- Be set out in federal legislation and not simply created by the executive, in order to ensure independence from government and the greatest degree of oversight and accountability;
- Be specific to the interest and rights of Indigenous children and families (and not wrapped into to broader mechanisms);
- Apply to all Indigenous children and families, not just First Nations on reserve (e.g., non-status First Nations, off-reserve, Métis and Inuit) while recognizing distinctions based on local needs and diverse legal traditions among Indigenous peoples; and

- Apply to conduct of both federal and provincial governments, which Canada has the constitutional jurisdiction to legislate pursuant to s 91(24) of the *Constitution Act, 1982*.

We believe all three mechanisms we have outlined can and should be legislated within one federal statute. The following chart sets out the three accountability mechanisms, with reference to the accountability needs each would address as well as essential elements for efficacy.

Accountability Mechanism 1: National Indigenous Child and Family Advocate

<table>
<tr><th colspan="2">National Indigenous Child and Family Advocate</th></tr>
<tr><th>Accountability needs to be addressed:</th><th>To be effective this Advocate should:</th></tr>
<tr><td>Need #1: Oversight of Canada's implementation of Jordan's Principle</td><td rowspan="7">a. Assess governments' obligations in relation to Jordan's Principle and substantive equality (protected under each government's human rights legislation and the Charter), C-92 and international instruments such as United Nations Declaration on the Rights of Indigenous Peoples, the Conventions with Rights of the Child, and the Convention of Rights of Persons with Disabilities.
b. Scrutinizes governments' distinctions-based approach in relation to the need for equitable services on the grounds of the various subcategories of Indigeneity governments have relied on in the past to make distinctions (non-status, off-reserve, Metis, Inuit, etc.) as prima facie discrimination.
c. Have the power to investigate individual, group and community complaints, as well as institute own-motion investigations, including into systemic issues.
d. Have robust investigative powers to collect and compel necessary information from government parties to effectively respond to the different types of complaints as well as to be able to effectively conduct systemic oversight.
e. Conduct research and hire experts in conducting systemic inquiries.
f. Be mandated to meet with children and youth and ensure their voices are heard in the work of the Advocate's Office.
g. Attempt to facilitate resolution of complaints through informal and confidential means. Such methods for resolving disputes should draw on Indigenous laws and the dispute resolution processes where possible. This would not prevent reporting and recommendations.</td></tr>
<tr><td>Need #2: Oversight of Canada's long-term reform of child welfare, including C92 implementation</td></tr>
<tr><td>Need #3: Oversight Canada's implementation of substantive equality in relation to all services impacting on Indigenous Children and Families</td></tr>
<tr><td>Need #4: Oversight of Federal-Provincial cooperation in servicing Indigenous Children and Families</td></tr>
<tr><td>Need #5: Ongoing education for federal and provincial government actors involved in child welfare services</td></tr>
<tr><td>Need #6: Oversight of provincial governments'</td></tr>
</table>

implementation of substantive equality in relation to all services impacting on Indigenous Children and Families **Need #7:** Oversight of child provincial welfare agencies, including their implementation of C92	h. Providing a "one stop shop" that can support Indigenous children, youth and their families in navigating the different accountability mechanisms that exist. This is not intended to limit peoples' options for resolving complaints through other mechanisms. It is our hope that an individual or group might start with the Advocate to seek informal resolution or, at the least, obtain information to navigate their options, and possibly be connected with legal support if necessary (we explain this further below with our third mechanism, National Legal Services for Indigenous Children and Families). i. Have the power to make recommendations to governments, and to escalate these recommendations to higher levels (up to and including the Tribunal) if recommendations are not reasonably acted upon. j. Report annually to Parliament on its activities, as well as make special reports commenting on any matter within the scope of its powers that it deems appropriate. k. Intervene in any adjudicative proceedings relating to the jurisdiction of the Advocate. l. Educate the public and federal and provincial civil servants, and those involved in child welfare matters, about the right to substantive equality and Jordan's Principle, of Indigenous children and families, as well as their rights within child welfare matters, including under C92. m. Play a 'knowledge mobilization' role in terms of ensuring that standards and practices are consistently applied/understood throughout the various jurisdiction and country, and act as a resource for Indigenous nations and communities to facilitate learning from each other. n. Promote connections to culture, families, lands, waters, language, songs and stories, as well as encourage the implementation of Indigenous laws in the work of the Advocate. Beyond these requirements, further details about the Advocate (composition, qualifications, terms, staff, etc.) ought to be determined in discussion and cooperation with Indigenous groups, including Indigenous children and youth, the Caring Society and the pro bono lawyers who have been supporting it. We further suggest that, in the actual development of the enabling legislation, further expert advice be sought to recommend specific statutory language.

Accountability Mechanism 2: National Indigenous Child and Family Tribunal

<table>
<tr><th colspan="2">National Indigenous Child and Family Tribunal</th></tr>
<tr><th>Accountability needs to be addressed:</th><th>To be effective this Tribunal <u>should</u>:</th></tr>
<tr><td>Need #8: Enforce orders against Canada for non-compliance with Jordan's Principle, substantive equality and other relevant laws and international requirements (C-92, DISA, UNDRIP, CRC, etc)</td><td rowspan="2">a. Have the power to issue binding orders against both the federal and provincial governments and their public servants and agencies.

b. Have the powers to craft its own procedures and rules of evidence that are more flexible than the courts, including child-informed and child-friendly procedures, and the incorporation of Indigenous law and legal procedures into the process.

c. Be mandated to issue remedial orders where discrimination is established.

d. Have extensive remedial powers, including powers to grant interim orders and make summary decisions, as well as the power to exercise supervisory jurisdiction made explicit.

e. Be composed of adjudicators with expertise in the discrimination issues faced by Indigenous children and families.

Beyond these requirements, further details about the Tribunal (composition, qualifications, terms, staff, etc.) ought to be determined in discussion and cooperation with Indigenous groups, including Indigenous children and youth, including parties and lawyers that have been involved in the Caring Society case.

The creation of a Tribunal with a focus on Indigenous child and family issues is critical to support the work of the proposed Advocate. Should Canada eventually implement recommendations from the MMWIG National Inquiry and others to create a National Indigenous and Human Rights Tribunal, we think this body could equally support the work of the Advocate, so long as the Tribunal is focused only on Indigenous matters, can bind both the provinces and governments, and has a sufficiently flexible process and robust remedies. However, until such time as a National Indigenous and Human Rights Tribunal, there needs to be a National Indigenous Child and Family Tribunal.

Finally, to ensure the utmost independence from the federal government, the proposed Tribunal should not be included within the schedule of federal administrative tribunals falling under the Administrative Tribunals and Support Services of Canada Act, SC</td></tr>
<tr><td>Need #9: Enforce orders against provinces for non-compliance with Jordan's Principle, substantive equality against provinces and relevant laws and international requirements (C-92, UNDRIP, CRC, etc)</td></tr>
</table>

	2014, c 20, s 36.

Mechanism 3: National Legal Services for Indigenous Children and Families

National Legal Services for Indigenous Children and Families	
Accountability needs to be addressed:	**To be effective the National Legal Services <u>should</u>:**
Need #10: Formal advocacy for First Nations children, families and communities for government services and in child welfare matters	a. Include funding support from filling forms, letter writings and speaking on their behalf, to pursuing existing Ombuds, Child Advocate, human rights processes (before the federal or provincial human rights commission, or the new Tribunal we are proposing) or judicial review in the courts. b. Take the form of a legal referral service housed in the proposed Advocate (similar to the Legal Representation for Child and Youth branch of Alberta's Office of the Child and Youth Advocate). This includes: i. The Advocate's Office has the power to refer children and families to lawyers and appoint lawyers to represent them to access substantive equality in services from the federal and provincial governments, and in their interactions with child welfare systems. ii. The lawyers appointed would be from a roster maintained by the Advocate. To get on the roster, lawyers would have to meet standards and expectations set by Advocate (e.g., practice experience, years at the bar of a province, knowledge of Indigenous communities, etc.).

Conclusion:

In identifying the accountability problems to be addressed by an accountability mechanism for this report, we have looked thoroughly at the context of "one of the worst possible cases" of racial discrimination, that has deeply and irrevocably harmed multiple generations of Indigenous children and families. We have also reviewed features of effective accountability mechanisms that can contribute to the imperative work of bringing an end to these ongoing harms.

There has been progress, and genuine work toward internal, policy and even legislative reform. However, there is much work to be done and many of the reforms that Canada has unilaterally

implemented have been inadequate to stymy ongoing substantive equality and other statutory human rights violations. The vast majority of meaningful reforms to date have occurred since the Tribunal issued its 2016 Main Decision and retained supervisory jurisdiction.

There will come a day when the Tribunal will relinquish jurisdiction over the case. Given the very long history of systemic discrimination against Indigenous people by the government in Canada, particularly in the area of service delivery, it will be important to have alternative accountability mechanisms in place. We have set out 3 that, together, we believe will practically address the accountability problems that have facilitated one of the worst possible cases of racial discrimination in Canadian history for over half a century. There are also internal steps ISC can take in the interim, and in addition, to external legislated accountability mechanisms, discussed in Part 3 A and in the Conclusions and Recommendations of this Report.

The Assembly of Seven Generations report clearly emphasized that "Indigenous youth and children deserve accountability and responsibility from the federal government, as well as all levels of government." As Cindy Blackstock says, once we know better, we need to *do* better. We hope and believe a new and better chapter has begun and can be created for present and future generations. Accountability is an essential aspect of this. Indigenous children, youth and families deserve nothing less.

Introduction

In the summer of 2020, we were approached by the Caring Society, acting jointly with the Department of Indigenous Services Canada [ISC], to undertake research on the design of an independent accountability mechanism to oversee the government's adherence with the numerous orders that have been made by the Canadian Human Rights Tribunal based on Jordan's Principle and substantive equality in *Caring Society et al. v Canada*.[1] Over the fall of 2020 we developed a workplan for this research, which was signed into a contract for services with ISC in February 2021.

Our work plan called for the review and analysis of general oversight, accountability and advocacy mechanisms in Canada and internationally; a review and analysis of Jordan's Principle-specific law, policies and processes; and having conversations with key stakeholders[2] to help us identify current needs, gaps and promising practices to inform the necessary scope, function and approach of an accountability mechanism related to Jordan's Principle and child welfare. The intended outcome of our research was this report, setting out at least three potential, well-researched options "for an effective national Jordan's Principle Ombuds-like function."

Early into the life of this project, both the Caring Society and ISC were using the specific language of an "ombudsperson function" on "Jordan's Principle." However, as we got deeper into our research, we determined that use of these phrases were not intended as pre-determining what the accountability mechanisms we propose should look like. Speaking with the Caring Society, ISC staff and others, we realized that there are several different accountability mechanisms that are encapsulated within the meaning 'ombuds', as we explain in our next section, entitled 'Primer on Accountability Mechanisms.' We also concluded that the accountability needs of Indigenous children and families go beyond Jordan's Principle because the principle arises from, and is informed by, the *Caring Society et al. v Canada* case, what led to it, and what has happened since the main decision.

According to international human rights expert, Linda Reif, author of *Ombuds Institutions, Good Governance and the International Human Rights System*, core elements of good governance include democratic government, rule of law, accountability, transparency of government, respect

[1] *First Nations Child and Family Caring Society of Canada et al. v. Attorney General of Canada (for the Minister of Indian and Northern Affairs Canada),* 2016 CHRT 2 [*Caring Society* 2016].

[2] We met with various key stakeholders including First Nations Child and Family Caring Society of Canada staff; Joint Policy and Operations Committee on Jordan's Principle; National Advisory Committee on First Nations Child Welfare; National Advisory Committee on First Nations Child Welfare; Consultation Committee on First Nations Child Welfare; lawyers involved in *Caring Society et al.* matter and advancing Jordan's Principle cases; and Indigenous Service Canada staff from Jordan's Principle branches. These meetings included local Jordan Principle service coordinators; relevant staff and directors from child welfare agencies, Indigenous health organizations; representatives from Assembly of First Nations (AFN); and relevant staff from human rights commission. We also presented at a one-day AFN forum on Jordan's Principle and spoke with Linda Reif, a leading Canadian expert in accountability mechanisms.

for human rights and public participation.[3] Accountability and advocacy mechanisms have an important role in ensuring, strengthening and promoting good governance. Reif explains that "[g]overnment accountability involves establishing "lines or forms of accountability" between the government and the public which can cross the spectrum from provision of information, through the application of procedural fairness legal principles, to subjection of government conduct to adjudicative decisions or prosecution".[4] An important element of the accountability process is a mechanism's ability to make decisions about conduct and make determinations to resolve inappropriate conduct. Answerability and enforcement are important elements of accountability. Metis legal scholar, Larry Chartrand, explains that "accountability is inherently a reciprocal relationship. […] In other words, accountability of government actors to the public is seen as important in promoting ethical, fair and efficient government decision-making."[5]

To date, existing accountability mechanisms in Canada have not generally served the accountability needs of Indigenous children and families. First of all, aside from the courts and the Canadian Human Rights Commission (CHRC) and Tribunal, there are no other oversight mechanisms in relation to the federal government's departments of ISC and Crown-Indigenous Relations and Northern Affairs Canada. Further, it has been extremely difficult for Indigenous children and families to use the courts to hold governments accountable in relation to the funding of essential services.[6] The Canadian Human Rights Tribunal's 2016 *Caring Society* case was a watershed decision in holding Canada accountability for systemic underfunding of child welfare services, however, this was a hard-won victory (over which the battle continues), and the fact is that the CHRC and Tribunal have significant shortcomings in meeting the various accountability needs of Indigenous children and families. There are more oversight mechanisms at the provincial level, such as ombuds and child advocates, but the extent to which they are able to or have advanced justice for Indigenous children and families is uncertain. In the Assembly of Seven Generations' report, *Accountability in Our Lifetime: A Call to Honour the Rights of Indigenous Children and Youth*, Indigenous youth acknowledged that

> Canada is long overdue in honouring inherent Indigenous rights, as demonstrated by generations and over 150 years of reports and recommendations that Indigenous peoples have provided to Canadians. Indigenous youth and children need action and it is urgent. [...] [The human rights violations experienced by Indigenous children and youth] is beyond the point of advocacy, rights promotion and the power to report. There must be accountability for those in positions of power that demonstrate prejudice and

> racism towards Indigenous peoples as well as accountability for the decades of broken promises on behalf of Canadian governments. The bleak reality is that government inaction and its ongoing violations of the rights of Indigenous youth and children has resulted in harms".[7]

We agree with the assessment of the Assembly of Seven Generations of the bleak nature of Canadian governments' accountability to Indigenous children and families. In Part 1 of this report, we attempt to summarize the long history that informs this conclusion. Drawing from this history, in Part 2, we set out what we identify as 10 separate accountability needs of Indigenous children and families that must be addressed in order to provide effective accountability. Finally, in Part 3, we propose three interconnected mechanisms that we believe address these accountability needs.

Primer on Accountability Mechanisms

There are various accountability mechanisms in democratic nations. Similar accountability mechanisms sometimes have different names, despite having similar purposes and functions. This primer aims to provide some high level definitions of common accountability mechanisms, grouped according to purpose and function, along with examples.

1. Independent Accountability Institutions

Independent Accountability institutions are institutions that "control the actions of other state bodies through actions ranging from soft monitoring to hard coercive standards".[8] Accountability institutions include, but are not limited to, Ombuds. Some also have additional functions including litigation, intervention, providing, advice, research and education.[9] Generally, these institutions are established to monitor and supervise the actions and activities of governments to make sure that they are doing their work in a fair, just and transparent way.[10] They are designed to provide citizens with an accessible, impartial, and informal avenue to address problems with the actions of government.[11] Key roles of accountability institutions include improving human rights protection and promotion when judicial intervention not available or realistic, improving domestic human rights circumstances; changing the culture and mindset of bureaucracy, drawing attention to law reform needs; requesting binding decisions through the courts, reducing poor bureaucratic behaviour through monitoring, improving rule of law and strengthening good governance.[12]

In comparison to judicial institutions, these institutions have broad and flexible assessment criterion for determining violations. This gives them the ability to address a wider range of violations using a variety of remedies.[13]

Some examples of Independent Accountability institutions include:

- Auditor generals,
- Anti-corruption bodies,
- Electoral commissions
- Policing oversight institutions,
- Human rights commissions, and
- Ombudspersons.[14]

[13] *Ibid* at 250-251.
[14] Chartrand *supra* note 5 at 5.

2. Ombuds Institutions (General or Classic)

An ombuds is one kind of independent accountability institution that reviews government, agencies, and other organizations' actions.[15] According to the Forum of Canadian Ombudsman, an ombuds is an independent and objective institution that reviews government, agencies, and other organizations' actions.[16] Reif explains the classic ombuds was established to fight maladministration[17] and supervise the actions of the government's administrative activities.[18] The office is provided for by constitution or action by legislature and it is headed by an independent, high level public official responsible to the legislature. Typically, the core powers of an ombuds are investigations, making recommendations and submitting reports to resolve problems by securing redress and improving administrative systems and redress.[19] Typical Ombuds functions include complaint handling and resolution, monitoring and reviewing functions, individual and systemic advocacy.[20] A small number have quasi-coercive powers.[21] The process is usually confidential, impartial, and neutral.[22]

Some examples of ombuds institutions in Canada include:

- Provincial and Territorial ombuds institutions,
- National Defence and Canadian Forces Ombudsman,
- Municipal ombuds institutions.[23]

3. Thematic Ombuds Institutions

The key distinction of a thematic ombuds institution is that they have jurisdiction over a specific and distinct thematic or specialized area.[24] Over the years, the concept of classic ombuds institutions have expanded and tailored to meet varying needs of local regions including public and private sectors, international, national and regional levels and crossing several thematic

areas. They require a level of expertise in the relevant area.[25] Thematic institutions may overlap with general accountability institutions and multiple departments may fall within the scope of thematic institutions depending on the specific focus of the institution.[26] Like classic ombuds, some thematic ombuds institutions have expanded to include additional mandates such as explicit human rights protection and promotion, functions related to children's rights, preventative measures, monitoring abilities,[27] and administrative law litigation functions. These institutions have a range of powers and functions. They are not only complaint-driven, and may have some decision-making powers and public education mandates. Some institutions have additional protection powers other than investigations including mediation and court litigation.[28] Some adjudicative powers have been given to thematic equality ombuds,[29] though these institutions rarely have coercive remedial powers.[30] Some can conduct audits to ensure compliance with the law in sensitive areas including police conduct, child protection, and government intrusion on private communications. Some also do administrative audits if it's in the public's best interest.[31] Like classic or general ombuds, thematic ombuds institutions generally monitor their recommendations and will attempt to use persuasion to encourage implementation.[32]

Some examples of thematic ombuds institutions in Canada include:

- Commissioner of Official Languages,
- Privacy Commissioner,
- Information Commissioner,
- Federal Correctional Investigator,
- RCMP External Review Committee, and
- Police Complaints Commissioner.

4. Thematic Ombuds Institutions – Children's Rights Commissioners and Advocates

Independent accountability institutions that focus on Children's rights are one type of thematic ombuds institution. These are typically either Commissioners or Advocates. Children's Commissioners have been appointed around the world and typically have similar powers and functions to other thematic ombuds, but in the area of children's rights.[33] Child Advocates

support children and youth populations through advocacy and other activities.[34] An important difference to highlight from other thematic ombuds institutions is that Advocates may not necessarily act impartially. Instead Advocates will act to protect the interest of the specific population they are mandated to protect.[35] In Canada, there are provincial and territorial Child Advocates. Child Advocates require specialized knowledge and experience. Hunter notes that all Child Advocates in Canada had advanced degrees and levels of experiences from various backgrounds including social work, legal backgrounds, education, youth services, nursing, employment, psychology and health administration, and public administration.[36] While Child Advocate functions vary, common functions of nine provincial and two territorial Child Advocate offices in Canada include providing individual advocacy, examining systemic issues and systemic advocacy, raising awareness about children's rights, and giving advice to improve the provision of services to children.[37] Most have a mixture of traditional functions and specialize solely on rights of children and youth.[38]

Almost all Child advocate' mandates in Canada include monitoring compliance and taking extra steps when the government is not complying with recommendations including reporting to higher authority.[39] Most Canadian child advocates expect governments to respond to their advice without formal means of holding the government accountable to improve services to children.[40] However, tracking and monitoring compliance were noted as key factors in influencing change.[41]

Some examples of Child Advocates in Canada include:

- **The Alberta's Office of the Child and Youth Advocate:** The OCYA is valued for its ability to identify systemic issues through its relationship and direct input from children and youth affected. This feedback and other quality assurance processes help to inform practice and make effective recommendations to improve services.[42] The OCYA conducts systemic reviews and advocacy as well as providing individual advocacy services to children and youth involved in designated services. It may appoint legal representation for young people in relation to those services.[43]

- **BC's Office of the Representative of Children and Youth:** In 2005, BC established a legislative office, the Representative of Children and Youth.[44] BC's

[44] *Ibid* at 48.

model was considered a hybrid model as it has functions of an ombuds, powers of a commissioner of inquiry and structural independence of an auditor general.[45]

5. Thematic Ombuds Institutions – Human Rights Commissions

Reif explains that Human Rights commissions have the same elements as a classic ombuds, other than their jurisdiction. Human rights commissions have jurisdiction over human rights protection and most have varying human rights prevention mandates,[46] Their scopes vary and may include the protection of civil, political, economic, social and cultural rights.[47] Some may have a specific role or function to monitor particular human rights issues such as the relations with Indigenous people.[48]

Human rights commissions typically have a broad mandate[49] and functions including complaint based investigatory powers, own motions investigations, holding public inquiries, making recommendations and reports, powers to bring or intervene in litigation and/or other legal avenues. Some also have human right promotion powers such as research, public awareness-raising, training, education and advice to governments.[50] Other human rights mandated functions include creating promotional information, education, advising, providing recommendations to governments, law reform, and investigatory powers.[51]

Some examples of human rights commissions in Canada include:

- **The Quebec Commission des droits de la personne et des droits de la jeunesse** Although similar to the Commission at the federal level, the Québec CDPJ has a specific unit dedicated to handling youth protection investigations.[52]
- **The Canadian Human Rights Commission:** At a federal level, the CHRC has numerous functions including a significant public human rights education and promotion role, public interest role by researching and monitoring systemic patterns and practices and investigating, mediating and referring matters to the CHRT.[53]

6. Human Rights Tribunals

A final type of independent accountability institution is a tribunal. An accountability institution becomes a quasi-judicial administrative tribunal when it has abilities to make legally binding decisions. Tribunals perform a quasi-judicial but not a purely judicial function. Administrative tribunals may have a particular expertise, and due to this expertise, they may be enabled by statute to deal with claims that are broader than those dealt with by courts and to grant forward–looking systemic remedies to deal with policy issues and further social goals and to remain seized of matters longer than courts.[54] Although the tribunal process will be formal, it does not need to be an adversarial process. It is important that the tribunal is impartial, non-political and has a level of expertise.[55] There is a wide variety of judicial and administrative tribunals in Canada.[56] There are some limitations to tribunals due to their capacity to make legally binding decisions. This capacity means the work and process of the institutions subject to administrative law standards and reviews. This can seriously limit the flexibility and informality of the institution's work and process.[57] A major concern related to this type of institution is the accessibility.[58]

At times, an independent and accessible appeal tribunal is established within a broader independent accountability institution in order to hear matters where a resolution has not been reached through the "advisory" part of the institution. These enforcement and adjudication abilities are developed to ensure accountability and reform where more informal individual advocacy, systemic reports or advice to governments are not sufficient to protect human rights.[59]

An example of a human rights tribunal in Canada includes:

- **The Canadian Human Rights Tribunal:** An important feature of the CHRT is its ability to make binding orders and grant remedies.[60] The CHRC and CHRT are a "federal human rights machinery […] comprised of an adjudicative body and a Commission. Both are "essential to the remedial function of the legislation".[61] Chartrand characterizes the CHRC and CHRT as "a more formally structured process than the Ombudsman Office although less formally structured than the court system. It is intended to be accessible to everyone and in particular those individuals that have been most marginalized in society".[62]

[54] *Ibid* at 31.

[60] *Ibid* at 19.
[61] *Ibid* at 34.
[62] Chartrand *supra* note 5 at 19.

As a final point, we wish to address possible confusion around use of different terminology for Ombuds-like mechanisms such as Ombudsman, Advocates or Commissioners. The terms are largely synonymous. Any distinction seems to be one of degree versus difference in kind (e.g., they are all forms of ombuds). For example, 'Commissions' are considered a variation/adaptation of the ombuds model, though sometimes viewed as having broader powers than the "traditional/ classic-based" model.[63] As between Commissions/Ombuds and Advocates, the former seem to stand in a more neutral/impartial place (until a complaint is substantiated), whereas children's advocates may have more active role in defending the rights of children and youth due to the fact that most are mandated to uphold children's rights, including the UN Convention on the Rights of the Child. However, like Ombuds/Commissions, Advocates investigate complaints and write reports about their investigations.

[63] See Marshall & Reif *supra* note 19 at 226 footnote 50: "The term "Ombudsman" is used in many countries that have adapted the office from its Scandinavian roots (e.g. provinces of Canada, New Zealand). Other English language synonyms are: "Parliamentary Commissioner for Administrative Investigations" (e.g. Queensland, Western Australia); "Commissioner for Administrative Complaints" (Hong Kong); and "Parliamentary Commissioner for Administration" (e.g. United Kingdom, Sri Lanka). In French-speaking jurisdictions see e.g.: Mediateur (e.g. France, Senegal, Mauritania); Protecteur du Citoyen (Qufbec); Defenseur du Peuple (Madagascar). In Spanish-speaking countries see e.g.: Defensor de/ Pueblo (e.g. Argentina, Spain); Defensor de los Habitantes (Costa Rica). In India, the office is called Lok Ayukta." See also Michelle Lebaron, in "Watchdogs and Wise Ones in Winter Lands: The Practice Spectrum of Canadian Ombudsman" Liz Hoffman Ombudsperson Research Award Paper, Forum of Canadian Ombudsman (FCO) 2008 at p. 11, made the following note "No classical ombudsman has been appointed in the federal sector, while some specialized ombudsman offices have been instituted, such as the offices of the Commissioner of Official Languages, the Correctional Investigator, and newer offices like the Taxpayers' Ombudsman/Ombudsman des Contribuables.

Part 1: Why is there a need for accountability when it comes to Indigenous children and families?

Simply put, there is a need for accountability because federal and provincial governments in Canada have both contributed to the taking away of thousands of Indigenous children from their families and communities. This has wreaked countless harms on individual children, their families, their communities and nations. This started with the residential school system but morphed into the child welfare system after World War 2. In the last 70 years, the most significant contribution to this overrepresentation has been the inadequate provision of services to meet the needs of Indigenous children and families. Both the federal and provincial governments have been reluctant to fully fund services to Indigenous peoples, relying on dubious jurisdictional arguments to justify such discrimination. This continues up to the present. The watershed finding from the Canadian Human Rights Tribunal in *Caring Society* in 2016 that Canada had been knowingly underfunding its First Nations Child and Family Services Program underscores this point. The fact that the Tribunal has made 21 further orders since, many of these finding Canada to be in non-compliance with the original ruling, accentuates how pervasive these problems are. In its ruling on monetary compensation for the discrimination in the case, the Tribunal noted, "this case of racial discrimination is one of the worst possible cases warranting the maximum award."[64] Below, we examine the context in relation to First Nations child and family services informing the need for accountability mechanisms.

a) The history of First Nations child welfare services

Paradoxically, the taking of children away from Indigenous families and communities stems from both the exercise of extraordinary amounts of control over the lives of Indigenous peoples by governments in Canada, as well as these governments exhibiting extraordinary neglect for the well-being of Indigenous children and families. To carry out its objective to 'kill the Indian in the child,' Canada used the *Indian Act* and RCMP, among other forms of state control, to take thousands of Indigenous children from their families and place them in residential schools between the 1880s and 1950s.[65] The TRC Final Report documented Canada's refusal to adequately fund health services as a cause of high illness and death rates of Indigenous children in residential schools.[66] Coinciding with the federal government's decision to gradually divest itself of residential schools, with the federal government's endorsement in the form of reimbursement of provincial costs, provincial child welfare systems were extended on reserve to effectively become the new residential school system.[67] Especially from the 1960s to the 1980s provincial legislation was used to apprehend large numbers of First Nations children from their

families, sometimes on the slightest of pretext (the "Sixties Scoop").[68] Indigenous communities had no say, nor any mechanisms to stop these governments from making these forceful interventions in the lives of their children and families.[69] Overrepresentation of Indigenous children in provincial child welfare systems remains a significant problem today and has been dubbed the 'Millennial Scoop.'[70]

These problems are also rooted in over 70 years of jurisdictional wrangling between the federal government and provincial governments, with neither level of government wishing to assume full responsibility for the provision of essential services to Indigenous peoples. This includes child and family services, but also health, education, social assistance, assisted living, housing and more.[71] While both levels of government gradually assumed some role in the delivery of child and family services to Indigenous peoples, perpetual disputes over who is responsible for paying for essential services for "Indians" have been used by all governments as justification for doing less, causing significant harm to Indigenous children and families.[72] In 2019 Final Report, the National Inquiry into Missing and Murdered Indigenous Women and Girls named this problem "interjurisdictional neglect" and suggested that it violated the s. 7 *Charter* rights to life, liberty and security of the person of Indigenous women and girls.[73]

Notably, starting in the 1960s, the federal government begrudgingly accepted temporary responsibility to provide some essential services to First Nations on reserve such as social assistance. Funding and services were intended to be provided at levels comparable to provincial services to other citizens. Although this became permanent and extended to a broader range of reserves, Canada resisted legislating in these areas or putting in place other accountability mechanisms to ensure adequate services or funding, despite the Auditor General and other reports highlighting the need for better accountability. Canada also downplayed its responsibility in relation to providing essential services, suggesting such services were not based on constitutional obligations, but simply a matter of good public policy.[74]

In the 1970s and early 1980s, First Nations began voicing concerns about services that were either lacking or utterly inappropriate and calling for more community-based services. In response, Canada began to gradually devolve program delivery to First Nations through funding

[69] *Ibid* at paras 20-61. In the case, Canada argued that if it had honoured its contractual obligations (in Ontario) to consult with First Nations regarding child apprehension, nothing would have changed. The Court rejected this argument based on substantial evidence to the contrary, and referred to it as "an odd and, frankly, insulting submission" at para 42.

agreements, however, the federal government maintained ultimate control over funding levels and program terms and conditions. The funding agreements lacked effective dispute resolution mechanisms to permit First Nations to hold Canada accountable for inadequate funding.

In the context of child and family services, Canada unilaterally created the First Nations Child and Family Services Program (FNCFS Program) under Directive 20-1 in 1991, which required FNCFS Agencies to operate pursuant to provincial child welfare laws, with federal funding. The creation of the FNCFS Program spurred the establishment of over 100 FNCFS Agencies across Canada, intended to provide more culturally appropriate child welfare services to First Nations children. It quickly became apparent, however, that the funding formula under Directive 20-1 was entirely inadequate to provide preventative and culturally appropriate services. The formula did not provide funding comparable to the range of child welfare services funded in the province, and often resulted in situations where children were apprehended because alternative services could not be funded under Directive 20-1.

Two expert reports commissioned by the Assembly of First Nations and Canada in 2000 and 2005 confirmed the systemic underfunding in the FNCFS program. Despite these reports, Canada did little to implement their recommendations. In 2008, Canada developed a new funding formula, called the Enhanced Prevention Focused Approach (EPFA), and slowly began implementing it in some regions of the country. The EPFA, however, was only a slight improvement over Directive 20-1 and continued to perpetuate inequities in the FNCFS.[75]

An important development in this period was the Federal House of Commons unanimously affirming Jordan's Principle in 2007, a child-first principle to ensure no gaps or delays in services to First Nations children.[76] The Principle is in memory of Jordan River Anderson, a First Nations boy from Manitoba, born with multiple disabilities, who died in hospital never getting to live close to his family, due to jurisdictional wrangling between Canada and the province over who would pay his medical costs were he moved closer to home. The Principle requires that the first government approached by a First Nations community *pay* for the requested services for a First Nations child, and that any jurisdictional disputes be resolved afterwards. While Canada committed to, and ear-marked substantial funds to implement, Jordan's Principle, these funds were never used due to the very narrow interpretation given to the Principle by the federal government.[77]

[76] Private Members Motion 296, tabled by Jean Crowder, MP Cowichan-Nanaimo for (NDP) the motion reads: "in the opinion of the House, the government should immediately adopt a child-first principle, based on Jordan's Principle, to resolve jurisdictional disputes involving the care of First Nations children".
[77] See *Caring Society* 2016, *supra* note 1 at para 380.

b) *First Nations Caring Society et al. v Canada*

Given the lack of commitment by Canada to make real reform to the FNCFS Program, the Caring Society and the AFN filed a human rights complaint with the Canadian Human Rights Commission in 2007. After nine years, which saw several delays by Canada, retaliation against Dr. Cindy Blackstock, as well as attempts to strike the complaint,[78] the Tribunal ordered in favour of the complainants in 2016 ("Main Decision").[79] It found that discrimination on the basis of race and/or national ethnic origin was made out, and in the course of its extensive reasons, made several important findings, including that:

- Canada is not a "passive player" in funding child welfare services but exercises significant control and power over child welfare services on reserve. Canada may have a fiduciary obligation to act in the best interest of First Nations children and families to ensure the child welfare programming is adequate and culturally appropriate.[80]

- The funding models used by Canada underfund prevention services, do not ensure services are culturally appropriate, and in fact create incentives to remove children from their homes as a first resort rather than as a last resort, replicating the residential school era. It also resembles the residential school era because the fate and future of many First Nations children is still being determined by the Canadian government.[81]

- Canada knew its FNCFS program was not comparable to provincial services but had resisted doing any comparative (gap) study. Evidence before the Tribunal included an internal report from 2006 showing the Department of Indigenous Services knew it was underfunding First Nations, stating, "if current social programs were administered by the provinces, this would result in significant increase in costs for INAC."[82]

- While Canada failed to provide services comparable to the provinces, this standard in itself is discriminatory. Human rights principles, both domestically and internationally, require INAC to consider the distinct needs and circumstances of First Nations children and families living on-reserve–including their cultural, historical and geographical needs and circumstances–in order to ensure substantive equality in the provision of child and family services to them. Simply attempting to mirror provincial for First Nations communities runs afoul of human rights principles.[83]

- Canada had wrongly adopted a very narrow interpretation of Jordan's Principle, which had been adopted by a unanimous resolution of Parliament in 2007 as being limited to children with multiple disabilities and not to child welfare or other services. Jordan's Principle requires coordination and cooperation between the provincial and federal

> governments, as well as between departments of the same government, to address gaps and delays in health and social services. The Tribunal's language suggested Jordan's Principle applies to all federal programs aimed at addressing the needs of children and families on reserve.[84]

The Tribunal ordered Canada to stop its discriminatory practices and reform of FNCFS programs, stating, "a REFORM of the FNCFS Program is needed in order to build a solid foundation for the program to address the real needs of First Nations children and families living on reserve."[85] It retained jurisdiction over the case in order to consider compensation and other remedies requested by the Complainants, and until all of its orders are implemented. Canada did not appeal this case and committed to make reforms to address its findings.[86]

c) Canada's conduct since the Main Decision

Since the Main Decision, the Tribunal has found several instances of non-compliance by Canada, particularly its failure to implement a broad interpretation of Jordan's Principle and an effective process to respond to Jordan's Principle requests and appeals. The non-compliance decisions point to a number of systemic and accountability issues, such as resistance to depart from old approaches (using comparability instead of substantive equality and narrow definition of services and children covered by Jordan's Principle)[87], using funding authorities to justify inaction,[88] failure to collect appropriate data to properly assess Jordan's Principle requests[89] and needs, and lack of arm's-length appeal process.[90]

While ISC has been attempting to respond to the rulings of the Tribunal by providing education to staff and modifying some of its processes, such as funding community service coordinators to help applicants and changing its Jordan's Principle appeals process, there is a need for ongoing, comprehensive assessment of Canada's commitment to Jordan's Principle and substantive equality. Staff turnover at the Department is reported to be high and implementing meaningful change within the bureaucracy of ISC seems to be a real challenge. Further, the modified appeal process the Department sought to introduce was stalled due to vacancies.[91]

[89] See 2017 CHRT 14 at paras 73, 85 and 107.
[90] See *ibid* at paras 94-103.
[91] See *Jordan's Principle Guide*, last updated May 29, 2020; *Standard Operating Procedures: Jordan's Principle Service Coordinators Gathering: Building Connections* (Indigenous Services Canada, 2019); and Jordan's Principle and Update on Development and Implementation of Appeals Secretariat PPT, September 2021.

A 2021 article based on assessment of the Jordan's Principle in the Alberta region highlights how onerous the Jordan's Principle application process can be for applicants.[92] Requiring applicants to provide documentary evidence and particularize how a request aligns with substantive equality were identified as particularly burdensome, resulting in several complaints being treated as ineligible for consideration by the Department.[93] This was confirmed by our own analysis of data provided by ISC for the year 2019-2020, which showed that over 51% of Jordan's Principle requests in that year (32,587 out of 62,888) were not considered due to being assessed as submitted with insufficient information.[94] Finally, in interviews, Caring Society staff and lawyers for the complainants emphasized the crucial importance of oversight to ISC's approach to Jordan's Principle.

Early on in our research, we conducted a survey to gather further information about the current issues and needs for an accountability mechanism for Jordan's Principle. We received thirteen responses mostly from Jordan's Principle Navigators and a couple of Indigenous Services Canada Jordan's Principle National staff. Some challenges and barriers identified included: burdensome document requirements in the initial application and appeals process; lack of knowledge of the Indigenous context by ISC staff; high turnover of limited staff at ISC; failure of provincial governments coming to the table; timelines and delays; the perception that the current individual case-by-case process for Jordan's Principle fails to create broader and more meaningful change; the need for clear parameters and policy guidelines to assist service coordinators; ISC staff do not understand substantive equality and communities bear the burden of explaining the needs for substantive equality in their applications; lack of aging out of care supports; lack of consistency; and vague reasons for denials.

Canada has also shown ongoing resistance to reform of its funding approach to the FNCFS Program from one based on ad-hoc budget allocations to one that is needs-based, and informed by principles of self-government. Merely increasing funding for FNCFS services through annual budget allocations was found to be inconsistent with the Main Decision and the Tribunal ordered Canada in 2018 to develop an alternative system of funding based on needs assessments of Agencies and a cost-analysis of the real needs of First Nations agencies.[95] The Tribunal contemplated, however, that nation-to-nation self-government agreements over child welfare could be an alternative to Canada's FNCFS Program, however, it is clear that the funding of such self-government would need to reflect the principles set out in the Main Decision.[96] Details of long-term reform in relation to funding have yet to be released by Canada.

[96] *Ibid*.

As part of responding to the Main Decision, as well the Truth and Reconciliation Commissions' call to action for national child welfare legislation, Canada passed *An Act respecting First Nations, Inuit and Métis children, youth and families*, SC 2019, c 24 ("C92").[97] The law sets out minimum standards to be followed when an Indigenous child is involved in child apprehension matters, which overlays the various provincial child welfare laws.[98] It also recognizes Indigenous groups' inherent right to self-government in the area of child and family services and sets out a framework for how Indigenous governing bodies can pass their own laws.[99] C92 legislates Jordan's Principle in s. 9(3)(e):

> in order to promote substantive equality between Indigenous children and other children, a jurisdictional dispute must not result in a gap in the child and family services that are provided in relation to Indigenous children.

This was confirmed by the Quebec Court of Appeal in a recent reference decision on C92.[100] However, C92 remains unclear as to which level of government as between Canada and the provinces bears primary responsibility for funding compliance with national standards and self-government.[101] Canada could have chosen to clarify this issue in the legislation, but chose not to, raising fears that C92 will be used to perpetuate the same jurisdictional wrangling that has plagued this area for over 70 years.[102] This problem was also highlighted in the *QCCA C92 Reference*.[103] While C92 raises the prospect for the creation of a dispute resolution mechanism through regulation, we have yet to hear any further plans by Canada to implement such a mechanism.

Further, we have heard of some ISC staff saying that the Main Decision has no bearing on C92 issues, but we clearly believe this to be in error and demonstrative of a lack of real appreciation of the Main Decision, or the extent of Canada's obligations to conform with the right to substantive equality, statutory human rights and international law obligations in relation to Indigenous peoples.[104] In addition, there are concerns that the timeline for negotiating collaboration agreements under C92 (1 year) are unrealistic and may position communities to exercise jurisdiction without funding (which could be disastrous). We have heard issues of

[103] QCCA C92 Reference, *supra* note 100 at paras 271-277.
[104] The QCCA C92 Reference also acknowledged the clear relationship between the Main Decision, subsequent decisions of the Tribunal, and C92: see ibid at paras 146-164.

Indigenous Governing Bodies receiving conflicting information about negotiation terms from federal negotiators and being asked to sign confidentiality agreements, which raises issues of government transparency. The QCCA's suggested approach to negotiations and paramountcy around Indigenous law under C92, if it is upheld by the Supreme Court of Canada, will require education of provinces and others about their roles and limits on their powers, as well accessible ways to address potential disputes between Indigenous governments and intransigent provinces.[105] There are also significant needs for resources for carrying out education and capacity building around C92 more generally, including for communities, for ISC and CIRNAC staff, as well as those involved in the enforcement of child welfare laws and implementation on the national standards, such social workers, Crown lawyers, legal aid lawyers and judges.[106] It is surprising to us that, despite the stated importance of C92 by Parliament, Canada did not commit the same amount of resources for education and capacity building as it did for changes to the *Divorce Act*, or when the *Family Homes on Reserves and Matrimonial Interests or Rights Act* was rolled out with a Centre of Excellence.[107]

There also appears to be significant reluctance on the part of Canada to see the reform it needs to undertake to address long-standing systemic underfunding in services that affect long-term child and family well-being. It is clear from several statements from the Tribunal that Jordan's Principle is only intended as a temporary stop-gap measure to address gaps in underfunding and under-servicing in its services on the way to Canada overhauling these services to remove such gaps and inadequacy.[108] However, it is not at all clear that this is understood by the Department. Our concern is Canada simply seeing Jordan's Principle as akin to a program without addressing the systemic inequality that underlies the necessity for Jordan's Principle in the first place.

In their 2021 paper, Vandna Sinha, Colleen Sheppard et al., echo our concern. They characterize ISC's approach to Jordan's Principle as an individualistic, demand-driven process, and less as a requirement to ensure substantive and systematic equality in services and develop proactive policies and practices for securing equitable services for First Nations children and families. The authors describe how such an approach results in funding only being provided to First Nations individuals or communities with the capacity and wherewithal to make Jordan Principle requests, and needs are not being systematically assessed across

---

[105] The QCCA, in the C92 Reference, struck ss 21-22 from C92 and said that, instead, issues of paramountcy between provincial and Indigenous laws were to be addressed through the s 35 Sparrow framework. This also imposes additional consultation and justification requirements on governments that may need to be adjudicated. The decision is currently on appeal to the Supreme Court of Canada.

[106] This observation is based on the sheer volume of unsolicited requests from all of these groups that the authors, the Caring Society, and affiliated lawyers, have received, and continue to receive for support filling these needs.

[107] In addition to continuing and public legal education presentation and webinars discussing and explaining the Divorce Act amendments, see for example: https://www.justice.gc.ca/eng/fl-df/cfl-mdf/dace-clde/index.html; https://www.justice.gc.ca/eng/fl-df/cfl-mdf/fam.html . The Centre of Excellence was in place from 2013 to March 2021 to support First Nations developing matrimonial property laws on reserve. For more information, see https://www.coemrp.ca/.

[108] See *Caring Society* 2016, *supra* note 1 at paras 362, 364, 374 and 391; 2017 CHRT 14 at paras 85 and 107; and 2020 CHRT 36, at para 12.

communities.[109] This is exacerbated by ISC's lack of transparency in publishing details of group requests made or approved by First Nations organizations and communities or the range of services or level of funding that First Nations can request.[110] The authors refer to this as a "project system" or "projectification" approach and argue it is especially inappropriate given the degree of systemic inequality First Nations face:

> This case by case approach to the implementation of Jordan's Principle can be described as what Tania Murray Li calls a "project system." In discussing this approach in relation to issues of rural development, she argues that the project system or "projectification" encourages people to think that a problem can be fixed without actually addressing the underlying processes that created the problem in the first place. Such an approach fails to make long-term systemic change, so when the time-bound project ends, the problems the projects were intended to address persist." …
>
> Under the demand-driven approach to Jordan's Principle, relief is contingent on the ingenuity, knowledge and ability of individual, community-based actors to make effective Jordan's Principle claims. Individuals or groups with identical needs may go unrecognized if they do not have the capacity to formulate Jordan's Principle requests, or if they fail to provide sufficient evidence of how the request is linked to substantive equality. …
>
> An individualistic, case-by-case approach to Jordan's Principle might be appropriate if First Nations children generally had access to equitable services. Exceptional, aberrant individual or group cases outside this norm of equitable services could be addressed through the Jordan's Principle claims process. However, the reality is that the problem of inequitable services for First Nations children living on reserves is persistent, systemic and impacts a wide range of health, social and education services. In such a context, the remedy of individual claims is a sorely inadequate means of addressing the challenge of larger systemic and structural problems.[111]

Building on the authors point about how inappropriate projectification can be in the context of systemic inequality of services to First Nations children and families, in our review of ISC Jordan's Principle data, we noted that for 2019-2020, 67% of individual requests and 87% of groups requests were within the normative standard of care, and in 2020-21, 51% of individual requests and 40% of groups requests were within the normative standard of care.[112] Services meeting "normative standard of care" are those that are readily available to children and families in the province of reference.[113] Thus, ISC's data reveals that a high degree of approved requests under Jordan's Principle were for services that are already provided to children within the province. Children and families in the province are not required to go through an extensive

[110] *Ibid* at 34.
[111] *Ibid*.
[112] Deep Drive Jordan's Principle - 2020-09-22 PPT, *supra* note 94 at slides 16-17; and Indigenous Service Canada, Deep Dive Jordan's Principle Q2 – 2021-05-04 at slides 25-26.
[113] See Standard Operating Procedures: Jordan's Principles (18 October 2019) at 23.

process similar to the Jordan's Principle request process in order to access such services. This sheds light on the degree of systemic inequality that continues to exist within ISC's system of essential services for First Nations. Further, future plans on the direction of Jordan's Principle put forward by ISC suggest a long-term vision of Jordan's Principle funding into the future (albeit administered by communities directly), as opposed to fixing the problems in existing programs and services. We believe there is a strong need for oversight of ISC to ensure they are not getting stuck in projectification, but in fact addressing and reforming all their programs and services that further the well-being of Indigenous children and suffer from underfunding and under-servicing.

The data on Jordan Principle requests suggests systemic inequality in a wide number of areas of ISC services from education, to health services (medical equipment and supplies, medical transportation, medical / nutritional supplements, mental wellness, oral health, orthodontics and vision care), child development, assisted living and respite, infrastructure, social assistance.[114] There are areas, such as with orthodontics and capital repairs and costs, that ISC has been reluctant to treat as falling within Jordan's Principle and intervention of the tribunal or the courts has been necessary.[115] The Caring Society relates there are certain areas, such as administration / governance costs, that ISC remains reluctant to fund pursuant to Jordan's Principle.

Even beyond the implications of the Main Decision, ISC should be striving to reform its services based on the commitments within *Department of Indigenous Services Act*, SC 2019, c 29, s 336 ("*DISA*"), which came into effect in July 2019. *DISA* replaced the old *Department of Indian Affairs and Northern Development Act*, RSC 1985, c I-6 and introduced some important standards that were absent from the old act. These include:

- Identifying the group the Department services as "Indigenous peoples" which is defined as having the same meaning as "Aboriginal peoples" within subsection 35(2) of the Constitution Act, 1982. Section 35(2) defines "Aboriginal peoples of Canada" as including the "the Indian, Inuit and Métis peoples of Canada."

- Listing the main activities and responsibilities to be undertaken by the Department. Section 6(2) of the Act states that "[t]he Minister shall ensure services with respect to … (a) child and family services; (b) education; (c) health; (d) social development; (e) economic development; (f) housing; (g) infrastructure; (h) emergency management; [and] (h.1) governance…".

- The preamble of DISA includes commitments by Canada to ensure its service standards are transparent, meets the needs of Indigenous group, consider the socio-economic gaps and negative social factors impacting Indigenous individuals in doing its work,

[114] Deep Drive Jordan's Principle - 2020-09-22 PPT, *supra* note 94 at slide 30.
[115] See *Shiner v Canada,* 2017 FC 515 on orthodontics, which was unsuccessful but resulted in a settlement that included a policy change that considers pain as a criteria for NIHB eligibility; and see August 26, 2021 Letter Decision, *supra* note 87 on capital services.

recognize and promote Indigenous ways of knowing, being and doing, and collaborate and cooperate with Indigenous peoples in its work.

- Section 7(a) of the Act sets out a requirement of the Minister to collaborate in the development, provision, assessment and improvement of the services listed at s 6(2).

In other words, *DISA* requires ISC to ensure that all of its services and programs are needs-based and address socio-economic gaps, and that reform of such programs be done in collaboration with Indigenous communities.[116] It is not clear to what extent *DISA* is being followed by the Department at this time. We believe there is a need for oversight of ISC for its compliance with *DISA*.

Finally, the *DISA* commits Canada to implementing the *United Nations Declaration on the Rights of Indigenous*, as does Canada's 2021 law, the *United Nations Declaration on the Rights of Indigenous Peoples Act*, SC 2021, c 14, which affirms the Declaration as a universal human rights instrument with application to Canadian law. The Declaration contains several articles that ought to inform Canada's delivery of services to Indigenous peoples, including that Canada must take effective measures, and where appropriate, special measures to ensure the continuing improvement of Indigenous peoples' economic and social conditions.[117] We believe there is a need for oversight of ISC for its compliance with the Declaration and *UNDRIPA*.

d) Role of First Nations Caring Society since the Main Decision

Since the Main Decision, Dr. Blackstock and the Caring Society have been playing a crucial advocacy role in supporting families in seeking to access Jordan's Principle and substantive equality, informally providing oversight of ISC's implementation of the CHRT decisions, by bringing issues of non-compliance to the Tribunal's attention as well as continuing to publicly raise awareness of systemic discrimination against First Nations children and families. Further, by drawing on its network of lawyers who assist it on a *pro bono* basis, the Caring Society has engaged in strategic interventions such as intervening with ISC National Office staff to discuss matters on Jordan Principle files as well seeking judicial review of denials, for example, in the case of Josey and Stacy Shiner regarding denial of orthodontics. While this judicial review was unsuccessful, a settlement was reached which included a policy change that considers pain as a criteria for NIHB eligibility.[118] In the case of Carolyn Buffalo-Jackson and her son Noah, the Caring Society and a *pro bono* lawyer prevented a First Nations mother's human right complaint relating to her disabled son from being dismissed by the Canadian Human Rights Commission, leading to a settlement with ISC. In this particular case, Carolyn was both a lawyer and First Nation Chief and still faced significant barriers in navigating the Jordan's Principle and human

[118] See *Shiner v Canada*, *supra* note 115.

rights system.[119] This and other stories of the Caring Societies' interventions provides compelling case-studies of the ongoing needs for advocacy vis-à-vis Canada when it comes to the need for services.

The Caring Society does not receive any funding from Canada but relies on fundraising to sustain itself. In carrying out its extensive advocacy, it relies on its small staff and the generosity of lawyers and other professionals who assist it in its work. The Society and its staff recognize that they cannot help all who need assistance and support and, in our conversations with them, have emphasized the need for formalized and funded advocacy services for First Nations children and families.

e) Role of the provinces

From the 1990s and onwards, some provinces amended their child welfare policies and legislation to attempt to accommodate Indigenous cultures and give some voice to Indigenous communities in apprehension matters. However, such changes were not universal and resulted in a patchwork of protections across the country.[120] This provided unequal protections to Indigenous children across the country until the coming into force of C92. When it comes to the provision of child and family services to First Nations, we are not aware of any provinces who were willing to provide funding to meet the child and family of First Nations children and families to address the shortfalls of the FNCFS Program between the 1990s and 2016.

More broadly, in relation to the provision of services to Indigenous people, despite some provinces endorsing Jordan's Principle (AB, SK, MB, ON, NB, NFLD), up to the present, there continues to be significant reluctance on the part of the provinces to provide services to Indigenous peoples, particularly First Nations living on reserve, although, constitutionally, there is nothing preventing them from doing so.[121] This is illustrated in the 2020 Manitoba Human Rights Panel decision of *Sumner-Pruden v. Manitoba*.[122] In this case, Manitoba's Human Rights Panel agreed that the province discriminated against a young First Nations man with multiple disabilities and his mother for delay, and often denial, of healthcare and related services based on their First Nations status and the fact they lived on reserve. The Panel found that the delays and denials were caused by the policies and practices arising from the exercise of concurrent jurisdiction between the province and federal government, and this amounted to adverse effects discrimination.[123] Importantly, the Panel also found that the province could not rely on

[121] See status report on provincial action on Jordan's Principle in Canadian Pediatric Society, "Are We Doing Enough? A status report on Canadian public policy and child and youth health," 2016 edition at 27. For a discussion of the concurrent jurisdiction between Canada and the province in matters of essential services, see Metallic in *Judicial Tales Retold*, *supra* note 72; see also Sébastien Grammond, "Federal Legislation on Indigenous Child Welfare in Canada" (2018) 28:1 J L & Soc Pol'y 132.
[122] *Sumner-Pruden v Manitoba* (2020), MHRC 15 LP 10.
[123] *Ibid* at paras 22-23.

jurisdictional arguments to justify the discrimination, noting, "The Canadian constitutional framework does not amount to a reasonable justification for the discriminatory treatment of the complainants."[124] Further illustrating provincial reluctance, Manitoba has appealed this ruling, continuing to maintain Canada's ability to fund and/or provide health and disability services on the First Nation constitutes a *bone fide* and reasonable cause for discrimination . This matter also further illustrates the need and importance of advocacy support services as the complainants in the case are represented by lawyers from the Public Interest Law Centre, and only citizens of Manitoba have access to this service.

We have also heard that some provinces have recently been denying funding services for urban Indigenous children in light of Canada's approach to Jordan's Principle since the Main Decision. In our discussion with ISC, Canada advised that it has yet to develop a system for negotiating reimbursement with the provinces in relation to services that Canada determines ought to be paid by provinces. These examples illustrate a further need to hold provinces more accountable to their substantive equality and Jordan's Principle obligations. The Assembly of Seven Generations report clearly emphasized that Indigenous youth and children deserve justice and reparations for the harms that continue to impact daily lives, and in this regard "Indigenous youth and children deserve accountability and responsibility from the federal government, as well as all levels of government."[125]

Beyond the provinces providing services, another area of needed oversight is in relation to those who enforce provincial child welfare laws–and now C92 as well–including agencies, government lawyers and judges, as well as those who represent parents and communities in child welfare proceedings, namely legal aid lawyers and members of the private bar. As noted earlier, there is a major need, especially with the coming into force of C92, for these actors to learn about their obligations under C92. More generally, there is a need to ensure that child welfare law enforcement is carried out appropriately with a knowledge and sensitivity to the history of residential schools and the overrepresentation of Indigenous children in state care through the Sixties Scoop and even up to the present. There are existing accountability bodies that already provide some oversight of child welfare enforcement in the provinces, but it is questionable whether these bodies provide sufficient attention to the challenges faced by Indigenous children and families. We explore this question further in the next section.

f) Conclusion

Addressing the causes of overrepresentation of Indigenous children in state care is a complex matter with deep systemic discrimination underlying it - many of the problems stem from Canada and the provinces' reluctance to prioritize and fund Indigenous children and families' needs. Canadian courts have done little to protect or vindicate these interests over the past 70 years. While courts provide some backstop on accountability issues, such as in matters of judicial review, generally, they lack the jurisdiction to address systemic discrimination

[124] *Ibid* at para 25.
[125] Assembly of Seven Generations, *supra* note 7 at p. 31.

complaints in the same way as human rights bodies or provide the types of systemic remedies that are needed to address long-standing systemic problems.[126]

Through the Main Decision and subsequent orders, the Canadian Human Rights Tribunal has been instrumental in holding the federal government accountable for systemic underfunding in the FNCFS Program and implementing Jordan's Principle. This is especially so because the Tribunal is remaining seized of its jurisdiction over the case until all outstanding remedial issues have been addressed. There will come a day, however, when the Tribunal will relinquish jurisdiction over the case. Given the very long history of systemic discrimination against Indigenous people by the government in Canada, particularly in the area of service delivery, we are not hopeful that this will signal the end of all such discrimination and believe it will be important to have alternative accountability mechanisms in place. Further, like the courts, the role of tribunals are reactive and not proactive. Tribunals and courts decide the matters in front of them based on evidence put forward by the parties. They cannot entertain or propose broader systemic solutions to problems. This is what fuels the need for consideration of other accountability mechanisms.

[126] See for example *Malone v Canada (AG)*, 2021 FC 127, where a child self-identified as Mi'kmaq Acadian with connections to the Mi'kmaq First Nations people flowing through their maternal side since 1700's was seeking judicial review of the ISC Jordan's Principle Appeals Committee's decision to deny him funding under Jordan's Principle on the basis that such funding was only available to First Nations children registered as Indians under the *Indian Act*. In denying the judicial review, the Federal Court was deferential to Canada's approach to eligibility criteria for Jordan's Principle without scrutinizing the systemic discrimination underlying such criteria. This is in stark contrast to the analysis of the Canadian Human Rights Tribunal on the issues of lack of Indian status and Jordan's Principle eligibility criteria in 2019 CHRT 7 (interim) and 2020 CHRT 36.

Part 2: What specific issues should be addressed by an accountability mechanism?

In undertaking our research, we learned there are several options and minute details to consider around different accountability mechanisms. It can be easy to get distracted by these. However, Linda Reif, author of *Ombuds Institutions, Good Governance and the International Human Rights System*, reminded us that the driving question in designing any accountability mechanism should be, "*What are the real accountability problems we want to address*?"

Based on the context and issues related in Part 1, we have identified ten different accountability problems that we strongly feel must be addressed in the context of ensuring the well-being of Indigenous children in Canada. We set these out below, explaining why these are crucial accountability needs that must be addressed. In the next section, we identify key features of effective accountability mechanisms and recommend three different accountability mechanisms that we believe can most effectively address these accountability needs if implemented together.

Need #1: Oversight of the current Jordan's Principle process at ISC

We heard very clearly from Caring Society staff and the lawyers who have been involved in the case that this has to be a key function of any accountability mechanism. We heard concerns about the design of the Jordan's Principle request process, inadequate funding to cover all costs related to the provision of child and family services, delays in process requests, inability to accommodate urgent and emergency cases, lack of transparency in decision-making and data collection, and more. In their 2021 article, Sinha et al. identify a number of short-term recommendations to improve the current Jordan's Principle process.[127] However, they also stress that ongoing, comprehensive assessment of Canada's commitment to Jordan's Principle is needed, including collection and independent analysis of data collected by ISC.[128] We agree.

At this time, given the deep systemic inequality in services faced by First Nations children, an effective Jordan's Principle process is necessary in order to meet the immediate needs of Indigenous children and families, and we believe that any body providing independent oversight and recommendations to ISC is the best way to ensure this. While ISC staff may be well-intentioned and committed to implementing the Tribunals orders, staff turnover is frequent, the legacy of systemic discrimination runs deep within ISC, challenges due to the confidential nature of Jordan's Principle requests, and concerns of retaliation when staff attempt to address systemic discrimination, all demonstrate the need for independent oversight by a body with expertise in the nature of systemic discrimination faced by Indigenous children and families is in order to ensure that mistakes of the past are not repeated.

[127] Sinha et al., *supra* note 92 at 42.
[128] *Ibid* at 24 and 41.

Need #2: Overseeing of ISC's long-term reform of CFS, including funding of agencies, as well as CIRNAC's funding and negotiation of self-government under C92

Understandably, given the immediate needs of First Nations children and families, a lot of the focus and attention since the Main Decision has been on effectively implementing Jordan's Principle. However, we cannot lose sight of the fact that one of the main orders from the Main Decision was for Canada to "REFORM" the FNCFS Program, or that much of the evidence in the case was about Canada knowingly underfunding the Program for over a decade.[129] There are few public details available about the plans for long term reform in relation to the FNCFS program. We are surprised that, almost six years since the Main Decision, there isn't more available. This indicates a strong need for an independent oversight of Canada in order to ensure that it follows through with long-term reform of the FNCFS Program.

The introduction of the C92 legislation was in response to addressing long-term reform of child welfare, and needs to be viewed as such.[130] If ISC and CIRNAC staff are denying any connection between the Main Decision and Canada's obligations in relation to C92, internal education and external accountability is needed. As noted early, the Tribunal clearly made a connection between long-term reform and self-government.[131] This means that the legal principles identified as applicable to long-term reform, such as Canada's key role in funding child welfare services on reserve, its fiduciary obligations to ensure the best interest of First Nations children and families,[132] as well as the requirement to ensure substantive equality in funding and services, are equally applicable to Canada's obligations to fund self-government under C92.

There have been concerns raised about Canada using the vague funding requirements in relation to self-government in C92 to sustain the same types of jurisdictional wrangling that has been harming Indigenous children and families for decades.[133] Accounts of Canada not being transparent or clear in its approach to funding negotiations, and requiring Indigenous governing bodies to sign confidentiality agreements only accentuate these concerns. For these reasons, we believe oversight of long-term reform over child welfare, including the implementation of C92, is a serious accountability need that must be addressed.

Need #3: Oversight of Canada's efforts addressing systemic inequality in services related to Indigenous children and families

As noted earlier, there appears to be significant reluctance on the part of Canada to see that long-term reform includes ending the long-standing systemic underfunding in its services that

---

[129] *Caring Society* 2019, *supra* note 1 at para 463 and see also paras 267 and 335-339.

[130] Canada first announced its plans to pass legislation at an national emergency meeting on Indigenous child welfare - see note 97.

[131] This is particularly apparent in 2018 CHRT 4, *supra* note 88 at paras 407-412

[132] See *Caring Society, supra* note 1 at paras 90-110; and 2016 CHRT 10 at para 116.

[133] See "*An Act Respecting First Nations, Inuit and Métis Children, Youth and Families*: Does Bill C-92 make the grade?," and "The promise and pitfalls of C-92: *An Act Respecting First Nations, Inuit and Métis Children, Youth and Families*," *supra* note 102.

affect long-term child and family well-being. This includes, but is not limited to, ISC's programming in education, to health services, child development, assisted living and respite, infrastructure, and social assistance. It is clear from the Main Decision and several subsequent orders from the Tribunal that eliminating systemic inequality in the services that affect First Nations children and families is the ultimate long-term objective of Jordan's Principle.[134]

We agree with Sinha et al. that Canada must be held accountable to achieving substantive equality in all services that affect long-term child and family well-being, not simply continuing to use Jordan's Principle as a stop gap measure.[135] Otherwise, as they observe, this will simply perpetuate 'projectification' of Jordan's Principle and not address its true purpose. In this regard, it will be crucial for Canada to see its obligation in relation to these services as providing substantive equality, not just ensure a comparable level to provincial services, as this was found to be discriminatory in the Main Decision. Further, the *Department of Indigenous Services Act* also requires Canada to provide services that, similarly, are needs-based and address socio-economic gaps faced by Indigenous groups.

Finally, there have been several reports, including from the Truth and Reconciliation Commission and the National Inquiry into Missing and Murdered Indigenous Women and Girls that have made several recommendations for the elimination systemic inequality in service delivery in relation to Indigenous children and families. We believe that part of the oversight of Canada here could also include assessment of relevant recommendations that Canada has committed to implementing.

Need #4: Oversight of federal-provincial efforts at cooperation in relation to funding and servicing of Indigenous children and families

Jordan's Principle recognizes that jurisdictional disputes between the provincial and federal governments (as well as disputes between departments within governments) should not result in the delay or denial of services that an Indigenous child is entitled to. It is not just a resolution of Parliament; it has been recognized by the courts and by the Tribunal as a human rights principle, which has both a substantive equality right and jurisdictional dimension to ensure First Nations children and families don't bear the brunt of jurisdictional disputes.[136]

The government of first contact should pay first, with any disputes over who pays to be determined between the governments at a later time. Under Canadian constitutional principles, both the federal and provincial governments have the jurisdiction to provide services to

[134] See *Caring Society* 2016, *supra* note 1 at paras 362, 364, 374 and 391; 2017 CHRT 14 at paras 85 and 107; and 2020 CHRT 36 at para 12-14.
[135] Sinha et al., *supra* note 92 at 24.
[136] See *Pictou Landing Band Council v. Canada (Attorney General)*, 2013 FC 342 at 96-97; and see the Tribunal in CHRT 2020 36 at para 12, "Jordan's Principle is a human rights principle grounded in substantive equality … [i]t is part of the solution for remedying the discrimination found in [the Main Decision … [it] not limited to the child welfare program and instead addresses all inequalities and gaps in federal programs for First Nations children." See also Colleen Sheppard, "Jordan's Principle: Reconciliation and the First Nations Child," (2018) 27:1 Constitutional Forum 1.

Indigenous peoples. This is known as an area of 'concurrent jurisdiction.'[137] Jordan's Principle therefore mandates cooperation between the federal and provincial governments to ensure essential services are received by First Nations children and families and to work out who is responsible for funding what. However, there is currently little evidence that any such cooperation is occuring. ISC has advised that it is currently not pursuing provinces for reimbursement of any Jordan Principle expenses. While a handful of provinces have endorsed Jordan's Principle, few seem to be respecting it and most seem to still take the view that funding services to Indigenous children and families is Canada's sole responsibility.

While Canada seems to be carrying a majority of the responsibility for funding at this time (while it continues to be heavily scrutinized for compliance with the Tribunal's orders), we easily can imagine a future date where a different administration of the federal government may claim it has 'done its part' on Jordan's Principle and say it is time for the provinces to pull their weight. This would likely revive the old jurisdictional wrangling that has caused so much harm to Indigenous children and families for decades. There is a need for a body to oversee and monitor Canada and the provinces' efforts to cooperate on this key human rights issue, as well as make recommendations of legal principles and processes that can inform the cooperation between Canada and the provinces on the sharing of funding responsibilities over Indigenous services. Similar oversight is needed with respect to cooperation between Canada and the provinces in relation to funding of self-government and compliance with national standards under C92.

Need #5: Ongoing education to ISC, CIRNA, provincial DCS staff, provincial agencies, Social workers, Crown lawyers, legal aid lawyers, judges.

There are ongoing education needs to ensure that ISC and CIRNA staff, as well as various actors involved in the enforcement of provincial child welfare legislation and now C92. In order for there to be meaningful change, all of these actors need to properly understand the context of the systemic discrimination in services to Indigenous children and families that has resulted in the overrepresentation of Indigenous children in care, and how this relates to and impacts how these professionals carry out the functions of their position. As noted in the previous section, some of this education is currently not happening, or only on an *ad hoc* basis. A systematic approach to educating these individuals is needed.

There is also a strong need for Indigenous communities to receive education and capacity building to support their efforts to exercise jurisdiction in relation to child and family services, as well as understand their rights as set out in the minimum national standards under C92.

[137] For a discussion of the concurrent jurisdiction between Canada and the province in matters of essential services, see Metallic in *Judicial Tales Retold*, *supra* note 72; see also Sébastien Grammond, "Federal Legislation on Indigenous Child Welfare in Canada", *supra* note 121.

Need #6: Investigating and mediating individual complaints about provincial governments' funding failure to provide services to Indigenous children and families

As noted previously, many provinces are currently not meeting their obligations to provide services to Indigenous children and families. Most continue to take the position that this is the sole or primary responsibility of the government of Canada.[138] All provinces in Canada have Ombuds or Ombuds-like offices that could, in theory, investigate denial of services by provinces to Indigenous children and families. In practice, there is no evidence that provincial ombuds or child advocates are holding provinces accountable for their responsibilities to provide services to Indigenous children and families. This may either be because provincial ombuds offices' lack awareness of the provinces' obligations in this area, or because Indigenous families do not fit within their mandated criteria, or may not be aware of, or may not feel comfortable accessing, this avenue for accountability. In any event, this gap signals the need for some further accountability mechanisms to support Indigenous children and families vis-a-vis provinces.

Need #7: Investigating and mediating individual complaints about child welfare agencies' implementation of CFS laws and policies, including C92

Currently, NL, PEI, NB, MB, SK, AB, BC, YK and NU have child advocates offices charged with oversight of provincial child welfare services. In NS and ON, concerns about the conduct of child welfare authorities are dealt with by the provincial Ombuds office. In QC, such concerns are sent to Quebec's human rights commission.

Public inquiries in MB and BC called for child advocates offices to advocate for Indigenous parents and children in the child welfare system, and to monitor the actions of the child welfare authorities.[139] The 2019 Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls called for the urgent establishment of units with specialized mandates in relation to Indigenous children and youth within the offices of child advocates in each province.[140] Currently, the extent of prioritization of Indigenous children within child advocate offices across the country appears to be patchwork. Only MB, AB, PEI, YK and NU have explicit provisions on Indigenous children and families in their child advocate laws.[141] Only the websites of MB, BC, YK and NU suggest Indigenous issues are a focus of Child Advocate's work. Further, some provincial child advocates offices are more limited in the extent of own-motion or systemic inquiries they can undertake.[142]

---

[138] See *Sumner-Pruden v Manitoba, supra* at note 122.

[139] See the Manitoba Justice Inquiry (1991), Chapter 14, and *British Columbia Children and Youth Review Final Report* (2006).

[140] MMIWG Final Report, *supra* note 73, Executive Summary, 2019, Call for Justice 12.9.

[141] Manitoba's *The Advocate for Children and Youth Act,* CCSM, c A6.7, s 8(2); Alberta's *Child and Youth Advocate Act*, SA 2011, c C-11.5, s. 9.4; Nunavut's *Consolidation of Representative for Children and Youth Act,* SNu 2013, c 27, ss 5 and 6(1)(a); Yukon's *Child and Youth Advocate Act,* SY 2009, c 1, ss 3, 4(5)(a), 13-14 and 17; Prince Edward Island's *Child and Youth Advocate Act*, RSPEI 1988, c C-4.3, s 12(1)(c).

[142] From our research, the child advocates in NL, NB, MB, for example, appear to have more limited jurisdiction over some types of complaints.

Particularly with the passage of C92, there is strong need to ensure provincial child welfare authorities across the country are adhering to the minimum standards in the new federal law, and to ensure more generally that these authorities are not contributing, through their actions or inaction, to the overrepresentation of Indigenous children in government care. It is not clear to us that this is a priority for most provincial child advocates (or ombuds) offices, which suggest the need for a further accountability mechanism to ensure the needs Indigenous children and families' for oversight of child welfare authorities are not falling through the cracks.

Need #8: Powers for enforceable orders against Canada for non-compliance with Jordan's Principle, substantive equality and other relevant laws and international requirements (C-92, *DISA*, UNDRIP, CRC, etc)

While we believe that having an accountability body to oversee, monitor and make recommendations to Canada on the provisions of services for Indigenous children and families is necessary (needs #1-6), we do not believe this is sufficient on its own to fully ensure accountability conditions under which Canada will make meaningful change.

While there is an important role for oversight and advice in accountability offered by bodies such as Ombuds and Child Advocates, these are circumstances that warrant stronger measures. In some countries that have faced extensive problems of political corruption, ombuds or commissions have been given enforcement powers in some cases.[143] While Canada does not face the challenges to democracy similar to those countries, we do not think it is an exaggeration to analogize the gravity of these problems to the extent of discrimination that Indigenous children and families have faced for decades. Canada's long history of systemic discrimination in relation to services resulting in the taking of thousands of children – called "one of the worst possible cases" of racial discrimination seen by the Tribunal[144] – as well as the intransigence the government has shown to change even following the *Caring Society* 2016 Main Decision, fully convinces us that enforcement powers must be a necessary last resort. As we stated at the outset, the overrepresentation of Indigenous children in state care and the federal government's role in this constitutes one of most serious, ongoing human rights violations in our country's history.

That said, we appreciate that it is not common within Canada to provide enforcement powers to ombuds-like bodies who primarily provide advisory functions.[145] Rather, as will be further developed below, what we envision is a 'layering' of accountability mechanisms through having both a National Indigenous Child and Family Advocate and Tribunal, the former providing ombuds-like oversight functions and the latter providing adjudication and having enforcement powers. The Advocate would have the power to investigate the implementation of Jordan's Principle and the substantive equality rights of Indigenous children and families' in relation to essential services, as well as CFS laws and policies, including C92. In addition to addressing

[143] See, for example, Reif *supra* note 3 at 556-557 (Ecuador Defensoría del Pueblo), and 646 (Kenya Commission on Administrative Justice).
[144] 2019 CHRT 39 at para 13, aff'd 2021 FC 969.
[145] Reif, *supra* note 3 at 24-26, 110, 243, 244, 748.

systemic and education issues, the Advocate would also assist Indigenous children and families resolve individual complaints through informal and confidential means. The Tribunal would have the jurisdiction to adjudicate individual, group, community and Advocate-initiated complaints in the same areas as noted above. We believe a dedicated Advocate and Tribunal is what will be most effective to bring real change to the long-standing discrimination and neglect of the needs of Indigenous children and families in Canada. The Tribunal would enforce Canada's substantive equality and statutory human rights obligations under domestic law (human rights legislation and the *Charter*), as well as its obligations under C92, *DISA*, the *UN Declaration* and *UNDRIPA*, as well as other international instruments such as the *Convention on the Rights of the Child*. Finally, it will be imperative that the Tribunal have strong remedial powers, including robust supervisory jurisdiction. Supervisory jurisdiction has been key to the Canadian Human Rights Tribunal ability to affect change in the *Caring Society* and something similar to take its place is necessary for when the Tribunal is no longer seized of the case.

Need #9: Powers for enforceable orders against provinces for non-compliance with Jordan's Principle, substantive equality against provinces and relevant laws and international requirements (C-92, UNDRIP, CRC, etc)

Similar to our conclusion in need #8, and building on our points discussed at needs #6-7, we believe the history of provincial neglect of Indigenous children and families needs justifies having a body that can also grant binding orders against the provinces for their failure to respect their obligations under both domestic and international instruments in relation to the Indigenous children and families.

Need #10: Formal advocacy for First Nations children, families and communities for government services and in child welfare matters

Indigenous children and their families experience significant barriers in accessing existing avenues to hold governments for violations of their rights to services. Barriers can include lack of awareness of avenues, lack of resources or capacity to advocate on their own behalf, fear of retaliation, language and literacy challenges, and more. The case of Carolyn and Noah Buffalo-Jackson, related earlier, shows that even where First Nations parents have a legal education and influence to advocate for their children, attempting to resolve disputes with Canada can be very challenging, as well as navigating the Canadian Human Rights Commission system.[146]

While the Caring Society and its network of *pro bono* lawyers have been supporting families and communities to the best of their ability in an *ad hoc* way and on a shoe-string budget, we believe there is a strong need for formal, funded advocacy to support Indigenous children and families in their disputes with both the federal and provincial governments over the provision of services to children and families, as well as with child welfare agencies in their enforcement of child welfare laws. Such supports should run the gamut from providing information to navigate the different avenues for recourse, to filling forms, letter writings and speaking on their behalf, to

[146] See "Buffalo v Canada – My Family's Fight for the Right for Noah to ride a bus to school," *supra* note 119.

pursuing Ombuds, Child Advocate, human rights challenges or judicial review. To our knowledge, most legal aid plans across the country, except for the Manitoba Public Interest Law Center, largely do not see their jurisdiction as extending to advocacy for pursuing denials and delay of services.

We would also see an important role for such advocates to represent parents, care providers and communities who now have a right to be represented, appear and make submissions in child welfare proceedings pursuant to the national standards in C92.[147] Except for parents, other care-givers and communities are not generally eligible for representation under most provincial legal aid plans, and so, without state-funded representation in these matters, their legal rights under C92 are rendered meaningless. Further, the guarantees of substantive equality in the exercise of the rights of children, their family members and communities under C92 suggest a positive obligation on governments to make legal services available (and Jordan's Principle provides a framework for determining who pays and reimbursement).

[147] *An Act respecting First Nations, Inuit and Métis children, youth and families, supra* note 98 ss 12-13.

Part 3: What does effective accountability look like?

Here, we set out and explain those common features we believe are necessary for the accountability mechanisms to have, and then we identify and explain three accountability mechanisms we have selected. It bears repeating that what effective accountability looks like is context-driven. Therefore, the history and needs identified in Part 1 and 2 drive our recommendations in this Part.

a) External accountability mechanisms

While there can be both internal and external forms of accountability (e.g., mechanisms within the department versus those arms-length and independent from it),[148] our recommendations focus on external mechanisms. Currently, there are no external non-judicial accountability mechanisms that apply to the work of ISC and CIRNAC.[149] While external accountability mechanisms, such as Ombud and Child Advocate offices exist within the provinces, it does not appear that most of these bodies see themselves as having a role in holding provincial authorities accountable for adequate services delivery to Indigenous children and families.

Our focus on external mechanisms are not intended to discourage Canada, particularly the staff of ISC, from developing internal mechanisms for accountability, such as staff training, internal audits, dispute resolution mechanisms, reporting, etc. ISC is already engaging in some of these activities, and it should continue to do so. Further actions that ISC could be taking include:

- Creating a Code of Ethics and Network Panel as a framework for funding community-based youth organizations that would inform the disbursements of any funds that implicate Indigenous youth, and the co-development of the Indigenous Youth Voice Government of Canada Fund;[150]

- Putting in place internal human rights champions who are responsible for engaging with service coordinators and Indigenous children, families and communities to review and evaluate ISC processes, including standing operating procedures and policies, and advocate for changes to ensure compliance with principles of substantive equality to those with the authority to make changes;

- Review all Jordan's Principle requests, including those with inadequate documentation, to identify where ISC can reduce demands for documentation to a minimal data set, particularly for services commonly approved or falling within the "normative standard of care." This may result in greater efficiency for ISC, and possibly lead to two streams of

[148] Kent Roach, "Models of Civilian Police Review: The Objectives and Mechanisms of Legal and Political Regulation of the Police," (2012) 61 *Crim Law Q* 29 at 71.
[149] Our research uncovered reference to an Ombudsman at the Department of Indian Affairs and Northern Development at some point, but no longer appears to exist. It was an internal body with only the softest type of ombuds powers: see Ombudsman for the Department of National Defense and the Canadian Armed Forces "The Way Forward – Action Plan for the Office of the Ombudsman" Jan 20, 1999, at p 21).
[150] Assembly of Seven Generations *supra* note 7 at 6.

claims (i.e. simple or complex; at or above normative standard of care), with documentation and process requirements that are proportional to the type of claim.[151]

- Reverse the onus of who has to establish how the requested service meets the standard of substantive equality, by requiring ISC staff to identify and give written reasons as to where and why they believe a specific request does not fall within that standard, prior to claimants ever being asked to explain how their request falls within this. This still addresses the issue but takes the burden off individual claimants and acknowledges it is ISC's responsibility to deliver services that meet the standard, not individuals to argue for their own substantive equality to ISC.
- Create and use confidential release forms, that, with the consent of Indigenous children and families, give their third party representatives access to information in order to advocate and support clarification, claims and/or appeals.
- Fund the advocates or lawyers who are supporting the ad hoc advocacy work of the Caring Society in the interim.

It is important to note that these actions do not replace the mechanisms we are proposing in this report. Nonetheless, they could and should be implemented in the interim while these mechanisms are being established. The long history of interjurisdictional wrangling and neglect by both Canada and the provinces leading to pervasive underfunding of services to Indigenous children and families, as well as continued resistance by Canada to implement the Tribunal's orders in the last six years, all make it clear to us that arms-length, external accountability mechanisms are necessary.

b) Legislated mechanisms, not simply created by the executive

To ensure the independence of these external accountability mechanisms, which is crucial for the same reasons as noted in the preceding section, we believe that these mechanisms must be legislated by Parliament and not simply be created by the executive.[152] Many of the external accountability mechanisms of the federal government tend to be created by the executive (the Governor in Council through orders in Council or through regulation). This can severely hamper the independence and powers of the accountability body. For example, the National Defence and Canadian Armed Forces Ombudsman, created by the executive, has been critiqued in several reports for having serious problems with its independence, ability to ensure confidentiality, ability to serve its constituents, operate effectively and fulfill its mandate.[153]

[151] See also Sinha et al, *supra* note 92 at 42, who make several thoughtful recommendations for short-term reform to improve the Jordan's Principle request process.
[152] See Reif, *supra* note 3 at 344.
[153] Ombudsman for the Department of National Defense and the Canadian Armed Forces "The Way Forward – Action Plan for the Office of the Ombudsman" Jan 20, 1999, at 6, 11; André Martin, Ombudsman, "Overhauling Oversight: Ombudsman White Paper, March 30th, 2005, at 1, 13, 33; National Defence and Canadian Forces "The Case for a Permanent and Independent Ombudsman Office: The Defence Community Deserves No Less", March 2017 Report to the Minister of National Defence, at 8, 9, 10, 14, 15, 17, 18.

In our conversation with Professor Reif, an expert on human rights accountability mechanisms, she stressed that for effective independence from the government of the day, legislatures, and not executives, ought to be the ones to create accountability bodies, appoint their leadership, oversee the bodies' functions, and be the government entity receiving reports from the body.[154] Reif noted this has been a challenge for the federal government, pointing out that even the Canadian Human Rights Commission is not entirely independent from government, since its Executive Director is appointed by the Governor in Council. We agree with the Caring Society that it would be important for the selection of the leaders of our proposed accountability mechanisms to be arms-length from the executive. There are precedents of how this can work.[155]

As will be seen further below, we believe the three interconnected mechanisms we propose could be legislated within the same statute.

c) Mechanism with specific mandates relating to Indigenous children and families

There have been recent calls for the creation of accountability mechanisms on Indigenous issues that could potentially serve as accountability mechanisms to address the accountability needs identified in this report. However, we believe that the unparallelled gravity and longevity of the ongoing substantive equality and statutory human rights violations of Indigenous children and families requires the creation of mechanisms with specific mandates in relation to Indigenous children and families.[156]

The 2015 Report of the Truth and Reconciliation Commission recommended the creation of a National Council for Reconciliation to monitor, evaluate and report annually on Canada's progress on reconciliation, including implementation of the calls to action.[157] In Budget 2019, Canada announced $126.5 million in fiscal year 2020 to 2021 to establish a National Council for Reconciliation and endow it with initial operating capital.[158] Despite the TRC containing five calls to action on child welfare, our concern would be that the focus of the Nation Council on

---

[154] See also Reif, *supra* note 3 at 179, 182, and 748.

[155] See for example, ss. 2(1)-(3) of Alberta's *Child and Youth Advocate Act*, *supra* note 141 , which requires the executive to appoint the Child and Youth Advocate based on the recommendation of the Legislative Assembly. Parliament's selection coud, in turn, be based on recommendations from Indigenous organizations, or possibly even elections for the role. An interesting model is the bylaws of the former Court Challenges Program, where members of the funding selection committee were elected by organizations representing equality-seeking advocacy groups and had to identify as a member of a group protected under section 15 of the *Charter*.

[156] See Reif, *supra* note 3 at 77, where Reif highlights the benefits of specific mandates to seriously prioritize addressing concerns for discrete vulnerable populations.

[157] TRC, *supra* note 65 at 215-219. In making this recommendation, the TRC noted Canada's poor record of accountability, and reconciliation, observing that Canada has long ignored its obligations and has breached and failed in its duty to do the work needed to revitalize its relationship with Indigenous peoples. However, the monitoring would go beyond the federal government and include all levels and sectors of Canadian society.

[158] CIRNAC website, "National Council for Reconciliation" under tab, "What's happening?" online: https://www.rcaanc-cirnac.gc.ca/eng/1524503926054/1557514163015.

Reconciliation would likely be too diffuse to provide the necessary attention to the accountability needs identified in Part 2. Further, it's not clear what kind of investigation, recommendation or enforcement powers, if any, a National Council would have, thus it likely would lack sufficient powers to be effective in the circumstances.

The 2019 Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls called for the creation of both a National Child and Youth Commissioner to strengthen the framework of accountability for the rights of Indigenous children in Canada, as well as National Indigenous and Human Rights Ombudsperson and a National Indigenous and Human Rights Tribunal.[159] The proposed scope and jurisdiction of these mechanisms by the National Inquiry was broad, suggesting these mechanisms could be designed to possess effective powers to hold governments accountable in the area of child welfare, Jordan's Principle and services for Indigenous children and families. Canada's June 2021 MMIWG National Action Plan has partly taken up this recommendation, identifying the creation of "an oversight body which represents the interests of families, survivors, and Indigenous communities by investigating and addressing mal-administration or a violation of rights" as a short-term priority that it will begin to implement.[160] This scope, however, appears focused on the interests of the families and communities of missing and murdered Indigenous women and girls. It therefore would not be sufficient to address the accountability needs identified in Part 2.

In June 2020, Senator Rosemary Moodie introduced Bill S-217, *An Act to establish the Office of Commissioner for Children and Youth in Canada* (which died on the order paper when the election was called in the summer of 2021).[161] The bill proposed the creation of an independent Commissioner to serve children and youth in Canada to promote, monitor and report on Canada's implementation of its obligation to advance the rights of children and youth, focusing on the best interests of the child. The bill was criticized by the Caring Society and other Indigenous advocates, as well as some First Nation Senators, for not being sufficiently focused on the needs of Indigenous children.[162] The bill provided, but did not mandate, the creation of an Assistant Commissioner on First Nations, Inuit and Metis children and youth matters. It also did not contemplate the Commissioner having any oversight and enforcement over legislation like C92 and *DISA*, or implementation by Canada of Jordan's Principle or substantive equality.

A report from the Assembly of Seven Generations also concluded that Bill S-217 did not meet Indigenous youth needs around accountability. The report suggests that Indigenous youth and children seemed to be an afterthought in the Bill. Other concerns raised include Bill S-217 providing the Commissioner insufficient powers to hold governments accountable. The Assembly of Seven Generations' report indicated that Indigenous youth want to have ongoing

conversations about accountability: regional conversations and to establish an ongoing network to share best practices and critical discussions on the topic of accountability.[163] On this point, the literature is clear that effective accountability mechanisms geared at children should be child and youth-informed.[164]

We agree with the Assembly of Seven Generations' report that, to address the long and ongoing history of discrimination faced by Indigenous children and families in Canada, effective accountability mechanisms have to be specifically focused on them. While there may be a need for a federal children's commission focused on the needs of other children (and our recommendations are not intended to dissuade Canada from taking other action on this front), no other group of children have been so detrimentally affected by Canada's exercise of jurisdiction over them. The context justifies an Indigenous-specific national child and family commissioner (or advocate).

d) Mechanisms with powers over all Indigenous children

We believe that effective accountability mechanisms must be focused on all Indigenous children and families, including First Nations (status and non-status), as well as Métis, and Inuit. While the FNFCS Program and the *Caring Society* decision focused on First Nations children (e.g., with Indian status) on reserve, we do not think the accountability needs discussed in this report are limited to status First Nations children and families on reserve.

The exclusion of non-status, Metis and Inuit children from the FNCFS program is a by-product of the same jurisdictional wrangling and discrimination that has preoccupied the federal and provincial governments for over 70 years. Canada did not discriminate between groups when it came to residential schools: Inuit and Metis children were forced to attend along with First Nations children.[165] However, after World War 2, Canada only begrudgingly accepted to provide services on reserves after much public pressure, and then provided inadequate services to First Nations.[166] Similarly, the provinces only begrudgingly provided services to Metis, non-status and off-reserve First Nations because Canada refused to, and were often similarly as neglectful as Canada in the delivery of services to these groups.[167] Due to a ruling from the

Supreme Court of Canada, the federal government was eventually forced to provide services to the Inuit, and then chose to do without a legislative framework and inadequately.[168]

In our view, only recommending accountability mechanisms for status First Nations children and families on reserve would be akin to reproducing the same jurisdictional neglect by Canada and the provinces that has been harming Indigenous children and families for decades. The Assembly of Seven Generations also acknowledged problems with the exclusion of Métis children from Jordan's Principle and Inuit Children First Initiative services.[169] Furthermore, decisions of the Supreme Court of Canada have now clearly confirmed that the federal jurisdiction over "Indians" includes First Nations, both status and non-status, Metis and Inuit peoples.[170] Due to ongoing discrimination through the second-generation cut-off rule in the *Indian Act*, since 1985, more and more First Nations are without status.[171] Recently Canada seems to have accepted its jurisdiction in relation to all three groups: *DISA* recognizes ISC's jurisdiction in relation to all three groups, and C92 extends the protections in the act to all Indigenous peoples.[172] Further, even the Tribunal in *Caring Society* has extended the protection of Jordan's Principle beyond status First Nations children living on reserve.[173] For all these reasons, we strongly feel that accountability should be extended to all Indigenous children and families.

We feel such an inclusive approach is necessary to ensure Indigenous children do not fall through jurisdictional cracks in the future. There are precedents in situations involving the human rights complaints of a subgroup of a larger equity-seeking group, where human rights tribunals have issued broader, more inclusive remedies to the larger equity-seeking group in order to effectively prevent future discrimination. For example, in the case of discrimination on the basis of mobility rights in accessing voting stations, the Canadian Human Rights Tribunal ordered the respondent, Elections Canada, to engage in greater consultation with voters with disabilities and disability groups (not just those with mobility disabilities) in order to prevent similar discriminatory practices in the future.[174] In another case involving discrimination on the basis of a person identifying as pangender for not having the ability to properly self-identify their gender on the provincial birth certificates, a Manitoba human rights panel ordered the government to revise its criteria for changing sex designation to include recognition of non-binary sex designations (not just for pangender peoples only).[175] Such an inclusive approach would prevent similar complaints of discrimination from other categories of non-binary persons in the future.

Inclusive is different from pan-Indigenous. Instead of treating all Indigenous peoples identically, as a pan-Indigenous approach seeks to do, an inclusive approach, while recognizing all Indigenous peoples are worthy of human rights protection, acknowledges there can be differences between different sub-groups that need to be accommodated. An inclusive approach does not prevent a distinctions-based approach when necessary or appropriate. For example, distinctions based on unique needs and the diverse legal traditions among Indigenous peoples may be appropriate to achieve equitable outcomes.

e) Mechanisms that bypass jurisdictional wrangling

Further developing a theme from the last section, we believe that effective accountability in the circumstances must challenge the conventional jurisdictional boundaries the federal and provincial governments have set for themselves. These are the same jurisdictional boundaries that have facilitated decades of neglect of the needs of Indigenous children and families.

In other words, we do not think it will be effective if the jurisdiction of a federal accountability body over Indigenous children and families is solely focused on the conduct of federal authorities, leaving the conduct of provincial authorities in relation to Indigenous children and families to provincial accountability bodies. This will stymie robust oversight, allowing the needs of some Indigenous children and families to fall through the cracks as they have for decades. They need to be addressed together, since it is the combined force of neglect, denials and delays from both the federal and provincial governments that is continuing to harm Indigenous children and families. The fact is that various federal and provincial actors operate within the complex matrix of essential service delivery and child welfare enforcement that affect the well-being of Indigenous children and families. Trying to separate out issues to be dealt with by different federal and provincial accountability mechanisms will only result in delays and denials of services that harm Indigenous children and families.

This issue can be illustrated by the example of an Indigenous child seeking to challenge a denial of the same service by both Canada and their home province as violating their right to substantive equality and Jordan's Principle. Under current law, it would be impossible for the child to bring a discrimination complaint against Canada and the province in the same forum. She would have to bring a complaint against Canada to the Canadian Human Rights Commission, and bring another complaint against the province to her provincial human rights commission.[176] She would face the same issue if she sought to judicially review the decisions of Canada and the province; Canada would have to be sued in Federal Court and the province sued in her provincial superior court.[177] These scenarios present risks of inconsistent legal

[176] This is because the jurisdiction of these tribunals is generally limited to the actions of the enacting government. However, it is possible for Canada to create a tribunal with jurisdiction over both federal and provincial action as we discuss below.

[177] Judicial review against Canada must be instituted in the Federal Court: *Federal Courts Act*, RSC 1985, c F-7, s 18. See also *Mousseau v. Canada (Attorney General)* (1993), 126 NSR (2d) 33 (NSCA), *Nolan v. Canada (Attorney General)*(1998), 155 DLR (4th) 728, and *Ochapowace Indian Band No. 71 v. Canada,* (1999) 167 Sask. R. 167

rulings, increased chances of appeals, delays and increased costs.[178] All of which is not in keeping with the spirit of Jordan's Principle that jurisdictional wrangling should not delay timely access to services by Indigenous children. As one of the pro bono lawyers for the Caring Society aptly put it: "Currently in Canada, there is a Jordan Principle problem with trying to vindicate Jordan's Principle."[179] Such a result is unacceptable in light of the long history of discrimination, delay and denial faced by Indigenous children and families. It is also unnecessary.

Under its jurisdiction under s. 91(24) of the *Constitution Act, 1982*, the federal government has the power to legislate in relation to Indigenous peoples in areas that would otherwise be regarded as areas of provincial jurisdiction. Such legislation can have incidental impacts on provinces.[180] Even legislative provisions that on their face encroach on provincial powers can be upheld so long as they are necessary to the effective functioning of the legislation.[181] This is all to say that Canada can pass legislation that would give an accountability body the power to investigate as well as make binding orders in relation to provincial authorities' actions in relation to Indigenous children and families. Historically, Canada has been reluctant to use its legislative powers to provide protection to Indigenous peoples from the provinces.[182] However, such action is in keeping with Canada's fiduciary and treaty obligations to Indigenous peoples, the Honour of the Crown and reconciliation.[183] With C92, however, Canada turned a page on that history by passing a federal law that has incidental impacts on the provincial powers over child welfare by legislating minimum standards. The Quebec Court of Appeal had no difficulty in concluding that this was within Canada's constitutional jurisdiction to legislate in relation to Indigenous people.[184] Canada did so because it recognized that the crisis of overrepresentation of Indigenous children in state care required such action.[185] The same reasoning applies in the

[178] The only time the child could get a definitive ruling where both the federal government and a province are joined to the matter is if the different cases simultaneously worked their way all the way to the Supreme Court of Canada and were joined there.

case of passing effective accountability mechanisms in the circumstances, and this is supported in legal scholarship.[186] There is also precedent for this internationally.[187]

f) Recommendations for Specific Accountability Mechanisms

We have identified 3 specific accountability mechanisms which could stand alone, but would most effectively safeguard the needs of Indigenous children and families if all 3 were enacted as interconnected mechanisms.

Based on the accountability needs identified in Part 2, and the principles we outlined above, we have identified three mechanisms that we believe will effectively address the government conduct that has contributed to the overrepresentation of Indigenous children in state care for decades. We believe that all 3 are necessary to achieve true accountability. Any of these three mechanisms, individually, could stand alone and would serve to provide greater protection of the rights of Indigenous children and families from the discrimination found in the *Caring Society* case by improving government accountability. However, none are sufficient, on their own, to address all of the identified accountability needs. Therefore, combining all three mechanisms would be the most effective way of preventing discrimination from continuing or re-emerging in the future.

First, we identify the mechanism and the accountability needs each would address. Following this, we explain our rationales for each mechanism, why we ruled out some other options, and what should be included in these mechanisms.

Note that we are not attempting to be exhaustive in setting out details for the mechanisms we propose. We believe there are several details about the proposed Advocate's Office and Tribunal, such as composition, qualifications, terms, staff, etc., that ought to be determined in future discussions and collaboration with Indigenous groups, including Indigenous children and youth, the Caring Society and the pro bono lawyers who have been supporting them. That said, when it comes to appointment criteria and the selection process, we agree with comments received from the Caring Society that it should be a priority for staff of these bodies to be diverse, knowledgeable about human rights and Indigenous child welfare issues, selected in a way that ensures their independence from the government, and for such details to be set out in the enabling legislation.[188]

---

[186] Patrick Macklem has also argued that the federal government has the jurisdiction under s91(24) to establish an independent accountability body with the power to implicate provincial interests: see Patrick Macklem, Indigenous Difference and the Constitution of Canada (Toronto: University of Toronto Press, 2001) at 272-273; as see Borrows, *supra* note 182 and Grammond, *supra* note 121.

[187] See for example Reif, *supra* note 3 at 755, who discusses the prospect of national accountability bodies with jurisdiction over subnational governments and gives examples, such as Peru's *Defensoría del Pueblo* (at 588) and Namibia's Ombudsman (at 669).

[188] See, for example, *Human Rights Code*, RSO 1990, c H.19, ss. 27(3) and (4) on mandated composition requirements.

Our mandate did not include drafting of the enabling legislation for these mechanisms, though we have given some ideas for precedent clauses in what follows. These are based on our review of different child advocates and human rights commissions laws in the county. However, we suggest that in the actual development of the enabling legislation, further expert advice be sought to recommend specific statutory language.

Accountability Mechanism 1:

National Indigenous Child and Family Advocate
Need #1: Oversight of Canada's implementation of Jordan's Principle
Need #2: Oversight of Canada's long-term reform of child welfare, including C92 implementation
Need #3: Oversight Canada's implementation of substantive equality in relation to all services impacting on Indigenous Children and Families
Need #4: Oversight of Federal-Provincial cooperation in servicing Indigenous Children and Families
Need #5: Ongoing education for federal and provincial government actors involved in child welfare services
Need #6: Oversight of provincial governments implementation of substantive equality in relation to all services impacting on Indigenous Children and Families
Need #7: Oversight of child provincial welfare agencies, including their implementation of C92

Accountability Mechanism 2:

National Indigenous Child and Family Tribunal
Need #8: Enforce orders against Canada for non-compliance with Jordan's Principle, substantive equality and other relevant laws and international requirements (C-92, DISA, UNDRIP, CRC, etc)
Need #9: Enforce orders against provinces for non-compliance with Jordan's Principle, substantive equality against provinces and relevant laws and international requirements (C-92, UNDRIP, CRC, etc)

Accountability Mechanism 3:

National Legal Services for Indigenous Children and Families

Need #10: Formal advocacy for Indigenous children, families and communities for government services and in child welfare matters

(1) A National Indigenous Child and Family Advocate

The body that we feel would be most effective at addressing accountability needs #1-7 is a national Indigenous child and family advocate. Effectively, this would be based on the ombuds model of a child and youth advocate office, but also with specific jurisdiction to oversee governments' delivery of services to Indigenous children and families in accordance with Jordan's Principle, their right to substantive equality in statutory human rights instruments and other relevant laws and international requirements (C-92, DISA, UNDRIP, CRC, etc). This is because of the dual need for such a body to take a child and family centered approach on the one hand, and to also apply a substantive equality lens informed by both domestic and international human rights principles. The Advocate would also oversee governments' implementation of child welfare legislation and policy in relation to Indigenous children and families.

In discussions with ISC and the Caring Society early on in this project, the specific model of an ombudsperson was of interest. However, as we got further into our research, we reached the conclusion that the 'classic' ombuds model of it would not have the tools and powers necessary to address the accountability needs we have identified in this report. Most classic ombuds offices in Canada focus mainly on the function of a government's administrative systems and procedures, and generally do not consider matters from a human rights lens, which is imperative in the circumstances. Furthermore, most ombuds in Canada also have limited powers to make systemic inquiries, and they generally do not have a mandate for education. Nor do they generally have requirements to take a child-centered approach. The federal government has a number of specific ombuds, some are created pursuant to executive power. These have received critiques for lacking sufficient independence from the government and powers to make effective change.[189] In the circumstances, we do not think a classic ombuds is a sufficiently robust model, and this is why we recommend a child advocate (a form of a thematic ombuds).

In an earlier draft, we had called this mechanism a 'commission' as opposed to an 'advocate.' There is no magic in the name. As we note in our 'Primer on Accountability Mechanisms,' the concepts are largely synonymous, however, advocates usually have a more active role in defending the rights of children and youth than commissions/thematic ombuds offices might, given that children's rights are at stake. 'Advocate' more clearly also distinguishes this office from a human rights commission with a role in screening complaints, which, based on feedback we received from the Caring Society, is a concern about using 'commission.' We had always

[189] See our earlier note 153.

intended that this mechanism would be involved in 'soft advocacy' by assisting Indigenous children and families resolve individual complaints through informal and confidential means. Children advocate office's are typically staffed with trained social workers or other helping professionals who can intervene on children and youth' behalf within the system and help navigate processes.

Below, we set out the functions and powers we believe the Advocate should have in order to be effective.

Mandate

The mandate of the Advocate ought to reflect accountability needs #1-7, and it should specifically identify the assessment standards upon which the Advocate would scrutinize the conduct of governments. For both the federal and provincial governments this would include Jordan's Principle and substantive equality (protected under each government's human rights legislation and the *Charter*), C-92 and international instruments such as *United Nations Declaration on the Rights of Indigenous Peoples*, the *Conventions with Rights of the Child*, and the *Convention of Rights of Persons with Disabilities*. On top of this, ISC's conduct should also be assessed for compliance with its enabling statute, *DISA*. Language in the enabling legislation should convey that these instruments set the minimum standards that government decision-makers are expected to comply with in all circumstances. The mandates in PEI and Ontario's 2007 Child and Youth Advocate law provide a robust mandate for their advocate and this could be drawn upon for inspiration.[190]

Consistent with various human rights statutes, the mandate should also explicitly mention the Advocate's role to protect Indigenous children and families' right to substantive equality and statutory human rights, particularly in the delivery of government services. The protected grounds from discrimination should include all those listed in the *Canadian Human Rights Act*, but it will also be important particularize Indigenous origin (which is not mentioned in the *CHRA* but is viewed as included within 'ethnicity'), as well as the various subsets of Indigenous characteristics that government distinctions have often been based upon, such as being non-status, living off-reserve, being Inuit, being Metis, etc., in order to ensure that any actions based on such distinctions suggests *prima facie* discrimination.

Jurisdiction

As we have said before, when it comes to jurisdiction, the Advocate ought to be able to oversee not just the actions of the federal government, but also provincial governments in the delivery of services to Indigenous children and families, as well as oversee the actions of child welfare agencies. This would include FNCFS Agencies, as well as other agencies dedicated to providing services to Indigenous groups (Métis, Inuit and off-reserve First Nations), all of whom currently exercise jurisdiction delegated from the provinces. Our interest in overseeing

[190] See *Child and Youth Advocate Act,* RSPEI *supra* note 141 s 12; and *Provincial Advocate for Children and Youth Act,* 2007, SO 2007, c 9 s 16 [Ontario Advocate].

delegated Indigenous child welfare agencies lies mainly in the fact that such investigations will likely reveal problems with federal and provincial legal or funding frameworks that need to be addressed.

The question of whether the Advocate should oversee the child welfare systems of self-governing Indigenous Governing Bodies as these grow under C92 is more challenging. Of course, accountability of self-governing Indigenous groups is important, but accountability models should not be unilaterally imposed on Indigenous governing bodies. Moreover, the history reviewed in Part 1 reveals that the need for accountability at this time arises from the actions and inactions by federal and provincial governments, not Indigenous governing bodies. For this reason, we do not think the jurisdiction of the Advocate should automatically include jurisdiction over Indigenous governing bodies that become self-governing over child and family services. Recognizing the right to self-determination, an Indigenous governing body should be given the choice to opt-in to the accountability framework offered by the Advocate[191], or be left to develop its own.

On the question of the wisdom of duplicating some of the functions carried out by existing accountability bodies, as addressed in Part 1, we know that many provincial governments continue to refuse many services to Indigenous peoples despite Jordan's Principle, and that many actors within provincial child welfare systems are not aware of, and not adhering to the minimum standards in C92. It does not seem that the majority of provincial child advocates, ombuds or human rights commissions are holding provincial authorities sufficiently accountable when it comes to their obligations to Indigenous children and families. The Canadian Human Rights Commission is not mandated to focus on Indigenous child and family issues, nor to take a child-centered approach that employs 'soft advocacy'--that is, working with governments to resolve individual complaints through informal and confidential means.[192] Moreover, as noted in section 3(e) above, both the federal human rights commission and provincial accountability bodies lack the jurisdiction to consider complaints that involve both federal and provincial refusals of a service at once.

There is precedent in the non-Indigenous context for the creation of a federal accountability body that may duplicate some of the functions of an existing provincial accountability body, and

[191] See Reif, *supra* note 3 at 14; *Ombudsman Act*, RSY 2002, c. 163, s 11(5).

[192] On this, see Blackstock, *supra* note 75 at 297-298. See also the Summary Report of the 2013 and 2014 Aboriginal Women's Roundtable, "Honouring the Strength of Our Sisters: Increasing Access to Human Rights Justice for Indigenous Women and Girls," which highlights the challenges and barriers experienced by Indigenous peoples in accessing the CHRC, at 23, 27, 28, 31, 32, 34, 35, 36. There were recommendations made by Indigenous groups, after the repeal of s. 67 of the *Canadian Human Rights Act* to strengthen the legislative mandate of the CHRC in relation to Indigenous peoples, but this did not happen: see 2011 Report to Parliament - On The Readiness of First Nations Communities And Organizations To Comply With The *Canadian Human Rights Act*, Appendix C - Report of the Congress of Aboriginal Peoples. Further, the Commission's focus on Indigenous issues has waxed and waned over time. After repeal of s. 67 of the *CHRA*, the Commission had a National Aboriginal Initiative focused on Indigenous issues, however, this branch of the Commission was cut for budgetary reasons around 2015.

the Supreme Court had no issue with the prospect of these bodies operating concurrently.[193] Further, the legislation could be drafted such that, if another accountability body is effectively responding to a matter, the Advocate may decline to exercise jurisdiction.[194] The Advocate could also be mandated to provide outreach, education and coordination with provincial ombuds, child advocate and human rights commission to assist in their attempts to address matters relating to Indigenous children and families.

Types of investigation

All child advocates, ombuds and human rights commissions have the power to investigate individual complaints relating to their areas of jurisdiction. There is clearly a need for this in the context of the services provided by Canada and provinces to Indigenous children and families. We could also foresee individual complaints including group or community complaints, especially in relation to funding issues relating to both Jordan's Principle, as well as funding under C92. Jurisdiction over group complaints is made explicit in some accountability legislation, and we recommend similarly in the proposed Advocate legislation.[195] It would be best if the law clarified that groups can include Indigenous collectives, such as communities, Bands, tribal councils, and organizations.

Many accountability bodies also have the power to initiate own-motion investigations into matters, and we recommend this for the proposed Advocate. We also recommend that the statute provide clear language that the Advocate has the power to undertake systemic investigations, including the powers to carry out studies and research in support of systemic inquiries, as in the case of some existing statutes.[196] Related to systemic inquiries, a power to carry out studies and research on any relevant question under the advocate's jurisdiction, such as found in Quebec's child advocate laws, is important to specify.[197] The power to engage any persons having technical or specialized knowledge of any matter relating to the work of the Advocate's Officer to advise and assist the Advocate, such as found in the *Official Languages Act*, would further assist the proposed Advocate in making systemic inquiries.[198]

---

[193] *Multiple Access Ltd. v. McCutcheon,* [1982] 2 SCR 161, involving a federal and Ontario's securities regulatory. The Court held that duplication of legislative regimes in areas of concurrent jurisdiction (double aspect) was acceptable, so long as there was no conflict or 'incompatibility' between the statutes, and this would be conceived of narrowly. In true cases of incompatibility, however, the federal legislation would be paramount.

[194] This could be modeled on the provision on s 41(1)(a) and (b) of the *Canadian Human Rights Act*, RSC 1985, c H-6 [CHRA], which give discretion to the Commission to decline dealing with a complain if the complainant has not exhausted other grievance procedure otherwise reasonably available, or the complaint is one that could be more appropriate dealt through another procedure.

[195] See, for example, *Charter of Human Rights and Freedoms,* CQLR, c C-12, s 74; and Saskatchewan's *Advocate for Children and Youth Act,* SS 2012, c A-5.4, s 14(2)(b).

[196] See *Saskatchewan Human Rights Code*, 2018, SS 2018, c S-24.2, s 24(h); Ontario Advocate, *supra* note 190 at s 16(1)(p); and *Child and Youth Advocate Act*, *supra* note 141 s 12(1).

[197] See *Youth Protection Act*, CQLR c P-34.1 s 23(f).

[198] *Official Languages Act*, RSC 1985, c 31 (4th Supp), s 52.

Investigative powers

The Advocate should have robust investigative powers to collect necessary information to effectively respond to the different types of complaints (individual, group, own-motion and systemic). In particular, we recommend that the Advocate have investigative powers similar to those of human rights commissions, including powers to make oral or written inquiries, demand the production of documents or records, and search any premises after applying for a warrant, and apply for enforcement of orders.[199] The investigative powers in Senator Moodie's proposed Bill S-217 would have given the proposed Commission all the powers of a commissioner appointed under Part II of the *Inquiries Act*, which covers most of the investigative powers above, so this may be a precedent worth considering.[200]

In terms of collection of data and systemic oversight of Canada's implementation of Jordan's Principle and CHRT's order to reform FNCFS, we agree with the Caring Society that it would be important to specify in the enabling legislation some types of data that it would be mandatory for the Advocate to collect and analyze. For example, this might include:

- Jordan's Principle decision-makers approval and denial rates, as well as number of requests deemed 'submitted with insufficient information'.
- Jordan's Principle decision-makers turn-around times.
- Jordan's Principle request by regions/communities.
- Disaggregated data by sub-group of Jordan's Principle requests by age, gender, disability as well as service/product/program types.[201]
- Identify gaps in services being addressed through Jordan's Principle.
- identify subgroups that are underrepresented in Jordan's Principle requests.
- The amount of funding being provided per capita through Jordan's Principle, and the variation in funding levels across provinces/territories and remote/rural/urban communities.
- Jordan's Principle appeal approval and denial rates.
- Jordan's Principle appeal turn-around times.
- Disaggregated data of complaints brought to the Advocate and Tribunal.

Further mandatory areas of data collection could be identified in discussions and collaboration with Indigenous groups, lawyers and experts in the area. Note that such a mandatory list should not preclude the Advocate from collecting other data they view as important to fulfilling their mandate, or to investigate specific complaints, and the legislation should also be clear on that.

---

[199] CHRA, *supra* note 197 at s 43; *Human Rights Act*, RSPEI 1988, c H-12, s 23-24.

[200] Bill S-217, *supra* note 161.

[201] As recommended by Sinha et al., *supra* note 92 at 41, "The data needed is not simply the broad category of services being funded, such as "vision," but a specific description that supports examination of the existing policy framework, e.g., "second pair of glasses within a year, not covered by Non Insured Health Benefits (NIHB).""

We also agree with the Caring Society that, for the purposes of systemic oversight, there is value in listing issues or events that would create an obligation on provincial and federal government departments to report to the Advocate that would in turn trigger mandatory investigations by the Advocate. While this list is not exhaustive, examples of potential areas that could trigger investigations include:

- Jordan's Principle decision-makers with low approval rates.
- Jordan's Principle decision-makers with slow turnaround times.
- Jordan's Principle regions/communities with high and low request rates.
- Situations where there are a large number of requests from members of groups or for a specific service.

Such a list would benefit from further discussions and collaboration with Indigenous groups, lawyers and experts in the area.

Like with the powers of provincial child advocates, the Advocate should also be mandated to meet with children and youth and ensure their voices are heard in the investigation process. Helpful provisions to this effect are included in Newfoundland's *Child and Youth Advocate Act*, which calls for the Advocate to meet with children and youth and ensure their participation in decisions regarding services.[202]

We see real value-added in the model of a Child Advocate for engaging in 'soft advocacy' on behalf of Indigenous children and families. Advocate Offices employ trained social workers or other helping professionals who can intervene with government departments and agencies on behalf on children and youth and attempt to informally resolve their complaints.Thus, investigations should take place confidentially, as they do with child advocates and federal legislated ombuds,[203] in order to foster greater cooperation by government parties.[204] Confidentiality supports professionalism and diligence as it creates better access to information and gains the respect of senior government officials, which leads to opportunities for quick resolutions.[205] Further, confidentiality strengthens accessibility to the public,[206] independence,[207] trust, and confidence as well as protects from fears of reprisal.[208] The provisions in the (now repealed) Ontario *Provincial Advocate for Children and Youth Act* on confidentiality and privacy are a useful precedent to look to. However, this does not prevent public reporting by the Advocate, which we believe will be a crucial function of the Advocate in some cases, as we

discuss below. In the Ontario legislation, for example, the individual's information can only be disclosed in a public report with consent, or otherwise anonymized.[209]

The proposed Advocate may require tools to encourage reporting of concerns by public servants and others and discourage any form of retaliation. The *Official Languages Act* contains a provision allowing the Commissioner to make a report to the Treasury Board of any belief of an individual being threatened, intimidated or discriminated against for making a complaint or giving evidence or assisting in an investigation under the *Act*.[210] The *Canadian Human Rights Act* also prohibits any form of retaliation and treats it as a form of discrimination that can be subject to a compensation order by the Canadian Human Rights Tribunal.[211] We believe that these sorts of protection against discrimination must be included in legislation for the proposed Advocate.[212]

Remedial powers

Commissions and child advocates do not typically possess remedial powers to make enforcement orders against government actors. By not giving these bodies enforcement powers, this allows them to instead investigate and seek to provide advice and recommendations to the government. The rationale is this will make government actors more amenable to cooperating and working with these bodies. We agree this should be the main function of the Advocate, however, as noted earlier in discussion of Need #8, this is why we are also recommending the creation of a Tribunal that can adjudicate matters when persuasion and advice are ineffective, as discussed further below.

The objective of the Advocate in cases of individual and group complaints should be to facilitate resolution, and like human rights commission and other child advocates, through informal and confidential means. Such methods for resolving disputes should draw on Indigenous laws and dispute resolution processes where possible. If complaints cannot be resolved internally, individuals or groups are free to pursue other modes of resolutions, including going to the proposed new Tribunal (or to existing methods for dispute resolution). We do not intend the Advocate's Office to 'gate-keep' individuals' or groups' access to the Tribunal or other forums. Typically, accessing options of dispute resolution through ombuds-functions does not prevent people from accessing other forums, and we do not intend to limit peoples' options with this mechanism. It is our hope that an individual or group might start with the Advocate to seek informal resolution or, at the least, obtain information to navigate their options, and possibly be connected with legal support if necessary (we explain this further below with our third mechanism, National Legal Services for Indigenous Children and Families). In other words, we

[209] Ontario Advocate, *supra* note 190 at ss 19-20.
[210] *Official Languages Act*, *supra* note 198 at s 62(2).
[211] CHRA, *supra* note 194 at ss 4, 14.1 and 53.
[212] Also see Samantha Feinstein et al "Are whistleblowing laws working? A global study of whistleblower protection litigation" which offers insight on whistleblower protections to safeguard against retaliation to ensure whistleblowers become essential players in fighting against government abuse of power at 13 - 19, 21 - 23, 25, 27, 65, 68-71.

see the Advocate as providing a "one stop shop" that can support Indigenous children, youth and their families in navigating the different accountability mechanisms that exist. Essential, we envision the Advocate receiving complaints and, based on its knowledge and experience, quickly assessing whether a complaint could be handled based on its relationships with the government actors (through 'soft advocacy') or, if the complaint is more complex or beyond their soft advocacy abilities, connecting the complainant with legal counsel to advise them on their options, including going to the Tribunal. The Advocate as a 'one stop shop' can help coordinate and ensure complaints are handled efficiently, as well as ensure that the Tribunal is not overwhelmed with complaints that could be more quickly handled through the soft advocacy.

The proposed Advocate would also have similar powers to provincial child advocates to make recommendations to the government. For example, Saskatchewan's child advocate can make recommendations on any matter concerning services provided to a child or group of children by the government, as well as on "any matter relating to the interests and well-being of children or youths who receive services from [the government]."[213] While such wide-discretion to make orders is important, it would be helpful for the enabling legislation to list examples of the types of recommendations the Advocate can make. For example,

- When data or investigations reveal bias in policies, process or staff members, recommendations for training or other corrective measures.
- Recommendations for government actors to take proactive measures, such as steps to ensure that Indigenous children and families are aware of their rights.
- Recommend policy or process changes to address systemic gaps or inequities, for example, driving a high level of Jordan's Principle requests.
- Recommend a comprehensive solution to avoid the case-by-case or a "projectification" approach to Jordan's Principle.

Such a list would not be intended to limit what the Advocate can recommend, but to allow Advocate staff, as well as government staff subject to Advocate oversight, to appreciate the Advocate's role and powers.

Further, if an investigation under the Advocate's jurisdiction reveals wrongdoing by a government actor (e.g., acting contrary to law, unreasonably, unjustly or based on a mistake of law or fact), we believe it would be important for the enabling legislation to specify, like in Saskatchewan, that the Advocate must report to the wrongdoing to the responsible minister or government service provider and may make recommendations that the Advocate considers appropriate.[214] The Advocate can also request the government entity who received the recommendation to provide notice within a specified time of the steps that it has taken to or propose action to give effect to the recommendation. If, within a reasonable time of the recommendation, no action is taken that seems to the Advocate to be adequate or appropriate, the Advocate may submit a report of the matter to the Cabinet, as well as mention the report in its annual report to the Legislative Assembly.[215] A very similar approach is found in Nunavut's

[213] Saskatchewan's *Advocate for Children and Youth Act, supra* note 195 at ss 14(2)(d) and (3)(b).
[214] *Ibid* at s 28.
[215] *Ibid* at s 29.

Children and Youth Act, except that a report shall also " include a description of the application, use or incorporation of Inuit culture and Inuit societal values in relation to the conduct of the review."[216] The federal Official Language Commissioner also has impressive escalation powers where its recommendations are not acted upon. If, after a reasonable time, the federal institution concerned has not acted on its recommendation, the Commissioner may transmit its report to Cabinet, following which, if no adequate and reasonable response is forthcoming in a reasonable time, the Commissioner may report to Parliament.[217] If no action is taken, the Commissioner can apply to Federal Court for remedy in relation to a complaint under the *Official Languages Act* with consent of the complainant.[218] We believe it would be important for the Advocate to have similar escalation powers up to Parliament, as well as to take issues to the proposed new Tribunal.

Beyond reports on specific complaints, human rights commissions and child advocates will normally have annual reporting requirements to the legislative branch on their activities for the year.[219] However, they are also empowered to make other or special reports commenting on any matter within the scope of its powers that they deem appropriate.[220] Finally, in addition to referring complaints to the federal court, the Official Language Commissioner also has the power to seek leave to intervene in any adjudicative proceedings relating to the status or use of English or French.[221] We believe these would all be important powers in the toolbox of the Advocate we are proposing.

Education

Human rights commissions and child advocates typically have specified powers to educate the public. Nova Scotia's human rights legislation calls on its commission to "develop a program of public information and education in the field of human rights." Alberta's child advocate law empowers its advocate to "promote the rights, interests, and well-being of children through public education."[222]

We believe that the proposed Advocate should have a significant mandate to promote human rights, particularly the right to substantive equality and Jordan's Principle, of Indigenous children and families, as well as their interests and well-being. We also believe the Advocate should more specifically have a mandate to educate both federal and provincial civil servants in these areas, as well as those other professionals who play a role in child welfare matters (judges, legal aid lawyers, etc.), including their obligation in relation to C92. The Advocate could also

[222] Alberta's *Child and Youth Advocate Act, supra* note 141 ; see also Saskatchewan's *The Advocate for Children and Youth Act*, *supra* note 195 at s 14(2)(a); and Manitoba's *The Advocate for Children and Youth Act*, *supra* note 141 at s 12.

play a 'knowledge mobilization' role in terms of ensuring that standards and practices are consistently applied/understood throughout the various jurisdiction and country, and act as a resource for Indigenous nations and communities to facilitate learning from each other.

Other important provisions

Senator Moodie's proposed Bill S-217 included provisions in the mandate of the Commissioner to promote the collective rights of Indigenous peoples, encourage maintenance of connections to culture, families, lands, waters, language, songs and stories, as well as encourage the implementation of Indigenous laws.[223] It would be worthwhile to emulate such provisions in legislation for the Advocate we are proposing. However, any Indigenous Process designed for accountability purposes needs to recognize the diverse legal traditions among Indigenous Nations.

The Yukon *Child and Youth Advocate Act* includes provisions stipulating that the Advocate should have knowledge of First Nations culture, traditions and beliefs, as well as knowledge about child and youth development and disabilities affecting children and youth.[224] A similar provision can be found regarding the Advocate's knowledge of Inuit culture in Nunavut's Act.[225] Alberta's child advocate legislation requires the child advocate to maintain a roster of Indigenous, Métis, and Inuit advisors.[226]

(2) A National Indigenous Child and Family Tribunal

The Advocate we propose above will provide badly needed oversight over the federal and provincial governments and play an essential role in safeguarding the rights of Indigenous children and families. However, as important as it is, given that government intransigence on services for Indigenous children and families is an ongoing problem, the Advocate will be ineffective if its recommendations on individual and systemic discrimination are only ever advisory without the possibility of being enforced through binding orders on governments.

In the choice between escalation by the Advocate to courts (which is the option in the case of the Official Languages Commissioner[227]) versus specialized tribunal, in the circumstances, we believe a specialized tribunal with the ability to have more informal procedures and rules around evidence, as well as more robust remedial powers, is preferable. Courts in Canada do not have the power to consider substantive equality and statutory human rights violations.[228] At best, they can consider violation of s. 15 of the *Charter* against government authorities in the context of a judicial review. In judicial review, the conduct of governments is most often assessed on the basis of reasonableness in accordance with the government authorities' statutory

objectives.[229] The nature of these proceedings often results in significant deference shown to governments. Further, the lack of legislative frameworks in the context of services to Indigenous peoples can further up the level of deference courts will show the government.[230] For all these reasons, we believe the creation of a specialized tribunal is important and would be the optimal venue to hear matters relating to Indigenous children and families. As noted earlier, however, we do not intend to limit individual or group complainants to the Tribunal and think they should be able to choose between it and existing forums. Below, we suggest ways to improve access to justice in existing forums. Given the long history of non-existent or ineffective options, we believe Indigenous children and families would benefit from more avenues for vindicating their rights to substantive equality, not less.

The Tribunal's jurisdiction would be in relation to the same laws falling within the Advocate's mandate. While we generally recommend a Tribunal that is focused on Indigenous Child and Family issues, there has been recommendations and ongoing advocacy for a broader National Indigenous and Human Rights Tribunal that can adjudicate the gamut of disputes between Indigenous peoples and governments based on their Aboriginal rights and human rights, including all those rights protected under the *United Nations Declaration on the Rights of Indigenous Peoples*.[231] While we feel strongly that the proposed Advocate should be focused specifically on Indigenous children and family issues, we are less concerned about the complaints from the Advocate going to a Tribunal with broader jurisdiction, so long as the Tribunal is focused only on Indigenous matters, can bind both the provinces and governments, and has a sufficiently flexible process and robust remedies. Further, it is likely that a Tribunal that can provide broad remedies in *all* areas of the Crown-Indigenous relationship will avoid any potential jurisdictional gaps.[232]

In section 3(e), we explained our reasoning for why using the Canadian Human Rights Tribunal would not be an effective forum to adjudicate the issue we have identified in this report, since it cannot hear matters that simultaneously involve the provinces. We also think that the legislation creating the Tribunal (potentially the same legislation creating the Advocate) should impose a greater emphasis on ensuring those who adjudicate matters at the Tribunal have expertise in the discrimination issues faced by Indigenous children and families. In general, the qualifications of adjudicators of the Tribunal, terms of office, and further details about the

[229] See *Canada (Minister of Citizenship and Immigration) v. Vavilov*, 2019 SCC 65.

[231] MMIWG Final Report*, supra* note 73, Executive Summary, Call for Justice 1.7; see also Inuit Tapiriit Kanatami Position Paper – Establishing an Indigenous Human Rights Commission through Federal UN Declaration Legislation (2021).
[232] In *Canada (AG) v First Nations Caring Society of Canada et al*, 2021 FC 969, at paras 241-258, Flavel J. underscored the importance of general and broad remedial jurisdiction in order to remedy past and prevent future discrimination in relation to First Nations chldren and families. Linda Reif also emphasizes the importance of accountability mechanisms having broad jurisdiction due to the multifaceted and interrelated nature of matters, particularly as it relates to human rights: see v *supra* note 3 at 27, 77, 149, 251- 252 and 755.

Tribunal ought to be determined in discussion and cooperation with Indigenous groups, including Indigenous children and youth, as mentioned earlier.

As for the powers of the Tribunal, in general, we recommend similar procedural and remedial rules as those of the Canadian Human Rights Tribunal, perhaps with some adaptation to further facilitate effective resolution of complaints in the circumstances, including the powers to order costs against governments.[233] To ensure that the substantive equality rights of Indigenous children and families are vindicated, we believe it would be important for the Tribunal's power to grant the remedial orders be mandatory where discrimination is established.[234] Further, given the importance that supervisory jurisdiction has played in the *Caring Society* case, the power of the Tribunal to exercise this remedy ought to be made explicit. We also agree with the suggestion of the Caring Society that it would be important for the Tribunal to have the power to grant interim orders and make summary decisions in situations where there is a clear human rights violation, or in urgent circumstances.[235] The ability to incorporate Indigenous laws and legal procedures into the process should be made explicit. It would also be desirable to design child-informed and child-friendly procedures.[236]

Further advice on the design of such a Tribunal ought to be sought from those parties and other lawyers who have been involved in the *Caring Society* case. The Tribunal should also be designed to lessen the grounds upon which its decision can be reviewed.

Finally, we strongly recommend that this new Tribunal not be included within the schedule of federal administrative tribunals falling under the *Administrative Tribunals and Support Services of Canada Act*, SC 2014, c 20, s 36 (*ATSSCA*). The management of facilities and support services for federal tribunals under the jurisdiction of the Administrative Tribunals Support Services of Canada has been criticized as compromising the independence of federal tribunals, particularly those involving Indigenous issues.[237] Because the need for independence from the federal government is crucial for the mechanisms proposed in this report, the proposed Tribunal should not be included in the *ATSSCA*.

---

[233] See Blackstock, *supra* note 75 at 299-300 on the need for reform in this area, as well as other further details of access to justice problems within the current CHRT process.

[234] For an example of this language, see s. 37(2) of the *Human Rights Code*, RSBC 1996, c 210

[235] Further suggestions made by the Caring Society for consideration include a one-way cost regime as is the case in American civil rights legislation. This might be especially important given the Supreme Court of Canada's decision in *Canada (Canadian Human Rights Commission) v. Canada (Attorney General)*, 2011 SCC 53, that powers to award costs soul be made explicit for human rights tribunals.

[236] See OHCHR: Access to justice for children, *supra* note 164, for standards and good practices for childrens' access to justice; Commissioner for Children and Young People Western Australia "National Principles for Child Safe Organizations WA: Guidelines, November 2019; Australian Government National Office for Child Safety prepared by the New South Wales Ombudsman's Office "Complaint Handling Guide: Upholding the rights of children and young people" 2019; New South Wales Office of the Advocate for Children and Young People "NSW Strategic Plan for Children and Young People – Consultation Results Report" May 2016, and Assembly of Seven Generations, *supra* note 7.

[237] See letter, "Independence of Specific Claims Tribunal", to Ministers McKay and Valcourt from the Canadian Bar Association, February 8, 2015.

(3) National Legal Services for Indigenous Children and Families

In addition to the Advocate and Tribunal described above, as long as federal and provincial governments have power and control over services for Indigenous children and families, and particularly as long as processes to access essential services remain individualized, there will be a continued need for advocacy and legal services. Indigenous children and families require access to knowledgeable advocates and lawyers who can support them in their attempts to access substantive equality in services from the federal and provincial governments, and in their interactions with child welfare systems. The power imbalance between individual children and families and the state makes advocacy essential for upholding the right to substantive equality and statutory human rights. These are complex areas that are challenging even for well-connected lawyers to navigate, as the story of Carolyn Buffalo-Jackson illustrates.[238] The specialized advocacy and support the Caring Society's staff and network of pro bono lawyers can provide in a limited number of cases is clearly needed but needs to be regularized and government funded on a national scale.

ISC funds Jordan Principle service coordinators from First Nations organizations to help children and families navigate the Jordan's Principle process. This is some recognition that Indigenous families and children need particular support in accessing services from the federal government. These positions are a good start because they help families navigate the process, but they are not able to provide deeper advocacy and legal support, which is essential.

As discussed in relation to accountability need #10, Indigenous children and their families experience significant barriers in accessing existing avenues to hold governments for violations of their rights to services, and the Caring Society and their pro bono lawyers have been assisting them informally on a shoe-string budget. There is a need for state-funded legal and advocacy support to be provided to Indigenous children and families to address the discrimination and breaches of the *Canadian Human Rights Act* found by the Canadian Human Rights Tribunal and prevent further discriminatory practices in the future as well as realize their rights to substantive equality and statutory human rights under human rights law, C92, *DISA* and international human rights instruments. This should include funding supports to navigate the different avenues for recourse, to filling forms, letter writings and speaking on their behalf, to pursuing ombuds, child advocate, human rights challenges (before the federal or provincial human rights commission, or the new Tribunal we are proposing) or judicial review in the courts.

The Supreme Court of Canada has held that parents living in poverty who face the prospect of losing their children in child protection proceedings have a right to state-funding for legal counsel.[239] This is because the stress, stigma and disruption of family life caused by the prospect of having the state take one's child engages a parent's right to security under s 7 of the *Charter* and also violates the parent's right to fair hearing if they do not have the opportunity to present their case effectively. Three judges also said that because single mother's are

[238] See "Buffalo v Canada – My Family's Fight for the Right for Noah to ride a bus to school," *supra* note 119.
[239] *New Brunswick (Minister of Health and Community Services) v. G. (J.),* , [1999] 3 SCR 46.

disproportionately impacted by child welfare proceedings, this also engaged equality protections that informed a finding of a *Charter* violation.

Arguing from analogy, we can argue that lack of effective representation in procedures (Jordan's Principle requests) that may eventually result in child apprehension (and the link between denial of services and child apprehensions in the First Nations context has been established by the *Caring Society* case) violates s 7 of the *Charter.* Further, the MMIWG National Inquiry Report also suggested that interjurisdictional neglect, delays and denials of services constituted a s 7 *Charter* violation.[240] On top of this, there is a s. 15 equality rights dimension here given the Indigeneity of the claimants. In our view, there is a strong *Charter* case for effective legal representation in Jordan Principle matters.

With respect to child welfare hearings, provincial legal aid plans in Canada can represent parents in provincial child welfare matters, however, applying for legal aid and qualifying based on an increasingly narrow income and other criteria, creates another barrier for many families. Legal aid providers may not have the specialized knowledge necessary for adequate representation, or the case may simply not meet the criteria set for legal aid (i.e. in some provinces, legal aid can only act for a parent after apprehension of a child, so a Jordan's Principle appeal for medical equipment or in-home support won't meet the threshold for representation). In addition, Indigenous care providers and communities now have rights to participate in child welfare hearings under C92,[241] and, to our knowledge, they are likely not covered under legal aid plans. However, without legal representation, they are likely not able to participate meaningfully in these proceedings. Again, based on the above-noted Supreme Court decision, there is a strong *Charter* argument for state-funded representation. Furthermore, as noted earlier, the guarantees of substantive equality in the exercise of the rights of children, their family members and communities in C92 suggest a positive obligation on governments to fund legal representation. Where there is some overlap with provincial Legal Aid, as noted earlier, duplication of provincial mechanisms is not a barrier and there are ways for bodies with similar functions to cooperate with each other.

This could take different forms. Ontario has the Office of the Children's Lawyer that is an independent law office that operates out of the Ministry of the Attorney General.[242] While such a model has promise, in the circumstances, we believe legal services situated outside government would be preferable. The Caring Society also recommended the Ontario Human Rights Legal Support Center or Ontario Specialty clinics as potential structures to look at to inspire the governance of this service.

A model we find particularly promising is the Legal Representation for Child and Youth (LRCY) branch of Alberta's Office of the Child and Youth Advocate (OCYA).[243] Like other child advocate offices, the advocate office is precluded from acting as legal counsel in their role.[244] In general, this avoids blurring lines between the investigative and persuasive functions of advocates[245] and adversarial advocacy. To avoid this blurring, but also equip children and youth with needed legal supports, Alberta's *Child and Youth Advocate Act* also gives the advocate the power to appoint lawyers to represent children with respect to a variety of legal matters that affect children in the province.[246] Based on this, the OCYA created the LRCY. The LRCY does not provide legal advice *directly*, but instead receives referrals from young people, caseworkers, courts, parents, foster parents, other caregivers and concerned individuals, appoints lawyers from a roster, sets and monitors service standards for lawyers, and pays lawyers for services provided.[247] For lawyers to be considered for membership on the LRCY roster they must, be lawyers in the province in good standing, have practiced in Alberta in the area of Family Law/Child Protection for a minimum of five years, be willing to be bound by LRCY's expectations and services standards, and submit a completed application and any additional information requested by the LRCY Manager.[248]

We believe a similar dual model to the Advocates and the LRCY, coordinated from the proposed Advocate, would be effective for several reasons. First, we expect the proposed Advocate would become highly visible to Indigenous peoples, therefore having the Advocate be a 'one-stop-shop' for information, complaints, and legal referrals increases accessibility. Second, the referrals branch of the Advocate will benefit from the knowledge and expertise of staff at the Advocate and this should inform the development of representation expectations and standards of the Advocate, as well as development of the lawyers' roster. Third, by building this into the infrastructure of the proposed Advocate, this does not rely on uncoordinated provincial legal aid offices nor requires separate legislation for the creation of a new national legal aid entity. Building and maintaining a national roster of lawyers would create much needed capacity and expertise for effective advocacy in these complex, under-served legal areas. Finally, the Advocate could collect national data on common themes and regional differences in legal

[244] Alberta's *Child and Youth Advocate Act, supra* note 141 at 9(2)(c) and 11.

[245] The persuasive function is cooperative and flexible, which fosters consensus decision-making that works to modify thinking and behaviour leading to long-term and widespread change, see Reif, *supra* note 3 at 24, 25, 26; and Chartrand, *supra* note 5 at p. 17, 18, 24, 25. This function is often accompanied by an investigative function that allows for a thorough investigation, consideration of all perspectives and analysis of all the issues that ultimately enables a more informed and reasoned approach to recommendations and decisions, see Reif, *supra* note 3 at p. 25, 49, 50. The inclusion of an adversarial function could significantly affect the strengths of these other functions.

[246] See Alberta's *Child and Youth Advocate Act, supra* note 141 at s 9(2)(c) and *Child and Youth Advocate Regulation*, Alta Reg 53/2012, s 1.1(1).

[247] See "About Legal Representation for Children and Youth," *supra* note 243.

cases, which would in turn help identify inadvertent barriers, helpful solutions, educational needs and potential subjects for systemic policy reforms.

Recommendations

It is our conclusion that the history of overrepresentation of Indigenous children in state care, particularly the role of interjurisdictional wrangling between the federal and provincial governments over essential services to Indigenous children and families, which continues up to the present (see Part 1), creates accountability needs (see Part 2) which necessitate significant action to be taken by the government of Canada in order to create meaningful and effective accountability.

Primary Recommendation:

We recommend three mechanisms external to the government of Canada to ensure true accountability. We believe all three of these mechanisms must:

- Be set out in federal legislation and not simply created by the executive, in order to ensure independence from government and the greatest degree of oversight and accountability. Further, the three interconnected mechanisms we proposed could be addressed in one statute.

- Be specific to the interest and rights of Indigenous children and families (and not wrapped into a broader mechanism.

- Apply to all Indigenous children and families, not just First Nations on reserve (e.g., non-status First Nations, off-reserve, Métis and Inuit). Such an inclusive approach prevents repeating exclusions of the past. Instead of treating all Indigenous peoples identifically, as a pan-Indigenous approach seeks to do, an inclusive approach, while recognizing all Indigenous peoples are worthy of human rights protection, acknowledges there can be differences between different sub-groups that need to be accommodated.

- Apply to conduct of both federal and provincial governments, which Canada has the constitutional jurisdiction to legislate pursuant to s 91(24) of the *Constitution Act, 1982*.

The three mechanisms are:

1. A **National Indigenous Children and Families Advocate**, which would be based on the thematic ombuds model of a child and youth advocate office, but also with specific jurisdiction to oversee governments' delivery of services to Indigenous children and families in accordance with Jordan's Principle, their right to substantive equality in statutory human rights instruments and other relevant laws and international requirements (C-92, DISA, UNDRIP, CRC, etc), as well as implementation of child welfare legislation and policy. To be effective this Advocate should:

    a. Have oversight over:

        i. Canada's implementation of Jordan's Principle;

ii. Canada's long-term reform of child welfare, including C92 implementation;

iii. Canada's implementation of substantive equality in relation to all services impacting on Indigenous Children and Families;

iv. Federal-Provincial cooperation in servicing Indigenous Children and Families;

v. Education for federal and provincial government actors involved in child welfare services;

vi. Provincial governments' implementation of substantive equality in relation to all services impacting on Indigenous Children and Families; and

vii. Child provincial welfare agencies, including their implementation of C92 (not including self-governing Indigenous Governing Bodies except with their consent).

b. Assess governments' obligations in relation to Jordan's Principle and substantive equality (protected under each government's human rights legislation and the *Charter*), C-92 and international instruments such as United Nations Declaration on the Rights of Indigenous Peoples, the Conventions with Rights of the Child, and the Convention of Rights of Persons with Disabilities.

c. Scrutinizes governments' distinctions-based approach in relation to the need for equitable services on the grounds of the various subcategories of Indigeneity governments have relied on in the past to make distinctions (non-status, off-reserve, Metis, Inuit, etc.) as *prima facie* discrimination.

d. Have the power to investigate individual, group and community complaints, as well as institute own-motion investigations, including into systemic issues.

e. Have robust investigative powers to collect and compel necessary information from government parties to effectively respond to the different types of complaints as well as to be able to effectively conduct systemic oversight.

f. Conduct research and hire experts in conducting systemic inquiries.

g. Be mandated to meet with children and youth and ensure their voices are heard in the work of the Advocate's Office.

h. Attempt to facilitate resolution of complaints through informal and confidential means. Such methods for resolving disputes should draw on Indigenous laws and the dispute resolution processes where possible. This would not prevent reporting and recommendations.

i. Providing a "one stop shop" that can support Indigenous children, youth and their families in navigating the different accountability mechanisms that exist. This is not intended to limit peoples' options for resolving complaints through other mechanisms. It is our hope that an individual or group might start with the Advocate to seek informal resolution or, at the least, obtain information to navigate their options, and possibly be connected with legal support if necessary

(we explain this further below with our third mechanism, National Legal Services for Indigenous Children and Families).

j. Have the power to make recommendations to governments, and to escalate these recommendations to higher levels (up to and including the Tribunal) if recommendations are not reasonably acted upon.

k. Report annually to Parliament on its activities, as well as make special reports commenting on any matter within the scope of its powers that it deems appropriate.

l. Intervene in any adjudicative proceedings relating to the jurisdiction of the Advocate.

m. Educate the public and federal and provincial civil servants, and those involved in child welfare matters, about the right to substantive equality and Jordan's Principle, of Indigenous children and families, as well as their rights within child welfare matters, including under C92.

n. Play a 'knowledge mobilization' role in terms of ensuring that standards and practices are consistently applied/understood throughout the various jurisdiction and country, and act as a resource for Indigenous nations and communities to facilitate learning from each other.

o. Promote connections to culture, families, lands, waters, language, songs and stories, as well as encourage the implementation of Indigenous laws in the work of the Advocate.

Beyond these requirements, further details about the Advocate (composition, qualifications, terms, staff, etc.) ought to be determined in discussion and cooperation with Indigenous groups, including Indigenous children and youth, the Caring Society and the pro bono lawyers who have been supporting it. We further suggest that, in the actual development of the enabling legislation, further expert advice be sought to recommend specific statutory language.

2. A **National Indigenous Child and Family Tribunal** with the power to hear complaints (individual, group, community or systemic). To be effective, the Tribunal <u>should</u>:

a. Have the power to issue binding orders against both the federal and provincial governments and their public servants and agencies.

b. Have the powers to craft its own procedures and rules of evidence that are more flexible than the courts, including child-informed and child-friendly procedures, and the incorporation of Indigenous law and legal procedures into the process.

c. Be mandated to issue remedial orders where discrimination is established.

d. Have extensive remedial powers, including powers to grant interim orders and make summary decisions, as well as the power to exercise supervisory jurisdiction made explicit.

e. Be composed of adjudicators with expertise in the discrimination issues faced by Indigenous children and families.

Beyond these requirements, further details about the Tribunal (composition, qualifications, terms, staff, etc.) ought to be determined in discussion and cooperation with Indigenous groups, including Indigenous children and youth, including parties and lawyers that have been involved in the Caring Society case.

The creation of a Tribunal with a focus on Indigenous child and family issues is critical to support the work of the proposed Advocate. Should Canada eventually implement recommendations from the MMWIG National Inquiry and others to create a National Indigenous and Human Rights Tribunal, we think this body could equally support the work of the Advocate, so long as the Tribunal is focused only on Indigenous matters, can bind both the provinces and governments, and has a sufficiently flexible process and robust remedies. However, until such time as a National Indigenous and Human Rights Tribunal, there needs to be a National Indigenous Child and Family Tribunal.

Finally, to ensure the utmost independence from the federal government, the proposed Tribunal should not be included within the schedule of federal administrative tribunals falling under the *Administrative Tribunals and Support Services of Canada Act*, SC 2014, c 20, s 36

3. **National Legal Services for Indigenous Children and Families** to provide Indigenous children and families with state-funded access to knowledgeable lawyers who can support them in their attempts to access substantive equality in services from the federal and provincial governments, and in their interactions with child welfare systems. The power imbalance between individual children and families and the state makes advocacy essential for upholding substantive equality and human rights. To be effective, these services <u>should</u>:

    a. Include funding support from filling forms, letter writings and speaking on their behalf, to pursuing existing Ombuds, Child Advocate, human rights processes (before the federal or provincial human rights commission, or the new Tribunal we are proposing) or judicial review in the courts.

    b. Take the form of a legal referral service housed in the proposed Advocate (similar to the Legal Representation for Child and Youth branch of Alberta's Office of the Child and Youth Advocate). This includes:

        i. The Advocate's Office has the power to refer children and families to lawyers and appoint lawyers to represent them to access substantive equality in services from the federal and provincial governments, and in their interactions with child welfare systems.

        ii. The lawyers appointed would be from a roster maintained by the Advocate. To get on the roster, lawyers would have to meet standards

and expectations set by Advocate (e.g., practice experience, years at the bar of a province, knowledge of Indigenous communities, etc.).

Additional Recommendations:

We believe all three mechanisms we have outlined can and should be legislated within one federal statute.

This federal statute, and the details of these 3 mechanisms should be co-developed in partnership with the AFN, the Caring Society and the Assembly of Seven Generations, and with broad and robust consultation with Indigenous children, youth and families, knowledge holders across all regions of Canada.

In the interim, and in addition to this external mechanism, as discussed in more detail above in Part 3(a), we recommend the following internal steps that ISC could take immediately to address some of the ongoing issues:

- Continue and increase activities such as staff training, internal audits, dispute resolution mechanisms and reporting,
- Create a Code of Ethics and Network Panel[249] as a framework for funding community-based youth organizations,
- Put in place internal human rights champions who are responsible for engaging with service coordinators and Indigenous children, families and communities to review and evaluate ISC processes, and advocate for changes to ensure compliance with principles of substantive equality;
- Review all Jordan's Principle requests, including those with inadequate documentation, to identify where ISC can reduce demands for documentation to a minimal data set, particularly for services commonly approved or falling within the "normative standard of care.'
- Reverse the onus of who has to establish how the requested service meets the standard of substantive equality, by requiring ISC staff to identify and give written reasons as to where and why they believe a specific request does not fall within that standard, prior to claimants ever being asked to explain how their request falls within this.
- Create and use confidential release forms, that, with the consent of Indigenous children and families, give their third party representatives access to information in order to advocate and support clarification, claims and/or appeals; and
- Fund the advocates or lawyers who are supporting the ad hoc advocacy work of the Caring Society in the interim.

[249] See Assembly of Seven Generations, supra note 7 at 6, 7, 26.

Finally, to be clear that we are not proposing the 3 accountability mechanisms we have outlined to be exclusive mechanisms. We do not intend that once developed, Indigenous children, families and communities would be precluded from accessing the existing (albeit imperfect) infrastructure that we seek to supplement. Given the history of systemic discrimination against Indigenous children and families discussed in Part 1, we feel strongly that Indigenous children and families should have more avenues for vindicating their rights to substantive equality, not less. Accordingly, along with our recommendations above, we encourage Canada, in the enabling legislation to create the mechanisms below, to include the following provisions in order improve access to existing mechanisms:

- A provision giving courts hearing matters touching on Jordan's Principle or the substantive equality rights of Indigenous children and familes, the ability to address such discrimination. For example, section 46.1 of the *Ontario Human Rights Code* contains such a provision.[250]

- Even leaving aside the jurisdictional issues in judicially reviewing Jordan's Principle claims in Part 3(e) above, there remain several challenges for Indigenous children and families to bring successful judicial review proceedings in the courts. One challenge is lack of clear legislated references standards courts can use to review governments' interactions with Indigenous children.[251] While *DISA* and C92 now provide reference standards to applicable to some decision-makers, given the gravity of discrimination against First Nations' children in *Caring Society v. Canada,* a more universal standard, applicable to all decision-makers may be called for. This could be effectuated through a clause in the proposed legislation stating: "The best interests of the child must be the paramount consideration in all decisions impacting Indigenous children. The unique cultural, historical, and geographic strengths, needs and circumstances must be considered as part of the best interests of the child."

- To avoid closing any legal doors for potential complainants, including to existing human rights commission and tribunals, it would be important to include a specific provision to neutralize provisions commonly found in human rights statutes requiring the complainants to exhaust alternative grievances or review procedures reasonably available.[252] This provision could read as follows "Nothing in this Act shall be construed so as to abrogate or derogate from the rights provided for under the *Canadian Human Rights Act*, any provincial human rights statute or provincial child advocate or ombuds state." A similar provision appears in the *Canada Labour Code*.[253]

---

[250] *Human Rights Code,* RSO 1990, c H.19, s. 46.1.
[251] See Promislow & Metallic, *supra* note 6 at 101-108; see also Naiomi Metallic, "Deference and legal frameworks not designed by, for or with us," Paul Daly - Administrative Law Matters, February 27, 2018.
[252] For example, s. 41(1)(a) of CHRA, supra note 194, states: "...the Commission shall deal with any complaint filed with it unless in respect of that complaint it appears to the Commission that (a) the alleged victim of the discriminatory practice to which the complaint relates ought to exhaust grievance or review procedures otherwise reasonably available;..."
[253]Canada Labour Code, RSC 1985, c L-2 at s. 123.1

Conclusion

In identifying the accountability problems to be addressed by an accountability mechanism for this report, we have looked thoroughly at the context of a "one of the worst possible cases" of racial discrimination, that has deeply and irrevocably harmed multiple generations of Indigenous children and families. We have also reviewed features of effective accountability mechanisms that can contribute to the imperative work of bringing an end to these ongoing harms.

There has been progress, and genuine work toward internal, policy and even legislative reform. However, there is much work to be done and many of the reforms that Canada has unilaterally implemented have been inadequate to stymy ongoing substantive equality and statutory human rights violations. The vast majority of meaningful reforms to date have occurred since the Tribunal issued its 2016 Main Decision and retained supervisory jurisdiction.

There will come a day, when the Tribunal will relinquish jurisdiction over the case. Given the very long history of systemic discrimination against Indigenous people by the government in Canada, particularly in the area of service delivery, it will be important to have alternative accountability mechanisms in place. We have set out 3 that, together, we believe will practically address the accountability problems that have facilitated one of the worst possible cases of racial discrimination in Canadian history for over half a century. There are also internal steps ISC can take in the interim, and in addition, to external legislated accountability mechanisms.

The Assembly of Seven Generations report clearly emphasized that "Indigenous youth and children deserve accountability and responsibility from the federal government, as well as all levels of government." As Cindy Blackstock says, once we know better, we need to *do* better. We hope and believe a new and better chapter has begun and can be created for present and future generations. Accountability is an essential aspect of this. Indigenous children, youth and families deserve nothing less.

This is Exhibit "43" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

INTRODUCTION

The National Inquiry into Missing and Murdered Indigenous Women and Girls published its Final Report in 2019, including 231 Calls for Justice intended to address the root causes that sustain violence against First Nations, Inuit, and Métis women, girls, two-spirit and gender-diverse people. As the National Inquiry emphasized,

"The steps to end and redress this genocide must be no less monumental than the combination of systems and actions that has worked to maintain colonial violence for generations."

Among them, Call for Justice 1.7 calls on the federal, provincial, and territorial governments, in partnership with Indigenous Peoples, to establish a National Indigenous and Human Rights Ombudsperson with authority in all jurisdictions, and to establish a National Indigenous and Human Rights Tribunal.

The Calls for Justice, more broadly, align with the stated principles articulated by the Government of Canada. As the Prime Minister of Canada, the Right Honourable Justin Trudeau, stated on National Indigenous Peoples Day in 2017:

"No relationship is more important to Canada than the relationship with Indigenous Peoples… We are determined to make a real difference in the lives of Indigenous Peoples – by closing socio-economic gaps, supporting greater self-determination, and establishing opportunities to work together on shared priorities."

In addition, the mandate letter[1] for the department of Crown-Indigenous Relations and Northern Affairs directing the Minister to implement the United Nations Declaration on the Rights of Indigenous Peoples and to work in partnership with Indigenous Peoples to advance their rights also notes that "reconciliation cannot come without truth and our Government will continue to invest in that truth. As Ministers, each of us has a duty to further this work, both collectively and as individuals."

Noting the **"profound systemic inequities and disparities that remain present in the core fabric of our society, including our core institutions,"** the mandate letter specifically identifies the implementation of the 2021 Federal Pathway to Address Missing and Murdered Indigenous Women, Girls and 2SLGBTQQIA+ People[2] and advancing the 2021 National Action Plan as key priorities.

In fulfilment of this mandate, in January of 2023, the Government of Canada organized an inaugural National Roundtable[3] of Indigenous Leaders and Representatives and Federal-Provincial-Territorial Ministers on Missing and Murdered Indigenous Women, Girls, and 2SLGBTQI+ People. At the roundtable, the federal Minister of Crown Indigenous-Relations and Northern Affairs Canada (CIRNAC) announced the appointment of a Ministerial Special Representative to provide advice and recommendations on the implementation of Call for Justice 1.7, and specifically the creation of an Indigenous and Human Rights Ombudsperson.

The Ministerial Special Representative acknowledges the leadership of The Honourable Gary Anandasangaree, Minister of Crown-Indigenous Relations, who is responsible for carrying the work on Call for Justice 1.7 forward. The Ministerial Special Representative also acknowledges the leadership of The Honourable Marc Miller, former Minister of Crown-Indigenous Relations and current Minister of Immigration, Refugees and Citizenship, for recognizing the importance of and initiating the work on Call for Justice 1.7. Support from the Office of the Minister of Crown-Indigenous Relations and the department is also gratefully acknowledged, as is the dedication of the MMIWG Secretariat.

The Ministerial Special Representative reports directly to the Minister and is independent of the federal bureaucracy, with a mandate to meet with national and regional Indigenous organizations, as well as existing government accountability entities, federal government departments, and provincial and territorial lead departments for Missing and Murdered Indigenous Women, Girls, Two-Spirit and Gender-Diverse People (MMIWG2S+) to gather information and provide advice and recommendations on the way forward.

This report represents meetings, including engagements and validations with First Nations, Inuit, and Métis organizations and governments, Indigenous women's organizations, those dedicated to (MMIWG2S+), and urban, rural, and northern Indigenous organizations, all of which include families and survivors, to further explore the urgent need for, and implications deriving from, Call for Justice 1.7. Advice and recommendations on the creation of a National Indigenous and Human Rights Tribunal are outside the scope of the mandate of the Ministerial Special Representative.

As the engagements made clear, a new Indigenous-specific human rights institution is required to advance the fulfilment of the rights of First Nations, Inuit, and Métis Peoples, and specifically of Indigenous women, girls, and 2SLGBTQQIA+ (two-spirit, lesbian, gay, bisexual, transgender, queer, questioning, intersex, asexual, plus the many other affirming ways people choose to self-identify) people, wherever they reside and regardless of status.

AN URGENT NEED FOR ACTION AND ACCOUNTABILITY

Family members who have lost loved ones and Indigenous advocates expressed very clearly throughout the National Inquiry and the engagement process on Call for Justice 1.7 that they believe there has been **little action compounded by a lack of accountability**. They have shared that striking committees does not constitute action. Continuous consultation does not constitute action. Words filled with good intentions do not constitute action. A recent comprehensive review of progress on the Calls for Justice by CBC[4] determined that **only two of 231 Calls for Justice are complete**, and more than 50 per cent have not been started. First Nations, Inuit, and Métis people reiterated throughout the engagement process that work on the remaining 231 Calls for Justice must begin, and not wait for Call for Justice 1.7 to be implemented.

The Royal Commission on Aboriginal Peoples,[5] Aboriginal Justice Inquiry,[6] Truth and Reconciliation Commission of Canada,[7] and National Inquiry[8] all speak in broad terms about systemic change and in some cases, more specifically about the need for accountability. The Aboriginal Justice Inquiry of Manitoba (AJI) was established in 1988 to inquire into the circumstances surrounding the murder of Helen Betty Osborne and the shooting of J.J. Harper by the Winnipeg Police Service. On the issue of accountability, the AJI noted that not only has the justice system failed Indigenous people – it has denied them justice at all. In the Royal Commission on Aboriginal People (RCAP), which reported in 1996, Commissioners noted the importance of rebalancing political and economic power to support reparation and accountability. More than 25 years since the RCAP released its report, calls for a separate Auditor-General responsible to Indigenous Peoples have not been fulfilled.

Amnesty International's 2004 report Stolen Sisters: A Human Rights Response to Violence and Discrimination against Indigenous Women in Canada,[9] and British Columbia's 2012 FORSAKEN - The Report of the Missing Women Commission of Inquiry,[10] are two reports foundational to documenting and raising awareness of the rights violations, discrimination, and violence that leads to Missing and Murdered Indigenous Women, Girls, and 2SLGBTQQIA+ People. In the final report of the Truth and Reconciliation Commission of Canada (TRC),[11] published in 2015, Survivors demanded accountability and issued 94 Calls to Action[12] – most of which, by external reporting and assessment, have not been fulfilled[13]. As a report[14] by the Yellowhead Institute has noted, "[H]ealing can only come after the truth, and justice and accountability for what happened to the children are essential to the process" (p. 39).

All of these reports, as noted in the National Inquiry's Interim Report, conclude that the solutions to ending violence must be led by self-determining Indigenous people, communities and Nations, and be inclusive of family members and survivors[15]. The Truths in these reports, including the final report of Quebec's Viens Commission[16], compels a legal responsibility to change – nothing less than transformational change – which includes structures to support accountability.

We need more than symbolism, we need structural change, enough is enough.

Work that directly responds to MMIWG2S+ is critical and we can no longer wait for systems change while Indigenous women continue to lose their lives. Immediate solutions must be implemented to mitigate this crisis.

THE CONTEXT FOR CALL FOR JUSTICE 1.7

Well documented gaps[17] in life expectancy, health outcomes, education, income, and almost every other metric are evidence that existing human rights protection mechanisms are not enough to protect the rights of First Nations, Inuit, and Métis Peoples, and specifically of Indigenous women, girls, and 2SLGBTQQIA+ people[18]. The issue of MMIWG2S+, reinforced by statistics from the Canadian Femicide Observatory for Justice and Accountability[19] at the University of Guelph and others, emphasizes the disproportionate nature of the violence. As these realities make clear, and as found by the National Inquiry into Missing and Murdered Indigenous Women and Girls,[20] racism, patriarchy, misogyny, and discrimination are entrenched in our systems and structures, and the cumulative effect is genocide.

The National Inquiry into Missing and Murdered Indigenous Women and Girls began its work in 2016, based in part on the TRC's Call to Action 41.2, which directed the federal government to establish a public inquiry into "the causes of, and remedies for, the disproportionate victimization of Indigenous women and girls" given the "sweeping history" of violence noted in the TRC's Legacy volume. In tandem, decades of work by family members and survivors still searching for justice spurred the process that would unfold. The mandate of the National Inquiry was broad and complex, including reporting on the systemic causes of all forms of violence against Indigenous women and girls, including sexual violence, and examining the underlying social, economic, cultural, institutional, and historical causes that contribute to the ongoing violence experienced by First Nations, Inuit, and Métis women and girls in Canada.

Based on its Truth-Gathering process, which included nearly 3,000 people testifying and sharing their experiences through community hearings, statements, guided dialogues, the Legacy Archive, and via Parties with Standing, as well as dedicated workshops to co-develop Calls for Justice with those most impacted, the National Inquiry developed Call for Justice 1.7 because **families and survivors told the Inquiry that there was no simple, barrier-free, trauma-informed way for them to address inequities in government programs and services that result in rights violations**.

In response to the National Inquiry's Final Report, the Government of Canada prepared its own response: The Federal Pathway,[21] the government's contribution to the National Action Plan. It outlines the government's commitments to end violence against Indigenous women, girls, and 2SLGBTQQIA+ people. It identifies accountability as a key priority through health and justice.

As part of the larger whole, the Federal Pathway is intended to contribute to the 2021 Missing and Murdered Indigenous Women, Girls, and 2SLGBTQQIA+ People National Action Plan, co-developed in collaboration with the National Family and Survivors Circle and contributing partners. This plan more directly addresses the importance of Call for Justice 1.7 and of accountability more generally. As an example, a pillar of the National Family and Survivors Circle is accountability to ensure that the recommendations and calls made over decades and by the National Inquiry are implemented in full. As noted in its preamble to this document, "The process and outcomes must have accountability mechanisms in place to measure transformative change."[22] Further, one of the central goals of the National Action Plan, as well as a listed short-term priority, includes **the development of a national Indigenous human rights accountability mechanism focused on Indigenous human rights** that include inherent, Treaty, and Constitutional rights, which also relates to Call for Justice 1.7. The National Action Plan calls for oversight bodies, such as an Indigenous Ombudsperson, Human Rights Tribunal, or civilian police oversight bodies

to represent the interests of families, survivors, and communities by investigating and addressing complaints of maladministration or violation of rights.

The MMIWG2S+ Urban Indigenous Action Group and the 2SLGBTQQIA+ Committee National Action Plans outline unique jurisdictional challenges including erasure of rights, along with opportunities and solutions in the urban context, which must be considered in the work of an Ombudsperson.

As previous work clearly asserts, this issue is both about accountability and about Indigenous and human rights. All human beings have **human rights**. First Nations, Inuit, and Métis Peoples also have inherent, collective **Indigenous rights** that flow from being the Original People of the land now known as Canada, and within these collective rights includes the legal acknowledgement of Indigenous women as individual rights holders. This includes the right to independence through self-determination in areas such as governance, land, resources, and culture. Indigenous rights, laws, and legal traditions are recognized by Section 35 of the Constitution Act, 1982[23] and repeatedly affirmed by the Supreme Court of Canada, as are Treaty rights.

Despite new and broader commitments such as the United Nations Declaration on the Rights of Indigenous Peoples Act (UNDA),[24] a legal source for the interpretation of the United Nations Declaration on the Rights of Indigenous Peoples within Canadian law, the rights of Indigenous peoples are not always recognized or respected by governments even with expensive, time consuming, legal action. Among its provisions, UNDA commits Canada to exploring, in consultation and cooperation with First Nations, Inuit, and Métis Peoples, measures related to monitoring, oversight, recourse, or remedy or other accountability measures that will contribute to the achievement of those objectives.

"Huge. 1.7 is just so big."

"This has the potential to alleviate suffering."

"A very good and reasonable option."

"History will make this right all the way."

CALL FOR JUSTICE 1.7

We call upon the federal, provincial, and territorial governments, in partnership with Indigenous Peoples, to establish a National Indigenous and Human Rights Ombudsperson, with authority in all jurisdictions, and to establish a National Indigenous and Human Rights Tribunal.

The ombudsperson and tribunal must be independent of governments and have the authority to receive complaints from Indigenous individuals as well as Indigenous communities in relation to Indigenous and human rights violations, and to conduct thorough and independent evaluations of government services for First Nations, Inuit, and Métis people and communities to determine compliance with human and Indigenous rights laws.

The ombudsperson and the tribunal must be given sufficient resources to fulfill their mandates and must be permanent.

KEY MEETINGS AND ENGAGEMENTS

The scheduling of meetings and engagement began on April 3, 2023, and included primarily virtual discussions with **more than 600 people representing more than 125 organizations and governments** including national and regional Indigenous organizations, as well as a number of existing government accountability entities, federal government departments, and provincial and territorial MMIWG2S+ lead departments. An initial contact list was provided by the CIRNAC MMIWG Secretariat, and individuals and organizations were added as suggested by meeting participants, within the time constraints of the mandate.

The majority of meetings and engagements involved small groups of people to allow for substantive discussion lasting up to two and a half hours at a time. Initial meetings and engagements were followed by validation meetings with Indigenous organizations and governments to confirm and evolve the co-developed recommendations. Meetings with Indigenous organizations and governments included impacted family members.

All insights in this report come from the guidance and advice of families and survivors, and First Nations, Inuit, and Métis leaders and citizens who shared their time, their Truths, and their expectation that there will be accountability and change.

In addition, many people from non-Indigenous accountability entities and governments also generously shared their perspectives. The self-reflection, honesty, and desire to contribute to change is deeply valued and appreciated.

National Indigenous Organizations

- Assembly of First Nations – Women's Council
- Inuit Tapiriit Kanatami
- Métis National Council
- Native Women's Association of Canada and affiliated women's organizations
- Pauktuutit Inuit Women of Canada
- Infinity Women Secretariat
- National Association of Friendship Centres including representatives from the Friendship Centre network of centres and provincial-territorial associations
- Congress of Aboriginal Peoples
- 2 Spirits in Motion Society
- MMIWG2S+ Urban Action Group – National Action Plan
- National Family and Survivors Circle – National Action Plan including individual meetings with circle members
- 2SLGBTQQIA+ Committee – National Action Plan
- Les Femmes Michif Otipemisiwak

- National Council of Women of Canada

** a small number of organizations did not respond to invitations to meet*

“We are not being taken seriously. It is frustrating, insulting, and exhausting.

If women go missing, generations are wiped out.”

As those engaged through this process made clear, Indigenous people in Canada, and Indigenous women, girls, and 2SLGBTQQIA+ people are living in a **state of emergency**. Indigenous women, girls, two-spirit, and gender-diverse people continue to go missing and are murdered in an unabated and ongoing epidemic of violence. The root causes of these murders and disappearances, as identified in the Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls, include unresolved intergenerational and multigenerational trauma, social and economic marginalization, a lack of will by governments resulting in maintaining a status quo that includes system racism and oppression, and the denial of the expertise and agency of Indigenous women, girls, and 2SLGBTQQIA+ people. **As such, the work to better support safety and to provide mechanisms through which rights violations can be pursued is urgent.**

> **“As women, it is astonishing how we are treated. How our voices are still not heard, how we are ignored. If women were not standing here today, there would be no men, no children.**
>
> **The ongoing failure of systems to protect Indigenous women has resulted in violence continually being perpetuated against them. This violence illustrates the consequences of what happens when there are not adequate, Indigenous women-led responses for Indigenous women's safety.”**

KEY INSIGHTS

The Origins and Function of an Ombudsperson

An Ombudsperson, also sometimes called an Ombudsman, Citizens Representative, or Protecteur du Citoyen, is someone who receives, investigates, reports on, and helps to resolve complaints and determine compliance with principles of fair and reasonable treatment by orders of government including determining consistency with human rights laws.

The concept originated in Sweden more than 200 years ago and there are Ombudspersons[25] with statutory mandates for all Canadian provinces and two of three territories, some cities, and some specific federal areas of responsibility. In addition, there are non-statutory Ombudspersons for some banks, some colleges and universities, and a handful of other organizations. While the size of an Ombuds Office varies greatly, usually Ombudspersons have trained staff who work for them, including intake specialists, investigators, researchers, mediators, and lawyers.

There are currently no Ombudspersons with Indigenous-specific mandates to safeguard Indigenous rights, despite the significant and well-documented disparities between Indigenous and non-Indigenous peoples in Canada.

As engagement participants made clear, an Ombudsperson is not an Indigenous construct and its role will need to be co-created to respond to First Nations, Inuit, and Métis rights and priorities, rather than remain based on the colonial system model. If this is done well and appropriately, many First Nations, Inuit, and Métis engagement participants believe this Indigenous and Human Rights Ombudspersons model can lead transformative change.

In one of the early engagements, a Knowledge Keeper spoke of the sweetgrass braid teaching. It is not just the braiding that makes it strong, but the finishing, and if the braid is not tied properly, it will unravel and come apart.

First Nations, Inuit, and Métis engagement participants stated throughout the engagement and validation process that it is our role and our responsibility to come together and ensure that this work is finished properly and in a good way, so there is accountability, justice, safety, healing, and ultimately peace. It is critical to have government accountability and it is the clear responsibility of all governments to act on all the Calls for Justice. It is a sacred responsibility, so engagement participants ask that we bring our good minds together.

Confronting Rights Violations

As noted in the National Inquiry's Principles for Change, through which all Calls for Justice should be interpreted, Indigenous women, girls, and 2SLGBTQQIA+ people are holders of inherent Indigenous rights, constitutional rights, and international and domestic human rights, and many Indigenous Peoples in Canada are also rights holders under various Treaties, land claims, and settlement agreements. Human and Indigenous rights obligations arise from international and domestic human and Indigenous rights laws, including the Charter, the Constitution, and the Honour of the Crown.

As such, and as noted within the National Inquiry's Final Report, "All actions and remediation to address root causes of violence must be human and Indigenous rights-based with a focus on substantive equality for Indigenous Peoples." Further, First Nations, Inuit, and Métis women and 2SLGBTQQIA+ people, who also suffer from layers of systemic misogyny, paternalism, and gender discrimination that compound the challenges they may face, should be included and centred in considerations around substantive equity.

Rights concerns were raised repeatedly by First Nations, Inuit, and and Métis participants througout the engagement process on Call for Justice 1.7, in reference to considering the potential scope and function of an Ombuds Office. Participants shared the following, requesting that these concerns inform the priorities of the Ombudspersons and their offices.

The Right to Health and Wellness

Participants cited numerous concerns around the right to health and wellness, taking a holistic view that links the right to health and wellness to the right to culture.

Concerns expressed included:

- Racism, and fear of going to the hospital
- Mental wellness and the lack of high quality, culturally safe addiction services
- The patchwork of healing services and a call to reinstate the Aboriginal Healing Foundation
- The importance of addressing health outcome disparities, and inadequate health care infrastructure in Indigenous communities
- Ongoing challenges and disparities within the Non-Insured Health Benefits Program and the structural inequity evident by the disparity between NIHB travel rates and other federal rates for programs that primarily serve non-Indigenous people
- The centrality of language and culture as medicine, and the lack of equitable funding to support First Nations, Inuit, and Métis languages when compared with colonial languages

"You lose a part of your being if culture and language are gone."

The Right to Justice

As reflective of the perspectives received from both urban and rural participants and from those engaged from all distinctions, access to justice remains a fundamental issue facing many Indigenous women and 2SLGBTQQIA+ people, with particular impacts, as well, on First Nations, Inuit, and Métis youth.

Concerns expressed included:

- Quality of policing, racism, and the over and under policing of Indigenous people and communities
- Systemic issues within the justice system, including but not limited to overcrowding in prisons and lack of supports during incarceration

"See how Creator has worked here. People have been praying for this... for change. We are not alone, the spirits of our Ancestors can come and help us bring our good minds together."

- The need for a new classification of offender under the criminal code related to definitions of dangerous offenders that better reflect the realities of Indigenous women's experiences of intimate partner violence and family violence
- Expanded access to legal aid and to Gladue, and the lack of culturally appropriate legal services
- The need for greater access to legal resources and assistance, particularly in cases involving rights violations
- The priority to establish Indigenous death review committees and to conduct more inquests into cases of violence against Indigenous women, girls, and 2SLGBTQQIA+ people

"The police could not find anything because they did not look."

The Right to Safety, Security, and Protection

For many who shared their stories and perspectives, the fundamental rights associated with ongoing searches for loved ones must be included in the scope of an Ombuds Office, to reflect the lack of recourse that often exists for those not properly supported in their right to safety, security, and protection.

Concerns expressed included:

- Better missing persons legislation and the establishment of a national Red Dress Alert to notify the public when an Indigenous woman, girl, or 2SLGBTQQIA+ person goes missing
- Services and supports to find those who are missing, including searching known locations such as landfills for the sacred remains of women
- Services and supports for the children left behind when a woman is murdered or goes missing
- Interjurisdictional issues that allow predators in positions of authority to move from one jurisdiction to another to avoid consequences

"Indigenous women, girls, and 2SLGBTQQIA+ people should not have to negotiate their safety to get their basic needs met."

The Right of Families to Stay Together in the Best Interests of the Child

As noted in many instances, the importance of keeping families together and its link to more positive outcomes for First Nations, Inuit, and Métis children, are key considerations in framing the mandate or focus of an Indigenous Ombuds Office.

Concerns expressed included:

- The disruption of the sacred bond with families and the devastating impact of birth alerts due to the lack of investment in families that would prevent apprehension
- The lack of preparation for aging out of the child welfare system

The Right to Housing

As the housing crisis in Canada has accelerated, Indigenous people are often most impacted. As participants shared, a safe place to call home for Indigenous women, girls, and 2SLGBTQQIA+ people remains an important priority for recourse and accountability.

Concerns expressed included:

- The shortage of safe, affordable places to live including the critical need for transitional housing
- The lack of shelters in rural and remote communities
- Human trafficking in the shelter sector

> We have nowhere to turn.

The Right to Social Services and Dignity

As many documented during the National Inquiry and in other forums since, including during the engagements that informed this report, Indigenous women, girls, and 2SLGBTQQIA+ people require structural change that will ensure human dignity and access to services, and recourse mechanisms under which they can appeal when these rights are not respected.

Concerns expressed included:

- The call for basic income and economic empowerment to counter state manufactured poverty
- Systemic underfunding and the chronic lack of investment in First Nations, Inuit, and Métis people and communities, in particular Indigenous women's organizations and 2SLGBTQQIA+ organizations; participants highlighted the number of pilot projects and noted the pilot model as well as project-based funding are not sustainable and will not achieve change
- Significant barriers such as navigating federal websites and extended and expensive multi-hour phone holds to speak to federal public servants, for example when requesting an update on a status card renewal or application; status card service delivery times are officially 8 – 12 weeks, but can take up to 6 months, while passport application service delivery standards are between 10 and 20 business days
- Jurisdictional wrangling that denies rights to First Nations, Inuit, and Métis people in myriad ways

"Poverty is criminalized in the city."

The Right to Education

As is clear from available data, alongside the firsthand accounts of those engaged during this process and through other truth-sharing mechanisms, the right to education remains unrealized for many First Nations, Inuit, and Métis children. The ability to appeal matters related to rights violations in the area of access to education or to funding is a key priority for accountability.

Concerns expressed included:

- The challenges of poor quality education due to underfunded schools that serve Indigenous children and youth, and the significant impact of racism within educational systems on gradutation rates, future employment and the social determinants of health
- The need to honour Indigenous rights to culturally relevant and respectful education, including land-based instruction

The Right to Our Sacred Lands, Waters and Treaty Rights

As central to wellbeing and health, to cultural rights, and to human dignity, access to sacred lands, waters and to Treaty rights are an important part of the function of defending rights.

Concerns expressed included:

- Challenges around land ownership, resource extraction, and land dispossession
- Ongoing water quality issues and general infrastructure needs in First Nations, Inuit, and Métis communities
- The need to finally and fully honour the Treaties

A Focus on Important Gaps and Challenges

Throughout the engagement process, First Nations, Inuit, and Métis participants identified several key gaps and challenges in the defence of their rights in Canada.

These included:

- There is **no category of rights complaint specific to Indigenous Peoples** in Canada. This is a failure to acknowledge First Nations, Inuit, and Métis identity as grounds for human rights complaints, not to mention the intersectional systems of oppression when identifying as female and Indigenous, as two-spirit and Indigenous, or as transgender and Indigenous.
- There is no independent place to make a complaint about most federal government services as there is **no overarching federal Ombudsperson** of general jurisdiction over federal government services. There is no independent oversight of Indigenous Services Canada and Crown-Indigenous Relations and Northern Affairs Canada, two departments that exist to serve Indigenous Peoples. While there are a number of accountability mechanisms in Canada, including human rights commissions and tribunals, provincial and territorial ombudspersons, and others with very specific or limited mandates, they are not well known or accessible to most First Nations, Inuit, and Métis people and there is little knowledge and expertise on Indigenous rights or laws including Treaty rights within existing mechanisms.
- There is **significant mistrust** in governments and affiliated authorities. There is an understandable skepticism that these authorities will uphold Indigenous and human rights, in the context of the legacy of residential schools and day schools, the Sixties Scoop, and ongoing child welfare and MMIWG2S+ crises.
- The existing mechanisms rarely reflect Indigenous people within their organizations and not at senior levels meaning there is **little representation**. While organizations are each at different points on the spectrum, some appear not to have adopted a trauma-informed approach, few offer the support of Elders and Knowledge Keepers, and many are not yet culturally safe. This reality is often compounded by a **lack of knowledge** about First Nations, Inuit, and Métis Peoples and Canada's colonial history, and by a **lack of lived experience** for staff within government and affiliated authorities. While there is a need to build and support capacity within existing non-Indigenous institutions and entities, due to systemic and structural issues and entrenched behaviors, existing accountability entities are not enough to assure First Nations, Inuit, and Métis rights.
- There is a **lack of timeliness** with some accountability mechanisms, and delays can discourage the filing of a complaint when recourse can take not days or weeks but months and even years. In some cases **significant resources** – both time and money – are required to successfully participate, including at times the need to hire a lawyer. This acts as a barrier to access for First Nations, Inuit, and Métis people.
- There are in many cases the **absence of monitoring, investigative, and enforcement tools**. And often, in part due to under-resourcing, the existing mechanisms are inherently reactive, and not proactive.
- There can also be **significant jurisdictional issues**. A mechanism is needed that can address rights violations wherever they occur and there is precedent – the National Inquiry was an example of Canada and the provinces and territories coming together to agree on a shared priority.

Improving Existing Accountability Mechanisms

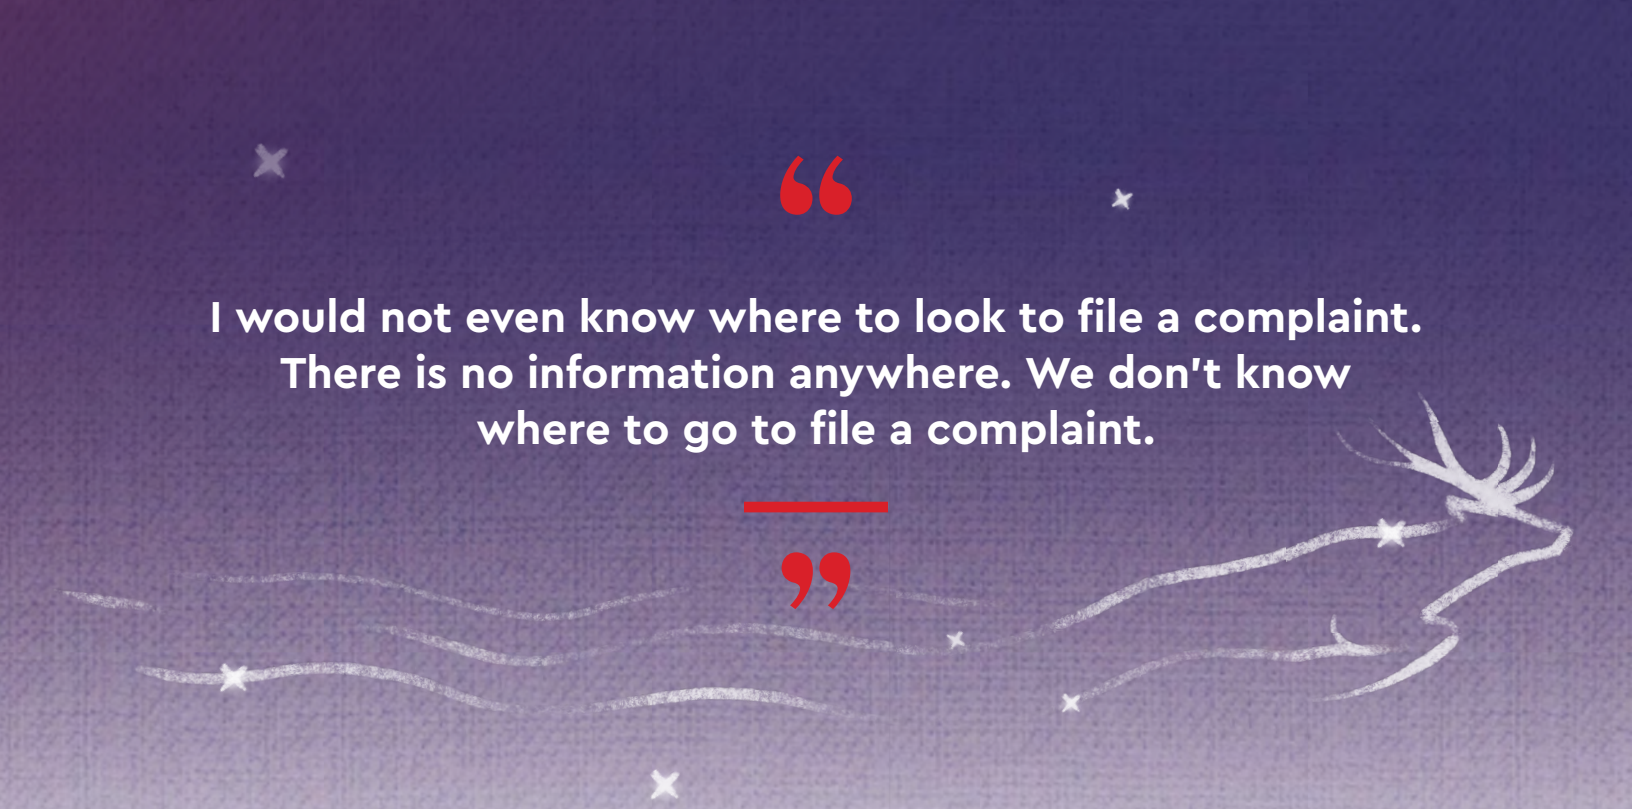
While participants emphasized the need for an Indigenous-focused mechanism, they also raised the importance of continuing to improve the mechanisms that already exist, through building trust and better meeting the needs and reflecting the diversity of First Nations, Inuit, and Métis citizens and communities. Participants suggested that the National Indigenous and Human Rights Ombuds Offices could provide training to other accountability entities so that they better serve Indigenous people.

Advice to existing accountability entities included:

1. Keep **families at the heart** of any process and allocate resources to allow families and communities to fully participate in processes, such as inquests;
2. **Prioritize the safety** of Indigenous women, girls, and 2SLGBTQQIA+ people and the culturally grounded supports and services required for healing and prevention of future loss of life;
3. **Create safe processes** and review internal processes to minimize the recounting of traumatic experiences;
4. **Reduce bureaucratic hurdles** and barriers in all ways, including supporting access through a broad range of technologies such as phone, email, and text, and by extending hours to weekends and evenings and reducing any unnecessary paperwork;
5. Increase staffing levels to **reduce the backlog** of cases and delays where they exist and improve response times, and in doing so increase representation and ensure that First Nations, Inuit, and Métis people are represented within every accountability entity, organization, and government department in meaningful numbers at all levels in an environment that does not require Indigenous staff to leave their Indigeneity at the door;
6. Mandate and **resource public education and awareness** about Indigenous and human rights and increase awareness of the existence of accountability entities;
7. **Commit to improve the collection and dissemination of data on First Nations, Inuit, and Métis identity and gender identity** on intake to be able to track, through an evidence-based lens, how needs are being met or not met and changes over time, while working to support Indigenous-led data collection and analysis within the context of Indigenous Data Sovereignty, through funding and support for First Nations, Inuit, and Métis statistical capacity;
8. **Increase knowledge of First Nations, Inuit, and Métis laws**, and interpret all Canadian laws in light of the United Nations Declaration on the Rights of Indigenous Peoples, specifically:

   Article 22

   - 1. Particular attention shall be paid to the rights and special needs of indigenous elders, women, youth, children and persons with disabilities in the implementation of this Declaration.
   - 2. States shall take measures, in conjunction with indigenous peoples, to ensure that indigenous women and children enjoy the full protection and guarantees against all forms of violence and discrimination.
9. **Build relationships, credibility, and trust**, work in respectful service, recognize systemic racism, look for every potential opportunity, and co-develop solutions in true partnership with First Nations, Inuit, and Métis people and families; and
10. **Acknowledge that change is needed and make it an organizational priority** to collaboratively transform, be open to learning, and practice cultural humility.



> I would not even know where to look to file a complaint. There is no information anywhere. We don't know where to go to file a complaint.

RECLAIMING POWER AND PLACE: RECOMMENDATIONS TO CENTRE THE PRIORITIES OF RIGHTS-HOLDERS

Unanimously, Indigenous participants engaged in discussions around Call for Justice 1.7 identified the need for additional accountability mechanisms. However, all participants stressed that getting the details right around the implementation of Call for Justice 1.7 will determine the success of the Ombudspersons and their offices. The creation of National and Regional Indigenous and Human Rights Ombudspersons needs to be Indigenous led and firmly grounded in the rights and priorities of First Nations, Inuit, and Métis people.

> **"Do not make this an ivory tower, brown people to do a white man's job to maintain colonial systems."**

Participants expressed that Canada has an opportunity to bring Call for Justice 1.7 to life in a way that is credible, brave, and proactive.

The following recommendations were raised through the engagement process by participants as a way to ensure that colonial constructs do not impede the functions of this new office.

However, as the Commissioners of the Mass Casualty Commission noted in Volume 6 of their Final Report[26] which addresses implementation barriers, "the gap that has often arisen between recommendations for change and action for change has prompted some to question whether the word "recommendation" carries an adequate sense of urgency, necessity, or even mandatory compliance." Therefore, the following recommendations should be understood as urgent actions, with the single most critical action being to **move forward with haste to create a new Indigenous and Human Rights accountability entity**.

Overarching Recommendations

Recommendation: A National and Regional Scope

- Indigenous engagement participants developed the concept of **four National Indigenous and Human Rights Ombudspersons, one First Nations, one Inuit, one Métis, and one urban Indigenous**. The four Ombudspersons will respect and reflect distinctions, while working together in one office in the National Capital Region to protect and defend all Indigenous and human rights.
- Further, there must be **regional offices in each province and territory** led by a Regional Ombudsperson. These 13 offices will ensure that the regional diversity of First Nations, Inuit, and Métis cultures, languages, customs, practices, protocols, and legal traditions throughout Canada are reflected. **The 13 Regional Ombudspersons and their offices should collaborate with and work for all Indigenous peoples within their region and report to the National Indigenous and Human Rights Ombudspersons**, who will in turn work with, support, and be accountable for the work of the Regional Ombudspersons.
- To be more present and to build relationships, each regional office will require a **mobile or 'pop up' presence** that can continuously travel within each region, to receive complaints, provide **education and awareness of rights** and rights workshops, and ensure the offices are truly accessible.

> **"The idea of regional offices is the right way to think about this. People do not know their rights."**

Recommendation: Establishing the Foundations

- The National and Regional Indigenous and Human Rights Ombudspersons shall have **jurisdiction over all federal departments, agencies, boards, commissions, and other bodies** including any parent Crown Corporation, and any wholly-owned subsidiary of such a corporation, within the meaning of section 83 of the Financial Administration Act[27].
- **Federal legislation** will be required and a draft legislative framework will be provided based on this report to support the co-development process. Federal legislation will allow for complaints to be received related to federal departments, agencies, boards, commissions, and other federal bodies.
- Where there are existing agents of parliament with **concurrent jurisdiction**, such as the Office of the Federal Ombudsperson for Victims of Crime or the Correctional Investigator of Canada, complainants may choose the accountability entity they prefer.
- Indigenous engagement participants noted that **Call for Justice 1.7 calls on the federal, provincial, and territorial governments** to work in partnership with Indigenous peoples to establish an Ombudsperson and a Tribunal, and that the Calls for Justice define "all governments" as federal, provincial, territorial, municipal, and Indigenous governments and related entities. Following successful implementation of the National and Regional Ombuds Offices related to federal jurisdiction, the federal, provincial, and territorial governments are encouraged to work together in the spirit and intent of Call for Justice 1.7 to coordinate alternative options for corresponding provincial and territorial action that could include:
    - Provincial/territorial legislation empowering existing provincial/territorial Ombudspersons to enter into agreements with the National and Regional Indigenous and Human Rights Ombudspersons to receive complaints on behalf of the other ombudsperson and to exchange information, including personal information, so as to provide a reciprocal "No Wrong Door" service.
    - Establishment of a dedicated Indigenous Deputy Ombudsperson or Indigenous liaisons within existing provincial/territorial Ombuds Offices, such as is the case with the British Columbia Ombudsperson[28].

Recommendation: Supporting Choice

- **Indigenous knowledge and worldviews must be foundational** throughout the development of the Ombudspersons and their offices, including Indigenous ways of being, knowing, and storytelling. Each office should open **guided by Elders and Knowledge Keepers** and respecting protocols, spiritual and cultural practices, and bundles of the Nations and communities of the region.
- A First Nations, Inuit, or Métis complainant who believes their rights are being violated can bring their complaint forward to the Office of the Indigenous and Human Rights Ombudsperson in their region. The intake staff will make the complainant aware of all of the options, including other existing accountability entities such as provincial and territorial Ombuds Offices where appropriate, as well as health supports. **The complainant will then be able to make the best choice for themselves**, selecting one accountability mechanism at a time, and returning to others at a later date if needed. This model of choice **empowers individuals and communities** and there is precedent already for choice, and existing overlap currently in Canada.

Recommendation: The Appointment Process

- **Selection of the four National Indigenous and Human Rights Ombudspersons should be made by Indigenous people via a selection body of First Nations, Inuit, and Métis leaders** that includes representation from MMIWG2S+ families, Indigenous women's organizations, Indigenous 2SLGBTQQIA+ organizations, elected national Indigenous organizations, and national urban Indigenous organizations. The selection body should be co-led by an Indigenous woman and an Indigenous 2SLGBTQQIA+ person.
    - The selection body should be comprised of no more than **13 representatives**, and there should be a minimum of three First Nations, three Inuit, and three Métis members. Each must be decision makers on behalf of their representative bodies.
    - **Each member must commit to working in good faith and in a spirit of collaboration and consensus**, always remembering that selecting the National Ombudspersons is a sacred responsibility.
    - The selection body will recommend **four people**, one for each of the four positions, and an all-party committee of Parliament will recommend to Parliament that the individuals be appointed by resolution of the House of Commons.
- The four National Ombudspersons should **report directly to First Nations, Inuit, and Métis people and to Parliament**, and not to a Minister, given that the Ombudspersons will have investigatory authority over all federal departments.
- **Selection of 13 Regional Indigenous and Human Rights Ombudspersons** should be made by regional selection bodies of First Nations, Inuit, and Métis leaders living within each province and territory, that includes at least one of the National Ombudspersons, with representation from MMIWG2S+ families and regional organizations, regional Indigenous women's organizations, regional Indigenous 2SLGBTQQIA+ organizations, regional urban Indigenous organizations, and elected regional Indigenous organizations (provincial/territorial organizations). Each selection body should be co-led by an Indigenous woman and an Indigenous 2SLGBTQQIA+ person.
    - The selection body should be comprised of no more than 13 representatives who are representative of the Indigenous people of the region. They must be decision makers on behalf of their Indigenous representative bodies.
    - Each member must commit to working in good faith and in a spirit of collaboration and consensus, always remembering that selecting the Regional Ombudspersons is a sacred responsibility.
    - Each of the 13 regional selection bodies will recommend one person, and an all-party committee of Parliament will recommend to Parliament that the individuals be appointed by resolution of the House of Commons.
- The Regional Ombudspersons and their offices will reflect the Territories they reside within and the people of the province or territory within which they are located, ensuring appropriate protocols and practices are respected.
- The **terms** of the National and Regional Ombudspersons should be five years with one option for reappointment. To avoid all terms expiring at the same time, the second term for the National Ombudspersons should be staggered for reappointments of 3, 4, 5 and 6 years, and for the second term of the 13 Regional Ombudspersons a similar staggered protocol should be developed.
- The National and Regional Ombudspersons positions **must not be vacant**. One year before the mandate of an Ombudsperson expires, or as soon as an impending vacancy is known if it is less than one year, a selection committee shall be convened to begin the search process.
- There should be a mid-term review for all Ombudspersons conducted by the respective hiring selection bodies. There must be a **mechanism to remove** an Ombudsperson who is not fulfilling their mandate.
- A **rigorous vetting process** will confirm the Indigenous identity of all Ombudspersons and of the Indigenous individuals, organizations, and governments involved in the selection process to avoid identity fraud.

Recommendation: A Mandate that Supports Justice

- The Ombudspersons should **triage, navigate, investigate, mediate, monitor, protect and promote rights** and as required recommend changes to legislation, policy, practice, procedure, and/or other corrective actions to prevent future rights violations. **Transformational change will require a whole-of-government approach** by all federal departments, agencies, boards, commissions, and other bodies including any parent Crown Corporation.
    - An Indigenous **MMIWG2S+ Senior Specialist and a 2SLGBTQQIA+ Senior Specialist** must be present within the national and regional offices. Among other responsibilities, these positions will focus on improving the criminal justice system's response to MMIWG2S+ cases.
    - **Indigenous dispute resolution models**, including mediation, restorative justice and talking circles should be offered at all stages of the process.
    - In a latter phase when the **Tribunal** is established, matters that the Ombudspersons are not able to resolve in an appropriate amount of time should be referred to a Tribunal, that would include binding orders such as costs against governments.
- **Call for Justice 1.10** can be placed within the accountability mandate of the National Indigenous and Human Rights Office and the office can report annually to Parliament on the implementation of the National Inquiry's Calls for Justice.
- All laws and human rights standards must be interpreted in light of the **United Nations Declaration on the Rights of Indigenous Peoples**, the United Nations Declaration on the Rights of the Child, the federal act, and respective provincial and territorial acts, as well as **Indigenous legal traditions** including oral histories, as per Call for Justice 1.2(v). The Ombudspersons should consider all relevant Indigenous and human rights legislation.
- Future **UNDA reporting** could be incorporated within the mandate of the National Indigenous and Human Rights Office with the office reporting annually to Parliament on the implementation of the federal act and action plan.
- Due to anticipated uptake and to avoid the challenges in successfully standing up inquiries and commissions, **implementation should be phased** but within strict timelines which will require dedicated focus early in 2024 on co-developed legislation based on the draft legislative framework that aligns with this report.
    - The National Ombudspersons should be appointed as soon as possible and by December 31, 2024, and the 13 Regional Ombudspersons should be appointed within the following six months and by June 30, 2025. The national and regional offices should be staffed and open no less

than six months after the appointment of the Regional Ombudspersons and by December 31, 2025.

- Development, implementation, and phasing must be clearly communicated via a public web site and updated on a regular and ongoing basis.

- Indigenous engagement participants stated that **collective rights are missing** from accountability mechanisms currently in place and that as per Call for Justice 1.7, **standing should be given to communities, settlements, Nations, tribal councils, Indigenous organizations and Indigenous women's organizations** to bring complaints forward. This aligns with the United Nations Declaration on the Rights of Indigenous Peoples.

  - Indigenous engagement participants remind us of our collective responsibility to each other, and that victims are not always able to advocate for themselves. Where victims of a rights violation choose, they should be able to nominate at intake or at any stage of the process an individual or a collective, such as an Indigenous government or organization, to go through the process on their behalf. Indigenous governments and organizations must receive the necessary funding to assume this new responsibility.

- The Ombudspersons should have a **'duty to refer' mandate**, so that people needing help are referred to services and supports, including health supports, and not left without assistance.

- Legislation should include the ability to **conduct joint investigations** with other accountability entities, and a **public education** mandate.

Recommendation: Ombuds Responsibilities, Powers, and Independence

- The Ombudspersons and offices must be **legislated**. The legislation should include **'own motion' powers**, and in this way the Ombudspersons can be proactive and examine systemic issues before they become a crisis.

- The Ombudspersons must have strong **investigative powers** similar to those of provincial and territorial Ombudspersons. This includes the power to compel the production of records, including records that are otherwise not releaseable under access to information legislation. In carrying out their investigation of a federal public authority under their jurisdiction, the Ombudspersons should have authority to interview, including

> **Combining traditional Indigenous governance with the oversight functions of an Ombuds Office can help strike a balance between respecting cultural values and ensuring accountability within a contemporary legal and administrative context.**

under oath, professionals, and others including representatives of institutions that have histories of perpetuating rights violations against Indigenous people. Ombudspersons must have sufficient power and authority to carry out their mandate effectively, alongside checks and balances that mitigate the risk of potential abuses. Balancing power dynamics and preventing abuses of power are crucial to promoting healthy and equitable relationships between systems and citizens.

- The Ombudspersons must have **strong enforcement powers** to compel witnesses and documents or records, including making it an offense to obstruct, with penalties for non-compliance. The Ombudspersons must have public reporting powers should recommendations not be acted upon, and once the Tribunal is established, may at their discretion seek enforcement through the Tribunal.
- **Independence** from government is critical for the function of the Ombuds Offices and to gain trust. The Ombudspersons must be truly independent so that there is no perception that decision making is impacted by politics. The Ombuds Offices must be arm's length in nature from government, akin to the Office of the Auditor General and the Parliamentary Budget Officer. Consideration should be given to the 'Venice Principles' regarding Ombudspersons, the United Nations resolution on Ombudspersons, and other international legal principles that ensure independence.
- A legislative, policy, and resource **framework** should reflect the National Inquiry's **Principles for Change** that includes substantive equality and a decolonizing approach, the involvement of families and survivors, and Indigenous-led solutions and services that recognize distinctions, are cultural safety, and trauma-informed.
- **Remedies** may include recommendations by the Indigenous and Human Rights Ombudspersons to change policy, practice, procedure, legislation and / or other corrective action to prevent future rights violations.

Recommendation: Reflecting on Governance

- A **National Ombuds Council** should be incorporated formally into the legislation. The Council should walk in both worlds and incorporate traditional Indigenous governance principles with board responsibilities under Canadian law and include MMIWG2S+ families, Indigenous women's organizations, Indigenous 2SLGBTQQIA+ organizations, elected national Indigenous organizations, and national urban Indigenous organizations, and appointments should be made following a robust appointment process by the National Selection Committee without the need to be affiliated, politically or otherwise.
  - There should be four **youth seats** on the National Ombuds Council, for a First Nations youth, an Inuit youth, a Métis youth, and an urban Indigenous youth. Youth for this purpose is defined as 18 – 29 years of age.
  - **Regional Ombuds Councils** should guide and support each Regional Ombudsperson, with National Ombuds Council members sitting as members of the Regional Ombuds Council that corresponds with their Territory. Representation should be ensured through a robust appointment process led by the Regional Selection Committee without the need to be affiliated, politically or otherwise, and include representation from MMIWG2S+ families and regional organizations, regional Indigenous women's organizations, regional Indigenous 2SLGBTQQIA+ organizations, regional urban Indigenous organizations, and elected regional Indigenous organizations (provincial/territorial organizations). Youth should sit on each Regional Ombuds Council, and in this case youth is defined as 16–29 years of age.
  - The Councils should meet no more than nine times a year and no less than four times a year, and the **terms** of Council members should be staggered.

- **Elders and Knowledge Keepers Advisory Circles** should be created for each Ombudsperson's Office and should be incorporated formally into the legislation to advise and support each office and as a way to draw on First Nations, Inuit, and Métis diversity and wisdom, rooted in Indigenous values. Recognition of Indigenous people living in community and in urban, rural, and northern environments is required to ensure systems reflect these experiences. Ombudspersons must have the ability to create specialized, topic-specific advisory circles with specific subject matter expertise if needed, including youth advisory circles.
- The governance structure and Ombuds Offices need to be non-patriarchal and non-binary in nature from inception, and **fully inclusive of 2SLGBTQQIA+ people**. This is essential, as the traditional role of 2SLGBTQQIA+ people is to see a variety of perspectives and bring balance.
- The Ombuds Offices, Councils, and Circles must be **inclusive of families and survivors, women, urban Indigenous, Indigenous 2SLGBTQQIA+ people, and persons with disabilities**. There should be gender parity and inclusion in the composition of all staff and members of related Councils, and Circles.
- Each member of the Ombuds Councils and Circles as well as the selection bodies must commit to working in **good faith and in a spirit of collaboration and consensus**, and a conflict resolution process will be identified to ensure a safe and healthy environment that respects the sacredness of the responsibility. There must be a **mechanism to remove** Council and Circle members who do not consistently attend meetings or are not working collaboratively and fulfilling their mandates.

Recommendation: Resourcing for Success

- The National Indigenous and Human Rights Ombudspersons and Office must be appropriately resourced with **adequate and permanent funding**, recognizing historic and ongoing systemic discrimination in funding and as per Calls for Justice 1.7 and 1.3. Permanent means on going and in perpetuity, and not time limited.
    - **Core operational requirements** should be fully funded beyond legal, investigative and research teams, financial services, human resources including training and professional development, communications, and information technology. Core funding must include honoraria for Council and Circle members and Elders and Knowledge Keepers, as well as the cost of specialized mediators and facilitators and an internal health support team, cultural needs including medicines and ceremony, translation and interpretation, and child care and local transportation to support individuals in making a complaint.
    - **Indigenous procurement** from authenticated First Nations, Inuit and Métis businesses must be considered in all circumstances and purchases.
- **Budgetary independence** from the executive branch of government is to be assured by the Ombudspersons presenting their budget request to a Parliamentary Committee each fall for the following fiscal year. The Parliamentary Committee shall publish a report with the recommended budget and the Minister of Finance shall provide for that amount in the subsequent budget.
- The Ombuds Offices should have the resources to provide **accessible timely services, including timelines established in legislation for government responses**. Sustainable core funding will help to avoid the backlogs experienced at some accountability entities.

- The offices need to be resourced to be **responsive** so they can provide **specialized mediators and facilitators** and support families and survivors when making a complaint and connect them to resources in the community. This acknowledges the need for resourcing existing systems to support the work of the Ombudspersons and the need for partnerships with existing agencies to support First Nations, Inuit, and Métis women and their families.
- The offices should be held to service standards including quality assurance.

- Full funding for the National and Regional Offices must include **sustainable and adequate operating dollars** and funding for the renovation, or where required construction, of **dedicated facilities** in storefront locations that are highly visible. This will avoid the need to compete for funding or for space within facilities and will allow for affirming and accessible Indigenous space.
  - Space and mediation rooms should be designed by First Nations, Inuit, and Métis people and honour and respect Indigenous cultural practices, fully accommodating ceremonies and protocols such as smudging, prayers, and the lighting of the qulliq.
- The Ombuds Office requires funding for high quality, **accurate data** systems to research, analyze, scrutinize, and ultimately make sound evidence-based decisions that allow relevant and targeted actions. The data should be desegregated and clear, reported regularly and publicly, and accessible so that it drives attention to rights violations. A national database is critical for staff and policy makers to examine trends or patterns of complaints with a whole-of-Canada view. National data should highlight and ultimately address regional disparities and measure transformative change.
  - The Ombudspersons should be charged with the **responsibility of collecting and tracking data specific to MMIWG2S+** and human trafficking as well as other data sets that impact women and 2SLGBTQQIA+ people across all jurisdictions. This data collection can establish a **national database on MMIWG2S+** at the National Indigenous and Human Rights Ombuds Office and include gender-based data on the scope and prevalence of violence. Aggregate data should be available to the public to ensure progress can be tracked as a further accountability mechanism.
  - **Call for Justice 1.10** can be incorporated within the National Indigenous and Human Rights Ombuds Office with the office reporting annually to Parliament on the implementation of the National Inquiry's Calls for Justice.
  - **Future UNDA reporting** can also be incorporated within the National Indigenous and Human Rights Ombuds Office with the office reporting annually to Parliament on the implementation of the federal Act and action plan.

Recommendation: Welcoming Our Relatives

- The Ombuds Offices must be **barrier-free and accessible** with services available in Indigenous languages including written materials. Contacting the office should be simple, including access by phone, email, text and other technologies as they develop. Intake should require support for any paperwork. Mobile or pop up locations should also be similarly resourced.
- Intake should be **warm and welcoming** with staff to walk with individuals and families through the process, interpreting technical language. Intergenerational trauma is not well understood and so services should be person-centred and trauma-informed and avoid **any unnecessary retelling of traumatic experiences**, with wrap around supports available through Indigenous organizations that are also appropriately funded, as per Call for Justice 1.3, 1.8, and 2.3.
- **Portability of rights** means that any First Nations, Inuit, or Métis person can access the Ombudsperson's Office in the region within which they reside and receive service. The protocols and practices of **each Nation and peoples** regardless of where they reside must be respected.

> If the support is not there to go through the process, then you just drop it.

- The Ombuds Offices must have **safe reporting mechanisms** that can be accessed anonymously and confidentially, so that rights defenders are not targeted and do not suffer retaliation.
- National and Regional Offices should be **open extended weekday hours and on weekends**, to meet the needs of First Nations, Inuit, and Métis citizens.
- There should be **no statute of limitations on filing a complaint**, appreciating that it can take years to work through trauma and be able to come forward. However, it is understood that on occasion Ombudspersons may not be able to investigate a matter that is too old to reasonably and reliably investigate.

Recommendation: Hiring and Staffing

- The Ombudspersons must be **Indigenous, well respected, trusted, and people of integrity**. The successful candidates should be **culturally grounded**, while understanding that colonial systems and structures such as the residential and day schools, Sixties Scoop, and child welfare system stole culture and traditional knowledge from generations of First Nations, Inuit, and Métis people.
- The hiring process must be **transparent** and based on work history, accomplishments, skills, and qualifications, including a track record of creating systemic and structural change. While knowledge of Indigenous and human rights is required, the Ombudspersons need not be legal scholars. Both formal and informal education must be respected.
- In addition to expertise in Indigenous and human rights, the Ombuds Office should be staffed by individuals with expertise in fairness and natural justice, program and service analysis, and Indigenous evaluation and methodologies, and with knowledge of key areas including health; mental wellness and addictions; policing and the justice system; social services including child and family services; domestic and family violence, and sexual violence; housing; education; and disability. **Lived experience and fluency in an Indigenous language should be an asset** in hiring.
- The National Ombuds Office must include **broad representation from each region** and ensure that Indigenous women and 2SLGBTQQIA+ people are well represented. As broad regional representation is valued, consideration should be given to remote work where possible and as necessary and if operational requirements can be met.
- The Ombuds Offices should select, hire, and train staff, instead of receiving support services from the Administrative Tribunals Support Service of Canada. Training should include Indigenous gender-based analysis as well as support for staff wellness including strategies to mitigate vicarious trauma. A conflict resolution process will be identified to ensure a safe and healthy work environment.
  - Security checks including child abuse and vulnerable persons checks must be satisfied before hiring, and members of a regulated profession must be in good standing.
  - A rigorous vetting process will confirm Indigenous identity.

Recommendation: Transparency and Reporting to Support Transformation

- The four National Ombudspersons must prepare a **joint annual report** to Indigenous leadership, rights bodies, and peoples, to the Auditor General of Canada, and to Parliament that includes a report from each region. The annual report will be reflective of national as well as key regional issues, data, and recommendations, and will track progress to date. The report must be available in Indigenous languages. The annual report and all special reports should, by statute, be automatically referred to a Parliamentary Committee for consideration and hearings.
- An Ombudsperson may make a special report on any urgent matter that in the opinion of that Ombudsperson should not be deferred to the next annual report.
    - Annual and special reports should be referred to the **United Nations** (UN), including the UN Special Rapporteur on the Rights of Indigenous Peoples, the UN Special Rapporteur on Violence Against Women and Girls, the UN Special Rapporteur on Trafficking in Persons, and the UN Independent Expert on Protection Against Violence and Discrimination Based on Sexual Orientation and Gender Identity, as well as other international human rights bodies such as the Organization of American States and the contemplated Canadian Ambassador on Indigenous Relations.
- The four National Ombudspersons must produce an **annual plain language report card**, including changes made and who or what was held accountable. The report card must be available in Indigenous languages and include an information graphic.
- The Ombudspersons in each region should hold an annual **Accountability Forum** similar to those hosted by the Yukon Advisory Committee, to share the progress and provide opportunity for leaders to respond directly to questions from First Nations, Inuit, and Métis citizens and others.
- There must be systemic accountability interwoven into all processes of the Ombudspersons and their offices, to ensure that the intersectional issues that impact the safety of Indigenous women, girls, and 2SLGBTQQIA+ people are addressed in a meaningful, transparent, and accountable way.

NEXT STEPS: 'THIS IS ALL OUR BUSINESS'

2024 will mark the fifth anniversary of the National Inquiry's final report and Calls for Justice, and nine years since the Truth and Reconciliation Commission of Canada called for a public inquiry into the causes of, and remedies for, the disproportionate victimization of Indigenous women and girls in Call to Action 41. Call for Justice 1.7 is a foundational remedy, and honouring families and survivors means implementing it before another year goes by.

Through engagement around Call for Justice 1.7, First Nations, Inuit, and Métis engagement participants stressed that a **systemic response is required** as Canada is in a state of systemic failure when it comes to Indigenous Peoples. While Call for Justice 1.7 is being implemented, work must proceed concurrently on all Calls for Justice. **The dedication to implementing the Calls for Justice needs to be parallel to federal, provincial, and territorial responses to the recent pandemic, with the same rigor, speed, and urgency.**

Moving Forward on Implementation

To take the next step in this work, the Government of Canada has already established specific budget investments. Minus expenditures made in 2023–24 the allocations committed stand at:

- $1.6 million over two years, starting in 2023–24, to support the Ministerial Special Representative appointed to provide advice and recommendations on the creation of an Indigenous and Human Rights Ombudsperson (Call for Justice 1.7).
- $2.2 million over two years, starting in 2023–24, to establish an oversight mechanism to monitor and report on the progress for implementation (Call for Justice 1.10).
- $2.5 million over five years, starting in 2023–24, to facilitate and coordinate work on advancing the National Action Plan by establishing a standing Federal-Provincial-Territorial-Indigenous table on Missing and Murdered Indigenous Women, Girls, and 2SLGBTQI+ People. This table is a specific forum to take action on areas of shared roles and responsibilities regarding Missing and Murdered Indigenous Women, Girls, and 2SLGBTQI+ People, including prioritizing discussion on how to launch a "Red Dress Alert".
- $95.8 million over five years, starting in 2023–24, and $20.4 million ongoing to help Indigenous families access information about their missing and murdered loved ones, and to enhance victim services. This funding would renew existing programming and expand it to include support for families of 2SLGBTQI+ Indigenous victims who are men.
- Other committed resources include $2.2 billion provided over five years, starting in 2021–22, and $160.9 million ongoing, announced in Budget 2021,[29] to accelerate work on the National Action Plan in response to the National Inquiry's Calls for Justice and the Truth and Reconciliation Commission's Calls to Action.

Suggested Implementation Timeline

By March 31, 2024:

- CIRNAC to establish an Implementation Committee and begin to develop a reporting schedule to publicly communicate via a dedicated web page that is easily discoverable. The Implementation Committee should be comprised of senior federal public servants from key departments and representation from elected national Indigenous organizations, MMIWG2S+ families, Indigenous women's organizations, Indigenous 2SLGBTQQIA+ organizations, and national urban Indigenous organizations.
    - The Implementation committee should be co-chaired by an Indigenous committee member and a senior CIRNAC federal public servant at the level of an Assistant Deputy Minister or above.
    - There should be a minimum of three First Nations, three Inuit, and three Métis non-government members who are senior decision makers on behalf of their representative bodies.
- Via roundtables beginning in March, co-develop legislation over a three month period of time supported by the draft legislative framework with suggested representation from organizations and entities that have generously engaged to date. Prepare to introduce Bill in House of Commons.
- Respecting process, CIRNAC to bring this report to the Assembly of First Nations through the Permanent Bilateral Mechanism, the Inuit Tapiriit Kanatami through the Inuit Crown Partnership Committee, and the Metis National Council through the Permanent Bilateral Mechanism.
- Implementation Committee to develop a budget to prepare to submit, modelling the request on the budgets of existing provincial and territorial Ombuds Offices and existing federal accountability entities such as the Canadian Human Rights Commission.
- Begin engagement on the development of a National Indigenous and Human Rights Tribunal, per engagement feedback on Call for Justice 1.7.

By June 30, 2024:

- Government introduces Bill in House of Commons.
- CIRNAC to establish the National Selection Committee that can be comprised of First Nations, Inuit, and Métis people members of the Implementation Committee and begin to accept applications for the four National Ombudspersons positions with the support of Indigenous executive search professionals.
- Implementation Committee to communicate implementation progress via a public website.

By December 31, 2024:

- National Selection Committee to select and send recommendations to Parliament to appoint the four National Ombudspersons.
- National Selection Committee and National Ombudspersons to develop the National Ombuds Council for appointment by the CIRNAC Minister. It is anticipated that members of the National Selection Committee may transition to become members of the National Ombuds Council.
- CIRNAC to establish 13 Regional Selection Committees with support of National Selection Committee and National Ombudspersons.
- National Ombudspersons to begin internal policy development and hiring of staff with a priority focus on CEO and human resource professionals to assist with the hiring processes for the National and Regional Ombuds Offices.
- National Ombudspersons with support of CIRNAC and federal government to begin to identify office space in the National Capital Region and each province and territory.

By June 30, 2025:

- Regional Selection Committees with National Ombudsperson representation to select the 13 Regional Ombudspersons and work with the National Ombudspersons to send recommendations to Parliament to have them appointed.
- Continue hiring national staff including a Call for Justice 1.10 Unit to monitor progress on the National Inquiry's Calls for Justice, and potentially an UNDA Unit. Begin hiring regional staff.
- Regional Selection Committee and Regional Ombudspersons to develop Regional Ombuds Councils with the support of the National Ombudspersons.
- National Ombudspersons to develop National Elders and Knowledge Keepers Advisory Circle, and National and Regional Ombudspersons to develop Regional Elders and Knowledge Keepers Advisory Circles.

By December 31, 2025:

- National and Regional Offices staffed and open.
- Following successful implementation of the National and Regional Ombuds Offices specific to federal areas of jurisdiction, the federal, provincial, and territorial governments are encouraged to work together in the spirit and intent of Call for Justice 1.7 to coordinate alternative options for corresponding provincial and territorial action.

IN CONCLUSION

The creation of Indigenous and Human Rights Ombudspersons is an opportunity to begin to address inequities in government programs and services that lead to Indigenous and human rights violations. Accountability, substantive equality, systemic change, and restorative justice are principles that can be embedded in the Indigenous-led, decolonized, culturally safe and trauma-informed work of the Ombudspersons.

Call for Justice 1.7 comes out of the National Inquiry into Missing and Murdered Indigenous Women and Girls and the testimony and Truths of families and survivors. Indigenous women, girls, and 2SLGBTQQIA+ people have the right to live in safety and peace. Indigenous people have the right to live in a more equitable Canada. Indigenous and Human Rights Ombudspersons are a necessary step in response to a national crisis of gaps and inequities that have existed since Confederation. There is much work to be done, and an ambitious schedule has been laid out.

"Call for Justice 1.7 makes a tremendous amount of sense. An important idea, long overdue"

Traditionally the Haudenosaunee used belts made of wampum to mark agreements and conditions between peoples. The Indigenous and Human Rights Ombudspersons and their offices can be a bridge, a two-row wampum, to link two worlds and two world views. The Métis infinity symbol also reflects the joining of two cultures.

This is the opportunity to use a non-Indigenous tool, the concept of an Ombudsperson, to develop a decolonial accountability entity that can truly walk in both worlds.

Indigenous engagement participants suggested that the implementation of Call for Justice 1.7 begin in ceremony to reset and renew Canada's relationship with First Nations, Inuit, and Métis peoples. This can start to chart a new path for a Canada, strengthened by a foundation of Indigenous and human rights, with fairness and substantive equality for all.

2024 can be the year when faith is honoured and hope is realized.

This report concludes with a reminder expressed by an engagement participant about the fragile nature of trust, and the expectations around Call for Justice 1.7:

> **Not great faith, but great hope.**

Indigenous Centered Conflict Resolution Processes in Canada

Nisha Sikka, George Wong, and Catherine Bell

I. Introduction

This paper discusses dispute resolution systems in Canada that are designed to implement Indigenous laws and values. It draws largely on models from First Nation contexts and publicly available material. It is the second of two papers on methods for conflict resolution in First Nation communities prepared for the Centre of Excellence for Matrimonial Real Property.[1] Not intended as an exhaustive review, it provides examples of a wide variety of First Nation approaches to conflict resolution operating in Canada. We begin with a general discussion of Indigenous legal traditions and approaches to conflict resolution. This is followed by examples that draw on Indigenous and Canadian dispute resolution values and processes operating at the community level in matrimonial real property and other family contexts as well as under the *First Nations Lands Management Act*.[2]

II. Indigenous Legal Traditions and Conflict Resolution

"Indigenous legal traditions" is a phrase adopted by the Law Commission of Canada and Indigenous Legal scholars to describe a body of Indigenous law including "Aboriginal dispute resolution systems" and "governance process."[3] Legal principles and values these traditions frequently embody include: respect, restitution, reconciliation, responsibility and connection with natural and spiritual environments, Creator and community. However,

> while there is often a strong emphasis on some of these concepts, they are not idealized, simple, or stand-alone responses to harms and conflicts. Every Indigenous legal tradition [has]… nuanced and robust understandings of what implementation of these principles entail, each legal order has a much broader repertoire of principled

[1] See also Rebecca Ratcliffe & Catherine Bell, "Conflict Resolution Practices in Canada" (2014) also posted on this website.

> legal responses and resolutions to harm and conflict to draw as factual situations warrant.[4]

Indigenous laws are reflected in stories, oral traditions, practices and other lived experiences of Indigenous peoples. They also exist as broad legal principles derived from and reflecting societal values. For example, laws, practices and processes articulated in *Book One of the Statutes of the Carcross Tagish First Nation (*CTFN) are based on core virtues or values that flow from CTFN stories, traditions, and practices.[5] *Book One* and the CTFN Constitution are the primary sources for developing and interpreting CTFN laws. Among the core virtues is respect. A "fundamental principle of survival that comes from timeless wisdom," it is considered "a core law."[6] Respect includes caring about people and treating them with dignity, to "treat everyone how you want to be treated."[7] Practicing respect engages other virtues such as acceptance, obedience, patience, and diligence. Diligence includes "attention and care legally expected or required of a person" and " being respectful of your place, your role, and your responsibilities in the community and to honour these by constantly striving to achieve the best for all in every aspect of our lives."[8] Not surprisingly, this law permeates throughout all aspects of Carcross/Tagish law and that of other Yukon First Nations, including CTFN family law and negotiated legal regimes with Canadian governments.[9] Other virtues informing CTFN legal traditions include the capacity to love, selflessness, courage, knowledge, compassion, honesty and integrity in relationships.[10]

These core values are aimed at establishing conditions necessary to live in harmony, respect differences, promote the well-being of individuals, families and the community, and resolve disputes in ways that promote better relationships. *The Boy Who Shot the Star*

reproduced in *Book Two: Government of Carcross/Tagish Traditional Family Beliefs and Practices* (and appended to this paper) is an example of how some foundational laws, values and processes are reflected in stories and oral traditions.[11] The teachings from this story are explained as follows:

> Stories say different things to different people. At different times new things will be found in the same story. All traditional stories are rich, magically full of lessons, insights and meaning. Each will take what they need from a story. Here are some insights about our values that can be taken from this story.
>
> This story speaks of loyalty, of connection to family and home, and of how harmony in our lives can be broken by speaking disrespectfully of others.
>
> The story demonstrates the harm in resorting to anger and revenge when we are hurt or suffer loss. Shooting arrows at the moon did not save a friend, but taking risks, persevering through great difficulties and seeking the helping hands of others did save a friend.
>
> Focussing on what is most important to our hearts brings us back to our family, to those we love, and to the life that is most important to us. We come home safely when we concentrate on what is most important to us, and act on our values.
>
> Opening ourselves in a good way to the lessons life provides about acting on our values lies at the core of all stories.[12]

1. Accessing Justice and Reconciliation Project

Two important themes about Indigenous legal traditions around conflict resolution emerge from research conducted by the Accessing Justice and Reconciliation Project [AJR].[13] Under the direction of Indigenous legal scholar Dr. Val Napoleon, the AJR is a recent collaboration between the University of Victoria Faculty of Law Indigenous Law Research Clinic, the Indigenous Bar Association, and the Truth and Reconciliation Commission, funded by the Ontario Law Foundation. The goal of the AJR research project on conflict resolution was to

> better recognize how Indigenous societies used their own legal traditions to successfully deal with harms and conflicts between and within groups and to identify

[13] Friedland, *supra* note 4 at 3.

> and articulate legal principles that could be accessed and applied today to work toward healthy and strong futures for communities.[14]

Applying a similar method to that adopted by lawyers to identify legal principles in Canadian court decisions, researchers on the AJR project analyzed publicly available materials, stories and oral traditions of partner First Nation communities in collaboration with Elders and other knowledgeable people from those communities.[15] Their research revealed two important themes about dispute resolution:

> *(1) There is no 'one size fits all' approach within or among Indigenous legal traditions. There are a wide variety of principled legal responses and resolutions to harm and conflict available within each legal tradition.*[16]
>
> ...
>
> *(2) Indigenous legal traditions reveal both consistency and continuity over time, and responsiveness and adaptability to changing contexts.*[17]

For example, in the Mi'kmaq legal tradition, *abeksikdawaebegik* (reconciliation) and *abeksikdewapan* (responsibility) are core values.[18] They promote the taking of responsibility by those that cause harm by, for instance, offering restitution and empathy to victims.[19] Cree legal tradition emphasizes healing of the offender, but may also use principles of separation "to keep others safe," while "acknowledging responsibility," undertaking "re-integration," and learning from the consequences.[20] The Tsilhqot'in legal tradition emphasizes "maintaining individual and community safety."[21] In their tradition, separating offenders from the community and deterrence were used to help in achieving this goal.[22] Healing, in the Tsilhqot-in tradition, is a "preferable resolution," but separation may be helpful in achieving healing by "creating space for the wrongdoer to reflect and change the thinking and behaviour that led to the harm in the first place."[23]

The AJR's review of Anishinabek legal traditions also illustrates the theme of consistency and continuity. It reveals a consistent legal principle that community participation in

[22] *Ibid*.
[23] *Ibid*.

decision making is central to determining how serious harms to a community are addressed.[24] Who decides and how the collective decision is made depends on the nature of the dispute. Decision makers may include a small, directly affected group, such as a family harmed by someone's actions, or extend to the entire community, including outside experts depending on the harm in issue.[25] In 2003, the 39 communities of the Anishinabek Nation began developing current processes for conflict resolution operating in their communities as part of their self-government negotiations.[26] After engaging in extensive consultation with Anishinabek citizens along with one national and four regional processes, processes that engage tribunal, mediation and Circle decision making were developed within Anishinabek territory.[27] Elaborated on later in this paper, these processes are grounded in seven Anishinabek grandfather teachings, involve community members and those affected by the conflict in decision making, and seek to restore relationships.[28]

Diversity and consistency are also demonstrated in the examples below. Although Indigenous legal traditions have been undermined, many persist or are in the process of revival and revitalization. Like other systems of law, they are dynamic - evolving and adapting over time to internal and external influences. We begin with a discussion of two examples of Indigenous approaches to collective decision making and conflict resolution used to address a wide range of disputes, including property disputes. Aspects of these processes are common to many Indigenous legal traditions including Circle discussions, ceremony, performance, listening and witnessing. This is followed by an overview of dispute resolution services and models from across Canada that draw on both western and Indigenous legal traditions to resolve family, land and matrimonial property disputes implemented through negotiated agreements or federal legislation such as the *Family Homes on Reserves and Matrimonial Interests or Rights Act*[29] and

First Nations Land Management Act.[30] The approach we use to describe these processes is informed by the AJR project and seeks to answer one or all of the following questions:

1. What are the key characteristics of the decision-making/problem-solving processes, including: (a) who are the authoritative decision makers? (b) what procedures or processes are involved in determining a legitimate response or resolution to conflict?
2. What principles govern responses to conflict?
3. What principles govern individual and collective responsibilities and expectations?[31]

2. Stó:lō Healing and Peacemaking Circles

Stó:lō approaches to conflict resolution are grounded on the principle that their programs be supported by the Stó:lō people and be based on Stó:lō "culture, customs, and traditions"[32] - principles that reflect their aspirations for self-determination by giving themselves and their legal institutions more meaningful roles in the justice system. For the Stó:lō, self-determination and justice are about being held responsible in a variety of ways.

> In general terms, a person who has caused harm is given the opportunity to take responsibility within a forum that focuses on maintaining family ties and community connections. All of this occurs within a context in which community takes responsibility for dealing with the troubles that exist among its people and in its external relations with other communities.[33]

The goal is to restore the community to harmony rather than just on punishing the offender.

The Indigenous language of the Stó:lō is *Xwélmexwqel* or *Halq'eméylem*.[34] The Stó:lō believe that their essence as a people is embodied in their language and so it is important to use it as much as possible.[35] Use of their language in conflict resolution and describing their conflict resolution systems also helps ground the discussion in their worldview and away from responding only to demands and judicial processes of the Canadian justice system. Language is also important when describing their justice system. For example, referring to Stó:lō justice

[34] *Ibid* at 19.
[35] *Ibid*.

programs as “alternative” and the Canadian criminal justice system as “mainstream” can de-legitimize the justice system of the Stó:lō and reinforce colonial relationships.[36] Stopping the use of such terms in their justice programs was a “small decolonizing step.”[37]

As Stó:lō Nation legal traditions do not have a word for “justice,” Stó:lō Elders created the word, *Qwi:qwelstóm kwelam t’ ey* (*qwi:qwelstóm*) - roughly translated as, “they are teaching you, moving you toward the good” - to describe program initiatives developed with the assistance of Wenona Victor in the late 1990s.[38] It is a concept of “justice” centered upon the family and reflects a way of life that focuses on relationships and the interconnectedness of all life.[39] It has four key elements: “the role of Elders; the role of family, family ties, and community connections; teachings; and spirituality.”[40]

Qwi:qwelstóm is "accountable to two main bodies within the Stó:lō Nation governance structure: the House of Justice and the Elders council for Q*wi:qwelstóm*."[41] It is concerned largely with matters that Canadian law would characterize as criminal. The House of Justice provides the mandate for the program and the Elders Council looks after the day-to-day operations.[42] *Qwi:qwelstóm* accepts referrals from "the RCMP (pre-charge), Crown counsels, (post charge), probation officers (pre-sentence), community members, self-referrals from the ones harmed or those causing harm” and government departments such as the Department of Fisheries and Oceans, and the Ministry of Children and Family Development.[43] It also has a role in resolving conflicts internally between community members and between community members and institutional employees such as school staff.[44]

The Stó:lō have two basic criteria for participation:

> First, the person who has done the harm must be taking responsibility for his or her behaviour. Second, all relevant persons, particularly those who have been harmed are fully informed of the Qwi:qwelstóm process and are offered the opportunity to participate when they are ready.[45]

When asked to participate in a Circle, participants are also asked to "come prepared to share all four sacred parts of being...the physical, the mental, the emotional, and the spiritual."[46] Preparation for a Circle engages the person's mental, physical, emotional and spiritual lives.[47] Not only are participants asked to come physically ready to participate by being "well-rested, fed, and drug- and alcohol-free for at least four days prior to the Circle date" but they are also asked to be mentally ready by coming to the Circle with "a strong mind, in order to make best use of the words that will be shared."[48] Preparing for participating in a Circle may depend on whether the Circle is a "healing or a peacemaking Circle" since in healing Circles the focus is "almost exclusively on restoring balance to an individual(s)" where a peacemaking Circle focuses mostly on gaining an "understanding by all Circle participants regarding a specific incident."[49]

Acceptance is determined on a case by case basis depending on a range of factors such as the "remorse (level of awareness) of the person who caused the harm," "the community's willingness to deal with the person" and the "resources available to the person(s) who caused the harm, the person(s) harmed, and family members" to handle the situation.[50] If the people involved in the conflict are in the midst of their own "journey of healing" then the "thoughts and opinions of the harmed person(s)" and the "positive actions the wrongdoer has taken" are also considered.[51]

At the centre of the *Qwi:qwelstóm kwelam* program are healing and peacemaking Circles and the S*mómíyelhtel*, a group of community members who organize and lead restorative Circles. They undergo extensive training on traditional Circle processes and other "Aboriginal justice initiatives, fetal alcohol syndrome, restorative justice and conflict resolution."[52] They organize and lead the Circles, inform participants of expectations, document the proceedings and, when necessary, the resolution.[53] They are free to use their own personal style when leading the Circle but have "guiding principles to follow."[54] These principles include "building relations

[54] *Ibid*.

and resolving conflict “in a good way,”" reconnecting "family members to their extended family and to their community," encouraging participants to bring Elders to share in the Circle, and focusing on being responsible and working on the self.[55]

Qwi:qwelstóm offers healing and peacemaking Circles at four times during the prosecuting process: "to replace the trial process, to make a sentencing recommendation, to assist with reintegrating Aboriginal people who have been incarcerated back into their communities, and/or to develop a healing plan to be part of sentencing and/or probation orders."[56] However, it also uses these processes to “assist with family disputes, custody concerns and divorce settlements” and to improve relations between other parties to disputes.[57] As elaborated below under the heading “B.C. Circle and Family Group Conferencing Models,” the Circle process has also been adapted to bring together extended family in child welfare matters to learn from teachings of Elders and develop family plans. Peacemaking Circles share some characteristics with Euro-Canadian mediation processes and healing Circles with transformative mediation and counseling sessions. Mediation and peacemaking seek to achieve better understanding among those affected by the conflict and to seek solutions that address all concerns. Healing Circles share these features and are also focused on restoring balance and harmony to individuals and relationships harmed by past and present events.[58]

Participants in the Circle vary depending on the nature of the dispute but always include the S*mómíyelhtel*, the parties involved in the dispute, and at least one Elder.[59] Each participant is asked to bring an Elder from their family.[60] Circles are rescheduled if an Elder is not able to attend.[61] Elders have a special role because they are accorded respect by Stó:lō people, “really listen and come without their own agenda.”[62] They "know how each person is tied to the community," bring spiritual guidance to the process, and their advice is generally well accepted by Circle participants.[63]

[59] *Ibid*.
[60] *Ibid* at 26.
[61] *Ibid* at 29-30.
[62] *Ibid* at 30.
[63] *Ibid.*

Extended family is also important to the process. The Stó:lō consider cousins as siblings and do not "place distance between family" as non-Indigenous peoples might in the case of extended family by using words such as "step," "in-law," and "half."[64] People are often introduced to each other in the community in terms of their family connections. These connections are reinforced in the Circle process, providing greater incentive to listen and change.[65] Names and connections come with responsibility and those who have gone through naming ceremonies to receive ancestral names may be "stripped…until they show they can carry it with responsibility and respect."[66] Connection to family in Stó:lō culture makes it easier for a wrongdoer to face a stranger in a courtroom than to sit in an intimate Circle with family they love and respect and acknowledge how they harmed them.[67]

All participants are encouraged to be kind, respectful and acknowledge the courage it takes to ask for help and to change.[68] They are expected to "share all four sacred parts of being, namely, the physical, the mental, the emotional, and the spiritual."[69] Involvement in the process calls for full participation through "actively listening, verbally sharing or both."[70] Participants are expected to be mentally strong enough to hear what may be difficult to hear and to extrapolate the good from what is being said.[71] Sharing emotions is also encouraged.[72]

Circle processes are highly spiritual and sacred to the Stó:lō. "[A]ll of life is best understood in terms of a Circle" and Circle work has "the power to protect and to heal."[73] The Circle process "creates space for Elders and invaluable teachings" they have to share and a forum for community members to relate in a "safe and non-confrontational" way.[74] It is a way for people to connect with Elders, family and ancestors. Each session "always starts and finishes with a prayer."[75] This is usually conducted by the Elder and is done to "ground the participants

[75] *Ibid* at 32.

and acknowledge Stó:lō ancestors."[76] Sometimes a meal is shared to further promote closeness and a feeling of well-being.[77]

Receiving and sharing teachings is an important part of the Circle process and establishing one's identity and sense of self-worth.[78] Tools used to help to facilitate this include a talking piece, sacred and unique to each S*móyelhtel*.[79] It is given to him or her by family relations to represent their ability "to bring people together "in a good way."[80] It is treated with respect by all participants and only the person holding it may speak. This enables speakers to proceed at their own pace, uninterrupted, slows the pace of discussion and ensures that nobody speaks out of turn.[81] It also reminds the speaker to speak truthfully and from the heart – an "'I' frame of reference that personalizes the interactions in the Circle."[82]

3. Gitanyow Legal Order and the Feast System

Ceremony, images, language, music, telling, performing and witnessing also have a significant role in many Indigenous legal systems and dispute resolution processes. For example, under Gitanyow law, the "highest legal and political unit is the House group" (matrilineal family lineage group).[83] Each house continues to evidence its territory, familial property and political authority through a sophisticated interweaving of song, performance, verbal record and images witnessed at feasts or potlatches by chiefs and members of other houses.[84] A unique set of crest images (*ayuks*) on blankets, rattles, poles and other regalia, as well as hereditary names of honoured ancestors, legends, songs, dances, secret words, ceremonial prerogatives and other intangibles belong to each House and are held by the Chief on their behalf.[85]

[85] *Ibid* at 101.

Godfrey Good is *Gwinu,*[86] a Gitanyow hereditary chief. As a chief he is expected to remain visible by wearing his chief's regalia and participating in feasts and to maintain a moral code so as not to disgrace his name through negligent or selfish behaviour.[87] In describing the legal order applicable to a Chief's holding of house possessions, he describes it as "automatic," deliberative, communal and witnessed by chiefs today as it was in the past.[88] When the Gitanyow stop following these legal traditions, "they will cease to be the Gitanyow people and will be something else."[89] The legal and political significance of these legal traditions are "constitutional" in the sense that they are about more than creating clear rules to govern relationships and disputes.[90] Rather, Gitanyow "centrally define themselves as a people who follow these laws."[91] Good explains that the law is not just a set of rules to resolve conflicts:

> When a chief dies, this is when the law is opened. It is automatic. No one can break the law when a chief dies. The chiefs will gather, have a feast and decide what to do. The law is the same today…
>
> When a chief dies, the law happens automatically. It is in the feast hall that the business is taken care of. If the law is not followed properly, the chiefs will ask why and state that it is not right. The law of our people is very good.[92]

Telling of *adaawk*, (formal oral history) is fundamental to transmission of laws and clarification of rights and responsibilities.[93] While crests represent important events that occur in the history of a House, these events are more fully recorded in the *adaawk*. *Adaawk* are sung or repeated orally but in some instances the telling of *adaawk* has also been recorded orally, visually and in writing.[94] Hereditary chiefs have a responsibility to pass on the *adaawk* and members of the House have a responsibility "to listen and to witness."[95] The chief has the responsibility of "telling the truth" and the listeners are responsible for understanding what they

---

[86] *Ibid* at 96. *Gwinu* means "to ask for something" and this meaning is acted out in a "naxnox" or spirit dance by its bearer (*Ibid* at 103).

have heard.[96] They may be called "mediators" if there is disagreement or misunderstanding within the House.[97] For example, "by listening at the feast, a person becomes familiar with the geographic place names" and territories associated with different Houses as the

> traditional way of showing ownership to land is to repeat the *adaawk* [and] share it with other chiefs. All present at the feast will hear and be witness. The guest chiefs will respond. They will affirm the *adaawk* or they will state it is not correct.[98]

Adaawk and *naxnox* (spirit dance, performance) are also associated with specific objects (e.g. masks) and crest images.[99] For example, Robert Good (Sindihl) tells an *adaawk* associated with *Simgyak*, a bird's head mask with a small human figure inside the beak, used in a *naxnox*.[100] In the *adaawk*, the small human figure is a "higher power that descended from the heavens and speaks through the bird's mouth."[101] It tells the chief of the House of Luuxhon to fish at a certain site. The "spirit of the place (*spanaxnox*) gives the House Chief permission to use the site" and is the underlying legal authority for ownership and use of the fishing site by the House.[102]

Disputes sometimes arise between Houses and members concerning House property, such as unauthorized use of crest images.[103] Authentication of the use of the symbol according to aboriginal legal traditions anticipates the affected House groups host a feast, and invite chiefs to attend along with "others with an interest in the crest being displayed."[104] There is also a broader application of this approach to other disputes and Nations through intermarriage. However the centrality of the feast, telling and witnessing to articulate law and applying it to the resolution of a wider range of disputes depends in part on whether the feast system continues to be recognized and reinforced as an effective and workable system for clarifying laws and resolving disputes within a particular community and beyond members of a particular House and collective property.[105]

III. Hybrid Models Drawing on Indigenous and Euro-Canadian Traditions

The following section provides an overview of dispute resolution processes that draw on Indigenous and Euro-Canadian legal traditions and dispute resolution processes. These processes include adaptations of mediation and tribunal processes, dispute resolution committees and collaborative decision-making.[106]

1. Ridgewood

In 1992, the Ridgewood Foundation for Community-Based Conflict Resolution was founded in order to develop, promote, and enhance Indigenous community-based conflict resolution "through foundational and principled best practices, process design and training."[107] Though it is no longer active due to the death of its founder,[108] the Ridgewood Foundation provided training and services to various groups including First Nations, government, police, community developers and professionals. The training was informed by a principled approach to dispute resolution based on interest based negotiation skills training. The training sessions formed part of a seven-day schedule designed to expose parties to negotiation processes while "equaliz[ing] the power imbalance between parties such as a First Nations community and the federal government."[109] Sessions were interactive and engaging "with the use of role playing while conveying principles of education on the ADR process, such as negotiation or mediation."[110] Following the negotiation training sessions, the affected parties prepared to negotiate actual conflicts with which they were involved.[111] Such training is now offered through other Indigenous conflict resolution programs such as those offered by the Indigenous Leadership and Management Programs offered by the Banff Center in Alberta.

---

[106] For more examples and elaboration of these processes see Ratcliffe & Bell, *supra* note 1.
[107] Jo-Ann EC Greene, *Towards Resolving the Division of On-Reserve Matrimonial Real Property Following Relationship Breakdown: A Review of Tribunal, Ombuds and Alternative Dispute Resolution Mechanisms* (2003), online: Aboriginal Affairs and Northern Development Canada <http://www.aadnc-aandc.gc.ca/DAM/DAM-INTER-HQ/STAGING/texte-text/adr_1100100032666_eng.pdf> at 24 [Greene].

[109] Greene, *supra* note 106 at 24.
[110] *Ibid.*
[111] *Ibid*.

Jo- Ann Greene has suggested this process might be adaptable to matrimonial real property disputes.[112] Applicable aspects include:

- It provides training in the process and skills for an equitable negotiation session;
- It is principled negotiation with emphasis on reaching an amicable agreement;
- It allows attention to cultural/identity issues, even those that may be deep-rooted, to be explored during negotiation; and
- It encourages full participation by the parties by paying attention to the environment in which the negotiation process occurs.[113]

Another benefit of the Ridgewood process is its focus on identifying and addressing the reasons and feelings underlying the conflict. Within First Nation and other communities "deep-rooted internalized feelings are often attached to the conflict."[114] The Ridgewood process facilitates the consideration and resolution of such feelings in order to prevent "derailment of the process."[115] This is crucial in that the process may collapse if the resolution of such concerns is inadequate, since any trust developed will disappear.[116]

However, Greene also points out some of the limitations of applying this model to matrimonial property disputes. For instance, one person in the relationship may generate the majority of the income and as a result, have more resources at his or her disposal to influence or "coerce outcomes"[117] by threatening litigation. Power issues are particularly prominent in families that experience domestic violence. For these reasons involvement of a third party or other process for addressing power imbalances is often needed to ensure fair and enduring resolution to such disputes.

2. Treaty Four

Established in 1999, the Treaty Four Governance Institute is "part of the Treaty Four Governance Model that promotes self-determination, self-government and the development of governance capacity."[118] It provides "advice to First Nations on the function & development of

[118] *Greene, supra* note 106 at 32.

constitutions, laws [and] policies" as well as development and training for treaty wide and community level dispute resolution.[119] In October of 2000, it adopted a policy, "to provide a mechanism whereby the First Nation can resolve community disputes…by proceeding through mediation, and adjudication if necessary, all the time drawing upon the mediation and peacemaking traditions of the Nation."[120] The Treaty Four Governance Institute has since incorporated mediation, as the first level in settling disputes, and adjudicative mechanisms, as the second level in resolving disputes. It also established the Treaty Four Administrative Tribunal (Tribunal) to "adjudicate disputes involving the application of First Nation law within Treaty Four territory. In order for the Tribunal to assert its jurisdiction, the First Nation law must designate the Tribunal as the dispute resolution mechanism to use."[121] It is intended to be available when disputes cannot be resolved at the community level through other processes.

Tribunal members are selected from the 34 First Nations of Treaty four and do not participate in resolution of conflicts from their own community.[122] The Treaty Four Governance Institute is responsible for developing and training Tribunal members, including in First Nation community based laws. The Tribunal was initially developed in response to the following needs identified by community members:

- Internal appeals seen as biased and ineffective
- External systems are too distant and inefficient
- Dispute resolution is a key component to all governance developments
- Desire to incorporate "traditional" principles and practices in settling disputes
- Improve quality of life (by settling disputes)[123]

The process followed incorporates Canadian administrative tribunal laws designed to ensure procedural fairness as well as ceremonial practice and respect for First Nations law and legal process. It involves five stages: "determination of Treaty Four jurisdiction" "pre-hearing stage," "the hearing," "decision writing" and "after the decision."[124] Lawyers for both disputing parties may be present but are precluded from actively participating and cross examination is

limited. The primary purpose of the Tribunal is to make findings of fact and settle disputes through the application of First Nations law. But the Tribunal may also make non-binding recommendations on possible ways to resolve the conflict,[125] suggest "recommendations on the development [and] implementation of First Nation law and policy," and issue "interim orders or injunctions during the course of its' proceedings."[126] While recommendations of the tribunal are non-binding, "the agreement to participate in the adjudicative process amounts to consenting to the binding Tribunal decision."[127]

3. Siksika Nation

In Alberta, the *Aiskapimohkiiks* Program was developed as a community-based justice program in order to "assist all Siksika Nation members to resolve disputes."[128] The *Aiskapimohkiiks* Program seeks to divert cases from formal adjudication, "thereby achieving maximum self-determination while restoring independence, solidarity, unity, peace and harmony."[129] The *Aiskapimohkiiks* process involves two-phases: mediation and arbitration and endeavors to incorporate Blackfoot traditions, values and customs.[130] The first phase, "*Aiipohtsiniimsta*," utilizes mediation. The second phase, "*Aiskapimohkiiks*," relies on arbitration if the parties are unable to settle their dispute during the first phase. A three-member tribunal comprised of an Elder, a member of the Siksika community and an independent Chairperson, conducts the arbitration. The A*iskapimohkiiks* Program also involves an Elders Advisory Committee.[131]

IV. Hybrid Models Directed at Matrimonial Property Disputes

1. Six Nations of Grand River

The matrimonial law of the Six Nations of Grand River community provides for mandatory real property mediation.[132] An exemption from this process is possible in situations where domestic violence is present or if parties agree "there is no reasonable chance for reconciliation."[133] Third party mediators are drawn from the community, and if necessary, given training in mediation.[134]

Section 8.2 of *A Law Concerning Matrimonial Real Property* sets out the purpose of the mediation, the process of selecting a mediator, and the steps that will happen leading up to and after the mediation.

> The mediator will be appointed by an Iroquois Tribunal Judge from a roster of trained mediators identified from within the community. Rules and procedures for mediation will be developed by the Office of the Iroquois Tribunal. Once engaged, the mediator will confer with the parties, and with the children, if the mediator considers it appropriate to do so, and will give their best effort to obtain an agreement between the parties. Success or failure to come to agreement will be reported to the Six Nations – Iroquois Dispute Resolution Tribunal. A mediated agreement will be registered.[135]

The tribunal is anticipated to be the final decision-maker with regards to matrimonial real property disputes, but with a right to appeal in certain circumstances to an Iroquois appellate body.[136] It is anticipated the tribunal will hold hearings in the communities where the dispute is located and apply local matrimonial real property law.[137] It will be comprised of community members from Iroquois communities in Ontario and Quebec: the Six Nations of Grand River, Mohawk Council of Akwesanse and Mohawks of Kahnawà:ke.[138] Section 9.1 of the *Law*

[136] Six Nations of the Grand River Elected Council, *Six Nations of the Grand River - Iroquois Matrimonial Real Property Tribunal Process* (18 January 2011, amended 19 August 2012), online: Six Nations Council < http://www.sixnations.ca/MRPLawNovember2012.pdf> at s.15 (regulations to *A Law Concerning Matrimonial Real Property*) [Six Nations of the Grand River, *Tribunal Process*].
[137] Six Nations of the Grand River, *Law Concerning Matrimonial Real Property, supra* note 131 at s 9.2.
[138] *Ibid* at s 9.1.

Concerning Matrimonial Real Property states that each of these will appoint three tribunal judges creating a roster of nine tribunal judges in total. Only three of the nine, one from each community and at least one from the community where the disputants reside, will sit to hear a case.[139] The process anticipates that expenses for the tribunal will be shared among the Iroquois communities and that the three communities will develop matrimonial real property laws that are "similar and have core [Iroquois] elements."[140] Although the tribunal will follow rules of administrative justice applicable to Canadian tribunals, as much as possible the dispute resolution will be "based on traditional approaches, such as those used in Justice Sentencing Circles."[141]

At the time of writing this paper, Six Nations was the only Iroquois community that enacted matrimonial real property laws and as such, its law anticipates Six Nations will operate the tribunal alone with three judges from that community until other Iroquois matrimonial real property laws are in place.[142] The traveling nature of the tribunal will not be implemented until all three communities have appointed their respective judges.[143] Six Nations has also developed a regulation to govern the tribunal process.[144] The regulation emphasizes that the Tribunal's remedies and processes must comply with the "Matrimonial Real Property laws of Six Nations of the Grand River and other member communities of the Iroquois Caucus, who have an Matrimonial Real Property Law" and be "fair, just and equitable."[145] It also sets minimum standards for member qualifications, which include impartiality and being of good character and reputation.[146] Members cannot be related by blood or marriage to each other, or to anyone whose case "is subject of a review, decision or an Iroquois which is before the tribunal."[147] Members appointed to the tribunal will serve for an indefinite period of time although their position is subject to review by their respective Council after five years.[148] If a case involves "culture, tradition, heritage and language," then the tribunal may need input from the Elders.[149] In such a

case, "any person who is an Elder of Six Nations of the Grand River has the right to give relevant input at the request of either spouse."[150]

To commence a tribunal proceeding, a written and signed application must be submitted to the Office of the Registrar along with proof of service on any named Respondents.[151] The anticipated process for the tribunal hearing is as follows:

a. Opening and closing prayer;
b. Acknowledge people present;
c. States rules of procedure to be used;
d. Deal with any preliminary objections concerning jurisdiction, irregularities, service and any other preliminary matters of a material nature;
e. The Applicant presents his or her case and calls witnesses;
f. Each Respondent has the opportunity to cross examine the witness of the Applicant;
g. At the conclusion of the case of the Applicant, each Respondent shall present their evidence and call witnesses;
h. All other parties have the opportunity to cross examine the Witnesses of the Respondent(s);
i. Re-examinational and rebuttal evidence is at the discretion of the Iroquois Tribunal Panel;
j. At the conclusion of the case each party shall be given the opportunity to provide argument;
k. The Hearing can be adjourned from time to time;
l. The Hearing is concluded when the Iroquois Tribunal declares the Hearing as concluded.[152]

The process also requires all witnesses to provide testimony under oath or by way of affirmation and hearings will generally be open to the public unless the tribunal determines protection of privacy is required.[153] Hearings may be completed or terminated in any of the following circumstances: the rendering of a decision of the panel, if the parties have settled, "if the applicant withdraws the notice of proceeding," if the parties agree to terminate the hearing or if the tribunal considers continuation of the hearing to be unnecessary.[154] Tribunal decisions can be appealed to the Iroquois Tribunal Appeal Body which will include one of the original members who heard the dispute.[155] The appeal must be premised on an error in the application of

[150] *Ibid.*

[153] *Ibid* at ss 13(2)-13(3).
[154] *Ibid* at s 14.
[155] *Ibid* at s 15.

relevant Iroquois matrimonial real property laws.[156] The appeal body has the authority to award costs to either party and such costs will usually be awarded if an appeal is deemed "frivolous or vexatious."[157] If an individual fails to comply with a decision rendered by the tribunal, the tribunal may also order costs, or engage the assistance of the Six Nations Government or a Compliance Officer, where one exists, to enforce the decision.[158]

2. Beecher Bay First Nation

Beecher Bay First Nation matrimonial real property law requires parties to participate in mediation if they are unable to successfully negotiate and conclude an Interspousal Contract with regards to the division of matrimonial real property upon relationship breakdown.[159] An Interspousal Contract refers to "an agreement entered into between Spouses who are married to each other or intend to marry" or "a Separation Agreement entered into between Spouses who are married to each other and are living separate and apart":

> ...made in writing, signed by the Spouses and witnessed, in which they agree on their respective rights and obligations under the marriage or on separation, with respect to the possession or division of Interests in Beecher Bay First Nation Land.[160]

The Council of Beecher Bay First Nation are responsible for developing the policy and procedures for mediation and maintaining a roster of mediators after consultation with the Elders Advisory Council and the Lands Management Advisory Committee.[161] The roster must "include one or more Elders who are qualified to apply the traditional laws and customers of the Big House of the Beecher Bay First Nation [and] available to assist Spouses in resolving disputes."[162]

Spouses may jointly or independently initiate mediation. If mediation is initiated independently, the initiating spouse is required to file a Notice of Request for Mediation with the

[162] *Ibid.*

Lands Manager and serve it on the other party.[163] Once the Lands Manager has been notified that the spouse has been served, the Notice of Request for mediation is delivered to the Land Management Advisory Committee.[164] Within thirty days the Lands Manager must schedule the mediation.[165] This time period may be extended at the request of the spouses or if the Lands Manager is unable to arrange for a qualified mediator within the required time period.[166] Ten or more days prior to the commencement of the mediation, the Lands Manager must serve a Notice of an Appointment for Mediation upon both spouses and the Lands Management Advisory Committee.[167] Spouses who have been served are required to attend mediation[168] and the mediation will be conducted expeditiously and in confidence.[169] If mediation is successful, a Separation Agreement is drafted.[170] The mediator is responsible for notifying the Lands Manager, who will then inform the Lands Management Advisory Committee.[171] If the mediation process is unsuccessful, the mediator must issue a confidential report outlining the unresolved issues to each spouse and the Lands Manager.[172]

3. Opaskwaya Cree Nation and Mississaugas of Scugog Island First Nation

Similar processes to those adopted by Beecher Bay First Nation are adopted by several other communities including the: Chippewas of Georgina Island First Nation, Lheidli T'enneh First Nation, Matsqui First Nation, McLeod of Lake Indian Band, Muskoday First Nation, Nipissing First Nation, and Opaskwaya Cree Nation.[173] However, the Opaskwaya Cree Nation does not mandate mediation. According to their matrimonial real property law mediation is an option that either party can arrange prior to seeking formal adjudication through the Canadian courts.[174] The Mississaugas of Scugog Island First Nation's process is mandatory, but the

spouses may choose the mediator.[175] If the spouses cannot agree on a mediator, the Band Council will choose a suitable mediator.[176] Regardless of the outcome of the mediation, in all of the aforementioned First Nations, Council provides a certificate to the parties confirming compliance with the mediation requirement.[177] An alternative process, such as formal adjudication, may not be pursued unless such a certificate can be produced.[178]

4. Kitslas and Westbank First Nations

Both the Kitselas First Nation and the Westbank First Nation require mediation before formal adjudication of matrimonial property disputes.[179] Under the Kitselas First Nation's process, either spouse may initiate mediation by providing a written request to the British Columbia Mediator Roster Society.[180] If the disputing spouses do not agree upon a mediator within fourteen days of the initial request, the British Columbia Mediator Roster Society, at the request of either spouse, will appoint one.[181] Furthermore, within fourteen days of the appointment of a mediator, each spouse is required to provide the mediator with a written summary outlining all relevant facts and issues.[182] The mediator is then required to provide copies of the summaries to the other party while determining the suitability of the parties for mediation. The mediator may refuse to mediate if he/she determines that the process will be unsafe for one or both spouses.[183] The mediation may be conducted "in joint meetings or private caucus" and the mediator may "determine his/her own rules and procedures applicable to the conduct of the mediation in accordance with the BC Mediation Roster Society standards."[184]

Parties may attend mediation in the presence or absence of legal counsel and have a duty to attend upon receiving a notice of appointment.[185] All statements made in the course of mediation are confidential unless the mediator is concerned for the safety of a child.[186] If the parties successfully reach an agreement through mediation, after advising the parties to seek independent legal advice, the mediator or a lawyer will draft a separation agreement for the spouses to sign.[187] The mediator is required to prepare a report if he/she deemed mediation to be an unsuitable dispute resolution process, if a spouse refused to attend or if the mediation did not result in an agreement.[188] In that event, the report is to be sent to both spouses and may be submitted to the Court in order to prove that mediation has occurred.[189] Furthermore, a spouse may commence further alternative dispute resolution processes in relation to matters that do not concern First Nations land.[190] The Westbank First Nation adopts the same process.[191]

5. Skawahlook First Nation

The Skawahlook First Nation community provides "justice assistance" to disputing spouses.[192] Qwi:Qwelstom refers to "justice" and is based on traditional dispute resolution techniques.[193] This form of mediation requires "affected family and community members to discuss what has happened and to reach an agreement on how best to repair harm and restore balance and harmony."[194] If mediation is successful, the chair is required to provide a copy of the agreed upon Domestic Contract to the Lands Manager, who is responsible for notifying the Lands Advisory Committee.[195] If mediation is unsuccessful and domestic contract cannot be achieved, the chair must deliver a confidential report to the spouses and the Lands Manager (if the report is oral, the Lands Manager must reduce is to writing and it must be initialed by the

chair).[196] Spouses may then apply to the Court for adjudication and resolution. A spouse may commence further alternative dispute resolution processes in relation to matters that do not concern First Nations land.[197]

6. Tsawout First Nation

The Tsawout First Nation encourages spouses to resolve property disputes "through cooperative discussion or through mediation or other alternative dispute resolution" [198] prior to applying to the court for formal adjudication.[199] Spouses may apply to the court provided reasonable efforts have been made in order to resolve the dispute.[200] The burden is on the person opposing the application to court to demonstrate that reasonable efforts have not been made through alternative dispute resolution.[201] This approach is also adopted by the Tzeachten First Nation.[202]

7. Anishinabek Nation (Union of Ontario Indians)

The Anishinabek Nation, which was incorporated in 1949 as the Union of Ontario Indians, represents 39 First Nations in Ontario. In 2003, the Anishinabek Nation began looking into creating community-based dispute resolution processes.[203] While engaging in self-government negotiations, they began crafting the processes after receiving funding.[204] The Anishinabek Nation has established dispute resolution systems to govern disputes including matrimonial real property, education and governance.[205]

From the start, the Anishinabek Elders Council was involved in the four regional workshops and the "wrap-up conference" that played a role in building the processes, bringing "a

strong source of Traditional Knowledge to help solidify the Anishinabek Nation's understanding of dispute resolution."[206] With the hopes of incorporating the Anishinabek citizens' views on the issue of dispute resolution, the workshops helped to strengthen the communities' support in starting and shaping such a process.[207] During 2004-2005, another set of workshops and a second conference occurred, this time focusing on discussions about "external dispute resolution processes" such as dispute resolution panels and the Commission's process.[208]

Some of the communities are very small, with populations no larger than a couple hundred. For those communities, it would be difficult for it to have its own process.[209] Thus, the decision was that there would be "one national and four regional dispute resolution processes in the Anishinabek territory."[210] The regional processes are aimed at dealing with regional challenges or disputes.[211] The types of disputes that may be considered by the Anishinabek Nation Tribunal and Commission are varied and include those that "concern the entire nation, [disputes] between First Nations, governance and administration of First Nations, Election Codes, Constitutions, matrimonial real property, citizenship, etc."[212] Moreover, "First Nations, citizens, and non-members of the Anishinabek Nation" may utilize the Anishinabek Nation Tribunal and Commission.[213]

Between 2005-2008, the structures, policies and practices of the four Dispute Resolution Commissions and the Anishinabek Nation Tribunal and Commissions were determined.[214] All five Commissions ultimately rely on several alternative dispute resolution processes including sharing Circles, mediation and dispute resolution panels.[215]

The processes draw on the traditional values and dispute resolution processes of the communities.[216] Respect is paid to the 7 grandfather teachings: wisdom (nbwaakawin), love (zaagidwin), respect (mnaadendmowin), bravery (aakdehewin), honesty (gwekwaadziwin),

humility (dbaadendiziwin) and truth (debwewin).[217] The processes arise from models that are "culturally appropriate" to the community and designed by the communities, resulting in a greater understanding of what the process represents.[218] The appeals and redress system that was created involves community members by having them sit on the committees and respects community individuality by providing for the procedures to be shaped to fit the particular community's tradition or desired system.[219] Some of the goals in the processes are to keep relationships[220] and to be fair, neutral, and confidential.[221]

One of the processes is the sharing Circle service. In this process, an Elder or member of the committee works with the parties involved in a dispute in a voluntary, informal process where they can discuss the dispute and explore how the dispute arose, the effects that have flowed from the dispute, an how it may be resolved.[222] This process encourages the community and the person to take ownership of the act or harm.[223]

Another process is mediation. Here, a trained community member acts as a mediator to lead a voluntary mediation.[224] The process allows the parties to voice their concerns and empowers the individuals to consider what they, and their communities, can do to move forward from the dispute.[225]

Lastly, there is the dispute resolution panel service, which is typically used where mediation or sharing Circles may not work well for the parties or where the parties would like a decision made.[226] Typically, three community members, who are trained in hearing evidence, sit on a panel and hear the parties.[227] In cases where the community panel members may be in conflict with the dispute or parties, a panel member may be brought in from another community.[228] The panel is given the authority to hear evidence, make recommendations, and to

make a final decision.[229] The overall goal of the processes is to promote the upkeep of relationships and to avoid situations that can divide people or communities.[230]

In March 2007, the Grand Council, Chiefs in Assembly of the Union of Ontario Indians passed a draft version of matrimonial real property legislation in principle. The Anishinabek Nation subsequently passed the law in June 2007.[231] In terms of enactment, in 2010, the Grand Council, Chiefs in Assembly passed a plan to develop and implement various regulations that will "give effect" to the matrimonial real property law.[232] The division and distribution process for matrimonial real property in the event of marital breakdown must be initiated through an application.[233] Ultimately, the law states that its purpose "is to promote the best interests, protection, and well being of members, citizens, and non-members who reside within First Nations of the Anishinabek Nations, regarding the division and distribution of matrimonial real property."[234]

V. Hybrid Models Directed at Family Disputes

Although not directed at matrimonial real property, these processes draw on Indigenous and Canadian legal traditions and can be adapted to address other family disputes, including matrimonial real property disputes.

1. Nishnawbe Talking Circles

In 1990, the Nishnawbe-Aski Legal Services Corporation was tasked by the Chiefs of Treaty Nine to establish alternative justice services for its community members. The process, called "the Talking Together Program was created in 2002 to address the child welfare needs of 51 First Nations communities in the Nishnawbe-Aski Nation (NAN) territory."[235] More specifically, the program works with on- and off-reserve NAN First Nations children who have

been apprehended and their families.[236] Talking Together utilizes a restorative, Circle approach "to bring participants together to discuss family problems in a non-judgmental way."[237] The Circle is comprised of family members, workers, agency representatives and community Elders.[238] In the Circle, participants examine the ramifications of the issues experienced by a particular family.[239] "If an agreement is reached, it is used as the basis for the Plan of Care, and filed with the Court."[240] Ultimately the purpose of the Talking Together initiative is to strengthen the family unit.[241]

2. Mikmaw Family Group Conferencing

Commencing in 2005, the Mi'kmaw Family and Children Services Agency developed Family Group Conferencing, "which is a culturally aligned strategy for family healing that uses a healing Circle format to assist families in open protection cases, cases before the courts, children in care and kinship placement in foster care and adoption."[242] As explained in our discussion of BC Initiatives below, Family Group Conferencing is a phrase used to describe a participatory process used in New Zealand and adapted in Canada. Here it often takes the form of Circle decision making processes for conflict resolution in accordance with many First Nation legal traditions. The Agency offers Mi'kmaw families the opportunity to engage kinship networks for child placement as opposed to foster care or family court.[243] Family Group Conferencing has expanded and presently receives referrals from the Family Support Department and the various Family and Community Healing Centres.[244] One reason it has expanded is, as the Mi'kmaw Family and Children Services Agency indicates, it:

> very much resembles the healing Circle and the talking Circles of [Mi'kmaw] culture. For many Mi'kmaq and other Aboriginal people the Circle is a powerful symbol of connectivity and completeness. The healing Circle / talking Circle has long been a place where everyone is equal, where all can have a say. It is a healing Circle where the heart can be unburdened, and words of consolation can be

> freely spoken. Everyone in the Circle has a piece of truth and everyone's contribution is intended to make it whole.[245]

3. B.C. Circle and Family Group Conferencing Models

In 2004, 2006 and 2008, the British Columbia Ministry of Children and Family Development provided significant funding to the Law Foundation of British Columbia for the purposes of expanding alternative dispute resolution processes with respect to child protection, particularly in the Aboriginal context.[246] There are eleven participating agencies that have implemented various "collaborative decision-making" (CDM) processes including family group conferencing, traditional decision-making and hybrid models.[247] Some of these are discussed below.

Family group conferencing was originally used to describe a process used in New Zealand where families, service providers and other professionals engage in collaborative decision-making. It was "developed in response to the need for a culturally sensitive, family-based approach to the care of Maori children, who, like Aboriginal children in BC, were disproportionately over-represented in the country's foster care system."[248] This model is premised on the notion of collective responsibility and involves the child, immediate and extended family members and community members (as identified by the family) in the development of a plan of care.[249] An "underlying assumption of the [Family Group Conferencing] process is that the family itself is best able to understand and articulate its strengths, challenges, resources and supports, [and] therefore plans created by the family have a higher probability of success."[250]

A family group conference facilitator or coordinator is responsible for assisting families in identifying and inviting appropriate individuals to the conference. Such conferences are ultimately designed to enhance and augment a particular family's support network.[251] Traditional decision-making processes also involve Elder wisdom and knowledge. They also generally

commence and close with a prayer. If the Circle format is employed, there are typically "four rounds: introduction/role identification; issue articulation; family planning; finalization of the plans and/or check in. Teachings are shared by those with influence and authority in the meeting - often Elders."[252] The individuals that comprise the Circle develop resolutions and as such, "the individuals are the Circle and are encouraged to take responsibility of the resolution."[253] Multiple meetings may be required in order to reach a resolution.[254]

(a) *Carrier Sekani Family Services Society*

The Carrier Sekani Family Services Society utilizes traditional decision-making regarding child welfare disputes. A Family Justice Facilitator (Facilitator) is responsible for arranging all pre-meeting and meeting details in addition to ensuring the safety of all participants.[255] Usually the Facilitator meets with the social worker prior to contacting the parents and arranging the pre-meeting. During the pre-meeting, the Facilitator is responsible for assisting participants to articulate and express their concerns and gauging relationship dynamics between participants.[256] Many individuals are invited to participate including children, siblings, parents, Elders, extended family members and Clan members depending on the families' preferences.[257]

The process is "child centered and ensures that the child's voice is included."[258] The Facilitators, which are "primarily of Carrier Sekani heritage," generally "have a variety of qualifications and experience" with many holding a social work degree or similar education.[259] He or she typically conducts an individual orientation with each participant, including service providers, to discuss various issues and concerns prior to the meeting.[260] The Facilitator, or if the family elects, Elders, share teachings from both Western and Indigenous traditions: "participants teach each other informally by relating their own similar personal experiences."[261] Once the

family hears all protection and welfare concerns, they develop a plan and reduce it to writing.[262] Depending on the nature of the case, the social worker may have ultimate decision-making responsibility.[263] The family and the social worker review the final agreement, which must outline the manner in which it is to be executed and evaluated, and sign it accordingly.[264] A date for a review meeting must be scheduled, usually three months after the plan is finalized and subsequent meetings may be arranged depending on the plans progress to account for any issues and revisions.[265]

(b) *Haida Child and Family Services Society*

Pursuant to Haida culture and values, "disputes are typically resolved by consulting Elders, matriarchs, or "aunties." In the event of a concern about a child, a community member will approach one of the people previously mentioned and ask for their assistance to intervene."[266] The Coordinator is responsible for inviting participants according to the families' wishes and will contact all identified family members, community members, the social worker and all other professionals involved.[267] On occasion, some professionals have been precluded from participating in the Circle "because the family does not want them there."[268] The Coordinator also outlines the structure and purpose of the meeting during the pre-meeting stage. During this stage participants will be asked to articulate "what they want for the child."[269]

The meeting is often initiated by an opening prayer and "always with a song."[270] Elders and cultural support people "may share teachings."[271] The Circle provides all participants with an "equal opportunity to speak."[272] While the family is responsible for developing a plan, it is subject to social worker approval.[273] The meeting concludes with "a final round of the Circle where participants are asked to say one thing each found significant. Then there are closing

[273] *Ibid.*

prayers and music."[274] In terms of accountability, the Coordinator conducts approximately three follow-up meetings for each conference, which is monitored by the social workers and any other appropriate professionals.[275]

(c) *Kla-how-eya Aboriginal Centre*

The Kla-how-eya Aboriginal Centre engages a hybrid process that is primarily child-focused.[276] During the pre-meeting stage, the family determines who to invite to the Circle with the support of two Facilitators.[277] The Facilitators explain the process to the family, discuss potential options for resolution including the benefits of the Circle process, and advise the social worker required to consent to any plans developed by the family.[278] A four round talking Circle is then utilized, which typically commences with a smudge and a prayer.[279] The four rounds of the talking Circle are as follows: role/relationship identification, issue identification, family planning, and formalization of plans.[280] Elders are available to provide "support and recommendations from a neutral, community point of view" as requested.[281] The meeting ends with "a final round to debrief the process and acknowledge the relationships built."[282] Food is served to encourage sharing and relationship building, while also celebrating the commitments contained in the plan.[283] Another meeting and/or Circle may be arranged if necessary.[284]

(d) *Northwest Inter-Nation Family and Community Services Society*

Northwest Inter-Nation Family and Community Services Society also employs a hybrid process. The Coordinator is required to determine "who should be invited" to the meeting "based on discussions with the parents, children (12 years and older) and other family members" during the pre-meeting phase.[285] The actual meeting is often opened with a prayer, if the family

requests, and is facilitated by the Coordinator.[286] Traditional teachings are discussed and "taking into account everyone's different perspective, [the Coordinator] facilitates some mutual understanding by assisting some parties to understand each other in individual meetings and within the [Family Group Conferencing] meeting."[287] During the introductions, participation is encouraged through the use of flip charts titled "Hopes," "Strengths," and "Issues/Concerns."[288] The Circle process then commences and all participants are permitted to speak.[289] The affected family is responsible for developing their own plan although it must be approved by the Delegated Agency.[290] Once a plan has been agreed on, the Coordinator formalizes it, a plan-monitoring schedule is developed, and the Coordinator's role concludes.[291] Within three to six months of the formalization of the agreement, a Family Group Conference Evaluator will also follow-up with the family in order to gauge progress.[292]

(e) *Nuu-chah-nulth Tribal Council*

The Nuu-chah-nulth Tribal Council relies on a traditional approach in settling child welfare and safety disputes that maintains: "opportunities for change and growth start with the basic precepts of traditional family as the support system and strength to begin the healing of the self."[293] The process includes as many family and community members as possible and preparation for the main meeting involves several "cultural preparation and cleansing ceremonies."[294] The Coordinator is responsible for explaining the process to participants and encouraging them to consider traditional teachings and "to use those teachings or to seek out Elders who will counsel them as to their family practices."[295] The Coordinator also arranges one-on-one meetings in order to empower individuals to actively participate.[296] The family conference meeting starts with an opening prayer and the Coordinator establishing guidelines

and encouraging all participants to express views, opinions and concerns.[297] All family members who participate are equally responsible for the development and execution of a plan.[298] Once consensus is reached, the family and the social worker file any and all necessary paperwork.[299] Follow-up meetings are arranged to measure progress and make adjustments.[300]

(f) *Squamish Nation*

The alternative dispute resolution processes developed by the Squamish draw on traditional teachings and the Circle format. Proceedings are initiated by a social worker who meets with the Coordinator/facilitator (facilitator) to discuss agency concerns and objectives for the affected family.[301] The social worker and the family identify individuals they believe will contribute positively to the Circle.[302] The Circle begins with a prayer by an Elder, family member or community member.[303] "[T]eachings are shared about local history, Squamish laws, protocols, customs and the significance of these are explained. There is a respectful acknowledgment of the family's strengths and their value to the community."[304] The facilitator encourages and supports participants to express their views while explaining the Circle process.[305]

During "private family time," the family develops a resolution plan based on the information presented and issues addressed in the Circle.[306] The final agreement is formalized in the full Circle after the family's plan has been considered and accepted by the social worker.[307] The Circle concludes with "a blessing and closing comments by an Elder, community member, or family member."[308] The facilitator, "one month after a Circle and three months thereafter for a period of up to 18 months, "is responsible for interviewing at least three people from each Circle in order to determine the executions and ramifications of the plan.[309] If deemed necessary, the

facilitator may arrange a follow-up Circle provided the social worker and the family approve.[310]

(g) *Sto:lo Nation*

The Sto:lo Nation promotes a traditional decision-making model in which ancestral teachings are relied upon in order to resolve child welfare issues.[311] A Family Justice Worker, who often conducts home visits and pre-meetings in order to establish a relationship with the affected family, is responsible for facilitating the Circle and is appointed within one to two days of receipt of a request for service.[312] At the request of Sto:lo Elders, children presently are not permitted to attend any meetings or conferences.[313] Ultimately the Circle provides a safe forum for the discussion of concerns and possible solutions. Prior to attending the Circle, individuals must refrain from substance use for at least four days.[314] Elders attend the Circle with no prior knowledge of the conflict in order to ensure that they "come in with no pre-judgment or pre-solutions to [the] conflict."[315] Their role is to support the family and provide traditional guidance based on oral teachings.[316]

The 'Smoyelhtel' guides the Circle through several processes including: opening prayer, rules, introductions, explanation of the conflict, resolution development, check-ins and a closing prayer.[317] The Family Justice Worker then assists the affected parties in establishing a written implementation plan.[318] Once the Circle is completed and resolutions are established, "the file remains open for up to two months."[319] The Family Justice Worker is responsible for following up with the family through personal contact to inquire into whether additional support is required approximately one month after resolutions are developed, depending on the plan that was set up.[320] If necessary, "the file will remain open for another two to four weeks" prior to its closing.[321] Ultimately the length of time required to execute the plan varies on a case-by-case,

Circle-by-Circle basis.[322]

VI. Conflict Resolution and the *First Nations Land Management Act*

Several First Nations have developed alternative dispute resolution processes under the *First Nations Land Management Act*. While these processes do not currently apply to the resolution of matrimonial real property disputes, similar models can be utilized and in some instances are being adapted. Signatories to this Act include the Aitchelitz, Beausoleil, Buffalo Point, Haisla Nation, Long Plain, Mashteuiatsh, Membertou, Miawpukek, One Arrow, Shushwap, Skowkale, St. Mary's, Stz'uminus, Tsuu T'ina, Williams Lake Indian Band and Yakweakwioose First Nations.[323] Some examples of dispute resolution processes adopted under the Act follow.

1. Long Plain First Nation

The Long Plain First Nation has established, under the *Long Plain First Nation Land Code*, a dispute resolution process that can handle disputes around "interests and rights in Lands."[324] Informal discussions are the first stage of resolving the dispute[325] and if those fail the parties can then move through the following ordered stages of dispute resolution: "facilitated discussions," appeal, or as a final option, Court adjudication.[326] The Long Plain Land Authority, developed to manage lands, is responsible for creating and maintaining a list of possible "appeal panelists from among Eligible Voters, who have relevant knowledge and experience to serve on the Appeal Panel for facilitated discussions and appeals."[327] Sections 41 and 42 detail the facilitated discussion and appeal stages of the process, where the same panel acts as facilitators and as an appeal panel. When a dispute arises and an Appeal Panel is required, the Chief and

[326] *Ibid* at s 38.4
[327] *Ibid* at s 39.1.

Council appoint an "appropriate number of panelists from the roster to serve in the facilitated discussion and appeal stages."[328] A party seeking the resolution of a dispute is required to file a written notice of appeal with the Land Authority.[329] Within fifteen business days the Land Authority must deliver a report to the Chief and council outlining the dispute, pursuant to section 41.1 of the *Land Code*. Within five business days, the Chief and Council establish the panel under section 41.2. Under section 41.3, the panel must then convene as facilitators within five business days. And if the parties are unable to reach consensus through facilitated discussion, the appeals stage is triggered.[330]

The Appeal Panel may confirm, reverse, substitute or refer a decision.[331] The decisions of the Appeal Panel must be reduced to writing[332] by the Chair and are "binding and shall be final except for review by a court of competent jurisdiction."[333] While this process does not apply to housing allocations or the settlement of matrimonial real property disputes,[334] s. 37.1 indicates that Council is responsible for developing and implementing a "spousal property law" applicable upon marital breakdown to "the use, occupancy and possession" and "the division of interests" in First Nation land. Such laws must ensure each spouse has "an equal right to possession" and "an undivided half interest in their matrimonial home," cannot "discriminate on the basis of sex" and must limit those entitled to hold a permanent interest in land to members.[335]

2. Beausoleil First Nation

Beausoleil First Nation has established a similar process in their draft *Land Code*. Citizens are required to "use best efforts to prevent disputes from arising and … consider the use of dispute resolution processes at the earliest possible stage of any conflict."[336] The four stage process for land disputes includes: negotiation, facilitated discussions, mediation and "final arbitration by the Dispute Resolution Panel."[337] An individual seeking assistance must file

written notice of the dispute.[338] All individuals involved must be: "treated fairly," "given a full opportunity to present their case" and "given reasons for a decision made."[339] Section 43.4 provides that a notice of termination will issue if it is determined that facilitated discussions or mediation are unsuccessful in resolving the dispute. In that case, the dispute may then progress to "the next stage of the dispute resolution process or to final arbitration."[340]

The Roster Panel is comprised of twenty panelists at most,[341] and is appointed by the Beausoleil First Nation Council.[342] Certain persons are precluded from being on the panel. In order to avoid conflicts of interest, "no Council member, or employee of Beausoleil First Nation or person already serving on another board, body, or committee related to Beausoleil First Nation" is permitted to be on the roster.[343] The panel to hear the dispute is made up of three panelists selected from the roster panel. To select the panel, each party is permitted to select a panelist, with the third being selected by "the rest of the panel."[344] However, all three panelists may, alternatively, be selected by the roster panel.[345] This three person Dispute Resolution Panel may confirm, reverse, substitute or refer a decision.[346] The Dispute Resolution Panel may also "direct an action be taken or ceased," make orders,[347] and make recommendations.[348] "Decisions of the Dispute Resolution Panel must be in writing" and provided to all parties of the proceeding within fourteen days of the decision date, if they so ask.[349] Decisions of the Panel are binding, but can be reviewed on application by the Federal Court's Trial Division.[350]

3. Haisla First Nation

The Haisla Nation Land Code was ratified in 2014[351] and relies on informal discussions, mediation and arbitration in the resolution of land-based conflicts. The Haisla Nation mandates "wherever possible, a dispute in relation to the Nation's Land must be resolved through informal discussion by the parties to the dispute."[352] If informal discussions are unsuccessful, the parties may attempt mediation, with a mediator selected from the British Columbia Mediator Roster Society.[353] If the parties are unable to agree on a mediator, they may request that the Society appoint a mediator or they may select any other mutually agreed upon mediator.[354] If mediation fails, then the parties may apply to the British Columbia Arbitration and Mediation Institute in order to commence arbitration proceedings.[355] The rules of the British Columbia Arbitration and Mediation Institute govern the arbitration process.[356] The process is not currently available for determining housing allocations.[357]

4. Stz-uminus First Nation

Similarly, the Stz'uminus First Nation employs informal discussions, mediation and arbitration in order to settle land-based disputes.[358] If parties are unable to resolve their dispute through informal discussions, mediation may be pursued.[359] The parties may jointly appoint a mediator or may request that the Lands Advisory Board Resource Centre do so.[360] If mediation is unsuccessful, the parties may seek arbitration. The same appointment process that governs the mediation also governs the arbitration.[361]

VII. Conclusion

This paper considered examples of a wide assortment of First Nation approaches to dispute resolution in Canada. The discussion opened with a general overview of many Indigenous legal traditions and processes to resolve conflict. Next, the discussion shifted to looking at numerous examples of dispute resolution processes operating on a community level that draw on both Indigenous and Canadian dispute resolution processes and values. This review is not comprehensive, but illustrates the variety of dispute resolution processes and the commonalities that are shared in the dispute resolution models.

Several themes emerge. Cooperation appears to be an important part of many of the processes and traditions considered here. Family and tradition are also frequently identified as important factors in many of the dispute resolution processes. In the examples considered, panels of multiple members, mediation, informal discussions and Circle processes are more commonly employed as first resorts to dispute resolution rather than the relatively more adversarial processes of litigation or formal negotiation.

Considering the interplay of Indigenous legal traditions with the processes to dispute resolution and the models that have been developed in many communities, a number of other themes may be identified. Responsibility, community, respect and discussion make frequent appearances as principles that are incorporated into these processes. For example, Norman Arnold Yellowman, from the Aamjiwnaang First Nation and part of the Anishinabek Nation Youth Council described how the sharing Circle process developed by the Anishinabek Nation can give the participants a chance to see "what love is, especially coming from a community based approach."[362] He went on to explain that the involvement of the Elders and that leadership can bring a realization to the participant about their importance in the community.[363]

But, important to remember is that though some themes or commonalities have been suggested here, "there is no 'on size fits all' approach" that can be applied to all Indigenous legal traditions or community processes.[364] Instead, there are a "wide variety of principled legal responses and resolutions to harm and conflict available within each legal tradition."[365]

2025 *Pre-Budget Submission*

JANUARY 24, 2025

Priority Areas for Action

- **Strengthen social infrastructure in communities across the province** so community-based organizations and service providers have capacity to meet the needs of children, youth, and families and effectively work in partnership to deliver integrated, wraparound supports, services, and treatment**.**

- **Ensure children, youth, and families presenting with complex needs (i.e., social, emotional, developmental, mental health and addictions, etc.) have access to highly specialized, intensive services, supports, and treatment and/or out-of-home care and live-in treatment** tailored to their unique needs.

- **Bring greater financial stability and sustainability to the Ontario child welfare sector by modernizing the funding formula** so that it aligns with service principles and best practices (i.e., early intervention, prevention, continued connections to kin, culture, and community) integral to delivering improved, equitable outcomes and responds to regional realities.

- **Prioritize family- and community-based placements** by ensuring kin and alternate caregivers receive adequate financial assistance, have timely access to local supports, services, and treatment, and receive care in a way that is culturally relevant, responsive, and identity-affirming.

- **Support youth receiving supports and services from a child welfare agency as they transition to independence** by continuing to fully fund *Ready, Set, Go* and improving access to integrated youth services in communities across the province.

About the Ontario Association of Children's Aid Societies

The Ontario Association of Children's Aid Societies (OACAS) is a provincial membership organization representing 47 of Ontario's 50 mandated children's aid societies and Indigenous Child and Family Well-Being Agencies, as well as 2 pre-mandated Indigenous Child and Family Well-Being Agencies. We support members by providing practice tools, educational and training opportunities, as well as communication and advocacy supports to help bring positive change to the Ontario child welfare system and deliver improved, equitable outcomes for children, youth, and families.

Introduction

The OACAS 2025 Pre-Budget Submission is informed by feedback from our members and youth with lived experience in the Ontario child welfare system. Many thanks to everyone who shared their reflections and insights.

Children's aid societies and Indigenous Child and Family Well-Being Agencies (child welfare agencies) are part of the network of community-based organizations and service providers that promote the health, well-being, and safety of children, youth, and families across the province. Child welfare agencies do not just provide protection services; they also work closely with organizations and service providers in their communities, as well as kin and alternate caregivers, to facilitate crisis intervention, early intervention, prevention-focused, and out-of-home care.

The work of child welfare agencies requires communities with robust resources and integrated systems of care that are ready to wrap around children, youth, and families so they have access to the right care, at the right time, close to home. Unfortunately, timely and equitable access to community-based care is lacking in communities across the province.

Gaps and barriers to culturally relevant, responsive, and identity-affirming supports and services at the community level are acutely felt by Indigenous, Black, racialized, and 2SLGBTQ+ children, youth and families, including those presenting with complex needs (i.e., social, emotional, developmental, mental health and addictions, etc.) and living in poverty. There are also regional barriers to care; children, youth, and families living in Northern, rural, and remote parts of Ontario face unique challenges in accessing services, supports, and treatment close to home.

Child welfare agencies are deeply concerned by the inadequate access to community-based care in Ontario given the scope of their work. They are seeing the impact on the children, youth, and families they support; challenges are deepening, and more and more families are escalating to the point of crisis. Further, they are facing significant economic hardships and human resource challenges as they strive to fill systemic gaps and remove barriers to care in the broader social services sector.

OACAS and our members remain committed to working in partnership with the Ontario government to promote the health, well-being, and safety of children, youth, and families across the province and bring positive change to systems serving children, youth, and families, including child welfare. Together, we can work towards actionable solutions so that children, youth, and families receive the right care, at the right time, close to home.

Priority Areas for Action & Recommendations

Strengthen social infrastructure in communities across the province so community-based organizations and service providers have capacity to meet the needs of children, youth, and families and effectively work in partnership to deliver integrated, wraparound supports, services, and treatment.

Children, youth, and families across Ontario are facing significant challenges amidst a period of heightened economic vulnerability. High inflation rates over the past few years have increased the cost of basic needs, such as housing, food, and healthcare. Though the inflation rate has come down, the cost of living has not, and families are having a tough time making ends meet.

Community-based organizations and service providers play a vital role in supporting children, youth, and families facing challenges. They make up the backbone of social infrastructure in Ontario by delivering programs focused on health and well-being and addressing poverty and its interconnected challenges like food insecurity, affordable housing, employment, education, and so on.

Sadly, community-based organizations and service providers are struggling to keep up with the increased demand for support. Up against worsening economic hardships linked to outdated approaches to funding and a shortage of human

resources, they are cutting back programs and services to cope; waitlists for existing programs are growing and the number of closures is climbing.[1]

Child welfare agencies are deeply concerned by the increasingly frail state of social infrastructure in Ontario given the scope of their work. Most families receiving services from their local child welfare agency are not cases of extreme abuse or neglect. They are families facing challenges like poverty, unemployment, inadequate housing, and intimate partner and gender-based violence or systemic racism.

Agencies work tirelessly to ensure children, youth, and families remain connected while providing them with short- or long-term support. In 97% of investigations, children and youth remain at home with their families while receiving services.[2] Agencies achieve this by working in close partnership with local partners and service providers, as well as kin and alternate caregivers, to facilitate crisis intervention and ongoing early intervention and prevention-focused care. The capacity of agencies to ensure children, youth, and families thrive and stay together is directly impacted by the availability of resources in their communities.

Unfortunately, for many agencies, they face a scant, siloed, and splintered landscape of supports and services in their communities. For some agencies, the services, supports, and/or treatment they need are simply not available. For others, there are lengthy waitlists, insufficient resources (i.e., funding, staff), or exclusionary eligibility criteria that frustrate access to the right care, at the right time, close to home.

Inadequate access to care has a profound impact on the children, youth, and families that agencies support. When families do not have timely access to supports, services, and treatment needs deepen and demands on community-based organizations, including child welfare agencies, intensify as they strive to keep up with families facing increasingly complicated challenges.

Gaps and barriers to culturally relevant, responsive, and identity-affirming supports, services, and treatment at the community level are acutely felt by Indigenous, Black, racialized, and 2SLGBTQ+ children, youth, and families, including those presenting

with complex needs (i.e., social, emotional, developmental, mental health and addictions, etc.) and living in poverty.

There are also regional barriers to care for children, youth, and families living in Northern, rural, and remote parts of the province due to longstanding disparities in social infrastructure. Many families must travel long distances to receive care exclusively offered in other parts of the province; this comes with unique economic hardships and challenges. For example, loss of income due to absences from work so they can travel and transportation costs.

Inadequate access to inclusive community-based supports, services, and treatment exacerbates existing inequities and disparities in outcomes linked to systems of power, privilege, and oppression. Culturally relevant, responsive, and identity-affirming approaches to service delivery are central to health and overall well-being; such approaches to service delivery ensure children, youth, and families feel truly supported as they navigate challenges.

The Ontario government can help by strengthening social infrastructure through the 2025 Budget. We recommend that the province:

- **Work across ministries to make targeted investments in community-based organizations and service providers across the province in the social services sector to build their capacity to meet the needs of children, youth, and families and effectively work in partnership to deliver integrated, wraparound supports, services, and treatment.**

  We urge Ontario to make targeted investments in community-based organizations and service providers delivering early intervention and prevention-focused programs related to health and well-being, mental health and addictions, child and family services, child development and rehabilitation, food insecurity, affordable housing, employment, poverty reduction, crisis intervention and intimate partner and gender-based violence.

  A portion of targeted investments should be earmarked for organizations and service providers delivering supports, services, and treatment tailored to the unique needs of Indigenous, Black, racialized, and 2SLGBTQ+ children, youth, and families.

- **Work across ministries to develop a strategy to modernize and maintain social infrastructure in Northern, rural, and remote parts of the province so children, youth, and families have access to the right services, at the right time, close to home.**

  The strategy should include strategic investments to address disparities in resources and barriers to care. A portion of investments should be earmarked to ensure Indigenous, Black, racialized, and 2SLTBQ+ children, youth, and families living in in Northern, rural and remote parts of the province have timely access to culturally relevant, responsive, and identity-affirming supports, services, and treatment

Ensure children, youth, and families presenting with complex needs (i.e., social, emotional, developmental, mental health and addictions, etc.) have access to highly specialized, intensive services, supports, and treatment and/or out-of-home care and live-in treatment tailored to their unique needs.

Over the past ten years, the number of protection cases, investigations transferred to ongoing service, and children in care has decreased. These broad trends reflect the successful efforts of agencies to prioritize early intervention and prevention-focused care outlined in the previous section. Though service volumes are declining as more and more children remain at home with their families while receiving services, workloads have not decreased, nor have they become easier to manage as agencies contend with increasingly complicated cases.

Child welfare agencies are supporting more and more families with children presenting with complex needs (i.e., social, emotional, developmental, mental health and addictions, etc.) and filling systemic gaps. Most often, they are working with families who have reached a breaking point and feel they have nowhere else to turn after being unable to access highly specialized, intensive supports, services, and treatment or out-of-home care or live-in treatment in their community. For other families, they have reached an acute point of crisis where there is not a protection concern, but a safety concern and their child can no longer remain at home.

Access to highly, specialized, intensive supports, services, treatment and out-of-home care and live-in treatment comes with its own unique challenges for Indigenous, Black, racialized, and 2SLGBTQ+ children, youth and families, as well as

those living in poverty due to systems of power, privilege, and oppression. There are limited options for culturally relevant, responsive, and identity-affirming care. Regional disparities in resources also frustrate timely access to care for children, youth, and families living in Northern, rural, and remote parts of the province.

Access to Highly Specialized, Intensive Supports, Services, and Treatment focused on Early Intervention and Prevention

Families seeking support from their local child welfare agency hope that the agency will not have to confront the same barriers to highly specialized, intensive supports, services, and treatment focused on early intervention and prevention. However, child welfare agencies encounter the very same challenges that families do. Agencies also face long waitlists, inadequate resources (i.e., funding, staff without adequate education/training), exclusionary eligibility criteria, and regional disparities in resources.

In 2023, the Ontario government invested $97 million over three years to support the Extensive Needs Service pilot program (ENS program) at three major hospitals in Toronto, Hamilton, and Oshawa to help improve access to highly specialized, intensive care early on. This type of programming goes a long way to ensure children, youth, and families receive the right care, at the right time, close to home. Ultimately, such programming helps families from reaching a breaking point or acute point of crisis by ensuring challenges do not deepen and intensify. Early intervention and prevention-focused care can be truly transformative for a young person with complex needs and change their path, as well as their caregivers.'

We commend the Ontario government for making this initial investment in 2023 and recently supporting the expansion of the ENS program in the Durham Region. We encourage the province to continue to build on these efforts to improve access to highly specialized, intensive supports and services early on at the community level through the 2025 Budget.

Access to Highly Specialized, Intensive Out-of-Home Care & Live-in Treatment

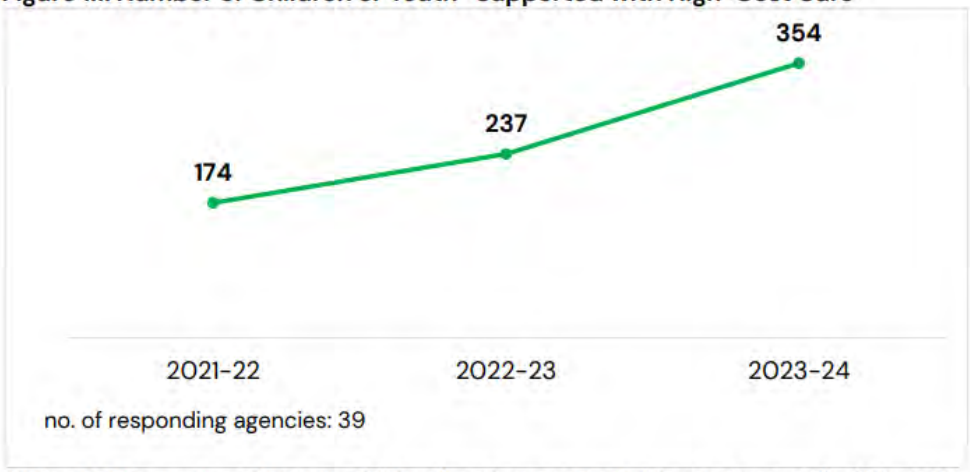
OACAS and our members also recommend that the government take steps to improve access to care and treatment outside of the home. There is a critical role for the province to play in improving access to non-profit out-of-home care and live-in treatment. There are simply not enough providers and, when there is capacity, organizations often deny referrals and/or placement requests from

agencies. They often cite exclusionary admission criteria (i.e., high risk behavior, recent self-harm, substance use, severe/complex personality disorder, etc.) or inadequate resources (i.e., funding, staff without adequate education/training).

When child welfare agencies can secure an out-of-home placement or access to a live-in treatment program, they are often high-cost due to expensive per diems and special rate agreements. Preliminary data from 39 of 47 designated member agencies has revealed the number of children and youth requiring high-cost care in out-of-home settings has doubled, increasing from 174 in 2021-22 to 354 in 2023-24. Boarding costs have risen accordingly, up from $48.3 million in 2021-22 to $107.4 million in 2023-24. Many children requiring high-cost care present with complex needs.

The Landscape of High-Cost Care

Figure 1.1: Number of Children or Youth* Supported with High-Cost Care



*Refers to the number of **unique** children/youth supported with per diem and/or SRA costs (i.e., a child or youth supported with both per diem and SRA costs is counted as one)

Organizations and service providers delivering for-profit out-of-home care and live-in treatment seem to be aware of the limited options agencies face. This reality is leveraged against agencies, and it appears to be common practice among for-profit organizations and service providers to only accept referrals from agencies willing to pay the highest price.

In dire circumstances where agencies are not able to secure appropriate out-of-home care or live-in treatment, they are forced to explore alternative settings like hotels, motels, offices, and trailers. These are temporary housing options of last resort that quickly become expensive. When a child welfare agency is forced to use these settings, they put in place a harm reduction approach to promote the health

and safety of the young person; this includes the highest level of supervision and support possible. Agencies sometimes hire third party vendors and/or reallocate their own staff to provide round-the-clock care, which comes with significant expenditures.

These temporary housing options have a profound impact on children, youth, and families. Though they receive the highest level of supervision and support, they are not receiving supports, services, and treatment that will truly meet their needs. Hotels, motels, offices, and trailers are not designed to function as care settings and direct service staff are not always able to provide highly specialized, intensive care. More and more direct service staff are leaving the workforce or taking sick leave, citing physical and psychological safety risks.

The capacity of child welfare agencies to access highly specialized, intensive supports, services, and treatment, as well as out-of-home care and live-in treatment close to home, is directly tied to the options available to them. Agencies are committed to ensuring young people receive care that centres their safety, health, and well-being. Many agencies are filling systemic gaps and removing barriers to care and, in the process, facing significant economic hardships and human resource challenges that threaten their financial stability and sustainability.

Through the Ontario 2025 Budget, we recommend that the province:

- **Continue to invest in non-profit community-based organizations and service providers delivering highly specialized, intensive supports, services, and treatment so children, youth, and families presenting with complex needs have access to care tailored to their unique needs, early on and closer to home.**

  When investing in non-profit community-based organizations and service providers, we encourage the Ontario government to remain mindful of the distinct needs of Indigenous, Black, racialized, and 2SLGBTQ+ children, youth, and families presenting with complex needs. It is essential to support predictable, sustainable programming that is culturally relevant, responsive, and identity-affirming.

- **Examine and respond to administrative barriers that frustrate access to Complex Special Needs (CSN) funding.**

Accessing CSN funding is challenging and cumbersome for families with complex needs; administrative barriers can delay access to critical financial assistance and, in turn, highly specialized, intensive supports, services, and treatment. Agencies encounter the same challenges when attempting to access CSN funding; in dire circumstances, placements are lost due to administrative delays.

- **Invest in non-profit community-based organizations and service providers delivering out-of-home care and live-in treatment so that they have adequate resources (i.e., funding, staff with adequate education/training) to support children, youth, and families presenting with complex needs, closer to home.**

  Ontario must ensure they invest in non-profit community-based organizations and service providers delivering care that is inclusive. Indigenous, Black, racialized, and 2SLGBTQ+ children, youth, and families require access to care that is culturally relevant, responsive, and identity-affirming.

- **Continue to support child welfare agencies in managing economic hardships linked to high-cost out-of-home care and live-in treatment, including care for children and youth presenting with complex needs.**

Bring greater financial stability and sustainability to the Ontario child welfare sector by modernizing the funding formula so that it aligns with service principles and best practices (i.e., early intervention, prevention, continued connections to kin, culture, and community) integral to delivering improved equitable outcomes and responds to regional realities.

Though strengthening social infrastructure and addressing systemic gaps and barriers to care in the broader social services sector would relieve financial pressures, there are additional steps the Ontario government can take to address the economic hardships many agencies are facing. To start, we recommend that the Ontario government develop a modern child welfare funding formula.

The current child welfare funding formula does not align with service principles and best practices, like intervening early and focusing on prevention or promoting

improved, equitable outcomes through continued connections to kin, culture, and community through family- and community-based placements (i.e., kin service, kin care, customary care, family-based foster care).

For example, the current funding formula allocates more funding if an agency has more children or youth in care. Though the funding formula *should* account for the number of children and youth in care, it must also factor in costs associated with early intervention and prevention-focused care. This work is labour intensive and time consuming. It involves working closely with families to identify kin and alternate caregivers and working in partnership with kin and alternate caregivers to ensure they are adequately supported (i.e., coordinating financial assistance, facilitating access to local supports, services, and treatment).

Kin and alternate caregivers play a vital role in supporting children, youth, and families and ensuring improved, equitable outcomes. Broad kin networks are directly linked to better outcomes and positively contribute to the well-being of children, youth, and families interacting with the Ontario child welfare system.

Additionally, the current child welfare funding formula is not responsive to different regional realities and distributes funding inequitably. Agencies in Northern, rural, and remote parts of the province, many of whom are Indigenous Child and Family Well-Being Agencies, have different core operating costs given the typically larger geographic areas they serve. These child welfare agencies are also less likely to have access to robust social infrastructure; meaning they face increased demand for their supports and services and must stretch their resources even further to fill systemic gaps driven by significant regional disparities in resources.

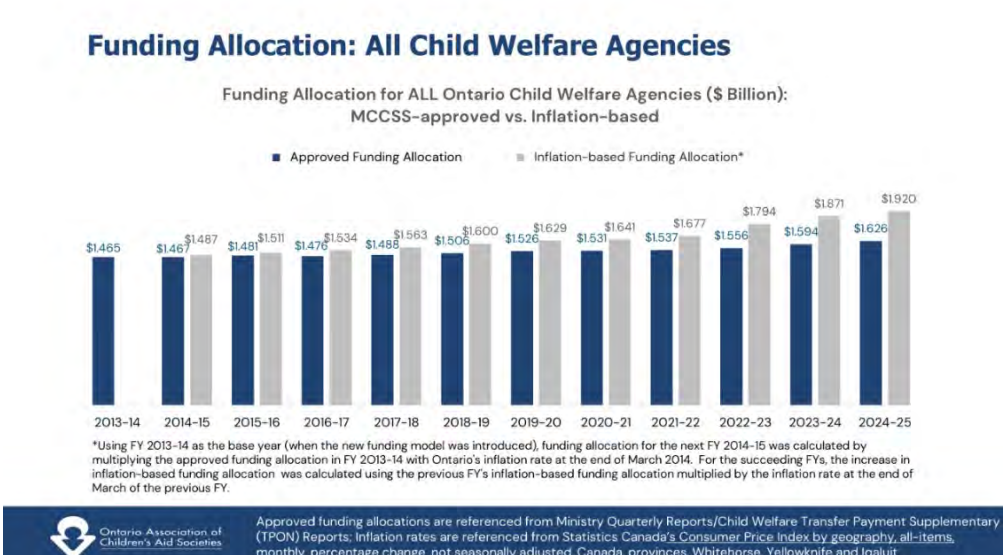
Developing a modern funding formula that aligns with service principles and best practices (i.e., early intervention, prevention, continued connections to kin, culture, and community) and factors in regional realities would promote greater stability and sustainability across agencies, as well as drive improved, equitable outcomes. However, it is also essential to ensure that an updated funding formula is flexible enough to keep up with legislative and regulatory changes and inflationary pressures.

The current child welfare funding formula is not responsive to the changing care landscape in Ontario. It has not kept pace with legislative and regulatory amendments and how they have significantly impacted service delivery, expenditures, and operational costs. For example, in 2018, Ontario increased the age

of protection to include all children under the age of 18 years and introduced Voluntary Youth Services Agreements (VYSAs). Child welfare agencies are required to provide the full range of services to 16- and 17-year-olds that are available to younger children, including coordinating alternative living arrangements for those who are unable to remain at home. Supporting more young people, and for longer, has come with costs.

It is important to keep in mind that some legislative and regulatory amendments have also come with human resource costs. For example, as part of their efforts to implement the Ontario Child Welfare Redesign Strategy, the Ontario government introduced the *Quality Standards Framework*. The legislative and regulatory changes have transformed day-to-day service delivery by introducing more administrative tasks and responsibilities. More direct service staff are needed to lead implementation and ensure workloads remain manageable so direct service staff can form meaningful, impactful relationships with children, youth, and families.

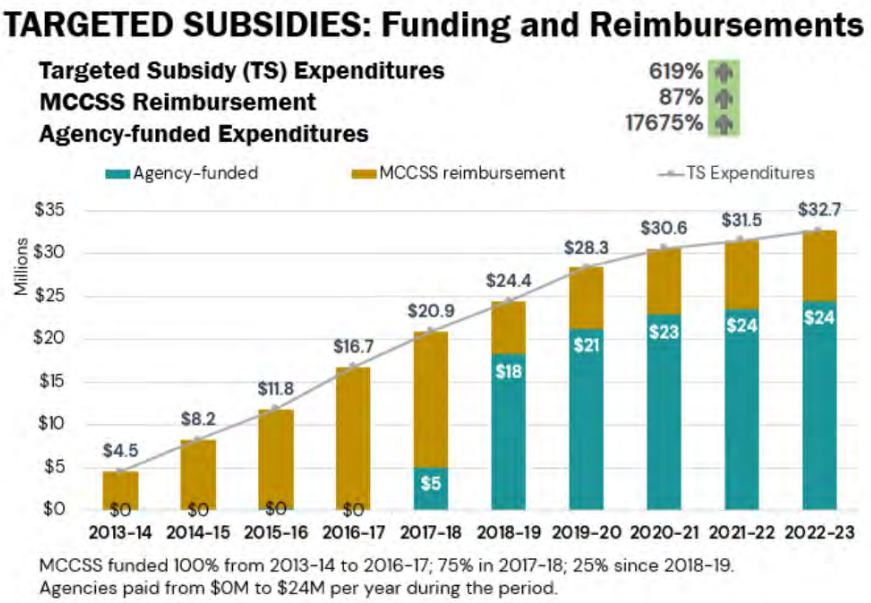
OACAS and our members support the Ontario government's efforts to improve the lived experiences of children, youth, and families interacting with the Ontario child welfare system through legislative and regulatory reform. However, it is essential to ensure that the approach to funding aligns with these efforts and responds to their impact on service delivery.



Finally, the current funding formula has not kept pace with inflationary pressures. Inflation may have come down, but prices have not; agencies are grappling with

increased operational costs and economic pressures that undermine their financial stability and sustainability.

The Ontario government can also help promote financial stability by ensuring child welfare agencies receive predictable, sustainable funding. It is difficult for child welfare agencies to successfully engage in long-term fiscal planning when funding is unpredictable or changes without sufficient notice; for example, the province has decreased its share of funding for targeted subsidies. Ten years ago, the Ministry of Children, Community and Social Services (the Ministry or MCCSS) funded 100% of targeted subsidies; agencies now cover 75%. To successfully manage their budgets and plan, predictability is essential.



To bring greater financial stability and sustainability to child welfare agencies, we recommend that the Ontario government:

- **Develop a modern child welfare funding formula that aligns with service principles and best practices (i.e., early intervention, prevention, continued connections to kin, culture, and community) integral to improved, equitable outcomes and responds to regional realities.**

- **Ensure child welfare agencies have access to predictable, sustainable funding so they can successfully engage in long-term fiscal planning.**

Prioritize family- and community-based placements by ensuring kin and alternate caregivers receive adequate financial assistance, have timely access to local supports, services, and treatment, and receive services in a way that is culturally relevant, responsive, and identity-affirming.

Kin are individuals who have a relationship with a young person or family. This may include biologically related kin, members of cultural communities, or individuals with other social, emotional, or community connections, such as teachers, coaches, or neighbors.

Alternate caregivers are relatives or community members who provide living arrangements for children and youth when necessary. It is an umbrella term used by many child welfare agencies to describe the broad spectrum of individuals who sometimes partner with child welfare agencies to provide family- and community-based placement options, such as kin service, kin care, customary care, and family-based foster care.

Kin and alternate caregivers ensure children receive care that is culturally relevant, responsive, and identity-affirming. They promote a strong sense of self and belonging by supporting a child or young person in maintaining connections to broader kin and community networks, as well as their culture. Culturally relevant, responsive, and identity-affirming care is central to delivering improved, equitable outcomes for children and youth, particularly for Indigenous and Black children and youth who have been and continue to be overrepresented in Ontario's child welfare system.

A young person is typically placed with a kin or alternate caregiver on an urgent basis; meaning, kin and alternate caregivers suddenly find themselves in a new role they did not plan or prepare for. Kin and alternate caregivers account for 45% of family- and community-based out-of-home care placements. As they welcome a child into their home, kin and alternate caregivers require timely access to community-based supports and services to meet the young person's unique needs.

Amidst the persisting housing and cost-of-living crisis in Ontario, it is more important than ever to ensure kin and alternate caregivers have access to adequate resources related to health, mental health and addictions, housing, childcare and early childhood education, and so on. Child welfare agencies across the province are

facing a shrinking pool of kin and alternate caregivers. Many caregivers do not have the financial flexibility or physical space to welcome a young person into their home. For example, available family-based foster homes affiliated with child welfare agencies in Ontario have dropped by over 35% since 2020.

We urge the province to ensure kin and alternate caregivers have access to adequate resources so they can readily and sustainably support a child or young person.

Through the Ontario 2025 Budget, we recommend that the Ontario government:

- **Increase the Ontario Works Temporary Care Assistance and Ontario Child Benefit to align with the current cost-of-living and inflationary pressures.**

- **Modernize financial assistance available to kin and alternate caregivers (i.e., kin service, kin care, customary care, family-based foster caregivers) to ensure all caregivers have access to equitable, sustainable funding that aligns with the current cost-of-living and inflationary pressures.**

- **Make targeted investments to improve access to community-based supports, services, and treatment so that children and youth, as well as the kin and alternate caregivers who support them, receive the right care, at the right time, close to home.**

  Priority areas of investment include health and well-being, mental health and addictions, child and family services, childcare and early child education, child development and rehabilitation, food insecurity, affordable housing, employment, poverty reduction, crisis intervention and intimate partner and gender-based violence.

  A portion of targeted investments should be earmarked for organizations and service providers delivering supports and services tailored to the unique needs of Indigenous, Black, racialized, and 2SLGBTQ+ children, youth, and families.

There are additional steps the Ontario government can take to prioritize family- and community-based placements. This includes continuing to support initiatives focused on building capacity in the child welfare sector to deliver supports and services in a way that is culturally relevant, responsive, and identity-affirming.

OACAS commends the province for their continued support of the One Vision One Voice (OVOV) program. OVOV is central to addressing anti-Black racism and supporting improved, equitable outcomes for Black children, youth, and families interacting with Ontario's child welfare system. OVOV provides tools and resources, as well as training, collaboration, and education opportunities, for child welfare agencies that help agencies build on promising practices and deliver services in a way that is holistic and centers identity.

Black children, youth, families, kin, and alternate caregivers have shared they experience disparities when interacting with the Ontario child welfare system. This includes being treated differently than their white counterparts, poorer outcomes, and not receiving services in a way that is inclusive or affirming. Further, Black families have shared they are dehumanized, judged, and punished, especially when experiencing vulnerability. Addressing these disparities is vital to ensuring kin and alternate caregivers feel truly supported when working with child welfare agencies to provide kin service, kin care, or family-based foster care.

We are also grateful for Ontario's investment of $822, 399 to help develop new, inclusive, and gender-affirming services and supports that improve outcomes for 2SLGBTQ+ children, youth, and families involved with the child welfare system. We strongly urge the government to continue to fund this work beyond 2025. An increasing number of 2SLBGTQ+ children and youth, especially trans and non-binary young people, are interacting with child welfare agencies due to a lack of support and identity rejection in their home and communities. It is vital children and youth receive services in a way that is inclusive and affirming, including those in family- and community-based placements.

In the Ontario 2025 Budget, we recommend that the province:

- **Provide ongoing funding for OVOV so they can continue to develop and promote tools and resources, as well as training and education opportunities, designed to advance promising practices and policies in the child welfare sector as it relates to culturally relevant, responsive, and identity-affirming care.**

- **Provide ongoing funding for the 2SLGBTQ+ Initiative so they can continue to develop and promote tools and resources designed to improve**

outcomes for 2SLGBTQ+ children, youth, and families interacting with the Ontario child welfare system.

Adequately support youth receiving supports and services from a child welfare agency as they transition to independence by continuing to fully fund *Ready, Set, Go* and improving access to integrated youth services in communities across the province.

OACAS is grateful for the province's efforts to help youth better prepare for and transition to independence through the *Ready, Set, Go* program (RSG or the program) launched in 2023. The decision to expand the scope of eligibility for the program (i.e., from 21 to 23 years old) and the investment of $170 million over three years to support its implementation are commendable. RSG will help young people build on their unique strengths and skills and address disparities in outcomes.

Disparities in outcomes for children and youth receiving services from a child welfare agency compared to their peers are well documented; it includes high rates of leaving high school or post-secondary early, under- or unemployment, mental health challenges and substance misuse, and precarious housing. Though OACAS and our members trust RSG will have a positive impact, we remind the province that this program alone cannot guarantee improved, equitable outcomes. There is more work ahead.

Through engagement sessions with young people with lived experience, we heard about the importance of a whole-of-government approach to meeting the needs of young people transitioning from care. Youth called on the province to work across ministries to ensure each young person has access to housing and employment, as well as culturally relevant, responsive, and identity-affirming community-based supports, services, and treatment related to health, mental health, education, and so on, including those living in Northern, rural, and remote parts of the province. Youth signaled that supports and services must be flexible and low barrier.

Young people with lived experience emphasized that systems of care must be well integrated so the transition to independence is not as stressful or overwhelming. Youth pointed out that wraparound supports and services require organizations in the child and youth services sector to be well resourced (i.e., funded, staffed) so young people can form stable, meaningful relationships with direct service staff who will help them navigate this critical period of transition.

To ensure young people successfully navigate the transition to independence, OACAS recommends that the Ontario government make key investments through Budget 2025. We suggest that the province:

- **Fully fund *Ready, Set, Go* beyond three years and make investments that will increase the number of Youth in Transition Workers and Education Liaisons so young people have timely access to integrated, wraparound supports and services.**

  Increasing the number of Youth-in-Transition Workers and Education Liaisons is essential to promoting improved, equitable outcomes. Under *Ready, Set, Go*, agencies are connecting with young people earlier to help them plan and prepare for their transition to independence; as a result, they require partners at the community level ready to come to the table and help ensure young people receive connected, consistent care as they plan for their future.

- **Continue to invest in and support community-based organizations and service providers delivering integrated youth services related to health, mental health, education, employment, housing, and recreation.**

  There is a need for programs specifically designed to support young people transitioning to independence. For instance, service models that offer a holistic range of wraparound supports and services focused on health, mental health, education, employment, housing, recreation, and continued life-skills development.

Conclusion

Child welfare agencies are integral members of the network of community-based organizations and service providers that promote the health, well-being, and safety of children, youth, and families across the province. They work closely with local organizations and service providers, as well as kin and alternate caregivers, to support families facing challenges.

The work of child welfare agencies requires well-resourced communities with integrated systems of care ready to truly meet the needs of children, youth, and families, regardless of where they live or how complex their needs may be.

Unfortunately, persisting systemic gaps and barriers to care frustrate timely, equitable access to community-based care across the province.

Gaps and barriers to care are acutely felt by Indigenous, Black, racialized, and 2SLGBTQ+ children, youth, and families, including those presenting with complex needs (i.e., social, emotional, developmental, mental health and addictions, etc.) and living in poverty. There are also regional barriers to care; children, youth, and families living in Northern, rural, and remote parts of Ontario face unique challenges in accessing services, supports, and treatment in their communities.

Child welfare agencies are deeply concerned about the inadequate access to community-based care. The challenges children, youth, and families are facing are deepening and cases are growing more and more complicated. Further, they are facing significant economic hardships and human resource challenges as they strive to tackle systemic gaps and barriers to care.

OACAS and our members remain committed to working in partnership with the Ontario government alongside provincial partners, community-based organizations, and service providers to bring positive change to systems of care supporting children, youth, and families. Together, we can identify actionable solutions to ensure children, youth, and families have access to the right care, at the right time, close to home.

Recommendations

- Work across ministries to make targeted investments in community-based organizations and service providers across the province in the social services sector to build their capacity to meet the needs of children, youth, and families and effectively work in partnership to deliver integrated, wraparound supports, services, and treatment.

- Work across ministries to develop a strategy to modernize and maintain social infrastructure in Northern, rural, and remote parts of the province so children, youth, and families have access to the right services, at the right time, close to home.

- Continue to invest in non-profit community-based organizations and service providers delivering highly specialized, intensive supports, services, and treatment so children, youth, and families presenting with complex needs have access to care tailored to their unique needs, early on and closer to home.

- Examine and respond to administrative barriers that frustrate access to Complex Special Needs (CSN) funding.

- Invest in non-profit community-based organizations and service providers delivering out-of-home care and live-in treatment so that they have adequate resources (i.e., funding, staff with adequate education/training) to support children, youth, and families presenting with complex needs, closer to home.

- Continue to support child welfare agencies in managing economic hardships associated with high-cost out-of-home care and live-in treatment, including care for children and youth presenting with complex needs.

- Develop a modern child welfare funding formula that aligns with service principles and best practices (i.e., early intervention, prevention, continued connections to kin, culture, and community) integral to improved, equitable outcomes and responds to regional realities.

- Ensure child welfare agencies have access to predictable, sustainable funding so they can successfully engage in long-term fiscal planning.

- Increase the Ontario Works Temporary Care Assistance and Ontario Child Benefit to align with the current cost-of-living and inflationary pressures.

- Modernize financial assistance available to kin and alternate caregivers (i.e., kin service, kin care, customary care, family-based foster caregivers) to ensure all caregivers have access to equitable, sustainable funding that aligns with the current cost-of-living and inflationary pressures.

- Make targeted investments to improve access to community-based supports, services, and treatment so that children and youth, as well as the kin and alternate caregivers who support them, receive the right care, at the right time, close to home.

- Provide ongoing funding for OVOV so they can continue to develop and promote tools and resources, as well as training and education opportunities, designed to advance promising practices and policies in the child welfare sector as it relates to culturally relevant, responsive, and identity-affirming care.

- Provide ongoing funding for the 2SLGBTQ+ Initiative so they can continue to develop and promote tools and resources designed to improve outcomes for 2SLGBTQ+ children, youth, and families interacting with the Ontario child welfare system.

- Fully fund *Ready, Set, Go* beyond three years and make investments that will increase the number of Youth in Transition Workers and Education Liaisons so young people have timely access to integrated, wraparound supports and services.

- Continue to invest in and support community-based organizations and service providers delivering integrated youth services related to health, mental health, education, employment, housing, and recreation.

This is Exhibit "46" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

Chapter 9 - Accountability and monitoring mechanisms: gaps in data management, performance review, and public transparency

From Impact to Action: Final report into anti-Black racism by the Toronto Police Service

As detailed in Chapter 8, it is critical that the TPSB and TPS have a clear and distinct policy and procedure on racial profiling. While this is an important step to fight discrimination, more is required. For policies and procedures to make real change, there must be strong accountability mechanisms in place to monitor and analyze their effect.

Accountability and monitoring mechanisms ensure that organizations effectively:

- collect objective data about their practices
- discuss and analyze the data in a transparent manner, and

- act in response to that analysis.

Data collection is a key component of an effective accountability system. The TPS must appropriately and effectively collect data related to racial profiling and discrimination from a variety of sources. The collection and resulting data must be transparent and available to the public.

Senior TPS officers and the TPSB must review and analyze the data to fulfill their supervisory and oversight functions. As reflected in our recommendations, there must be independent analysis and evaluation of the data to inform the TPS and TPSB about events, trends, and issues within the community and their impact on the effectiveness of police services.

Where the data indicate progress, the contributing factors should be recognized and applied more broadly. Similarly, where the data suggest concerns, the TPSB and TPS senior officers must respond quickly to address them and do so effectively.

Turning to accountability more broadly, when officers are found to have engaged in discriminatory behaviour (whether through data analysis or otherwise), there must be a consequence. If officers can engage in racial profiling and/or discrimination with impunity, then the policies and procedures are meaningless, and the relationship between the TPS and Black communities will not improve. The absence of appropriate discipline, when warranted, helps perpetuate patterns of racism and misconduct, and contributes to the mistrust of police among Black people.

The OHRC finds that there are significant gaps in the TPS and TPSB's accountability mechanisms in relation to anti-Black racism, racial profiling, and racial discrimination.

Data collection systems

Prior to 2019, the TPS and TPSB did not implement data collection systems or compile or analyze existing data to identify, monitor, and address racial profiling or racial discrimination of Black people – despite many documented concerns about anti-Black racism and recommendations to collect race-based data.[1]

In September 2019, after having conducted significant community engagement on race-based data collection, the TPSB adopted its Policy on Race-Based Data Collection, Analysis and Public Reporting (RBDC Policy). The policy requires the police to collect data on an individual's race in a wide variety of interactions, including stops, questioning and searches, Use of Force Reports, and charges, arrests, and discrete interactions between an individual and an officer that lead to a "decision that determines an outcome for the individual."[2]

On January 1, 2020, the TPS began collecting race-based data on Use of Force Reports and strip searches in line with Phase 1 of the RBDC Policy.[3]

On January 1, 2021, the TPS began collecting race-based data on arrests, apprehensions, releases and youth diversions under Phase 2 of the RBDC Policy.[4]

In June 2022, the TPS released its analysis on race, use of force, and strip searches.[5]

These are significant steps forward. However, some limitations in the TPS's data collection need to be addressed. In particular, the scope of the Phase 2 data collection is too narrow.

Scope of Phase 2 data collection

As noted above, Phase 2 began in January 2021 with the collection of data in apprehensions, arrests, charges, releases, and youth

diversion. However, Phase 2 does not include data collection for all stops,[6] in particular:

- investigative detentions
- protective searches (formerly Level 1 searches),[7] and
- frisk searches (formerly Level 2).[8]

Phase 2 data collection also does not include all use-of-force incidents. Specifically, it does not include use of force resulting in physical injury that does not require medical attention.

The OHRC notes that the TPS's analysis of race-based data on use of force included "persons in crisis calls for service," but does not appear to broadly capture whether the person involved had a noted history of mental health issues or was perceived to have a mental health disability.[9]

The community chairs of the Mental Health and Addictions Advisory Panel (MHAAP) suggested that race-based data be collected from crisis services providers from the Community Crisis Support Services Pilot. They also stressed the importance of collecting race-based and mental health data to examine intersectionalities (e.g., in conducted energy weapon use and *Mental Health Act* apprehensions).[10]

In September 2021, the TPS advised it was working on updating its systems' capacity and resource workflow to collect stop data, including both traffic and pedestrian stops, and lower-level uses of force.[11]

The scope of data collection should be expanded. The current scope is too narrow and does not address longstanding concerns about systemic anti-Black racism, racial profiling, and racial discrimination in all stops and all uses of force. Nor does it allow for sufficient monitoring and accountability.[12]

There must be human rights-based data collection, analysis, and public reporting on the full range of police–civilian interactions, including all stop and search activities, traffic and pedestrian stops that do not result in formal action, charges, arrests, releases, and use of force.[13]

This expansion is consistent with the intent of the TPSB's RBDC Policy, and the *Anti-Racism Act*. It is also supported by the TPA465F[14] and the Information and Privacy Commissioner (IPC).[15]

Race-based data should be collected when people are not charged, and where criminal incidents are "cleared otherwise" as defined in the Uniform Crime Reporting (UCR) Survey. "Cleared otherwise" means there was a criminal offence and a chargeable suspect, but the suspect was ultimately processed by other means. For example, the police may have decided not to charge, or diverted the case through an alternative mechanism, or charged under a regulatory statute instead of the *Criminal Code*.

Race-based data collection by the TPS on "cleared otherwise" cases will provide greater insight into the use of TPS discretion and how discretion is exercised.

This broader scope of data collection should be implemented not only by the TPS, but across Ontario. A province-wide approach to comprehensive data collection, analysis, and public reporting is important. Consistent with the OHRC's *Framework for change to address systemic racism in policing*, the TPSB should urge the provincial government to mandate province-wide race-based data collection, analysis, and reporting across the spectrum of officer activities, including all stop and question practices, charges and arrests, and uses of force.[16]

For the OHRC's recommendations for data collection, analysis, and public reporting, see Recommendations 52–60.

Early intervention systems and the use of race-based data for officer accountability

Early intervention systems (EIS) – also known as early warning systems – involve a data-driven management process. EIS allow supervisors to identify officers who engage in problematic behaviour, and to intervene through counselling, education, and additional training.

EIS have been identified as a positive strategy for reducing or preventing racial profiling, by using race-based data to alert supervisors to potential racial profiling and racial discrimination by individuals and platoons/units/divisions.

The idea behind EIS is that officers may not recognize problematic behaviour unless it is identified and brought to their attention by supervisors. Once identified, officers have the ability to improve their performance and correct the conscious or unconscious behaviour, such as racially biased traffic enforcement.[17]

EIS can review trends in officers, partnerships, units, and geographic areas to identify issues and inform improvements through policy changes, supervision, education and training, and accountability.[18]

EIS have been recommended as a promising practice by the International Association of Chiefs of Police, the U.S. Department of Justice, and many policing experts.470F[19] In the United States, approximately 65% of police agencies with 250 or more officers had an EIS as of September 30, 2007.[20]

The TPS and EIS

In 2013, the *Police and Community Engagement Review* (PACER Report)472F[21] recommended the implementation of EIS related to bias and racial profiling.[22]

The PACER Report also recommended that the TPS should:

> Proactively design and conduct unit level reviews of performance trends and indicators that may relate to systemic and/or individual bias, prejudices and/or racial profiling. This may be accomplished by comparative analysis of Officers and unit performance. Recognizing such analysis does not in itself indicate bias-based policing, the trend indicator should be utilized as part of a more comprehensive analysis of the individual or unit level performance to ensure consistency with the unit and Service priorities.

The report further recommended that the TPS Professional Standards Unit "develop new risk thresholds specifically designed and implemented with respect to bias and racial profiling," and "design and conduct reviews at both the Unit and Professional Standards Unit level, examining all ranks of the Service to proactively assess and address Officer performance trends and indicators that may relate to bias, prejudices and/or racial profiling."[23]

As of 2020, the development of new risk thresholds was still in progress,[24] and there appear to have been no further developments since that time.

The TPS previously implemented a limited form of EIS in 2008, which has since been updated and revised.[25] However, at time of writing, the EIS does not include race-based data.[26] The performance indicators do not appear to capture bias, prejudice, or racial profiling, but do include complaints.[27]

In August 2020, the TPSB adopted the 81 recommendations from its report on *Police Reform in Toronto: Systemic Racism, Alternative Community Safety and Crisis Response Models and Building New Confidence in Public Safety (Police Reform* Report).[28]

Recommendation 45 directed the Chief to report by November 2020 on:

a. How the TPS identifies police officers who are repeated subjects of conduct complaints or negative findings by the courts, or those who disproportionately use force, even where no specific instance amounts to allegations of misconduct;
b. How identified officers are monitored for compliance with TPS policy and procedure and receive additional training where necessary; and
c. How the TPS determines what other interventions are appropriate or required for officers that are identified as part of the service's efforts as per a) and b).

On November 4, 2020, then-Interim Chief James Ramer presented his report to the TPSB. The report confirmed that the EIS performance indicators do not include indicators of racial discrimination or racial profiling by individual officers and platoons/units/divisions, and important and related indicators described in detail in the OHRC's recommendations in this report.480F[29]

It is imperative that the TPS fully adopt a comprehensive EIS that includes indicators of racial discrimination/profiling.

For the OHRC's recommendations for effective EIS, see Recommendations 65, 66, 67, and 95.

EIS and officer discipline

Although not intended to be disciplinary, EIS do not preclude discipline for individuals' repeated negative behaviour. For example, the LAPD has disposition options for interventions that include no action, commendation, informal meeting, training, modified field duties, directed health and wellness referral, notice to correct, and a complaint.[30]

Discussions at the OHRC policy roundtable also supported using race-based data for remedial or disciplinary purposes.[31]

TPS objections to the use of such data to investigate individual misconduct are not sustainable. On June 15, 2022, then-Interim Chief Ramer stated that the "privacy commission" and the *Anti-Racism Act* require that race-based data be anonymized and therefore prevent the TPS from investigating individual officer conduct.[32] However, the IPC of Ontario stated:[33]

Based on the information available to date, it is our view that neither the [*Municipal Freedom of Information and Protection of Privacy Act*] nor the [*Anti-Racism Act*] prevent police service boards or police services from using race-based data or employee information to supervise, discipline, train, or monitor police divisions.[34]

Indeed, the Data Standards for the Identification and Monitoring of Systemic Racism created under the *Anti-Racism Act* specifically contemplates that the failure to monitor the impact of discretionary decision-making may itself constitute a form of systemic racism where it leads to significant racially inequitable outcomes.[35]

However, the TPSB's RBDC Policy prohibits race-based data from being used for performance management.[36] Therefore, the TPS and TPSB have been unable to effectively identify, monitor, or address racial profiling or racial discrimination by individual officers.

On June 22, 2022, the TPSB passed a motion:

1. Directing the Chief of Police to assess how the Service's approach to race-based data collection and analysis can be modified to enhance the Service's ability to identify, investigate and address specific instances of potential inequitable policing, including with respect to Use of Force, strip searches and other interactions, and to report back to the Board by Q4 2022 with the results of this assessment and any next steps, as well as areas for consultation with the Police and Community Engagement Review, other community stakeholders, and the Toronto Police Association; and
2. Directing the Executive Director and Office of the Police Services Board to undertake a review of the Board's Race-Based Data

> Collection, Analysis and Public Reporting Policy, in consultation with the Board's Anti-Racism Advisory Panel, key stakeholders and community partners, and to report back to the Board by Q2 2023 concerning any suggested revisions to the Policy, and in particular, revisions that relate to the Chief of Police's assessment in item 1.[37]

However, in his April 28, 2023 update to the TPSB on these and several other motions related to the RBDC Policy, Police Chief Myron Demkiw noted that "The challenge is that attempting to identify trends based on too little information (too few data points using the Use of Force report alone) is an unreliable means of indicating bias or … identifying a pattern of racism or racial bias." He further stated:

> The early risk intervention process involves identifying use of force trends that can be used to initiate a broader review, leveraging body-worn and in-car camera systems, notes, and other reports such as complaints data. As there are now mandatory reviews of this nature, the amount of information available about an incident is increasing. It is in this mandatory review that the appropriateness of the intervention and any indication of racism or bias can be determined. Conversation in the town halls centres on making the process more transparent and robust; ensuring events are captured; and on actions the Service should take in the event of an abuse of authority.[38]

While mandatory reviews of body-worn and in-car camera systems, notes, and other reports such as complaints data are critical, it is not clear at this time how they will be incorporated as data that can be used in an EIS for performance management. Based on concerns that there are not enough data points in use-of-force reports, the EIS should incorporate indicators of racial discrimination or racial profiling by individual officers and platoons/units/divisions, and other related indicators, which are currently missing.

The April 28, 2023 update did not address the second item from the TPSB's motion.

Issues with performance analysis and management of police services, including EIS, exist across Ontario, a fact appropriately

recognized by the TPSB. On June 22, 2022, the TPSB passed a further motion to:

> Request that the Ministry of the Solicitor General create a new Adequacy and Effectiveness Standard, under the *Community Safety and Policing Act*, 2019, that mandates a consistent approach to performance analysis and management of police services that is designed to identify inequitable policing, including in relation to Use of Force, and which includes an early-warning system [EIS] built to identify instances where systemic bias may be operating, and a requirement that supervisory staff take appropriate action.[39]

The OHRC agrees that a province-wide approach to EIS informed by race-based data is required. Consistent with the OHRC's *Framework for change to address systemic racism in policing*, the TPSB should urge the provincial government to mandate the implementation of EIS consistent with its recommendations.

In his April 28, 2023 update on this motion, Chief Demkiw stated that the TPS had "engaged with the Province to improve and introduce enhanced use-of-force reporting requirements that support identifying and addressing systemic patterns and trends to advance racial equity in policing."[40] He also noted that the provincial government indicated its intention to convene a working group to develop an anti-racism strategy for policing in Ontario, which includes discussions of priority areas for race-based data collection and reporting.

In addition, following the implementation of the updated Use of Force Report, a Race-Based Data Working Group was formed by the Ontario Association of Chiefs of Police, and discussions around how the Ministry of the Solicitor General would be involved were ongoing.[41]

The OHRC looks forward to the results of the TPS's engagement with the Province to improve and introduce enhanced reporting requirements that lead to a consistent province-wide approach to an EI system.

For the OHRC's recommendations on the use of race-based data in EIS and officer discipline, see Recommendations 61, 68, and 69.

Body-worn cameras

Between February 2015 and March 2016, the TPS conducted a body-worn camera (BWC) pilot project.[42]

On August 18, 2020, the TPSB approved a contract to roll out BWCs to all front-line officers. The TPSB directed the Chief to ensure that BWCs were not deployed fully to all front-line members until the Board approved a BWC policy and the relevant Service Procedures had been developed and/or amended to ensure consistency with the Board policy.[43]

On November 24, 2020, the TPSB passed a Policy on Body Worn Cameras. The purpose of the policy includes enhancing the commitment to anti-racist, bias-free service delivery by the TPS. It also directs the Chief of Police to establish a framework for reviewing the recordings by supervisors on a regular basis to, among other things, identify and address evidence of explicit or implicit bias and discrimination.495F[44]

By the end of 2021, 2,111 BWCs were deployed to front-line officers, which amounted to 92% of front-line officers.[45]

In June 2022, the TPSB directed the Chief of Police to:

Implement mandatory reviews by supervisors of body-worn camera footage and in-car camera system footage for all Use of Force incidents, as contemplated by the new Service Procedure, and to initiate a disciplinary investigation where excess force is deemed to have potentially occurred.[46]

On July 6, 2022, the TPS issued a Procedure 15-20, Body Worn Camera. It requires that supervisors review a video from each BWC-equipped police officer a minimum of once per month and conduct regular random reviews of videos to:

- Ensure officers are using the BWC in accordance with the law and BWC training;
- Determine if any additional training is required;
- Identify material that may be appropriate for training; and
- Comply with section 15 of the Board Policy on Body Worn Cameras.[47]

Section 15 of the Board Policy on Body Worn Cameras states:

The Chief of Police, in consultation with the Information and Privacy Commissioner of Ontario and other relevant stakeholders, will develop Procedure(s) that:

15. Establish a framework for reviewing of recordings by supervisors on a regular basis to:

a. Ensure compliance with Procedures;
b. Identify and address evidence of explicit or implicit bias and discrimination; and
c. Determine the need for additional training or other measures.

The IPC's BWC Model Governance Framework also supports regular (e.g., monthly and annual) and event-based audits of BWC records to assess compliance with all applicable laws, policies, procedures, and professional standards, including those related to discrimination and the use of force.[48]

Concerns

The OHRC has maintained that BWCs can be an important tool for accountability, if their use is accompanied by robust procedures.

However, the OHRC has also heard the concerns raised by Black communities and others that BWCs do not capture a complete and accurate visual or audio record of what may have transpired in individual cases.

Recent studies have called into question the utility of BWCs because they often present only one perspective of an interaction or incident.[49] Specifically, BWCs record from the officer's perspective, and officers have been trained to narrate events while they are being recorded, which can present a skewed version of events. For example, yelling at a suspect to "stop resisting" may mislead one to believe an individual was resisting when they were not.[50]

We have also heard directly from Black people that BWCs will not prevent the deaths of Black persons by the police, and that more meaningful action is necessary.

Given the concerns, it is important that the use of BWCs be properly monitored and supervised. BWCs can be a helpful tool to learn about officer conduct and, where appropriate, enhance officer accountability for misconduct.

The OHRC recommends that supervisors review the BWC footage of ***all*** use-of-force incidents. In conducting these reviews, supervisors should consider additional information, including data from use-of-force reports (if completed), injury reports, subject and witness officer notes, and other relevant reports. The supervisor should also assess whether there was a credible, non-discriminatory explanation for the use of force.[51]

BWCs and the mug shot database

The OHRC is concerned about using footage from BWCs in conjunction with the TPS mug shot database and facial recognition technology. Its use in these circumstances could exacerbate existing racial disparities in the criminal justice system.

The Chief Information Officer of the TPS explained that the use of facial recognition together with BWCs is rare. He maintained that the combined use would only arise in circumstances where a crime was captured on a BWC, but the suspect was not captured or identified. In such circumstances, the footage from the BWC could be entered into the mug shot database to see if they could identify the suspect.[52]

Although the combined use of BWC footage and the mug shot database may be rare, there must be a comprehensive consultation and study of the various human rights, due process, officer accountability, and public access and privacy implications of deploying these technologies together.

If the TPSB and TPS continue to allow BWC footage to be used in conjunction with the mug shot database, the OHRC supports the recommendation from the Canadian Civil Liberties Association (CCLA) that a dedicated consultation, privacy impact, and human rights impact assessment be undertaken.

Similarly, the IPC recommended that police services not adopt biometric technology (including facial recognition) in conjunction with BWCs until a full risk assessment is completed and the IPC is consulted.[53]

For the OHRC's recommendations regarding BWCs, see Recommendations 70 and 71.

Performance management systems, including supervision and discipline

The TPS currently uses the Uniform Performance Appraisal and Development Plan as its performance management system. Officers are assigned a rating by their next-level supervisor under several categories of evaluation, including:

- human rights
- personal qualities
- technical skills
- core competencies.

Former Deputy Chief responsible for Human Resources Command, Barbara McLean, stated that the next-level supervisor:

… reviews calls, work, [and] assess[es] things like complaints and training. A lot of it is observation, being around them in the workplace. That gets translated. So, there's that assessment and room for comments by their supervisor. An active participation is what is expected from the supervisor.[54]

Evaluation of the human rights category is unclear and limited. It includes whether the officer:

- has attended and/or completed human rights training as required
- shows knowledge and understanding of the *Ontario Human Rights Code* and human rights issues as they apply to policing
  - examples include but are not limited to knowledge of racial profiling, racial bias in policing, racism, sexual harassment, sexism, ageism), and

- delivers policing services in a fair, respectful, and unbiased manner.[55]

Unfortunately, the TPS Uniform Performance Appraisal and Development Plan has not prevented systemic racial discrimination against Black people, as described throughout the Inquiry's report. Indeed, under the TPSB's RBDC Policy, race-based data are prohibited from being used for performance management.

The OHRC believes that the TPSB should immediately amend this policy to permit the use of race-based data in performance management. Similarly, the TPS should provide more explicit direction to supervisors on assessing compliance with anti-racism

and anti-discrimination policies, procedures, and practices when evaluating officer performance.

In its 2020, *Police Reform* Report, the TPSB proposed changes to the performance management system. The TPSB directed the Chief to:

> Develop and implement a formal annual performance review process for uniformed Service Members, in consultation with any relevant experts, that will assist in identifying the strengths and areas for improvement of each police officer, and which will include an individualized annual performance plan that identifies the education, training and experiences to be completed in the coming year in order to build on their identified strengths and address their identified areas for improvement.[56]

However, the proposed changes do not provide specific guidance to address anti-Black racism, racial profiling, or racial discrimination.

The TPSB's implementation dashboard for the recommendation does not describe how officers will be evaluated in relation to anti-Black racism, racial profiling, or racial discrimination. Nor does it indicate related qualitative or quantitative measures. The dashboard states that the new performance review process:

> Provides performance evaluation to members based on the responsibilities of their roles and the competency behaviors tied to their level of leadership in the Service. Members will be required to examine the responsibilities of their roles and share:
>
> - the "what" of what they delivered, and
> - the manner in which they delivered it, the "how".[57]

Any new performance management system must include a meaningful review of officers' performance in human rights, including anti-Black racism, racial profiling, or racial discrimination. An officer's act of racial discrimination should be included in their evaluation and lead to progressive discipline, up to and including dismissal, where warranted.

Dr. Wortley stated, "any anti-racism policy is doomed to failure unless specific accountability mechanisms are put into place." He encouraged specific disciplinary consequences for personnel found guilty of racial bias, and a policy that would hold supervisors accountable for the racially biased behaviour of those under their supervision.[58]

This approach is broadly supported and has been endorsed by at least 22 community and advocacy groups.[59]

For the OHRC's recommendations on performance management, supervision and discipline, see Recommendations 74, 75, and 76.

Accountability mechanisms

Third-party findings

The OHRC identified eight Human Rights Tribunal of Ontario (HRTO) and court decisions between 2009 and 2017 that found that Black people were the victims of racial profiling or racial discrimination by TPS officers.[60] These cases involved multiple officers, and the misconduct included unnecessary stops, searches, charges, arrests, and the use of force. The HRTO and courts also found instances of biased and untrustworthy testimony from some of the officers.

This Inquiry revealed that none of the officers who were found to have engaged in racial profiling or discrimination by the HRTO were subjected to any formal discipline by the TPS. None were the subject of Notices of Hearing or brought before the TPS Disciplinary Tribunal under the *Police Services Act*.

TPS mechanisms to track cases

The OHRC asked the TPS why none of these cases was the subject of a Notice of Hearing or proceeded to a TPS Disciplinary Tribunal. The TPS advised that it could not provide an explanation for individual cases because of the statutory confidentiality provisions in the *Police Services Act*.[61]

However, the evidence examined by the OHRC demonstrated that the TPS has no formal mechanism to track, review, or act upon adverse findings of racial profiling and/or discrimination against officers by the HRTO or the courts.

TPSB mechanisms to track cases

The TPSB has a statutory responsibility to establish guidelines for dealing with complaints and to review the Chief's administration of the complaints system. This includes internal complaints.[62]

Notwithstanding this responsibility, it appears that like the TPS, the TPSB does not have any formal mechanism to track individual cases where racial profiling or discrimination is found, or how many TPS officers are disciplined for racial profiling or racial discrimination.[63] The TPSB advised the OHRC that it:

Does not have a system for monitoring every decision of the criminal courts, many of which are not reported, to identify cases where there have been findings of Charter violations by TPS officers.

However, the Board Office has established a system where reported decisions identifying issues of a systemic nature that involve the Board or the Service are identified and brought to the Board's attention.

On occasion, a criminal decision involving the TPS will also come to the Board Office's attention through legal counsel. These may include *Charter* breach cases. In most cases, these cases come to the Board's attention because legal counsel has identified it as a decision

that substantially alters the law of policing, could have impact on police governance or affect the public's trust in policing. In such cases, the Board's lawyers will bring the case to the attention of the Board's Executive Director [and] Chief of Staff, and a report may be prepared for the Board where appropriate. In other circumstances, the Board's Executive Director & Chief of Staff may raise the matter with the Chief or Chief's Office for further exploration, and then, if appropriate, discussion with the Board.[64]

The TPSB also advised the OHRC that it receives monthly reports from the Chief on officer discipline, which summarize the disposition of cases investigated and prosecuted under Part V of the *Police Services Act*, and "where particular systemic or other issues arise or are identified with the administration of the complaints system, the Board addresses them on a case-by-case basis."[65]

However, if cases are not investigated or prosecuted under the *Police Services Act*, they will not come to the attention of the TPSB.

To promote a service environment free of racial profiling and racial discrimination, the TPS and TPSB should take proactive steps to ensure officer accountability following decisions of the HRTO, courts or tribunals. Proactive steps should include an automatic investigation by Professional Standards when the HRTO or a court finds that an officer engaged in racial profiling or racial discrimination, regardless of whether the officer's conduct was the subject of the litigation.

Where the investigation reveals racial profiling or discrimination, the TPS must ensure there are appropriate transparent and meaningful consequences consistent with progressive discipline, up to and including dismissal.

The TPS should:

- determine the race of the alleged victim in allegations of officer misconduct
- investigate potential racial profiling or discrimination in all allegations of officer misconduct that involve Black people as victims, and

- identify tribunal/court decisions with findings of racial profiling or discrimination by officers (whether or not the officer's conduct was the subject of the litigation), and include them in an EIS and in performance management.

SIU investigations

SIU investigations are required whenever an officer is involved in an incident that results in death, serious bodily harm, or allegations of sexual assault.

When the SIU is notified of such an incident, the Chief of Police of the relevant police Service is also required to conduct an investigation. The purpose of the Chief's investigation is to review the policies or services provided by the Service and the conduct of its police officers.

The SIU is required to report the result of its investigation to the Attorney General, and notify the Chief of Police that they have done so. The SIU letter to the Chief of Police usually identifies any concerns about the conduct of the officer(s).

Within 30 days of receiving the SIU letter, the Chief of Police is required to report the findings of its internal investigation and any action taken or recommended to the Board.[66]

The OHRC identified 27 cases[67] where the SIU flagged problematic conduct in its letter to the Chief. None of them resulted in a hearing before the TPS Disciplinary Tribunal.

The OHRC is concerned by the lack of accountability where issues of potential misconduct are raised in SIU letters to the Chief. This is consistent with an observation by former TPSB Chair, Dr. Alok Mukherjee, in his book *Excessive Force*:

> In reality, these reviews follow the letter rather than the spirit of the law. They are largely paper exercises involving the checking off of a bunch of boxes in a report to the board to say that the officer complied with policies, procedures and training; that the equipment used was also in compliance; and that there were no conduct issues. When the SIU says it had no reason or lack sufficient grounds to lay [criminal] charges, the Chief's review invariably repeats that conclusion. To me, the review is a classic example of how the systems of accountability put in place by law are manipulated to protect police interest.[68]

The absence of TPS Disciplinary Tribunal hearings where the SIU identified problematic behaviour is symptomatic of a larger problem. Police officers are rarely disciplined for misconduct. According to a report by the CBC, only 1% of complaints made to the Office of the Independent Police Review Director (OIPRD) about Toronto police officers between 2014 and 2019 has led to a disciplinary hearing.[69]

The lack of transparency is also concerning in that the complaints investigated by the OIPRD and the TPS (internally) investigated appear to be resolved informally by the TPS, and remain confidential. As noted in the OHRC's *Framework for change to address systemic racism in policing*:

The *Police Services Act*'s current confidentiality provisions prevent the public from knowing when and whether an officer was subject to some form of discipline for engaging in racial profiling, racial discrimination or other police misconduct. Only decisions from police service disciplinary tribunals are not confidential. This severely undermines public confidence in a system that must be transparent and grounded in the values espoused by the *Human Rights Code*.

The TPS must establish a process to fully investigate misconduct flagged by the SIU about racial profiling or racial discrimination. The TPS procedures should require the Chief or their designate to investigate each issue of problematic conduct the SIU Director raises in letters to the Chief. The Chief should report publicly to the TPSB on the findings and outcome of these investigations, subject to the confidentiality provisions of the *Police Services Act*.

The TPSB should also review the SIU letter and the findings of the Chief's internal investigation. The TPSB acknowledged that comparing these reports would:

- assist in the Board's oversight role
- allow the Board to ask questions where the SIU identifies potential misconduct
- allow the Board take appropriate policy action where potential systemic issues are identified.[70]

In his interview with the OHRC, SIU Director Joseph Martino stated that these recommendations made sense and he did not take issue with them.[71]

For the OHRC's recommendations regarding the SIU, see Recommendations 105, 106 and 107.

Tracking disciplinary decisions

The OHRC did not find any publicly available information on the number of officers disciplined for racial profiling, discrimination, or harassment as a result of a *Police Services Act* disciplinary hearing.

The OHRC asked the TPS for the relevant statistics. However, the TPS could not confirm whether, since 2010, the TPS Disciplinary Tribunal has found that any officers engaged in racial profiling, discrimination, or harassment. This suggests that the TPS does not track Disciplinary Tribunal findings for cases where officers have been found to have engaged in racial discrimination or racial profiling.

The TPS stated that it was unable to provide an answer on relevant statistics without reviewing all disciplinary tribunal decisions since 2010 and that it was unable to undertake the labour-intensive task of sorting, scanning and vetting TPS Disciplinary Tribunal decisions. The TPS noted that the OHRC could make a request to the Tribunal Office for these decisions.[72] The TPS also stated that the system for TPS

complaints and reports of investigation is not designed to capture an individual's specific race.[73]

The TPS did confirm that from 2017 - 2020, there has only been one internal or public complaint alleging anti-Black racism in service delivery that the TPS has substantiated.[74]

This low number is concerning because of the evidence of systemic anti-Black racism, racial profiling, and racial discrimination detailed in the Inquiry's reports. This raises a real concern that incidents of anti-Black racism are not being captured and/or investigated by the TPS.

For the OHRC's recommendations on accountability, see Recommendations 76 and 77.

Transparency and accountability in discipline

Police services should promote greater accessibility and understanding of police discipline by routinely collecting and publishing information about allegations of police misconduct, the results of investigations into them, and disciplinary outcomes. This transparency is important for reassuring communities that the police are serious about investigating and punishing misconduct by their officers.[75]

The OHRC joins community agencies and the IPC in their support for greater transparency by police services. During this Inquiry, the IPC advised the OHRC that:

Public trust in policing requires a strong commitment to transparency through … the proactive disclosure of de-identified information and other information capable of informing the public about critical police decisions, activities, and practices, including in relation to the effectiveness of oversight and disciplinary systems. Therefore, the IPC would welcome recommendations, including any necessary legislative amendments, to increase proactive disclosure

of statistical, anonymized or de-identified data, as long as it does not involve personal information. Public reporting of this nature would support the public's ability to hold police agencies to account by helping the public better understand how policing is being conducted and the extent to which reform efforts are progressing.[76] Notably, the lack of transparency in police discipline is not limited to the TPS. A province-wide approach to transparency in police discipline is an important requirement. Consistent with the OHRC's *Framework for change to address systemic racism in policing*, the TPSB should urge the provincial government to amend the *Police Services Act* and/or the *Community Safety and Policing Act*, 2019 to include a requirement for greater transparency in police discipline.[77]

For the OHRC's recommendations regarding transparency, see Recommendations 72, 73, 78, 79 and 82.

Community oversight

Community can and should play an integral role in policing oversight, whether that comes in the form of consultations, ongoing working groups or committees, and/or integrated positions in policing services. However, this oversight must not be in name or appearance alone. Rather, community involvement in policing activities should carry weight, and community recommendations should be implemented and properly evaluated by an external party.

Community oversight should also be properly resourced so that community members are not expected or required to meet onerous time and work requirements without appropriate compensation.

Police and Community Engagement Review

In 2012, the TPS established the Police and Community Engagement Review (PACER) committee "to assess and address issues of racial

profiling and bias in community engagements (at both the individual and systemic levels) to enable the delivery of bias-free police services."[78]

PACER's vision was to establish the TPS as "a world leader in bias-free service delivery." PACER's work included a "comprehensive review of Service governance, business processes, and the culture of policing[,]" and resulted in 31 recommendations.[79]

In 2013, the Committee released the *PACER Report: Phase II – Internal Report & Recommendations*, which recognized that:

To properly evaluate the success of the recommendations presented in this report requires a formal and impartial third party to design and oversee the evaluation project. The Key Performance Indicators (KPIs) of the evaluation must be filtered through an objective lens that ensures they accurately assess the outcomes of the recommendations.[80]

In response to PACER, the TPS entered into partnership with the Center for Policing Equity (CPE) and Dr Phillip Goff to evaluate the implementation of the recommendations in the PACER Report. Dr. Goff's final report was due on March 31, 2017. However, the evaluation was never completed. In its 2018 update on the PACER recommendations, the TPS stated that the CPE's policy assessment is "ongoing."[81]

The TPS advised the OHRC that they have not had contact with the CPE since January 2020, at which time CPE advised that there is no timeline for the completion of this report.[82] In other words, there was no independent evaluation to determine whether the PACER recommendations were implemented and what if any change resulted from their implementation.

It is concerning that implementation of some recommendations remain pending at time of writing this report – ten years following the release of the PACER Report. It is also concerning that the TPS has failed to follow through with an independent evaluation of its

implementation of the recommendations. This demonstrates a lack of accountability. As noted above, community involvement is an important part of policing, but only if it is taken seriously, and any resulting recommendations are implemented with external evaluation of progress and effectiveness.

Anti-Racism Advisory Panel

The Andrew Loku inquest jury recommended that the TPSB:

Establish a new committee to consider possible or identified disparities in services and outcomes for racialized persons and consider interventions to address any such disparities. The committee should include representatives of the Toronto Police Service, subject matter experts and members of racialized communities, including the Black community. The committee should consider the intersectionality of mental health and race both in terms of member composition and issues to be addressed.[83]

In 2018, the TPSB formed the Anti-Racism Advisory Panel (ARAP) to advise the TPSB on its role in "overseeing and monitoring the response to and implementation of the recommendations directed both to the Toronto Police Service and to the Toronto Police Services Board, by the jury in the Inquest into the Death of Andrew Loku."[84]

The terms of reference for the ARAP were to establish a monitoring framework for the TPSB to use to assess the response to and implementation of the inquest recommendations, "including the creation of key benchmarks and performance indicators addressing each recommendation."[85]

The TPSB selected applicants with lived experience and a background in anti-racism, anti-Black racism, mental health and addictions, as well as people familiar with the issues raised at the Loku inquest.[86]

On August 18, 2020, ARAP became a permanent advisory committee of the TPSB. Its role is to "advise and support the Board in relation to policing and racism, anti-Black racism and anti-Indigenous racism," which includes:

- identifying current issues relating to racism, anti-Black racism, anti-Indigenous racism and policing, including developing and/or recommending policies, strategies, and action plans for approval by the TPSB
- monitoring the implementation of Toronto Council's Action Plan to Confront Anti-Black Racism
- monitoring the implementation of the Board's RBCD Policy, including reviewing the data analysis and any interventions developed by the TPS to address racial disparities for feedback and recommendations for enhancement
- monitoring the implementation of the recommendations from the Andrew Loku inquest through the monitoring framework previously developed by ARAP
- reviewing the development and implementation of all TPS training and offering recommendations for enhancement, including training on anti-racism
- monitoring the implementation of the 81 recommendations in the TPSB's *Police Reform* Report.[87]

ARAP was involved in a number of important issues, including assisting with drafting the RBDC Policy for the Board and the development of a framework to monitor the implementation of the Loku inquest recommendations.[88] The monitoring framework established performance targets and benchmarks that the TPSB and TPS could use to measure implementation of the Loku inquest recommendations, and hold themselves accountable.[89]

ARAP did not review the "means of implementation" of the Loku recommendations. For example, ARAP did not review any training programs or procedures that were developed or revised in response to the jury recommendations.[90] Whether that was the result of a lack of resources or a narrow mandate, this is an important missed step in ensuring that the recommendations were effectively implemented.

Among other things, this highlights the need for ARAP to be empowered and resourced adequately, including compensating its members for their time and work similar to the civilian members of the TPSB. It also highlights the need for independent monitoring of the implementation of any recommendations. The OHRC recommends that the TPSB provide ARAP with additional resources to take on an expanded role that would include assisting with the implementation of the OHRC's recommendations.

ARAP is a novel and commendable approach that brings together community members, academics, and police Service members to develop police governance policy. The OHRC also recognizes the important role that should be played by ARAP members in the robust approach to implementation discussed later in this chapter

For the OHRC's recommendations on community oversight, see Recommendations 2, 3, 70(b), 85, and 86.

Independent monitoring and enforceability

For decades, members of Black communities in Toronto have raised alarms about anti-Black racism, both individual and systemic, within the TPS and the TPSB. Multiple reviews and reports have confirmed the existence of anti-Black racism, and recommended changes to TPSB policies and TPS practices and procedures to eliminate racial profiling and discrimination.

The TPS recently acknowledged the existence of anti-Black racism. This acknowledgement is an important and welcome development.

The TPS has also implemented some of the recommendations and made some improvements.

However, the required progress has been slow and insufficient.

The TPS and TPSB systems have not provided effective monitoring and accountability for anti-Black racism, racial profiling, and racial discrimination against Black people. There are few examples of officers being evaluated, investigated, or disciplined for racial profiling or discrimination. There has been structural impunity for systemic racism within the TPS and TPSB.

Not surprisingly, the outcomes for Black people have not changed.

The TPS and TPSB have demonstrated that they alone cannot assess, monitor, and change their systems to eliminate anti-Black racism, which is why the OHRC recommends that the Inquiry's recommendations be independently monitored and legally binding.

Independent monitoring and effective and expeditious legally binding enforcement measures are necessary to help restore trust among Black communities. They provide communities with mechanisms for input, monitoring and transparency, and accountability.

Community stakeholders such as the Black Legal Action Centre (BLAC) and Canadian Association of Black Lawyers (CABL) support legally binding enforcement measures, given their concerns about the ability of the TPS and TPSB to address systemic racism using traditional measures such as non-binding recommendations, or directions from the TPSB.[91]

Similarly, the IPC recognized:

the importance of an approach to rights protection that, whenever possible, is informed by meaningful public engagement, supported by effective enforcement mechanisms, and capable of producing concrete results that can be assessed and verified by an independent and expert reviewer in a transparent manner. A commitment to such an approach by the Board and the Service could play a significant role in helping build citizen trust in policing.[92]

Legally binding measures between parties can take various forms. In Ontario for example, the OHRC has previously entered into a model of enforcement, known as a consent order.[93] This is an agreement between parties, made legally binding by filing it with the HRTO. Recently the OHRC and the Peel Regional Police Service entered into a Memorandum of Understanding which built in an agreement to ultimately file a consent order with the HRTO.

Another model of legally binding enforcement is arbitration. In the current context, this would involve an agreement in which disputes over implementation of the OHRC's recommendations would be addressed through binding arbitration. This, too, can represent an alternative to potentially lengthy contested legal proceedings. This model gives the TPS, TPSB, and the OHRC input to select the final arbiter, which can facilitate the timeliness of resolutions to any matter in dispute.

The OHRC's inquiry has confirmed that Black communities have little confidence in a process that does not result in accountability for the TPS and TPSB. Legally binding measures are an important step in building confidence in policing and promoting a fundamental shift in practices and culture.

For the OHRC's recommendations on independent monitoring and enforceability, see Recommendations 1, 2, 4, 5, 50, 51, 85, and 86.

7 A Protective search is "used generally during Investigative Detention and involves a limited search of a person who has been detained by policy when there is reasonable belief the person poses a safety risk. The scope of the search is limited to exterior patting of clothing such as pockets, waistband or areas that may reasonably conceal such items as weapons or implements that may be used as weapons, usually with open hands to maximize the ability to detect weapons through clothing. This search may also be described as a 'safety search', as that is the purpose and objective." Toronto Police Service, *Procedure 01-02 Search of Persons* (24 November 2021), online (pdf): https://www.tps.ca/media/filer_public/a0/f9/a0f91c6c-e992-4036-badb-1f14fe1a6980/8e76ce5e-27b3-465d-b31a-60e580a1de8a.pdf.

8 A Frisk search is "used generally for Search Incident to Arrest and means a more-thorough search that may include emptying and searching pockets as well as removal of clothing, which does not expose a person's undergarments, or the areas of the body normally covered by undergarments. The removal of clothing such as belts, footwear, socks, shoes, sweaters, extra layers of clothing, or the shirt of a male would all be included in a Frisk search. A Frisk search may

be commenced in the field and concluded at the station." Toronto Police Service, *Procedure 01-02 Search of Persons* (24 November 2021), online (pdf): https://www.tps.ca/media/filer_public/a0/f9/a0f91c6c-e992-4036-badb-1f14fe1a6980/8e76ce5e-27b3-465d-b31a-60e580a1de8a.pdf.

Anti-Racism & Organizational Change: A Guide for Employers

The Canadian Human Rights Commission is Canadas national human rights institution. The Commission helps ensure that everyone in Canada is treated fairly, no matter who they are.

30 min. read · View original

> “Canadians have the right to be treated fairly in workplaces free from discrimination, and our country has laws and programs to protect this right.” Department of Canadian Heritage[Footnote 1]

> “As we focus on combatting racism, it is not sufficient to simply equip ourselves with knowledge and tools. We must take action in ways we know will be meaningful in addressing all barriers and disadvantages.” - Ian Shugart, Former Clerk of the Privy Council and Secretary to the Cabinet, 2021[Footnote 2]

Introduction

Today, Canadian workplaces are not the same as they were in March 2020. Recent incidents have

had an impact on Canadian society with shocking reminders of Canada's ongoing history of racism. Whether it was the discovery of burial grounds on Residential School sites or continued anti-Black and anti-Asian expressions of racism, including violent attacks – these incidents have triggered a resurgence of demands for society and its institutions to develop, adopt and act on anti-racism initiatives that are comprehensive and sustainable, ensuring employers in all sectors take leadership to address the past and recent history of racism in Canada.

The increasing numbers of Indigenous, Black and other racialized people in Canada makes it more important now than ever before for employers to consider the well-being of employees from all backgrounds. This is both a pressing moral and legal issue and, while engaging in anti-racism work is important in any time, it is critical now that we are seeing a gradual transition to post-pandemic workplace environments that are changing based on the following factors:

- Canada's current shift towards a "proactive compliance approach to human rights protection" means **more responsibility for employers** to counteract and actively prevent racial discrimination.[Footnote 3]
- The racial reckoning of **2020 has shifted conversations about equality**. Across all sectors, Canadian employers recognized that efforts towards racial equity were critical, central, and ur-

gent. A flood of anti-racism statements was released, town halls convened, and training sessions held. But a year later, there was not much measurable change, which has reduced many employees' trust.[Footnote 4] [Footnote 5]

- Many Canadian **employers are facing the challenge of managing the return to a physical workplace** and/or a dispersed workforce when many are still working from home. It has been reported that in particular racialized employees have negative expectations for a return to the office because of previous experiences of racial discrimination and/or exclusion now combined with personal and/or racial trauma and higher awareness of workplace racism.[Footnote 6] [Footnote 7] [Footnote 8]
- There is greater recognition that there are differences in the expressions and impact of racism on different racialized groups – therefore, a need for specific strategies and actions to address them. The release of **disaggregated racialized workforce data** (breakdown by racialized groups)[Footnote 9] suggest such approaches are needed to make sure that anti-racism initiatives address the different challenges faced by the different racialized groups in the workplace.[Footnote 10]
- Changing demographics indicate that the growth of Indigenous, Black and other racialized population groups will continue to exceed the average annual growth for the Canadian population as a whole.[Footnote 11] [Footnote 12] [Footnote 13] According to the population projections from Statistics Canada, about 2 in 5 Canadian will be part of a racialized group in 2041, accounting for 38.2% to 43.0% of the Canadian population, compared to 22% in 2016.[Footnote 14]

This situation has created growing awareness that the experiences during the last several years can

and should be the reason for employers to actively support and advance anti-racism in the workplace and ensure organizational goals of equity, diversity, and inclusion are set within an anti-racism framework.

For the public sector, this was recognized in the Clerk of the Privy Council's 2021 Call to Action[Footnote 15] for federal employers and leaders across the Public Service to take decisive action for change and set specific requirements for documentation and reporting.[Footnote 16] And – relevant for all sectors – the legislation to ensure equal opportunities for employees from under-represented groups (Employment Equity Act) is "heading for its most significant overhaul since its introduction 35 years ago."[Footnote 17] [Footnote 18]

> "The disruption and trauma of the past year have created a once-in-a-generation opportunity to redesign working models from the ground up—with principles of diversity, equity and inclusion placed at the center [...]." - S. Subramanian and T. Gilbert[Footnote 19]

It is clear that the time to advance anti-racism, equity and inclusion in the workplace is now. The question many employers have asked is how. In response to that question, this guide has been created to support public, private and not-for-profit sector employers who are looking for tools to

educate effectively, create relevant strategies and implement short-and long-term measures to offer a workplace that is inclusive and equitable for employees of all Indigenous, Black and other racialized backgrounds, and that has measures in place designed to **prevent or to interrupt *any* display of racist behaviours or actions**.

In this guide, the focus on racialization and racism (including its intersections with other grounds of discrimination, e.g., gender, disability, religion)[Footnote 20] does not suggest that other issues around discrimination have not arisen, continued, or worsened in Canada in the past years. But comprehensive human rights protection comes from comprehensively addressing each of the grounds defined in the Human Rights Act; and the Canadian Human Rights Commission is recognizing that by developing a series of employer tools. While these tools will focus on different human rights grounds, they are all based on the same **fundamental understanding that Human Rights grounds must be seen and treated as interconnected** and that actions to address them must be well-planned, resourced and sustainable.

Given these issues, the purpose of this guide is to provide information and practical suggestions for employers looking for guidance on how to approach anti-racism in their actions and planning in

today's changing workplaces. To do so, this document is divided into the following sections:

1. **Leadership for Implementing Anti-Racism Initiatives.** This section addresses the important role an organization's leadership can and must exhibit to fully support the design, development and implementation of a comprehensive approach to anti-racist organizational change;
2. **Promoting Anti-Racism in the Workplace.** This section discusses the importance of using common language, raising awareness and communications across the organization, and conducting an organizational review of policies and procedures;
3. **Sustaining Anti-Racism in the Workplace.** This section discusses the importance of workplace culture and norms that support the ongoing understanding and implementation of anti-racism efforts;
4. **Human Resources Strategies to Support Anti-Racism in the Workplace.** This section addresses the steps that are integral to supporting the recruitment, selection and advancement of Indigenous, Black and other racialized peoples as well as setting a framework for and providing both mandatory and optional education/training programs;
5. **Anti-Racism and the Procurement of Goods and Services.** This section addresses the importance of upholding anti-racism values and practices when engaging external contractors and service providers with an emphasis on those led by Indigenous, Black and other racialized peoples as well as those who are implementing anti-racism policies;
6. **Anti-Racism Action Planning and Assessing Results.** This section discusses the importance of taking a measured strategic approach to

planning, developing, implementing anti-racism initiatives and tracking their outcomes;
7. **Closing Thoughts.** This section addresses the steps employers can take to acknowledge the importance of anti-racism with the aim of publicly supporting such work and noting its critical function in developing inclusive workplaces and influencing social values; and
8. **Bibliography of Useful Resources.** This section provides references to resources noted in the preceding sections as well as an annotation of resources from various organizations, including statutory human rights agencies, the public service and not-for-profit sector, educational institutions and other organizations.

Each section begins with a brief summary of background information, then makes suggestions and recommendations for steps to take and provides additional resources available for more in-depth information. The flow of the topics reflects steps along an organizational change journey, but each section can be read as stand-alone, based on where your organization is on that journey.

This guide concludes with closing thoughts on the role public, private and not-for-profit organizations can take to impact public awareness on the importance of anti-racism, thereby, encouraging greater public awareness and creating social environment that is understanding and supportive of anti-racism in all sectors of society.

This is then followed up with a section identifying organizations that are engaged in good practices

regarding the implementation of anti-racism work.

This guide is not a policy statement or action plan for addressing racism in the workplace. Rather, it is designed to assist employers in developing their own action and implementation plans to address their organization's specific needs and priorities.

The resources in this guide are applicable for all employers and those tasked with implementing anti-racism measures – be it in the public, private or not-for-profit sector.[Footnote 21]

1. Leadership for Implementing Antiracism Initiatives

Within the context of *Section 15 of the Canadian Charter of Rights and Freedoms*, which addresses substantive equality, an inclusive culture requires active management and **deliberate leadership to drive vision and the appropriate resource allocation**. This goes beyond the moral imperative: It is simply a necessity in order to take full advantage of the skills and experience Canada's increasingly diverse workforce offers, and in order to engage, nurture, and retain those who drive organizational excellence. In doing so, leadership will need to acknowledge that diversity exists within Indigenous, Black and other racialized communities and should, therefore, undertake a disaggregated lens

to the diversity within each of these communities.[Footnote 22]

As a consequence, inclusive leadership has become a "unique and critical capability"[Footnote 23] for employers: Leadership must contribute to a culture of inclusion. That means visibly and consistently demonstrated leadership engagement and support is needed for long-term success. In large organizations, leadership will also need to ensure alignment with the corporate antiracist vision throughout all levels of management, which means paying attention not only to policies, but to formal and informal practices and decision-making processes. This will help both eliminate systemic discrimination and promote accountability across job functions and seniority levels.

How can it be achieved? Corporate Leadership can establish and promote vision and values by:

- communicating commitment to develop and implement anti-racism initiatives that address governance and operations, including decision-making and provision of programs and services, as well as leadership modeling anti-racist attitudes and behaviours;
- under-taking a comprehensive anti-racism organizational review and embedding anti-racism in organizational policies, procedures and structures, including education/training, employment as well as programs and services;
- establishing and collaborating effectively with an Indigenous and anti-racism committee of staff supportive of such an initiative; and

- allocating sufficient resources, including retention of an internal and/or external resource(s) to support and guide the change process.

Several areas are critical to address for this to be successful in an organization, and actions in these areas will decide the role and the influence Indigenous, Black and other racialized employees have in an organization, as employees, decision-makers, contract service providers, and clients and/or service recipients. These areas are:

- Strong, clear and consistent leadership guided by the values and principles discussed in this resource; and
- Involving Indigenous, Black and other racialized staff in creating the relevant policies and procedures at all levels of the organization.

This is particularly important given the intersections between racialization and other social identities that have been the target of discrimination. The notion of 'intersectionality' has been defined by legal scholar Kimberle Crenshaw in 1989. Her concern in defining this term was to demonstrate ways that various forms of oppression combine with racism, and why it is important to acknowledge and address those lines of intersection.

> "The concept of intersectionality describes the ways in which systems of inequality based on gender, race, ethnicity, sexual orientation, gender identity, disability, class and other forms of discrimination "intersect" to create unique dy-

> namics and effects. For example, when a Muslim woman wearing the Hijab is being discriminated, it would be impossible to dissociate her female* from her Muslim identity and to isolate the dimension(s) causing her discrimination. “All forms of inequality are mutually reinforcing and must therefore be analysed and addressed simultaneously to prevent one form of inequality from reinforcing another. For example, tackling the gender pay gap alone – without including other dimensions such as race, socio-economic status and immigration status – will likely reinforce inequalities among women.”[Footnote 24]

This is important for organizations to address in taking leadership in implementing anti-racism change work. It is also very important for organizational leadership to note that the guidance provided in this document can be used to address other issues where discrimination is evident whether based on faith, gender, gender identity and sexual orientation.

As is noted in the Ontario Human Rights Commission’s **Policy and guidelines on racism and racial discrimination** *“Racial discrimination can be impacted by related Code grounds such as colour, ethnic origin, place of origin, ancestry and creed. In addition, race can overlap or intersect with other grounds such as sex, disability, sexual orienta-*

tion, age and family status to create unique or compounded experiences of discrimination."[Footnote 25]

This understanding of the ways in which racism can overlap or intersect with other grounds is also reflected in the Government of Canada's Anti-Racism Strategy, which includes colonialism, anti-Black racism, anti-Asian racism, Islamophobia and Antisemitism in its discussion of key terminology.

2. Promoting Anti- Racism in the Workplace: Finding Common Language

The racial and cultural diversity of Canadian workplaces is reflected in the difference in language we use when addressing racial identities, racism, and the many components of anti-racism work. Even commonly used words hold different meanings for different people, and this can cause confusion and potentially conflict when addressing topics related to race and (anti-)racism in the workplace.

There are no universally accepted definitions of many terms related to racism and anti-racism. Therefore, it is important for organizations to establish a shared understanding and a shared vocabulary within the organization before having these conversations.

This section provides a list of some of the most comprehensive glossaries of terms which will be

useful for employers who want to start or expand the conversation about anti-racism in their organization and in doing so want to make sure that the language is consistent and inclusive, particularly given that the use of language on this subject is still evolving, and any glossary will need to be reviewed and updated on an ongoing basis. Here are a couple of examples to illustrate this point:

- The use of the term “Aboriginal” is limited today, although it was previously used in the same way as “Indigenous” is today.[Footnote 26] Generally, non-Indigenous persons should find out which terminology a specific Indigenous group or individual prefers, and then use that consistently.[Footnote 27]
- The fairly new term “Latinx” is not universally used in the population for whom it was created but is frequently used in advocacy.[Footnote 28] [Footnote 29]
- Also, the categories for racialized groups are changing over time. Statistics Canada therefore provides a detailed Population Group Reference Guide for each census, which can also be helpful for employers.[Footnote 30]

For further resources please click here.

2.1 Raising Awareness:

Public awareness of racism in past and present Canadian society has increased, along with public support to eliminate racism in society.[Footnote 31] In the last two years, anti-racism work across sectors has gained momentum, and the results are renewed efforts to embed antiracist values, strate-

gies and initiatives into the foundations of workplaces.

But when speaking to individual employees during organizational consultations, it often becomes clear that there is not enough awareness of

- how certain practices can put specific racialized groups at a disadvantage;
- what kind of behaviours would actually fall in the category of “racist’; and
- how the specific set of circumstances that enable (systemic, intended and/or unintended) racist behaviours or practices in an organization can be changed by the organizational leadership.

To increase awareness and appreciation of the many forms in which racism may materialize in an organization means building a foundation on which an inclusive and actively anti-racist workplace culture can be built.

Given the shift in Canadian demographics, some employers may think that diverse, inclusive and anti-racist organizations will just happen naturally. But an organization that is not only diverse but also **fundamentally inclusive, equitable and actively anti-racist doesn’t just happen; it is the consequence of deliberate, and sustained efforts**. For example, an organization can have racial diversity among employees throughout the ranks but still be non-equitable and non-inclusive in its work-

place culture, operational practices and even policies.

For further resources please click here.

2.2 Communications:

Employees at all levels must be made aware and kept informed of the corporate vision and agenda as it relates to antiracism, and this must be communicated through a clear and consistent set of messages that are endorsed by leadership (and/or board, if that is applicable). Important success factors include:

- Transparency and touch points: Sharing not only an action plan but regular scheduled progress updates that include what actions have been taken, what effects they have had to date, and what the next steps and desired outcomes are for these steps
- Ensuring communications are inclusive of and sensitive to individuals from diverse communities (for example subjects and images in organizational newsletters, when announcing days of significance, etc.)
- Devising communication plans and strategies to effectively communicate commitment and progress reports within the organization and externally (for example website, emails, social media)
- Keeping it top of mind by having anti-racism work as an agenda item at key meetings and retreats.

2.3 Organizational Review and Engagement:

Any organization taking on anti-racism work should consider it important to do three things:

- identify any element/trace of racism in its policies, practices (e.g., programs and services) and governance;
- eliminate any element/trace of racism in its policies, practices and governance; and
- remedy all elements/traces of racism in its policies, practices and governance.

Engaging in anti-racism work begins with an assumption that there are likely barriers in place that limit and/or deny access by Indigenous, Black and other racialized peoples to the organization's employment, decision-making and/or programs and services. As such, one of the most important actions for an organization to take is to involve its staff, decision-makers, service recipients and the public in a review of its policies, programs and procedures. This is done to ensure all of the organization's functions and guiding principles are examined through an anti-racism lens. In this context, the organization's leadership initiates a process to review these core principles and activities and does so involving its staff, board of directors and service recipients.

Following a comprehensive organizational review, the development of equity, diversity and inclusion and anti-racism (EDI AR) policies and procedures can provide the benchmarks needed to guide organizations in their development and implementa-

tion of plans to advance anti-racism. They require the following:

- A Statement of Commitment.
- Definitions of key terms that are consistent with human rights, addressing non-discrimination/harassment and anti-racism.
- Clearly defined mandate/s for all committees or advisory groups that will work in this space.
- Organization-wide, racially and culturally diverse employee-driven committee (in case of a national organization, regional diversity would also need to be considered as well) that will provide input and feedback on all policies and procedures related to equity, inclusion, and anti-racism.
- Onboarding and training for all employees within the organization on anti-racism policies and procedures to ensure they are clearly communicated so that employees have realistic expectations of what is meant, how things will be done, how they can become involved, etc.
- Community consultation if an organization's work is in/for the community (for example, cultural organizations, non-profit and certain government agencies). A group of respected advisors from the Indigenous, Black or other racialized communities in question should be engaged to provide input and feedback on planned initiatives and implementation processes with impact on the community.
- Recognition of Days of Significance (religious holidays, cultural events and celebrations, public holidays) that may be observed by employees:[Footnote 32]
    - For Canadian employers, this includes heeding the Truth and Reconciliation Commission of Canada's Calls to Action[Footnote 33] and to recognize the First Nations', Métis', and Inuit peoples' right to

practice and teach their spiritual traditions and customs.
    - Accommodation requests will differ– it may be a full day off, or time off during a day, or modification of an employee's work schedule for specific days.
    - Accommodation offers will differ between organizations depending on the company's policy, the employee's benefits plan, or a collective agreement (for example, whether they are based on two or three religious holidays, whether there is the option for additional unpaid leave for this purpose, or whether flexible scheduling options are possible).

There are several steps which can be taken to do this, including:

- having the organization's senior leadership, including its board of directors, make a firm commitment to supporting this work;
- engaging with an internal and/or external resource(s) who can facilitate the organization's review process, i.e., an Equity/Diversity/Inclusion/Antiracism Task Group (EDI AR). This provides expertise to the process to ensure that a thorough review is taken, discussed and steps identified to eliminate and remedy their impact;
- establishing an internal team of staff from Indigenous, Black and other racialized backgrounds, as well as others who are supportive of this initiative. This team can serve as the organization's internal feedback loop and connections with a broader pool of staff. Such a team can give input to the review as well as share communications on this from leadership to all staff. However, to ensure this staff team is able to engage effectively in this initiative, it will be

essential for the employer to ensure they have adequate time and resources to do so;
- establishing an external advisory group of Indigenous, Black and other racialized peoples, as well as others who are supportive of this initiative. This group can provide an external perspective to the process, identify issues that their communities face as it relates to the organization and provide information and access points for the organization to communicate to diverse communities.

For the organization to effectively choose whom to involve as staff and/or external supports, it will be useful to set criteria for the selection process, promote the opportunity widely and have a team to review applications. It will be essential to inform all potential applicants of the time required, the competencies needed and, in the case of staff, how they will be accommodated in terms of their day-to-day work.

3. Sustaining Anti- Racism in the Workplace: Changing Conversations & Cultures

The last few years have seen numerous publications on the issue of anti-racism, and the importance of integrating principles of racial equity and anti-racism into an organization's work and operations. But less is available on the details of how to achieve this. Therefore, this guide is designed to provide and summarize current good practices, as well as recommendations and resources for the application in the workplace.

This is offered to address operational and workplace culture and to provide information on useful practices for organizations to implement and sustain anti-racism initiatives and how organizations can support, connect and build on relationships with their Indigenous, Black and other racialized employees. To do this effectively, it is important to understand workplace norms in order to shift workplace systems and culture.

As Marie-Claude Landry, the former Chief Commissioner of the Canadian Human Rights Commission, has put it:

> The key to the success of this work is that it be never-ending.
>
> It must be continuous, it must be evergreen, and it must be sustainable.[Footnote 34]

3.1 Understanding Workplace Norms:

In addition to the formal policies and procedures discussed above, it is equally important that we consider the unspoken workplace norms and cultural practices and their influence.

This may include assessing the following:

- Organizational code of conduct or corresponding policies to ensure that all relevant documents reflect principles of equity, inclusion and anti-racism.
- Interaction styles (peers, supervisors, senior management) and communication styles for not

only accuracy but also demonstrating thoughtfulness and respect.

- Cultural competencies – for example:
  - How are issues related to race discussed at meetings, for example of organization's committees, educational sessions and retreats?
  - What are the work styles that are valued in your organization, and are unspoken expectations that work styles expected from certain demographic groups?
  - Are days of cultural and/or religious significance as they intersect with racialization and racism considered when allocating resources or planning a project/program?

3.2 Shifting Workplace Systems and Culture:

Given the scope and potential impact of any comprehensive anti-racism plan, it is important that employees (in particular Indigenous, Black and other racialized employees) believe in the goal and have positive expectations of the outcomes. A successful implementation of equity, inclusion and anti-racism initiatives requires trust. To earn it, leadership as well as senior management must have demonstrated their capabilities as well as their caring ("benevolence")[Footnote 35] and integrity.

For maintaining changes and improvements long-term, a culture and framework of accountability is needed. For example, performance evaluations should include an assessment of a manager or employee's responsibilities related to the equity, inclusion and anti-racism initiatives. The princi-

ples of equity, inclusion and anti-racism should shape decision-making and culture.

> The Canadian Human Rights Commission has produced two discussion papers – on Systemic Racism and on Religious Intolerance – to increase understanding of these important issues. This Guide should be read in conjunction with those tools.

When your organization assesses this, it is also important to look at whether the impact of any observed and addressed racially discriminatory behaviour had been different for one group compared to another – that might be different racialized groups being treated differently, or racially discriminatory behaviours that affect more racialized women than men ("intersectionality").[Footnote 36]

Especially in large and long-established organizations, there may be challenges and resistance when the planned changes include restructuring of workplaces, the promotion of new social norms in the organization, monitoring during implementation, and last not least, mandatory education and training, particularly during the implementation phase/s of an anti-racism action plan. It is therefore helpful to be proactive and monitor

- Non-harassment/violence prevention actions, including actions to address *Subtle Acts of Exclusion* (aka micro-aggressions)
- Adherence to workplace Code of Conduct

- Demographics across job levels: How diverse are middle and senior management?
- Turnover for Indigenous, Black and other racialized employees (comparing across job levels)
- Participation levels from these communities in key organizational activities, for example strategic planning and ongoing involvement in EDI AR policy, procedures, programs and services review and communications on these.

4. Human Resources Strategies

Your human resources department will be responsible for operationalizing organizational values and principles related to equity, inclusion and anti-racism.

To ensure that the organization's workforce reflects the diversity of the community requires to not only attract diverse job candidates but also to ensure the organization is prepared to ensure that they can flourish. This means not only promoting employment opportunities through channels that reach a diverse target audience but also having equitable interview practices, providing professional development opportunities and having an effective mentoring program and succession planning approach.

4.1 Recruitment

To identify recruitment strategies, the Human Resources department will need to know the racial/cultural composition of the current workforce. Therefore, the first step has to be an organi-

zational workforce “census” and breaking down the data by racial/cultural groups to compare representation across levels of seniority, and across departments. There are now several efforts underway to not only identify the various Indigenous, Black and other racialized peoples in Canada but to go beyond the homogenizing categories identified in many policies and procedures that address “visible minorities” and “Indigenous peoples” as if they are the same.[Footnote 37]

Next steps could include:

- Seeking workforce availability information for the organization’s sector and using this to compare with the organization’s own representation of Indigenous, Black and other racialized communities.
- Establishing strategies to attract the desired candidates and using networks within Indigenous, Black and other racialized communities to promote employment opportunities.
- Highlighting the organization’s commitment to anti-racism in recruitment and promotional materials.
- Involving individuals from Indigenous, Black and other racialized communities in the recruitment process where this is possible based on the team in question.
- Participating in public and private sector programs to connect with students from Indigenous, Black and other racialized communities.
- Conducting an employment systems review.

4.2 Interviewing Practices

The successful completion of an interview can open the door to a career - it may even change a life. Therefore, the interview process must be a fair and unbiased instrument based on occupational requirements, designed to measure the required competencies of all candidates.

This can be done by:

- Having agreed-upon job descriptions and weighted selection criteria related to the job requirements;
- Reviewing interview questions through an EDI AR lens to ensure standard approaches and the same set of non-biased questions are used for all candidates;
- Providing clear descriptions of the organization's expectations and clarifying the decision-making process for candidate selection;
- Probing on alignment of values:
    - Using an interview format that probes cognitive and behavioural competencies so as to assess broader range of candidates' capacities as well as understanding and education/training on human rights and anti-racism;
    - Educating those involved in interviewing on these matters;
- Promoting and providing reasonable accommodation for those who may require it, i.e., persons with disabilities and of diverse faiths;
- Ensuring interviews provide enough time for all candidates to bring forward their strengths;
- Involving individuals from Indigenous, Black and other racialized communities in the interview process; and
- Ensuring that interviewers of a candidate arrive at decisions independently - for example, each

interviewer has to assess candidates' interviews separately and rate them online, before discussing the results of individual scoring in a group.

4.3 Professional Development, Education and Training:

One of the key indicators of anti-racism is for public and private sector organizations to have the faces, voices and cultures of individuals from Indigenous, Black and other racialized communities represented at leadership level. To achieve that, employees from all racial backgrounds need to have opportunities for desired professional development so that they can advance based on their full potential.

For example, to prevent perceptions of manager's bias, manager-nominated access should not be the only option to access professional development. Multiple options should be provided, including mentorships, secondments, access to non-advertised positions, etc. To do this, it is essential that managers establish specific plans to support the development and advancement of Indigenous, Black and other racialized employees.

As well, education and training help develop and maintain a common understanding of:

- what an organization's equity, inclusion and anti-racism initiatives want to achieve;
- why this is relevant for this specific workplace;

- why this offers benefits for all (for example, inclusive interaction styles and avoiding acts of exclusion/microaggressions improve all team member's work-related quality of life); and
- what will be expected from staff, managers, HR, and leadership.

Therefore, training must be planned systematically and must be aligned with an organization's action plan, so that it can support the implementation step by step. Of course, that does not exclude the addition of unplanned events if an opportunity presents itself (for example, to engage a specific speaker, or to respond to a specific event).

The first question when planning equity, inclusion and anti-racism training is usually: Should it be mandatory? The answer depends on the content.

Types of training that should be mandatory and participation documented include:

- Leadership training designed for executives, directors, managers and staff with supervisory and/or team leader responsibilities to:
  - Advance inclusive leadership strategies
  - Advance ability to create effective organization wide anti-racism action plans
- Management training designed to:
  - Prevent/eliminate bias from work assignments, eligibility for professional development, and/or performance evaluations
  - Ensure that all managers are aware of accountability measures
- HR staff training designed to:
  - Foster cultural competence, for example, to ensure that HR staff have awareness, sen-

sitivity and appreciation of other cultures and know how to interrupt bias in themselves and others
    - Support race-based data collection and comparison between racialized groups recognizing that the workplace experience is not the same for all racialized groups,[Footnote 38]
- Staff training designed to:
    - Introduce key ideas and language of inclusion and anti-racism
    - Ease conversations about race ("First, do no harm")
    - Help employees avoid bias and acts of exclusion ("microaggressions") and to employ actions within the context of **Subtle Acts of Exclusion**[Footnote 39] in daily interactions
    - Understand Intersectionality and the relationship of racism to other "-isms" (sexism, homophobia, ableism, etc.)
    - Support becoming better allies through self-awareness education/training

Types of training that should be **not mandatory** include:

- Information on history or customs related to specific cultures, for example on Days of Significance
- Information on latest demographic changes in Canada
- Lunch and Learn Speaker series

Other considerations when planning training include:

- **Avoiding "education fatigue":** Whatever training is offered (or mandatory to attend) must be relevant to the specific workplace and have practi-

cal value. Sessions don't necessarily have to be stand-alone events – for example, they could be combined with or integrated into department- or task-specific skills training or professional development sessions.

- **Avoiding extra burden on racialized employees:** Anti-racism training should not just assume that racialized employees want to share personal experience and stories. Unless they express interest or suggest it, they should not be asked to support a training session, or lead a discussion centered around their identity. Educating others about topics related to experiences of discrimination or disadvantage can be mentally exhausting and for some quite distressing.
- **Finding the right training provider/s:** Given the flood of anti-racism training programs/sessions that have been developed and offered in the last two years, it is a challenge to choose programs or education providers, and it is different for each industry and sector. The Human Rights Commissions in each Canadian province and territory as well as recognized local anti-racism organizations (for example, the City of Toronto's Confronting Anti-Black Racism (CABR) Unit, Colour of Poverty Coalition, and the Federal Government Anti-Racism Secretariat, will be able to provide support. Also, the end of this Guide, resources by sector are provided that can help guide the decision-making.

For further resources, please click here.

4.4 Mentoring:

Mentoring provides opportunities for junior or newly hired employees to learn from senior staff in the organization. In mentoring relationships, knowledge, skills as well as the organizational val-

ues and culture are transferred. Mentorship programs have been especially successful in increasing both promotion and retention rates of racialized employees and increasing the rate of racialized representation at manager level.[Footnote 40]

Public and private sector organizations can support this by:

- Establishing plans to provide meaningful opportunities that can lead advancement for Indigenous, Black and other racialized peoples.
- Setting selection criteria for those to be mentored with anti-racism considerations included, e.g., knowledge of Indigenous, Black and other racialized peoples and how their lived experience impacts on the employers programs, services, staffing, and relationships with these communities.
- Monitoring mentoring program through an intersectional lens – avoiding that for example, specific racial groups are underrepresented (based on their percentage in the organization's workforce), that Indigenous and/or racialized women might be underrepresented, that racialized employees with disabilities are underrepresented, etc.
- Providing introductory education for potential mentors and mentees, so that they have a clear understanding of the relationship and of their responsibilities to each other and to the organization. Ineffective mentoring can be damaging, as can "over-mentoring" that creates an unrealistic workload.
- Ensuring that the mentee's direct supervisor is informed and supportive.
- Providing opportunities for individuals from Indigenous, Black and other racialized commu-

nities to discuss their cultural background and values and what they may add to the organization – for example in “reverse mentorship” relationships which can help senior staff and leadership understand issues and barriers potentially faced by their Indigenous, Black and other racialized employees.

4.5 Performance Development and Appraisal:

Within the context of implementing anti-racism, it is both important to support professional development for all staff, particularly for Indigenous, Black and other racialized employees, and to hold staff accountable for implementation. This can be done through performance development and appraisal that provides:

- A framework for all staff to understand their roles and responsibilities for implementing the organization’s anti-racism actions;
- Support to developing the required competencies, knowledge and skills, to be successful on this;
- Support to and understanding of the value of the lived experiences of Indigenous, Black and other racialized staff, in particular, in contributing to the organization’s anti-racism actions;
- A regular system of assessment of each staff’s actions that contribute to the organization’s anti-racism actions as well as methods of accountability; and
- A framework for the organization to regular assess and act upon the professional development needs of the organization’s staff as a whole and/or by department, division, unit.

While performance development and appraisal has traditionally been understood as a matter for individual employee support, it is also critical for the organization to assess the aggregate of identified staff needs for professional development through this process and, based on this, develop and implement actions to support both individual employees and the organization in the implementation of anti-racism actions.

5. Procurement of Goods and Services

An inclusive approach to procurement of goods and services with the goal of supplier diversity is an important component of organizational anti-racism efforts.

Inclusive procurement means eliminating potential barriers for qualified suppliers from underrepresented or marginalized groups to register as suppliers and to access contract opportunities. Employers who want to engage diverse[Footnote 41] external supplier companies owned[Footnote 42] and operated by people who are Indigenous, Black, people of colour, or other marginalized people can seek support from:

- the wide range of diverse business associations in Canada, e.g., Black Business and Professionals Association, Canadian Aboriginal and Minority Supplier Council, and
- the member organizations of the Supplier Diversity Alliance Canada (SDAC), which provide certification for diverse suppliers[Footnote 43]

To ensure the impact can be measured, organizations need to collect data from potential and current suppliers. This can be done by inviting suppliers to:

- advise if their company has been certified as diverse supplier by a certifying council such as the members of the Supplier Diversity Alliance Canada (SDAC, mentioned above);
- self-identify if their business is owned and operated by Indigenous, racialized, women, persons with disabilities or other marginalized people; and
- confirm that their company policies are addressing EDI AR and that employees have received information/education on these policies.

All suppliers should be made aware of the contracting organization's efforts to advance EDI AR, of the importance of shared values in contracting assignments (bidding process as well as single sourcing process). Potential suppliers should receive the relevant hiring company's policies addressing EDI AR. Needless to say, that alignment is particularly important if an employer is engaging external recruiters when looking for new employees.

Not all suppliers will be in a position to have such policies in place and/or to provide education/training to its employees – for example, very small owner-operated companies or very specialized niche suppliers. However, it is still important that the supplier agrees in writing to adhere

to the hiring company's policies and procedures. Managers who are engaging suppliers will then be responsible for reporting promptly if a supplier's conduct or behaviour is not adherent to EDI AR related policies and procedures.

The specifics should be described in a policy document and confirmed with the supplier in writing (for example, in a Memorandum of Understanding).

Importantly, inclusive procurement is about adding opportunity and benefits for both suppliers and employers by:

- creating economic opportunities for suppliers from marginalized people and groups; and
- widening the range of sourcing options for companies looking for the best supplier for a job.

As well, organizations seeking diverse suppliers should consider developing a roster of suppliers and give thought to rotating contracts between eligible suppliers of goods and services that meet appropriate criteria and contract specifications.

For further resources, please click here.

6. Action Planning And Assessing Results:

As is likely evident from the sections outlined above, developing and implementing an EDI AR program is quite challenging as it is comprehen-

sive, sensitive, critical and will take time, e.g., to engage the workforce, secure expertise, involve external resources and to connect/communicate with program/service users and the public. This may seem like an impossible task; however, a strategic approach is required, and a clear road map set out that identifies:

- goals and objectives;
- timeframes for actions;
- who is responsible for implementation;
- the resources needed to support this;
- what the potential outcomes might be;
- how the actions will be assessed during implementation; and
- how progress will be evaluated over a 3–5-year timeframe of implementation.

Once an organization makes a formal commitment to implementing an anti-racism initiative, it is important that its leaders are accountable to ensuring the initiative runs well and achieves its intended results. This is a step-by-step process that should be assessed annually to decide whether or where the implementation plan needs to be adjusted.

This assessment requires clear indicators, timelines, and mechanisms of accountability. It also requires the collection and tracking of data, including race-based employee information. In the public sector, this is now required and is permissible under federal human rights law.[Footnote 44] Collecting data for a purpose consistent with the Canadian

Human Rights Act[Footnote 45] *is* permitted, and it is aligned with Canada's federal Employment Equity Act (Section 15)[Footnote 46] and Canada's Charter of Rights and Freedoms.[Footnote 47]

A comprehensive assessment should answer the following questions:

- Have the organization's leaders committed to specific anti-racism goals and has this become part of their formal strategic plan?
- Who is responsible for leading the implementation?
- How frequent and in-depth was the consultation with racialized employees and/or stakeholders?
- How frequent, in-depth and customized was training/education provided? What was mandatory?
- How was progress monitored and communicated?

For each of those areas, a clear and consistent framework should include:

1. What was the intended outcome (goal)?
2. What is the evaluation question?
3. What would be signs of progress?
4. Who (person, stakeholder group, department) or what (documents, procedures) should be consulted to find out?
5. What is the result of that consultation - the actual outcome?

For further resources, please click here.

7. Closing Thoughts

No two organizations will have the same starting point on the pathway to create an equitable, inclusive and anti-racist workplace. Knowing your organization's starting point based on current data and evidence is the first step – not gathering those data at the beginning can lead to missteps later on (communications that don't resonate with your employees, training programs that are not well received, etc.).

And like all organizational change work, the path is not a straight one but a cycle of regular assessment and adjustments, for example by re-prioritizing actions or re-allocating resources. Anti-racism is about remaining actively engaged, and has to be part of strategic planning cycles.

Public and private sector employers play a role in our communities. This is an important consideration as these employers can contribute to shaping public opinion. As such, it is very important for organizations involved in antiracism efforts to consider the impact they can have individually and/or in concert with other organizations. For example, after the release of the Truth and Reconciliation Commission's (TRC) report and after the murder of George Floyd in 2020, many public and private sector organizations put out statements in support of the TRC's recommendations and of Black Lives Matter's calls for justice and an end to violence against Black bodies. For any organization who

wants to engage in anti-racism work (or advance the work they are already doing), making such a statement in a sincere, sensitive and timely manner and followed by measurable actions sends a strong message to its employees, its service and program users, and the public about the importance of Indigenous, Black and other racialized peoples and the need for justice and security in their lives.

And in this work, it is important to understand that this is a process and a journey for everyone involved:

> "You don't need to be free of racism to be an anti-racist. Anti-racism is the commitment to fight racism wherever you find it, including in yourself. And it's the only way forward."
>

9. Resources by Sector

Needless to say, there are significant differences between sectors with regards to governance, obligations and organizational priorities. Therefore, the resources for further reading provided in this section have been divided by sector.

9.1 Provincial & Territorial Human Rights Agencies

While not all provincial offices provide in-depth anti-racism resources for employers, it is important for employers to know that customized information can always be provided upon request (special programs/event requests).

For a list of the provincial and territorial human rights agencies, see the Canadian Association of Statutory Human Rights Agencies: https://cashra.ca/contact-a-commission/.

9.2 Public Service Sector

A lot of antiracism work has been going on in this space. We mentioned early the Clerk of the Privy Council's 2021 Call to Action[Footnote 49] for leaders across the Public Service to take decisive action for change and set specific requirements for documentation and reporting.[Footnote 50] Further, the legislation to ensure equal opportunities for employees from under-represented groups (Employment

Equity Act) is “heading for its most significant overhaul since its introduction 35 years ago.”[Footnote 51] [Footnote 52] thus, a growing number of antiracism resources have been made available by and for the Public Service Sector.

9.3 Community and registered non-profit organizations

Over the last two years, Canadian non-profit organizations have stated or reasserted their commitment to incorporating equity, inclusion and antiracism within their programming, governance, recruitment/hiring process and employee training. The focus will of course be different and depend on the organization’s mandate and mission.

9.4 Educational Institutions as Workplace

On December 18, 2020, the Commissioner of the Ontario Human Rights Commission took the unusual step to publish her Open Letter[Footnote 54] and thus, publicly calling Ontario academic institutions to account for failing to ensure that their equity policies have adequate impact in addressing discrimination and racism. She stated that “universities and colleges must take a hard and unflinching look at the ways their policies, practices, and attitudes perpetuate discrimination.”

The pandemic was by no means the first instance of the issue of racism at Canadian, colleges and Universities being raised within Canada’s postsecondary institutions.[Footnote 55] Some institutions had

seen multiple reports on the matter commissioned and recommendations subsequently not implemented.

However, the pandemic was a watershed moment that revealed the degree of racist incidents and discriminatory impact of campus structures and procedures.[Footnote 56] Consequently, a number of post-secondary institutions are currently planning and implementing measures designed to create significant structural change. The rise in demand for expertise in developing and implementing anti-racist strategies in the workplace has even led to academic programs developed specifically for this area.

Please note that given the longer history of on-campus anti-racism work in the US compared to Canada, this section includes American resources.

9.5 Labour Organizations

A number of Canadian unions have in recent years undergone equity audits and developed anti-racism strategies; understanding that that a labour movement cannot hope to remain relevant and to achieve social and economic justice when racial inequities continue to persist. Therefore, those unions are engaging as organizations in efforts to advance the priorities of Black, Indigenous, and racialized workers, be it through advocacy, education or at the bargaining table with the goal to

make the fight against racism a priority at the and "build [...] an anti-racist labour movement".[Footnote 57]

9.6 Continuing Education Programs

The rise in demand for expertise in developing and implementing anti-racist strategies in the workplace has led to programs developed specifically for this area.

This is Exhibit "48" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

1. INTRODUCTION AND CONCEPTUAL FRAMEWORK

COMMISSION ON EQUITY AND HEALTH INEQUALITIES IN THE AMERICAS

The Americas—North, Central, South America, and the Caribbean—are remarkable in their diversity. These lands, which the World Health Organization (WHO) designates as one of six global "regions," contain some of the richest individuals and countries in the world, some of the poorest, and much in between. Within the Region of the Americas are tiny island states with small populations, and populous countries of vast land mass, with the different challenges that brings.

The Region includes people who enjoy substantial privileges, and others who face severe human rights violations by reason of their socioeconomic position, ethnicity, gender, sexual orientation, disability status, or being migrants. Each of these factors, alone or in combination, can contribute to marked inequalities in health within and among countries in the Americas. Insofar as systematic inequalities in health are avoidable by reasonable means, they are unfair—and hence inequitable. Putting them right is a matter of social justice.

It is to address these health inequities that the Commission on Equity and Health Inequalities in the Americas was set up by the Director of the Pan American Health Organization (PAHO), Dr. Carissa Etienne. The PAHO Equity Commission's starting point is that health is an end in itself. It is a worthwhile goal for individuals and for communities. Certainly, there are good instrumental reasons for improving health: good health may be a route to individuals enjoying flourishing and productive lives; a healthier population may make economic sense for a country. But that is not our central concern.

> Overcoming poverty is not a gesture of charity. It is an act of justice. It is the protection of fundamental human rights, the right to dignity and a decent life.
>
> **Nelson Mandela,**
> **"Make Poverty History" speech, London, 2005**

Health is more than a means to some other end. Health is a state that is much valued and cherished and is part of a world view, common in the Americas as elsewhere, that human well-being is an end in itself. Better health and greater health equity will come when life chances and human potential are freed, to create the conditions for all people to achieve their highest possible level of health and to lead dignified lives.

The evidence we bring together here demonstrates that much of ill health is socially determined. The reason that life expectancy for a woman in Haiti is a little less than 66 years while for a woman in Canada it is 84 (*1*) is not because Haitian women are biologically different from Canadian women, but because of the conditions in which each is born, grows, lives, works, and ages. Similarly, in Chile, the fact that a man with a low educational level can expect to live 11 years fewer than a man with university education is mostly the result of the social determinants of health (*1*). As we shall show, initiatives on education and social inclusion, for example, will have health and other societal benefits.

The effect of social determinants of health is seen at the beginning of life (*2*). In most countries in the Americas, the chance of a child dying before the age of 5 is strongly linked with parents' income—the lower the income, the higher the mortality (*3*). In Guatemala, for example, in 2014, the under-5 mortality rate was 55 in 1,000 births in the poorest fifth of families, and 20 per 1,000 in the richest fifth. In nearby Colombia, by contrast, in 2015, the under-5 mortality in the richest fifth was less than 5 in 1,000 (*4*). This shows what should be achievable. Across the Americas, children's lifelong development and outcomes in education, income,

health, and well-being remain closely aligned with parents' situations.

There is increased evidence and awareness that good health requires not only access to health care, but also action on the social determinants of health. Indeed, so close is the relationship between features of society and health that, we argue, health and health equity represent important markers of societal progress. A society that meets the needs of its members, in an equitable way, is likely to be a society with a high level of population health and relatively narrow health inequities.

In addition to the challenge of addressing great social and economic inequalities, the PAHO Equity Commission's work has identified climate change, environmental threats, relationship with land, and the continuing impact of colonialism, racism, and the history of slavery as critical factors slowing progress toward the goal for people in the Region to lead a dignified life and enjoy the highest attainable standard of health.

The aim of the PAHO Equity Commission is to provide a better understanding of these challenges as well as make proposals for effective action to address them. We build on the foundations laid by the Commission on Social Determinants of Health (CSDH) (*5*). In the decade that followed the CSDH report *Closing the Gap in a Generation*, countries in the Americas have been active in taking forward initiatives, and our examples for action come from these countries.

The PAHO Equity Commission has partnered with 15 countries as this work has proceeded. There is also action at subnational level. In the United States of America, for example, many cities have embraced a social determinants of health approach.

It is an important moment to publish this report. Inequality dominates the Americas. This is true for socioeconomic inequality, but also inequalities between Indigenous and non-Indigenous peoples; between people of African descent and those of European origin; between genders; between disabled and nondisabled people; between people of different sexual orientations; and between migrants and nonmigrants. Too much inequality damages social cohesion and leads to unfair distribution of life chances and to health inequalities. Yet at the same time, there is great interest in health in the Americas, and the Region has been at the forefront of acknowledging the human right to the highest attainable standard of health, with the majority of countries signing international protocols on economic, social, and cultural rights. Implementation of the recommendations of these agreements is the challenge for leaders—political, professional, and community.

We seek to engage governments, civil society, and academics not only in the health sector but across all the societal domains that influence health equity. The Sustainable Development Goals (SDGs) clearly recognize that societal success is multifaceted: economic success is but one, somewhat limited, measure of a society's progress. While only one of the SDGs is explicitly related to health, evidence shows that most of the other 16 do have an influence on health and health equity (*6*).

We recognize that achieving health equity in some areas will require tackling unfavorable politics, the undue priority of economics over human rights, conflict, climate change, and corruption. However, we are not rendered hopeless in the face of these challenges, because we have seen meaningful change despite great barriers. The report highlights examples of

> Social injustice is killing on a grand scale.
>

Martin Luther King Jr. Memorial, Washington, D.C., USA

governments making a difference, civil society and professional organizations implementing evidence-informed strategies, and citizens engaging in social movements and community-building actions to achieve change. We have evidence to support our judgment that achieving health equity is a realistic goal.

> Peace cannot exist without justice, justice cannot exist without fairness, fairness cannot exist without development, development cannot exist without democracy, democracy cannot exist without respect for the identity and worth of cultures and peoples.
>
> **Rigoberta Menchú,**
> **Nobel Peace Prize recipient 1992**

Taking action: Learning from the Civil Rights Movement in the United States

The PAHO Equity Commission met with leaders of the Civil Rights Movement in the city of Atlanta, Georgia, to learn from them about how to achieve major political and social change.

Points of learning the Commission took away:

- We must target the social determinants of health equity, such as jobs, education, income, and safety.
- We must be willing to confront discrimination in these areas, even at the risk of "redemptive suffering," in the words of Martin Luther King, Jr.[1]
- Like Rosa Parks of the Montgomery, Alabama, bus boycott, "we must have a made-up mind"—a determination within ourselves.[2]

We must always engage the community in our efforts and keep this engagement throughout.

CONCEPTUAL FRAMEWORK

The PAHO Equity Commission's conceptual framework, shown in Figure 1.1, summarizes our approach to both analyzing the evidence and formulating recommendations. It is the organizing framework for our report. The structural drivers are dealt with in Section 3, recommendations to improve equity in the conditions of daily life are laid out in Section 4, and recommendations for governance arrangements are given in Section 5.

The framework is based on the Commission on Social Determinants of Health (CSDH) conceptual framework (*5*), but goes beyond it in important ways. There is an emphasis on "structural racism," colonialism, and importance of relationships to land. It is consistent with the SDGs, but with greater emphasis on the environment and climate change. There is a more explicit focus on human rights, and greater focus on inequities according to gender, ethnicity, sexual orientation, life stage, and disability. The PAHO Equity Commission also recognizes the interrelations among these factors, with an emphasis on leading a dignified life as a desired outcome—aligned with greater health equity.

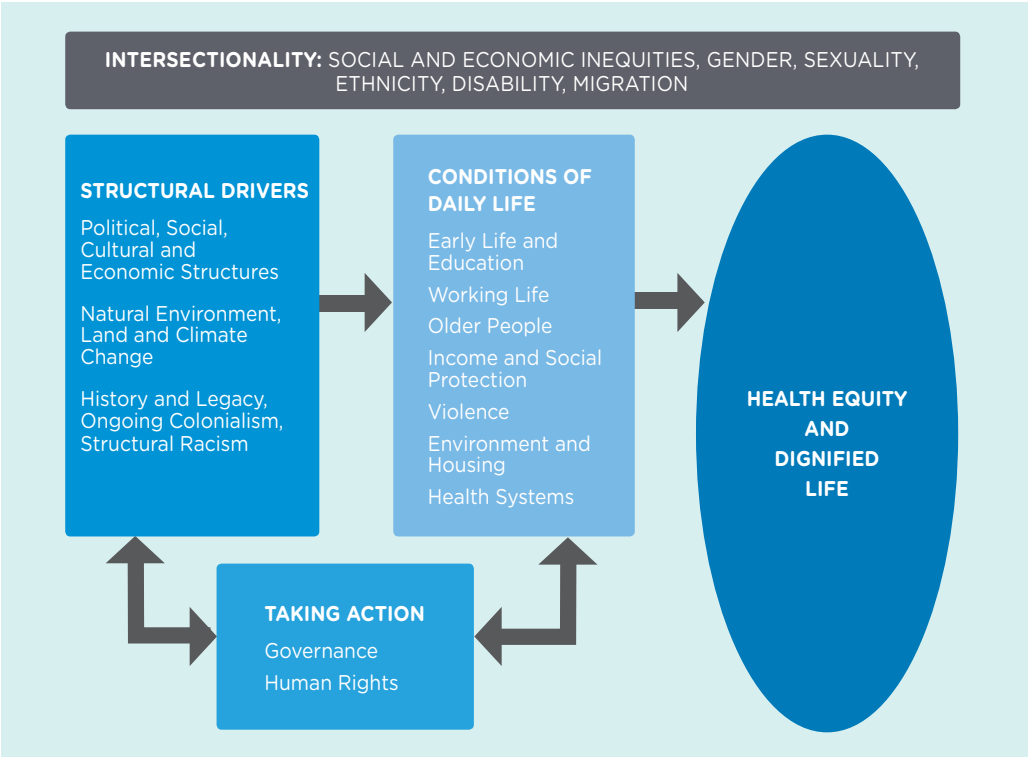
STRUCTURAL DRIVERS OF HEALTH INEQUITIES

Political, social, cultural, and economic structures

The way markets operate, the role of the public sector, and economic inequalities are structural drivers of inequities in the conditions of daily life, mostly produced or modified by political choices.

The global financial crisis of 2007–2008 and its aftermath exposed the limits of unfettered markets. A move toward market fundamentalism downplayed the importance of the public sector and fostered growing economic inequality (*7*).

Figure 1.1.
Conceptual framework



Evidence assembled for the PAHO Equity Commission points to the importance of a vibrant and invigorated public sphere. A successful private sector is the complement to investment in the public good.

Economist Anthony Atkinson reported that when respondents in the United States of America and Europe were questioned on what they considered to be the "greatest danger in the world," concerns about inequality outweighed all other dangers (*8*). Few would deny the importance of equality of opportunity, but great inequalities of income and wealth tilt the playing field. The evidence clearly shows that these big inequalities limit opportunities for the next generation. This is referred to as the intergenerational transmission of inequities.

A second and related reason for the public's concern about inequality is that it questions the legitimacy of society. If society is seen to work in the interest of the few, extremes of inequality are inconsistent with a functioning democracy. Those who are rich may question why they should pay taxes to support the poor. Those who are disadvantaged perceive the palpable unfairness of life chances for the few but not the rest. Unaddressed inequality can create the conditions for societal dysfunction and instability. Third, highly unequal societies are associated with social evils, such as ill health and crime. Central to the ill-health effect of inequality are both poverty and relative disadvantage.

We highlight that Indigenous peoples and people of African descent in the Americas are subject to multiple disadvantages that damage their health. But within all groups of people of the Region there are social gradients in health. When people are classified by their level of education, income, or wealth, or by the social level of their neighborhood, the higher the socioeconomic position, the better their health. This social gradient runs all the way from the top to bottom of society. Dealing with it implies not only reducing poverty but also reducing relative disadvantage by improving society as a whole. Such improvement will entail action on structural drivers. It will also require social policies and programs devoted to reducing the damaging effects of inequities in power, money, and resources.

To deal with the whole social gradient in health, the review of health inequalities in England titled *Fair Society, Healthy Lives* introduced the concept of "proportionate universalism." The aim was to have universal services applied to all and to distribute effort and resources proportionate to need (*9*). We have highlighted the importance of meeting the needs of Indigenous peoples and people of African descent in the Americas. That will be done partly through proportionate universalism, by redressing the underfunding and neglect of services for Indigenous peoples and people of African descent, but also by recognizing the physical, emotional, spiritual, and cognitive health domains of all people in the Region.

History and legacy, ongoing colonialism, and structural racism

A key conclusion of the CSDH was that inequities in power, money, and resources are fundamental drivers of inequities in the conditions of daily life, which, in turn, drive health inequities (*3*). One major source of such inequity is colonialism: it is intrinsic to the history of the Americas.

There are between 45 and 50 million Indigenous peoples living in Central America, South America, and the Caribbean, representing approximately 13 percent of the total population. In the United States of America, approximately 5.2 million persons identify as American Indian or Alaskan Native, and in Canada 1.4 million identify as Indigenous (*10*). Indigenous peoples presenting to the PAHO Equity Commission made clear that the continuing effects of colonialism contribute to the depth and scope of health inequities affecting Indigenous peoples, and across generations.

> Blatant colonialism mutilates you without pretense: it forbids you to talk, it forbids you to act, it forbids you to exist. Invisible colonialism, however, convinces you that serfdom is your destiny and impotence is your nature: it convinces you that it's not possible to speak, not possible to act, not possible to exist.
>
> **Eduardo Galeano, *The Book of Embraces***

There are approximately 200 million people of African descent in the Americas (including the United States of America and Canada) (*1*). Their history is characterized by slavery, colonialism, racism, and discrimination, the effects of which are active in the present day (*4*). Such structural racism drives inequities in the conditions of daily life for people of African descent.

To address the health disadvantage of Indigenous peoples and people of African descent in the Americas, we need to bring together the social determinants framework, the disadvantages of daily life, and an approach that includes ending discrimination and racism, promotes self-determination, and improves support for relationships with the land, while recognizing obligations to ancestors and future generations. We see self-determination as central to this and as mediating the effect of social determinants on health equity. There will be other pathways, such as the effects of environment and material deprivation, but self-determination and living a dignified life are of vital importance to creating the kind of society that will lead to health equity.

Natural environment, land, and climate change

Climate change demands urgent change in the way societies function and the ways in which States cooperate. Such changes must respect equity and health equity. Damage to the natural environment is also a major threat to the land and its people, with significant adverse impacts on health equity. Redressing both of these threats must be done in a spirit of justice.

Effective health equity analysis of these threats to the lives of Indigenous people, and any interventions, must take account of their distinct symbiotic relationship with the land and the environment. The issue of land tenure rights also needs to be addressed—it affects all marginalized people throughout the Americas.

CONDITIONS OF DAILY LIFE

The conditions in which people are born, grow, live, work, and age are fundamental to the lives they are able to lead. We lay out the evidence to show in detail how each of the domains that affect daily life—early years and education, decent work, dignified aging, income and social protection, environmental and housing conditions, violence, and the health system—also affect health equity and the ability to lead a dignified life. These domains are affected by the structural drivers described above.

INTERSECTIONALITY

PAHO's four cross-cutting themes of gender, ethnicity, equity, and human rights are central to the report. Socioeconomic position, gender, disability, and ethnicity are all bases of discrimination that profoundly impact health outcomes in the Americas. Central to the work of the PAHO Equity Commission is the recognition that multiple disadvantage can adversely increase experience of the social determinants of health. The Commission has considered disadvantages related to gender and ethnicity, and the intersection of detriment caused by poverty, disability, sexual orientation, and gender identity. Attending to life stage is important since children and older people can experience health inequity differently and often at deeper levels than other age groups. Human rights instruments and mechanisms have identified all these characteristics as giving rise to, or exacerbating, human rights violations.

TAKING ACTION: GOVERNANCE FOR HEALTH EQUITY

Governance arrangements

Governance systems determine who decides on policies, how resources are distributed across society, and how governments are held accountable. Governance for health equity through action on social determinants requires, at a minimum, adherence to the United Nations Development Programme's principles of good governance: legitimacy and voice, clear direction and vision, measurable performance, accountability, and fairness (*11*). But it also requires whole-of-government and whole-of-society approaches to reducing inequities (*12*). Such approaches require new forms of leadership that shift the allocation of power and weaken centralized, top-down decision-making structures. Many of the factors that shape the patterns and magnitude of health inequities within a country lie beyond the direct control of ministries of health and require increased involvement of local people and communities in defining problems and generating and implementing solutions.

Governance for health equity requires accountability. To achieve this, it is necessary to monitor health and its social determinants in a transparent way. While reliable data on demographic trends and morbidity and mortality are available in some countries, in most countries there is a lack of health information broken down by ethnicity, disability, or socioeconomic position, such as income, employment status, and education. This is a significant weakness for addressing health inequities, and it limits monitoring of interventions and policies.

Human rights

The law is a counterbalance to political power, and legal redress provides a vital pathway to correct policies and practices that result in or deepen health inequities. Human rights standards and commitments "strengthen the diagnosis of injustice of differences in health outcomes due to social and political factors" (*13*). The strong focus on accountability in human rights requires effective and timely redress of violations, as well as effective measures to prevent recurrence and to bolster a human-rights enabling environment (*14*).

Observance of human rights, including taking positive measures for the most disadvantaged, is fundamental to creating conditions to ensure that all persons can live a dignified life as individuals and as members of their communities and societies.

HEALTH EQUITY AND A DIGNIFIED LIFE

The actions captured by our conceptual framework are aimed at achieving greater health equity and opportunity for a dignified life. Creating the conditions for a dignified life builds on the concept of empowerment, which was emphasized by the CSDH. Empowerment potentially has three dimensions: material, psychosocial, and political. In a number of its decisions, the Inter-American Court of Human Rights has developed the concept of *vida digna*—a dignified life. The Court has emphasized that the right to life must include the right to "not be prevented from having access to the conditions that guarantee a dignified existence" (*15*).

Dignified life incorporates the principle of self-determination and the ability to envisage and seek to realize one's life project, which includes the right to pursue the options people feel are best, of their own free will, in order to achieve their ideals (*16*). This approach to autonomy and a life lived with dignity draws on Amartya Sen's concept of capabilities (*17*). Freedom to live a life one has reason to value is at the heart of Sen's capabilities.

CONSISTENCY WITH OTHER APPROACHES TO GLOBAL HEALTH

The PAHO Equity Commission builds on, and is complementary to, three other dominant strands in global health.

First, the PAHO Equity Commission endorses the strong push by WHO and others toward universal health coverage (UHC). Universal access to health care should be a feature of all societies. But inequities in access to health care are not the prime cause of inequities in health. Countries such as Canada and the United Kingdom, with their universal access to health care, still have health inequities. These can be attributed to the structural drivers and conditions of daily life. Lack of access to care when people get sick compounds the problem. That said, there is a clear intersection between social determinants of health and universal health coverage, or its lack. In many countries, lack of money, marginal status, remote location, and cultural barriers can all be reasons for lack of access to care; they are also social determinants of health.

We endorse the approach taken by PAHO that an important component of universal health coverage is to incorporate the essential public health functions. Also, countries across the Region have signed up to and agreed on PAHO-led resolutions, many of which are important in fostering greater health equity. We draw attention to these in boxes throughout this summary, along with relevant SDGs and other international agreements.[1]

Second, prevention of communicable diseases is still a major priority for the Region of the Americas. At its most basic, lack of access to clean water and sanitation are significant causes of ill health. Our perspective is to address the "causes of the causes": the reasons why known policies and interventions that would improve health are denied to some groups in society.

[1] The documents cited in the Relevant International Agreement boxes are listed at the end of the References section.

Third, there is a most welcome worldwide initiative on noncommunicable diseases (NCDs). Part of this movement is oriented to access to care, and part to prevention. Objectives of WHO's Global Action Plan for the Prevention and Control of NCDs include improvements in known risk factors or causes: diet, smoking, obesity, lack of physical activity, and abuse of alcohol (*18*). Our focus is on the "causes of the causes"—the social determinants of these unhealthy behaviors. Therefore, the recommendations of the PAHO Equity Commission will support the Global Action Plan on NCDs.

Social determinants also act through psychosocial pathways. For example, stress has direct effects on both mental and physical health (*3*).

RELEVANT INTERNATIONAL AGREEMENTS

2. HEALTH INEQUALITIES BETWEEN COUNTRIES IN THE AMERICAS

There have been many improvements in health across the Americas in recent years. Since 2003, life expectancy has improved by two years in the United States of America and Canada and by four years in Latin America and the Caribbean (LAC) (*19*). Infant mortality has dropped by 42 percent in LAC since 2003 and maternal mortality by 32 percent since 2000 (while essentially staying constant in Canada and the United States of America) (*1*).

However, as with other regions in the world, profound inequalities in health remain. Within all countries in the Americas, those with higher levels of income or educational attainment experience better conditions of daily life and live longer, healthier lives than others.

The difference in life expectancy among the countries in the Region was more than 19 years in 2016, as shown in Figure 2.1. In every country, women live longer than men.

Within countries, health inequalities are even greater, and they are closely related to gender, Indigenous and African-descent identity, educational attainment, income and wealth,

disabilities, sexuality, and the intersections among these (*20, 21*).

Stark inequalities can exist even within small geographic areas. In the U.S. city of Baltimore in 2014, there was a 19-year gap in life expectancy between the most disadvantaged neighborhoods and the wealthiest, as shown in Figure 2.2 (*20*).

Despite improvements in early years and maternal health outcomes, stark inequalities remain. A key indicator is the mortality rate for children under 5 years of age, which shows higher levels among the poor than for the rich, and a social gradient running from the richest fifth (quintile) to the poorest. Under-5 mortality is higher among children of Indigenous people than among non-Indigenous people across all countries shown (Figure 2.3).

Stunting is prevalent in Latin America, and there are inequalities in rates within and among countries related to levels of education and income (*22*). Stunting mainly, but not exclusively, affects low-income children, children of mothers with low levels of education, and Indigenous children (Figure 2.4).

There are marked and persistent inequalities in rates of adolescent fertility related to socioeconomic position and Indigenous and African-descent identity. Women in the richest quintile have lower rates of adolescent pregnancies and births than poorer groups. Adolescent pregnancy and birth carry risk for both mothers and children, including higher levels of maternal and under-5 mortality (*23*).

There are large differences in rates of disability across the Region, although direct comparisons are

Figure 2.4.

Note: DHS = Demographic and Health Survey.

problematic, as countries use different definitions of disability and monitoring is generally weak (*24*). There are also significant differences in disability rates within countries (Figure 2.5). The highest rates are for people of African descent, and are associated with gender and socioeconomic position. In all countries for which data are available, those with incomplete primary education had higher rates of disability than those with higher levels of education.

Structural inequalities in the determinants of health contribute to inequalities in the incidence and prevalence of mental illness and inequalities in access to effective mental health treatment. Such inequalities are seen among different ethnic

groups in the Americas, as well as different socioeconomic groups, and between men and women (*4*). People with poor mental health are at increased risk of other illnesses, injury, and premature death (*3*).

While not all mental illness leads to suicide, and not all suicide relates to mental illness, suicide is one possible outcome of mental illness (*25*).

Figure 2.6 shows the rates of suicide in the Region.

In the United States of America between 1999 and 2014, suicide rates rose significantly for poorer White men and women and for American Indian and Alaskan natives (*25*, *26*). In Canada, the suicide rate for First Nations males aged 15–24 is four times higher than that of non-Indigenous young people (*27*).

3. STRUCTURAL DRIVERS: INEQUITIES IN POWER, MONEY, AND RESOURCES

RECOMMENDATION 1.
ACHIEVING EQUITY IN POLITICAL, SOCIAL, CULTURAL, AND ECONOMIC STRUCTURES

Political, social, cultural, and economic forms of power have become more concentrated across the Americas (*28*). That concentration, and the deterioration of the Region's position in the global economy, are driving profound structural and health inequities.

In many countries in the Region, national and international economic forces have undermined economic growth, equity, and stability. Parts of the Americas are in economic crisis, and the poorest bear the brunt—both in terms of reduced employment opportunities and lower wages, and reduced expenditure on social protection policies.

Progressive fiscal policy is critically important to improving health equity. Monetary policy, social protection spending, and tax systems should aim to be redistributive, designed progressively to improve the standard of living of communities and populations most at risk of poor outcomes, and to provide them with essential services.

PRIORITY OBJECTIVES	ACTIONS
1A. Implement progressive fiscal policy to improve health equity	• Identify equity impacts of fiscal policies and adapt them to promote health equity • Strengthen international cooperation to stop exploitation of tax havens • Reinforce the financial safety net of the Region
1B. Ensure a flourishing public realm and reinforce the role of the State in provision of services	• Develop approaches to increase political empowerment based on ECLAC's Horizons 2030 agenda for equity and the recommendations of the Oslo Commission (*29*) • Challenge the presumption that markets are the most effective ways to deliver public services • Reinforce the role of the State in regulating public services
1C. Urgently address corruption to reduce its threat to health equity	• Implement Transparency International's recommendations to reduce corruption (*30*) • Strengthen the institutions involved in the detection, investigation, and prosecution of corruption-related crimes • Lift political immunity for corruption-related cases • Strengthen police investigative capacity, reinforce internal disciplinary measures, and establish permanent accountability mechanisms for the police • Create accessible, anonymous reporting channels for whistleblowers that genuinely protect them from all forms of retaliation

Homeless man rests in front of a bank offering home loans, Great Barrington, USA

In many areas of fiscal policy, currently this is not the case. For example, pension policy can be regressive when government subsidies for pensions are available only to those in formal employment, excluding unemployed people and people in informal employment. In many countries, tax and benefit systems are regressive: the wealthier pay less in taxes proportionate to their income than the poorest do.

Across the Region, many countries have retreated from involvement in provision of services, and private sector provision has replaced government provision. However, public goods are not always best delivered by markets, and private sector provision often worsens inequities in access to essential quality services. Public investment in education, research and development, health, infrastructure, and many other essential services is vital for a flourishing, healthy society.

Greater political accountability could help, with people actively participating in democratic governance to enable a flourishing public realm and support good health. Without this, political and economic accountability will be undermined (*29*, *31*).

Corruption and tax avoidance blight efforts to reduce economic and social inequalities. Multinationals use tax havens to avoid paying tax in many countries. Individuals move money around to avoid paying tax, or do not declare income and assets. National economies lose resources to invest in communities most at risk of poor health and other negative outcomes.

RECOMMENDATION 2.
PROTECTING THE NATURAL ENVIRONMENT, MITIGATING CLIMATE CHANGE, AND RESPECTING RELATIONSHIPS TO LAND

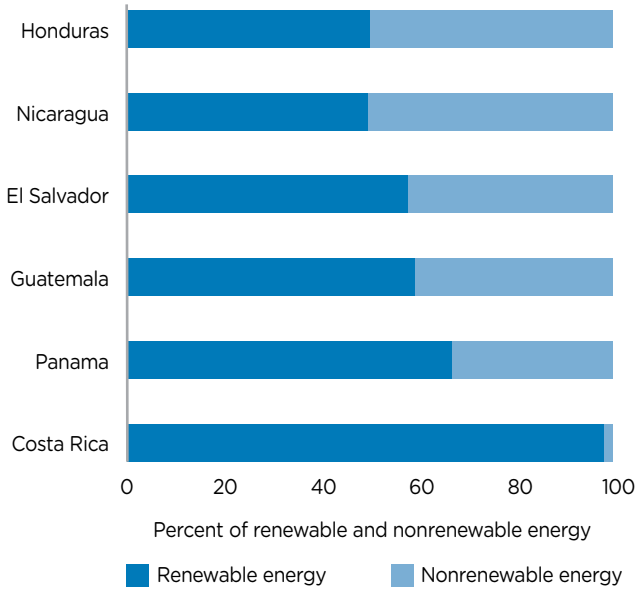
Environmental threats commonly have a stark equity dimension: socially disadvantaged people are disproportionately affected by environmental degradation and climate change (*9*). Experience shows that environmental shocks and extreme natural events become disastrous for disadvantaged people (*32*). It is important to ensure that actions aimed at mitigation and adaptation to climate change do not have adverse impacts on health equity. Land and land rights play a vital role in enabling people to lead flourishing lives, and environmental justice must be central to development (*33, 34*).

Unsustainable development, and particularly climate change, increases the risk, the severity, and the vulnerability of people and ecosystems to harm that will damage health and well-being. Climate change is one dimension of unsustainability; others include ignoring resource limitations, threatening biodiversity and soil health, and polluting and damaging life-sustaining ecosystems. Decreasing these environmental risks will be good for both average health and well-being, and for flattening the socioeconomic gradient, as each affects poorer people and communities most.

Development of renewable energy throughout the Region is necessary; it is currently underdeveloped in many countries (Figure 3.1). A notable exception is Costa Rica, where energy is produced almost entirely from renewable sources.

PRIORITY OBJECTIVES	ACTIONS
2A. Mitigate and adapt to climate change to support health equity	• Transfer fossil fuel subsidies to incentivize development and use of renewable energy • Improve preparedness for, and response to, extreme weather events to reduce health inequities • Abide by the Paris Agreement on climate change and the relevant SDGs (*35*) • Ensure the role of the private sector in innovation as part of promoting environmental protection and mitigation of climate change
2B. Minimize environmental harm from resource extraction industries and agriculture	• Protect biodiversity for soil health and healthy ecosystems • Develop and enforce regulations over extractive and agricultural industries to minimize environmental and health damage
2C. Enact policies that protect and support the relationship of Indigenous peoples to the land and make progress in attainment of land tenure for marginalized communities	• Respect and affirm the distinct relationship between Indigenous peoples and the land • Include people of African descent and Indigenous communities in decisions and actions that affect their land • Establish mechanisms and legislation for formalizing occupation and tenure of inhabitants living in informal settlements

Figure 3.1.
Energy generation mix, Central America, 2016



Source: Economic Commission for Latin America and the Caribbean. Statistics and indicators: environmental [Internet]; 2019. Available from: http://estadisticas.cepal.org/cepalstat/portada.html?idioma=english.

A common factor to all forms of land degradation is the depletion of soil and the reduction of biodiversity. Fertilizer use per hectare has intensified in Latin America, and there has been a dramatic increase in the intensive use of pesticides.

Vast tracts of forested area have been lost in Latin America and the Caribbean: approximately 100 million hectares between 1990 and 2014 (*36*). Parts of Latin America and the Caribbean have high rates of desertification. The UN International Fund for Agricultural Development estimates that 50 percent of agricultural land in LAC will be subject to desertification by 2050.

Many Indigenous communities across the Region live and adhere to sustainable environmental practices that balance people and environments, with a strong focus on protecting the earth and consideration of future generations. However, expansion of agriculture and resource extraction into the lands of Indigenous peoples is causing displacement of these populations from lands where they have lived for centuries, as well as environmental degradation. This, in turn, creates and compounds health inequities.

Strategy and Plan of Action on Climate Change (PAHO Resolution CD51.R15 [2011])
Coordination of International Humanitarian Assistance in Health in Case of Disasters (PAHO Resolution CSP28.R19 [2012])

Example actions to improve environmental conditions and reduce use of nonrenewable energy

Canada

- The federal government will deliver on its commitment of Can$ 2.65 billion by 2020, to help the poorest and most vulnerable countries mitigate and adapt to the adverse effects of climate change.
- The province of Alberta has committed to end emissions from coal-fired electricity generation and replace it with 30 percent renewable energy by 2030.
- The off-grid community of Ramea in Newfoundland and Labrador host the Ramea Wind-Hydrogen-Diesel Energy Project, one of the first projects in the world to integrate power generation from wind, hydrogen, and diesel in an isolated electricity system.[1]

Costa Rica

The country has set itself the target of being carbon-neutral by 2021 and in 2016 achieved over 300 consecutive days of energy produced entirely from renewable sources. The government announced new measures to protect 340,000 hectares of forest in a move to become the first country to negotiate the sale of forestry carbon credits.[2]

RECOMMENDATION 3.
RECOGNIZE AND REVERSE THE HEALTH EQUITY IMPACTS OF ONGOING COLONIALISM AND STRUCTURAL RACISM

Throughout the Americas, colonialism, slavery, and attendant racism have been catastrophic for people's life chances and health, especially for Indigenous peoples and those of African descent. Their manifestations and effects persist today.

Indigenous peoples worldwide are more likely to be poor and to live in deeper levels of poverty than non-Indigenous people, due to the pervasive effects of colonialism (*37*). The poverty trend is apparent even in wealthy countries in the Americas. For example, in Canada, over 60 percent of children living on First Nations reserves live in poverty, compared with 18 percent for all children (*38*).

PRIORITY OBJECTIVES	ACTIONS
3A. Act to address the philosophy, culture, policies, and practices that flow from historic and current colonialism	• Include people of African descent and Indigenous communities in law-making, service design and provision, and other decisions that affect their lives • Improve disaggregated data collection and include input of Indigenous peoples and people of African descent in research to define problems and solutions • Ensure people of all ethnicities have equitable access to public services that contribute to health equity, and that the spending on services is equitable
3B. Ensure people of African descent and Indigenous peoples are free to live dignified lives, including through affirmation of their distinct rights	• Recognize spatial, cultural, social, and intergenerational inequalities as a human rights issue for all ethnic groups • Governing entities are to recognize and be accountable for the distinct rights of people of African descent and abide by the tenets of the UN International Decade for People of African Descent • All States are to codify the UN Declaration on the Rights of Indigenous Peoples (UNDRIP) into domestic legislation, policies, and practices, ensuring Indigenous peoples have the resources and opportunities necessary to exercise the full enjoyment of their rights
3C. Undertake positive measures to address systematic racism	• Address racism through public education, including in government, civil society, and schools • Review existing legislation, policies, and services to identify and redress activities that perpetuate racism • Develop and support effective and independent domestic and inter-American mechanisms to address cases of systemic and individual discrimination • Governments should endorse the UNDRIP position affirming that Indigenous people are equal to all other people, while recognizing the right of all people to be different, to consider themselves different, and to be respected as such

Across the Region, similar problems apply to people of African descent. In 2016, the Brookings Institution reported that in the United States of America in 2000 the median Black household had an income that was 66 percent of the median White household income. By 2015, that figure had fallen to 59 percent (*39*).

The combined effect of colonial practices has been to dismiss Indigenous self-determination over lands, resources, law, and governance, and disrupt (and in some cases, eradicate) Indigenous cultures, languages, and oral histories, while ingraining multigenerational trauma.

Decolonization requires a change in the structures and in the philosophy, policies, and practices that flow from colonialism. An important effect or indeed intentional mechanism of colonialism that reinforces inequality is the mental construction of colonialism that supposes the superiority of one race over the others. This attitude translates into exclusionary actions for reasons of race and origin, whether by action or omission.

The United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP) centers Indigenous peoples' rights to self-determination as a fundamental right and a necessary antecedent for the restoration of land and resource rights and the full enjoyment of human rights (*40*).

Most countries have some government mechanism for the promotion of racial equality or for Afro-descendant affairs. However, experience reveals weaknesses in these mechanisms, which, added to their limited resources, slows the possibilities of implementing actions to progress the guarantee of the rights of people of African descent.

Protest against the demarcation of Indigenous lands, São Paulo, Brazil

The UN General Assembly in its resolution 68/237 proclaimed the International Decade for People of African Descent (2015–2024), with the theme "People of African descent: recognition, justice and development." The Decade is an opportunity to underline the important contribution made by people of African descent and to propose concrete measures to promote equality and to combat discrimination of any kind (*41*).

Other key milestones for action against discrimination of people of African descent in the Americas are the Inter-American Convention against Racism, Racial Discrimination and Related Forms of Intolerance (*42*) and the Inter-American Commission on Human Rights' report, "The situation of people of African descent in the Americas" (*43*).

PAHO's resolution titled Health of the Indigenous Peoples in the Americas (CD47.R18 [2006]) resolves to strengthen evidence-based decision-making and monitoring capacities in the Region on Indigenous people's health issues (*44*).

Example actions to reduce racial and ethnic inequalities and deconstruct ongoing colonialism and racism

Affirmative actions: These have been implemented mainly in the field of education and the labor market. Experience shows that, maintained over time, these actions have excellent results.[1]

- In 2005 in the **Plurinational State of Bolivia,** the Ministry of Education granted 20 percent of the existing annual quotas in teacher training for secondary schools to Indigenous and Afro-Bolivian people, without an entrance examination.
- In 2003, **Brazil** established quotas for Afro-descendant students (40 percent).
- In **Brazil**, the policy for the entry of youths of African descent to universities showed a significant reduction in ethnic-racial inequality in income in the period 2004–2014.
- In 1996, **Colombia** established the fund for loans for Afro-Colombian students with limited economic resources and good academic performance in 1996.
- In 2009, **Ecuador** assured access to public positions in government for Afro-Ecuadorians, in proportion to their population.
- In 2005, the **Bolivarian Republic of Venezuela** established scholarship quotas for Afro-descendant youths in training and professional institutes.

Honoring Nations (United States of America): An awards program that identifies and shares examples of outstanding tribal governance that demonstrate the importance of self-governance. Honoring Nations upholds the principle that tribes themselves hold the key to positive social, political, cultural, and economic prosperity—and that self-governance plays a crucial role in building and sustaining strong, healthy Indian nations.[2]

Jordan's Principle: In Canada, Jordan River Anderson from Norway House Cree Nation spent over two years unnecessarily in the hospital as different levels of Canada's government argued over payment for his at-home care because he was First Nations. Jordan died never having left the hospital. Jordan's Principle is named in his memory and ensures First Nations children can access all public services without discrimination.[3] It passed in the House of Commons in 2007, but it took another 11 years and four legal orders before the Canadian government began to implement it.[4,5]

4. CONDITIONS OF DAILY LIFE

People in the Americas want the basic everyday things that enable them to have reasonable, dignified lives. This includes having control over their reproductive and sexual activities; good maternity and postnatal services; a good start in life for their children, including good health and quality early-child development; a good education that gives their children skills and enhances their life chances; decent work that promotes, not harms, health; conditions that enable older people to live lives of dignity and independence; enough money to live on; a cohesive living environment without threat of violence; safe and affordable housing with clean water and sanitation; and access to health care that supports health as well as treats ill health.

Achieving these conditions will also contribute significantly to a flourishing, well-organized, secure, and productive society. But access to all of these necessary resources is unequally distributed and a major contributor to health inequities. Without them, the goal of living a life of dignity will be unachievable.

RECOMMENDATION 4.
EQUITY FROM THE START: EARLY LIFE AND EDUCATION

Child survival is paramount, but so too is the quality of early child development. A good start in life leads to better health and well-being in later life. It is during pregnancy, birth, and childhood that the foundations of greater health equity are laid.

Inequalities in maternal and babies' health, and experiences in the early years and schooling, relate directly to inequalities in a range of later life outcomes, including health. Fundamental to achieving equity in this period is reducing social and economic inequality (see Priority Objectives 1A, 1B, and 1C), which leads to profound social, economic, gender, and ethnic inequalities in health and development. There are, in addition, specific actions that can be taken. These include access to contraception, ante- and postnatal care, and safe abortion. We place particular emphasis on increasing breastfeeding and child nutrition, the impacts of which are felt throughout life. The early period of life is critical for initiating and inheriting parents' trajectories of inequality but is also the period where these inequalities can be most effectively disrupted and reduced.

PRIORITY OBJECTIVES	ACTIONS
4A. Ensure good maternal and child health and optimal nutrition	• Increase access to modern contraception, including for young adolescents, and to safe abortion • Extend pre- and postnatal care services for those most at risk of poor outcomes • Improve adherence to WHO guidelines on breastfeeding and child and maternal nutrition, with a focus on poor and rural communities • Introduce programs to provide nutrition for low-income families • Provide financial and social support for low-income families, including extension of successful conditional cash transfer schemes
4B. Support good early-child development	• Increase and rebalance public funding so that more is invested in preprimary and primary education and development • Expand access to good-quality, culturally appropriate early-years programs with focus on reducing inequalities in participation • Adopt and meet international children's rights obligations, including taking effective positive measures to ensure the full enjoyment of rights by Indigenous, African-descent, and disabled children
4C. Reduce inequities in completion of secondary education	• Build on improvements to primary education participation, ensuring all young people in the Region complete good-quality secondary education • Expand conditional cash transfer schemes supporting children to stay in secondary education • Ensure that comprehensive sexuality education is taught in all secondary schools • Drive forward education reforms improving quality in secondary education, ensuring teachers have sufficient skills and qualifications

The Region of the Americas has made progress, particularly in relation to reducing maternal and infant mortality and improving access and equity in primary education. However, profound inequalities related to socioeconomic position, ethnicity, and disability remain, and, in some cases, have widened, particularly for secondary education.

In Latin America and the Caribbean, 43 percent of children live in households that have less than 60 percent of the median income, nearly double the percentage of adults generally (24 percent). The United States of America has similar child poverty rates to Mexico and Chile and considerably higher child poverty rates than the OECD 37-country average (*45*). Children in the bottom income decile in Canada live in families where the income is 53 percent lower than for the average child, while income inequality has increased and the rate of child poverty has persisted (*46*).

Good-quality preprimary education is an important way to improve educational attainment and participation and hence to reduce inequalities in health and improve other social and economic outcomes, such as employment and income, with effects throughout life. To illustrate this importance, Figure 4.1 shows the score-point difference in mathematics performance between students who reported that they had attended preprimary school for one year or more and those who had not attended preprimary school, after accounting for socioeconomic status (*47*). The latter is important, because in most countries, children from poorer households, who might benefit the most, are less likely to attend preschool.

Figure 4.1.

RELEVANT INTERNATIONAL AGREEMENTS

Plan of Action for the Prevention of Obesity in Children and Adolescents (PAHO Resolution CD53.R13 [2014])

Strategy and Plan of Action for Integrated Child Health (PAHO Resolution CSP28.R20 [2012])

Across the Region, much progress has been made toward achieving universal access to good-quality primary education. Universal participation and attainment levels in secondary education have not seen the same levels of investment, focus, or improvements, and profound inequalities persist. These are closely related to socioeconomic position, parental levels of education, ethnic identity, gender, disability status, and rural residence.

Indigenous women have the lowest rates of secondary school attendance across the Region, and women of African descent also have particularly low rates of school completion. In all countries, children with disabilities have significantly lower completion rates than non-disabled children.

RELEVANT INTERNATIONAL AGREEMENTS

Article 28 states that every child has the right to an education, that primary education must be free, and that different forms of secondary education must be available to every child (United Nations, 1989).

Youth playing soccer, Morro da Mineira favela, São Paulo, Brazil

RECOMMENDATION 5. **DECENT WORK**

The transition from school to work, the quality of working life, and the nature of employment contracts are all important determinants of health. The concept of a decent job is foundational and must be spread to those currently not in formal work. Work is essential to relieving poverty and creating opportunities for human flourishing.

Across the Region, there are profound inequalities between ages 16 and 65, the stage in life during which people are working, family-building, and caring for older relatives. Some of these inequalities relate to earlier life inequalities, in education and training, and some are generated during this phase of life. All of them have profound implications for health inequities.

DECENT QUALITY WORK

Working an excessive number of hours can be damaging for physical and mental health and well-being, and for work-life balance, interaction with children, and levels of community participation. In most countries in the Americas, employees work more than eight hours per day.

In some countries in the Region, there are relatively high levels of fatal occupational injuries, with rates reaching approximately 8 fatal injuries per 100,000 total injuries a year. The actual numbers may be higher, as there is likely to be underreporting or inadequate monitoring systems. Rates among migrant workers are higher than the average for countries (*50*).

PRIORITY OBJECTIVES	ACTIONS
5A. Improve access to decent jobs and conditions at work, including for people in informal and domestic labor sectors	• Governments to regulate employers to meet International Labour Organization (ILO) conventions and provide decent jobs • Governments to formalize informal work and ensure those jobs meet ILO standards for decent jobs, especially in relation to ILO Convention 189 on domestic workers (*48*) and SDG 8.7 (*49*) • Develop and implement legislation that requires minimum standards for safety, and ensure these are upheld • Develop and implement standards for work stress, working hours, holidays, and management practices • Allow and support the development of unionization—including in the informal sector • Reduce child labor through protecting and ensuring rights of the child • Develop and implement minimum wage policies to reduce in-work poverty
5B. Support unemployed people through active labor market programs and social protection systems	• Reduce rates of young people not in employment, education, or training, especially women of African descent and Indigenous peoples • Institute active labor market programs • For countries with limited social protection coverage of unemployment, increase length of time support is available and ensure that the self-employed are covered
5C. Reduce gender inequalities in access to work, pay, and seniority	• Strengthen legislation and regulation to ensure gender equity in employment • Achieve SDG 5 on gender equality and empowering all women and girls • Develop effective systems for monitoring gender equity in employment • Support cultural shifts in gender equity, including holding employers accountable for gender differentials in employment rates, pay, and seniority

> "Decent work sums up the aspirations of people in their working lives. It involves opportunities for work that is productive and delivers a fair income, security in the workplace and social protection for families, better prospects for personal development and social integration, freedom for people to express their concerns and organize and participate in the decisions that affect their lives, and equality of opportunity and treatment for all women and men."
>
> International Labour Organization. Decent work [Internet]. Geneva: ILO. Available from: https://www.ilo.org/global/topics/decent-work/lang--en/index.htm.

There are many studies linking psychosocial stress at work with poor health outcomes. A recent systematic review looked at the empirical studies conducted in Latin America assessing the association of psychosocial stress at work and health using the Effort–Reward Imbalance model. It found that there is evidence from a range of countries, settings, and methods supporting the association between work stress and poor health (*51*).

INFORMAL LABOR, DOMESTIC WORKERS, AND OTHER GROUPS OF WORKERS AT RISK

Informal labor includes work either without a contract or with no security or guarantee of employment or income, no employer-provided social protection such as sick pay, or no legal protections. It is a risk to health and health equity.

There are high rates of informal labor in Latin America and the Caribbean, particularly among women. In Bolivia (Plurinational State of), Guatemala, Paraguay, and Peru, employment outside the formal sector constitutes 70 percent or more of the total employed (*4*, *52*).

Domestic work is undervalued, poorly remunerated, and mainly carried out by women and girls, many of whom are migrants, people of African descent, or members of disadvantaged communities (*4*, *23*).

CHILD LABOR

The Americas has the third-highest burden of child labor of any region in the world. Boys are more likely to undertake child labor than girls and perform a higher proportion of the most hazardous work. Child labor is detrimental to health, removes children from full-time education, and often results in the child's separation from their family and community (*53*).

MIGRANT WORKERS

In 2013, Northern America (Canada and the United States of America) as a broad subregion had the world's highest share of migrant workers, at 25 percent (*54*). Migrants often depend on the most dangerous, insecure types of work and have no formal protections.

UNEMPLOYMENT

Long-term unemployment and job insecurity are damaging to health. There are clear inequalities in rates of unemployment and poor-quality employment related to socioeconomic position,

RELEVANT INTERNATIONAL AGREEMENTS

ILO Convention 189 sets a minimum age for domestic workers, guarantees the right to freedom of association and freedom from all forms of abuse, harassment and violence, and makes special provisions related to migrant workers (International Labour Organization, 2011)

SDG Target 8.7 highlights the need to take immediate and effective measures to eradicate forced labor, end modern slavery and human trafficking, secure the prohibition and elimination of the worst forms of child labor, including recruitment and use of child soldiers, and by 2025 end child labor in all its forms.

gender, ethnicity, and disability status. Men and women from less educated and more deprived areas are more likely to be unemployed; working in unsafe, unregulated occupations; and outside formal employment.

In the United States of America, Native Americans have the highest rates of unemployment, followed by African-Americans and Hispanics. In most countries in the Americas, any government unemployment assistance is time-limited, and in many countries, there is no government assistance during unemployment. The ILO has estimated that if there were a 25 percent reduction in the gender employment gap by 2025, it would increase gross domestic product (GDP) in Latin America and the Caribbean by 4 percent, and in Canada and the United States of America by 2 percent (*55*).

THOSE NOT IN EMPLOYMENT, EDUCATION, OR TRAINING

Throughout the Americas, women are more likely than men not to be in education, employment, or training. In most countries in the Region, but not all, women of African descent are the group most likely not to be in employment or education (Figure 4.2). Native Americans also have the highest percentages of young people not in formal training or in work (*56*).

IN-WORK POVERTY AND PAY GAPS

For many people in the Region, being employed is no guarantee of being lifted out of poverty, since wages are too low. There is wide variation across the Region in levels of poverty for employed people. In Costa Rica, less than 1 percent of those in work are recorded as being in poverty, while figures for Haiti are 22 percent among women and 18 percent among men (*57*). Since it was first instituted in 1938 to protect workers from in-work poverty, the federal minimum wage in the United States of America has established a floor for wages. While not every worker is eligible, it provides a minimum of earnings for the lowest-paid workers. However, despite some recent increases in state minimum wages, minimum wages at the federal and most state levels are still below the peak of its real value in 1968 and are in decline (*58*).

Plan of Action on Workers' Health (PAHO Resolution CD54.R6 [2015])

Workers, most of whom are women and girls, manually extracting minerals from salt basins, Maras, Peru

Examples of successful programs and policies to improve conditions during working life

Active labor market programs (ALMPs)

These government-funded programs designed to help people find work have been implemented in the United States of America since the 1960s and 1970s, and in Latin America and the Caribbean since the 1990s. ALMPs are found to be more effective among those in long-term unemployment.[1]

Chile Joven program, Chile

This program has been effective in increasing employment chances for women and in causing some increases in earnings and job quality.[2]

Unionization

There is evidence that unionization is associated with higher wages. There are other benefits. A 2011 study in Chile showed that nearly three-quarters of unionized women have some form of health insurance, compared to less than half of non-unionized women.[3]

Prospera Mexico (previously *Oportunidades*)

Prospera is a conditional cash transfer (CCT) program that has contributed to a reduction in child labor outside the household, particularly for boys. Studies have shown a 14 percent reduction in children's work time outside the household, coupled with more time allocated to school-related chores.[4]

RECOMMENDATION 6. **DIGNIFIED LIFE AT OLDER AGES**

Older age is no longer an afterthought. It characterizes the present and future of the populations of the Americas, which have the fastest-growing population of older people globally. It is estimated that by 2050, approximately 25 percent of the population of Latin America and the Caribbean will be aged 60 years or more (*59*). Fulfilling the right to live a dignified life in older age is central to reducing health inequities in the Region.

Inequities in older people's health and well-being relate to differences in conditions experienced earlier in the life course, as set out in Recommendations 4 and 5, as well as to conditions in older age covered here.

Societies where older people's contributions are valued and where older people continue to live active and engaged lives are healthier and enjoy higher levels of well-being. Social isolation causes ill health, and social isolation of older people is increasing as a result of changing family structures and urban design. There are inequalities in risk of social isolation related to income, education level, physical and mental health, and gender (in later life, men tend to be more socially isolated than women). Evidence shows that keeping socially, physically, and mentally active can extend the age at which cognitive decline develops and the age of developing dementia (*60*). Although the direction of causation is disputed, there is sufficient evidence to support active aging to reduce cognitive decline.

Older people of lower socioeconomic position are more likely to live in poor-quality housing and environments that are not conducive to social integration, exercise, mobility, or preventing ill health (*61*).

There are wide inequalities in income and poverty levels in later life, related to earlier life socioeconomic position, gender, and ethnicity. For instance, in the United States of America, up to 19

PRIORITY OBJECTIVES	ACTIONS
6A. Create conditions for active and engaged aging, with society valuing contributions of older people	• Local government and civil society to create conditions in communities that encourage physical and mental activity and reduce social isolation • Develop multisector partnerships that facilitate housing, environment, and transportation systems, such as "age-friendly cities," which meet older people's social, economic, health, and mobility needs
6B. Increase provision of pensions through government subsidies, particularly for those most at risk of having no income in later life	• Develop and extend noncontributory pensions to ensure coverage of those outside contributory schemes • Develop minimum income standards for older people and, for those below the threshold, provide support through pensions and other social protection mechanisms • Ensure that pensions and social protection schemes have a particular focus on women, people of African descent, and Indigenous peoples
6C. Increase the focus of health care systems on prevention and promotion of healthy, active aging	• Develop multisector partnerships, including the health care system and civil society, to support prevention and health improvement • Ensure appropriate continuity of care between hospitals and communities • Support families to care for elderly relatives, including through provision of leave for families

percent of older African-Americans and 18 percent of older Hispanics live in poverty, compared with an estimated 9 percent of older White Americans (*62*).

Across the Region, there are relatively low levels of government support for care and income support for older people. Most pensions are contributory, thus only available to those in secure employment. In Latin America and the Caribbean, only 40 percent of older people receive a pension (*4*).

Figure 4.3 shows that in four Latin American countries, non-Indigenous men had the highest rates of pension coverage in 2014, and Indigenous women had the lowest. For all groups, pension coverage was closely related to education level.

In most countries of the Americas, there is no paid leave available to care for elderly parents, with the exceptions of Canada, El Salvador, Nicaragua, and Peru (*63*). Unpaid leave is available in the United States of America. Women account for 90 percent of all unpaid care providers and often cut back on paid work to provide care (*60*). In a study of caregivers in one city of the Dominican Republic, 43 percent of them showed symptoms of depression and anxiety and a two-fold increased risk of heart disease and injuries compared with noncarers (*64*).

Prevention services should be a core part of a health system approach that is aligned with the needs of older people and that focuses on protecting health as well as treating ill health. However, data from the United States of America show that even when these preventive services are available, there are significant inequalities related to ethnicity, levels of education, and gender in relation to uptake (*62*).

Residents sitting on a bench in the Plaza de Armas, Arequipa, Peru

Examples of successful programs at older ages

Education in earlier years

If the United States of America were to increase expenditure on education and incapacity to the levels of the OECD country with the maximum expenditures, life expectancy in the United States of America would increase to 80.12 years, a gain of 0.168 years.[1]

Pension provision

Pension systems have an important role in alleviating old-age poverty—and countries with high levels of coverage are able to eradicate poverty to varying degrees among the elderly. The strongest impact in the Region occurs in Brazil: while just under 4 percent of Brazilians older than 60 are poor, 48 percent of them would be poor if they did not have pensions (keeping other factors constant).[2]

Age-friendly cities

These are city-wide programs, mostly run at municipal level, that prioritize and support active healthy aging, combined with enhanced support for those who need additional support and care. Older people are involved in the development of strategies and implementation of programs.[3]

Programs to support physical and mental activity for older people

In the United States of America, a study showed that following a regular, balanced, moderate exercise program for an average of 2.6 years reduced the risk of major mobility disability by 18 percent in an elderly vulnerable population.[4]

RECOMMENDATION 7.
INCOME AND SOCIAL PROTECTION

Not having the minimum income for healthy living is a key driver of health inequity. Many of our recommendations relate exactly to the aim of everyone having enough money to lead a dignified life. Here, we list further specific recommendations.

Although levels of extreme poverty have fallen across the Region, high levels of poverty remain, and in many countries, poverty is increasing as economies struggle and inequalities widen. The share of national income for the bottom 20 percent varies from 2 percent of national income to 7 percent, with the majority between 3 and 5 percent. An ILO report discusses the universal social protection required to achieve the Sustainable Development Goals (*65*).

Income inequality is high across the Region. Comparing the wealthiest quintile with the poorest quintile, the ratio is 15 or higher in 9 of the 27 countries presented in Figure 4.4.

Children are usually the poorest age group in societies. The average rate of destitution in 18 countries in Latin America and the Caribbean for children was 21 percent, in comparison with 11.5 percent in adults in 2014 (*28*). The rates of children in poverty in the United States of America in 2016 among non-Hispanic Whites and Asians and Pacific Islanders was 12 percent, while Black or African-American or American Indian children had nearly three times that rate, at 34 percent (*66*).

WAGES AND POVERTY

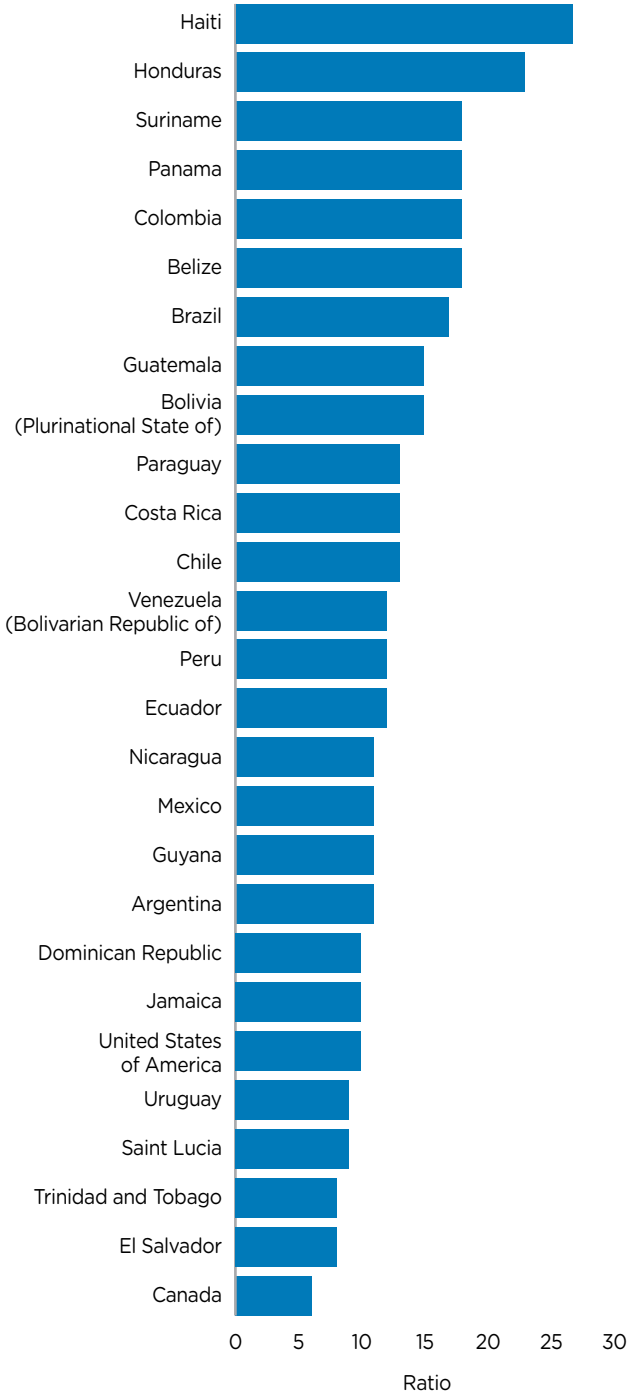
Wage growth in Latin America and the Caribbean has been consistently below the world average, and since 2014 it has been negative. There is considerable scope to implement mandatory minimum wages, although only in the formal sector. This would reduce in-work poverty. Other measures are necessary for those who are unemployed or economically inactive.

INCOME INEQUALITIES RELATED TO GENDER, ETHNICITY, AND DISABILITY

Between the ages of 20 and 59, women are overrepresented in the lowest two income quintiles in countries from Latin America and the

PRIORITY OBJECTIVES	ACTIONS
7A. Implement a minimum social protection floor	• Implement nationally appropriate social protection systems and measures for all, including floors, and by 2030 achieve substantial coverage of the poor and the vulnerable, to achieve SDG 1.3
7B. Reduce poverty through social protection policies and other initiatives	• Protect against unaffordable, out-of-pocket health care expenditure (SDG 3.8.2) through support for health care and through financial support for individuals • Develop monitoring systems and other evidence to inform development of progressive policies, with particular regard to those groups currently excluded • Build on successful elements of conditional cash transfer schemes to ensure extreme poverty and hunger are eliminated
7C. Establish support for unpaid caring roles	• Support development of government and employer benefits for those with caring responsibilities

Figure 4.4.
Ratio of top income quintile to lowest quintile (highest 20 percent/lowest 20 percent) in the Americas, 2012 or latest available year



Source: World Bank. Databank. World development indicators [Internet]. Available from: https://data.worldbank.org.

Caribbean by up to 40 percent, as compared with men (*4*).

Across the Americas, average income is lowest for Indigenous populations, followed by people of African descent (*67*). In the United States of America between 1995 and 2015, the median incomes of Asian and White people were higher than that of Hispanic and Black people (*68*).

Across the Region, people with disabilities earn less than people without disabilities. In Canada in 2012, persons aged 25 to 44 years old with disabilities had 57 percent of the income reported by those without disabilities (*69*).

The intersections among disability, gender, and ethnicity are apparent in relation to income and poverty rates. In the United States of America, older women with a disability were more likely than their male counterparts to be in poverty (15 percent for women and 9 percent for men) (*70*).

SOCIAL PROTECTION SYSTEMS

Social protection systems have a clear and substantial impact on poverty and income inequality, boost educational attainment, improve nutrition, reduce social conflict, and increase economic productivity. Social protections have direct and indirect impacts on health inequities and reduce gender and ethnic inequities. These have been outlined in priority objectives and actions in Recommendations 4, 5, 6, 8, and 10.

Effective social protection coverage in the Americas stands at around 67 percent of the population, falling below coverage in Europe and Central Asia, where it stands at 84 percent (*28*). Despite recent efforts in building comprehensive social protection systems, challenges remain in the provision of universal coverage.

There is a divergence in coverage levels between the United States of America and Canada, and Latin America and the Caribbean. Canada and the United States of America tend to have higher coverage rates, based on their higher level of economic development and social investment, but in the United States of America one in four people do not have access to any kind of social protection. In the Plurinational State of Bolivia and in Colombia, 60 percent of the population is still unprotected (*4*).

Brazil: Social protection and conditional cash transfer programs (CCTs)

The number of people living below the national poverty line in Brazil declined from 44 million in 2000 to 17.9 million in 2014, and the Gini coefficient declined from 59 to 51.3 over the same period.[1]

Over this period, Brazil invested significantly in social protection and public services. Actions included increasing the minimum wage and public expenditure on health, education, and other social services, and extending non-contributory pensions for rural informal sector workers and other disability payments. CCT programs have been consolidated and expanded in the form of the *Programa Bolsa Família* (Family Allowance Program), targeted at extremely poor households and poor parents with children living at home. In 2010, the *Bolsa Família* CCT program covered 12.8 million families, more than 51 million people. The overall cost of noncontributory cash transfers in Brazil is approximately 2.5 percent of GDP.[2]

The Zero Hunger strategy was introduced in 2003 and combined with others in 2011 to form the Strategy to Eradicate Extreme Poverty by 2014, the narrative of which stresses social justice, dignity, and rights for the most deprived groups in the population.[2]

The overall effect of these programs was to reduce poverty and inequality among their respective target groups: children, adolescents, and pregnant and breastfeeding women.

Sources: [1] World Bank. Poverty and Equity Data Portal [Internet]; [accessed 12 July 2018]. Available from: http://povertydata.worldbank.org/poverty/country/BRA.
[2] Holmes R, Hagen-Zanker J, Vandemoortele M. Social protection in Brazil: impacts on poverty, inequality and growth. Development progress. London: Overseas Development Institute; 2011. Available from: https://www.odi.org/publications/5477-brazil-social-protection-development-progress.

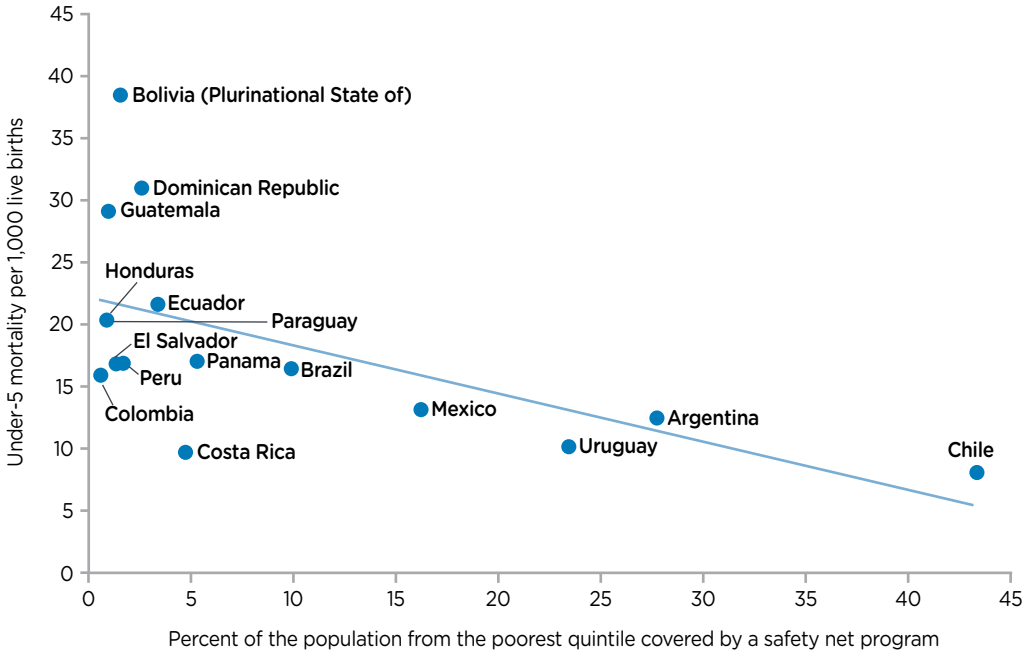
Between 2000 and 2014, Brazil increased investment in social protection in cash benefits and public services (*4*).

Countries with higher social expenditure aimed at the lowest income quintile had lower under-5 mortality rates than those that spent less on this group, as shown in Figure 4.5.

The objective of the joint United Nations Social Protection Floor Initiative is to ensure a basic level of social protection and a decent life as a necessity and an obligation under human rights instruments (*71*). The ILO defines social protection floors as "nationally defined sets of basic social security guarantees that should ensure, as a minimum that, over the life cycle, all in need have access to essential health care and to basic income security which together secure effective access to goods and services defined as necessary at the national level" (*72*). In addition, SDG 1.3 specifically refers to meeting social protection floors. Universal social protections include maternity and child support, unemployment protections, sickness protections, disability protections, pensions, and access to health care throughout life.

Thirty-three countries in the Americas have ratified the International Covenant on Economic, Social and Cultural Rights, which provides that States recognize the right of everyone to social security, including social insurance. This right "plays an important role in poverty reduction and alleviation, preventing social exclusion and promoting social inclusion" (*73*).

Figure 4.5.
Under-5 mortality rate by percent of the poorest quintile covered by a safety net program, selected countries in Latin America and the Caribbean, 2017 or latest available year



Source: World Bank. Databank. World development indicators [Internet]. Available from: https://data.worldbank.org.

Example of a social protection program to reduce poverty and income inequalities: Argentina

Argentina budgeted for an increase in its social protection function in 2017 to take it up to 12 percent of GDP, with plans to maintain and expand various cash transfer programs (such as the universal child allowance and family allowances) and to create a program of historical redress for retirees and pensioners.

RECOMMENDATION 8.
REDUCING VIOLENCE FOR HEALTH EQUITY

Latin America and the Caribbean are home to less than 9 percent of the world's population, yet 33 percent of the world's homicides take place there (*1*). The highest rates occur in the 15–29 age group. As in other regions, gender-based violence is of great and continuing concern.

GENDER-BASED VIOLENCE

Gender-based violence includes violence against women, including femicide, as well as intimate partner (IP) violence, sexual harassment, sexual assault and exploitation, violence against lesbian, gay, bisexual, transgender, and intersex (LGBTI) people, and obstetric violence.

There are high rates of femicide in the Americas. Latin America and the Caribbean is the most violent region in the world for women (*74*). In 2014, rates of violence experienced by women during their lifetime reached 64 percent in the Plurinational State of Bolivia, the highest in the Region of the Americas; Canada had the lowest rate, at 6 percent (*75*). In 2011 in the United States of America, 19 percent of women had been raped at some time in their lives, and 44 percent experienced sexual violence other than rape (*76*). Between 2003 and 2012, approximately one-third of female homicide victims in the United States

PRIORITY OBJECTIVES	ACTIONS
8A. Eliminate gender-based violence, especially that affecting women and girls	• Develop education programs in school, community, and workplace settings to prevent gender-based violence in schools and at places of employment • Empower women through education and financial independence • For women who have experienced violence, provide protection and support for them and their children to reduce exposure to violence and reduce femicide • Provide information, education, and appropriate punitive arrangements for men who commit violence against women
8B. Reduce structural violence, focusing on those most at risk	• Institute controls on the availability of weapons, particularly firearms • Improve environmental conditions and safe public spaces, particularly in areas with high crime rates • Improve or create statistical systems to register all forms of violence, disaggregated by indicators of social and economic position, gender, and ethnicity • Implement evidence-based interventions to reduce gang violence
8C. Eradicate institutional and political violence	• Eliminate all forms of political violence, including violence to migrants through separation of families, violation of women, and attacks on journalists and on candidates in election processes • Develop information systems to document discrimination in the criminal justice system and hold institutions accountable • Recognize mass incarceration as a determinant of health • Develop and incorporate protocols to care for victims of violence, including sexual, psychological, and physical violence, and develop policies on proportionate use of force by institutional work forces

© iStock

Rally for national plan to end violence against women, Parliament Hill, Ottawa, Canada

of America died at the hands of an intimate partner (*26*). Disabled women are subject to even higher levels of violence, and in many cases their disabilities are caused by violence (*77*).

Across the Region, violence against women is widely accepted and tolerated, including by women themselves (*75*).

LGBTI people suffer high levels of violence. Gender identity and sexuality-based hate crimes made up about 21 percent of hate crimes reported by law enforcement in 2013 in the United States of America (*78*). The Inter-American Court of Human Rights' first report on the rights of LGBTI persons in 2015 highlighted the pervasive violence against LGBTI persons (*79*).

Violence against women and the Inter-American convention on the prevention, punishment and eradication of violence against

Women (Belém do Pará convention)

A UN report notes that 24 of the 33 countries in Latin America and the Caribbean have laws against domestic violence, but only nine of them have passed legislation that tackles a range of forms of other violence against women, in public or in private.[1] This is in spite of the Inter-American Convention on the Prevention, Punishment, and Eradication of Violence against Women, which established that women have the right to live a life free of violence and that violence against women constitutes a violation of human rights and fundamental freedoms.[2]

Sources: [1] Carvalho L. No form of violence against women and girls should be tolerated: end the culture of tolerance of violence against women, end impunity. UN Women Regional Office for the Americas and the Caribbean [Internet]; 29 May 2016 [accessed 4 March 2018]. Available from: http://lac.unwomen.org/en/noticias-y-eventos/articulos/2016/05/statement-luiza.

[2] Organization of American States. Inter-American Convention on the Prevention, Punishment and Eradication of Violence against Women "Convention of Belém do Pará" [Internet]; 2014. Available from: http://www.oas.org/juridico/english/treaties/a-61.html.

Unsafe abortion can also be considered a form of gender-based violence. There are six countries in Latin America and the Caribbean where abortion is prohibited altogether: Dominican Republic, El Salvador, Haiti, Honduras, Nicaragua, and Suriname. Abortions are permitted only to save the life of the pregnant woman in Antigua and Barbuda, Brazil, Chile, Dominica, Guatemala, Mexico, Panama, Paraguay, and Venezuela (Bolivarian Republic of). During 2010–2014, only approximately one in four abortions in Latin America and the Caribbean were safe. In 2014, at least 10 percent of all maternal deaths in Latin America and the Caribbean resulted from unsafe abortion (*80*).

PATTERNS OF VIOLENCE

There are profound inequalities in violence by ethnicity, socioeconomic position, and gender, which are related to cultural, socioeconomic, and political factors, and also result from racism, the drug trade, criminal organizations, and human trafficking.

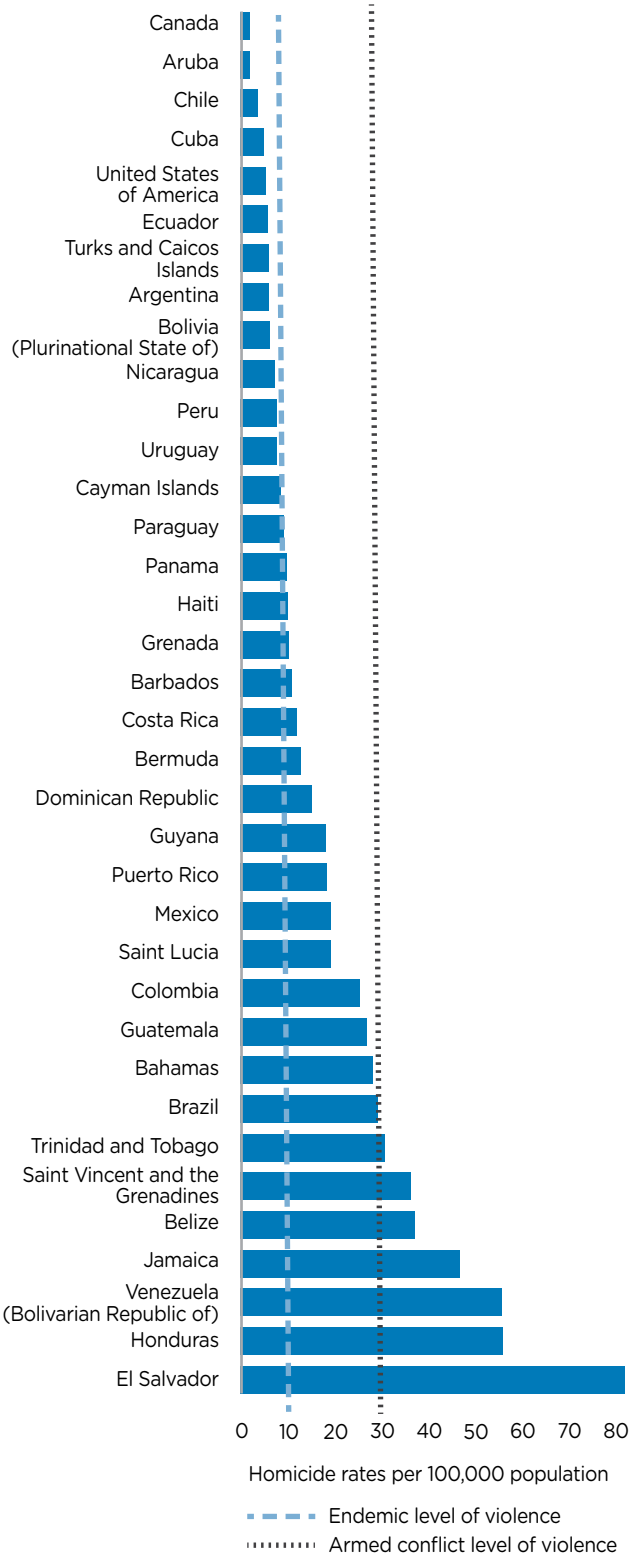
Figure 4.6 shows the homicide rates in 2016 for countries in the Americas. WHO follows the United Nations Office on Drugs and Crime (UNODC) in considering a rate of 10 homicides per 100,000 inhabitants or higher to be characteristic of endemic violence, and a rate of 30 homicides per 100,000 or higher as an armed conflict level of violence (*81*). Several countries have surpassed this conflict level of violence threshold. By way of contrast, the average homicide rate of Scandinavian countries is just under 1 death per 100,000 of the population (*82*).

Young men are disproportionately the perpetrators and the victims of violent crime in the Region, and compared with other regions, the Americas have the highest male homicide and femicide rates.

Honduras had the highest homicide rate in the Region in 2012. Rates of homicide and violence in the Region are higher for people of African descent. Central America experienced a declining homicide rate from 1995 to 2004, followed by a marked increase from 2007, related to drug trafficking and high levels of organized crime (*83*).

In the United States of America in 2015, of all homicides (5.5 per 100,000) a high proportion were committed using a firearm (4 per 100,000). The age-

Figure 4.6.
Homicide rates for countries in the Americas, 2016



Source: World Bank. Databank. World development indicators [Internet]. Available from: https://data.worldbank.org.

Note: Armed conflict level of violence defined according to the United Nations Office on Drugs and Crime (UNODC).

adjusted homicide rate for non-Hispanic Blacks (22.8 per 100,000) was approximately eight times the rate for non-Hispanic Whites (2.9 per 100,000), and four times the rate for Hispanics (5.3 per 100,000) (*84*).

Native American and Alaskan Native persons surveyed were more likely to have been violently victimized in the previous 12 months, as compared with the rest of the population (*85*).

INSTITUTIONAL VIOLENCE

Institutional violence refers to violence from social and State institutions, including selective incarceration and selective detention based on migrant status, ethnicity, and socioeconomic position.

Across the Region of the Americas, there are high levels of incarceration, and in many cases this incarceration is related to ethnicity. In some countries, there are also punitive institutional practices and high levels of political violence. Mass incarceration is likely to damage the health of individuals, families, and communities (*86*).

Police asking for bribes is associated with a 17 percentage point increase in the probability of experiencing some form of crime in Latin America and the Caribbean (*30*).

Examples of actions to reduce violence

Violence against women

- In Peru, the introduction of violence prevention and care centers for women has reduced the likelihood of domestic violence.[1]
- In Brazil in 2006, the effect of community campaigns targeting young men had positive changes in reducing violence against women.[1]
- In Ecuador, a cash, food, and voucher program targeting women in relationships decreased sexual violence by 6 percent in 2013.[1]

Education-based interventions

- Good-quality schooling and education help prevent crime and reduce homicide rates. A one-year increase in the average education level reduces state arrest rates by 15 percent in the United States of America.[2]
- The 15-year follow-up of the Nurse–Family Partnership in the United States of America showed strong significant positive effects on children's criminal and antisocial behavior.[3]
- Lengthening the school day from a half to full day in Chile (in 2011) reduced youth crime.[4]
- Educational workshops held for young men in public schools in Chile produced significant changes on the acceptance of violence as a conflict-resolution mechanism.[4]

Income

- A 2012 study estimated that a conditional cash transfer program in São Paulo, Brazil, led to a reduction in crime of almost 8 percent in school neighborhoods.[5]

(continued on next page)

Examples of actions to reduce violence (*continued*)

- Familias en Acción helped to reduce crime in Colombia, with robberies and car thefts declining by 7.2 percent and 1.3 percent, respectively.[6]

Regeneration

- The physical and social integration of informal urban neighborhoods in Medellin, Colombia, may have contributed to a steep decline in homicide rates (66 percent) in intervention neighborhoods.[7]

Policing

- Research in Brazil has found that the integration of police force operations leads to increased efficacy and reductions in crime.[8]

RELEVANT INTERNATIONAL AGREEMENTS

Strategy and Plan of Action on Strengthening the Health System to Address Violence against Women (PAHO Resolution CD54.R12 [2015])

Preventing Violence and Injuries and Promoting Safety: A Call for Action in the Region (PAHO Resolution CD48.R11 [2008])

RECOMMENDATION 9. **IMPROVING ENVIRONMENT AND HOUSING CONDITIONS**

As well as broader issues of environment and climate change, the dwellings, environments, and communities in which people live and work are vital for health and health equity.

The Americas is the most urbanized region in the world and unplanned urban migration is continuing. The proportion of the population living in cities in Latin America and the Caribbean increased from 40 percent in the 1950s to 80 percent in 2016 (*87*). Growth is mostly now occurring in medium- and small-sized urban areas, boosted by people migrating to seek better opportunities, and those being forced out of rural areas as their land is turned over to large agricultural businesses and resource extraction industries.

For many, migration to urban areas results in extreme poverty and living in large slum areas in temporary, poor-quality housing with minimal services, including lack of sewerage and access to safe drinking water.

There are large inequalities among countries regarding the proportion of populations living in slums: it is approximately 70 percent in Haiti, whereas Suriname and Costa Rica have very low levels (*1*). In cities, informal settlements

PRIORITY OBJECTIVES	ACTIONS
9A. Develop and implement national planning strategies for sustainable rural and urban development	• Develop national urban and rural strategies that plan along four dimensions: economic performance, social conditions, sustainable resource use, and finance and governance • Build capacity and resources for local implementation, including multistakeholder governance arrangements • Develop standards to ensure good-quality, environmentally sustainable development • Balance development of rural and urban areas to reduce unplanned settlements
9B. Set and achieve environmental standards and upgrade poor-quality environments and housing	• Develop standards for universal basic services that cover housing, food, health care, education, transport, and communications • Ensure universal provision of safe water, sanitation, and electricity • Government financial support for upgrading poor-quality housing, including through civil society and private sector and community partnerships • Reduce air pollution through managed, clean transportation systems, reducing car use, and regulating pollutant emissions • Improve sustainable transportation infrastructure and systems and access to employment and services for deprived and rural areas • Ensure universal access to the internet • Meet SDGs 6, 7, and 11
9C. Ensure security of land tenure in informal settlements and other environments	• Establish legislation and mechanisms for formalizing land tenure for inhabitants living in informal settlements

Modern buildings and stilt houses on the Guamá River, Belém, Brazil

mean that inhabitants do not have security of land tenure, can be removed from their dwellings, and do not have access to essential services or social protections. There are clear health and other impacts resulting from this lack of land tenure.

Inequalities in environmental and living conditions and access to services across the Region drive inequalities in health. Poor performance on the following environmental determinants compound the risk to health and affect Indigenous communities disproportionately (*88*):

- Decent-quality, affordable housing in safe places with security of tenure;
- Access to safe drinking water, modern sanitation services, and sustainable waste disposal systems;

RELEVANT INTERNATIONAL AGREEMENTS

Strategy and Plan of Action on Urban Health (PAHO Resolution CD51.R4 [2011])

Sustainable Health Agenda for the Americas 2018–2030 (PAHO Resolution CSP29/6, Rev. 3 [2017])

Sustainable Development Goal 11 refers to slums and informal settlements. It aims to "make cities and human settlements inclusive, safe, resilient and sustainable." Within that goal is the target by 2030 to "ensure access for all to adequate, safe and affordable housing and basic services and upgrade slums."

United Nations Development Programme. Sustainable Development Goals [Internet]; [accessed 27 June 2018]. Available from: http://www.undp.org/content/undp/en/home/sustainable-development-goals.html.

- Access to electricity and the internet;
- Effective, affordable public transportation systems to access to employment, educational opportunities, community facilities, healthy food, and other services;
- Clean air, water, and soil; and
- Access to green spaces and areas for physical activity.

All these and associated issues require long-term investment and coordinated, strategic planning at national level to reduce unplanned development and development of slums, but most countries do not have national urban planning strategies.

National and local planning strategies should be developed on principles of good governance, balanced national economic and environmental strategies, and integrated system and service planning. Brazil, for example, has a Ministry of Cities.

ACCESS TO IMPROVED SANITATION AND DRINKING WATER

In Latin America and the Caribbean, improved sanitation coverage in rural areas increased from 36 percent to 64 percent between 1990 and 2015 (*89*). However, there remain large inequalities among and within countries in the region. Open defecation is most common in rural areas of South America and the Caribbean (*90*).

There is a wealth gradient in many countries in access to improved drinking water. A higher percentage of population in rural areas with access to improved water facilities is closely associated with lower maternal mortality and under-5 mortality across the Region. In every country, Indigenous communities have lower levels of access. In Canada in 2016, there were 100 long-term advisories to boil drinking water and 47 short-term advisories in First Nations communities. Current spending levels will only address 50–70 percent of need despite the Canadian government's promise to end all boil-water advisories by 2021 (*91*).

Water pollution disproportionately affects poorer, Indigenous, and African-descent communities—as do land and air pollution.

AIR POLLUTION

Air pollution in the Americas causes as many as 93,000 deaths annually from cardiopulmonary disease, 13,000 deaths from lung cancer, and 58,000 years of life lost due to acute respiratory infections in children under 4 years of age (*92*). Studies in the Region have shown that exposure to air pollution is unequally distributed: poorer communities suffer most, and children in particular (*93*).

There are large differences in disability-adjusted life years (DALYs) attributable to ambient air pollution, as shown in Figure 4.7. For example, in Bolivia (Plurinational State of), Guyana, and Haiti, DALYs per 100,000 of the population were between 1,000 and 1,499 in 2012, while in Canada and the Unites States, these remained below 299 during the same period.

Progress in reducing air pollution in the United States of America appears to have slowed, and in Latin America and the Caribbean, pollution continues to worsen (*94*).

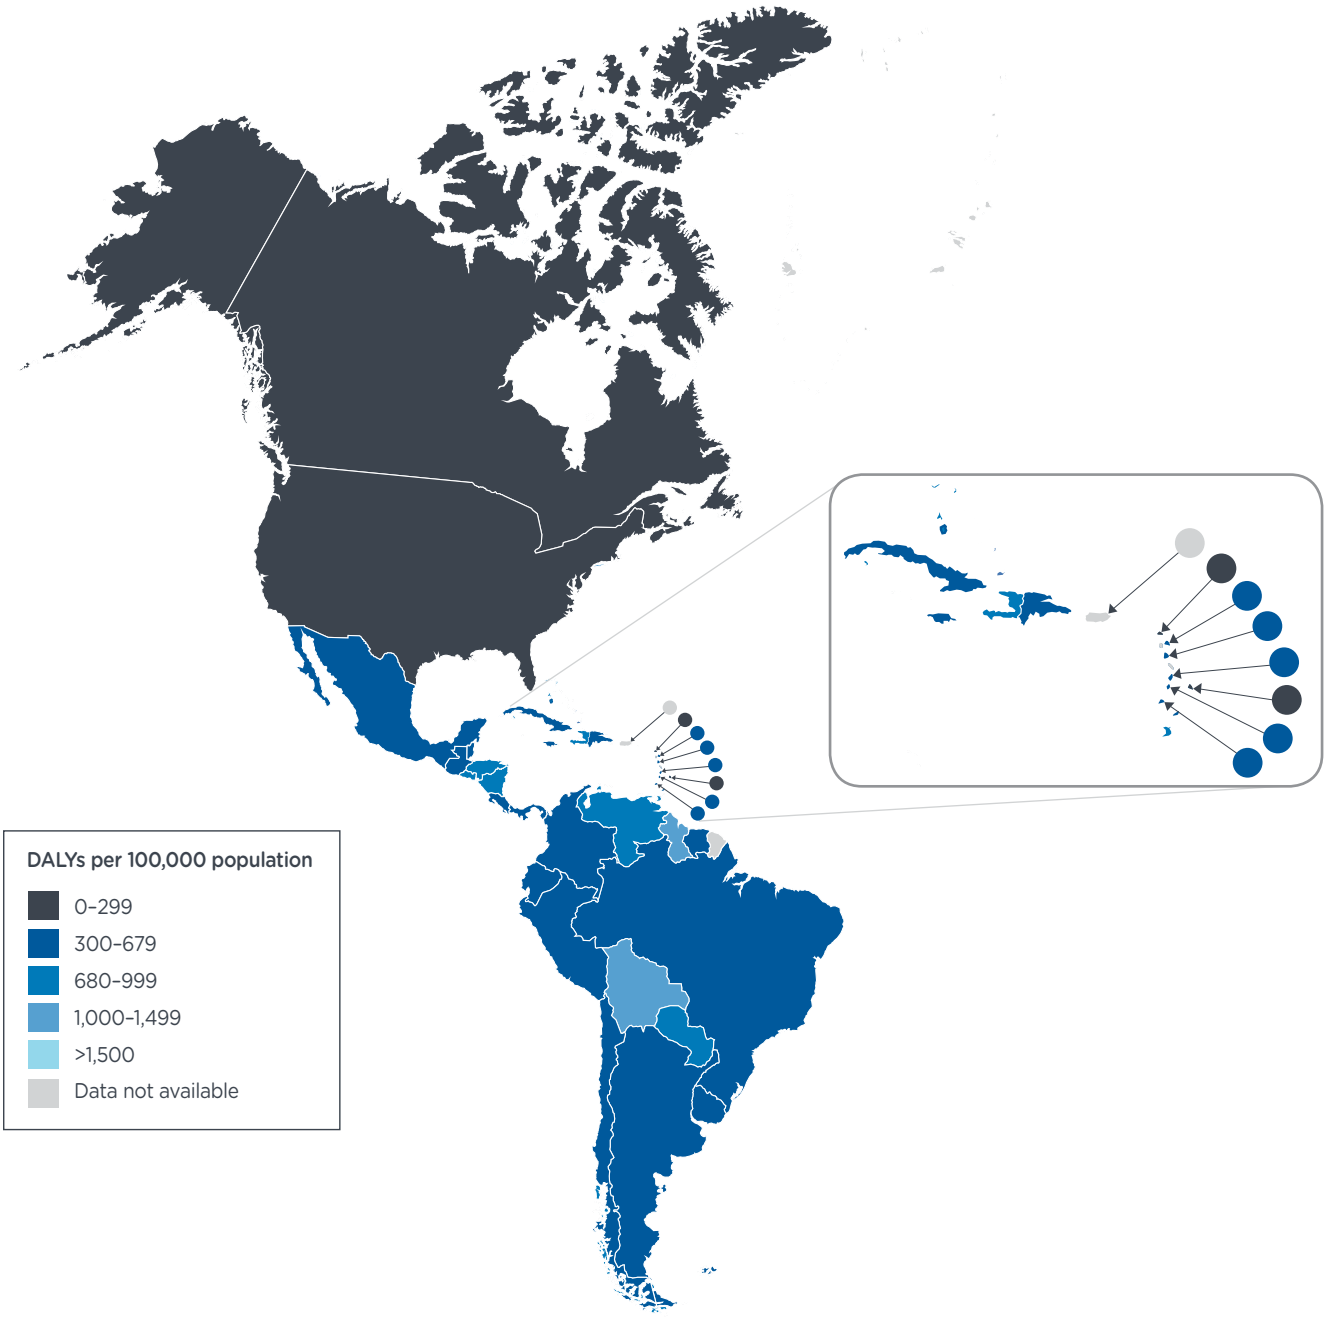
HOUSING CONDITIONS AND ACCESS

Currently, one in three families in Latin America and the Caribbean, 59 million people, live in dwellings that are either unsuitable for habitation or are built with poor materials and lack basic infrastructure services (*95*). Housing conditions relate closely to health: poor-quality housing, overcrowding, and insecurity of occupancy and tenure are important drivers of physical and mental ill health across the Region.

Housing is unaffordable to much of the population in the Region. More than 50 percent of families in Latin America's biggest cities cannot afford to buy a formal dwelling using their own means (*88*). In the United States of America, the physical segregation of the poor and less poor is increasing (*87*).

Figure 4.7.

Age-standardized disability-adjusted life years (DALYs) lost per 100,000 population that are attributable to ambient air pollution, Region of the Americas, 2012



Source: World Health Organization. Ambient air pollution: a global assessment of exposure and burden of disease. Geneva: WHO; 2016. Available from: https://apps.who.int/iris/bitstream/handle/10665/250141/9789241511353-eng.pdf?sequence=1.

Examples of successful interventions to improve environmental conditions

Housing

The *Piso Firme* Program in Mexico, begun in 2000, demonstrated the benefits that targeted upgrades, such as concrete flooring, can provide for the urban poor. As a result of the program, poorer communities in Mexico had relatively high rates of finished floors. Also, there were 13 percent fewer episodes of diarrhea and a 20 percent reduction in anemia, and communication skills improved by 30 percent.[1]

Patrimonio Hoy and Self-Help Housing in Mexico help low-income families form self-financing groups. They expedited the homebuilding process in many slums from 1988 onward and reduced costs by 30 percent.[2]

Formal land tenure

An evaluation in Buenos Aires, Argentina, in 2010 showed that families that received a formal land title substantially increased housing investments and reduced overcrowding.[3]

The Prime project [*Proyecto Prime*] upgraded settlements in Medellín, Colombia, by promoting citizen participation, helping with home improvement, and promoting the legalization of tenure.[3]

Water and sanitation

The Favela Bairro program in Brazil significantly increased the availability of services such as water and sanitation from 1996 to 2007; the results also showed that the program had a small but statistically significant impact on school attendance among those aged 5–20 years old.[4]

Urban planning and transportation

The *Trans Milenio* Bus Rapid Transit in Bogotá, Colombia (2000) connected low-income neighborhoods, and, by 2006, traffic had decreased by 89 percent and carbon dioxide emissions dropped by 40 percent.[5]

The WHO-led Healthy Cities program supports cities to improve health through development of positive environments, provision of basic sanitation and hygiene needs, and access to health care. Programs are unique to each city, but all involve multistakeholder partnerships and the involvement of citizens.[6]

RECOMMENDATION 10. **EQUITABLE HEALTH SYSTEMS**

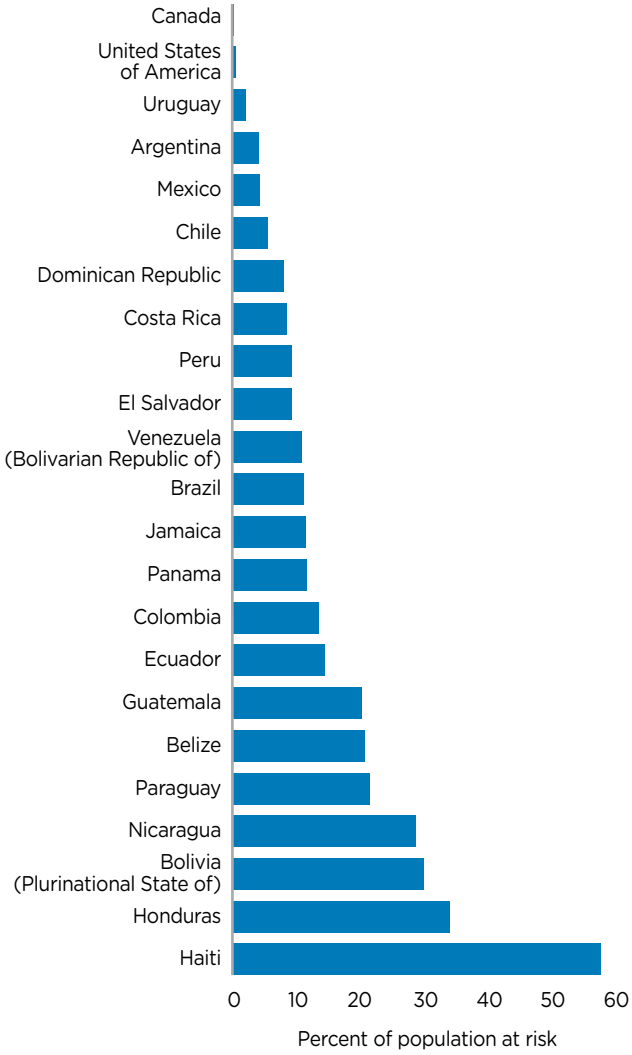
The PAHO Equity Commission is focused on the social determinants of health in the Americas, but health systems are crucial to greater health equity, too. Social determinants can exert a powerful influence on access to and quality of care, and universal access to quality care is an absolute necessity. Health systems can also address the causes of ill health, as well as treating them when they occur.

Universal health coverage is a key component of the right to health and is a prerequisite to equity in resources and health. Across the Region, there are high degrees of socioeconomic and ethnic inequities in access to health care resulting from the cost of services and, in some countries, the inadequacy of provision, particularly in rural areas and informal settlements (*28*).

The proportion of people in Latin America and the Caribbean who are at risk of expenditure on surgical care—defined as direct out-of-pocket payments for surgical and anesthesia care—leading to impoverishment has declined in recent years, from almost 20 percent in 2003, but still stands at approximately 11 percent of the total population in Latin America and the Caribbean (*1*). However, in some LAC countries, the proportion of people at risk of impoverishment as a result of expenditure on surgical care is much higher than that 11-percent value (Figure 4.8). The risk of having to make catastrophic payments for medical care is also

PRIORITY OBJECTIVES	ACTIONS
10A. Develop universal health systems and ensure access to health care, regardless of ability to pay	• Follow WHO universal health care recommendations and guidelines, and ensure compliance with the right to highest attainable standard of health, as recognized in international human rights law • Achieve SDG 3.8 by providing universal health care, including financial risk protection as well as access to safe, effective, quality, affordable essential medicines and vaccines for all
10B. Health systems should focus on protecting and improving physical and mental health, meeting essential public health functions	• Public health and health care systems to work together with other sectors, including communities, to ensure interventions are undertaken to improve conditions of daily life • Establish health system performance assessments of the 11 public health functions developed by PAHO *(96)* • Universal health systems should monitor access and outcome inequities—drawing on the right to health—and aim to eliminate and not exacerbate health inequities
10C. Health systems should focus on social and economic drivers of health-related behaviors, mental health, and suicide	• Health systems should build public and system understanding that health behaviors and mental health are influenced by structural drivers and conditions of daily life • Health professionals should work as national and local advocates for improvement of individual and community conditions, and providing treatment for patients • Include in health professional education and training how to understand and take action on the social determinants, and how to refer patients to support to improve their conditions of daily life

Figure 4.8.
Percent of the population at risk of impoverishment due to expenditure for surgical care, countries in the Americas with comparable data available, 2017



Source: World Bank. Databank. World development indicators [Internet]. Available from: https://data.worldbank.org.

correlated with under-5 mortality rates in countries in the Americas.

DEVELOPMENT OF HEALTH SYSTEMS: FOCUS ON HEALTH IMPROVEMENT

There is great scope for health care systems to broaden their approach to health and strengthen health improvement, enabling people to maintain good health as well as treating ill health. Currently, in most health care systems, this approach is underdeveloped. Meeting the essential public health functions would provide a firm basis for action.

Improving health requires health care organizations, the health care work force, public health systems, and partners to influence the conditions of daily life, through action with patients and community organizations, and in their role as employers and community leaders. There is much that health professionals can do. On an individual basis, health professionals can refer patients to available support for housing, financial support, access to benefits, and social protections. At a community level, health professionals can be advocates for action to protect and improve health: through effective transportation systems, reducing pollution, protecting natural environments, and fostering social integration. At a national and international level, health professionals can influence governments and international approaches—arguing for Health in All Policies (HiAP) approaches and more equitable policies, as well as supporting more access to affordable health care systems (*97*).

In turn, health care organizations can use their local assets—buildings, expertise, and knowledge of population health—to develop healthy local employment practices as well as support for civil society (*97*).

Prevention services—screening and vaccination—are frequently hard to access or unaffordable for many at-risk communities. With prevention services in the United States of America, data show that there are clear inequities in access that are related to ethnicity and socioeconomic position (*98*). Risky health behaviors are related to socioeconomic position and gender.

Throughout the Americas, being male and poor increases the likelihood of harmful alcohol consumption, smoking, and drug misuse.

Strategy for Universal Access to Health and Universal Health Coverage (PAHO Resolution CD53.R14 [2014])

Men and women of all ages using public exercise equipment, Copacabana Beach, Rio de Janeiro, Brazil

Examples of successful health system programs

In **Brazil,** community health workers have been working for over 20 years, serving 54 percent of the population. Since their introduction, Brazil has seen significant health improvements and a reduction in health inequity, which researchers have attributed to the program. Improvements include a reduction in infant mortality and in hospitalizations. There have been improvements in the uptake of screening, breastfeeding, antenatal care, and immunizations, and reductions in mental health problems.[1]

In **Canada,** researchers sought to document the relationship that local access to primary care and measures of community control have with the rates of hospitalizations for First Nations on-reserve populations. The study found that the longer community health services have been under community control, the lower the hospitalization rate in the area.[2]

In **Cuba,** at the Latin America School of Medicine, preference is given to applicants who are from lower socioeconomic groups and/or people of color who show the most commitment to working in disadvantaged communities; 80 percent of graduates end up working in poor rural communities.[3]

In the **United States of America,** the Baylor Health Care System (Dallas,Texas) established an Office of Health Equity in 2006 with the purpose of reducing variations in health care access, care delivery, and health outcomes that arise from race and ethnicity, income and education, age and gender, and other personal characteristics (for example, primary language skills). The health care organization has redeveloped programs and improved outreach in services where inequities have been identified.[4]

In North Carolina, USA, a multiagency partnership was set up in 2011 to address the relatively high long-term unemployment rate of the local, rural population by training them to join the health care work force. Projections suggest that 25 percent or more will gain employment upon successful workforce training.[5]

RECOMMENDATION 11. **GOVERNANCE ARRANGEMENTS FOR HEALTH EQUITY**

Experience shows that committed governments can make significant progress on addressing social determinants of health equity through their policies and actions. These policies and actions can be at the level of local government, national government, or transnational organizations. Action needs to be taken across the whole of government, not just by the health sector. Civil society also has an important role to play in achieving more equitable, dignified lives for people, with better health.

PRIORITY OBJECTIVES	ACTIONS
11A. Make health equity a key indicator of societal development and establish mechanisms of accountability	• All government ministries, not just health ministries, to work toward improving health and reducing health inequities by taking action on the social determinants of health • Establish cross-government mechanisms and develop strategic plans for improving health equity • Undertake health equity assessments of all policies and develop policies to amplify action on health equity • Develop public, national plans of action for health inequities and incorporate local government, communities, and cross-sector approaches, including the private sector
11B. The whole of government—including legislature, judiciary, and executive—to take responsibility for ensuring equity in all policies	• Involve the different sectors and levels of governance in creating and sustaining political support for health equity as a societal good • Strengthen the coherence and resourcing of actions among sectors and public, private, and voluntary stakeholders to redress the current patterns and magnitude of health inequities
11C. Develop and ensure the involvement of wider society—including civil society and communities—in setting priorities and policies for achieving health equity	• Make intelligence and data on health equity and social determinants accessible within the public domain, locally and nationally • Promote transparent, public reporting of actions and progress through a comprehensive monitoring system for health equity and social determinants • Provide support for local people and communities to participate in local decision-making and develop solutions that inform policies and investments at local and national levels • Strengthen the capacity of nongovernmental organizations and local authorities in their use of participatory planning methods that improve health and reduce social inequities • Take positive measures to support children's rights to participate in matters affecting them, including in public education, legal proceedings, and advocacy to achieve health equity

Community meeting, Port-au-Prince, Haiti

Governance systems determine who decides on policies, how resources are distributed across society, and how governments are held accountable. Governance for health equity through action on social determinants requires, at a minimum, adherence to the UNDP principles of good governance—legitimacy and voice, clear direction and vision, measurable performance, accountability, and fairness (*99*). But it also requires whole-of-government and whole-of-society approaches to reducing inequities based on "smart governance" principles—of collaboration, citizen engagement, regulation and persuasion, use of independent agencies and expert bodies, adaptive policies, resilient structures, and foresight (*12*).

Governance for health equity also requires new forms of leadership that shift the allocation of power toward communities and support a move toward decentralized decision-making systems involving local communities and that strengthen coherence between sectors and stakeholders.

THE RIO POLITICAL DECLARATION ON SOCIAL DETERMINANTS OF HEALTH

A key step in implementing a social determinants approach to health inequities globally was the adoption of the priorities outlined in the Rio Political Declaration on Social Determinants of Health, in 2011 (*100*). The five priority areas were:

1. Better governance for health and development;
2. Promotion of participation in policy-making and implementation;
3. Further reorientation of the health sector toward reducing health inequities;
4. Strengthening global governance and collaboration; and
5. Monitoring progress and increasing accountability.

It is necessary to make each of these appropriate for different country and locality contexts.

HEALTH IN ALL POLICIES (HiAP)

The HiAP approach to public policy can provide a basis for addressing the need for coherent concrete action across government to improve health (*101*). While the health sector commonly serves a central role, HiAP systematically takes into account the health implications of decisions across sectors and improves the accountability of policymakers for health impacts at all levels of policy-making. It includes an emphasis on the health consequences of public policies, including promoting health equity as a societal goal.

A cautionary note: a review of past HiAP approaches showed that intersectoral action appears to have been used most often to address downstream and midstream determinants of health, such as behaviors, with action on the "causes of the causes" occurring less often (*102*).

THE SURINAME EXPERIENCE OF IMPLEMENTING HEALTH IN ALL POLICIES (HiAP) TO ADDRESS THE SOCIAL DETERMINANTS OF HEALTH

Under the leadership of the Ministry of Health and with support from PAHO, the government of Suriname implemented a "Quick Assessment of the Social Determinants of Health" to understand the underlying causes of major health problems and associated health inequities in the country. The assessment of available data found that the social determinants are predominately geographical location, socioeconomic position, population group, and gender. These findings were used to establish eight country-specific areas of action. Suriname's experience demonstrates the success of taking on an intersectoral approach to health and highlights the strong links between the social determinants of health and HiAP.

Pan American Health Organization. Health in All Policies in the Americas. Health in All Policies approach: quick assessment of health inequities [Internet]; 2015. Available from: http://saludentodaslaspoliticas.org/en/experiencia-amp.php?id=29.

Suriname provides an example of taking forward a social determinants approach to health equity as part of HiAP.

A whole-of-government approach goes further than HiAP (*103, 104*). In addition to having explicit recognition of health in all policy formulation, a whole-of-government approach is aligned more strongly with the holistic approach of the 2030 Agenda for Sustainable Development (*6*). Governments can make progress by ensuring health equity in all policies as part of a whole-of-government approach.

© iStock

SUSTAINABLE DEVELOPMENT GOALS

In 2015, countries adopted a set of goals to end poverty, protect the planet, and ensure prosperity for all as part of a global sustainable development agenda. They may not have been formulated with health as a specific goal—they did not take the HiAP approach—but achieving the following SDGs will have profound impacts on achieving greater health equity:

Goal 1. End poverty in all its forms everywhere

Goal 2. End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Goal 3. Ensure healthy lives and promote wellbeing for all at all ages

Goal 4. Ensure inclusive and quality education for all and promote lifelong learning

Goal 5. Achieve gender equality and empower all women and girls

Goal 6. Ensure access to water and sanitation for all

Goal 8. Promote inclusive and sustainable economic growth, employment and decent work for all

Goal 10. Reduce inequality within and among countries

Goal 11. Make cities inclusive, safe, resilient and sustainable

Goal 16. Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Goal 17. Revitalize the global partnership for sustainable development

To make progress toward achieving the SDGs, it is necessary to develop governance arrangements, including legislation and regulations, to strengthen joint accountability for equity—across sectors and decision-makers, and within and outside of government (*12*). These include:

- Mechanisms that actively promote involvement of local people and stakeholders in problem definition and solution development;
- Ensuring regular joint review of progress, which fosters common understanding and commitment to delivering shared results; and
- Using evidence to ensure policies address the main causal pathways and are capable of adapting over time.

MONITORING

Integral to good governance is the transparent monitoring of performance—to allow access to information and inform debate nationally with communities and others on achievements and challenges, including through the use of local intelligence.

Measurement of trends is also needed to track the consequences of policy decisions on inequities in health (*105*). For this to be sustainable, infrastructure support is required for successful monitoring in terms of both information technology and capacity-building.

From a social determinants and health equity perspective, monitoring of performance and trends requires disaggregated data. While reliable data on demographic trends and morbidity and mortality are available in some countries (as illustrated in Section 2), in most countries there is a lack of health information broken down by ethnicity or socioeconomic position indicators. This is a significant weakness in developing effective policies to address health inequities.

Case study: key indicators, Canada 2016–2017

In the report titled *Key Health Inequalities in Canada: A National Portrait*, a number of key indicators are identified as providing a baseline for monitoring (see Table 4.1). These indicators were analyzed by each of the following social stratifiers, where feasible:

- Sex/gender
- Indigenous identity
- Cultural/racial background
- Sexuality
- Functional health
- Participation and activity limitation
- Immigrant status
- Income
- Education
- Employment
- Occupation
- Material and social deprivation
- Urban/rural residence

Source: Public Health Agency of Canada; Pan-Canadian Public Health Network. Key health inequalities in Canada: a national portrait [Internet]; 2018. Available from: https://www.canada.ca/en/public-health/services/publications/science-research-data/key-health-inequalities-canada-national-portrait-executive-summary.html.

DISAGGREGATION OF DATA

The ways in which different groups are affected by and react to policies and social change vary systematically. As indicated above, it is important to disaggregate indicators based on actual or proxy measures both of social groups and changes over time. Crucially, the list of SDG indicators starts with a paragraph about disaggregation inspired by the Addis Ababa Action Agenda (*106*), which reads:

> Sustainable Development Goal indicators should be disaggregated, where relevant,

Table 4.1.
Baseline list of key indicators, Canada, 2016–2017

Health outcomes	Life expectancy and mortality	• Life expectancy at birth (ecological level) and health-adjusted life expectancy at age 18 years (individual level) • Infant mortality—weight > 500 grams • Unintentional injury mortality—all ages
	Mental illness	• Intentional self-harm/suicide—all ages • Mental illness hospitalization age 15+ years
	Self-assessed health	• Perceived mental health—fair or poor, age 18+ years
	Cause-specific outcomes	• Arthritis age 18+ years • Asthma age 18+ years • Diabetes—excluding gestational, age 18+ years • Disability age 18+ years • Lung cancer incidence • Obesity—age 18+ years • Oral health—no ability to chew age 18+ years • Tuberculosis
Health determinants (daily living conditions)	Health behaviors	• Alcohol use—heavy drinking • Smoking—age 18+ years
	Physical and social environment	• Core housing need • Exposure to second-hand smoke at home age 18+ years
Health determinants (structural drivers)	Social inequities	• Food insecurity—household • Working poor
	Early childhood development	• Vulnerability in early childhood development ages 5–6 years

by income, sex, age, race, ethnicity, migratory status, disability and geographic location, or other characteristics, in accordance with the Fundamental Principles of Official Statistics (General Assembly resolution 68/261) (*107*).

The most promising way forward appears to be to align indicators, as far as possible, to the Rio Political Declaration on Social Determinants of Health (*100*) and to those indicators recommended for monitoring progress on key SDGs that are relevant to health equity. Indicators should be suitably disaggregated to reveal whether or not there is a narrowing of social inequity in society.

CAPACITY-BUILDING

Delivery of the 2030 Agenda for Sustainable Development requires considerable capacity-building in skills and substantial cultural change in organizations at national, local, and community level.

The health sector has a critical role in cross-government action, as advocates for making health equity a government priority and for leveraging change. It has a key role in leading and influencing public opinion. But this will only be effective if there is the capacity in other sectors—legislatures, government ministries, local government, NGOs, civil society, communities—to address the challenges posed by intersectoral action on the "causes of the causes."

RECOMMENDATION 12.
FULFILLING AND PROTECTING HUMAN RIGHTS

Human rights laws can be powerful tools, both for building awareness and consensus around shared values and for guiding analysis and strengthening measurement and accountability of human rights and health equity (*108*).

The human right to health is an "inclusive right" that extends beyond access to health care or physical health. Good governance can build on key human rights actions that:

- Require equity in social conditions, as well as in other modifiable determinants of health
- Underpin the right to a standard of living adequate for health
- Improve the distribution of the determinants of opportunities to be healthy, across the whole population

The United Nations Declaration on the Rights of Indigenous Peoples places peoples' rights to self-determination as a fundamental and inherent right and a necessary antecedent for the restoration of land and resource rights and the full enjoyment of human rights (*40*).

PRIORITY OBJECTIVES	ACTIONS
12A. Strengthen rights relating to social determinants of health as aspects of the right to health and to a dignified life	• Develop further the UN Committee on Economic, Social and Cultural Rights' principles and recommendations on rights relating to social determinants of health • Increase consideration of social determinants of health by the Inter-American Human Rights System and other human rights bodies in monitoring compliance with the right to health and a dignified life • Strengthen the human rights perspectives of international health organizations, including WHO
12B. Strengthen accountability for social determinants of health as an aspect of the right to health and to a dignified life	• Expand the training of judges on the inclusion of social determinants of health as being within the scope of the right to health, and on the interdependence of other rights and the concept of a dignified life • Expand the training of public officials and leaders, including officials in health systems, on the full accountability required by human rights commitments, in particular relating to disadvantaged populations • Strengthen reporting on social determinants of health to the UN Committee on Economic, Social and Cultural Rights • Strengthen access to justice and access to remedies for human rights violations related to the right to health and its social determinants
12C. Strengthen protection against all forms of discrimination in all spheres, including responsiveness to multiple forms of discrimination	• Strengthen legal protections and remedies against all forms of discrimination in public and private spheres • Integrate nondiscrimination principles into all public policies and services and ensure adequate data collection to monitor equality and nondiscrimination

Santa Marta favela, Rio de Janeiro, Brazil

The PAHO Equity Commission was set up to address health inequities—those systematic inequalities in health among social groups that are judged to be unfair. We have set out recommendations with priority objectives and, associated with these, specific actions to achieve this. We start with the premise that health is an end in itself, a worthwhile goal for individuals and for communities. Achieving this for all requires social justice. A society that meets the needs of its members, in an equitable way, is likely to be a society with a high level of population health and relatively narrow health inequities.

Our perspective is to address the "causes of the causes": the reasons why known interventions that would improve health are denied to some groups in society. The roots of the current inequities lie in the very structures of society—the distribution of power, money, and resources—and colonial attitudes and attitudes toward gender that are the past and present realities of the the Region of the Americas.

Public action is necessary to create the conditions for people to lead a dignified life, characterized by self-determination, recognizing the indivisibility, interrelatedness, and interdependence of civil, political, economic, social, cultural, and Indigenous rights. We have highlighted that health inequities are not a matter of "them and us," the excluded and non-excluded, but to varying degrees affect everyone in society—this is the social gradient in health. But the most vulnerable suffer multiple disadvantages. For this reason, action on the social determinants of health is necessary for everyone, but so too is action to meet the distinctive needs and aspirations of people whose lives are most affected by exclusion, discrimination, and disadvantage.

Human rights laws can be powerful tools to strengthen these principles, not only by contributing toward building awareness and consensus around shared values, but also by guiding analysis and strengthening measurement and accountability of both human rights and health equity.

Through the Sustainable Development Goals, countries have agreed to mobilize efforts over the next 15 years to end all forms of poverty, fight inequalities, and tackle climate change, while ensuring that "no one is left behind." As part of this process, each country should review the priority objectives, as set out by this Commission, adapt them to their specific context, and identify the resources, legislative changes, and capacity-building needed to take forward the specific actions. The achievement will be more just societies in which all people are enabled to lead dignified lives and in which health equity is a realizable goal.

In the last decades, health in the Region of the Americas has improved dramatically, yet many people are being left behind. PAHO has established the Commission on Equity and Health Inequalities in the Americas to analyze the impact of drivers influencing health, while proposing actions to improve inequalities in health.

According to the evidence presented in this summary, much of ill health is socially determined. Factors such as socioeconomic position, ethnicity, gender, sexual orientation, disability status, being a migrant—alone or in combination—can contribute to marked inequalities in health on life. The analysis also reveals that other structural factors, such as climate change, environmental threats, and one's relationship with the land, as well as the continuing impact of colonialism and racism, are also slowing progress towards a dignified life and enjoying the highest attainable standards of health. Furthermore, the impact of daily life conditions shows that the effect of inequalities is seen at the start of life.

The summary provides examples of successful policies, programs, and actions implemented in countries and presents 12 recommendations to achieve health equity, calling for coordinated actions among local and national governments, transnational organizations, and civil society to jointly address the social determinants of health.

Statement of Apology – to former students of Indian Residential Schools

The treatment of children in Indian Residential Schools is a sad chapter in our history.

For more than a century, Indian Residential Schools separated over 150,000 Aboriginal children from their families and communities. In the 1870s, the federal government, partly in order to meet its obligation to educate Aboriginal children, began to play a role in the development and administration of these schools. Two primary objectives of the Residential Schools system were to remove and isolate children from the influence of their homes, families, traditions and cultures, and to assimilate them into the dominant culture. These objectives were based on the assumption Aboriginal cultures and spiritual beliefs were inferior and unequal. Indeed, some sought, as it was infamously said, "to kill the Indian in the child". Today, we recognize that this policy of assimilation was wrong, has caused great harm, and has no place in our country.

One hundred and thirty-two federally-supported schools were located in every province and territory, except Newfoundland, New Brunswick and Prince Edward Island. Most schools were operated as "joint ventures" with Anglican, Catholic, Presbyterian or United Churches. The Government of Canada built an educational system in which very young children were often forcibly removed from their homes, often taken far from their communities. Many were inadequately fed, clothed and housed. All were deprived of the care and nurturing of their parents, grandparents and communities.

First Nations, Inuit and Métis languages and cultural practices were prohibited in these schools. Tragically, some of these children died while attending residential schools and others never returned home.

The government now recognizes that the consequences of the Indian Residential Schools policy were profoundly negative and that this policy has had a lasting and damaging impact on Aboriginal culture, heritage and language. While some former students have spoken positively about their experiences at residential schools, these stories are far overshadowed by tragic accounts of the emotional, physical and sexual abuse and neglect of helpless children, and their separation from powerless families and communities.

The legacy of Indian Residential Schools has contributed to social problems that continue to exist in many communities today.

It has taken extraordinary courage for the thousands of survivors that have come forward to speak publicly about the abuse they suffered. It is a testament to their resilience as individuals and to the strength of their cultures. Regrettably, many former students are not with us today and died never having received a full apology from the Government of Canada.

June 11, 2008

The government recognizes that the absence of an apology has been an impediment to healing and reconciliation. Therefore, on behalf of the Government of Canada and all Canadians, I stand before you, in this Chamber so central to our life as a country, to apologize to Aboriginal peoples for Canada's role in the Indian Residential Schools system.

To the approximately 80,000 living former students, and all family members and communities, the Government of Canada now recognizes that it was wrong to forcibly remove children from their homes and we apologize for having done this. We now recognize that it was wrong to separate children from rich and vibrant cultures and traditions, that it created a void in many lives and communities, and we apologize for having done this. We now recognize that, in separating children from their families, we undermined the ability of many to adequately parent their own children and sowed the seeds for generations to follow, and we apologize for having done this. We now recognize that, far too often, these institutions gave rise to abuse or neglect and were inadequately controlled, and we apologize for failing to protect you. Not only did you suffer these abuses as children, but as you became parents, you were powerless to protect your own children from suffering the same experience, and for this we are sorry.

On behalf of the Government of Canada
The Right Honourable Stephen Harper,
Prime Minister of Canada

The burden of this experience has been on your shoulders for far too long. The burden is properly ours as a Government, and as a country. There is no place in Canada for the attitudes that inspired the Indian Residential Schools system to ever again prevail. You have been working on recovering from this experience for a long time and in a very real sense, we are now joining you on this journey.

The Government of Canada sincerely apologizes and asks the forgiveness of the Aboriginal peoples of this country for failing them so profoundly.

In moving towards healing, reconciliation and resolution of the sad legacy of Indian Residential Schools, implementation of the Indian Residential Schools Settlement Agreement began on September 19, 2007. Years of work by survivors, communities, and Aboriginal organizations culminated in an agreement that gives us a new beginning and an opportunity to move forward together in partnership. A cornerstone of the Settlement Agreement is the Indian Residential Schools Truth and Reconciliation Commission. This Commission presents a unique opportunity to educate all Canadians on the Indian Residential Schools system. It will be a positive step in forging a new relationship between Aboriginal peoples and other Canadians, a relationship based on the knowledge of our shared history, a respect for each other and a desire to move forward together with a renewed understanding that strong families, strong communities and vibrant cultures and traditions will contribute to a stronger Canada for all of us.

Présentation d'excuses aux anciens élèves des pensionnats indiens

Le traitement des enfants dans ces pensionnats est un triste chapitre de notre histoire.

Pendant plus d'un siècle, les pensionnats indiens ont séparé plus de 150 000 enfants autochtones de leurs familles et de leurs communautés. Dans les années 1870, en partie afin de remplir son obligation d'instruire les enfants autochtones, le gouvernement fédéral a commencé à jouer un rôle dans l'établissement et l'administration de ces écoles. Le système des pensionnats indiens avait deux principaux objectifs : isoler les enfants et les soustraire à l'influence de leurs foyers, de leurs familles, de leurs traditions et de leur culture, et les intégrer par l'assimilation dans la culture dominante. Ces objectifs reposaient sur l'hypothèse que les cultures et les croyances spirituelles des Autochtones étaient inférieures. D'ailleurs, certains cherchaient, selon une expression devenue tristement célèbre, « à tuer l'Indien au sein de l'enfant ». Aujourd'hui, nous reconnaissons que cette politique d'assimilation était erronée, qu'elle a fait beaucoup de mal et qu'elle n'a aucune place dans notre pays.

Cent trente-deux écoles financées par le fédéral se trouvaient dans chaque province et territoire, à l'exception de Terre-Neuve, du Nouveau-Brunswick et de l'Île-du-Prince-Édouard. La plupart des pensionnats étaient dirigés conjointement avec les Églises anglicane, catholique, presbytérienne ou unie. Le gouvernement du Canada a érigé un système d'éducation dans le cadre duquel de très jeunes enfants ont souvent été arrachés à leurs foyers et, dans bien des cas, emmenés loin de leurs communautés. Bon nombre d'entre eux étaient nourris, vêtus et logés de façon inadéquate. Tous étaient privés des soins et du soutien de leurs parents, de leurs grands-parents et de leurs communautés. Les langues et les pratiques culturelles des Premières nations, des Inuits et des Métis étaient interdites dans ces écoles. Certains de ces enfants ont connu un sort tragique en pension et d'autres ne sont jamais retournés chez eux.

Le gouvernement reconnaît aujourd'hui que les conséquences de la politique sur les pensionnats indiens ont été très néfastes et que cette politique a causé des dommages durables à la culture, au patrimoine et à la langue autochtones. Bien que certains anciens élèves aient dit avoir vécu une expérience positive dans ces pensionnats, leur histoire est de loin assombrie par les témoignages tragiques sur la négligence, l'abus émotif, physique et sexuel d'enfants sans défense, et ainsi que la séparation de leurs familles et communautés impuissantes.

L'héritage laissé par les pensionnats indiens a contribué à des problèmes sociaux qui persistent dans de nombreuses communautés aujourd'hui.

Il a fallu un courage extraordinaire aux milliers de survivants qui ont parlé publiquement des mauvais traitements qu'ils ont subis. Ce courage témoigne de leur résilience personnelle et de la force de leur culture. Malheureusement, de nombreux anciens élèves ne sont plus des nôtres et sont décédés avant d'avoir reçu des excuses du gouvernement du Canada.

Le gouvernement reconnaît que l'absence d'excuses a nui à la guérison et à la réconciliation. Alors, au nom du gouvernement du Canada et de tous les Canadiens et Canadiennes, je me lève devant vous, dans cette chambre si vitale à notre existence en tant que pays, pour présenter nos excuses aux peuples autochtones pour le rôle joué par le Canada dans les pensionnats indiens.

Aux quelque 80 000 anciens élèves toujours en vie, ainsi qu'aux membres de leurs familles et à leurs communautés, le gouvernement du Canada admet aujourd'hui qu'il a eu tort d'arracher les enfants à leurs foyers et s'excuse d'avoir agi ainsi. Nous reconnaissons maintenant que nous avons eu tort de séparer les enfants de leur culture et de leurs traditions riches et vivantes, créant ainsi un vide dans tant de vies et de communautés, et nous nous excusons d'avoir agi ainsi. Nous reconnaissons maintenant qu'en séparant les enfants de leurs familles, nous avons réduit la capacité de nombreux anciens élèves à élever adéquatement leurs propres enfants et avons scellé le sort des générations futures, et nous nous excusons d'avoir agi ainsi. Nous reconnaissons maintenant que, beaucoup trop souvent, ces institutions donnaient lieu à des cas de sévices ou de négligence et n'étaient pas contrôlées de manière adéquate, et nous nous excusons de ne pas avoir su vous protéger. Non seulement vous avez subi ces mauvais traitements pendant votre enfance, mais, en tant que parents, vous étiez impuissants à éviter le même sort à vos enfants, et nous le regrettons.

Le fardeau de cette expérience pèse sur vos épaules depuis beaucoup trop longtemps. Ce fardeau nous revient directement, en tant que gouvernement et en tant que pays. Il n'y a pas de place au Canada pour les attitudes qui ont inspiré le système de pensionnats indiens, pour qu'elles puissent prévaloir à nouveau. Vous tentez de vous remettre de cette épreuve depuis longtemps, et d'une façon très concrète, nous vous rejoignons maintenant dans ce cheminement.

Le gouvernement du Canada présente ses excuses les plus sincères aux peuples autochtones du Canada pour avoir si profondément manqué à son devoir envers eux, et leur demande pardon.

Entrée en vigueur le 19 septembre 2007, la Convention de règlement relative aux pensionnats indiens s'inscrit dans une démarche de guérison, de réconciliation et de règlement des tristes séquelles laissées par les pensionnats indiens. Des années d'efforts de la part des survivants, des communautés et des organisations autochtones ont abouti à une entente qui nous permet de prendre un nouveau départ et d'aller de l'avant en partenariat. La Commission de vérité et de réconciliation est au cœur de la Convention de règlement. La Commission constitue une occasion unique de sensibiliser tous les Canadiens et Canadiennes à la question des pensionnats indiens. Il s'agira d'une étape positive dans l'établissement d'une nouvelle relation entre les peuples autochtones et les autres Canadiens et Canadiennes, une relation basée sur la connaissance de notre histoire commune, sur un respect mutuel et sur le désir de progresser ensemble, avec la conviction renouvelée que des familles fortes, des communautés solides et des cultures et des traditions bien vivantes contribueront à bâtir un Canada fort pour chacun et chacune d'entre nous.

le 11 juin 2008

Au nom du gouvernement du Canada
le très honorable Stephen Harper,
premier ministre du Canada

This is Exhibit "50" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Rome Declaration 2023
Statement

Safeguarding Seven Generations
in times of Food, Social, and Ecological Crisis

*****

We, the **Indigenous Youth**, hailing from the seven socio-cultural regions of the world: (i) Africa; (ii) Asia; (iii) North America; (iv) Central, South and Caribbean America; (v) the Arctic; (vi) the Pacific; and (vii) Central and Eastern Europe, Central Asia, Transcaucasia, Russian Federation; gathered from 16 to 20 October 2023 at the Food and Agriculture Organization of the United Nations (**FAO**) headquarters in Rome for the second session of the biennial United Nations Global Indigenous Youth Forum (**UNGIYF**); and present the **2023 Rome Declaration – on Safeguarding Seven Generations**, to the world.

On this second session of the UNGIYF, we acknowledge the Global Indigenous Youth Caucus (**GIYC**) for their collaboration with the World Reindeer Herders Association and FAO to bring this to fruition.

We are the voices of the Indigenous Youth who participated in the UNGIYF both in person and virtually. We represent at least 95 Indigenous Nations around the world and bring with us our historical processes. We are also Indigenous Peoples who come from over 54 different countries from the seven socio-cultural regions of the world.

Indigenous Youth advocated for the creation of the UNGIYF. We collaborated with FAO to create what is the only high-level forum for the voices of Indigenous Youth to be heard directly at the United Nations, to engage directly with Member States, and be our platform to raise our concerns, make recommendations, and advocate on those matters that affect us.

Through this second session of the UNGIYF, we have raised our voices on the perspectives, concerns, challenges, and priorities to make proposals for safeguarding a sustainable, self-sufficient, and resilient Indigenous Peoples' food and knowledge systems for at least the next seven generations.

We are the future of Mother Earth because her challenges are our challenges; our role, our leadership, and our traditional knowledge are key to addressing the current crisis that she, all forms of life, and humanity face.

Mother Earth is being damaged, her ability to feed people and sustain life is at risk by the continuity of a social, political, and economic system, which perpetuates industrial production, deforestation, water extraction, soil pollution, and exploitation of the world's biodiversity. This way of food production has damaged Mother Earth, which is particularly felt by Indigenous Peoples, because the direct impacts have been on our traditional lands and waters, our forests, our rivers, our ecosystem, the very thing that grounds our identity—the symbiosis between our peoples and our traditional territories.

Even though we, Indigenous Peoples, are the custodians and protectors of 80% of the world's biodiversity; those who drive scientific endeavour and the development of policy, continue to diminish and disregard Indigenous Peoples' important role in the process; we are exploited, and our traditional food and knowledge systems taken advantage of.

These are systems that can be a gift for the world to help revolutionise the way we tackle the challenge of ending world hunger, and healing Mother Earth.

We, the Indigenous Youth, are the product of our ancestors; our ancestors who endured colonisation, violence, exploitation, dispossession, displacement, marginalization, and discrimination.

We, the Indigenous Youth, are the present, and the future, the action that the world needs to take in order to face this crisis, to return to peace, harmony, involves reconciliation, recognition, and reparation of the intergenerational damage that has been faced by our Indigenous Peoples globally.

The way humanity is producing and consuming food is leading us to catastrophe. Indigenous Peoples' food and knowledge systems are the engine of the transformations that we all need and truly aspire to.

We are here for the future of the next generations because the pain has not stopped us and we come to build as we have done for centuries to heal ourselves, heal Mother Earth and humanity. Our food and knowledge systems are sustainable, resilient, wise, harmonious, and equitable.

We have lived and experienced firsthand the pain of modern genocide, green colonialism, and the development of extractive capitalism, and we know that these damages are irreversible. We, Indigenous Youth, are the protectors and safeguards of the next seven generations. We are the seeds of change. But we need the right conditions to thrive.

Today we reaffirm that the rights of Indigenous Youth are linked to the collective rights of our peoples who have a deep relationship with our territories, ecosystems, ancestral knowledge, and spirituality, which have an intrinsic connection with our food and knowledge systems, and which are an essential part of our identities.

We recognize the intergenerational efforts to create spaces for dialogue with Member States and United Nations agencies; the United Nations Permanent Forum on Indigenous Issues, the Expert Mechanism on the Rights of Indigenous Peoples, and the Special Rapporteur on the Rights of Indigenous Peoples. We also urge you to continue working closely for the next generations and the future of life and Mother Earth.

We belong to the generation at risk by the actions of current and past actors, but at the same time, we are the generation that can contribute to ensuring there are seven more generations to come. We, Indigenous Youth, are the nexus between the past and the future, we strive to become good ancestors and custodians, we can help the world construct a better future.

So, on this day, gathered here in Rome for the second session of the biennial United Nations Global Indigenous Youth Forum, we ask the world to listen to our messages, our recommendations, our demands, and to ask for your support to implement the actions that will allow us to have a future for all.

We seek your support so that we all may flourish in reconciliation and healing of the wounds and sufferings that our last seven generations have endured, to offer a more prosperous future to the next seven generations to come.

On commitments – We are the next generation

Our knowledge as Indigenous Peoples is essential for the transformation of food systems, but it is in danger. Our grandfathers and grandmothers, repositories of millennial knowledge, are slowly disappearing as well as our cultures and languages. We are prepared to overcome the challenges of knowledge and language transmission. Indigenous Youth have the unique ability to navigate different worlds at the same time. We can merge the ancestral and the own with what is said modern. But we need the right policies to support us in the process of safeguarding, reviving and strengthening the world's oldest, most sustainable, efficient and necessary knowledge. This is why:

- We demand that Member States, United Nations Agencies and decision makers assume the responsibility that corresponds to them and do not miss the opportunity to protect humanity and the planet.

- We remind you that we have seven years left before talking about the achievement of the SDG goals, we are far behind because there is still a long way to go to improve access and engagement to training, innovation, new technologies, adaptation and mitigation mechanisms, and agendas.

- We demand justice, reparation and restoration for historical and intergenerational damages, recognizing the value of our knowledge and wisdom, custom and languages, including our food systems and the territories where life flourishes.

- We demand the creation of specific funds for the preservation of our sustainable and resilient Indigenous Peoples' food and knowledge systems and support innovation and knowledge projects for Indigenous Youth and their holistic perspective, urging that these funds reach the direct hands of Indigenous Peoples.

On responsibility - Mother Earth is hurt and angry

We, Indigenous Youth, are the first to experience and most affected to the impacts of the damage inflicted on Mother Earth but we are also her advocates and protectors. The effects of climate change is how Mother Earth communicates her discontent and frustration about how her children mistreat her. The acceleration of these changes, coupled with biodiversity loss, puts even the most resilient in our food and knowledge systems at risk. Actions must be taken to sustainably preserve what the seven future generations have lent us. This is why:

- We urge Member States to recognize that adequate food is intrinsically linked to the regulation of Indigenous Peoples' territories, traditional knowledge, peace and security.

- We urge Member States to implement regulations and programs for biodiversity conservation with the leadership and meaningful participation and engagement of Indigenous Peoples, including initiatives to protect bees and other pollinators, endangered terrestrial and aquatic species that are the foundation of our food systems.

- We urge countries to take all necessary measures to curb greenhouse gas emissions in order to prevent the worst effects of climate change and recall that all parties gathered at COP 28 and CBD 16, must commit to courageous plans that ensure no further jeopardization of food systems, biodiversity and knowledge of Indigenous Peoples.

- To the United Nations Entities to create a program for Indigenous Youth on food systems in relation to the challenges and exposure to violence, damage, and trauma due to the loss of biodiversity in their lands and territories.

On the Claims - Modern Genocide Must Cease

The use of toxic, agrochemicals, particularly pesticides, poisons our forests, rivers, waters, and communities. Our lifelines are being cut off. We are facing a modern genocide. These practices not only affect Indigenous Youth, but all of humanity and the future of Mother Earth. We continue to face the desire to be exterminated. Extractive industries, such as oil exploitation and mining, destroy our territories and pollute our waters, our air, our food and our soil. This is why:

- We denounce the lack of attention to the risks we live today and those that the next seven Indigenous and non-Indigenous generations will face due to the uncontrolled use of pesticides and other chemicals, poisons of modernity.

- We propose to FAO the creation of a high-level consultative body, which includes representatives of Indigenous Youth, to guide the monitoring and regulation of the use of pesticides, agrochemicals, toxics, and any other substance that contributes to the genocide of our Peoples and the life of our territories.

- We urge Member States and industries to implement free, prior, and informed consent especially when our right to a healthy life is at risk, as well as the capacity of our food and knowledge systems to generate food sustainably for current and future generations.

On Actions – Stop Green Colonialism and Extractivism in the Name of Development

The so-called green or sustainable solutions to climate change are detrimental to us, they are false alternatives and a form of green colonialism because as they advance on our territories, it destroys and affects our lives and all the forms of life that inhabit there. Green colonialism including food colonialism has the potential to disrupt the ability of Indigenous Youth to preserve their intergenerational food and knowledge systems. Certain initiatives, projects, products, and policies perceived as "sustainable" could be detrimental to us.

We, the Indigenous Youth, are the heirs of hundreds of years of suffering caused by colonialism. This is why:

- We demand that any decision in the name of development or implementation of the so-called sustainable-green solutions that may affect Indigenous Peoples and Indigenous Youth in any way and that drives the phenomenon of "green colonialism" including “food colonialism” must be stopped immediately.

- We demand that before implementing any green or sustainable solution that involves our territories, knowledge or ways of life, our right to free, prior, and informed consultation is implemented.

- We urge Member States and United Nations agencies to commit to repairing the damage caused by intergenerational trauma and renewed violence caused by green colonialism, which also permeates our food systems.

- We urge Member States to regulate any projects that affect, or have the potential to adversely affect, Indigenous Peoples' food and knowledge systems.

- We urge the world to reformulate the narratives of "green colonialism" along with “food colonialism” and false solutions that exclude the needs and violate the rights of Indigenous Peoples, increasing inequality gaps, violence and generating conditions of marginalization.

On the demands – Our territories must be free of violence

Our territories are our home and without them, we risk losing our food and knowledge systems that are key for future generations, Indigenous and non-indigenous Peoples. The lack of opportunities, discrimination, the presence of organized crime, armed groups or war zones in our territories. Food insecurity increases, violence continues to cause displacement, poverty and, finally, the abandonment and loss of our food and knowledge systems. All this distances Indigenous Youth from our ancestral knowledge. This is why:

- We urge UN agencies to create a programme on food systems for Indigenous Youth. The programme should focus on the challenges and exposure to conflict, violence, damage and trauma caused by biodiversity loss in Indigenous Peoples’ lands and territories.

- We recommend that Member States, United Nations agencies and research centres establish professional capacity-building programmes aimed at providing Indigenous Youth with decent employment conditions. This would allow them to remain key actors for change.

- We urge Member States to act on protecting Indigenous Women, Indigenous Children, Indigenous Youth and Indigenous Persons belonging to sexual minorities because they are most affected in areas of conflict and land grabbing. The Member States must create programs to support Indigenous women, children and youth to strengthen their capacities, and improve living and job conditions while ensuring their basic rights are first guaranteed.

About the Urgencies-Our food, our health and mental health

Ultra-processed foods are invading our territories and displacing our traditional diets, corrupting our food and knowledge systems and thereby affecting our physical, spiritual and mental health. We, Indigenous Youth, hold the key to our health in our hands. However, external forces continue to jeopardize our food and knowledge systems, damaging our identity relations, affecting our physical, mental and spiritual health.

Safeguarding the knowledge that has kept our ancestors healthy, recognizing the potency of our food systems is the way to provide healthy living for the next seven future generations, and continuing our balanced and medicinal diets, to reduce the negative effects we face.

We know that talking about the future must include respect for our food and our food systems, for the preservation of life. This is why:

- We demand the implementation of specific policies for the responsible labelling of ultra-processed foods. These should warn of potential negative health effects and allow food traceability.

- We demand the creation of mechanisms of social responsibility, accountability, transparency, and democratic behaviours for the industries that produce ultra-processed foods and thus repair or stop the damages that ultra-processed foods may cause.

- We demand the recognition, strengthening and visibility towards Indigenous Peoples' and Community Conserved Areas and Territories (ICCAs) and the movement to foster food sovereignty throughout the world through knowledge sharing and enhanced mutual support.

- We recommend that Indigenous Peoples' organizations, Member States, United Nations agencies and other key actors strengthen the visibility and defend Indigenous Peoples' food and knowledge systems, recipes, ingredients, cooking, and production methods while respecting our intellectual property rights and knowledge systems.

- We urge Member States, governments, academia, society, and key actors to recognize our contribution to healthy diets and respect the nutritional value, establishing legal mechanisms for their protection as heritage and collective memory of Indigenous Peoples.

- We demand that governments recognize that our systems are healthy and sustainable, strengthening the inclusion of Indigenous Peoples' knowledge by investing in our science so that our communities are self-sufficient, but also contributing to food security challenges.

- We urge Member States to include Indigenous Peoples' Food, Culture and Knowledge Systems as a key part of their school curricula at all levels and strengthen our relationship of identity and thereby guarantee the rights of Indigenous children and food and strengthen the economies of Indigenous Peoples.

About Respect- Stop biopiracy and intellectual property

We are a product of biodiversity and knowledge. But these two elements are being stolen from us. The disrespectful and unauthorized appropriation and looting of genetic material, knowledge and any other form of biopiracy related to Indigenous Peoples' food and knowledge systems must cease immediately. Any form of usurpation and theft is unacceptable. Indigenous Peoples' knowledge is crucial to overcoming multiple crises, but it is paramount to respect it, along with its protectors for generations to come. This is why:

- We demand that Member States, United Nations Agencies and decision-makers guarantee our intellectual property rights, the protection of our genetic resources and the patenting of our Indigenous food and knowledge systems.

- We urge WIPO to enhance the participation and capacity building of Indigenous Youth for defensive protection of our intergenerational knowledge, genetic resources, and heritage.

- We urge academia and research to also respect and enforce our intellectual property rights and that any research or findings involving Indigenous Peoples, their territories, knowledge, and food systems, be within a framework of the right to self-determination and prior, free, and informed consultation.

- We urge academia to recognize the value and contribution of the wisdom and knowledge of Indigenous Peoples and adequately support Indigenous Peoples' knowledge and food systems, for the construction of mechanisms for reparation and restoration of damages in

the instances in which Indigenous Peoples have been affected and their intellectual property rights have been violated.

- We urge that all research materials should indicate proper authorship highlighting the level of participation and honorship of Indigenous Peoples.

We thank FAO, the follow-up of the recommendations and collaboration for the implementation of the biennial UN Global Indigenous Youth Forum, the Global Declaration of Indigenous Youth on Sustainable and Resilient Food Systems, the launch of the campaign "My food vision is...", and specific actions for Indigenous Youth, in almost a decade of collaboration with the Global Indigenous Youth Caucus.

We value the efforts and participatory accompaniment of the World Reindeer Herders Association, Nomad Indigenous FoodLab, who claim and highlight the innovation of Indigenous Peoples' food and knowledge systems.

We recognize the commitment of the Indigenous Peoples' Food Systems Coalition and the Global-Hub on Indigenous Peoples' food systems to promote the protection and strengthening of Indigenous Peoples' knowledge and food systems for the benefit of all humanity.

It is the 45% of Indigenous Youth from the seven socio-cultural regions of the 476 million Indigenous Peoples in the world who must bear the weight of responsibility for the catastrophe that is approaching for future generations, in the face of the emergency of leaving no one behind in goals that can hardly be achieved in seven years in the vision of the 2030 agenda.

This situation is unacceptable, and we urge the world to be part of the solutions for reconciliation and reparation of the damages that are reflected in natural disasters, which continue to impede basic needs such as food.

Therefore, we encourage the entities of the United Nations, IFAD, FAO and WHO, UNESCO, UNICEF, WFP, UNEP, to also come and join us, and in the future host the secretariat of the UNGIYF forum, within the framework of leaving no one behind and fulfilling the promised commitments, in an articulated and collaborative manner.

In reaffirming the echo of the voices of the seven regions, in the words of one of many stories, we quote one of the sisters who could not attend the forum because she lives in conflict, "we cannot achieve peace when there is hunger and food insecurity".

We cannot be the seeds of change and transformation of food systems if they do NOT listen to the Messages of Mother Earth and that of the voices of Indigenous Youth.

Rome Declaration 2023
Policy Recommendations

Safeguarding Seven Generations
in times of Food, Social, and Ecological Crisis

*****

We, the **Indigenous Youth**, hailing from the seven socio-cultural regions of the world: (i) Africa; (ii) Asia; (iii) North America; (iv) Central, South and Caribbean America; (v) the Arctic; (vi) the Pacific; and (vii) Central and Eastern Europe, Central Asia, Transcaucasia, Russian Federation; gathered from 16 to 20 October 2023 at the Food and Agriculture Organization of the United Nations (**FAO**) headquarters in Rome for the second session of the biennial United Nations Global Indigenous Youth Forum (**UNGIYF**); and present the **2023 Rome Declaration - Policy Recommendations** to the United Nations Organs, Agencies, Funds, and Organisations, to Civil Organisations and to Indigenous Peoples.

The UNGIYF is the result of nearly a decade of collaboration between the Global Indigenous Youth Caucus (**GIYC**) and FAO. The fruits of this collaboration can be summarized as follows:

- In April 2017, a preparatory meeting was hosted at the FAO headquarters, bringing together 14 Indigenous Youth representing the GIYC and the seven socio-cultural regions of the world to prepare the first Rome Declaration (2017).

- In May 2017, the GIYC presented the Rome Declaration to the United Nations Permanent Forum on Indigenous Issues (**UNPFII**). The United Nations Department of Economic and Social Affairs made a recommendation to FAO to support the collaboration between Indigenous Youth and FAO.

- In October 2017, Indigenous Youth representing the GIYC met at the FAO headquarters to develop the initial terms of reference for the creation of the biennial United Nations Global Indigenous Youth Forum.

- In 2021, the inaugural session of the biennial UN Global Indigenous Youth Forum was held in an online format due to the restrictions of the global COVID-19 pandemic. This resulted in the "Rome Declaration (2021) on Sustainable and Resilient Food Systems".

- In October 2022, on the sidelines of the World Food Forum, a delegation of GIYC leaders met at FAO headquarters in Rome and launched the campaign "My Food Vision is…" with the aim of recognizing, respecting, and protecting Indigenous Peoples' food and knowledge systems.

After a long journey, today we, Indigenous Youth, gather at the Second Session of the biennial United Nations Global Indigenous Youth Forum to discuss the future of our food and knowledge systems. We are here to ensure that our voices and knowledge are heard and listened to.

In addition to our 2023 Rome Declaration on Safeguarding Seven Generations, we make the following policy recommendations:

Global and Public Policy

1. We **recommend** the International Fund for Agricultural Development (IFAD), the World Health Organization (WHO), UN International Children's Emergency Fund (UNICEF), World Food Program (WFP), UN Environment Programme (UNEP) and United Nations Education, Scientific and Cultural Organization(UNESCO) to join us on this journey by assisting in hosting the Secretariat for the UNGIYF. We acknowledge the importance of coordinated collaboration and cooperation of the various United Nations organs, agencies, funds, and organisations, when engaging with Indigenous Youth. We recognise the model that has been developed between the GIYC and the FAO has been one of genuine collaboration and best practice. We encourage others to do the same, and support similarly.

2. We **recommend** FAO update the Policy on Indigenous and Tribal Peoples in consultation with Indigenous Peoples, ensuring there is appropriate representation of Indigenous women and Indigenous Youth within the framework of free, prior, and informed consent.

3. We **recommend** FAO, IFAD, WHO, UNESCO, WFP, UNEP, the Indigenous Peoples' Food Systems Coalition (IPFSC), and Member States recognise and strengthen the role of Indigenous Peoples' Food and Knowledge Systems towards achieving food security and sustainability of Indigenous Peoples and the world. We further urge you to join the campaign of the Indigenous Youth "My vision for food is…".

4. We **recommend** that Member States, the WHO, and FAO implement monitoring and accountability policies in respect of food industries, specifically in relation to responsible labelling of processed foods. Our concerns are about the potential negative effects on the health of food, and if necessary, propose a mechanism for repairing damage.

5. We **recommend** the Special Rapporteur on the Right to Food (**SRRF**) and the Special Rapporteur on the Rights of Indigenous Peoples (**SRIP**) to investigate the effect of displacement of traditional diets of Indigenous Peoples, the effects of ultra-processed foods on the health of Indigenous Peoples, youth, and children; and to make recommendations to Member States and appropriate UN organs, agencies, organisations, and funds.

6. We **recommend** the School Fund Coalition (**SFC**) and the IPFSC work collaboratively to create School Feeding Programs ensuring an intercultural perspective. We further recommend that the SFC include representation of Indigenous Peoples in any steering committee or governing body to ensure respectful and meaningful participation of Indigenous Peoples.

7. We **recommend** the Codex Alimentarius Committee (**CAC**) to collaborate with the IFSC and the Indigenous Peoples Global Food Systems Centre (**IPGFSC**) to incorporate and develop research that focuses on Indigenous Peoples' food systems and knowledge and explore their potential to contribute to food security.

8. We **recommend** the FAO and WHO Panel of Experts on Pesticide Management to create a high-level consultative body with representatives of Indigenous Peoples (ensuring representation of women and youth along with sexual minorities) to guide the control of excessive and harmful use of pesticides, agrochemicals, and toxicants, that contribute to the genocide of Indigenous Peoples and the biodiversity of the planet.

9. We **recommend** the Special Rapporteur on the Right to Food, Human Rights and the Environment, the Special Rapporteur on the Toxic Substances, and the Special Rapporteur on the Rights of Indigenous Peoples to investigate, report and make recommendations on the effect of toxic pesticides that are used in agriculture and food systems.

10. In the framework of the Water Decade, we **recommend** UNESCO, FAO, UNFCCC, UNEP, and other organisations to recognise the rights of Indigenous Peoples in water, and recognise its value in its different forms not only as a resource, but the inherent connection it has to identify, culture, and food systems. We further recommend the development mechanisms that strengthen and guarantee the right to water and territories of Indigenous Peoples.

11. We **recommend** the Convention on Biological Diversity to guarantee the participation of Indigenous Youth in its formal processes.

12. We **recommend** there be effective representation of Indigenous Peoples in all the various UN Organs, Agencies, Funds and Organisations, that are particularly concerned with food systems (such as WIPO, FAO, UNESCO, UNACD, WHO, WFP, IFAD,UNAOC), where there are no representatives (e.g. Focal Points), that these are addressed urgently. There should be appropriate representation of Indigenous Youth and for this we recommend the establishment of a Global Indigenous Youth Caucus secretariat with a specific governing structure, membership, and engagement processes.

13. We **recommend** UNESCO to create guidelines for Member States to formulate and implement intercultural educational curricula at all levels, to respect and include the knowledge and languages of Indigenous Peoples, and to promote and strengthen the rights of Indigenous Peoples.

14. We **recommend** UNESCO to work with Member States and the Inter-Agency and Support Group of Indigenous Peoples promote the institutionalization at the international and country level of research programs led by Indigenous Peoples and with Indigenous Peoples, from legal framework, on issues that affect their rights and their health and that of their territories, For example, climate change observatories, studies on the physical and mental health status of Indigenous Youth, the nutritional value of their food, among others.

15. We **recommend** UNESCO to incorporate Indigenous Youth perspectives on Indigenous worldviews as part of its global action plan for the International Decade of Indigenous Languages and to join the campaign "My food vision is…", and the promotion of information in our languages.

16. We **recommend** IFAD, FAO, WFP and the other UN bodies within the Inter-Agency and Support Group of Indigenous Peoples to create a financing fund for different policies and projects that support Indigenous Youth and Children in matters of food, physical and mental health and sustainability. This fund should be designed and coordinated with the Global Indigenous Youth Caucus.

17. We **recommend** the protection of the data of Indigenous People, its usage and the purpose to ensure that the interests of Indigenous Peoples' knowledge systems are not misused, and manipulated.

18. We **recommend** WIPO to create capacity building programs so that Indigenous Youth and children have the necessary tools and know the mechanisms for a preventive protection of intergenerational knowledge and wisdom, of our genetic resources, heritage and economic development.

19. We **recommend** WIPO, UNESCO and FAO to create guidelines for the certification and labelling of products derived from the Food and Knowledge Systems of Indigenous Peoples and that allow respect for the intellectual property of Indigenous Peoples, give them the control and access to markets and be compensated for any use of their products from a legal framework.

20. We **recommend** FAO, WTO and other international regulatory bodies to guarantee 'Right to Price' or 'Right to Fair Market' on products produced by Indigenous People so that they can control, regulate, and decide on their own produce for fair profits in a globalised market.

21. We **recommend** the WHO to create guidelines that incorporate the process of access with regards to traditional medicine of Indigenous Peoples and recommend knowledge-based and culturally relevant public health policies of Indigenous Peoples.

22. We **recommend** WHO, UNICEF and the Special Rapporteur on the Rights of Indigenous Peoples to carry out a study on the status and determinants of the physical, spiritual and mental health of Indigenous Youth and children in the context of climate change, migration and conflict worldwide in order to make specific recommendations to Member States in order to address these problems.

23. We **recommend** UN Women, the Special Rapporteur on the Rights of Indigenous Peoples and the Special Rapporteur on violence against women and girls to conduct studies on the rule of law of Indigenous women, girls and sexual minorities within a framework of food security, climate crisis, conflict and forced displacement to make recommendations to Member States on actions to address gender equality and equity challenges.

<u>Member States</u>

24. We **recommend** Member States to recognize Indigenous Peoples, and adopt ILO Convention 169 and the Declaration on the Rights of Indigenous Peoples, as well as other mechanisms of rights achieved, in the vision of achieving the right to food.

25. We **recommend** that Member States implement educational curricula on the right to food to promote healthy and culturally relevant food that promotes and strengthens the right to food of Indigenous children in connection with their cultural identity, strengthening and basing on the food and knowledge systems of Indigenous Peoples.

26. We **recommend** Member States to implement responsible regulatory policies on ultra-processed foods that affect public health and contribute to the increase in non-communicable diseases (cancer, diabetes, among others).

27. We **recommend** Member States to recognize and include within their national development plans and food policies the role of Indigenous Peoples, their food and knowledge systems for food security and invest in funds that strengthen their food sovereignty and self-sufficiency and their contribution to national food security.

28. We urgently **recommend** that Member States join the Indigenous Peoples' Food Systems Coalition to respect and strengthen Indigenous Peoples' food and knowledge systems in collaboration with Indigenous Peoples and other key actors.

29. We **recommend** Member States to establish policies or amend existing legislation to regulate and reduce toxic and agricultural chemicals that pollute soil, air, water and the environment and have a negative effect on biodiversity, human and planetary health.

30. We **recommend** Member States and national research institutions to create monitoring observatories in collaboration and with the free, prior and informed consent of Indigenous Peoples, to investigate the effects associated with the promotion and use of monocultures, toxins and pesticides in agriculture, ultra-processed crops, climate change, among others, on the physical and mental health of Indigenous Peoples and on the health of their territories.

31. We **recommend** Member States, academic and research institutions to create or strengthen research institutions and initiatives in common agreement with Indigenous Peoples, respecting prior, free and informed consultation, to document their food and knowledge systems, which allow them to be rescued, conserved and strengthened in follow-up to scale them at the local, national and global levels for their "game-changer nature".

32. We **recommend** Member States to institutionalize and recognize within Educational Policies the spaces for co-creation of alternative knowledge that are essential for the transmission, revitalization and conservation of the knowledge of Indigenous Peoples and especially seeking the elderly and women as holders of that traditional knowledge and wisdom.

33. We **recommend** Governments to create investment and innovation funds with proper monitoring process and mechanisms in collaboration with Indigenous Peoples to develop technologies and initiatives that meet their needs, enable them to improve their food systems to achieve food self-sufficiency and create resilient food systems and communities.

34. We **recommend** Governments to establish policies of fair trade and investment funds that support processes of certification, labelling and traceability of products derived from the food systems of Indigenous Peoples that respect their intellectual property but also allow economic incentives and connect them with markets to improve their quality of life from a legal framework.

35. We **recommend** that national governments create initiatives for the preservation of genetic resources in situ and ex situ of Indigenous Peoples from a framework of law respecting free, prior and informed consultation to safeguard the wealth and knowledge of Indigenous Peoples.

36. We **recommend** governments to establish food value chains that strengthen and prioritize Indigenous Peoples' Food Systems, strengthening them through technologies and connecting them with local markets to promote local, sustainable and responsible consumption.

37. We **recommend** governments to recognize the land and water tenure rights of Indigenous Peoples so that they can continue to practice and maintain the practices that make them self-sufficient, sustainable and custodians of the biodiversity of the planet.

38. We **recommend** governments to implement policies that protect the rights of Indigenous children, youth, women and sexual minorities in a context of climate change, violence, conflict and migration so that their rights to food and an environment free of violence are guaranteed.

39. We **recommend** governments ensure that any project implemented in Indigenous Peoples' territories is always in compliance with the free, prior and informed consultation of Indigenous Peoples and that labels or narratives of sustainable or green alternatives do not violate or override the rights of Indigenous Peoples.

40. We **recommend** that governments create policies and funds for the physical, spiritual and mental health care of children, youth and Indigenous Peoples from a framework of cultural relevance and ideally strengthen the training of Indigenous professionals who can meet these demands.

Indigenous Peoples and their Organisations

41. We **recommend** Indigenous organizations locally to join the Indigenous Food Systems Coalition to work collectively to rescue and strengthen our Indigenous food and knowledge systems.

42. We **recommend** Indigenous and non-indigenous organizations, in recognition of the valuable contribution of Indigenous food systems, to carry out awareness and dissemination campaigns that highlight the importance of the right to food and sensitize society to violations of this right, particularly in Indigenous Peoples' communities.

43. We **recommend** Indigenous Youth and organizations to continue making visible their good practices of mitigation, innovation and resilience to the effects on their Indigenous food systems.

44. We urge to promote educational curricula in collaboration with Indigenous elders, women and scholars to support the transmission of traditional knowledge and wisdom from older to younger generations, recognizing the importance of reciprocity and fostering cultural heritage.

45. We encourage Indigenous Peoples' organizations and leaders to remain strong in the challenge in reformulating the narratives of "green and food colonialism" and false solutions that are exclusive to the needs of Indigenous Peoples, which have increased inequality gaps and generated conditions of marginalization.

46. We urge Indigenous Youth, organizations and allies to continue encouraging the creation of community gardens for the exchange of knowledge, wisdom and the promotion of native plants that improve soil quality and biodiversity

47. We urge Indigenous Youth to continue to encourage and organize the creation of festivals and spaces dedicated to sharing and promoting the value of Indigenous food systems, highlighting their cultural and environmental importance.

48. We urge authorities, organizations, and the community at large to support the creation and distribution of cooking manuals that promote the use of Indigenous ingredients and traditional food preparation techniques.

49. We urge local governments to develop plans together with Indigenous Peoples including Indigenous Youth for the protection of ecosystems found in the seven socio-cultural regions (communities, pastoral, those that interact with different forms of water status and others).

This is Exhibit "51" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

Calls to Action

In order to redress the legacy of residential schools and advance the process of Canadian reconciliation, the Truth and Reconciliation Commission makes the following calls to action.

Legacy

Child welfare

1. We call upon the federal, provincial, territorial, and Aboriginal governments to commit to reducing the number of Aboriginal children in care by:
    i. Monitoring and assessing neglect investigations.
    ii. Providing adequate resources to enable Aboriginal communities and child-welfare organizations to keep Aboriginal families together where it is safe to do so, and to keep children in culturally appropriate environments, regardless of where they reside.
    iii. Ensuring that social workers and others who conduct child-welfare investigations are properly educated and trained about the history and impacts of residential schools.
    iv. Ensuring that social workers and others who conduct child-welfare investigations are properly educated and trained about the potential for Aboriginal communities and families to provide more appropriate solutions to family healing.
    v. Requiring that all child-welfare decision makers consider the impact of the residential school experience on children and their caregivers.
2. We call upon the federal government, in collaboration with the provinces and territories, to prepare and publish annual reports on the number of Aboriginal children (First Nations, Inuit, and Métis) who are in care, compared with non-Aboriginal children, as well as the reasons for apprehension, the total spending on preventive and care services by child-welfare agencies, and the effectiveness of various interventions.
3. We call upon all levels of government to fully implement Jordan's Principle.
4. We call upon the federal government to enact Aboriginal child-welfare legislation that establishes national standards for Aboriginal child apprehension and custody cases and includes principles that:
    i. Affirm the right of Aboriginal governments to establish and maintain their own child-welfare agencies.
    ii. Require all child-welfare agencies and courts to take the residential school legacy into account in their decision making.
    iii. Establish, as an important priority, a requirement that placements of Aboriginal children into temporary and permanent care be culturally appropriate.
5. We call upon the federal, provincial, territorial, and Aboriginal governments to develop culturally appropriate parenting programs for Aboriginal families.

Education

6. We call upon the Government of Canada to repeal Section 43 of the *Criminal Code of Canada*.
7. We call upon the federal government to develop with Aboriginal groups a joint strategy to eliminate

educational and employment gaps between Aboriginal and non-Aboriginal Canadians.

8. We call upon the federal government to eliminate the discrepancy in federal education funding for First Nations children being educated on reserves and those First Nations children being educated off reserves.

9. We call upon the federal government to prepare and publish annual reports comparing funding for the education of First Nations children on and off reserves, as well as educational and income attainments of Aboriginal peoples in Canada compared with non-Aboriginal people.

10. We call on the federal government to draft new Aboriginal education legislation with the full participation and informed consent of Aboriginal peoples. The new legislation would include a commitment to sufficient funding and would incorporate the following principles:

    i. Providing sufficient funding to close identified educational achievement gaps within one generation.

    ii. Improving education attainment levels and success rates.

    iii. Developing culturally appropriate curricula.

    iv. Protecting the right to Aboriginal languages, including the teaching of Aboriginal languages as credit courses.

    v. Enabling parental and community responsibility, control, and accountability, similar to what parents enjoy in public school systems.

    vi. Enabling parents to fully participate in the education of their children.

    vii. Respecting and honouring Treaty relationships.

11. We call upon the federal government to provide adequate funding to end the backlog of First Nations students seeking a post-secondary education.

12. We call upon the federal, provincial, territorial, and Aboriginal governments to develop culturally appropriate early childhood education programs for Aboriginal families.

Language and culture

13. We call upon the federal government to acknowledge that Aboriginal rights include Aboriginal language rights.

14. We call upon the federal government to enact an Aboriginal Languages Act that incorporates the following principles:

    i. Aboriginal languages are a fundamental and valued element of Canadian culture and society, and there is an urgency to preserve them.

    ii. Aboriginal language rights are reinforced by the Treaties.

    iii. The federal government has a responsibility to provide sufficient funds for Aboriginal-language revitalization and preservation.

    iv. The preservation, revitalization, and strengthening of Aboriginal languages and cultures are best managed by Aboriginal people and communities.

    v. Funding for Aboriginal language initiatives must reflect the diversity of Aboriginal languages.

15. We call upon the federal government to appoint, in consultation with Aboriginal groups, an Aboriginal Languages Commissioner. The commissioner should help promote Aboriginal languages and report on the adequacy of federal funding of Aboriginal-languages initiatives.

16. We call upon post-secondary institutions to create university and college degree and diploma programs in Aboriginal languages.

17. We call upon all levels of government to enable residential school Survivors and their families to reclaim names changed by the residential school system by waiving administrative costs for a period of five years for the name-change process and the revision of official identity documents, such as birth certificates, passports, driver's licenses, health cards, status cards, and social insurance numbers.

Health

18. We call upon the federal, provincial, territorial, and Aboriginal governments to acknowledge that the current state of Aboriginal health in Canada is a direct result of previous Canadian government policies, including residential schools, and to recognize and implement the health-care rights of Aboriginal people as identified in international law, constitutional law, and under the Treaties.

19. We call upon the federal government, in consultation with Aboriginal peoples, to establish measurable goals to identify and close the gaps in health outcomes

between Aboriginal and non-Aboriginal communities, and to publish annual progress reports and assess long-term trends. Such efforts would focus on indicators such as: infant mortality, maternal health, suicide, mental health, addictions, life expectancy, birth rates, infant and child health issues, chronic diseases, illness and injury incidence, and the availability of appropriate health services.

20. In order to address the jurisdictional disputes concerning Aboriginal people who do not reside on reserves, we call upon the federal government to recognize, respect, and address the distinct health needs of the Métis, Inuit, and off-reserve Aboriginal peoples.

21. We call upon the federal government to provide sustainable funding for existing and new Aboriginal healing centres to address the physical, mental, emotional, and spiritual harms caused by residential schools, and to ensure that the funding of healing centres in Nunavut and the Northwest Territories is a priority.

22. We call upon those who can effect change within the Canadian health-care system to recognize the value of Aboriginal healing practices and use them in the treatment of Aboriginal patients in collaboration with Aboriginal healers and Elders where requested by Aboriginal patients.

23. We call upon all levels of government to:

    i. Increase the number of Aboriginal professionals working in the health-care field.

    ii. Ensure the retention of Aboriginal health-care providers in Aboriginal communities.

    iii. Provide cultural competency training for all health-care professionals.

24. We call upon medical and nursing schools in Canada to require all students to take a course dealing with Aboriginal health issues, including the history and legacy of residential schools, the *United Nations Declaration on the Rights of Indigenous Peoples*, Treaties and Aboriginal rights, and Indigenous teachings and practices. This will require skills-based training in intercultural competency, conflict resolution, human rights, and anti-racism.

Justice

25. We call upon the federal government to establish a written policy that reaffirms the independence of the Royal Canadian Mounted Police to investigate crimes in which the government has its own interest as a potential or real party in civil litigation.

26. We call upon the federal, provincial, and territorial governments to review and amend their respective statutes of limitations to ensure that they conform to the principle that governments and other entities cannot rely on limitation defences to defend legal actions of historical abuse brought by Aboriginal people.

27. We call upon the Federation of Law Societies of Canada to ensure that lawyers receive appropriate cultural competency training, which includes the history and legacy of residential schools, the *United Nations Declaration on the Rights of Indigenous Peoples*, Treaties and Aboriginal rights, Indigenous law, and Aboriginal–Crown relations. This will require skills-based training in intercultural competency, conflict resolution, human rights, and anti-racism.

28. We call upon law schools in Canada to require all law students to take a course in Aboriginal people and the law, which includes the history and legacy of residential schools, the *United Nations Declaration on the Rights of Indigenous Peoples*, Treaties and Aboriginal rights, Indigenous law, and Aboriginal–Crown relations. This will require skills-based training in intercultural competency, conflict resolution, human rights, and anti-racism.

29. We call upon the parties and, in particular, the federal government, to work collaboratively with plaintiffs not included in the Indian Residential Schools Settlement Agreement to have disputed legal issues determined expeditiously on an agreed set of facts.

30. We call upon federal, provincial, and territorial governments to commit to eliminating the overrepresentation of Aboriginal people in custody over the next decade, and to issue detailed annual reports that monitor and evaluate progress in doing so.

31. We call upon the federal, provincial, and territorial governments to provide sufficient and stable funding to implement and evaluate community sanctions that will provide realistic alternatives to imprisonment for Aboriginal offenders and respond to the underlying causes of offending.

32. We call upon the federal government to amend the Criminal Code to allow trial judges, upon giving reasons, to depart from mandatory minimum sentences and restrictions on the use of conditional sentences.

33. We call upon the federal, provincial, and territorial governments to recognize as a high priority the need to address and prevent Fetal Alcohol Spectrum Disorder (FASD), and to develop, in collaboration with Aboriginal people, FASD preventive programs that can be delivered in a culturally appropriate manner.

34. We call upon the governments of Canada, the provinces, and territories to undertake reforms to the criminal justice system to better address the needs of offenders with Fetal Alcohol Spectrum Disorder (FASD), including:

    i. Providing increased community resources and powers for courts to ensure that FASD is properly diagnosed, and that appropriate community supports are in place for those with FASD.

    ii. Enacting statutory exemptions from mandatory minimum sentences of imprisonment for offenders affected by FASD.

    iii. Providing community, correctional, and parole resources to maximize the ability of people with FASD to live in the community.

    iv. Adopting appropriate evaluation mechanisms to measure the effectiveness of such programs and ensure community safety.

35. We call upon the federal government to eliminate barriers to the creation of additional Aboriginal healing lodges within the federal correctional system.

36. We call upon the federal, provincial, and territorial governments to work with Aboriginal communities to provide culturally relevant services to inmates on issues such as substance abuse, family and domestic violence, and overcoming the experience of having been sexually abused.

37. We call upon the federal government to provide more supports for Aboriginal programming in halfway houses and parole services.

38. We call upon the federal, provincial, territorial, and Aboriginal governments to commit to eliminating the overrepresentation of Aboriginal youth in custody over the next decade.

39. We call upon the federal government to develop a national plan to collect and publish data on the criminal victimization of Aboriginal people, including data related to homicide and family violence victimization.

40. We call on all levels of government, in collaboration with Aboriginal people, to create adequately funded and accessible Aboriginal-specific victim programs and services with appropriate evaluation mechanisms.

41. We call upon the federal government, in consultation with Aboriginal organizations, to appoint a public inquiry into the causes of, and remedies for, the disproportionate victimization of Aboriginal women and girls. The inquiry's mandate would include:

    i. Investigation into missing and murdered Aboriginal women and girls.

    ii. Links to the intergenerational legacy of residential schools.

42. We call upon the federal, provincial, and territorial governments to commit to the recognition and implementation of Aboriginal justice systems in a manner consistent with the Treaty and Aboriginal rights of Aboriginal peoples, the *Constitution Act, 1982*, and the *United Nations Declaration on the Rights of Indigenous Peoples*, endorsed by Canada in November 2012.

Reconciliation

Canadian Governments and the *United Nations Declaration on the Rights of Indigenous People*

43. We call upon federal, provincial, territorial, and municipal governments to fully adopt and implement the *United Nations Declaration on the Rights of Indigenous Peoples* as the framework for reconciliation.

44. We call upon the Government of Canada to develop a national action plan, strategies, and other concrete measures to achieve the goals of the *United Nations Declaration on the Rights of Indigenous Peoples*.

Royal Proclamation and Covenant of Reconciliation

45. We call upon the Government of Canada, on behalf of all Canadians, to jointly develop with Aboriginal peoples a Royal Proclamation of Reconciliation to be issued by the Crown. The proclamation would build on the Royal Proclamation of 1763 and the Treaty of Niagara of 1764, and reaffirm the nation-to-nation relationship between Aboriginal peoples and the Crown. The proclamation would include, but not be limited to, the following commitments:

i. Repudiate concepts used to justify European sovereignty over Indigenous lands and peoples such as the Doctrine of Discovery and *terra nullius*.

ii. Adopt and implement the *United Nations Declaration on the Rights of Indigenous Peoples* as the framework for reconciliation.

iii. Renew or establish Treaty relationships based on principles of mutual recognition, mutual respect, and shared responsibility for maintaining those relationships into the future.

iv. Reconcile Aboriginal and Crown constitutional and legal orders to ensure that Aboriginal peoples are full partners in Confederation, including the recognition and integration of Indigenous laws and legal traditions in negotiation and implementation processes involving Treaties, land claims, and other constructive agreements.

46. We call upon the parties to the Indian Residential Schools Settlement Agreement to develop and sign a Covenant of Reconciliation that would identify principles for working collaboratively to advance reconciliation in Canadian society, and that would include, but not be limited to:

    i. Reaffirmation of the parties' commitment to reconciliation.

    ii. Repudiation of concepts used to justify European sovereignty over Indigenous lands and peoples, such as the Doctrine of Discovery and *terra nullius*, and the reformation of laws, governance structures, and policies within their respective institutions that continue to rely on such concepts.

    iii. Full adoption and implementation of the *United Nations Declaration on the Rights of Indigenous Peoples* as the framework for reconciliation.

    iv. Support for the renewal or establishment of Treaty relationships based on principles of mutual recognition, mutual respect, and shared responsibility for maintaining those relationships into the future.

    v. Enabling those excluded from the Settlement Agreement to sign onto the Covenant of Reconciliation.

    vi. Enabling additional parties to sign onto the Covenant of Reconciliation.

47. We call upon federal, provincial, territorial, and municipal governments to repudiate concepts used to justify European sovereignty over Indigenous peoples and lands, such as the Doctrine of Discovery and *terra nullius,* and to reform those laws, government policies, and litigation strategies that continue to rely on such concepts.

Settlement Agreement Parties and the *United Nations Declaration on the Rights of Indigenous Peoples*

48. We call upon the church parties to the Settlement Agreement, and all other faith groups and interfaith social justice groups in Canada who have not already done so, to formally adopt and comply with the principles, norms, and standards of the *United Nations Declaration on the Rights of Indigenous Peoples* as a framework for reconciliation. This would include, but not be limited to, the following commitments:

    i. Ensuring that their institutions, policies, programs, and practices comply with the *United Nations Declaration on the Rights of Indigenous Peoples*.

    ii. Respecting Indigenous peoples' right to self-determination in spiritual matters, including the right to practise, develop, and teach their own spiritual and religious traditions, customs, and ceremonies, consistent with Article 12:1 of the *United Nations Declaration on the Rights of Indigenous Peoples*.

    iii. Engaging in ongoing public dialogue and actions to support the *United Nations Declaration on the Rights of Indigenous Peoples*.

    iv. Issuing a statement no later than March 31, 2016, from all religious denominations and faith groups, as to how they will implement the *United Nations Declaration on the Rights of Indigenous Peoples*.

49. We call upon all religious denominations and faith groups who have not already done so to repudiate concepts used to justify European sovereignty over Indigenous lands and peoples, such as the Doctrine of Discovery and *terra nullius*.

Equity for Aboriginal People in the Legal System

50. In keeping with the *United Nations Declaration on the Rights of Indigenous Peoples*, we call upon the federal government, in collaboration with Aboriginal organizations, to fund the establishment of Indigenous law institutes for the development, use, and

understanding of Indigenous laws and access to justice in accordance with the unique cultures of Aboriginal peoples in Canada.

51. We call upon the Government of Canada, as an obligation of its fiduciary responsibility, to develop a policy of transparency by publishing legal opinions it develops and upon which it acts or intends to act, in regard to the scope and extent of Aboriginal and Treaty rights.

52. We call upon the Government of Canada, provincial and territorial governments, and the courts to adopt the following legal principles:

    i. Aboriginal title claims are accepted once the Aboriginal claimant has established occupation over a particular territory at a particular point in time.

    ii. Once Aboriginal title has been established, the burden of proving any limitation on any rights arising from the existence of that title shifts to the party asserting such a limitation.

National Council for Reconciliation

53. We call upon the Parliament of Canada, in consultation and collaboration with Aboriginal peoples, to enact legislation to establish a National Council for Reconciliation. The legislation would establish the council as an independent, national, oversight body with membership jointly appointed by the Government of Canada and national Aboriginal organizations, and consisting of Aboriginal and non-Aboriginal members. Its mandate would include, but not be limited to, the following:

    i. Monitor, evaluate, and report annually to Parliament and the people of Canada on the Government of Canada's post-apology progress on reconciliation to ensure that government accountability for reconciling the relationship between Aboriginal peoples and the Crown is maintained in the coming years.

    ii. Monitor, evaluate, and report to Parliament and the people of Canada on reconciliation progress across all levels and sectors of Canadian society, including the implementation of the Truth and Reconciliation Commission of Canada's Calls to Action.

    iii. Develop and implement a multi-year National Action Plan for Reconciliation, which includes research and policy development, public education programs, and resources.

    iv. Promote public dialogue, public/private partnerships, and public initiatives for reconciliation.

54. We call upon the Government of Canada to provide multi-year funding for the National Council for Reconciliation to ensure that it has the financial, human, and technical resources required to conduct its work, including the endowment of a National Reconciliation Trust to advance the cause of reconciliation.

55. We call upon all levels of government to provide annual reports or any current data requested by the National Council for Reconciliation so that it can report on the progress towards reconciliation. The reports or data would include, but not be limited to:

    i. The number of Aboriginal children—including Métis and Inuit children—in care, compared with non-Aboriginal children, the reasons for apprehension, and the total spending on preventive and care services by child-welfare agencies.

    ii. Comparative funding for the education of First Nations children on and off reserves.

    iii. The educational and income attainments of Aboriginal peoples in Canada compared with non-Aboriginal people.

    iv. Progress on closing the gaps between Aboriginal and non-Aboriginal communities in a number of health indicators such as: infant mortality, maternal health, suicide, mental health, addictions, life expectancy, birth rates, infant and child health issues, chronic diseases, illness and injury incidence, and the availability of appropriate health services.

    v. Progress on eliminating the overrepresentation of Aboriginal children in youth custody over the next decade.

    vi. Progress on reducing the rate of criminal victimization of Aboriginal people, including data related to homicide and family violence victimization and other crimes.

    vii. Progress on reducing the overrepresentation of Aboriginal people in the justice and correctional systems.

56. We call upon the prime minister of Canada to formally respond to the report of the National Council for Reconciliation by issuing an annual "State of Aboriginal Peoples" report, which would outline the government's plans for advancing the cause of reconciliation.

Professional Development and Training for Public Servants

57. We call upon federal, provincial, territorial, and municipal governments to provide education to public servants on the history of Aboriginal peoples, including the history and legacy of residential schools, the *United Nations Declaration on the Rights of Indigenous Peoples*, Treaties and Aboriginal rights, Indigenous law, and Aboriginal–Crown relations. This will require skills-based training in intercultural competency, conflict resolution, human rights, and anti-racism.

Church Apologies and Reconciliation

58. We call upon the Pope to issue an apology to Survivors, their families, and communities for the Roman Catholic Church's role in the spiritual, cultural, emotional, physical, and sexual abuse of First Nations, Inuit, and Métis children in Catholic-run residential schools. We call for that apology to be similar to the 2010 apology issued to Irish victims of abuse and to occur within one year of the issuing of this Report and to be delivered by the Pope in Canada.

59. We call upon church parties to the Settlement Agreement to develop ongoing education strategies to ensure that their respective congregations learn about their church's role in colonization, the history and legacy of residential schools, and why apologies to former residential school students, their families, and communities were necessary.

60. We call upon leaders of the church parties to the Settlement Agreement and all other faiths, in collaboration with Indigenous spiritual leaders, Survivors, schools of theology, seminaries, and other religious training centres, to develop and teach curriculum for all student clergy, and all clergy and staff who work in Aboriginal communities, on the need to respect Indigenous spirituality in its own right, the history and legacy of residential schools and the roles of the church parties in that system, the history and legacy of religious conflict in Aboriginal families and communities, and the responsibility that churches have to mitigate such conflicts and prevent spiritual violence.

61. We call upon church parties to the Settlement Agreement, in collaboration with Survivors and representatives of Aboriginal organizations, to establish permanent funding to Aboriginal people for:

    i. Community-controlled healing and reconciliation projects.

    ii. Community-controlled culture- and language-revitalization projects.

    iii. Community-controlled education and relationship-building projects.

    iv. Regional dialogues for Indigenous spiritual leaders and youth to discuss Indigenous spirituality, self-determination, and reconciliation.

Education for reconciliation

62. We call upon the federal, provincial, and territorial governments, in consultation and collaboration with Survivors, Aboriginal peoples, and educators, to:

    i. Make age-appropriate curriculum on residential schools, Treaties, and Aboriginal peoples' historical and contemporary contributions to Canada a mandatory education requirement for Kindergarten to Grade Twelve students.

    ii. Provide the necessary funding to post-secondary institutions to educate teachers on how to integrate Indigenous knowledge and teaching methods into classrooms.

    iii. Provide the necessary funding to Aboriginal schools to utilize Indigenous knowledge and teaching methods in classrooms.

    iv. Establish senior-level positions in government at the assistant deputy minister level or higher dedicated to Aboriginal content in education.

63. We call upon the Council of Ministers of Education, Canada to maintain an annual commitment to Aboriginal education issues, including:

    i. Developing and implementing Kindergarten to Grade Twelve curriculum and learning resources on Aboriginal peoples in Canadian history, and the history and legacy of residential schools.

    ii. Sharing information and best practices on teaching curriculum related to residential schools and Aboriginal history.

    iii. Building student capacity for intercultural understanding, empathy, and mutual respect.

    iv. Identifying teacher-training needs relating to the above.

64. We call upon all levels of government that provide public funds to denominational schools to require such schools to provide an education on comparative religious studies, which must include a segment on

Aboriginal spiritual beliefs and practices developed in collaboration with Aboriginal Elders.

65. We call upon the federal government, through the Social Sciences and Humanities Research Council, and in collaboration with Aboriginal peoples, post-secondary institutions and educators, and the National Centre for Truth and Reconciliation and its partner institutions, to establish a national research program with multi-year funding to advance understanding of reconciliation.

Youth Programs

66. We call upon the federal government to establish multi-year funding for community-based youth organizations to deliver programs on reconciliation, and establish a national network to share information and best practices.

Museums and Archives

67. We call upon the federal government to provide funding to the Canadian Museums Association to undertake, in collaboration with Aboriginal peoples, a national review of museum policies and best practices to determine the level of compliance with the *United Nations Declaration on the Rights of Indigenous Peoples* and to make recommendations.

68. We call upon the federal government, in collaboration with Aboriginal peoples, and the Canadian Museums Association to mark the 150th anniversary of Canadian Confederation in 2017 by establishing a dedicated national funding program for commemoration projects on the theme of reconciliation.

69. We call upon Library and Archives Canada to:

    i. Fully adopt and implement the *United Nations Declaration on the Rights of Indigenous Peoples* and the *United Nations Joinet-Orentlicher Principles*, as related to Aboriginal peoples' inalienable right to know the truth about what happened and why, with regard to human rights violations committed against them in the residential schools.

    ii. Ensure that its record holdings related to residential schools are accessible to the public.

    iii. Commit more resources to its public education materials and programming on residential schools.

70. We call upon the federal government to provide funding to the Canadian Association of Archivists to undertake, in collaboration with Aboriginal peoples, a national review of archival policies and best practices to:

    i. Determine the level of compliance with the *United Nations Declaration on the Rights of Indigenous Peoples* and the *United Nations Joinet-Orentlicher Principles*, as related to Aboriginal peoples' inalienable right to know the truth about what happened and why, with regard to human rights violations committed against them in the residential schools.

    ii. Produce a report with recommendations for full implementation of these international mechanisms as a reconciliation framework for Canadian archives.

Missing Children and Burial Information

71. We call upon all chief coroners and provincial vital statistics agencies that have not provided to the Truth and Reconciliation Commission of Canada their records on the deaths of Aboriginal children in the care of residential school authorities to make these documents available to the National Centre for Truth and Reconciliation.

72. We call upon the federal government to allocate sufficient resources to the National Centre for Truth and Reconciliation to allow it to develop and maintain the National Residential School Student Death Register established by the Truth and Reconciliation Commission of Canada.

73. We call upon the federal government to work with churches, Aboriginal communities, and former residential school students to establish and maintain an online registry of residential school cemeteries, including, where possible, plot maps showing the location of deceased residential school children.

74. We call upon the federal government to work with the churches and Aboriginal community leaders to inform the families of children who died at residential schools of the child's burial location, and to respond to families' wishes for appropriate commemoration ceremonies and markers, and reburial in home communities where requested.

75. We call upon the federal government to work with provincial, territorial, and municipal governments, churches, Aboriginal communities, former residential school students, and current landowners to develop and implement strategies and procedures for the ongoing identification, documentation, maintenance, commemoration, and protection of residential school cemeteries or other sites at which residential school children were buried. This is to include the provision of

appropriate memorial ceremonies and commemorative markers to honour the deceased children.

76. We call upon the parties engaged in the work of documenting, maintaining, commemorating, and protecting residential school cemeteries to adopt strategies in accordance with the following principles:

    i. The Aboriginal community most affected shall lead the development of such strategies.

    ii. Information shall be sought from residential school Survivors and other Knowledge Keepers in the development of such strategies.

    iii. Aboriginal protocols shall be respected before any potentially invasive technical inspection and investigation of a cemetery site.

National Centre for Truth and Reconciliation

77. We call upon provincial, territorial, municipal, and community archives to work collaboratively with the National Centre for Truth and Reconciliation to identify and collect copies of all records relevant to the history and legacy of the residential school system, and to provide these to the National Centre for Truth and Reconciliation.

78. We call upon the Government of Canada to commit to making a funding contribution of $10 million over seven years to the National Centre for Truth and Reconciliation, plus an additional amount to assist communities to research and produce histories of their own residential school experience and their involvement in truth, healing, and reconciliation.

Commemoration

79. We call upon the federal government, in collaboration with Survivors, Aboriginal organizations, and the arts community, to develop a reconciliation framework for Canadian heritage and commemoration. This would include, but not be limited to:

    i. Amending the Historic Sites and Monuments Act to include First Nations, Inuit, and Métis representation on the Historic Sites and Monuments Board of Canada and its Secretariat.

    ii. Revising the policies, criteria, and practices of the National Program of Historical Commemoration to integrate Indigenous history, heritage values, and memory practices into Canada's national heritage and history.

    iii. Developing and implementing a national heritage plan and strategy for commemorating residential school sites, the history and legacy of residential schools, and the contributions of Aboriginal peoples to Canada's history.

80. We call upon the federal government, in collaboration with Aboriginal peoples, to establish, as a statutory holiday, a National Day for Truth and Reconciliation to honour Survivors, their families, and communities, and ensure that public commemoration of the history and legacy of residential schools remains a vital component of the reconciliation process.

81. We call upon the federal government, in collaboration with Survivors and their organizations, and other parties to the Settlement Agreement, to commission and install a publicly accessible, highly visible, Residential Schools National Monument in the city of Ottawa to honour Survivors and all the children who were lost to their families and communities.

82. We call upon provincial and territorial governments, in collaboration with Survivors and their organizations, and other parties to the Settlement Agreement, to commission and install a publicly accessible, highly visible, Residential Schools Monument in each capital city to honour Survivors and all the children who were lost to their families and communities.

83. We call upon the Canada Council for the Arts to establish, as a funding priority, a strategy for Indigenous and non-Indigenous artists to undertake collaborative projects and produce works that contribute to the reconciliation process.

Media and Reconciliation

84. We call upon the federal government to restore and increase funding to the CBC/Radio-Canada, to enable Canada's national public broadcaster to support reconciliation, and be properly reflective of the diverse cultures, languages, and perspectives of Aboriginal peoples, including, but not limited to:

    i. Increasing Aboriginal programming, including Aboriginal-language speakers.

    ii. Increasing equitable access for Aboriginal peoples to jobs, leadership positions, and professional development opportunities within the organization.

    iii. Continuing to provide dedicated news coverage and online public information resources on issues of concern to Aboriginal peoples and all Canadians,

including the history and legacy of residential schools and the reconciliation process.

85. We call upon the Aboriginal Peoples Television Network, as an independent non-profit broadcaster with programming by, for, and about Aboriginal peoples, to support reconciliation, including but not limited to:

    i. Continuing to provide leadership in programming and organizational culture that reflects the diverse cultures, languages, and perspectives of Aboriginal peoples.

    ii. Continuing to develop media initiatives that inform and educate the Canadian public, and connect Aboriginal and non-Aboriginal Canadians.

86. We call upon Canadian journalism programs and media schools to require education for all students on the history of Aboriginal peoples, including the history and legacy of residential schools, the *United Nations Declaration on the Rights of Indigenous Peoples*, Treaties and Aboriginal rights, Indigenous law, and Aboriginal–Crown relations.

Sports and Reconciliation

87. We call upon all levels of government, in collaboration with Aboriginal peoples, sports halls of fame, and other relevant organizations, to provide public education that tells the national story of Aboriginal athletes in history.

88. We call upon all levels of government to take action to ensure long-term Aboriginal athlete development and growth, and continued support for the North American Indigenous Games, including funding to host the games and for provincial and territorial team preparation and travel.

89. We call upon the federal government to amend the Physical Activity and Sport Act to support reconciliation by ensuring that policies to promote physical activity as a fundamental element of health and well-being, reduce barriers to sports participation, increase the pursuit of excellence in sport, and build capacity in the Canadian sport system, are inclusive of Aboriginal peoples.

90. We call upon the federal government to ensure that national sports policies, programs, and initiatives are inclusive of Aboriginal peoples, including, but not limited to, establishing:

    i. In collaboration with provincial and territorial governments, stable funding for, and access to, community sports programs that reflect the diverse cultures and traditional sporting activities of Aboriginal peoples.

    ii. An elite athlete development program for Aboriginal athletes.

    iii. Programs for coaches, trainers, and sports officials that are culturally relevant for Aboriginal peoples.

    iv. Anti-racism awareness and training programs.

91. We call upon the officials and host countries of international sporting events such as the Olympics, Pan Am, and Commonwealth games to ensure that Indigenous peoples' territorial protocols are respected, and local Indigenous communities are engaged in all aspects of planning and participating in such events.

Business and Reconciliation

92. We call upon the corporate sector in Canada to adopt the *United Nations Declaration on the Rights of Indigenous Peoples* as a reconciliation framework and to apply its principles, norms, and standards to corporate policy and core operational activities involving Indigenous peoples and their lands and resources. This would include, but not be limited to, the following:

    i. Commit to meaningful consultation, building respectful relationships, and obtaining the free, prior, and informed consent of Indigenous peoples before proceeding with economic development projects.

    ii. Ensure that Aboriginal peoples have equitable access to jobs, training, and education opportunities in the corporate sector, and that Aboriginal communities gain long-term sustainable benefits from economic development projects.

    iii. Provide education for management and staff on the history of Aboriginal peoples, including the history and legacy of residential schools, the *United Nations Declaration on the Rights of Indigenous Peoples*, Treaties and Aboriginal rights, Indigenous law, and Aboriginal–Crown relations. This will require skills based training in intercultural competency, conflict resolution, human rights, and anti-racism.

Newcomers to Canada

93. We call upon the federal government, in collaboration with the national Aboriginal organizations, to revise the information kit for newcomers to Canada and its citizenship test to reflect a more inclusive history of the diverse Aboriginal peoples of Canada, including

information about the Treaties and the history of residential schools.

94. We call upon the Government of Canada to replace the Oath of Citizenship with the following:

> I swear (or affirm) that I will be faithful and bear true allegiance to Her Majesty Queen Elizabeth II, Queen of Canada, Her Heirs and Successors, and that I will faithfully observe the laws of Canada including Treaties with Indigenous Peoples, and fulfill my duties as a Canadian citizen.

unicef
for every child

In Focus:
Access to justice for children

Helping children and families hold those who violate their rights to account

OCTOBER 2024

unicef
for every child

Access to justice for children is not only a specific human right, it is also a crucial way to uphold all the other rights that should be guaranteed for every child, from access to health care and education to protection from violence.

Across Europe and Central Asia, however, access to justice for children is obstructed by systems that fail to recognize their rights or to act in their best interests. Attitudes within justice systems make it difficult – or even unacceptable – for children to come forward, speak out and demand their right to justice.

Full access to justice for every child could, however, generate a powerful 'triple win' that benefits entire communities and nations, as well as children themselves:

- it would reinforce human rights
- it would reinforce the rule of law
- it would support sustainable development by upholding and enforcing the full range of rights for every child to ensure their health, development, well-being and inclusion.

In Europe and Central Asia, as elsewhere around the world, UNICEF champions access to justice for all children whose rights are violated. We advocate for effective child-friendly justice systems across the region that enable children to come forward when their rights have been violated, that prioritize the child's best interests, and that use child detention and other custodial measures only as a measure of last resort.

01
Key facts

Children from poor family backgrounds receive less information than others about their rights, are less likely to seek redress and have greater difficulties in paying for lawyers, court fees and transportation.

The disruption of being heavily involved in the criminal justice system can undermine a child's ability to reach key developmental milestones – with potentially lifelong consequences.

Children with disabilities may lack the communication aids and targeted support that would make it possible for them to participate in justice processes, while children from ethnic minorities, including Roma, experience stigma.

60%

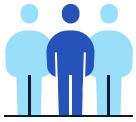
UNICEF's work in Europe and Central Asia contributed to a 60% decrease in the number of children in detention between 2006 and 2012, according to a 2015 independent evaluation on juvenile justice in the region.

Adolescent boys are more likely to be in juvenile detention facilities or to come into conflict with the law than adolescent girls. However, while there are fewer girls in the justice system, there are also fewer services and female police officers to meet their needs.

82%

In Albania and North Macedonia, the number of children in pretrial detention decreased by 82% between 2011 and 2018, and in Montenegro, there were no children in pre- or post-trial detention as of 2018.

02
Key policy frameworks



SUSTAINABLE DEVELOPMENT GOALS (2015)

SDG 16
Peace, justice and strong institutions

Target 16.3: Promote the rule of law at the national and international levels and ensure equal access to justice for all.

Below: © UNICEF/Kosovo

Children at an educational correction facility in Lipjan, Kosovo[1] take part in a life skills session – part of an UPSHIFT programme that equips children in conflict with the law with essential skills, and supports their inclusion and integration into society when they finish serving their sentences. *February 2024.*

1 All references to Kosovo should be understood to be in the context of United Nations Security Council resolution 1244 (1999)

Convention on the Rights of the Child (1989)

- **Article 3:** In all actions concerning children undertaken by courts of law, the best interests of the child shall be a primary consideration.
- **Article 12:** Children have the right to be heard in judicial and administrative proceedings affecting them.
- **Article 37:** No child shall be deprived of liberty unlawfully or arbitrarily. Children deprived of liberty have the right to legal assistance and to challenge their detention.
- **Article 40:** Every child accused of or convicted of breaking the law has the right to be treated in a manner that safeguards their sense of dignity and worth.

03
Challenges

For some children in Europe and Central Asia, the pursuit of justice remains hampered by a **lack of access to equitable and adequate child-friendly justice systems**, including a lack of specialized lawyers, prosecutors, judges and courts that are equipped to make decisions that are in children's best interests. This is particularly true for children who have complex emotional and behavioural needs and those who are under the minimum age of criminal responsibility (MACR).

As well as those in conflict with the law – and at risk of detention – there are the children who need access to justice when rights are denied, including their right to an education because of their disability or ethnicity, and children living in poverty who miss out on the social benefits to which they are entitled. They include children who face violence at home, but also those who are separated needlessly from families that could stay together with the right support.

Few children know about their right to redress, let alone how to claim that right. And even if children have this information, they may struggle to navigate their way through the justice system without specialized support.

Marginalized children lack information and redress

Across Europe and Central Asia, children who are already disadvantaged are far more likely than other children to have their rights violated. But they are also far less likely to seek – or find – support from the justice system. Children from poor family backgrounds, for example, receive less information than others about their rights, are less likely to seek redress and have greater difficulties in paying for lawyers, court fees and transportation. Children with disabilities lack the communication aids and targeted support that would make it possible for them to participate in justice processes, while children from ethnic minorities, including Roma, experience stigma.

In parts of the region, girls are more isolated than boys and, therefore, receive less information, while social norms make it even less acceptable for them to come forward in cases of abuse.

Children deprived of liberty face severe risks

Marginalized children are more likely to be placed in detention – too often the end result of a history of exclusion and a lack of effective child protection services to address family problems. Children who come into conflict with the law may be seen as less 'deserving' than others, with their individual circumstances rarely taken into account. Most children under arrest in the region have been accused of petty or non-violent offences, and some are placed in 'protective custody,' even though depriving children of their liberty should always be the very last resort.

Adolescent boys are more likely to be in juvenile detention facilities or to come into conflict with the law than adolescent girls. However, while there are fewer girls in the justice system, there are also fewer services and female police officers to meet their needs.

All children under arrest or in detention are at risk of severe rights violations, including violence and even torture, with few opportunities to report these violations to authorities. Children living behind closed doors, away from their families and often without external oversight, are among the most isolated young people in society, and completely dependent on the goodwill of those in charge.

Children deprived of liberty – whether they are in residential care or detention – have few ways to speak out about or report any abuses, and gross under-reporting means that their situation is invisible. The chances of their reintegration into the community after such experiences are slim, increasing the risk that they will face sustained poverty and exclusion.

Although the total number of children in detention dropped by almost 60 per cent in 11 countries and territories across the region between 2006 and 2012, the full picture regarding child victims and child witnesses is unclear, as data systems rarely – if ever – capture their stories.

BOX 1

Children under the Minimum Age of Criminal Responsibility (MACR)

Children under the minimum age of criminal responsibility (MACR) have complex emotional and behavioural needs and need special support and protection. Their offending behaviour is often linked to other problems in their lives, and research shows that they often lack the maturity to understand the consequences of their actions because their ability to plan, reason and control their impulses is not yet fully developed.

These children often fall outside the criminal justice system, and are often labelled as 'delinquent' or 'anti-social'. They may face punitive measures that can include deprivation of liberty in so-called 'special' schools, residential care or psychiatric institutions.

Children under the MACR who are exploited by criminal adults should always be seen as victims and need immediate and effective care, as well as protection from further exploitation. They are entitled to the same rights as other child victims and witnesses of crime, including access to justice.

The MACR in Europe and Central Asia is generally 14 years, which is in line with international standards. However, there are persistent challenges in addressing the needs of children under this age who are accused of crimes. UNICEF has developed guidance to help governments in the region establish a systematic response based on 10 action points. These include the responsibility of the child justice system to refer such children immediately to the social welfare system; ensuring that they are never deprived of their liberty; and supporting measures to prevent family separation, prioritizing family-based alternative care where necessary.

UNICEF'S GOAL

UNICEF is committed to securing equitable access to justice for all children, whether they are offenders, victims, witnesses or children claiming their rights to services.

We welcome the new and stronger child-friendly approaches to justice that are being developed across the region, characterized by a focus on all children – boys and girls – caught up in the justice system. And we advocate for tailored responses for every child whose rights are violated. These include children accused of crimes, for whom loss of liberty should be the last resort and full rehabilitation into society the ultimate aim.

04
UNICEF's work for children

UNICEF is the region's **leading advocate for equitable access to justice** for all children whose rights are being violated. We believe that the best way to guarantee children's access to justice is to adapt justice and social welfare systems to their rights and needs. We advocate for strong legal aid systems that ensure children and families know their rights, and that offer pathways to justice.

We support the provision of **tailored responses** for children accused of crimes. Our work includes support for legislative and policy reform and the development of alternatives that have helped to reduce the number of children in detention.

UNICEF's determination to reduce the rates and length of juvenile detention has helped to narrow the equity gap in juvenile justice. Our work contributed to the 60 per cent fall in the number of children in detention between 2006 and 2012, according to a 2014 independent evaluation of progress on juvenile justice in the region.

Our support focuses, in particular, on prevention, diversion, child-friendly procedures, and alternatives to detention and the deprivation of liberty.

Prevention

Prevention is the most effective way to reduce crime rates, and benefits children, families, communities and society as a whole. We support the prevention that builds a protective environment for every child by tackling the root causes of crime, such as poverty, homelessness, domestic violence and family crises, to make crimes less likely. And we support targeted help for children and families identified as being at risk of coming into conflict with the law, as well as tailored programmes for children who are already involved in the child justice system to prevent reoffending.

Diversion

We advocate for and support diversion measures that deal with children in conflict with the law without resorting to formal judicial proceedings or formal trials, and that include the referral of children to community-based organizations, services, programmes or activities. Such measures avoid the stigma of conviction and criminal records, reduce pre-trial detention, yield better long-term results for children and for public safety, and are cost-effective.

R.R. 17, walks through a park in Dushanbe, Tajikistan. With little support from his community, and facing the challenges of stigma after being released from a detention facility, R.R. is now taking part in a support programme run by UNICEF that provides him with the guidance, education and psychosocial support he needs to rebuild his life and reintegrate into society. *November 2022.*

BOX 2

In Georgia, diversion is a turning point for Mariam

Mariam went into the shop to look for a birthday present for a classmate, "but nothing I could afford seemed to be good enough; she always looks perfect." On the spur of the moment, the 16-year-old hid a bracelet under her sweater – and was caught immediately. Facing severe consequences, Mariam's first and only contact with Georgia's justice system was to be a turning point in her life.

That was when she first heard the term 'diversion'. This alternative to criminal proceedings in the juvenile justice system is prioritized for children who commit offences under Georgia's Juvenile Justice Code. UNICEF and the European Union have supported the Diversion and Mediation Programme in Georgia since its launch in 2010 and it has, to date, diverted around 5,600 children and young people from criminal proceedings.

Because it was her first offence, and because she showed deep remorse, she was enrolled in the diversion programme, where social workers helped her to understand her behaviour. Art therapy helped her with her emotional struggles, and she learned how to better navigate life's daily challenges.

Social workers who match diverted children with activities that interest them noticed her love of reading. As a result, Mariam worked as a volunteer for a month at the Sulakauri Publishing House – a member of the Business Advisory Council for Children created by UNICEF. This gave her a sense of community membership.

"I didn't feel like a 'diverted child' at all," she says. "Every time I came to work, I felt like a member of the team." As a result of her six months in the diversion programme, Mariam reset her priorities and learned to be more open about her feelings with friends and family. She is now studying for her university entrance exams.

"I learned that no one is immune to mistakes, and you have to take responsibility for your own mistakes," she says. "I can now focus on my future, education, and career."

Child-friendly legal procedures

UNICEF works with authorities across the region to adapt justice systems so they are age-appropriate and empowering for children. This work includes training professionals, such as police officers, social workers, judges and lawyers in child-friendly case management so that decisions are made in the best interests of each child. We also support investment in alternatives to intimidating court experiences, such as interventions by Ombudsman's offices, as a way to resolve legal disputes. Our work has, for example, included the development of 12 guidelines for child-friendly legal aid for children, aimed at lawyers, paralegals and other legal practitioners who represent children in civil, criminal, administrative and restorative justice proceedings. These guidelines range from acting in a child's best interests to keeping children safe.

Alternatives to child detention and the deprivation of liberty

Detaining children is never in their best interests, given its harmful effects on their development and reintegration. UNICEF works to end child detention through reforms that strengthen child protection services, promote non-custodial measures, and provide better post-release support.

Children should remain with their parents or caregivers while they are waiting to be charged or tried if possible, and non-custodial alternatives to post-trial detention should provide community-based options for the supervision and rehabilitation of children found guilty of a criminal offence. Potential alternatives include participation in community-based programmes, restorative justice programmes, drug or alcohol treatment, counselling or attendance at day centres. This is no 'easy ride': the aim is to hold children accountable, help them change their behaviour and become productive, law-abiding citizens.

BOX 3

Preventing the detention of refugee children in Poland

In Poland, the first 160 judges have been trained to prevent the detention of refugee children, including those who have fled from Ukraine, by the National School of Judiciary and Prosecution, with the support of the UNICEF Refugee Response Office in Poland and the Ministry of Justice. The project, launched in March 2023, includes training on alternative measures to detention for foreign minors, in line with the recommendations of the UN group on children deprived of liberty, which aims to eliminate the detention of children for migration reasons.

Almost 4,000 people have, to date, participated in the training, including prosecutors, legal advisors, court guardians and the 160 judges.

"This is an important step towards ensuring justice and protection for children with migration experience, who are among the most vulnerable groups of children" says Milena Harizanova from the UNICEF Refugee Response Office in Poland. "This project not only educates, but also builds a solid foundation for a more empathetic and understandable justice system for all children in Poland, regardless of where they come from."

This support to the Polish justice system has been funded by donors from around the world, including the Bureau of Population, Refugees, and Migration of the U.S. Department of State.

05
Call to action

While the number of children in detention in Europe and Central Asia has fallen, there is a long way to go before every child has equitable access to the justice that allows them to claim their rights. While countries in the region are at different stages on this issue, those that already see juvenile detention as a last resort are well-placed to take the lead on full access to justice for all children, including those seeking justice; those involved in judicial proceedings as victims, witnesses and offenders; and those participating in civil or administrative justice processes.

With the right resources, UNICEF can do even more to support the adaptation of police and court proceedings to the needs of children, expand education on child rights, and ramp up our work on legal aid and social support for children and their families. As the leading UN agency for children working on this issue across the region, UNICEF is well-placed to help ensure that the rights of children are upheld in justice systems across Europe and Central Asia.

Image: ©UNICEFGeorgia

An illustration from a video about a special service centre for child survivors of sexual violence in Georgia. Children who have survived such violence often go through processes to bring the perpetrators to justice that can add to their pain by making them relive their experiences over and over again. These processes are now changing in Europe and Central Asia, with the support of UNICEF and its partners. New approaches aim to protect children from re-traumatization, bringing the investigation of the crime and support for the child together in one child-friendly space. Trained professionals from different areas – from police officers to child welfare and protection professionals – work together on each case, putting the best interest of the individual child front and centre. Barnahus centres, for example, are warm and welcoming spaces where children can testify without having to set foot in a court or see the perpetrator. Here, a trained psychologist will take their statement just once, and share it with the other professionals working on the case. *2021.*

WHAT IS A CHILD RIGHTS IMPACT ASSESSMENT?

Impact assessment

Impact assessment is the systematic analysis of the potential changes positive or negative, intended or not, direct or indirect, short-term or long-term, in people's lives brought about by a given decision or action.

Child rights impact assessment (CRIA) is, in the simplest terms, a tool for decision-making in the best interests of children. CRIA is a systematic process or methodology of ensuring children's best interests and the potential impacts of policy change upon them are considered in the policy-making process. CRIA involves examining a proposed law or policy, administrative decision or action in a structured manner to determine its potential impact on children or a specific group of children, and whether it will effectively protect and implement the rights set out for children in the Convention on the Rights of the Child. Potential impacts may be positive or negative, intended or not, direct or indirect, short or long-term. A CRIA should be undertaken whenever there are new policies, proposed legislation, regulations or budgets being adopted, or other administrative decisions at national, provincial/territorial, and local levels that can have an impact on children. In this context, it will generally be used more in the consideration of impacts on children as a group, and – with an equity filter – on specific groups of children, rather than on individual children. It uses the framework of the Convention on the Rights of the Child and its Optional Protocols as a lens: considering the full scope of rights, the core principles, and also the Concluding Observations from the country's progress reports.

Scope of the CRIA methodology

DONNEZ

It would be impossible to carry out a CRIA on every legislative or policy decision across the government that might have an effect on children. Instead, CRIA should be carried out on those decisions that are likely to have a significant impact on children, including both those that directly concern children – such as criminal justice, immigration or child health policy – and those that may have a more indirect impact where children are not obvious stakeholders – such as macroeconomic policy reform that will have an impact on family incomes.

Three steps for carrying out an ex-ante CRIA

The CRIA process should be simple enough to be useful and in repeated use, and detailed enough to be meaningful. There are three basic steps to carrying out an effective CRIA:

Step One: Selection, Screening and Scoping

Step Two: Assessment

Step Three: Communication

Selection, screening and scoping

This step is used to identify what could be assessed and what will be assessed. It would also include an initial screening of the measure to be assessed to identify what particular rights and issues may be affected that should be looked at in more depth during the assessment phase.

Recognizing that the Convention covers a wide range of rights that may seem overwhelming, the process can use a well-accepted consolidated version of the articles as a first step, for the screening process, to identify what groups of rights are relevant (i.e., "clusters" of rights that the government uses when reporting to the UN Committee on the Rights of the Child) Back to Top

ssessment

The analysis of the law, policy or regulation seeks to identify potential impacts on children, based on input from a number of sources: academic literature and studies that identify impacts on children in the area under assessment, input from experts (including from children and civil society), relevant jurisprudence, and the Concluding Observations from the UN Committee on the Rights of the Child as appropriate. Depending on the time frame and depth of the analysis, different tools can be used for the assessment ranging from checklists to more detailed modelling of potential impacts on children. Assessment will also include engaging with relevant government departments that have a responsibility for this area of policy. The assessment should explicitly address the four core principles of the Convention – non-discrimination, the best interests of the child, child survival and development, and the need to elicit and give due consideration to the views of children (articles 2, 3, 6 and 12), and the other relevant articles of the Convention identified during the screening process. The CRIA analysis should be used to formulate recommendations (in partnership with key departments and/or levels of government involved in the development and implementation of the policy), setting out potential amendments, enhancements and alternative policies to address any concerns that have arisen through the CRIA process.

The UNICEF *Implementation Handbook for the Convention on the Rights of the Child* is an extremely valuable reference as it explains each of the articles in clear and accessible language, using jurisprudence and other guidance from the UN Committee on the Rights of the Child to show how the Convention can be realized in practical terms. The Handbook is used by the European Union for legislative screening. Back to Top

Communication

Publicizing and communicating the CRIA, its results and recommendations is essential to inform the decision-making process, to encourage ownership of the results of the impact assessment and to enable transparency. This communication can be internal or external to government depending on the point in time in the decision-making process.

An *ex ante* CRIA can also serve as important input into designing a monitoring and evaluation process for the relevant law or policy. Monitoring should

identify whether the projected impacts did in fact have the effects identified, identify unforeseen impacts, etc. Back to Top

United Nations E/C.12/CAN/CO/6

Economic and Social Council

Distr.: General
23 March 2016

Original: English

Committee on Economic, Social and Cultural Rights

Concluding observations on the sixth periodic report of Canada*

1. The Committee on Economic, Social and Cultural Rights considered the sixth periodic report of Canada on the implementation of the International Covenant on Economic, Social and Cultural Rights (E/C.12/CAN/6) at its 6th and 7th meetings (E/C.12/2016/SR.6-7), held on 24 and 25 February 2016, and adopted the following concluding observations at its 20th meeting, held on 4 March 2016.

A. Introduction

2. The Committee welcomes the sixth periodic report submitted by the State party and the supplementary information provided in the replies to the list of issues (E/C.12/CAN/Q/6/Add.1). The Committee also welcomes the oral replies provided by the high-level delegation.

B. Positive aspects

3. The Committee welcomes the State party's ratification of the Convention on the Rights of Persons with Disabilities, in 2010.

4. The Committee notes with appreciation the measures taken by the State party to enhance the promotion and protection of economic, social and cultural rights, including:

(a) The repeal of section 67 of the Canadian Human Rights Act in 2008, thus enabling people to file complaints with the Canadian Human Rights Commission regarding discrimination resulting from the application of the Indian Act;

(b) The restoration of the Interim Federal Health Program in December 2015 for certain categories of refugees and asylum seekers that had been eliminated in 2012;

(c) The State party's decision in 2015 to establish a national inquiry into murders and disappearances of indigenous women and girls;

(d) The State party's commitment to implement the United Nations Declaration on the Rights of Indigenous Peoples (2007);

* Adopted by the Committee at its fifty-seventh session (22 February-4 March 2016).

Please recycle

(e) The State party's commitment to reinstate the long-form census and the launch of the new Canadian Survey on Disability;

(f) The recent appointment of the new federal Cabinet, in which 50 per cent of new ministers are women and 17 per cent are "visible minorities".

C. Principal subjects of concern and recommendations

Domestic application of the Covenant

5. The Committee is concerned that, despite certain promising developments and the Government's commitment to review its litigation strategies, economic, social and cultural rights remain generally non-justiciable in domestic courts. The Committee is also concerned at the limited availability of legal remedies for victims in the event of a violation of Covenant rights, which may disproportionately impact disadvantaged and marginalized groups and individuals, including homeless persons, indigenous peoples and persons with disabilities.

6. **The Committee recommends that the State party take the legislative measures necessary to give full effect to the Covenant rights in its legal order and ensure that victims have access to effective remedies. The Committee recommends that the State party implement its commitment to review its litigation strategies in order to foster the justiciability of the economic, social and cultural rights. The State party should engage civil society and organizations of indigenous peoples in that revision, with a view to broadening the interpretation of the Canadian Charter of Rights and Freedoms, notably sections 7, 12 and 15, to include economic social and cultural rights, and thus ensure the justiciability of Covenant rights. The Committee also recommends that the State party improve human rights training programmes in order to ensure better knowledge, awareness and application of the Covenant, in particular among the judiciary and law enforcement and public officials. The Committee refers to its general comments No. 3 (1990) on the nature of States parties' obligations and No. 9 (1998) on the domestic application of the Covenant.**

Intergovernmental arrangements under the federal system

7. The Committee welcomes the reassurance provided by the State party that its federal structure may enhance implementation through local and regional accountability measures and notes that the State party has referred in its common core document to section 36 of the Constitution Act, 1982 in that context. The Committee is concerned, however, that funding and other agreements with provinces, territories and municipalities do not establish responsibilities for the implementation of Covenant rights at the different levels.

8. **The Committee recommends that economic, social and cultural rights be incorporated into intergovernmental agreements and enabling legislation for municipalities, and that transfer of payments take into due account compliance with Covenant rights.**

Maximum available resources

9. The Committee is concerned about stagnation in the levels of social spending as a share of gross domestic product. The Committee is also concerned at the low levels of corporate tax rates if compared with other rich countries, and about the disproportionate impact of austerity measures introduced in a number of provinces on disadvantaged and marginalized groups and individuals (art. 2 (1)).

10. **The Committee recommends that the State party increase national spending to guarantee Covenant rights so as to achieve the progressive realization of economic, social and cultural rights. The Committee urges the State party to adopt and implement a tax policy that is adequate and socially equitable and improves tax collection, so as to ensure the mobilization of resources sufficient for implementing economic, social and cultural rights, with special attention paid to disadvantaged and marginalized individuals and groups. In that regard, the Committee encourages the State party to collect disaggregated data based on the prohibited grounds of discrimination. The Committee recommends that the State party monitor closely the introduction of austerity measures by provinces and ensure that they do not undermine the minimum core content of all the Covenant rights, and that such austerity measures are not discriminatory and are temporary, necessary and proportionate. The Committee refers the State party to the letter sent by the Committee's Chairperson on austerity measures to all States parties on 16 May 2012.**

Official development assistance

11. The Committee is concerned about the level of official development assistance (0.24 per cent of gross national income).

12. **The Committee recommends that the State party raise the official development assistance level so as to meet the internationally recognized target of 0.7 per cent of gross national income, and pursue a human rights-based approach in its development cooperation policy.**

Free, prior and informed consent of indigenous peoples

13. The Committee is concerned that the right to free, prior and informed consent of indigenous peoples to any change to their lands and territories is not adequately incorporated in domestic legislation and not consistently applied by the State party. The Committee, while acknowledging the State party's statement that this issue will be revised by the new Government, remains concerned about the lack of formal mechanisms and processes that enable meaningful consultation with indigenous peoples, particularly in the context of the operation of extractive industries.

14. **The Committee recommends that the State party fully recognize the right to free, prior and informed consent of indigenous peoples in its laws and policies and apply it in practice. In particular, it recommends that the State party establish effective mechanisms that enable meaningful participation of indigenous peoples in decision-making in relation to development projects being carried out on or near their lands or territories. The Committee also recommends that the State party effectively engage indigenous peoples in the formulation of legislation that affects them.**

Business and economic, social and cultural rights

15. The Committee is concerned that the conduct of corporations registered or domiciled in the State party and operating abroad is, on occasion, negatively impacting on the enjoyment of Covenant rights by local populations. The Committee is also concerned about the limited access to judicial remedies before courts in the State party by victims and that existing non-judicial remedial mechanisms, such as the Office of the Extractive Sector Corporate Social Responsibility Counsellor, have not always been effective. The Committee is further concerned about the lack of impact assessments explicitly taking into account human rights prior to the negotiation of international trade and investments agreements.

16. **The Committee recommends that the State party strengthen its legislation governing the conduct of corporations registered or domiciled in the State party in their activities abroad, including by requiring those corporations to conduct human rights impact assessments prior to making investment decisions. It also recommends that the State party introduce effective mechanisms to investigate complaints filed against those corporations, and adopt the legislative measures necessary to facilitate access to justice before domestic courts by victims of the conduct of those corporations. The Committee further recommends that the State party ensure that trade and investment agreements negotiated by Canada recognize the primacy of its international human rights obligations over investors' interests, so that the introduction of investor-State dispute settlement procedures shall not create obstacles to the full realization of Covenant rights.**

Non-discrimination

17. The Committee is concerned that social condition is not included among the prohibited grounds of discrimination in the Canadian Human Rights Act (art. 2).

18. **The Committee recommends that the State party include social condition among the prohibited grounds of discrimination in the Canadian Human Rights Act, and in the provincial human rights acts, as necessary. The Committee draws the attention of the State party to its general comment No. 20 (2009) on non-discrimination in economic, social and cultural rights.**

Indigenous peoples

19. The Committee is concerned, in spite of the pledge made by the State party to address the situation of indigenous peoples, about the persisting socioeconomic disparities between indigenous and non-indigenous peoples, and by disparities in relation to poverty prevalence and access to basic rights, including housing, education and health-care services. The Committee is also concerned about the decrease in the already insufficient funding allocated to indigenous peoples living both on and off reserves, a situation which is further exacerbated by the jurisdictional disputes between federal and provincial governments on funding to indigenous peoples (art. 2 (2)).

20. **The Committee recommends that the State party, in consultation with indigenous peoples:**

(a) **Implement and strengthen its existing programmes and policies to improve the enjoyment of Covenant rights by indigenous peoples;**

(b) **Increase federal and provincial funding to indigenous peoples commensurate to their needs, and work out solutions to ensure coordinated and accountable implementation of indigenous peoples' rights by all jurisdictions;**

(c) **Implement the recommendations put forward by the Special Rapporteur on the rights of indigenous peoples following his mission to Canada in 2013 (see A/HRC/27/52/Add.2);**

(d) **Promote and apply the principles enshrined in the United Nations Declaration on the Rights of Indigenous Peoples;**

(e) **Consider ratifying the International Labour Organization Indigenous and Tribal Peoples Convention, 1989 (No. 169).**

Equality between women and men

21. The Committee is concerned at the discrimination against women in the State party in many areas of economic, social and cultural rights. In particular, it is concerned that, owing to women's primary role as caregivers in the family, women are overrepresented in part-time work and in low-paid sectors, thus perpetuating the gender segregation in the workplace and the gender wage gap. The Committee is further concerned about the remaining gender-based discriminatory provisions in the Indian Act concerning Indian status classification (art. 3).

22. **The Committee recommends that the State party develop and implement a comprehensive national gender equality policy to address the structural factors leading to gender inequality, in close cooperation with provinces and territories, as well as in consultation with civil society organizations. The Committee also recommends that the State party:**

(a) **Effectively implement and improve existing legislation on equal pay between men and women, at provincial and territorial levels, including the adoption of effective enforcement mechanisms, and include temporary special measures such as quotas;**

(b) **Repeal the remaining discriminatory provisions in the Indian Act;**

(c) **Pursue its commitment to provide affordable childcare services across the country so as to assist parents to balance family and employment responsibilities;**

(d) **Adopt targeted measures to increase access to social assistance and employment opportunities for women with disabilities;**

(e) **Intensify its efforts to eliminate the gender-role stereotypes and prejudices, including through awareness-raising campaigns.**

Unemployment

23. The Committee is concerned that certain disadvantaged and marginalized groups and individuals continue to be disproportionately affected by unemployment, including persons with disabilities, African-Canadians, the youth, recent immigrants, minorities and indigenous peoples (art. 6).

24. **The Committee recommends that the State party step up its efforts to address unemployment faced by disadvantaged and marginalized groups and individuals. The Committee also recommends that the State party strengthen the enforcement and monitoring of the Employment Equity Act and take all appropriate measures to strengthen and expand its coverage. The Committee further recommends that the State party take measures to ensure the adoption of employment equity legislative and policy measures in all jurisdictions, in collaboration with provinces and territories.**

Minimum wage

25. While noting that the minimum wage has been adjusted in all provinces during the period under review, the Committee is concerned that in all provinces it remains inadequate and falls short of living costs (art. 7).

26. **The Committee recommends that the State party ensure that the minimum wage is increased in all jurisdictions and adjusted and regularly indexed to the cost of living, so as to allow a decent living for all workers and their families.**

Just and favourable conditions of work

27. The Committee welcomes the changes introduced to the Live-In Caregiver Program. It remains concerned, however, that certain categories of foreign workers, including temporary and seasonal migrant workers, are vulnerable to exploitation by employers, especially as their work permit is tied to a specific employer (art. 7).

28. **The Committee recommends that the State party step up its efforts to prevent labour exploitation of temporary and seasonal migrant workers, among others by increasing inspection visits, improving regulation of recruitment agencies and replacing the employer-specific work permit with a type-of-work permit. The Committee refers to its general comment No. 23 (2016) on the right to just and favourable conditions of work.**

Social security

29. The Committee is concerned at the inadequate social assistance rates in all provinces and for all households and at the lack of accountability provisions in the Federal Social Transfer. The Committee is also concerned about the existence of clawback provisions in some jurisdictions that allow deducting of child benefits from social assistance benefits. Furthermore, the Committee expresses its concern at recent amendments to Bill C-43 which allow provinces to deny access to social assistance by refugee claimants and other persons without permanent status in Canada (art. 9).

30. **The Committee recommends that the State party ensure that social assistance rates are increased in all provinces to levels that allow a decent living for beneficiaries and their families so as to ensure an effective income safety net. The State party should also integrate accountability provisions in the Federal Social Transfer as a means to allow monitoring of how the funds are allocated to social assistance benefits. Furthermore, the State party is requested to ensure that all clawback provisions in provincial jurisdictions are repealed and the recent amendments introduced to Bill C-43 reviewed, with a view to ensuring that refugee claimants and other persons without permanent status in Canada can access social assistance without discrimination.**

Employment insurance

31. The Committee is concerned about the decrease in the number of the unemployed who are eligible for employment insurance, as well as at the insufficient levels of those benefits. In particular, the Committee expresses its concern at the stringent conditions for qualifying for employment insurance and that some workers are often unable to access employment insurance benefits following the termination of their work contract (art. 9).

32. **The Committee recommends that the State party revise the eligibility thresholds for and amounts of employment insurance, with a view to ensuring that all workers, including part-time and temporary foreign workers, can access adequate employment insurance benefits without discrimination.**

Violence against women

33. The Committee is concerned about the persistence of violence against women in the State party, which is particularly prevalent among indigenous women and girls and further exacerbated by the economic insecurity of women. The Committee is also concerned that, in some cases, owing to the inadequacy and insufficient number of shelters, combined with women's inability to afford housing and the inadequate social assistance, women victims of violence are unable to escape violent situations (arts. 10 and 11).

34. **The Committee recommends that the State party address violence against women and girls in a holistic manner. Inter alia, the State party is encouraged to study the link between poverty, ethnic origin and vulnerability to violence and take effective measures aimed at preventing and eradicating violence against women and girls. The Committee also recommends that the State party step up its efforts to protect victims of violence, including by ensuring the availability of a sufficient number of adequate shelters for victims of violence, as well as long-term housing solutions and adequate social assistance.**

Children in foster care

35. The Committee is concerned at the higher likelihood that indigenous children be placed in childcare institutions, which is further exacerbated by the inadequate funding for child welfare services to indigenous peoples living on reserves. The Committee is also concerned that African-Canadian children are overrepresented in childcare institutions (art. 10).

36. **The Committee recommends that the State party:**

(a) **Review and increase its funding to family and child welfare services for indigenous peoples living on reserves and fully comply with the decision of the Canadian Human Rights Tribunal (January 2016) concerning the provision of family child welfare services to First Nations children and families living on reserves;**

(b) **Implement the recommendations of the Truth and Reconciliation Commission (2015) with regard to the Indian Residential Schools;**

(c) **Take effective measures to address the root causes of overrepresentation of African-Canadian children in care institutions.**

Poverty

37. Considering the advanced level of development of the State party, the Committee is concerned about the significant number of people living in poverty. It is further concerned that indigenous peoples, persons with disabilities, single mothers and minority groups continue to experience higher rates of poverty and at the limited effectiveness of measures taken to address that issue (art. 11).

38. **The Committee recommends that the State party take all measures necessary to combat poverty more effectively while paying particular attention to groups and individuals who are more vulnerable to poverty. The Committee recommends that the State party, in collaboration with provinces, territories and indigenous peoples and consultation with civil society organizations, implement a human rights-based national anti-poverty strategy, which includes measureable goals and timelines, as well as independent monitoring mechanisms. The Committee further recommends that the State party ensure that provinces and territories' anti-poverty policies are human rights-based and aligned with the national strategy.**

Right to housing

39. The Committee is concerned about the persistence of a housing crisis in the State party. It is particularly concerned at: (a) the absence of a national housing strategy; (b) the insufficient funding for housing; (c) the inadequate housing subsidy within the social assistance benefit; (d) the shortage of social housing units; and (e) increased evictions related to rental arrears (art. 11).

40. **The Committee urges the State party to develop and effectively implement a human-rights based national strategy on housing and ensure that all provincial and**

territorial housing strategies are aligned with the national strategy. In the light of its general comments No. 4 (1991) on the right to adequate housing and No. 7 (1997) on forced evictions, the Committee recommends that the State party:

(a) **Progressively increase federal and provincial resources allocated to housing and reinforce the housing subsidy within the social assistance benefit so as to be commensurate with living costs;**

(b) **Take effective measures to substantially increase the availability of social and affordable housing units;**

(c) **Regulate rental arrangements with a view to ensuring that tenants enjoy the right to affordable and decent housing and are not vulnerable to forced evictions or homelessness;**

(d) **Ensure that its legislation on forced evictions is compatible with international norms, particularly with respect to its obligation to ensure that no persons find themselves homeless or victims of other human rights violations due to evictions, and that compensation or alternative accommodation is provided to victims.**

Homelessness

41. The Committee is concerned at the increasing number of homeless persons in the State party, the lack of adequate measures to prevent homelessness, the shortage of adequate emergency shelters and the existence of anti-camping and other by-laws that penalize homeless persons in some jurisdictions (art. 11).

42. **The Committee recommends that the State party adopt a national strategy on homelessness to examine the root causes of the increase in the number of homeless persons and collect data on the extent of homelessness, disaggregated by geographic location, ethnicity, sex and social condition, and to combat homelessness. The Committee also recommends that the State party take effective measures to ensure the availability of adequate emergency shelters throughout the country and repeal provincial by-laws that penalize homeless persons for finding solutions necessary for their survival and well-being.**

Adequate standard of living

43. The Committee is concerned that indigenous peoples, notably the Inuit and First Nations, encounter poor housing conditions, including overcrowding, which generate, among other issues, health challenges for the communities concerned. The Committee is also concerned at the restricted access to safe drinking water and to sanitation by the First Nations, as well as the lack of water regulations for the First Nations living on reserves (art. 11).

44. **The Committee urges the State party to intensify its efforts to address the indigenous peoples' housing crisis, in consultation with indigenous governments and organizations. The Committee also urges the State party to live up to its commitment to ensure access to safe drinking water and to sanitation for the First Nations while ensuring their active participation in water planning and management. In doing so, the State party should bear in mind not only indigenous peoples' economic right to water but also the cultural significance of water to indigenous peoples.**

Housing for persons with disabilities

45. The Committee is concerned that persons with psychosocial and intellectual disabilities continue to be placed in care institutions due to a lack of adequate housing for

them. It is also concerned by the increased rate of incarceration of these persons and the excessive use of solitary confinement (arts. 11 and 12).

46. **The Committee recommends that a disability perspective is integrated in all housing plans and policies at all levels. To that end, the Committee recommends that the State party increase the availability of affordable and social housing units for persons with psychosocial and intellectual disabilities, as well as community-based services. The Committee also recommends that the State party ratify the Optional Protocol to the Convention on the Rights of Persons with Disabilities.**

Right to food

47. The Committee welcomes the information provided by the delegation on the development of a national food policy. The Committee remains concerned, however, at the rates of food insecurity in the State party, the increased reliance on food banks, particularly in northern Canada, and the deficiencies of the Nutrition North Canada food programme (art. 11).

48. **The Committee recommends that the State party take effective measures to address the recommendations put forward in the report of the Special Rapporteur on the right to food following his mission to Canada in 2012 (see A/HRC/27/52/Add.2). The Committee recommends that the State party ensure the food policy is human rights-based and is developed in close collaboration with provinces, territories and indigenous peoples, as well as in consultation with civil society organizations. The Committee recommends that the State party pay particular attention to addressing food insecurity in northern Canada, and take effective measures to protect access to traditional food. To that end, the State party is encouraged to review the Nutrition North Canada programme, giving due attention to the necessary transparency and accountability provisions, and to extend the programme's coverage so as to reach those most affected by food insecurity.**

Right to health

49. The Committee is concerned that undocumented immigrants in the State party are denied access to health care. The Committee is also concerned that drug users face barriers in access to health-care services due to stigma and the punitive approach of the 2007 National Anti-Drug Strategy, which has had negative consequences on the health of drug users and discriminatory effects on disadvantaged and marginalized groups and individuals, such as African-Canadians, indigenous peoples and women (art. 12).

50. **The Committee recommends that the State party ensure access to the Interim Federal Health Program without discrimination based on immigration status, in line with the Human Rights Committee's recommendation of 2015 (see CCPR/C/CAN/CO/6, para. 12). The Committee also recommends that the State party ensure that its national drug law and the National Anti-Drug Strategy incorporate a public-health approach and be harm-reduction-based, and take effective measures to facilitate access to appropriate health care, psychological support services and rehabilitation for drug users.**

Sexual and reproductive health rights

51. The Committee welcomes the information provided by the delegation on measures taken to facilitate access to legal abortion services. It remains concerned, however, at disparities in access to such services and to affordable contraceptives (art. 12).

52. **The Committee recommends that the State party ensure access to legal abortion services in all provinces and territories. The Committee also recommends**

that the State party ensure that physicians' conscientious objection does not impede women's access to legal abortion services. The Committee also recommends that affordable contraceptives be made accessible and available to all, and in particular those living in remote areas and those living in poverty. The Committee refers to its general comment No. 22 (2016) on the right to sexual and reproductive health.

Climate change and environmental protection

53. The Committee is concerned that climate change is negatively affecting the enjoyment of Covenant rights by indigenous peoples. The Committee is also concerned that regulations governing environmental protection have been weakened in recent years, notably by the enactment of the Budget Bill C-38 (2012) and in the context of extractive industries (art. 12).

54. **The Committee recommends that the State party address the impact of climate change on indigenous peoples more effectively while fully engaging indigenous peoples in related policy and programme design and implementation. The Committee also recommends that the State party ensure that the use of non-conventional fossil energies is preceded by consultation with affected communities and impact assessment processes. It also recommends that the State party pursue alternative and renewable energy production. The Committee recommends that the State party further strengthen its legislation and regulations, in accordance with its international human rights obligations, and ensure that environmental impact assessments are regularly carried out in the context of extractive industry activities.**

Right to education

55. The Committee is concerned by the continuous lower educational and academic achievements of indigenous and African-Canadian children. The Committee is particularly concerned by the latter's high dropout rates at all school levels. The Committee is also concerned about reported barriers for children whose parents have no legal status in accessing schooling (arts. 13).

56. **The Committee recommends that the State party reinforce its efforts to address the long-standing issues faced by indigenous and African-Canadian children in accessing and completing primary and secondary school. In doing so, the Committee recommends that the State party develop interventions, in consultation with the affected communities, aimed at combating school dropout, including by putting an end to the unnecessary measures of expelling and suspending pupils. The Committee further recommends the State party ensure access to free compulsory schooling for all children without discrimination.**

Post-secondary education

57. The Committee is concerned at the increasing tuition fees in post-secondary education, combined with decreasing governmental funding, which disproportionately impacts students and families with low income and indigenous peoples (art. 13).

58. **The Committee recommends that the State party take steps to increase the budget allocated to publicly funded post-secondary education system, with a view to facilitating access to higher education to everyone regardless of their socioeconomic or ethnic background.**

Cultural rights

59. The Committee is concerned that many indigenous languages are endangered, despite some measures taken. It is also concerned about the inadequate funding for and

promotion of African art and culture, which adds to the structural discrimination faced by that group in the enjoyment of economic, social and cultural rights in the State party (art. 15).

60. **The Committee recommends that the State party step up the efforts needed to promote the preservation and use of indigenous languages, including by ensuring that provinces and territories teach and use indigenous language at schools, where appropriate. The Committee recommends that the State party promote and increase the funding to the art and culture of African-Canadians and, to that end, use the International Decade for People of African Descent, proclaimed by General Assembly, as a vehicle to promote and protect the human rights of that group.**

D. Other recommendations

61. **The Committee encourages the State party to ratify the Optional Protocol to the the International Covenant on Economic, Social and Cultural Rights.**

62. **The Committee recommends that the State party take steps to progressively develop and apply appropriate indicators on the implementation of economic, social and cultural rights, in order to facilitate the assessment of progress achieved by the State party in the compliance of its obligations under the Covenant for various segments of the population. In that context, the Committee refers the State party to, inter alia, the conceptual and methodological framework on human rights indicators developed by the Office of the United Nations High Commissioner for Human Rights (see HRI/MC/2008/3).**

63. **The Committee requests that the State party disseminate the present concluding observations widely at all levels of society at national, provincial and territorial levels, particularly among parliamentarians, public officials and judicial authorities, and that it inform the Committee in its next periodic report about the steps taken to implement them. The Committee also encourages the State party to engage non-governmental organizations and other members of civil society in the process of consultation at the national level prior to the submission of its next periodic report.**

64. **The Committee requests the State party to submit its seventh periodic report, to be prepared in accordance with the reporting guidelines adopted by the Committee in 2008 (E/C.12/2008/2), by 31 March 2021. It also invites the State party to update its common core document, as necessary and in accordance with the harmonized guidelines on reporting under the international human rights treaties (HRI/GEN/2/Rev.6, chap. I).**

This is Exhibit "55" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

COMMITTEE ON THE RIGHTS OF THE CHILD
Fiftieth session
Geneva, 12-30 January 2009

GENERAL COMMENT No. 11 (2009)

Indigenous children and their rights under the Convention

GE.09-40605 (E) 190209

COMMITTEE ON THE RIGHTS OF THE CHILD

GENERAL COMMENT No. 11 (2009)

Indigenous children and their rights under the Convention

Introduction

1. In the preamble of the Convention on the Rights of the Child, States parties take "*due account of the importance and cultural values of each people for the protection and harmonious development of the child*". While all the rights contained in the Convention apply to all children, whether indigenous or not, the Convention on the Rights of the Child was the first core human rights treaty to include specific references to indigenous children in a number of provisions.

2. Article 30 of the Convention states that "*In those States in which ethnic, religious, or linguistic minorities or persons of indigenous origin exist, a child belonging to such a minority or who is indigenous shall not be denied the right, in community with other members of his or her group, to enjoy his or her own culture, to profess and practise his or her own religion or to use his or her own language.*"

3. Furthermore, article 29 of the Convention provides that "*education of the child shall be directed to the preparation of the child for responsible life in a free society, in the spirit of understanding, peace, tolerance, equality of sexes, and friendship among all peoples, ethnic, national and religious groups and persons of indigenous origin*".

4. Article 17 of the Convention also makes specific mention as States parties shall "*encourage the mass media to have particular regard for the linguistic needs of the child who belongs to a minority group or who is indigenous*".

5. The specific references to indigenous children in the Convention are indicative of the recognition that they require special measures in order to fully enjoy their rights. The Committee on the Rights of the Child has consistently taken into account the situation of indigenous children in its reviews of periodic reports of States parties to the Convention. The Committee has observed that indigenous children face significant challenges in exercising their rights and has issued specific recommendations to this effect in its concluding observations. Indigenous children continue to experience serious discrimination contrary to article 2 of the Convention in a range of areas, including in their access to health care and education, which has prompted the need to adopt this general comment.

6. In addition to the Convention on the Rights of the Child, various human rights treaties, have played an important role in addressing the situation of indigenous children and their right not to be discriminated, namely, the International Convention on the Elimination of All Forms of Racial Discrimination, 1965, the International Covenant on Civil and Political Rights, 1966, and the International Covenant on Economic, Social and Cultural Rights, 1966.

7. The International Labour Organization Convention No. 169 concerning Indigenous and Tribal Peoples in Independent Countries, 1989 contains provisions which advance the rights of indigenous peoples and specifically highlights the rights of indigenous children in the area of education.

8. In 2001, the United Nations Commission on Human Rights appointed a Special Rapporteur on the situation of human rights and fundamental freedoms of indigenous peoples, subsequently confirmed by the Human Rights Council in 2007. The Council has requested the Special Rapporteur to pay particular attention to the situation of indigenous children and several recommendations included in his annual and mission reports have focused on their specific situation.

9. In 2003, the United Nations Permanent Forum on Indigenous Issues held its second session on the theme indigenous children and youth and the same year the Committee on the Rights of the Child held its annual Day of General Discussion on the rights of indigenous children and adopted specific recommendations aimed primarily at States parties but also United Nations entities, human rights mechanisms, civil society, donors, the World Bank and regional development banks.

10. In 2007, the United Nations General Assembly adopted the Declaration on the Rights of Indigenous Peoples which provides important guidance on the rights of indigenous peoples, including specific reference to the rights of indigenous children in a number of areas.

Objectives and structure

11. This general comment on the rights of indigenous children as provided for by the Convention on the Rights of the Child draws on the legal developments and initiatives outlined above.

12. The primary objective of this general comment is to provide States with guidance on how to implement their obligations under the Convention with respect to indigenous children. The Committee bases this general comment on its experience in interpreting the provisions of the Convention in relation to indigenous children. Furthermore, the general comment is based upon the recommendations adopted following the Day of General Discussion on indigenous children in 2003 and reflects a consultative process with relevant stakeholders, including indigenous children themselves.

13. The general comment aims to explore the specific challenges which impede indigenous children from being able to fully enjoy their rights and highlight special measures required to be undertaken by States in order to guarantee the effective exercise of indigenous children's rights. Furthermore, the general comment seeks to encourage good practices and highlight positive approaches in the practical implementation of rights for indigenous children.

14. Article 30 of the Convention and the right to the enjoyment of culture, religion and language are key elements in this general comment; however the aim is to explore the various provisions which require particular attention in their implementation in relation to indigenous children. Particular emphasis is placed on the interrelationship between relevant provisions, notably with the general principles of the Convention as identified by the Committee, namely, non-discrimination, the best interests of the child, the right to life, survival and development and the right to be heard.

15. The Committee notes that the Convention contains references to both minority and indigenous children. Certain references in this general comment may be relevant for children of minority groups and the Committee may decide in the future to prepare a general comment specifically on the rights of children belonging to minority groups.

Article 30 and general obligations of States

16. The Committee recalls the close linkage between article 30 of the Convention on the Rights of the Child and article 27 of the International Covenant on Civil and Political Rights. Both articles specifically provide for the right, in community with other members of his or her group, to enjoy his or her own culture, to profess and practise his or her own religion or to use his or her own language. The right established is conceived as being both individual and collective and is an important recognition of the collective traditions and values in indigenous cultures. The Committee notes that the right to exercise cultural rights among indigenous peoples may be closely associated with the use of traditional territory and the use of its resources.[1]

17. Although article 30 is expressed in negative terms, it nevertheless recognizes the existence of a "right" and requires that it "shall not be denied". Consequently, a State party is under an obligation to ensure that the existence and the exercise of this right are protected against their denial or violation. The Committee concurs with the Human Rights Committee that positive measures of protection are required, not only against the acts of the State party itself, whether through its legislative, judicial or administrative authorities, but also against the acts of other persons within the State party.[2]

18. In this context, the Committee also supports the Committee on the Elimination of Racial Discrimination in its call upon States parties *to recognize and respect indigenous distinct cultures, history, language and way of life as an enrichment of the State's cultural identity and to promote its preservation*.[3]

19. The presence of indigenous peoples is established by self-identification as the fundamental criterion for determining their existence.[4] There is no requirement for States parties to officially recognize indigenous peoples in order for them to exercise their rights.

---

[1] Human Rights Committee, general comment No. 23 on article 27, CCPR/C/Rev.1/Add.5, 1994, paras. 3.2, 7. Recommendations of CRC Day of General Discussion on the Rights of Indigenous Children, 2003, para. 4.

[2] Human Rights Committee, general comment No. 23 on article 27, CCPR/C/Rev.1/Add.5, 1994, para. 6.1.

[3] Committee on the Elimination of Racial Discrimination, general recommendation No. 23 on Indigenous Peoples, 1997, contained in A/52/18, Annex V.

[4] ILO Convention concerning Indigenous and Tribal Peoples in Independent Countries No. 169, article 1 (2).

20. Based on its reviews of States parties reports, the Committee on the Rights of the Child has observed that in implementing their obligations under the Convention many States parties give insufficient attention to the rights of indigenous children and to promotion of their development. The Committee considers that special measures through legislation and policies for the protection of indigenous children should be undertaken in consultation with the communities concerned[5] and with the participation of children in the consultation process, as provided for by article 12 of the Convention. The Committee considers that consultations should be actively carried out by authorities or other entities of States parties in a manner that is culturally appropriate, guarantees availability of information to all parties and ensures interactive communication and dialogue.

21. The Committee urges States parties to ensure that adequate attention is given to article 30 in the implementation of the Convention. States parties should provide detailed information in their periodic reports under the Convention on the special measures undertaken in order to guarantee that indigenous children can enjoy the rights provided in article 30.

22. The Committee underlines that cultural practices provided by article 30 of the Convention must be exercised in accordance with other provisions of the Convention and under no circumstances may be justified if deemed prejudicial to the child's dignity, health and development.[6] Should harmful practices be present, inter alia early marriages and female genital mutilation, the State party should work together with indigenous communities to ensure their eradication. The Committee strongly urges States parties to develop and implement awareness-raising campaigns, education programmes and legislation aimed at changing attitudes and address gender roles and stereotypes that contribute to harmful practices.[7]

General principles
(arts. 2, 3, 6 and 12 of the Convention)

Non-discrimination

23. Article 2 sets out the obligation of States parties to ensure the rights of each child within its jurisdiction without discrimination of any kind. Non-discrimination has been identified by the Committee as a general principle of fundamental importance for the implementation of all the rights enshrined in the Convention. Indigenous children have the inalienable right to be free from discrimination. In order to effectively protect children from discrimination, it is a State party obligation to ensure that the principle of non-discrimination is reflected in all domestic legislation and can be directly applied and appropriately monitored and enforced through judicial and administrative bodies. Effective remedies should be timely and accessible. The Committee highlights that the obligations of the State party extend not only to the public but also to the private sector.

[5] ILO Convention No. 169, articles 2, 6, 27.

[6] UNICEF Innocenti Digest No. 11, Ensuring the Rights of Indigenous Children, 2004, p. 7.

[7] CRC, general comment No. 4 on Adolescent Health, 2003, para. 24.

24. As previously stated in the Committee's general comment No. 5 on general measures of implementation, the non-discrimination obligation requires States actively to identify individual children and groups of children the recognition and realization of whose rights may demand special measures. For example, the Committee highlights, in particular, the need for data collection to be disaggregated to enable discrimination or potential discrimination to be identified. Addressing discrimination may furthermore require changes in legislation, administration and resource allocation, as well as educational measures to change attitudes.[8]

25. The Committee, through its extensive review of State party reports, notes that indigenous children are among those children who require positive measures in order to eliminate conditions that cause discrimination and to ensure their enjoyment of the rights of the Convention on equal level with other children. In particular, States parties are urged to consider the application of special measures in order to ensure that indigenous children have access to culturally appropriate services in the areas of health, nutrition, education, recreation and sports, social services, housing, sanitation and juvenile justice.[9]

26. Among the positive measures required to be undertaken by States parties is disaggregated data collection and the development of indicators for the purposes of identifying existing and potential areas of discrimination of indigenous children. The identification of gaps and barriers to the enjoyment of the rights of indigenous children is essential in order to implement appropriate positive measures through legislation, resource allocation, policies and programmes.[10]

27. States parties should ensure that public information and educational measures are taken to address the discrimination of indigenous children. The obligation under article 2 in conjunction with articles 17, 29.1 (d) and 30 of the Convention requires States to develop public campaigns, dissemination material and educational curricula, both in schools and for professionals, focused on the rights of indigenous children and the elimination of discriminatory attitudes and practices, including racism. Furthermore, States parties should provide meaningful opportunities for indigenous and non-indigenous children to understand and respect different cultures, religions, and languages.

28. In their periodic reports to the Committee, States parties should identify measures and programmes undertaken to address discrimination of indigenous children in relation to the Declaration and Programme of Action adopted at the 2001 World Conference against Racism, Discrimination, Xenophobia and Related Intolerance. [11]

[8] CRC, general comment No. 5 on General Measures of Implementation, 2003, para. 12.

[9] Recommendations of CRC Day of General Discussion on the Rights of Indigenous Children, 2003, para. 9.

[10] Ibid., para. 6.

[11] Recommendations of CRC Day of General Discussion on the Rights of Indigenous Children, 2003, para. 12.

29. In the design of special measures, States parties should consider the needs of indigenous children who may face multiple facets of discrimination and also take into account the different situation of indigenous children in rural and urban situations. Particular attention should be given to girls in order to ensure that they enjoy their rights on an equal basis as boys. States parties should furthermore ensure that special measures address the rights of indigenous children with disabilities.[12]

Best interests of the child

30. The application of the principle of the best interests of the child to indigenous children requires particular attention. The Committee notes that the best interests of the child is conceived both as a collective and individual right, and that the application of this right to indigenous children as a group requires consideration of how the right relates to collective cultural rights. Indigenous children have not always received the distinct consideration they deserve. In some cases, their particular situation has been obscured by other issues of broader concern to indigenous peoples, (including land rights and political representation).[13] In the case of children, the best interests of the child cannot be neglected or violated in preference for the best interests of the group.

31. When State authorities including legislative bodies seek to assess the best interests of an indigenous child, they should consider the cultural rights of the indigenous child and his or her need to exercise such rights collectively with members of their group. As regards legislation, policies and programmes that affect indigenous children in general, the indigenous community should be consulted and given an opportunity to participate in the process on how the best interests of indigenous children in general can be decided in a culturally sensitive way. Such consultations should, to the extent possible, include meaningful participation of indigenous children.

32. The Committee considers there may be a distinction between the best interests of the individual child, and the best interests of children as a group. In decisions regarding one individual child, typically a court decision or an administrative decision, it is the best interests of the specific child that is the primary concern. However, considering the collective cultural rights of the child is part of determining the child's best interests.

33. The principle of the best interests of the child requires States to undertake active measures throughout their legislative, administrative and judicial systems that would systematically apply the principle by considering the implication of their decisions and actions on children's rights

[12] Convention on the Rights of Persons with Disabilities, preamble. United Nations Declaration on the Rights of Indigenous Peoples, A/RES/61/295, articles 21, 22.

[13] UNICEF Innocenti Digest No. 11, Ensuring the Rights of Indigenous Children, 2004, p. 1.

and interests.[14] In order to effectively guarantee the rights of indigenous children such measures would include training and awareness-raising among relevant professional categories of the importance of considering collective cultural rights in conjunction with the determination of the best interests of the child.

The right to life, survival and development

34. The Committee notes with concern that disproportionately high numbers of indigenous children live in extreme poverty, a condition which has a negative impact on their survival and development. The Committee is furthermore concerned over the high infant and child mortality rates as well as malnutrition and diseases among indigenous children. Article 4 obliges States parties to address economic, social and cultural rights to the maximum extent of their available resources and where needed with international cooperation. Articles 6 and 27 provide the right of children to survival and development as well as an adequate standard of living. States should assist parents and others responsible for the indigenous child to implement this right by providing culturally appropriate material assistance and support programmes, particularly with regard to nutrition, clothing and housing. The Committee stresses the need for States parties to take special measures to ensure that indigenous children enjoy the right to an adequate standard of living and that these, together with progress indicators, be developed in partnership with indigenous peoples, including children.

35. The Committee reiterates its understanding of development of the child as set out in its general comment No. 5, as a "holistic concept embracing the child's physical, mental, spiritual, moral, psychological and social development".[15] The Preamble of the Convention stresses the importance of the traditions and cultural values of each person, particularly with reference to the protection and harmonious development of the child. In the case of indigenous children whose communities retain a traditional lifestyle, the use of traditional land is of significant importance to their development and enjoyment of culture.[16] States parties should closely consider the cultural significance of traditional land and the quality of the natural environment while ensuring the children's right to life, survival and development to the maximum extent possible.

36. The Committee reaffirms the importance of the Millennium Development Goals (MDGs) and calls on States to engage with indigenous peoples, including children, to ensure the full realization of the MDGs with respect to indigenous children.

---

[14] CRC, general comment No. 5 on General Measures of Implementation, 2003, para. 12.

[15] Ibid.

[16] UNICEF Innocenti Digest No. 11, Ensuring the Rights of Indigenous Children, 2004, p. 8.

Respect for the views of the child

37. The Committee considers that, in relation to article 12, there is a distinction between the right of the child as an individual to express his or her opinion and the right to be heard collectively, which allows children as a group to be involved in consultations on matters involving them.

38. With regard to the individual indigenous child, the State party has the obligation to respect the child's right to express his or her view in all matters affecting him or her, directly or through a representative, and give due weight to this opinion in accordance with the age and maturity of the child. The obligation is to be respected in any judicial or administrative proceeding. Taking into account the obstacles which prevent indigenous children from exercising this right, the State party should provide an environment that encourages the free opinion of the child. The right to be heard includes the right to representation, culturally appropriate interpretation and also the right not to express one's opinion.

39. When the right is applied to indigenous children as a group, the State party plays an important role in promoting their participation and should ensure that they are consulted on all matters affecting them. The State party should design special strategies to guarantee that their participation is effective. The State party should ensure that this right is applied in particular in the school environment, alternative care settings and in the community in general. The Committee recommends States parties to work closely with indigenous children and their communities to develop, implement and evaluate programmes, policies and strategies for implementation of the Convention.

Civil rights and freedoms (arts. 7, 8, 13-17 and 37 (a) of the Convention)

Access to information

40. The Committee underlines the importance that the media have particular regard for the linguistic needs of indigenous children, in accordance with articles 17 (d) and 30 of the Convention. The Committee encourages States parties to support indigenous children to have access to media in their own languages. The Committee underlines the right of indigenous children to access information, including in their own languages, in order for them to effectively exercise their right to be heard.

Birth registration, nationality and identity

41. States parties are obliged to ensure that all children are registered immediately after birth and that they acquire a nationality. Birth registration should be free and universally accessible. The Committee is concerned that indigenous children, to a greater extent than non-indigenous children, remain without birth registration and at a higher risk of being stateless.

42. Therefore, States parties should take special measures in order to ensure that indigenous children, including those living in remote areas, are duly registered. Such special measures, to

be agreed following consultation with the communities concerned, may include mobile units, periodic birth registration campaigns or the designation of birth registration offices within indigenous communities to ensure accessibility.

43. States parties should ensure that indigenous communities are informed about the importance of birth registration and of the negative implications of its absence on the enjoyment of other rights for non-registered children. States parties should ensure that information to this effect is available to indigenous communities in their own languages and that public awareness campaigns are undertaken in consultation with the communities concerned.[17]

44. Furthermore, taking into account articles 8 and 30 of the Convention, States parties should ensure that indigenous children may receive indigenous names of their parents' choice in accordance with their cultural traditions and the right to preserve his or her identity. States parties should put in place national legislation that provides indigenous parents with the possibility of selecting the name of their preference for their children.

45. The Committee draws the attention of States to article 8 (2) of the Convention which affirms that a child who has been illegally deprived of some or all of the elements of his or her identity shall be provided with appropriate assistance and protection in order to re-establish speedily his or her identity. The Committee encourages States parties to bear in mind article 8 of the United Nations Declaration on the Rights of Indigenous Peoples which sets out that effective mechanisms should be provided for prevention of, and redress for, any action which deprives indigenous peoples, including children, of their ethnic identities.

Family environment and alternative care (arts. 5, 18 (paras. 1-2), 9-11, 19-21, 25, 27 (para. 4) and 39 of the Convention)

46. Article 5 of the Convention requires States parties to respect the rights, responsibilities and duties of parents or where applicable, the members of the extended family or community to provide, in a manner consistent with the evolving capacities of all children, appropriate direction and guidance in the exercise by the child of the rights recognized in the Convention. States parties should ensure effective measures are implemented to safeguard the integrity of indigenous families and communities by assisting them in their child-rearing responsibilities in accordance with articles 3, 5, 18, 25 and 27 (3) of the Convention.[18]

47. States parties should, in cooperation with indigenous families and communities, collect data on the family situation of indigenous children, including children in foster care and adoption processes. Such information should be used to design policies relating to the family environment

[17] UNICEF Innocenti Digest No. 11, Ensuring the Rights of Indigenous Children, 2004, p. 9.

[18] Recommendations of CRC Day of General Discussion on the Rights of Indigenous Children, 2003, para. 17.

and alternative care of indigenous children in a culturally sensitive way. Maintaining the best interests of the child and the integrity of indigenous families and communities should be primary considerations in development, social services, health and education programmes affecting indigenous children.[19]

48. Furthermore, States should always ensure that the principle of the best interests of the child is the paramount consideration in any alternative care placement of indigenous children and in accordance with article 20 (3) of the Convention pay due regard to the desirability of continuity in the child's upbringing and to the child's ethnic, religious, cultural and linguistic background. In States parties where indigenous children are overrepresented among children separated from their family environment, specially targeted policy measures should be developed in consultation with indigenous communities in order to reduce the number of indigenous children in alternative care and prevent the loss of their cultural identity. Specifically, if an indigenous child is placed in care outside their community, the State party should take special measures to ensure that the child can maintain his or her cultural identity.

Basic health and welfare
(arts. 6, 18 (para. 3), 23, 24, 26, 27 (paras. 1-3) of the Convention)

49. States parties shall ensure that all children enjoy the highest attainable standard of health and have access to health-care service. Indigenous children frequently suffer poorer health than non-indigenous children due to inter alia inferior or inaccessible health services. The Committee notes with concern, on the basis of its reviews of States parties' reports, that this applies both to developing and developed countries.

50. The Committee urges States parties to take special measures to ensure that indigenous children are not discriminated against enjoying the highest attainable standard of health. The Committee is concerned over the high rates of mortality among indigenous children and notes that States parties have a positive duty to ensure that indigenous children have equal access to health services and to combat malnutrition as well as infant, child and maternal mortality.

51. States parties should take the necessary steps to ensure ease of access to health-care services for indigenous children. Health services should to the extent possible be community based and planned and administered in cooperation with the peoples concerned.[20] Special consideration should be given to ensure that health-care services are culturally sensitive and that information about these is available in indigenous languages. Particular attention should be given to ensuring access to health care for indigenous peoples who reside in rural and remote areas or in areas of armed conflict or who are migrant workers, refugees or displaced. States parties should furthermore pay special attention to the needs of indigenous children with disabilities and ensure that relevant programmes and policies are culturally sensitive.[21]

---

[19] Ibid.

[20] ILO Convention No. 169, article 25 (1, 2).

[21] CRC, general comment No. 9 on The Rights of Children with Disabilities, 2006.

52. Health-care workers and medical staff from indigenous communities play an important role by serving as a bridge between traditional medicine and conventional medical services and preference should be given to employment of local indigenous community workers.[22] States parties should encourage the role of these workers by providing them with the necessary means and training in order to enable that conventional medicine be used by indigenous communities in a way that is mindful of their culture and traditions. In this context, the Committee recalls article 25 (2) of the ILO Convention No. 169 and articles 24 and 31 of the United Nations Declaration on the Rights of Indigenous Peoples on the right of indigenous peoples to their traditional medicines.[23]

53. States should take all reasonable measures to ensure that indigenous children, families and their communities receive information and education on issues relating to health and preventive care such as nutrition, breastfeeding, pre- and postnatal care, child and adolescent health, vaccinations, communicable diseases (in particular HIV/AIDS and tuberculosis), hygiene, environmental sanitation and the dangers of pesticides and herbicides.

54. Regarding adolescent health, States parties should consider specific strategies in order to provide indigenous adolescents with access to sexual and reproductive information and services, including on family planning and contraceptives, the dangers of early pregnancy, the prevention of HIV/AIDS and the prevention and treatment of sexually transmitted infections (STIs). The Committee recommends States parties to take into account its general comments No. 3 on HIV/AIDS and the rights of the child (2003) and No. 4 on adolescent health (2003) for this purpose.[24]

55. In certain States parties suicide rates for indigenous children are significantly higher than for non-indigenous children. Under such circumstances, States parties should design and implement a policy for preventive measures and ensure that additional financial and human resources are allocated to mental health care for indigenous children in a culturally appropriate manner, following consultation with the affected community. In order to analyse and combat the root causes, the State party should establish and maintain a dialogue with the indigenous community.

Education
(arts. 28, 29 and 31 of the Convention)

56. Article 29 of the Convention sets out that the aims of education for all children should be directed to, among other objectives, the development of respect for the child's cultural identity, language and values and for civilizations different from his or her own. Further objectives

---

[22] ILO Convention No. 169, article 25 (3).

[23] United Nations Declaration on the Rights of Indigenous Peoples, A/RES/61/295, articles 24, 31.

[24] CRC, general comment No. 3 on HIV/AIDS and the Rights of the Child, 2003 and general comment No. 4 on Adolescent Health, 2003.

include the preparation of the child for responsible life in a free society, in the spirit of understanding peace, tolerance, equality of sexes and friendship among all peoples, ethnic, national and religious groups and persons of indigenous origin. The aims of education apply to education for all children and States should ensure these are adequately reflected in the curricula, content of materials, teaching methods and policies. States are encouraged to refer to the Committee's general comment No. 1 on the aims of education for further guidance.[25]

57. The education of indigenous children contributes both to their individual and community development as well as to their participation in the wider society. Quality education enables indigenous children to exercise and enjoy economic, social and cultural rights for their personal benefit as well as for the benefit of their community. Furthermore, it strengthens children's ability to exercise their civil rights in order to influence political policy processes for improved protection of human rights. Thus, the implementation of the right to education of indigenous children is an essential means of achieving individual empowerment and self-determination of indigenous peoples.

58. In order to ensure that the aims of education are in line with the Convention, States parties are responsible for protecting children from all forms of discrimination as set out in article 2 of the Convention and for actively combating racism. This duty is particularly pertinent in relation to indigenous children. In order to effectively implement this obligation, States parties should ensure that the curricula, educational materials and history textbooks provide a fair, accurate and informative portrayal of the societies and cultures of indigenous peoples.[26] Discriminatory practices, such as restrictions on the use of cultural and traditional dress, should be avoided in the school setting.

59. Article 28 of the Convention sets out that States parties shall ensure that primary education is compulsory and available to all children on the basis of equal opportunity. States parties are encouraged to make secondary and vocational education available and accessible to every child. However, in practice, indigenous children are less likely to be enrolled in school and continue to have higher drop out and illiteracy rates than non-indigenous children. Most indigenous children have reduced access to education due to a variety of factors including insufficient educational facilities and teachers, direct or indirect costs for education as well as a lack of culturally adjusted and bilingual curricula in accordance with article 30. Furthermore, indigenous children are frequently confronted with discrimination and racism in the school setting.

60. In order for indigenous children to enjoy their right to education on equal footing with non-indigenous children, States parties should ensure a range of special measures to this effect. States parties should allocate targeted financial, material and human resources in order to implement policies and programmes which specifically seek to improve the access to education for indigenous children. As established by article 27 of the ILO Convention No. 169, education programmes and services should be developed and implemented in cooperation with the peoples

---

[25] CRC, general comment No. 1 on the Aims of Education, 2001.

[26] ILO Convention No. 169, article 31, United Nations Declaration on the Rights of Indigenous Peoples, A/RES/61/295, article 15.

concerned to address their specific needs. Furthermore, governments should recognize the right of indigenous peoples to establish their own educational institutions and facilities, provided that such institutions meet minimum standards established by the competent authority in consultation with these peoples.[27] States should undertake all reasonable efforts to ensure that indigenous communities are aware of the value and importance of education and of the significance of community support for school enrolment.

61. States parties should ensure that school facilities are easily accessible where indigenous children live. If required, States parties should support the use of media, such as radio broadcasts and long distance education programmes (internet-based) for educational purposes and establish mobile schools for indigenous peoples who practice nomadic traditions. The school cycle should take into account and seek to adjust to cultural practices as well as agricultural seasons and ceremonial periods. States parties should only establish boarding schools away from indigenous communities when necessary as this may be a disincentive for the enrolment of indigenous children, especially girls. Boarding schools should comply with culturally sensitive standards and be monitored on a regular basis. Attempts should also be made to ensure that indigenous children living outside their communities have access to education in a manner which respects their culture, languages and traditions.

62. Article 30 of the Convention establishes the right of the indigenous child to use his or her own language. In order to implement this right, education in the child's own language is essential. Article 28 of ILO Convention No. 169 affirms that indigenous children shall be taught to read and write in their own language besides being accorded the opportunity to attain fluency in the official languages of the country.[28] Bilingual and intercultural curricula are important criteria for the education of indigenous children. Teachers of indigenous children should to the extent possible be recruited from within indigenous communities and given adequate support and training.

63. With reference to article 31 of the Convention, the Committee notes the many positive benefits of participation in sports, traditional games, physical education, and recreational activities and calls on States parties to ensure that indigenous children enjoy the effective exercise of these rights.

Special protection measures
(arts. 22, 30, 38, 39, 40, 37 (b)-(d), 32-36 of the Convention)

Children in armed conflict and refugee children

64. Through its periodic reviews of States parties' reports, the Committee has concluded that indigenous children are particularly vulnerable in situations of armed conflict or in situations of internal unrest. Indigenous communities often reside in areas which are coveted for their natural

[27] ILO Convention No. 169, article 27.

[28] ILO Convention No. 169, article 28.

resources or that, because of remoteness, serve as a base for non-State armed groups. In other situations, indigenous communities reside in the vicinity of borders or frontiers which are disputed by States.[29]

65. Indigenous children in such circumstances have been, and continue to face risks of being, victims of attacks against their communities, resulting in death, rape and torture, displacement, enforced disappearances, the witnessing of atrocities and the separation from parents and community. Targeting of schools by armed forces and groups has denied indigenous children access to education. Furthermore, indigenous children have been recruited by armed forces and groups and forced to commit atrocities, sometimes even against their own communities.

66. Article 38 of the Convention obliges States parties to ensure respect for the rules of humanitarian law, to protect the civilian population and to take care of children who are affected by armed conflict. States parties should pay particular attention to the risks indigenous children face in hostilities and take maximum preventive measures in consultation with the communities concerned. Military activities on indigenous territories should be avoided to the extent possible, the Committee recalls article 30 of the United Nations Declaration on the Rights of Indigenous Peoples in this regard.[30] States parties should not require military conscription of indigenous children under the age of 18 years. States parties are encouraged to ratify and implement the Optional Protocol on the Involvement of Children in Armed Conflict.

67. Indigenous children who have been victims of recruitment in armed conflict should be provided with the necessary support services for reintegration into their families and communities. Consistent with article 39 of the Convention, States parties shall take all appropriate measures to promote physical and psychological recovery and social reintegration of a child victim of any form of exploitation, abuse, torture or any other form of cruel, inhuman or degrading treatment or punishment or armed conflicts. In the case of indigenous children, this should be done giving due consideration to the child's cultural and linguistic background.

68. Indigenous children who have been displaced or become refugees should be given special attention and humanitarian assistance in a culturally sensitive manner. Safe return and restitution of collective and individual property should be promoted.

Economic exploitation

69. Article 32 of the Convention provides that all children should be protected from economic exploitation and from performing any work that is likely to be hazardous or to interfere with the child's education, or to be harmful to the child's health or physical, mental, spiritual, moral or social development. In addition, ILO Convention No. 138 (Minimum Age Convention) and Convention No. 182 (Worst Forms of Child Labour Convention) set parameters for

---

[29] UNICEF Innocenti Digest No. 11, Ensuring the Rights of Indigenous Children, 2004, p. 13.

[30] United Nations Declaration on the Rights of Indigenous Peoples, A/RES/61/295, article 30.

distinguishing child labour that needs abolition, on the one hand, and acceptable work done by children, including such activities that allow indigenous children to acquire livelihood skills, identity and culture, on the other. Child labour is work that deprives children of their childhood, their potential and dignity and that is harmful to their physical and mental development.[31]

70. Provisions in the Convention on the Rights of the Child refer to the use of children in illicit production and trafficking of drugs (art. 33), sexual exploitation (art. 34), trafficking in children (art. 35), children in armed conflicts (art. 38). These provisions are closely related to the definition of the worst forms of child labour under ILO Convention No. 182. The Committee notes with grave concern that indigenous children are disproportionately affected by poverty and at particular risk of being used in child labour, especially its worst forms, such as slavery, bonded labour, child trafficking, including for domestic work, use in armed conflict, prostitution and hazardous work.

71. The prevention of exploitative child labour among indigenous children (as in the case of all other children) requires a rights-based approach to child labour and is closely linked to the promotion of education. For the effective elimination of exploitative child labour among indigenous communities, States parties must identify the existing barriers to education and the specific rights and needs of indigenous children with respect to school education and vocational training. This requires that special efforts be taken to maintain a dialogue with indigenous communities and parents regarding the importance and benefits of education. Measures to combat exploitative child labour furthermore require analysis of the structural root causes of child exploitation, data collection and the design and implementation of prevention programmes, with adequate allocation of financial and human resources by the State party, to be carried out in consultation with indigenous communities and children.

Sexual exploitation and trafficking

72. Articles 34 and 35 of the Convention with consideration to the provisions of article 20, call on States to ensure that children are protected against sexual exploitation and abuse as well as the abduction, sale or traffic of children for any purposes. The Committee is concerned that indigenous children whose communities are affected by poverty and urban migration are at a high risk of becoming victims of sexual exploitation and trafficking. Young girls, particularly those not registered at birth, are especially vulnerable. In order to improve the protection of all children, including indigenous, States parties are encouraged to ratify and implement the Optional Protocol on the sale of children, child prostitution and child pornography.

73. States should, in consultation with indigenous communities, including children, design preventive measures and allocate targeted financial and human resources for their implementation. States should base preventive measures on studies which include documentation of the patterns of violations and analysis of root causes.

---

[31] ILO, Handbook on Combating Child Labour among Indigenous and Tribal Peoples, 2006, p. 9.

Juvenile justice

74. Articles 37 and 40 of the Convention ensure the rights of children within, and in interaction with, State judicial systems. The Committee notes with concern that incarceration of indigenous children is often disproportionately high and in some instances may be attributed to systemic discrimination from within the justice system and/or society.[32] To address these high rates of incarceration, the Committee draws the attention of States parties to article 40 (3) of the Convention requiring States to undertake measures to deal with children alleged as, accused of, or recognized as having infringed the penal law without resorting to judicial proceedings, whenever appropriate. The Committee, in its general comment No. 10 on children's rights in juvenile justice (2007) and in its concluding observations, has consistently affirmed that the arrest, detention or imprisonment of a child may be used only as a measure of last resort.[33]

75. States parties are encouraged to take all appropriate measures to support indigenous peoples to design and implement traditional restorative justice systems as long as those programmes are in accordance with the rights set out in the Convention, notably with the best interests of the child.[34] The Committee draws the attention of States parties to the United Nations Guidelines for the Prevention of Juvenile Delinquency, which encourage the development of community programmes for the prevention of juvenile delinquency.[35] States parties should seek to support, in consultation with indigenous peoples, the development of community-based policies, programmes and services which consider the needs and culture of indigenous children, their families and communities. States should provide adequate resources to juvenile justice systems, including those developed and implemented by indigenous peoples.

76. States parties are reminded that pursuant to article 12 of the Convention, all children should have an opportunity to be heard in any judicial or criminal proceedings affecting them, either directly or through a representative. In the case of indigenous children, States parties should adopt measures to ensure that an interpreter is provided free of charge if required and that the child is guaranteed legal assistance, in a culturally sensitive manner.

77. Professionals involved in law enforcement and the judiciary should receive appropriate training on the content and meaning of the provisions of the Convention and its Optional Protocols, including the need to adopt special protection measures for indigenous children and other specific groups.[36]

[35] United Nations Guidelines for the Prevention of Juvenile Delinquency, "the Riyadh Guidelines", 1990.

[36] CRC, general comment No. 1 on Children's Rights in Juvenile Justice, 2007, para. 97.

States parties' obligations and monitoring of the implementation of the Convention

78. The Committee reminds States parties that ratification of the Convention on the Rights of the Child obliges States parties to take action to ensure the realization of all rights in the Convention for all children within their jurisdiction. The duty to respect and protect requires each State party to ensure that the exercise of the rights of indigenous children is fully protected against any acts of the State party by its legislative, judicial or administrative authorities or by any other entity or person within the State party.

79. Article 3 of the Convention requires States parties to ensure that in all actions concerning children, the best interests of the child shall be a primary consideration. Article 4 of the Convention requires States parties to undertake measures to implement the Convention to the maximum extent of their available resources. Article 42 sets out that States parties are further required to ensure that children and adults are provided information on the principles and provisions of the Convention.

80. In order to effectively implement the rights of the Convention for indigenous children, States parties need to adopt appropriate legislation in accordance with the Convention. Adequate resources should be allocated and special measures adopted in a range of areas in order to effectively ensure that indigenous children enjoy their rights on an equal level with non-indigenous children. Further efforts should be taken to collect and disaggregate data and develop indicators to evaluate the degree of implementation of the rights of indigenous children. In order to develop policy and programming efforts in a culturally sensitive manner, States parties should consult with indigenous communities and directly with indigenous children. Professionals working with indigenous children should be trained on how consideration should be given to cultural aspects of children's rights.

81. The Committee calls for States parties to, when applicable, better integrate information in their periodic reports to the Committee on the implementation of indigenous children's rights and on the adoption of special measures in this regard. Furthermore, the Committee requests States parties to strengthen efforts to translate and disseminate information about the Convention and its Optional Protocols and the reporting process among indigenous communities and children, in order for them to actively participate in the monitoring process. Furthermore, indigenous communities are encouraged to utilize the Convention as an opportunity to assess the implementation of the rights of their children.

82. Finally, the Committee urges States parties to adopt a rights-based approach to indigenous children based on the Convention and other relevant international standards, such as ILO Convention No. 169 and the United Nations Declaration on the Rights of Indigenous Peoples. In order to guarantee effective monitoring of the implementation of the rights of indigenous children, States parties are urged to strengthen direct cooperation with indigenous communities and, if required, seek technical cooperation from international agencies, including United Nations entities. Empowerment of indigenous children and the effective exercise of their rights to culture, religion and language provide an essential foundation of a culturally diverse State in harmony and compliance with its human rights obligations.

This is Exhibit "56" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

Convention on the Rights of the Child

Distr.: General
22 August 2023

Original: English

Committee on the Rights of the Child

General comment No. 26 (2023) on children's rights and the environment, with a special focus on climate change*

I. Introduction

1. The extent and magnitude of the triple planetary crisis, comprising the climate emergency, the collapse of biodiversity and pervasive pollution, is an urgent and systemic threat to children's rights globally. The unsustainable extraction and use of natural resources, combined with widespread contamination through pollution and waste, have had a profound impact on the natural environment, fuelling climate change, intensifying the toxic pollution of water, air and soil, causing ocean acidification and devastating biodiversity and the very ecosystems that sustain all life.

2. The efforts of children to draw attention to these environmental crises created the motivation and were the momentum behind the present general comment. The Committee benefited immeasurably from the contributions of children at its 2016 day of general discussion on children's rights and the environment. A diverse and dedicated children's advisory team, comprising 12 advisors of between 11 and 17 years of age, supported the consultation process undertaken for the general comment, with 16,331 contributions from children, from 121 countries, through online surveys, focus groups and in-person national and regional consultations.

3. The children consulted reported on the negative effects of environmental degradation and climate change on their lives and communities. They asserted their right to live in a clean, healthy and sustainable environment: "The environment is our life." "Adults [should] stop making decisions for the future they won't experience. [We] are the key means [of] solving climate change, as it is [our] lives at stake." "I would like to tell [adults] that we are the future generations and, if you destroy the planet, where will we live?!"[1]

4. Child human rights defenders, as agents of change, have made historic contributions to human rights and environmental protection. Their status should be recognized, and their demands for urgent and decisive measures to tackle global environmental harm should be realized.

5. While the present general comment is focused on climate change, its application should not be limited to any particular environmental issue. New environmental challenges may arise in the future, for example, those linked to technological and economic development and social change. States should ensure that the present general comment is widely disseminated to all relevant stakeholders, in particular children, and is made available in multiple languages and formats, including age-appropriate and accessible versions.

* Adopted by the Committee at its ninety-third session (8–26 May 2023).

[1] See https://childrightsenvironment.org/reports/.

Please recycle

A. Child rights-based approach to environmental protection

6. The application of a child rights-based approach to the environment requires the full consideration of all children's rights under the Convention on the Rights of the Child and the Optional Protocols thereto.

7. In a children's rights-based approach, the process of realizing children's rights is as important as the result. As rights holders, children are entitled to protection from infringements of their rights stemming from environmental harm and to be recognized and fully respected as environmental actors. In taking such an approach, particular attention is paid to the multiple barriers faced by children in disadvantaged situations in enjoying and claiming their rights.

8. A clean, healthy and sustainable environment is both a human right itself and necessary for the full enjoyment of a broad range of children's rights. Conversely, environmental degradation, including the consequences of the climate crisis, adversely affects the enjoyment of these rights, in particular for children in disadvantaged situations or children living in regions that are highly exposed to climate change. The exercise by children of their rights to freedom of expression, peaceful assembly and association, to information and education, to participate and be heard and to effective remedies can result in more rights-compliant, and therefore more ambitious and effective, environmental policies. In this way, children's rights and environmental protection form a virtuous circle.

B. Evolution of international law on human rights and the environment

9. The Convention explicitly addresses environmental issues in article 24 (2) (c), by which States are obliged to take measures to combat disease and malnutrition, taking into consideration the dangers and risks of environmental pollution, and under article 29 (1) (e), by which they are required to direct the education of children to the development of respect for the natural environment. Since the adoption of the Convention, growing acceptance has emerged of the wide-ranging interconnections between children's rights and environmental protection. Unprecedented environmental crises and the resulting challenges for the realization of children's rights require a dynamic interpretation of the Convention.

10. The Committee is mindful of efforts of relevance to its interpretation, including: (a) the recognition of the human right to a clean, healthy and sustainable environment by the General Assembly[2] and the Human Rights Council;[3] (b) the framework principles on human rights and the environment;[4] (c) the existing and evolving norms, principles, standards and obligations under international environmental law, such as the United Nations Framework Convention on Climate Change and the Paris Agreement; (d) the legal developments and jurisprudence at the regional level recognizing the relationship between human rights and the environment; and (e) the recognition of some form of the right to a clean, healthy and sustainable environment in international agreements, the jurisprudence of regional and national courts, national constitutions, laws and policies by a vast majority of States.[5]

C. Intergenerational equity and future generations

11. The Committee recognizes the principle of intergenerational equity and the interests of future generations, to which the children consulted overwhelmingly referred. While the rights of children who are present on Earth require immediate urgent attention, the children constantly arriving are also entitled to the realization of their human rights to the maximum extent. Beyond their immediate obligations under the Convention with regard to the environment, States bear the responsibility for foreseeable environment-related threats

[2] General Assembly resolution 76/300.
[3] Human Rights Council resolution 48/13.
[4] A/HRC/37/59, annex.
[5] See A/HRC/43/53.

arising as a result of their acts or omissions now, the full implications of which may not manifest for years or even decades.

D. Objectives

12. In the present general comment, the Committee aims to:

(a) Emphasize the urgent need to address the adverse effects of environmental degradation, with a special focus on climate change, on the enjoyment of children's rights;

(b) Promote a holistic understanding of children's rights as they apply to environmental protection;

(c) Clarify the obligations of States to the Convention and provide authoritative guidance on legislative, administrative and other appropriate measures to address environmental harm, with a special focus on climate change.

II. Specific rights under the Convention as they relate to the environment

13. Children's rights, like all human rights, are indivisible, interdependent and interrelated. Some rights are particularly threatened by environmental degradation. Other rights play an instrumental role in safeguarding children's rights in relation to the environment. The right to education, for example, is a right that has both dimensions.

A. Right to non-discrimination (art. 2)

14. States have an obligation to effectively prevent, protect against and provide remedies for both direct and indirect environmental discrimination. Children in general, and certain groups of children in particular, face heightened barriers to the enjoyment of their rights, due to multiple and intersecting forms of discrimination; such grounds include those specifically prohibited under article 2 of the Convention and the "other status" referred to in the article. The impact of environmental harm has a discriminatory effect on certain groups of children, especially Indigenous children, children belonging to minority groups, children with disabilities and children living in disaster-prone or climate-vulnerable environments.

15. States should collect disaggregated data to identify the differential effects of environment-related harm on children and to better understand intersectionalities, paying special attention to groups of children who are most at risk, and to implement special measures and policies, as required. States must ensure that all legislation, policies and programmes that deal with environmental issues are not intentionally or unintentionally discriminatory towards children in their content or implementation.

B. Best interests of the child (art. 3)

16. Environmental decisions generally concern children, and the best interests of the child shall be a primary consideration in the adoption and implementation of environmental decisions, including laws, regulations, policies, standards, guidelines, plans, strategies, budgets, international agreements and the provision of development assistance. Where an environmental decision may have a significant impact on children, conducting a more detailed procedure to assess and determine children's best interests that provides opportunities for their effective and meaningful participation, is appropriate.

17. Determining the best interests of the child should include an assessment of the specific circumstances that place children uniquely at risk in the context of environmental harm. The purpose of assessing the best interests of the child shall be to ensure the full and effective enjoyment of all rights, including the right to a clean, healthy and sustainable environment.

States should not only protect children against environmental harm, but also ensure their well-being and development, taking into account the possibility of future risk and harm.[6]

18. The adoption of all measures of implementation should also follow a procedure that ensures that the best interests of the child are a primary consideration. A child rights impact assessment should be used to evaluate the environmental impact of all implementation measures, such as any proposed policy, legislation, regulation, budget or other administrative decision concerning children, and should complement ongoing monitoring and evaluation of the impact of measures on children's rights.

19. Potential conflicts of the best interests of the child with other interests or rights should be resolved on a case-by-case basis, carefully balancing the interests of all parties. Decision makers should analyse and weigh the rights and interests of all those concerned, giving appropriate weight to the primacy of the best interests of the child. States should take into account the possibility that environmental decisions that seem reasonable individually and on a shorter timescale can become unreasonable in aggregate and when considering the full harm that they will cause to children throughout their life courses.

C. Right to life, survival and development

20. The right to life is threatened by environmental degradation, including climate change, pollution and biodiversity loss, which are closely linked to other fundamental challenges impeding the realization of this right, including poverty, inequality and conflict. States should take positive measures to ensure that children are protected from foreseeable premature or unnatural death and threats to their lives that may be caused by acts and omissions, as well as the activities of business actors, and enjoy their right to life with dignity.[7] Such measures include the adoption and effective implementation of environmental standards, for example, those related to air and water quality, food safety, lead exposure and greenhouse gas emissions, and all other adequate and necessary environmental measures that are protective of children's right to life.

21. The obligations of States under article 6 of the Convention also apply to structural and long-term challenges arising from environmental conditions that may lead to direct threats to the right to life and require taking appropriate measures to tackle those conditions, for example, the sustainable use of resources needed for covering basic needs and the protection of healthy ecosystems and biodiversity. Special measures of protection are needed to prevent and reduce child mortality from environmental conditions and for groups in vulnerable situations.

22. Environmental degradation increase children's risk of facing grave rights violations in armed conflict due to displacement, famine and increased violence. In the context of armed conflict, States should prohibit the development or retention of, and ensure the clean-up of areas contaminated by, unexploded ordnance and residue of biological, chemical and nuclear weapons, in line with international commitments.

23. Environmental degradation jeopardizes children's ability to achieve their full developmental potential, with implications for a wide range of other rights under the Convention. The development of children is intertwined with the environment in which they live. The developmental benefits of a healthy environment include those linked to opportunities to experience outdoor activities and to interact with and play in natural environments, including the animal world.

24. Younger children are particularly susceptible to environmental hazards due to their unique activity patterns, behaviours and physiology. Exposure to toxic pollutants, even at low levels, during developmental windows of increased vulnerability can easily disrupt the maturational processes of the brain, organs and the immune system and cause disease and impairments during and beyond childhood, sometimes after a substantial latency period. The

[6] General comment No. 14 (2013) on the right of the child to have his or her best interests taken as a primary consideration, paras. 16 (e), 71 and 74.

[7] Human Rights Committee, general comment No. 36 (2018) on the right to life, para. 62.

effects of environmental contaminants may even persist in future generations. States should consistently and explicitly consider the impact of exposure to toxic substances and pollution in early life.

25. States should recognize each stage of childhood, the importance of each stage for subsequent stages of maturation and development and children's varying needs at each stage. To create an optimal environment for the right to development, States should explicitly and consistently consider all factors required for children of all different ages to survive, develop and thrive to their fullest potential and design and implement evidence-based interventions that address a wide range of environmental determinants during the life course.

D. Right to be heard (art. 12)

26. Children identify environmental issues as being highly important to their lives. Children's voices are a powerful global force for environmental protection, and their views add relevant perspectives and experience with respect to decision-making on environmental matters at all levels. Even from an early age, children can enhance the quality of environmental solutions, for example, by providing invaluable insights into issues such as the effectiveness of early warning systems for environmental hazards. Children's views should be proactively sought and given due weight in the design and implementation of measures aimed at addressing the significant and long-term environmental challenges that are fundamentally shaping their lives. Creative means of expression, such as art and music, may be used by children to participate and express their views. Additional support and special strategies may be required to empower children in disadvantaged situations, such as children with disabilities, children belonging to minority groups and children living in vulnerable areas, to exercise their right to be heard. The digital environment and tools can enhance consultations with children and expand their capacity and opportunities to be effectively engaged in environmental matters, including through collective advocacy, if carefully used, with due attention given to challenges regarding digital inclusion.[8]

27. States must ensure that age-appropriate, safe and accessible mechanisms are in place for children's views to be heard regularly and at all stages of environmental decision-making processes for legislation, policies, regulations, projects and activities that may affect them, at the local, national and international levels. For free, active, meaningful and effective participation, children should be provided with environmental and human rights education, age-appropriate and accessible information, adequate time and resources and a supportive and enabling environment. They should receive information about the outcomes of environment-related consultations and feedback on how their views were taken into account and have access to child-sensitive complaint procedures and remedies when their right to be heard in the environmental context is disregarded.

28. At the international level, States, intergovernmental organizations and international non-governmental organizations should facilitate the involvement of children's associations and child-led organizations or groups in environmental decision-making processes. States should ensure that their obligations concerning children's right to be heard are incorporated into international environmental decision-making processes, including in negotiations and the implementation of instruments of international environmental law. Efforts to enhance youth participation in environmental decision-making processes should be inclusive of children.

E. Freedom of expression, association and peaceful assembly (arts. 13 and 15)

29. Children across the world are taking action, individually and collectively, to protect the environment, including by highlighting the consequences of climate change. States shall respect and protect children's rights to freedom of expression, association and peaceful

[8] General comment No. 25 (2021) on children's rights in relation to the digital environment, paras. 16 and 18.

assembly in relation to the environment, including by providing a safe and enabling environment and a legal and institutional framework within which children can effectively exercise their rights. Children's rights to freedom of expression, association and peaceful assembly shall not be subjected to restrictions other than those imposed in conformity with the law and that are necessary in a democratic society.

30. Children who exercise their right to freedom of expression or engage in protests on environmental matters, including children environmental human rights defenders, often face threats, intimidation, harassment and other serious reprisals. States are required to protect their rights, including by providing a safe and empowering context for initiatives organized by children to defend human rights in schools and other settings. States, State actors, such as the police, and other stakeholders, including teachers, should receive training on children's civil and political rights, including measures to ensure that children can enjoy them safely. States must take all appropriate measures to ensure that no restrictions other than those that are provided by law and that are necessary are imposed on forming and joining associations or taking part in environmental protests. Laws, including those relating to defamation and libel, should not be abused to suppress children's rights. States should adopt and implement laws to protect child human rights defenders in accordance with international human rights standards. States should provide effective remedies for violations of children's rights to freedom of expression, peaceful assembly and association.

31. States should foster, recognize and support the positive contribution of children to environmental sustainability and climate justice, as an important means of civil and political engagement through which children can negotiate and advocate for the realization of their rights, including their right to a healthy environment, and hold States accountable.

F. Access to information (arts. 13 and 17)

32. Access to information is essential for enabling children and their parents or caregivers to comprehend the potential effects of environmental harm on children's rights. It is also a crucial prerequisite for realizing the rights of children to express their views, to be heard and to effective remedy regarding environmental matters.

33. Children have the right to access to accurate and reliable environmental information, including about the causes, effects and actual and potential sources of climate and environmental harm, adaptive responses, relevant climate and environmental legislation, regulations, findings from climate and environmental impact assessments, policies and plans and sustainable lifestyle choices. Such information empowers children to learn what they can do in their immediate environment related to waste management, recycling and consumption behaviours.

34. States have an obligation to make environmental information available. Dissemination methods should be appropriate to children's ages and capacities and aimed at overcoming obstacles, such as illiteracy, disability, language barriers, distance and limited access to information and communications technology. States should encourage the media to disseminate accurate information and materials regarding the environment, for example, measures that children and their families can take to manage risks in the context of climate change-related disasters.

G. Right to freedom from all forms of violence (art. 19)

35. Environmental degradation, including the climate crisis, is a form of structural violence against children and can cause social collapse in communities and families. Poverty, economic and social inequalities, food insecurity and forced displacement aggravate the risk that children will experience violence, abuse and exploitation. For example, poorer households are less resilient to environment-related shocks, including those caused or exacerbated by climate change, such as rising sea levels, floods, cyclones, air pollution, extreme weather events, desertification, deforestation, droughts, fires, storms and biodiversity loss. The financial hardships, food and clean water shortages and fragile child protection systems brought about by such shocks undermine families' daily routines, place

an extra burden on children and increase their vulnerability to gender-based violence, child marriage, female genital mutilation, child labour, abduction, trafficking, displacement, sexual violence and exploitation and recruitment into criminal, armed and/or violent extremist groups. Children must be protected from all forms of physical and psychological violence and from exposure to violence, such as domestic violence or violence inflicted on animals.

36. Investment in children's services can considerably reduce the overall environmental risks faced by children worldwide. States should adopt cross-sectoral measures to address the drivers of violence against children linked to environmental degradation.

H. Right to the highest attainable standard of health (art. 24)

37. The right to health includes the enjoyment of a variety of facilities, goods, services and conditions that are necessary for the realization of the highest attainable standard of health, including a healthy environment. This right is dependent on and is indispensable to the enjoyment of many other rights under the Convention.

38. Environmental pollution is a major threat to children's health, as explicitly recognized in article 24 (2) (c) of the Convention. However, in many countries, pollution is often overlooked and its impact underestimated. Lack of potable water, inadequate sanitation and household air pollution pose serious threats to children's health. Pollution associated with past and present industrial activities, including exposure to toxic substances and hazardous waste, presents more complex threats to health, often resulting in effects long after exposure.

39. Climate change, biodiversity loss and the degradation of ecosystems are obstacles to the realization of children's right to health. These environmental factors often interact, exacerbating existing health disparities. For example, rising temperatures caused by climate change increase the risk of vector-borne and zoonotic diseases and concentrations of air pollutants that stunt brain and lung development and exacerbate respiratory conditions. Climate change, pollution and toxic substances all represent key drivers of the alarming loss in biodiversity and the degradation of ecosystems on which human health depends. Specific effects include reductions in microbial diversity, which is critical to the development of children's immune systems, and the increasing prevalence of autoimmune diseases, with long-term effects.

40. Air and water pollution, exposure to toxic substances, including chemical fertilizers, soil and land degradation and other types of environmental harm increase child mortality, especially among children under 5 years of age, and contribute to the prevalence of disease, impaired brain development and subsequent cognitive deficits. The effects of climate change, including water scarcity, food insecurity, vector-borne and waterborne diseases, the intensification of air pollution and physical trauma linked to both sudden- and slow-onset events, are disproportionately borne by children.[9]

41. Another concern is children's current and anticipated psychosocial and mental health conditions caused by environmental harm, including climate change-related events. The clear emerging link between environmental harm and children's mental health, such as depression and eco-anxiety, requires pressing attention, both in terms of response and prevention programmes, by public health and education authorities.

42. States should integrate measures to address environmental health concerns relevant to children into their national plans, policies and strategies relating to both health and the environment. Legislative, regulatory and institutional frameworks, including regulations dealing with the business sector, should effectively protect children's environmental health where they live, study, play and work. Environmental health standards should be consistent with the best available science and all relevant international guidelines, such as those established by the World Health Organization, and be strictly enforced. The obligations of

[9] For example, Intergovernmental Panel on Climate Change, Sixth Assessment Report, Summary for Policymakers, figure SPM.1, The data show the disproportionate, cumulative and long-term effects of climate change on people born in 2020.

States under article 24 of the Convention also apply when developing and implementing environmental agreements to address transboundary and global threats to children's health.

43. The right to health includes access for children affected by environmental harm to high-quality public health and health-care facilities, goods and services, and particular attention should be given to underserved and hard-to-reach populations and to delivering high-quality prenatal maternal health care nationwide. Facilities, programmes and services should be equipped to respond to environmental health hazards. Health protection also applies to the conditions that children need to lead a healthy life, such as a safe climate, safe and clean drinking water and sanitation, sustainable energy, adequate housing, access to nutritionally adequate and safe food and healthy working conditions.

44. The availability of high-quality data is crucial for adequate protection against climate and environmental health risks. States should assess the local, national and transboundary health effects of environmental harm, including the causes of mortality and morbidity, while taking into consideration the entire life course of children and the vulnerabilities and inequalities that they face at each life stage. Priority concerns, the impacts of climate change and emerging environmental health issues should be identified. In addition to data collected through routine health information systems, research is required, for example, for longitudinal cohort studies and studies of pregnant women, infants and children that capture risks at critical windows of development.

I. Right to social security and adequate standard of living (arts. 26 and 27)

45. Children have the right to a standard of living adequate for their physical, mental, spiritual, moral and social development. A clean, healthy and sustainable environment is a prerequisite for the realization of this right, including to adequate housing, food security and safe and clean drinking water and sanitation.[10]

46. The Committee underlines that the rights to adequate housing, food, water and sanitation should be realized sustainably, including with respect to material consumption, resource and energy use and the appropriation of space and nature.

47. Exposure to environmental harm has both direct and structural causes and exacerbates the effects of multidimensional child poverty. In the environmental context, social security, as guaranteed under article 26 of the Convention, is particularly relevant. States are urged to introduce features into social security policies and social protection floors that provide children and their families with protection against environmental shocks and slow-onset harms, including from climate change. States should strengthen child-centred poverty alleviation programmes in the areas that are most vulnerable to environmental risks.

48. Children, including displaced children, should have access to adequate housing that conforms to international human rights standards. Housing should be sustainable and resilient and should not be built on polluted sites or in areas facing a high risk of environmental degradation. Homes should have safe and sustainable sources of energy for cooking, heating, lighting and appropriate ventilation and be free from mould, toxic substances and smoke. There should be effective management of waste and litter, protection from traffic, excessive noise and overcrowding and access to safe drinking water and sustainable sanitation and hygiene facilities.

49. Children should not be subject to forced evictions without prior provision of adequate alternative accommodation, including relocation linked to development and infrastructure projects addressing energy and/or climate mitigation and adaptation action. Child rights impact assessments should be a prerequisite for such projects. Particular attention should be paid to preserving the traditional land of Indigenous children and protecting the quality of

[10] Committee on Economic, Social and Cultural Rights, general comment No. 15 (2002) on the right to water, para. 3; and Committee on the Rights of the Child, general comment No. 15 (2013) on the right of the child to the enjoyment of the highest attainable standard of health, para. 48.

the natural environment for the enjoyment of their rights, including their right to an adequate standard of living.[11]

50. In situations of cross-border displacement and migration linked to climate-related and environment-related events and related to armed conflict situations, the Committee underlines the importance of international cooperation and the obligation of States to undertake all appropriate legislative, administrative and other measures to ensure the rights under the Convention for all children within their jurisdiction, without discrimination. Relevant authorities should consider the risk of children's rights violations caused by the impacts of environmental degradation, including climate change, when deciding upon admission and when reviewing claims for international protection, in particular given, for example, the particularly serious consequences for children of the insufficient provision of food or health services. States should not deport children and their families to any place where they would face a real risk of grave violations as a result of the adverse effects of environmental degradation.

J. Right to education (arts. 28 and 29 (1) (e))

51. Education is one of the cornerstones of a child rights-based approach to the environment. Children have highlighted that education is instrumental in protecting their rights and the environment and in increasing their awareness and preparedness for environmental damage; however, the right to education is highly vulnerable to the impact of environmental harm, as it can result in school closures and disruptions, school dropout and the destruction of schools and places to play.

52. Article 29 (1) (e) of the Convention, requiring that the education of a child be directed to the development of respect for the natural environment, should be read in conjunction with article 28, to ensure that every child has the right to receive an education that reflects environmental values.[12]

53. A rights-based environmental education should be transformative, inclusive, child-centred, child-friendly and empowering. It should pursue the development of the child's personality, talents and abilities, acknowledge the close interrelationship between respect for the natural environment and other ethical values enshrined in article 29 (1) of the Convention and have both a local and global orientation.[13] School curricula should be tailored to children's specific environmental, social, economic and cultural contexts and promote understanding of the contexts of other children affected by environmental degradation. Teaching materials should provide scientifically accurate, up-to-date and developmentally and age-appropriate environmental information. All children should be equipped with the skills necessary to face expected environmental challenges in life, such as disaster risks and environment-related health impacts, including the ability to critically reflect upon such challenges, solve problems, make well-balanced decisions and assume environmental responsibility, such as through sustainable lifestyles and consumption, in accordance with their evolving capacities.

54. Environmental values should be reflected in the education and training of all professionals involved in education, encompassing teaching methods, technologies and approaches used in education, school environments and preparing children for green jobs. Environmental education extends beyond formal schooling to embrace the broad range of lived experiences and learning. Exploratory, non-formal and practical methods, such as outdoor learning, are a preferred way of delivering this aim of education.

55. States should build safe, healthy and resilient infrastructure for effective learning. This includes ensuring the availability of pedestrian and biking routes and public transportation to school and that schools and alternative learning facilities are located at safe distances from sources of pollution, flooding, landslides and other environmental hazards, including

[11] General comment No. 11 (2009) on Indigenous children and their rights under the Convention, paras. 34 and 35.

[12] General comment No. 1 (2001) on the aims of education, para. 13.

[13] Ibid., paras. 2, 12 and 13.

contaminated sites, and the construction of buildings and classrooms with adequate heating and cooling and access to sufficient, safe and acceptable drinking water[14] and sanitation facilities. Environmentally friendly school facilities, such as those with lighting and heating sourced from renewable energy and edible gardens, can benefit children and ensure compliance by States with their environmental obligations.

56. During and after water scarcity, sandstorms, heatwaves and other severe weather events, States should ensure physical access to schools, especially for children in remote or rural communities, or consider alternative teaching methods, such as mobile educational facilities and distance learning. Underserved communities should be prioritized for the climate-proofing and renovation of schools. States should ensure alternative housing for displaced populations as soon as possible to ensure that schools are not used as shelters. When responding to emergencies caused by severe weather events in areas already affected by armed conflict, States should ensure that schools do not become targets for armed groups' activity.

57. States should recognize and address the disproportionate indirect and knock-on effects of environmental degradation on children's education, paying special attention to gender-specific situations, such as children leaving school due to additional domestic and economic burdens in households facing environment-related shocks and stress.

K. Rights of Indigenous children and children belonging to minority groups (art. 30)

58. Indigenous children are disproportionately affected by biodiversity loss, pollution and climate change. States should closely consider the impact of environmental harm, such as deforestation, on traditional land and culture and the quality of the natural environment, while ensuring the rights to life, survival and development of Indigenous children. States must undertake measures to meaningfully engage with Indigenous children and their families in responding to environmental harm, including harm caused by climate change, taking due account of and integrating concepts from Indigenous cultures and traditional knowledge in mitigation and adaptation measures. While children in Indigenous communities face unique risks, they can also act as educators and advocates in applying traditional knowledge to reduce the impact of local hazards and strengthen resilience, if this knowledge is passed on and supported. Comparable measures should be taken regarding the rights of children belonging to non-Indigenous minority groups whose rights, way of life and cultural identity are intimately related to nature.

L. Right to rest, play, leisure and recreation (art. 31)

59. Play and recreation are essential to the health and well-being of children and promote the development of creativity, imagination, self-confidence, self-efficacy and physical, social, cognitive and emotional strength and skills. Play and recreation contribute to all aspects of learning, are critical to children's holistic development[15] and afford important opportunities for children to explore and experience the natural world and biodiversity, benefiting their mental health and well-being and contributing to understanding, appreciation and care for the natural environment.

60. Conversely, unsafe and hazardous environments undermine the realization of the rights under article 31 (1) of the Convention and are risk factors for children's health, development and safety. Children need inclusive spaces for play that are close to their homes and free from environmental hazards. The impacts of climate change exacerbate these challenges, while climate change-related stress on household incomes may reduce children's available time for, and ability to engage in, rest, leisure, recreation and play.

[14] Committee on Economic, Social and Cultural Rights, general comment No. 15 (2002), paras. 12 (c) (i) and 16 (b).

[15] General comment No. 17 (2013) on the right of the child to rest, leisure, play, recreational activities, cultural life and the arts, paras. 9 and 14 (c).

61. States shall take effective legislative, administrative and other measures to ensure that all children, without discrimination, are able to play and engage in recreational activities in safe, clean and healthy environments, including natural spaces, parks and playgrounds. In public planning, in rural and urban settings, children's views should be given due weight and the creation of environments promoting their well-being should be prioritized. Consideration should be given to: (a) providing access, by means of safe, affordable and accessible transportation, to green areas, large open spaces and nature for play and recreation; (b) creating a safe local environment that is for free play, free from pollution, hazardous chemicals and waste; and (c) undertaking road traffic measures to reduce pollution levels near households, schools and playgrounds, including through the design of zones in which children playing, walking and cycling have priority.

62. States should introduce legislation, regulations and guidelines, accompanied by necessary budgetary allocations and effective monitoring and enforcement mechanisms, to ensure that third parties comply with article 31 of the Convention, including by establishing safety standards for all toys and play and recreational facilities, in particular concerning toxic substances, in urban and rural development projects. In situations of climate change-related disasters, measures should be taken to restore and protect these rights, including through the creation or restoration of safe spaces and by encouraging play and creative expression to promote resilience and psychological healing.

III. Right to a clean, healthy and sustainable environment

63. Children have the right to a clean, healthy and sustainable environment. This right is implicit in the Convention and directly linked to, in particular, the rights to life, survival and development, under article 6, to the highest attainable standard of health, including taking into consideration the dangers and risks of environmental pollution, under article 24, to an adequate standard of living, under article 27, and to education, under article 28, including the development of respect for the natural environment, under article 29.

64. The substantive elements of this right are profoundly important for children, given that they include clean air, a safe and stable climate, healthy ecosystems and biodiversity, safe and sufficient water, healthy and sustainable food and non-toxic environments.[16]

65. Towards the realization of this right for children, the Committee considers that States should immediately take the following action:

(a) Improve air quality, by reducing both outdoor and household air pollution, to prevent child mortality, especially among children under 5 years of age;

(b) Ensure access to safe and sufficient water and sanitation and healthy aquatic ecosystems to prevent the spread of waterborne illnesses among children;

(c) Transform industrial agriculture and fisheries to produce healthy and sustainable food aimed at preventing malnutrition and promoting children's growth and development;

(d) Equitably phase out the use of coal, oil and natural gas, ensure a fair and just transition of energy sources and invest in renewable energy, energy storage and energy efficiency to address the climate crisis;

(e) Conserve, protect and restore biodiversity;

(f) Prevent marine pollution, by banning the direct or indirect introduction of substances into the marine environment that are hazardous to children's health and marine ecosystems;[17]

[16] See A/74/161, A/75/161, A/76/179, A/HRC/40/55, A/HRC/46/28 and A/HRC/49/53.

[17] Convention for the Protection of the Marine Environment of the North-East Atlantic, art. 2.2 (a).

(g) Closely regulate and eliminate, as appropriate, the production, sale, use and release of toxic substances that have disproportionate adverse health effects on children, in particular those substances that are developmental neurotoxins.[18]

66. Procedural elements, including access to information, participation in decision-making and child-friendly access to justice, with effective remedies, have equal importance to the empowerment of children, including through education, to become agents of their own destiny.

67. States should incorporate children's right to a clean, healthy and sustainable environment into their national legislation and take adequate measures to implement it in order to strengthen accountability. This right should be mainstreamed across all decisions and measures concerning children, including policies related to education, leisure, play, access to green spaces, child protection, children's health and migration, and national frameworks for the implementation of the Convention.

IV. General measures of implementation (art. 4)

A. Obligation of States to respect, protect and fulfil children's rights

68. States must ensure a clean, healthy and sustainable environment in order to respect, protect and fulfil children's rights. The obligation to respect children's rights requires States to refrain from violating them by causing environmental harm. They shall protect children against environmental damage from other sources and third parties, including by regulating business enterprises. States parties are also under the obligation to prevent and remediate the impacts of environmental hazards on children's rights, even where such threats are beyond human control, for example, by establishing inclusive early warning systems. States must take urgent steps to fulfil their obligation to facilitate, promote and provide for the enjoyment by children of their rights, including their right to a clean, healthy and sustainable environment, such as by transitioning to clean energy and adopting strategies and programmes to ensure the sustainable use of water resources.

69. States have a due diligence obligation to take appropriate preventive measures to protect children against reasonably foreseeable environmental harm and violations of their rights, paying due regard to the precautionary principle. This includes assessing the environmental impacts of policies and projects, identifying and preventing foreseeable harm, mitigating such harm if it is not preventable and providing for timely and effective remedies to redress both foreseeable and actual harm.

70. States are also obliged to respect, protect and fulfil children's rights that are exercised in relation to the environment. The obligation to respect rights requires that they refrain from any action that would limit children's right to express their views on matters relating to the environment and from impeding access to accurate environmental information, and protect children from misinformation concerning environmental risks and from the risk of violence or other reprisals. The obligation to fulfil rights requires that States combat negative societal attitudes to children's right to be heard and to facilitate their meaningful participation in environmental decision-making.

71. States must take deliberate, specific and targeted steps towards achieving the full and effective enjoyment of children's rights related to the environment, including their right to a healthy environment, including through the development of legislation, policies, strategies or plans that are science-based and consistent with relevant international guidelines related to environmental health and safety and by refraining from taking retrogressive measures that are less protective of children.

72. States are obliged to devote financial, natural, human, technological, institutional and informational resources to realize children's rights in relation to the environment to the

[18] See A/HRC/49/53.

maximum extent of their available resources and, where needed, within the framework of international cooperation.[19]

73. Subject to any obligations under international law, including those contained in multilateral environmental agreements to which they are party, States retain discretion in arriving at a reasonable balance between determining the appropriate levels of environmental protection and achieving other social goals in the light of available resources. Nevertheless, such leeway is limited by the obligations of States under the Convention. Children are far more likely than adults to suffer serious harm, including irreversible and lifelong consequences and death, from environmental degradation. Given their heightened duty of care, States should therefore set and enforce environmental standards that protect children from such disproportionate and long-term effects.[20]

74. States should ensure the collection of reliable, regularly updated and disaggregated data and research on environmental harm, including the risks and actual impacts of climate change-related harm on children's rights. They should include longitudinal data on the effects of environmental harm on children's rights, in particular on health, education and standard of living at different ages. Such data and research should inform the formulation and evaluation of environmental legislation, policies, programmes and plans at all levels and must be made publicly available.

B. Child rights impact assessments

75. All proposed environment-related legislation, policies, projects, regulations, budgets and decisions, and those already in force, require vigorous children's rights impact assessments, in accordance with article 3 (1) of the Convention. States should require the assessment, both before and after implementation, of the possible direct and indirect impact on the environment and climate, including the transboundary, cumulative, and both production and consumption effects, on the enjoyment of children's rights.

76. Whether child rights impact assessments are included within the framework of an environmental or integrated impact assessment, or carried out as a standalone assessment, they should incorporate a special regard for the differential impact of environmental decisions on children, in particular young children and other groups of children most at risk, as measured against all relevant rights under the Convention, including short-, medium- and long-term, combined and irreversible impacts, interactive and cumulative impacts and impacts in the different stages of childhood. For example, States that have substantial fossil fuel industries should assess the social and economic impact on children of their related decisions.

77. Child rights impact assessments should be undertaken as early as possible in the decision-making process, at crucial stages of decision-making and in follow up to the measures taken. Such assessments should be conducted with the participation of children and due weight should be given to their views and those of thematic experts. The findings should be published in child-friendly language and in the languages that children use.

C. Children's rights and the business sector

78. Businesses have the responsibility to respect children's rights in relation to the environment. States have the obligation to protect against the abuse of child rights by third parties, including business enterprises.[21]

79. Business activity is a source of significant environmental damage, contributing to child rights abuses. Such damage results, for example, from the production, use, release and disposal of hazardous and toxic substances, the extraction and burning of fossil fuels,

[19] General comment No. 19 (2016) on public budgeting for the realization of children's rights, para. 75.
[20] A/HRC/37/58, paras. 56 and 57.
[21] General comment No. 16 (2013) on State obligations regarding the impact of the business sector on children's rights, paras. 28, 42 and 82.

industrial air and water pollution and unsustainable agriculture and fishing practices. Businesses contribute significantly to greenhouse gas emissions, which adversely affect children's rights, and to short- and long-term infringements of their rights linked to the consequences of climate change. The impacts of business activities and operations may undermine the ability of children and their families to adapt to the impacts of climate change, for example, where land has been degraded, thereby exacerbating climate stress. States should strengthen the realization of children's rights by sharing and making accessible existing technologies and exerting influence on business operations and value chains to prevent, mitigate and adapt to climate change.

80. States have obligations to provide a framework to ensure that businesses respect children's rights through effective, child-sensitive legislation, regulation, enforcement and policies and remedial, monitoring, coordination, collaboration and awareness-raising measures. States should require businesses to undertake child rights due diligence procedures to identify, prevent, mitigate and account for their impact on the environment and children's rights. Such due diligence is a risk-based process that involves focusing efforts where the risks from environmental damage are severe and likely to materialize, paying special attention to the risk exposure of certain groups of children, such as working children. Immediate steps should be taken in the event that children are identified as victims to prevent further harm to their health and development and to adequately and effectively repair the damage done in a timely and effective manner.

81. The Committee recommends the development by businesses, in partnership with stakeholders, including children, of due diligence procedures that integrate children's rights impact assessments into their operations. Marketing standards should ensure that businesses do not mislead consumers, in particular children, through practices of green-washing or green-sheening, by which businesses falsely portray efforts to prevent or mitigate environmental harm.

D. Access to justice and remedies

82. Effective remedies should be available to redress violations and promote social justice.[22] Despite children having been at the vanguard of several environmental and climate change cases and their recognition under the Convention as rights holders, children, due to their status, encounter barriers to attaining legal standing in many States, thereby limiting their means of asserting their rights in the environmental context.

83. States should provide access to justice pathways for children, including complaint mechanisms that are child-friendly, gender-responsive and disability-inclusive, to ensure their engagement with effective judicial, quasi-judicial and non-judicial mechanisms, including child-centred national human rights institutions, for violations of their rights relating to environmental harm. This includes removing barriers for children to initiate proceedings themselves, adjusting the rules of standing and empowering national human rights institutions with mandates to receive complaints from children.

84. Mechanisms should be available for claims of imminent or foreseeable harms and past or current violations of children's rights. States should ensure that these mechanisms are readily available to all children under their jurisdiction, without discrimination, including children outside their territory affected by transboundary harm resulting from States' acts or omissions occurring within their territories.

85. States should provide for collective complaints, such as class action suits and public interest litigation,[23] and extend the limitation periods regarding violations of children's rights due to environmental harm.

86. The complexity of cases involving environmental harm due to transboundary effects, causation and cumulative impacts necessitates effective legal representation. Litigation is

[22] General comment No. 5 (2003) on general measures of implementation of the Convention, para. 24; and International Covenant on Civil and Political Rights, art. 2 (3).

[23] General comment No. 16 (2013), para. 68; and general comment No. 25 (2021), para. 44.

often a lengthy process, and supranational bodies generally require the exhaustion of domestic remedies prior to filing a complaint. Children should have access to free legal and other appropriate assistance, including legal aid and effective legal representation, and be provided the opportunity to be heard in any judicial or administrative proceedings affecting them. States should consider additional measures to lower the costs for children seeking remedies, for example, through protection from adverse cost orders, to limit the financial risk to children who bring cases in the public interest regarding environmental matters.

87. To enhance accountability and promote children's access to justice in environmental matters, States should explore options for shifting the onerous burden of proof from child plaintiffs to establish causation in the face of numerous variables and information deficits.

88. Children may face particular difficulties in obtaining remedies in cases involving business enterprises that may be causing or contributing to abuses of their rights, especially concerning transboundary and global impacts. States have an obligation to establish non-judicial and judicial mechanisms to provide access to effective remedies for abuses of children's rights by business enterprises, including as a result of their extraterritorial activities and operations, provided that there is a reasonable link between the State and the conduct concerned. In line with international standards, businesses are expected to establish or participate in effective grievance mechanisms for children who have been victims of such abuses of their rights. States should also ensure the availability of regulatory agencies, monitor abuses and provide adequate remedies for violations of children's rights related to environmental harm.

89. Appropriate reparation includes restitution, adequate compensation, satisfaction, rehabilitation and guarantees of non-repetition, with regard to both the environment and the children affected, including access to medical and psychological assistance. Remedial mechanisms should consider the specific vulnerabilities of children to the effects of environmental degradation, including the possible irreversibility and lifelong nature of the harm. Reparation should be swift, to limit ongoing and future violations. The application of novel forms of remedy is encouraged, such as orders to establish intergenerational committees, in which children are active participants, to determine and oversee the expeditious implementation of measures to mitigate and adapt to the impacts of climate change.

90. Access to applicable international and regional human rights mechanisms should be available, including through ratification of the Optional Protocol on a communications procedure. Information about such mechanisms and how to use them should be made widely known to children, parents, caregivers and professionals working with and for children.

E. International cooperation

91. States have an obligation to take action, separately and jointly, through international cooperation, to respect, protect and fulfil children's rights. Article 4 of the Convention emphasizes that the implementation of the Convention is a cooperative exercise for the States of the world,[24] and the full realization of children's rights under the Convention is in part contingent upon how States interact. Climate change, pollution and biodiversity loss clearly represent urgent examples of global threats to children's rights that require States to work together, calling for the widest possible cooperation by all countries and their participation in an effective and appropriate international response.[25] The obligations of international cooperation of each State depends in part on its situation. In the context of climate change, such obligations are appropriately guided by taking into account the historical and current emissions of greenhouse gases and the concept of common but differentiated responsibilities and States' respective capabilities, in the light of different national circumstances,[26] while requiring the provision of technical and financial assistance from developed States to

[24] General comment No. 5 (2003), para. 60.

[25] United Nations Framework Convention on Climate Change, preamble; and Human Rights Council resolutions 26/27 and 29/15.

[26] United Nations Framework Convention on Climate Change, preamble and art. 3 (1); Paris Agreement, art. 2 (2); and Human Rights Council resolutions 26/27 and 29/15.

developing States consistent with article 4 of the Convention. States should engage in international cooperation to ensure the conformity of standards for developing and implementing children's rights and environmental due diligence procedures.

92. In general, developed States have committed to supporting action to address the intersecting global environmental challenges in developing countries by facilitating the transfer of green technology and contributing to financing environmental measures, in line with internationally agreed climate and biodiversity finance goals. The Convention should be a core consideration in global environmental decisions, including in States' international mitigation, adaptation and loss and damage strategies. [27] The environment-related programmes of donor States should be rights-based, while States that receive international environmental finance and assistance should consider allocating a substantive part of that aid specifically to child-focused programmes. Implementation guidelines should be reviewed and updated to take into account the child rights obligations of States.

93. States should ensure that environmental measures supported by international environmental finance mechanisms and international organizations respect, protect and proactively seek to fulfil children's rights. States should integrate standards and procedures to assess the risk of harm to children into the planning and implementation of new environment-related projects and take measures to mitigate the risks of harm, in compliance with the Convention and the Optional Protocols thereto. States should cooperate to support the establishment and implementation of procedures and mechanisms to provide access to effective remedies for violations of children's rights in this context.

94. States should cooperate in good faith in the establishment and funding of global responses to address environmental harm suffered by people in vulnerable situations, paying particular attention to safeguarding the rights of children in the light of their specific vulnerabilities to environment-related risks and addressing the devastating impact of both sudden- and slow-onset forms of climate disruption on children, their communities and their nations. States should cooperate to invest in conflict prevention and efforts to sustain peace that will positively contribute to mitigating any environmental harm to children that could result from armed conflict and should consider the views of children in peacemaking and peacebuilding.

V. Climate change

A. Mitigation

95. The Committee calls for urgent collective action by all States to mitigate greenhouse gas emissions, in line with their human rights obligations. In particular, historical and current major emitters should take the lead in mitigation efforts.

96. Insufficient progress in achieving international commitments to limit global warming exposes children to continuous and rapidly increasing harms associated with greater concentrations of greenhouse gas emissions and the resulting temperature increases. Scientists warn about tipping points, which are thresholds beyond which certain effects can no longer be avoided, posing dire and uncertain risks to children's rights. Avoiding tipping points requires urgent and ambitious action to reduce atmospheric concentrations of greenhouse gases.

97. Mitigation objectives and measures should be based on the best available science and be regularly reviewed to ensure a pathway to net zero carbon emissions at the latest by 2050 in a manner that prevents harm to children. The Intergovernmental Panel on Climate Change has illustrated that it is imperative to accelerate mitigation efforts in the near term, to limit the temperature increase to below 1.5°C above pre-industrial levels, and that international cooperation, equity and rights-based approaches are critical to achieving ambitious climate change mitigation goals.[28]

[27] United Nations Framework Convention on Climate Change, art. 4 (5); and Paris Agreement, art. 9 (1).

[28] See https://www.ipcc.ch/assessment-report/ar6/.

98. When determining the appropriateness of their mitigation measures in accordance with the Convention, and also mindful of the need to prevent and address any potential adverse effects of those measures, States should take into account the following criteria:

(a) Mitigation objectives and measures should clearly indicate how they respect, protect and fulfil children's rights under the Convention. States should transparently and explicitly focus on children's rights when preparing, communicating and updating nationally determined contributions.[29] This obligation extends to other processes, including biennial transparency reports, international assessments and reviews and international consultations and analyses;[30]

(b) States have an individual responsibility to mitigate climate change in order to fulfil their obligations under the Convention and international environmental law, including the commitment contained in the Paris Agreement to hold the increase in the global average temperature to well below 2°C above pre-industrial levels and to pursue efforts to limit the temperature increase to 1.5°C above pre-industrial levels by 2030.[31] Mitigation measures should reflect each State party's fair share of the global effort to mitigate climate change, in the light of the total reductions necessary to protect against continuing and worsening violations of children's rights. Each State, and all States working together, should continuously strengthen climate commitments in line with the highest possible ambition and their common but differentiated responsibilities and respective capacities. High-income States should continue to take the lead by undertaking economy-wide absolute emission reduction targets, and all States should enhance their mitigation measures in the light of their different national circumstances in a manner that protects children's rights to the maximum possible extent;[32]

(c) Successive mitigation measures and updated pledges should represent the efforts of States in a progression over time,[33] keeping in mind that the time frame for preventing catastrophic climate change and harm to children's rights is shorter and requires urgent action;

(d) Short-term mitigation measures should take into consideration the fact that delaying a rapid phase out of fossil fuels will result in higher cumulative emissions and thereby greater foreseeable harm to children's rights;

(e) Mitigation measures cannot rely on removing greenhouse gases from the atmosphere in the future through unproven technologies. States should prioritize rapid and effective emissions reductions now in order to support children's full enjoyment of their rights in the shortest possible period of time and to avoid irreversible damage to nature.[34]

99. States should discontinue subsidies to public or private actors for investments in activities and infrastructure that are inconsistent with low greenhouse gas emission pathways, as a mitigation measure to prevent further damage and risk.

100. Developed States should assist developing countries in planning and implementing mitigation measures, in order to help children in vulnerable situations. The assistance could include providing financial and technical expertise and information and other capacity-building measures that specifically contribute to the prevention of harm to children caused by climate change.[35]

France* (CRC/C/88/D/106/2019) and *Sacchi et al. v. Germany* (CRC/C/88/D/107/2019) and *Sacchi et al. v. Turkey* (CRC/C/88/D/108/2019).
[32] Paris Agreement, art. 4 (4).
[33] Ibid., arts. 3 and 4 (3).
[34] United Nations Framework Convention on Climate Change, arts. 4 (1) (h)–(j) and (2) (b); and Paris Agreement, preamble and arts. 4 (8), 12 and 13.
[35] Paris Agreement, art. 13 (9).

B. Adaptation

101. Since climate change-related impacts on children's rights are intensifying, a sharp and urgent increase in the design and implementation of child-sensitive, gender-responsive and disability-inclusive adaptation measures and associated resources is necessary. States should identify climate change-related vulnerabilities among children concerning the availability, quality, equity and sustainability of essential services for children, such as water and sanitation, health care, protection, nutrition and education. States should enhance the climate resilience of their legal and institutional frameworks and ensure that their national adaptation plans and existing social, environmental and budgetary policies address climate change-related risk factors by assisting children within their jurisdiction to adapt to the unavoidable effects of climate change. Examples of such measures include strengthening child protection systems in risk-prone contexts, providing adequate access to water, sanitation and health care, as well as safe school environments, and strengthening social safety nets and protection frameworks, while giving priority to children's right to life, survival and development. Healthy ecosystems and biodiversity also play an important role in supporting resilience and disaster risk reduction.

102. In adaptation measures, including disaster risk reduction, preparedness, response and recovery measures, due weight should be given to the views of children. Children should be equipped to understand the effects of climate-related decisions on their rights and have opportunities to meaningfully and effectively participate in decision-making processes. Neither the design nor the implementation of adaptation measures should discriminate against groups of children at heightened risk, such as young children, girls, children with disabilities, children in situations of migration, Indigenous children and children in situations of poverty or armed conflict. States should take additional measures to ensure that children in vulnerable situations affected by climate change enjoy their rights, including by addressing the underlying causes of vulnerability.

103. Adaptation measures should be targeted at reducing both the short-term and the long-term impacts, such as by sustaining livelihoods, protecting schools and developing sustainable water management systems. Measures that are necessary to protect children's rights to life and health from imminent threats, such as extreme weather events, include establishing early warning systems and increasing the physical safety and resilience of infrastructure, including school, water and sanitation and health infrastructure, to reduce the risk of climate change-related hazards. States should adopt emergency response plans, such as measures to provide inclusive early warning systems, humanitarian assistance and access to food and water and sanitation for all. In formulating adaptive measures, the relevant national and international standards, such as those contained in the Sendai Framework for Disaster Risk Reduction 2015–2030, should also be considered. Adaptation frameworks should address climate change-induced migration and displacement and include provisions for ensuring a child rights-based approach to these issues. In the event of imminent threats of climate change-related harm, such as extreme weather events, States should ensure the immediate dissemination of all information that would enable children and their caregivers and communities to take protective measures. States should strengthen awareness among children and their communities of disaster risk reduction and prevention measures.

C. Loss and damage

104. In the Paris Agreement, the parties addressed the importance of averting, minimizing and addressing loss and damage associated with the adverse impacts of climate change. Through a human rights lens, the adverse impacts of climate change have led to significant losses and damages, in particular for those in the developing world.

105. The manner in which climate-related loss and damage affect children and their rights may be both direct and indirect. Direct impacts include instances where both sudden-onset extreme weather events, such as floods and heavy rains, and slow-onset events, such as droughts, lead to the violation of rights under the Convention. Indirect impacts may include situations in which States, communities and parents are forced to reallocate resources away

from intended programmes, such as those for education and health care, towards addressing environmental crises.

106. In this respect, it is critical to acknowledge loss and damage as a third pillar of climate action, along with mitigation and adaptation. States are encouraged to take note that, from a human rights perspective, loss and damage are closely related to the right to remedy and the principle of reparations, including restitution, compensation and rehabilitation.[36] States should undertake measures, including through international cooperation, to provide financial and technical assistance for addressing loss and damage that have an impact on the enjoyment of the rights under the Convention.

D. Business and climate change

107. States must take all necessary, appropriate and reasonable measures to protect against harms to children's rights related to climate change that are caused or perpetuated by business enterprises, while businesses have the responsibility to respect children's rights in relation to climate change. States should ensure that businesses rapidly reduce their emissions and should require businesses, including financial institutions, to conduct environmental impact assessments and children's rights due diligence procedures to ensure that they identify, prevent, mitigate and account for how they address actual and potential adverse climate change-related impacts on children's rights, including those resulting from production-related and consumption-related activities and those connected to their value chains and global operations.[37]

108. Home States have obligations to address any harm and climate change-related risks to children's rights in the context of business enterprises' extraterritorial activities and operations, provided that there is a reasonable link between the State and the conduct concerned, and should enable access to effective remedies for rights violations. This includes cooperation to ensure the compliance of business enterprises operating transnationally with applicable environmental standards aimed at protecting children's rights from climate change-related harm and the provision of international assistance and cooperation with investigations and enforcement of proceedings in other States.[38]

109. States should incentivize sustainable investment in and use of renewable energy, energy storage and energy efficiency, in particular by State-owned or controlled enterprises and those that receive substantial support and services from State agencies. States should enforce progressive taxation schemes and adopt strict sustainability requirements for public procurement contracts.[39] States can also encourage community control over the generation, management, transmission and distribution of energy to increase access to and the affordability of renewable technology and the provision of sustainable energy products and services, in particular at the community level.

110. States should ensure that their obligations under trade or investment agreements do not impede their ability to meet their human rights obligations and that such agreements promote rapid reductions in greenhouse gas emissions and other measures to mitigate the causes and effects of climate change, including through the facilitation of investment in renewable energy.[40] The climate change-related impacts on children's rights connected to the implementation of the agreements should be regularly assessed, allowing for corrective measures, as appropriate.

[36] A/77/226, para. 26.
[37] General comment No. 16 (2013), para. 62.
[38] Ibid., paras. 43 and 44.
[39] Ibid., para. 27.
[40] Committee on Economic, Social and Cultural Rights general comment No. 24 (2017) on State obligations under the International Covenant on Economic, Social and Cultural Rights in the context of business activities, para. 13.

E. Climate finance

111. Both international climate finance providers and recipient States should ensure that climate finance mechanisms are anchored in a child rights-based approach aligned with the Convention and the Optional Protocols thereto. States should ensure that any climate finance mechanisms uphold and do not violate children's rights, increase policy coherence between children's rights obligations and other objectives, such as economic development, and strengthen the demarcation of roles of various stakeholders in climate finance, such as Governments, financial institutions, including banks, businesses and affected communities, especially children.

112. In line with the principle of common but differentiated responsibilities and respective capabilities, States' national circumstances need to be taken into account in efforts to address climate change. Developed States should cooperate with developing States in providing climate finance for climate action that upholds children's rights, in line with the international climate-related commitments that States have made. In particular, despite the link between various financing mechanisms, including on sustainable development, climate finance provided by developed States should be transparent, additional to other financial flows that support children's rights and properly accounted for, including by avoiding tracking challenges such as double counting.

113. Developed States need to urgently and collectively address the current climate finance gap. The current distribution of climate finance, which is overly slanted towards mitigation at the cost of adaptation and loss and damage measures, has discriminatory effects on children who reside in settings where more adaptation measures are needed and children who are confronted with the limitations of adaptation. States should bridge the global climate finance gap and ensure that measures are financed in a balanced manner with consideration given to measures on adaptation, mitigation, loss and damage and broader means of implementation, such as technical assistance and capacity-building. The determination by States of the total global climate finance required should be informed by the documented needs of communities, especially to protect children and their rights. Climate finance provided to developing countries should be in the form of grants, rather than loans, to avoid negative impacts on children's rights.

114. States should ensure and facilitate access for affected communities, especially children, to information on activities supported by climate finance, including possibilities to lodge complaints alleging violations of children's rights. States should devolve decision-making on climate finance to strengthen the participation of beneficiary communities, especially children, and make the approval and execution of climate finance subject to a child rights impact assessment to prevent and address the financing of measures that could lead to the violation of children's rights.

115. Children are calling for the collective action of States. According to two children consulted for the present general comment: "The Governments of each country should cooperate to reduce climate change." "They need to acknowledge us and say, 'we hear you; here is what we are going to do about this problem'."[41]

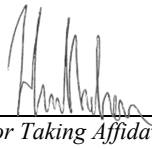
This is Exhibit "57" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.



Commissioner for Taking Affidavits (or as may be)

HENNA MOHAN
LSO#: 90494W

Convention on the Rights of the Child

Adopted and opened for signature, ratification and accession by General Assembly resolution 44/25 of 20 November 1989

entry into force 2 September 1990, in accordance with article 49

Preamble

The States Parties to the present Convention,

Considering that, in accordance with the principles proclaimed in the Charter of the United Nations, recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world,

Bearing in mind that the peoples of the United Nations have, in the Charter, reaffirmed their faith in fundamental human rights and in the dignity and worth of the human person, and have determined to promote social progress and better standards of life in larger freedom,

Recognizing that the United Nations has, in the Universal Declaration of Human Rights and in the International Covenants on Human Rights, proclaimed and agreed that everyone is entitled to all the rights and freedoms set forth therein, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status,

Recalling that, in the Universal Declaration of Human Rights, the United Nations has proclaimed that childhood is entitled to special care and assistance,

Convinced that the family, as the fundamental group of society and the natural environment for the growth and well-being of all its members and particularly children, should be afforded the necessary protection and assistance so that it can fully assume its responsibilities within the community,

Recognizing that the child, for the full and harmonious development of his or her personality, should grow up in a family environment, in an atmosphere of happiness, love and understanding,

Considering that the child should be fully prepared to live an individual life in society, and brought up in the spirit of the ideals proclaimed in the Charter of the United Nations, and in particular in the spirit of peace, dignity, tolerance, freedom, equality and solidarity,

Bearing in mind that the need to extend particular care to the child has been stated in the Geneva Declaration of the Rights of the Child of 1924 and in the Declaration of the Rights of the Child adopted by the General Assembly on 20 November 1959 and recognized in the Universal Declaration of Human Rights, in the International Covenant on Civil and Political Rights (in particular in articles 23 and 24), in the International Covenant on Economic, Social and Cultural Rights (in particular in article 10) and in the statutes and relevant instruments of specialized agencies and international organizations concerned with the welfare of children,

Bearing in mind that, as indicated in the Declaration of the Rights of the Child, "the child, by reason of his physical and mental immaturity, needs special safeguards and care, including appropriate legal protection, before as well as after birth",

Recalling the provisions of the Declaration on Social and Legal Principles relating to the Protection and Welfare of Children, with Special Reference to Foster Placement and Adoption Nationally and Internationally; the United Nations Standard Minimum Rules for the Administration of Juvenile Justice (The Beijing Rules) ; and the Declaration on the Protection of Women and Children in Emergency and Armed Conflict, Recognizing that, in all countries in the world, there are children living in exceptionally difficult conditions, and that such children need special consideration,

Taking due account of the importance of the traditions and cultural values of each people for the protection and harmonious development of the child, Recognizing the importance of international co-operation for improving the living conditions of children in every country, in particular in the developing countries,

Have agreed as follows:

PART I

Article 1

For the purposes of the present Convention, a child means every human being below the age of eighteen years unless under the law applicable to the child, majority is attained earlier.

Article 2

1. States Parties shall respect and ensure the rights set forth in the present Convention to each child within their jurisdiction without discrimination of any kind, irrespective of the child's or his or her parent's or legal guardian's race, colour, sex, language, religion, political or other opinion, national, ethnic or social origin, property, disability, birth or other status.

2. States Parties shall take all appropriate measures to ensure that the child is protected against all forms of discrimination or punishment on the basis of the status, activities, expressed opinions, or beliefs of the child's parents, legal guardians, or family members.

Article 3

1. In all actions concerning children, whether undertaken by public or private social welfare institutions, courts of law, administrative authorities or legislative bodies, the best interests of the child shall be a primary consideration.

2. States Parties undertake to ensure the child such protection and care as is necessary for his or her well-being, taking into account the rights and duties of his or her parents, legal guardians, or other individuals legally responsible for him or her, and, to this end, shall take all appropriate legislative and administrative measures.

3. States Parties shall ensure that the institutions, services and facilities responsible for the care or protection of children shall conform with the standards established by competent authorities, particularly in the areas of safety, health, in the number and suitability of their staff, as well as competent supervision.

Article 4

States Parties shall undertake all appropriate legislative, administrative, and other measures for the implementation of the rights recognized in the present Convention. With regard to economic, social and cultural rights, States Parties shall undertake such measures to the maximum extent of their available resources and, where needed, within the framework of international co-operation.

Article 5

States Parties shall respect the responsibilities, rights and duties of parents or, where applicable, the members of the extended family or community as provided for by local custom, legal guardians or other persons legally responsible for the child, to provide, in a manner consistent with the evolving capacities of the child, appropriate direction and guidance in the exercise by the child of the rights recognized in the present Convention.

Article 6

1. States Parties recognize that every child has the inherent right to life. 2. States Parties shall ensure to the maximum extent possible the survival and development of the child.

Article 7

1. The child shall be registered immediately after birth and shall have the right from birth to a name, the right to acquire a nationality and. as far as possible, the right to know and be cared for by his or her parents.

2. States Parties shall ensure the implementation of these rights in accordance with their national law and their obligations under the relevant international instruments in this field, in particular where the child would otherwise be stateless.

Article 8

1. States Parties undertake to respect the right of the child to preserve his or her identity, including nationality, name and family relations as recognized by law without unlawful interference.

2. Where a child is illegally deprived of some or all of the elements of his or her identity, States Parties shall provide appropriate assistance and protection, with a view to re-establishing speedily his or her identity.

Article 9

1. States Parties shall ensure that a child shall not be separated from his or her parents against their will, except when competent authorities subject to judicial review determine, in accordance with applicable law and procedures, that such separation is necessary for the best interests of the child. Such determination may be necessary in a particular case such as one involving abuse or neglect of the child by the parents, or one where the parents are living separately and a decision must be made as to the child's place of residence.

2. In any proceedings pursuant to paragraph 1 of the present article, all interested parties shall be given an opportunity to participate in the proceedings and make their views known.

3. States Parties shall respect the right of the child who is separated from one or both parents to maintain personal relations and direct contact with both parents on a regular basis, except if it is contrary to the child's best interests.

4. Where such separation results from any action initiated by a State Party, such as the detention, imprisonment, exile, deportation or death (including death arising from any cause while the person is in the custody of the State) of one or both parents or of the child, that State Party shall, upon request, provide the parents, the child or, if appropriate, another member of the family with the essential information concerning the whereabouts of the absent member(s) of the family unless the provision of the information would be detrimental to the well-being of the child. States Parties shall further ensure that the submission of such a request shall of itself entail no adverse consequences for the person(s) concerned.

Article 10

1. In accordance with the obligation of States Parties under article 9, paragraph 1, applications by a child or his or her parents to enter or leave a State Party for the purpose of family reunification shall be dealt with by States Parties in a positive, humane and expeditious manner. States Parties shall further ensure that the submission of such a request shall entail no adverse consequences for the applicants and for the members of their family.

2. A child whose parents reside in different States shall have the right to maintain on a regular basis, save in exceptional circumstances personal relations and direct contacts with both parents. Towards that end and in accordance with the obligation of States Parties under article 9, paragraph 1, States Parties shall respect the right of the child and his or her parents to leave any country, including their

own, and to enter their own country. The right to leave any country shall be subject only to such restrictions as are prescribed by law and which are necessary to protect the national security, public order (ordre public), public health or morals or the rights and freedoms of others and are consistent with the other rights recognized in the present Convention.

Article 11

1. States Parties shall take measures to combat the illicit transfer and non-return of children abroad.

2. To this end, States Parties shall promote the conclusion of bilateral or multilateral agreements or accession to existing agreements.

Article 12

1. States Parties shall assure to the child who is capable of forming his or her own views the right to express those views freely in all matters affecting the child, the views of the child being given due weight in accordance with the age and maturity of the child.

2. For this purpose, the child shall in particular be provided the opportunity to be heard in any judicial and administrative proceedings affecting the child, either directly, or through a representative or an appropriate body, in a manner consistent with the procedural rules of national law.

Article 13

1. The child shall have the right to freedom of expression; this right shall include freedom to seek, receive and impart information and ideas of all kinds, regardless of frontiers, either orally, in writing or in print, in the form of art, or through any other media of the child's choice.

2. The exercise of this right may be subject to certain restrictions, but these shall only be such as are provided by law and are necessary:

(a) For respect of the rights or reputations of others; or

(b) For the protection of national security or of public order (ordre public), or of public health or morals.

Article 14

1. States Parties shall respect the right of the child to freedom of thought, conscience and religion.

2. States Parties shall respect the rights and duties of the parents and, when applicable, legal guardians, to provide direction to the child in the exercise of his or her right in a manner consistent with the evolving capacities of the child.

3. Freedom to manifest one's religion or beliefs may be subject only to such limitations as are prescribed by law and are necessary to protect public safety, order, health or morals, or the fundamental rights and freedoms of others.

Article 15

1. States Parties recognize the rights of the child to freedom of association and to freedom of peaceful assembly.

2. No restrictions may be placed on the exercise of these rights other than those imposed in conformity with the law and which are necessary in a democratic society in the interests of national security or public safety, public order (ordre public), the protection of public health or morals or the protection of the rights and freedoms of others.

Article 16

1. No child shall be subjected to arbitrary or unlawful interference with his or her privacy, family, home or correspondence, nor to unlawful attacks on his or her honour and reputation.

2. The child has the right to the protection of the law against such interference or attacks.

Article 17

States Parties recognize the important function performed by the mass media and shall ensure that the child has access to information and material from a diversity of national and international sources, especially those aimed at the promotion of his or her social, spiritual and moral well-being and physical and mental health.

To this end, States Parties shall:

(a) Encourage the mass media to disseminate information and material of social and cultural benefit to the child and in accordance with the spirit of article 29;

(b) Encourage international co-operation in the production, exchange and dissemination of such information and material from a diversity of cultural, national and international sources;

(c) Encourage the production and dissemination of children's books;

(d) Encourage the mass media to have particular regard to the linguistic needs of the child who belongs to a minority group or who is indigenous;

(e) Encourage the development of appropriate guidelines for the protection of the child from information and material injurious to his or her well-being, bearing in mind the provisions of articles 13 and 18.

Article 18

1. States Parties shall use their best efforts to ensure recognition of the principle that both parents have common responsibilities for the upbringing and development of the child. Parents or, as the case may be, legal guardians, have the primary responsibility for the upbringing and development of the child. The best interests of the child will be their basic concern.

2. For the purpose of guaranteeing and promoting the rights set forth in the present Convention, States Parties shall render appropriate assistance to parents and legal guardians in the performance of their child-rearing responsibilities and shall ensure the development of institutions, facilities and services for the care of children.

3. States Parties shall take all appropriate measures to ensure that children of working parents have the right to benefit from child-care services and facilities for which they are eligible.

Article 19

1. States Parties shall take all appropriate legislative, administrative, social and educational measures to protect the child from all forms of physical or mental violence, injury or abuse, neglect or negligent treatment, maltreatment or exploitation, including sexual abuse, while in the care of parent(s), legal guardian(s) or any other person who has the care of the child.

2. Such protective measures should, as appropriate, include effective procedures for the establishment of social programmes to provide necessary support for the child and for those who have the care of the child, as well as for other forms of prevention and for identification, reporting, referral, investigation, treatment and follow-up of instances of child maltreatment described heretofore, and, as appropriate, for judicial involvement.

Article 20

1. A child temporarily or permanently deprived of his or her family environment, or in whose own best interests cannot be allowed to remain in that environment, shall be entitled to special protection and assistance provided by the State.

2. States Parties shall in accordance with their national laws ensure alternative care for such a child.

3. Such care could include, inter alia, foster placement, kafalah of Islamic law, adoption or if necessary placement in suitable institutions for the care of children. When considering solutions, due regard shall be paid to the desirability of continuity in a child's upbringing and to the child's ethnic, religious, cultural and linguistic background.

Article 21

States Parties that recognize and/or permit the system of adoption shall ensure that the best interests of the child shall be the paramount consideration and they shall:

(a) Ensure that the adoption of a child is authorized only by competent authorities who determine, in accordance with applicable law and procedures and on the basis of all pertinent and reliable information, that the adoption is permissible in view of the child's status concerning parents, relatives and legal guardians and that, if required, the persons concerned have given their informed consent to the adoption on the basis of such counselling as may be necessary;

(b) Recognize that inter-country adoption may be considered as an alternative means of child's care, if the child cannot be placed in a foster or an adoptive family or cannot in any suitable manner be cared for in the child's country of origin;

(c) Ensure that the child concerned by inter-country adoption enjoys safeguards and standards equivalent to those existing in the case of national adoption;

(d) Take all appropriate measures to ensure that, in inter-country adoption, the placement does not result in improper financial gain for those involved in it;

(e) Promote, where appropriate, the objectives of the present article by concluding bilateral or multilateral arrangements or agreements, and endeavour, within this framework, to ensure that the placement of the child in another country is carried out by competent authorities or organs.

Article 22

1. States Parties shall take appropriate measures to ensure that a child who is seeking refugee status or who is considered a refugee in accordance with applicable international or domestic law and procedures shall, whether unaccompanied or accompanied by his or her parents or by any other person, receive appropriate protection and humanitarian assistance in the enjoyment of applicable rights set forth in the present Convention and in other international human rights or humanitarian instruments to which the said States are Parties.

2. For this purpose, States Parties shall provide, as they consider appropriate, co-operation in any efforts by the United Nations and other competent intergovernmental organizations or non-governmental organizations co-operating with the United Nations to protect and assist such a child and to trace the parents or other members of the family of any refugee child in order to obtain information necessary for reunification with his or her family. In cases where no parents or other members of the family can be found, the child shall be accorded the same protection as any other child permanently or temporarily deprived of his or her family environment for any reason , as set forth in the present Convention.

Article 23

1. States Parties recognize that a mentally or physically disabled child should enjoy a full and decent life, in conditions which ensure dignity, promote self-reliance and facilitate the child's active participation in the community.

2. States Parties recognize the right of the disabled child to special care and shall encourage and ensure the extension, subject to available resources, to the eligible child and those responsible for his or her care, of assistance for which application is made and which is appropriate to the child's condition and to the circumstances of the parents or others caring for the child.

3. Recognizing the special needs of a disabled child, assistance extended in accordance with paragraph 2 of the present article shall be provided free of charge, whenever possible, taking into account the financial resources of the parents or others caring for the child, and shall be designed to ensure that the disabled child has effective access to and receives education, training, health care services, rehabilitation services, preparation for employment and recreation opportunities in a manner conducive to the child's achieving the fullest possible social integration and individual development, including his or her cultural and spiritual development

4. States Parties shall promote, in the spirit of international cooperation, the exchange of appropriate information in the field of preventive health care and of medical, psychological and functional treatment of disabled children, including dissemination of and access to information concerning methods of rehabilitation, education and vocational services, with the aim of enabling States Parties to improve their capabilities and skills and to widen their experience in these areas. In this regard, particular account shall be taken of the needs of developing countries.

Article 24

1. States Parties recognize the right of the child to the enjoyment of the highest attainable standard of health and to facilities for the treatment of illness and rehabilitation of health. States Parties shall strive to ensure that no child is deprived of his or her right of access to such health care services.

2. States Parties shall pursue full implementation of this right and, in particular, shall take appropriate measures:

(a) To diminish infant and child mortality;

(b) To ensure the provision of necessary medical assistance and health care to all children with emphasis on the development of primary health care;

(c) To combat disease and malnutrition, including within the framework of primary health care, through, inter alia, the application of readily available technology and through the provision of adequate nutritious foods and clean drinking-water, taking into consideration the dangers and risks of environmental pollution;

(d) To ensure appropriate pre-natal and post-natal health care for mothers;

(e) To ensure that all segments of society, in particular parents and children, are informed, have access to education and are supported in the use of basic knowledge of child health and nutrition, the advantages of breastfeeding, hygiene and environmental sanitation and the prevention of accidents;

(f) To develop preventive health care, guidance for parents and family planning education and services.

3. States Parties shall take all effective and appropriate measures with a view to abolishing traditional practices prejudicial to the health of children.

4. States Parties undertake to promote and encourage international co-operation with a view to achieving progressively the full realization of the right recognized in the present article. In this regard, particular account shall be taken of the needs of developing countries.

Article 25

States Parties recognize the right of a child who has been placed by the competent authorities for the purposes of care, protection or treatment of his or her physical or mental health, to a periodic review of the treatment provided to the child and all other circumstances relevant to his or her placement.

Article 26

1. States Parties shall recognize for every child the right to benefit from social security, including social insurance, and shall take the necessary measures to achieve the full realization of this right in accordance with their national law.

2. The benefits should, where appropriate, be granted, taking into account the resources and the circumstances of the child and persons having responsibility for the maintenance of the child, as well as any other consideration relevant to an application for benefits made by or on behalf of the child.

Article 27

1. States Parties recognize the right of every child to a standard of living adequate for the child's physical, mental, spiritual, moral and social development.

2. The parent(s) or others responsible for the child have the primary responsibility to secure, within their abilities and financial capacities, the conditions of living necessary for the child's development.

3. States Parties, in accordance with national conditions and within their means, shall take appropriate measures to assist parents and others responsible for the child to implement this right and shall in case of need provide material assistance and support programmes, particularly with regard to nutrition, clothing and housing.

4. States Parties shall take all appropriate measures to secure the recovery of maintenance for the child from the parents or other persons having financial responsibility for the child, both within the State Party and from abroad. In particular, where the person having financial responsibility for the child lives in a State different from that of the child, States Parties shall promote the accession to international agreements or the conclusion of such agreements, as well as the making of other appropriate arrangements.

Article 28

1. States Parties recognize the right of the child to education, and with a view to achieving this right progressively and on the basis of equal opportunity, they shall, in particular:

(a) Make primary education compulsory and available free to all;

(b) Encourage the development of different forms of secondary education, including general and vocational education, make them available and accessible to every child, and take appropriate measures such as the introduction of free education and offering financial assistance in case of need;

(c) Make higher education accessible to all on the basis of capacity by every appropriate means;

(d) Make educational and vocational information and guidance available and accessible to all children;

(e) Take measures to encourage regular attendance at schools and the reduction of drop-out rates.

2. States Parties shall take all appropriate measures to ensure that school discipline is administered in a manner consistent with the child's human dignity and in conformity with the present Convention.

3. States Parties shall promote and encourage international cooperation in matters relating to education, in particular with a view to contributing to the elimination of ignorance and illiteracy

throughout the world and facilitating access to scientific and technical knowledge and modern teaching methods. In this regard, particular account shall be taken of the needs of developing countries.

Article 29

1. States Parties agree that the education of the child shall be directed to:

(a) The development of the child's personality, talents and mental and physical abilities to their fullest potential;

(b) The development of respect for human rights and fundamental freedoms, and for the principles enshrined in the Charter of the United Nations;

(c) The development of respect for the child's parents, his or her own cultural identity, language and values, for the national values of the country in which the child is living, the country from which he or she may originate, and for civilizations different from his or her own;

(d) The preparation of the child for responsible life in a free society, in the spirit of understanding, peace, tolerance, equality of sexes, and friendship among all peoples, ethnic, national and religious groups and persons of indigenous origin;

(e) The development of respect for the natural environment.

2. No part of the present article or article 28 shall be construed so as to interfere with the liberty of individuals and bodies to establish and direct educational institutions, subject always to the observance of the principle set forth in paragraph 1 of the present article and to the requirements that the education given in such institutions shall conform to such minimum standards as may be laid down by the State.

Article 30

In those States in which ethnic, religious or linguistic minorities or persons of indigenous origin exist, a child belonging to such a minority or who is indigenous shall not be denied the right, in community with other members of his or her group, to enjoy his or her own culture, to profess and practise his or her own religion, or to use his or her own language.

Article 31

1. States Parties recognize the right of the child to rest and leisure, to engage in play and recreational activities appropriate to the age of the child and to participate freely in cultural life and the arts.

2. States Parties shall respect and promote the right of the child to participate fully in cultural and artistic life and shall encourage the provision of appropriate and equal opportunities for cultural, artistic, recreational and leisure activity.

Article 32

1. States Parties recognize the right of the child to be protected from economic exploitation and from performing any work that is likely to be hazardous or to interfere with the child's education, or to be harmful to the child's health or physical, mental, spiritual, moral or social development.

2. States Parties shall take legislative, administrative, social and educational measures to ensure the implementation of the present article. To this end, and having regard to the relevant provisions of other international instruments, States Parties shall in particular:

(a) Provide for a minimum age or minimum ages for admission to employment;

(b) Provide for appropriate regulation of the hours and conditions of employment;

(c) Provide for appropriate penalties or other sanctions to ensure the effective enforcement of the present article.

Article 33

States Parties shall take all appropriate measures, including legislative, administrative, social and educational measures, to protect children from the illicit use of narcotic drugs and psychotropic substances as defined in the relevant international treaties, and to prevent the use of children in the illicit production and trafficking of such substances.

Article 34

States Parties undertake to protect the child from all forms of sexual exploitation and sexual abuse. For these purposes, States Parties shall in particular take all appropriate national, bilateral and multilateral measures to prevent:

(a) The inducement or coercion of a child to engage in any unlawful sexual activity;

(b) The exploitative use of children in prostitution or other unlawful sexual practices;

(c) The exploitative use of children in pornographic performances and materials.

Article 35

States Parties shall take all appropriate national, bilateral and multilateral measures to prevent the abduction of, the sale of or traffic in children for any purpose or in any form.

Article 36

States Parties shall protect the child against all other forms of exploitation prejudicial to any aspects of the child's welfare.

Article 37

States Parties shall ensure that:

(a) No child shall be subjected to torture or other cruel, inhuman or degrading treatment or punishment. Neither capital punishment nor life imprisonment without possibility of release shall be imposed for offences committed by persons below eighteen years of age;

(b) No child shall be deprived of his or her liberty unlawfully or arbitrarily. The arrest, detention or imprisonment of a child shall be in conformity with the law and shall be used only as a measure of last resort and for the shortest appropriate period of time;

(c) Every child deprived of liberty shall be treated with humanity and respect for the inherent dignity of the human person, and in a manner which takes into account the needs of persons of his or her age. In particular, every child deprived of liberty shall be separated from adults unless it is considered in the child's best interest not to do so and shall have the right to maintain contact with his or her family through correspondence and visits, save in exceptional circumstances;

(d) Every child deprived of his or her liberty shall have the right to prompt access to legal and other appropriate assistance, as well as the right to challenge the legality of the deprivation of his or her liberty before a court or other competent, independent and impartial authority, and to a prompt decision on any such action.

Article 38

1. States Parties undertake to respect and to ensure respect for rules of international humanitarian law applicable to them in armed conflicts which are relevant to the child.

2. States Parties shall take all feasible measures to ensure that persons who have not attained the age of fifteen years do not take a direct part in hostilities.

3. States Parties shall refrain from recruiting any person who has not attained the age of fifteen years into their armed forces. In recruiting among those persons who have attained the age of fifteen years but who have not attained the age of eighteen years, States Parties shall endeavour to give priority to those who are oldest.

4. In accordance with their obligations under international humanitarian law to protect the civilian population in armed conflicts, States Parties shall take all feasible measures to ensure protection and care of children who are affected by an armed conflict.

Article 39

States Parties shall take all appropriate measures to promote physical and psychological recovery and social reintegration of a child victim of: any form of neglect, exploitation, or abuse; torture or any other form of cruel, inhuman or degrading treatment or punishment; or armed conflicts. Such recovery and reintegration shall take place in an environment which fosters the health, self-respect and dignity of the child.

Article 40

1. States Parties recognize the right of every child alleged as, accused of, or recognized as having infringed the penal law to be treated in a manner consistent with the promotion of the child's sense of dignity and worth, which reinforces the child's respect for the human rights and fundamental freedoms of others and which takes into account the child's age and the desirability of promoting the child's reintegration and the child's assuming a constructive role in society.

2. To this end, and having regard to the relevant provisions of international instruments, States Parties shall, in particular, ensure that:

(a) No child shall be alleged as, be accused of, or recognized as having infringed the penal law by reason of acts or omissions that were not prohibited by national or international law at the time they were committed;

(b) Every child alleged as or accused of having infringed the penal law has at least the following guarantees:

(i) To be presumed innocent until proven guilty according to law;

(ii) To be informed promptly and directly of the charges against him or her, and, if appropriate, through his or her parents or legal guardians, and to have legal or other appropriate assistance in the preparation and presentation of his or her defence;

(iii) To have the matter determined without delay by a competent, independent and impartial authority or judicial body in a fair hearing according to law, in the presence of legal or other appropriate assistance and, unless it is considered not to be in the best interest of the child, in particular, taking into account his or her age or situation, his or her parents or legal guardians;

(iv) Not to be compelled to give testimony or to confess guilt; to examine or have examined adverse witnesses and to obtain the participation and examination of witnesses on his or her behalf under conditions of equality;

(v) If considered to have infringed the penal law, to have this decision and any measures imposed in consequence thereof reviewed by a higher competent, independent and impartial authority or judicial body according to law;

(vi) To have the free assistance of an interpreter if the child cannot understand or speak the language used;

(vii) To have his or her privacy fully respected at all stages of the proceedings.

3. States Parties shall seek to promote the establishment of laws, procedures, authorities and institutions specifically applicable to children alleged as, accused of, or recognized as having infringed the penal law, and, in particular:

(a) The establishment of a minimum age below which children shall be presumed not to have the capacity to infringe the penal law;

(b) Whenever appropriate and desirable, measures for dealing with such children without resorting to judicial proceedings, providing that human rights and legal safeguards are fully respected. 4. A variety of dispositions, such as care, guidance and supervision orders; counselling; probation; foster care; education and vocational training programmes and other alternatives to institutional care shall be available to ensure that children are dealt with in a manner appropriate to their well-being and proportionate both to their circumstances and the offence.

Article 41

Nothing in the present Convention shall affect any provisions which are more conducive to the realization of the rights of the child and which may be contained in:

(a) The law of a State party; or

(b) International law in force for that State.

PART II

Article 42

States Parties undertake to make the principles and provisions of the Convention widely known, by appropriate and active means, to adults and children alike.

Article 43

1. For the purpose of examining the progress made by States Parties in achieving the realization of the obligations undertaken in the present Convention, there shall be established a Committee on the Rights of the Child, which shall carry out the functions hereinafter provided.

2. The Committee shall consist of ten experts of high moral standing and recognized competence in the field covered by this Convention. The members of the Committee shall be elected by States Parties from among their nationals and shall serve in their personal capacity, consideration being given to equitable geographical distribution, as well as to the principal legal systems.

3. The members of the Committee shall be elected by secret ballot from a list of persons nominated by States Parties. Each State Party may nominate one person from among its own nationals.

4. The initial election to the Committee shall be held no later than six months after the date of the entry into force of the present Convention and thereafter every second year. At least four months before the date of each election, the Secretary-General of the United Nations shall address a letter to States Parties inviting them to submit their nominations within two months. The Secretary-General shall subsequently prepare a list in alphabetical order of all persons thus nominated, indicating States Parties which have nominated them, and shall submit it to the States Parties to the present Convention.

5. The elections shall be held at meetings of States Parties convened by the Secretary-General at United Nations Headquarters. At those meetings, for which two thirds of States Parties shall constitute

a quorum, the persons elected to the Committee shall be those who obtain the largest number of votes and an absolute majority of the votes of the representatives of States Parties present and voting.

6. The members of the Committee shall be elected for a term of four years. They shall be eligible for re-election if renominated. The term of five of the members elected at the first election shall expire at the end of two years; immediately after the first election, the names of these five members shall be chosen by lot by the Chairman of the meeting.

7. If a member of the Committee dies or resigns or declares that for any other cause he or she can no longer perform the duties of the Committee, the State Party which nominated the member shall appoint another expert from among its nationals to serve for the remainder of the term, subject to the approval of the Committee.

8. The Committee shall establish its own rules of procedure.

9. The Committee shall elect its officers for a period of two years.

10. The meetings of the Committee shall normally be held at United Nations Headquarters or at any other convenient place as determined by the Committee. The Committee shall normally meet annually. The duration of the meetings of the Committee shall be determined, and reviewed, if necessary, by a meeting of the States Parties to the present Convention, subject to the approval of the General Assembly.

11. The Secretary-General of the United Nations shall provide the necessary staff and facilities for the effective performance of the functions of the Committee under the present Convention.

12. With the approval of the General Assembly, the members of the Committee established under the present Convention shall receive emoluments from United Nations resources on such terms and conditions as the Assembly may decide.

Article 44

1. States Parties undertake to submit to the Committee, through the Secretary-General of the United Nations, reports on the measures they have adopted which give effect to the rights recognized herein and on the progress made on the enjoyment of those rights

(a) Within two years of the entry into force of the Convention for the State Party concerned;

(b) Thereafter every five years.

2. Reports made under the present article shall indicate factors and difficulties, if any, affecting the degree of fulfilment of the obligations under the present Convention. Reports shall also contain sufficient information to provide the Committee with a comprehensive understanding of the implementation of the Convention in the country concerned.

3. A State Party which has submitted a comprehensive initial report to the Committee need not, in its subsequent reports submitted in accordance with paragraph 1 (b) of the present article, repeat basic information previously provided.

4. The Committee may request from States Parties further information relevant to the implementation of the Convention.

5. The Committee shall submit to the General Assembly, through the Economic and Social Council, every two years, reports on its activities.

6. States Parties shall make their reports widely available to the public in their own countries.

Article 45

In order to foster the effective implementation of the Convention and to encourage international co-operation in the field covered by the Convention:

(a) The specialized agencies, the United Nations Children's Fund, and other United Nations organs shall be entitled to be represented at the consideration of the implementation of such provisions of the present Convention as fall within the scope of their mandate. The Committee may invite the specialized agencies, the United Nations Children's Fund and other competent bodies as it may consider appropriate to provide expert advice on the implementation of the Convention in areas falling within the scope of their respective mandates. The Committee may invite the specialized agencies, the United Nations Children's Fund, and other United Nations organs to submit reports on the implementation of the Convention in areas falling within the scope of their activities;

(b) The Committee shall transmit, as it may consider appropriate, to the specialized agencies, the United Nations Children's Fund and other competent bodies, any reports from States Parties that contain a request, or indicate a need, for technical advice or assistance, along with the Committee's observations and suggestions, if any, on these requests or indications;

(c) The Committee may recommend to the General Assembly to request the Secretary-General to undertake on its behalf studies on specific issues relating to the rights of the child;

(d) The Committee may make suggestions and general recommendations based on information received pursuant to articles 44 and 45 of the present Convention. Such suggestions and general recommendations shall be transmitted to any State Party concerned and reported to the General Assembly, together with comments, if any, from States Parties.

PART III

Article 46

The present Convention shall be open for signature by all States.

Article 47

The present Convention is subject to ratification. Instruments of ratification shall be deposited with the Secretary-General of the United Nations.

Article 48

The present Convention shall remain open for accession by any State. The instruments of accession shall be deposited with the Secretary-General of the United Nations.

Article 49

1. The present Convention shall enter into force on the thirtieth day following the date of deposit with the Secretary-General of the United Nations of the twentieth instrument of ratification or accession.

2. For each State ratifying or acceding to the Convention after the deposit of the twentieth instrument of ratification or accession, the Convention shall enter into force on the thirtieth day after the deposit by such State of its instrument of ratification or accession.

Article 50

1. Any State Party may propose an amendment and file it with the Secretary-General of the United Nations. The Secretary-General shall thereupon communicate the proposed amendment to States Parties, with a request that they indicate whether they favour a conference of States Parties for the purpose of considering and voting upon the proposals. In the event that, within four months from the date of such communication, at least one third of the States Parties favour such a conference, the Secretary-General shall convene the conference under the auspices of the United Nations. Any

amendment adopted by a majority of States Parties present and voting at the conference shall be submitted to the General Assembly for approval.

2. An amendment adopted in accordance with paragraph 1 of the present article shall enter into force when it has been approved by the General Assembly of the United Nations and accepted by a two-thirds majority of States Parties.

3. When an amendment enters into force, it shall be binding on those States Parties which have accepted it, other States Parties still being bound by the provisions of the present Convention and any earlier amendments which they have accepted.

Article 51

1. The Secretary-General of the United Nations shall receive and circulate to all States the text of reservations made by States at the time of ratification or accession.

2. A reservation incompatible with the object and purpose of the present Convention shall not be permitted.

3. Reservations may be withdrawn at any time by notification to that effect addressed to the Secretary-General of the United Nations, who shall then inform all States. Such notification shall take effect on the date on which it is received by the Secretary-General

Article 52

A State Party may denounce the present Convention by written notification to the Secretary-General of the United Nations. Denunciation becomes effective one year after the date of receipt of the notification by the Secretary-General.

Article 53

The Secretary-General of the United Nations is designated as the depositary of the present Convention.

Article 54

The original of the present Convention, of which the Arabic, Chinese, English, French, Russian and Spanish texts are equally authentic, shall be deposited with the Secretary-General of the United Nations. IN WITNESS THEREOF the undersigned plenipotentiaries, being duly authorized thereto by their respective governments, have signed the present Convention.

This is Exhibit "58" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

BRIDGING ECONOMETRICS AND FIRST NATIONS CHILD AND FAMILY SERVICE AGENCY FUNDING: PHASE ONE REPORT

A SUMMARY OF RESEARCH NEEDED TO EXPLORE THREE FUNDING MODELS FOR FIRST NATIONS CHILD WELFARE AGENCIES

REPORT TO THE NATIONAL POLICY REVIEW
NATIONAL ADVISORY COMMITTEE

Prepared by:
John Loxley, Fred Wien and Cindy Blackstock
Vancouver, British Columbia
December, 2004

ACKNOWLEDGEMENTS

The First Nations Child and Family Caring Society of Canada expresses *its* sincere appreciation to the many people and organizations that supported this important work – their dedication to the wellbeing of First Nations children was ever present. Special thanks to the six First Nations child and family service agencies, the Joint National Advisory Committee of the NPR, and the Operational Funding Formula Committee who so generously gave of their time and wisdom. We also thank Dr. Fred Wien and Dr. John Loxley for their excellent work on this project and the Department of Indian Affairs and Northern Development for providing the funding support to make this project possible.

FUNDING MODELS FOR FIRST NATIONS CHILD AND FAMILY SERVICE AGENCIES[1]

Introduction

There are now over 100 First Nations child and family service agencies (FNCFSA) providing child and family welfare services on reserve in Canada. With the exception of FNCFSA in Ontario that are funded under a separate funding agreement, agencies are funded by the Department of Indian Affairs according to a formula that was implemented in 1989 known as Directive 20-1, Chapter 5. However, as the Joint National Policy Review on First Nations Child and Family Services (NPR) found in June of 2000, the formula has some serious shortcomings (MacDonald & Ladd, 2000.) The NPR provided seventeen recommendations for improvements to Directive 20-1. This resulted in the establishment of the Joint National Policy Review National Advisory Committee (NAC) in 2001, composed of representatives from the Assembly of First Nations, the Department of Indian Affairs and Northern Development and First Nations child and family service agencies. The NAC established a sub-group known as the Operational Funding Formula Design Team (OFFD) which was tasked to explore how to change parts of the formula in line with the NPR recommendations. In May of 2004 the NAC, in consultation with the OFFD, requested that the First Nations Child and Family Caring Society of Canada (www.fncfcs.com) engage a skilled team of econometricians and related experts to identify at least three funding formula options for First Nations child and family service agencies and to further identify what research would be needed to run economic simulations of each option. In response to this request, the First Nations Child and Family Caring Society of Canada submitted a proposal outlining a three stage research process:

PHASE ONE: Identify three options for FNCFSA funding and the research agenda needed to run simulations of each option for the consideration of the NAC

PHASE TWO: Complete research identified for options approved by the NAC

PHASE THREE: Develop the economic models necessary to run the economic simulations on approved funding formula options.

[1] This is the written version of a "power point" presentation made to the National Policy Review National Advisory Committee in Vancouver, British Columbia, December 4, 2004.

With the funding support of the Department of Indian Affairs and Northern Development and the engagement of Dr. Fred Wien and Dr. John Loxley as principal investigators, Phase one of this work began in September of 2004 and was completed in December 2004 culminating in a presentation of the research findings to the NAC on December 4, 2004. The following presentation, and thus this report, reflects the following objectives:

- provide background on how funding formulae are developed
- how information for Phase I was collected
- outline three funding formula options
- describe the benefits and limitations of each model and
- outline a research agenda for each model

Background

The initial First Nations child and family service agencies were formed one at a time beginning in the mid-1980's. Given this early pattern of development, it was not surprising that each FNCFSA negotiated its budget individually with the regional office of INAC. This process, *while* contributing to the development of these FNCFSA, was cumbersome and there was a growing concern that a pattern of inequitable funding could emerge in the absence of some kind of common framework. Although it is likely some common principles were applied these have not been documented. This pattern of determining funding soon became untenable. This was the case both from the point of view of INAC, who would have to conclude an increasingly large number of individual negotiations, as well as from the point of view of the receiving FNCFSA.

This drove the movement toward developing a national formula which could better assure equity and fairness in both the content and amount of funding for a growing number of child welfare agencies. Despite the advantages, the task of developing a national funding formula is not a simple one given the variations that exist in the characteristics and conditions of each agency. The development of a national formula is further complicated as clear examples of existing funding methodologies for child welfare are not always apparent. For example, in some jurisdictions outside the First Nations context, it may no longer be clear how a given set of agencies or departments is funded. The original formula, if there was one, may be lost in the mists of time, and year to year funding decisions may reflect no more than a cost of living increment to a pre-existing budget (or an across-the-board cut) combined with some recognition of changing work loads. In a typical university department, for example, one can expect such across-the-board increments or reductions but otherwise the budget stays the same, unless there is a sharp increase or decline in enrolment. Furthermore, adjustments in the formula may be made at a practice level as funding officials adjust to changes in context or practice. As First Nations child welfare agencies are not funded on the basis of a determination of need but rather on population levels, there appears to have been significant regional variation in the implementation of Directive 20-1 as funding officials within the department adapted to their local context. Another approach is to fund according to a fixed budget. In this

situation, rather than completing a needs assessment and then determining funding accordingly, it is determined that a certain pot of money is available, and that sum is distributed to the agencies or departments according to some formula.

In preparing this report on funding formulae, we have reviewed some pertinent literature from Canada and abroad and conducted interviews with informed observers and participants including the Operations Formula Funding Design Team (OFFDT). Our main source of information about the existing formula and alternatives has been the meetings we have had with six First Nation child welfare agencies located in various parts of the country. These agencies have been of different sizes, and have served urban, rural and more remote communities. Some were established prior to the introduction of the DIAND funding formula, others have come later. Some operate under a block funding arrangement for their maintenance expenses and others adhere to the reimbursement plan for allowable expenses. Taken together, they have given us a very good picture of the issues involved in revising or replacing the existing funding formula.

Findings from FNCFSA Interviews

As noted above, a fundamental information source for this project were the interviews held with six First Nations child and family service agencies located in six different provinces across Canada. The agencies were selected by the research team as they represented differing agency sizes, service contexts, regions and cultural groups. The research team was extremely impressed by the cooperation and significant contribution of time and expertise made by all of the participating agencies.

The concerns and challenges expressed by the agencies reflected the seventeen recommendations made in the Joint National Policy Review of First Nations Child and Family Services completed in June of 2000. For example, lack of funding for primary, secondary and tertiary (least disruptive measures) prevention services was identified by all agencies as a significant concern as was the lack of implementation of the price adjustment (COLA) contained in Directive 20-1. Other issues such as the need for increased funding for management information systems, capital costs, culturally based program and standards design and evaluation, caregivers, and staff compensation/training were routinely identified. Inadequate cost adjustments for remoteness was also identified by agencies serving populations located in remote regions of Canada. Moreover, FNCFSA serving communities with child population sizes below 1000 expressed concerns about the inadequacy of the operations formula allotments for small agencies under the current formula.

Overall, our findings affirm that the findings and recommendations of the NPR which was completed in June of 2000 continue to be reflective of the concerns that FNCFSA are experiencing today. Both have as their objective enhancing funding levels so as to better support culturally based practices – and especially preventative and community development based approaches to child maltreatment. All agencies agreed that immediate redress of inadequate funding was necessary to support good social work practice in their communities.

Basic Principles

At its meeting in November, 2004, the OFFDT set out some basic principles that should be reflected in any new approach to funding the First Nation agencies. These principles articulate the desired elements of a new formula, including the variations in agency circumstances that need to be taken into account and the constraints faced by the funding agency. The new formula should:

- support prevention and community development
- be consistent with the UN Convention on Rights of the Child
- be responsive to the proportion of high needs children
- provide equal benefit to children under the law
- accommodate unexpected occurrences
- be responsive to remoteness and service context
- support culturally based services
- permit flexibility in the allocation of the budget
- provide automatic adjustments for changes in price (cola)
- provide adequate funds to meet the needs of children in care
- stay within DIAND's mandate

We turn now to describing three alternative approaches to providing funding for First Nation child welfare agencies.

Option 1: Redesigning the Existing Formula

The structure of the existing formula is as follows:

- Operations budget provides fixed amount for core administration. Maximum is $143,159 plus $10,714
- It also includes a variable amount of $727 per child in the 0-18 age group for staff, purchase of services, training, administration
- Adjustments take into account size of agency and remoteness factor
- There is also a maintenance component which reimburses the agency for permitted costs incurred to look after children in care
- In lieu of reimbursement of actual costs, an agency can opt for flexible (block) funding

As noted above, the existing formula was put in place in the early 1990's. At the time, certain assumptions were made:

- Formula assumes 20% of children in need, 6% of children in care

- One child care and one family support worker for every 20 children in care
- One supervisor and one support staff for every 5 workers;
- Wages based on average salaries in Ontario and Manitoba

The formula was supposed to look after the following expenditure components, although in practice agencies believe it has fallen short of providing the necessary funds:

- Salaries and benefits
- Administration including rent, equipment
- Legal costs for agency and children
- Protection services
- Prevention services including homemakers
- Therapy costs
- After hours service

While much criticism has been directed toward the formula, it also has certain strengths:

- It is a national formula that provides equity across the country
- It reimburses actual costs for allowable expenditures
- It is broadly consistent with how agencies are normally funded
- It permits a block funding option for flexibility
- It aims to provide comparable programs and services

Nevertheless, our interviews with agencies and the outcomes of the National Policy Review have also identified a number of serious shortcomings in the formula. They are:

- Lack of provision for prevention, both staff and maintenance
- Salaries, benefits and other costs that have not kept up with changes; lack of cola
- Inadequate and inappropriate remoteness formula
- Inadequate provision for legal, insurance, training costs and for cultural appropriateness
- Lack of support for less intrusive measures including kinship care and care of children in own home
- Lack of comparability to programs and services offered by provinces
- Lack of provision for extraordinary costs
- Lack of provision for capital costs
- Insufficient recognition of core administration costs of small agencies
- Lack of adjustment in operation funding for higher than assumed caseloads and high needs children
- Longer term, implications of stability or decline in 0-18 population

It may be possible to correct these shortcomings in the existing formula without necessarily throwing out the positive aspects of its basic structure. Understandably, however, DIAND and the agencies would want to know what the implications of changes

in the formula would be. The Department would want to know the impact on the Department's budget and perhaps its authorities from Treasury Board, while the agencies would be interested in the changes in revenues that could be expected at the community level. Changing the funding formula also changes the incentive structure for what agencies do, so the implications go well beyond strictly financial ones.

Thus the impact of the changes would need to be tested out in a quantitative model, and for the latter to be accomplished a solid data base is required. For this reason, we set out a research agenda involving 8 projects. The main research questions and methodology for each project are set out below:

Project 1: On Prevention

- What is best practice in preventive work in Canada and abroad?
- How should *the* funding formula incorporate this element and what is the cost?
- What are the realistic savings that could be expected through limiting or reducing children in care?

Methodology: literature review and key informant interviews.

Project 2: On Gaps in Programs and Services (Provincial Case Studies)

- What programs and services do provinces actually offer in family and child welfare? What is statutory and non-statutory, and how are they funded?
- What are their salary and benefit scales (linked to qualifications)?
- How are legal costs supported in provincial agencies (children in care; inquests)
- How are population size and caseloads taken into account?

Methodology: a province by province analysis of programs, services, wages and benefits using available data plus interviews as required.

Project 3: On Gaps in Programs and Services (First Nation Agency Case Studies)

- What core programs and services do First Nation agencies offer?
- What salary and benefits do they provide (linked to qualifications)
- What are actual costs and funding requirements to account for remoteness, insurance, training, standards development and legal costs?

Methodology: (i) 2 case studies per region (ii) development of template (iii) completion of template by all agencies.

Project 4: On Extraordinary Costs

- What is the experience of other jurisdictions with an extraordinary costs fund?
- What items should be included in an extraordinary costs fund and how large should it be?
- Who should administer such a fund and what should be the application ground rules? How should the concerns of the Auditor General be addressed?

Methodology: Key informant interviews.

Project 5: Management Information Systems

- What kind of MIS system is required? Do such models already exist?
- Should it be comparable across the country? Comparable to the province?
- Cost of development and maintenance (hardware, software, staff, training, transition)
- Implications for funding formula budget

Methodology: Engage expert on MIS systems. Key informant interviews.

Project 6: On Capital Costs

- What are the housing/space needs of First Nation agencies for their own operations and to provide care in the community?
- How should space costs be addressed in the funding formula or outside it (e.g., capital budget up front; amortization over time; an occupancy cost item that could be used for rent or capital construction, etc)

Methodology: Add this dimension to case study of 12 First Nations agencies.

Project 7: On Small Agencies

- What are the core administrative staffing and related requirements of small FNCFSA?
- How should the funding formula be adjusted to meet these requirements?
- What is the minimum size of agency and related population that is consistent with good social work practice and with economies of scale?

Methodology: Key informant interviews with a sample of small to medium sized agencies.

Project 8: Jurisdictional Disputes

- What are the issues concerning the funding of children in care with health needs?
- How do DIAND, Health Canada and the provinces see these issues?
- Is there a basis for resolving these disputes or at least finding agreement on a dispute resolution mechanism?

- What are the pros and cons of different dispute resolution mechanisms?

Methodology: Build into Projects 2 and 3, plus additional interviews with relevant persons

Option 2: The Provincial Funding Model

Another approach to funding First Nation child and family service agencies would be for DIAND to provide funding in the same manner and at the same level as is done by each of the provinces. This would not mean that the First Nation agencies would need to provide exactly the same programs and services, but their funding would be determined in relation to the funding practices of the province in which the agency is located.

This approach carries with it certain assumptions:

- There would be not one formula but 10 (more if agencies are established in the territories over time.)
- Funding of First Nation agencies would be determined according to the manner and level of provincial agencies.
- First Nations child and family service agencies would not need to provide exactly the same programs and services as the province. There is room for culturally appropriate programs and services.
- The starting point is the core programs and services provided by the province and the costs of providing them.
- Education and training levels, salaries benefits, workloads would be equivalent to the province.

This kind of approach to funding is being seriously explored by at least one First Nations agency in Alberta. Using this as the example, the funding formula would include the following components, at least in that province:

- A provision for governance costs (e.g., Board of Directors) which is enveloped.
- Core management and administration, varying by size of agency.
- Financial administration and services.
- Infrastructure costs, including capital and computer hardware and software.
- Direct delivery costs tied to number of children in caseload.
- Program services and support.

It is important to emphasize that the following summary of the strengths and weaknesses of this model are based on a summary exploration of the model in one province only – further research is required to establish the facts. Nonetheless, based on our current analysis, the strengths of the provincial funding model are the following:

- It could mean higher levels of funding for FN agencies, at least in some provinces

- It would permit a reduction of the gap in programs and services between on and off reserve status Indians within provinces
- It might permit more attention to be paid to preventative programming, kinship and home care, leading to a reduction of children in care.
- It may better provide for legal, capital and other costs

The provincial funding approach also brings with it some disadvantages:

- Regional inequalities amongst First Nations agencies located in different provinces will be difficult to control
- There is the concern that FN agencies would be drawn closer into provincial sphere and be subject to provincial fluctuations in social service investment.
- There is a lack of positive, trusting relationship in some cases between provinces and First Nations CFS agencies.
- Provincial formulae may themselves be inadequate. For example: remoteness, emergency funds, cultural development, MIS, small agencies may not be adequately addressed.
- Funding may vary by number of children in care, not by the population of children aged 0-18 years.

To establish the specific features and implications of moving to a provincial funding approach will also require some research. The main research questions to be pursued in Project 9 are as follows:

Project 9: The Provincial Funding Model

- What is the funding formula in each province?
- What results would it achieve when applied to FN agencies in each province?
- What is the difference between federal and provincial funding in terms of dollar outcomes?

Methodology: province by province analysis combined with case studies of 12 FN agencies (Project 3). Then applied to all FN agencies

Option 3: The First Nations Funding Model

A third approach to funding First Nation child and family service agencies is one that is explicitly based on community needs and assets and is rooted in the particular socio-economic and cultural characteristics of the communities and Nations which the agencies serve. The approach involves determining the core set of programs and services that First Nation agencies need to offer in their communities. This core set would be based on the unique socio-economic and demographic conditions of the communities. It would take cultural differences into account and would be rooted in best practice based on First Nation experience. Thus funding to agencies would be based on the cost of providing the

core set of programs and services, but with appropriate adjustments to take into account varying conditions, cultures, population sizes and locations.

At this point, it is less clear than it is with the other two models what such an approach to funding would look like, and what its implications would be. It also requires some research to be undertaken, a starting point for which is outlined in the following project designed to scope out the shape of a First Nations funding model.

Project 10: A First Nations Funding Model

- What are the unique conditions faced by First Nation communities in family/child welfare field?
- What is best practice in this context, taking into account First Nation cultures and perspectives?
- What are an ideal set of programs and services in this context, and the cost of delivering them?
- What adjustment factors would be needed to accommodate differences among First Nation communities?
- What is the range of funding models that could best support a "First Nations" child welfare system?
- What are the steps in implementing this scenario?

Methodology: Literature review, case studies and interviews

Summary

The contract for service required that three funding formula options be identified for First Nations Child and Family Services, that the pros and cons of each options be outlined and the research needed to run economic simulations of each option be identified.

Overall our key findings are:

1. That First Nations child and family service agencies included in our research project expressed concerns regarding funding that were consistent with the findings of the Joint National Policy Review on First Nations Child and Family Services completed in June of 2000.
2. The National Advisory Committee affirmed that the basic principals identified on Page 7 of this report should apply to any new funding option that is developed.
3. Three funding formula models were identified: Fixing the current formula, the provincial funding model and the First Nations funding model.
4. After reviewing the existing literature and research, the specific research questions needed to inform all three funding models is detailed in this report along with a proposed research methodology.

The research findings and options, detailed in this report, were presented to the National Advisory Committee of the Joint National Policy Review on December 4, 2004 in Vancouver, British Columbia. Upon reviewing the information summarized in this report, the committee directed that research be conducted on all three options. Completing the research will form phase two of this project followed by phase three which will involve First Nations agencies completing a survey tool designed to better inform the National Advisory Committee, and agencies themselves, of the implications of each option.

A proposal to complete the research detailed in this report will be submitted to the Department of Indian Affairs and Northern Development in January of 2005.

This is Exhibit "59" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

We are Coming to the Light of Day

Throughout the many years of the National Policy Review, we have traveled down many paths –sometimes we have stumbled in the darkness trying to move forward in a good way. We could not see our way forward clearly.

This report provides the clear evidence needed to ensure First Nations children and families receive what is rightfully theirs – a chance to live with dignity, in the ways of their ancestors, safely at home.

The light is beginning to shine – to light our way forward. We can not turn back or stand still – generations are depending on us to go forward – now that we can.

Donald Horne, Kahnawake First Nation
Elder and First Nations Representative
to the National Policy Review (2000-2003).

CHAPTER 1
SUMMARY OF FINDINGS

by Cindy Blackstock, Tara Prakash, John Loxley and Fred Wien

Abstract

This multidisciplinary research project brought together experts in First Nations child welfare, community development, economics, management information systems, law, social work and management to inform the development of three funding formula options to support policy and practice in First Nations child and family service agencies in Canada. This unique research approach involved specialized research projects on the incidence and social work response to reports of child maltreatment respecting First Nations children, prevention services, jurisdictional issues, extraordinary circumstances, management information services and small agencies. These research projects were complimented by the results of twelve case studies of First Nations child and family service agencies in Canada. Findings indicate that First Nations children are over represented at every level of the child welfare decision making continuum including reports to child welfare, case substantiation rates, and admissions to child welfare care. In fact an analysis of child in care data by cultural group indicated that one in ten Status Indian children in three sample provinces were in care as of May 2005. Research results indicate that First Nations child and family service agencies are inadequately funded in almost every area of operation ranging from capital costs, prevention programs, standards and evaluation, staff salaries and child in care programs. The disproportionate need for services amongst First Nations children and families coupled with the under-funding of the First Nations child and family service agencies that serve them has resulted in an untenable situation. Recommendations for policy change and future research are discussed.

Project Overview

[The Committee] is equally encouraged by the establishment of First Nations child and family service providing culturally sensitive services to Aboriginal children within their communities. United Nations Committee on the Rights of the Child Concluding Observations Canada, 2003, Observation 26.

There are approximately three times the numbers of First Nations children in state care than there were at the height of residential schools in the 1940's (Blackstock, 2003). Taken together the 9000 First Nations children in care who are resident on reserve in Canada will spend over two million nights away from their families this year (McKenzie, 2002). Through the years, many have dreamed of making a difference for these children – to allow them to stay safely at home. This research project is dedicated to those children, their families and to making the dream of keeping them safely at home a reality. The most encouraging and important finding of this research project is that there really are things we could be doing for this generation of First Nations children to improve their well being – and in most cases it is as simple as providing them access to the resources enjoyed by other Canadians – but in a manner that reflects their distinct identity.

Recent research has confirmed that First Nations children are removed at disproportionate rates due to neglect (Blackstock, Trocme, & Bennett, 2004). When neglect is unpacked – poverty, poor housing and substance misuse are identified as key drivers (Trocme, Knoke, & Blackstock, 2004). This report is as much about redefining social work to better respond to the needs of First Nations families as it is about providing an evidence base for a renewed, and hopefully, equitable funding regime for First Nations child welfare. The researchers involved in this project represent some of the most renowned experts in Canada. We are honoured they are sharing their knowledge in this report – we know they did it because they believed it would make a difference. However, no report alone can do that – at the end of the day it is up to all those who read this report to mobilize this knowledge into beneficial action that First Nations children can experience – not just hear.

Building on the 17 recommendations of the Joint National Policy Review of First Nations Child and Family Services (NPR) (MacDonald and Ladd, 2000), the National Advisory Committee of the Joint National Policy Review (NAC) requested that the First Nations Child and Family Caring Society of Canada (FNCFCS) undertake research to respond to the research questions identified in Phase One[1] of the research project to inform three possible funding options for First Nations child and family services:

1) **Integrating recommendations of the NPR into the current funding formula, Directive 20-1, Chapter 5 (hereinafter called the Directive or Directive 20-1)**

2) **Linking First Nations child and family service agency funding with provincial child welfare funding levels**

3) **A new First Nations based funding formula.**

The first two possible funding models are relatively well defined with the first having benefited from the recommendations of the Joint National Policy Review on First Nations Child and Family Services completed in 2000 and the second based on standardized provincial funding formulae where they exist. In terms of the restructuring of Directive 20-1, the seventeen recommendations improve funding for First Nations child and family services contained in the National Policy Review were validated in Phase One and formed the primary frame of reference for analysis of this option in Phase Two (excluding the recommendation for a review of the funding arrangement in Ontario which will need to be done under a separate process).

The provincial option is also reasonably well defined although it is not always clear how specific child welfare services are funded within universal provincial social services funding pools. Moreover, as detailed later in this report there were instances where provinces had lost sight of the original funding formula over time and had simply adjusted the rate according to volume and

cost of living indices. Nonetheless, three provinces were identified for further research – Alberta, Nova Scotia and Manitoba and should provide a reasonable basis for determining if linking First Nations child and family service funding to the level of funding provided by the province in their respective area is a viable option.

The First Nations model is potentially the most promising although it is undoubtedly the most difficult to develop as there are no pre-existing funding template models to refer to. The potential lies in the possibility of re-conceptualizing the pedagogy, policy and practice in First Nations child welfare in a way that better supports sustained positive outcomes for First Nations children. There are several theme related studies in Phase Two which will contribute to this model – such as the secondary analysis of the First Nations data set in the Canadian Incidence Study of Reported Child Abuse and Neglect (CIS) and the Management Information System report. Although other study methodologies will inform this model, these two studies are particularly important given that any new funding regime should be founded on evidence based research and data – not speculation.

In terms of the CIS, this study describes the characteristics of children and their families who came into contact with the child welfare system over a three month period in 2003 (eight First Nations child and family service agencies participated.) As this is the second cycle of the CIS it is possible to compare results respecting Aboriginal children collected and analyzed as a part of the 1998 study.

The review of management information systems will also be a critical report in that will describe the current capacity of First Nations agencies to collect and report data that could potentially inform a First Nations funding formula model. The MIS review includes key informant interviews with First Nations child and family service agencies using a variety of data management systems ranging from pen and paper to agency based MIS systems.

The research for Phase Two began in January 2005 when FNCFCSA identified an interdisciplinary research team including experts in economics, First Nations child and family services, sociology, substance misuse, community development, management, public administration, management information systems, psychology and law. Methodological approaches for research projects were designed in accordance to the requirements of each research question identified in Phase One. A key method was to conduct detailed case studies of 12 First Nations child and family service agencies and the provinces using standardized questionnaires administered by regional researchers. The surveys include questions describing the range of services currently provided as well as to map out optimal levels of service and the costs associated with ensuring an equitable and culturally based funding formula going forward.

Selected First Nations child and family service agencies were also contacted by experts in management information systems, jurisdictional disputes and child maltreatment prevention services in order to inform the funding formula research. culminating in a report on the findings in June of 2005. These tight time frames have impacted the ability of our research team to fully analyze all aspects of the project. Nonetheless, results suggest that given the variety of research methodologies, the expertise of the research team and the cooperation of First Nations child and family service agencies and the federal and provincial governments have yielded substantial information to guide the National Advisory Committee in its efforts to develop a new funding formula.

This chapter provides an overview of the findings of all research projects and describes the implications of these findings for three funding formula options. In the spirit of transparency, full research reports on specific research areas are published in subsequent chapters in this report except in instances where publication of the report would reveal the identity of research participants.

Guiding Principles

The following set of guiding principles was established by the National Advisory Committee to guide the development of a new funding formula for First Nations child and family services:

- Supports culturally based services
- Consistent with the United Nations Convention on the Rights of the Child
- Ensures equal benefit to children under the law
- Supports preventative services and community development in relation to child maltreatment
- Responsive to the proportion of high needs children
- Accommodates unexpected occurrences
- Responsive to remoteness and service context
- Permits flexibility in allocation of budget
- Provides automatic price adjustments
- Provides adequate funds to meet needs of children in care
- Reflects the mandate of INAC

Research Questions and Methodology Summary

Table One on the following page summarizes the research questions identified in Phase One to inform each of the funding options and the methodology used to respond to each question.

Once all the data was retrieved from the various projects, the principal investigators reviewed the projects to identify how the research findings linked together to inform the three funding formula options. This analysis was presented to the National Advisory Committee for their review and the final report was prepared after having considered their comments.

Table 1: Summary of Research Questions

Funding Formula Option	Research Question	Methodology
Redesign of Directive 20-1	• Prevention • Identifying gaps in the current formula • Extraordinary Costs • Management Information Systems (MIS) • Capital Costs • Implications for small agencies • Jurisdictional disputes	• Principal methodology for all topic areas involves conducting literature reviews and key informant interviews. • Key informant interviews with 12 sample FNCFSA representing diversity in cultures, operating contexts and sizes will inform the development of a questionnaire to be administered to all FNCFSA in the Phase III of the research. • MIS and legal experts conducted independent studies for the MIS and jurisdictional dispute analysis. • Secondary analysis of the Aboriginal sample of the Canadian Incidence Study on Reported Child Abuse and Neglect (2003) informed prevention and gaps research topics. • Focus group conducted for prevention services
Tying the Formula to Provincial Standards	• Identification of funding formulas used by each province/territory • What results would be achieved if provincial formulas were applied to FNCFSA? • Comparative analysis of provincial formula versus Directive 20-1	• Literature review • Key informant interviews with each province/territory to identify funding formula • Key informant interviews with FNCFSA (using sample of 12 agencies) • Analysis of three provincial funding formulas • Analysis of all information by econometrician and policy experts
First Nations Based Formula	• Identification of unique conditions faced by FN communities in CFS. • Best Practices in FNCFSA and conditions that support best practice • Ideal set of programs and services in this context and the cost of delivering them • What adjustment factors would be needed to accommodate different communities • What is the range of funding formula options that could best support a First Nation child welfare system • Implementation steps	• Literature reviews to describe the unique conditions and best practices in FNCFSA and economic formula options. • Key informant interviews with a diversity of First Nations Child and Family Service Agencies (utilizing 12 case studies proposed for option one) • Identification of specific data sets and concordant infrastructure needed to further develop this option. • Canadian Incidence Study on Child Abuse and Neglect

Research Team

FNCFCS was honoured to work with the following esteemed researchers, many of whom are broadly recognized as being amongst the best in their field of research, both nationally and internationally:

Summary of Research Project Findings

1. TheExperience Of First Nations Children Coming Into Contact With The Child Welfare System In Canada: THE CANADIAN INCIDENCE STUDY ON REPORTED ABUSE AND NEGLECT

The profiles of Aboriginal families differ dramatically from the profile of non-Aboriginal families. Aboriginal cases predominantly involve situations of neglect where poverty, inadequate housing and parent substance abuse are a toxic combination of risk factors.
(Trocme, MacLaurin, Shangreaux & Fallon, 2005)

Study Design and Methodology

Despite the graphic over-representation of Aboriginal children in the child welfare system in Canada, until 1998 there was no information available on why these children were coming into child welfare care. The 1998 Canadian Incidence Study on Reported Child Abuse and Neglect (Trocme, et. al., 2001) (hereinafter called CIS-98) included Aboriginal children in the study sample, as well as three First Nations child welfare agencies. This national study documents the assessments of social workers on reported cases of child abuse and neglect that came to their attention during a three month period. The study captures information on why the child was reported to child welfare, report substantiation rates, child functioning items, caregiver functioning items and case disposition. This study was replicated in 2003 including eight First Nations child and family service agencies in the sample. The CIS -2003 Aboriginal data sample reflects the experiences of 2,328 investigations involving Aboriginal children: 304 First Nations children served by a First Nation's agency, 1,244 First Nations children served by mainstream agencies and 476 Métis, Inuit, and other Aboriginal children. A new feature of the CIS 2003 analysis is that the sample size of substantiated cases was large enough in some cases to compare the experiences of First Nations children on reserve with First Nations children off reserve, other Aboriginal children and non Aboriginal children. To follow is a brief summary of the secondary analysis of the 2003 CIS data respecting Aboriginal children with the full report appearing in Chapter 2.

Building on the Findings of CIS-98

Secondary analysis of the Aboriginal data in CIS-98 revealed that although Aboriginal children were less likely to be reported to child welfare authorities for physical or sexual violence they were twice as likely to experience neglect (Blackstock, Trocme & Bennett, 2004). When researchers unpacked neglect by controlling for various care giver functioning and socio-demographic factors – they determined that the key drivers of neglect for First Nations children were poverty, poor housing, and substance misuse (Trocme, Knoke & Blackstock, 2004). It is important to note that two of these three factors are arguably outside of the domain of parental influence – poverty and poor housing. As they are outside of the locus of control of parents is unlikely that parents will be able to redress these risks in the absence of social investments targeted to poverty reduction and housing improvement. The limited ability for parents to influence the risk factors can mean that their children are more likely to stay in care for prolonged periods of time. This is particularly a concern in regions where statutory limits on the length of time a child is being put in care are being introduced. If parents alone can not influence the risk and there are inadequate social investments to reduce the risk – children can be removed permanently. The third factor, substance misuse, is within the personal domain for change but requires access to services. Overall, CIS- 98 results suggest that targeted and sustained investments in neglect focused services that specifically consider

substance misuse, poverty and poor housing would likely have a positive impact on the safety and well being of these children.

Providing an adequate range of neglect focused services is likely more complicated on reserve than off reserve due to existing service deficits within the government and voluntary sector. A study conducted by the First Nations Child and Family Caring Society in 2003 found that First Nations children and families receive very limited benefit from the over 90 billion dollars in voluntary sector services provided to other Canadians annually. Moreover, there are far fewer provincial or municipal government services than off reserve. This means that First Nations families are less able to access child and family support services including addictions services than their non Aboriginal counterparts (Nadjiwan & Blackstock, 2003). Deficits in support services funding were also found in the federal government allotment for First Nations child and family services (MacDonald & Ladd, 2000.) This report found that the federal government funding for least disruptive measures (a range of services intended to safely keep First Nations children who are experiencing or at risk of experiencing child maltreatment safely at home) is inadequately funded. When one considers the key drivers resulting in First Nations children entering care (substance misuse, poverty and poor housing) and couples that with the dearth in support services, unfavorable conditions to support First Nations families to care for their children emerges.

Although there has been no longitudinal studies exploring the experiences of Aboriginal children in care throughout the care continuum (from report to continuing custody[2]), data suggests that Aboriginal children are much more likely to be admitted into care, stay in care and become continuing custody wards. It is possible that the over representation of Aboriginal children in child welfare care is a result of the structural risk factors (poverty, poor housing and substance misuse) not being adequately addressed through the provision of targeted least disruptive measures at both the level of the family and community. The lack of service provision may result in minimal changes to home conditions over the period of time the child remains in care and thus it is more likely the child will not return home. This is an area for further study.

Findings of CIS 2003

Consistent with the findings of CIS-98, neglect continues to be the primary reason why Aboriginal children are reported to child welfare authorities. Amongst the various forms of neglect, physical neglect and failure to supervise were the most frequently reported. Physical neglect relates to the caregivers failure to provide adequately for the child's needs such as nutrition, clothing, hygienic living conditions. CIS requires that the social worker suspect or believe that the parent is at least partially responsible for the situation.

CIS -03 data suggests that First Nations children on and off reserve have higher rates of child functioning concerns than their non Aboriginal peers. First Nations children on reserve were more likely to be reported as having depression/anxiety, negative peer involvement, misuse substances, irregular school attendance, and to experience a learning disability than their First Nations peers resident off reserve, other Aboriginal children and non Aboriginal children. On the positive front, First Nations children on reserve were less likely to experience ADD, ADHD, inappropriate sexual behaviour, to have a positive toxicology at birth or young offender involvement than their peers off reserve.

In terms of caregiver functioning, it is clear that First Nations caregivers are facing more pressures than their non Aboriginal counterparts. Although First Nations caregivers on reserve are less likely to be single parents than their non Aboriginal peers, they are more likely to rely on benefits for income and to live in public housing, in unsafe housing, and overcrowded conditions. Alcohol abuse continues to be a key factor affecting 44% of First Nations caregivers on reserve versus 58% for First Nations off reserve, 43% for other Aboriginal caregivers and 11% for non Aboriginal caregivers. First Nations caregivers were more likely to experience drug and solvent abuse (44%) versus 10% for non Aboriginal caregivers. However, the

rates for drug and solvent abuse amongst First Nations caregivers resident off reserve were higher at 58% than amongst other Aboriginal caregivers (43%).

In terms of social worker response, cases involving Aboriginal families were two and one half times more likely to be substantiated (49 per thousand) than non Aboriginal families (19.8 per thousand.) In terms of investigative outcomes, cases involving First Nations children were more likely to remain open for services (68%) versus their non Aboriginal peers (41%). Court applications were also more likely for First Nations children on reserve occurring in 10% of cases versus 6% of cases involving non Aboriginal children. Rates for court applications were slightly higher at 13% for both First Nations off reserve and other Aboriginal peoples. When it came to placement First Nations children on reserve were two and a half times more likely to be placed in child welfare care than non Aboriginal children. Specifically, First Nations children on reserve experienced placement rates of 15% as compared to 6% for non Aboriginal children. First Nations children off reserve were placed in child welfare placements in 16% of cases.

CIS -03 compared where Aboriginal children on and off reserve were being placed once admitted to child welfare care. Overall, children on reserve were three times more likely to be placed in either informal kinship care, kinship care or with a family foster home than their non Aboriginal counterparts.

Conclusions

The following concluding statement is taken directly from the CIS report completed for the First Nations Child and Family Caring Society by Trocme et.al. (2005) which appears in full in Chapter 2 of this report:

A number of striking differences emerge from this preliminary comparative analysis of child welfare investigations of Aboriginal and non-Aboriginal children. **From the very outset, Aboriginal children are more than twice as likely to be investigated compared to non-Aboriginal children. Once investigated, cases involving Aboriginal children are more likely to be substantiated, more likely to require on-going child welfare services, more than twice as likely to be placed in out of home care, and more likely to be brought to child welfare court.** The profiles of Aboriginal families differ dramatically from the profile of non-Aboriginal families. Aboriginal cases predominantly involve situations of neglect where poverty, inadequate housing and parent substance abuse are a toxic combination of risk factors. Surprisingly, fewer differences were noted at the level of the children themselves.

The most systematic pattern to emerge from this first analysis highlights the differences between Aboriginal and non-Aboriginal children. It would be helpful to discuss with Aboriginal service providers any on/off-reserve differences that have not been highlighted by this statistical analysis.

Multivariate analyses controlling for some of the differences between Aboriginal and non-Aboriginal families should be undertaken to better understand the factors underlying the differences in service response. **Regardless of these possible explanations, it is apparent that one should expect the cost of providing services to Aboriginal children to be significantly higher given that these cases involve a significantly higher rate of intervention at every point of contact.**

2. JORDAN'S PRINCIPLE: A CHILD FIRST APPROACH TO JURISDICTIONAL ISSUES

Every individual is equal before and under the law and has the right to equal protection and benefit under the law without discrimination and, in particular, without discrimination based on race, national or ethnic origin, colour, religion, sex, age or mental or physical disability
Canadian Charter of Rights and Freedoms, Section 15

The spirit of the Canadian Charter of Rights and Freedoms (hereinafter called the Charter) is reaffirmed by Canada signing the United Nations Convention on the Rights of the Child where non-discrimination is a key principle. These principles in domestic and international law provide a foundation for First Nations children to receive equal benefit under the law and should provide adequate incentive for all levels of government to coordinate their policies and programs respecting First Nations children. Unfortunately, as the United Nations Committee on the Rights of the Child (2003) suggests, the lack of coordination between federal, provincial and territorial governments has left open the possibility of uneven implementation of the objects of the Convention.

This report, completed by Kelly A. MacDonald, a Tsimshian lawyer and child rights expert with the assistance of Kylie Walman provides a synopsis of how case law, international law and inquest findings come together to inform the development of a new funding formula that better reflects the non discrimination provisions of the Charter and the United Nations Convention on the Rights of the Child. Ms. MacDonald uses a combined methodology of literature reviews (both for case law and inquests) supplemented by over 20 key informant interviews.

Findings

The research finds that jurisdictional disputes continue to have significant impacts on the lived experiences of First Nations children – particularly those with special needs. Although both the federal and provincial governments embrace the principle that the safety and well being of the child is a paramount consideration, in practice jurisdictional disputes often supersede the interests of children. **The lived experience of this situation is saliently outlined in the case of Jordan, a young child, in Manitoba who remained in hospital for a prolonged period of time due to jurisdictional wrangling between federal government departments as to which department was responsible for paying at home care costs. A sad update is that Jordan passed away before the jurisdictional dispute could be resolved and never had a chance to live in a family environment – the only home he ever knew was a hospital (Lavalee, 2005).**

As key informants contributing to this research confirm, Jordan's experience with jurisdictional disputes is not unique. Efforts to clarify the responsibilities of the federal and provincial governments have been attempted using the court system but as Ms. MacDonald found, existing case law does little to clarify government roles and responsibilities. Lower court decisions such as the decision by Justice MacInnes of the Manitoba Queens Bench find that there is not a clear fiduciary obligation on behalf of the federal government to fund First Nations child and family services. Additionally, a Manitoba provincial court decision found that the provinces have an obligation to ensure equal benefit under the child welfare law for every child within the province irrespective of their views of federal government responsibilities to First Nations children. This suggests that where there is a gap between what

the federal government will fund on reserve and what the provincial statute requires, the province must step in and fund the service. These lower court decisions, however, must be taken within the broader context of Canada's obligations under the Charter of Rights and Freedoms and the United Nations Convention on the Rights of the Child. Ms. MacDonald notes that although there is no existing case law that specifically explores the implications of federal government under funding of child welfare services, perpetuating inequities in child welfare services through inequitable funding regimes is likely inconsistent with Section 15 of the Charter.

As this report notes, the lack of non judicial forums for the resolution of jurisdictional disputes is a problem. This is also evident in the First Nations agency survey responses which indicated that the **12 agencies had experienced 393 jurisdictional disputes this past year requiring an average of 54.25 person hours to resolve each incident.** The most frequent types of disputes were between federal government departments (36%), between two provincial departments (27%) and between federal and provincial governments (14%). Examples of the most problematic disputes were with regard to children with complex medical and educational needs, reimbursement of maintenance, and lack of recognition of First Nations jurisdiction. There were variations in the responses with some regions reporting higher incidents than others which may reflect the uneven development of dispute resolution mechanisms. Although tripartite tables have been established in some regions with INAC, the province and First Nations child and family service agencies, the efficacy and authority of these tables to resolve jurisdictional disputes is unclear and inconsistent. Moreover, as some jurisdictional disputes involve federal, provincial or tribal authorities outside of these core participants it is critical that mechanisms for engaging these groups are integrated into a dispute resolution process. Importantly, dispute resolution mechanisms must be reflective of cultural values and processes of the participating First Nation child and family service agency.

Conclusion: Jordan's Principle to Jurisdictional Dispute Resolution

There is no way to know if implementing recommendation number 4 of the National Policy Review calling for the clarification of jurisdictional disputes involving special needs children would have prevented Jordan's death, but putting Jordan first would have at least provided him with the best opportunity to live in a family environment. Despite the stated intentions by governments, including Canada, the predominant strategy for resolving jurisdictional disputes affecting First Nations children has been to put the needs of the child on the back burner while governments sort out who is going to assume the costs. In far too many cases the government puts its needs before the needs of the child. The predominance of the child second solution in managing jurisdictional disputes is fundamentally inconsistent with our national values, social norms, laws and international commitments. **The well being and safety of the child must be the paramount consideration in resolving jurisdictional disputes – the child must come first in all instances.**

We recommend that a child first principle be adopted whereby the government (provincial or federal) who first receives a request for payment of services for a First Nations child will pay without disruption or delay when these services are otherwise available to non Aboriginal children in similiar circumstances. The government then has the option of referring the matter to a jurisdictional dispute resolution process. Consistent with recommendations made by the Baby Andy inquest we recommend that jurisdictional dispute resolution tables be established to resolve funding disputes between and within federal, provincial and First Nations child and family service agencies. These tables will receive complaints by parties and recommend a resolution.

In Jordan's memory we recommend that this new child first approach to resolving jurisdictional disputes be called Jordan's Principle and be implemented without delay.

3. LEAST DISRUPTIVE MEASURES AND PREVENTION

Our calculations on the cost of child maltreatment in Canada are as follows:

Judicial	$616,685,247
Social Services	$11,780,062,222
Education	$ 23,882,994
Health	$ 222,570,517
Employment	$11,299,601,363
Personal	$ 2,365,107,683
TOTAL	$15, 705,910, 047

This total reflects a minimum [annual] cost to society…The investment of Canadian governments at all levels in social services directed at this serious problem [child maltreatment] represents only a small fraction of billions of dollars lost every year (Bowlus, McKenna, Day & Wright, 2003 P. v)

The projected cost of child maltreatment respecting First Nations children has not been researched in detail. However, considering that Aboriginal children compose approximately 30-40% of all children in child welfare care and the vast majority of those are First Nations, the annual economic costs in Canada are likely in the billions of dollars per annum. The staggering costs noted in the Bowlus e. al. 2003 study are consistent with data from the United States. According to the World Health Organization (2004) **the estimated costs of child maltreatment in the United States in 2001 are reportedly 94 billion dollars or a full 1% of the GDP for the United States.** Alexander Butchart, WHO Coordinator for Violence Prevention notes that "The good news from this report on the economic dimensions of violence is that, according to cost-benefit studies that have been conducted, violence prevention is cost-effective…. Providing graduation incentives for high risk youth and parents or new parents are, respectively, between seven and five times more cost-effective in preventing violence than investing in increased legal enforcement and incarceration." (WHO, 2003 P. 2).

The 1998 Canadian Incidence Study of Reported Child Maltreatment documented an overrepresentation of Aboriginal children in foster care placements and other institutional settings compared to non-Aboriginal children. Although socioeconomic hardship can account for much of this phenomenon, it has been suggested that funding arrangements may also create perverse incentive effects that work against family-based approaches. **In light of this present situation, more suitable alternatives for ensuring the well-being of Aboriginal children are a priority. Prevention constitutes a significant component of the general holistic philosophy of care in First Nations communities and a number of studies have illustrated that setting priorities in prevention is not only fiscally prudent, but also a humanitarian response to child maltreatment.**

The purpose of this study was to identify best practices and least disruptive measures in primary, secondary and tertiary child maltreatment prevention. For the purposes of this study, primary prevention is defined as the range of population based or community development services provided to prevent child maltreatment. Secondary prevention is the range of services provided to children at risk of experiencing child maltreatment. Tertiary prevention is responding to children who are at significant risk or are experiencing child maltreatment. In child welfare legislation in all provinces tertiary prevention services (often termed least disruptive measures) must be exhausted prior to considering the removal of the child from her/his family.

A secondary goal of this study was to identify a realistic level of cost that can be expected by reducing the number of children in care by filling identified prevention funding gaps in Directive 20-1.

Study Design and Methodology

The conclusions of these reports are informed by a literature review on prevention services which was complemented by a one day focus group of

child welfare practitioners, policy makers and researchers. An additional economic cost benefit analysis utilizing data from West Region Child and Family Services Agency in Manitoba was completed in order to inform what savings could reasonably be expected with investments in prevention services over time. It is important to recognize that as the current funding formula inadequately funds prevention services we were limited as to the number of agencies that this type of cost savings analysis could be conducted on. It is important to note that West Region CFS is a large agency which has been in operation for over two decades meaning it was in an ideal position to optimize benefits of block funding. As Dr. McKenzie (2002) notes there are very few other agencies that could benefit from block funding as their economies of scale are too small or they continue to experience fluctuations in costs year over year making setting the base amount for the block a difficult exercise. However, for the purposes of this costing analysis, West Region provides a good indication as to what would be possible if all agencies had access to a holistic and community based range of prevention and least disruptive measures services.

Summary of Findings

There is a general consensus in the literature that child removal should really be the last resort in responding to child maltreatment. This can only be fully realized if there is a focused investment in all three levels of prevention services (primary, secondary and tertiary.) The NPR (MacDonald & Ladd, 2000) found that the current funding formula inadequately invests in prevention and least disruptive measures. Meanwhile the formula does reimburse for services once a child is removed from their family home. **This means that, in practice, there are more resources available to children who are removed from their homes than for children to stay safely in their homes.** Focus group participants echoed this finding and urged strategic and sustained investments in prevention services which would provide families the best opportunity to have their children remain safely in their homes. These services, however, must be reflective of local culture and context and also consider the broader structural risks that impact on child safety such as community poverty, lack of infrastructure and inadequate or overcrowded housing.

Many First Nations child and family service agencies work with families where the children are experiencing, or are at significant risk for, child maltreatment. Focus group participants see a direct relationship between the lack of primary and secondary prevention options that could mitigate family crisis and the high proportion of families who experience family crisis and child maltreatment. If social workers do not effectively respond to early symptoms of child maltreatment and/or family crisis then problems can escalate both in terms of degree and scope creating conditions where removal of the child is the only option. It is suggested that providing a diversity of primary and secondary prevention services would reduce the scale of crisis-related interventions. Currently these services, if offered, are fragmented and poorly funded. Also the Directive does not allow flexibility to work with other departments to jointly undertake prevention projects – funding agreements are structured in such a fashion that stove piping of services is the end result. This needs to be changed to promote more interdisciplinary and holistic prevention interventions (i.e: development and implementation of programs in partnership with addictions services, health or band schools.)

The classification of prevention in terms of primary, secondary and tertiary as used in the literature is to some extent, incongruent with the notion of holism in Aboriginal terms where program strategies often entail a continuum of overlapping and interlocking child welfare services comprising all three levels of prevention. The new funding formula should encourage a seamless continuum of prevention services that allow children and their families to transition easily between programs.

Overall focus group participants echoed the findings of the literature review. There was general consensus that the current funding formula works against a comprehensive prevention agenda for

First Nations agencies. Participants emphasized the need for an increased investment in all aspects of culturally based prevention programs whilst ensuring the maintenance of prevention programs that agencies have been able to establish. The major outcomes of the focus group were as follows:

- Prevention is conceptualized as a front-end investment in people and should be reflected in prevention oriented legislation and funding arrangements.
- The need for a multidisciplinary collaborative approach to intervention.
- There is a need for a contextual framework encompassing broader community related environmental factors and socio-demographic issues.
- Flexibility and sustainability in funding is needed to support prevention programs which respond to the range of risk factors affecting child safety including structural risk.
- There is a need for adequate funding to build infrastructure and human resource capacity to design, deliver and evaluate prevention programs. This is particularly acute in remote communities.
- Building the FNCFSA human resource base and community volunteer capacity in First Nations communities for prevention programs is identified as a priority.
- The need for development of a comprehensive plan relating to capital requirements such as office space, vehicles and computer systems needed to operate prevention programs needs to be addressed.

Cost-benefit Analysis

A cost-benefit analysis was conducted to determine the realistic savings that can be expected by reducing the numbers of children in care using West Region Child and Family Services as an example. **Consistent with the findings of Bowlus et. al. (2003) and the World Health Organization (2003), the calculations demonstrate substantial returns on spending geared toward prevention. It is important to emphasize that reductions in children in care should be conceptualized as an outcome of programs intended to strengthen families and communities.** It is equally important that artificial means of reducing children in care be avoided. For example, in some mainstream regions reduction in child in care numbers have been achieved by reducing the maximum age children can be in care to 16 years. This approach to reducing children in care is not only poor practice, it is inconsistent with federal age of majority (age 18) and the age of majority set out in the Convention on the Rights of the Child (age 18.) Reductions of children in care need to be conceptualized as a positive long term outcome of supporting healthy families. To achieve this there is a need to re-direct policy in favor of primary and secondary services as a principal component of the casework model, while continuing adequate responses to more complex cases of high risk and family conflicts. The cost-benefit analysis confirms that a shift in focus must be directed to family preservation and reunification wherever possible. **A detailed analysis of the cost benefits of West Regions investment in a continuum of primary, secondary and tertiary prevention services revealed that 1.5 million dollars was saved each year as more children were able to stay safely at home versus being placed in child welfare care. This clearly demonstrates that doing the best thing for children and their families can, over the longer term, result in economic benefits as well.**

Gaps In Formula

Analyzing the current national funding formula from the perspective of the general holistic philosophy of care recommended by First Nations experts reveals a number of significant gaps. One of the key gaps is that the cost of living adjustment in the current formula has not been implemented since 1995. Focus group participants felt that this had resulted in a reduction in overall funding for First Nations child and family service agencies across all service areas including prevention as they could not keep pace with inflation. Their opinion was later validated by the Dr. Loxley's analysis of the cost of living that appears later in this chapter.

Although prevention is a significant aspiration of First Nations agency programming, the funding provided by the current formula is insufficient

to meet needs in primary, secondary or tertiary (least disruptive measures) prevention services. Another complication is that agencies have been disallowed prevention based expenditures that they have billed as a part of the child maintenance. It is an expectation of all child welfare statutes in the country that once a child is admitted to care; the child welfare authority has to provide services to the family and the child to optimize conditions for the child's safe return. In many cases, agencies find themselves in a catch 22 situation – they have inadequate funds in the operations pool to pay for these services and then regional INAC staff would disallow the expenditure if it was billed under maintenance. This means that agencies in this situation effectively have no money to comply with the statutory requirement to provide families with a meaningful opportunity to redress the risk that resulted in their child being removed. More importantly, the children they serve are denied an equitable chance to stay safely at home due to the structure and amount of funding under the Directive. In this way the Directive really does shape practice – instead of supporting good practice. There is a clear need to amend INAC policy, or interpretation of policy, to recognize the need to provide family and child supports to children in care.

The issue of compulsory services under provincial statues versus discretionary programs is also an area requiring further attention. There are several categories of discretionary costs consistent with Aboriginal values such as preventative community development expenditures which are not uniformly reflected under statutory legislative standards and therefore are not funded.

Three broad funding recommendations with the goal of suitably redistributing funds to reflect lower maintenance costs and an increased percentage of funds for prevention and community development or family healing support initiatives are:
1) a multidisciplinary team approach to funding, 2) linking prevention funding to children in care and/or families receiving services and 3) linking prevention to agency capacity to implement and evaluate programs.

Conclusion

Many **First Nations child and family service agencies work with families who could avoid experiencing significant family crisis or child maltreatment if they had received primary or secondary prevention services**. Providing an adequate and sustained amount of funding for the development of a holistic and culturally based continuum of primary, secondary and tertiary prevention services would go a long way to ensuring that child removal is a last resort for First Nations children. This finding is consistent with recommendations made in both the NPR and in CIS-98.

There are strong social work and economic cases for making prevention a priority with substantial fiscal and societal savings. Unfortunately, the current funding formula does not adequately provide for prevention programming and may in fact, discourage prevention by under funding the continuum of services that the operations formula was intended to support. Still, some First Nations agencies have been able to implement successful prevention programs through the diversion of maintenance dollars under a block funding arrangement. As the use of maintenance funds in this manner is subject to uncertainty, it is not an option exercised by all agencies.

A separate budgetary provision is recommended for both primary and secondary prevention. In addition to this a separate budget for least disruptive measures which would include services to children in care so that they can safely return home needs to be established. The efficacy of these programs could be supported by incorporating flexibility in funding use to promote interdisciplinary approaches.

4. MANAGEMENT INFORMATION SYSTEMS

The December 2002 Report of the Auditor General of Canada concluded that First Nations agencies must rely on computer technology to manage currently cumbersome and excessive federal

> **reporting requirements. All agencies agree with this totally and want to have their own information system tailored to their needs for a variety of reasons, but absence of technology funding has been the most major problem. Currently, very few agencies have their own system, and they can barely afford it or keep it working smoothly due to constant lack of funds. (Loo, 2005, P.28)**

Study Design and Methodology

This research report was completed by Stanley Loo who is broadly acknowledged as a leading expert in child welfare information systems having been retained by the Provincial and Territorial Directors of Child Welfare and the University of Toronto, Faculty of Social Work to complete a national child welfare outcomes data project. The specific research questions in the Phase One study were:

1. What kinds of MIS systems are currently in use by FNCFSA and how do they compare with provincial systems?
2. What kind of MIS system is required to meet agency requirements and ensure adequate interfaces with provincial and national data systems?
3. What are the costs of developing and maintaining such a system?
4. What are the implications for a funding formula budget?

Methodological approaches included key informant interviews with eight First Nations child and family service agencies representing all regions except Alberta where we were referred to the province as all agencies use the provincial data base system. Provincial government staff were interviewed from all regions except Quebec and British Columbia where MIS contacts were either unavailable or unknown. Additionally, three external MIS experts who provided services to First Nations child and family service agencies were interviewed.

Summary of Findings

The Auditor General of Canada (December, 2002) has recommended that First Nations make greater use of information management technology to manage federal reporting requirements. FNCFCSA interviewed for this research project are supportive of this recommendation but are unable to implement it due to inadequate funding for MIS in the current funding formula. . Findings indicate a diversity in terms of existing MIS capacity. Additionally, Mr. Loo argues that MIS funding should be linked to agency office structure, location, data collection and management needs and capacity. There is no support for linking MIS to child population as in the current operations formula.

Additionally, findings of this report indicate that, despite the recommendations of the Auditor General of Canada (December, 2002) to streamline reporting requirements using information systems as a tool whenever possible, there is a broad variation in the data management systems being used by First Nations child and family service agencies in Canada. Additionally, most agencies expressed a desire to develop their own data management systems which would facilitate data collection for policy making and evaluation purposes and support the reporting needs of tribal governments, INAC and the provinces. A very small number of agencies have developed these systems and in some cases have licensed the resulting product for use in other First Nations communities. Agency based MIS systems, however, are still the rare exception with the vast majority of agencies having inadequate MIS capability. Currently there is broad variation in MIS capacity within First Nations agencies ranging from pen and paper operations to agency developed information systems. There are also a number of agencies who are using the provincial government's case management system but operate separate data collection regimes to collect reporting data required by INAC. It is likely that variation in MIS capacity is related to the amount of operational funding available to the agency – in general large agencies were in a better position to fund MIS services than small agencies.

Moreover, the structure of agencies varies from single office operations to multiple site structures as do the distribution of agencies in rural, remote and urban centers. Both of these factors – agency structure and location influence the MIS needs of agencies.

Another complicating variable is that First Nations child and family service agencies are often required to report to the provinces and tribal leadership on service quality whereas they need to report to the Department of Indian Affairs in order to sustain funding. Although most provincial governments invite agencies to use their data systems (at no cost or on a fee for service basis) agencies must have adequate computer systems/ staff to take advantage of this option. Moreover the provincial computer system option is limited as the systems are designed with the human resources and MIS capacity of the province in mind and are intended to achieve provincial government data collection and reporting requirements. We have not identified an example where a province involved First Nations child and family service agencies in key design elements of the provincial data collection system. Taken together these issues have resulted in many First Nations identifying concerns with the use of provincial systems. For example, there is no harmonization between provincial data systems and INAC data systems thus agencies experience redundancies in data entry – increasing personnel costs. Additionally, agencies reported navigation problems in provincial systems or with province imposed restricted access to systems modules.

In order to analyze the computer hardware needs of diverse agencies – Mr. Loo proposes linking MIS costs to agency structure, location, data collection and reporting needs according to the following agency typologies:

1. Single agency office less than 75 computers
2. Single agency office more than 75 computers
3. Multiple locations (head office and other branches.

The shortcomings in information management systems impact the ability of First Nations child and family service agencies to collect data that would inform promising policy and practice solutions. As noted by the Nico Trocme (2003) collecting consistent data on children and families coming into contact with the child welfare system is critical to being able to understand what practices are effective in child welfare and which are not. In terms of First Nations child and family service agencies there is limited capacity to collect data on outcomes measures. Current data collection is often restricted to that required by INAC and child welfare regulatory agencies. INAC reporting requirements for FNCFSA vary depending on the funding methodology used but as the Auditor General of Canada (December, 2002) reports, information collected by INAC generally consists of a Child Care Notification Form which is submitted by the FNCFSA on the 10th day of every month in order to receive reimbursement of expenses. The form is completed when the child is removed from the home and requires the following information:

- Child information (name, date of birth, address and health insurance number)
- Date of removal and residence of the child at time of removal
- Legal status of the child pursuant to provincial statute
- Parental information including information on legal custody and Indian status
- Identity of the caregiver if someone other than the birth parent
- Identify of fiscally responsible entity (i.e: provincial child welfare, INAC, health, justice, etc.)

Consistent with the concluding remarks to Canada made by the United Nations Committee on the Rights of the Child (2003) disaggregated data would provide some guidance to First Nations child and family service agencies on children in care but the data INAC currently collects was not designed to inform policy and practice decisions on critical factors such as why the children are coming into care, services provided to children at risk while living in the family home, longitudinal experiences of children post removal. It is important to note that although INAC collects some child welfare

data for its financial reporting purposes, it is not consistently reported in public documents at a regional or national level. This limits the policy impact of even the limited amount of data that is currently collected. The further development of MIS capacity in First Nations child and family service agencies will augment their capacity to collect outcomes measures on children and families coming into contact with child welfare thereby informing evidence based policy and practice solutions.

Conclusions:

We recommend that each agency be assessed for capital MIS equipment and infrastructure needs in order to bring them to the minimum standard recommended by Stanley Loo in his report. Moreover, the new formula should include adequate funds for MIS staff training, system upgrades and maintenance.

In addition to these recommendations, Stanley Loo offers the following conclusions taken directly from the report completed for the First Nations Child and Family Caring Society:

1) How to determine how much an agency needs to acquire an information system is a critically important but exceedingly complex issue. Determining technology costs goes way beyond, for example, counting number of workers or cases served, or size of on-reserve child population. The kind of computer equipment needed, hence the cost, is mainly determined by:

- The type of information system an agency needs and the features desired.
- Adequacy of computer equipment in use, i.e., which existing computer hardware and software items need to be upgraded or replaced, and what additional equipment is needed.
- Geographical spread (number of locations) of the organization.
- Size of the organization.

The third and fourth conditions also influence the design of a technological infrastructure needed to support an agency's information system. These four factors are the key determinants of technology costs in the case of FNCFSAs.

2) The report also shows that the cost of an information system or database application itself is actually quite small, compared to the cost of the technological infrastructure required. However, it is extremely important that the right database application is used otherwise serious usability problems will surface sooner or later.

3) In making decisions concerning selecting an information system, identifying the types of computer hardware, software and related requirements, and estimating costs, it is always useful, and actually important, that agencies follow a consistent framework. Otherwise agencies could easily lose sight of the purpose of an information system and/or end up acquiring inappropriate technology. For this reason, the report includes a number of checklists or sets of criteria for, respectively:

- Helping an agency to determine the adequacy of its existing hardware and software, as per requirements of a typical agency-level information system,
- Helping an agency currently without its own information system to decide whether to develop its own system or to lease a commercial system.
- Showing an agency how to select a commercial information system.
- Helping an agency to identify the "typical" mix of computer hardware, software, peripherals, remote access options and associated considerations needed to build a technological infrastructure based on agency size and geographical spread. (Suggestions for technology refresh are also included.)

In addition, two other sets of information are included:

- Information system or database features deemed essential for meeting expectations regarding outcomes measures, program performance monitoring, electronic data exchange, ad hoc data or report requests, etc.

These are above and beyond day-to-day agency service delivery and management requirements.

- Prevailing cost (regular price as well as special discounted price for charitable organizations, where available) of each hardware, software, or service item. Most of the hardware and software prices are standard across Canada, although service charges may vary between regions and/or suppliers.

4) Given the high degree of complexity of the subject, it is important to treat this framework of information or checklists as educated guidelines, which may require adjustment when they are applied to individual agencies. Situational needs and other factors hitherto unknown or that may surface later, as well as constant technological advances necessitate periodic adjustment to this set of information to ensure currency and continual applicability. It is also suggested that agencies engage a technical consultant to help identify the specific technology they need to match agency characteristics, using the checklists as a reference guide. This person should be familiar with Microsoft server products, database development, computer hardware, and infrastructure design and implementation.

5. EXTRAORDINARY COSTS AND JURISDICTIONAL DISPUTES

Under the current formula, First Nations child and family service agencies are reimbursed for child welfare services provided to Status Indian children on reserve. Unlike the provinces, First Nations child and family service agencies operate on a budget that should theoretically zero out at the end of each fiscal year –there is no process in the Directive to deal with cost overruns or unexpected costs. As Dr. Cradock notes the problem is that the costs of child welfare are not predictable enough to respond to this rigid zero based funding structure in the formula. Provinces also typically receive an annual fixed budget, but they can also appeal to the provincial treasury board or a similar structure for additional funding should an unexpected event occur. First Nations child and family service agencies do not have this type of safeguard.

Additionally the overall under-funding of First Nations child and family service agencies mitigates their ability to respond effectively to what would be "normal" circumstances in provincial child welfare systems (e.g: changes in legislation or special protocol investigations (such as investigating child welfare staff) and thus the realm of what is considered an extraordinary expense expands.

Community infrastructure also impacts conceptions of what is, and what is not, extraordinary. The fact that First Nations have varying degrees of community infrastructure influences their ability to respond within and across community services to extraordinary events. This report reviews the nature of extraordinary circumstances whilst providing recommendations for response.

Study Design and Methodology

The information for this study was gathered from a review of literature, a review of policies from nine provinces (British Columbia, Alberta, Saskatchewan, Manitoba, Quebec, Nova Scotia, New Brunswick and Newfoundland) and survey data from 12 First Nations Child and Family Service Agencies.

Findings

The report begins by outlining two primary challenges when examining extraordinary circumstances:

1) the boundary between extraordinary costs and jurisdictional disputes is not always clear
2) The conceptualization of what is an ordinary or extraordinary event is significantly linked to the First Nations community context in which the event occurs. Thus it is critical to understand the community context in order to

judge whether or not something is extraordinary or not.

In terms of interface between extraordinary costs and jurisdictional disputes, aggregated survey results from First Nations child and family service agencies indicates that eleven of twelve agencies in the sample experienced jurisdictional disputes. Taken together they reported 393 jurisdictional disputes this past year. The frequency of these disputes varied widely with agencies reporting anywhere from 1 to as many as 165 disputes within a year. The amount of time and human resources taken to resolve these disputes was in itself extraordinary. Over the duration of one year, the resolution of each dispute took an average of 54.25 person hours with some disputes taking up to 200 hours of staff time to sort out. The human resource costs related to resolving jurisdictional disputes make them an extraordinary cost for agencies which is not covered in the formula.

Although it is fair to say that provincial child welfare agencies also experience jurisdictional disputes, FNCFSA face the additional burden of sorting out the federal/provincial jurisdictional disputes arising from Section 88 of the Indian Act or disputes between different federal government departments over the funding of services to Status Indian children that are not likely to occur at the same rate or in the same form for provincial governments. This is typified in the FNCFSA survey responses with six of the nine responding agencies reporting persistent disputes between the federal government Departments of Indian and Northern Affairs Canada (INAC) and Health Canada over funding for non-insurable medical costs. Problems with jurisdictional disputes between federal departments are more likely to occur for agencies responsible for remote communities. These types of disputes delay or withhold necessary non-insured health benefits. Children with complex developmental, mental health and physical health issues are particularly impacted by the resulting delays in service.

The second type of jurisdictional dispute, reported by four agencies, is between the federal government and provincial child welfare agencies. The principle disputes in this area revolve around figuring out which government (federal or provincial) is responsible to fund child welfare services which are required by provincial statute or policy but are not funded by INAC within current authorities. This type of dispute was reported by a third of agency respondents who indicated that these disputes consume a considerable amount of agency time.

Consistent with the findings of Irvine (2004), this report found that the unique context of First Nations communities directly influences the definition of what is and what is not an extraordinary circumstance. Given the variance in geography, community size, access to services and degree of community social development there are vast differences in conceptions of extraordinary amongst First Nations and between First Nations and the rest of Canada.

In comparison with other Canadians, the high levels of socio economic need, the experience of colonization and the comparative lack of service infrastructure means that many events that would be described as extraordinary in the overall Canadian context are ordinary in the First Nations experience. For example, best estimates indicate that one in ten Aboriginal children are removed by child welfare authorities whereas the rate for non Aboriginal children in one in four hundred; graduation rates for non Aboriginal children are three to four times higher than for First Nations children. This boundary between extraordinary and ordinary is complicated. The assignment of "ordinary" to circumstances experienced by First Nations children and families which would be extraordinary by other Canadians can serve to normalize the perception of the risk and moderate the type of urgent response one would expect from all levels of government.

Similarly, First Nations also have diversity in contexts, cultures, community development and history that impact on their definitions of what is extraordinary and their ability to respond thereto. For example, what may be described as ordinary in a remote First Nations community may constitute the extraordinary in an urban First Nation. For example, one remote community described how social workers had to pass by bears and travel

over partially thawed ice to get to a community in the spring time. Although dodging the bears is an everyday activity for a remote community it would likely be an extraordinary circumstance in an urban community. The reverse is also true, what may be considered ordinary in an urban First Nation may be extraordinary in an isolated community. For example for one urban First Nation in this sample reports that it has no less than four types of transportation lines cutting through their reserve lands creating hazards for children and adults alike.

A community capacity assessment is proposed as a means to gage community context and ability to respond to extraordinary circumstances and to help distinguish between ordinary and extraordinary local events

Incidents of extraordinary costs were reported by six agencies in the FNCFSA survey. Agencies reporting extraordinary costs reflect the concerns expressed with jurisdictional disputes in the sense that extraordinary costs are associated with isolated and high needs communities. Reported costs are primarily related to travel associated with providing services in extraordinary circumstances or due to costs linked with lack of specialized services and resources and costs.

Events that are unanticipated, unforeseen or outside normal risks are not reflected in the First Nations survey data on extraordinary costs although key informant interviews identified incidence such as a series of youth suicides as being an extraordinary event. The survey data suggests that what is considered extraordinary is a body of predictable and repetitive events for which agencies are currently unable to respond due to funding issues or established jurisdictions cannot or will not take responsibility.

Conclusions

Much of what is considered within the parameters of jurisdictional disputes and extraordinary costs are in fact neither. Instead, in approximately half the cases these disputes and costs are actually problems related with under funding. More specifically, lack of funding for the particular circumstances of certain agencies. Degree of community isolation appears to be a variable in both jurisdictional disputes and extraordinary costs and agencies serving isolated communities are particularly impacted. In addition to the following recommendations proposed by Dr. Cradock, the research team endorses the recommendation by Kathryn Irvine (2004) that funds be set aside to promote inter-agency cooperation in extraordinary circumstance reports such as investigations of staff members or incidents of multiple abuse.

The recommendations based on the findings of this study are:

1. Community Capacity Assessments:

Community capacity assessments are recommended as a means of distinguishing between ordinary and extraordinary local events and as a means of assessing the particular needs of communities serviced by agencies. These assessments would also include an inventory of existing resources and infrastructure that could be activated to respond to exceptional circumstances. This assessment would provide a baseline for the assessment of First Nations child and family service agency requests for extraordinary circumstance funding.

Prevention is, of course, the best strategy for avoiding jurisdictional disputes and community capacity assessments may be instrumental in this regard. It is strongly recommend that a change in the current federal funding to First Nations child welfare agencies must include a provision for community capacity assessments.

2. Committee Structure

From the perspective of jurisdictional disputes and extraordinary costs, a major recommendation is for improved relationships between Health Canada and INAC. Increased cooperation between these agencies would save considerable effort and expenditure agencies are currently taking on. The establishment of interagency committees with an independent discretionary budget for family and children's services may be instrumental in helping to resolve disputes and sustain the process of networking and cooperation

between staff and government departments.

3. Funding For Mediation

A funding mechanism to provide mediation services for jurisdictional disputes where applicable is suggested. This would provide a separate budget which agencies could utilize to engage a mediator in the resolution of jurisdictional disputes.

4. Increased Funds For Travel

Increased funding for travel is required particularly for agencies serving remote communities even for day to day operations let alone extraordinary circumstance response. The formula for operational funding must reflect actual demands placed on agencies by various provincial legislative requirements. As agencies do not have control over shifts in provincial legislation and policy, the operational formula will require regular scheduled reviews to monitor changes in provincial requirements.

5. Establishment Of A Central Extraordinary Circumstances Budget

Establishment of a central budget administered either by INAC or by a committee system to ensure adequate funding for agencies on an as-needed basis. Extra costs generated by special institutional care, is one example of where these funds would be directed. As well, the funding formula for maintenance should be adjusted to recognize the real incidents of complex special needs amongst on reserve children in care. The formula should take into account both residential costs and costs for the purchase of necessary professional support. The research team recommends that this amount be set at an initial, and minimum, value of 2 million dollars to be adjusted annually according to volume and price.

6. Consideration Of Legal Liability

Considerations must be made for the potential extraordinary costs related to liability exposure stemming from the discrepancy between agency's legal responsibility to protect children and level of resources to fill this legal mandate. This is of particular concern for agencies serving isolated communities where there is a gap between the agencies legal responsibility to protect children and the actual resources available to do the job.

7. Independent Advocate

A formal independent advocate representing First Nations children would ensure the voices of First Nations children are heard and that resources designated for the maintenance of these children are not diverted elsewhere such as to the resolution of jurisdictional disputes. The advocate must have an investigatory mandate and access to federal decision-making processes.

6. FIRST NATIONS CHILD AND FAMILY SERVICE AGENCY SURVEY RESULTS

A key research methodology used in this report was to conduct a detailed survey of 12 First Nations child and family service agencies. These agencies were selected on the basis of the following criteria:

1) Balance of urban, rural and remote locations
2) Francophone and Anglophone agencies in Quebec
3) Balance of small, medium and large agency sizes
4) Fully delegated and partially delegated agencies in British Columbia
5) Two agencies in each of six regions (BC, Alberta, Saskatchewan, Manitoba, Quebec, Atlantic (New Brunswick and Nova Scotia)

All agencies were compared against these criteria and a sample of 12 agencies was selected and presented to the National Policy Review Funding Design Team who finalized the selections. Taken together the agencies broadly reflect the diversity of First Nations child and family service agencies.

The surveys were completed by the First Nations child and family service agencies with the assistance of a researcher in each region. All regional researchers received training on the use of the standardized survey instrument and were also supported by a researchers guide to ensure standardization of process and ability to compare results across surveys. Confidentiality of survey responses is ensured through the presentation of findings in aggregate form only.

Findings

To follow is a summary of the aggregate agency survey responses by major research category. Please be advised that in some cases agency surveys were considered along side the findings of a separate research project to inform the conclusions and recommendations regarding the funding formula options.

Please also be advised that the number of responses for some questions is more or less than the sample size of 12 agencies. For example, some agencies may have multiple offices so in questions relating to office space there may be more than 12 responses or if the question relates to remoteness not all agencies will be in remote locations so the number of responses will be reduced.

In reviewing the findings and consulting with the regional researchers it was clear that many agencies had difficulty estimating the costs of services that they would like to provide but do not currently provide. This is not surprising given that accurate program costing would entail knowing the design of the program, the setting in which it is being implemented and then costing out the budget associated with this program.

A. General Background Question

The vast majority of agencies in the sample were fully delegated (91.7%) and were therefore delivering the full range of child welfare services. Only one agency was operating under the partially delegated model providing guardianship, voluntary care agreements and family support services.

First Nations agencies report a misalignment between what the Directive funds and what the needs of the community are. The developmental approach contained in the Directive for the development of new agencies requires a community needs assessment but does not in any way link funding to it. First Nations agencies in the sample were asked if they had ever conducted a needs assessment of the community in relation to child welfare services. Three quarters of the agencies had completed such an assessment suggesting that if a more needs based approach was undertaken many FNCFSA have at least a baseline for knowing what the community needs are.

Records management requirements and mechanisms have evolved significantly over the fifteen years the Directive has been in place. This is in tune with an increased public and legal sensibility related to confidentiality and client access to records. 91.7% of the agencies stated that they have a records management policy for child-in-care files which were guided by laws or

Table 3: Cultural Placement Match For Children In Care Of First Nations Child And Family Service Agencies

Placement Type	Number of Responses for Placement Type	Number of Children in Placement Type	Number of Responses for Cultural Match	Cultural Match (%)
Kinship Care / Family Placement 'restricted'	8	257	8	99.75%
Non-relative foster home	7	127	7	63%
Respite care home	10	0	10	100%
Group home	5	48	2 (10 children)	20%
Institution	7	49	7	17.85%

regulations covering the storage of child-in-care records in their agency. There is currently no specific funding in the formula to account for statutory or regulatory requirements regarding records management.

B. Children in Care

When asked if the amount of funding provided under the funding formula is adequate to meet the need of children in care, only 33.3% of the agencies said yes. Of the 33.3% of the agencies which responded yes, 8.7% indicated that the formula is adequate to meet the needs of the children in care, so long as that funding that is provided in a block funding arrangement – the other 25% of the agencies did not indicate why they felt funding was sufficient. An overwhelming 66.7% of the agencies indicated that there was inadequate funding in the formula for children in care particularly in relation to prevention services and in home supports.

Many First Nations child and family service agencies have indicated that one of their primary objectives was to place First Nations children in care in culturally matched placements. As Table 3 indicates, First Nations child and family service agencies have to their great credit, largely achieved that goal. Please note that the number of responses to individual questions varied thus we have indicated the number of responses for each placement type identified in Table 3.

The provinces do not uniformly collect information on cultural match so comparative statistics are difficult to access. The British Columbia Children's Commissioner found in 1998 that only 2.5% of Aboriginal children in the care of that province were placed in culturally matched homes despite a statutory obligation to give preference to Aboriginal homes (British Columbia Children's Commission, 1998).

When asked what, if any, impact increased investment in prevention and least disruptive measures services would have on children in care numbers over time, most agencies felt that over time the numbers of children in care would decrease. Estimates of the reduction of children in care over ten years averaged at about 50% but some agencies noted that there might be shifts in categories of care with fewer children entering care by court order and more by agreement as parents increasingly access support services.

The agencies were unanimous in their belief that increased investments in prevention and least disruptive measures services would benefit children in continuing custody (in care under court order until the child reaches the age of majority.) A response by one agency was echoed in the responses of the others:

"Children in care would emotionally/ psychologically improve because their family or

caregivers would be functioning better – their placements in foster care would be more stable. Since many children are placed in their communities with extended family members, these children would have more access to their natural family through increased visits. In some cases, permanent orders of guardianship could be rescinded after a successful trial reunification and these children could be discharged from care and returned to their natural families"

Other expected benefits include:

- Support the child in reestablishing family and community relationships
- Programs to support the cultural identity of the child
- Assistance with preparing the child for independence by creating a holistic continuum of support around the child.
- It may be possible to return some children to their parents with support.
- Quality of life supports such as personal and family counseling

Key informants advise that the degree to which INAC allows for reimbursement of prevention services related to children in care varies widely between regions. Prevention and least disruptive measures clearly have benefits for both children at risk living at home, children in temporary forms of care and children in permanent care. INAC Treasury Board authorities should be reviewed to ensure that an adequate and equitable full range of prevention and least disruptive measures are available across the country.

C. Board Costs (Incorporated Boards and Advisory Boards / Committees)

Incorporated Non Profit Agencies

Among the 12 agencies surveyed a large proportion (75%) are registered non profit organizations with a board of directors. Of these nine agencies, 58.3% of the non profit agencies indicated that they have a special honourarium or travel cost policies for Elders who are members of the board of directors. Board members were paid honourariums for service in addition to reimbursement for travel costs for service in 66.7% of the cases.

In addition to operating a board of directors, 56% of the 9 non profit agencies had community advisory board/ committee (s). When asked if advisory board members receive an honourarium for sitting on the advisory boards, 20% of the agencies said yes, yet 40% said no and 40% did not provide an answer. The survey also asked if the advisory board members receive reimbursement for travel expenses related to their duties as advisory board members, and though 20% of the agencies responded yes, 60% answered no and 20% of the agencies did not respond. Special honourarium and travel policies were in place for Elders in 20% of these agencies - another 40% did not have this policy and the remaining 40% did not provide an answer.

When the survey inquired if the amount of funding provided under the funding formula is adequate to meet the needs of non profit board governance 44% indicated that funds were not sufficient and 56% did not provide an answer.

Agencies Operating under other Governance Models

For those agencies operating under a different governance model (i.e: reporting directly to Chiefs and Council or to the Tribal Council), the survey asked about the existence and costs associated with advisory committees. Amongst the 25% of agencies that used a governance model other than an incorporated non profit, 66.7% indicated they had community advisory committees, whereas 33.3% indicated they did not. Further, when the not registered non profit agencies were asked if their advisory board members receive reimbursement for travel expenses related to their duties as advisory board members, 33.3% replied yes, 33.3% replied no, while 33.3% did not provide a response. Also, 33.3% of the agencies indicated that they have special honourarium or travel cost policies for Elders who are members of the advisory board, however, 33.3% said no, while 33.3% did not provide an answer.

When asked if the amount of funding provided under the funding formula is adequate to support their governance needs, 66.7% of the agencies replied no, while 33.3% did not respond – none of the agencies replied yes.

D. Legal, Capital Costs and Insurance Costs

First Nations child and family service agencies incur a number of capital costs ranging from office space, staff housing, vehicles, and equipment costs. Legal costs for an agency range from corporate legal costs (maintaining incorporations, human resources, liability insurance) to child in care legal costs. Insurance for a FNCFSA should include policies typical of corporate insurance (fire, theft, "household" liability) but should also include liability insurance related to child welfare itself. Agencies were asked about all three of these issues in the survey.

In terms of capital costs, the NPR indicated that there was no money in the formula that was specifically targeted for capital costs. Although there were funds included for office rent, costs associated with renovations, staff housing, capital investments in technology were not included. The FNCFSA survey results below indicate that although agencies have tried to make do with the current allotment there are deficits in accessibility and adequacy of both office space and staff housing costs (for remote communities).

In terms of staff housing, 25% indicated that their agency provided housing for staff, while 66.7% of agencies revealed that their agency did not and 8.3% of agencies did not respond. Remote communities were more likely to provide staff housing than agencies in rural or urban areas. Among the 25% of agencies who provide staff housing, 33.3% indicated that their agency charges for staff housing that the agency provides, while 66.7% of the agencies indicated that they do not. Accessibility of staff housing for disabled persons was a concern as 67% of agency housing is not accessible.

The survey also asked agencies if the amount of funding provided under the funding formula is adequate to meet the housing needs of staff. 75% answered no and 16.7% did not supply a response and 8.3% stated that this question was not applicable. Of the 75% who answered no, 16.7% revealed that between $900,000.00 and $1,650,00.00 is needed to either repair existing staff housing or to build new housing for staff.

Accessibility of agency office space was also a problem. The National Building Code of Canada contains the following two articles specific to building accessibility for disabled persons

A1 - Barrier-Free Path of Travel

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person with a physical or sensory limitation will be unacceptably impeded from accessing the building or circulating within it.

A2 - Barrier-Free Facilities

An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person with a physical or sensory limitation will be unacceptably impeded from using the building's facilities."[3]

Despite the requirements of the National Building Code of Canada, one third of the agencies indicated that their buildings were not accessible to persons with disabilities (31.2%). It is important to note that if the building is not accessible for persons with disabilities it is likely that the building is also inaccessible to persons with child strollers thus limiting access to the very children the agencies are attempting to service. Amongst those who responded that their buildings were not accessible to the disabled, lack of funding to do the needed renovations was identified as the key reason why the buildings were inaccessible. To our knowledge, First Nations child and family service agencies have not been given specific and targeted funds to ensure their space is accessible for persons with disabilities.

When asked if agencies felt their office space provided a safe and child and youth friendly environment, 71.4% of agencies answered yes and 28.6% answered no. One agency is operating in a building that is beyond repair. Overall, the overwhelming majority of agencies (91.7%) felt that they did not have adequate funding in the current formula to meet their office space requirements.

It was clear from these respondents that First Nations were providing significant support to the agencies in terms of providing or supplementing office space costs. Specifically, 25% of agencies indicated they received their office space free of charge whereas 8.3% responded that a partial subsidy was provided.

It is recognized that proper maintenance of workplace vehicles is critical for reducing employee injury and in the case of social workers transporting clients, injury to community members as well. Despite the need for proper workplace vehicle maintenance, FNCFSA indicate that capital travel costs are a critical need. The agencies that provided company vehicles were asked to indicate if they have sufficient funds within the current travel amount provided in the funding formula to ensure their company vehicles are properly maintained and safe for road conditions, only 8.3% of the agencies said yes, while 41.7% said no, 25% specified that this question was not applicable and 25% did not respond.

When it came to staff using their own vehicles for business purposes, 66.7% of agencies agreed that the transportation allowance in the current funding formula intended to cover staff costs for the use of personal vehicles was inadequate. Although agencies were not specifically asked what mileage rates they provide to staff, comparable benchmarks are the rates set by the American Automobile Association and the Treasury Board of Canada. The American Automobile Association estimates that it costs 56.2 cents per mile US to operate a new vehicle in 2005 (Internet Auto Guide, 2005). Treasury Board of Canada mileage reimbursement rates vary from a low of 41 cents per km in Saskatchewan to a high of 52.0 cents per km for the Yukon, the mean rate is 45.8 cents per km (Treasury Board of Canada, 2005.) The under funding of workplace vehicle travel is a critical issue given that workplace safety regulations frequently require employers to ensure proper vehicle maintenance with an increasing number of provinces passing laws to ensure the safe transportation of children (e.g.: baby/toddler car seat requirements). The failure to provide adequate funding not only has implications for workplace safety it also introduces the possibility of children in care and their families being in harms way when transported in vehicles which are not road worthy.

Finally, when the agencies were asked if they felt they had adequate funds for other types of capital expenses (i.e. computers, photocopies, office furniture, office equipment), 75% of the agencies that answered no and 25% responded affirmatively. The need was particularly critical for information technology related capital expenses with some agencies reporting there was no funding to support purchase and upgrades for information technology equipment.

Overall, agencies in the sample report significant difficulty funding capital expenditures within the current formula. Moreover, a review of workplace safety regulations and federal building code standards indicate that the under funding of capital expenses may place agencies in a position where they are out of step with workplace safety and accessibility legislation/standards.

E. Management Information Systems

Consistent with Stanley Loo's report, the Auditor General of Canada (December, 2002) has called for significant investments in management information technology for First Nations to assist them in adhering to federal reporting requirements whilst introducing efficiencies in how reports are produced. The current funding formula was developed in 1989, prior to there being any significant use of information systems amongst First Nations child and family service agencies hence information technology costs (capital, maintenance or training) were not included in the original formula. Reports from agencies indicate that they have drawn from the

already stretched operations funding to pay for information technology needs. **Survey results indicate that 66.7% of agencies have some form of management information system whereas 33.3% indicated that they did not. This means that a full one third of agencies surveyed had no computer information management systems.**

When asked if the current funding formula adequately covers costs for MIS, 58.3% said no, 16.7% said yes, and 25% of the agencies did not respond to this question. The agencies who answered no indicated that additional funding was absolutely necessary for services such as, technical support, IT personnel, hardware upgrades, links between an agency's main office and its satellites offices and the creation of an information system for case management. The cost of these services was estimated to be between $60,000.00 and $600,000.00 per agency.

F. Programs and Services

This section of the questionnaire described the child population served by First Nations child and family service agencies. In addition, questions were asked regarding the range of services each agency provided and what services each agency would like to provide in optimal circumstances.

In terms of who is receiving services from the agencies, in addition to serving Status Indian children on reserve, survey results indicate that (83.4%) of agencies provide services to non status First Nations children on reserve. 8.3% of the agencies offer partial services and the remainder provide no service. Agency responses indicate that reimbursement from the provinces is not adequate in one third of cases (33.3%) whereas 53.3% did receive adequate funding and the remainder indicated the question was not applicable to their agency.

Furthermore, 58.4% of the agencies indicated that they provide services to non Aboriginal children resident on reserve, while 33.3% of the agencies revealed that they do not offer these services and 8.3% of agencies did not respond to this question. Agencies reported that under-funding for services provided to these children by the provinces was even a more serious concern than with non Status First Nations children with only 33.3% reporting adequate funding, 8.3% of the agencies did not respond to this question and a majority (58.4%) indicating inadequate funding by the province to provide these services.

G. Remoteness Factor

First Nations child and family service agencies operate throughout the country including in remote areas. This section of the questionnaire focused on exploring the adequacy of the current funding formula in covering the costs of providing child and family services in remote First Nations. Issues such as remoteness related salary; capital and operational costs were explored.

At the beginning of the survey 33.3% of agencies stated that their agency services remote communities. Of the 33.3% of agencies that service remote agencies, 25% indicated that they offer a salary incentive for staff working in remote locations, while 75% revealed that they do not provide salary incentive. Further, when these agencies were asked if they covered any exceptional moving costs associated with new staff being posted in a remote location, 50% responded yes and 50% responded no.

Agencies were asked to estimate the costs associated for remoteness in five areas, the number of respondents (N) varies with each question and thus it is indicated in each situation.

1) Estimated annual shipping costs for goods and services related to remoteness. N=3 Average cost: 155,233.33
2) Estimated annual cost for buildings and utilities related to remoteness. N=2 Average cost: 13,570.
3) Estimated annual travel costs to government services. N=3 Average cost: 66,666.66
4) Estimated additional staff travel costs per year related to remoteness that are not covered by the maintenance budget. N=3 Average cost 36,666.66

Table 4: Minimal Educational Requirement By Staff Position In FNCFSA

Occupation	Minimum Reported	Maximum Reported	Most Frequent Requirement
Executive Director	College Diploma	Master Degree	Bachelor/Master Degree (78%)
Clinical Supervisor	Technical Training (non diploma)	Master Degree	Bachelor of Social Work (72.7%)
Direct Protection Workers	High School	Bachelor of Social Work	Bachelor of Social Work (BSW) (54.5%)
Prevention Workers	High School	Bachelor of Social Work	High School (18.2%) and BSW (18.2%)
Permanency Planning Workers	High School	Bachelor of Social Work	College Diploma (18.2%), University Degree (non BSW) 18.2% and BSW (18.2%)
Foster Home Workers	High School	Bachelor of Social Work	BSW (45.5%)

* These 2 agencies receive delegation training that is partially subsidized by the province.

5) Estimated annual cost of transporting children in care related to remoteness not covered by the maintenance budget. N=2 Average cost 33,500.00

Finally, of the 33.3% of agencies which stated that they serve remote communities, 75% answered no when asked if the current remoteness factor in the funding formula is adequate to offset any additional costs to the agency, while 25% did not provide an answer.

H. Staff Salary and Benefit Levels

Throughout the National Policy Review process, First Nations child and family service agency representatives have consistently raised concerns regarding the adequacy of funding in the Directive for staff salaries and benefits. This section of the survey explored adherence to human resources standards/laws, comparability of salaries and benefits to the province and the overall adequacy of funding in the Directive to support human resources costs.

The survey asked questions about the minimal education qualifications of staff in various positions. Table 4 contains a brief summary of the results in key occupations.

Agencies were then asked how many of their staff actually have the minimal educational qualifications in various positions. Table 5 on the next page is a brief summary of results in key occupations, please note ten agencies responded to this question:

Agencies noted that social workers require additional non academic training to work effectively in their communities. Survey responses indicate that the types of training are diverse (there were 38 different types of training identified by the 10 agencies who completed this section.) Table 6 lists the most frequent types of training and the associated cost per worker.

The survey asked agencies if the FNCFSA had a human resource manual that includes salary levels and benefits, 75% of the agencies reported having a human resource manual, whereas 25% of agencies do not. The survey went on to ask if agencies were confident that their human resources policies and procedures met applicable labor laws and regulations. One half of agencies said that their human resource manuals were in compliance whereas, 25% said no, 16.7% responded 'partially'

Table 5: Percentage Of Staff Meeting Minimal Educational Requirements Of FNCFSA

Occupation	Percentage of Staff Meeting Qualifications	Percentage of Staff not Meeting Qualifications
Executive Director	77.8%	22.2%
Clinical Supervisor	100%	Nil
Direct Protection Workers	77.8%	22.2%
Prevention Workers	66.7%	33.3%
Permanency Planning Workers	88.9%	11.1%
Foster Home Workers	77.8%	22.2%

Table 6: Training Costs by Staffing Position

Training Program	Number of Agencies Reporting Need for this Training	Cost per Worker
Delegation Training	5	$1500-2000* (2 agencies) $1500-9000 (3 agencies)
Cultural Education	4	$100-500 (2 agencies) $1000 (1 agency) Unknown (1 agency)
Sexual Abuse Training	3	$100-300 (1 agency) $1000 (1 agency) $1500 (1 agency)
Computer Training	2	$1000 (1 agency) $24,000 (1 agency)
Child Abuse Investigations	2	$2500 (1 agency) $10,000 (1 agency)
Family Conferencing	2	$100-300 (1 agency) $420 (1 agency)
Suicide Intervention	2	$1000 (1 agency) $1,200 (1 agency)

and 8.3% indicated that this question was not applicable.

Feedback from key informants during the survey development process indicated that overtime compensation for staff working after hours on child protection matters was a critical area of concern, thus a question specific to over time compensation was included in the survey. When agencies were asked if their overtime compensation policies complied with applicable labor regulations, 50% of the agencies answered yes, 41.7% answered no and 8.3% stated that this question was not applicable. Overtime compensation rates varied widely from a flat rate of $50.00 per call to a flat rate per week on call plus time and a half for hours worked. After hours provisions would apply to social workers as well as staff providing clinical supervision. Survey responses indicate that the clinical supervisor is often on call (75%) to provide advice to social workers and in their absence executive directors, contracted supervisors and senior social workers fulfill this role.

In terms of the degree to which the agency can assure social worker safety after hours, 2 agencies said they cannot currently ensure staff safety; the majority relied on local police or the RCMP. Other approaches included employing a buddy system to make sure no worker went out alone, to using community contacts, providing cell phones and workplace safety training. Social workers have to

intervene in some of the most difficult of family circumstances, including situations where adults and youth are impaired – provision of funding within the human resources envelope to ensure their safety is critical.

Predictably there was some variation in caseload size and case composition according to the structure of the agency. In some agencies social workers perform all duties whereas others have adopted a more specialized approach with targeted investigation, family support and permanency planning and intake workers. Specialized workers in agencies are often taking up some of the workload for other specializations (e.g. intake workers also managing child in care files.) Given the range of responses and the fact that several agencies could not respond to this question due to the holistic approach to their work it is not possible to adequately gauge the caseloads across all functions. From the 7 agencies who did respond to the question the data suggests the following:

- Intake workers carry an average of 2 family service files, 2 children in care and 20 investigations
- Family service workers on average carried no family service files, 17 children in care and 10 investigations
- Permanency planning workers on average carried no family service files, 22 children in care and 25 investigations
- Foster home workers carried one investigation, 5 children in care, 20 foster homes and 2 adoption homes.

Caution should be used in basing a formula solely on caseload alone as it is typical for First Nations child and family service agencies social workers to assume duties which would typically be dealt with by specialized divisions within provincial governments. For example, the Directive does not currently fund policy positions for First Nations child and family service agencies so social workers often take that up as a function above and beyond their child welfare duties whereas provincial child welfare workers can rely on policy divisions to do this work. Moreover, the workload involved with managing a case varies according to severity and as the CIS-03 findings noted, First Nations children and families require more service and thus more staff resources.

There is an increasing trend in child protection in Canada toward certification of professional staff and thus a question specific to this issue was included in the survey. One half of agency respondents (50%) indicated that there is a professional certification/registration (i.e. registration with association of social workers) requirement for agency staff, whereas 41.7% said no and 8.3% noted that this question was not applicable. When asked if agencies pay for professional certification and registration the staff require, 50% said yes, 25% said no, 8.3% said 'partially', while 16.7% indicated that this question was not applicable.

In terms of salary and benefits comparability, two thirds (66.7%) of agencies felt their salary and benefits rates were not competitive whereas 25% felt they were and 8.3% stated that this question was not applicable. In terms of staff turnover related to salary and benefits levels, 16.7% of the agencies revealed that in the past three years, they have had staff leave to join another child welfare organization where the primary reason for their transfer was to get better benefits and salaries yet 83.3% indicated that this had not occurred. Turnover rates are generally low between 1-10% over three years and the primary reasons staff leave the agency are work related stress (related to doing the job but not to workplace safety and morale) (63.6%) and personal and family stress (36.4%) followed by moving to get better salary and benefits (27%.)

Overall, the vast majority of agencies (83.3%) felt that the current formula did not provide adequate funds for human resources costs. This is obviously an area for more focused review in the development of the new formula and will need to be considered in regards to annual costs of living adjustment considerations within the new formula as well.

I. Standards and Cultural Appropriateness

One of the key reasons for developing First Nations child and family service agencies was so

that First Nations children and families could receive culturally based child and family services. The development of culturally based standards and policies for agency operations is a key element in the delivery of culturally based services yet there is no funding in the current formula to support policy development. This section of the questionnaire asked agencies about their ability to develop culturally based services and programs.

The agencies involved in the survey were asked if the funds provided in the formula were adequate to ensure culturally appropriate services. An alarming 83.4% responded no with a further 8.3% responding yes and the remainder indicated that this question was not applicable.

Amongst those agencies who have developed their own standards, 33.3% of the agencies were required to get approval from the province; 25% required partial approval and 25% said no – the remaining 16.7% of agencies did not respond.

Consistent with recommendation number one of the NPR indicating that the future funding formula should be responsive to tribal legislation and governance, survey responses indicate that 41.7% of the agencies were developing their own child welfare laws while 50% replied no, and 8.3% maintained that this question was not applicable.

In terms of community development planning, 58.3% of agencies indicated that the First Nation communities they serve have developed a community development plan that integrates responses to child maltreatment, whereas 25% answered no and 16.7% indicated that this question was not applicable.

Survey responses indicate a clear and critical need for upgrading funding to support culturally based standards and practice in First Nations child and family service agencies. Moreover, the fact that 41.7% of agencies in the sample are in the process of developing their own child welfare laws indicates a need to seriously consider implementing recommendation one of the NPR to expand the range of fundable child welfare authority beyond provincial delegation.

J. Jurisdictional Issues

First Nations child and family service agencies have long reported that jurisdictional disputes between government departments and levels of government (provincial/federal) have resulted in children unnecessarily being denied services or experiencing delays in service. Moreover, agencies indicated that resolving these disputes was taking an inordinate amount of staff time. This section of the survey explored the nature of these disputes, the incidence of the disputes and the time required by agency staff to resolve the disputes.

Survey responses from the 12 agencies indicated that they experienced a staggering **393 jurisdictional disputes this past year** requiring an average of **54.25 person hours to resolve each incident** or 21,320 person hours each year. If this is typical then agencies across the country are dedicating over 200,000 person hours per year resolving these disputes – and this does not include the time of government officials. **If one assumes an average salary of 45K per annum – then jurisdictional disputes cost agencies, and by extension INAC close to five million dollars per year**. The most frequent types of disputes were between federal government departments (36%), between two provincial departments (27%) and between federal and provincial governments (14%). Examples of the most problematic disputes were with regard to children with complex medical and educational needs, reimbursement of maintenance, and the lack of recognition of First Nations jurisdiction. There were variations in the responses with some regions reporting a higher number of incidents than others which may reflect the uneven development of dispute resolution mechanisms. Although tripartite tables have been established in some regions with INAC, the province and First Nations child and family service agencies, the efficacy and authority of these tables to resolve jurisdictional disputes is unclear and inconsistent. Moreover, as some jurisdictional disputes involve federal, provincial or tribal authorities outside of these core participants, it is critical that mechanisms for engaging these groups are integrated into a dispute resolution process. Additionally, dispute resolution mechanisms must be reflective of cultural values and processes of the

participating First Nation child and family service agency.

K. Negotiation of Agreements with the Provinces and Federal Government

Directive 20-1 requires agencies to operate pursuant to provincial legislation and thus agreements must be negotiated between the First Nations child and family service agency and the province to enable the agency social workers to carry out duties pursuant to the child welfare statute. In addition to delegation agreements, agencies must also negotiate funding arrangements with the federal government in order to receive funding for on reserve services. This section describes how these negotiations impact on FNCFSA.

Directive 20-1 allows for the negotiation of tripartite agreements (the province, INAC and the First Nation, Tribal Council or non profit FNCFSA) or complementary bilateral negotiations (agency negotiates one agreement with the province and another with INAC.) Survey results suggested that seven agencies in this sample were using multi-year tripartite agreements. Three others operated under a community and provincial delegation model and one other had delegated authority pursuant to a specific piece of legislation. The most typical period for renewals of these arrangements was within the 1-5 year time frame.

There was wide variation in the amount of legal costs agencies reported as being linked to negotiation of delegation agreements. Three agencies noting that no legal expenses were incurred, three others did not answer the question, 4 estimated their costs to be between $20,000 and $40,000 and one agency reported spending in excess of $300,000 on delegation arrangements. This is likely a reflection of the wide variety of delegation processes throughout the country with some provinces having more detailed and prolonged processes for delegation.

In terms of the provinces, the survey asked agencies if the province provides any financial assistance to the agency for the purposes of reaching a delegation agreement, or renewing a delegation agreement. 91.7% of agencies received no funding from the province to negotiate these agreements with 8.3% indicating that this was not applicable.

Agencies had a variety of suggestions on how to make the delegation negotiation and funding agreement negotiation processes more efficient. To follow is a sample of the recommendations:

1) Greater time to discuss and negotiate (two respondents indicated having received the agreement with only days to review it and sign or have their funding allotment delayed.)
2) Ensure consistency of people at the table
3) Governments should fund the negotiations
4) Government should not dictate criteria to the community
5) Governments should honour their responsibilities
6) Bilateral agreements are needed.

Once negotiated, agencies indicated a wide variation in the amount of staff time needed to maintain the delegation agreements. Six respondents indicated that it took 1-10 days; and there was one agency for each of the following levels 11-20 days; 81-90 days and 141-150 days. For agencies where delegation arrangements take a significant amount of time, the fact that they receive no reimbursement from the provinces to maintain these agreements results in a significant tax on limited resources

Agencies were also asked if their staff provided consultation services to the province and whether or not these were reimbursed by the province. 8 agencies in the sample indicated that they do provide consultation services to the province. Of these 8 agencies, 6 estimated the number of staff days per year to be up to 50 days per annum with the other two estimating 201-250 days per year. In none of the cases did the province provide a fee for service to compensate the agency for its personnel costs or expertise and only 4 respondents indicated that they received compensation for travel costs associated with the consultation.

The survey inquired about agency agreements and consultation services with INAC.

The most frequent period for renewal of funding arrangements with INAC was one year (6 agencies) with two others reporting renewal periods of 1-5 years, another was on a flexible funding arrangement and one respondent indicated the question was not applicable.

Similar to results with the provinces, agencies report wide variation on the amount of staff time taken to negotiate and maintain these agreements from minimal (3 agencies), 1-5 days (4 agencies), 20 days (2 agencies), 30 days (1) agency and 165-200 days (1 agency.) Moreover, some agencies who reported minimal negotiation times indicated that this was due to a "take it or leave it" approach used by INAC – in that the funding agreements were not in practice negotiable. Legal costs associated with the negotiation of funding agreements with INAC varied with 3 agencies reporting no costs, 2 indicating costs ranged between $1-$1000;1 respondent indicated costs of $30,000 and one agency at $100,000; two other agencies noted this was not applicable.

Survey responses indicate that the federal government, like their provincial counterparts, benefit from consultation services provided by agencies. Of the agencies in the sample, four agencies had provided consultation to INAC. In terms of staff time, two agencies indicated that 5-15 days per year were dedicated to INAC consultation services; one agency reported 16-25 days and the other did not specify. Like the provinces, INAC does not provide any compensation for human resource time provided and provided travel costs in 50% of the circumstances.

L. Other Sources of Agency Financial Support

Mainstream child welfare organizations draw upon services and funding provided by the voluntary sector and other government bodies. This section of the survey is intended to identify the degree to which FNCFSA receive financial support or gifts in kind from First Nations or other sources (i.e.: voluntary sector funders).

The agencies were asked to indicate if their agency receives any services from the band council or tribal council as gifts in kind (e.g.: bookkeeping services, funding for prevention services). 16.7% of the agencies responded yes, 75% of the agencies responded no, while 8.3% stated that this question was not applicable. Of those responding yes, one agency received 25,000 for agency staff and another 100,000 for legal costs from their band or tribal council.

41.7% of agencies indicated that they received funding from sources other than INAC, the First Nation or Tribal Council, yet 50% of the agencies responded no and 8.3% indicated that this question was not applicable. Two agencies had received funds from the Aboriginal Healing Foundation, another from a community foundation, one from the province, one from a federal government department (not INAC) and one unspecified source. Funding allotments ranged from $50 to $250,000.

The limited number of agencies accessing external funding sources may be due to the fact that one third of those surveyed (33.3%) indicated that there were barriers to their applying for provincial or voluntary sector grants while 25% indicated that this question was not applicable. Specifically, 33.3% of agencies in the sample indicated that the key barrier to accessing outside funding was the stacking provision contained in INAC funding arrangements.

As noted in a study conducted by FNCFCS in 2003, voluntary sector supports for children and families are virtually non-existent on reserves and thus agencies must do more than what would be required of a mainstream agency which can refer families to local voluntary sector supports (Nadjiwan and Blackstock, 2003.)

Conclusions

Overall, First Nations child and family service agencies report that current funding levels are inadequate in the following areas: prevention services (including least disruptive measures),

human resources, capital costs, standards/ evaluation, culturally appropriate services, records management and information technology. Human resources funding was identified as a critical need to support current operations and the anticipated expansion of prevention services in the new formula. Two thirds of agencies in the sample feel there are inadequate funds to pay staff equitable salary and benefits packages.

Jurisdictional disputes are a key problem and need to be resolved in order to ensure that Status Indian children on reserve do not face discriminatory allocation of services. In addition, there is likely to be substantial savings in human resources costs should a meaningful dispute resolution mechanism be put in place instead of the current case by case approach that too often places the needs of the child second while governments scramble to see who will pay for the service. Adoption of Jordan's principle where the needs of the child come first in the resolution of all jurisdictional disputes is very strongly recommended.

There is a trend toward FNCFSA developing their own legislation to ensure culturally based services. This suggests that the new generation funding formula should allow for both tribal based and provincially delegated child welfare legislation. In the meantime, delegation and funding agreement negotiations need to be standardized to create efficiencies in negotiations whilst still allowing for adaptation to reflect community specific needs. First Nations child and family service agencies indicated that there should be a move away from the "take it or leave it" negotiation approach by some provinces and in some situations, by INAC.

FNCFSA provide significant gifts in kind to both the provincial and federal governments in terms of consultation services. Although both governments appear to value this input neither is prepared to pay for it – meaning that this service is an additional drain on agencies.

Although some agencies were receiving additional funding from other sources, there is clearly a need to clarify the application of the stacking provision in INAC funding agreements with agencies in order to ensure that they can benefit from voluntary sector funding sources and other types of government funding to enhance the range of services provided outside of INAC funding.

8. PROVINCIAL CHILD and FAMILY SURVEY RESULTS

Regional researchers contacted the following provinces to request that they complete a comprehensive survey designed to identify the range of child welfare services provided, number of First Nations children and families serviced, nature of the funding formula in use in each region, including adjustments for remoteness, capital costs and extraordinary costs:

- British Columbia
- Alberta
- Saskatchewan
- Manitoba
- Quebec
- Nova Scotia
- New Brunswick

Two provinces completed the full survey, with an additional three provinces partially completing the survey. The remaining provinces either chose not to participate or were only able/ willing to provide a very limited amount of information. The low response rate coupled with the inconsistency in questions answered between provinces makes it very difficult to determine with any reliability the range of services typically offered by the provinces or the costing formulas to support such works. However, information provided by the provinces on the numbers of children in care and their funding methodologies is very valuable. Consistent with our approach with the First Nations child and family service agencies, provincial information is presented in aggregate form only to respect the confidentiality of each informant.

Findings

The range of services provided by respondents was linked to provincial statute and legislation in

each area – no province as able to provide specific descriptions of the range of services or the costs of said services. One province noted that the budget is allocated provincially to regions which then have some discretion on how to allocate the budget based on community needs.

Consistent with the findings in the Canadian Incidence Study on Reported Child Abuse and Neglect, the provinces that completed the survey reported disproportionate numbers of Aboriginal children in care. Unfortunately there was wide variation in the degree to which provinces recorded information regarding Aboriginal children and their families. Some regions could only approximate a percentage; others could report numbers of children in care of the province and not of First Nations agencies. However, there were three provinces that maintained excellent data records on Aboriginal children and disaggregated that data by First Nations status. To follow is a summary of the numbers of children in care as reported by these three jurisdictions:

As Table 7 demonstrates, Aboriginal children are over-represented amongst children in care from a low of 350% in Province C to highs of approximately 600% in Provinces A and B.

As indicated in Table 8, overall, the data from these three sample provinces indicates that First Nations children are vastly over-represented amongst both children in care and Aboriginal children in care. Table 7 also provides some indication as to what this over-representation looks like as compared to non Aboriginal children in Canada. Table 8 shows the differences in child in care numbers for First Nations, Metis and Inuit children whilst indicating the percentage of the population that these three groups represent. Pay particular attention to the difference between the cultural groups by child population as compared to the percentage of children in care for the provinces.

Statistics Canada (2001) data indicates that status First Nations children under 14 years compose 6.2% of the overall child population in the 3 sample provinces while Métis and other children representing 3.1% and 90.6% of the child population respectively. As shown in Table 9, when it comes to children in care, the proportion of Status First Nations and Metis in child welfare care compared to other Canadian children, the figures are astounding. **10.23% of all First Nations Status Indian children in these three provinces are in child welfare care as compared to 3.31% for Métis children and less than one percent of other children (0.67%).** This means that approximately one in ten Status Indian children in these three provinces was in care as of May 2005. Considering that a portion of these children in care are likely to transition out of care at some point, **it would not be unrealistic to estimate that about 20% of Status First Nations children will have been in child welfare care at some point of their childhoods.** This staggering statistic affirms First Nations community reports of mass removals of children. This finding also suggests that pan Aboriginal policy and practice

Table 7: Proportion of Aboriginal and non Aboriginal Children in Care in Three Sample Provinces contrasted with population of Aboriginal children

Cultural Identity/Status	Province A		Province B		Province C	
Aboriginal CIC	4,197	52%	4,379	48%	4,803	83%
Non Aboriginal CIC	3,751	48%	4,715	52%	979	17%
Aboriginal Children as percentage of total child population*	8.7%		7.3%		23.1%	

* Statistics Canada (2001) Aboriginal children 0-14 as a percentage of total child population by province

Table 8: Children in Care by Aboriginal Status in Three Sample Provinces

Aboriginal Identity of Child	Province A		Province B		Province C		Total	
Métis	492	11.7%	622	14.2%	510	10.6%	1,624	12.1%
Inuit	26	0.6%	22	.5%	9	.2%	57	.4%
First Nations (status)	3,317	79%	2,592*	59.2%	4,022	83.7%	9,931	74.2%
First Nations (non status)	362	8.6%	1143	26.1%	262	5.5%	1,767	13.2%

Table 9: Percentage of Children in Care by Cultural Group in Three Sample Provinces

Cultural Group	Population of Specific Cultural Group in 3 Sample Provinces*	Percentage of overall Child Population in 3 Sample Provinces	Number of Children in Care (3 Provinces)	Percentage of Children in Child Welfare care by Cultural Group in 3 Sample Provinces***
First Nations Status children	97,065	6.2%	9931	10.23%
Métis children	49,040	3.1%	1624	3.31%
Other children**	1,411,280	90.6%	9445	0.67%

*note that child population data represents children 0-14 years in Canada in the 2001 census. Statistics Canada data indicated that the overall child population (0-14 years in all three provinces was 1,557,385 in the 2001 census)

**note that population of other children includes non status First Nations, Inuit and non Aboriginal children

***note that the proportion of Status Indian children in child welfare care by provinces A, B and C are Province A (11.06%), Province B (8.34%) and Province C (11.1%)

approaches may not be advised given the disproportionate representation of status First Nations children in child welfare care and calls for an enhanced investment in services to Status Indian children.

In terms of funding formulas, two provinces provided details regarding their funding formulas – one in very specific terms and another provided a less detailed formula. The remaining provinces reported that the details regarding the original funding formula for provincial child welfare had been lost over time and was now simply adjusted on an annual basis according to price, volume or changes in circumstances. Several of the respondents indicated that although they operate under a fixed amount of funding they have the option to appeal to the provincial treasury for additional funds in cases of extraordinary circumstances including significant organizational or practice change.

Three provinces report basing human resource needs on caseload or workload models. One province uses a complicated workload formula involving over 1700 pieces of data which has a built in adjustment for changes in social work practice. This model has been in place since 1997 and is subject to a union collective agreement. This particular province did not comment on whether its salary ranges are similar or different from FNCFSA in the area. Another province using a caseload model, noted that when it reimburses agencies for services it assumes funding for one worker for every 7228 days of care provided by the agency – no funding is provided for community services, or executive core funding and only partial reimbursement is provided for protection services. The third province used a caseload model funding one social worker for every 20 cases and noted that the FNCFSA match the salary levels provided by the province. The other regions were unable to respond to this question.

Conclusions

Despite the limited response rate, the provincial surveys revealed some important data:

1) First Nations children are over-represented in child welfare care and compose the largest group within the Aboriginal category. Data from three provinces indicates that First Nations Status Indian children are over 15 times more likely to be placed in child welfare care than other children in the provinces.
2) Ranges of services are based on provincial legislation, regulations and standards, but no province was able to specifically identify the range of services they provide, noting in at least one case, that this was due to the flexibility given to regions to allocate funding based on community need.
3) Caseload or workload appears to be the most significant variable in shaping provincial human resource needs.
4) The good example set by the three provinces in the sample that collect information on Aboriginal children disaggregated by cultural group should be made uniform throughout all provinces. Collecting disaggregated data allows for a more targeted understanding and response to the needs of Aboriginal children from diverse cultures and contexts.

Further analysis of provincial funding formulas where they exist will occur in Phase Three of the research program.

9. REMOTENESS FACTOR

The National Policy Review (MacDonald & Ladd, 2000) found that the remoteness factor in Directive 20-1 required review in order to ensure it adequately reflected the additional costs to child and family service agencies related to remoteness. In addition to the analysis of remoteness questions in the First Nations child and family service agency survey, Dr. John Loxley analyzed the current remoteness factor and compared it with two other formulas (one used by a provincial government and the other by a corporation.)

Findings

The current remoteness factor classifies agencies in accordance with their distance from the service centre, degrees latitude, and year round road access. It contains three separate adjustments– one on the per band amount, one on the per child

amount and another on the per agency amount. These adjustments vary and no documented rationale exists to support the varying amounts. So changing the adjustment factors may correct the concern by remote agencies that the current formula is inadequate to meet costs. However it is unclear whether this type of adjustment would address the primary concern expressed by remote agencies which was that the current service centre used to calculate the remoteness factor for the agencies does not necessarily reflect the place where agencies go to access the specialized range of services and products related to child welfare.

A more promising option is to run analysis of the current remoteness factor replacing the current service centres with the city centres used to calculate remoteness for other INAC programs. Preliminary analysis of the city centers indicates that these locations seem to correlate more closely with the locations from which agencies are likely to access their services and products.

The current remoteness factor formula was compared to two other remoteness factors – one used by a province and another by a corporation. In each case the remoteness formula was applied to First Nations child and family services in the province were these two formulas were derived. Neither formula proved to be an improvement over the current remoteness factor as they were not designed with the unique needs and economies of scale of First Nations child and family service agencies in mind.

Conclusions

Replacing the service centre used in the current formula with the city centre used for some other INAC programs appears to be the most promising resolution to ensure First Nations child and family service agencies operating in remote area have adequate funding. Further analysis of this option will be conducted in Phase 3 of the research program. Importantly a question asking agencies to identify the centre where they go to access specialized child welfare services and products will be included and these results will be compared to the service centers and city centers identified in the INAC remoteness factor.

10. How Much has INAC's Failure to Adjust the Operating Formula for Inflation COST FIRST NATIONS CHILD AND FAMILY AGENCIES?

Although Directive 20-1 does contain a cost of living adjustment it has not been implemented since 1995. This is considered by many to be a major weakness in the formula, one which leads to both under-funding of services and to distortion in the services funded since some expenses subject to inflation must be covered, while others may be more optional. How much has this failure to adjust for inflation cost First Nations Agencies since the last adjustment in 1995?

Table 10 shows that the Consumer Price Index, the most widely accepted indicator of cost of living increases, rose from 104.2 in 1995 to 126.3 in 2005 (May). If the starting point in 1995 is expressed as 100, then the index in 2005 rises to 121.21, i.e. prices increased by 21.21% over this ten year period, when no adjustments were made for inflation by INAC.

Table 10: Increases in the Consumer Price Index (1995-2005)

CPI	Year	CPI set at 100
104.20	1995	100.00
105.90	1996	101.63
107.60	1997	103.26
108.60	1998	104.22
110.50	1999	106.05
112.50	2000	107.97
116.40	2001	111.71
119.00	2002	114.20
122.30	2003	117.37
124.60	2004	119.58
126.30	2005	121.21

Source: Statistics Canada

Table 11: Inflation Adjustments by Region (1999-2005)

INAC Region	Formula Funding	Adjusted for Inflation	Difference
British Columbia	$80,992,151	$92,059,053	$11,516,902
Alberta	$144,061,110	$164,650,535	$20,589,425
Saskatchewan	$151,445,637	$173,138152	$21,692,514
Manitoba	$191,591,040	$218,703,956	$27,112,916
Ontario	$123,427,998	$140,728,620	$17,300,623
Quebec	$59,956,671	$65,154,656	$8,197,985
Atlantic	$39,705,067	$45,312, 751	$5,607,684

We know, therefore, that had cost of living adjustments been made annually since 1995, then funding would have been higher in 2005 than in 1995 by 21.21% purely on account of inflation, i.e., ignoring any increase in the number of children, number of agencies etcetera. Although we do not, have access to data for funding levels in 1995.

We do have data for 1999 to 2005. If we adjust the funding data for each year by the cost of living index in Table 10, we can calculate what funding would have been available over this six year period had inflation protection been available in each region (please see Appendix 2 for tabulation per year in each region). Table 11 shows what this would have been for each INAC region from 1999 to 2005 and the difference between this and actual funding, representing lost revenues from INAC for operations.

Table 12 shows what that total would have been the national operations funding with inflation adjustment and what the difference is in total for all regions. It shows that **between 1999 and 2005, cumulative operations funding would have been larger by $112 million, at $900 million instead of the $788 million which was provided in actuality**.

This represents a loss of 14% of funds over the period. For the year 2005, operations funding would have been $142 million instead of $117 million, or $24.8 million higher than funding actually provided. This amount is roughly the additional monies the government has promised to make available to First Nations Agencies this year, one time only!! To fully compensate for inflation losses over this period, this $25 million, and more, would need to be made available every year from now on. This helps to situate the additional money in the broader context of historical under funding.

11. SMALL AGENCIES

Small agencies (those serving child populations of less than 1,000) represent 55% of the total number of First Nations child and family service agencies in Canada, excluding the province of Ontario. It is critical to understand the needs and challenges of these agencies in order to promote optimal support and functioning.

Study Design and Methodology

The objective of this study is to describe the challenges faced by small agencies and ensure the needs of these organizations are considered in the development of an alternative funding formula for First Nations child and family service agencies.

The data for this study was gathered using a structured interview conducted with fourteen executive directors of small First Nations child and family service agencies. Information was gathered using a standardized questionairre and was administered either on site or by telephone.

Table 12: Losses on INAC Operations Funding Due to Lack of Inflation Adjustment (All INAC Regions)

Year	Formula Funding	Adjusted for Inflation	Difference
1999	$105,053,015	$111,404,589	$6,351,574
2000	$108,573,428	$117,221791	$8,648,363
2001	$110,959,054	$123,950,421	$12,991,367
2002	$113,702,424	$129,852,097	$16,149,673
2003	$114,848,709	$134,798,437	$19,949,728
2004	$117,895,263	$140,976,486	$23,081,222
2005	$117,147,781	$141,993,903	$24,846,122
Total	$788,179,674	$900,197,723	$24,846,122

Agencies were selected from the provinces of British Columbia and New Brunswick due to the high distribution of small agencies in these regions. Quebec, the only other region with a significant number of such agencies was not included due to resource limitations. The primary areas of inquiry for this report are:

1. **What are the core administrative staffing and related requirements of small agencies?**
2. **How should the funding formula be adjusted to meet these requirements?**
3. **What is the minimum size of agency and related population consistent with good social work practice and economies of scale?**

It is important to note that maintenance in British Columbia is not reimbursed at actual costs but rather on the basis of an "average actual cost" that is set by the province each year for foster and group care. This amount may exceed the actual costs for maintenance for some children in First Nations child and family service agency care and in these instances, the INAC region has allowed agencies to keep the maintenance surplus and apply it against expense shortfalls under the operations formula. This has worked to the benefit of First Nations agencies in British Columbia as most of the agencies in that province are small agencies and thus do not receive the full operations allotment.

Summary of Findings

In addition to child protective services, provided by fully mandated agencies, the agencies in the study provide a diverse range of services which include, but are not limited to, family and child supportive services, foster care, family reunification, prevention and community development. There are, however, a number of services which agencies indicated they would like to provide but are unable to due to limitations of the current funding formula. Virtually all respondents stated that in order to provide the full range of services needed by the community, additional full time staff would be needed. The most commonly identified staffing need was for social workers and prevention workers.

The findings indicate that small agencies face a number of challenges in the areas of core administrative and staffing related requirements with 75% of respondents indicating that their salary and benefit levels are not comparable to other child welfare organizations.

The most frequently cited non-staffing cost that would be incurred if agencies provided their preferred range of services is associated with capital costs for office buildings, space or renovations. New Brunswick agencies placed equal priority on costs for information technology software and hardware. **There is a substantial gap, with an average differential of $320,000, between the funds required to run an agency with the preferred full range of services and the amount of funds agencies currently receive.**

To optimize services, most agencies share resources with other reserve based programs. Examples include joint funding of staff positions, cosponsoring training or community events and sharing costs to bring in specialized services. Due to the high level of needs in their communities, none of the respondents stated that there should be a minimum population size to ensure good social work and economies of scale.

The pressure on First Nations child and family services to deliver services comparable to the provincial government child welfare agencies is a challenge for small agencies. In regards to cost-effectiveness, participants were unanimous in the position that their services were more cost-effective as compared to provincial counterparts due to the broader scope and extensive nature of the services provided. Cost differences are also due to lower maintenance costs and non-unionization. The demands on staff in small agencies are high with virtually all respondents agreeing that staff members perform duties not expected by employees in larger agencies.

In order to meet some the challenges small agencies face in providing a full range of services, the option of centralizing some agency functions was explored. While this was a favored approach by most agencies, notably all New Brunswick participants, it was not accepted by all due to issues regarding geographic isolation and/or high travel costs.

Directive 20-1, the use of surplus funds and alternatives for maintenance funding formed the basis of inquiry regarding alternative funding approaches. The majority of respondents believed that an entirely new formula was required incorporating prevention and out of care options, an increased rate for remoteness, a mechanism for block funding and consideration of the total population - whether status or non status.

The population policy threshold in Directive 20-1 was considered to be an inadequate means of benchmarking operations funding levels by all participants in the study. Approximately half of the respondents stated that funding should be based on community needs not child population counts. Another 25% of participants stated that population counts should reflect the entire population, not just children as it is the entire family which needs support when a child is unsafe or at risk in the home.

Policy directing the use of surplus funds differs by region and accounts for the variances in agency possession and use of these funds. Surplus funding was reported by British Columbia agencies only due to their maintenance per diem arrangement. While agencies in New Brunswick must return surplus funds, British Columbia agencies are able to use these funds for child and family services.

British Columbia is unique in using the per diem arrangement to pay for maintenance costs. In terms of the allocation of funding for maintenance based on actual costs or by per diem, all New Brunswick agencies expressed preference for payments based on actual costs, while most British Columbia agencies preferred the per diem arrangement. The positions expressed by both regions appear to be motivated by fear. New Brunswick agencies feared per diem arrangements would result in a budget deficit or reduced service delivery while British Columbia agencies feared that removing the per diem arrangement and associated surpluses would mean reduced funds for staff and prevention programs.

Conclusions

While small agencies remain viable and cost-effective resources, they face significant challenges in terms of administrative and core staffing requirements. The average cost actual system in BC has appeared to have partially compensated for the

low operational funding. Cuts or changes to this funding arrangement would likely substantially decrease the ability of these agencies to provide the current range of services.

There is a substantial disparity in salary and benefit levels as compared to other child welfare organizations as well as a significant gap in what is required to run an agency with the preferred full range of services and what agencies currently receive. Although agencies had different perspectives on the used of surplus funds and maintenance funding alternatives, dissatisfaction with the current Directive 20-1 population threshold policy was unanimous.

Recommendations for alternative funding approaches include:

1. Funding for prevention and out of care options
2. An increased rate of funding for remoteness
3. Development of a mechanism for block funding
4. Consideration of the total population, whether status or non-status.

Similar to their larger counterparts, small agencies maintain a holistic approach to child and family welfare which includes an emphasis on prevention and community development. These are proactive services which function to reduce the incidence of child abuse over time. Small agencies do face some unique challenges and as these agencies constitute the majority of First Nations child and family services in operation, it is evident that more focused study is required.

LIMITATIONS OF THE RESEARCH

In every research project there are important limitations and this is true of the works undertaken for this Phase Two project. Overall, we are very pleased with the quantity and quality of the data but it is important to acknowledge the limitations in the research and analysis. This phase of the project had to be completed in its entirety in less than five months and thus, time was definitely a factor which limited our ability to collect and validate data. This was particularly true for the provincial surveys. Although all provinces were contacted for the research (except Ontario, PEI and Newfoundland) the researchers did not always have the time needed to negotiate consent to participate and collect the data within the defined time frame. We, and the individual researchers, have made every effort to identify limitations in the research whenever possible.

As noted before, this research does not include Ontario (as it is funded under a separate funding arrangement), nor has it specifically focused on foster care costs or the proposed block funding methodology. Dr. Brad McKenzie (2002) prepared a report to inform block funding and cautions that this approach, whilst having benefits of increased flexibility, is not appropriate for all First Nations child and family service agencies (i.e. small agencies, new agencies, agencies lacking a long term track record that allows for accurate prediction of future costs (thus setting a reasonable base amount for the block.)

An additional limitation is that given the short time frames for the research to be completed, there is an incomplete analysis of the costs related to children in care and it strongly recommended that future research be undertaken to define the range of services provided to children and care and the relative costs thereof.

We have also not accounted for unpredictable changes INAC may make to current funding levels or arrangements. We would hope that any such changes would be put in abeyance until adequate analysis of how these proposed changes would interface with any new formula were fully considered in partnership with First Nations.

IMPLICATIONS FOR THE THREE FUNDING FORMULA OPTIONS

Redesigning Directive 20-1

Overview of Directive 20-1

The current funding formula was designed in 1989 in an effort to standardize funding levels

amongst First Nations child and family service agencies in Canada and promote their further development. The Directive requires that agencies follow the provincial child welfare legislation in each province but includes no adjustment for the content of said statutes. It includes a guiding principle that services should be comparable to those provided to children in similar circumstances off reserve. but contains no mechanisms to ensure this is achieved.

In addition to a calculation for remoteness, Directive 20-1 provides funding pursuant to two broad categories of funding:

1. **Operations**: Based on the Status Indian child population resident on reserve this pot of funds is intended to support the administrative functioning of the agency and includes a small amount for prevention services and legal fees.
2. **Maintenance:** Provided on a reimbursement basis for placing Status Indian children resident on reserve into out of home care.

The Directive also includes an allotment for a cost of living adjustment although this has not been implemented since 1995. Additionally, the Directive included funds for agencies to conduct evaluations at years three and six of operations but as the Auditor General of Canada (December, 2002) has noted First Nations child and family service agencies consider evaluation as a key management tool to inform best practices and would like to see ongoing funding for evaluation.

Although it is broadly acknowledged that the Directive achieved the goal of increasing the numbers of First Nations child and family service agencies in Canada, there were significant concerns being expressed by First Nations child welfare agencies about insufficient levels and flexibility in funding arrangements – particularly with regard to providing primary, secondary and tertiary prevention services.

In response to these concerns, the Assembly of First Nations and the Department of Indian Affairs and Northern Development undertook a review of the Directive in partnership with a panel of First Nations child and family service agency staff and departmental officials. The resulting report, the Joint National Policy Review on First Nations Child and Family Services (MacDonald & Ladd, 2000) contained seventeen recommendations for change. As more than four years had passed between the time of that report and the commencement of this research project, the research team checked the validity of the NPR recommendations in Phase One and found that participating First Nations child and family service agencies continued to believe the recommendations were valid and had application in a 2005 context.

Implications of Research Findings for Directive 20-1 Option

Based on the research findings **the Directive would need substantial alteration in order to meet the requirements of First Nations child and family services and ensure equitable child welfare services for First Nations children resident on reserve.** From the outset, ongoing separate pools of funding outside of the current operations and maintenance budgets are being recommended for inclusion in the new formula to cover the following expenses:

1) Community Development (primary prevention)
2) Least Disruptive Measures
3) MIS system maintenance and training
4) Standards and evaluation funding
5) Exceptional circumstances funding pool (2 million dollars as a minimum value to be adjusted annually) to be held nationally.

Additionally separate funding is recommended for one time or exceptional expenses:

1) Community assessments relating to extraordinary circumstances
2) Capital costs to bring MIS systems up to minimum standards and to develop national and regional data collection frameworks to inform policy and practice.
3) Capital costs for the development of culturally based standards.
4) Capital costs to allow for accessibility of offices for disabled persons.
5) Capital cost to allow for adequate office space

for agency operations and to ensure that office space meets building code standards.

6) Funds for research and development at a national, regional and agency level.

7) Funds to adjust funding when changes in provincial legislation are introduced.

In addition to these costs, we recommend the reintroduction of the cost of living adjustment. **The failure to implement the cost of living provision in the current formula has resulted in a 112 million dollar loss of funding in the national operations budgets for the years 1999-2005**. This means that the 24.8 million dollars is needed to meet the cost of living requirements for 2005 alone, if the loss of purchasing power since 1995 is to be restored.

Adjustments to the remoteness factor are required so that it better reflects the costs associated with child welfare and providing adequate funds for staff salary and benefits are required.

Importantly, the research recommends the adoption of Jordan's Principle. In circumstances where a service would normally be available to non Aboriginal children, the provincial or federal government department which first receives a request to pay for services for a First Nations child should fund the service without delay or disruption. The government of first pay then has the option of referring the payment to a jurisdictional dispute table for review. Consistent with the Convention on the Rights of the Child Jordan's principle would ensure that child's needs come before the needs of governments – all the time.

It is also clear that **a number of agencies are moving toward the development and implementation of their own child welfare laws and thus the implementation of recommendation one of the NPR which encourages that the new funding policy support First Nations based jurisdiction and governance** is becoming increasingly important. This would simply mean expanding the eligibility range for jurisdiction to include First Nations child welfare legislation.

Recommendations

That the research team move forward with a full survey of First Nations child and family service agencies in order to quantify the implications of these modifications to the funding formula for both First Nations agencies and INAC. This will be accomplished through the development, implementation and analysis of results of a survey to be administered to all First Nations child and family service agencies in Canada (except in Ontario where a separate funding agreement exists.) This survey would be informed by the results of Phase Two and will include specific questions on the areas where modifications to the current formula are being considered. It is anticipated that the survey will be administered over the summer of 2005. This timing is not ideal as agency staff often take their vacations during this time, but unfortunately deferring this to the fall is not an option as INAC needs to develop the Memorandum to Cabinet requesting the new funding authority no later than September of 2005.

In addition to this agency survey, specific focused research is recommended in the following areas:

1) Research on the minimum economy of scale for operation of a First Nations child and family service agency.

2) Legal review of tort law relevant to First Nations child and family service agencies to determine a minimal level of liability coverage.

3) Research on the implications of substituting the city centre for the current service centre in the remoteness factor.

4) Obtain population trend data on the status Indian children in care in order to understand how the current definition of eligible child impacts FNCFSA funding over time.

5) Analyze the interface between Directive 20-1 and the funding instruments used by INAC (e.g.: contribution funding agreements.)

Overall, a blending of this option and the First Nations formula appears to be the most promising option emerging from the research. The additional information provided by the universal First Nations child and family service

agency survey and the recommended focused research projects will help better define the practice and economic implications of the proposed modifications to Directive 20-1.

LINKING FNCFSA FUNDING TO PROVINCIAL FUNDING LEVELS

This option involved identifying the funding formulas used by each province and then applying it to the First Nations child and family service agencies in the respective province to see what the implications were. **Although at first glance this option may suggest that there would be "provincial comparability" if the formulas were applied to First Nations child and family service agencies further analysis immediately identifies complications.** From the outset there were several complications regarding this approach: 1) application of provincial formulas could result in no fewer than 10 different funding formulas thereby creating potential for inequities between regions 2) provincial funding formulas are developed with provincial economies of scale and service contexts in mind – application to FNCFSA that serve smaller communities with greater service needs was questionable and 3) provincial child and family service authorities may draw upon the resources of other provincial ministries to support delivery of child welfare (i.e.: for capital building costs, legal costs) – if these services were funded outside of the provincial formula then the formula would need to be adjusted to reflect these costs and 4) provincial funding formulas are developed by provincial staff and have not included First Nations or the federal government thus pursuing this option would mean locating the control of funding strictly within the ambit of the provinces and 5) consistent with the findings of CIS-03, provinces typically serve a population with lower needs for child welfare services than First Nations child and family service agencies.

Despite the initial complications of this approach, the NAC directed that further analysis of this option be conducted in phase three of the research program. The research team had initially hoped to conduct an economic analysis of three provincial funding formulas, but as two of three of the provinces identified for analysis turned out to not know what their formula was, a detailed analysis could only be completed for one province.

Description of Provincial Models

Several provinces interviewed report that they no longer have any record as to what the original structure of the funding formula for child and family service deliver was in their area. They have simply adjusted the amount provided annually by price and volume. This creates an obvious complication as the intent was to apply the provincial formulas to First Nations child and family service agencies in each jurisdiction.

As noted above, the research team had initially planned to identify the funding formulas for three provinces and then apply them to the First Nations child and family service agencies in each province to see what the results would be. However, two of the provinces identified for study did not have any record of how their funding formulas were derived. Therefore, analysis of the implications of the applying a provincial funding formula to First Nations child and family service agencies in that province was only conducted in one region.

This province indicated that their province unilaterally applies a funding formula based on the Universal Cost of a Direct Service Worker. The formula provides a Direct Service Worker for each 7228 days of care provided by the agency. Unlike their provincial agency counterparts:

- The FNCFS Agencies do not receive Services to Community funding.
- The FNCFS Agencies do not receive Executive Core funding.
- The FNCFS Agencies receive partial funding for Protection Services.

When the provincial funding formula was applied to First Nations child and family service agencies in this province the majority of agencies would receive less funding than under the Directive.

Provincial surveys indicate that workload and caseload are primary determinants of human resource needs in at least three provinces. One province uses a complicated workload formula involving over 1700 pieces of data which has a built in adjustment for changes in social work practice. This model has been in place since 1997 and is subject to a union collective agreement. This particular province did not comment on whether its salary ranges are similar or different from FNCFSA in the area. Another province, using a caseload model, noted that when it reimburses agencies for services it assumes funding for one worker for every 7228 days of care provided by the agency – no funding is provided for community services or executive core funding and only partial reimbursement is provided for protection services. The third province used a caseload model funding one social worker for every 20 cases and noted that the FNCFSA match the salary levels provided by the province. The other regions were unable to respond to this question.

Implications of Research Findings for Provincial Funding Level Option

An analysis of this funding option indicates that this is the least promising of all three funding formula options in that even if the funding formulas could be identified for all ten provinces, there is no indication that the formulas were developed to be responsive to the unique service needs or economies of scale for First Nations child and family service agencies.

Moreover, selection of this option would be inconsistent with the recommendations of the National Policy Review which sought to reduce inequities in funding levels between regions – if the provincial option were selected there would be, in effect, ten funding formulas for First Nations child and family services.

Recommendations

1) **Given the short time frame for the analysis of all three formulas and the need to focus on the most promising alternative for the survey of all FNCFSA, we recommend not pursuing the option of applying provincial funding formulas to FNCFSA.**

2) **Analysis of the existing provincial funding formulas should, however, continue to identify possible best practices for integration into the new formula for FNCFSA.**

3) **If possible within the time frame for Phase Three the research team will attempt to identify another provincial funding model and apply it to First Nations child and family service agencies in the region to see what the results would be.**

THE FIRST NATIONS BASED FUNDING MODEL

Description of First Nations Model

There is no preexisting template for this model – it would be an entirely new funding formula which, taking into account the recommendations of the NPR, would respond to the unique needs of First Nations child and family service agencies. **In principle, this approach would be the most community based and reflect the findings of the research conducted by Cornell and Kalt (2002) which indicated that community based decision making accompanied by adequate resources creates optimal conditions for sustained socio-economic improvements.** It would involve comprehensively researching the needs of children and families serviced by the diversity of First Nations agencies and then, with the involvement of the FNCFSA, develop a funding model that best equips them with the tools needed to support families in their communities taking into full account the current status and evolution of child welfare legislation, standards and best practice (provincial and First Nations) Integration of outcomes and evaluation mechanisms would be key as agencies measure the efficacy of various approaches to enhancing child safety and well being.

The range of tools available to First Nations agencies would include the ability to draw upon the resources and expertise of neighboring First

Nations agencies to respond to exceptional circumstances such as the admission of large numbers of children in care or a child maltreatment investigation involving a staff member. Regional and national research, policy and networking non government organizations would further support agencies in their regions. The mandates of these organizations would reflect local needs, but may include the design of training programs for staff, development of standards templates, information management systems, and research on key regional basis. Consistent with the NPR the establishment of national NGOs to support FNCFSA through the provision of policy, research and networking functions that may include monitoring the implementation of the Convention on the Rights of the Child respecting First Nations children, conducting national research projects, information sharing on promising practices and linkages to promising practices amongst Indigenous peoples worldwide.

The development of such a model would require having broad based information on the longitudinal experiences of First Nations children and families coming to the attention of child welfare and the range of community based responses currently provided by First Nations child and family service agencies. Once this is determined a costing exercise would need to be designed to be undertaken and a funding formula developed. Unfortunately, much of the baseline data needed to develop a fully First Nations formula is currently unavailable. However, the research conducted for Phase Two did reveal some important findings relevant for the development of this option over time.

Implications of Research Findings for First Nations Model

The Canadian Incidence Study on Reported Child Abuse and Neglect is the first national data set that describes the experiences of First Nations children coming into contact with the child welfare system. Although this study is limited to reported cases of child maltreatment, it has the benefit of running in five year cycles allowing researchers to mark changes over time. The 2003 study, the second cycle of CIS, finds that Aboriginal children continue to be over-represented at every decision making point from reporting to admission into care. It also confirms findings of the 1998 study that First Nations children are by far the largest group of children comprising the Aboriginal sample, accounting for over 67% of all investigations.

The most important finding of 2003 is that it affirms the findings of the 1998 cycle indicating that Aboriginal children are twice as likely to come into contact with child welfare authorities for neglect than their non Aboriginal peers. Physical neglect (failure to provide for a child's basic needs such as clothing, shelter, nutrition) is the most frequent form of neglect experienced by Aboriginal children. This is important as the ability to provide for a child's needs is correlated with income and Aboriginal parents continue to be more likely to rely on financial assistance or part time employment than their non Aboriginal counterparts.

The CIS data signals that investments in family support services that account for poverty, poor housing and addictions could maximize the standard of family care and avoid the current over-representation of First Nations children in child welfare care.

An interesting finding is regarding the placement of Aboriginal children in care. **When the child is on reserve they are three times more likely to be placed in the range of extended family and kinship placements than their off reserve counterparts**.

First Nations child and family service experts have routinely advocated that social work approaches in families must balance assessment of risk with the recognition and leveraging of protective factors (strengths) (Foxcroft & Blackstock, 2003; Blackstock, 2003). **As Dr. Helen Jones (2003) notes this approach has been integrated into child protection services in the UK in what is known as the Integrated Children's System (ICS.) This system relies on three inter-related components: 1) an assessment model framework that considers**

the child's developmental needs, the family and environmental factors and parenting capacity 2) developing information requirements and 3) sample formats for producing and generating reports. This system relies heavily on information management because one must have a holistic data management system that can be used for child and family case planning and policy making. The ICS system collects data to inform five over arching goals: healthy children, staying safe, enjoying and achieving, making a positive contribution and economic wellbeing. The data management system was designed to be attuned to social workers motivations for using a system and thus maximized their use of the system. The primary motivating factors for social workers to use the system were better outcomes for the children they served and more efficient use of their time. It also provided ample staff training time and opportunities for feedback into the process. Results of pilots of the ICS system are very encouraging with the following positive outcomes having been reported:

- Better descriptions of children and their families provide a stronger foundation for the development of effective service plans at the family level.
- More comprehensive information allows for more effective targeting, and coordination of resources to meet needs of children.
- Provides a basis for mapping trends of child need and identification of service gaps.

A model such as ICS would have important applications in a First Nations context as it accounts for the structural risk factors identified in the CIS -98 (Trocme, Knoke & Blackstock, 2004) study and puts in play a system that better describes the strengths and risks experienced by children and families allowing for a more effective and efficient use of resources over time. A caution must be raised about importing the ICS model without accounting for the cultural differences in, and between, First Nations but the integration of a holistic and strength based approach holds significant promise.

As Stanley Loo notes, **augmenting information systems would greatly increase reporting efficiencies as recommended by the Auditor General of Canada and would have the added benefit of supporting First Nations child and family service agencies to better identify changes in community needs and measure the efficacy of service outcomes.**

In terms of jurisdiction disputes, the new formula would entrench Jordan's principle of putting the needs of the child first and the resolution of the jurisdictional dispute second. This does not mean that jurisdictional disputes would go unresolved. Ideally, a First Nations funding formula would include an arms length dispute resolutions system that involves relevant stakeholders and, whenever possible, the integration of cultural approaches to resolving disputes.

Additionally, **a separate pool of funds needs to be established to respond to exceptional circumstances and communities in crisis that supports community based solutions and allows for cooperative resource sharing with neighboring First Nations child and family service agencies when necessary.** Consistent with the findings of Irvine (2004) the definition of a community in crisis or an extraordinary circumstance is contingent on the context of the community, available resources, degree of crisis response planning and resources and the precipitating event.

To set a baseline for understanding what is, or is not, extraordinary in each community, Dr. Cradock recommends that a community capacity assessment be completed on each community. This assessment will also identify existing community capacity to respond to exceptional circumstances and identify gaps in capacity. This assessment should account with the following continuum of extraordinary circumstances response as recommended by Irvine (2004):

- Recognize that First Nations child and family service agencies are often the first responders to community crisis and thus need to have equitable funding bases in order to meet the additional demands of crisis situations.
- Building community capacity to respond to crisis situations including the development of

crisis response procedures, protocol agreements and by providing training to First Nations child and family service agency staff.

- Moving to prevention as a mechanism to avoid as many crisis situations as possible – this means further investment in prevention services and the coordination of said services
- Building relationships within the First Nation, with neighboring First Nations child and family service agencies, non profits and levels of government to augment the range of resources available and engage the broadest available skill set in community crisis plan planning, immediate response and after crisis care.

Improving staff salary, benefits and training resources would be an important validation of the skills and expertise of FNCFSA staff would ensure that agencies are able to recruit and maintain qualified staff. It is important to keep in mind that professional development options should include a balance of academic and non academic pursuits allowing staff to upgrade their skills and knowledge. Adequate funding should also be provided to cover off costs related to workplace safety.

Recommendations

Implementation of the following recommendations would significantly advance the development of a First Nations based formula in the future:

1) Implement targeted funding for community development and least disruptive measures and include funds for ongoing evaluation of new programs.
2) Implement funding for adequate culturally based policy and standards development and maintenance that includes ongoing evaluation and maintenance.
3) Ensure that human resources funds are sufficient for FNCFCSA to offer competitive salaries and benefits whilst ensuring workplace safety and professional development (academic and non academic)
4) New treasury board authorities should provide funds for INAC to support national and regional research projects such as the CIS that significantly inform policy and practice for FNCFSA.
5) Increased investment in research to describe promising practices in FNCFSA management, policy and practice whilst identifying the conditions that made the promising practice possible.
6) Implement recommendation one of the National Policy Review by increasing the scope of child welfare authority eligible for funding to include First Nations based legislation.
7) Introduce a financial review and adjustment to account for changes to provincial child welfare legislation.

Conclusion

This report is dedicated to Jordan and to all First Nations children and families. In reading the statistics and the findings it is their images that should guide our interpretation and inspire our action.

This research presented a unique opportunity to bring together a multi-disciplinary team of experts whilst balancing academic and community expertise. To date, research on First Nations child and family services has been limited in Canada despite the over-representation of First Nations children in care and the development of First Nations child and family service agencies. This report represents the most comprehensive overview of First Nations child and family services completed to date. The findings, whilst having their limitations, affirm the calls by First Nations child and family service agencies for greater emphasis on prevention and least disruptive measures services in order to support family well being and over time reduce the numbers of children in child welfare care.

To follow is a highlight of some of the most important findings of this research report:

1) Status First Nations children are drastically over-represented amongst both children in care and Aboriginal children in care. In three sample provinces First Nations children are 15 times more likely than other children to enter

child welfare care. One in ten Status Indian children in these provinces was in care as of May 2005.

2) The most common reason why First Nations children come to the attention of child welfare authorities is neglect.

3) First Nations children are twice as likely as their non Aboriginal peers to have their cases substantiated and to be admitted into child welfare care. Funding levels should reflect the increased costs associated with these increased levels of service

4) The cost of living increment has not been provided to First Nations child and family service agencies since 1995. What this means is that for the time period where we have data (1999-2005) the loss of funds due to inflation for the operations portion of the funding formula was 112 million dollars.

5) Funds for prevention and least disruptive measures are not adequate either in terms of program development, program delivery and evaluation or staffing requirements.

6) First Nations child and family service agencies are having significant success in placing children in culturally based placements.

7) Two thirds of First Nations agencies report that funding for salaries and benefits was not sufficient in the current formula.

8) A large majority (84%) of agencies felt that current funding levels were insufficient to provide for adequate culturally based services.

9) The First Nations child and family service agencies in the sample reported an aggregate of 393 jurisdictional disputes that took an average of 54.25 person hours each to resolve.

10) First Nations child and family service agencies provide significant gift in kind consultation service to the provinces and federal governments.

11) Management information systems vary widely ranging from pen and paper to agency developed systems. In the vast majority of cases MIS systems do not meet minimum standards.

12) There is currently no adjustment to account for changes in provincial legislation resulting in reported gaps in services provided on and off reserve.

The ongoing research will help refine these findings and determine the costs of standing still and going forward with modifications to the funding formula.

In the end the value of this research will be judged by the actions that are taken in its spirit. Knowing what the problems are and knowing what the solutions are is simply not enough. If we do not act courageously and without compromise to ensure that First Nations have as Elder Donald Horne says *"what is rightfully theirs- a chance to live with dignity, in the ways of their ancestors, safely at home."*

Dr. Barbara Fallon
Bruce MacLaurin

May 11, 2005

Introduction

This report presents a comparison of Aboriginal and non-Aboriginal children investigated for maltreatment in Canada in 2003. The analyses are based on the preliminary findings from the ***2003 Canadian Incidence Study of Reported Child Abuse and Neglect*** (***CIS-2003***) (Trocmé, Fallon, et al., to be released in October 2005). Analyses were conducted under contract for the First Nations Child and Family Caring Society to support the Caring Society's review of the Federal Government's child welfare funding framework. The purpose of the analyses was to examine differences in profiles of and service responses to Aboriginal children compared to non-Aboriginal children. The CIS 2003 study was made possible by a grant from the Public Health Agency of Canada.

Methodology

The ***CIS-2003*** is the second nation-wide study to examine the incidence of reported child maltreatment and the characteristics of the children and families investigated by Canadian child welfare services. The estimates presented in this report are primarily based on information collected from child welfare investigators on a representative sample of over 11,000 child welfare investigations conducted across Canada, excluding Quebec.

Specifically, the CIS–2003 is designed to

1. Examine rates of investigated and substantiated physical abuse, sexual abuse, neglect, emotional maltreatment and exposure to domestic violence as well as multiple forms of maltreatment;
2. Examine the severity of maltreatment as measured by forms of maltreatment, duration, and physical and emotional harm;
3. Examine selected determinants of health for investigated children and their families;
4. Monitor short-term investigation outcomes, including substantiation rates, out-of-home placement, use of child welfare court, and criminal prosecution, and
5. Compare 1998 and 2003 rates of substantiated physical abuse, sexual abuse, neglect, emotional maltreatment and exposure to domestic violence; the severity of maltreatment and short-term investigation outcomes

Sample

The ***CIS-2003*** captured information about children and their families as they came into contact with child welfare services over a three-month sampling period. Maltreated children who were not reported to child welfare services, screened-out reports, or new allegations on cases currently open at the time of case selection were not included in the ***CIS-2003***. A multi-stage sampling design was used, first to select a representative sample of child welfare offices across Canada, and then to sample cases within these offices. Information was collected directly from the investigating child welfare workers. The core sample of 11,562 child investigations was used to derive estimates of the annual rates and characteristics of investigated child maltreatment in Canada, outside of Québec[1].

A stratified cluster design was used to select maltreatment investigations for the ***CIS-2003***. Because of variations in the organization of child welfare service systems across Canada, a four-stage sampling process was required to select a nationally representative sample of children investigated because of suspected maltreatment. Fifty-five sites were selected from a pool of 327 child welfare service areas in Canada, outside of Québec.[2] Five sites declined to be involved because of their particular circumstances, and five replacement sites were randomly selected from the remaining pool.

A total of eight Aboriginal agencies were involved in the ***CIS-2003***. Five Aboriginal agencies were contacted for recruitment but were unable to participate as a result of external demands on the organization, organizational change, or existing service demands. Multiple presentations were made to agencies in an effort to recruit them and to establish trust between the agency and members of the study team. Two agencies initially agreed to

participate in the study and then were unable to due to capacity issues. Although the intention was to have ten aboriginal agencies participate in the study, only eight aboriginal agencies are included in the final sample.

The second sampling stage involved selecting cases opened in each site over a three-month period between October 1, 2003 and December 31, 2003.[3] Three months was considered to be the optimum period to ensure high participation rates and good compliance with study procedures. Consultation with service providers indicated that case activity from October to December is considered to be typical of the whole year.

The third sampling stage involved screening opened cases to identify those cases that met ***CIS-2003*** definitions of suspected maltreatment. The Intake Face Sheet of the CIS Maltreatment Assessment Form was completed on all open cases. Investigating workers then evaluated each case to determine whether maltreatment was alleged by the referral source or suspected at any point in the investigation process. In cases where maltreatment was suspected, the remainder of the CIS Maltreatment Assessment form was completed.

The final case selection stage involved identification of the specific children who had been investigated. In many jurisdictions, cases are classified on the basis of family units, while in others each investigated child is counted as a case. In jurisdictions using family-based case counts, children who had been specifically investigated because of suspected maltreatment were identified, yielding a final sample of 11,562 investigated children.

The sample includes 2,328 investigations involving Aboriginal: 304 First Nations children served by a First Nation's agency, 1,244 First Nations children served by mainstream agencies and 476 Métis, Inuit, and other Aboriginal children.

As with any sample survey, estimates must be understood within the constraints of the survey instruments, the sampling design, and the estimation procedures used. Please refer to the Canadian Incidence Study of Reported Child Abuse and Neglect Major Findings Report (***CIS-2003***) for a full discussion about the ***CIS-2003*** methodology and a discussion of the strengths, limitations, and impact on interpreting the ***CIS-2003*** estimates. [4]

Aboriginal Definition

The Aboriginal population figure was derived from Census 2001 data.[5] According to Census documents, the Aboriginal identity population figures refer to "North American Indian, Métis or Inuit (Eskimo), and/or those who reported being a Treaty Indian or a Registered Indian as defined by the Indian Act of Canada and/or who were members of an Indian Band or First Nation." The Census population figures may differ from those calculated by INAC because of methodological and conceptual differences.

Aboriginal Analyses

For the purposes of this comparative report, First Nation status children and First Nation non-status children were combined and then categorized as living on or off reserve[6a]. Other Aboriginal children included Métis, Inuit and other Aboriginal children. Non-Aboriginal children were those children for whom the worker did not categorize as Aboriginal.

Most tables are limited to estimated counts of the number children in each Aboriginal category because we were unable to obtain reliable population estimates for on and off reserve children. **Tables 1a and 2a** provide population based incidence estimates by collapsing the three Aboriginal categories. Caution should be used in comparing the investigation statistics in the other tables because counts of number of investigations and differences in the distribution of these cases do not reflect the significant base-rate difference in incidence rates between Aboriginal and non Aboriginal children. For example, in **Table 2a** 13% of substantiated cases of maltreatment involving Aboriginal children involved physical abuse, compared to 29% for non-Aboriginal children. However, since Aboriginal children

were nearly 2.5 times more likely to be reported and substantiated, the incidence of substantiated physical abuse was in fact higher for Aboriginal children: 6.4 per thousand compared to 5.7 per thousand for non-Aboriginal children.

Given that the purpose of the report was to explore differences in profiles of and service responses to Aboriginal children compared to non-Aboriginal children, the statistical analyses in this report examine the differences in distribution of key characteristics of both groups. In most cases this is done using a Chi-square analysis[6b] of these distributions. Thus the significant difference reported in **Table 2a** means that there is a significant difference in the distribution of categories of maltreatment (13% physical abuse vs. 29%). However, this statistical analysis does not examine the difference in incidence rates (6.4 vs. 5.7)

Child Maltreatment Investigations by Level of Substantiation

Tables 1a and 1b describe investigations of maltreatment in terms of the three levels of substantiation specified by child protection workers involved in the *CIS-2003*:

A case is considered substantiated if the balance of evidence indicates that abuse or neglect has occurred.

A case is suspected if you do not have enough evidence to substantiate maltreatment, but you also are not sure that maltreatment can be ruled out.

A case is unsubstantiated if the balance of evidence indicates that abuse or neglect has not occurred.

Table 1a describes incidence rates for Aboriginal and non-Aboriginal children. Nearly 10% of Aboriginal children in Canada (95.3 per thousand Aboriginal children) are estimated to have been investigated in 2003 because of alleged maltreatment, over double the rate for non-Aboriginal children (42.2 per thousand). The rate of substantiated maltreatment was 2.5 times higher: 49 substantiated victims per thousand Aboriginal children compared to 19.8 per thousand non-Aboriginal children.

Table 1b provides the breakdown in substantiation rates by Aboriginal group. A higher proportion of child maltreatment investigations were substantiated for First Nations on reserve (51%), First Nations off reserve (51%), and other Aboriginal (55%) compared to non-Aboriginal (47%). In addition, a higher percentage of child investigations for First Nations off reserve and other Aboriginal were determined to be suspected following the completion of the initial investigation period.

Table 1a: Incidence of Child Maltreatment Investigations by Level of Substantiation in Canada in 2003, (Quebec Excluded)

	Aboriginal			Non-Aboriginal			Total
	%	# of Child Investigations	Rate per 1000	%	# of Child Investigations	Rate per 1000	
Substantiated	52	15,273	49.0	47	88,025	19.8	103,098

Canadian Study of Reported Child Abuse and Neglect 2003 $X^2=50.16$ $p<0.001$

Analysis is based upon a sample of 11, 562 child maltreatment investigations with information about substantiation

Categories of Substantiated Maltreatment

Investigating child protection workers could identify up to three types of maltreatment for each investigation. Workers could choose from a list of twenty-five forms of maltreatment, under five categories of maltreatment (physical abuse, sexual abuse, neglect, emotional maltreatment and exposure to domestic violence). Note that because a case could include more than one form of maltreatment the columns in **Tables 2a to 3f** add up to more than the total number of substantiated cases. Estimates are not presented when there are insufficient cases sampled to provide a reliable estimate. In such cases, two dashes (--) appear in the table cell.

Incidence Rates: **Table 2a** shows that rates of substantiated maltreatment were similar or higher for Aboriginal children for all categories of maltreatment compared to non-Aboriginal children.

Physical Abuse: Significant differences were seen in the proportion of investigations that identified substantiated physical abuse for the four groups (First Nations on reserve, First Nations off reserve, other Aboriginal and non-Aboriginal). Twenty-nine percent of non-Aboriginal investigations indicated that physical abuse had been substantiated compared to 10% for First Nations off reserve and 11% for other Aboriginal.

Sexual Abuse: A higher proportion of non-Aboriginal investigations involved substantiated sexual abuse than for First Nations and other aboriginal categories.

Neglect: A much higher proportion of First Nations and Aboriginal investigations involved substantiated neglect compared to non-Aboriginal investigations. This ranged from 51% for First Nations on reserve to 65% for other Aboriginal.

Emotional Maltreatment: Seventeen percent of substantiated maltreatment investigations for First Nations off reserve noted emotional maltreatment. This proportion was higher for First Nation on reserve (27%), other Aboriginal (26%) and non-Aboriginal (24%).

Exposure to Domestic Violence: The proportion of substantiated child maltreatment investigations involving exposure to domestic violence ranged from 28% for other Aboriginal to 38% for First Nations on reserve.

Forms of Substantiated Physical Abuse

For the purposes of the *CIS-2003*, cases of investigated maltreatment were classified as physical abuse if the investigated child was suspected to have suffered or to be at substantial risk of suffering physical harm at the hands of his or her caregiver. The physical abuse category includes five forms of abuse:

Table 2a: Incidence of Categories of Substantiated Maltreatment in 2003 in Canada (Quebec Excluded)

	Aboriginal			Non-aboriginal			Total
	%	# of Child Investigations	Rate per 1,000 children	%	# of Child Investigations	Rate per 1,000 children	
Physical Abuse	13	1,982	6.4	29	25,454	5.7	27,436

Canadian Study of Reported Child Abuse and Neglect 2003 *X^2, $p<.05$

Analysis is based upon a sample of 5,660 child maltreatment investigations with information about substantiation

Shake, Push, Grab Or Throw: include pulling or dragging a child as well as shaking an infant.

Hit With Hand: include slapping and spanking but not punching.

Punch, Kick, Or Bite: include as well any other hitting with other parts of the body (e.g.: elbow or head).

Hit With Object: includes hitting with a stick, a belt or other object, throwing an object at a child, but does not include stabbing with a knife.

Other Physical Abuse: Any other form of physical abuse including choking, strangling, stabbing, burning, shooting, poisoning, and the abusive use of restraints.

Table 3a describes the proportion of substantiated physical abuse cases indicating each of the five forms of physical abuse by Aboriginal status. As noted in the previous section, investigating workers could identify up to three types of maltreatment for each investigation from a list of twenty-five forms of maltreatment. Note that because a case could include more than one form of maltreatment the columns in **Tables 2a to 3f** add up to more than the total number of substantiated cases. Estimates are not presented when there are insufficient cases sampled to provide a reliable estimate. In such cases, two dashes (--) appear in the table cell.

Table 3a indicates that the proportion of substantiated investigations involving at least one form of physical abuse was highest for non-Aboriginal investigations (29%). The proportion of substantiated physical abuse cases that involved shaking, pushing, grabbing or throwing was highest for other Aboriginal (48%), compared to non-Aboriginal physical abuse investigations (23%). A higher percentage of substantiated physical abuse investigations for First Nations off reserve (57%) involved hitting with a hand compared to other Aboriginal and non-Aboriginal (47%), and First Nations on reserve (30%). First Nations off reserve indicated the highest proportion of substantiated physical abuse cases involving a punch, kick or bite, while non-Aboriginal substantiated physical abuse investigations involved a higher percentage involving hitting with an object. Other forms of physical abuse were noted most frequently in

Forms of Substantiated Sexual Abuse

It should be noted that the *CIS-2003* identified only cases reported to child welfare services; many cases of child sexual abuse that do not involve parents or relatives in the home are investigated only by the police, and child welfare services usually become involved in extra-familial sexual abuse cases only if there are concerns about the parents' ability to protect the child. The *CIS-2003* used eight forms to classify cases of sexual abuse:

Penetration: penile, digital or object penetration of vagina or anus.

Attempted Penetration: attempted penile, digital or object penetration of vagina or anus.

Oral Sex: oral contact with genitals by either perpetrator or by the child.

Fondling: touching or fondling of genitals for sexual purpose.

Sex Talk: verbal or written proposition, encouragement, or suggestion of a sexual nature (include face to face, phone, written and internet contact, as well as exposing the child to pornographic material).

Voyeurism: Included activities where the alleged perpetrator observes the child for the perpetrator's sexual gratification.

Exhibitionism: Included activities where the perpetrator is alleged to have exhibited himself/herself for his/her own sexual gratification.

Exploitation: Included situations where an adult sexually exploits a child for purposes of financial gain or other profit, including pornography and prostitution.

Table 3b describes the proportion of substantiated sexual abuse cases that involved each of the eight forms of sexual abuse by Aboriginal status. It is important to remember that estimates are not presented when there are insufficient cases sampled to provide a reliable estimate. In such cases, two dashes (--) appear in the table cell. The proportion of substantiated investigations involving at least

one form of sexual abuse was highest for non-Aboriginal child investigations. Fondling was the form of sexual abuse indicated most frequently in substantiated sexual abuse investigations for all categories.

Forms of Substantiated Neglect

Child neglect includes situations in which children have suffered harm, or their safety or development has been endangered as a result of the caregiver's failure to provide for or protect them. Unlike abuse, which is usually incident-specific, neglect often involves chronic situations that are not as easily identified as specific incidents. Nevertheless, all provincial and territorial statutes include neglect or some type of reference to acts of omission, such as failure to supervise or protect, as grounds for investigating maltreatment. The *CIS-2003* examines eight forms of neglect:

Failure To Supervise - Physical Harm: The child suffered or was at substantial risk of suffering physical harm because of the caregiver's failure to supervise and protect the child adequately. Failure to supervise included situations in which a child was harmed or endangered as a result of a caregiver's actions (e.g. drunk driving with a child, or engaging in dangerous criminal activities with a child).

Failure To Supervise - Sexual Abuse: The child has been or was at substantial risk of being sexually molested or sexually exploited, and the caregiver knew or should have known of the possibility of sexual molestation and failed to protect the child adequately.

Permitting Criminal Behaviour: A child has committed a criminal offence (e.g. theft, vandalism or assault) with the encouragement of the child's caregiver, or because of the caregiver's failure or inability to supervise the child adequately.

Physical Neglect: The child has suffered or was at substantial risk of suffering physical harm caused by the caregiver(s)' failure to care and provide for the child adequately. This includes inadequate nutrition/clothing, and unhygienic dangerous living conditions. There must be evidence or suspicion that the caregiver is at least partially responsible for the situation.

Medical Neglect: The child required medical treatment to cure, prevent, or alleviate physical harm or suffering, and the child's caregiver did not provide, refused, or was unavailable or unable to consent to the treatment. This included dental services where funding was available.

Failure To Provide Psych. Treatment: The child was at substantial risk of suffering from emotional harm as demonstrated by severe anxiety, depression, withdrawal, self-destructive or aggressive behaviour, or a mental, emotional, or developmental condition that could seriously impair the child's development. The child's caregiver did not provide, or refused, or was unavailable or unable to consent to treatment to remedy or alleviate the harm. This category includes failing to provide treatment for school-related problems such as learning and behaviour problems, as well as treatment for infant development problems such as non-organic failure to thrive. Parents awaiting service were not included in this category.

Abandonment: The child's parent has died or was unable to exercise custodial rights and did not make adequate provisions for care and custody, or the child was in a placement and the caregiver refused or was unable to take custody.

Educational Neglect: Caregivers knowingly allowed chronic truancy (five or more days a month), or failed to enroll the child, or repeatedly kept the child at home. If the child had been experiencing mental, emotional, or developmental problems associated with school, and treatment had been offered but caregivers did not cooperate with treatment, the case was classified under failure to provide treatment as well.

Table 3c describes the proportion of substantiated neglect investigations that involved each of the eight forms of neglect by Aboriginal status. The proportion of substantiated investigations involving at least one form of neglect was higher for each of the three First Nations or other Aboriginal groups compared to non-Aboriginal. This ranged from 51% for First Nations on reserve, 62% for First Nations off reserve to 65% for other Aboriginal. Thirty percent of Non Aboriginal substantiated investigations involved at least one type of substantiated neglect.

Table 3c: Forms of Substantiated Neglect (% of substantiated neglect), (Quebec Excluded)

Canadian Study of Reported Child Abuse and Neglect 2003 *X^2, $p<0.05$

Analyses are based upon a sample of 2,077 child maltreatment investigations with substantiated neglect

A higher proportion of non-Aboriginal investigations involving substantiated neglect indicated failure to supervise leading to physical harm or failure to supervise leading to sexual harm, compared to First Nations (on or off reserve) or other Aboriginal. In contrast, a higher proportion of substantiated neglect cases for First Nations (on or off reserve) and other Aboriginal indicated physical neglect or educational neglect.

Forms of Substantiated Emotional Maltreatment

Three forms of emotional maltreatment were designed to be tracked by the *CIS-2003*. A fourth form, exposure to non-intimate partner violence, was added after the start of the study to deal with the relatively large number of such investigations.

Emotional Abuse: The child has suffered or was at substantial risk of suffering from mental, emotional, or developmental problems caused by overtly hostile, punitive treatment, or habitual or extreme verbal abuse (threatening, belittling, etc.).[8]

Non-organic Failure To Thrive: A child under 3 has suffered a marked retardation or cessation of growth for which no organic reasons can be identified. Failure to thrive cases where inadequate nutrition was the identified cause were classified as physical neglect. Non-organic failure to thrive is generally considered to be a form of psychological maltreatment; it has been classified as a separate category because of its particular characteristics.

Emotional Neglect: The child has suffered or is at substantial risk of suffering from mental, emotional, or developmental problems caused by inadequate nurturance/affection. If treatment was offered but caregivers were not cooperation, cases were classified under failure to provide treatment as well.

Exposure To Violence Between Adults Other Than Caregivers: A child has been a witness to violence occurring between adults in the child's home environment (for example the child's father and an acquaintance), excluding exposure to domestic violence.

Table 3d presents the proportion of substantiated emotional maltreatment cases that involved each of the four forms of emotional maltreatment by Aboriginal status. The proportion of substantiated investigations involving at least one form of emotional maltreatment was fairly

similar for First Nations on reserve (27%), First Nations off reserve (17%), other Aboriginal (26%), and non-Aboriginal groups (24%). A higher percentage of substantiated emotional maltreatment investigations for non-Aboriginal children (74%) noted emotional abuse, while First Nations on reserve (60%) noted a higher proportion of emotional neglect.

Substantiated Exposure to Domestic Violence

Although exposure to domestic violence is often categorized as a form of emotional maltreatment, most Canadian jurisdictions have developed policies and practices specific to exposure to domestic violence. To facilitate the analysis of this rapidly expanding form of maltreatment it is described in this report as its own category.

Exposed To Domestic Violence: A child has been a witness to violence occurring between the caregivers (or a caregiver and his/her partner). This would include situations where the child indirectly witnessed the violence (e.g. saw the physical injuries on his/her caregiver the next day or overheard the violence).

Table 3e describes the proportion of all substantiated investigations that indicated exposure to domestic violence. The proportion of substantiated investigations involving at exposure to domestic violence was highest for First Nations on reserve (38%), followed by non-Aboriginal (35%), First Nations off reserve (29%) and other Aboriginal (28%).

Single and Multiple Forms of Substantiated Child Maltreatment

Table 3f presents the number of substantiated investigations involving single and multiple forms of maltreatment. Because most jurisdictions currently track single forms of maltreatment, it is likely that the investigating workers who completed ***CIS-2003*** forms were unaccustomed to classifying cases under more than one form, and that the ***CIS-2003*** may therefore underestimate the actual incidence of multiple maltreatment.

The proportion of substantiated maltreatment investigations indicating a single substantiated form was highest for First Nations off reserve (82%) followed by non-Aboriginal (81%), other

Analysis is based upon a sample of 5,660 child maltreatment investigations with substantiated maltreatment

[1] *forms combined with sexual abuse not included since Ns very small*

Aboriginal (76%), and First Nations on reserve (67%). The percentage of substantiated child investigations involving substantiated physical abuse only, sexual abuse only and emotional maltreatment only was higher for non-Aboriginal child investigations than for First Nations or other Aboriginal child investigations. The proportion of substantiated cases involving neglect only was consistently higher for the three First Nations (on or off reserve) and other Aboriginal groups.

Multiple forms of substantiated maltreatment was noted in 33% of substantiated investigations for First Nations on reserve, 24% of other Aboriginal, 19% of non-Aboriginal, and 18% of First Nations off reserve. The percentage of substantiated cases involving multiple forms of maltreatment was fairly low for all groups.

Child Age in Substantiated Maltreatment Investigations

Table 4 presents child age categories in substantiated child maltreatment investigations by Aboriginal status. The proportion of substantiated investigations involving children less than one year of age was highest for other Aboriginal (18%). In contrast, only seven percent of substantiated investigations for the First Nations on reserve category involved children less than one year of age. Fifteen percent of substantiated investigations involving First Nations on reserve children concerned children 2-3 years of age, while 10 percent of substantiated investigations involving non-Aboriginal children concerned children 2-3 years of age.

Child Risk Factors For Substantiated Child Maltreatment Investigations

Child functioning was documented on the basis of a checklist of problems that child welfare workers were likely to be aware of as a result of their investigation. The child functioning checklist (see Maltreatment Assessment Form) was developed in consultation with child welfare workers and researchers to reflect the types of concerns that may be identified during an investigation. The checklist is not a validated measurement instrument for which population norms have been established.[9] The checklist documents only problems that child welfare workers became aware of during their investigation and therefore undercounts the occurrence of child functioning problems.[10] Nevertheless, it provides an important estimate of the types of concerns that are identified during child maltreatment investigations.

Canadian Study of Reported Child Abuse and Neglect 2003 $X^2=39.13$, $p<0.001$

Analysis is based upon a sample of 5,660 child maltreatment investigations with substantiated maltreatment

Investigating workers were asked to indicate problems that had been confirmed by a formal diagnosis and/or directly observed, as well as issues that they suspected were problems but could not fully verify at the time of the investigation.[11] The six-month period before the investigation was used as a reference point where applicable. Child functioning classifications that reflect physical, emotional, cognitive, and behavioural issues were documented with a checklist that included the following categories:

Depression Or Anxiety: Feelings of depression or anxiety that persist for most of every day for two weeks or longer, and interfere with the child's ability to manage at home and at school.

ADD/ADHD: Attention Deficit Disorder/ Attention Deficit Hyperactivity Disorder included: distractibility; impulsivity; hyperactivity. These behaviours are very noticeable, occur over a long period of time in many situations, and are troublesome to others.

Negative Peer Involvement: Child has been involved in high-risk peer activities, such as gang activities, graffiti or vandalism.

Alcohol Abuse: problematic consumption of alcohol (consider age, frequency and severity).

Drug/solvent Abuse: included prescription drugs, illegal drugs and solvents.

Self-harming Behaviour: Child has engaged in high-risk or life-threatening behaviour such as suicide attempts, physical mutilation or cutting.

Violence Towards Others: Child has displayed aggression and violence toward other children or adults.

Running (One Incident): Child has run away from home (or other residence) on one occasion, for at least one overnight period.

Running (Multiple Incidents): Child has run away from home (or other residence) on more than one occasion for at least one overnight period.

Inappropriate Sexual Behaviour: Child has been involved in inappropriate sexual behaviour.

Other Emotional Or Behvaioural Problem: The child has significant emotional or behavioural problems other than those describes above.

Learning Disability: A child has identified learning deficits in one or more areas of mental functioning (e.g. language usage, numbers, speech, reading, word comprehension).

Specialized Education Services: Child has been involved in special education program for learning disability, special needs, or behaviour problems.

Irregular School Attendance: Child has shown irregular attendance and truancy (more than 5 days/month).

Developmental Delay: Child has delayed intellectual development. Typically it is diagnosed when a child does not reach his/her developmental milestones at expected times. It includes speech and language development, fine and gross motor skills and or personal and social skills.

Physical Disability: The child has a long-lasting condition that substantially limits one or more basic physical activities such as walking, climbing stairs, reaching, lifting or carrying. This includes sensory disability conditions such as blindness, deafness or a severe vision or hearing impairment that noticeably affects activities of daily living.

Substance Abuse Related Birth Defect: Child has a diagnosis or indication of birth defect(s) related to substance abuse by the biological parent (e.g. Fetal Alcohol Syndrome (FAS)/Fetal Alcohol Effect (FAE), cocaine addiction or solvent abuse).

Positive Toxicology At Birth: The child, at birth, tests positive for the presence of drugs or alcohol.

Other Health Condition: Child has ongoing physical health condition (e.g. chronic disease, and frequent hospitalization).

Psychiatric Disorder: Child has diagnosis of psychiatric disorder by a psychiatrist (e.g. conduct disorder, anxiety disorder).

Youth Criminal Justice Act Involvement: Child has been involved in charges, incarceration, or alternative measures with the youth justice system.

Other: Any other child or family focused referral

Table 5 presents child functioning characteristics that affect the physical, emotional, and cognitive health of children for substantiated child maltreatment investigations. Overall, for substantiated maltreatment investigations, First

Canadian Study of Reported Child Abuse and Neglect 2003 *X^2, $p<0.05$

Analysis is based upon a sample of 5,660 child maltreatment investigations with substantiated maltreatment

Nations on reserve children, First Nations off reserve children and other Aboriginal children had higher rates of child functioning issues than substantiated investigations involving non-Aboriginal children.

Twenty-four percent of substantiated investigations involving First Nations on reserve children noted depression or anxiety, 18% of substantiated investigations involving non-Aboriginal children noted depression or anxiety, 16% of substantiated investigations of other Aboriginal children noted depression or anxiety and 13% of substantiated investigations involving First Nation off reserve children noted depression or anxiety.

Forty-two percent of substantiated investigations involving First Nations on reserve children noted other behavioural or emotional problems. In comparison, 18% of substantiated investigations for other Aboriginal children noted other behavioural or emotional problems. Irregular school attendance was noted in 31 % of substantiated investigations involving First Nations on reserve children, 28 % involving other Aboriginal children and 23 % involving First Nations off reserve children. In comparison, 11 % of substantiated investigations involving non-Aboriginal children noted irregular school attendance. Thirty-one percent of substantiated investigations involving First Nations on reserve children noted a developmental delay. Eleven percent of substantiated investigations involving non-Aboriginal children noted a developmental delay.

Nine percent of substantiated investigations involving First Nations on reserve children, 8 percent of First Nations off reserve children and 6 percent of other Aboriginal noted substance abuse related birth defects. In comparison, 2 percent of substantiated investigations involving non-aboriginal children noted substance abuse related birth defects. Five percent of substantiated investigations involving other Aboriginal children noted positive toxicology at birth compared to 2% First Nations off reserve children, and 1% non-Aboriginal children).

Physical and Emotional Harm in Substantiated Child Maltreatment Investigations

The ***CIS-2003*** tracked physical harm suspected or known to be caused by the investigated maltreatment. Information on physical harm was collected using two scales, one describing severity of harm as measured by medical treatment need and one describing the nature of harm.

Information on emotional harm was collected using a series of questions asking child welfare workers to describe emotional harm that had occurred after the maltreatment incidents. Workers were asked to include changes in the child's development (regression, withdrawal), self-regulation (sleep patterns, elimination), or emotions (child crying, clinging, or anxious) that they had observed or that had been described to them. These maltreatment-specific descriptions of emotional harm are not to be confused with the general child functioning ratings noted in **Table 5**.

Table 6 presents physical and emotional harm in substantiated child maltreatment investigations by Aboriginal group. At least one type of physical harm was noted in 10% of substantiated investigations involving non-Aboriginal children. For Aboriginal children, physical harm was note in 9 % of substantiated investigations involving First Nations off reserve children, 6 % involving First Nations on Reserve children and 5% involving other Aboriginal children.

First Nations on reserve children had the highest rates of noted emotional harm. Thirty-three percent of substantiated investigations involving First Nations on reserve children noted emotional harm during the course of the maltreatment investigations. Rates of emotional harm were lower for other groups. Twenty-one percent of substantiated investigations involving First Nations off reserve children noted emotional harm and 14% of substantiated investigations involving other Aboriginal children noted emotional harm. In 20% of substantiated investigations involving non-Aboriginal children emotional harm was noted.

Table 6: Physical and Emotional Harm in Substantiated Child Maltreatment Investigations, (Quebec Excluded)

Analysis is based upon a sample of 5,660 child maltreatment investigations with substantiated maltreatment

Family Risk Factors for Substantiated Child Maltreatment Investigations

Table 7 presents information on a number of family risk factors in substantiated child maltreatment investigations, including single parent status, housing accommodation, housing safety and overcrowding, source of income and recent family moves.

The *CIS-2003* gathered information on up to two of the child's parents or caregivers.[12] For each listed caregiver, investigating workers were asked to choose the category that best described the relationship between the caregiver and the children in the home. If a caregiver was a biological parent to one child and a step-parent to another child in the family, workers were asked to use "step-parent" to describe that caregiver.[13] If recent household changes had occurred, investigating workers were asked to describe the situation at the time the referral was made.

Investigating workers were asked to select the housing accommodation category that best described the investigated child's household living situation. The types of housing included:

Own Home: A purchased house, condominium, or townhouse.

Rental Accommodation: A private rental house, townhouse or apartment.

Public Housing: A rental unit in a public housing complex (i.e. rent-subsidized, government-owned housing), a house, townhouse or apartment on a military base, or band housing.

Shelter/Hotel: A homeless or family shelter, SRO hotel (single room occupancy), or motel accommodation.

Unknown: Housing accommodation was unknown.

Other: Any other form of shelter.

In addition to housing type, investigating workers were asked to indicate whether the investigated child lived in unsafe housing conditions where children were at risk of injury or impairment from their living situation (e.g. broken windows, insufficient heat, parents and children sharing single room). Workers also noted if the family had moves within the past year.

Investigating workers were requested to choose the income source that best described the primary source of the household income. Income source was designated by investigating workers in terms of five possible classifications:

Full Time Employment: A caregiver is employed in a permanent, full-time position.

Employment Insurance (EI)/Social Assistance/ Other Benefit: Family income is derived primarily from employment insurance, social assistance or other benefits (e.g. long-term disability, pension, or child support).

Table 7 indicates that substantiated investigations involving First Nations off reserve children noted the highest proportion of single parents (53%). Substantiated investigations involving First Nations on reserve children noted the lowest proportion of single parents (38%).

Aboriginal families had the lowest rates of home ownership. In 14% of substantiated investigations involving First Nations on reserve children workers indicated that the family owned their own home. Nine percent of substantiated investigations involving First Nations off reserve children noted home ownership and 7% of investigations involving other Aboriginal children noted home ownership. In comparison, 36% of substantiated investigations involving non-Aboriginal children noted home ownership.

Thirty-two percent of substantiated investigations involving other Aboriginal children noted unsafe housing conditions, compared to 20% of investigations involving First Nations on reserve children and 21% involving First Nations off reserve children. In comparison, 7% of substantiated investigations involving non-Aboriginal children noted unsafe housing conditions.

Overcrowding was noted as an issue in 24% of substantiated investigations involving First Nations on reserve children, in 25% of substantiated investigations involving other Aboriginal children and in 14% of substantiated investigations involving First Nations off reserve children. In comparison, 7% of substantiated investigations involving non-Aboriginal children noted overcrowding.

Aboriginal caregivers were less likely to have full time employment than non-Aboriginal caregivers. Twenty-six percent of substantiated investigations involving First Nations on reserve children noted full time employment, 27 percent of substantiated investigations involving First Nations off reserve children noted full time employment and 22 % of substantiated investigations involving other Aboriginal children noted full time-employment. In comparison, 62% of substantiated investigations involving non-Aboriginal caregiver noted full time employment.

Canadian Study of Reported Child Abuse and Neglect 2003 *X^2, $p<0.001$

Analysis is based upon a sample of 5,660 child maltreatment investigations with substantiated maltreatment

Substantiated investigations involving other Aboriginal children had the highest proportion of moves within the past year (45%), followed by investigations involving First Nations off reserve children (31%).

Caregiver Risk Factors for Substantiated Child Maltreatment Investigations

Concerns related to caregiver functioning and family stressors were examined by investigating workers using a checklist of 10 items that were asked about each caregiver. Where applicable, the reference point for identifying concerns about caregiver functioning was the previous six months.[14] The checklist included

Alcohol Abuse: the use of alcohol poses a problem for the household.

Drug/solvent Abuse: at least one caregiver abuses prescription drugs, illegal drugs or solvents.

Criminal Activity: At least one caregiver is absent due to incarceration, or is involved in criminal activity (drug dealing, theft or prostitution). This did not include a criminal history for domestic violence.

Cognitive Impairment: The cognitive ability of at least one caregiver is known to or suspected to have an impact on the quality of care giving provided in the household.

Mental Health Issues: At least one caregiver is known or suspected to have mental health problems.

Physical Health Issues: At least one caregiver is known or suspected to have a chronic illness, frequent hospitalizations, or a physical disability.

Few Social Supports: At least one caregiver is known or suspected to be socially isolated or lacking in social supports.

Maltreated As A Child: Either caregiver is known or suspected to have suffered maltreatment as a child.

Victim Of Domestic Violence: during the past six months the caregiver was a victim of domestic violence including physical, sexual or verbal assault.

Other: Any other issue/concern describing caregiver functioning.

Table 8a and b represent the caregiver risk factors that the worker noted for the female and male caregiver respectively. The average number of female caregiver risk factors was highest for substantiated investigations involving First Nations off reserve children (3.4 average risk factors) and First Nations on and off reserve children for male caregivers (2.1 average risk factors). Substantiated investigations involving non- Aboriginal children were lowest for both female (1.8 average risk factors) and male caregivers (0.9 risk factors).

High rates of alcohol abuse for female caregivers were noted in substantiated investigations involving First Nations off reserve children (58%), First Nations on reserve (44%) and other Aboriginals (43%). High rates of alcohol abuse in male caregivers were noted in investigations involving First Nations children on reserve (42%), other Aboriginal (33%) and First Nations off reserve (31%).

Few social supports were noted as significant risk factors in both female and male caregivers. Sixty- one percent of female caregivers involving other Aboriginal children noted few social supports followed by First Nations off reserve (50%) and First Nations on reserve (49%). For male caregivers, few social supports were noted in investigations of First Nations children on reserve (23%), other Aboriginal (22%) and First Nations off reserve (19%).

Table 8a also indicates 64% of investigations involving female caregivers of First Nations children on reserve were victims of domestic violence, 59% of First Nations off reserve, 49% other Aboriginal and 47% for non- Aboriginal child investigations.

Recurrence and Duration of Maltreatment in Substantiated Child Maltreatment Investigations

Table 9 presents information on the recurrence and duration of maltreatment in substantiated

child maltreatment investigations by Aboriginal group. Eighty percent of substantiated investigations involving First Nations on reserve children noted that the family had been previously identified to child welfare services. Eight-four percent of substantiated investigations involving First Nations off reserve children noted a previous family opening and 75% of investigations involving other Aboriginal children noted a previous family opening. Fifty-nine percent of substantiated investigations involving non-Aboriginal children noted a previous child welfare opening.

Substantiated investigations involving First Nations on reserve children had the highest proportion of cases involving the duration of the maltreatment lasting more than 6 months (56%). Forty-one percent of substantiated investigations involving non-Aboriginal children noted maltreatment lasting more than 6 months.

Investigation Outcomes for Substantiated Child Maltreatment Investigations

Table 10 presents the short-term investigation outcomes related to whether the case remains open for ongoing services, an application is made to child welfare court, there was a police investigation and charges laid. Investigating workers were asked whether the investigated case would remain open for ongoing child welfare services after the initial investigation. Workers completed these questions on the basis of the information available at that time or upon completion of the intake investigation.

Application to child welfare court can be made for an order of supervision (child remaining in the home), temporary wardship (for a set time period), or permanent wardship. The ***CIS-2003*** tracked

the number of applications made or being considered during the initial investigation, but did not track the types of applications. Workers were also asked to report on whether or not they had made a referral to a mediation or alternative response. Because applications may have been made at a point following the *CIS-2003* study period, the *CIS-2003* court involvement figures should be treated as underestimates of the true rate of court involvement. Court status was tracked in terms of three possible worker responses:

Application Made: An application to child welfare court was submitted.

Application Considered: The child welfare worker was considering whether or not to submit an application to child welfare court.

No Application Considered: Court involvement was not considered.

In many jurisdictions in Canada there are detailed protocols between child welfare and police services, resulting in rising levels of co-operation. This co-operation includes cases of physical and sexual abuse as well as cases of domestic violence. Most jurisdictions require police to report adult domestic violence cases to the child welfare authorities if children are living in the family. The CIS–2003 captured information about police involvement in adult domestic violence cases as well as in all other child maltreatment investigations.

As with the other interventions during investigations described in this chapter, the *CIS-2003* tracked only events that occurred during the initial child welfare investigation; it is therefore possible that police decided to lay charges or became involved in some cases after the *CIS-2003* information forms had been completed. It should be noted further that the police also investigate many non-familial child maltreatment cases that do not involve child welfare services.15

As illustrated in **Table 10**, 68% of substantiated investigations involving First Nations on reserve children received ongoing services at the conclusion of the child maltreatment investigation. In comparison, 41 percent of substantiated investigations involving non-Aboriginal children received ongoing services.

Substantiated investigations involving aboriginal families had the highest rates of child welfare court application. In thirteen percent of substantiated investigations involving both First Nations off reserve children and other Aboriginal children an application to child welfare court was made. In ten percent of substantiated investigations involving First Nations on reserve children an application to child welfare court was made and in 6 percent of investigations involving non-Aboriginal children an application to child welfare court was made.

Placement for Substantiated Child Maltreatment Investigations

Admissions to out-of-home care at any time during the investigation were tracked. If there were multiple placements, workers were asked to indicate the setting where the child had spent the most time. The following placement classifications were used:

No Placement Required: No placement was required following the investigation.

Placement Is Being Considered: At this point of the investigation, an out-of home placement is still being considered.

Informal Kinship Care: An informal placement has been arranged within the family support network (kinship care, extended family, traditional care), the child welfare authority does not have temporary custody.

Kinship Foster Care: A formal placement has been arranged within the family support network (kinship care, extended family, customary care), the child welfare authority has temporary or full custody and is paying for the placement.

Other Family Foster Care: Includes any family based care, including foster homes, specialized treatment foster homes, and assessment homes.

Group Home Placement: An out-of-home placement required in a structured group living setting.

Residential/Secure Treatment: Placement required in a therapeutic residential treatment centre to address the needs of the child.

Table 10: Physical and Emotional Harm in Substantiated Child Maltreatment Investigations, (Quebec Excluded)

Canadian Study of Reported Child Abuse and Neglect 2003 *X^2, $p<0.001$

Analysis is based upon a sample of 5,660 child maltreatment investigations with substantiated maltreatment

Table 11 presents information on the placement decisions that occurred at the end of the child protection investigation. Placement was considered in 8% of substantiated investigations involving First Nations on reserve children, compared to 3% of investigations involving First nations off reserve children, 3% of investigations involving other Aboriginal children and 4% of investigations involving non-Aboriginal children. Informal kinship care was noted in 17% of substantiated investigations involving First Nations on reserve children. Other Aboriginal children had the highest rate of informal kinship care (22% of substantiated investigations). In comparison, for substantiated investigations involving non-Aboriginal children, 4% resulted in informal kinship care. Seven percent of substantiated investigations involving First Nations on reserve children resulted in kinship care, compared to 4% involving First Nations off reserve children, 3% other Aboriginal children and 1% non-Aboriginal Children. Sixteen percent of substantiated investigations involving other Aboriginal children resulted in other family foster care compared to 4% for First Nations on reserve children, 7 percent First Nations off reserve children and 4% non-Aboriginal children.

Referral Sources for Substantiated Child Maltreatment Investigations

Each independent contact with the child welfare agency or office regarding a child/children or family was counted as a separate referral. The person who actually contacted the child welfare agency/office was identified as the referral source. For example, if a child disclosed an incident of abuse to a schoolteacher, who made a report to child welfare services, the school was counted as a referral source. However, if both the schoolteacher and the child's parent called, both would be counted as referral sources.

The Maltreatment Assessment Form included 18 pre-coded referral source categories and an open "other" category. Referral categories were collapsed into professionals, family, relatives or acquaintances and other sources of referral.

Non-Professional Referral Sources:

Parent: This includes parents involved as a caregiver to the reported child, as well as non-custodial parents.

Child: A self-referral by any child listed on the Intake Face Sheet of the ***CIS-2003*** Maltreatment Assessment Form.

Relative: Any relative of the child in question. Workers were asked to code "other" for situations in which a child was living with a foster parent and a relative of the foster parent reported maltreatment.

Neighbour/Friend: This category includes any neighbour or friend of the children or his/her family.

Other Referral Source: Any other source of referral.

Professional Referral Sources:

Community Agencies: This includes social assistance worker (involved with the household), crisis service/shelter worker (includes any shelter or crisis services worker) for domestic violence or homelessness, community recreation centre staff (refers to any person from a recreation or community activity programs), day care centre staff (refers to a childcare or day care provider), and community agency staff.

Health Professional: This includes hospital referrals that originate from a hospital made by either a doctor, nurse or social worker rather than a family physician's office, public health nurse (nurses involved in services such as family support, family visitation programs and community medical outreach), and physician (any family physician with a single or ongoing contact with the child and/or family).

School: Any school personnel (teacher, principal, teacher's aide etc.)

Mental Health Professional/agency: Includes family service agencies, mental health centres (other than hospital psychiatric wards), and private mental health practitioners (psychologists, social workers, other therapists) working outside of a school/hospital/child welfare/Youth Justice Act setting.

Other Child Welfare Services: Includes referrals from mandated Child Welfare service providers from other jurisdictions or provinces.

Police: Any member of a Police Force, including municipal, provincial/territorial or RCMP.

Table 12: Referral Sources for Substantiated Child Maltreatment Investigations, (Quebec Excluded)

Analysis is based upon a sample of 5,660 child maltreatment investigations with substantiated maltreatment									

Table 12 presents information on the referral sources for substantiated child maltreatment investigations by Aboriginal group. Substantiated investigations for First Nations on reserve children had the lowest rate of referral by professionals (54%), compared to 59% for First Nations off reserve children, 75% for other Aboriginal children and 73% for non-Aboriginal children. Conversely, substantiated investigations for First Nations on reserve children had the highest rates of referrals from family, relatives or acquaintances, 38%, compared to 23% for First Nations off reserve children, 23% for other Aboriginal children and 19% for non-Aboriginal children.

Conclusions

A number of striking differences emerge from this preliminary comparative analysis of child welfare investigations of Aboriginal and non-Aboriginal children. From the very outset, Aboriginal children are more than twice as likely to be investigated compared to non-aboriginal children. Once investigated, cases involving Aboriginal children are more likely to be substantiated, more likely to require on-going child welfare services, more than twice as likely to be placed in out of home care, and more likely to be brought to child welfare court. The profiles of Aboriginal families differ dramatically from the profile of non-Aboriginal families. Aboriginal cases predominantly involve situations of neglect where poverty, inadequate housing and parent substance abuse are a toxic combination of risk factors. Surprisingly, fewer differences were noted at the level of the children themselves.

The most systematic pattern to emerge from this first analysis highlights the differences between Aboriginal and non-Aboriginal children. It would be helpful to discuss with Aboriginal service providers any on/off-reserve differences that have not been highlighted by this statistical analysis.

Multivariate analyses controlling for some of the differences between Aboriginal and non-Aboriginal families should be undertaken to better understand the factors underlying the differences in service response. Regardless of these possible explanations, it is apparent that one should expect the cost of providing services to Aboriginal children to be significantly higher given that these cases involve a significantly higher rate of intervention at every point of contact.

(Footnotes)

1 Québec is excluded from the estimates in this report because of differences in the way data were collected in Québec.

2 A list of 327 provincial and territorial child welfare service areas (CWSAs) was drawn up on the basis of information received from each province and territory. A similar search developed a list of Aboriginal agencies providing child protection services. Eight Aboriginal sites participated in the study. CWSAs varied greatly in size. For example, three agencies made up one CWSA for the City of Toronto, with a total of 11 offices.

3 Due to later recruitment 5 sites collected data from November 1, 2003 – January 31, 2004. Quebec used two different data collection periods to create the sample of three months.

Census of Canada, 2001: Aboriginal Identity Population, Registered Indian Status, Age Groups, Sex and Area of Resident for Population, for Canada, Provinces and Territories, 2001 Census – 20% Sample Data [computer file]. Ottawa: Ont.: Statistics Canada [producer and distributor], October 22, 2002 (97F0011XCB01005).

6a. Information was not collected on whether Aboriginal children resided on or off reserve. This information was collected for Aboriginal caregivers and thus, categories were derived from caregiver variables.

6b To avoid having weights inflate the Chi-squares, the weighted estimates were weighted down to the original sample size.

7 Some CIS reports only use the primary category, in this report primary and secondary categories are counted.

8 Instances in which children were displaying severe emotional problems requiring treatment and parents refused or did not cooperate with offered treatment were classified as neglect cases under failure to provide treatment.

9A Number of child functioning measures with established norms exist; however, these are not consistently used in child welfare settings and could not be feasibly used in the context of the CIS.

10 Although child welfare workers assess the safety of children, they do not routinely conduct a detailed assessment of child functioning. Items on the checklist included only issues that workers happened to become aware of during their investigation. A more systematic assessment would therefore likely lead to the identification of more issues than noted by workers during the CIS.

11 This report refers to both confirmed and suspected problems as "indicated".

12 The two-caregiver limit was required to accommodate the form length restrictions set for the Household Information Sheet. The caregiver information usually corresponded to the parents and/or step-parent living in the home; if there was only one caregiver living in the home and a second living outside the home, information was gathered on both of these, but is not reported here.

13 This compromise was needed because the Household Information Sheet served as a common information source for all the children in the family. A much more extensive set of questions would have been required had the CIS-2003 gathered child-specific caregiver information, leading to a significantly longer form. Child-specific information on the caregiver-child relationship is available for caregivers who were investigated as alleged perpetrators (see chapter 4).

14 Most items were rated on a 4-point scale differentiating "confirmed", "suspected", "no" and "unknown" caregiver functioning issues. A caregiver functioning or family stressor was classified as confirmed if a problem had been diagnosed, observed by the investigating

worker or another worker, or disclosed by the caregiver. An issue was classified as suspected if investigating workers` suspicions were sufficient to include the concern in their written assessment of the family or in transfer summary to a colleague. For the purposes of the present report, the categories of confirmed and suspected have been collapsed. A comparison of the ratings will be completed in subsequent analyses.

Jordan's Principle: A Child First Approach to Jurisdictional Issues

CHAPTER 3

Prepared on behalf of:
First Nations Child & Family Caring Society Canada

Written by:
Kelly A. MacDonald, B.A., LL.B., LL.M.
Kylie Walman, B.A., University of B.C. Law Student (year two)

March, 2005

I. INTRODUCTION

> *As the federal and provincial/territorial governments sort out their respective jurisdictional and funding responsibilities, the urgent needs of children and families are falling through government jurisdictional cracks. This is particularly the case for families that move on and off reserve, who and [sic] experience dramatic changes in the range and access to culturally based services. Funding formulas and jurisdictional arrangements must put the needs of children and families first.* [1]

This research paper was contracted by the First Nations Child and Family Caring Society of Canada, to examine:

a) The implications of laws pertinent to child welfare and law relevant to jurisdictional disputes between federal government departments and between provinces and the federal government for the development of policy/procedure to manage jurisdictional disputes in First Nations Child Welfare.

b) The legal considerations in developing processes to resolve jurisdictional disputes (with a particular focus on whether or not the current approach of having no uniform process for resolving such disputes is acceptable).

A comprehensive review of literature and case law was completed. As well, approximately 20 key informants were interviewed, in order to assess the current state of First Nations child and family service delivery with regards to jurisdiction. Please note that the names of key informants are not noted in order to ensure confidentiality.

This paper is organised beginning with an overview of jurisdictional issues – including (Section II) an examination of federal/provincial/territorial and inter-ministerial (federal) jurisdictional issues. A case law review and analysis is provided, with a synopsis of the international rights of children. In addition, a discussion of the Social Union Framework Agreement is included.

Section III provides a discussion of dispute mechanisms and Section IV sets out recommendations culled from the literature and developed for the purposes of this paper.

The issues surrounding jurisdictional responsibilities and funding for First Nations Child and Family Services have been long-standing. This paper contributes to the work of the First Nations Child and Family Caring Society of Canada (FNCFCS) in seeking some positive resolution to these issues. The FNCFCS is committed to working with other stakeholder groups in order to ensure that First Nations children receive the care that they require and that they are entitled to. Developing mechanisms to resolve the "adult"/government issues that affect First Nations children, and in many cases disadvantage them, are of an urgent and pressing concern. Our children are our future.

II. JURISDICTIONAL OVERVIEW

> *…special status of Indian people has been used as a justification for providing them with services inferior to those available to Whites who established residence in this country, which was once theirs.*[2]

As identified by Hawthorne (above) almost 40 years ago, the "jurisdictional dispute" between the federal and provincial/territorial governments, regarding who has the ultimate legislative, constitutional, fiscal, and moral responsibility for First Nations people (children) has had an impact on the availability of services and programs for First Nations children.

Despite the breadth of research and literature concerning the impact of this "dispute" on services for Aboriginal children and despite the federal government's own expressions of commitment to this issue, the jurisdictional debate continues. The literature canvassed highlights the impact of this dispute, not only on child and family services but also on the delivery of other social services such as health. Moreover, the discussion has expanded to include concerns and problems/issues with inter-ministerial jurisdictional disputes.

An *ad hoc* coalition comprised of: the Atlantic Policy Congress of First Nations Chiefs, the Commission on Peace and Justice (Canadian Council of Churches), First Nations Child and Family Caring Society of Canada, KAIROS (Canadian Ecumenical Justice Initiative) and the Southern Chiefs Organisation (Manitoba) – expressed concern, in their NGO submission to the United Nations, in relation to the impact of jurisdictional disputes:

> …Canada is not, based on its second report to the UN sufficiently aware of the deficiencies inherent in existing initiatives and funding practices. Too often, current programs targeted at Aboriginal peoples respond to immediate needs, without focusing on the undercurrents that shaped them. Child maltreatment is one example.[3]

This continual jurisdictional wrangling results in program fragmentation, problems with co-ordinating programs and reporting mechanisms, gaps in service delivery - thereby leaving First Nations children to fall through the cracks. In short, neither the federal or provincial/territorial governments have effectively addressed the community needs of First Nations despite awareness of the impact of "policies of avoidance". Proper consultation with First Nations and co-operation on initiatives such as the National Policy Review and this project will hopefully assist in alleviating some of these problems.

Clearly something needs to be done to resolve this situation and to bring the standards of care for First Nations children up to internationally acceptable levels. The reality is that:

> The average Canadian gets services from federal, provincial and municipal governments at an amount that is almost two-and-a-half times greater than that received by First Nations citizens. [4]

> Adding additional resources and providing flexibility in funding to ensure our most vulnerable are provided with the services they require should not be barred due to fiscal concerns. As pointed out by British Columbia's former Children's Commissioner:

> The federal and provincial governments and bands do not yet share a clear vision of how best to meet the needs of Aboriginal children on and off reserve…. in the meantime funding formulas and lack of clarity about roles and responsibilities, continue to place Aboriginal children at risk on reserves. **Only when communities are given adequate resources for health, education and child welfare supports will we see healthier and safer Aboriginal children… This must be top priority of all governments and child serving agencies in the years to come.** [5] [*emphasis added*]

1. Federal/Provincial Jurisdiction

Compared with other jurisdictions, services and infrastructure provided on reserve are substandard by almost every measurable outcome. No government appears to want to be accountable for this. At present, reserves are so under-financed that virtually every dollar received must be used to meet pressing social needs.[6]

The federal/provincial/territorial "dispute" can be summarised as follows. The federal government's position is that the provincial government has constitutional authority, pursuant to section 92 of the *Constitution Act, 1867*[7] for the delivery of child and family services under the headings "property and civil rights" and "all matters of a local or private nature". The federal government funds on-reserve child and family service agencies pursuant to a policy directive (20.1) – not, according to them, as a result of a fiduciary obligation but as a matter of administration. Steadfast in their claims, the federal Government asserts that their provision of programs and services to First Nations, whether on or off reserve, is discretionary.[8] Specifically the Department of Indian and Northern Affairs (DIAND) has stated that:

> DIAND's perspective is that provinces delegate authority to agencies and are thus responsible to ensure that the agency operates pursuant to the established standards. Where deficiencies are observed it is the role of the province, as the substantive legislative

> authority for Child and Family Services, to work with the agency to address the needed improvements. The department's role is limited to funding the provision of services delivered by agencies authorised by the province. [9]

The provincial government contends that the federal government is responsible for "Indians" on reserve pursuant to section 91(24) of the *Constitution Act*, which they argue includes the delivery of child welfare services to ""Indians"". The provincial and territorial governments have expressed concern regarding the federal off-loading of responsibility for Aboriginal peoples and argue:

> …that the federal government has a constitutional, historical, fiduciary and Treaty responsibility for/and to Aboriginal peoples, both on reserve and off. [10]

The lack of services, opportunities and deplorable living conditions characterizing many of Canada's reserves has led to mass urbanization of Aboriginal peoples. The provinces claim that federally imposed limitations on the provision of services on reserve has led to urbanization and has transferred the "economic and social costs of inadequate on-reserve conditions to other levels of government".[11] Some provincial governments point out that as far back as the *Penner Report*[12] it was recognized that the federal government remains responsible for Aboriginal peoples living off-reserve and rights to special federal programs must be accorded to those living both on and off reserve. However, 22 years later there continues to be a lack of clarity and, as articulated in a Provincial/Territorial options paper:

- Aboriginal peoples and the provincial and territorial governments regard the federal government as responsible.
- Aboriginal peoples suffer from the lack of clear and consistent federal responsibility and accountability.
- The federal government's practice of withdrawing funding has meant reductions in services for Aboriginal peoples and increasing costs for provincial and territorial governments.[13]

The position of First Nations is set out clearly in the following guiding principle, endorsed by resolution, by the Chiefs in Assembly:

> The federal government must maintain its trust responsibility and fiduciary obligation to First Nations including, child, family and community services.[14]

Chiefs have drawn a link between the federal government's fiduciary responsibility to ""Indians"" and their financial responsibility:

> An issue clearly linked to funding is the fiduciary responsibilities of the federal government toward the First Nations.[15]

The responsibility of the Federal government has been argued at various times from a constitutional, treaty and fiduciary standpoint. [16] Similar to the argument put forth by the provinces, First Nations have asserted that the federal government's obligation to provide adequate funding for child welfare arises from ss. 91(24) and 35 of the *Constitution*; and that the federal government's fiduciary responsibility extends to child welfare and obliges the federal government to ensure the well-being and health of First Nations children.

With regard to s.35, the federal government argues that the right to funding for child welfare services is not an aboriginal right protected under s.35 and therefore the fiduciary relationship is not engaged. The possibility of a fiduciary obligation will be discussed further in relation to case law. Treaty arguments have likewise been rejected by the federal government. Unfortunately treaties have not been clear as to specific obligations in the area of social programs and services and therefore the dispute is left to differences of interpretation.[17] Although First Nations maintain that child welfare is a treaty right this ambiguity would make litigation, on this basis, difficult.

a) Funding

First Nations have made a direct connection between the state of children's health and the colonization and attempted assimilation of Aboriginal peoples:

- The legacy of dependency, cultural and language impotence, dispossession and helplessness created by residential schools and **poorly thought out federal policies** continue to have a lasting effect.
- Substandard infrastructure and **services have been made worse by federal-provincial disagreements over responsibility.**[18] [*emphasis added*]

The most profound impact of the lack of clarity relating to jurisdiction results in what many commentators have suggested are gaps in services and funding –resulting in the suffering of First Nations children. As articulated by McDonald and Ladd in their comprehensive Joint Policy Review (prepared for the Assembly of First Nations and DIAND):

> First Nations agencies are expected through their delegation of authority from the provinces, the expectation of their communities, and by DIAND, to provide a comparable range of services on reserve with the funding they receive through Directive 20.1. The formula, however, provides the same level of funding to agencies regardless of how broad, intense or costly, the range of services is. [19]

This is further underscored in the recent Manitoba Aboriginal Justice Implementation Commission, which summarised a number of problems inherent with the delivery of First Nations child and family service delivery, notably [from the relevant literature]:

> Aboriginal agencies have had to operate with inadequate financial resources even when compared to non-Aboriginal agencies. They have had to do more with less money. This has meant that essential services have consumed the bulk of available resources and that other areas such as prevention and public education have received a low priority. In addition some Aboriginal agencies have experienced serious backlogs in key program areas such as foster and adoption placements.[20]

The federal funding formula provides for two categories of funding; operations and maintenance. Agencies receive operations funds based on the number of children within the agency's jurisdiction. Alternatively, maintenance funds are intended to cover the cost of maintenance for each child. These funds, however, are only provided for **children in care**. Small agencies, therefore, have difficulty finding funding for family assistance or prevention services. The result is that children have been placed in care simply to receive funding. [21]

A comment that was consistently repeated by First Nations Child and Family Service [FNCFS] providers and highlighted by the National Policy Review is the lack of focus, within the current funding formula, on the diverse needs of FNCFS agencies. An example of where this creates great difficulty is with FNCFS agencies located in rural locations. Service providers in these agencies are required to do a great deal of travelling, however, travel costs are only provided for **children in care**. Therefore, small agencies receiving minimal operational funds are hard pressed to cover travel costs needed to visit families who require assistance to ensure the continued health and safety of their children.

These comments are directly related to the most common issue that has been raised in regard to the funding of FNCFS agencies, the lack of funding for preventative services. Despite the fact that preventative services are provided for in most provincial child and family statutes, under which mandated FNCFS agencies operate, they are not funded adequately by Indian and Northern Affairs Canada [INAC]. For example, a FN agency key informant, noted that ss.5 and 14 of the *Child and Family Services Act* [22] provide for family services to enable agencies to assist families and keep children with their parents. However, FNCFS agencies in Saskatchewan are unable to provide these legislatively mandated services due to the removal of funding for preventative care.

These difficulties are felt in most provinces, however, the unfortunate result of having to place children in care in order to receive funding is further complicated in some provinces where the funded care options are limited. For example, B.C.'s *Child, Family and Community Services Act*[23] provides for numerous out of care options such as kith and kin agreements, assisted adoption and transfer of custody. These options, however, are not funded under directive 20-1 and therefore Aboriginal children may be denied options which are provided to other non-Aboriginal children or off-reserve. As pointed out by a First Nations agency director:

> Flexible funding does provide for agencies to meet the criteria to fund children in these types of placements [out of care]. However, the formula is still based on numbers of children in care and the fear is that at the end of the 5 year block there could be significant cuts to funding if children have been placed through an out of care option. [24]

The result is that agencies are forced to effectively ignore the best interests of the child in order to ensure continued funding.

A similar situation exists in Saskatchewan where recent amendments to *The Child and Family Services Act* [25] have been introduced to ensure that the first placement option is with the child's extended family or friends. The funding formula, however, does not allow FNCFS to fully implement these options in First Nations communities. [26] Therefore, children under the care of a FNCFS agency are not given the same level of service as children under provincial jurisdiction.

The difficult decisions made by agencies in order to ensure continued funding are further exacerbated by the fact that agencies must maintain both provincial and their own Nation's standards. An informant commented on the absurdity of criteria put in place by INAC.[27] For instance, one Aboriginal child and family service agency reports that INAC advised them that they would only be funded for one hour of service per child. The agency currently employs two social workers, each of whom carry approximately 65 files, more than doubling the provincial standard of 24. These social workers frequently travel long distances to visit clients, making it impossible to maintain a one hour per child standard.

Moreover, the informant pointed out that the agencies not only have to meet provincial standards to ensure continued operation, but also the standards of their own communities. She stated that often these community standards are far stricter than those of the provinces or the federal government and require a level of attention to the best interests of the child physically, spiritually and culturally that is often not possible due to the funding limitations. This issue was also raised by a review panel, established to inquire into services provided to an Aboriginal infant in Saskatchewan.[28] In their report, the panel noted that:

> …FNCFS agencies are expected to provide services according to Provincial legislation and program standards with funding criteria that does not recognize all of the provisions in the *The Child and Family Services Act* or its accompanying program standards. [29]

In addition, in her report on the funding of FNCFS agencies, Elsie Flette notes that:

> The requirement to use provincial/territorial child welfare statutes poses a significant challenge for First Nation agencies which must try to adapt to expectations of First Nation governments whose services reflect the holistic, interdependent and communal rights framework of the cultural communities they serve with the individual rights based child welfare statutes. [30]

A final issue that was repeated by service providers is the lack of funding for legal services. Approximately two years ago the federal government halted payment of legal fees under maintenance funding.[31] Therefore, small agencies with limited operational funds are again forced to either deny service or transfer cases to other jurisdictions. In either scenario, costs are likely to be offloaded to the province and children are moved from agency to agency and social worker to social worker with their best interests lost in fiscal conservatism.

The issues raised by FNCFS providers demonstrate the tangible effects of funding limitations on the ability of agencies to address the needs of children. Without funding for provision of preventative services many children are not given the service they require or are unnecessarily removed from their homes and families. In some provinces the option of removal is even more drastic as children are not funded if placed in the care of family members. The limitations placed on agencies quite clearly jeopardize the well-being of their clients, Aboriginal children and families. As a society we have become increasingly aware of the social devastation of First Nations communities and have discussed at length the importance of healing and cultural revitalization. Despite this knowledge, however, we maintain policies which perpetuate the suffering of First Nations communities and greatly disadvantage the ability of the next generation to effect the necessary change.

2. Case Law Review

There is a paucity of case law specifically on the issue of jurisdiction and child and family services, and very little on jurisdiction generally, *vis-a-vis* social service delivery. No case law was found challenging various inter-ministerial (federal departments) jurisdictional responsibilities.

A review of the case law is set out below beginning with a discussion of federal/provincial jurisdictional issues and fiduciary responsibility. In addition a review of section 35 of the *Constitution*, section 15 and 7 of the *Charter* and international law is provided.

In summary the state of the law is uncertain. Although there are strong arguments to be made, no decisions have yet been rendered on the obligations of the Crown to provide adequate and equal funding for child welfare, as either a constitutional or fiduciary obligation.

a) Federal/Provincial

In a 1997 decision the Manitoba Queens Bench cast doubt on the argument that Canada's decision to unilaterally discontinue discretionary funding for preventative services was a breach of their fiduciary obligation. In his judgement, MacInnes J. stated that:

> In my view, there is nothing that obligates Canada to provide services to family funding. There is no aboriginal or treaty right which so provides. While clearly there is a fiduciary relationship between Canada and aboriginal people which creates certain obligations upon Canada with respect to Indian children and families, this fiduciary relationship does not obligate Canada to pay any specific amount of funding for any specific purposes. [32]

MacInnes J.'s decision in *Southeast* suggests that although there is a general fiduciary relationship between the federal government and Aboriginal peoples [children] it is unlikely that this relationship equates to a fiduciary duty to provide funding for child welfare services. The scope of the Crown's fiduciary obligation in relation to its dealings with First Nations is a relatively new area of law and therefore it is difficult to assess the probability of success with this type of argument. However, the following provides a brief discussion of recent case law with regard to the Crown's fiduciary duty.

In *Wewaykum Indian Band v. Canada*[33], Binnie J., for the court, held that the fiduciary duty is not a general concept and doesn't cover all aspects of the fiduciary relationship[34]. Therefore, not all dealings between parties to a fiduciary relationship will give rise to a fiduciary obligation.

> It is necessary then to focus on the particular obligation or interest that is the subject matter of the particular dispute and whether or not the Crown had assumed discretionary control in relation thereto, sufficient to ground a fiduciary obligation. [35]

The courts have repeatedly stated that a fiduciary duty will not generally attach to a public law duty. In *Squamish Indian Band v. Canada* [36] the court held that in matters of public law the Crown is not acting with the benefit of one party in mind, therefore, Crown discretion and vulnerability of those to whom the Crown maintains a fiduciary relationship can exist "without triggering a

fiduciary standard"[37]. Similarly in *Guerin v. Canada*[38] Dickson C.J. stated that:

> Public law duties, the performance of which requires the exercise of discretion, do not typically give rise to a fiduciary relationship. The Crown is not normally viewed as a fiduciary in the exercise of its legislative or administrative function.[39]

However, it was further noted by Binnie J. in *Wewaykum* that a public law duty does not necessarily negate the possibility of a fiduciary relationship.

> The latter depends on identification of a cognizable Indian interest and the Crown's undertaking of discretionary control in relation thereto in a way that invokes responsibility "in the nature of a private law duty." [40]

Moreover, Binnie J. held that the fiduciary duty:

> …where it exists, is called into existence to facilitate supervision of the high degree of discretionary control gradually assumed by the Crown over the lives of Aboriginal peoples. [41]

Finally, in *R. v. Adams*[42], Lamer C.J. for the majority, warned against the implementation of "unstructured discretionary administrative regimes" [43] and stated:

> In light of the Crown's fiduciary obligations towards Aboriginal peoples Parliament may not simply adopt an unstructured discretionary administrative regime which risks infringing aboriginal rights in a substantial number of applications in the absence of some explicit guidance.[44]

Therefore, the existence of a fiduciary duty seems to hinge on the type of interest in question and whether due to the sui generis nature of the relationship between the Crown and Aboriginal peoples, a traditional public law duty will be subject to a fiduciary duty. An example of where a fiduciary obligation was found to exist in what would generally be deemed a public law area is provided by the Ontario Court of Appeal in *Bonaparte v. Canada (Attorney General)*.[45] The court held that the federal government, in implementing residential school policy, "assumed a duty to act in a fiduciary capacity with respect to the education of Aboriginal peoples." [46]

The appellants in *Bonaparte* were the descendants of residential school survivors and claimed that they had been denied transmission of their culture and "the opportunity to achieve a full and normal family, social and economic life" [47] due to the imposition of the residential school system. Unfortunately, the issue of whether the fiduciary duty had been breached was not decided at either the trial or appeal level. The claim was struck out at the trial level on the grounds that descendants of victims are not owed a fiduciary duty and although the court of appeal ruled that this was an error, the primary issue of breach was not decided.

Nonetheless, the fact that a fiduciary obligation was found to exist in relation to the administration of education significantly strengthens the argument that the same obligation should be extended to other social services, such as child welfare.

With regard to the obligation of the provincial government to step in and provide services, where federal funding is lacking, a Manitoba Provincial Court Judge held that the province has a legal obligation to ensure that First Nations have comparable services to those off-reserve:

> … irrespective of any views, that the provincial government may have as to the historical, political, financial or moral responsibility of the federal government to provincial health and social care, it is now absolutely clear that it is the legal responsibility and duty of the province to supply child welfare services in accordance with the *Child Welfare Act* [48]

In some cases provinces have provided piece-meal funding. For instance in B.C. the Squamish First Nation was provided with funding for a cultural worker. This was done after the Nation brought a complaint to the former Children's Tribunal alleging that Squamish children were being denied their right to receive guidance and encouragement to maintain their cultural heritage pursuant to section 70 of the *British Columbia Child, Family and*

Community Services Act. They argued, successfully, that the federal funding, pursuant to Directive 20.1, was inadequate to comply with the changes to the provincial legislation (specifically s. 70 – rights of children in care).

Unfortunately, the law remains unclear. The *Director of Manitoba v. B* was decided by a lower court, never appealed, and is now almost 25 years old. Much has changed since then (and much has stayed the same). Moreover, there has yet to be a clear decision on whether the Crown could be held to a fiduciary obligation to provide child welfare services. *Southeast* was unsuccessful on appeal and the primary issue, regarding the existence of a fiduciary obligation to provide funding for preventative services, has yet to be argued. Therefore in the absence of any further judicial inquiries, the state of the law is as set out in *Southeast* – in short, the jurisdictional conundrum continues.

b) Section 35

Aboriginal peoples have been recognised in *Constitution Act, 1982,*[49] pursuant to section 35, which reads as follows:

> *s. 35 (1) The existing aboriginal and treaty rights of the aboriginal peoples of Canada are hereby recognised and affirmed.*

Case law to date has not recognised the governance of child and family services as an Aboriginal right. For example, a lower court in British Columbia found that section 35 did not include the right to govern child and family services, in *Re Child and Family Services Act of B.C.*:

> Within any society there can be only one source of ultimate power or authority. Within modern democracies that is the properly constituted government. The right to determine if children are abandoned, or neglected or abused to the extent of being in need of protection, and the power to implement the appropriate remedies is an authority vested in every viable society. It is not something exclusive to aboriginal in general or to aboriginal of Canada in particular. Being a feature common to all

> viable societies, I am satisfied it is not an aboriginal right as referred to in section 35 of *Constitution Act*, 1982[50]

In contrast, the B.C. Court of Appeal held in *Casimel,*[51] that customary adoption is a right protected by section 35 of the *Constitution*. Thus embracing the notion that the traditional practices of caring for children by extended family and other community members is an inherent right. By analogy, and logical extension, section 35 should apply to First Nations child and family services. If accepted as a right under s.35, the case law would suggest that a fiduciary duty argument would be significantly strengthened and it could be argued that the federal government has a fiduciary responsibility to ensure that the right is not extinguished by provincial laws of general application.

c) Charter

The Canadian *Charter of Rights and Freedoms* outlines, in section 15, that:

> *Every individual is equal before and under the law and has the right to the equal protection and benefit of the law without discrimination and, in particular, without discrimination based on race, national or ethnic origin, colour, religion, sex, age or mental or physical disability.*

The provincial and federal government's jurisdictional debate could be characterised as a shirking of responsibilities that amounts to inequitable treatment of First Nations and is therefore in violation of section 15 of the *Charter*. Arguably child protection laws are applied differently on reserve (due to lack of adequate

funding) than off which constitutes inequitable treatment based on race and residence. On its face, this amounts to a denial of equality before the law (equality of application) and equal benefit (unequal provision of generally available services). The Supreme Court of Canada held in *Eldridge v. British Columbia* [52] that once a state provides a benefit, it must do so in a non-discriminatory manner, and must take special measures to ensure that disadvantaged groups are able to benefit equally from government services.

In *Corbiere*[53], the Supreme Court of Canada unanimously held that "Aboriginality-residence" is an analogous ground of discrimination under s.15[54]. McLachlin and Bastarache JJ., for the majority, held that distinctions based on reserve residency touch on personal, immutable characteristics and are therefore automatically suspect of being discriminatory. The reasoning of the court was based on the fact that living on or off reserve may not involve choice for many, and for others is a very personal decision.

> The ordinary "residence" decisions faced by the average Canadians should not be confused with the profound decisions Aboriginal band members make to live on or off their reserves, assuming choice is possible. The reality of their situation is unique and complex.

An alternative argument is that the inequalities in child welfare funding are based on race. This argument is bolstered by the fact that services are not only unavailable on reserve but may also be denied off reserve due to jurisdictional disputes. Therefore, a government argument based on the proposition that the inequality arises out of the difficulty of providing and funding services in remote communities [on-reserve] would be unconvincing. The lack of services off-reserve or the unwillingness of the federal government to provide for services off-reserve, lends credibility to the argument that the inequality is based on race (as well as residence).

It may also be argued that the lack of adequate funding and resources on reserve constitutes a breach of s.7 of the *Charter*. s. 7 provides that:

> *Everyone has the right to life, liberty and security of the person and the right not to be deprived thereof except in accordance with the principles of fundamental justice.*

The lack of adequate funding and resources on-reserve has led to the placement of children in care and removal of children from reserves. It could be asserted that this is a clear infringement of children's right to liberty in relation to the ability to remain in their homes and communities. In *Godbout v. Longueuil*, La Forest J. held that:

> …the autonomy protected by the s. 7 right to liberty encompasses only those matters that can properly be characterized as fundamentally or inherently personal such that, by their very nature, they implicate basic choices going to the core of what it means to enjoy individual dignity and independence… choosing where to establish one's home is, likewise, a quintessentially private decision going to the very heart of personal or individual autonomy. [57]

Although the liberty to choose where one resides is clearly not an inalienable right, it may be considered a strong argument that children should only be forced to leave their family homes in the most extreme circumstances. This is not the case here as Aboriginal children are removed from their homes in far greater numbers than non-Aboriginal children for the purposes of receiving services.

Alternatively, it may be argued that placement of children in care, due to lack of services, amounts to an infringement of the parent's right to security of the person, under s.7. According to the Supreme Court of Canada in *New Brunswick v. G.(J.)* [58] the right to security of the person encompasses psychological integrity and may be infringed by state action which causes significant emotional distress. Moreover, it was held that the loss of a child constitutes the kind of psychological harm which may found a claim for breach of s.7. Lamer J., for the majority, held:

> I have little doubt that state removal of a child from parental custody pursuant to the state's parens patriae jurisdiction constitutes a serious interference with the psychological

> integrity of the parent…As an individual's status as a parent is often fundamental to personal identity, the stigma and distress resulting from a loss of parental status is a particularly serious consequence of the state's conduct.[59]

The court went on to state that there are circumstances where loss of a child will not found a prima facie breach of s.7, including when a child is sent to prison or conscripted into the army. [60] Clearly, these circumstances can be distinguished from the removal of a child from his/her home due to the government's failure to provide adequate funding and services.

The federal funding formula, directive 20-1, impacts a very vulnerable segment of our society, Aboriginal children. The protection of these children from state action, infringing on their most fundamental rights and freedoms, is clearly in line with the spirit of ss.7 and 15 of the Charter. Research conducted on the issue of child welfare plainly shows differentiation in the quality of services provided on and off reserve and to aboriginal and non-aboriginal children. This type of differentiation is unacceptable in a society that prides itself on protection of the vulnerable.

d) International

In 1990, Canada signed on, as a signatory, to the United Nations *Convention on the Rights of the Child* [61]. The Convention sets out the rights of children and the corresponding responsibilities of state governments. In particular, the *Convention* includes:

> Article 23 – Right of a child with a disability to special care and assistance – ***which may be violated due to lack of funding as a result of jurisdictional issues.***
>
> Article 24 – Right to highest attainable standard of health – ***which may be violated due to lack of funding as a result of jurisdictional issues.***

As a means to honour the *Convention*, Canada has set out an "Action Plan" in response to the 2002 United Nations Special Session on Children. Canada's Action Plan commits to the following:

> No. 44: The Government of Canada is working together with Aboriginal communities, leaders and Elders, as well as provincial and territorial governments **to improve the health and well-being of Aboriginal children and their families**.
>
> No. 83: **Canadians believe that children with disabilities should have equality of access to programs and services** that allow them to reach their full potential and participate as they wish in society… [*emphasis added*]

Arguably, in light of the continued "jurisdictional disputes" Canada is in breach of their international obligations, pursuant to the *Covenant*, in particular Articles 23 and 24. Canada's commitments in their Action Plan (especially 44 and 83) are compromised by the continued failure of all governments to effect adequate dispute mechanisms that would place First Nations children at the centre of the 'dispute', as opposed to "falling through the cracks" because of gaps in services created by the continuing lack of clarity. Although the Convention does not contain any specific remedies for a breach of the Convention – International attention regarding continued violation of the convention would not be looked favourably upon by the international community.

3. Inter-Jurisdictional

> *Despite persistent pleas from Aboriginal people that their interdependent needs be served by holistic services, the service environment continues to be fragmented between federal and provincial levels of government, between departments and ministries, and among service agencies in community.* [63]

The vision document *A National Children's Agenda: Developing a Shared Vision* sets out four goals for a National Children's Agenda:

- Healthy physically and emotionally,
- Safe and secure,
- Successful at learning, and
- Socially engaged and responsible.[64]

Aboriginal children fair poorly in meeting any of the goals presented in the National Children's Agenda (or Canada's Action Plan). As discussed previously (above) and reiterated in a report on *The National Child Benefit*[65] many Aboriginal children live in poverty and suffer because of the lack of clarity around jurisdictional roles and responsibilities not only of the of the Federal/Provincial/Territorial governments, but also between ministries/departments (inter-jurisdictional):

> Another barrier to the provision of holistic services is the lack of integration between government departments, programs and agencies. Communities that are trying to develop new strategies are overwhelmed and frustrated by having to deal with far too many different government departments. Others indicated that there was more rhetoric than reality about partnership building. [66]

The Aboriginal Nurses Association of Canada poignantly illustrate how this impacts on their work with Aboriginal people:

> Aboriginal nurses see the jurisdictional problems between the federal, provincial/territorial, and First Nations governments and agencies from a clients perspective. They spend many hours attempting to explain the complexity and the relevant policies and procedures to clients and their family members that require access to the wide array of programs and services offered at the various levels of government and non-government agencies.

Following is a specific example of problems that arise for children with special needs/disabilities.

a) Children with Disabilities/Special Needs

> Aboriginal people receive health services through a unique combination of federal, provincial and Aboriginal-run services, as well as other programs and services. Responsibility for delivery of health care to Aboriginal people in Canada has been the subject of considerable debate regarding jurisdictional responsibility. For many years, the lack of co-ordination between various levels of government and Aboriginal community agencies has resulted in fragmented services or a lack of services for Aboriginal people… Historically the federal government of Canada has recognised that a special relationship exists between it and Status "Indians" with respect to the provision of health care. However this responsibility is largely defined as a matter of policy and goodwill and is not considered by the courts to be a legal obligation.[68]

The Assembly of First Nations, in a recent newsletter, highlighted the circumstances of the case of four year old Jordan, a First Nations boy in Winnipeg as a poignant and sad example of how First Nations children fall through the cracks as a result of federal/provincial/territorial and inter-ministerial jurisdictional squabbles.[69] Jordan was removed from his home at birth and placed in hospital under the care of a FNCFS agency. The agency developed a plan to place the child in a foster home with the necessary support for his medical condition. However, implementation of the plan has been impossible, as INAC, Health Canada and the provincial government are not willing to take responsibility for the costs involved in moving the child from hospital. The newsletter states:

> *This is unnecessary. This situation is unacceptable and it is a violation of this child's basic human rights. Every child has the right to be raised in a family, to have their needs met and to receive quality care. And sadly, this young boy is only one example.*[70]

As the article points out, Jordan's experience is but one example. According to statistics:

> Almost one-third of Aboriginal Canadians age 15 and over reported having a disability in 1991 – more than double the national rate (15%). The difference was particularly pronounced among younger age groups, where Aboriginal people were three times as likely to have a disability. [71]

A key informant offered numerous examples of children with complex medical needs, suffering on-reserve due to the lack of resources. However, she/he quickly noted that those who are transferred

off reserve, for provision of services, do not have a much brighter future. Children who are removed from their homes are primarily transferred to hospitals and institutions where it is cheaper to meet their needs. Therefore, due to jurisdictional disputes, Aboriginal children with special medical needs are not only taken out of their own homes but are rarely ever offered the chance to once again live in a family environment.[72]

She/he also noted that INAC recently discontinued the funding of travel costs for parents to visit their children in hospital. Although INAC still covers the cost of travel for a child to return home for a visit, due their unique medical needs, these children are generally not able to travel. [73] Therefore, in light of the poverty suffered by many of the families involved with child welfare system, INAC's policy essentially keeps these families from maintaining contact.

Inadequate funding and poor inter-jurisdictional cooperation has resulted in a situation where children with complex medical needs are either left to suffer on reserve, without the proper resources, or alternatively are institutionalized with little likelihood of ever having the opportunity to live in a home environment. Surely neither of these options can be seen to be in the best interests of the child.

Great concern has also arisen in relation to children who have special medical and emotional needs but do not require the type of equipment and resources as those who are institutionalized, for example, children with FAS/FAE. Unfortunately, these concerns have largely been brought to public attention through extensive inquests into the circumstances of the deaths of children in care.

Two recent inquests out of Manitoba underscore the impact of inadequate funding and the lack of cooperation and communication between the different levels of government and agencies.[74] Both children, Patrick Norman Redhead and Susan Redhead (unrelated), committed suicide by hanging after being bounced from home to home and institution to institution. Both children had emotional and behavioural issues that were left unaddressed and likely suffered from FAS/FAE although neither was ever officially diagnosed.

The inquest into the death of Patrick Norman Redhead was held by Provincial Court Justice Geisbrecht and lasted over thirty days. A number of recommendations were produced in regard to the care of children with special needs. Giesbrecht J. particularly noted that jurisdictional issues have resulted in children being "moved or pushed from one agency to another for purely economic reasons"[75] resulting in a disconnect between the needs of the child and what occurs due to fiscal restraints. Moreover, Geisbrecht J. focused a great deal on the impact of the virtual absence of funding for preventative programming:

> It is self-evident in my view that at this time existing resources cannot be diverted from the high-needs children who are currently in the system. . . At the same time if funding at the front end of the system is not increased, if we do not become proactive rather than reactive than we are simply creating greater and ultimately much more expensive problems down the road.[76]

In her testimony before the Inquest, Janet Mirwaldt, Manitoba Child Advocate, discussed the possibility of a multi-disciplinary approach to provide adequate services for high-needs children. In commenting on the policies of avoidance, practiced by both the federal and provincial governments, she stated:

> Even in a world of limited resources the narrow approach should be avoided…More resources might be found, not by creating new resources but by sharing existing resources…Resources can be developed interdepartmentally within those limited resources.[77]

The recommendations set out by Geisbrecht J. in relation to resource and funding issues are reproduced in Section IV, of this report.

The inquests of both Patrick Redhead and Susan Redhead paid additional attention to the lack of training for service and foster care providers regarding the needs of children with FAS/FAE. Again this was linked to a lack of funding for preventative services and programs.

Recommendations for improvement in training are also reproduced later in this report.

This, therefore, raises a systemic issue that arguably has not, but must be, addressed:

> Lack of disability-related services available on-reserve often forces Aboriginal peoples to abandon their communities in search of supports. Once off-reserve, Aboriginal peoples face jurisdictional barriers in accessing these supports and services. This sub-committee also heard that many Aboriginal children with disabilities are placed in child welfare services in order to access supports which are not available to their biological families.[78]

A similar refrain was articulated, on March 30, 2001, by the Social Services Ministers, who released *In Unison 2000: Persons with Disabilities in Canada*[79]. This paper included input from Aboriginal peoples and provided a profile of Aboriginal Canadians with disabilities. One of the main concerns raised regarding Aboriginal peoples, was the jurisdictional debate/conundrum that enters almost any discussion about Aboriginal peoples (children) and social policy:

> The lack of disability-related services available on reserve often forces Aboriginal peoples to abandon their communities in search of these supports; however, once off-reserve, Aboriginal peoples with disabilities face jurisdictional barriers in accessing these supports and services. [80]

The report outlined actions to be taken which included the establishment of an Aboriginal Technical Committee on Social Policy.

Finally, Commissioner Roy Romanow, in his *Interim Report* on health care in Canada, underscored that the responsibility for Aboriginal health and health care programs demands resolution.

> … is an area surrounded by uncertainties that have had serious consequences to the health and health care of Aboriginal peoples. [read children] [81]

This issue is currently under review by both Health Canada and INAC. According to an informant from the First Nations and Inuit Health Branch, the two federal departments are in discussions regarding who will fund the necessary services for Aboriginal children with complex medical needs. She/he acknowledged that there was significant concern in regard to the gaps in service for these children and the consequences of ongoing jurisdictional disputes.

Another informant agreed that the present situation is intolerable. However, she/he stated that the current situation is due primarily to Health Canada's refusal to cover the medical costs of children in care under non-insured health benefits. She/he stated that Health Canada has signed numerous agreements with various FNCFS agencies promising to provide funding for children with special medical needs. She/he stated that these agreements have rarely been upheld and Health Canada has cited interpretational misunderstandings as the reason to pull out of agreements. The existence of these agreements was not confirmed by Health Canada.

While the discussions are ongoing between federal departments some provinces are taking independent action. For example, Alberta has recently enacted new legislation, *The Family Support for Children With Disabilities Act*[82], which extends services to children with disabilities on reserve. Unfortunately, it seems that most First Nations children will be unable to take advantage of this program. As pointed out by an informant, the new legislation consists of a reimbursement program and the majority of First Nations families on reserve will be unable to pay for services upfront[83]. Therefore, the same situation arises where families are forced to put their children into care in order to ensure funding.

4. SUFA

The Social Union Framework Agreement (SUFA) was entered into, in 1999, between the Federal/Provincial/Territorial governments. SUFA sets out some broad principles for a new era of social policy and co-operation in the areas of health, children, post-secondary education and other social programs. In particular the agreement

is aimed at enabling the Federal/Provincial/Territorial governments to work together:

> … and with Canadians, to strengthen our health care system, eliminate barriers to mobility for Canadians, involve Canadians in the development of social programs, and strengthen partnership among governments.[84]

The general principles outlined in the agreement, to guide social programs for Canadians, were identified as:

- Equality of opportunity;
- Access to all Canadians to comparable programs;
- Medicare principles;
- Help for those in need.[85]

The government of Quebec did not sign the agreement, nor were Aboriginal peoples included as signatories to the agreement. National Chief of the Assembly of First Nations, Chief Phil Fontaine, prior to the signing of SUFA, recommended the inclusion of First Nations as full and equal partners in the Social Union process and urged the Prime Minister to "enfold the First Peoples of Canada in this historic process of nation-building" [86]. Yet leaders from National Aboriginal Organisations (NAO's) were not direct parties to the negotiations.[87] Fontaine underscored the importance of Aboriginal involvement in light of the unique relationship of First Nations with the federal government and the fact that:

> Social Union reform directly affects the **jurisdictions** of First Nations' governments, the current and future relationships between First Nations and the federal and provincial/territorial governments **and the nature and quality of social programs** available to First Nations citizens. [88] *[emphasis added]*

SUFA does, however, include a provision which states that:

> Governments will work with the Aboriginal peoples of Canada to find practical solutions to address their pressing needs.[89]

Although the SUFA agreement acknowledges Aboriginal peoples it does not, by implication, recognise them as contemporaries to the other signatories. One commentator has suggested that the exclusion of Aboriginal peoples as signatories would suggest:

> … that they are analogous to municipal governments, which are also bystanders to the SUFA process. This could be seen as a further retreat from the 1992 high-water mark of Aboriginal influence, when the text of the Charlottetown Accord wove a significant Aboriginal presence into virtually every institutional warp and woof of the Canadian federal state.[90]

Unfortunately, the rationale provided to justify Aboriginal exclusion was, as identified by Prince, a Professor at the University of Victoria, because the agreement dealt with "administrative matters":

> The reasons given for the exclusion of Aboriginal national leaders were that the talks involved administrative arrangements, not constitutional proposals, and that the delivery of social programs continues to be a provincial responsibility.[91]

First Nations are, unfortunately, all too aware of the fact that because of jurisdictional issues, and other matters of pressing urgency, SUFA represented not merely the negotiation of "administrative arrangements" but enfolded discussions regarding matters that relate to their very survival – access to social programs i.e. especially with regards children and youth.

Furthermore, Professor Margot Young argues that the text of SUFA seems to support a notion of formal rather than substantive equality. [92]As illustrated by Young, substantive equality takes into account individual or group differences in recognition of the fact that "same treatment is not always equal treatment"[93]. This is of special concern for Aboriginal people [read children] who are historically disadvantaged because of their race and often times due to their place of residence. As Young points out, the difference between models of substantive and formal equality can be very important:

> Without consideration of individual's real social and economic conditions and absent program design that addresses systemic

> inequalities, state action will do little to effect substantive amelioration of the pre-existing conditions of deprivation and disadvantage that currently deny social citizenship to large groups of Canadians.[94]

One of the areas highlighted in the SUFA agreement is "Funding Predictability". This section is meant to provide direction for the funding relationship between the Federal/Provincial/Territorial governments - but has obvious far-reaching implications for Aboriginal peoples. Jurisdictional "issues", have yet to be reconciled and clearly affects "funding predictability". Aboriginal peoples survive, in many cases, on piece-meal or inadequate funding for necessary social services. SUFA does nothing to address this far-reaching problem in particular with Aboriginal peoples. One of the goals of SUFA should be funding predictability for Aboriginal peoples, Aboriginal Nations, governments, and National Aboriginal representative groups.

In a Treasury Board, SUFA analysis of the First Nations Child and Family Services programs they note that there are no "residency-based barriers in this program"[95]. Furthermore, the Social Union web-site notes that:

> There was a broad consensus between the signatory governments that the first priorities should be children in poverty and persons with disabilities[96].

Clearly there are residence-based barriers and clearly if the first priority of the SUFA signatories is children living in poverty and people with disabilities – issues affecting access to services for First Nations children with special needs/disabilities must be given the greatest priority.

5. Summary

Jurisdictional issues remain the subject of lively debate. Case law does not provide much guidance in clarifying the issue. Complicating the "debate" are the jurisdictional issues that manifest inter-ministerially, in addition to the federal/provincial/territorial conundrum.

One avenue that could have ameliorated and potentially have assisted stakeholders would have been the inclusion of First Nations as full and equal partners in the negotiation, signing, and discussions of SUFA.

In the interim, as a result of the lack of clarity in the law and policy it is important that dispute mechanisms be designed to ensure that First Nations children are provided with the services that best meet their needs and that Canada has committed to providing in order to meet their international obligations pursuant to the *Convention on the Rights of the Child*.

Following is an examination of dispute mechanisms.

III. DISPUTE MECHANISMS

> *No. 18: Under Canada's Constitution, federal, provincial and territorial governments are responsible for many areas that touch on the lives of children. It is clear that if children are to benefit co-operation among jurisdictions is essential. Federal, provincial and territorial co-operation with respect to children has been significantly enhanced over the past decade…*[97]

McDonald and Ladd, in their comprehensive policy review of First Nations Child and Family Services provide an overview of Dispute Mechanisms as of March 31, 2000, which set out arrangements to resolve differences in interpretation and legislation and standards between provinces, DIAND, and First Nations Child and Family Services (FNCFS). As McDonald and Ladd point out, in nearly all cases there are no formal mechanisms in place resulting in informal methods being deployed to address various contentious issues. This was identified in 1995 by INAC, despite the fact that Directive 20.1 requires the establishment of tri-partite panels/committees:

All regions have created tripartite mechanisms, though not always a formal panel or committee. These mechanisms have been useful, but their effectiveness tends to depend on the relationship developed between the parties and their intended purpose.

McDonald and Ladd proposed the following recommendation:

> Recommendation 5: **A national framework is needed** that includes fundamental principles of supporting FNCFS agencies, that is sensitive to provincial/territorial variances, and has mechanisms to ensure communications, accountability and dispute resolution mechanisms. This will include evaluation of the roles and capacities of all parties. [100] *[emphasis added]*

As well they recommended:

> **A regional table process** is needed to discuss this issue and come up with an action plan. [101] *[emphasis added]*

It seems clear, from the previous discussion in this paper that the development of dispute mechanisms are of paramount importance to ensure that everyone keeps their commitments to protect and provide services to the most vulnerable of our population – First Nations children and youth.

The inability of FNCFS agencies to utilize the processes put in place was noted by the Saskatchewan review panel in the *Baby Andy Report*. According to the panel, agreements between FNCFS agencies and INAC provide for a forum to discuss and analyse mutual program and policy concerns. However, the capacity of agencies to further this agenda is/limited by experience, financial resources and systematic supports. [102]

The panel suggested a starting point for cooperation:

> In order to proceed to the next level of FNCFS agency development, a focused and systematic framework for joint service improvement and accountability is required. This level of development requires a comprehensive plan that includes FNCFS agencies, the Department and INAC.[103]

The Nova Scotia government provides one example of a "dispute resolution" mechanism designed to enhance services to children, however, it is not clear whether First Nations are involved in this process. The province has set up a Child and Youth Action Committee that works as an inter-departmental working group of senior officials for co-ordination of cross-jurisdictional initiatives affecting children and youth.[104]

The Provincial/Territorial governments put forward a number of options to attempt to address this problem. One of the approaches enunciated in a 1997 paper, was described as the "comprehensive approach" which would be a cross-sector action plan to identify strategic ways of improving the social, economic and environmental conditions for Aboriginal peoples. [105] That was 7 years ago?

In the 2001 *Progress Report to Premiers No. 6* a number of recommendations are set out, including:

- Premiers called on the federal government to recognise its treaty, fiduciary, and constitutional responsibilities for the health, education, and well-being of Aboriginal Canadians and to work with provinces, territories and Aboriginal peoples on more effective delivery and financing of health, education and social services for Aboriginal peoples;
- Premiers stressed the importance of continued Aboriginal involvement to ensure that the needs of Aboriginal children are a priority as work on the National Children's Agenda proceeds.
- Premiers encouraged continued co-operation between governments and Aboriginal organisations toward addressing the education, skills development and labour market needs of Aboriginal people. [106]

Where dispute resolution processes are unavailable or ineffective decisions are being made without any recourse or involvement - negative feelings and backlash can occur between the parties involved. Arguably, this is the current situation between First Nations agencies and INAC. Service providers stressed the difficulty in achieving direct communication with INAC. Communication between the two parties generally occurs through letters; a number of agencies reported having made numerous attempts to set up meetings, with no success. [107] Anecdotally, it could be argued that agencies generally feel that INAC is

in a defensive position and that communication is strained.

Current communications between the provincial and federal governments, inter-departmentally and with the agencies seem to be grounded in a power or rights-based approach as opposed to an interests-based approach. In their study of dispute resolution systems, the Institute on Governance notes that:

> Benefits for reducing the reliance on power and rights based approaches include reduced costs; better quality decisions; greater satisfaction levels among disputants and the preservation of long-term relationships. There appears to be considerable convergence in the literature on Aboriginal justice to move in a similar direction, that is, to place greater reliance on interest-based approaches, often referred to as alternative dispute resolution (ADR).[108]

The federal and provincial governments' present approach of jurisdictional finger-pointing and avoidance has cost a great deal for all involved – especially children. The current state of First Nations Child and Family services is creating a myriad of related problems in the health and well-being of Aboriginal peoples [read children] which clearly affects all areas of social policy. Therefore, it is obviously in the interest of both the federal and provincial governments to work together with First Nations agencies to create an effective funding arrangement.

In their report, the Institute on Governance discussed possible models for a successful dispute resolution process as a component of a new inter-governmental fiscal relationship between the Federation of Saskatchewan Indian Nations, the Government of Canada and the Government of Saskatchewan. The report notes that the central issue facing First Nations, in fiscal negotiations with government, is how to avoid a sovereignty based approach on the part of government. The report notes that governments are reluctant to allow a third party to act in the role of mediator, as this negates their ability to determine budget allocation. Although a third party mediator may not be necessary, it is crucial that the government is aware of the fiscal consequences of inaction and the importance of cooperation between the levels of government, the agencies and inter-departmentally.

FNCFS providers expressed great frustration at the lack of processes in place for the resolution of issues. Suggestions made by providers as to effective processes for the future, were as diverse as the issues they face. However, a common thread throughout the responses was the concept of putting a small cross-sectional group in place to deal with the issues of FNCFS agencies. A key informant suggested that a standing committee be established, comprised of representatives of the province, INAC, FNCFS agencies and AFN. She/he noted that "in B.C. with the number of agencies and their varied size it is difficult to meet effectively as a larger group to conduct business. This was reiterated by another informant, who further stated that the process undertaken by any specified body should reflect cultural values. She noted that:

> The process may be a circle as it embodies the cyclical nature of life and has become an acceptable means of resolving disputes in this province. Regardless of the actual resolution process chosen, the critical elements of the process are respect for treaty, respect for differences and inclusiveness. [109]

This sentiment was reiterated by MacDonald and Sayers:

> The understanding of culture in the development of dispute resolution process is key to successful outcomes. Any examination of First Nations issues in Canada has to respect the cultural diversity that exists within First Nations.[110]

Moreover, a standing committee, apprised of the current issues facing FNCFS agencies and comprised of representatives from the various Stakeholders, may circumvent the government's reluctance regarding the use of a third party mediation process and yet achieve the same results. Any process, however, must be grounded in the idea that:

> …no one jurisdiction – let alone one federal department – can control decisions, resources and activities. Success depends on developing and sustaining a common vision of outcomes, objectives and lines of accountability.[111]

IV. RECOMMENDATIONS

A myriad of recommendations can be found in the literature. The 17 recommendations found in the Joint Policy Review are the most contemporary and provide a call for clarifying the jurisdictional issues:

> Recommendation 4: DIAND, Health Canada, the provinces/territories and First Nation agencies must give priority to clarifying jurisdiction and resourcing issues related to responsibility for programming and funding for children with complex needs, such as handicapped children and children with emotional and/or medical needs. Services provided to these children must incorporate the importance of cultural heritage and identity.[112]

The Ad Hoc Coalition in their submission to the United Nations recommended that:

> Recommendation 10: In the short term, implement recommendations of the Joint Policy Review on First Nations Child and Family Services, and launch a review of off-reserve funding methodologies, to ensure equitable access to sustained and culturally –based targeted prevention services.113

In order to achieve Canada's commitment, as articulated in their *Action Plan*, to honour the international rights of children – jurisdictional issues need to be remedied and/or dispute mechanisms need to be developed in order to make the following a reality:

> No. 82: Together we will strive to build supportive environments to improve the healthy development of Aboriginal children through safe, affordable housing, access to quality and culturally specific health services, child care and schools, as well as improved supports for parents, families and communities… Continued efforts should be directed at toward the development of partnerships and co-ordination among all sectors to promote and support indigenous, holistic responses. [114]

Geisbrecht J., in the inquiry into the death of Patrick Norman Redhead, provided the following recommendations in relation to funding and resource provision:

- **It is recommended that the parties** to the AJI-CWI [Aboriginal Justice Inquiry-Child Welfare Initiative] ensure that adequate funding and resources are provided in the restructured child and family services system for early intervention and preventive programming.
- It is recommended that in providing funding to child and family services agencies the provincial and federal governments specifically allocate separate funds for prevention programs and initiatives.
- It is recommended that adequate funding for professional training and development be built into the funding formulas of family services agencies.
- It is recommended that funding formulas for family services agencies not be based on population but on a model that reflects the needs and capacities of particular communities.
- It is recommended that additional specialized group homes and foster homes be developed in the province to ensure that all children who require such level 4 and level 5 resources need not wait for months for an appropriate placement.
- It is recommended that agencies be encouraged to develop specialized foster placements and residential care facilities in communities in northern Manitoba

> so that children from those areas need not be removed from their home communities in order to have their needs addressed.[115]

Further recommendations were provided in the inquest into the death of Susan Redhead, in relation to the lack of funding for adequate training of service and foster care providers:

- Based on the above recommendations, it is of critical importance that adequate funding for professional training and development be built into the funding provided to a child care agency.
- There should not only be funding provided to the Agency for training itself, but there should be provision to access provincial programs which have the expertise and are already in place to provide the kind of training required.
- There must be a rationalization of the method of funding to the Agency in order to allow for services to families and prevention programs.[116]

In summary, it is of the utmost importance that all stakeholders, provincial, federal, and First Nations governments/departments/ministries must find some way to resolve the long-standing jurisdictional disputes that have caused and continue to cause such unnecessary harm to First Nations children and youth.

V. CONCLUSION

> *It seems inconsistent with a modern Western industrial democracy that the welfare of hundreds of thousands of people is a matter of intergovernmental avoidance.* [117]

The impact of ongoing jurisdictional disputes on Aboriginal children has been well documented. Both the federal and provincial governments are aware of the effects of policies of avoidance and yet cooperation has yet to occur, and the current situation persists.

The federal government persistently contends that the provision of social services is within provincial jurisdiction and therefore any federal services and programmes are merely provided on a humanitarian basis.

> The federal approach is a defensive one, predicated on the notion that Parliament cannot be compelled to legislatively take responsibility, even if not doing so causes Indians harm. [118]

Alternatively, the provincial government and First Nations assert that the federal government has a constitutional, treaty and fiduciary obligation to provide adequate social services, including child welfare, to Aboriginal peoples in Canada.

Clarification of jurisdictional authority may be attempted through litigation. This, however, would be a long and costly process during which the pressing needs of Aboriginal children would continue to be unmet. The needs of these children cannot be placed on a shelf while the various levels of government and departments argue over budgetary constraints and differences in the interpretation of existing agreements.

There are no legal jurisdictional issues that bar governments from working together to improve the services and programs provided to First Nations children. The only bar appears to be that governments are more willing to dig in their heels, as a means of protecting their budgets, than to recognize and move forward in finding a solution to the appalling state of First Nations children.

Lack of will to find solutions is exacerbated by the lack of processes to discuss, analyze and resolve the issues. FNCFS agencies are faced daily with the effects of inadequate funding and resources and are deprived of a forum for expressing their frustrations. Effective and accessible dispute resolution processes are critical to the resolution of issues in First Nations child welfare. Any changes to the current funding formula will undoubtedly raise new issues and concerns for FNCFS agencies and the ability to express these concerns and find solutions will be crucial to the success of a new fiscal relationship.

The success of any dispute resolution process hinges on the recognition, by all parties involved, of the commonality of interests. Governments, ministries and FNCFS agencies must realize that improving/enhancing the health and well-being of First Nations children is in the interest of every Canadian. Further, it must be recognized that neither the simple addition of funds nor a simple change of policy will resolve the issues faced by FNCFS agencies. What we do know to be true is that this debate has gone on for too long and as a result First Nations children have and continue to suffer. It is of paramount importance that dispute mechanisms be implemented as soon as possible. Our children are our future.

In keeping with the United Nations Convention on the Rights of the Child, we recommend that a child first principle be adopted in the resolution of inter-governmental jurisdictional disputes. Under this procedure the government (provincial or federal) that first receives a request to pay for services for a Status Indian child where that service is available to other children, the government will pay for the service without delay or disruption. The paying party then has the option to refer the matter to a jurisdictional dispute resolution table. In this way the rights of the child come first whilst still allowing for the resolution of jurisdictional issues. In honor and memory of Jordan we recommend the child first principle to resolving jurisdictional disputes be termed Jordan's principle and be implemented without delay.

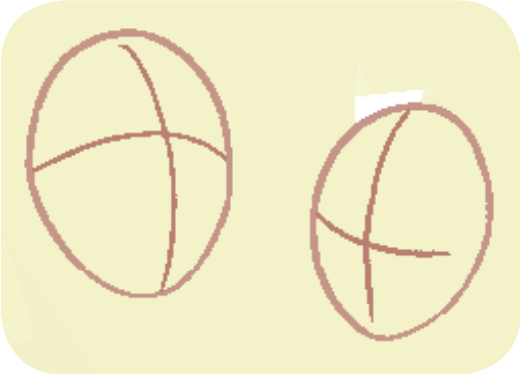
Promoting Community & Family Wellness

Least Disruptive Measures and Prevention



CHAPTER 4

Prepared on behalf of:
First Nations Child & Family Caring Society Canada

Written by:
Dr. John Loxley and Linda Deriviere

July 2005

THE COST OF DOING NOTHING

Recent economic analyses on the costs of child abuse offer much evidence that the fiscal and societal outcomes of child maltreatment are staggering. Bowlus et al. (2002) calculate that $15.7 billion in societal costs can be avoided by preventing abuse and by allowing children to reach their full potential as contributors to society (p.104). The relationship between child abuse and later involvement with the justice system has also been captured by Hepworth (2001) in ***Jack's Troubled Career: The Costs to Society of a Young Person in Trouble***. The analyst has estimated the intergenerational effects of child abuse on the criminal justice system and other social services at roughly $511,500 per child. Other analysis has been conducted in the area of the health outcomes related to child abuse. A Saskatoon study found that adult female survivors of sexual abuse used 4.1 times more costly health services than the average population (Burgess et al. 2003). These are only a few of the fiscal and social consequences that make the rationale for prevention evident.

Analysts argue that the solution to mediating the incidence of child maltreatment lies partly in tackling the dire economic state of First Nations communities. Socio-economic factors, such as poverty, create many stressors in daily life that lead to family violence, addictions and youth detachments from formal schooling. The Royal Commission on Aboriginal Peoples (RCAP 1996) estimated that the lost productivity to aboriginal people in terms of unemployment and forgone earnings, in part from lack of education, as well as lower wages relative to other Canadians, totaled $2.9 billion in 1996 dollars. Another $4.6 billion was lost to the government from forgone tax revenues and other direct fiscal expenditures[1] above the average for the general population. Analysts calculated that "the cost of the status quo will rise from $7.5 billion in 1996 to $11.0 billion in 2016" (cited in McCallum 1999:124), a 47% increase.

These studies illustrate that the case for setting priorities in prevention is convincing, as it is not only fiscally prudent, but it is a humanitarian approach to averting child maltreatment. There is plenty of evidence that the fiscal commitment towards direct child protection will continue to rise in future if policymakers and society in general choose not to address these issues. In this chapter we present further compelling evidence, which illustrates that the costs of preventive interventions are minimal in comparison with the limitless costs of the alternative – doing nothing.

To begin with, the present funding formula provides more incentives for taking children into care than it provides support for preventive, early intervention and least intrusive measures. The 1998 Canadian Incidence Study of Reported Child Maltreatment (CIS-98) has documented an overrepresentation of Aboriginal children in foster care placements and other institutional settings compared to non-Aboriginal children. Socio-economic hardships, such as poverty and substandard housing, intergenerational child maltreatment, as well as addictions are key contributors to this phenomenon (Trocme, Knoke and Blackstock 2004). However, funding arrangements may also create perverse incentive effects that work against family-based approaches, which may be in the best interests of a child's well-being. Flette (2004) argues:

> "Current funding of FNCFS provides money for children only when they are in foster care or group care. No money is available for services to neglected and/or abused children in their own home. Services/funding to work with families to return children home have come under attack and are no longer available. In the mid 90's, DIAND eliminated completely the funding to agencies in Manitoba for Services to Families. This remains a service that agencies are required to provide in legislation, and the Province provides funding for this service to its agencies, separate and apart from Operations. DIAND policies result in on reserve children who are suffering from abuse and neglect not having access to comparable services in their own homes" (p.3).

In addition, though Aboriginal youth represent a high proportion of Canadian children in care,

the funding that is committed to this group is disproportionately lower than what is allocated to non-Aboriginal children (Flette 2004). It is estimated that, of the Canadian children living in out-of-home placements, 30-40% is Aboriginal children (Blackstock et al. 2004), while only 5.6% of children in the Canadian population are Aboriginal (Statistics Canada: Census 2001) [2]. Over the period 1995-2001, out-of-home placements for registered Indian children on reserve increased by 71.5% at a national level (McKenzie 2002), yet the latter's population (below age 15 and between 1996-2001) fell by 1% (Statistics Canada 2001, cited in Blackstock et al. 2004: 157). It is also known that welfare costs are rising at a rate of 6% per annum, while additional funding directed to Aboriginal children is not forthcoming[3]. Moreover, DIAND's financial support to First Nations child and family services agencies is roughly 22% lower than the average provincial funding (based on 1999 dollars) (National Policy Review June 2000, cited in Blackstock et al. 2004; Flette 2004).

The purpose of this chapter is to identify what is best practice in this area, for the information of agencies, but also in order to document the case for a change in the national funding formula. We also want to determine how a more preventive family well-being model should be included in the funding formula, as well as what the net cost implications would be. The latter involves not only estimating the costs of preventive measures, but also the savings that might accrue through limiting or reducing the number of out-of-home placements, as a result of alternative measures being undertaken. An estimate can be derived by examining the experience of agencies that have made the transition to emphasizing more preventive measures, such as the West Region Child and Family Services agency.

This chapter summarizes how a strengthened prevention agenda can be used to generate social and economic change in First Nations communities. The structure of information gathering for this project involved addressing three key components, including:

1. A review of the relevant literature and participants' feedback from a workshop on prevention informed the question of what is best practice as it pertains to preventive and least disruptive measures in primary, secondary and tertiary prevention.
2. An economic cost-benefit analysis addressed the question of what are the realistic fiscal savings that could be expected by reducing the numbers of children in care.
3. Gaps in the current national funding formula are identified. Recommendations are put forth on new areas of required programming and different possible approaches to funding them. We address the question of how a funding formula might incorporate this range of services, but at this stage, cost implications are dealt with only in a very preliminary fashion.

LITERATURE REVIEW

To begin with, the review of a significant child welfare literature informed the process by identifying what is deemed to be the best practices in primary, secondary and tertiary prevention work, including least disruptive measures (see Appendix 1). There is general consensus that the traditional practice of placing greater emphasis on child protection through the removal of children from their home or the cultural environment of a kinship system is immobilizing, in terms of building healthy First Nations communities. Many authors point out that such practices often result in a revolving door between foster care placements and returning home. Not only does this process endanger the child's sense of well-being, but it is more costly from a fiscal viewpoint, as the child's needs become even more complex. Indeed, the risks of child maltreatment are not necessarily reduced from a placement strategy outside the child's cultural setting[4]. The traditional approach to custodial care often defeats the intended purpose of a child well-being model of service delivery.

In contrast, a family-centered and family-preserving approach within a community-building framework and with much cultural content is perceived as a high-need area in the efforts related to child protection. Many analysts propose that a

prevention agenda, which keeps children in their home or, in more complex cases, within the kinship system is seen as integral to the child protection function. Family functioning itself needs mending with cultural healing strategies, in contrast to a heavy reliance on external custodial care. There is general consensus that incorporating a more proactive family-centered component to a child well-being model requires more appropriate levels of financial resources to carry out this work. But the current measures lean heavily toward a reactive level of tertiary intervention only. The major work that needs to be done in First Nations communities is in the area of primary and secondary level strategies in order to reduce the enormity of crisis-related interventions that emerge from a lack of services to begin with.

From this viewpoint, analysts in the field suggest that the solution is partly in a diversity of primary and secondary prevention services, which would redress some of the systemic or socio-economic issues in these communities. A comprehensive inventory of such services is listed in the appended literature review. The current situation is that these services, if offered at all, are often fragmented and poorly funded. They do not always serve the complexities of a family's dynamics very well. Thus, a general lack of proactive and multi-faceted preventive programs can be endangering to child and family outcomes.

Though the analysis in the literature review conceptualizes prevention in terms of primary, secondary and tertiary classifications, to some extent, this is incongruent with the notion of holism in Aboriginal terms. Program strategies often entail a continuum of overlapping and interlocking child welfare services that comprise all three levels of prevention. As described in the literature, preventive actions are often effective on several levels. The demarcation into separate levels of prevention stems from a public health model of prevention, in which such categorizations are distinguished by the level of risk exposure for the child or family. In some ways, this is in contrast to the meaning of prevention within a social work context.

Nevertheless, a regimented distinction between the different categorizations of preventive activities does permit the conduct of a review of the multi-level range of potential preventive services compared to the current services under the existing funding arrangements. It also allows us to identify the new financial commitments, which would appropriately serve families in First Nations communities. In other words, through such distinctions, the financial needs can be tied to specific preventive services. Consequently, the demarcation into various levels of prevention is not intended to create fragmented and inflexible services where it concerns program development and delivery.

To sum, the current reality is that many First Nations Child and Family Services agencies deal with high-risk families in which services typically fall into the category of tertiary intervention or, at a minimum, secondary prevention in terms of risk intensity. But current funding levels need to be reworked in order to make funding resources available so that agencies can address the issues of family dysfunction long before high-risk conflict situations surface. Funding is also needed to begin the process of strengthening social capital in these communities, which has potential for improving the chances of fostering First Nations independence. An appropriate response requires a multi-faceted approach in contrast to the current situation in which programs often deal with a narrow range of child protection issues only.

CONSULTATIONS WITH SERVICE PROVIDERS

The range of preventive programs identified in the literature review were also confirmed via a consultation process with analysts and service providers in the area of child welfare who were brought together in a one-day workshop on April 29 2005, at the Fort Garry Hotel in Winnipeg. Participants came to share their thoughts and experiences on child welfare issues and outcomes. Presentations by the workshop participants illuminated a variety of perspectives on the meaning of prevention in child and family

services. From the discussions, we assembled a list of challenges and program needs that were identified during the workshop. The meeting also drew on notes on an earlier consultation with representatives of the West Region Child and Family Services agency and a consultant with extensive experience in this area.

There was general consensus that the current funding arrangement works against having a comprehensive preventive agenda in First Nations Child and Family Services agencies. Heavy emphasis must be directed at a traditional or cultural component to family healing. More sustained funding is required in order to maintain the few existing preventive programs, in contrast to the current practice of relying heavily on grant dollars. Presenters spoke about the fact that there is room to do alternative programming given the current child welfare legislation, but the problem is with freeing up the funding in order to do this programming appropriately.

During the workshop, seven major highlights were identified by the presenters:

1. **Prevention is an investment in people upfront.** Legislation and the consequent funding arrangements must be prevention-oriented. There is critical need in the area of prevention, as only this type of approach permits the incorporation of Aboriginal values of holism. How much the government invests in families upfront, via primary and secondary prevention, is a good indicator of how many families and children will end up at a tertiary or reactive intervention level. The damaging effects from many children's past negative experiences in foster care placements provides evidence that agencies must be involved with families long before crisis ensues.

The current problem is one of access to a 'seamless continuum of care' in preventive services in order to decrease the number of children from entering formal care situations. Prevention involves plenty of focus on parenting capacity and other services that are likely to lead to purposive changes, but a key theme is that agencies can not always fit people into preventive models. Conversely, programming models have to fit to people's needs. Therefore, multifaceted and flexible interventions are needed in First Nations communities.

2. **A multidisciplinary and collaborating model of intervention is needed.** Service provision to children and their families should reflect a coordinated approach to better deal with many co-existing risk factors. For instance, the child and family services team must have the ability to collaborate with schools and other organizations, such as Child Find, on personal safety issues. Agencies need to partner with employers in the area and the leadership in the community via community task forces. For example, task forces could deal with issues of violence, sports and recreation for young people, as well as parental involvement in behavioral issues. Agencies need to work collaboratively with the health sector, other community-based organizations, and the kinship system.

A multidisciplinary service approach is critically important to prevention in child welfare outcomes, since there is evidence that the physical and mental health issues of Aboriginal children can be very complex. Child welfare agencies can not be self-sustaining, and they must use the human resource base of the community.

3. **Environmental issues – poverty, substandard housing and sanitation, and low educational and employment status –** matters very much where it concerns addictions, abuse and intergenerational family dysfunction. Current strategies are equally lacking the necessary preventive work from a community economic development approach. Indeed, the experience of daily living with these socio-economic issues and all of their consequent problems has left a legacy of developmental disarray in First Nations communities. For example, the literature review indicated that First Nations communities are beset by high suicide rates among youth, as well as disturbing levels of drug and alcohol misuse. Such phenomena are symptomatic of the multitude of stressors that young people encounter on a daily basis, and which are rooted in a very alarming rate of developmental erosion. There are enormous risks associated with the

expansion of child welfare services without allocating financial resources to some of the bigger developmental issues.

4. **Flexibility in funding to do multi-dimensional or multi-faceted programming** is viewed as being a best practice in preventive work. Curriculum-based programming has proven effective in many initiatives (e.g. Vision Seekers in the Skownan First Nation), but this is not necessarily the experience of all participants. Not all individuals can fit into a particular curriculum. For instance, two people may be affected differently by the same parental training program, with one individual needing a more intense intervention. Programs must bend in many directions to serve the needs of particular individuals and family healing strategies. Home visitation programs may involve lower caseloads for social workers and other agency service providers. Indeed, the challenge is for funding levels to adequately meet the enormity of this task.

A human development perspective to meeting the needs of children means that specific community problems are approached with a customized service delivery model from a variety of overlapping perspectives. Multi-generational family dysfunction means that multifaceted interventions are needed. These issues are not solvable with single dimensional program provision. It requires a different way of thinking around programming, such as restoring the relationship between child and community. The workshop participants pointed out that programming can always be done differently, that is, with flexibility as a key component. One size fits all types of services are not always proven effective.

5. **Service infrastructures are lacking in remote communities.** There is a need to secure adequate levels of funding, which will allow remote communities to build up their physical infrastructures, as well as the capacity of human expertise internally. This would permit more services to be offered within isolated communities as opposed to sending people outside the community, in particular, as it relates to youth with disabilities or special needs. There is a lack of physical resources and respite services needed to keep special needs children at home in such communities. This is a big issue in the North. Agencies can not continue to rely on outside expertise brought into the community, as it creates discontinuity in service provision from the comings and goings of professional staff. There needs to be a base of case workers with internal obligations or connections to these communities so that they can establish trusting relationships and continuity with families.

Funders also have to recognize that it may be less expensive to pay a psychiatric nurse to go into the home and to spend time there than to take the family out of the community to receive services in a larger center. Developing the human resource base of professionally trained people is important in terms of staff understanding the internal dynamics of a community, that is, how the community perceives and internalizes the healing process, as opposed to imposing it from the outside.

6. **Building a human resource base and community volunteer capacity** in First Nations communities must be a priority. Agency staff must be trained to take a broader community development perspective. The issues extend well beyond simply training professionals via a university degree. A trait of flexibility in prevention workers is an essential component of the work. Approaches that help to build social capital include:

   - A holistic outlook to community roles and responsibilities by building a volunteer base of peer support. Community volunteerism must be the new way of thinking. For example, a community mentoring program could place individuals who have successes as parents in a mentoring role to other families with parenting challenges;
   - Intensive training for foster parents; - A supervisor training program within agencies in order to foster a preventive mindset;
   - Training specialized staff to work in rural areas through the Bachelor of Social Work (BSW) training program;
   - Developing agency staff's skill set in order

to expand their comfort level with adult education, teaching and group facilitation.

7. **Capital investments are lacking in First Nations communities.** In most First Nations communities, there is also a need for a comprehensive plan relating to the capital requirements that would build up the physical infrastructure. Funding needs to address the ability of agencies to secure buildings and facilities and to have control over them. For example, internally-managed therapeutic foster care treatment units are crucial capital investments that will ensure stability and consistency for long-term placements, such as high needs/high medical needs children in foster care. Maintaining residential programs is essential to ensuring an Aboriginal content to programming.

From the presentations and the literature review, we devise specific recommendations for a revised funding formula. But first, we summarize the results of our investigation into the potential cost savings from a variety of alternative preventive strategies.

COST-BENEFIT ANALYSIS

In the current analysis, we were also asked to focus on answering a further question, as follows: **What are the realistic savings that can be expected by reducing the numbers of children in care?**

A brief economic cost-benefit study of a handful of the West Region Child and Family Services agency's programs, in the Province of Manitoba, informs the analysis with plenty of tangible evidence that the monetary cost savings and cost avoidance from prevention are substantial. Though this agency could rely on a substantive human resource base and an operational infrastructure in place, which allowed the staff to implement such programs, most agencies do not have the capacity to carry out such preventive initiatives within their existing funding levels. Nevertheless, the calculations demonstrate a critical need to re-direct policy costs in favor of primary and secondary

preventive services as a principal component of the casework model, while still adequately reacting to more complex cases of high-risk family conflicts. The highlights of the cost-benefit calculations for only a few programs offered by one community-based child and family services agency are summarized in the following:

- The fiscal savings from the Vision Seekers program, which has been operating in the Skownan First Nation Community in Manitoba for around five years, totals in excess **$25 million**. The program takes a human development approach to its residents' needs on the matter of education and employment. It offers life skills workshops, adult education, a community-centered therapy program, a career-trek program for young adolescents and their parents, all from a holistic Aboriginal family and community healing perspective. This is a fine example of preventive work that fully engages a community at all levels – children, adolescents, youth, parents and Elders. It appears to return $6.2 in savings in present value terms to the WRCFS for every $1 spent. When savings to other agencies are include, notably social assistance savings, a benefit to cost ratio of 16.5 appears to be returned, which is huge.
- The Gaa Gii Kweng (GGK) therapeutic foster care program has also demonstrated substantial economic cost savings for twenty-five special needs children in the federal children in care program. The net present value of the cost savings in custodial care for these 25 children (in 2005 dollars) from internally-managing

a therapeutic foster care service totals **$2.0 million**. At times, for more complex and high-needs child welfare cases, out-of-home 24-hour care is absolutely required. However, this comparative review with other residential care facilities located within the mainstream system has illustrated that First Nations Child and Family Services agencies need to ensure that therapeutic support services are provided within their own communities so that they can guarantee an appropriate cultural component.

- The Reclaiming Our Voices Project involves a three-day retreat for individuals who have significant issues with addictions and maintaining sobriety. Roughly 900 participants over a six-year period have received services from this initiative. Over this period of time, the savings in foster care from preventing children from entering formal care, as well as returning some children home, have exceeded **$14 million**. Furthermore, another **$63 million** in savings is expected to materialize in future from the prevention of FAS/E afflicted children, due to their mothers' maintaining sobriety during a pregnancy. The intergenerational outcomes and costs savings, though difficult to measure, are expected to be substantial. In short, this program appears to return $60 in present value terms to WRCFS for every dollar spent by the agency.
- The Treatment Support Unit, which involves intensive family preservation and reunification services, has prevented roughly 212 medium-to-high risk children from entering formal care. The net savings in foster care over a nine-month period exceed **$2.9 million or $3.9 million over a full year.** Keeping children in their homes, or at the very least within their kinship system in the community, is not only a preferred alternative which is best practice from a least disruptive approach, but the cost avoidance effects prove it to be cost efficient and effective, as well. Theis project appears to yield $12.8 in benefits to WRCFS (in present value terms) for every dollar expended.

While one should be cautious in using these ratios of benefit to cost, the bottom line is that returns to spending on prevention are huge and hence spending more on prevention makes sound fiscal sense.

Another way of approaching the issue is to take an aggregate view of the dollars saved by WRCFS by investing in prevention, in terms of NOT putting children into care. Estimates are over $1.5 million per annum after allowing for the cost of prevention programs. The case for paying more attention to prevention is, therefore, an extremely strong one, not just in human terms (which, after all, is really what counts), but also in fiscal terms.

No one questions that there is a need to sustain the existing reactive or tertiary system, which addresses high-risk family environments in which children face a high probability of abusive situations. The cost-benefit analysis illustrates, however, that a shift in focus must be directed to family preservation and reunification whenever possible. A key component in this is that agencies may be able to better provide their own therapeutic foster care residential facilities. Further, community capacity building efforts, such as the Vision Seekers and Reclaiming Our Voices projects, demonstrate that there are substantial fiscal benefits to providing First Nations agencies the adequate resources so that they can offer a continuum of high-quality primary and secondary preventive services. There is a high probability that such services will consistently meet the challenge of optimizing the government's investment dollars in fiscally sound ways.

THE UNDERFUNDING OF PREVENTION AND MAINTENANCE IN THE CURRENT FEDERAL FUNDING FORMULA

The final question is posed: **How should a funding formula incorporate this range of services and at what cost?** Put differently, what amount of funding would adequately equip First Nations communities with the vital financial resources needed to carry out the prevention task in order to respond to their needs of their residents? The starting point is that the current

INAC funding formula for Operations makes inadequate provision for prevention services.

Since the early 1990s, the INAC formula has been based on child population figures (0-18 years). Analysts and service providers in the field generally agree that most First Nations Child and Family Services agencies are precluded from implementing prevention programs due to a lack of funding within the current formula. More dollars would reduce the current heavy workload situation, and it would release some staff time so that they can focus on a preventive agenda. In this section, we identify gaps in the current federal formula based on the general philosophy of care in First Nations communities, which involves an ecological or holistic approach. In this general overview, we also include a discussion of the treatment of prevention in the current funding formula.

The existing Operations Funding Formula of INAC is discussed at length elsewhere in this report. In essence, operations funding is driven by two main variables and a few other less important variables. The main variables are the number of children in the 0-18 age group and a fixed amount per child, $727. These account for by far the greatest proportion of funding. In addition, there is a fixed amount per agency, which also depends upon number of children in the population being served, and which can reach a maximum of $143,000 and a fixed amount per band of $10,700. The three fixed amounts (per child, per agency and per band) are then adjusted by the INAC remoteness factor. These are the only variables determining funding.

In notes accompanying the formula, INAC explains that the fixed amount per agency is intended to cover the cost of a Director's salary, benefits and travel; a secretary, a financial officer, audit, evaluation, legal costs, ongoing organizational development and training of placement resources.

The fixed amount per band is intended to cover the costs of boards of directors, and of local and elders' committees, including travel and training.

The amount per child is intended to cover the costs of direct protection, resource development and prevention services, professional supervision, special services purchases, off-hours services, staff salaries, benefits and travel and overheads (rent, telephone, office supplies and utilities).

The formula is said to be based on the following assumptions: 20% of families need services; 6% of children are in care; the need for core positions in all agencies; supervisors at a rate of 1 to 5 staff; child care workers and family support workers at a ratio of 1:20 children: support staff workers at a ratio of 1:5 workers: wages based on average salary scales in Manitoba and Ontario.

The basic problem with the formula is that there is no periodic reconciliation between the amount of money calculated under the formula and the cost of the services those funds are supposed to purchase. It is not clear, therefore, that agencies can actually purchase the services they are supposed to. In fact, there is very good reason to suppose that in many cases, they cannot. Thus, there has been no adjustment for salary increases or other increases in the cost of purchasing services since the formula was introduced some 15 years ago. Any increase in funding has come, therefore, from increases in the number of children. In the circumstances, **either** the quality of services must have declined if child and family needs grew proportionately with population **or,** increases in costs of services can have been covered, if at all, only from a reduction in the proportion of children or families receiving services.

The consensus among First Nation agencies is that the funding formula makes inadequate provision not only for inflation but also for travel, legal costs, insurance, front-line workers, staff benefits, program evaluation, accounting and janitorial staff, staff meetings, Health and Safety Committee meetings, security systems, human resource staff for large agencies, quality assurance specialists and management information systems. Funding has not reflected the significant technology changes in computer hardware and software. Liability insurance premiums have increased substancially over the past decade. Agencies are expected to allocate these costs to

the operational funding category ($143,000), which has not kept pace with inflation since the mid 1990s. Regional Tables were formed across Canada in response to the National Policy Review in 2002. The Manitoba Regional Table (MRST 2002) participants have argued, "If agencies are unable to purchase liability insurance, they are in breach of their legislative responsibility" (p.6). And if they do find the money for the liability insurance, from which other operating item will it come?

There are also a number of expenditures currently charged to the Operating Budget which might be better charged to the Maintenance Budget. The Manitoba Regional Table (MRST 2002) has identified a number of concerns relating to expenditure categories, which INAC considers as falling within the operating budget, when in fact these costs are directed associated with child protection activities [5]. These include:

- The operational budget base of $143,000 is inadequate to cover the high legal costs for bringing children into care, such as attending court proceedings and preparing case plans for the courts. These and other extraordinary or unavoidable expenditures, such as the costs of inquests and medical examiner's recommendations, can easily consume a large portion of the operational budget in any given year. Frequently, these items are directly associated with having the child in care.
- Psychological assessments, subsidized adoptions, repatriation and unification costs (in-home support services when a child has been reunited with their family), and homemaker services are all related to providing for the needs of a child. There is also government funding disputes with respect to mental health therapies for children, which can be disruptive to a child's emotional well-being. Operational funds should not have to accommodate these costs.
- Some travel costs should also be billable under the maintenance budget, for example, if a worker has to escort a child to a major centre to receive services. From a service perspective, it is less traumatizing to a child if a worker who is familiar with the child accompanies him/her to a major centre in the situation where psychological or treatment services are not accessible in a community. However, travel costs that are not recoverable through FNIHB should be billable under maintenance, since they are directly associated with having the child in care.

These are only some of the purchased services that are directly related to the child care function. But agencies are mandated to offer such services under provincial legislative statutes. Hence, all these costs should be billable under maintenance budgets. They do not belong in an operations formula, since the expenditures are directly associated with child protection activities.

Often the issue is one of disallowed expenditures, which surfaces during the periodic compliance reviews. Consequently, maintenance billings are disqualified due to mismatched policy interpretations. For example, INAC is known to disqualify emergency services on reserve (INAC 2003). Flette (2004) argues "DIAND maintains that money for services to abused and neglected children in their own homes is found in agency operations budgets while at the same time they acknowledge that these are unfunded items in the operations budget" (p.3). Thus, there are plenty of inconsistencies in approved funding, which do not reflect the agencies' legal obligations under provincial legislative statutes. At other times, expenditures are disqualified due to jurisdictional payment disputes, as INAC argues that it is not the "first payer" for certain costs. An example involves government jurisdictional disputes with respect to providing services to children with complex medical needs.

More importantly, for the purposes of the issue under discussion, the formula provides insufficiently for prevention services. This shortfall has a number of dimensions. Firstly, if overall funding is inadequate, direct front-line services to children and families will receive priority and preventive services will be neglected, simply because of the urgency factor. Secondly, while the $727 per child notionally includes funding for two prevention workers per agency, provision for one prevention worker per band might be more reasonable. Moreover, remote communities may need more prevention workers. West Region

Child and Family Services agency in Manitoba would argue that the number of child care workers and the number of Family Support/Protection workers should both be increased from 1 to every 20 children in care to 1 to every 15. The $727 also provides for one resource worker per agency, but again, WRCFS argues this should be increased to 1 for every 20 foster homes. If all these adjustments were to be made, WRCFS would need an additional 17 staff to undertake prevention work appropriately, at a cost of approximately $1 million, or of about 45% of its existing INAC budget. The main drivers here are the additional prevention staff per band and the additional Resource Workers.

Access to prevention funding is also undermined by jurisdictional payment disputes. For instance, INAC does not pay for day care services to foster children on reserve, which is known to promote healthy child development in the early formative years (MRST 2002). The CFS Act requires First Nations child welfare agencies to provide such services. To date, HRDC has been providing minimal funding for day cares on reserve and, consequently, there are a limited number of spaces available.

Much of what WRCFS has achieved in the area of prevention has been funded not through the Operations Budget, but through the Maintenance Budget, via the block funding or Flexible Funding Option for Maintenance (FFOM) approach (previously known as block funding). Though FFOM does provide a solution that has achieved some successes in various agencies, the workshop participants pointed out that there are many reservations associated with block funding, including:

- Such a funding arrangement may not be suitable for all agencies, since it requires a level of management maturity and sophistication.
- The West Region Child and Family Services agency currently runs a deficit under the flexible funding option for the reasons that were discussed earlier (funding levels not keeping pace with inflation, etc.). While there is much emphasis on WRCFS as a model of flexibility in the use of funded dollars, this detracts from the key problem that there are too few dollars being allocated to agencies. It is imperative that the initial funding level for a FFOM be appropriate and that cost of living increases for prevention programs be included in the adjustment factors.
- Furthermore, a flexible funding option must be truly flexible on the programming side if services are to be tailored to specific community needs. Agencies should not have restrictions placed on the type of child welfare delivery model that they can offer in their respective communities.
- A flexible funding agreement must allow for unforeseen circumstances since certain crises or emergencies may cause maintenance costs to increase substantially. This would force an agency to reallocate basic maintenance dollars that were initially targeted to prevention initiatives. There is an exceptional circumstance review process within the existing policy; however, it has many gaps.

The consensus was that too much uncertainty is generated when an agency has to rely on their block maintenance budget to do preventive work. The effects can be devastating if things go wrong. Cash flow problems are immediate if an agency has one high medical needs child that comes into care unexpectedly. So there is a need to investigate other solutions to the funding of prevention programs.

Finally, it is also noted that the issue of compulsory services under provincial statutes versus discretionary programming needs to be addressed further. Although direct child protection expenditures are mandated under provincial legislation, there are several other categories of discretionary costs that should be provided by law in order to maintain consistency with Aboriginal values. For example, many preventive community development expenditures do not fall under the statutory legislative standards, even though these items contribute to family healing strategies, which should be funded.

As a further example, in all provinces, child welfare agencies are required to remove children from the home only after initial attempts are made

toward family preservation with least disruptive measures (i.e. keeping the child at home) [6]. But according to the Joint National Policy Review, this legislative standard is not funded consistently from one province to the next (Blackstock et al. 2004: 167-8). The fact that the groups of services which constitute the different levels of prevention/ least disruptive measures are not always clearly defined in the CFS legislation, and thus they are not necessarily funded, also undermines the ability of FNCFS agencies to provide appropriate programming (Shangreaux 2004). There needs to be more discussion about the levels of prevention – primary, secondary and tertiary – that could be legislated consistently across jurisdictions, as well as funded universally, in order to ensure that programs are based on a more holistic community development social planning process.

Blackstock et al. (2004) have argued a "disconnect between the funding and the jurisdiction as resulting in inequity of services to Status Indian children in Canada" (p.160). The Auditor General of Canada (1998) has stated:

> "14.76 Arrangements [funding arrangements] vary by province, and in some provinces Indians are not entitled to a whole range of services that may be available to Indians in another province. In Saskatchewan, for example, no preventive services, which Indians view as the most valuable, are available to Indians because they are not part of that province's service package. This is a direct result of federal recognition of provincial jurisdiction and of adhering to provincial standards for child welfare. In addition, because child welfare agreements with individual bands within a province vary, all bands in that province may not be entitled to the same range of services or the same level of funding" (Auditor General of Canada, 1998: Section 14.76 cited in Blackstock et al. 2004).

To conclude this discussion, there is little uniformity between the federal policies versus provincial standards around child maintenance funds, which is discriminatory. For instance, the Manitoba provincial legislation provides for three additional years of extended care to permanent wards beyond their 18th birthday, particularly, if the youth is participating in an education and training program. The same policy is not applied to federal children in care, as it is assumed that they will be covered under adult services. However, adult services are generally absent on reserve. Flette (2004) argues that the current practice of the treasury board authorities is to flag these funding disputes as "anomalies" to "bring agencies in line with Dir 20-1, rather than moving ahead to implement the NPR [National Policy Review] recommendations" (p.4) [7]. It has the effect of "creating a discriminatory two tier system for First Nation children and families, when compared to provincial systems" (ibid, p.4). Funding gaps lead to a lower standard of service in First Nations communities.

FUNDING RECOMMENDATIONS

This final section presents broad funding recommendations, which characterize a shift of emphasis to preventive and intensive family work. The workshop participants identified three broad funding options. Ongoing cost of living adjustment would be incorporated into all three approaches. In addition, as an interim measure, funding formulas could be adjusted to the current levels in terms of salary and benefits adjustments. This option would suffice as a temporary solution.

The goal of all three options is to eventually have a lower proportion of funding allocated to maintenance costs for children in care, and a much higher percentage of the funding formula being given to preventive programs and community development or family healing initiatives. In other words, the shift in emphasis is from out-of-home child protection to intensive family services, as well as primary and secondary prevention.

Option #1 A Multidisciplinary Team Approach to Funding.

For instance, for every 'X' number of statutory workers, the team must include 'X' funded prevention or community development worker

positions. Staffing can be broken down into various groupings. This is a multidisciplinary team approach. The prevention worker must be offered a similar salary scale to other professional staff on the team. Finally, a funding formula has to consider that a multidisciplinary team approach takes up more staff time to get the job done, due to ongoing collaboration.

This approach would include the following budget categories:

(1) **A maintenance line.** This would not differ substantially from the current practice, though its funding levels should recognize provincial legislative differences in programming, as opposed to trying create national uniformity in its funding practices. The problems identified above with respect to billable direct child protection expenditures should be addressed (legal, travel, homemakers, psychological, counseling, etc.). Presumably, as a shift takes place towards fewer out-of-home placements from the traditional child protection function, the required funding in this budget category should decline over time.

(2) **An operating line,** which could depend on the number of staff, as opposed to a population formula. Nevertheless, this line should include the appropriate adjustments for salaries (with inflation adjustments) and benefits (an increase to 15%), adjustments for high insurance costs and other identified gaps and inequities in the earlier discussion. The resource worker who recruits and support placement resources (foster care component) is included under this budget line.

(3) **A prevention line** tied into the number of staff or some notion of children in care/ family files opened. These would be specific positions, such as prevention and community development workers (1 per band suggested earlier to focus on primary and secondary level strategies), child care workers at the rate of one for every 15 children in care in order to provide intensive family support (tertiary level intervention), family support/protection workers (i.e. in home visitation) also at the rate of one for every 15 multi-problem families (tertiary level intervention). In addition, there also has to be specific positions to do outreach, advocacy and funding proposals (1 position for each agency).

Operating costs and staffing must also increase as the maintenance and prevention budget lines increase (i.e. accounting staff, administrative support). Moreover, for every five supervisors or administrative office staff, there should be one additional manager added to oversee their activities.

Teams would have to work with communities to design prevention programs appropriate to the ability of the agency to implement them and according to the absorptive capacity of the community being served.

Option #2 – Link Prevention Funding to Children in Care and/or Families Receiving Services.

The idea is that funding for prevention should be based explicitly on in-care days, families receiving services or some notion of the caseload. Prevention would be built into the caseload formula. This would borrow some of the features of those Provincial Funding Formulae which are driven by service rather than by number of children in the community. There would be a separate budget line for prevention, arrived at by applying a formula, perhaps along the lines suggested earlier; viz, 1 prevention worker per band above a certain size, depending also on remoteness; 1 Family Support/ Protection worker and 1 child care worker to every 15 children in care; and 1 resource worker for every 20 foster homes. This budget would be separate from and in addition to the Operating Budget.

A variation on this would be would be to base the provision for prevention only on the number of families receiving services, on the grounds that working with families is the way to prevent having to take children into care.

In either case, the proposal deals only with a way of determining funding. Staff and the communities

concerned would need to determine how that funding is used, although the successful practical experiences outlined earlier might act as a guide..

Option #3 – Link Prevention to an Accreditation System

This funding arrangement is based on an incentive system. It also integrates a system of accountability and transparency at different stages of capacity or levels of funding. Concerning the base funding to agencies, INAC's current funding formula would be applied in principle at all levels of capacity, but it would be enhanced (or replaced) to account for some of the concerns expressed in the earlier section and elsewhere on existing gaps in current financing. However, the government would also invest developmental dollars for preventive programming, but they would only be required to sustain the funding if tangible (and intangible) outcomes were achieved. The formula is expected to be more complex, but it permits the development of an array of diversified and flexible services that are tailored to the specific needs of child and family services agencies across Canada.. Funding would be tied to four levels in terms of "capacity to implement". There would be national overview of the program, but it would be managed by existing local authorities that set their own standards.

Under this program, First Nations Child and Welfare Services agencies are given funding options, as follows:

Level One: Agencies have the opportunity to apply for special developmental funds in order to complete a needs assessment in their communities, and to prepare a strategic plan and budget around the different levels of preventive programming. Staff at the local managing authority would assist in giving advice during the planning process, as well as providing some training of the workforce in order to implement a preventive agenda. Non-participating agencies remain at Level One, but they would be encouraged to raise their capacity level. Scale of operations is also a significant concern. Even with the financial incentive of developmental funds, some agencies with smaller scale operations will have difficulty in moving forward to the next capacity level of implementing preventive programs. These agencies will likely require extra funding, which is specifically dedicated to improving their scale capacity.

Level Two: Following the use of a developmental grant, the agency receives additional pilot funding, which makes possible the implementation of the preventive services and programs that were outlined in the strategic plan. Agencies would not be required to implement programs all at once. Pilot funding could be allocated incrementally based on a priority list of service needs, as outlined in the strategic plan. This recognizes that agencies have diverse needs in terms of programming, as well as priorities in execution. Implementation would have to be successfully achieved before receiving sustained program funding. For instance, is the agency doing what it said it would do? A quick evaluation by staff at the managing authority could determine whether the agency has earned the next stage of sustained funding for the implemented programs. Subsequently, formal evaluations would take place every 3-5 years, as is the current practice.

Level Three: The agency receives a sustained increase in their funding level based on preventive programming initiatives that were implemented in Level Two and as proposed in the strategic plan. The preventive services are funded over and above the minimum statutory services in the funding formula. Presumably, the maintenance budget should be declining for agencies that operate at Level Three. In addition, there is an option to access further developmental funding for any innovative projects that the agency wishes to explore. This would be done through a similar proposal process and pilot funding.

Level Four: An exceptional amount of programs/services are provided in First Nations communities, based on a five-year plan. A type of award system, with financial compensation or non-pecuniary rewards to management and staff would be implemented for those agencies who achieve a Level Four capacity to implement.

While this option is less easily translated into a dollar figure for prevention, the idea is that different bundles of prevention programs would be accessed by agencies at different development

levels. If there were interest in this approach, the bundles could be more clearly specified and dollar amounts attached.

CONCLUDING REMARKS

Drawing on the above, we can make the following statements;

1. **There is a strong case for putting resources into prevention**
2. **There is a significant literature on the types of preventive measures that have been attempted and there is knowledge of what might or might not work in different circumstances.**
3. **The returns to successful prevention programs are huge, both in terms of savings in agency costs but also in terms of broader societal savings.**
4. **The current INAC approach to funding does not adequately provide for prevention and, may even systematically discourage it by underfunding basic operational activities.**
5. **Some First Nations agencies have, nonetheless, managed to implement a variety of preventive programs with remarkable success. Sometimes this has been accomplished through the diversion of Maintenance dollars under a block funding arrangement.**
6. **The use of maintenance dollars for this purpose is subject to uncertainty, and block funding is, as well, not for all agencies.**
7. **Separate provision should be made for prevention funding.**
8. **This could be based on a team building approach, linked to children in care and/or families receiving treatment, or it could be based on a progressive accreditation process using the services of the First Nations Child and Family Caring Society or some other First Nation central agency set up for this purpose.**
9. **Whatever the funding approach, prevention activities must be encouraged and there is much successful First Nation experience to draw upon.**

[1] The determinants of these expenditures include social assistance, the justice system, health and other social services, such as family services and substance abuse programs (RCAP1996).

[2] Available online at: www12.statcan.ca/English/census01/products/analytic/companion/abor/Canada.cfm.

[3] Flette (2004) has reported that, in Manitoba, 2004-5 funding cuts to FNCFS are roughly 8%, which amounts to a loss of one month's worth of funding, even though the number of children entering formal care is on the rise. The analyst proposes that the occurrence of reduced funding to First Nations agencies is a countrywide phenomenon (p.4).

[4] Placements are generally made based on mainstream rules and requirements as determined by provincial legislation.

[5] Many of these issues were also raised in the minutes of the meeting (entitled "Parking Lot Issues") of Executive Directors at First Nations Child and Family Services agencies in Manitoba, in September 2002. Flette (2004) also identified several of these funding challenges, which are often based on narrow interpretations of the treasury board authorities, as to which costs are considered "anomalies" from the approved expenditures in the policy manual. A further source is the "Overview of Social Anomalies", which is prepared by the treasury board authorities of Indian and Northern Affairs Canada (INAC 2003).

[6] See Shangreaux (2004) for a comprehensive discussion of least disruptive measures statements that are found in Provincial and Territorial Legislation. The analyst states, "The concept of "least disruptive measures" not only reflects best practice in social work it is also embedded in provincial and territorial child welfare legislation". However, the types of services constituting least disruptive measures are not always clearly identified in the various provincial legislations.

[7] The treasury board authorities keep track of expenditure variances between the national policy manual and actual agency practices, but to date such anomalies have not been funded.

APPENDIX A: DEFINITIONS OF COST-BENEFIT TERMS

Cost-benefit analysis (CBA) has been a widely utilized evaluative tool for a variety of public projects. In Canada, the first cost-benefit guide was developed for the government in 1961[1]. Later, a revised Treasury Board publication outlined the principles of CBA in the following:

"Benefit-cost analysis is a method of evaluating the relative merits of alternative public investment projects in order to achieve efficient allocation of resources. It is a way of identifying, portraying and assessing the factors which need to be considered in making rational economic choices. It is not a new technique. In principle, it entails little more than adjusting conventional business profit-and-loss calculations to reflect social instead of private objectives, criteria and constraints in evaluating investment projects" (Canada, Treasury Board, Benefit-Cost Analysis Guide, March 1976).

There have been several approaches to CBA in recent decades, from both program evaluation and countrywide societal perspectives. One of the major differences in the many published cost-benefit studies is how they vary in their points of view for placing money values on society's resources. Some studies estimate exclusively the fiscal impact to the government or, alternatively, the private costs to individuals. Other studies examine costs to the whole of society, including those costs that are imposed on the community. The current analysis considers the impact of a variety of program alternatives on fiscal expenditures. Therefore, it takes a program evaluation perspective.

The underlying principle in cost-benefit analysis is the notion of economic costs as opportunity costs. All of society's resources may be used in other most highly valued alternative ways. When society makes a choice about the uses of its scarce resources or its delivery of services, it also sacrifices the positive benefits or opportunities obtained by using the resources in some other way. For example, society's expenditures on police investigations and law enforcement, including human efforts in these activities, pulls resources away from preventive activities, such public education about drinking and driving or speeding. The latter alternatives may have resulted in other valuable and gainful societal outcomes. This notion of giving up one thing to get something else underlies economic cost analysis and, in economic terms, it is defined as an 'opportunity cost' (Levin and McEwan 2001).

Inflation, Net Present Value and the Discount Rate

Inflation factor: this is an adjusting factor to economic cost analysis because the value of money fluctuates over time due to increases (and sometimes decreases) in the general price level of goods and services in the economy, as well as wages in the labour force. These periodic adjustments to the value of money are referred to as nominal dollar changes (i.e. costs unadjusted for inflation). An inflation adjustment removes the price level effects by converting economic values into real dollar units, in other words, constant purchasing power over time. The costs of all future years are adjusted to the price level of a specific base year. The most widely used measure of inflation is the Consumer Price Index (CPI) (Levin and McEwan 2001).

Net Present Value (NPV): when comparing costs versus benefits over a period of time, a dollar's worth of expenditures today is worth more than the value of a dollar at some future date. This is because an invested dollar today will earn interest income. Put differently, any deferred program costs to future years involves lower real resource costs to society. If the costs and benefits extend over a number of years, the time value of money is adjusted together with the inflation factor (constant purchasing power). A present value calculation accomplishes this task by using a discount rate. It converts the value of program benefits and costs in the future to a present value, in order to compare them to the current or present costs (Levin and McEwan 2001; Nas 1996).

Discount rate: this is a type of interest rate that is used for the net present value calculation, and its value depends on the viewpoint under examination. For private outcomes, a standard

approach is to use the market interest rate because it reflects a return to private savings or a bank loan, in other words, the consumer's opportunity costs of consumption versus savings. From the state's narrow viewpoint, the cost of government borrowing is an appropriate discount rate. Broader societal effects are adjusted using a social discount rate which, in Canada, has been specified by the government's Treasury Board to be approximately 10%, a rate that reflects private firms' opportunity costs of investment (Levin and McEwan 2001; Canada: Treasury Board of Canada 1998).

APPENDIX 1

Best Practices In Primary, Secondary And Tertiary Prevention Work (Including Least Disruptive Measures)

Introduction

This paper reviews the literature on best practices in primary, secondary and tertiary prevention work, including least disruptive measures in preventing a child from coming into formal care. Much of the existing body of Canadian research in the area of child welfare proposes that First Nations Child and Family Services agencies are increasingly aware of a need for alternative ways of conceptualizing the delivery of services to families in their communities. For instance, more holistic, family-centered and family-preserving approaches within a community-building framework and which protect the integrity of cultural traditions are seen as integral to the provision of child welfare services (McKenzie and Flette 2003; Blackstock 2003).

Despite these common understandings, First Nations communities encounter significant challenges in supporting family-centered approaches, as well as targeting proactive preventive initiatives, in the face of substantial inequities in access to the critical financial resources which would redress a multitude of issues in service delivery needs (Blackstock 2003; Shangreaux 2004). The relevance of inadequate funding is that programming practices in child welfare are often informed by reactive policy responses to an enormity of crises-related interventions and, thus, reflect incongruency with the key goals of redressing some of the systemic issues. This includes the need for early intervention and preventive measures, the lack of which thwarts capacity building and family wellness in First Nations communities (Kufeldt 2003; McKenzie 2002; Shangreaux 2004). Consequently, most of the research included in this review identifies glaring gaps in proactive preventive service provision within the majority of First Nations communities.

Primary, Secondary and Tertiary Prevention

Analysts generally concede that the notion of prevention implies a continuum of child welfare services that promote healthy community living and, ultimately, fewer children from coming into formal care. However, the continuum of care is formally defined as falling into the three broad classifications of prevention: primary, secondary and tertiary. Preventive measures can include participation from the community (Elders), institutional (medical or educational systems) or social strategies involving family and individual, or any blend of these approaches. For example, a program aimed at decreasing the risk of FAS/E for the children of pregnant adolescents who smoke, drink or engage in substance misuse might combine medical services, health education in a school program, elder counseling, and participation in a support group (Health Canada 1997).

Prevention actions are often effective on several levels. For instance, consider the case of family training in behavioural management techniques for a special needs child in the home. The tools acquired by parents will likely apply to other children in the family. There may be intergenerational effects, as older adolescent children learn how to deal with the behavioural and learning issues of younger siblings, thus providing them general parenting tools to deal with their own children in future. In this way, a secondary prevention effort that is dealing with a specific risk factor overlaps with a primary prevention effort aimed at future generations.

Though there is interplay of the various types of prevention and the members of the population who benefit from such strategies, the current review is framed in terms of delineating into separate classifications the primary, secondary and tertiary prevention initiatives that are given attention in the literature.

There is also much discussion in the research regarding a "resource gap" in the area of prevention (McKenzie 2002). However, it is also proposed that none of the three levels of prevention can achieve maximum effectiveness unless key social issues are addressed through development-enhancing programming and funding directed at strengthening the physical and social infrastructures of the First Nations Child and Family Services agencies and their communities (Shangreaux 2004). Only through adequate financial resources and a community-building approach can general developmental strategies dealing with poverty, inadequate housing, addictions and violence be redressed.

The current literature review is structured to provide discussion of the range of prevention services that are considered necessary by service providers and other analysts in the social work field, in terms of best practices from a least disruptive measures approach. Tables 1-4 summarize an array of program categories that are aspired to in the current research within four broad classifications – primary, secondary and tertiary prevention initiatives, as well as general developmental strategies. Several of the programs listed in these tables, which range from an emphasis on wellness at one end to intervention measures for existing child maltreatment at the other end, have been proven effective in some First Nations communities and, thus, constitute best practices in child welfare service delivery (McKenzie and Flette 2003; MacLeod and Nelson 2003).

Primary Prevention

Primary prevention, sometimes referred to as "universal prevention", is delivered to the general population as opposed to an identified high risk group. As a proactive measure, it is focused on lessening the incidence of child abuse in a society by preventing risk factors which bring about family violence to begin with (MacLeod and Nelson 2003; Shangreaux 2004). Progress in primary prevention initiatives would include the substantial reduction or the eradication of the significant factors that lead to child maltreatment.

A program that is directed at preventing prenatal alcohol consumption is an example of primary prevention and it substantially reduces or eliminates any risk of birth effects, such as FAS/E. As further example of primary prevention from a culturally-based perspective, previous research has observed that what is considered necessary in

family wellness initiatives is a focus on teaching traditional parenting styles within a culturally-appropriate framework (which may also vary by band/tribe) (Cross 1986; Coleman et al 2001), in particular, as it pertains to the engagement of Elders in the process, the oral tradition and the use of the medicine wheel. Parents who are offered such services would learn what their culture tells them about how to be an effective parent. Examples may include a non-coercive styles and little emphasis on developmental timing. Traditional practices often avoid physical punishment and domineering or "take charge" parenting styles, which are superceded by hugging, praising and being emotionally available to the children (Coleman et al. 2001; Cross 1986).

Table 1 lists a review of various literature sources in the child welfare research, which identify recurring themes in what are best practices in primary prevention, as well as some of the existing innovative initiatives in community-based strategies.

**All of the literature emphasizes that such programming, which supplements the child welfare system, must integrate cultural practices and collaborative working relationships with the communities.*

Table 1: Literature Review of Best Practices in Primary Prevention

Type of Primary Prevention Program* *(proactive support, education and resources directed at the general population)*	**Literature Sources or Existing Programs** *(which are considered effective as best practices)*
Building parenting capacity: Public education campaigns that promote effective parenting, healthy pregnancies (avoiding alcohol, etc.); use media interventions, speaking engagements; **Resource materials development related to parenting:** Newsletters promoting Aboriginal spirituality and an oral tradition in child-rearing practices;	Blackstock (2003); Cross (1986); Kufeldt (2003); MacLeod and Nelson (2003); McKenzie and Flette (2003): medicine wheel framework; Resource example: *Parents* magazine; Shangreaux (2004);
Outreach and prevention services related to parenting capacity: Parent education programs and support groups; family planning programs; referral services; prenatal classes and home visits; Developing parenting training methods on the basis of traditional practices and using Elders in these processes of "self-conscious traditionalism";	Blackstock (2003); Brown et al. (2002); Cross (1986); Fairholm (1997): Canadian Red Cross workshop -- "Walking the Prevention Circle"; McKenzie (2002); MacLeod and Nelson (2003) – emphasis on multi-component programming; Shangreaux (2004); WRCFS 2005-6 Service Plan: Welcome Baby Programs;
Males and parenting: Programs that engage males in the parenting process e.g. group therapy interventions that incorporate traditional Aboriginal practices, ceremonies and, in particular, child-rearing values; Elder involvement;	Dion Stout (1997); Dion Stout and Kipling (1999); McTimoney (1993);
Public awareness campaigns – FAS prevention: Fetal Alcohol Effects/Syndrome (FAE/FAS) prevention using an integrated approach which also addresses some of the social issues in the communities;	Bennett (2002); Dion Stout (1997); Health Canada (1997); McKenzie (2002); WRCFS 2005-6 Service Plan: Addictions Education Workshops;

Table 1: Literature Review of Best Practices in Primary Prevention

Public awareness campaigns – How to report suspected child abuse/neglect; Public awareness re: domestic violence; Awareness around risk factors re: child offending behaviors; Child abuse and neglect awareness;	Dion (1999); Health Canada and Assembly of First Nations (2003); Longclaws et al. (1994); Shangreaux (2004); WRCFS 2005-6 Service Plan: Family Violence Education Workshops; Child Abuse and Neglect Awareness Week activities;
Public awareness: Community meetings; workshops on community needs (this overlaps with a developmental strategy);	McKenzie (2002);
Resource materials development: Relating to suicide prevention; Culturally sensitive resources re: FAS/E	Royal Commission on Aboriginal Peoples (1995); Health Canada and Assembly of First Nations (2003): suicide prevention; Health Canada (1997) – FAS/E;
Family Support Initiatives: Family resource centers intended to strengthen the ability of families to access existing supports and resources; life skills (budgeting, taking care of a home, self-care, etc.); marriage preparation workshops; family activity nights; family camps;	Shangreaux (2004); WRCFS: 2005-6 Service Plan;
Family Support Initiatives - **Education:** School-based prevention efforts around child maltreatment; Availability of pre-school programs and resources; **Parents:** Engaging parents in the education system and prevention issues early in the formative years (e.g. parent volunteer initiatives) re: substance/alcohol use; **Children:** Prevention/intervention in the primary school years (the formative years) re: substance abuse, sexual abuse, self-esteem/confidence building, etc.; Babysitting training courses for adolescents;	Budgell and Robertson (2003): Aboriginal Head Start Program; First Nations Education Steering Committee (2001): "A Handbook for Parents" resource; Gfellner (1991); MacLeod and Nelson (2003); Pancer et al. (2003): Highfield Community Enrichment Program in Ontario (includes a home visiting program) – annual per child cost $1,300; Resolve and CS/Resors (2004): Ndaawin coloring and activity book as a resource for the prevention of sexual abuse;
Nutrition programs in which traditional foods are included; **Smoking Cessation** programs;	Wright et al (2005)
Building youth capacity through prevention efforts targeting children and adolescents (healthy activities): Recreation programs, summer programs, sports, camps, etc. for children, including those with special needs; "Back to the Land" outings; Culture and language programs; life skills;	First Nations Center (2004); Durst et al.(1995); Trocme et al. (1998); Shangreaux (2004); Wright et al. (2005); WRCFS: 2005-6 Service Plan: Summer Program for Youth (workshop and activity-based);
Culture: programs related to the development of cultural identity, also taking account of the diversity in Aboriginal culture; youth awareness of traditional values;	Wright et al. (2005);

Secondary Prevention

Secondary prevention, often referred to as "selective prevention", is also a proactive strategy which more selectively targets an existing risk factor or high-risk families, and it takes measures to lessen the threats of child maltreatment with early intervention. Such initiatives are focused on bringing under control any harm or distress that may have been done before the secondary intervention started, thus, the onset of any negative effects may be reduced rather than being completely prevented (MacLeod and Nelson 2003; Shangreaux 2004).

For instance, a child who at risk for neglect or abuse can go to a neighborhood drop-in center and have access to an individualized support network of youth workers, in particular, given her dysfunctional home circumstances. Aside from being a safe place to go, the idea behind the prevention agenda (i.e. the drop-in center) is to change the youth's reference group, to provide positive role modeling and to deal with the social circumstances that make the youth more apt to eventually engage in drug and alcohol misuse or to become an offender (Resolve and CS/Resors 2004).

Other proactive secondary level strategies that have been proven effective include home visitation, which begins in the prenatal period or at birth. In their study, McLeod and Nelson (2003) found encouraging results from this type of early intervention, the positive effects of which superseded other crisis-focused intensive home-based programs that intervene in existing child

Table 2: Literature Review of Best Practices in Secondary Prevention

Type of Secondary Prevention Program* (resources, support and education directed at high-risk families and youth*)	Literature Sources or Existing Programs (which are considered effective as best practices)
Building parenting capacity: parent education programs/ workshops and support groups for at-risk groups: e.g. adolescent lone-parent mothers in high schools or in addictions treatment programs; **Programs for parents with special needs children;** **Smoking cessation programs;** **Family strengthening** programs that deal with challenges of parenting: parent education workshops to develop skills around the needs of their children; **Household management** workshops;	Bopp (1985); Public Health Agency of Canada -- Nobody's Perfect Program & Resource Kit; Shangreaux (2004); Wright et al. (2005); WRCFS 2005-6 Service Plan: Teen Parenting courses; Early Identification, intervention and support for pregnant women who are affected by alcohol or family violence; Parenting Training programs (Positive Indian Parenting; How to Talk So Kids Will Listen); Child Development Training Workshops; Household Management Skills Training;
Family support: Day Care, Parent aide, respite services to families at risk (lone-parents, multiple children, etc.); Support groups for men and women (co-ed adult groups);	WRCFS 2005-6 Service Plan: Healing and Sharing Circles; Women's Circles: Survivors of Sexual Abuse;
Family support: Resource centers where information is disseminated: families can access books, pamphlets, videos on family issues, etc.; **Community drop-in centers** for families where they can engage in healthy family activities; **Ongoing seminars/workshops** on issues, such as child abuse, sexual abuse, historical grief; colonization and residential schools, family violence;	Shangreaux (2004); WRCFS: 2005-6 Service Plan: 12-week healing program for women who were child victims;

* *All of the literature emphasizes that such programming, which supplements the child welfare system, must integrate cultural practices and collaborative working relationships with the communities.*

Table 2: Literature Review of Best Practices in Secondary Prevention

Type of Secondary Prevention Program* (resources, support and education directed at high-risk families and youth*)	Literature Sources or Existing Programs (which are considered effective as best practices)
Home visiting programs for families with children at risk: Support and assistance to women in the pre-and-postnatal periods; prenatal nutrition; in-home support for children and other family members;	MacLeod and Nelson (2003); Shangreaux (2004); WRCFS: 2005-6 Service Plan;
FASD prevention for at risk women/teens	Health Canada (1997); WRCFS: 2005-6 Service Plan: Reclaiming our Voices Project and Annual Conference (Health Canada);
FASD intervention: Early diagnosis and intervention services as it pertains to child developmental issues (special needs; FAE, etc.)	Bennett (2002); Health Canada (1997); Wright et al. (2005); WRCFS: 2005-6 Service Plan;
Support for children with special needs (FASD intervention): **Respite and other child care services**, as well as better financial support for families, including foster families with special needs children (recreation, lessons); (E.g. behavioral and learning disabilities; FAS); **Community-based therapeutic services** (child development counselors, etc.) **Specialized resources for youth with greater needs;** training sessions for teachers and other community helpers;	Dion Stout (1997); Health Canada (1997); McKenzie (2002); Shangreaux (2004); WRCFS: 2005-6 Service Plan: Training sessions for teachers with FAS/E children in the classroom; training for community helpers; Wright et al. (2005);
Intervention services for youth with disabilities (special needs) or complex needs when they reach adulthood;	Health Canada (1997); Wright et al. (2005);
Building youth capacity: Neighborhood drop-in centers where children can go when home circumstances are difficult; children's groups; **Pre-school programs** for at risk children; training teachers in schools;	Budgell and Robertson (2003): Aboriginal Head Start Initiative; Second Step Program (training for teachers and parents); Resolve and CS/Resors (2004) – Ndaawin Program, Winnipeg; WRCFS: 2005-6 Service Plan: Children's Group;
Support to girls who have been sexually abused; Suicide prevention;	Health Canada and Assembly of First Nations (2003); Royal Commission on Aboriginal Peoples (1995); WRCFS: 2005-6 Service Plan: 13-week adolescent girls – survivors of sexual abuse group; Suicide Prevention Workshops for Teens;
Youth employment and life skills programs	WRCFS: 2005-6 Service Plan: Vision Seekers (for youth – ages 19-25);
Anger management workshops for youth	WRCFS: 2005-6 Service Plan: Anger Management Training for Teens;
Risk assessment tools development re: suicide prevention for youth;	Health Canada and Assembly of First Nations (2003); Royal Commission on Aboriginal Peoples (1995);

* *All of the literature emphasizes that such programming, which supplements the child welfare system, must integrate cultural practices and collaborative working relationships with the communities.*

maltreatment cases (i.e. tertiary prevention). Their results suggested that, while tertiary prevention is a crucial service, "the earlier the intervention the better" as it pertains to positive child outcomes (p.141).

A further secondary prevention example of family support and parenting education measures for at-risk families is the Nobody's Perfect Program, a Health Canada developed and funded parenting program (usually 5-6 weeks long) and resource series for parents of children from birth to five years of age. The program is also offered on an individualized basis. The resource kit of five user friendly books -- Safety, Parents, Behavior, Body, Mind -- covers family violence and abuse related topics, such as children's behavioral issues, parent's self-care and injury prevention. This resource is distributed through an array of other community-based programs, such as the Aboriginal Head Start Programs. This strategy's effectiveness as a best practice in prevention is evident in evaluation and impact studies, as well as the continuing high demand for the program and its resources since its inception in 1987 (Public Health Agency of Canada: Online. Available at: www.phac-aspc.gc.ca).

Tertiary Prevention

Tertiary services in a least disruptive framework, often referred to as "indicated prevention", encompass family support and family preservation or rehabilitative services that enable at risk children to remain at home (Trocme et al. 1998; Shangreaux 2004). Tertiary prevention is implemented when the conditions of child maltreatment already exist (i.e. there is demonstrated evidence), therefore, such interventions are viewed as reactive measures (MacLeod and Nelson 2003; Shangreaux 2004). The idea is to minimize the adverse conditions of serious harm to the child while stressing the preservation of the family. Heavy emphasis is placed on tertiary prevention services in most of the literature. For example, tertiary intervention in the case of a maltreated special needs child would entail a range of overlapping services to help minimize the adverse effects of these circumstances. Programs may include medical procedures, social supports for the child and guardians, as well as educational efforts.

The most cited example of family-centered tertiary services is the Homebuilders' Model,

Table 3: Literature Review of Best Practices in Tertiary Prevention –

In the context of family-centered preservation and stabilizing services, such as the Homebuilders (HB) and Wrap-Around Models (WA)

Type of Tertiary Prevention Program* *(this often involves rehabilitative services directed at families where maltreatment has occurred: case management, counseling, education, etc.)*	**Literature Sources or Existing Programs** *(which are considered effective as best practices)*
HB: Home-based intensive support services: Shorter term intensive family preservation and stabilization protective services with 24-hour availability of trained mental health staff; crisis counseling services; Multidisciplinary case planning/assessments with the family, including regular visitation programs; **A coordinated team approach** to service provision through integrated services, including after hour services, in more complex cases when the removal of a child is possible – a network of services: social workers, foster parents, health professionals, teachers, kinship system, etc.;	Blackstock (2003); MacLeod and Nelson (2003); McKenzie (2002); Shangreaux (2004); Trocme et al. (1998); WRCFS: 2005-6 Service Plan: Homemaker and Parent Aide Services; case planning with families; McKenzie and Flette (2003); Kufeldt (2003): the idea of "corporate parenting" – *Looking After Children* was designed in this way.
HB: Rehabilitative services that build parenting capacity: More highly intensive parental support – in-home, groups and training that focuses on alternative techniques from current negative practices for effective parenting; child management skills, etc.	Blackstock (2003); Coleman et al. (2001); MacLeod and Nelson (2003); Shangreaux (2004); Trocme et al. (1998);
HB: Rehabilitative services: Parent mentor programs, e.g. non-abusive families could act as role models and provide support (community helpers social support system); family violence treatment programs;	Flette (1999); Green (1996); MacLeod and Nelson (2003); McTimoney (1993); Shangreaux (2004);

Table 3: Literature Review of Best Practices in Tertiary Prevention –

In the context of family-centered preservation and stabilizing services, such as the Homebuilders (HB) and Wrap-Around Models (WA)

HB: Rehabilitative services: Family supervision services; mental health intervention services for children who have been abused, instilling cultural and spiritual practices;	Blackstock (2003); Shangreaux (2004); Trocme et al. (1998); Wright et al. (2005); New Directions, Winnipeg: Families Affected by Sexual Assault Program (FASA);
Respite services (child care) to reduce family stress; emergency care; recreational support;	Shangreaux (2004); Wright et al. (2005); WRCFS: 2005-6 Service Plan;
WA: Family reunification services: Strengthen the wider family network (grandparents, non-relative community helpers, etc.); keep children in their own communities and culture approach; support to children who are reuniting with extended family; Preventing discontinuity in placements and workers assigned to cases; Intensive and long-term support to families/children that are reuniting after children have been placed in care;	Blackstock (2003); Brown et al. (2002); Fox-Decent (1993); Jones (2003); Kufeldt (2003) – notion of a "seamless continuum and continuity of care"; McKenzie (1999); Shangreaux (2004); Trocme et al. (1998); WRCFS: 2005-6 Service Plan: comprehensive transition case planning (team approach), in-home family/ individual counseling; one-to-one parental skill development, etc. Elder services to youth returning to their kinship systems;
Family Support: Services that help remove an abusing parent from the home (and support them in other ways, e.g. addictions services), not the child, in particular, if there is a non-abusing parent in the home; Drug and alcohol treatment referral; Treatment Support Services: individual, family, group counseling and family conferencing; life skills training; (wo)men's/co-ed groups dealing with family stressors; post-treatment support; Programs in dealing with sexual abuse (holistic healing models); women's support groups;	Blackstock (2003): Hollow Water First Nation; McKenzie (2002): Miikanaa Centre for male sexual offenders; Daily (1987): Awareness Wheel approach for victims and perpetrators of sexual abuse; Green (1996) ; McKenzie and Flette (2003); WRCFS: 2005-6 Service Plan: Men's Group to deal with issues of family violence (26-week program for men who batter); Anger Management workshops; Men's Healing Circle; Women's Sharing Circle; Survivors of Sexual Abuse/Domestic Violence groups;
Culturally specific addictions recovery programs for parents, including residential treatment and post treatment support (e.g. treatment for men who batter);	Wright et al. (2005); WRCFS: 2005-6 Service Plan: Women and Addictions recovery circles; Mandatory treatment for men who batter;
Youth Services	
Treatment centers or special schooling programs for children with behavioural issues, also located in the local communities;	Health Canada (1997); Wright et al. (2005);
School partnerships: in-school counseling support for at risk children; Programs dealing with child sexual abuse; anger management; treatment for adolescent boys who are at risk for sexually offending;	WRCFS: 2005-6 Service Plan: 13-week adolescent girls – survivors of sexual abuse group; Anger Management Training for Teens; Miikaana program (sexually offenders);
Services relating to out-of-home placements: wrap around perspective involving extended family, elders, leaders and other community members; loss and grief counseling; access to trained counselors for child and foster families;	Brown et al. (2002); Carrier-Laboucan (1997); Cross (1986); McKenzie (2002); WRCFS: 2005-6 Service Plan;

Table 3: Literature Review of Best Practices in Tertiary Prevention –

Therapeutic Foster Home Program	WRCFS: 2005-6 Service Plan: GGK program;
Residential prenatal and postnatal programs for adolescent mothers; adolescent pregnancy supports; short-term emergency receiving services on reserve (placement beds, etc);	Ma Mawi Wi Chi Itata Centre (Winnipeg): residential program for teens; McKenzie (2002) & WRCFS: 2005-6 Service Plan: Oshki-ikwe facility; Piikaanijii home;
Independent living programs for youth leaving care (> age 18), i.e. transition services related to life skills; employment counseling; training; support to prevent youth from becoming offenders; healthy recreation opportunities;	Biehal et al. (1995) study in England of treatment and control groups showed mixed results in terms of differences in the outcomes for the youth (cited in Davies 2003); Kufeldt (2003); McKenzie (1999);
Programs dealing with youth addictions	WRCFS: 2005-6 Service Plan: Youth Addictions – Co-ed Gym nights;

* *All of the literature emphasizes that such programming must integrate cultural practices and collaborative working relationships with the communities and kinship systems.*

which is the main family preservation approach, as it pertains to mainstream approaches. Such a model targets families in which the children are at risk of being placed in formal care arrangements, and it tailors home-based services to their specific needs. Traditionally, in this model, social workers and family support workers have smaller but more intensive caseloads (Shangreaux 2004; MacLeod and Nelson 2003). However, this model is not without criticisms in the literature (Kufeldt 2003: 276-7), and Coleman et al. (2001) propose that Aboriginal ways of helping can remedy several of the issues that result in the diminished effectiveness of these programs as it pertains to evaluative outcomes.

For instance, the concept of a normal and healthy family in Aboriginal culture, which includes a support network of extended family and community members, is inherently incompatible with the mainstream paradigm of the nuclear family structure (Blackstock 2003; Cross 1986). Coleman et al. (2001) argue that, in Aboriginal culture, the notion of an in-law may be nonexistent and elders or neighbors might be considered a part of one's family (p.55). Likewise, a child whose biological parents die is not perceived as an orphan (Cross 1986). Thus, family-centered services when seeking options in child placements entail working with relatives who have had successes as parents (i.e. aunties or grandparents) and who parent from a cultural appropriate perspective (Coleman et al. 2001).

There are also many tensions resulting from the fast-moving pace of Homebuilders programming as it pertains to expectations of results from the intervention. Brown et al. (2002) refers to this as a "drive-through" approach (p.143). One suggested remedy is that funding has to be adapted to looser time constraints, in other words, slowed down and focused on building relationships from a client-directed perspective. In their meta-analysis of child welfare programs, MacLeod and Nelson (2003) argue that "program intensity and longer program duration" are key success factors in home visitation programs (p.141).

Hence, from this viewpoint, agency workers should not be expected to enter a home and resolve the family's issues in any meaningful way within one month's time. Services must be slower-paced, client-directed and flexible to building relationships, as well as not interfering in a huge way in order to ensure congruency with the family's culture and belief system (MacLeod and Nelson 2003). One cited example of family empowerment in the literature is that culture may determine how a family resolves its disagreements;

hence, respect must be given to these traditions (Coleman et al. 2001).

Since children are viewed as a gift to the community, as opposed to individuals or couples, the literature emphasizes the notion of forming a circle around the family in case planning, which includes relatives in foster care placements, Elders and other community members (Blackstock 2003; Coleman et al. 2001; Cross 1986). One example of a natural helping system which must be reflected in programming initiatives is the Wrap Around model, in which a multidisciplinary team approach to problem-solving combines formal and informal services, including collaborative "community-based services; individualized services; cultural respect; families are partners; flexibility in funding…" (Shangreaux 2004: 18). Coleman et al. (2001) argues that the "helping process involves multiple layers" of working relationships (p.65), with a key objective being to enhance the capacity of a natural helping mechanism or network. There is much emphasis in the community-based research that a continuum of services, as opposed to a single-worker approach, is considered necessary to carry out a family centered services approach with a least disruptive measures perspective (Coleman et al. 2001; Shangreaux 2004), Coleman et al. (2001) also propose that programs offered must involve spirituality interventions, such as sweats, smudges and pipe ceremonies, as a few examples.

In sum, there is general consensus in the research that family preservation services can only really work effectively as a collaborative effort between formal services and community partners: Aboriginal healers, Elders, other community-based services and extended family. The single-worker approach within rigid time frames simply does not work (Brown et al. 2002).

Developmental Programming

Best practices in developmental programming would support the design and service delivery (and evaluation) of community-based healing strategies, also tailored to the specific needs and cultural heterogeneity or identity of each community (McKenzie and Flette 2003; Shangreaux 2004; Durst et al. 1995). The basis for this model of practice is the notion that residents in the communities are in the best position to actively participate in dialogue on which solutions are in the best interests of their own communities (Brown et al. 2002; Fox-Decent 1993: 72).

Moreover, analysts argue that many underlying social issues in Aboriginal communities must be addressed on several levels if any type of prevention initiative relating children coming into care is expected to be effective (Shangreaux 2004; Kufeldt 2003; MacLeod and Nelson 2003). The underlying principle in developmental programming is to reinstate natural systems by developing culturally relevant practices in seeking to protect children with a further goal of strengthening the infrastructure of First Nations communities (Blackstock 2003; Cross 1986). Cross (1986) argues that formal child welfare services, including tertiary prevention services, have become the primary model of practice only because "natural systems became less able to protect children" over time (p.286). Development strategies would also improve income and social status by taking account of the wider systemic issues in the community at large.

The types of developmental strategies listed Table 4 are fuelled by deeper and more complex social issues – poverty, unemployment, racism, violence, sexual abuse, addictions and the growing prevalence of fetal alcohol birth effects. Combating

Table 4: Developmental programming directed at strengthening the infrastructure of the First Nations Child and Family Services agencies and their communities (i.e. a community-building approach)	**Literature Sources or Existing Programs**
Socio-economic issues around income and employment and the future of the youth: Community economic development projects to combat poverty; Life-skills training for at-risk children; vocational assessments; Create part-time jobs and job placement training for at-risk adolescents in order to nurture connections to the labour market/schooling; Work towards a long-term goal of training youth in various professions, such as psychology, speech therapy, family violence support workers, social work, etc.	Chapman (1991): family violence worker training program at the Vancouver Native Education Centre; Early labour market connections programming, such as the Urban Green Team, in Winnipeg (which is a culturally-based strategy); Charter et al. (1994): Career counseling for Aboriginal youth pilot program; Durst et al.(1995); McKenzie and Flette (2003): Vision Seekers Program; the Mino-Bimaadizi Project; McLeod and Nelson (2003); Wright et al. (2005);
An ecological approach, which considers other socio-economic issues that create stressors in family functioning – lack of housing and overcrowding in existing housing; lack of food banks; addictions; Unsafe drinking water and sewage treatment; Lack of women's shelters, culturally-based domestic violence counseling and victim/perpetrator support programs; need for better policies re: domestic violence that acknowledge the issues and integrate men in proactive initiatives;	Aboriginal Justice Implementation Commission (2001); Chapman (1991); Dion Stout and Kipling (1999); Dion Stout (1997); Health Canada (1997); Durst et al.(1995); Kufeldt (2003); Longclaws et al. (1994); McTimoney (1993); Canadian Incidence Study on Reported Child Abuse and Neglect (Trocme et al. 1998, p.41); Wright et al. (2005);
Cost-of-living recovery on expenditures which targets the problem that some goods and services may be more expensive to transport into remote communities	Blackstock (2003); Wright et al. (2005);
Developmental approach/resources to address the need for better service infrastructures and relevant programming in First Nations communities/remote areas: Create advisory committees, which would form community-based linkages in terms of the voluntary sector; emphasizing a collaborative service provision focus that builds local capacity and support networks – working with health services, band controlled programs, local schools, etc. (idea is to keep youth in the community); Special focus on the problems of isolation of reserve communities from outside community-based services and coordinating/networking of service provision;	Blackstock (2003); Coleman et al. (2001); Irvine (2004); McKenzie and Flette (2003); McKenzie (2002); Nadjiwan and Blackstock (2003); Wright et al. (2005);
Developmental approach/resources for youth capacity building: Create advisory committees of Elders and young members of the community, which would develop strategies to involve youth in working on solutions to broader social issues in their communities – adolescent drug and alcohol misuse, community-driven approaches to suicide prevention; ways of implementing traditional teachings, healing, ceremonies, drumming, etc.; mentoring programs; healthy recreation activities; Coordinated community responses to child maltreatment issues;	Bennett (2002); Bopp (1985); Coleman et al. (2001); Durst (2000); Durst et al.(1995); Health Canada and the Assembly of First Nations (2003): suicide prevention; Royal Commission on Aboriginal Peoples (1995): suicide prevention; Shangreaux (2004); WRCFS: 2005-6 Service Plan;

Developmental approach/resources to build volunteer capacity in communities: Ongoing work on expanding a community-based volunteer sector within reserve communities, perhaps even promoting youth and parents' participation in local capacity building, community helpers volunteer initiatives, etc., also taking account of geographic isolation;	McKenzie (2002);
Developmental approach/resources for internal agency infrastructure: User-friendly training manuals; ongoing funds for staff training and professional development so that an adequate human resource base of culturally-sensitive staff can be realized/maintained; Ongoing re-evaluation of casework techniques and case loads, i.e. planning/assessments/ consultation; Training of more specialized social workers (emphasizing a collaborative approach) and focused training for families/foster families in childhood cognitive learning disabilities and behavioral issues (FAS/E issues);	Caring for First Nations Children Society (2002); Cross (1986); Green (1996); McKenzie (2002, 1999); McKenzie and Flette (2003): Children with Special Needs Coordinator position developed a parent support network, educational resources, etc.; WRCFS: 2005-6 Service Plan; Wright et al. (2005);
Adequate resources allocated to the supervision and ongoing support of front-line staff: Parent aides, child support workers, community helpers, teaching homemakers, etc. **Bureaucratic systems:** findings ways to reduce the front-line staff's paperwork needed to fulfill the obligations under the Child and Family Services Act, which create times pressures with regards to casework;	Coleman et al. (2001); WRCFS: 2005-6 Service Plan: sharing circles for community helpers; specialized training for caregivers; Caring for Caregiver Training; Training community helpers to facilitate groups; Training support and respite workers; volunteer recognition activities; McKenzie (1999);
Physical infrastructure issues: wheelchair accessibility; Equipment and supplies for children with disabilities;	Wright et al. (2005); WRCFS: 2005-6 Service Plan;
Targeted funds for the management and administrative structures to support primary, secondary and tertiary prevention initiatives, e.g. MIS systems to reduce staff workloads and expedite information sharing; agency governance issues, such as strategic planning of priorities and regular service plans that involve the community;	Bennett (2002); Durst (2000): Kahnawake Shakotiia'takehnhas (PQ) & Nog-Da-Win-Da-Min Family (Ont.) and Community Services: community consultation projects for social service delivery; Flette (1995); McKenzie and Flette (2003); McKenzie (2002, 1999); WRCFS: 2005-6 Service Plan;
Developing **clear definitions of disability**, for example to include behavioral issues and cognitive learning disabilities; Develop a culturally sensitive resource base and public awareness around issues of disabilities (FAS/E, etc.).	Health Canada (1997); Wright et al. (2005);
Funding research advisory groups and ongoing research, which helps to inform evidence-based policy and practices around prevention (e.g. with a child outcomes focus); Policy development: e.g. take measures to create consistency/ coordination in the practices of FNCFS agencies (within reasonable parameters since activities/teams are decentralized); Standardized data collection (comparative statistics) and reporting for research and evaluation purposes;	Davies (2003) – research that is linked into the policy process (p.384); Fox-Decent (1993); Jones (2003) – Looking After Children Model in England – policy rooted in evidence drives and supports the required changes in practices (p.374); McKenzie (1999); Nutter et al. (1995);

many of these systemic issues which impact the entire community is apt to have a more positive impact on prevention strategies, but the enormity of the task is costly to implement and vulnerable to unsustainable financing from government sources.

Conclusion

This paper reviewed the literature on best practices in prevention work, from a standpoint of least disruptive measures in preventing a child from coming into formal care. At the risk of oversimplifying the multifaceted continuum of care in child welfare service delivery, in this analysis, prevention initiatives are distinguished separately into four classifications: Primary, Secondary and Tertiary prevention, as well as Developmental Strategies. Though there has been action on a variety of preventive initiatives within several First Nations Child and Family Services agencies, the glaring obstacle is that financial resources are rarely made available to develop an appropriate inventory of services. Such strategies would better match the philosophy of service delivery which puts the responsibility back on the community by emphasizing intensive family support and cultural connections.

Furthermore, this literature review investigates a range of critical developmental issues in First Nations communities, which are at the core of much child maltreatment – poverty, unemployment, racism, violence, sexual abuse, addictions and the growing prevalence of fetal alcohol birth effects. It highlights the issue that families in distress, as well as the consequent intergenerational outcomes and costs to society, ought to make prevention measures a concern for all Canadians, and not just the responsibility of the First Nations Child and Family Services agencies acting in isolation. In light of these issues, a recurring theme in the literature is that, while reactive or tertiary prevention programs are absolutely needed for families who are presently in distress, it is of paramount importance that the question of sustained financial support be addressed so that proactive primary and second preventive activities, as well as community development initiatives are undertaken in First Nations communities.

April 25, 2005

Background

This review of information systems used by FNCFSAs (First Nations Child and Family Service Agencies) is part of the funding formula development project. Costs related to acquiring and maintaining information systems can be substantial and are important data needed for testing the three funding formula options identified in Phase One of the project. It should also be recognized that since information systems cannot be implemented without a viable technological infrastructure in place, accurate cost estimates must be based on all aspects of technology deployed, not just those specific to information systems or databases.

Although FNCFAs vary in their present levels of use of computer technology and information systems, they, like all other organizations across Canada mandated to deliver child protection services, must ultimately have a uniform capability, by means of appropriate computer technology, to operate efficiently, manage and monitor delivery of child protection services, report on service or program outcomes, facilitate service planning, and meet various accountability expectations and standards.[1] Specifically, they must strive to use technology to achieve the following core functions of child welfare agencies:

1. Managing day-to-day office operation, e.g., word processing, accounting, payrolls, newsletters, etc.
2. Managing caseloads, service delivery, and resources.
3. Meeting performance expectations and legislated requirements for accountability management, i.e., ability to quickly generate accurate and current financial reports, caseload reports, and other types of status or ad hoc statistical reports for government departments or regional authorities.
4. Producing performance feedback information for management, and contributing child protection outcomes data to the national project currently underway.[2]
5. Exchanging electronic datasets with external

organizations, such as university research centers, government agencies, and the proposed First Nations Statistical Institute.

The Auditor General of Canada usefully pointed out in their December 2002 report[3] that deploying appropriate computer technology is the only way for First Nations organizations to meet the demanding reporting requirements imposed by federal government departments and to ensure that the data is accurate. Authors of the report were "concerned about the burden associated with the federal reporting requirements." In reviewing the experiences of four First Nations and two tribal councils in Saskatchewan, the report authors estimated that the total number of financial and non-financial reports that a community was required to compile annually for INAC, Health Canada, HRDC and CMHC was between 168 and 202. The federal government acknowledged that the current reporting requirements must be made less cumbersome and less excessive. Among the strategies proposed to streamline reporting requirements were:

- "…make full and efficient use of available technology".
- Building on the positive results of the Government on Line (GOL) initiative, "promote electronic data exchange as a way of doing business with First Nations".

Purpose of Review

This review aims to answer the four questions pertaining to information systems listed in the project proposal, and they are:

1. "What kinds of MIS systems are currently in use by FNCFSA and how do they compare with provincial systems?"
2. "What kind of MIS system is required to meet agency requirements and ensure adequate interfaces with provincial and national data systems?"
3. "What are the costs of developing and maintaining such a system?"
4. "What are the implications for funding formula budget?"

In order to identify practicable computer technology options that would allow FNCFSAs to build the kinds of operational and data capability described above, and to estimate costs, we need to know the present situations, efforts, and technology deployment plans in the agencies. In addition, since FNCFSAs are accountable to their respective provincial governments for service delivery as per provincial child welfare legislation, policies and standards, and, as part of this legislative arrangement, are required to use or contribute case data to provincial information systems, it is equally important to understand the kinds of provincial-agency arrangement in place and the extent to which such arrangements help FNCFSAs to meet their day-to-day operational and management needs. Recommendations regarding suitable information systems must be made on the basis of a balanced understanding of specific situations, needs, issues, and the larger context in which agencies operate.

Methodology

Scope of the Review

Currently there are 119 FNCFSAs in nine Canadian provinces[4], according to FNCCSC (First Nations Child and Caring Society of Canada). Since the 11 Ontario agencies are not included in this project due to a different funding arrangement the Ontario government has with First Nations agencies in that province, a total of 108 FNCFSAs constituted the population for this review. However, we knew that time and budget limitations would not allow us to interview too many agencies. It was therefore concluded that, given the specific purpose and focus of this review, our data collection priority should be to include those agencies that have their own information system. Should resources allow, we would also interview agencies that use provincial systems exclusively as well as those that wanted to contribute information or discuss operational or funding issues related to office automation or information systems. We also decided that, to the extent possible, information should be collected from all nine target provinces so that we would have a more complete picture of issues across Canada.

Data Collection

The following data gathering approach was adopted for this review:

1. FNCCSC identified agencies that used a uniform computerized information system and invited them to participate in the review.[5]
2. The researcher called the designated contact, explained the purpose of the interview, named the types of information to be collected,[6] and set up a time for the interview. Email confirmations were sent out.
3. The researcher conducted phone interviews with the designated persons(s)[7] at the pre-arranged time.
4. At the end of the interview, the researcher asked, where warranted, for the name of the system developer and/or the name of a provincial contact for information on the provincial system.
5. Where more information needed to be collected from the system developer or the provincial contact, steps 2 and 3 were followed. On a number of occasions, additional provincial officials had to be identified and interviewed because the original contact did not have full answers to our questions, and steps 2 and 3 were repeated. HRDC also gave us with the names of provincial officials who were members of the National Child Protection Outcomes Working Group, and encouraged us to contact them where needed.

Information was collected from agencies, government officials, and/or system developers in all eight target provinces. Specifically, eleven agency officials representing eight FNCFSAs were interviewed. Detailed technical information was gathered from three external consultants or technology suppliers related to systems installed in three of the agencies. We also interviewed ten provincial officials having direct knowledge of or responsibility for implementing provincial systems. The following table provides the breakdown.

Number of People Interviewed

Province	Agency Officials (FNCFSAs)	Provincial Government Officials	Developers /System Suppliers
British Columbia	2+ (2 agencies)	0	0
Alberta	0	3	0
Saskatchewan	2 (2 agencies)	1	2
Manitoba ++	3 (1 agency)	3	0
Quebec	1 (1 agency)	0	0
New Brunswick +++	2 (1 agency)	1	1++++
Nova Scotia	1 (1 agency)	1	0
Newfoundland and Labrador	0	1	0
Total	11 (8 agencies)	10	3

\+ 1 was an in-house developer

++ 1 manager in a First Nations regional authority became unavailable at the prearranged interview time, and did not return phone message.

+++ 1 technical manager became unavailable at the prearranged interview time, and did not return phone message.

++++ Same person who supplied the same system to the Quebec agency interviewed.

The researcher received very good cooperation from all respondents, and successfully completed all interviews, despite their lengths. The interviews, guided by a set of standard questions, were conversational in style and exhaustive in nature, involving frequent probing for details. All respondents provided frank, factual and useful information. The average time to complete a phone interview was 1 hour and 30 minutes. Two agencies also shared materials or reports with the researcher as supplementary information. A number of respondents were re-contacted for additional information.

Types Of Information Collected

Depending on the role of the respondent, the kinds of questions varied.

The main emphasis in interviewing government officials was on understanding the current features of the provincial information system, including specific technical changes made to the system since the nationwide review conducted in 2001-2002, availability of child protection outcomes data in the current system, and arrangement between the government and FNCFSAs regarding use of the provincial system.

Interviews with FNCFSA officials and their technology suppliers focused on the following areas:

- Types of technology deployed
- Technical features of agency information system or database
- Data sharing capacity
- Interface with provincial system
- Ability to generate reports for INAC and government departments
- Availability of child protection outcomes data
- Arrangement with province regarding using the provincial system
- Technical support
- Technology costs
- Technology funding
- Future plans

The timeframe and budget of this project did not allow site visits or hands-on verification of the information provided. For example, we did not have an opportunity to extract data from agency databases for testing.[8] Probing for technical details during the interviews was the only way to allow us to assess the technical capability of an information system.

Findings

This review of office automation and information systems used in FNCFSAs employs a case study approach, arguably the most appropriate one given the purpose of the review and the complex issues involved. The nationwide scope, inclusion of all major types of organizations, collection of detailed information from the most knowledgeable respondents,[9] and vigorous efforts to gather frank and accurate information from both agency and government sources allow us to form a good and balanced understanding of specific situations, needs, issues, and the larger context in which agencies operate. The findings of the review, issues identified, suggested solutions, and costs are presented in the following sections.

Using Provincial Child Protection Information Systems

In the majority of provinces, most, but not all, FNCFAs have some sort of computer technology, and many of them are connected to the respective provincial information systems in one way or another.[10] As provincially mandated child welfare organizations, all FNCFSAs are required to contribute to the provincial system information or data pertaining to all off-reserve cases (on-reserve cases as well in some provinces) they serve. Agencies do so by means of an online system, paper reports, or document/spreadsheet files. Other than this requirement, the government does not stipulate the kinds of systems agencies must use to manage their day-to-day operation, including service delivery.

Although very few FNCFSAs outside Ontario[11] have their own child protection information system, it appears that the majority do use computers for basic office functions. Those agencies without their own information system use either the provincial system or a paper file system to manage service delivery. It also seems that all provinces prefer FNCFSAs to use some aspects of the government system, and some have rolled out a deliberate plan to sign up agencies. Provincial recruitment strategies typically involve offer of free ISP service. One province also gives out free computer hardware and installation service if the agency does not have and cannot afford suitable computer equipment. Building a province-wide broadband infrastructure of fiber optic lines to allow remote agencies to have high speed connection to the provincial system is a project underway in one province. At least two

are considering using satellite ISP service to speed up data transfer for remote locations where dialup connection is currently the only option. At the same time, it is interesting to note that, according to one agency, they have to pay the government $4,000 a month for using the provincial system. All other provinces offer free access to the government information system.

Provinces seem to vary not only in terms of level of enthusiasm and strategies with respect to signing up FNCFSAs for the provincial information system; how an agency accesses the government system is also different. Depending on the provincial plan, there are generally two different ways. One setup involves installing thin client remote access and security software on the computer of each worker mandated by the province to provide child protection service. [12] (Note: non-mandated workers are not allowed to use the provincial system.) The other arrangement is for the province to install in the agency a "provincial" computer and a printer dedicated to the government information system. Only the provincial worker on location or a government-authorized agency employee is allowed to operate the equipment. It should also be noted that access by agency staff to the provincial system is restricted to certain service delivery and management modules only. Financial modules are, without exception, not available to agency users. Security concern is the reason cited for restricted access.[13]

Private Information Systems Installed

Outside Ontario, there are at least four different private systems in use by a handful of FNCFSAs in Canada. The following paragraphs summarize their features and capacity, as per information provided by their respective respondents.[14]

What appears to be the most advanced system of the four is a Sybase client/server application produced with PowerBuilder. It was first developed in 1995. The main modules include Basic Case Management, Payment, Support, Prevention, and Outside Service. A noteworthy feature of this particular system is a case audit module developed to meet government audit standards. According to the respondent, this system is properly designed, incorporating adequate data integrity enforcement features, and has the ability to store various types of historical data and to output electronic data files. However, only a limited set of data needed for the national child protection outcomes measurement project is currently available. Enhancement plan includes incorporating a case tracking capability among agencies. Six or seven agencies in the province are also using this system under a lease agreement.

The second private system is a SQL Server client/server application being written in Visual Basic. Mainly for reasons of lack of sustainable funding, this system is still under development after 10 years.[15] According to agency respondents, this system, when completed, will allow them to easily manipulate data to meet various statistical reporting requirements, to exchange data with other agencies, to interface with government systems, to contribute to internal and external planning and evaluation processes, to efficiently manage service delivery and human resources, and to achieve a high level of operational and financial accountability. This system will also have program performance indicators for inputs, outputs and outcomes, a recommendation or requirement under INAC's new Results-Based Management and Accountability Framework. The types of information available will include: core information on child-in-care and protection cases, information on foster parents, homemakers and parent aides workers/supervisors, financial information to facilitate payments to foster parents and service providers, and police and Abuse Registry Information. A cursory review of the work produced to-date suggests that this project has the potential to evolve into a comprehensive and capable system, if the database structure is properly designed and the application competently written to take care of complex data linking, among other technical challenges. The agency producing the system has been using Excel to manage service delivery. Because of incongruence in structure between their Excel spreadsheets and the SQL Server database under development, most of the existing data cannot be salvaged. However, being a system under development, opportunities to include historical outcomes data should be reasonably good.

The third private system, installed in two agencies in two different provinces, is supplied by a firm in Toronto, Ontario. It is a 4th Dimension client/server database application probably written in Visual Basic. The modules available are Agency Resources, Clients (demographics, education, employment, etc.), Cases (intake, placements, and services provided), and Payment. According to the company's technical salesperson, the database design, including data integrity enforcement, is adequate and the database has all sorts of historical data that can be unloaded for external use. We were also told that all the data needed to measure child protection outcomes are available. Each module can be customized for or by the client. Features customizable include pick lists, reports, data extraction, and other things. This application seems to rely extensively on templates to achieve customization. Service planning is a main feature: it allows the worker to pick service objectives and associated outcome indicators, identify service providers (workers/agencies), set target dates, review results, etc. Built into this system are the standard assessment tools used in the agency's province. The two agencies that have this system also use AccPac for accounting functions, but software interface between this system and AccPac is not available, according to one of the respondents.

The fourth private information system, reported by one FNCFSA included in this review, is actually an off-the-shelf contact management software package customized for that agency. This package is a Pervasive SQL database application, but it is unclear which language is used to develop it. Although this system is not a specially developed database application in the traditional sense, its usefulness might still be appreciated by the user because the supplier is able to customize, within limits of the database structure, to suit existing, new or changed requirements. According to the supplier of this system, producing reports for INAC is not a problem. Most of the data needed for child protection outcomes measurement is not in the system, likely due to the particular original purpose and database structure of this software package.

Computer Equipment Deployed

FNCFSAs that have computers use various versions of Microsoft operating systems, enabling system software, and office suites. Microsoft Publisher, Project and Visio are also used by at least one agency. PCAnywhere and NetSupport Manager are the most popular remote support tools, which, along with Citrix, are also used for remote access to database servers. In addition, many of the agencies, whether they use a private information system or the provincial system, also use an off-the-shelf accounting software package, and AccPac is the dominant choice in this category. However, in all situations, because of absence of software to connect the accounting package to either the provincial or the private information system, staff needs to enter data twice. A common practice is to enter data into one system first, print out a hard copy of the information, and manually key the copy data into the second system.

In terms of computer hardware in use, there is an even greater variety, perhaps a reflection of different affordability levels and history. Computers range from Pentium I or II workstations with 64MB RAM running Windows 95 to dual-Xeon class server computers powered by Microsoft Server 2003. While all the agencies interviewed have a Windows local area network in place (some also implement messaging function), we are certain that workstations in many of the small agencies not interviewed are mostly older standalone computers.[16] Depending on the operating system of the provincial information system, the workstations of mandated workers permitted to access the government system may or may not have 3270 emulation software installed.

Remote access is mainly via broadband or dialup connection. However, satellite is being considered by a large agency as a substitute for the much slower dialup option. Thin client remote access software and firewall software are often used. VPNs are also deployed to achieve secure communications for remote users who directly connect to agency networks or servers. Generally, both governments and agencies have a similar setup for remote access, although it is most likely that government systems deploy more

functionality servers, enforce stronger firewalls, and implement tightly coded secure services portals.

Technical support in the largest agencies is provided onsite typically by agency staff along with offsite consultants. Small agencies rely on offsite support personnel. Government technical support is available only to agencies that have a direct connection to the provincial system.

Mainly because of lack of money, many agencies are still using computer equipment that should have been retired years ago. For example, two provincial sources mentioned that they had come across agencies still using very old and slow computers running Windows 95. We assume they were referring to Pentium I, 486 or even 386 computers. Using obsolete hardware and operating systems usually gives rise to the following problems:

- Efficiency is compromised due to inability to deploy newer software that is not only easier to use but also has better features. In addition, older equipment takes more time to process commands, and cannot use new hardware devices due to lack of software drivers.
- Networking older computers running obsolete versions of Windows or DOS is always technically difficult. The operation is slow, and unstable or failed performance is a common complaint.
- It is expensive to maintain old equipment because it has a higher than normal rate of hardware failure. Certain replacement parts are sometimes hard to find and costly.
- Downtime due to hardware problems further reduces worker efficiency. Need to redo things because of lost or damaged work also directly wastes staff time and causes frustration.
- Information systems cannot be deployed using obsolete or inadequate hardware and software. (Details are presented in later sections of this report.)

In the case of one agency, old technology has already created problem for them to work or liaise with the government. They have had difficulty exchanging electronic files with the province since the time the government upgraded their operating system and office software. According to the respondents, they need to upgrade their office automation software from Microsoft Office 97 to Office 2003 and the operating system to Windows XP Professional in order to comply with the current software standards of the province. Software upgrades often entail hardware upgrades too which, in this case, mainly involve, fortunately, installing more main memory in the computers.

Provincial Child Protection Information Systems[17]

Since the time the characteristics and capacity[18] of provincial/territorial child protection information systems were assessed in 2001-2002, improvements have been made to a number of these systems. Although reviewing government systems is not a focus for this review, it is useful to briefly mention the main characteristics of these systems, especially with respect to technology deployment and availability of data for the measurement of child protection outcomes. Both aspects have implications for technology planning on the part of FNCFSAs.

The 2001-2002 review showed that enterprise-scale client/server computing had been very widely implemented to add flexibility and power to mainframe computing. Using industrial-strength RDBMSs (Relational Database Management Systems) to develop child protection information systems across the nation was another distinct development. A number of the provinces, including a number of mainframe-centric operations, were hoping that enterprise-level applications developed with RDBMSs and deployed on a client/server computing architecture would allow them to have a unified information system for sharing data across departmental programs and services. We also noted that, although client/server computing has been very popular since early 1990s and true RDBMSs were first introduced in early 1980s, mainframe-centric government organizations had been slow in adopting such new technology.

Four years later, both trends continue to dominate. Availability of 64-bit computing will

expectedly solidify these trends and give rise to more and better design options. In addition, there is a significant emerging development: web applications. Both Nova Scotia and Manitoba have produced viable applications deployed on the Internet. The Manitoba system may also the first Linus-based child protection system in Canada. It is very likely that other provinces are also pursuing the web option, which particularly suits users with high bandwidth communication lines and equipment. Security should not be an issue with the deployment of VPN or tightly coded secure internet services portals. Despite what appears to be a rapid adoption of cutting edge technology by the majority of provinces, a small number of them are still mainframe-centric, working in a predominately UNIX environment where terminals or workstations running 3270 emulation are in widespread use.

Other than using better technology to improve performance, facilitate users anywhere to access the information system, and reduce costs, a number of provinces have also been working to enhance their data ability to support national efforts to measure child protection outcomes. Among the eight provinces included in this review, British Columbia, Alberta, Manitoba, Newfoundland and Labrador, and New Brunswick are taking a lead role in this area. In at least three provinces, data not previously available is being added to their databases. The following table summarizes progress made to-date by the eight provinces included in this review, regarding availability of data needed for outcomes measurement in their information systems.

Data Needed for Outcomes Measurement	Alberta	British Columbia +	Manitoba	New Brunswick +	Newfoundland and Labrador	Nova Scotia	Quebec /CJLPJ +	Saskatchewan +
Child's DOB	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Child's sex	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

+ Current information not collected. Most likely no change since 2002.

Information System Costs to Agencies

Office automation and information system technology can be costly to acquire, maintain, upgrade and support. This review discovered that many of the computer-using agencies have not upgraded their systems for a long time and are finding themselves having problem using newer releases of software, operating their private information systems, or even exchanging electronic files with the government. A few managed to find money in their budgets to upgrade or replace some of their computer equipment to avoid failed operation.

This review uncovered a wide range of cost figures related to technology deployment, and some of these figures, representing either an agency's current year estimates, or expenditures actually incurred in the agency's current or last fiscal year, are presented below.

The primary reason for the big variance has a lot to do with the specific needs and size of the respective agencies. A larger agency has more computers to upgrade and/or replace, and the cost is naturally much higher than that of a small agency. How much something costs also greatly depends on what is acquired or gets replaced.

Agency	Computer Hardware (LAN included)	Computer Software	Information System	Others (Tech support, training)	Total[20]	Notes
A	$251,220	$69,375	$85,000 (System development work)		$405,595	Of this total, cost to upgrade hardware and software to allow for compliance with provincial requirements = $220,040
B	$25,000	$5,000	$48,000 (Fee paid to province for use of system)		$78,000	User of government system exclusively
C	$26,000	$3,200	$5,000 (RDBMS license fee)	$2,350	$36,550	
D	$52,500	$1,200			$53,700	User of government system exclusively
E			$41,500		$41,500	Recently acquired own information system
F	$45,000		$4,430		$49,430	¨ Need $45,000 annually to replace 25 of the 125 computers each year, but this allocation has not happened. (Expected life span of a computer is 5 years) ¨ Budget for software upgrades also does not exist
G		Will soon have to install Windows XP Professional on all 17 computers			?	No budget information was received
H	$49,000	$1,000			$50,000	¨ User of government system exclusively ¨ Agency tries to allocate $30,000 each year for office automation

For example, the cost to replace a functionality server is many times more than that to replace a desktop computer. Another example: buying Microsoft Exchange Server CALs (Client Access Licenses) alone for 125 workers costs $14,000[21], whereas buying a copy of PCAnywhere only costs $200. Similarly, an agency having to replace all its 30 obsolete computers for the first time in 12 years has to pay significantly more than another same size agency just needing to add 256 MB memory in each of its 30 computers acquired, say, only three years ago. Furthermore, developing information systems is always expensive, and the costs to develop and maintain the application and to acquire the necessary hardware and system software to support the information system must be included in technology deployment planning and budgets.

Although the wide range of these cost figures is the direct result of situational and needs factors unique to the individual agencies, these figures together do give us a glimpse of certain key aspects of the reality, and they are as follows.

- Office automation and information systems can be expensive to acquire, maintain, and support.
- Computers, especially servers, in an organization need to be upgraded (where possible) or replaced every four to seven years.
- Whether an agency uses the government system or its own system, it still has to find money to buy all the hardware and software, to maintain and upgrade them, and to pay for support and training.
- A viable technological infrastructure must exist in the agency first for an information system to operate. Therefore, in estimating costs of an information system, all aspects of technology deployment in the agency, not just those specific to the information system.
- A uniform method to plan office automation and information system work is needed.

A subsequent section of this report suggests one common and equitable framework for estimating costs related to deploying office automation and information systems.

Issues Regarding Agency Use of Provincial Information Systems

As mandated provincial child protection organizations, all FNCFSAs are required to supply data concerning cases they serve to their respective provincial governments. As a result, all agencies do interface, in one way or another, with the provincial system, but it seems that a large percentage of them are reluctant to use the government system unless they feel they do not have a choice. In addition, despite invitations extended by a number of provinces to FNCFSAs to use the government system, many agencies are still using a paper file system. There are a number of reasons for this phenomenon.

Technology Funding

Although provincial governments, with the exception of one, do not require agencies to pay an access fee, using the provincial system is not really for free. Agencies must have a viable technological setup (adequate computers, current operating systems, networks, and, in many situations, useful communication links) before they can connect to the government system. Most agencies do not have the necessary technology simply because they cannot afford it. Provinces do want agencies to contribute data to and use the government system, but do not seem to want to give out or pay for the needed equipment. Since FNCFSAs are federally funded agencies performing provincially mandated reimbursable child protection services, provinces see that INAC, not them, have that direct responsibility although they all know INAC does not provide technology funding. The only kind of offer provinces are willing to consider is paying for external communication links, i.e., Internet Service Provider service charges. This combined government position has also hampered the efforts of provincial officials in charge of rolling out a provincial system.

We also know that only a handful of FNCFSAs across Canada use a private information system -- either their own creation or one leased from an external source. According to the respondents, the main reason for the paucity of FNCFSA-specific information systems is lack of funding, definitely not lack of needs. All agencies realize

the importance to have a viable information system to allow them to efficiently manage day-to-day service delivery and generate reports or information for INAC and other government departments, among other things. They also very much like to have a system that allows agencies to exchange data electronically with government departments, a direction advocated by the Attorney General of Canada. Achieving these objectives requires computer technology, but both levels of government are silent on who would pay for what.

The story of one large agency is worth noting because this is a good example of how the current funding system can directly prevent agencies from getting things done right, a real dilemma especially for accountability- and efficiency-conscious organizations. Since there was and still is no information system that can meet the needs of First Nation agencies having to satisfy the dual reporting requirements of both federal and provincial governments, this agency began to develop a database application in 1994 that would eliminate double data entries, thus resulting in saving tremendous amount of staff time and producing more accurate reports. Their goal was to have a cost-effective, user-friendly and unified data system that could interface with the provincial system and INAC for better communication and timely sharing of information, based on consistent and standardized data collection and reporting. To-date, 10 years later, work is still incomplete due to absence of INAC funding and government support. Struggling to find money outside the agency to complete the project has apparently consumed a great deal of staff time and caused much frustration over the years. Recent refusal by the province to pay for hardware and software upgrades to allow them to continue exchanging files with the provincial government has added another layer of frustration.

Absence of INAC and provincial funding for technology is a main concern among agencies across the nation. However, it appears that not all provinces are equally firm on their position with regard to paying for certain computer equipment. For example, if a province is very anxious to get agencies use a newly rolled out provincial system, it might consider exception.

However, the problem remains that there is no government policy or even a consistent and clear understanding regarding who pays for what.

Perceptions of Usefulness of Provincial Systems

Most respondents believe that the reason why the province is anxious in getting them to use the government system is because the province needs their data. A number of ways are used by agencies to supply data: facsimile reports, spreadsheet files, document files, or direct remote data entry (for agencies that have suitable equipment). Stationing a provincial worker in the agency to collect data concerning specific types of cases using dedicated provincial computer equipment is not an unusual arrangement. Some provinces collect off-reserve cases only, but others want both off- and on-reserve cases.

Most agencies on the government system are dissatisfied. A general perception is that the province wants agencies to contribute data, but in return is not interested in giving them the tools they need. Their complaints are quite consistent and some respondents said they were certain that other agencies would have shared the same views. The common reasons cited for their unhappiness are as follows:

- Use of the provincial system is presented as a condition for service agreement. Agencies are not given a choice.
- Agencies are not permitted to access the financial module of the government system, for stated security reasons. As a result, they use a separate accounting package to manage financial data. Lack of software connectivity between the accounting package and the government system requires double data entry. In addition, computing child-based or service-based cost statistics is not possible or is very difficult.
- Provincial information systems are designed for government users exclusively. There is no special version for FNCFSAs with interface features and the kinds of information they need. Another consistent main complaint is that the reports available do not meet INAC requirements, and the province has no plan

to customize any features of the government system for FNCFSAs. Agencies must compile INAC in a labour intensive way.

- A few provinces, as mentioned above, still use a UNIX system. For people familiar with the Windows environment, using a text-based information system developed long time ago is counterproductive. Finding simple information often requires extensive and tedious navigation, a difficult, time-consuming and frustrating process. The kinds of reports available are difficult to read and some span rows or screen pages.

INAC Reporting

The Auditor General of Canada report[22] identified the following financial and non-financial reports (reformatted for inclusion here) that First Nations child and family services authorities are required to submit.

Financial Reports

Indian Child and Family Services Child Specific Invoice Summary (10th day of the month for CFA)	This report is submitted to INAC by the agency providing the service to request reimbursement. It includes a summary for the month containing the following: - Child information (such as name, member number, and date of birth). - Date of admission into care, type of care, and most recent placement date. - Start and end pay date, basic maintenance total, skill fee or fee for service, special needs description, and total, and total amount invoiced.

Non-Financial Reports

Child Care Notification Form (Monthly on the 10th day for services funded by the Comprehensive Funding Arrangement)	This form is completed when a child is removed from its home and placed under child protection in alternative care facilities. It includes the following: - Child information (name, gender, birth date, address, health insurance number). - Where child was apprehended from, reason that a Notification is being completed. - Type of care being provided, type of action taken under the Child and Family Services (CFS) Act, date action was taken. - Information on both parents indicating who is the care-giving parent with Indian Status and who is the custodial parent. - Information on person providing care if the birth parent is no longer doing so, and entity that is financially responsible for the child (for example, INAC, Provincial Social Services, or provincial Justice Department).
Special Needs Greater Than $2,000 Report (Monthly on the 10th day for CFA fund)	Special Needs Greater Than $2,000 requests need approval annually by INAC and state the special need requirement for each child including estimated yearly cost over $2,000.
CFS Operational Report (Twice yearly on Oct 15 and April 15)	This report for INAC operations funding is to reflect services to residents who are normally resident on the agencies' member reserves and includes the following: - Information on Prevention Services (list of specific services provided; number of families and children served by each; number of local CFS committees active; number of elder committees; number of Public Information and Education workshops) - Information on Protection Services (list of specific services provided; numbers of families served with/without placement; number of trained/approved foster care homes and parent aides contracts; number of children placed in off-reserve resources; number of children having status under the CFS Act; and number of adoption homes)

Domain	Indicator	Variable
Safety	Recurrence of maltreatment (rate & incidence)	· Reopening date · Reopening closing date · Reason case reopened · Type of maltreatment · Type of substantiation
	Serious injuries/deaths (rate & incidence)	· Date of injury · Injury severity · Injury type · Injury intentionality
Well-being	Grade level/Graduation	· Date of grade level/graduation report · Grade level/graduation
	Child behaviour	· Date of child behaviour rating · Child behaviour rating
Permanence	Placement rate	· Placement date · Placement type · Discharge date · Discharge type
	Moves in care [Placement changes] (rate & incidence)	· Placement date · Placement type · Reason for move/placement
	Time to achieving permanent placement	· Placement date · Placement type · Reason for move/placement
Family & Community Support	Family moves (rate & incidence)	· Date of address · Address or Postal Code
	Parenting capacity	· Date of parenting capacity assessment · Parenting capacity assessment
	Ethno-cultural placement matching	· Date of placement · Ethno-cultural matching · Placement inclusiveness

Although the number of reports is not large, compiling the kinds of information needed for these reports can be a difficult recurrent task for agencies without an information system, and the degree of hardship is proportionate to caseload size or agency size. In addition, it is easy to introduce errors into manual reports. Since no provincial system includes INAC reports, it is not difficult to understand why all agencies want to have their own automated information system to allow them to not only handle reporting with ease, but also manage day-to-day service delivery in a way directly relevant to their particular needs, and assess performance, among many other benefits.

Performance Measurements

As mentioned before, a national child protection outcomes measurement project is underway under the auspices of HRDC. Given the significance of this concerted effort, we have included a summary of the Outcome Indicator Matrix in the appendix. For the purpose of this review, it is useful to know what data is needed to measure what outcomes as per the conceptual framework of the matrix. The following table identifies this data requirement.

Historical or time-series data is needed. All required data is deemed to be basic and should exist in provincial child protection information systems.[23]

The section on provincial child protection information systems above includes information on current availability of outcomes data in the eight provinces of interest to this review. It appears that, currently, measuring Recurrence of Maltreatment, Placement Rates, Moves in Care, Time to Achieving Permanent Placement appear to be possible. Provinces leading the national project are working hard to modify their databases to include data for as many indicators as possible. One provincial contact informed that he was confident that his province would have, within the near future, data for 8 of the 10 outcome measures. However, there is no known timeline set by the provinces for achieving this data objective.

The Ontario Incidence Study[24] and the Canadian Incidence Study[25] reveal that disproportionately

large numbers of First Nations children are served in the home or in care across Canada. For First Nations child protection authorities, ability to measure the complete spectrum of outcomes of child protection services and to report on outcomes periodically should be of particular importance. Unfortunately, the current provincial information systems, main sources of First Nations child protection case data in Canada, are short of this capability, and it is unclear how long it will take before we see real improvement.

According to information shared by an agency, INAC recently introduced a "Results-Based Management and Accountability Framework". One requirement under this initiative concerns program performance measurement. Indicators for resource inputs (what was spent), activities (what was done), outputs (what was produced), and outcomes (what benefits or impacts resulted) will need to be developed for each program as per its goals and objectives. A very important prerequisite for successful measurement is availability of data needed to support the various indicators. Because the measures are specific to First Nations programs, the kinds of data required mostly likely do not exist in provincial information systems. This means that First Nations agencies will have to have their own data systems to allow them to meet such emerging accountability requirements.

Implementing Information Systems in FNCFSAs

The Attorney General of Canada, focusing on the issue of federal reporting requirements, decried the situation two years ago, and concluded that First Nations agencies must have capable computerized information systems to deal with cumbersome and excessive reporting requirements. Unfortunately, due to lack of technology funding, the majority of FNCFSAs still does not have any or are not given a suitable information system. Not only do they have to continue to endure hardship in connection with reporting, they also cannot, among other things, efficiently manage service delivery, meet their accountability requirements, work collaboratively with each other and with government departments by means of data exchange, or participate in important national or regional performance measurement endeavours. In order not to remain in a helpless state, a couple of large agencies decided to develop their own systems a few years ago. We have also seen medium size agencies beginning to use a leased system, although they can barely afford it. It appears that most agencies across Canada are anxious to have a suitable information system.

Selecting an Information System

Basic Considerations

The purpose of any information system, regardless of type of organization and nature of business, is to support efficient and effective operation[26] of the organization as per its mandate, vision, mission, goals, and objectives. For an information system to be and remain useful, it must be properly designed and managed. Meeting the following design principles is very important:

- The kind of RDBMS deployed must be an industrial-strength system[27] with a robust engine designed to handle very large data volume. Multi-CPU support is an advantage.
- The database and applications must be designed to exactly mimic the operational model or processes of the organization, and comply with provincial legislation, policies and standards.
- The database structure must have the ability to allow quick modification to accommodate sudden changes in the organization's operational processes, or new requirements externally introduced[28].
- The data in the database must be valid and complete to support the agency's needs, via tight data integrity enforcement at the structure level, form level, and code level.
- The applications must be designed with the user in mind, including features like logical and user-friendly graphical interface, familiar terminology, flexible searching for information using user-defined criteria, easy navigation, and attractive graphics.
- The data in the database must be available for SQL manipulation behind the scenes to facilitate managers to perform quick queries,

computations or other reports, above and beyond what the standard menus provide, and to allow live connection to external data sources.

- The database system must support local as well as remote access.

Specific to FNCFSAs, the following additional features are important, and each has implications for the database and application design:

- Financial data related to the child and/or the child's family must be captured and stored in the same database. This is the best way to facilitate accurate and convenient computations of costs, especially unit costs using child, family, or service event as the unit. Cost comparisons across categories, e.g., type of abuse, type of placement resource, etc., are possible only with cost data totally integrated and linked to the child or the family.
- All standard detail and summary reports required by INAC must be efficiently designed, exploiting the power of SQL, and temporary views and tables, for example. Using any of the report should be a one-button operation. The same design approach should be applied to all other reports.
- The application must include a "one-button" feature to automatically upload or supply selected data to external organizations, e.g., daily case data to the province, daily case data to a regional or national tracking system, monthly summary data or statistics to the national outcomes data pool, monthly report data to INAC, etc. Design specifications must be worked out with the parties or dataset recipients involved. This is the level of data exchange advocated by the Auditor General of Canada.
- The data in the database must be selectively retrievable for sharing with external groups on an as-required basis, like INAC, First Nations Statistical Institute, and university research institutes.
- The database must incorporate all the data and measurement scales needed to support the national outcomes measurement project.
- All data, especially events data, in the database must be historical and date-specific to permit meaningful statistical analysis, case audits, child protection outcome measurements, and other types of performance measurements.

Costs of Information Systems

Ten years ago, when very few relevant child protection information systems were commercially available, agencies in need of one usually ended up developing their own. They hired external consultants to do that if they did not have qualified developers on staff. For example, in late 1960s, the Children's Aid Society of Metropolitan Toronto used internal staff to produce the very first child protection information system in Canada. The Catholic Children's Aid Society of Metropolitan Toronto did the same a few years later, followed by the Ottawa Children's Aid Society and one or two others. These were and still are among the largest child protection agencies in Canada and could afford developing their own information systems. However, since early 1980s, leasing a commercial system has been the trend. Currently, all the remaining 48 children's aid societies and close to 10 First Nations child protection agencies in Ontario use a leased system.

In the field of First Nations child welfare in Canada, a similar trend took place. West Region Child & Family Services, Inc. in Manitoba, one of the largest FNCFSAs in Canada, decided to develop its own system in 1994. Lalum'utul'smun'eem Child & Family Services in British Columbia did the same a year later. However, the current trend is to lease, although the number of agencies which can afford their own system, leased or otherwise, are still far few and in between, as described above.

To lease or to develop is always a difficult decision, and there are no specific rules. However, the following factors should be taken into consideration in making such a decision:

- Which way is less expensive in the next 5 years? (Initial cost, license and software costs, support cost, modification cost, etc. Warning : it is not uncommon to see cost overrun in application development projects.)
- Who (vendor or developer in mind) is more

familiar with the child welfare service delivery system, operational and reporting requirements, legislation, etc.? (Content knowledge impacts relevance, quality, delivery timeframe, cost, time of agency liaison, etc.)

- Who (vendor or developer in mind) is more technically competent? (Knowing the person's track record, clients' satisfaction, similar work completed, etc., is very important. Can this person deliver the expectations listed under "Basic Considerations" above?).
- How long does it take to have the system installed and staff trained? (Leased systems are by definition in a far more favorable position on this count.)
- Who (vendor or developer in mind) can provide better support?
- How long is the person (vendor or developer in mind) going to be in business? (How long has this person been in business?)

Assuming the decision is to lease, deciding which vendor to use is also not easy. Given wide variations between vendors in price, features, product quality, and technical support ability, it is extremely important that the agency sees a live demonstration, asks in-depth questions before, during and after a demonstration, and talks to current users of the system under consideration. The agency must also assess the real technical ability of the vendor, among other things. Making promises is totally different from getting things done or successfully resolving problems. In addition to the expectations list under "Basic Considerations" above, the questions included in the table below should be useful to agencies choosing a commercial information system.

Technological Infrastructure Required to support an Information System and Costs

Information systems cannot be implemented without a viable technological infrastructure in place. It is equally important to realize that computer technology in the office deemed adequate for office automation is not necessarily capable to support the operation of an information system. The technology required for implementing information systems is far more demanding. However, a technological infrastructure good enough for supporting an information system is always able to host office automation, including demanding features like imaging, voice-over-Internet, collaboration, remote computing, etc. The paragraphs below identify the types of technology needed to operate a typical information system in voluntary child protection agencies, and suggest a common framework for estimating the costs of such technology.

Minimum Computer Hardware Needed

What kinds of computer hardware and software agencies need to build an adequate technological infrastructure to support an information system, leased or otherwise, is quite a complex matter. Our observation is that, in the case of FNCFSAs, organization size, whether or not an organization has one or more locations/branches, and adequacy of current computer equipment in use are together key determinants of the kinds of technology an agency needs to allow them to set up an information system. For example, the types of system software and hardware and support structure needed by a small self-contained agency with, say, only 5 workers are quite different from those required for an agency that has a head office and two branches and whose workers, regardless of where they are located, have to access the agency information system in head office. Variations in technological requirements directly affect costs as well.

Other than size and geographical spread of an agency, adequacy of computer technology in use creates another level of complexity. Information systems require fast servers, desktop computers and communication links on a functioning network. In addition, suitable operating system software for the servers and desktop computers must be properly installed and configured. For this reason, agencies currently using 386 or 486 standalone computers or slow servers will need to replace what they have.

Generally speaking, the following types of computer hardware are considered as minimum for operating a typical agency-level child protection system:

Subject	Questions to ask
Cost (Initial)	Leasing a commercial system costs between $30,000 and $45,000 in the outset. This fee generally includes customization to suit agency needs and onsite training time. In addition, there is a monthly or annual charge for phone support, software upgrades, and in some cases, user group membership. However, there is no standard for this type of charge. If the system is the client/server or web version, then number of locations in the organization should not affect the price. It is useful to remember that familiarity with operation and needs of child protection agencies, work quality, technical ability, relevance of the system, and professionalism are far more important considerations than price. A wrong decision in the beginning can cause very serious problems for the agency and will cost a lot to fix the problems. Examples are plenty. Ask the following questions: ¨ What modules are included in the price? What are their specific features? ¨ How many users are included in the license? How much extra does it cost to add users? ¨ What additional modules are available? What are their specific features? What are their prices? ¨ How much does it cost to transfer existing data to the system? ¨ Is onsite training included in the price? ¨ Can you provide references (current First Nations agency users)?
Cost (Annual)	Vendors charge between $2,000 and $15,000 a year for support and software upgrades. Ask the following questions: ¨ How much is the annual or monthly charge? ¨ What is covered by this fee? ¨ Are there additional charges?
Support	Technical support is usually included in the annual or monthly fee. Ask the following questions: ¨ Is there a limit on the number of support calls? ¨ How is remote support (remote connection to the system by vendor to solve problems) managed?
Features modification	Enhancement work is usually billable. Ask the following questions: ¨ What does it cost to add or change features in the application? ¨ How is the cost determined? What is the fee structure? (Ask for examples and details.)
Data extraction or exchange	It may be treated as enhancement work or one-time service. Usually billable. Ask the following questions: ¨ What does it cost to extract data from the database? ¨ What does it cost to add to the application ability to periodic exchange (upload and download) data with external organizations? ¨ How is the cost determined? What is the rate? (Ask for examples and details.)
Others	Ask the following questions: ¨ Can agency staff go into the actual database to use the data directly? Are there restrictions? ¨ Does the vendor have a web version for deployment on the Internet? ¨ How long has the information system been on the market? What is the current install base? How many First Nations child protection agencies are using the system? (Ask for references.) ¨ Does the vendor have a users group? What is the purpose of the users group? How does it work together with the vendor?

- Workstation: Pentium-class computer with 1 GHz processor, 512 MB main memory, 8 GB hard drive, 100 mbps network adapter, CD ROM drive, and 1024x768 video resolution operating under Windows XP Professional.
- Application/Database Server: Single Xeon server computer with 2.8 GHz processor, 4 GB main memory, two 40 GB SCSI hard drives (RAID-1), 100 mbps network adapter, CD ROM drive, and 40 GB tape drive.
- Network Server: Pentium 4 class server computer with 2.8 GHz processor, 1 GB main memory, 20 GB SCSI hard drives, 100 mbps network adapter, and CD ROM drive.
- Terminal Services Server: Pentium 4 class server computer with 2.8 GHz processor, 2 GB main memory, 20 GB SCSI hard drives, 100 mbps network adapter, and CD ROM drive.
- Local Area Network: Category-5 cables, and 100 mbps switch.

If an agency's computer equipment falls short of these minimum features, then, for the purpose of hosting a typical agency-level information system, their equipment may be considered as inadequate and needs to be upgraded or replaced.

Recommended Hardware, Software and Related Requirements, and Costs

This section contains detailed information on recommended hardware, software and related requirements and cost estimates for agencies categorized by size and geographical spread. The technical information is produced to the best of our knowledge based on what is available and feasible to do today regarding implementing a technological infrastructure in voluntary child protections agencies.[30] All cost figures are close estimates, reflecting current market pricing, which can vary somewhat between regions. In addition, we expect to see the prices of certain types of computer hardware products come down in the near future as their quality, reliability and features increase at the same time: something to keep in mind when planning to refresh technology a few years later.[31] Given the high degree of complexity of the subject, it is important to treat our suggestions as educated guidelines, which may require adjustment when an agency applies them. Situational, needs and other factors hitherto unknown or that may surface later make it extremely difficult to have just one set of recommendations for all agencies across Canada. In addition, technological advances necessitate periodic adjustment to this set of information to ensure currency and applicability.

The information involved is complex and detailed. The full package of this information and associated costs can be found in the appendix. The table on the next page presents information for three main categories of agencies. To avoid tedious repetition, only references to the applicable details are included in the table. The reader can easily locate the referenced details (equipment, costs, and related information) in the appendix. The reader will also be interested in knowing that charitable organizations, i.e., holders of a Charitable Organization Number issued by the federal government, are eligible for drastic discounts on all Microsoft[32] software products. Discounted prices under this arrangement are also included to allow us to form a more complete picture of costs and to do more accurate cost projections.

As we can see, the final cost strictly depends on the types and amount of hardware, software and service required, which in turn are determined by number of locations, preferred features and number of computers in the entire organization. If an agency already has some of the recommended items, then they will not need to include them in the calculation. However, if some or all existing equipment is of marginal performance, then the agency will need to decide to replace or to keep them. In making decisions of this nature, it is always important to seek input from technical experts who are in a position to make objective informed assessments. Using these guidelines, any agency should be able to estimate in a standard way the cost to build a viable technological infrastructure not only for operating an information system, but also for hosting office automation. Finally, it must be realized that technology budgets must be based on actual hardware and software required, not caseload size. For this reason, INAC's traditional formula based

Hardware and Software Required by Agencies to Operate a Typical Agency-level Information System

Agency Type		Recommended Hardware, Software, and Related items[33]	Notes
Type A	¨ One location only ¨ Less than 75 computers ¨	Option 1 - Software: A1; (A2); (A3); (A5); (A7); A8; A9; A10 Computers: C1; (C2); C4; C5 Others: B; D1-D3; E1-E4; F1-F3; G1-G2.	¨ Bracketed items are optional for small agencies (less than 10 computers) ¨ Software and hardware installation and configuration expenses do not apply to agencies having required expertise on staff. ¨ Only one A10 is needed
		Option 2 - Software: A1; A4; (A5); (A7); A8; A9; A10 Computers: C1; (C2); C4; C5 Others: B; D1-D3; E1-E4; F1-F3; G1-G2.	¨ Small Business Server 2003 can support up to 75 devices or users, as per the number of CALs purchased. ¨ Bracketed items are optional ¨ Software and hardware installation and configuration expenses do not apply to agencies having required expertise on staff. ¨ Only one A10 is needed
Type B	¨ One location only ¨ 75 or more computers	Software: A1; A2; A3; (A5); (A7); A8; A9; A10 Computers: C1; C2; C4; C5 Others: B; D1-D3; E1-E4; F1-F3; G1-G2.	¨ Bracketed items are optional ¨ Software and hardware installation and configuration expenses do not apply to agencies having required expertise on staff. ¨ Only one A10 is needed
Type C	Multiple locations (head office plus one or more branches)	Software: A1; A2; A3; (A5); (A6); (A7); A8; A9; A10 Computers: C1; C2; C3; C4; C5 Others: B; D1-D3; E1-E4; F1-F3; G1-G2.	¨ Bracketed items are optional ¨ Software and hardware installation and configuration expenses do not apply to agencies having required expertise on staff. ¨ Item A10 is needed for head office and each branch ¨ Item B is needed for head office and each branch ¨ Items C1, C2 and C3 are needed for head office only ¨ Item C2 may also be needed in certain large branches

please see pages 169 to 174 for component (A#) explanations

on number of on-reserve children cannot be used to fund technology.

APPENDIX A

The following section is adapted from the original Outcome Indicator Matrix document[34]

Recurrence of Maltreatment

Child protection is the core function and primary focus of the child welfare system with the ultimate goal of preventing future maltreatment. Recurrence of maltreatment includes all confirmed cases of child abuse or neglect known to a child protection system in which a subsequent confirmed incident of maltreatment occurs and becomes known to child protective services. Reported rates of recurrence range from under 10% to over 60%. The best study to date reported 24% of families experienced at least one repeat incident of confirmed maltreatment within 12 months of the first incident, 43% repeated within 5 years.[35] Recurrence is measured over a set interval. For example the 12 month recurrence rate is the proportion of children identified by child welfare services as maltreated who are maltreated again within 12 months.

Serious Injuries and Deaths

Protection from serious harm is a key priority for all child protection services and such cases require priority intervention and tacking. While the majority of investigated maltreatment cases do not involve serious injuries or fatalities, every effort must be made to prevent such tragic outcomes. The Canadian Incidence Study of Reported Child Abuse and Neglect found that 4% of substantiated investigations documented physical harm severe enough to require medical attention[36]. While injuries associated with suspected maltreatment and all serious injuries (intentional and non-intentional) to children in child welfare placements (e.g., foster care, group care, & residential care) are documented in child welfare case notes, most Child Welfare Information Systems (CWISs) do not track injury information.

Grade level/graduation

Maltreatment is a significant risk factor for developmental, cognitive, and academic delays. Enhancing child well-being is a paramount objective of the child welfare system. Improvements in cognitive functioning is a key outcome indicator. This is not the exclusive domain of the child welfare system, but it represents a service priority that should be well documented. Research consistently shows that children receiving child welfare services are behind their peers in all aspects of cognitive development and school performance. A community survey in upper New York State found that maltreated children were 2.5 times more likely to repeat a grade than were a matched group of non-maltreated children[37]. Performance can be measured as age to grade ratio, achievement on standardized tests (e.g. Math & English), placement in special education classes, school attendance, and assessed risk of failure. While test scores may more accurately measure specific skills, age to grade ratio is the most feasible indicator for child welfare services to collect, especially for children receiving home based services. For out of school older youth, graduation rates are a simple and appropriate measure. Outcome monitoring for pre-school children depends on the extent to which child welfare authorities use developmental assessments.

Child Behaviour

Maltreated children are higher risk for behavioural problems at home and in school, delinquency, and criminal activity. Preliminary findings from the Looking After Children in Canada Project were that 39% of maltreated youth reported having difficulties with anger, and 32% reported often getting into trouble for defiance[38]. Similarly, a recent American study using the Teacher report from the Child Behaviour Checklist found that over 40% of children in the child welfare system were rated as having problem behaviours compared to 20% in a matched sample[39]. Standardized measures of child behaviour are not generally used in child welfare settings. However, some jurisdictions have started to use instruments that include some behavioural information, either in risk assessment tools or in assessment records for children in long-term care.

Placement Rate

Placement of children in out-of-home care is a consistently documented indicator for child welfare services. Placement in care is necessary for children who cannot be adequately protected at home or whose needs cannot be met at home. The Canadian Incidence Study of Reported Child Abuse and Neglect found that 8% investigations lead to a placement in care within the first two-months of the investigations[40]. An Illinois study of over 10,000 child welfare investigations found that placement rates increase as a function of the time a case is kept open. At one month after referral 7% of children had been placed in care compared to 21% within one year of the initial referral[41]. Interpretation of placement statistics is complex. An increase in placement rates is not necessarily a negative outcome; it could mean that child welfare authorities are doing a better job at identifying and protecting children who would have been severely harmed if left at home. This is further complicated by the fact that placement decisions are affected by the availability of placement resources. In some jurisdictions official placement rates may significantly under represent children who are placed in non-traditional child welfare settings, such as customary care or informal community placements. Runaway youth should also be carefully tracked in placement statistics.

Moves in Care

Social stability is essential for children to develop a sense of belonging and identity as they cope with separation from their families. Some placement changes can be beneficial, but multiple unplanned moves can have seriously negative short and long-term consequences for children. Moves in care tracks admissions, re-admissions, and significant placement changes. A four year longitudinal study of 717 children who entered foster care in Saskatchewan found that 71% of children experienced only one out-of-home placement. The average number of moves for children who experienced more than one out-of-home placement was 2.3, and only 10% of these had more than 4[42]. The simplest way to measure moves in care is to count the number of moves experienced by children when they are discharged from care. This method measures moves during a specific spell in

care. The moves in care indicator should only track significant placement changes, not respite placements or home visits.

Time to Achieving Permanent Placement

Most children brought into care return home after relatively short periods of time. Rosenbluth (1995) found that children entering care in Saskatchewan spent an average of one year in foster care, although the majority of children returned home in less than six months. Placement drift is a concern for children who remain in care. The challenge in measuring time to achieving permanence is deciding which placements can appropriately be categorized as permanent. The simplest definition of permanent placement is one that is intended to be permanent, such as returning a child home (reunification), placement in an adoptive home, or a permanent foster home placement. Using time to achieving permanence as an outcome measure is complicated by the fact that hasty placements may be more likely to break down. Reunification breakdown rates have been as high as 30%. Courtney (1995) found that foster children reunified within three months were more likely to be taken into care again than children reunified between three and six months.

Family Moves

Frequent moves lead to loss of peer and social support networks for children and parents. For children, frequent moves and multiple school changes may prevent the formation of constructive social support networks. Housing instability is caused by many factors including lack of affordable good quality housing, employment changes, lifestyle, and other family crises. While

child welfare services are not responsible for providing housing, many child welfare social workers advocate for better affordable housing for their clients and also work with families to adopt lifestyles that will increase their likelihood of enjoying housing stability. The Canadian Incidence Study of Reported Child Abuse and Neglect found that more than 23% of investigated families had experienced at least one address in change in the previous six months (Trocmé, MacLaurin , Fallon, et al. 2001). A recent survey conducted a the Children's Aid Society of Toronto found that 21% of respondents noted that housing was a factor in the decision to place children in out of home care (Chau, Fitzpatrick, Hulchanski, Leslie & Schatia, 2001)

Parenting Capacity

Parenting capacity is a major concern in many cases of child maltreatment. Most home based child welfare services target parents' ability to meet the emotional, cognitive, physical, and behavioural needs of their children. Improved parenting is a good outcome for children. Better parenting translates into better long-term child outcomes. Parenting is targeted by many child welfare interventions and tools have been developed to assess parenting and family functioning. However, standardized parenting measures are not commonly used to assess families or track outcomes in child welfare. Most risk assessment tools also include a number of potentially useful parenting measures, although their interpretation as outcome measures has yet to be tested.

Ethno-Cultural Placement Matching

When children and youth must be removed from their homes, efforts should be made to place them within their geographic community with extended family, a family with similar ethno-cultural background, or in foster care that is very inclusive of their family and friends. There is well-founded concern that many minority children (e.g. Aboriginal, Black, Muslim, etc.) are not placed in matched foster homes or homes easily accessible to their family and friends. For example, although 64% of children in care in Saskatchewan in March 1990 were of Aboriginal ancestry, and these children spent on average more time in foster care than did non-Native children, less than 10% of these Native children were in matched foster homes. Placement matching data must be interpreted with caution in individual cases because ethno-cultural matching is only one of the factors to be considered in finding the most appropriate placement for a child. Nonetheless, ethno-cultural matching provides a strong indicator of community engagement in recruiting foster homes and finding the most appropriate out-of-home placements for children in their communities.

Interpretation Issues

Many of the indicators selected for the Child Welfare Outcome Indicator Matrix are proxy measures that will need to be interpreted with caution. A narrow focus on any one indicator could have unintended effects on delivery of services. Reducing placements, for example, without ensuring safety and supporting child well-being, could simply result is a loss of services leaving more children at risk of further maltreatment. Proxy indicators that reflect system events can nevertheless provide a meaningful measurement framework if the selection of indicators covers a broad set of domains, as proposed in the Child Welfare Outcome Indicator Matrix.

APPENDIX B

Recommended computer hardware, software and other requirements for building a viable technological infrastructure to support a typical

GROUP A = Software				
	System Software	**Price**	**Special Price for Charitable Organizations**	**Notes**
A1	**Microsoft Windows XP Professional** (Upgrade version) Each workstation computer Main uses in a self-contained office, branch office or headoffice: ¨ Networking ¨ Messaging ¨ Accessing database remotely located in head office	$260	$100	¨ Upgrade version is for upgrading any version of Windows since Windows 98 ¨ OEM version (preinstalled full version) is supplied by computer manufacturer, and is not usually available for retail sale. ¨ Windows XP Home, lacking important security and communication features, is not suitable ¨ Should include Windows XP Professional when ordering new computers
A2	**Microsoft Server 2003** (Standard edition) Main uses: ¨ Domain networking ¨ Setting up application/database server ¨ Setting up Terminal Services Server (Both Application and Administration modes of Terminal Services are available in Server 2003)	$1,000	$190	¨ Only 1 package is needed for setting up in head office: • Network server • Application server • Terminal Services server ¨ Certain offices with less than 75 computers may find this version more cost-effective than Small Business Server 2003 with additional CALs, depending on agency size and features needed.
	Each Server 2003 CAL (device or user)	$40	$10	
	Each Terminal Services CAL (device or user)	$112	$60	
A3	**Microsoft Exchange Server 2003** (Standard edition) Main uses: ¨ Emailing (using Outlook)	$980	$600	¨ Can be installed in Network Server, if preferred.
A4	**Microsoft Small Business Server 2003** (Standard edition) Main uses: ¨ Setting up application/database server ¨ Networking	$733	$314	¨ Suitable for self-contained office. License for up to 5 users/devices is included. ¨ Additional licenses can be purchased to increase the number of users/devices up to a maximum of 75 ¨ Only 1 package is needed for setting up: • Domain network • Application/database server ¨ Only 1 server computer is needed to host the application and database and to control network
	Each Exchange Services CAL	$94	$6	

GROUP A = Software				
	System Software	**Price**	**Special Price for Charitable Organizations**	**Notes**
A5	System software and network configurations (Small job)	$1,350	$1,350	¨ Up to 3 hours @ $450 – each location ¨ Rate varies between $200 and $450 an hour, depending on region and qualifications
A6	System software and network configurations (Big job)	$7,200	$7,200	¨ 12-16 hours @ $450 – main location ¨ Work includes setting up: • Domain network • Exchange Server • Application server • Terminal Services Server • VPN ¨ Rate varies between $200 and $450 an hour, depending on region and qualifications
	Software Upgrades			
A7	Microsoft's Software Assurance Program subscription	Add 50% to each system software price	Add 50% to each system software price	¨ Optional ¨ Subscribers receive free upgrades for two years of all insured server software
	Office Suite			
A8	Microsoft Office 2003 (Standard edition) – Each workstation computer	$518	$77	¨ Includes Word, Excel, and PowerPoint ¨ Should include Office 2003 (Standard edition) when ordering new computers
	Utility Software			
A9	Norton SystemWorks 2005	$100	$100	¨ Protects against virus and intrusion, keeps files in good working order, manages bad sectors, etc. ¨ One per computer
A10	PCAnywhere version 11 (Host and Client)	$200 (one per location)	$200 (one per location)	¨ For remote support ¨ GoToMyPC or NetSupport Manager is equally appropriate

GROUP B = Internet Service Provider				
agency-level information system:		Cost (One-time)	Monthly Cost	Notes
	One of the following options:			¨ Prices vary between regions. All prices are approximate only. ¨ Add to monthly cost extra charges for static IP addresses needed for remote computers connecting to head office Terminal Services Servers to access central databases. Charges can vary greatly between carrier types and vendors. ¨ Add to monthly cost extra charges for additional email addresses, where needed.
	Cable ISP (Best option)		$50	¨ Modem always included ¨ Usually free installation
	DSL ISP (Second best option)		$40	¨ Modem extra ¨ Self installation
	DSL Modem	$150		
	Dedicated phone line		$28	If all the phones in the small office and the DSL modem have to share one phone line, then telephone filters (one per phone) are needed. One time cost is $5 per filter.
	Satellite ISP (Third best option)		$400	¨ Charges can vary greatly between vendors. ¨ Upload and download speeds greatly affected by number of concurrent users. Practical maximum is 2-3 concurrent users. ¨ Signal problems in bad weather condition
	Dish, materials, and installation	$7,000		¨ Prices vary greatly between vendors. ¨ Installation cost also depends on location.
	Dialup ISP (Last option)		$30	Should use thin client software to help offset speed problem.
	Dedicated phone line		$28	

GROUP C = Computer Hardware (Very important to use high quality equipment)			
		Price	Notes
C1	Computer for managing application and database (Application Tower Server) ¨ Intel server grade motherboard ¨ Dual Xeon, 3.2 GHz ¨ 4 GB RAM ¨ Redundant power supply ¨ 2 SCSI 73 GB Seagate hard drives (RAID-1 implementation) ¨ CD ROM drive ¨ 72 GB DAT Seagate tape drive ¨ Onboard video, 100 mbps NIC ¨ Keyboard ¨ Optical mouse ¨ 17" LCD monitor (16ms) ¨ No OS, but Microsoft ready ¨ 3 years onsite next business day service	$5,700	Needed for each agency regardless of number of branches ¨ One dual processor server per 40-50 concurrent users. ¨ Small self-contained agencies with 10 or fewer users may use a single processor server instead ¨ Size of main memory depends on specific application. Upgrade memory if performance is slow. ¨ Price estimate based on Dell's PowerEdge line ¨ Price will change

GROUP C = Computer Hardware (Very important to use high quality equipment)			
		Price	**Notes**
C2	Computer for managing large network in head office (Network Tower Server) ¨ Intel server grade motherboard ¨ Pentium 4, 3.2 GHz ¨ 1 GB RAM ¨ 80 GB, 7200 rpm SATA Seagate hard drive ¨ CD ROM drive ¨ Onboard video, 10/100/1 GB mbps NIC ¨ Keyboard ¨ Optical mouse ¨ 17" LCD monitor (16ms) ¨ No OS, but Microsoft ready ¨ 3 years onsite next business day service	$1,850	¨ Not needed for a small self-contained office running Microsoft Small Business Server 2003 ¨ Not needed for a small branch office running Windows XP Professional workgroup network. ¨ Price estimate based on Dell's PowerEdge line ¨ Price will change
C3	Computer for managing Terminal Services (Terminal Services Tower Server) ¨ Intel server grade motherboard ¨ Pentium 4, 3.2 GHz ¨ 2 GB RAM ¨ 80 GB, 7200 rpm SATA Seagate hard drive ¨ CD ROM drive ¨ Onboard video, 10/100/1 GB mbps NIC ¨ Keyboard ¨ Optical mouse ¨ 17" LCD monitor (16ms) ¨ No OS, but Microsoft ready ¨ 3 years onsite next business day service	$2,430	¨ Install in head office for remote computers to access head office databases. ¨ Key consideration is RAM size. Calculated as 100 Megabyte per user. 4 Gigabyte is needed for 40-50 concurrent users. Adjust RAM size accordingly. ¨ Elaborate VPN setup may require Xeon-class server. ¨ Price estimate based on Dell's PowerEdge line ¨ Price will change
C4	Mini-tower Workstation – Each staff person ¨ Intel motherboard ¨ Pentium 4, 3GHz ¨ 512 MB RAM ¨ IDE 80 GB, 7200 rpm hard drive ¨ CD ROM ¨ Onboard video, 100 mbps NIC ¨ Keyboard ¨ Optical mouse ¨ 17" LCD monitor (16ms) ¨ Windows XP Professional ¨ Office 2003 (Standard edition: Word, Excel, PowerPoint) ¨ 3 years onsite next business day service	$1,270	¨ One for each staff person in agency. ¨ Price estimate based on Dell's Dimension line
C5	Laser printer – Each location ¨ Monochrome ¨ 1200 x 1200 dpi ¨ Networked ¨ 25 pages per minute ¨ 15,000 pages per month duty cycle ¨ 3 years onsite next business day service	$500	¨ Offices with less than 20 workers may need a printer with a higher duty cycle rating ¨ Price estimate based on Dell's 1700n model ¨ Price will change

GROUP D = Technology Refresh Planning (Every 4 to 7 years, depending on equipment) Also applies to technology currently in use in agencies			
		Price	**Notes**
D1	Server replacement	80-85% of original price for servers with similar features	The average useful service life span of servers is between 4 and 5 years. However, replacing or upgrading components may extend the life span for another 3 to 4 years. Decisions to retire or upgrade should be made within the context of performance too vis a vis the current system software, not just economy.
D2	Workstation replacement	60-75% of original price for desktop computers with similar features	The average useful service life span of desktop computers is between 5 to 7 years. Although replacing or upgrading components may extend the life span for another 3 to 4 years, the usually small cost differential might make better sense to replace the whole computer.
D3	Laser printer replacement	70-75% of original price for laser printers with similar features	Laser printers are normally not worth fixing. In addition, the cost to replace the drum could be as high as the cost of a new printer.

GROUP E = Local Area Networks (Very important to use high quality equipment) (One-time cost for each location currently without a viable LAN setup)			
		Price	**Notes**
E1	16-port switch	$80	For locations with more than 16 devices, purchase either a switch with more ports OR multiple units.
E2	Firewall and VPN router	$400	Must be compatible with the broadband service. Important to ask service provider to recommend suitable brands and models. Price is approximate for a good quality router.
E3	Regular Category 5 cable	$30 (For each workstation located within 30 feet of switch)	¨ Assuming 30 feet of cable for each computer. ¨ Fire retardant grade cables cost many times more.
E4	Installation labor	$75 an hour	Rate varies between regions.

GROUP F = Computer Accessories and Other Office Equipment			
		Price	Notes
F1	Uninterrupted Power Supply (980 Watts, 25 minutes) – Each server computer	$800	One for each server
F2	Replacement battery of Uninterrupted Power Supply	$600	Approximately every 3 years
F3	Laser printer toner	$120 per cartridge	Should belong to the supplies budget

GROUP G = Annual Computer Hardware Maintenance and Support			
		Price	Notes
G1	External computer hardware services (on-site)	Approximately 5% of first time total equipment cost	¨ Some vendors may charge as high as 10% ¨ Best is to include onsite service plan in all computer purchases to cover labor and parts. 3-year protection is probably most cost-sensible.
G2	Replacement parts	$1,000	"Quesstimate"

(Footnotes)

[1] See Nico Trocme, Stanley Loo, Butch Nutter and Barbara Fallon, *Client Outcomes in Child Welfare: Phase II*, Centre of Excellence for Child Welfare, University of Toronto, April 5, 2002. (This report focused on measuring child protection service outcomes, and recommended steps for removing data problems in provincial/territorial government information systems found to hinder national outcomes measurement efforts.)

2 Subsequent to the release of the University of Toronto report, HRDC set up a national child protection outcomes working group to launch a pilot project. Five provinces (British Columbia, Alberta, Manitoba, Prince Edward Island, and Newfoundland and Labrador) will be contributing test data, in accordance with the definitional intent and requirements of the University of Toronto's *Child Welfare Outcome Indicator Matrix*.

3 *Streamlining First Nations Reporting to Federal Organizations*, Report of the Auditor General of Canada, December 2002 (Internet version at: http://www.oag-bvg.gc.ca/domino/reports.nsf/html/20021201ce.html)

4 18 in Alberta, 25 in British Columbia, 15 in Manitoba, 9 in New Brunswick, 1 in Newfoundland and Labrador, 1 in Nova Scotia, 11 in Ontario, 24 in Quebec, and 15 in Saskatchewan. Northwest Territories, Yukon, Nunavut and Prince Edward Island have none.

5 Since a list of agencies that have their own information system did not exist, the only way to identify them was asking FNCCSC's regional contacts to find these agencies. The names of those agencies willing to be interviewed were given to the researcher, along with contact information. The same approach was used to recruit agencies that used a provincial system exclusively.

6 If the respondent wanted to be more prepared, the researcher would email a list of questions to him/her well ahead of time.

7 On four occasions, the contact invited one or more colleagues to sit in at the interview, in order to be able to readily provide more accurate or technically complete answers. This arrangement helped to produce better responses and save time.

8 The reader might be interested in knowing that running tests on database data, a strong and technically involved design feature of the recent nationwide review of provincial/territorial child protection information systems, allowed us to uncover many technical shortcomings in a number of government systems.

9 They were key agency officials, government officials directly responsible for implementing or managing provincial child protection information systems, and suppliers of technology to FNCFSAs.

10 Compared to other provinces, New Brunswick may have the highest number and proportion (9 out of 11, or about 80%, according to a government contact) of agencies that still use a paper file system and are not connected to the provincial system at all. The actual situation in Quebec is difficult to determine, and usage figures for that province are not available.

11 Ontario does not have a provincial child protection information system, although this situation will change when the government introduces an integrated system, perhaps a few years later. This data system project is in the planning stage, and a request for proposals will be issued shortly, according to a government source. Absence of a government information system has given rise to a proliferation of private systems in the province. Currently, most of the 53 CASs (Children's Aid Societies) use a system supplied by one of two consulting firms. Eight First Nations agencies in Ontario use *Frontline*, a dedicated child welfare information system also installed in 60% of the CASs. The other system is *CWIS (Child Welfare Information System)*. The four largest CASs in the province use a private system developed in-house years ago.

12 Criteria used by the government for worker certification varies somewhat between provinces, but level of former social work education and training is an important one.

13 It is likely that access to certain non-financial modules is also denied.

14 The real capacity of these systems cannot be ascertained because we did not have an opportunity to analyze the database structures, the applications, and the database data, among other things.

15 Development work started in 1994.

16 It is also possible that some agencies still use 486 computers or Microsoft DOS.

17 See the University of Toronto final report for details. Advantages of client/server computing and RDBMSs were described in an interim report of that project.

18 Characteristics of the information system: Information gathered included details about the database management system used to build the database and drive the application; types of computer technology deployed; languages used to develop the application; history of application development; main functions of the application; user training; and plans for further development. Capacity of the information system: Information gathered included types and amount of data stored in the database; availability of data needed to measure outcomes; database structure; data integrity enforcement; and coding scheme. An important part of that review involved extracting large datasets from each information system and running extensive usability tests on the data to uncover problems and pinpoint errors.

19 Child in care is noted, but not number of placements nor placement change dates.

20 Salaries and benefits of agency technical support staff are extra.

21 According to Microsoft's current price. Federally registered charitable organizations are eligible for drastic discounts.

22 See footnote #3.

23 An earlier study of Ontario information systems revealed that only one commercial information system had all the data needed, which could be retrieved easily.

24 Trocme, Nico, McPhee, D, et al., *Ontario Incidence Study of Reported Child Abuse and Neglect*. Toronto: Institute for the Prevention of Child Abuse, 1944.

25 Trocme, Nico, et al., *Canadian Incidence Study of Reported Child Abuse and Neglect*. Ottawa: Health Canada, 2001.

26 It is difficult to specify what features should be included in an information system. The usefulness of a system must be decided by the user. However, we should advise that, although inclusion of enterprise level features like human resource management, payrolls, and fleet management is important from the point of view of a comprehensive information management system, these additional features should be managed separately given their specific nature and purposes. As a general design principle, a good database should include only modules intrinsically related to each other and whose data need to be linked to each other. Since a child protection information system is child-based and family-based, only those modules directly or indirectly linkable to a child or a family should be included.

27 If the application is for web or local deployment, it does not matter whether the RDBMS is a client/server system or a file server system. 32-bit engines should be adequate for FNCFSAs.

28 Such flexibility would also take care of what the Auditor General of Canada called "report creep", where the introduction of a new program invariably adds to reporting requirements.

29 The amount of memory is a function of the number of concurrent Terminal Services clients. 2 GB should be able to handle up to 20 clients.

30 The same idea applies to complex organizations and governments as well, although enterprise versions of system software are needed and elaborate security measures are usually involved. In addition, mainframe computers and high-end servers may be deployed, especially in a government computing environment.

31 Items D1, D2 and D3 in the table below and in Appendix B concern technology refresh planning.

32 Most, if not all agencies use Microsoft software products. Therefore, the hardware and software we recommend support this strong tendency.

33 See Appendix B for details and costs.

Extraordinary Costs and Jurisdictional Disputes

CHAPTER 6

Prepared on behalf of:
First Nations Child & Family Caring Society Canada

Prepared by:
Dr. Gerald Cradock, University of Windsor

July 2005

Executive Summary

Jurisdictional disputes and extraordinary costs are endemic to all bureaucratic apparatuses. However, it is not always clear where the boundary between the two terms lies. For the purposes of this analysis, a distinction is made between extraordinary events that are unanticipated, unforeseen, or outside normal risks, from events that appear extraordinary because they lie outside or between established jurisdictions.

Since Directive 20-1 is a national formula, it is not surprising events classified as extraordinary for many First Nations agencies are in fact quite ordinary for some agencies. This is particularly true where agencies are responsible for remote communities with their high incidence of community dysfunction and high travel costs.

Distinguishing between extraordinary and ordinary local events can only be done through the application of community capacity studies, which will provide a guide to the particular needs of the communities serviced by agencies.

The data from this study suggest there are two primary types of jurisdictional disputes plaguing First Nations agencies. First, persistent disputation between INAC and Health Canada over funding for non-insurable medical costs leads to denial or unnecessary delay in the provision of services to children in the care of agencies. In particular, children with complex developmental, mental health, and physical health issues suffer from these delays. Second, some agencies report disputes between themselves and provincial counterparts due to insufficient funding to cover provincially mandated services, demands by provincial actors for agencies to take responsibility for children not recognized by INAC, and disputes over appropriate case practice.

The effect of jurisdictional disputes is to divert staff effort and agency funding from targeted activities and toward dispute resolution. Moreover, the incidence of jurisdictional disputes is highly variable across agencies suggesting some agencies find themselves in a disputing environment in which there appears to be a minimum of cross-agency cooperation. Further, data shows a rough correlation between frequency of disputes and the degree to which agencies service remote communities.

Suggested mechanisms for preventing or resolving jurisdictional disputes include; conducting community capacity studies, establishing interagency committees at local, regional, and provincial levels (with adequate funding for necessary travel), funding for mediation between disputing parties as necessary, and establishing an officer responsible for advocating on behalf of on reserve children.

Data on extraordinary costs does not reflect events that are unanticipated, unforeseen, or outside normal risks. Rather, the data is very similar to that considered under jurisdictional disputes and suggests that much of what is considered 'extraordinary' is, in fact, a body of predictable and repetitive events for which no established jurisdiction can or will take responsibility. For example, complex medical needs are mentioned both as jurisdictional disputes and as extraordinary costs. Yet, the incidence of complex medical needs is calculable and therefore not unexpected.

That said, some agencies report the periodic outbreak of community crises related to sudden high rates of suicide, substance abuse, or other socially destructive behavior. These crises are sudden in the sense they depart from community norms and therefore constitute a major drain for agencies already overstretched by their ordinary commitments. It is important to recognize that these kinds of crises cannot be managed by casework insofar as the dysfunctional unit appears to be the community as a whole, rather than its individual members.

Further, while not noted by agencies surveyed, there are a range of possible extraordinary costs that have been experienced by other child welfare jurisdictions. These include exposure to legal liability, required involvement in public inquiries, and social consequences of natural disasters. The two former types of extraordinary costs are in the nature of moral hazards insofar as while their occurrence is random they are nevertheless

intrinsic to the child welfare enterprise.

It is also evident that little attention has been paid to the cost implications of making reserve communities accessible for disabled children. These costs are not restricted to individual residences, although that is an issue, but also to general civic improvements.

From the perspective of jurisdictional disputes and extraordinary costs a major requirement is a better relationship between Health Canada and INAC. Cooperation between these two federal agencies would save considerable effort and expenditure currently falling to agencies. Some of the cost issues can be addressed by re-jigging Directive 20-1 to more accurately reflect the actual costs of delivering child welfare services. In particular, recognition of the enormous costs of travel for agencies servicing remote communities and a graduated maintenance schedule recognizing the existence of complex needs and the guardianship responsibilities they entail. Similarly, the formula must provide for recognition of the differing responsibilities created by varied provincial legislative regimes.

Finally, it is significant that the on reserve population of children do not have a designated minister or officer dedicated to advancing their interests. This is unique in Canada. In particular, the lack of an ombudsman or advocate for First Nations children places them out of step with the U.N. Declaration of the Rights of the Child and many provincial jurisdictions. It is the position of the author that jurisdictional disputes and the extraordinary costs they generate are likely to persist so long as there is no government supported independent voice dedicated to solely to advancing First Nations children's interests.

Introduction:

The following paper is organized into four parts. First, I provide an overall discussion of how we might think about extraordinary costs and their relationship to jurisdictional disputes. In the second section I turn to surveyed agencies' responses and consider the types of jurisdictional

disputes which are so common as to not meet the test of 'extraordinary' since these disputes are not unanticipated, unforeseen, or outside normal risks. However, I also underline that that which is ordinary for some jurisdictions is abnormal for others – and this is particularly true of travel costs to remote communities and the kind of services which, at present, are legally mandated yet practically impossible to deliver. I follow this with a section concerned with extraordinary costs as described by agencies. Again, I try to distinguish costs which are truly extraordinary from those that ordinary but not addressed by current funding and staffing arrangements. Each of the second and third sections includes a summation of the issues raised and observations about how to address them.

I conclude the paper with a distillation of the paper's findings into recommendations with respect to improving funding under Directive 20-1 and a call for budget lines not contemplated by the Directive. I recognize it is a preferred strategy to improve rather than eliminate the conditions of Directive 20-1 but the reader will realize that the subjects of extraordinary costs and jurisdictional disputes presuppose failings or gaps in the present formula. While some of these problems can be addressed by tinkering with present budgetary procedures, there are issues which have arisen for First Nations agencies which clearly were not contemplated by the authors of the Directive and cannot be addressed by an adjustment to current structural arrangements. However, I hope the reader will appreciate that where possible I have suggested changes which could be addressed under the current structural regime; the rest is perhaps a longer-term project but, I hope, worth the effort.

Locating the Extraordinary:

The past several decades have seen an explosion of "assessment" tools and an accompanying theoretical literature on what should be assessed, how assessments should be constructed, and what purposes assessments should serve. In general, assessments are constructed around one or more of three concepts: risk, needs, and capacity (sometimes called strengths). However, no matter which concept is predominant, all assessment tools work from a normative base. Sometimes this normative base is constructed from expert opinion, other times it is constructed from specific and local research designed to create a baseline of present conditions. Participatory Action Research seeks to combine baseline research with a political agenda of change.

The majority of tools utilized by child protection systems use as their object either parents, children, or some combination of the two. This is true whether the central concept utilized by the assessment is risk or needs. Where community appears in these types of assessments, it is not, in and of itself, subject to assessment. Rather, community appears as a given and what is measured is not community functioning but the child's or parents' involvement in this assumed community. Effectively, this approach conceives of parents and children as more or less defective liberal citizens situated within interchangeable healthy communities.[1]

INAC recognizes at least one distinction between reserve communities – degrees of isolation. Its basic departmental data utilizes four categories (urban, rural, remote, and special access) based upon geographic distance from a 'service center' (INAC 2003, 94). While not overtly stated, this classification system appears to assume quality of life is related to accessing services contained within a service center. However, there is no reason to assume this single dimension is an adequate measure of quality of life or that it is capable of distinguishing between healthy and toxic communities.[2]

The significance of this observation is central to the conception of extraordinary costs. An assessment scale designed to assess only parents, or only children, without taking account of community functioning will necessarily create distortions. It is reasonable to suggest that a child presenting objective extraordinary challenges (for example, autism, F.A.S.) will be much more likely to become a child in care if the challenges occur within a community with low child welfare capacity. On the other hand, if the community contains high capacity the child's objective challenges may present less difficulty and, hence, not be extraordinary.

Further, the conception 'child welfare capacity' is not limited to professional assistance or intervention. In theory, a healthy community would not require professional assistance or intervention because it would have its own internal capacity to address problems and issues as they arose. Within the First Nations context, the frequently cited importance of extended family indicates Nations composed of healthy extended families would not require professional intervention – or at least not an alternate care system – since healthy extended families would tend to care for their own.

In contrast to child welfare literature, a significant body of community assessment tools has emerged in the population health area (Granner and Sharpe 2004). As well, a variety of needs assessment tools have emerged in the U.K. in response to various central government initiatives designed to ensure local authorities are responsive to the needs of local jurisdictions (for example, see Browne 1996). The examples provided by Percy-Smith (1996) include assessments of community care, community needs, housing needs, access to legal services, and labor market and training needs. Others, such as Oetting et al (2001) have attempted to create a theoretical and methodological base for needs assessment. Meanwhile, Family Support America (Samuels et al 1998) has developed a step-by-step guide for assessing community needs and Christakopoulou et al (2001) have reported an initial international test of reliability and validity for a community well-being questionnaire.

Of urban Europe, Christopoulou et al write:

> *The need for a comprehensive profile of community wellbeing arises from the multiple nature of the problems themselves that many urban neighbourhoods face. Although disadvantaged neighbourhoods are often classified as low income areas, it is a mixture of environmental, social and economic problems that undermine investments and residents' commitment to these areas often encourage social exclusion.* (ibid, 322)

The significance of this understanding of multiple causes of lack of community wellbeing is reflected in the data collected by Trocme et al (n.d.). Here, substantiated child protection investigations on reserve reflect the presence of an average of 4.1 risk factors as opposed to an average of 2.5 risk factors for non-aboriginal children (ibid, 23). Moreover, amongst these risk factors mental health issues occur in 40% of all cases yet the Joint National Policy Review notes that of fifty First Nations child welfare agencies surveyed only eight had contact with mental health agencies (McDonald et al 69). In other words, given the prevalence of mental health concerns in child protection matters it astonishes that in five of nine provinces First Nations agencies had no contact with mental health services at all.

From the point-of-view of extraordinary costs the presence of mental health risk factors for on-reserve child abuse investigations is not extraordinary at all. It is, like alcohol abuse (73% occurrence) and solvent abuse (54% occurrence), virtually normative despite being far in excess of normal occurrence rates in non-aboriginal communities. Given these facts it is unreasonable to assume that on-reserve child welfare services should simply match usual provincial service levels because by this standard all aboriginal communities have extraordinary needs in comparison to non-aboriginal needs. Further, despite the usefulness of national figures, the reported Trocme et al (n.d.) data is not fine grained enough to suggest the distribution of risk factors across the on-reserve population. It is reasonable to suppose that risk factors are, in fact, unevenly distributed across nations and localities.

A funding formula for child welfare agencies must take into account not only the demonstrably greater needs of on-reserve populations, but must also discern differences between First Nations since the determination of what constitutes an extraordinary event or problem cannot be uniform across localities. More precisely, it is not possible to determine which individual cases are extraordinary without reference to local and particular norms.

Risks and Strengths:

Returning to the need for a calculus of risks and strengths within communities, and the question of what appropriate level of funding is required. We might put this graphically in this way:

Statutory Requirements

Risks ----------		---------- funding
	Capacity	
Strengths --------		----available resources

Fig. 1

Higher levels of risk indicate an increased necessity for funding. However, funding does not, in itself, create healthy communities. Therefore, while strengths would presumably positively correlate with available resources this is not a simple equation of more resources equal more strengths. For the present, 'available resources' is meant to reflect expertise and wisdom, the presence of appropriate jurisdictions to address issues impinging upon child welfare, and, perhaps most importantly, adequate networking of available resources distributed across jurisdictional boundaries. In short, available resources are not simply additive; resources become strengths when they knowledgeable and sufficiently networked to create meaningful responses to social challenges.

Required or Preferred?

Despite much effort, there is, as yet, no generally accepted agreement as to what constitutes the minimum number or type of satisfiers of human needs upon which citizens have a universal claim

within a welfare state (Percy-Smith 1996, 143). As outlined in the National Policy Review, there are at least three conceptions of required services under which First Nations agencies must operate: statutory, contractual, and audit formats. In other words, First Nations agencies must comply with applicable statutes, with the conditions of their bipartite and tripartite contractual arrangements, and the financial, record-keeping, and case practices formally reviewed through audit systems. While these requirements vary in their details, the National Policy Review indicates they exist across provincial jurisdictions. In particular, statutes generally agree on broad definitions of child abuse. We make take these requirements as providing for the minimum number of satisfiers required to meet human needs.

The large number of on-reserve children in care indicates a discrepancy between reserve capacity and reserve needs. Clearly, in the judgment of child welfare agencies a high proportion of on-reserve children face an unacceptable level of risk of child abuse. The vast majority of funding directed at alleviating these risk conditions is predicated upon child removal. However, it is not immediately clear whether this strategy is based upon any given reserve's lack of strengths (in which case it is not individual parents who are the source of risk but the community as a whole), a lack of resources (understood as networked expertise and practice), or a lack of funding to operationalize latent strengths and resources already extant. Alternatively, even if sufficient funding for a specific function (say psychiatric care) were available it is not immediately obvious that there would be anywhere to spend it. One can easily imagine a perversity of funding arrangements in which adequate funding for psychiatric care was available but accompanied by insufficient travel funding to get the client to the psychiatrist (or the psychiatrist to the client).

There seems little point in rehearsing the reasons why on-reserve children are taken into care more often than non-aboriginal children. The question that needs to be addressed is what to do about the problem. I suggest that any policy which seeks equivalency between on-reserve services and non-aboriginal services misses the point. It is not the equivalency of services that is required but an equivalency of community capacity to create the minimum number of satisfiers to meet human needs. However, the distinction between required and preferred satisfiers is blurred by what Ian Hacking calls a "looping effect" (Hacking 1995). As an example, it was not so long ago that high school graduation was preferred but not required for the purposes of employment. As more people become aware that high school graduation is possible (and as employment standards come to recognize the possibility) more people come to define themselves as either graduates or drop-outs[3] and this self-definition is colored by the generally held belief that high school graduation is not preferred but necessary.

Consider also something as simple as indoor plumbing. Even in Canada's urban areas indoor plumbing is a relatively recent adaptation. Nevertheless, indoor plumbing has rapidly become a necessity where before it was only preferred. Now consider requirements for foster parents to possess "adequate housing". Presumably, "adequate" in this context would take as its normative referent the provision of indoor plumbing because this is a national norm even though it may not be a local norm. Yet, this national norm is a relatively recent occurrence. This means that an architectural innovation rapidly became a norm beyond the realm of architecture and into the realm of (amongst other things) child neglect. A child raised without indoor plumbing falls below the national norm and, more importantly, comes to be viewed both by him/herself and others as living in inadequate housing.

From this perspective, a major difficulty for reserve populations is the impossibility of "catching up" to ever-evolving national norms. Put another way, reserve populations can never achieve normative community capacity if the resources available to them are predicated upon an assumption of an already achieved normative state. As the colloquialism goes, "it's hard to soar with eagles when you're swimming with alligators".

To the extent that on-reserve populations have failed to realize a normative level of community capacity they are exceptional. Yet, if the entire

on-reserve population has exceptional needs it follows that no on-reserve person has exceptional needs. I suggest this is a major reason why INAC has shown a remarkable reluctance to fund exceptional costs. It may be useful here to acknowledge that this is not a problem restricted to reserve populations. The Windsor-Essex County Children's Aid Society ran into a similar problem when they classified all children in their care as "special needs" (personal communication, April 2005).

Extraordinary Review

The National Policy Review (McDonald et al 2000) noted that there is no uniformity across provincial jurisdictions with respect to reporting and audit functions. This is a problem in itself, but it is also the case that no child welfare jurisdictions are immune to child fatalities or critical incidents. While many of these fatalities and incidents follow a routine form of review (either internal or external to child welfare agencies), it is also the case that occasionally such incidents are brought into the public view (typically through press coverage) and become objects of public inquiries[4]. For present purposes, the importance of these events are a) the impossibility of predicting when and where they will happen, and b) whether the event will remain within normative review processes or will create a public inquiry requiring large amounts of agency time and effort.

First Nations child welfare agencies have not been immune to these sorts of inquiries. The "Baby Andy" case involved both a review panel and a "fact finding" project conducted by the Children's Advocate of Saskatchewan. While not as massive as some inquiries, this review demanded considerable agency time and resources.

The Children's Advocate Office completed independent fact finding by holding interviews with 23 persons from 11 agencies and reviewing documentation from all relevant files and records. This information was compiled and provided to the review panel in February 2003 for thorough analysis. (Saskatchewan 2003, 7)

An inquiry into the 1998 deaths of Constance Jacobs and Tyundanaikah Jacobs at the Tsuu T'ina Nation, Alberta does not give an account of how many people were consulted, however some twenty legal counsel representing various parties participated in the inquiry's activities (Goodson 2000).

Some jurisdictions – notably British Columbia – have experimented with mandatory reviews of child fatalities and critical incidents by independent or quasi-independent bodies[5]. These policies tend to depend for their longevity on the vagaries of press coverage and provincial government's political problems. In any case, for present purposes the main point is that inquiry involvement is largely unpredictable, outside First Nations control and, most importantly, expensive in terms of both funding and time. Social workers and administrators who participate in inquiries are taken away from their normal tasks in order to service the requirements of inquiries. Additionally, such inquiries typically occur within very public and highly charged emotional situations. Staff moral is almost always adversely affected resulting in loss of productivity.

Concluding Remarks

The foregoing section has attempted to highlight the difficulty in conceptualizing what the category 'extraordinary' contains in the context of child welfare. A principle difficulty is the high level of need demonstrated by many First Nations communities. Many events that might be described as extraordinary in the overall Canadian context are, in fact, quite ordinary in First Nations' experience. That said, it remains to be seen how uniformly such events are distributed across the universe of First Nations. In any case, the argument has been made that it is impossible to identify extraordinary events without an assessment of the overall capacity of communities using available tools.

This analysis has been necessary in order to distinguish the projected greater needs of First Nations' communities from their off reserve counterparts. If, as is indicated by available

research, First Nations communities are generally high needs then the prospect of simply matching services available off reserve will always leave First Nations resource poor. In turn, the discrepancy will generate extraordinary costs due to predictable jurisdictional (service) gaps. What is needed is a philosophy of matching services to particular needs, rather than matching services to a presumed provincial average. In any case, matching service provision to provincial equivalents must result in varied service provision across provincial boundaries where those services are subject to differing legislative, policy, and audit regimes.

Moreover, as discussed in the final section, extraordinary events such as child fatalities can rapidly lead to expenditures of time and funds for activities demanded by inquiries. These inquiries are impossible to predict because they tend to be struck in response to the passing interests of parties normally outside the child welfare universe. This is particular true of the press whose interest in any particular case is dependent upon a variety of commercial pressures (i.e. competing stories) but nevertheless can exercise considerable public pressure. This point will be further argued below, but for the moment it is important to recall that it is not child mortality per se that is extraordinary – rather it is the public reaction to specific children's deaths that is extraordinary.

Anyone familiar with public inquiries into child welfare recognizes the repetitive plea for better communication and better coordination across jurisdictions. Conceivably, most extraordinary events are, in fact, not extraordinary at all. Rather, they are events for which bureaucratic and service responses are lacking. The following section takes up this theme in greater detail. It will argue that many events characterized as extraordinary are quite common occurrences. What makes them extraordinary is the degree to which jurisdictional disputes hamper, delay, or prevent appropriate service delivery.

If we can locate persistent jurisdictional disputes in the same terrain as persistent extraordinary costs then it ought to be possible to identify service gaps. Such service gaps are distinguished from extraordinary events because they meet none of the criteria defining extraordinary. That is, they are not unanticipated, unforeseen, nor outside normal risks.

Jurisdictional Disputes

Frequency

Aggregate data indicates all but one of the study agencies experienced jurisdictional disputes. The frequency of these disputes varied from 1 to as many as 165. Over a year, resolution of each dispute took anywhere up to 200 hours of staff time with half the reporting agencies dedicating 10 to 150 hours as usual.

Frequency of jurisdictional disputes is not reflected in the amount of staff time required. For example, one agency reported only one jurisdictional dispute but this engaged four staff members for an estimated total of 150 hours. The lowest estimate of staff time per dispute is two hours. By far the largest estimate of staff time dedicated to jurisdictional disputes was 200 hours per dispute of a total of 32 disputes, necessitating a total staff commitment of 6,400 person hours. The highest estimated total number of disputes per year was 165 at an estimated 20 hours per dispute totaling 3,300 hours.

Data from the studied agencies did not specify time per occupational classification. Therefore, it is not possible to give an overall dollar cost for staff time although it is possible to calculate costs for reporting agencies in terms of Full Time Equivalents (FTEs). Based on a 35 hour week, agencies reported a low of 0 FTEs to a high of 3.5 FTEs required for resolving jurisdictional disputes.

Types of Disputes:

One agency reported only disputes between the federal and provincial governments. These disputes are reported to be over "kinship care". It is not clear what the exact nature of this dispute was, but it may be that there is no provincial equivalent to the federal Guardianship for Aid (GFA) program or possibly traditional adoption. Insofar as the GFA does not require child protection authorities to take custody of children this may be better phrased

as a dispute over preventative services rather than funding for children in care's residential or clinical requirements.

Six of nine studied agencies reported jurisdictional disputes between federal ministries/departments primarily due to disputes between the Ministry of Health and INAC over Non-Insured Health Benefits. By contrast, only one agency reported disputes internal to provincial governments (5 disputes).

Four of nine agencies report disputes between the agencies and provincial programs. Significantly, two of these agencies report from the same province (British Columbia). Further, where jurisdictional disputes between agencies and provincial governments occur, they comprise the largest proportion of disputes (although in two instances, frequencies of disputes between federal agencies/ministries and disputes between agencies and provincial governments are reported as identical.)

Three agencies report internal jurisdictional disputes i.e. between different First Nation programs, but the total number of disputes is minor in comparison to disputes between federal agencies and agency disputes with provincial governments.

Four agencies report disputes between themselves and the federal government. Again, in general these disputes are relatively minor in terms of the proportion of total jurisdictional disputes.

Overall Observations

Where jurisdictional disputes occur, the overwhelming incidence is concentrated in two areas. First, disputes between (a) federal agencies and second (b) disputes between First Nations' agencies and provincial governments.

a) For disputes between federal agencies, examples provided by reporting agencies show disputes are largely concerned with funding disputes between Health Canada's First Nations and Inuit Health Branch (FNIHB) and the Indian Affairs Department of INAC. The general impression is that First Nations agencies find these disputes particularly frustrating since while they are not party to the dispute, they are responsible for the health and care of the children in question. One can easily infer that because neither FNIHB nor INAC have direct responsibilities for children they do not experience the sense of urgency felt by First Nations agencies.

The problem of disputes between federal ministries may also be related to location. Problems of jurisdictional disputes between federal ministries are more likely to occur for agencies responsible for remote communities. One might infer, therefore, that problems of transportation and communication play a part in creating and extending jurisdictional disputes. For example, where there is a pressing need for diagnostic services in remote communities, and where this need is associated with lack of local resources, the dispute is likely to revolve around both large transportation costs and the scale of the demand. In other words, remote communities tend to have large numbers of undiagnosed disabilities (particularly FAS) which, at the very least, must create an enormous backlog of referrals.

b) Jurisdictional disputes between First Nations agencies and provincial governments are not widespread – occurring in only three of nine provinces. However, where they do occur, they consume a considerable amount agency time. Comments accompanying the survey suggest several sources of conflict. First, inadequate funding for First Nations' agencies to absorb the influx of responsibility associated with agencies receiving delegation. Second, disputes over the limits of First Nations' agencies capacity – what one agency described as provincial governments' "dumping cases". Provinces seem to expect First Nations' agencies to take responsibility for all band members irrespective of whether the members are recognized by INAC as reserve residents and therefore eligible for federal funding.

That said, a major source of jurisdictional disputation does not involve money, but practice. That is, First Nations' agencies report their provincial counterparts either do not keep them informed as to members' involvement with

provincial systems (and if they do, they assume First Nations' consent for provincial protective action) or do not employ 'least intrusive' strategies and tactics such as variations of kinship care.

Of course, while these latter types of dispute do not entail direct maintenance costs to First Nations' agencies, they do absorb a considerable amount of staff time (from a low of 10 hours per case to a high of 200 hours). Funding for staff time is presumably drawn from maintenance budgets for children in care of agencies and therefore the cost of these disputes is effectively transferred from children in the care of agencies and to provincial social work and judicial apparatuses.

Disputing Cultures?

It is remarkable that some First Nations' agencies report an enormous resource drain due to jurisdictional disputes while one reports no disputes whatsoever. Moreover, of the nine agencies surveyed, four identify only one type of dispute and three of those concern disputes between federal ministries, not disputes between the agency and some other entity. Further, of these latter agencies the number of disputes is significantly lower (to a maximum of 5 per year). By contrast, agencies reporting multiple sites of jurisdictional disputes report between 17 and 30 disputes per year except for one agency reporting a staggering 165 disputes[6].

The frequency and distribution of jurisdictional disputes has no correlation with either the number of children in care or the educational attainment of social workers. Instead, the best predictors of high rates of jurisdictional disputes are a) disputes between FNIHB and INAC and b) agencies and provincial jurisdictions where provincial policy and/or statute requires agencies to undertake tasks not funded by INAC. Related to the latter are disputes over best practices. On the one hand, agencies are not funded to perform tasks mandated by provincial legislation, while on the other hand agencies view provincial authorities as failing to encourage least intrusive strategies or to utilize traditional forms of alternate care.

In short, First Nations agencies reporting multiple jurisdictional disputes seem to be engaged with a wide range of disputes leading one to suspect either a) a general breakdown between all levels of government – including to some extent internal band government, or b) some agencies have not been able to create a non-disputing persona. This is not to suggest such agencies engage in disputes without substance, but rather certain characteristics of their particular situation either induce disputes or prevent dispute resolution[7].

It is possible that variation in reported jurisdictional disputes is not so much a measure of actual disputes but a measure of whether agencies create either a trust relationship or a bureaucratic routine with federal departments. For example, an agency reporting no jurisdictional disputes makes the following comment:

INAC and Health Canada fight, but agency sends bill to INAC and gets reimbursed. INAC then sorts it out with Health Canada. Almost anything with a medical component triggers a dispute. Agency is protected by a clause in its agreement.

Whatever the clause in the agreement is, it is clearly not a national clause because this is the only agency which considers disputes between INAC and Health Canada to be of no consequence to the agency itself. Hence, because the dispute is contained within federal departments no agency effort is directed at resolving the dispute.

The principle disputes at issue then are as follows.

1) Disputes between FNIHB and INAC which delay or withhold necessary non-insured health benefits to children.
2) Disputes between agencies and provincial authorities over the provision of services demanded by provincial legislation and/or policy but which is not reimbursed or contemplated by INAC policy.
3) Boundary disputes over which authority is responsible for particular children. Frequently these disputes are rooted in whether children or their parents are 'resident' on reserve

and the funding issues that flow from that determination. One agency reported these disputes can include the question of whether a child's parent died on or off reserve. These disputes include provincial authorities 'dumping' cases.

4) Disputes over appropriate practice. This is related to above insofar as agencies may view the range of provincial legislative or policy requirements as too limiting of culturally appropriate solutions. On the other hand, these disputes may also be based upon differing conceptions of safety thresholds and family strengths – that is to say, case management practice.

Structures for Resolving Jurisdictional Disputes:

Jurisdictional disputes may be solved through a continuum of strategies ranging from the informal to the formal. The best strategy depends upon the interests of the disputing parties, the relationship between the parties, the nature of the dispute, and whether the solution to any particular dispute ought to be general and binding on all similar disputes. The Province of Quebec identified a section of the responsible ministry (MSSSQ) whose task was negotiating intergovernmental issues. However, the Quebec based First Nation agency did not identify this division as resolving jurisdictional disputes. It seems the division is less a forum for resolving disputes than an arm of the provincial government specializing in negotiating with other governments on behalf of the Province of Quebec. While it is certainly useful to identify a specific part of government responsible for resolving disputes, this should not be confused with the actual resolution process itself[8]. Below I outline several possible processes and suggest the kinds of disputes they are best suited for.

Avoiding Disputes: Community Assessments:

The best way to resolve disputes is to try to prevent them from arising in the first place. There are several ways in which jurisdictional disputes might be avoided.

No policy initiative or shift in governmental responsibilities can anticipate all possible jurisdictional difficulties; however disputes often arise because of poor planning[9]. Above I alluded to the importance of conducting community capacity assessments. Indeed, it is striking that of the agencies surveyed, a community assessment was completed by only one agency apparently due to its block funding arrangement. By contrast, FNIHB insists that the first task of local delivery of health services is to conduct a needs assessment study and has created a handbook to guide local actors. The handbook's first paragraph makes the following point:

> Identifying home and community care priorities and needs through a community needs assessment is an important activity that needs to be conducted at the beginning of program development. Whereas word-of-mouth can be helpful for getting the idea for the program going, a needs assessment study provides a comprehensive and unbiased documentation of the needs in the whole community. (emph. in original) (Health Canada, [3])

The importance attached to community needs assessments by Health Canada is not surprising given the entrenchment of the population health paradigm within public health programs. However, it is also striking that children are almost entirely absent from FNIHB program strategies and goals. Indeed, with the exception of the Aboriginal Head Start program, and a brief flurry of training around FAS, children are entirely absent from FNIHB's literature. More precisely, the particular health needs of children are subsumed within general categories such as dental, vision; medical supplies and equipment, and so forth.

The absence of children as a category from FNIHB's literature is significant because it blinds medical practitioners to the physical and emotional consequences of child abuse and neglect. More precisely, it suggests abuse and its consequences are not FNIHB's responsibility. Since disputes between FNIHB and INAC over health funding for children in care are a major problem, it may be

that the genesis of these disputes is to be found in the lack of attention paid to child abuse and children in care by community needs assessments conducted within the population health paradigm.

The value of community assessments does not solely lie in their identification of community needs. Literature concerned with community assessments suggests that community assessments are themselves a mechanism for building community strength because they rely on the identification, mobilization and networking of key community members (Kelly et al 2003; Oetting et al 2001). Thus, community assessments not only collect objective information but they also play a part in establishing a shared mission and philosophy which is then widely distributed throughout the community. A community assessment that takes into account the social sphere as well as the medical sphere ought to result in both a clearer understanding of the health needs of parents and their children, but should also assist in developing cooperation between health care and social service providers. In turn, this ought to result in fewer jurisdictional disputes and therefore less time required for servicing disputes.

For all its emphasis on competition, business literature recognizes the central place of trust in economic relationships. This is because it would clearly be too expensive and too time consuming to litigate every dispute. Further, many business disputes arising from professional activities are too difficult to specify in terms of end product and therefore are virtually non-justiciable. The variable rates of jurisdictional disputes reported by agencies may well be a reflection of the presence or absence of trust. The comment by one agency (referred to above) that it trusts FNIHB and INAC to work out their funding arrangements – albeit with contractual support – indicates the importance of inter-agency trust. Note also this trust works both ways; presumably in this instance INAC trusts the agency not to bill for frivolous or unnecessary medical services. A major benefit of community assessments then is the opportunities they create for building trust relationships.

Managing Disputes: Committees:

Bureaucracies are ever faced with the task of imposing rational order upon the disorderly nature of lived experience. Bureaucratic rationalism requires the bounding of human experience within specified categories of action and under the domain of specified areas of expertise. It is perhaps the great irony of bureaucracies that in order for them to function at all they must divide experience into manageable parts. As Nikolas Rose (1999) has remarked, this results in rational bureaucracies resembling Tinguely's fantastic machines filled with independent and often borrowed parts that while seemingly randomly connected nevertheless get things done.

Bureaucratic classifications of experience and expertise tend to create departmental isolates. For one department a client is a set of teeth, for another a problem to be transported, and for a third a risk of child abuse. As each department attempts to sustain its own isolated rationality it may find itself at cross-purposes with other departments where the overall result is either nullification of action or the misuse of extant programs in order to address a service vacuum created by another department's policies.[10]

The usual response of bureaucracies to identifying, preventing, or resolving bureaucratic jurisdictional disputes is the committee. In theory, a committee is capable of reassembling the bureaucratic whole through representatives of departments and expert domains. A standing committee recognizes that some jurisdictional disputes are likely never entirely resolved at least in part because every bureaucratic system must cope with anomalies and exceptions on a case-by-case basis.

Committees are successful when they are a) fully attended by their members and b) based upon high trust between their members. Both of these factors have costs associated with them. Full attendance requires adequate funding for time and travel costs. Where time commitments are large this will have a 'knock-on' effect in terms of back-fill. Travel costs require a recognition that funding is directed at abstract goals – that is to

say, it is unlikely that 'trust' can be conceived as a measurable good and therefore would be opaque to value-for-money audits. Further, these costs will be higher for agencies servicing remote communities since travel will be both more extensive and more difficult. However, the reader will recall that frequency of disputes seems to be positively correlated with degree of isolation. If we can accept that trust relationships are more likely to occur in face-to-face relation than through communication technologies located in isolated areas, then a standing committee structure is likely to enhance trust relations and therefore reduce jurisdictional disputes. [11]

As we have seen, the bulk of jurisdictional disputes concern either disputes between INAC and FNIHB (in which agencies are caught in the middle) or disputes between provincial governments and agencies often due to lack of INAC funding for provincial legislative and policy requirements and exacerbated by a lack of understanding of these limitations on the part of provincial officials. Hence, a standing committee structured to require attendance by these three bureaucratic spheres ought to lessen at least some jurisdictional disputes. I have in mind an hierarchical structure composed of local, regional, provincial, and possibly national committees in which disputes that cannot be resolved at one level may be raised to a higher table.[12]

It is possible to build in an incentive to standing committee's effectiveness by attaching a budget line. That is, a separate discretionary budget for family and children's services accessible solely through the committee and requiring some form of quorum or consensus. I will address this further under the heading of 'Extraordinary Costs' since as I have argued above many extraordinary costs are not in and of themselves extraordinary but, rather, costs outside established jurisdictions and budget lines. That is to say, they are often boundary cases because they partially fit many budget lines but wholly fit within none.

Resolving Disputes: Alternative Dispute Mechanisms

In the movie "Cool Hand Luke" the prison warden explains his brutalization of a prisoner with the phrase: "What we have here is a failure to communicate." Alternate Dispute Resolution mechanisms (ADR) are predicated upon the belief that most disputes are rooted in failures to communicate resulting in a perception by at least one of the disputing parties that they have not been heard – if not brutalized. ADR can take several different forms with arbitration, mediation, and their several sub-forms being predominate. There are two main advantages of ADR over litigation. First, ADR tends to be informal and therefore has more discretion as to what factors (particularly emotional factors) are important and tends to be less expensive than litigation. Second, ADR seeks to create win-win situations through creative solutions where litigation creates win-lose solutions defined within legal parameters and procedures.

However, there are some important negative characteristics of ADR that ought to be kept in mind. First, ADR works best when it is voluntary. Parties who engage in coerced ADR have no stake in the process and therefore the whole philosophy of ADR is undermined. Second, informal procedures provide little protection where the parties enter ADR from unequal power positions. The formality of judicial procedures does provide a hedge against bullying or extortive behavior. As well, ADR can lead to solutions that are less advantageous than legal precedent expects. Third, ADR is often time limited, meaning there can be unreasonable time pressure on parties to reach an agreement irrespective of whether or not it is fair. Fourth, ADR tends to lead to "split-the-difference" solutions on the theory that half a loaf is better than no loaf. However, for the sorts of disputes under consideration here, half a prosthetic device or half a counseling regime (for example) is no solution at all.

Finally, mediators and arbitrators are typically selected by consent of both parties. Since some parties (i.e. insurance companies) frequently find themselves in ADR they tend to hire many more mediators and arbitrators than the other disputant.

In turn, mediators and arbitrators operate within an economy of ADR and it is only natural for them to either consciously or unconsciously attempt to please their primary customers.

Nevertheless, ADR can be a useful mechanism for resolving persistent jurisdictional disputes because of its emphasis on win-win solutions. And, the cost savings over litigation or the persistent drain of staff time due to unresolved disputes may make ADR an attractive alternative to both disputing parties. Nevertheless, while ADR may be cheaper it is not free. Nor does it necessarily save on legal fees insofar as many parties engaging in ADR are wise to engage the services of a solicitor to ensure both the process and settlement are fair. The extent to which agencies can expect to engage in ADR is dependent upon their current dispute frequency and their anticipation of further disputes arising due to government policy changes[13].

From a budgetary perspective, it is unlikely that ADR could be planned for on a global basis since, as we have seen, the frequency of jurisdictional disputes are highly variable. It seems more reasonable that agencies with a history of disputes would need to create a separate budget line (or claim against INAC) based upon their particular situation. From the perspective given here, what is important is that such a budget line be created for those agencies able to demonstrate the need.

Some may argue that to create such a budget line would be to encourage disputes rather than the smooth operation of jurisdictional cooperation. While I certainly allow for the possibility, I find this concern unfounded because it fails to take account of a secondary byproduct of ADR. Pavlich (1996) points out that a major goal of ADR is to teach participants how to resolve their own conflicts – what he calls the creation of non-disputing selves. The reader will recall that I have speculated above that the extraordinarily high number of disputes reported by a minority of agencies seems to suggest a culture of dispute. If Pavlich is right, then a major reason for this culture may not be the objective conditions under dispute but the lack of skills and trust available to the disputing parties. In theory, ADR provides a forum for disputing organizations to acquire a non-disputing persona by gaining skills and enhancing future trust relations based upon the increased likelihood of win-win solutions. At the very least, a skilled mediator ought to be able to increase the level of trust due to their practice goal of having each party hear and understand the position of the other party.

Formal Advocates and (Child) Rights Approaches

The United Nations Convention on the Rights of the Child, ratified by Canada in 1991, is generally accepted as a watershed moment in defining the relationship between the state and children. In its wake, the Convention has created a number of reporting requirements and advocacy apparatuses designed to monitor and report on states' compliance with the Convention's requirements. According to Canada's Second Report on the Convention of the Rights of the Child (Canadian Heritage 2003) there were five Canadian provinces with some form of advocate, commission, or ombudsman dedicated to insuring governments act in accordance with the Convention[14]. Other provinces identified a specific minister designated to act on behalf of children's rights.

The federal government does not have a single ombudsman although a number of ministries and departments have their own internal ombudsman. (Interestingly, the staff of INAC has recourse to an internal ombudsman.) Since Canada's constitution assigns governmental responsibility for social services and children to the provinces, the federal government does not ordinarily have any requirement for a child advocate to monitor its own policies and procedures. However, the situation of First Nations children is different since the federal government retains a fiduciary duty toward them. This anomaly means that First Nations children on reserve are the only children in Canada for whom no authority is designated as responsible for them, and they are among that proportion of children who cannot call upon an independent body dedicated to speaking on their behalf. Given that a significant number of jurisdictional disputes concern disputes within the

federal government the absence of an independent voice effectively means there is no way to leverage policy and procedural change for the benefit of aboriginal children.

By contrast, the recent example of children in care of Ontario Children's Aid Societies due to the government's decision not to fund Special Care Agreements and its subsequent reversal of that policy was largely due to the activities and report of the Ombudsman of Ontario (2005). Similarly, in British Columbia, pressure to change child protection legislation in the early 1990s came in no small part from the release of two provincial Ombudsman's reports (1990; 1991)[15]. Hence, while Ombudsman and other Advocates have no authority to make governments change their policies, the ability of these officers to embarrass government through their public reports can provide an important and effective incentive for change.

The importance of independent voices speaking on behalf of children has been noted by UNICEF:

> …without independent institutions focusing entirely on the rights of children, these rights will rarely receive the priority they deserve. While children are among the heaviest users of public services, they remain the people who are least able to influence the actions of governments. The main task of such institutions is to close the gap between the rights rhetoric and the realities of children's lives, ensuring that rights are translated into law, *policy and practice*. *(emph. added.) (UNICEF 2001, 1)*

Thus, while the Convention explicitly requires states to "strive to ensure that no child is deprived of his or her right of access to such health care services" (Article 24) the reported jurisdictional disputes between INAC and FNIHB seem to amount to such a deprivation. Further, Article 12 requires states to take into account the views of children but in the absence of a designated voice representing the interests of First Nations children this right is more rhetorical than substantive.

The federal government has introduced Bill C-257 titled "An Act to establish a First Nations

Ombudsman and a First Nations Auditor to assist with administrative and financial problems"[16]. However, while Section 2 (a) (iii) contemplates this Ombudsman investigating problems arising "between one or more First Nations communities and the Government of Canada", it is clear the Bill's principle concern is with financial irregularities within First Nations' governments. The Ombudsman's task will not be, as law professor Larry Chartrand has noted, to "monitor non-aboriginal governments' accountability to aboriginal peoples". Further, the First Nations Ombudsman does not have responsibility for investigating difficulties involving individuals – its concern is between First Nations governments and INAC – unless that difficulty is between a band member and his or her First Nation government.

Disputes within the federal bureaucracy are unquestionably the responsibility of the federal government. However, as we have noted, jurisdictional disputes are as likely to occur with provincial authorities. Would a federally constituted ombudsman or child advocate have the authority to intervene in these kinds of disputes? In principle, there seems to be no objection. As has been frequently noted, just because the federal government has not legislated on behalf of First Nations children on reserve does not mean it cannot. This is a choice of the federal government. A federally constituted child advocate would not be inherently restricted to federal government programs since the office's task would be to represent First Nations children – no matter where their concerns lie.

Moreover, as noted above, ombudsmen and child advocates normally do not have authority to make government – in this case either federal or provincial – change law or policy. Rather, their role

is to investigate, report, and, if need be, embarrass governments into action. Further, provincial ombudsmen and child advocates share certain general characteristics. There is no reason to suppose a federally appointed advocate could not participate in a cooperative network of advocates composed of both provincial and federal officers charged with resolving jurisdictional disputes of mutual interest.

Linking Mediation and Advocacy:

In the previous section I argued for a separate budget line that agencies could call on for the purpose of engaging a mediator for jurisdictional disputes. If a federal child advocate were appointed it is possible this advocate could either a) fulfill this role directly, or b) hold the mediation budget line, thus ensuring independence from INAC and provincial governments in the distribution of funding.

Such an arrangement would, of course, be outside the current activities funded by Directive 20-1. However, as I hope to have demonstrated, the present arrangement does little or nothing with respect to providing resources for the resolution of jurisdictional disputes. Instead, if the agency sample is at all representative of general conditions facing agencies, it is clear a substantial amount of funding supposed to used for the maintenance of First Nations children is in fact being directed at resolving jurisdictional disputes.

Furthermore, the repetition within reported disputes (as noted above) indicates one-off resolution of disputes is inefficient if the real issue is a policy gap. That is, if the jurisdictional dispute is general – and the disputes between INAC and FNIHB certainly appear so – then it is clearly a policy problem. What First Nations need, then, is a way into the policy-making domain; a way to influence internal government organization and policy. An ombudsman or child advocate ought to be able to perform precisely this function.

In Conclusion:

The most effective way of dealing with jurisdictional disputes is to prevent them. For this reason, I strongly believe that a change to current federal funding of First Nations child welfare agencies must include a provision for community assessment. The precedent has already been set by Health Canada due to their reliance on the population health paradigm. There is every reason to suppose a similar approach toward the incidence of child abuse and neglect is equally necessary. As noted, a significant byproduct of community assessments is the creation of networks of cooperation and trust. In turn, this ought to lessen the incidence of jurisdictional disputes.

Cooperation between staff and government departments is not a given. If community assessments begin the process of networking and cooperation then it is standing committees that sustain them. A committee structure presents significant difficulties for agencies in remote areas. Ideally, then, travel budgets of remote and rural agencies must recognize the importance of face-to-face contact amongst agents because it is only in this way the trust necessary for cooperative action can be initiated and sustained. Furthermore, a committee structure with access to its own budget line may provide a mechanism for dealing with disbursement of funds for extraordinary costs. I will pursue this recommendation in the following section.

Despite the best efforts of individuals, jurisdictional disputes are unlikely to be eliminated. They are simply a fact of life in complex bureaucracies. At present, there is no formal mechanism for outside mediation of disputes. Thus, it appears that in some instances disputes multiply due to an increasing mistrust and a belief by one or more parties that their position is neither heard nor understood. A funding mechanism is required to provide mediation services where they are appropriate. Mediation is not without its problems; however it can be a very useful resource under the right circumstances. Certainly, mediation services would be cheaper, less time-consuming, and more efficient than the current situation in which staff time is drained

out of direct service and into dispute engagement. Moreover, one supposes that persistent jurisdictional disputes might eventually lead to expensive and drawn out litigation.

Finally, the lack of an independent voice representing First Nations children's voices suggests the honoring of the Convention on the Rights of the Child is more rhetorical than actual; if INAC staff have the opportunity to call upon an ombudsman, why not children? Ideally, a First Nations child advocate would be entirely independent of government structures through its institution as an Officer of Parliament. In any case, any sort of quasi-independent voice would be better than the current situation.

Again, the logic of an independent advocate is based upon the observation that, at present, many resources supposedly destined for the maintenance of First Nations children are currently being directed towards the resolution of jurisdictional disputes which are all too predictable and repetitive. If, for example, an advocate was able to convince FNIBH and INAC to mesh their policies almost half of all serious jurisdictional disputes would be resolved. That Health Canada and INAC have been able to do this in one province suggests it can be done in all provinces. Of course, for First Nations the frustrating part of this problem is that without an advocate with access to federal government decision-making processes, it cannot be known why the problem persists. An advocate with an investigatory mandate could fulfill this function.

Extraordinary Costs

Six agencies reported incidences of extraordinary costs. Of the agencies reporting no incidences, two were from the same province (Alberta), while the third had a block funding agreement. In the latter case, it may be that the agency did not consider any expense 'extraordinary' insofar as block funding implies funding for everything – including extraordinary costs. Thus, this agency may experience extraordinary costs but does not perceive them as extraordinary because of the nature of their funding arrangement.

Agencies reporting extraordinary costs tend to mirror the concerns expressed with jurisdictional disputes. That is to say, extraordinary costs are associated with isolated and high needs communities due in the main to the travel costs incurred for providing service; costs associated with a lack of specialized care/resources such as psychiatric care for suicide, homicide, substance abuse, and so forth; and costs incurred due to delays caused by jurisdictional disputes.

Agencies servicing remote communities note the high cost of staff travel as well as travel for clients for diagnostic or remedial services. Two agencies noted the high costs of travel associated with calling a staff meeting (up to $50,000), but also the inherent danger of winter travel in sparsely populated districts. This danger is to be understood as twofold; a) danger associated with seasonal weather conditions and b) danger associated with child protection workers (and foster parents) co-resident with dangerous and potentially life-threatening clients in isolated and non-policed communities.

Children with complex health issues are a major feature of agencies' reports because these problems are widespread yet random in occurrence. That said, agencies servicing isolated communities report it is impossible to know the incidence of complex medical needs because travel costs preclude diagnostic services[17]. Related to the problem of complex medical needs are those children with complex developmental disabilities. The average cost of developmental disabilities of the four agencies reporting is $115,000. However, developmental disabilities often require extensive capital investment in accessibility technology but these costs do not appear to be part of agencies' calculations.

Like complex medical and developmental issues, complex mental health needs present extraordinary management challenges. Assuming they have been diagnosed, and there is little reason to believe the incidence of mental health difficulties amongst First Nations children has been adequately surveyed through appropriate diagnostic tools, then the average cost per agency of servicing such children is $500,000. It is unclear from the

data whether this includes special residential arrangements such as Special Needs homes. If it does not, an agency's reporting special needs foster care requires $12,500 per day is in addition to this initial $500,000. On the other hand, both agencies and provincial governments report specialized (and out-of-province) institutional placement as a major budgetary problem. Presumably this is because such institutions are inherently expensive but also because of the difficulty of predicting both the number of children requiring such care and the length of time the children would require intensive institutionalization.

One agency reported as an extraordinary cost the expenses involved with terminating an agency employee. A second agency reported as an extraordinary cost provision of post-majority care provided for by provincial statute.

The employment example is the only example of extraordinary costs if 'extraordinary' is understood to mean random, unforeseen, and unique. The vast majority of costs identified are not extraordinary by local standards. In other words, one agency reports the costs of helicopter transportation; a cost unique amongst surveyed agencies. However, there is nothing extraordinary about this form of transportation in the local area. Hence, what makes this cost extraordinary in the mind of the agency is a lack of adequate transportation funds covered by Directive 20-1[18].

In addition to the problem of medically fragile children and out-of-province institutional care, the Nova Scotia case study mentions "legal and settlement costs" in which "[settlements] can cost hundreds of thousands, while legal costs can be around millions". It is unclear from the response what sorts of settlements or legal procedures are referenced however it seems likely to include historical abuse settlements, class action lawsuits pertaining to institutional care, or serious abuse within other forms of care. This would be consistent with other jurisdictions; For example, British Columbia has been to the Supreme Court of Canada to appeal liability judgments in all these categories. According to the Nova Scotia case study there is no settled formula for dealing with such cases. Instead the government:

> Tend[s] to absorb it centrally after a review of all other alternatives and justification of the expense. Sometimes an agency can handle the cost, especially if their normal case load has dropped. The central office doesn't have a contingency budget for this either – the request needs to go to the Deputy Minister and sometimes to Cabinet. (N.S. case study)

In this description one detects a hierarchy of claims. First, local agencies are expected to cover costs through internal budgetary adjustments. Where this is not possible, the problem rises to provincial ministry which presumably pays for settlements though cost savings in other areas. If the cost is not only extraordinary in terms of type, but also in the amount of monies required then a Deputy Ministerial decision is required, which would presumably involve informing the responsible Minister and possibly making a special request to Treasury Board. Finally, where the cost is very large (millions) then Cabinet becomes involved as the cost may well involve reallocation of government budgetary resources involving other ministries.[19]

It should also be noted that the case study implies extraordinary expenses only involve one-time settlements and litigation. This would be consistent with the general legal practice of calculating "future care costs" as a lump sum transferred to the victim. However, it is possible that costs such as future counseling could be rendered "in kind" rather than as a lump sum settlement. In isolated communities where counseling services are sparse such an arrangement may be the only practical alternative. In any case, this may be a situation where an extraordinary cost is not as simple as a one-time payment consequent to a judicial decision. [20]

Since First Nations agencies are relatively new, legal and settlement costs associated with historical abuse may appear relatively remote. However, it should be kept in mind that, to my knowledge, no child welfare system has eliminated moral hazards from their activities. Unfortunate as it may be, no fostering system can prevent the problem of foster parents abusing children in their care. Moreover, given the progressive expansion

of behaviors considered abusive no child welfare system can be sure that its current practices will always be approved at a later date – although the Supreme Court of Canada has indicated the standard for such determinations depends on the usual practices and state of knowledge at the time of the any infractions (K.L.B.). On the other hand, the U.K. experience of the Cleveland Affair indicates that where child welfare personnel utilize novel technologies to determine the occurrence of abuse considerable legal and political effort can be engaged to both attack and defend child protection decisions.

Furthermore, children-in-care are almost by definition a challenging population. For example, in June of 2005 a child pled guilty to murdering a group home worker at his residential resource in Alberta. According to news reports the worker's parents are planning to sue the Alberta government for $75,000 (Harding 2005, A8). Rare as it may be, children-in-care do commit crimes – sometimes violent crimes – both against those that care for them and members of the public. Under such circumstances, agencies and governments may be liable for the crimes of the children. Many of these liabilities are settled out of court and therefore it is difficult to predict potential settlement costs. However, as an example, in 1987 the British Columbia government negotiated a $40,000 out of court settlement to a woman sexually assaulted by a child in a government psychiatric facility for adolescents (Vancouver Sun 1987, G.8).

Of particular concern for agencies serving isolated communities is the gap between the agencies legal responsibility to protect children and the actual resources available to do the job. One agency describes child protection workers in isolated communities taking children into their own homes but without any local police protection. In a worst case scenario, if the person posing a danger to the child were to enter the worker's home and assault its inhabitants one can imagine a resulting plethora of lawsuits. First, the child(ren) may sue the agency for failing to protect them. Second, employees may sue the agency for failing to ensure their safety 'in the workplace'. Third, others present in the employees' home – whether family, friends, or acquaintances – may sue the agency for any harms they or their family members' experience as a consequence of the agency's enterprise. Of course, not taking the child into custody would also present its own potential liabilities.

Calculating extraordinary costs is, then, not a simple or straightforward matter. For agencies servicing isolated communities or challenging clients, lack of sufficient funding for travel or adequate residential resources may transform ordinary travel costs into extraordinary legal costs. That is to say, the inability to monitor resources for potential moral hazards, travel and diagnostic barriers preventing agencies from fulfilling their statutory mandates, the dangers associated with potentially volatile clients, and reliance on ad hoc travel technologies may save money in the short run but extraordinary expenses in the form of agency liability seem inevitable.

Forms of Extraordinary Costs:

In general, the most significant costs reported by agencies can be divided into three types; a) those that are extraordinary due to jurisdictional disputes or obviously insufficient funding; b) costs associated with the unexpected and random distribution of moral hazards found in any child welfare system; and c) costs experienced by other jurisdictions but not mentioned in the agency survey.

Type (a):

1) Agencies servicing isolated communities face extraordinary staff travel costs, communities with widespread and largely undiagnosed problems associated with community-wide dysfunctions, and an inability to transport clients to needed services. In addition, child and staff safety is compromised due to a lack of adequate police protection and safe forms of transportation. These costs are only extraordinary insofar as they are costs not ordinarily faced by most child welfare agencies. They are not however extraordinary for these particular agencies. Rather, they are simply costs associated with providing child welfare to

isolated and often dysfunctional communities. These problems are not amenable to 'one off' solutions but instead demonstrate an ongoing need for adequate funding if child welfare responsibility is to be practiced in isolated communities. Reported under-funding is difficult to judge since agencies responsible for isolated communities are, in a sense, "bottomless pits" of problems and therefore funding requirements are potentially without end. I suggest that establishing the necessary budgetary commitment can only be calculated in the context of an adequate community capacity assessment. As it stands, funding estimates are at best guesses and at worst wildly divergent from actual needs.

2) Children with complex medical needs create extraordinary costs. It should be kept in mind that this issue is also significant for jurisdictional disputes. These kinds of extraordinary costs may be considerably alleviated if funding and responsibility disputes between FNIHB and INAC are resolved. Put another way, funding for complex medical needs is not necessarily an agency problem; it becomes an agency problem when federal departments dispute responsibility amongst themselves. That said, there remain additional travel costs agencies can expect to absorb. In-person case management and consultation, costs associated with accompanying children to medical services, and family visitation for children unable to live in their home communities are not, strictly speaking, medical costs. Such visitation is, of course, necessary for best practice reasons. Therefore, staff and family travel costs are rightly an agency responsibility. However, they are not, in and of themselves, extraordinary costs insofar as the population of children with complex medical needs is calculable. For that matter, if FNIHB's recommended community needs surveys have been completed then the demand ought to be largely known.

3) From both agency data, and the FNIHB policies available to me, it is difficult to judge the boundary between FNIHB responsibility and agency responsibility for children with complex developmental disabilities. Judging by the information available it seems likely FNIHB would limit its responsibility to direct medical care and provision of prosthetic devices. However, the general movement toward de-institutionalizing the physically and mentally disabled has revealed considerable cost considerations with respect to the provision and/or monitoring of daily care as well as the need to retrofit public buildings, roadways, vehicles, and housing. In the absence of other sources of funding, it seems likely many of these costs will fall to agencies. Again, it is useful to remember these issues are not unique to First Nations except that many First Nations have considerably further to catch up to standards still developing within the non-aboriginal world. Research is clearly required to establish the incidence of children with complex developmental delays resident on reserve. Furthermore, as de-institutionalization becomes entrenched, such a determination will need to take into account both the possibility of disabled persons returning to their home reserves and the difficulty of establishing a baseline when past practice was to remove disabled children from their homes and place them in institutions.

4) As with (3) above, the jurisdictional boundaries and incidence of complex mental health needs are difficult to determine. As mentioned above, addressing mental health issues on reserve is something of a novel initiative since historically it seems to have been ignored. The knowledge vacuum is exacerbated by the lack of diagnostic services available to remote communities. It is worth noting however that where complex mental health needs are mentioned by the survey they are far and away the most expensive needs to service – likely due to the extraordinary supervision and residential requirements associated with mental health needs.

Type (b)

1) The only purely random extraordinary cost reported by agencies concerned costs involved with terminating an employee. The cost was estimated at $25,000.

2) As alluded to in Type (a) (1), widespread community dysfunction is reported by agencies concerned with isolated communities. However, one agency drew attention to "communities in crisis". Examples of such crises include sudden jumps in suicide rates (referred to in suicide literature as "clustering") and periodic outbreaks of substance or solvent abuse. Responding to such crises places an enormous drain on both ordinary travel budgets (already overstretched) and staff time with the usual problems of back-fill this creates. Additionally, such crises and the sudden demands they generate, tend to make great demands on whatever counseling services are available. [21]

Type (c)

1) No agencies reported extraordinary legal costs for liability exposure. However, while this may be a function of First Nations agencies effectiveness, I would suggest it is more likely due to agencies' relative novelty. It is also worth noting that lawsuits directed at government child welfare policies and practices are still in their relative infancy, which suggests jurisprudence in the area is still unsettled. For example, The Critchley judgment of the British Columbia Court of Appeal that established important principles of government liability was rendered in 1998. The next year, the Supreme Court of Canada rendered its decision in Bazely where it was found the Children's Foundation was vicariously liable for the torts of a group home parent. Significantly, the Children's Foundation had no insurance coverage for this type of liability. Had the British Columbia government not underwritten the damages accrued, the Foundation (a non-profit organization) would likely have gone bankrupt.

   Given the potential for large damage quanta, it is unlikely First Nations agencies could afford insurance for global liability – especially since according to H.L.A. Hart (1994, 132) liability can only be determined after-the-fact. Exposure to liability may not constitute the most common form of extraordinary expense experienced by agencies, but in light of the comments of the Nova Scotia official it may turn out to be the most expensive. Clearly, protection from liability exposure, and a means of ensuring damages do not bankrupt First Nations agencies are crucial to the First Nations child welfare project. First Nations agencies do not share the economies of scale enjoyed by government nor do they have the kind of deep pockets self-insurance requires.

2) As with the example from Alberta given above, agency liability is not limited to the actions of its staff or contracted representatives toward clientele. Liability exposure must also take into account agency exposure to liability for the conduct of its clientele toward its staff. Given the safety and policing concerns expressed by agencies responsible for isolated communities this form of liability exposure deserves further attention.

3) Type (b) 2 concerns the effects of periodic crises on service delivery to communities – these are understood as located within the community as a whole rather than crises located within individual behavior. However, communities are also subject, from time to time, to crises consequent to natural disasters. The precise boundary between natural and human causation can be fuzzy with respect to natural disasters (i.e. is a dam bursting, or an oil tanker sinking a natural disaster?). Moreover, disasters can be sudden (i.e. an earthquake) or cumulative over extended periods of time. The Minimata effect at Grassy Narrows and Whitedog reserves is an example of a cumulative health and social disaster.

There are three aspects to disasters that need to be kept in mind. First, disasters need a coordinating body. Second, disasters require immediate response. Third, disaster response is usually followed by a period of reconstruction. In off-reserve Canada, governments have established a number of emergency plans and protocols to clarify what body is responsible for declaring an event a disaster and to ensure coordination and quick response. Whether these plans and protocols are binding on reserve is a legal question, however it seems reasonable to assume that First Nations might choose to develop their own emergency

response either because the community is of a sufficient size to warrant independent plans, the community is sufficiently isolated that it is effectively self-responsible, or the community makes a political decision to take care of its own.

In the case of a disaster in the form of an epidemic, it is now well appreciated from the African AIDS experience that a large number of orphans can be created by age opportunistic diseases. Were such an epidemic to break out on reserve it would be up to agencies to try to cope with the social consequences of a lethal epidemic. Moreover, Canada's experience with SARS suggests that it is not just the objective dangers of a given disease, but subjective risk perceptions that define whether or not an event is classified as a disaster.[22]

The implication of natural disasters is the need for a disaster planning body. The federal government provides for a source of funding for such planning through its Public Safety and Emergency Preparedness program. Of First Nations, the programs website states:

> Under the legislation of Alberta, Prince Edward Island and the Northwest Territories, the band council of an Indian band or a settlement council, as the case may be, is given the same power and responsibility as a local authority with regards to preventing, responding to, and recovering from an emergency. In British Columbia, the Minister of Indian Affairs is the local authority for a reserve. Alberta allows reserves to be considered municipalities under the Disaster Services Act. Manitoba supports First Nations initiatives such as an Assembly of Manitoba Chiefs for emergency preparedness activities and the Manitoba Association of Native Fire Fighters.

The Department of Indian and Northern Affairs is required, under the federal Emergency Preparedness Act, to co-ordinate emergency response measures on all reserves. The INAC works to ensure "contingency plans are in place in First Nation communities on reserve lands and in communities on federal lands north of 60 degrees." It attempts to provide "prompt, coordinated responses…that are community based and supported by the local population." (INAC, Administration Manual, Foreward, 1994.)

It is beyond the purview of the present work to examine this arrangement in detail however it is clear that responsibilities vary from province to province and the likelihood of INAC creating a comprehensive, nation-wide, emergency preparedness plan for all First Nations' reserves is highly unlikely. It seems reasonable then to suppose First Nations governments, child welfare agencies, and health organizations have an interest in establishing their own disaster responses and that INAC should be the conduit for funding that activity. [23]

Finally, the Public Safety and Emergency Preparedness program has a role to play in post-disaster reconstruction. First Nations child welfare agencies need to feel confident the interests of their clients are reflected within any reconstruction effort. This may be accomplished through on-reserve consortiums of interests (government, child welfare, health, education, etc.) and, in the case of children, underwritten by the either the committee system and/or the children's ombudsman/advocate as proposed in the jurisdictional disputes section of this paper.

4) No agency specifically reported involvement with public inquiries as an extraordinary cost. However, as discussed in the introductory section of this paper, public inquiries into child welfare are the quintessential extraordinary cost. This is so because a) such inquiries are impossible to predict when so often they are a consequence of press interest and transient political pressures; and b) because the kinds of events leading to public inquiries are usually not, in themselves, extraordinary. Rather, attention is attracted to such events due to their unusual and unforeseen consequences. This is particularly true for child homicides where the belief that a child died as a consequence of child abuse, and that the consequence of that child abuse was obvious, is widespread but erroneous.[24]

I will not belabor the obvious problems inquiries

present with respect to drains on staff time, the need for back-fill of positions, impact on staff morale, requirements for travel and the problem of attending inquiries of uncertain duration. I will simply reiterate that I have discovered no budget line specifically set aside as a contingency fund for such activities. Rather, governments tend to absorb these costs through economies of scale, specific requests to cabinet and Treasury Board, or through an entirely separate inquiry budget. Clearly, Directive 20-1 did not anticipate the possibility of extensive resource commitment to such inquiries despite the fact First Nations have no control over their establishment or the degree of participation required of First Nations.

Budget Strategies:

Funding provision under Directive 20-1 is primarily divided into two forms; operational costs and maintenance costs for children in care. Operational costs are adjusted according to on reserve child populations and degree of remoteness. So far as I've been able to ascertain, if there was an initial logic to the division of funding and the amount of funding, that logic has been lost over the intervening years. As a general observation, it seems clear that agencies' subsequent experience has demonstrated Directive 20-1 severely underestimated both the types of agency activities and the funding required for supporting those activities. Hence, a theme of agencies surveyed is the universal practice of 'robbing Peter to pay Paul'. In particular, a general problem is the diversion of maintenance funding away from children in care and towards subsidizing large travel or administrative costs.

This paper has argued that a good deal of what is considered under the general rubric of jurisdictional disputes and extraordinary costs is, in fact, neither. Rather, for approximately half the cases, jurisdictional disputes and extraordinary costs are actually problems associated with under-funding. More precisely, lack of funding for the particular circumstances of particular agencies. The theme to which this paper has consistently returned – the need for the kind of community assessment already entrenched in FNIHB policy – attempts to suggest that funding quantum needs to be tailored to each agency's particular circumstances.

Operational funding:

Operational costs are clearly inadequate to cover travel expenses conceived as 'extraordinary' from a national perspective but 'ordinary' from the perspective of agencies faced with delivering statutory services to remote locations. As well, a national funding formula cannot take account of the differing operational costs associated with provincial legislative and policy demands. These demands range from the purely bureaucratic (i.e. audit and reporting policies) resulting from administrative requirements built into contracting arrangements required by provincial governments, to legal responsibilities pursuant to the delegation process. For example, responsibility for mediation, repatriation and post-majority services varies with each province's legislative regime. Hence, one operational formula cannot be sensitive to each of these varied demands.

With respect to contracting, it is significant that one agency reporting no jurisdictional disputes mentions disputes between FNIHB and INAC over medical funding; but not as a problem for the agency. This is due to the contractual relationship the agency has with the federal government. By inference, if this contractual relationship were replicated across the country a significant number of jurisdictional disputes would be eliminated. Of course, it would be simpler if the two branches of the federal government could resolve this problem in Ottawa, but a clause within agency contracts could protect agencies from the periodic reallocation of funding responsibilities between federal departments.

Travel costs ought not to be limited simply to the costs associated with adequate transportation technologies. As noted above, transportation problems have significant knock-on effects for both the safety of children and staff. Thus, savings realized from inadequate travel budgets may well reappear as extraordinary costs in the form of legal liability.

Assuming the distinction presently made by Directive 20-1 between operational and maintenance funding remains in place, the most crucial improvement needed for operational funding is the inclusion of a requirement and funding support for community capacity assessments. As discussed above, this is a requirement for health funding and it seems curious child welfare has not hitherto been subject to a similar requirement. Much of the difficulties coded as jurisdictional disputes and extraordinary funding could be alleviated with this relatively inexpensive investment.

In addition, increased funding for travel is required, particularly where this is directed at agencies responsible for remote communities. Similarly, the formula for operational funding must reflect the actual demands placed on agencies by various provincial legislative requirements. Hence, the formula probably needs to be tweaked by provincial jurisdiction. Further, given that agencies have no control over shifts in provincial legislative and policy regimes, the operational funding formula will require regularly scheduled reviews (say, every 3 to 5 years) of changes in provincial requirements.

Maintenance funding:

In one form or another, all surveyed agencies report a significant proportion of children in care, or children likely to enter care, as possessing significant special needs. The actual demand is unknown largely due to the difficulty of accessing appropriate diagnostic resources. Again, this problem grows more acute the more remote the community served. While an adequate community assessment would help to reveal the extent of the problem for any particular community, the problem of diagnostic, treatment, and supervision costs remains to be calculated. As noted above, by far the most expensive type of client are those with complex mental health concerns, however costs associated with complex developmental delay and complex acute medical needs are equally urgent.

By and large, provincial jurisdictions solve the problem of varied special needs by creating graduated care regimes. That is to say, the cost of maintaining a child in care varies according to the degree of care the child requires. This approach would seem to be self-evident; however the approach seems to have no application within Directive 20-1. Of course, recognition of the principle of special needs does not necessarily imply agreement upon where the boundary between 'special' and 'regular' lies, nor how much funding should be attached to 'special care'. Some argue all children in care have special needs, but this seems unhelpful given the broad range of potential disabilities, their relative severity, and variable access to support services.

As well, while special needs children require attentive and professional care, their needs are also understood to include specialized support (i.e. psychiatry, counseling, etc. with their associated travel requirements) and capital costs associated with renovating modest housing to accommodate children with special needs (i.e. wheelchair ramps, accessible vehicles, additional staff associated with twenty-four hour care of the medically fragile, etc.)

From the perspective of the federal government, the difficulty with recognizing children's special needs is that, at present, it is almost impossible to predict the global costs associated with a graduated maintenance regime. Largely, this is because there is, as yet, no reliable mechanism to calculate the actual incidence of children with special needs on reserve. The best source of such information may be FNIHB but it seems likely to be incomplete. Nevertheless, a survey of community needs assessments undertaken under the auspices of FNIHB policy may give a rough approximation of the number of children with complex special needs.

It is further worth noting that special institutional care is noted as a large expense by the Nova Scotia case study. All child welfare jurisdictions are faced with such costs and recognize they are sufficiently beyond the means of the usual formula for maintenance that they are often paid out of centralized budgets. Here, provincial authorities rely on their economies of scale to absorb extra costs which are extraordinary in the sense of being outside the usual requirements of residential care but ordinary

in the sense of being regular and predictable in their incidence. It seems likely, then, that a central budget – either managed by INAC itself or managed by the committee system proposed above – will be a requisite to ensure adequate funding on an as-needed basis.

The funding formula for maintenance must be adjusted to create a tiered system of payments capable of recognizing the real incidence of complex special needs amongst on reserve children in care. The hierarchy must not be limited solely to residential costs but must be inclusive of the purchase of necessary professional support. The system needs to be augmented by a central budget line capable of releasing funds on an as-needed basis for institutional care or unexpected demands for exceptional costs.

Directive 20-1 seems not to have contemplated the need for capital costs associated with accessibility and the disabled. These costs are of two types; housing and vehicle renovation targeted at particular children and community based renovation such as installation of sidewalks, access to public buildings, traffic control, and the like. I raise this issue of public accessibility here because there seems little point in ensuring disabled children in care are located in accessible housing if they are unable to leave the residence due to lack of public amenities.

Funding External to Directive 20-1

Within the limitations of Directive 20-1 significant improvements can be made with a more nuanced and expansive use of the categories of operational and maintenance costs. However, the problem of extraordinary costs – that is, costs which come, as it were, 'out of the blue' remains. Similarly, the drain on agency resources caused by jurisdictional disputes which are often replicated across the country needs to be addressed through alternative funding structures. What follows, then, constitutes something of a wish list for a comprehensive on reserve child welfare system.

As noted above, at present First Nations children are the only children without a designated independent officer responsible for representing their interests. I regard it as crucial such an officer be appointed under the title of advocate or ombudsman. This officer would be a federal functionary (but ideally appointed through a consensus of the Assembly of First Nations or its designate, and Parliament) but independent of government and particularly INAC. Attached to this office may be either in-house mediators or a budget line for engaging mediators on an as-needed basis for jurisdictional disputes. As noted above, the frequency of jurisdictional disputes, and the costs associated with those disputes, varies wildly between agencies. Hence, it seems reasonable to centralize this aspect of advocacy work so that it is available to those jurisdictions where it is most needed as opposed to including small amounts of funding for each agency.

A similar economy of scale applies to the proposal for multi-jurisdictional committees. A separate budget line is required both to ensure adequate travel funds for their membership but also to allow for committee control of a budget line designated to address extraordinary costs as they arise[25]. Funds controlled by these committees would constitute a kind of insurance against extraordinary costs (such as inquiry participation or sudden community crises) requiring deeper pockets than any single agency could afford. They may also be able to coordinate back-fill for sudden events resulting from sudden drains on agency personnel resources. It is possible the committee controlled budget line could be established through a surcharge on funding for each agency (which would make it an insurance function), or funds could be disbursed from INAC to provincial committees which, in turn, would disburse a portion of those funds to regional and local committees. In any case, it is clear that no child welfare jurisdiction is immune to unexpected costs sometimes counted "in the millions". What is needed is a replication of the economies of scale the federal and provincial governments are able to call on.

Also outside the purview of Directive 20-1 are funds necessary to address the possibility of natural disasters and capital costs associated with community accessibility for the disabled.

As alluded to above, it is probable these costs are not likely to be seen as child welfare costs per se. However, an advantage of a children's advocate or ombudsman would be the ability to put these issues 'on the table' as children's issues. Whether agencies become the lead agencies responsible for addressing these shortcomings is, I suspect, for individual First Nations to determine. However, disaster response and accessibility is not the exclusive domain of the adult world. Therefore, funding for operational costs must reflect demands on agency resources for addressing these issues. Again, this may be incorporated directly into operational costs, or constitute a surcharge on contracted funding. In either case, recognition of children as full citizens also means recognition within all policies that affect them.

Footnotes

[1] See (HRDSC n.d.) for a list by province of risk assessments in use in Canada.

[2] But see O'Sullivan and McHardy (2004) for a

national measurement using a Community Well-Being Index. The analysis provided gives regional comparisons, but not comparisons by type of community.

[3] And, of course, this self-categorization has implications for self-esteem and all the possible social problems low self-esteem is associated with.

[4] I have written on this elsewhere. See Cradock (2003) for a fuller account. In the U.K. similar inquiries have been sparked largely due to press coverage (see Nava 1995 for a media analysis of the Cleveland Affair and Franklin and Parton (1991) for a more general account of the relationship between social work and the press).

[5] British Columbia established the Children's Commission to conduct such inquiries in the wake of the Gove Inquiry. The Commission was disbanded in 2001 with the election of a new government.

[6] This number cannot be explained solely by the size of population served. Similar populations served by other agencies do not produce anywhere close to this number of disputes. It is possible the data was skewed insofar as the survey describes disputes between two parties. Perhaps this particular agency is double reporting tripartite disputes and therefore the survey double counts. Even so, the minimum number of disputes would still be on the order of 80, significantly higher than any other agency.

[7] See below for the construction of the 'non-disputing' self in the context of mediation. As an aside, variations between numbers of disputes may also indicate cultural differences towards disputes across First Nations in general. Further, see Cruise (1986) for rumination on contemporary aboriginal socialization and its relation to assertiveness. Briefly, Cruise argues part of aboriginal subjectivity depends upon creating an oppositional stance toward dominant social values. Lemert (1954) made a similar observation about 'outlaw' social groups within the nascent Catholic Indian State of late 19th century British Columbia.

[8] The Province of British Columbia has also experimented with specialist First Nations negotiators. When B.C. had a Ministry of Aboriginal Affairs it was supposed to liaise with designated persons within all other ministries within government to ensure First Nations issues were incorporated into all government initiatives. The Ministry was disbanded in 2001 and has recently (June) been resuscitated. The B.C. experience is a reminder that the priority given to negotiations between First Nations and other governments can radically change and therefore is always, to some extent, at the pleasure of sitting governments.

[9] Poorly planned social initiatives are not limited to aboriginal issues. See the withering critique of the Ombudsman of Ontario (2004) with respect to insufficient research, poor administrative planning, lack of funding and the consequent inflation of public expectations created by the Ontario government's attempt to establish services for autistic children.

[10] For example, previous research has identified aboriginal children entering care because of medical needs which parents cannot afford to meet. The recent scandal in Ontario over just this issue demonstrates this not unique to aboriginal children. (Windsor-Essex C.A.S. personal communication; Ombudsman of Ontario 2005)

[11] What I have in mind here is drawn from my own experience servicing remote communities in British Columbia. For example, to contact one band meant radio-telephoning (through an exchange) a luxury fishing camp who would then have an employee get into a boat, round the point to the band's location, and bring back a band member to the telephone. Needless to say, any telephone conversation was a very public communication. Similarly, in that area, cel phones were useless because there were no relay stations. It is possible face-to-face meetings might be replaced with new video conferencing and satellite communication (which might also have the benefit of being relatively independent of prevailing weather conditions) but if this medium is preferred it will obviously have capital cost implications.

[12] This model is loosely based upon the old Inter-

Ministerial Children's Committees (IMCC) utilized in British Columbia during the 1980s. These committees ranged from local committees of what amounted to interested persons, through regional committees, and up to a committee composed of Deputy Ministers.

[13] I have in mind here unexpected consequences for First Nations of policy changes directed at more global issues. As in the above example from Ontario re: special needs children in care. Of course, it is possible agencies may change their own policies and spark a dispute with provincial and federal agencies.

[14] Since the report was issued, British Columbia has abolished its Child and Youth Advocate.

[15] At the time, British Columbia had no independent body designated to advocate on behalf of children. However, these reports were authored by a deputy ombudsman who fulfilled that role within the larger mandate of the Ombudsman.

[16] The Act seems to have died on the order paper at least three times. In any case, it has never got past first reading.

[17] Presumably, many undiagnosed complex medical needs would eventually be counted as child mortality.

[18] Unusual forms of transportation (i.e. snowmobiles and other local forms of transportation from pick-ups to herring skiffs) are not solely used by protection workers but also by children if removal from isolated communities is the only way to ensure children's safety. If, as one agency reported, "no normal person would do it" then one might speculate that transportation risks are perceived as 'ordinary' if undertaken by workers but 'extraordinary' if undertaken by children. One can imagine a child taken into care to protect their safety but subsequently drowning if the snowmobile transporting them falls through the ice. The cause of death would, no doubt, be extraordinary while still not unexpected. The cost of dealing with the liability issues would however be both unusual and extraordinary.

[19] I have examined the line budgets of several provinces and INAC. I have not been able to identify any targeted contingency budget addressing such extraordinary costs.

[20] Historical institutional abuse arbitrated through an ADR process is another such situation. In this case, economies of scale and expertise might suggest a dedicated budget line for counseling services directed at a class of persons over a period of years; perhaps decades.

[21] My own experience as a child protection worker provides an example. An on-reserve school introduced the C.A.R.E kit for sexual abuse prevention. For a number of weeks nothing happened and then on a Friday afternoon my office received 17 allegations of sexual abuse all requiring immediate investigation. Of a total staff of six social workers, two were pulled off their usual duties to deal with the crisis. These workers' usual duties were taken on by auxiliary staff brought in for the occasion. However, costs were not limited to investigations. Prior to the introduction of the kit, and in the certain knowledge it would generate numerous investigations, the Province of British Columbia provided funding for the training and employing of four support workers. Even then, a professional counselor was also provided through Victims Compensation funding for personal counseling of the children. It is difficult to estimate the total cost because of the varied budget lines concerned. Suffice to say, dealing with that crisis was not cheap.

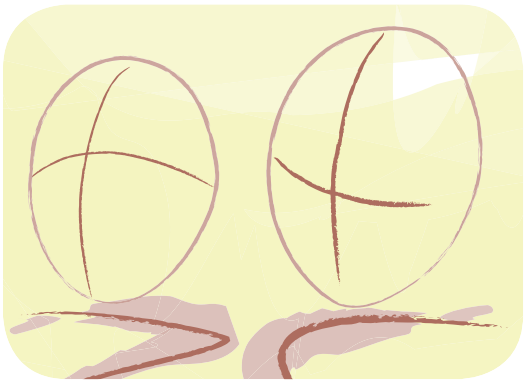
[22] Risk assessment theorists are well aware of the role of subjectivity. A favorite example is the varying perceptions of the dangers of nuclear power. Subjectively, nuclear power becomes more dangerous the closer one lives to a nuclear power plant.

[23] The preparedness program is comprehensive in its scope. It includes, for instance, privately owned dams, computing failure, storage of important documents, and anti-terrorism responses. A First Nations presence within the program may add issues of particular interest to First Nations to the program's rather eclectic list of concerns.

[24] I have written on this subject before so I will not belabor the subject here. See Cradock (2003; 2004) for a more detailed account.

[25] This is not to imply that the federal government would also be responsible for the participation of provincial representative, or that these provincial representatives would 'control' the disbursal of funds. What I have in mind is more the possibility of the committees accessing funds that could be used for such arrangements as matched funding or the purchase of, for example, institutional care in provincial resources.

Small Agencies



CHAPTER 7

Prepared on behalf of:
First Nations Child & Family Caring Society Canada

Prepared by:
Valerie Lannon & Associates Inc.

May 10, 2005

Introduction

1.0 - Background

The First Nations Child and Family Caring Society of Canada (FNCFCS) has been engaged to work with the National Advisory Committee (on the National Policy Review) to provide research which can be used to develop alternative funding formulae for First Nations child and family service agencies.

A multidisciplinary team is using a number of approaches to accomplish this research task, and part of the project entails a review of small agencies, those who serve child populations of less than 1,000. There are 51 small agencies out of a total of 93 agencies in Canada, excluding Ontario. (source: Summary report by FNCFCS presented February 2005 to a meeting of the Operational Funding Formula Design Team, Vancouver BC)

The three areas of inquiry are:

- What are the core administrative staffing and related requirements of small agencies?
- How should the funding formula be adjusted to meet these requirements?
- What is the minimum size of agency and related population that is consistent with good social work practice and economies of scale?

1.1 - Methodology

The FNCFCS engaged the services of Valerie Lannon & Associates Inc. to complete the research and prepare a report on small agencies. Ms. Lannon completed the research on agencies in British Columbia, and Ms. Judy Levi, an agency director in New Brunswick, completed the research on agencies in that province.

A structured interview was conducted with fourteen agency directors either on site or by telephone, using the questionnaire included as Appendix A.

1.2 - Agency information

The description of these fourteen agencies by child population is as follows:

Region	Less than 250*	Less than 500	Less than 800
B.C.	0	5	2
New Brunswick	4	3	0

** Note: these New Brunswick agencies came into existence prior to the establishment of Directive 20-1.*

The only other region with a significant number of small agencies is Quebec (12 out of 15 agencies); however, due to resource limitations, the Quebec agencies were not included in this aspect of the research project.

1.3 - Range of services provided

In addition to child protection services (by fully delegated agencies), the fourteen small agencies who took part in this research project also provide the following services:

Type of service	
Family preservation (child out of care)	11
Child support services (child out of care)	13
Respite care	11
Family reunification (child in care)	12
Support services for temporary or voluntary care	12
Adoption services	6 (in NB only)
Reunification (adults)	4
Prevention services	13
Community development	9
Foster home services	13

Other services provided by individual agencies included:

- Head Start
- Pilot Program For Youth At Risk
- Counselling
- Supervised Visits
- Recreation
- Early Childhood Development
- "Healthy Food" Programs
- Youth Advocacy
- Family Relations Act Advocacy
- Family Resource Centre
- Court Counselling And Intervention.

1.4 - Additional services required

When asked to identify services the agencies would like to provide but are unable to do so because of the limits of current funding, the respondents named the following services (costs noted where provided by respondents):

- Family Enhancement (In-home Parenting)
- Youth Enhancement
- Family Nights
- More Family Support Services
- Support For Two-spirited Youth
- Child And Youth Care - $80,000
- In-service Training - $50,000
- Foster Parent Facilitation $30,000
- Youth Activities (Share Costs With Other Service Providers)
- Services Off-reserve
- Family Counselling
- Services For Children With Special Needs
- On-call Services
- Adoption (Bc)
- Courtworker - $50,000
- Family Treatment Centre - $120,000
- Early Childhood Intervention - $60,000
- Mentors, Youth Summer Camp, Social Worker In Schools, Family Support - $205,000.

Characteristics of Small Agencies – some Regional Differences

2.0 - Regional differences

While agencies in both BC and New Brunswick are funded through Directive 20-1, and offer a somewhat comparable range of services, there are differences between the agencies in these two regions. There were also some regional differences in the responses to the questionnaire.

Delegation

BC is the only region in Canada where agencies assume delegated authority in a three-stage process, namely:

- Voluntary services – voluntary care agreements, special needs agreements, approval and support of residential resources, plus prevention and community development
- Guardianship – legal guardianship of children in care on temporary or continuing basis
- Child protection (or "full" delegation) – receipt and assessment of reports of child abuse and neglect, investigations, decisions regarding safety of child and, if necessary, removal of child.

Typically, it takes an agency 5-6 years to reach full delegation.

The composition of the agencies in BC is as follows:

	Voluntary Services	Guardian-ship	Full Delegation
Total # agencies*	2	10	7
# research partici-pants**	1	2	3

*Note: There are two additional agencies in BC; however they do not receive their funding through 20-1. These include the Nisga'a, which is funded under its treaty, and the Spallumcheen Band funded separately and created through a by-law, pre-dating Directive 20-1.

** Note: One of the research participants is an agency in the Start-up stage, not yet delivering delegated services.

Child population size

The Atlantic region is unique in Canada for having agencies whose child population count is less than the 250 required under 20-1. This is because all the agencies in New Brunswick existed prior to 20-1, except one, which received an exemption on size.

Treaties

BC is largely unceded land, and most First Nations in BC are involved in treaty discussions with the federal and provincial governments. These First Nations consider delegation enabling agreements as a preliminary, government-to-government step, prior to the execution of a treaty.

Agency age

Two of the Atlantic Region's thirteen agencies began operating after Directive 20-1 was established, whereas only one of BC's eighteen agencies began operating prior to 1989.

Almost all of the Atlantic Region's agencies began operating in the 1983-85 period and are, therefore, over twenty years old. In BC, most agencies have been in operation for twelve years or less.

Agency surplus

The BC Region of INAC has arranged for BC agencies to receive maintenance payments on a per diem basis, as opposed to payment based on actual expenditures. This arrangement is unique in Canada and provides a sort of "mini-block funding" to agencies.

The current per diem rate is $52.44. It was developed through bilateral negotiations with the provincial government, excluding First Nations. The figure is meant to reflect the average rate of payments for all family-type residential resources, from "restricted" (extended family member) to "level three" homes for children with special needs.

This arrangement can and does result in agencies accruing savings, as long as their actual care costs are less than the per diem rates. Such savings are used for other child and family service program costs.

Regional size and population diversity

BC is much larger in size than New Brunswick. BC has 199 First Nations communities made up of 30-40 major ethnic groups (shared territory, language and culture) and at least eight language families. New Brunswick has far fewer differences among its First Nations groupings.

Key differences in findings:

Respondents from New Brunswick were more likely than their BC counterparts to:

- want to have maintenance payments based on actual costs, rather than on a per diem basis;
- be open to centralizing some functions of their operations;
- identify a need for increased capital expenditures for office buildings and for information technology (hardware and software).

Core Requirements of Small Agencies

3.0 - Introduction

The first area of inquiry for this report is:

What are the core administrative staffing and related requirements of small agencies?

To explore the issues related to this question, agencies were asked to describe, among other

things:

- Current staffing levels
- Current costs for salaries and benefits
- Ideal staffing compliment
- Comparability with other child welfare organizations
- Types and amounts of non-staffing costs, and current funding gaps.

3.1 - Current Staffing Levels, Costs, And Comparability

All respondents indicated that current staffing levels include:

- A full-time program director (in three cases, this position is combined with a social work position)
- Social workers, full-time, varying in number from one to six (presumably depending on funding availability), with the average number being 2.5
- Administrative staff, varying in number from one (the most common number) to five full-time positions.

Annual costs for salaries and benefits range from a low of $64,000 to a high of $608,638. The average agency cost is approximately $250,000.00.

Nine of the twelve agencies that responded to this question indicated that their salary and benefit levels are not comparable to other child welfare organizations. It would take approximately $10,000 - $15,000 more per position annually to be more competitive.

To provide the full range of services needed by the community, virtually all respondents indicated that they would need additional full time staff. Typically this involved one to two more social workers, for an additional cost of up to $170,000 per year per agency. The other most commonly identified need was for prevention workers, at an average annual cost of $35,000 per agency.

Other required staffing, identified by individual respondents, included:

- Early home visitor (new mothers) – requiring a diploma, at a cost of $40,000
- Reconnection worker – requiring a diploma, at a cost of $40,000
- Policy analysts – requiring a BSW, for a total cost for two FTEs $140,000
- Child and youth counsellor/general counsellor – average cost of $78,000.

One agency stated it would need a home economist, a psychologist, an additional social worker, and a courtworker, for a total cost of $340,000 annually.

In an earlier report prepared by the New Brunswick agencies, it was noted that additional funding is needed to ensure adequate levels of training for staff. No dollar amount was specified.

3.2 - Non-staffing costs

The most frequently cited non-staffing cost that would be incurred if agencies were providing their preferred range of services is that associated with capital costs, for either a new office building or space, or office renovations. Estimated funding requirements were in the range of $15,000 to $250,000, with an average of $102,500.00.

In New Brunswick, there was an equal priority placed on costs for information technology software and hardware, at an average cost per agency of approximately $45,000.00

The gap between what is required to run an agency with the preferred full range of services and what the agencies currently receive runs from $119,000 to $524,000, with an average differential of $320,000.

Funding Formula Adjustments

4.0 - Introduction

The second area of inquiry for the research into small agencies was:

How should the funding formula be adjusted to meet these requirements?

Agencies were asked to discuss:

- aspects of the Directive 20-1
- the use of surplus funds

- preference for various forms of maintenance funding.

1.1 - Directive 20-1

While some agencies were satisfied with the separation of 20-1 funding between operational and maintenance funding (because it clarified accounting), there were no agencies that believe the population threshold policy is effective.

The overwhelming sentiment is that these thresholds do not meet the core needs of small agencies, and that funding should be based on community needs, not population size. A couple of New Brunswick respondents added that the entire community population should be taken into account, not just that of children, since it is the entire family that needs support when a child is at risk or is unsafe.

4.2 - Surplus funds

Not surprisingly, it was only BC agencies that advised that they had surpluses and, in almost all cases, the surplus came from the maintenance per diem arrangement.

The policy for use of surplus funds varied by region. In New Brunswick, the agencies noted that the policy is to return any unspent funds to INAC. In BC, however, agencies are to use surplus funds on child and family services.

4.3 - Maintenance funding alternatives

As mentioned in Chapter Two, the BC region is unique for using a per diem arrangement to pay for maintenance costs. In New Brunswick, as in the rest of Canada, maintenance costs are paid by INAC based on actual costs. The agencies were asked which of the two funding arrangements they preferred.

All of the New Brunswick agencies indicated a preference for the current payments, based on actuals. Most feared that a per diem arrangement might result in either a budget deficit or in reduced service delivery.

While two BC agencies stated that payment based on actual expenses would have the advantage of better covering the costs of children with special needs, most BC agencies feared that removing the per diem arrangement, and the removal of associated surpluses would mean less funds for staff and prevention programs.

There appears to be a trade-off, therefore, between being able to fully fund children with special needs, and having discretionary (surplus) funds for prevention and other programs.

How Small Agencies Can Ensure Good Practice and Economies of Scale

5.0 - Introduction

The third area of inquiry for this research was: What is the minimum size of agency and related population that is consistent with good social work practice and economies of scale?

Agencies were asked about:

- The particular challenges faced by small agencies in delivering services
- The volume of cases required for social workers to maintain their skills
- The allied services needed to optimize the impact of agencies' services
- Measures to achieve economies of scale
- Centralization of functions.

5.1 - Challenges facing small agencies

One of the challenges facing small agencies is the pressure to deliver comparable services to larger agencies, whether these larger agencies are First Nations or the provincial government child welfare organizations.

When asked how they thought their agencies' costs for services compared to what the provinces' costs would be for providing services in the community, the agencies were unanimous that agencies' services were more extensive and, therefore, INAC "gets more bang for the buck" from First Nations agencies. Respondents pointed out that provincial government organizations tend to focus primarily on child protection cases, whereas First Nations agencies, even small ones, provide prevention and community development programs, which act to reduce the incidence of child abuse over time.

In a sense, the question tended to combine "apples and oranges" given the differences in approaches to service delivery between provincial organizations and those of First Nations. The provinces tend to use a tertiary prevention vs. a primary prevention approach, to use the parlance of health promotion.

Some agency directors also pointed out that their costs are lower because they have lower maintenance costs (at least in BC) for foster parents, as agencies are less inclined to place children in more expensive "levelled" homes. As well, agencies are non-unionized and, therefore, are not bound to pay the higher salaries and benefits contained in collective agreements.

Virtually all respondents agreed that their staff members perform duties that would not be expected by employees in similar positions in large First Nations agencies. Examples of some of these duties include:

- community work, such as community clean-up, Christmas and children's parties, helping to furnish houses
- administrative duties
- handling non-child and family service requests (e.g. for transportation to town), mainly as a way of building up trust so that people are encouraged to use the child and family services on a voluntary basis.

In order to support the staff who are faced with carrying out extra duties, agencies have devised a number of methods, including:

- peer support
- support from the Board of Directors
- training on stress management
- use of traditional teachings.

In one case, staff members are given time off to compensate for overtime incurred due to performing "over and above" normal job requirements.

There is little in the way of support, however, when it comes to covering for staff when there are temporary absences, due to illness, vacation, training or other leave, vacations, or staff turnover. The most common response was "someone picks it (the workload) up". But in almost half the cases, directors said the routine, non-emergency work is left undone until the person gets back or the position is filled. In one case, the agency supervisor fills in, and in another case, the agency occasionally will hire a temporary worker. While there are no financial costs associated with these arrangements (because there is no funding available), the human cost can be high in terms of burn-out. The cost of temporary workers runs around $36,000 per year for the agency that uses this approach.

When asked how clinical supervision was carried out where social workers work outside the central office, the vast majority of agencies indicated this does not apply to their situation because all staff work from the same location. In one case, however, the agency responded that the supervisor visits the satellite office, and is also available by phone.

5.2 - Minimum volume of cases

The respondents were asked what volume of cases is necessary to ensure that a social worker's skills do not decrease due to lack of use. Two respondents were unsure, and two others stated that there is no minimum size, as there is always work to be done, and social workers are continually improving their skills depending on the situations they face.

Most respondents, however, believe that a minimum caseload is indeed necessary to maintain skill levels. Opinions varied as to size of the minimum caseload, as follows:

- A range of 10-15 cases for a generalized caseload
- 12-15 child protection cases
- 14 child protection cases and 6 children in care.

Another director stated that the minimum would be five to six cases a year involving a child at risk.

5.3 - Necessary allied services

When asked to identify the allied community services needed to optimize the impact of the agency's services, the majority of respondents named:

- addictions counselling;
- counselling (general);

- housing; and
- health services.

Some agencies also listed: educational supports; recreation; psychological assessment; social development/income assistance; native policing; occupational therapy/speech therapy/ physiotherapy; and employment advice and support.

In addition, the following services were identified by individual respondents:

- parental assessment
- art therapy
- Head Start
- safe house for women
- day care
- family resource centre for women
- cultural strengthening programs
- courtworker program
- transportation.

5.4 - Economies of scale

When asked whether they thought there is a minimum size of agency, and minimum size of population needed to ensure good social work and economies of scale, none of the respondents stated that there should be a minimum size of population. This is because of the high level of needs in their communities. Most respondents would not venture a minimum size of staff; however the two that did suggested a minimum of two social workers to ensure safety, back-up, and the opportunity for consultation and de-briefing.

Most respondents have taken measures to achieve some economies of scale, usually through sharing resources with other programs. Examples include:

- Sharing administrative staff, financial management, building space, and office supplies with another program (e.g. a health program)
- Shared training with other programs
- Joint organization of community events
- Sharing costs to bring specialists to the community
- Using multidisciplinary committees to assess families.

Because of the challenges small agencies face in trying to deliver a full range of services, there has been a suggestion that some agency functions be centralized, for example after hours services, clinical supervision, and administration. All of the New Brunswick agencies favoured this approach, as did the majority of BC respondents. Three BC respondents rejected this approach, however, due to the geographic isolation and/or high travel costs associated with their communities.

Conclusions

6.0 - Introduction

To conclude the investigation into small agencies, respondents were asked to:

- suggest alternative ways of funding small agencies;
- identify whether these alternatives would mean revising or rejecting the Directive 20-1; and
- provide advice to small First Nations to ensure the successful delivery of child and family services.

6.1 - Alternative funding approaches and implications for 20-1

Almost half of the respondents stated that funding should be based on community needs, not child population counts. Another quarter of the respondents (all from New Brunswick) stated that the population count should be of the total population, not just children, since it is the entire family that needs support when a child is at risk or is unsafe with her or his family.

And another quarter of the respondents indicated that a funding formula should include at least one of the following:

- funding for prevention and out of care options
- an increased rate for remoteness
- a mechanism for block funding
- consideration of the total population, whether status or non-status.

Most respondents believe that an entirely new funding formula is required, one that is based on community needs. But two of the respondents believe that adjusting Directive 20-1, by adding funds for prevention and community development, would meet their needs.

6.2 - Advice to small First Nations

All of the respondents encourage small First Nations to think positively about providing child and family services to their members. The most common messages of advice include:

- ensure funding is available for prevention services and make those the priority
- hire good staff
- set priorities
- network and share resources with other programs
- promote community involvement in service planning and reinforce the idea that the whole community is responsible for the well-being of children.

A couple of directors also advised that small First Nations consider the use of block funding although it was acknowledged that small agencies may not benefit from the economies of scale that make block funding work well.

And on an interesting philosophical note, one agency director advised, "What seems inconsequential can have huge implications. For example, just driving someone somewhere helps build trust and can mean there is a greater use of your organization's services." The message here is that agencies should have the goal of being the place that families want to come to when they need help.

APPENDIX A
QUESTIONNAIRE

A. General Background Information

A1 What is the size of the 0-18 status Indian child population served by your agency?

A2 What is the size of the non-status Indian population living on reserve?

A3 Does your agency serve non-status Indian children?
[ ] yes
[ ] no

A4 If so, how many per year?

A5 What are your arrangements for reimbursement?

A6 What is the size of the status Indian children from other First Nations living on reserve?

A7 Does your agency serve these children?

A8 If so, how many per year?

A9 What are your arrangements for reimbursement?

A10 Does your agency serve status Indian children off reserve for whom you receive no reimbursement from the Province or Federal Government (i.e. non-billable children in care?)
[ ] yes
[ ] no

A11 If so, how many?

A12 What is the average cost to your agency on an annual basis?

A13 Does your agency serve non-native children?
[ ] yes
[ ] no

A14 If so, how many?

A15 What are your arrangements for reimbursement?

A16 How many communities does your agency serve?

A17 Are there any that are not accessible by roads year-round?
[ ] yes
[ ] no

A18 If so, are the funds provided under the remoteness factor in the current formula adequate to cover the extra costs associated with remoteness?
[ ] yes
[ ] no

A19 If not, why not?

A20 What is the geographic area you serve?

A21 Do you have

[ ] full; or

[ ] partial delegation?

A22 If partial, which level?

A23 What is the governance structure of your agency?

A24 How many children are typically in care at one time?

A25 What percentage of Aboriginal children in care are placed with Aboriginal caregivers?

A26 How does this compare with when the province was providing services (pre-delegation)

A27 What services does your agency provide among the following:

[ ] Family Preservation (Child Out Of Care)

[ ] Child Support Services (Child Out Of Care)

[ ] Respite Care

[ ] Family Reunification (Child In Care)

[ ] Support Services For Temporary Or Voluntary Care

[ ] Adoption Services

[ ] Reunification Services (Adults)

[ ] Prevention Services

[ ] Community Development

[ ] Foster Home Services

[ ] Other (Specify)

A28 What services would your agency like to provide but is unable to fund under the current funding arrangement, and what are the costs of each service identified?

A29 What do you think the impacts, if any, would be on children and families if preferred range of services could be provided?
Over one year?
A30 Over three years?
A31 Over five years?
A32 Over ten years?

A33 What child welfare services, if any, are provided by another service provider (e.g. provincial social workers do child protection, use provincial after hours screening?)

A34 What is the annual estimated value of these services?

A35 What is the primary reason why the agency does not provide these services?

B What are the core administrative staffing and related requirements of small agencies?

B1 Please describe your agency's current staffing compliment :
Number and qualifications of staff in each full and part-time position
B2 Annual costs of salaries and benefits

B3 Are your agency's salary and benefits levels competitive with other child welfare organizations?
[ ] yes
[ ] no

B4 If not, please identify the amount of funding (per year) for each affected position that would be required to match other child welfare organizations

B5 Are there any situations where you are unable to meet labour standards related to staff compensation (i.e. overtime payment) and workplace safety due to the current level of funding provided under the operations formula?
[ ] yes
[ ] no

B6 If so, please describe each incident and the estimated amount of funds required per year to comply with each standard

B7 Does your agency have adequately trained staff in order to ensure quality, culturally-based services in accordance with your level of delegation?
[ ] yes
[ ] no

B8 If not, please identify the amount of funding (per year) that would be required to fill the gap

B9 Please describe the staffing compliment (including qualifications) your agency would require to provide the full range of services needed in your community(ies). Please indicate whether they are full time or part time

B10 What funding would be required to cover staffing costs each year? _____

B11 What are the types of non-staffing costs that need to be covered in order to operate a FULL service agency, and what would be required funding to cover each of these costs per year?
[ ] capital
[ ] remoteness
[ ] other

B12 What is the gap (if any) between required costs and what you currently receive under 20-1?

B13 Is the current level of funding provided to your agency adequate to develop and maintain culturally based child welfare standards?
[ ] yes
[ ] no

B12 If not, what would be the initial development cost and the annual cost for maintaining such standards?

B13 Is the current level of funding provided to your agency adequate to develop and maintain culturally based service evaluations?
[ ] yes
[ ] no

B14 If not, what would be the initial development cost of an evaluation framework?

B15 And for conducting evaluations?

B16 Has your agency developed financial policies and procedures that comply with Generally Accepted Accounting Principles (GAAAP) and reporting requirements of both the First Nation/Tribal Council/Agency Board and INAC?
[ ] yes
[ ] no

B17 If so, what were the costs associated with this? ____

B18 Were the funds provided under the operations formula adequate to cover these costs?
[ ] yes
[ ] no

B19 If not, what would be the cost of developing such standards? ____

C How should the funding formula be adjusted to meet these requirements?

C1 What are your thoughts on the current separation in 20-1 between operational and maintenance funding?

C2 The Directive currently provides operational funding pursuant to the Status Indian child population on reserve exceeding certain population thresholds (i.e. 251, 501, and 801). Do you think this policy is effective in meeting the needs of children and families on reserve?
[ ] yes
[ ] no

C3 If not, why not?

C4 Does the fact that the Directive does not have a policy to cover deficits impact the case practice in your agency?
[ ] yes
[ ] no

C5 If so, please describe

C6 Does your agency run a surplus?
[ ] yes
[ ] no

C7 If so, how was the surplus accrued?

C8 What policies are in place regarding the use of surplus funds?

C9 In many other areas of the country, maintenance costs are funded through reimbursement of actual expenses related to children in care (running surpluses under maintenance is theoretically impossible under this regime); whereas in BC, maintenance funding under the MOU is reimbursed under an average actual cost based on provincial expenditures. What impacts, if any, do you think that setting aside the MOU in favour of the reimbursement of actual expenses would have on the annual budget of your agency?

D. What is the minimum size of agency and related population that is consistent with good social work practice and economies of scale?

D1 Please describe the differences in service approaches between the Province and your agency

D2 Please describe what the impacts for children and families have been since your agency began providing services?

D3 How do you know what these impact are (i.e. independent evaluation, testimonials, personal opinion, etc.)?

D4 How do you think your costs for service compare to what the province would incur if it were providing services in your community (ies)?

D5 Do your staff perform duties that would not be expected by employees in similar positions in large First Nations agencies?
[ ] yes
[ ] no

D6 If so, what training and support are provided to help them manage this expanded range of responsibilities?

D7 How do you cover for staff when there are temporary absences (e.g. illness, vacaion, training other lave, staff turnover/vacancies)?

D8 What costs are involved?

D9 (if applicable) How do you provide clinical supervision in those cases where staff work outside the central office of the agency?

D10 What volume of cases is necessary to ensure that social work skills do not decrease due to lack of use? (e.g. investigation skills)

D11 What allied services in your community (ies) are needed to optimize services to children and families/ (e.g. counselling, substance misuse, better housing, etc…)

D12 Do you think there is a minimum size of agency and population that is needed to ensure good social work practice and some economies of scale? What size would that be and why?

D13 Please describe any measures your agency takes to achieve economies of scale? (e.g. sharing resources with another program)

D14 As small agencies face special challenges in delivering a full range of services, there has been discussion in some areas of the country of centralizing some child welfare functions (i.e. after hours, clinical supervision, administration) in a First Nations run organization that provides support to several agencies.
Do you think this approach would work in your agency?
[ ] yes
[ ] no

D15 If not, why not?

E. General

E1 Do you have any suggestions for alternative ways of funding agencies whose child populations are less than 1,000?

E2 Would this require adjusting the current 20-1 design, or creating a different funding model altogether? Please describe

E3 What advice would you give to First Nations with small child populations, in order to ensure that successful, viable child and family services can be delivered?

THANK YOU!!

WEN:DE
Appendices

Recommendations of the Joint National Policy Review on First Nations Child and Family Services

(MacDonald & Ladd, 2000)

1. The Joint Steering Committee of the National Policy Review recognizes that Directive 20-1 is based on a philosophy of delegated authority. The new policy or Directive must be supportive of the goal of First Nations to assume full jurisdiction over child welfare. The principles and goals of the new policy must enable self-governance and support First Nations leadership to that end, consistent with the policy of the Government of Canada as articulated in Gathering Strength.

The new policy or directive must support the governance mechanisms of First Nations and local agencies. Primary accountability back to community and First Nations leadership must be recognized and supported by the policy.

2. The Joint Steering Committee recognizes a need for a national process to support First Nations agencies and practitioners in delivery of services through various measures, including best practices.

3. A national framework is required that will be sensitive to the variations that exist regionally in relation to legislation and standards. Tripartite tables consisting of representatives from First Nations, [Department of Indian and Northern Affairs] DIAND, and the province/territory are required to identify issues and solutions that fit the needs of each province/territory. Some of the issues that will need to be addressed by these regional tables consist of (but are not limited to) the following:

   a. Definitions of maintenance

   b. Identification of essential statutory services and mechanisms for funding these services

   c. Definitions of target populations (as well as the roles of federal/provincial/territorial governments related to the provision of services)

   d. Adjustment factors for new provincial programs and services- processes for FNCFS agencies to adjust and accommodate the impacts of changes in programs and services.

   e. Definition of a special needs child

   f. Dispute mechanisms to address non-billable children in care

   g. Definition of range of services

   h. Definition of financial audit and compliance comparability/reciprocity between provincial and First Nations accreditation, training and qualifications requirements of staff (e.g. licensing criteria.)

4. DIAND, Health Canada [Public Health Agency of Canada] the provinces/territories and First Nations agencies must give priority to clarifying jurisdiction and resoursing issues related to responsibility for programming and funding for children with complex needs, such as handicapped children and children with emotional and/or medical needs. Services provided to these children must incorporate the importance of cultural heritage and identity.

5. A national framework is needed that includes fundamental principles of supporting FNCFS agencies, that is sensitive to provincial/territorial variances, and has mechanisms to ensure communication, accountability and dispute resolutions mechanisms. This will include evaluation of roles and capacity of all parties.

6. The funding formula in Directive 20-1 is not flexible and is outdated. The methodology for funding operations must be investigated. The new methodology should consider factors such as workload/case analysis, national demographics and the impact on large and small agencies, and economies of scale. Some of the other issues the new formula must address but not be limited to are:

a. Gaps in the operations formula. A clear definition is required.

b. Adjustment for remoteness

c. Establishment of national standards

d. Establishment of an average cost per caseload

e. Establishment of caseload/workload measurement models

f. Ways of funding a full service model of FNCFS

g. The issue of liability

h. Exploration of start up developmental costs

i. Develop and maintain information systems and technological capacity.

7. The Joint Steering Committee found that the funding formula does not provide adequate resources to allow FNCFS agencies to do legislated/targeted prevention, alternative programs, and least disruptive/intrusive measures for children at risk. It is recommended that DIAND seeks funding to support such programming as part of agency funding.

8. DIAND must pursue the necessary authorities to enable FNCFS agencies to enter into multi-year agreements and/or block funding as an option to contribution funding, in order to further enhance the ability of First Nations to deliver programs that are geared to maintaining children within their families, communities, and reuniting those children in care with their families. This requires the development of a methodology for establishing funding levels for block funding arrangements that encompass:

a. A methodology for new and second generation agreements

b. Multi-year authorities for these programs with a criteria for measurement of success [DIAND may need to go to Cabinet to get authority for these]

9. An exceptional circumstances funding methodology is required to respond to First Nations communities where large numbers of children are at risk. Best practices shall inform the development of this methodology.

10. A management information system must be developed and funded for First Nations in order to ensrue the establishment of consistent, reliable data collection, analysis and reporting procedures for all parties (First Nations, regions, provinces/territories and headquarters.)

11. Funding is required to assist First Nations CFS Agencies in the development of their computerization ability in terms of capacity, hardware and software.

12. Funding is required for all agencies for ongoing evaluation based on a national framework and guidelines to be developed.

13. DIAND and First Nations need to identify capital requirements of FNCFS agencies with a goal to develop a creative approach to finance First Nations child and family service facilities that will enhance holistic service delivery at the community level.

14. Funding is required for ongoing standards development that will allow FNCFS agencies to address change over time.

15. Priority consideration should be given to reinstating annual cost of living adjustments as soon as possible. Consideration should also be given to address the fact that there has not been an increase in cost of living since 1995-96.

16. Phased in funding is a problem in the formula and should be based on the level of delegation from the province.

17. An immediate tripartite review (Canada, Ontario and Ontario First Nations) be undertaken in Ontario due to the implications of the 1965 Indian Welfare Agreement, current changes to the funding formula, and the Ontario Child Welfare Reform.

Losses on INAC Operations Funding Due to Lack of Inflation Adjustment

Well I don't want to tell you
what you can give
but give everything you can.
Conviction is not enough.

It is not enough to be
conscious of the problems
of the world;
how we involve ourselves
in their solution is
the most important thing.

So let us believe again
in children and youth.
Let us believe again
in Indigenous peoples.

Let us believe in people
who can promote dialogue
in the SEARCH FOR PEACE.

WEN:DE
Coming to the Light of Day

The Journey Continues

INTRODUCTION

One in ten Status Indian children in three sample provinces were in child welfare care as of May 2005 compared to one in two hundred non Aboriginal children (Blackstock, Prakash, Loxley and Wien, 2005). National data suggests there are three times the number of Aboriginal children in care than there were at the height of residential school operations (Blackstock, 2003) and the child in care admission rates for Status Indian children resident on reserve are increasing at the staggering rate of 71% over a six year period (McKenzie, 2002). The good news is that recent research has identified the reason why so many Aboriginal children are coming into care and suggests what can be done to turn the tide. Data from the Canadian Incidence Study on Reported Child Abuse and Neglect indicate that Aboriginal children are less likely to be reported to child welfare authorities for physical or sexual abuse than non Aboriginal children but are twice as likely to experience neglect (Trocme, Knoke and Blackstock, 2004; Trocme, Fallon, McLaurin and Shangreaux, 2005). Addressing neglect involves providing a continuum of multidisciplinary services that consider risks at the level of the child, the family as well as structural risks such as poverty and poor housing. Researchers have continually identified an increase in targeted in home support services for neglected children and their families as a key step in reducing the numbers of Aboriginal children in care over time (McKenzie, 2002; Shangreaux, 2004; Blackstock and Trocme, 2005).

The Joint National Policy Review of First Nations Child and Family Services (NPR) (McDonald and Ladd, 2000) confirmed that the current funding formula, Directive 20-1 (hereinafter called the Directive), did not provide sufficient funding for First Nations Child and Family Service Agencies (FNCFSA) to deliver culturally based and statutory child welfare services on reserve to a level comparable to that provided to other Canadians. Moreover, the NPR validated First Nations child and family service agency reports that the Directive did not adequately fund in home interventions for abused and neglected children known as least

disruptive measures. These services are required by child welfare statute in order to give children the best chance to live safely at home but are not funded by the Directive.

Upon the completion of the Joint National Policy Review on First Nations Child and Family Services (McDonald and Ladd, 2000), a National Advisory Committee (NAC) was formed to implement the NPR recommendations. The NAC is co-chaired by the Assembly of First Nations (AFN) and the Department of Indian Affairs and Northern Development (INAC) and includes representatives from INAC regions and First Nations Child and Family Service Agencies (FNCFSA). In September of 2004, the NAC commissioned the First Nations Child and Family Caring Society of Canada (www.fncfcs.com) to complete a comprehensive research project aimed at providing evidence based recommendations to improve the current INAC funding formula for FNCFSA.

This report presents the final findings of a three phase research project which was designed to inform analysis of three funding formula options for First Nations child and family services. Phase One of the research project focused on the identification of three funding formula options and the identification of the research questions that needed to be addressed to inform each option. Phase 2 focused on the response to these research questions and Phase 3 involved the development, and costing of the recommended changes.

The proposed funding formula options arising from Phase One are:

1) **Redesign the Directive:** Redesigning the current INAC funding formula Directive 20-1 to reflect the recommendations of the Joint National Policy Review conducted in June 2000.

2) **The Provincial Model:** Identify the provincial funding formulas used in each region and apply the respective formula to First Nations Child and Family Service Agencies

3) **The First Nations Model:** An entirely new funding formula designed to meet the specific needs of First Nations Child and Family Service Agencies in Canada.

The researcher questions identified in Phase 1 were answered in Phase 2 of the research project with findings of the research documented in the ***Wen:de*** report completed in August of 2005. The third and final phase of the research project, Phase 3, involved conducting a national survey of First Nations Child and Family Service Agencies (excluding Ontario) and running economic analysis to develop recommendations for a new funding formula and quantify the cost implications.

This report summarizes the results of Phase 3 and is prepared for INAC to inform the development of a Memorandum to Cabinet seeking authority to implement the recommended improvements to the funding formula for First Nations Child and Family Service Agencies approved by the National Advisory Committee. The report begins by introducing research aims, the research team, method, and limitations of the research before presenting an evidenced based analysis of why the redesign of Directive 20-1 option is being recommended as compared to the other two funding formula options. Finally, recommendations for reforms to Directive 20-1 are described, supporting evidence is identified and calculations to arrive at cost implications are provided.

Research Team

Throughout the three phases of the research project, a team of researchers with expertise in a wide range of academic, policy and practice disciplines were engaged. The principal investigators for Phase 3 were:

1. Dr. Fred Wien, Dalhousie University, School of Social Work
2. Dr. John Loxley, University of Manitoba, Faculty of Economics
3. Dr. Nico Trocme, McGill University, School of Social Work
4. Cindy Blackstock, First Nations Child and Family Caring Society of Canada
5. Dr. Linda DeRiviere, University of Manitoba, Faculty of Economics
6. Tara Prakash, University of Manitoba, Faculty of Economics

The principal investigators were assisted by the following researchers:

1. Valerie Lannon, Lannon and Associates, British Columbia
2. Kathryn Irvine (Phd Candidate), Alberta
3. Shelley Thomas Prokop, consultant, Saskatchewan
4. Richard De La Ronde, FNCFCS research assistant, Manitoba
5. Melanie Vincent, Gripma consulting, Quebec
6. Judy Levi, Regional coordinator, New Brunswick
7. Dr. Barbara Fallon, University of Toronto, Faculty of Social Work
8. Bruce Maclaurin, University of Calgary
9. Raina Loxley, student, Manitoba
10. Rachel Levasseur, student, Ottawa

Methodology

In the third phase, a national survey instrument was developed for First Nations Child and Family Service Agencies in Canada (excluding Ontario). The instrument leveraged Phase 2 research results and was developed in consultation with project researchers and key informants. The phase three survey instrument was compiled as a select version of the second phase instrument, focusing on areas requiring additional information identified by agencies and/or the research team.

The purposes of the third phase survey instrument were:

1) To quantify the economic implications of introducing various changes to the funding formula for FNCFSA and what revenue needs would need to be addressed by INAC

2) To strengthen the evidence base for recommended changes to the funding formula.

Specifically, the survey instrument contained 13 sections exploring the following topics:

- Demographics of the agency
- Remoteness
- Management information systems
- Records management
- Extraordinary costs
- Legal costs
- Capital costs
- Salaries and benefits
- Jurisdictional disputes
- Standards, cultural appropriateness and program evaluation
- Least disruptive measures and prevention
- Keeping pace with provincial legislation
- Agency contributions

The survey used a mixed methods approach, employing both qualitative and quantitative questions. This approach was used to ensure FNCFSA had the opportunity to describe their particular agencies and unique situations, while allowing the researchers to analyze the information effectively. When applicable, some sections were dominantly qualitative to gage the need for specific services and the implications if such services were provided. This was the case in many questions relating to extraordinary costs, standards, cultural appropriateness and program evaluation. There were also several questions that were more quantitative in nature such as: salaries and benefits, capital costs, and legal costs, to accurately capture the current revenue needs and expenses of First Nations Child and Family Service Agencies.

The survey instruments, available in both official languages, were sent out to 93 First Nations Child and Family Service Agencies in Canada. Researchers in each province were retained to support agencies in the completion of the survey via the phone or site visits if required. Researchers contacted each agency, in the language of their preference, to ensure they received the survey, offered assistance to complete it, reviewed survey returns to ensure that as many questions as possible had been answered and returned the surveys to FNCFCS. The survey was also available in electronic form format on the FNCFCS website in both French and English. Accessibility to the web-based survey was checked using several different computer programs and access systems throughout the period the survey was being conducted in

order to ensure that agencies using different computer systems had access. Participating agencies received no financial compensation for their participation, however, notes of appreciation were sent to all respondents.

1. This methodology garnered 35 completed surveys – or 36 % of the population of FNCFSA. This is remarkable given the short time frame for completion of the surveys (one month) and the fact that the survey was administered during the summer months when many staff take holidays. An analysis of the survey response rates indicates that the sample covers 35 agencies, 32,575 children, 146 bands and $28.6 million in operating funds.
2. It is highly representative of the Atlantic region, very representative of Saskatchewan, Quebec and BC.
3. It is moderately representative of Manitoba and greatly under-represents Alberta.
4. Nationally however, (excluding Ontario) it covers 38% of all FNCFSA, 49% of all bands, 31.4% of all children 0-18 and 28.7% of all funding for operations.
5. It is a little under-representative of FNCFSA and bands in remote areas because of the over-representation of the Atlantic region.
6. For the same reason it over-represents very small FNCFSA, with under 250 children and under-represents agencies with in excess of 800 children.
7. In order to assess more systematically how representative of the total population our sample was, a number of statistical tests were performed.

In conclusion, the survey sample for Phase three is representative for most purposes and can be relied upon with confidence.

The survey results are reported in aggregate form throughout this report in order to respect the anonymity of respondents.

Consultations

In July of 2004, the Chiefs in Assembly at the Assembly of First Nations Annual General Assembly passed Resolution #23 that supported the full implementation of the recommendations of the Joint National Policy Review on First Nations Child and Family Services.

During the process of this research, the research team has incorporated consultations with national samples of First Nations Child and Family Service Agencies at each stage of the research:

Phase One: Interviews with five First Nations Child and Family Service Agencies located in Nova Scotia, Manitoba, Saskatchewan, Alberta and British Columbia

Phase Two: Case studies of 12 First Nations Child and Family Service Agencies located in New Brunswick, Nova Scotia, Quebec, Manitoba, Saskatchewan, Alberta and BC along with focused interviews on specific projects with over 50 staff members or contractors of First Nations Child and Family Service Agencies. All provinces were also invited to participate in case studies in Phase two. Academic experts were consulted for the prevention project and for the analysis of jurisdictional issues.

Phase Three: National survey instrument sent to 93 First Nations Child and Family Service Agencies in Canada and completed by 35 of them.

In addition, the National Advisory Committee and Funding Design Team as well as representatives of the Assembly of First Nations and INAC were consulted on research design, methodology and results during each phase of the research program.

The results of Phase 2 were also presented to the Assembly of First Nations Chiefs Task Force on Child Welfare, the Treaty Seven FNCFSA directors and several presentations are scheduled with FNCFSA in the coming weeks. To date the research findings have been very well received by

First Nations Child and Family Service Agencies across Canada.

Limitations to Research

This research report represents the best evidence that was possible to collect and analyze within the one year time frame for the project including the two and one half month time period for the completion Phase Three of the work.

This research project does not include Ontario (as it is funded under a separate funding arrangement), has not specifically focused on foster care costs nor has it analyzed the proposed block funding methodology. Dr. Brad McKenzie (2002) prepared a report to inform block funding and cautions that this approach, whilst having benefits of increased flexibility, is not appropriate for all First Nations Child and Family Service Agencies (i.e. small agencies, new agencies, agencies lacking a long term track record that allows for accurate prediction of future costs (thus setting a reasonable base amount for the block.)

Moreover, our research assumes that there will be no cuts affecting the current level of funding. Pursuing a reduction in the current funding envelope would require detailed analysis in partnership with First Nations child and family service agency directors and econometricians in order to ensure that proposed changes do not erode the beneficial outcomes of the funding formula recommendations outlined in this research report.

Analysis of the THREE FUNDING FORMULA OPTIONS

One of the principal objectives of Phase One was to identify three different approaches or models to funding FNCFSA – models that would fit the circumstances of multiple agencies serving different size populations and spread out across the country. Through the case studies that were carried out in Phase One, three options were identified:

(1) **Redesign of the Directive:** The existing funding formula, but with the limitations of the formula addressed

(2) **Linking to Provincial Funding Formulas:** Tying the funding of First Nation agencies to the formula used by the province in which the First Nation agency is located

(3) **First Nations Funding Formula:** Developing a new formula from scratch that is specifically geared to the cultures and circumstances of First Nation communities.

The following section outlines how the research supports our recommendation to redesign the Directive whilst providing a foundation for the development of a First Nations based formula over time.

Option One: REDESIGN OF THE DIRECTIVE

The problems with the existing funding formula have been thoroughly documented in the report on the National Policy Review (McDonald and Ladd, 2000). In addition, the critique was subsequently reaffirmed by case studies undertaken in Phases One and Two of our research.

There is very little detail on how the Directive was originally developed and what type of analysis went into its development. It was not reviewed systematically until the completion of the McDonald and Ladd (2000) report and the present research project.

At the time it was introduced, the Directive represented an improvement over the more ad hoc, agency by agency approach that had previously prevailed. However, it soon became evident that there were significant weaknesses in the formula. These weaknesses were due to a variety of causes: 1) uncertainty in what the original rationale was underlying the development of the formula 2) regional interpretations of sometimes vaguely worded guidelines, 3) a failure to implement certain elements of the formula such as the annual inflation adjustment and 4) a failure of the policy to keep pace with advances in social work evidence based practice, child welfare liability law and the evolution of management information systems and 5) the policy appeared to leave out some child welfare

expenses altogether or fund them inadequately such as the failure of the policy to support agencies to provide in home interventions to abused and neglected children to keep them safely at home as opposed to bringing them into care.

When asked about the current rendition of the Directive, First Nations child and family service agency directors, and others approached in Phase One, would often say that they believed the existing formula should be thrown out and a whole new formula more suited to their needs should be developed. Start with a clean slate, in other words. However, when pressed about what a completely new formula would look like, respondents acknowledged that a more complete analysis of FNCFSA would be needed at a national level in order to move in this direction. Over the short term, respondents would typically accept the idea of redesigning the Directive so long as the recommendations of the NPR were integrated into a new rendition and the long term objective of developing a First Nations based formula was actively pursued. Although FNCFSA respondents felt all of the NPR recommendations needed to be implemented in order to ensure equitable and culturally based child welfare services, the lack of in home intervention services for abused and neglected children at all levels of the prevention and response continuum was identified as a priority along with the urgent need to redress losses in funding due to inflation.

Further analysis of the Directive-based option also revealed that the model had some positive features despite the substantial flaws that had been identified. Perhaps the most important of these is that the formula is national in scope, has undergone two national studies, has enabled the development of FNCFSA throughout Canada, and offers a baseline for judging the impacts of possible changes to the current regime. For these and other reasons that are mentioned below when we discuss the alternatives, the research team recommended to the National Advisory Committee that "redesigning the existing formula" be the principle way forward to achieving better funding outcomes for the agencies and, most importantly, better outcomes for First Nation children, families and communities. Much of the remainder of this document is concerned with how the existing formula can be improved.

Option Two:
TYING FIRST NATION AGENCY FUNDING TO PROVINCIAL FORMULAE

Under this option, First Nation child and family service agencies would be funded according to the formula by which the province funds its child welfare agencies. However, FNCFSA would be allowed to develop a range of child welfare programs that respond to the unique needs and culture of their communities whilst respecting statutory requirements. This option would then, determine the level of funding received using provincial formulae, but not the exact shape of programs and services to be delivered

At first blush this appears to be a promising alternative to a national funding approach, especially since First Nation child and family service agencies are expected to provide family and child welfare services equivalent to what provincial agencies provide to other residents pursuant to provincial child welfare statutes. As demonstrated below, however, the evidence suggests that this is the least promising option in terms of positive outcomes, addressing the NPR recommendations and ensuring that funding respects the unique cultures, operating contexts and economies of scale for FNCFSA.

Our research and analysis leads us to the conclusion that this provincial funding approach is fraught with problems and should not be pursued. In Phase Two, we collected information from most provinces about how they fund child welfare, and we undertook an in-depth study in one province to examine in detail how First Nations Child and Family Service Agencies would fare if they were to be funded in the same manner as provincial agencies. The difficulties with the provincial funding approach are the following:

(1) In several provinces, it is not clear what their formula is. If there was an original formula determining how much money different agencies in the province would receive, it has been lost over time and the province

simply builds on its funding base by adjusting annually primarily on the basis of price and volume. Whatever the historical situation, the provincial agencies (whether private non-profit or more directly part of the provincial government) have been established for many years, personnel have changed, and no one appears to know what the original basis for funding was. Decisions about funding levels do need to be made from one year to the next, of course, and these adjustments are typically made depending on changes at the margin considering factors such as numbers of children in care, price increases, changes in statute and historical expense patterns and so forth. Several provinces, therefore, do not offer a clear alternative to the federal funding formula which, despite its flaws and vagueness is at least a documented formula.

(2) Shifting to a provincial funding model in a context where there are rich and poor provinces as well as important cultural and historical differences means that First Nations Child and Family Service Agencies would be funded at substantially different levels and in different ways across the country. This is not a desirable outcome and in fact would be perceived by First Nation child and family service agencies as a regressive step.

(3) Provincial formulae and funding traditions are based ultimately on what the province assesses its needs to be and on what it can afford. These approaches to funding, in other words, are based in large measure on the characteristics and conditions faced by families in need of services. They are not based on the particular needs and conditions faced by First Nation families living on reserve. Yet we know from the Canadian Incidence Study of Child Abuse and Neglect (CIS) that it costs more to service First Nations children and families due to their high needs levels (Trocme, Fallon, McLaurin and Shangreaux, 2005, Trocme, Knoke and Blackstock, 2004.) Specifically, at every decision making point Status Indian children are over-represented in child welfare interventions. For example, they are more likely to be reported to child welfare, experience higher rates of report substantiation, admission to child welfare care and overall require longer and more intensive interventions than non Aboriginal children and families. Furthermore, CIS notes that child maltreatment patterns in First Nations families vary significantly from those of other Canadians in that First Nations children are more likely to be reported to child welfare for structural issues (the neglect factor involving poverty, poor housing and addictions) and that this situation requires different kinds of interventions – primarily in the realm of child welfare related community development and prevention - than is the norm for provincial agencies.

Service infrastructures also differ considerably between First Nations Child and Family Service Agencies at both organizational and societal levels (Nadjiwan and Blackstock, 2003; Blackstock and Trocme, 2005; Royal Commission on Aboriginal Peoples, 1996.) We also know that First Nation communities do not have, to nearly the same degree, the infrastructure of programs, services, volunteer agencies and the like that provincial agencies and their communities have access to. Thus it would not be helpful to apply a formula rooted in one set of conditions to a population whose conditions are substantially different.

(4) Provincial governments change their family and child welfare programs and related funding mechanisms from time to time, and an examination of that experience would support the conclusion that the needs of First Nation agencies and dialogue with them are not uppermost in their minds even though the First Nations agencies are required to adjust their programs and services to the provincial changes. If First Nation agencies were required to offer programs according to provincial child welfare statutes and had their funding determined according to provincial norms, a major concern would be that they would have little or no say in the key drivers (funding and jurisdiction) shaping practice. Provinces do not have constitutional responsibility for "Indians and lands reserved for Indians", and therefore may not view First Nations Child

and Family Service Agencies located on reserve as part of their constituency nor as a major priority.

(5) If provincial funding formulas drove First Nations child and family service agency funding it is unclear what influence, if any, INAC would have over the mechanisms driving costs. It is unlikely that a model where the amount and mechanisms for funding would fall outside the realm of influence by INAC would garner the approval of the Auditor General or Treasury Board.

Of course, in practice, the situation would vary from one province to another. Certainly there are some provinces where relations between the province and First Nations are favorable but even First Nations Child and Family Service Agencies in operating in these situations express concern about the prospect of introducing funding dependence on the province. The concerns are magnified in regions where relations between the province and First Nations Child and Family Service Agencies have been difficult.

We conclude, therefore, that the provincial funding model should not be pursued for First Nation child and family service agencies.

Option Three: DEVELOPING A FIRST NATIONS FUNDING MODEL

Respondents in the earlier research phases spoke positively about the advantages that a new funding model, built from the ground up, to reflect First Nation socio-economic realities, cultural practices and child welfare experience (for example, with best practices) could provide. However, it was also recognized that this would not provide a quick fix to the problems with the existing funding formula. Rather, it would take a considerable time and much better information than is currently available to construct such a model – to document common and varying cultural beliefs and traditions, to compile the many examples of best practice, to accommodate the diversity in socio-economic conditions, and to carry this information into the design of a new funding model.

Our research did shed some light on these dimensions – see, for example, the paper on best practice in strengthening families and communities (prevention and least disruptive measures) contained in the ***Wen:de*** Phase Two report. More importantly, we believe that a number of the steps we are recommending under the heading of redesigning the existing formula will help to move the yardsticks forward in the search of a First Nations funding formula. This is the case in two respects. First, we make a number of recommendations that would, if implemented, make major improvements in the information base to which the agencies and their collective organizations would have access. This includes the recommendation to vastly improve the management information systems of the agencies not only for administrative purposes but also to provide information useful for research, evaluation and strategy development. Secondly, many other changes that we are recommending in the existing formula reflect, not surprisingly given the information sources, a First Nations sensibility and perspective. We argue, for example, that much more attention needs to be given in the formula to strengthening First Nations families and communities. We recommend that staff appointed to work in the area of least disruptive measures and community development should work in the context of a multi-disciplinary team, not only within the agency but with other agencies – hence a more holistic approach. We recommend that funding be devoted to the development of standards so that they reflect First Nation cultures, and so on.

In short, we are supportive of a First Nations formula but we are also realistic in thinking that, for the next few years at least, the best option is to make the necessary improvements in the existing formula while building a foundation to pursue this option in future years.

Overview of RECOMMENDED REFORMS TO DIRECTIVE 20-1

The recommendations for adjustments to the current funding regime for First Nations Child and Family Service Agencies contained in this report are based on the findings of a three phase research project that involved experts in economics, community development, law, sociology, social work, First Nations child and family services, management information systems, psychology, public policy and management. Research methodologies included a balance of quantitative and qualitative research methodologies. The results of specific research projects are outlined in the following two reports:

1) Wien, Loxley and Blackstock (2004). *Bridging econometrics with First Nations child and family service agency practice.* Ottawa: First Nations Child and Family Caring Society of Canada Available on line at www.fncfcs.com.

2) Blackstock, Prakash, Loxley and Wien (2005) *Wen:de: We are coming to the light of day.* Ottawa: First Nations Child and Family Caring Society of Canada. Available at www.fncfcs.com.

Although each suggested change element is presented as a separate item, it is important to understand that these elements are interdependent and adoption in a piece meal fashion would undermine the overall efficacy of the proposed changes. For example, providing least disruptive measures funding for at home child maltreatment interventions without providing the cost of living adjustment would result in agencies not having the infrastructure and staffing capacity to maximize outcomes. Similarly, these recommendations assume that there will be no reductions in the First Nations child and family service agency funding envelope. Situations where funds in one area are cut back and redirected to other funding streams in child and family services should be avoided as our research found that under funding was apparent across the current formula components.

The following recommendations are presented in two separate but vitally interconnected sections: 1) recommendations for policy change or clarification and 2) recommendations for modifications to the current formula. This research project did not specifically focus on the maintenance envelope due to time and resource restrictions so this is an area for ongoing research.

Overall the following recommendations are based on the best available evidence and provide a funding foundation that supports First Nations aspirations to culturally based and equitable child welfare services in their communities whilst incorporating mechanisms to support organizational learning and evaluation.

Policy Change or Clarification Recommendations

The following policy change or clarification recommendations are intended to support the efficacy of the proposed formula adjustments. In many cases these recommendations are cost neutral (e.g.: Jordan's principle, introducing policies to promote interdisciplinary child welfare approaches or clarification of the stacking provision) and in other cases they are adjustments to ensure that legitimate maintenance costs are recognized by INAC staff reviewing agency financial reports (e.g.: clarifying that child welfare related legal and child and family support services related to reunifying children with their families or enhancing extended family relationships for children in permanent care are services provided to other children in care and Canada).

1. Amending INAC policy to allow for interagency collaborative projects in prevention services and in response to extraordinary circumstances (including providing peer support to agencies in crisis).

Mainstream child welfare organizations have increasingly focused on the importance of interdisciplinary practice as a means of both preventing and responding to child maltreatment. This approach is particularly critical in neglect interventions where, as the CIS has indicated, substance misuse, poverty and housing are key drivers of the over-representation of First Nations children in child welfare care. The Directive does not currently support FNCFSA in developing joint

programs with other community experts and this should be changed in order to optimize the efficacy of prevention and intervention services in child maltreatment.

2. Expand the current range of jurisdictional models funded by the Directive to include First Nations legislation.

The current Directive requires FNCFSA to operate according to provincial child welfare legislation. Many First Nations view operating under provincial jurisdiction as an interim step with restoration of First Nations laws being the primary aim. A significant number of respondents in Phase 3 (18%) indicate that they are developing First Nations legislation. Phase 3 findings echo recommendation one of the Joint National Policy Review (McDonald and Ladd, 2000) which called for the expansion of jurisdictional models under the Directive to include First Nations legislation. This step is in keeping with research findings that suggest that the higher the degree of self determination in First Nations communities the more sustainable the socio-economic outcomes (Cornell and Kalt, 1998)

3. Immediate implementation of Jordan's principle for jurisdictional dispute resolution.

Jurisdictional disputes between federal government departments and between federal government departments and provinces have a significant and negative effect on the safety and well being of Status Indian children (McDonald, 2005; Lavalee, 2005). Survey results in Phases 2 and Phase 3 indicate that the number of disputes that agencies experience each year is significant. In Phase 2, where this issue was explored in more depth, the 12 FNCFSA in the sample experienced a total of 393 jurisdictional disputes in the past year alone. Each one took about 50.25 person hours to resolve resulting in a significant tax on the already limited human resources.

The most compelling reason to implement Jordan's principle is Jordan. He was a little boy who lived in a hospital instead of a home because two governments could not decide who should pay for what. Jordan died having never experienced a home environment – not because he was too ill to be in hospital. Not because there wasn't a loving and skilled home for him to live in. He died without living in a family home because two governments put themselves first and him second.

Jordan's principle asserts that governments must fund services to Status Indian children that are normally available to other Canadian children without disruption or delay. The government department (federal or provincial) that first receives the request to pay for the service must pay and then has the option of referring the matter to a jurisdictional dispute table for resolution.

4. Integration of Jordan's principle into any funding agreements between INAC and the provinces respecting federal funding for child welfare.

Provinces draw a significant amount out of the INAC First Nations Child and Family Service funding pool to support their service provision to Status Indian children on reserve. The vast majority of the provincial billings are for communities not served by FNCFSA. The provinces are also implicated in a large number of the jurisdictional disputes where children are impacted. This cost neutral recommendation calls for requiring provinces who receive INAC funds for child welfare to adopt Jordan's principle to resolving jurisdictional issues.

5. Validation for the need for research and mechanisms to share best practices at a regional and national level through the creation of knowledge transfer (conferences/ best practice forums/communications) and research budgets.

Organizational learning is essential to optimizing the efficacy of service provided by a FNCFSA. Keeping abreast of innovations in First Nations child and family service research, policy developments and practice and peer learning supports best practice. The First Nations Child and Family Caring Society of Canada estimated that in 2004 the national allocation of research monies to support First Nations investigations in child welfare was less than $400,000. INAC alone spends over 300 million on this program per year – creating an evidence base to maximize benefit of

the social and economic benefit just makes good sense and good practice. The proposed research fund would reflect a one dollar investment in research for every $300 in child welfare costs – a modest expense in light of the benefits over the short and long term.

6. Consistent with the UN Permanent Forum on Indigenous Issues, INAC commits to collecting disaggregated data by Aboriginal cultural group and encourages other federal departments to follow suit.

The United Nations Permanent Forum on Indigenous Issues (2005) has repeatedly called for the collection of disaggregated data on the experiences of Indigenous peoples. The importance of collecting disaggregated data by cultural group is borne out in the Canadian Incidence Study on Reported Child Abuse and Neglect findings. Had CIS not collected data on Aboriginal children – then the disproportionate rates of neglect would have not been identified. If CIS not collected disaggregated Aboriginal data on First Nations, Inuit and Métis children we would not have learned of the overrepresentation of First Nations children coming to the attention of the child welfare system.

Disaggregated data allows the experiences of specific populations to be told and researched further. In the case of First Nations child welfare, having available a broad base of research that specifically describes the experiences of First Nations children and families would augment understanding of reasons why First Nations children come into care and what their experiences are throughout the care continuum – with an object of better defining policies.

7. INAC to clarify the provisions of the stacking provisions in current funding arrangements with FNCFSA and make necessary amendments to ensure that FNCFSA can access voluntary sector funding sources to augment the range of resources they can provide without a financial penalty being imposed by INAC.

The voluntary sector receives approximately 90 billion dollars in revenue per annum from governments, foundations and corporate/private donors to support a broad range of services for public benefit including child, youth and family supports. A national study completed by Nadjiwan and Blackstock (2003) confirmed FNCFSA reports that there was negligible evidence that children on reserve were being serviced by the voluntary sector nor that First Nations child and family service organizations on reserve were receiving any where near sufficient benefit from the 90 billion dollars in annual revenue. Phase two survey results reported in ***Wen:de*** indicate that one of the key barriers First Nations Child and Family Service Agencies see in accessing voluntary sector funding is the lack of clarity amongst regional INAC staff in terms of whether to apply the stacking provision when FNCFSA receive voluntary sector supports or not. In mainstream society, voluntary sector supports augment, not replace, the services provided by governments. Applying the stacking provision in situations where FNCFSA receive voluntary sector funds to augment the range of services they provide is entirely inappropriate and inconsistent with national practice. It is recommended that INAC clarify in its policy that the stacking provision does not apply to voluntary sector sources of funding.

8. INAC to clarify that legal costs related to children in care are billable under maintenance.

Child welfare statutes throughout Canada require that social workers who remove a child or apply for a warrant must notify, and often appear, before the Courts. These proceedings are legal in nature and guided by provincial child welfare laws and court rules. In some provinces, child welfare costs are incurred as a part of being required to participate in inquests, or for the child him or herself to have legal representation. It is not appropriate for social workers to appear without legal counsel or to deny children in care their statutory right to have legal counsel (where it exists) nor is it an option to forego the court process. In some regions, FNCFSA have reported that regional INAC staff disallowed child welfare legal expenses under maintenance. There is no evidence to suggest these costs are covered elsewhere in the formula and they are an expense that is directly related to complying with statutory requirements to remove a child and to apply for ongoing orders. It is therefore

recommended that INAC clarify in its policy that child welfare related legal costs are eligible for reimbursement under maintenance and this would include:

- **Costs related to bringing children into care and applying for ongoing orders or warrants under child welfare statutes**
- **Costs related to mandatory participation in inquests, coroners hearings or other related processes.**
- **Costs related to providing legal counsel for children in child welfare proceedings in regions where such statutory requirements exist (i.e.: Alberta)**

9. INAC to clarify that support services related to reunifying children in care with their families or enhancing extended family relationships for children in care are billable under maintenance.

All provincial statutes require that support services be provided to children in care when they are removed or in temporary care in order to optimize their chances of returning safely home. Moreover, the provincial child welfare statutes require that social workers act as guardian to children in care – this means providing services to the child in care that they need such as counseling services, cultural and language programs, mentorship, wellness programs, specialized treatment, preparation for independent living services. These services are related to the statutory obligation of social workers to optimize the child's potential to return home and part of the due diligence of a responsible guardian.

Moreover, the guardianship responsibility extends to children in continuing custody as the social worker (acting for the agency) must provide guardianship for the child and thus make available services of any reasonable parent. Recommended increases in prevention and LDM services contained elsewhere in this report are provided to families and children living in their homes and the families of children in care. The recommended increases in funds are not intended to cover the full range of supports needed by children in care.

INAC should clarify with its staff that services provided to children in care for the purposes of optimizing their opportunity to return home or as part of the guardianship responsibilities that social workers have to ensure that children in care are provided the supports that they need to be healthy, happy, and safe are billable under maintenance.

These policy amendments are interdependent with the following reforms to the structure of the Directive. They are designed to compliment and optimize the economic reforms recommended below. Most of all they are designed to make a difference for First Nations children and their families. This is especially true of Jordan's principle – his life stands as an inspiration for governments to do better- much better -for First Nations children.

ECONOMIC REFORMS to the Funding Formula (Directive 20-1)

The economic analysis of the implications of each change in the formula is presented assuming that there are 93 First Nations Child and Family Service Agencies in Canada (exempting Ontario.) Please note that the calculations reflect a per agency cost and have not, with the exception of the small agency adjustment, capital costs, the fixed amount and prevention (by virtue of it being contingent on a proportion of the budget) been weighted to reflect varying agency costs. Weighting to account for agency size can be done at a later date and will not affect the overall cost of each adjustment.

1. Inflation Adjustment

The INAC operating formula does not give annual adjustments for cost of living increases. This is considered by many to be a major weakness in the formula, one which leads to both under-funding of services and to distortion in the services funded since some expenses subject to inflation must be covered, while others may be more optional. But how much has this failure to adjust for inflation cost First Nations Agencies since the last adjustment in 1995?

Table 1, shows that the Consumer Price Index, the most widely accepted indicator of cost of living increases, rose from 104.2 in 1995 to 126.3 in 2005 (May). If the starting point in 1995 is expressed as 100, then the index in 2005 rises to 121.21 (i.e.

Table 1: Increases in the Consumer Price Index

CPI	Year	CPI set at 100
104.20	1995	100.00
105.90	1996	101.63
107.60	1997	103.26
108.60	1998	104.22
110.50	1999	106.05
112.50	2000	107.97
116.40	2001	111.71
119.00	2002	114.20
122.30	2003	117.37
124.60	2004	119.58
126.30	2005	121.21

(1995-2005)
Source: Statistics Canada

prices increased by 21.21% over this ten year period when no adjustments were made for inflation by INAC).

We know, therefore, that had cost of living adjustments been made annually since 1995, then funding would have been higher in 2005 than in 1995 by 21.21% purely on account of inflation (i.e. ignoring any increase in the number of children, number of agencies etc.) If we adjust the funding data for each year by the cost of living index in Table 1, we can calculate what funding would have been in each year had inflation protection been available. Table 2 in Appendix A shows what this would have been for each INAC region from 1999 to 2005 and the difference between this and actual funding, representing lost revenues from INAC for child welfare operations. Table 2 also shows the total funding, what that total would have been had the inflation adjustment been provided and what the difference is in total for all regions. It shows that between 1999 and 2005, failure to adjust for inflation cost First Nations agencies (in the six INAC regions excluding Ontario) a cumulative total of $94.7 million in operations funding.

For the year 2005, operations funding would have $121 million instead of $99.8, or $21.17 million higher than funding actually provided. While the National Advisory Committee accepts, reluctantly, that losses in previous financial years are water under the bridge, it also feels strongly that this year's funding should be increased by 21.2 per cent to restore this year's purchasing power back to 1995 levels and that inflation coverage should be reinstated into the formula to avoid losses going forward. **The cost for 2005 would be $21.17 million.**

INAC has advised that it uses the Final Domestic Demand Implicit Price Index (FDIPI), however, this index does not appear to have been broadly recognized or utilized to reference cost of living adjustments nor does it appear to have relevance to child welfare related costs. Applying the FDIPI does appear to result in a lower inflationary adjustment but this is largely the result of it not being designed to offset costs actually incurred due to inflation. What brings the index down below the CPI are machinery and equipment, durable and semi-durable goods, imports and business fixed investment. Very little of this is relevant to First Nations Child and Family Service Agencies. The real price increases faced by agencies are much better reflected in the CPI.

2. In Home, and Community, Interventions for Abused and Neglected Children (Prevention and Least Disruptive Measures)

One can not fully conceive the impact that prevention, wellness and least disruptive measures can have on a Nation, community, family and child – because the federal funding formula for First Nations child and family services under funds this critical range of services. The social responsibility of giving all children chances to succeed is of a serious nature and a priority for First Nations. Caring for, and supporting, tomorrow's leaders is a major focus in the *Wen:de* report, as voiced by the First Nation's child and family agencies. A major factor in preparing these leaders is providing services that meet the needs of these children and families in their communities, and not only in crisis situations or when a problem has been identified. Instead, agencies are committed, given the appropriate

resources, to providing opportunities for the wellbeing and growth for all First Nation's children and families.

Currently First Nation's child and family agencies feel they can not fully meet the needs of the children and families due to lack of human and financial resources, and jurisdictional issues that interfere with the impact each of the agencies can have in their communities. The issues raised by FNCFSA providers demonstrate the tangible effects of funding limitations on the ability of agencies to address the needs of children. Without funding for preventative and related services many children are not given the service they require or are unnecessarily removed from their homes and families. As indicated in the ***Wen:de*** report, in some provinces the option of removal is even more drastic as children are not funded if placed in the care of family members. The limitations placed on agencies quite clearly jeopardize the well-being of Aboriginal children and families. As a society we have become increasingly aware of the social devastation of First Nations communities and have discussed at length the importance of healing and cultural revitalization. Despite this knowledge, however, we maintain policies which perpetuate the suffering of First Nations communities and greatly disadvantage the ability of the next generation to effect the necessary change. The cost savings of investing in preventative programs are huge and were indicated in a special phase two study which showed that savings of up to $1.5 million per annum in the sample agency can be achieved through investments in prevention programs.

The Joint National Policy Review of First Nations Child and Family Services (NPR) (McDonald and Ladd, 2000) confirmed that the current funding formula, Directive 20-1 (hereinafter called the Directive), did not provide sufficient funding for First Nations Child and Family Service Agencies to deliver culturally based and statutory child welfare services on reserve to a level comparable to that provided to other Canadians. The NPR confirmed First Nations child and family service agency concerns that the Directive did not adequately fund in home interventions for abused and neglected children known as least disruptive measures. These services are required by child welfare statute in order to give children the best chance to live safely at home but are not available on reserve due to deficiencies in Directive 20-1.

Certainly the issue of service differentiation comes into play, as a First Nations child will not receive the same service on and off reserve. As noted in the ***Wen:de*** document, considering the provincial and federal government's jurisdictional debate could be characterized as a shirking of responsibilities that amounts to inequitable treatment of First Nations and is therefore in violation of section 15 of the Charter. Arguably child protection laws are applied differently on reserve (due to lack of adequate funding) than off which constitutes inequitable treatment based on race and residence. Despite persistent pleas from Aboriginal people that their interdependent needs be served by holistic services, the service environment continues to be fragmented between federal and provincial levels of government, between departments and ministries, and among service agencies in community.

A shift in funding mentality is vital. An approach that invests in the community and engages the community at all levels – children, adolescents, youth, parents and Elders means directing resources at growth and development of the people rather than the breakdowns of the people in the community. This approach demonstrates long term commitment to the growth of a child and family and invests in the future of contributing members to society. Three options were presented in the ***Wen:de*** document (Chapter 4) and were presented to the National Advisory Committee on August 30, 2005. The NAC rejected option 2 outright because linking prevention services to numbers of children in care could produce a "catch 22" situation where the prevention programs are effective and thus the funds for these programs are decreased

to a point where they can no longer be offered. This could potentially mean the withdrawal of the supports that were resulting in the decrease in children in care and create conditions for the numbers of children in care to ramp up again. Option 3 was favored by some participants as they liked the accreditation format, however, as noted by some NAC participants this option would require the development of standards, and a process for assessing accreditation levels. This would likely be a long term exercise delaying benefit of funding for children and families in need. Option one was favored by the majority of NAC participants but a suggestion was made to phase in the funding over time to account for the varying levels of agency development and preparedness to implement prevention services. The research team, in consultation with the Assembly of First Nations, the First Nations child and family service representative, Donald Horne, and the Department of Indian Affairs elected to select option one whilst incorporating the NAC recommendation to phase it in over a period of seven years. The development of accreditation standards and processes can be explored over the longer term.

Option #1: A Multi-disciplinary Approach To Funding

Of the three possible approaches to promoting community and family wellness, least disruptive measures and prevention that were outlined in Chapter 4 of *Wen:de*, option #1, a multi-disciplinary approach to funding has been selected as the preferred option. Under this approach, teams would work with communities to design prevention programs appropriate to the ability of the agency to implement them and according to the absorptive capacity of the community being served. For every so many statutory workers, the team must include a number of funded prevention or community development worker positions. Staffing can be broken down into various groupings but what is being proposed is that one grouping should consist of staff working on enhancing least disruptive measures (L.D.M.'s), and another on prevention and community development. This is a multidisciplinary team approach. Communities would have inter-agency meetings to collaborate on prevention etc., and the community development and prevention workers would sit at the table, together with representatives of education, health, economic development and other agencies to help work out programming. The prevention worker must be offered a similar salary scale to other professional staff on the team. Finally, a funding formula has to consider that a multidisciplinary team approach takes up more staff time to get the job done, due to ongoing collaboration.

Assumptions:
(Related to the calculations on the spreadsheet Opt#1 Assumptions)

Option #1 in Table 3 in Appendix B calculates the incremental operational funds that are requested by First Nations Child and Family Services agencies for the implementation of comprehensive L.D.M.s and prevention programs, based on a set of assumptions listed below. This option assumes that the increased staffing needs will be phased in incrementally at a rate of 50 percent in Years 1 and 2, 90 percent in Years 3 and 4, 95 percent in Years 5 and 6, and 100 percent after Year 6. This reflects the view of the NAC of how prepared different agencies might be to design and implement these programs. The spreadsheet in Appendix B "Option #1 Assumptions" provides calculations of the increased staffing needs for each agency in Manitoba, which is then extrapolated to the national level on worksheet "Option 1".

Table 3 makes the following assumptions.

- The new staff positions for child care workers will be determined based on 0.4% of child population 0-18 and resource workers 0.2%, as opposed to a measure of the CIC. (The starting point for these ratios is, however, INAC's assumption of 6% children in care and 1 worker for every 20 children in care i.e.1 worker for 6%/20 = 0.3% of child population).
- Staffing positions related to least disruptive measures include child care workers, family support workers and resource workers. Supervisory and administration costs are calculated for these specific positions. Likewise, prevention staff includes prevention and community economic development workers,

as well as outreach and advocacy workers. Supervision and administration are separated out for the prevention workers, as well.

- Discount rate – 8% is calculated as follows: 10% recommended by the Treasury Board of Canada less 2% inflation, since inflation which affects both the costs and savings is excluded; The discount rate is used to calculate the present value (in today's dollars) of both the incremental costs of these initiatives and the incremental savings that result from them in terms of reduced maintenance costs over time.
- Travel costs – 15% of gross salaries; benefits – 15% of gross salaries;
- Assumption concerning the number of foster homes – 1.5 children for each foster home based on Manitoba rates (this is a rough approximation of northern and southern regions). The calculation of one resource worker for every 20 foster homes approximates 0.2% of the child population 0-18;
- An inflation increase for past costs is not included in this analysis;
- Prevention/Community Development Worker – currently, agencies are funded 2 workers. These staff positions are increased to 1 per band;
- Child Care Workers – adjusted the current ratio of 1 to 20 CIC to 0.4% of child population 0-18;
- Family Support Workers – adjusted the current ratio of 1 to 20 MPFs to a ratio of 1 to 15 MPFs;
- Outreach/Advocacy Workers – added one full-time staff position to each agency;
- Supervisors: one incremental supervisor for every five additional staff;
- The administrative overhead charges of 15% are for administration and accounting staff, rent, utilities and other general overhead. The rate of 15% is a commonly applied rate;
- Salaries are based on rates provided by West Region Child and Family Services;
- Projected savings: assume the child population (0-18) growth rate is 3.5% for Years 1-6, and 3.0% after Year 6; it is assumed that the investment in LDMs and prevention is recouped as the population growth (0-18 years) does not result in additional children entering formal care after a phasing in period;
- Assumed the annual cost for maintaining a child in formal care totals $20,000 (based on West Region Child and Family Services rates);

Results

The detailed calculations for Manitoba, when proportioned up to national level (six regions) show that expenditures would have to increase as follows:

Expenditure Increases over the Current Level of Funding at the National Level

	Year 1	Year 2	Year 3	Year 4
Amount	$34.7m	$34.7m	$62.5m	$62.5m
Percent increase	34.8%	34.8%	62.7%	62.7%
	Year 5	Year 6	Year 7 on	
Amount	$66.0m	$66.0m	$69.5m	
Percent increase	66.1%	66.1%	69.6%	

In year 1, **additional spending on these measures would be about $35 million, rising to $62 million two years later, to $66 million by year 5 and peaking at $69.5m by year 7.**

The spreadsheet in Appendix B assumes that savings in terms of reduced maintenance expenditures will take time to materialize but that eventually, after about 42 years, they will exceed the costs of the program in present value terms. If, as some propose, a lower rate of discount be used, say one of 3.5% rather than 8%, the savings from these programs would be much larger in present value terms and the expenditures on wellness, prevention and least disruptive measures, would pay for themselves within 29 years. This emphasizes the long-run nature of the problem

First Nation's agencies in the Phase 3 survey indicated they require on average $305,000.00 per year to adequately meet the needs of prevention and an additional $210,000/yr is needed each year for least disruptive measures, but the detailed costing in Table 3 show that this is a

gross underestimate of what a comprehensive program would cost and, no doubt, reflects modest expectations after years of under-funding.

We are living at a time when many First Nations communities are suffering from the permanent loss of their children and young people – the fabric of their communities. Culturally based programs that support community efforts to safely care for their children and families are imperative. Given the strong evidence supporting preventative and in home services provided in the *Wen:de* document and the support for further investments in this area indicated by Phase 3 survey participants, First Nation's child and family agencies, **it is recommended that initial allotments of $35 million be provided in years one and two to support agencies in developing strategic plans and program designs for the continuum of prevention programs. These funds would also support staff recruitment and development. In summation, an allocation of $62 million for years 3-4 to support the operation and evaluation of these programs is required to move forward with this recommendation.**

3. Small Agency Adjustments (Agencies with Status Indian Child Population below 801)

The FNCFS Joint National Policy Review (2000 p.13) found that "The formula does not provide a realistic amount per organization for agencies serving small on-reserve populations. To agencies serving an on-reserve 0-18 populations of less than 801, and particularly those that are serving even smaller populations, the formula did not provide realistic administrative support." This complaint, which refers to the fixed amount per agency or the provision for overhead, has been echoed by others during the formula review process. It has two separate components. The first is that no agency representing communities with a combined total of 250 or fewer children receives any overhead funding whatsoever. The second problem is that available funding is currently fixed in three large blocks viz: 25 1-500= $ 35,790; 501-800= $ 71,580 and 801 – $143,158. A slight increase or decrease in child population can result, therefore, in a huge increase

or decrease in overhead funding available to agencies.

To deal with these shortcomings, two reforms are proposed. The first is to extend overhead funding to agencies with populations of 125 and above. Using INAC's rule of thumb, this would suggest agencies dealing with 7 or more children in care and 5 multi-problem families should receive some overhead funding. It is proposed that a minimum of $20,000 be made available to the smallest agency representing 125 children.

The second proposal is to abolish the step increases and to give agencies additional funding for every 25 children in excess of 125 to a maximum of 800. This smoothing of the fixed amount is achieved by fitting a quadratic function to the data in the rage of $20,000 to $143,158 meaning that all agencies would receive enhanced funding up to the maximum but that smaller agencies would receive slightly more absolutely (and even more proportionately) than larger agencies. The results of this function (which is expressed as Y= 20,000 + 4635X – 2.7625X2) are shown in Table 4 in Appendix C. When this is fitted to small agencies, 6 agencies would still be too small to receive any fixed amount: 8 small agencies which never before received a Fixed Amount would now do so. In addition, 23 agencies of medium size would receive funding increases and 56 large agencies would receive no change in the Fixed Amount for purposes of this specific, size sensitive adjustment exercise. **The total cost of this proposal would be $1,214,000.**

We are recommending that existing small agencies continue to be supported according to the new proposed funding guidelines. In future, however, we believe that a minimum economy of scale is required to provide a basic level of child protection

and support services. We recommend that future agencies have a minimum size to support three social workers, administrative support, a supervisor and an executive director it is clear that not all communities will be in a position. In keeping with the caseload size recommendations of the Child Welfare League of America (2005), 36 active cases (intakes) per month for the three social workers with a recommended aggregated caseload of (active and inactive files) not to exceed approximately 51 family service files.

4. Operations Base Amount (Currently at 143K per annum)

In addition to the Fixed Amount not being adjusted for inflation or accessible to small agencies, there is a widespread complaint, dating back to when the formula was first introduced, that it was set at a level insufficient to cover necessary overhead costs (basic operating costs). Although it was, in theory, supposed to cover the costs of a Director, Secretary and Financial Officer, only $95,000 in total was allowed for these (Joint national Policy Review, 200, pp. 83-84). Indeed, we estimate that the costs of the items supposedly covered by $143,000 amounts to more than $250,000 today (Table 5). In addition, no provision was made for a janitor or a human resources person, both of which are needed by larger agencies. Neither was provision made for security of buildings or personnel, and inadequate amounts were provided for records management which has assumed huge proportions, for liability insurance up to $ 1,000,000, and for legal fees for routine business.

The total cost of all these items, taken together, is about $357,400, rather than the $143,159 that was provided to large agencies. However, not all of the difference needs to be funded because agencies do receive a modest amount for remoteness, about $2,500. As well, our proposals call for an inflation adjustment, a remoteness adjustment and some funds for evaluation (see Table 6). These need to be deducted from the shortfall, leaving a funding deficiency of $165, 592 for an agency with 801+ children.

TABLE 5 - Why The Fixed Amount Is Inadequate

	Base		
	Director Salary and Benefits		$88,550
	Travel		$8,500
	Secretary		$41,400
	Financial Officer		$58,650
	Audit		$8,500
	Legal Costs		$5,000
	Organization development		$20,000
	Training of Placement Resources		$10,000
	Evaluation		$10,000
			$250,600
	Adjustment		
	Janitor		$22,600
	Security		$5,000
	HR person		$45,200
	Liability Insurance		$9,000
	Records management		$10,000
	Legal	$20,000-5,000	$15,000
			$106,800
	Required		**$357,400**

TABLE 6			
Proposals			
Old Fixed Amount			$143,159
Ave Remoteness		0.276	$2,549
Inflation			$30,890
Remoteness Adj. Ave		0.0364	$5,211
Evaluation			$10,000
			$191,808
Shortfall			$165,592

Table 7 adjusts the limit of the Fixed Amount for these items to a new limit of $308,751. Adjusting this new maximum for agency size would be accomplished by applying the new weights. The minimum Fixed Amount, for the smallest eligible agency, would be the $ 20,000 referred to in section 4b increased by the proportion 308,751/143,159 = 2. 157 x 20,000 = $43,182. Agencies with children between 125 and 800 would receive steadily increasing amounts (fitted by the function Y = 43,182+100.00X-6.0784X2). The results are to be found in Appendix D. These amounts were then applied to agencies of different sizes and the incremental cost calculated. All 87 agencies representing child populations of 125 or more would receive an increase and **the total incremental cost would be $12 million.**

5. Children in Communities Not Served by FNCFSA

There are some communities that are too small or remote to operate a First Nations child and family service agency. Under the current formula they receive nothing and yet their children are just as deserving of culturally based services as First Nations children in large communities. CIS 2003 research indicates that First Nations children on reserve (and thus disproportionately served by FNCFSA) are three times more likely to be placed in a culturally based placement than First Nations children off reserve (and thus disproportionately served by non Aboriginal child welfare agencies).

We are recommending the establishment of a national pool of one million dollars per annum to which First Nations communities not served by a FNCFSA can apply to provide family support, foster home recruitment services or child and youth supports. An administrative structure such as the one described to solicit and review proposals for research could be implemented.

6. Remoteness Factor

The current remoteness adjustments in the INAC formula apply differentially to the Fixed Amount, the Band Amount and the Amount per Child. On average, they compensate more remote agencies significantly more than they do less remote agencies. This is as it should be and is the whole point of the remoteness adjustment. Table 8 shows for a sample of agencies what the remoteness adjustments amount to on average for 2005-2006 and the progressiveness of the adjustment is evident.

TABLE 8	
Average Remoteness	**% Remoteness Adjustment on Average**
0.800	0.08%
0.220	2.70%
0.850	8.60%
1.265	13.90%
1.650	19.00%

In spite of this, the remoteness adjustments suffer from a number of weaknesses. The first is that the average adjustment is considered by most agencies to be too small to compensate for the actual costs of remoteness. Over 90 per cent of those sampled complained that the adjustment was inadequate. Secondly, the remoteness index is based on accessibility of the nearest service centre but these are usually business centers which are not necessarily able to offer specialized child welfare services. Thirdly, the relative size of the remoteness adjustment varies between the three amounts to which it is applied and there seems to be no obvious logic to this. Finally, the remoteness index is an average across communities for each agency and this average is not weighted by the size of the communities involved. This leads to some communities receiving less than their population warrants and some receiving more.

Each of these problems was studied but in the end, it was decided to address only the first two. Changing the weights applied to the three amounts to which remoteness is applied would likely lead to difficulties in budget implementation because a single, uniform rate would lead to an increased rate for the Child Amount and reduced rates for the Band Amount and the Fixed Amount. It was felt this might affect the latter two significantly more than the first and cause budget implementation difficulties because specific activities are funded by these two amounts. It was also felt that weighting average remoteness by child population in each community would be a superior approach but, after applying it to a sample of agencies, it was concluded that the net effects were minimal whereas the tension caused between agencies might be significant, as some would gain and some would lose. On balance, a decision was made to continue current practice.

Two changes are being proposed to the Remoteness Adjustment. The first is to introduce an across the board increase in remoteness allowances, each component spending category being increased by the same per cent. This would then be rolled into base revenues and carried forward into subsequent years. The second component is to adjust the index from the current service centre based to a city centre base.

In arriving at the first adjustment, it was felt that the current average per cent adjustment for remoteness is too low for the most remote agencies. The costs of remoteness are closer to the 25-30 per cent range for these communities/agencies than they are to the current 19 per cent. At the same time, less remote agencies do, in reality face higher costs than urban centers. They are claiming it costs them an additional 6 per cent while agencies as a whole claim that remoteness costs them on average, an additional 18 per cent. We feel that these numbers are on the high side. Instead, we would recommend an across the board remoteness increase of 3 per cent for the least remote rising to a maximum of 8 per cent for the most remote, roughly in line with the geometric average increase requested. For agencies in between, we would again fit a quadratic function to smooth out the increases, as shown in Table 9.

In Table 10, Appendix F, these increases are allocated to each agency in each region, according to their current index of remoteness. It can be seen from this table that **the total cost of this adjustment will be $4 million per year.**

Table 11, Appendix F conducts exactly the same exercise as Table 10 with one amendment, which is that service centers are switched to city centers where appropriate (in bold letters). Most of these adjustments take place in BC, Atlantic and Alberta's and mainly affects less remote agencies. **The total cost of doing this will be $95,734 per year.** There are, however, a few caveats that need to be made about this adjustment. First of all, since no detailed distance maps exist for First Nations, the calculations are very approximate. Secondly, not all distances could be measured from the available maps, so no adjustments were made for 50 communities, out of a total of 395 (Table 12). If these communities had the same proportion of changes in remoteness as the 395 had, then the figure of $95, 734 might rise to somewhere close to $108,000.

7. MIS Capital Costs

In *Wen:de - We are Coming to the Light of Day*, the report on Phase 2 of this exercise, Chapter 5 identified the precise capital and other spending needs of First Nation agencies in the Management Information Systems (MIS) area. It laid out a

TABLE 12

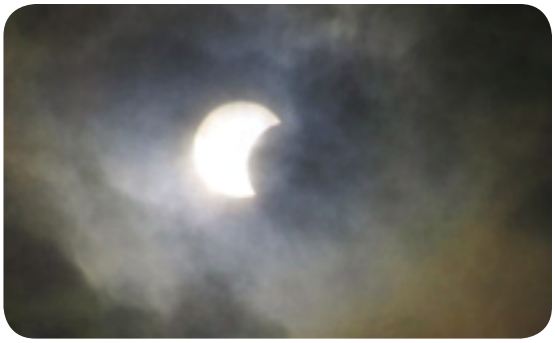
	Total Number of Communities	# of Communities with changes in Remoteness	# of Communities Not accounted for
Manitoba	57	2	0
Alberta	53	15	3
Atlantic	44	19	0
Saskatchewan	69	7	0
British Columbia	153	41	46
Quebec	19	8	1
	395	92	50

template of appropriate hard ware and software for three types of agency: Type A, which has one location only and employs less than 75 computers; Type B, which again has one location only but has 75 or more computers and Type C, which has multiple locations. Packages of appropriate equipment and supplies were proposed for each and, for Type A agencies, two options were presented, one of which involved using a Microsoft Server 2003 and one which involved using a Microsoft Business Server. These options are outlined in ***Wen:de*** Chapter 5, as are the specific equipment and supplies to which they relate and their detailed costs. That chapter makes the general point that agencies sampled are using inadequate, outdated and inappropriate systems. The question is, how much would it cost to update all agencies so that they can manage their internal data systems and their external reporting systems satisfactorily?

In this phase of the exercise, Stanley Loo's template was applied to each agency in the six regions being reviewed. It was necessary, though difficult, to do this because, as he points out in Chapter 5 of ***Wen:de***, the needs of each agency are quite specific and must be addressed individually.

The spreadsheet, Table 13, in Appendix F shows estimated capital needs related to MIS for all agencies. It begins by laying out the Stanley Loo template. One complication of that template is that we do not know which agencies have access to which form of internet service provider (Group B costs). In what follows, it was decided that less remote communities should be able to use the best option, Cable ISP or the second best option, DSL ISP, and that more remote communities would have to use the most expensive option, the satellite dish. Based on an assessment of agencies with which researchers are familiar, it was decided that all agencies with an average remoteness index of 0.22 or higher, should be considered 'more remote' and their MIS needs are budgeted on the assumption that they would require satellite dishes.

For Type A agencies it was assumed that Option 1 would be adopted, i.e. the one using the Microsoft Server 2003. It was assumed that all agencies would be eligible for the Special Prices for Charitable Agencies. It was also assumed that



minimal packages only would be used and not those involving the purchase of optional items. As it happens, there are only Type A and Type C agencies operating in the six regions under review.

In order to cost out the MIS packages it is necessary to know how many staff are working with each agency. Since that information is not available, it was estimated using the assumptions that 65 per cent of all funding of each agency would be attributable to staff costs and that, on average, each staff person would cost about $48,000 with benefits. Thus, an agency such as Attikamek-Sipi in Quebec, with an Operating Budget of $1,302,636, would be estimated to have (1,302,636 x 0.65)/48,000 = 18 staff.

Using these assumptions, the template is applied to each agency in each region and the resulting MIS costs are calculated. **The total for all regions is $5.62 million.**

This amount is calculated as a pool amount and is best understood as being the amount of money needed to outfit each agency with the recommended package of MIS hardware and software. This money would be spent as agencies verify the accuracy of these estimates and in some order of priority of need. Since important portions of spending are for items with life spans of 4 to 7 years, the pool would need to be replenished periodically. If the idea of a capital pool for MIS is not acceptable, then initially the amount needed should be drawn over 2 years so that all agencies can have systems up and running by 2008. **This would imply an annual draw of $2.81 million in each of 2006 and 2007.** Thereafter, an annual amount would be needed to continuously upgrade equipment from roughly 2010 on.

It must be stressed that the estimated costs of MIS capital are based on estimates of current staff

levels. If other recommendations in this report are accepted, such as those on inflation and Least Disruptive measures/Prevention, staff cadres would rise, and MIS costs would rise accordingly. We estimate that MIS pool costs would increase by a further $3.5 million or the annualized costs by $1.75 million.

8. Capital Costs
(Buildings, Vehicles And Office Equipment)

In the questionnaire circulated as part of this project, agencies complained about the inadequate state of repair and accessibility of their buildings. The range of responses in terms of additional dollars needed to fix their problems was quite wide so the average or mean amount requested, at $340,000 per agency, is not very meaningful. If, however, this skewness is adjusted for by calculating the geometric mean, a more meaningful, much lower, average is arrived at. In terms of fixing both head offices and other buildings, an average amount of about $111,000 per agency is indicated. This suggests that a capital fund of some 93 x $111,000 or **$10.3 million might be needed to fix up the buildings of all agencies.**

Currently, some accommodation for capital needs is supposed to be built into the funding formula, at the rate of 13 per cent of gross salaries and benefits. If the proposals to adjust the funding formula are accepted, salaries and benefits would rise and this capital/rent provision would also rise and some portion of the $10.3 million would be automatically funded from this source. To avoid double counting, this amount must be estimated and deducted from capital needs. To do this, the salary component of adjusted revenues must be calculated and 13 per cent deducted from this estimate of capital needs. This is done in Table 14, Appendix G. It shows that, if the adjustment proposals are accepted, First Nations Child and Family agencies can expect to receive an extra $55.4 million in salary and benefits funding. This would require that $7.2 million be set aside for rent etc. However, some $3.49 million of that would be funded in the amounts covered by the Adjustment proposals. This would reduce capital needs by that amount, or to $6.8 million. It is proposed that a capital pool of roughly this magnitude is established to meet the capital needs of First Nations child welfare agencies. This would be accessed by agencies according to the urgency of their need and over a period of some years. It would be available for major capital renovations, improving accessibility and acquiring new buildings.

A tentative proposal for allocating these funds (the pool of $6.8 million and the increase in funds available for capital through our salary proposals, i.e.: $3.49 million, for a total of $10.3 million) is to be found in Table 15 in Appendix G. It is proposed that the allocation be on the basis of agency size. Agencies are weighted by their child population in groups of 335 children, roughly the number needed under the current INAC formula to justify hiring 1 staff member (6% children in care (CIC) and 1 worker for every 20 CIC = 1 worker for roughly every 335 kids). Each agency is weighted by the number of children/335, so an agency with 1600 children would receive a weight of 4, one with 770 a weight of 2 etc. All the weights are summed, amounting to 392 and the $10.3 million capital allocation is divided by this number, giving the amount of money each agency would receive for each 335 children it represents. This amounts to $26, 276, which is what each agency with 335 or less would receive. An agency with 670 to 1005 children would receive $78,827 and an agency with 2,200 children would receive $183,929. The average amount would still be $111,000, but allocating by child population makes more sense than giving all agencies, large and small, the same amount of money.

In addition to these monies, the extra staff and salaries proposed under New Funding Streams would require **$3.7 million annually** in provision for rent etc, which is not included in the capital pool estimate, nor provided for in the detailed estimates of the New Funding Streams proposal. This must be provided for separately.

One possible way of making capital funds go further would be for agencies to use them to make down payments and subsequent mortgage payments for new buildings/renovations funded by credit. This would allow these funds to lever considerably more capital funding. Thus, if the whole $6.8 million were spent and used to cover a

20 per cent down payment for 20 years, $200,000 mortgages at say, even 6.5 per cent per annum, the fund could cover the down payments and the annual principal and interest payments (of $18,150 per $200,000) on many such loans in total amounting to $23 million. Alternatively, and perhaps more reasonably in this context, capital expenditures worth $6.8 million could be funded through 20 year, 6.5 per cent mortgages, with a 20 per cent deposit, for only $1.98 million per annum. Annualizing the outstanding capital needs funding would, therefore, offer a less demanding financial alternative, should this be both feasible and desired. This option is reflected in the annualized version of the cost of proposals, Appendix I, Table 17.

9. Extraordinary Costs

As Dr. Cradock notes, extraordinary costs are by definition extraordinary and thereby difficult to define. They are the range of unexpected or unanticipated events that place cost pressures on First Nations Child and Family Service Agencies which can not be absorbed into the current budget without cutting other essential services. Provincial government respondents to the Phase two survey indicate that they have the option of applying to provincial treasury boards or similar structures to offset unexpected costs but First Nations Child and Family Service Agencies do not have such a safeguard. Under the current formula they are left to manage unexpected costs within the funding envelope regardless of the scope or cost incurred.

Phase three research findings reveal a number of examples of extraordinary costs experienced by First Nations Child and Family Service Agencies such as:

- Suicide epidemics affecting children and young people
- High levels of substance misuse in communities resulting in a large number of children being at risk of abuse or neglect.
- Inquests relating to the deaths or severe injury of a child served by a First Nations child and family service agency.
- Changes in provincial child welfare legislation.

There were also a myriad of costs which would, within a mainstream system, be considered ordinary expenditures but as Dr. Cradock notes the under funding of the current child welfare system by INAC means that agency capacity to absorb even the most modest of unexpected occurrences is compromised.

The costs of extraordinary event vary by incident, but as Kathryn Irvine (2004) notes, crisis events in communities have three key components which would introduce costs to First Nations Child and Family Service Agencies: 1) Enhancing community preparedness to respond to crisis involving children and youth 2) responding to the crisis and 3) assisting children, youth and families to cope with the after effects of a crisis. Within a child welfare context such a response may include 1) developing a community suicide prevention program in concert with allied resources 2) providing immediate support services to youth who attempt suicide and prevention support to other youth and 3) assisting affected community members with the emotional turmoil associated with suicide attempts and reviewing the incident to see how it may inform future responses.

As the definition and costs of extraordinary events are unpredictable, we recommend establishing a national pool of funds in the amount of 2 million dollars to be refreshed annually and adjusted as needed.

A proposed mechanism for receiving applications from the fund would be to leverage the efficacy of the National Policy Review Project Management Committee structure which was composed of a representative from INAC headquarters, a First Nations delegate appointed by the First Nations child and family service agency representatives on the National Advisory Committee and a representative from the Assembly of First Nations. This group could develop an application process, process for the review of applications and financial and programmatic accountability frameworks that are reflective of INAC's mandate and the needs of FNCFSA. This group could leverage the models for emergency disaster relief distribution in order to ensure that funds are released in a timely manner in order to avoid undue duress on First Nations CFS agencies.

10. Liability Costs Arising from Child Welfare

Liability costs arising from child welfare interventions have become a growing concern amongst child welfare providers over the past ten years. The Supreme Court of Canada has adjudicated several cases relevant to child welfare and more specifically the degree to which child welfare organizations can be held responsible for the safety and wellbeing of children in care. As reported by Eileen Vanderburg in her report contained in Appendix H, the courts have held that child welfare organizations have a special duty to children in care that is afforded by their role as guardians and custodians. The Critchley decision in particular ruled that the state run child welfare organization had a duty to ensure that children in a child welfare placement are safely cared for.

Upon reviewing the current status of tort law regarding child welfare and surveying the damages awarded to litigants claiming negligence or maltreatment by the state, Ms. Vanderburg recommends a minimum coverage of 5 million dollars per incident.

Key informant interviews with insurance brokers indicate there is only one major insurance carrier in North America that will provide child welfare coverage up to a maximum value of one million dollars per incident. This reluctance flows from insurance risk assessments arising from the residential schools issue and an overall trend of increasing litigation in child welfare. Phase three survey results indicate that most agencies were insured to a value of 1 million dollars with one agency having received 5 million dollars in insurance from an Indigenous brokerage firm at a cost of 24,000.00 per annum.

This means that the majority of agencies in Canada are at risk of paying out as much as 4 million dollars plus legal fees should a current, or former, child in care or family receiving services successfully sue the agency. This would result in financial bankruptcy of the vast majority of agencies. The provinces are able to absorb these costs due to their large economy of scale, not unlike how the federal government is currently funding liability claims resulting from residential schools related litigation.

We are recommending that a national pool of seven million dollars be established to cover such costs and that the pool be refreshed annually and adjusted as needed. This pool could be administered in a fashion similar to that suggested for extraordinary circumstances with expert consultations from actuary experts.

11. Culturally Based Standards

Culturally based practice pivots on culturally based operational and practice standards. Therefore, having child welfare standards that meet the needs of the clients is of utmost importance to the First Nations child and family agencies. However, there is minimal funding to develop and maintain culturally appropriate child welfare standards. The child welfare standards utilized by First Nation agencies across Canada are very diverse, as are the communities they serve. This diversity requires the development and maintenance of standards that are appropriate and applicable to the people each agency serves. This request applies not only to First Nations agencies serving First Nations but also to First Nations communities being served by non- First Nations agencies.

The development of standards for First Nation's agencies is critical to the delivery of culturally based services. As one is required to follow the other, financial support is mandatory to adequately meet the needs of the First Nation's clients. The development of culturally based standards by First Nation's agencies particular to their clientele can contribute to the overall impact and success of the agency, children and families. Phase 2 researches indicated that 41.7% of the agencies are currently developing their own child welfare laws. It also indicated that 50% of the agencies that participated are not currently developing their own standards and another 8% indicated it was not applicable. There is broad based support for the development of culturally based standards but many of the agencies who have not developed them identify lack of funds as a barrier. This illustrates the need and trend to provide more resources for the agencies to develop standards to better meet the needs of their clientele.

Both the development of standards and maintenance is critical to the agencies. Standards need to be updated to reflect changes in legislation, practice or policy as well as evolutions in community needs.

Within the Phase 3 survey, agencies were asked how much more funding is required to meet the need of culturally based standards and practice. Please note, this does not solely represent the development and maintenance of standards, but also consists of such practices as employing Elders, ceremonies, and cultural events to inform such standards. Results from the survey indicate that on average agencies had a shortfall of $32,000 per annum. This number expresses a need to upgrade current funding to develop and maintain cultural standards and practice. Therefore, it is recommended that each agency receive an additional $30 000 per annum within the formula going forward, for a total increase of 2.79 million per annum.

12. Organizational Learning and Networking

As noted in the National Policy Review (McDonald and Ladd, 2003), First Nations Child and Family Service Agencies have limited opportunities to network and share information with one another. There are only two formal regional organizations to support the work of agencies at a regional level- one is located in BC and the other in Ontario. Agency directors in other regions meet informally but receive no resources for travel, to hire staff to organize the meetings or to follow up on identified tasks. Although there have been no detailed studies on the cost efficacy of these organizations we propose that the cost savings could be significant if agencies are able to identify mutual needs that can be best served by joint projects. For example, the Caring for First Nations Children Society (www.cfncs.com), which provides policy support to FNCFSA in BC, has developed a province wide training program for social workers containing a community specific field component to ensure training is linked directly to the culture/ context in which the social worker is employed. They also provide policy and secretariat support to the group of First Nations child and family service agency directors to ensure that decisions made by the collective are followed through.

At a national level, the First Nations Child and Family Caring Society of Canada (www.fncfcs.com) has developed an on line data base of over 2000 annotated resources on Aboriginal child welfare providing a one stop resource centre for agencies. It also has an on line journal to support best practices and has participated in national research projects including First Nations such as the Canadian Incidence Study on Reported Child Abuse and Neglect and, of course, the current research project.

Regional organizations will likely save money over time as they avoid the "recreating the wheel" syndrome on common issues. There are, of course, some policies and standards and training programs that should be developed on an agency by agency basis but where possible joint work on projects of mutual benefit should be encouraged.

We are recommending that each of six regions be allocated $250,000 each to establish non political research, policy and practice forums for agencies in the region. This amount represents the following expenses:

13. Research

Evidence based decision making in child welfare is vital to ensure that resources are targeted

Expense	Amount per annum	Assumptions
Coordinator (salary/benefits)	$65,000.00	Assume MSW and at least five years experience or equivalent
Administrative support with bookkeeping skills	$30,000.00	Assume certificate in office management and two years experience
Admin Fee	$20,000.00	office supplies, furniture, computers, mail, printing, phone, audit
Rent and utilities	$15,000.00	Assume 1000 square feet of space
Meeting space	$ 6000.000	Assume 750 dollars per day for two days of meetings occurring four times per year
Travel subsidies for Agency Directors to attend meetings	$72,000.00	Assumes $1200.00 per trip by 15 directors for 4 meetings
Project funds	$42,000.00	To be determined by agency directors

to the most prevalent risk factors that First Nations children and families experience and that interventions achieve intended outcomes (Trocme, 2003; Lane, 2003; Blackstock, 2003). The importance of evidence based research is embodied in the current research program where INAC required quantitative and qualitative evidence to support is application for a renewed Treasury Board authority for First Nations child welfare. As noted in the National Policy Review (McDonald and Ladd, 2000) continued investment in research specific to First Nations child welfare is critical as there is still a significant dearth of research in this area as compared to research on other Canadian children. The FNCFCS estimated that in 2003 the aggregate national investment in First Nations child welfare research was about $350,000 whereas the amount of money spent on First Nations child welfare by INAC alone is one thousand times that amount. There is no funding in the current INAC funding envelope for child and family services research of any form. If we want to ensure that the available resources are used to their maximum efficacy then research at an agency, regional and national level are required. We are recommending that a research pool of 1,210,000 be set aside annually for research. Included in this envelope is $450,000 ($15,000 per site) in funding to support the participation of 30 agencies in the third cycle of the Canadian Incidence Study of Reported Child Abuse and Neglect to be conducted in 2008. This study has been extremely important in identifying why so many First Nations children are coming into care and informing how funds can be targeted to get at identified risks. The remaining funds will be made available on a proposal basis with an independent review committee analyzing the merits of each proposal including the potential of the research project to inform practice in a number of agencies. Grant criteria and review mechanisms such as that established by the Centre of Excellence for Child Welfare for their community development grants could be used to guide the development of the grant process for these funds.

14. Evaluation and Outcomes

Evaluation is critical to gage the efficacy of programs and services provided to First Nations

children and families (Trocme, 2003). The current formula provides funding to agencies in years 3 and 6 of operation (McDonald and Ladd, 2000). Survey results from phases 2 and 3 affirm that First Nations Child and Family Service Agencies see the importance of evaluation and call for the provision of evaluation funding past year six. Survey results indicate that the average large scale evaluation costs about $28,000 – this is likely influenced by the current allotment of 30,000 for evaluations in years 3 and 6. Nonetheless, the research team recommends providing $10,000 per annum for agencies to conduct evaluations. We further recommend that agencies be given the option of deferring evaluation revenue over fiscal years to pool monies for large scale evaluations.

Summary of Proposed Reforms TO THE DIRECTIVE

Appendix I, Tables 16 and 17 contain summary overviews of the reform proposals and their cost to government.

Table 16 assumes that some expenditures, on MIS, Capital and the Liability Pool, may be pool financed i.e. provided for in a replenishable pool from which agencies would draw according to established priority need. These pools would, in total, amount to $22.6 million.

All other identified revenue needs of agencies/

costs to government are annual. In total, they amount to $89.9 million if the pooling proposal is accepted.

Two types of proposals are being made. The first constitutes **adjustments** to the existing funding formula. The second involves **new funding streams**.

Under the first, **adjustments**, there is an adjustment for inflation of $21.2 million and this would be built into base going forward, with annual adjustments being made thereafter.

The Fixed Amount per Agency adjustment, of $15.5 million, fills gaps in the current Fixed Amount by providing for services which are either not covered, such as janitorial or human relations, or inadequately covered, such as salaries, records keeping and legal.

Remoteness Allowances are adjusted by $4.2 million, first, to recognize that city centers are more appropriate for child welfare services than the 'service centers' currently used and, second, to allow for increases in remoteness funding by between 3 and 8 per cent, depending on agency remoteness.

Some small agencies will receive Fixed Amount funds for the first time, while other small agencies will receive increased amounts, totaling $1.2 million.

Under the second category, **new funding streams**, specific funding of wellness, least disruptive measures (LDM) and prevention will cost $34.7 million and this amount grows steadily thereafter to $69.4 million by year 7. This is the largest increase of all the proposals but it is one which will pay for itself over time in reduced maintenance costs.

Communities currently not served by agencies will receive $1 million to allow them to offer some basic child welfare services.

An amount of $30,000 per agency will be set aside for developing culturally appropriate standards, totaling $2.8 million and another amount of $30,000 every three years for on-going evaluations, totaling $0.93 million a year.

Provision is made for one regional study every five years at a cost of $150,000, together with an agency led study every five years costing $50,000 and a national study every five years costing $500,000. These are annualized to $1.2 million.

A $2.0 million per annum provision will be made for extraordinary circumstances and each region will receive $250,000 to establish a new regional organization to provide forums for knowledge transfer and to design and implement projects that are of mutual benefit to all agencies in the region.

The three pools would be for MIS, which would cost $5.6 million if all existing systems were replaced over time and a further $3.5 million if all the above recommendations, which would lead to staffing increases, were accepted.

The capital pool is estimated at $6.8 million, arrived at by averaging requests for more space, vehicles, repair, and accessibility improvement of $111,000 for each of the 93 agencies, or $10.3 million and deducting from that the 'rent' equivalent or 13 per cent of the salary and benefits component of funding adjustments outlined above, or about $3.5 million.

Additional capital (space) needs resulting from new funding streams will require an additional $3.7 million per annum in funding.

A liability pool for insurance claims in excess of $1.0 million will be established at a cost of $7.0 million.

Total costs are, therefore, $22.9 million for the pools and $86.4 million for annual funding needs.

Table 17 assumes no pooling of funding but instead, MIS, Capital and the Liability Insurance are funded annually. The assumptions are that MIS needs will be met over a two year period in the first instance, at a cost of $4.56 million. Thereafter, annual amounts would be between one half to one third of the annual amounts shown as systems would be replaced or fundamentally upgraded every four to six years.

The capital pool would be replaced by annual funding to permit mortgage borrowing of currently

unmet capital needs, amounting to about $1.98 million a year.

The liability pool would be replaced by annual funding over two years, at $3,500,000 per annum.

The revenue needs for First Nations Child and Family Service Agencies total $96.5 million per annum

Tables 18, 19 and 20 in Appendix I give detailed examples of how the above proposals would affect three anonymous agencies in Alberta, the Atlantic region and Manitoba, for purposes of illustration.

Anticipated Outcomes and Benefits of DOING EVERYTHING

The anticipated economic, social and cultural benefits of fully implementing the recommended reforms are substantial, benefiting First Nations children, families, Nations and Canadian society at large. **The social benefits are significant –the cost is minimal representing 1.25% of the 8 billion dollar surplus budget that Canada reported in 2004/2005**. If these recommendations are implemented in whole and without compramise:

1) Jordan would be the last child to die in a hospital because governments put themselves first.
2) First Nations children who are experiencing abuse and neglect would have an equitable chance to stay safely at home.
3) First Nations children in care would have access to the cultural, spiritual, physical and emotional supports they need and what every caring parent would want to provide.
4) First Nations social workers would receive equitable salary levels to their colleagues off reserve.
5) First Nations agencies could develop their own child welfare laws and standards.
6) Increased research and evaluation funding means we would know more about how to help First Nations children and families experiencing child maltreatment.
7) Every social worker would have access to a computer which would be able to collect information that helps them do their job better and more efficiently.
8) Persons with disabilities and children would have access to safe and friendly office spaces.
9) First Nations children living in remote areas would not receive less because things cost more.
10) First Nations agencies would be able to learn from one another, support one another and collaborate with other disciplines to ensure that children benefit from the very best that everyone has to offer.
11) First Nations agencies could respond to unexpected events or community crisis without worrying about having to cut programs to meet the costs.
12) Every First Nations child would receive culturally based child welfare supports – no matter if she/he lived in a small or large First Nation.

Doing everything could result in economic payback. Investments in wellness, prevention and least disruptive measures (LDM) would pay for themselves within 28 years. This economic payback is in child welfare terms only and does not account for the significant benefits that would result from having healthy children grow into healthy and independent adults who would be less likely to access the services of justice, health, drug and alcohol, mental health and unemployment insurance.

Most of all First Nations children would for the first time have a chance to receive equitable child welfare services and INAC would have the opportunity for the first time ever to send a message to First Nations children that they really do count – and the days of under funding and under valuing them are over.

Cost of Doing NOTHING

This is a powerful option – one that has guided INAC to date. It has chosen to stand still – but it has cost a significant price. Bowlus and McKenna (2003) estimate that the annual cost of child maltreatment to Canadian society is 16 billion dollars per annum. As increasing numbers of studies indicate that First Nations children are over represented amongst children in care and Aboriginal children in care they compose a significant portion of these economic costs (Trocme, Knoke and Blackstock, 2004; Trocme, Fallon, McLaurin and Shangreaux, 2005; McKenzie, 2002). A failure of governments to invest in a substantial way in prevention and least disruptive measures is a false economy – The choice is to either invest now and save later or save now and pay up to 6-7 times more later (World Health Organization, 2004.)

The Department of Indian Affairs currently spends over 350 million dollars per year on child welfare and the vast majority of this budget is spent on keeping First Nations children in care. The current formula provides a dearth of resources to keep abused and neglected children safely at home. These services, known as least disruptive measures, are required by statute and are available to every other Canadian child. The lack of early intervention services contributes to the large numbers of First Nations children entering care and staying in care. For the Department this means an increase in the maintenance budget of 11% per year. For First Nations children it means that the numbers of children in child welfare care increased a staggering 71.5 between 1995 and 2001 (McKenzie, 2002) At this rate there will be close to 15,000 status Indian children on reserve in care by 2011 that will collectively spend about 3.9 million days in care per year. If one assumes a very modest estimate of an average of 80.00 per day to care for these children (exempting social work and administration costs) maintenance costs alone would exceed 312 million per annum by 2011 (would need to be adjusted upwards in accordance with inflation rates).

Doing nothing could also result in Canada being found vicariously liable for discriminatory funding in child welfare knowingly resulting in harm or disadvantage to another generation of First Nations children. Regardless of opinions on the legal merits of this potential action, the political fall out would be substantial –especially on the heels of the residential school era.

Doing nothing would also erode Canada's international human rights reputation and call into question its commitment to the United Nations Convention on the Rights of the Child that require that States that know about rights violations for children, have the solutions and have the resources act- to redress the rights violation without delay. Canada knows about the problems resulting from Canada's long term under funding of First Nations child welfare (McDonald and Ladd, 2000), it has a solution that was jointly developed by First Nations and it has an 8 billion dollar surplus. **To stand still, or implement these recommendations in a piece meal fashion, when doing the right thing is possible – would be failure for all of us – but especially for the First Nations children. Surely, Canada would want to go over and above for abused and neglected children – this is its chance to at least be equal. Maybe in the future Canada will go above and beyond for First Nations children – but for now equal would be an important first s**tep.

CONCLUDING REMARKS

Supporting the healthy development and prevention of child abuse and maltreatment of First Nations children and families in First Nations communities is the premise of these recommendations. The strenth of these recommendations are sourced in the experience and wisdom of the Elders, First Nations agencies and line staff who work every day to enrich the lives of First Nations children and families. These are the people who have front line experience with the current system and see first hand the sadness, shortfalls, triumphs and successes within the communities. Their opinions, perceptions, and experiences have been expressed in the ***Wen:de*** (2005) and ***Wen:de - The Journey Continues*** reports. The message is consistent. The consequences of under funding First Nations

children and families are born out every day by children themselves and the real tragedy is that is unnecessary – especially in a country running an 8 billion dollar surplus.

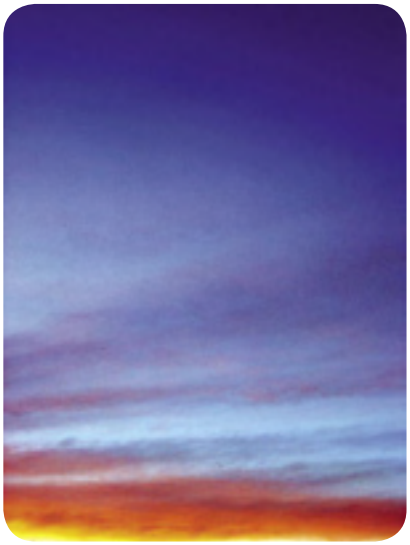
Further resources are needed to ensure First Nations children and families have the opportunity to receive care that is culturally appropriate, equitable and meets their needs. This care, as outlined throughout the document, is required before, during and after a crisis has been identified. Currently the funding is aimed at reactive measures. The recommendations in this report would introduce supports to children and families in their home to curtail crisis and reduce the need to remove children from their homes whenever possible. The merits of these preventative and least disruptive measures approaches have been well documented resulting in social and economic savings for individuals, families and governments. The proposed system would leverage the strength and resilience of First Nations families by providing them with some of the essential tools to safely care for their children.

Although each suggested change element is presented as a separate item, it is important to understand that these elements are interdependent and adoption in a piece meal fashion would undermine the overall efficacy of the proposed changes. For example, providing least disruptive measures funding for at home child maltreatment interventions without providing the cost of living adjustment would result in agencies not having the infrastructure and staffing capacity to maximize outcomes. Similarly, these recommendations assume that there will be no reductions in the First Nations child and family service agency funding envelope. Situations where funds in one area are cut back and redirected to other funding streams in child and family services should be avoided as our research found that under funding was apparent across the current formula components.

The report has presented two separate but critically interconnected sections: 1) recommendations for policy change or clarification and 2) recommendations for modifications to the current formula. This research project did not specifically focus on the maintenance envelope due to time and resource restrictions so this is an area for ongoing research.

Overall the following recommendations are based on the best available evidence and provide a funding foundation to support First Nations aspirations to culturally based and equitable child welfare services in their communities whilst incorporating mechanisms to support organizational learning and evaluation.

Together will all of our strength, communities, experts, researchers, young people and Elders – we have all done our best to tell this story – now it's Canada's turn.



In loving memory of Jordan.

2005-2006
Budget Calculations for Option #1
Manitoba only (extrapolation to national level is on line 194)

OPTION #1: operating and prevention		Children in Care (estimate) 6% Current INAC assumption	Current # of staff funded (1/20 CIC)	Recommended # of staff funded	ADDITIONS TO BUDGET (incremental positions) Option #1
Anishinaabe West CFS (1,855 children)	$1,586,986				
Child Care Workers (Column E addt'l staff = 0.4% of population)		112 CIC	5.6	7.5	$124,404
Family Support 332 MPF (Column E = 1/15 MPF)		332 MPF	16.6	22.1	$328,607
Resource Workers (additional staff = 0.2% of population)				3.7	$163,309
Supervision staff					$147,768
Plus admin. overhead (administrative staff/ accounting)					$114,613
Prevention/CD worker					$179,240
Outreach/advocacy					$59,747
Supervision staff					$59,107
Plus admin. overhead (administrative staff/ accounting)					$44,714
Awasis CFS (6,564 children 0-18)	$5,553,862				
Child Care Workers (Column E addt'l staff = 0.4% of population)		394 CIC	19.7	26.3	$432,140
Family Support 332 MPF (Column E = 1/15 MPF)		912 MPF	45.6	60.8	$908,154
Resource Workers (additional staff = 0.2% of population)				13.1	$724,930
Supervision staff					$502,412
Plus admin. overhead (administrative staff/ accounting)					$385,145
Prevention/CD worker					$657,214
Outreach/advocacy					$59,747
Supervision staff					$177,321
Plus admin. overhead (administrative staff/ accounting)					$134,142
Cree Nation CFS (4,479 children 0-18)	$3,586,313				
Child Care Workers (Column E addt'l staff = 0.4% of population)		269 CIC	13.5	17.9	$288,093
Family Support 332 MPF (Column E = 1/15 MPF)		524 MPF	26.2	34.9	$519,799
Resource Workers (additional staff = 0.2% of population)				9.0	$475,984
Supervision staff					$310,314
Plus admin. overhead (administrative staff/ accounting)					$239,129

CALCULATIONS/ASSUMPTIONS
$50,366 x (7.5-5.6 or 1.9 workers) + 15% benefits + 15% travel costs
1 for every 15 multi-problem families (MPF) (current rate is 1/20 MPFs); (22.1-16.6=5.5) x $45,959 + 15% benefits + 15% travel
1 for every 20 foster homes (currently, agencies are funded '1' per agency): approx. 0.2% pop=3.7 -1 x $45,959 + 15% benefits + 15% travel
Supervisory staff @ $56,834 for the newly added positions above (1/5) plus benefits/travel costs 30%; (1.9+ 5.5+2.7)/5 = 2
15% re: administration for the above newly created positions
1 per band x 5 bands x $45,959 + 15% benefits + 15% travel costs minus 2 per agency currently funded
1 per agency x $45,959 + 15% benefits + 15% travel costs
Supervisory staff @ $56,834 for the newly added positions above (1/5) plus benefits/travel costs 30%; (3.0+1.0)/5 = .8
15% re: administration for the above newly created positions
$50,366 x (26.3-19.7 or 6.6 workers) + 15% benefits + 15% travel costs
1 for every 15 multi-problem families (current rate is 1/20 MPFs); (60.8-45.6=15.2) x $45,959 + 15% benefits + 15% travel
1 for every 20 foster homes (currently, agencies are funded '1' per agency): approx. 0.2% pop=13.1 -1 x $45,959 + 15% benefits + 15% travel
Supervisory staff @ $56,834 for the newly added positions above (1/5) plus benefits/travel costs 30%; (6.6+15.2+12.1)/5=6.8
15% re: administration for the above positions
1 per band x 13 bands x $45,959 + 15% benefits + 15% travel costs minus 2 per agency currently funded
1 per agency x $45,959 + 15% benefits + 15% travel costs
Supervisory staff @ $56,834 for the newly added positions above (1/5) plus benefits/travel costs 30%; (11.0+1.0)/5=2.4
15% re: administration for the above positions

15% re: administration for the above positions
Budget outlay would have to increase by an estimated 69.6% under Option #1
Note on Staff/Child ratio - Ratio of Staff to Population is based on INAC's current practice of assuming 6% children in care (CIC), 1 staff for every 20 Moving to 0.4% child population = 6/15 CIC/Staff ratio.

First Nations Child and Family Caring Society of Canada
Suite 1001—75 Albert Street
Ottawa, Ontario K1P 5E7

Attention: Cindy Blackstock, Executive Director

Dear Sirs/Mesdames:
Re: Liability Exposure of Child and Family Service Agencies

You have asked us to provide you with our opinion on the liability exposure of the First Nations Child and Family Service Agencies across Canada who are members of the First Nations Child and Family Caring Society of Canada ("FNCFSA"). We understand that the purpose of seeking this opinion is to provide the FNCFSA with information that will be used to obtain estimates for the limits and coverages of the liability insurance required by the FNCFSA and the member agencies in order to carry out child and family services. The estimate for the cost of liability insurance for the child and family service agencies will form one of the elements in the FNCFSA's proposal for a new funding formula between the Department of Indian Affairs and the agencies.

You have asked us to identify the areas of exposure to liability for child and family service agencies and their employees in the delivery of services and the liability of the agencies for employee claims for wrongful dismissal and human rights complaints.

Background

The First Nations Child and Family Service Agencies deliver services on reserve to status Indian children. The agencies are funded by the federal government through a national funding formula (Directive 20/1). Although the funding for the delivery of child welfare services to status Indian children on reserve is provided by the federal government, the agencies must follow provincial child welfare statutes in the delivery of services to children. The provincial child welfare statutes also provide the basis for the delegation of child welfare services from the provincial government to the agency.

The degree to which a provincial government remains liable for the negligence of any agencies or agency employees in the delivery of child welfare services depends upon the wording of the particular child welfare legislation, in particular, the ability of the province, or a provincial official, to delegate the duty owed to children in care in the province to an agency or an employee of an agency. The extent to which a provincial government or a provincial government official will be solely liable or jointly liable with a child welfare agency for negligence in the delivery of child welfare services will vary from province to province depending on the wording of the particular statute. For the purposes of this opinion, we have not analyzed the wording of each statute to provide an opinion on the ability of each province or provincial official to delegate their legal duties to children in care to an agency and thus avoid liability for any negligence in the delivery of child welfare services.

Liability to Children in Care

The particular areas of exposure to liability that relate to the delivery of services to children in care are the following:

- liability of the agency for personal injury to children and families, arising from the participation of children in activities provided by the agency, motor vehicle accidents, or

accidents that occur on property owned or managed by the agency;

- direct and vicarious liability of the agency for criminal or intentional actions of its employees, for example, abuse claims.

The exposure of the agency to liability for physical personal injury sustained by children in care is relatively straightforward. The agency is liable for any injury sustained by a child, whether or not that child is in the legal care of the agency, who participates in an activity organized by and supervised by the agency or one of its employees. For example, if the agency ran a recreational or sports program and a child was injured as a result of participating in that program, the agency would be liable for any negligence on the part of its employees in the supervision of the activities. The agency would also be liable for any injuries caused by the state of the premises on which the recreational or sporting activity was conducted. If the agency is providing programs for children on the reserve, the agency owes a duty to those children to supervise them to the standard of a careful and prudent parent. The agency therefore must provide sufficient supervision for the number and age of the children, and the level of risk involved in the activity.

The agency can also be exposed to liability where children under its supervision are being transported in motor vehicles.

With respect to the extent of any damage awards for personal injury, the awards vary widely depending on the level of injury. For the most serious injuries, which include serious brain injuries or quadriplegia, damage awards can be in excess of $5,000,000.00, which includes awards for the future income loss of the child. Where liability is shared between two or more parties, the responsibility for paying damages is also shared. However, if other responsible parties have no assets and no ability to pay, the Plaintiff is entitled to claim all of the damages from the agency on the basis of joint liability. For example, if liability for damages is equally split between an agency and an individual employee, and the employee has no assets, the Plaintiff can demand the whole amount from the agency.

The area of liability for child welfare agencies that has received the most attention in the past few years is vicarious liability of a child welfare agency for physical and sexual abuse of the children in its care and under its supervision by employees or volunteers of the agency. The most recent decision of the Supreme Court of Canada in the area of vicarious and direct liability for abuse of children is Roman Catholic Episcopal Corporation of St. Georges v. John Doe ([2004] 1 S.C.R. 436). The Plaintiffs were sexually assaulted by a Roman Catholic priest employed by the diocese in Newfoundland. The Supreme Court of Canada found the diocese to be directly liable to the Plaintiffs resulting from the failure of the diocese to prevent the assaults from continuing when they knew or ought to have known that the priest was abusing the Plaintiffs. The Supreme Court of Canada also found the diocese vicariously liable for the abuse to the Plaintiffs on the tests established in the previous decisions of Bazley v. Currie ([1999] 2 S.C.R. 534), and Jacobi v. Griffiths ([1999] 2 S.C.R. 570).

The imposition of direct liability on the diocese in the John Doe case was based on the knowledge imputed to the diocese of the abusive history of the priest. Where an agency is aware of abuse occurring, or should be aware if appropriate supervision was exercised, the agency will be found negligent in performing the duties it owes to the children in care. Direct liability for abuse committed by employees can also arise where the agency has not taken reasonable steps to ensure the employees hired do not pose a risk to children.

The Supreme Court confirmed the test first applied in Bazley for the imposition of vicarious liability on an employer for the criminal acts of its employee. The court should first determine whether there are precedents which unambiguously determine whether the facts support vicarious liability. If there is no clear precedent, vicarious liability should be imposed where

the employer and the person committing the criminal act have a sufficiently close relationship and the criminal act is sufficiently connected to the conduct authorized by the employer. In Bazley, vicarious liability was imposed on the non-profit Children's Foundation who were operating residential care facilities where a resident was sexually assaulted by a child care counsellor. The Supreme Court of Canada imposed vicarious liability on the grounds that the relationship between the employer and the child care counsellor was sufficiently close and the wrongful act was a manifestation of the risks inherent in the employer's enterprise, that is, providing residential care for children. In Jacobi, the non-profit Boys and Girls Club was found not vicariously liable for sexual assaults committed by the program director in the course of excursions relating to children's sports activities. The Supreme Court of Canada found that the connection between the enterprise of the boys and girls club and the sexual assaults had not been established given that the level of intimacy required between the employee and the children was much less than in Bazley.

In the John Doe case, the Supreme Court of Canada found a sufficiently close relationship between the diocese and the priest to satisfy the first element of the test for vicarious liability. The Supreme Court of Canada also found that the role of a parish priest was to provide special care for the catholic education of children and young people and that the priest was expected to have close involvement with children. The Supreme Court of Canada further found that the priest's wrongful acts with respect to the boys in the parish were strongly related to the psychological intimacy that was inherent in his role as a priest and encouraged by the diocese. The priest also exercised an enormous degree of power over the children, which power was conferred to the priest by the diocese.

Based on the Supreme Court of Canada case law discussed above, it is our opinion that the child welfare agencies will not be found to be vicariously liable for any acts of abuse committed by their employees in the course of providing programs and activities for children on reserves. The relationship and circumstances of an agency providing activities and programs for children on reserves is akin to the situation in Jacobi, where the Boys and Girls Club was held not to be vicariously liable for abuses of its employee in providing recreational services. However, there is a risk of vicarious liability for acts of abuse committed by child care counsellors, who are expected to develop a close relationship with children in their care. The relationship between a child care counsellor and a child in care is similar to the relationship between the priest and child described in John Doe. Where the agency encourages and requires its employees to develop close relationships with children that can be used by the employee to abuse the child, the agency may be found to be vicariously liable for the abuse.

The other area of exposure for child welfare agencies is vicarious liability for acts of abuse committed by foster parents on children placed in their care by the agency. The Supreme Court of Canada dealt with the issue of vicarious liability of governments for the abuse of children by foster parents in two cases arising out of British Columbia, KLB v. British Columbia ([2003] 2 S.C.R. 403), and MB v. British Columbia ([2003] 2 S.C.R. 477). The Supreme Court of Canada held that the relationship between the abusing foster parent and the provincial government was not sufficiently close to make the claim for vicarious liability appropriate. The Supreme Court of Canada stated that it was inherent in the nature of family-based care for children that foster parents are in important respects independent from government and that government cannot exercise sufficient control over their activities for them to be seen as acting on behalf of the government or as government agents in their daily activities with the foster children. The Supreme Court of Canada acknowledged that foster families serve an important public goal of providing children the experience of family life but that they discharge this public goal in a manner that is highly independent from government control. The decisions of the Supreme Court of Canada in KLB v. British Columbia and MB v. British Columbia do not preclude an

action against an agency for direct negligence in failing to properly screen prospective foster parents or in failing to act when the agency knows or ought to know from its supervision of the foster family relationship that the foster parent is abusing the foster children.

The claims for damages that normally accompany an allegation of sexual or physical abuse of children while in care are normally claims for emotional and psychological damage and claims for loss of future income based on the inability or reduced ability of the abused child to earn income because of the psychological and emotional damage. The quantums of these claims are variable, depending on the nature of the abuse, the expected income earning capacity of the individual in the absence of the abuse and the extent to which the individual has other unrelated problems that contribute to a reduced ability or inability to earn income. These claims are difficult for courts to quantify, particularly where the Plaintiffs are children who were already at a disadvantage based on family background. In many cases children in care have already been abused in some fashion by family members or others and therefore it is often difficult to identify the extent to which the abuse suffered in care has contributed to the child's overall loss of earning potential as an adult.

Awards for future loss of income when the Plaintiff is unable to work competitively due to the abuse can exceed $1,000,000.00.

Liability for Wrongful Dismissal and Human Rights Violations

An agency's primary risk of exposure as an employer relates to wrongful dismissal claims by former employees.

Whether or not a written employment contract exists, the relationship of employer and employee is one of contract. If the employment contract says nothing about the rights and obligations on termination of employment, then there will be implied into the contract an obligation of the employer to give reasonable notice to the employee of the termination, unless the termination is for cause. The contractual obligation will be to give working notice and immediate termination will be a breach of the employment contract. An employer providing working notice in the appropriate length will bring the employment contract to an end and no claim for breach of contract will exist. However, in most cases, the employer will want to act more quickly in terminating employment for various reasons including cost cutting, morale and ongoing business. As a result, the employer will be breaching the employment contract by not giving working notice and will be seeking to settle the claim of the employee for damages for breach of contract by providing pay in lieu of notice.

The implied contractual reasonable notice obligation is referred to as "common law" notice and is different from the minimum termination pay provisions provided by statute. Common law notice will be in addition to the statutory minimum although payments towards the minimum will be deducted in determining whether further amounts are owing in respect of common law notice.

The length of reasonable notice required to be given in each case will be based on such factors as the age of the employee, length of service with the employer, the nature of the position and availability of alternative employment. For some employees, common law notice will not entitle them to more than a statutory minimum. For middle managers and professionals with length of service between 5 to 10 years, courts often find a reasonable notice period in the range of one month per year. The upper limit of notice is generally considered to be 24 months for a long term senior employee. Where special factors aggravating the damage claim exist, the notice period will be extended, and where appropriate, beyond this upper limit.

An employee is obligated to take steps to seek alternative employment to reduce any damages they may suffer. Any amount earned by an employee during the common law notice period will

be deducted from the damages otherwise payable.

The damages awarded to an employee will be the value of the salary and benefits that the employee would have received if they had remained employed by the employer during the period of reasonable notice. In addition to these amounts, employees are entitled to receive the amount of the employer's premium towards Canada Pension Plan and Employment Insurance benefits during the period of notice. The court will also award interest on the full amount of salary and benefits, subject to mitigation, calculated from the start of the action.

An employer may also be exposed to human rights claims by potential, current or former employees.

Employers must not discriminate against a employee or potential employee on a variety of prohibited grounds, including race, religion, marital or family status, physical or mental ability, sex, sexual orientation, age, or an unrelated criminal conviction. Claims may relate to termination or to other terms and conditions of employment. Harassment complaints are most commonly litigated as human rights claims.

The remedies allowed under the various human rights legislative schemes can be more invasive than those available at common law. For example, if discrimination is proven, in addition to lost salary, wages and expenses, an employer may be ordered to reinstate the employee to their former position and/or to pay damages for injury to dignity, feelings and self respect.

Conclusion

The primary areas of exposure to liability for a child and family service agency providing services to children and family on reserve across Canada are:

1. As an agency providing services to children generally, the agency may be liable for physical injury suffered by children under its supervision;

2. The agency has an obligation to properly investigate and supervise its employees where those employees have a close relationship with children in care to ensure that the children are not exposed to abuse;

3. The Agency may be vicariously liable for intentional acts of its employees, where those employees are placed in a relationship of intimacy with children in care which provides an opportunity for the employees to physically or sexually abuse the children;

4. The Agency as an employer is exposed to claims for wrongful dismissal and human rights violations with respect to its employees.

As discussed above, the damages that can be awarded against an agency directly or vicariously vary widely depending on the nature of the injury, the particular circumstances of the Plaintiff, and whether or not there are other parties who share liability for the damages.

If you require any further information regarding this opinion, please do not hesitate to contact the writer.

Yours truly,

ALEXANDER HOLBURN BEAUDIN & LANG LLP

Dear Dr. Blackstock:

Re. Support for the National FNCFS Long-Term Reform Plan

I am thinking of my grandson, Quill, as I write this. He was also on my mind in October of last year when I made the difficult decision to vote against Canada's proposed final settlement agreement. I know the other Chiefs in the room that day also held special little ones in their hearts when we decided collectively that the proposed agreement would not end Canada's systemic discrimination and was not good enough for our children.

In the aftermath of that decision, my fellow Commissioners and I accepted a heavy responsibility to form a National Children's Chiefs Commission—as mandated by the First Nations-in-Assembly—and deliver a stronger resolution to the Human Rights complaint that you initiated all those years ago. None of us have undertaken this work lightly, and all of us have been deeply concerned about the consequences of failure—consequences that would fall heavily on our children. Our concern grew as Canada repeatedly refused to negotiate a new agreement or to engage with the Commission in any meaningful way.

In August, 2025 CHRT 80 provided a strong pathway forward uncoupled from Canada's willingness—or lack thereof—to work with the Commission. We quickly sought, and were granted, an expanded mandate from the First Nations-in-Assembly to work with you and your team at the Caring Society to consult with our Nations and build a plan to end Canada's discrimination in First Nations Child & Family Services.

Our technical team immediately got to work with you and your team to design and implement an engagement strategy. Together, we launched the regional engagements on October 1 and concluded them on November 14. During the engagement period, you and the Commission's technical team supported in-person and virtual engagement sessions with First Nations leaders and Rights Holders and with FNCFS experts in Prince Edward Island, New Brunswick, Quebec,

Manitoba, Saskatchewan, Alberta, British Columbia, the Yukon, and the Northwest Territories. We also welcomed submissions directly through the Commission's website. This work generated a total of 105 submissions, 64 of which were group submissions representing input from up to 90 leaders, Rights Holders and experts.

It is my understanding that, in parallel with the engagement work, you and your team were drafting the Plan, based on the research, legal orders and expert input accumulated since the start of (and even before) this Human Rights process. As the engagement work neared completion, you shared drafts of the Plan with the Commission's technical team. Our team worked closely with you and your team to edit, re-draft, and contribute new material based on their own expertise and on the input gathered through the regional engagements.

This morning, the Commission met for a final discussion prior to the submission of the Plan. As a Commission, we have reviewed the Plan and have taken advice from our technical team. We strongly support this Plan and have passed a motion by consensus to send you this letter supporting your submission to the Canadian Human Rights Tribunal today.

There is one notable area where both the engagement input and our position as a Commission reach beyond the Plan. This concerns our children and families who live off-reserve and in the Northwest Territories. As Commissioners, we understand there are limits on the Tribunal's jurisdiction in this matter. As Chiefs, however, we love and are responsible for our children and families wherever they reside. We embrace the Tribunal's decision affirming that Jordan's Principle eligibility to all our children, regardless of residency and we have seen meaningful changes in the lives of our children as a result of that decision.

We heard very clearly from leaders, Rights Holders and experts across all regions that the on/off-reserve distinction is itself grounded in systemic discrimination and inequality. The lack of housing and services on-reserve drives so many of our families away from our communities: nearly three-quarters of all First Nations people live off-reserve or in the Northwest Territories, where they are ineligible for the services Canada is required to provide on-reserve. In establishing the reserves, Canada broke numerous treaty agreements. The courts have recognized Canada's dishonourable conduct in this regard and have ordered Canada to pay compensation to purchase new lands. Yet Canada continues to rely on the Indian Act limitation of ordinarily resident on-reserve to deny services to our children and families. The Commission does not accept the Indian Act's narrow understanding of First Nations or reserves—and neither should the Tribunal. We must pursue every avenue to achieve a world where children matter more than reserve boundaries.

The Plan you will submit to the Tribunal today is built on love for our children and respect for their rights. I can share this work proudly with my grandson because it promises to deliver Loving Justice to our children who have endured Canada's discrimination. All our children, wherever they reside, deserve that justice.

Mahsi' choo,

Chief Pauline Frost
Chair, National Children's Chiefs Commission

By Email

The Honourable Mandy Gull-Masty
Minister of Indigenous Services Canada
10 rue Wellington, Gatineau, QC K1A 0H4

Dear Minister,

Re: Next Steps to Advance Long-Term Reform of First Nations Child & Family Services

We are writing jointly on behalf of AFNQL Regional Chief Francis Verreault-Paul, Chief Pauline Frost of the National Children's Chiefs Commission (NCCC), and Dr. Cindy Blackstock of the First Nations Child & Family Caring Society. We wish to thank you for taking the time to meet recently with Chief Frost and Regional Chief Verreault-Paul in person, and for meeting virtually with Dr. Blackstock and Regional Chief Verreault-Paul. We appreciate your willingness to hear directly from First Nations leadership and advocates who have worked on this file for many years.

We are encouraged to hear that you intend to take this file in a new direction—one grounded in meaningful collaboration and focused on bringing real, lasting solutions to First Nations children, youth, and families. We welcome this shift and agree that the central task now is addressing Canada's longstanding discriminatory conduct in the First Nations Child & Family Services program and in Jordan's Principle and ensuring it does not recur.

We are writing to ensure that our common positions and expectations are clear before entering into any discussions regarding the resolution of the Canadian Human Rights Tribunal (CHRT) complaint. Ensuring that all parties have a shared understanding at the outset is essential to any good-faith engagement.

1. Our plan will be filed with the Tribunal on December 22, 2025.
As discussed, we are not in a position to share or pre-disclose our plan before it is formally filed with the CHRT on December 22, 2025. This reflects the significant contributions First Nations and their experts have made to a First Nations led plan, as well as Canada's repeated submissions before the Tribunal that it would not collaborate with the NCCC, Caring Society and AFN and would be submitting its own plan.

2. We are open to discussions with Canada after December 22, contingent on clear written commitments.
Following the filing of our plan, we would welcome discussions with Canada on next steps, conditional on receiving written confirmation from Canada that:

- It has a clear mandate to work collaboratively with the Caring Society, the NCCC, and the AFN to permanently cease its discriminatory conduct, and

- Litigation will continue concurrently to ensure First Nations children and families remain fully protected throughout any engagement.

It is also essential that Canada recognize the decisions of First Nations-in-Assembly and make every reasonable effort to implement them. These are not optional directions; they reflect the rights, priorities, and authority of First Nations.

3. Canada must recant its unilateral operational bulletins and commit to co-development of its policies in alignment with the Tribunal's orders going forward.
Canada's unilateral issuance of operational bulletins and policy directions—without co-development or consent—has harmed First Nations children and families and significantly eroded trust. To move forward, Canada must:

- Withdraw or formally recant its unilateral operational bulletins, and
- Commit to working collaboratively with the NCCC, AFN, and the Caring Society on any ISC policy, bulletin, directive, or operational change that affects First Nations children, families, or service providers.

We believe these are reasonable expectations and foundational steps to rebuilding trust. A meaningful show of good faith from Canada—particularly on the commitments described above—would demonstrate that the intent to move in a new direction is genuine.

We look forward to receiving your written confirmation of Canada's mandate and commitments and to continuing this work together in a way that upholds the rights, dignity, and safety of First Nations children and families.

Sincerely,

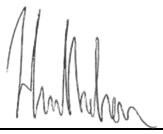
Regional Chief Francis Verreault-Paul,
AFN Portfolio Holder, FNCFS & Jordan's Principle,

Chief Pauline Frost,
Chair, National Children's Chiefs Commission

Cindy Blackstock, PhD
First Nations Child and Family Caring Society

CC: National Chief and Executive, Assembly of First Nations
National Children's Chiefs Commission
Julia Carbone, Indigenous Services Canada

This is Exhibit "63" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.



Commissioner for Taking Affidavits (or as may be)

HENNA MOHAN

Ministre des
Services aux Autochtones

Minister of
Indigenous Services

Ottawa, Canada K1A 0H4

December 21, 2025

Chief Pauline Frost
Chair
National Children's Chiefs Commission

Regional Chief Francis Verreault-Paul
Portfolio Holder, First Nations Child and Family Services and Jordan's Principle
Assembly of First Nations

Cindy Blackstock
Executive Director
First Nations Child and Family Caring Society of Canada

Dear Chief Pauline Frost, Regional Chief Francis Verreault-Paul, and Cindy Blackstock:

I am writing to thank you for your letter of December 15, 2025 and for taking the time to meet with me on December 4, 2025 and December 10, 2025.

I appreciated the opportunity to hear your perspectives and to discuss the ongoing work related to the reform of the First Nations Child and Family Services Program. As I shared during our discussions, it is important to me that reform be driven by First Nations and grounded in an inclusive approach—one that respects regional approaches while operating within a coherent national framework.

While I valued our dialogue and found it constructive, the decision not to share draft proposed plans or jointly speak publicly in advance of December 22 is a decision that I will respect. I have to reiterate that it would have been a great opportunity for us to demonstrate a public facing commitment and to stand together—united—for our children. My intent in raising this is not to dwell on process challenges, but to underscore the importance of transparency and shared understanding in serving communities, leadership, families, and the children who await our decisions.

…/2

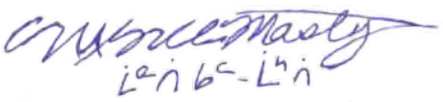
My objective remains meaningful collaboration and lasting solutions for First Nations children, youth, and families—solutions grounded in sound policy, legal obligations, and, most importantly, the lived realities of communities incorporating their unique and diverse culture and language across all First Nations. As Minister of Indigenous Services, I take this responsibility seriously. Our experience working regionally with rightsholders, including with the Chiefs of Ontario and Nishnawbe Aski Nation, has demonstrated the potential of approaches that respect First Nations' right to self-determination while building practical, durable systems. I believe our process has to be respectful of the requests from communities to determine what next step they take.

In that spirit, I want to be clear about my approach. I respect the authority and role of the Tribunal. I believe in ensuring that communities have the freedom to choose the path they wish to follow.

I am open to further discussions with the Assembly of First Nations, the Caring Society, and the National Children's Chiefs Commission following the submission to the Tribunal on December 22, 2025.

I remain committed to advancing this work in a way that respects First Nations leadership, restores confidence in the process, and delivers meaningful, lasting change for children and families.

Yours sincerely,



The Honourable Mandy Gull-Masty, P.C., M.P.
