Building on its previous work, IFSD's approach to this project was collaborative and informed by OCAP® principles. As an affiliate of the University of Ottawa, IFSD is guided by ethical research guidelines respecting Indigenous Peoples and complies with the Tri-Council Policy Statement on Ethical Conduct for Research Involving Humans in all of its work. Pursuant to article 2.2 on the legal accessibility of information requested for this study and article 2.5 that exempts program evaluation and assessments of organizational performance from review, IFSD did not require Research Ethics Board review for its work.

All information collected from this survey, with the consent and participation of the agencies, has been shared back to participating agencies (via monthly updates) and NAC in an anonymized and aggregated format to protect the privacy of agencies and their communities. All results of this project will only be shared in an anonymized and aggregated format.

A physical copy of the data collected for this project is stored in a locked cabinet at the IFSD office. Electronic copies of data are maintained locally on IFSD research laptops only.

RESEARCH DESIGN

Following IFSD's review of FNCFS agency need assessments (see Appendix A), it was determined that current information available through the assessments and financial statements was insufficient and inconsistently collected to complete the analysis required by the CHRT orders. IFSD determined that it would develop its own data collection instrument aligned to the CHRT orders, and that accounted for federal financial and program activity architectures. The data collection instrument was a 105-question survey developed from April to May 2018. The instrument was designed as an online survey on the SurveyMonkey platform, accessible via weblink.

The instrument was reviewed by methodological experts[39] and by NAC and was then translated into French. Both English and French versions of the tool were made accessible to agencies to complete. All information requested from agencies was organizational in nature and related to the fulfilment of professional duties. No confidential or secret information was requested. For an overview of the survey questions, see Table 2 and the complete instrument in Appendix C.

The instrument was designed to complete a census of organizations. ISC provided IFSD with a list of 104 FNCFS agencies in April 2018 to contact for this project. Only data from the listed agencies that participated in this project is included in this report.[40]

[39] Professors Scott Bennett and John Loxley reviewed the instrument and provided feedback to refine the tool prior to its release to FNCFS agencies.

[40] Additional agencies contacted IFSD to participate in this project. Their data was directionally consistent with that of the 104 agencies on ISC's list. In previous drafts of this analysis, the additional agencies were included. However, for methodological consistency, they were removed from this analysis as they were not on the original list provided by ISC.

TABLE 2
OVERVIEW OF THE 2018 IFSD FNCFS SURVEY

CATEGORY	SURVEY QUESTIONS
AGENCY DETAILS Contact details for survey, location of agency and community/ies served; community accessibility; catchment and satellite office details; children in care; child population served; mandate, history and agency services and programs.	1–21
BUDGET AND FINANCES Total and program specific budgets (e.g. prevention, protection); budgetary changes.	22–41
CAPITAL ASSETS Capital expenditures and assets; nature of building occupancy (lease/own); details on agency headquarters (e.g. square footage, building materials); repair requirements and estimated costs.	42–54
TECHNICAL PROFILE Investments, satisfaction with and need for information technology (e.g. hardware, software, cloud-based infrastructure).	55–58
OPERATING AND MAINTENANCE The costs of doing business, e.g. legal and related fees.	59–65
EMPLOYEE DETAILS Salaries and benefits; salary ranges; personnel and retention.	66–75
Small agencies; remoteness; travel costs; gaps in service.	76–83
CASELOAD Understanding case complexity; average cases per employee and employee category.	84–91
GOVERNANCE AND DATA COLLECTION Agency management and accountability practices; community engagement; performance measurement.	92–105

Each FNCFS agency was invited to send two representatives to Ottawa to attend one of five workshops at IFSD to complete the survey (one workshop was hosted in Saskatoon, with logistics coordinated by the Saskatchewan First Nations Family and Community Institute). All travel, accommodation and incidental expenses were covered for the two participants by IFSD. Participants were not remunerated or incentivized to participate in the research process.

The two-day workshops were designed to work with agencies to complete the survey and enhance consistency in interpretation of questions (see Appendix D for a sample agenda and Appendix E for definitions used in the survey). A future state exercise was hosted on

the second day of each workshop, to better understand the agencies' perspectives on future need and vision for an improved FNCFS structure (see Appendix F for summaries). Convening agency leadership was fruitful for exchanges, knowledge sharing and network building. Participant evaluations of the workshops were positive (see Appendix G for the evaluation summary) and helped to improve future sessions.

Agency outreach was central to IFSD's efforts. FNCFS agency executive directors were first contacted via email by Kevin Page on May 1, 2018 using contact information provided by ISC and included a letter of endorsement from NAC (see Appendix H). A second email was sent to executive directors on May 3, 2018 by Helaina Gaspard, inviting agencies to attend one of four workshops scheduled in Ottawa (a fifth workshop in June was added to accommodate agencies who could not attend a May workshop) (see Appendix H). To follow-up on the invitation, IFSD contacted all agencies at least once by phone, first on May 4, 2018, and followed-up at least once with an email reminder, first sent on May 9, 2018.

IFSD is grateful to agency leadership and NAC whose efforts enhanced outreach on a regional basis. As a trusted leader and member of NAC, Cindy Blackstock recorded a promotional video that was shared with agencies and other stakeholders on May 8, 2018, to provide information about the project and to encourage agency participation.[41] Agencies unable to accommodate any of the workshop dates were given the option to complete the survey online remotely, with the support of IFSD staff (eleven agencies completed the survey remotely).

In total, 70 agencies[42] attended one of the five workshops in Ottawa and one workshop in Saskatoon (Table 3). Only IFSD staff were on-site to support agencies in their work in both English and French, with interpreters on-site for select sessions.

[41] A website (www.ifsd.ca/fncfs) was developed for the project that included monthly updates (that were also sent to stakeholders) and related information, including the video.

[42] Two agencies that participated in the workshop were subsequently removed from the analysis for methodological consistency (see footnote 41).

TABLE 3
WORKSHOP DATES AND LOCATIONS

DATE	LOCATION
May 14–15, 2018	Ottawa
May 17–18, 2018	Ottawa
May 22–23, 2018	Ottawa
May 24–25, 2018	Ottawa
May 30–31, 2018	Saskatoon
June 4–5, 2018	Ottawa

During the workshops, agencies were invited to complete the survey using the SurveyMonkey platform in English or in French. There were technical challenges with the platform during the first workshop that were corrected for all other workshops (participants from the first workshop were invited to submit an electronic or paper copy of the survey). Following the first workshop, minor refinements were made to the survey thanks to agency feedback. There were no losses to data integrity or aggregability with those changes.

When completing the survey, agencies were asked to report with information from fiscal year 2017–2018, referring to baseline funding levels. Agencies were asked to omit any supplementary funding from the CHRT orders to capture the typical or steady state of operations. In order to develop a future state model for agencies based on need, it was important to have a complete understanding of their point of departure, with potentially anomalous funding removed. To supplement responses, participants were encouraged to provide context to give meaning to the data they shared. Upon completion of the survey, a copy of the submission was returned to participants.

All submitted surveys were reviewed for completion by IFSD. Unanswered questions and unclear responses were flagged and compiled into a single reference document or email for each participating agency. Agencies were contacted at least twice (once by email and once by phone) to clarify the flagged questions. Follow-ups began in mid-May 2018 (following the first workshop) and continued into early July. Agencies were asked to submit their supplementary information or clarification, and approximately one third of the follow-up emails received responses. A final reminder was sent on July 13, 2018 and substantive data collection efforts ended

on July 31, 2018. As a census of a population, data collection remained open to any agency willing to participate but IFSD's outreach for survey participation ended.

With substantive data efforts complete, IFSD reached out one final time in October 2018 to all twenty-five non-responding agencies first by phone and then via email. The agencies were asked to provide four key pieces of information about their organization to ensure they were represented in the sample: 1) the number of children in care; 2) the agency's total budget (all sources of funds); 3) total federal funding only; 4) federal allocation for protection and prevention. A total of five agencies provided these details. There was one agency that requested to participate through a shortened survey of approximately 20 questions.

PARTICIPATION

This project's total sample population was 104 agencies. The final participation rate was 76%, with 79 of 104 agencies participating in the Survey (Figure 7). All ten provinces are well represented with over 50% of agencies in each province taking part in the survey (see Figure 8). It should be noted that participation per question varies, i.e. not all participating agencies answered all questions.

FIGURE 7

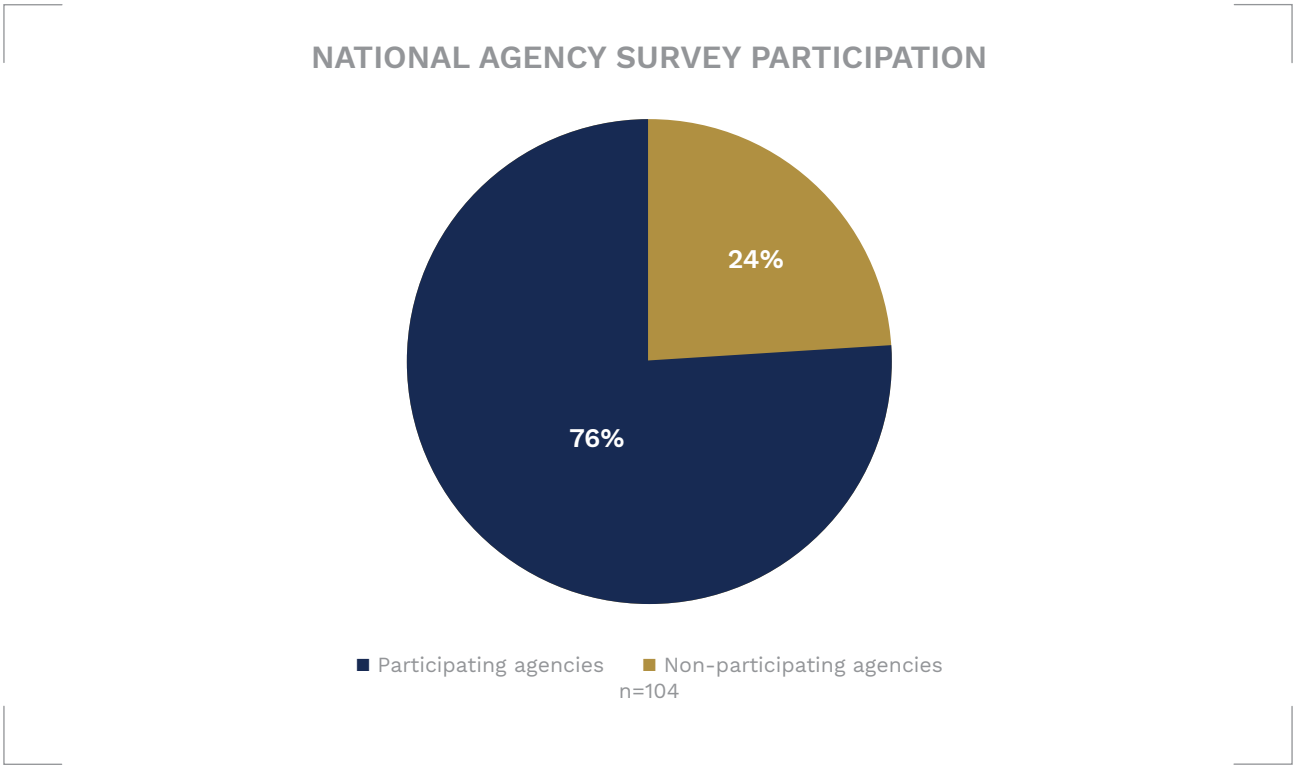

FIGURE 8

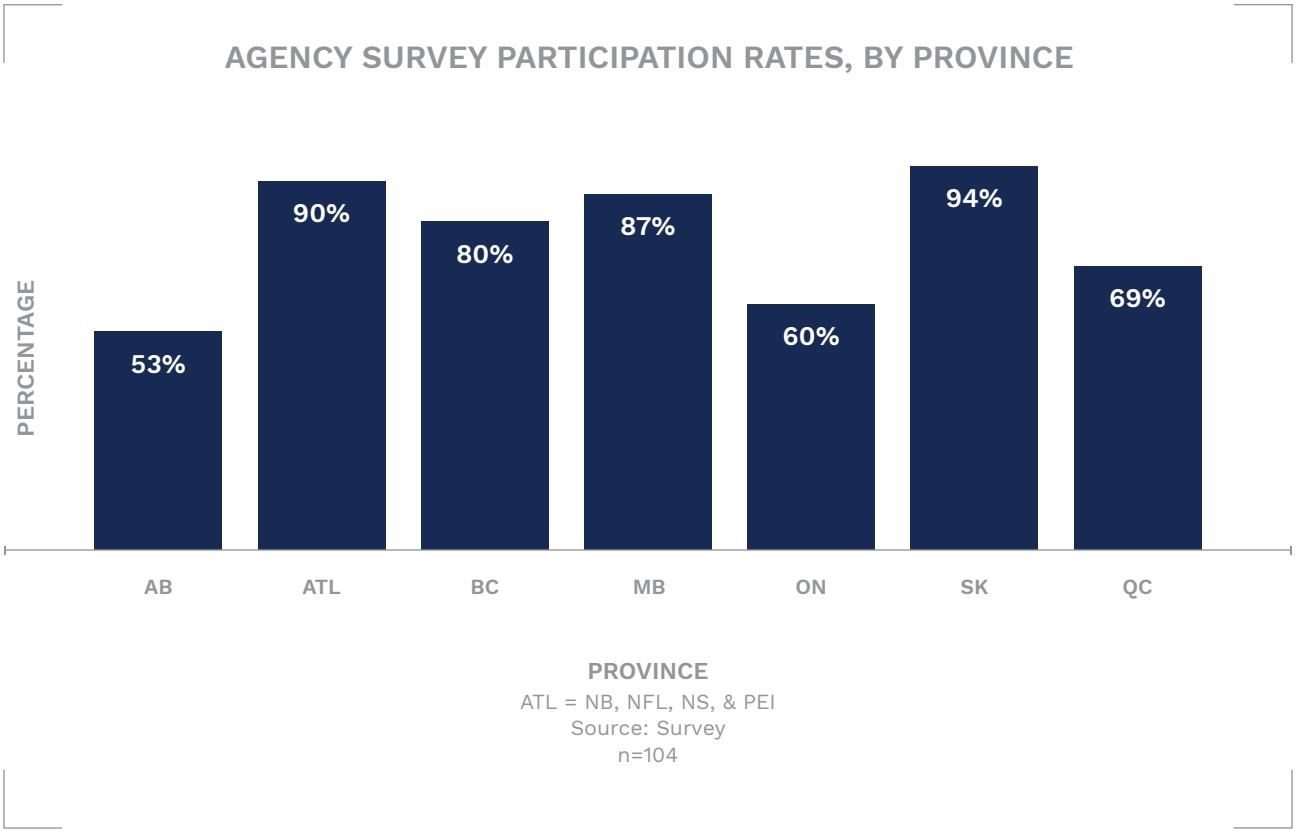

FIGURE 9

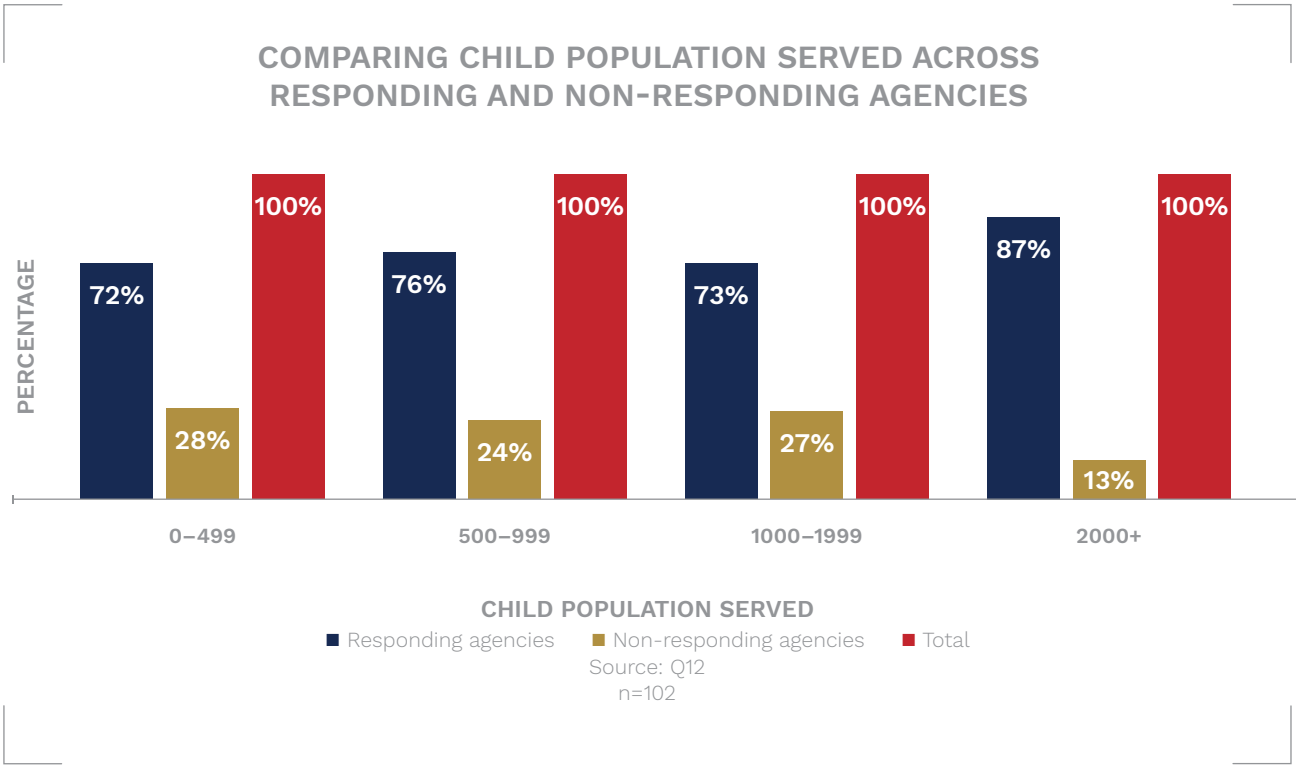

FIGURE 10

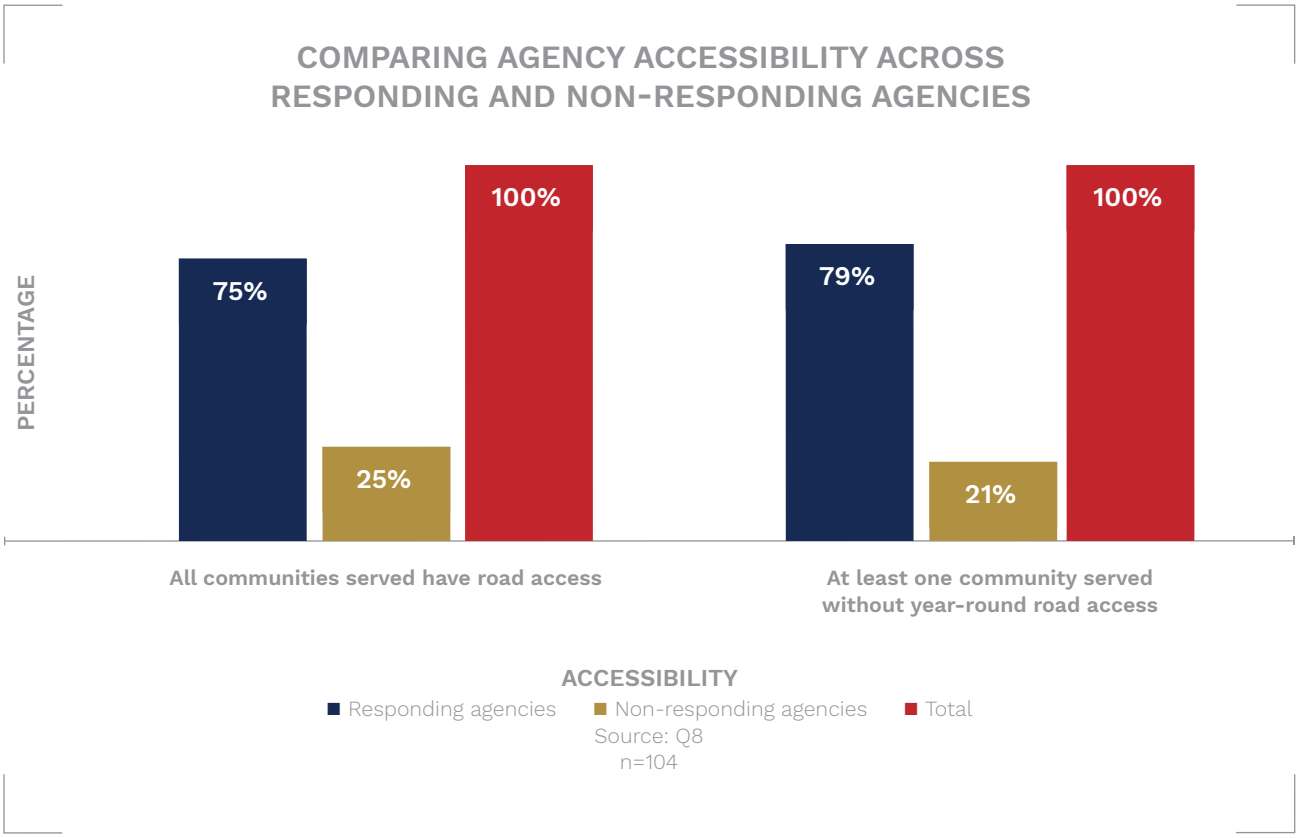

FIGURE 11

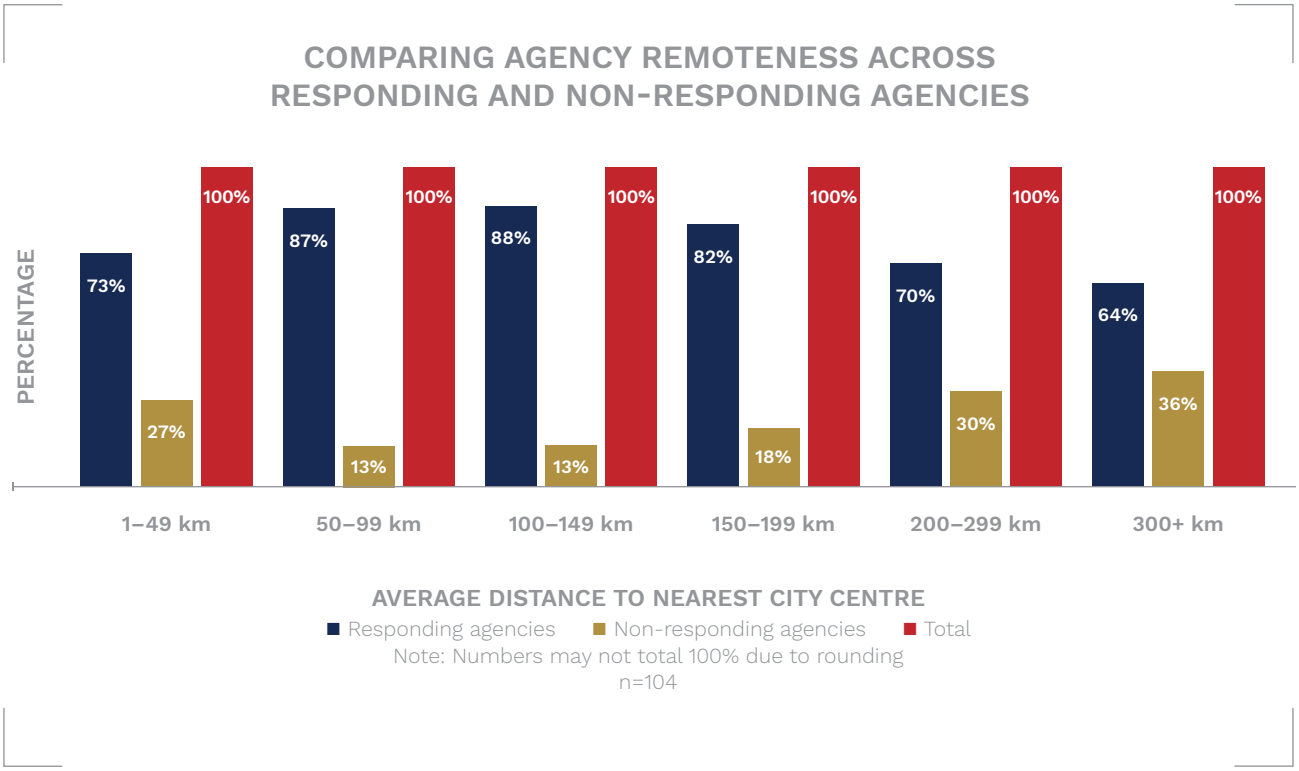

The limitation of any census of organizations such as this one is the imperfect response rate. However, the response rate of 76% as well as the provincial and typological representations of the agencies in the responding population helps to ensure that there is no major bias in representation. There can be, but there is sufficient publicly available information to help to assess the extent of the potential data gap.

The reliability of the sample was tested by sorting non-responding agencies into the three typologies using publicly available data. The data used included total child population served from Statistics Canada, as well as distance calculations using agency headquarters addresses and community locations. When assessed against the total potential sample in each of the three typologies, over 50% of each potential population is included in this project's sample (see Figure 9, Figure 10, Figure 11). For these reasons, the sample is considered representative. For an independent expert opinion from Professor Scott Bennett on the reliability of the data and the project's methodology, please see Appendix I.

ANALYSIS

Following the workshops, IFSD began coding all survey data in June 2018. A spreadsheet was designed to facilitate the entry of quantitative and qualitative responses. Using hardcopies of the survey, IFSD research assistants entered quantitative and qualitative data into the spreadsheet. Each entry was checked at least once by another research assistant. Following the initial data entry, the more complex qualitative questions were coded and integrated into the master spreadsheet. The master data set was spot-checked by a third research assistant, selecting questions and half of responding agencies at random to ensure completeness, consistency in coding, and accuracy. The master data file was finalized in early August 2018.

To make sense of the data, analysis was undertaken in three steps. First, data was assessed to better understand agency characteristics. This analysis tabulated for instance, the number of agencies that required building repairs and the number of agencies reporting service gaps. Once this overview was complete, analysis of characteristics continued by sorting data by different variables to better understand what impacted agency expenditures. Clustering agencies by total child population served, remoteness and accessibility of communities served offered insight into what drives expenditures for agencies. These three typologies were helpful in understanding trends in agency expenditures influenced by different characteristics (see Table 4). Second, correlations were run to understand the strength of relationships between variables. The strongest cost driving relationship in the data is the number of children in care to total agency budgets. Given the current funding arrangement, the strength of the relationship is not surprising as the system incentivizes the placement of children in care to unlock funding. The third step of the analysis was the cost estimation of the current and future states (see the Costing section of this report for a detailed discussion).

TABLE 4
TYPOLOGY DEFINITIONS

TYPOLOGY	DEFINITION	FINDINGS
Total child population served	The total population of persons 0–18 years of age within the agency's catchment area (i.e. in communities served).	Notwithstanding overall funding shortfalls, there are variances in expenditures and trends when agencies are assessed by population served. Analysis suggests that variances are largely driven by remoteness and accessibility.
Remoteness	Remoteness was determined as distance to a city centre, because analysis from Wen:de (2005) suggested that agencies must send clients to a city centre (Statistics Canada definition) to access services. The remoteness calculation for each agency was determined as an average of the distance of the communities they serve to the closest city centre.	Remote agencies exist across populations served, provinces, and budget ranges. Average number of staff and travel costs generally trend upward with remoteness; this is reflected in average budgets.
Accessibility	Agencies were clustered based on the communities that they serve. Agencies serving at least one community without year-round road access were grouped, and agencies serving only communities with year-round road access were grouped.	Agencies with at least one community without year-round road access have higher average budgets, staff, children in care and substantially larger travel budgets. Limited road access represents approximately 20% of the population.

AGENCY CHARACTERISTICS

Agency data was clustered to assess if agency characteristics could help to identify expenditure trends. This approach was helpful in demonstrating that agency characteristics were more representative than provincial or funding formula groupings (i.e. agency characteristics cross provincial boundaries and funding formulas). When data was sorted by province and by funding formula, there were limitations in the explanatory value of trends.

While average budgets by province varied, agencies in Ontario reported higher average budgets than their peers using other funding formulas. This however, may be a function of the size of the Ontario agencies and the geography that they cover (Figure 12 and Figure 13).

Most agencies did not report a deficit in fiscal year 2017–2018, whether sorted by province or funding formula (Figure 14 and Figure 15). This does not necessarily imply sufficient funding, but may indicate that agencies are operating nearly exclusively within planned authorities.

FIGURE 12

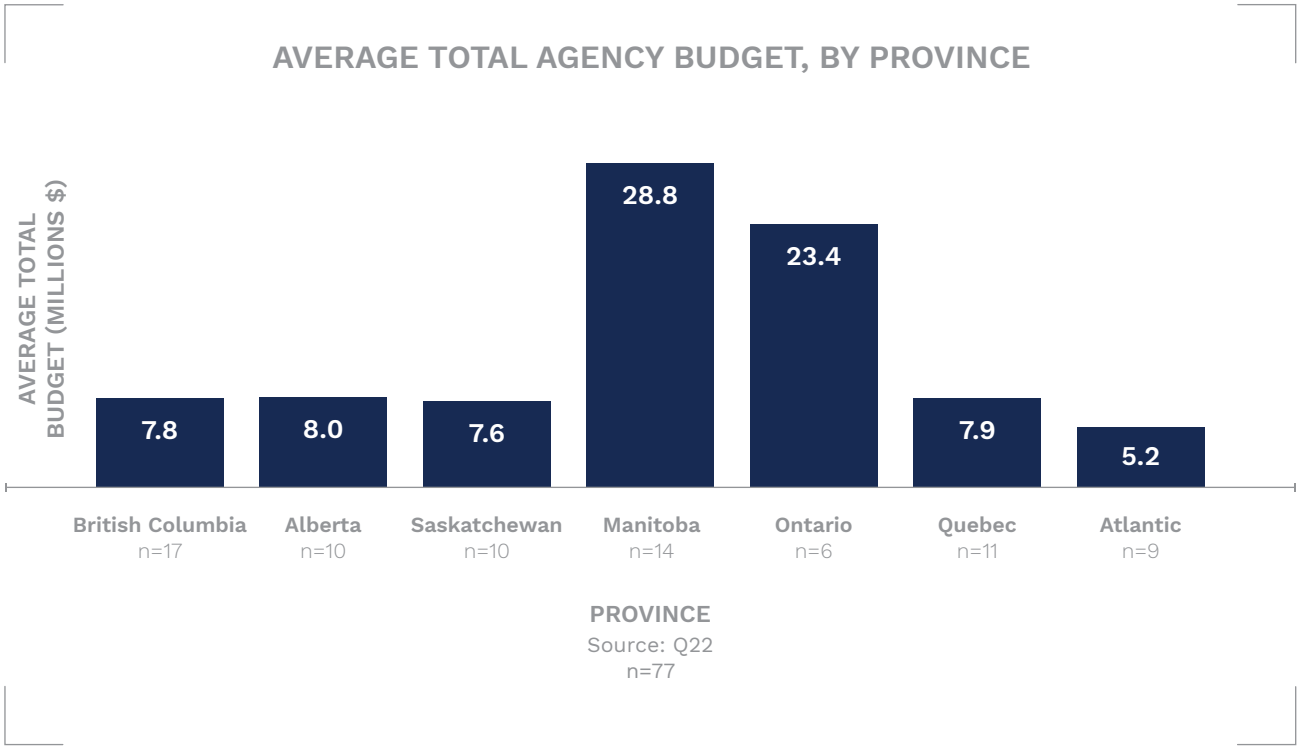

FIGURE 13

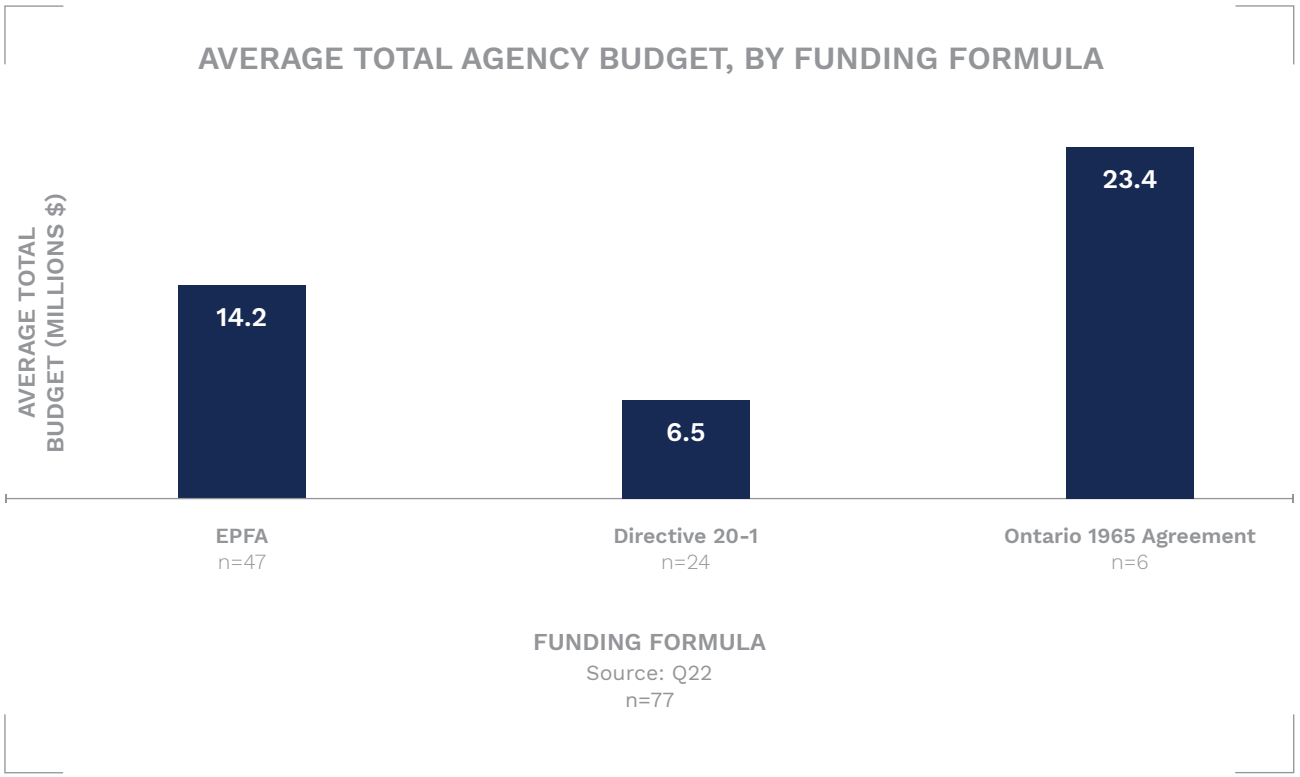

FIGURE 14

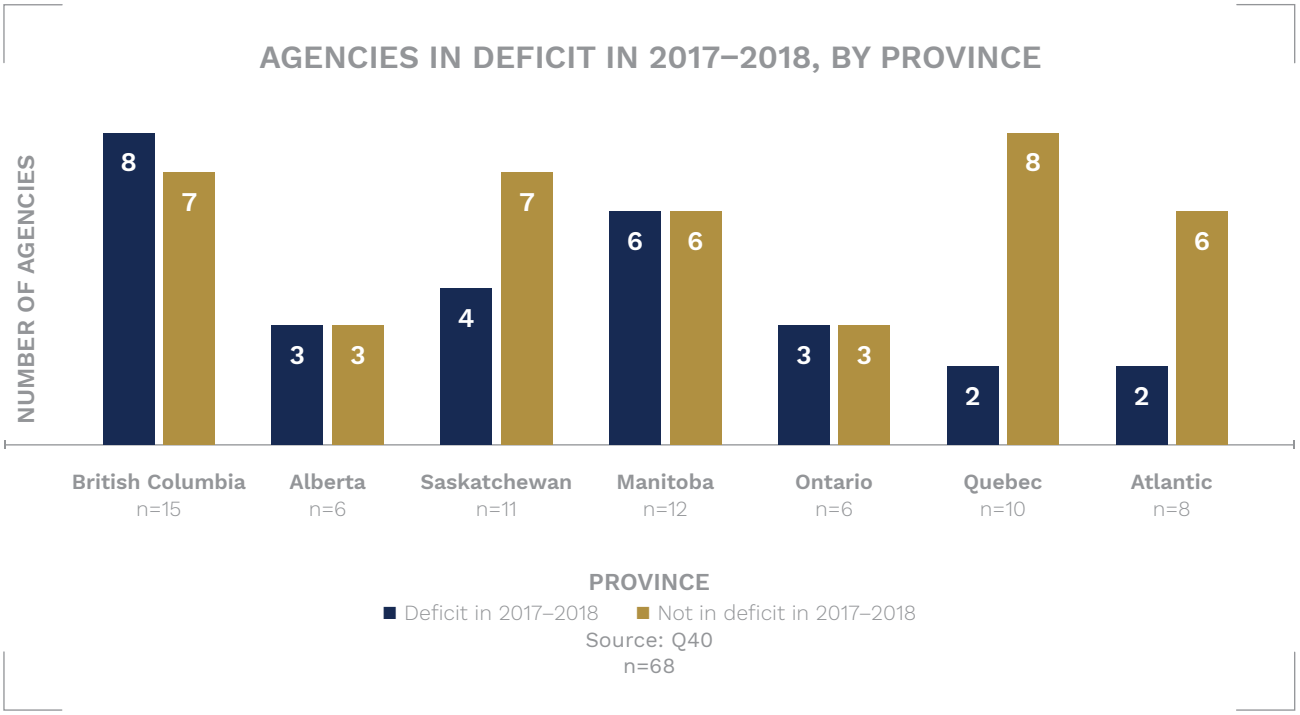

FIGURE 15

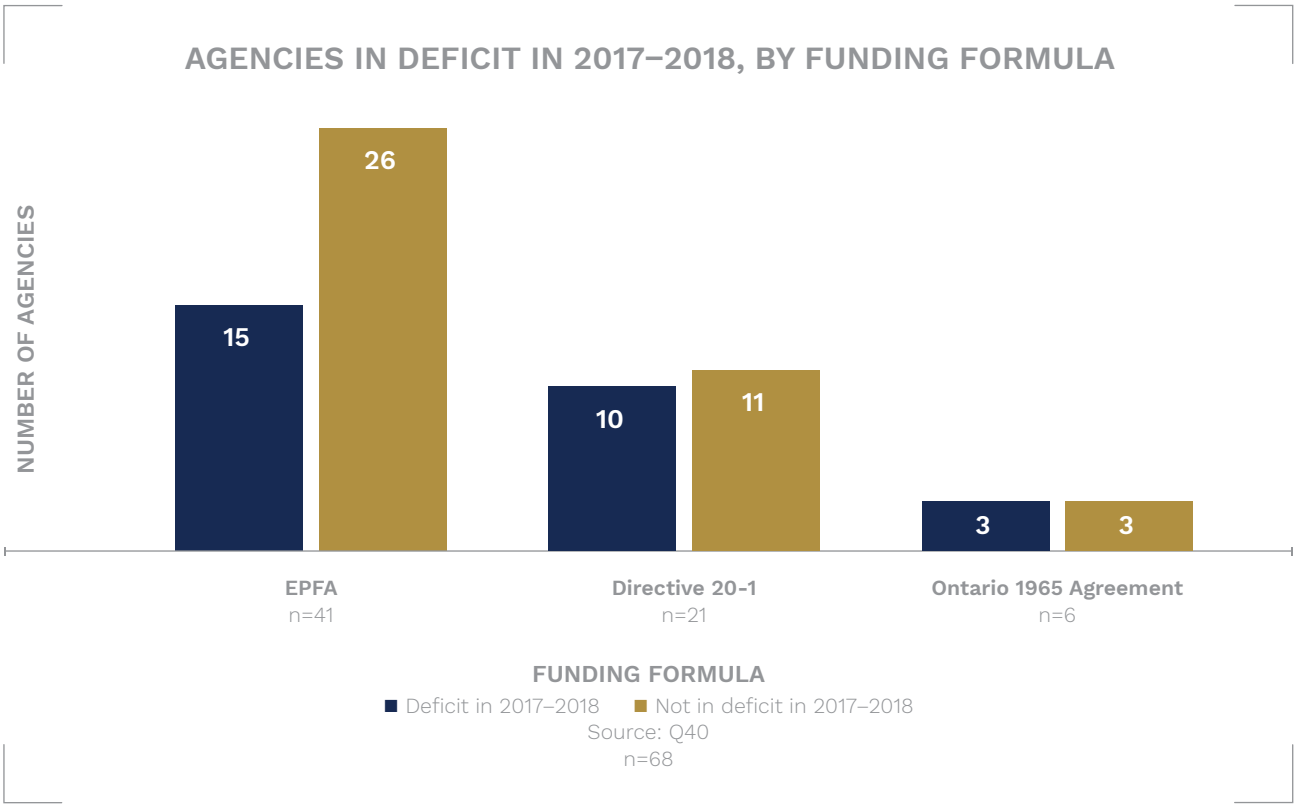

Provinces, although they can offer insight into the legislation governing child and family services, are not indicative of inherent characteristics of agencies. Similarly, clustering by funding formula is not helpful in deciphering agency characteristics. Characteristics such as geographic location (remote versus near an urban centre) or total population of children served are independent of provincial borders and funding formulas. An agency serving remote communities in Ontario under the 1965 Agreement can exhibit similar expenditure trends to an agency serving a similar community in British Columbia under a modified version of Directive 20–1.

POPULATION SERVED

There is some variance in average agency budgets by child population served as reported by agencies (Figure 16). Average agency budgets trend upwards with population served using Statistics Canada's custom catchment data (Figure 17).

FIGURE 16

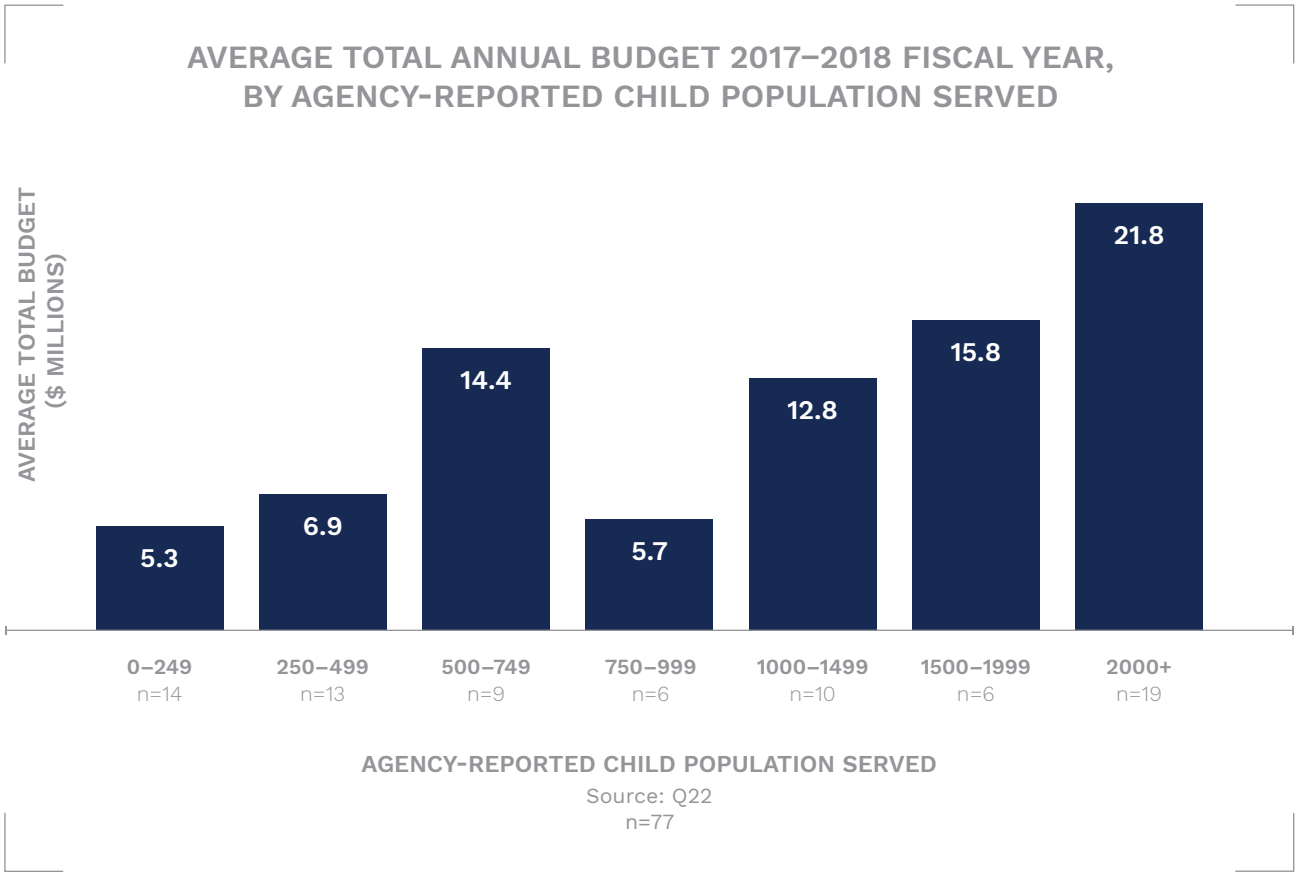

FIGURE 17

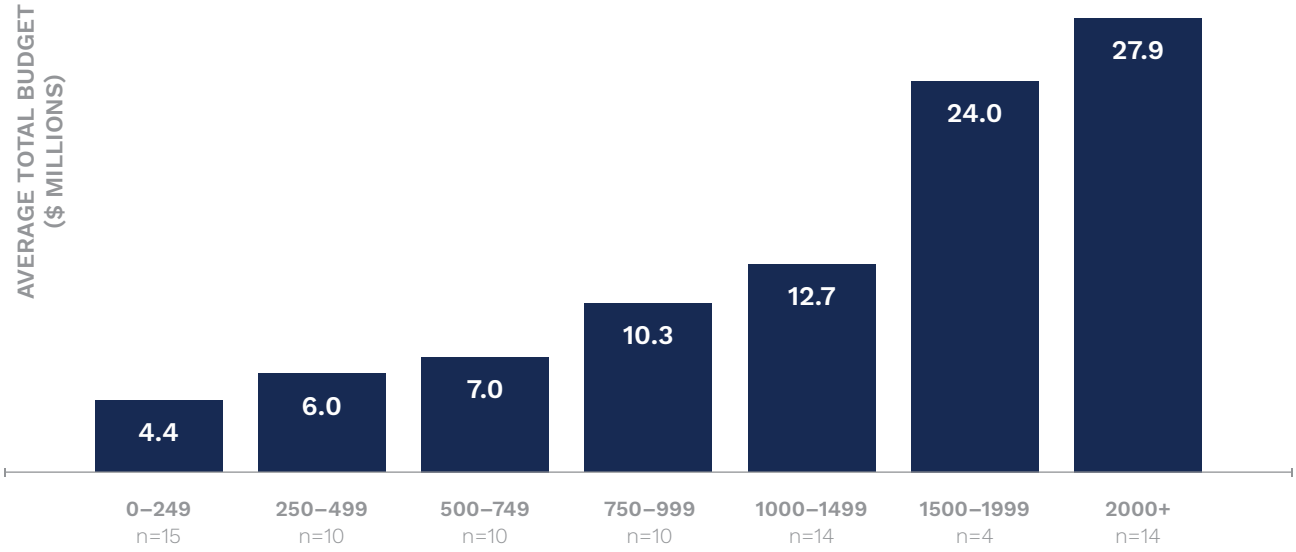
AVERAGE TOTAL ANNUAL BUDGET 2017–2018 FISCAL YEAR, BY STATISTICS CANADA'S CUSTOM CATCHMENTS OF CHILD POPULATION SERVED



Source: Q22
n=77

There is some variance in the relationship between number of children in care and the size of the child population served whether sorted by agency self-reported (Figure 18) or using Statistics Canada's custom catchment data (Figure 19).

FIGURE 18

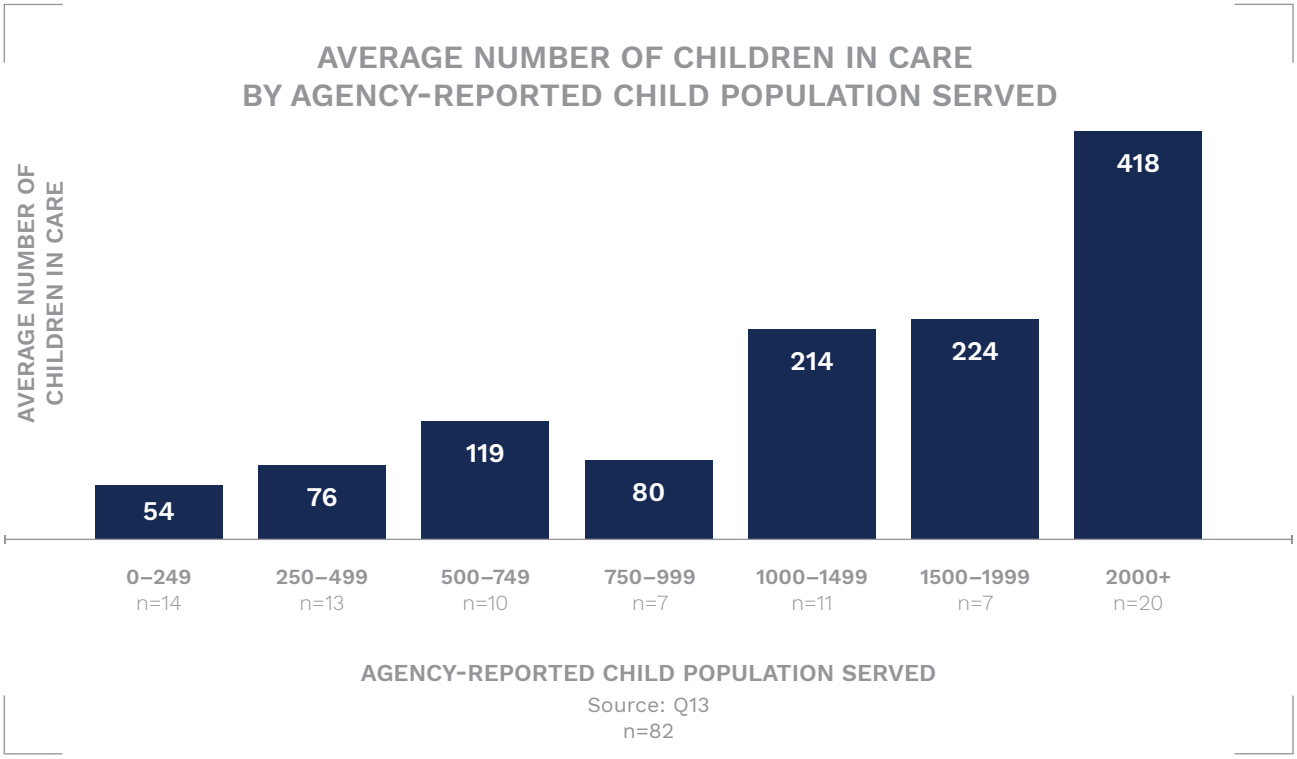


FIGURE 19

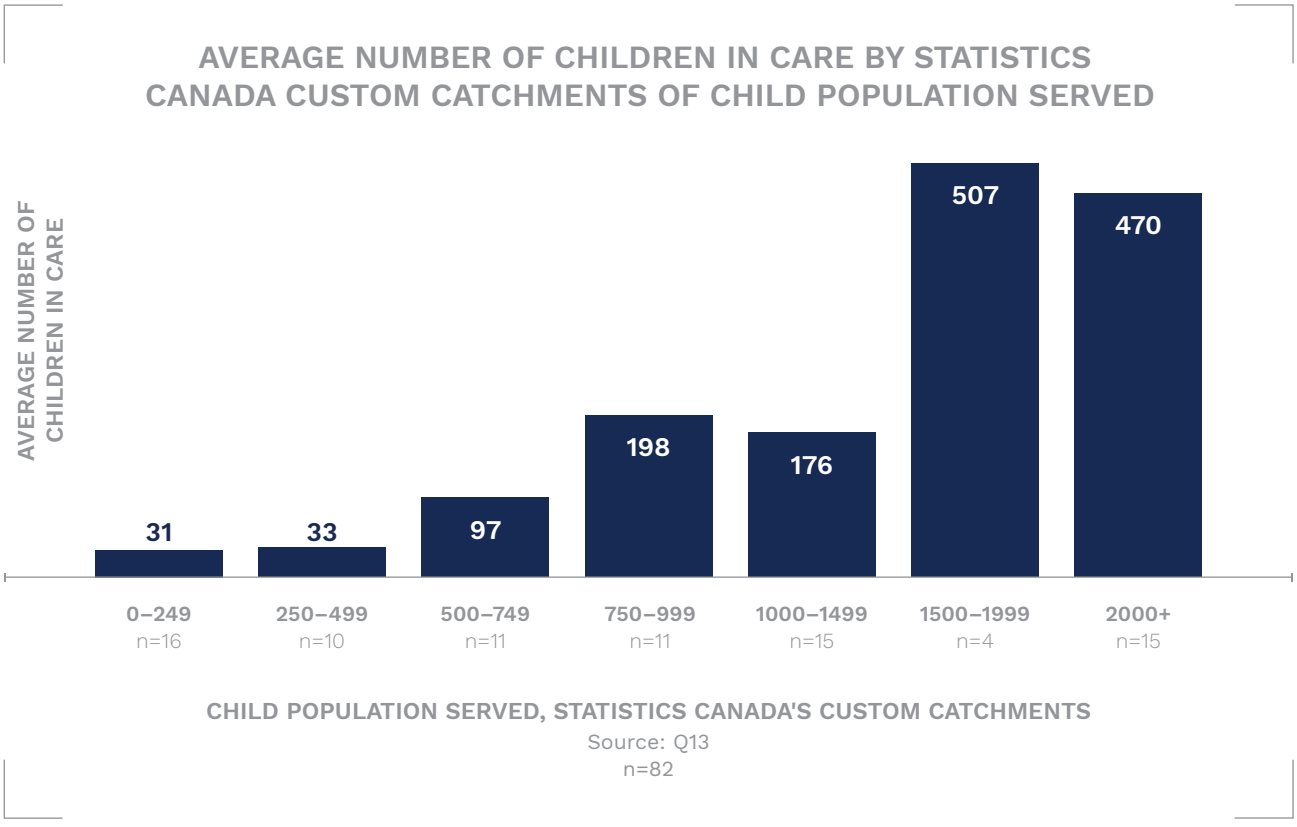

There is variance in agency travel costs when analyzed by child population served whether self-reported (Figure 20) or using Statistics Canada's custom agency catchments (Figure 21).

FIGURE 20

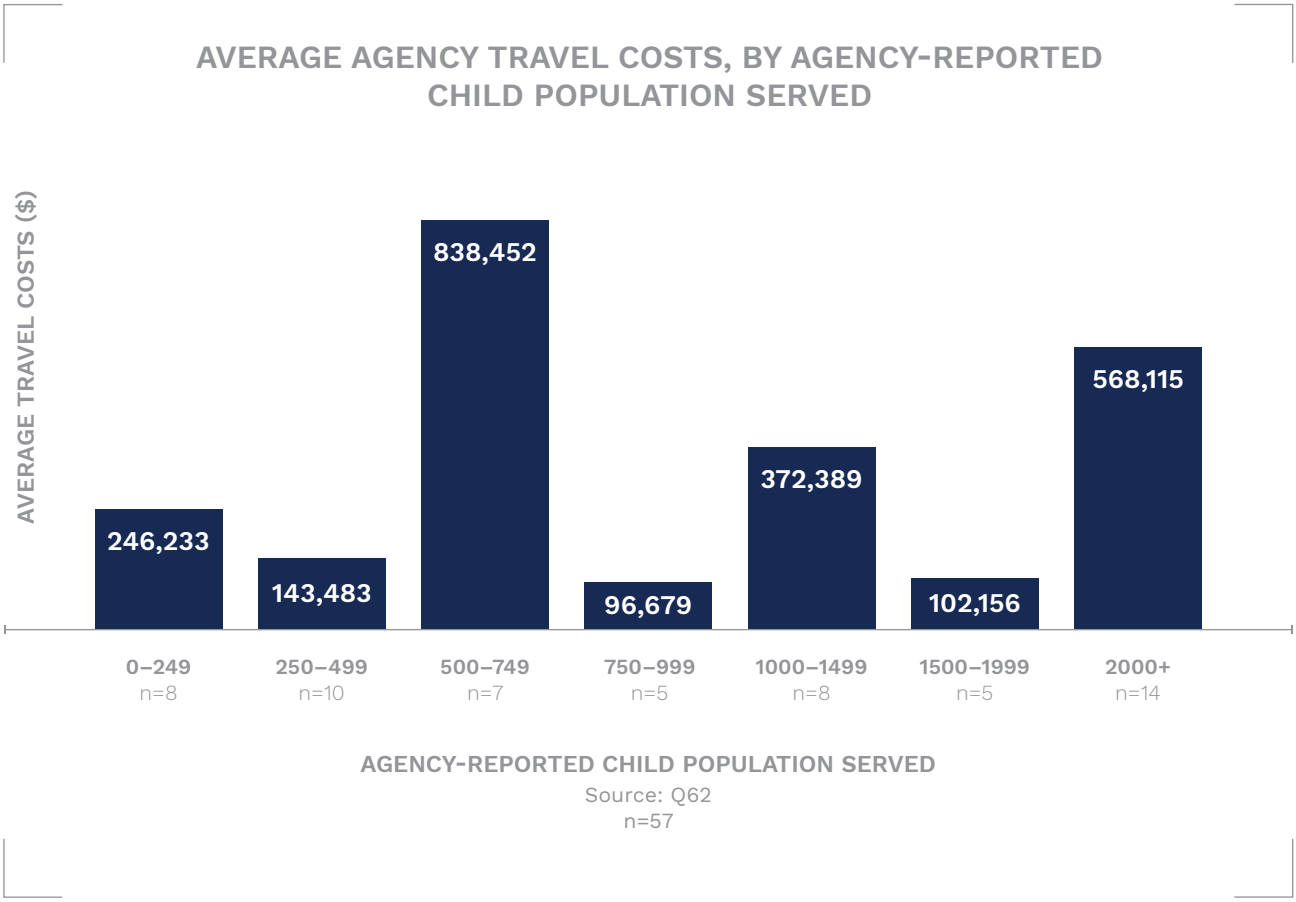

FIGURE 21

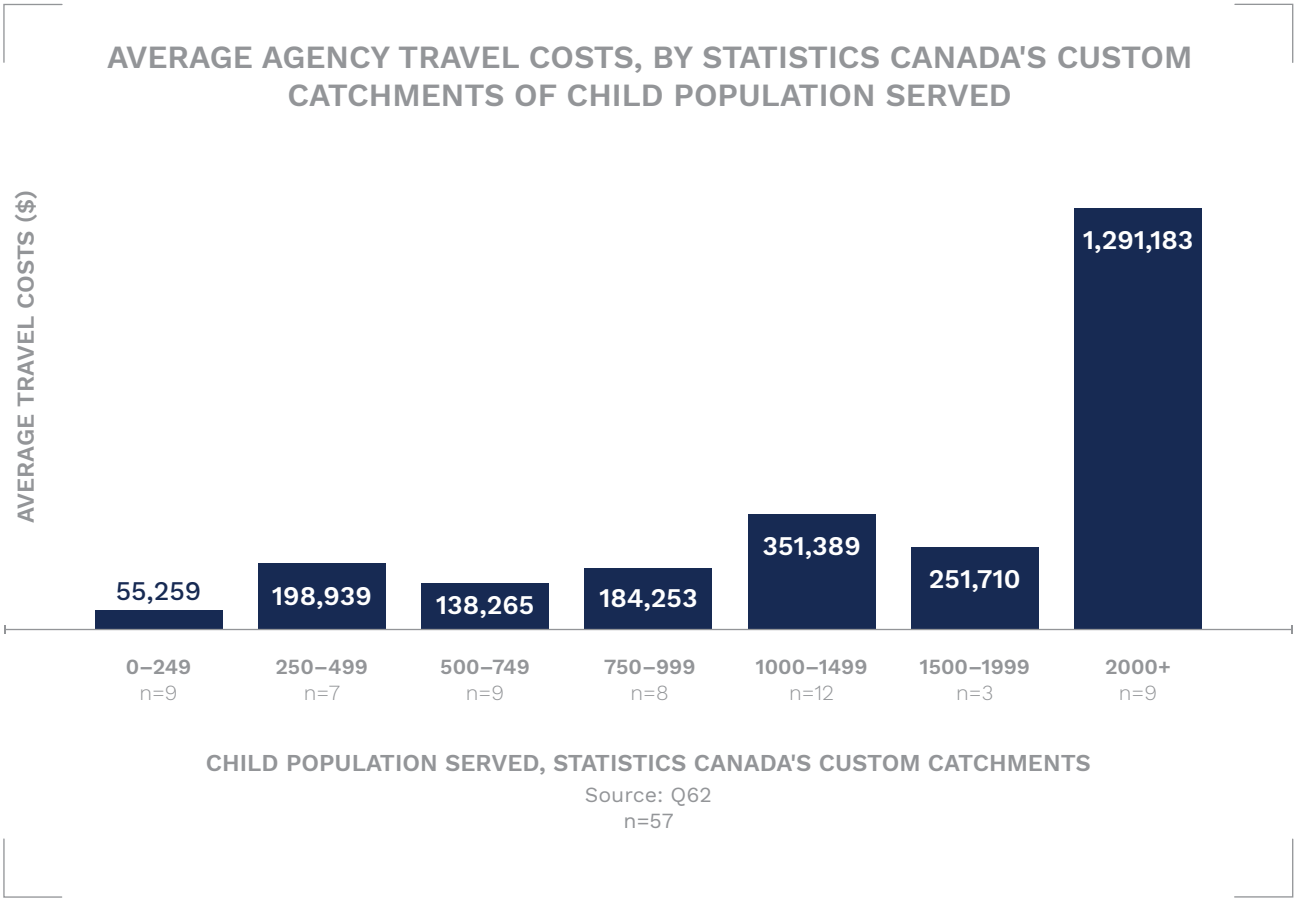
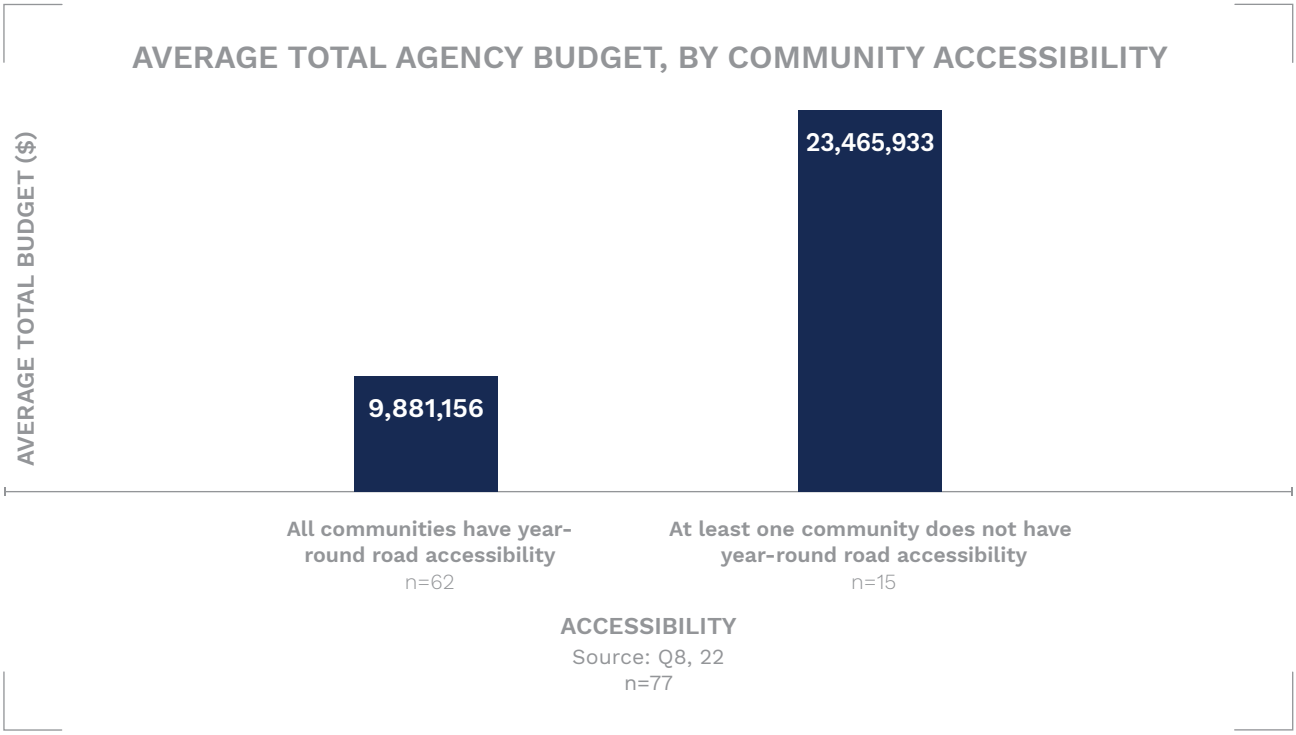


ACCESSIBILITY

Agencies were clustered based on the communities that they serve. Agencies serving at least one community without year-round road access were grouped, and agencies serving only communities with year-round road access were grouped.

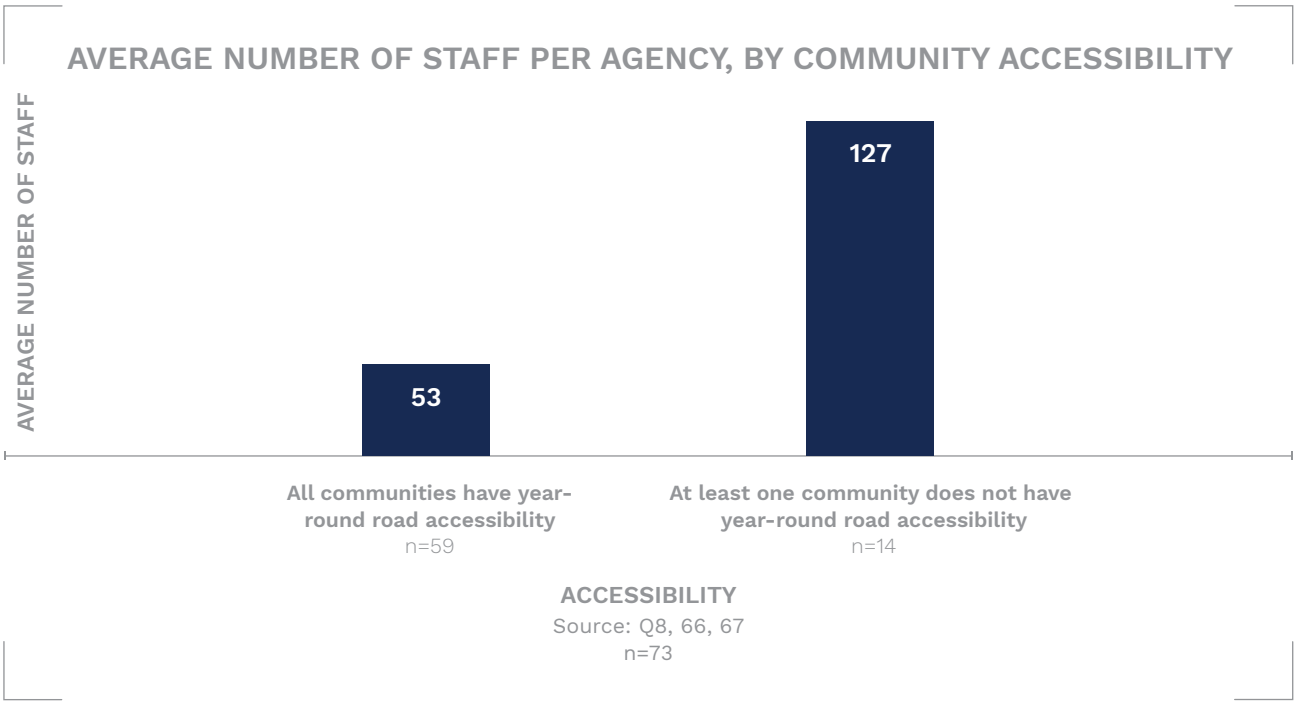
Agencies with at least one community without year-round road access have more than twice the average annual budget than those with all-year road access (Figure 22).

FIGURE 22



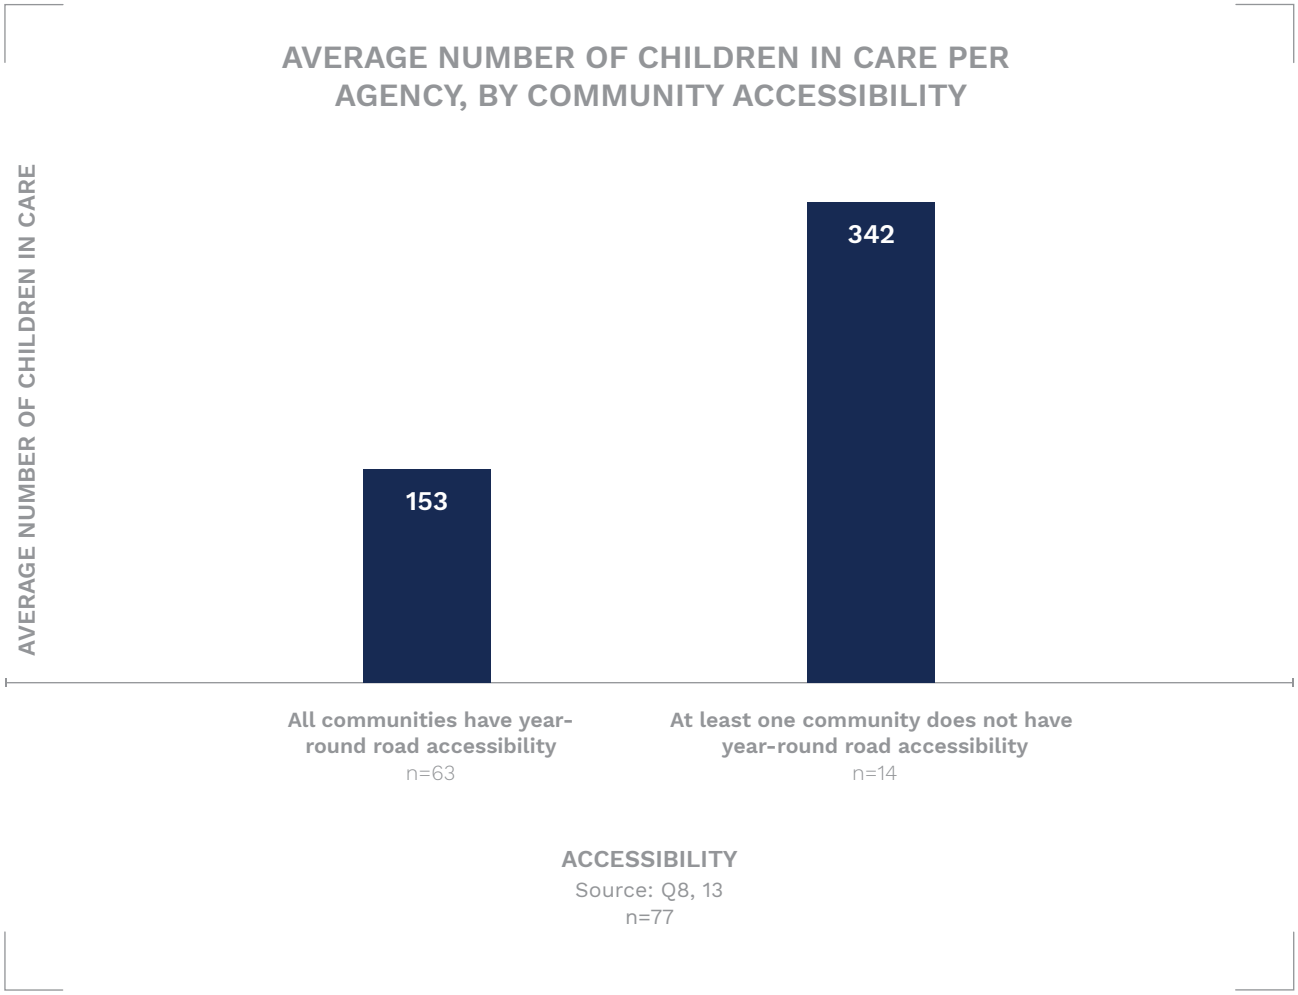
Agencies with at least one community without year-round road access have on average, approximately two times more staff than agencies with all-year road access (Figure 23).

FIGURE 23



Agencies with at least one community without year-round road access have on average, more than twice the number of children in care than agencies with all-year road access (Figure 24).

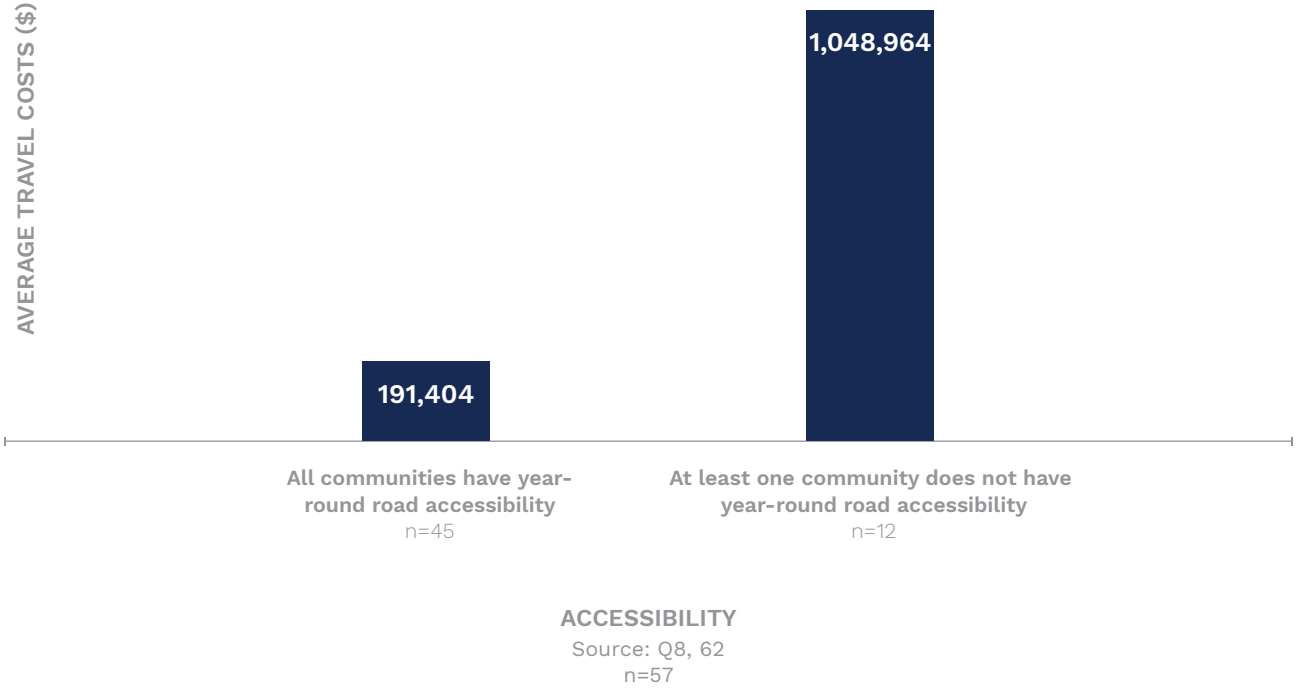
FIGURE 24



Agencies with at least one community without year-round road access have on average, travel costs over five times greater than agencies with all-year road access (Figure 25).

FIGURE 25

AVERAGE TRAVEL COSTS PER AGENCY, BY COMMUNITY ACCESSIBILITY



Agencies with at least one community without year-round road access have higher average budgets, staff, children in care and substantially larger travel budgets.

REMOTENESS (DISTANCE TO CITY-CENTRE)

Remoteness was determined as distance to a city centre, because analysis from Wen:de has suggested that agencies must send clients to a city centre to access services. The remoteness calculation for each agency was determined as an average of the distance of the communities they serve to the closest city centre.

Average budget by remoteness varies among agencies (Figure 26). There is a slight upward trend in average number of staff per agency as distance from a city-centre increases (Figure 27). There is no relationship between the average number of children in care and their remoteness profile (Figure 28). Travel costs generally trend upwards as distance from a city-centre increases (Figure 29). Remote agencies exist across populations served, provinces, and budget ranges.

FIGURE 26

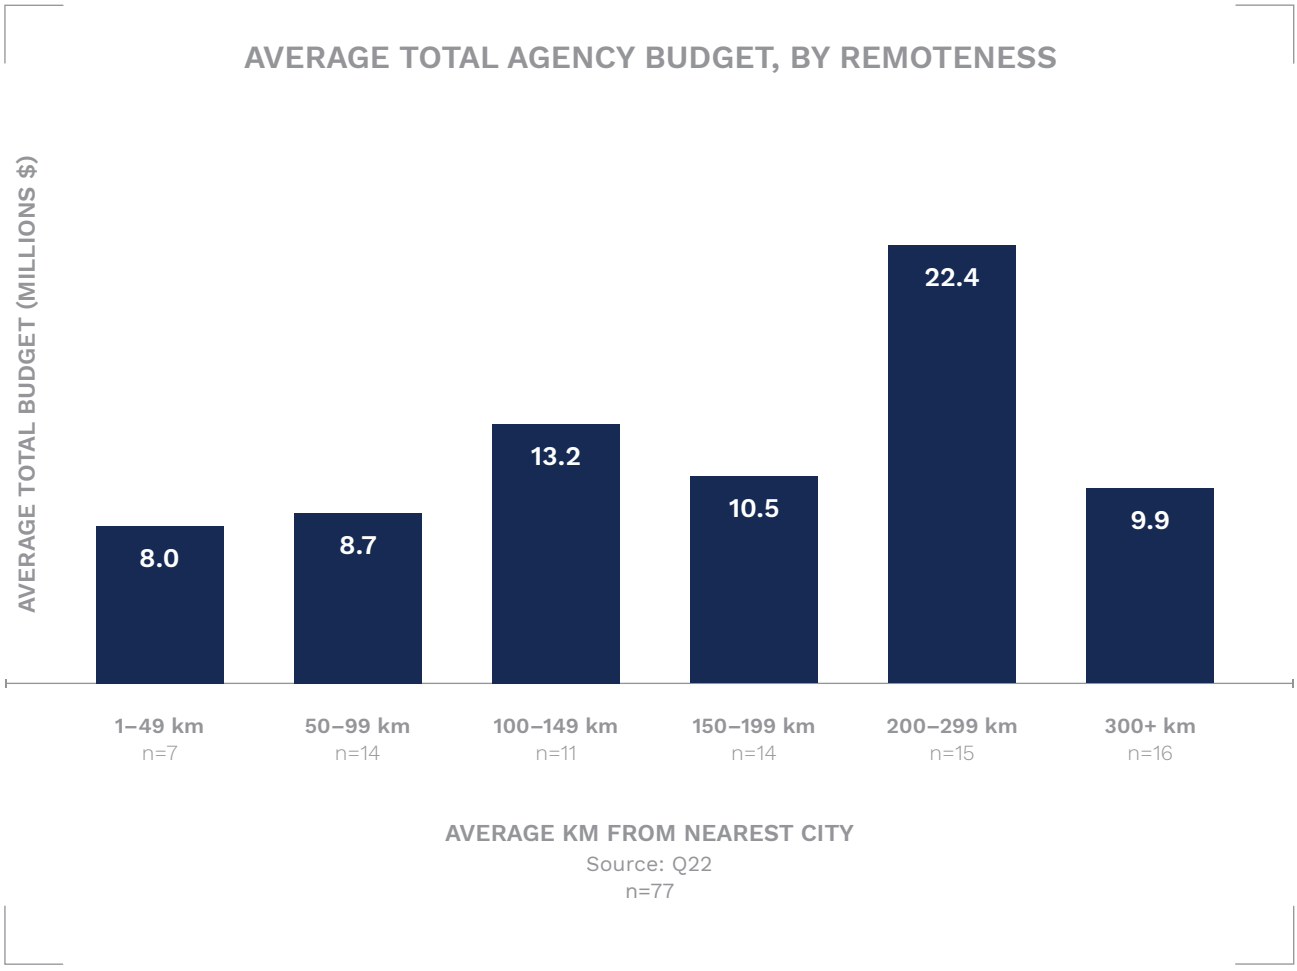


FIGURE 27

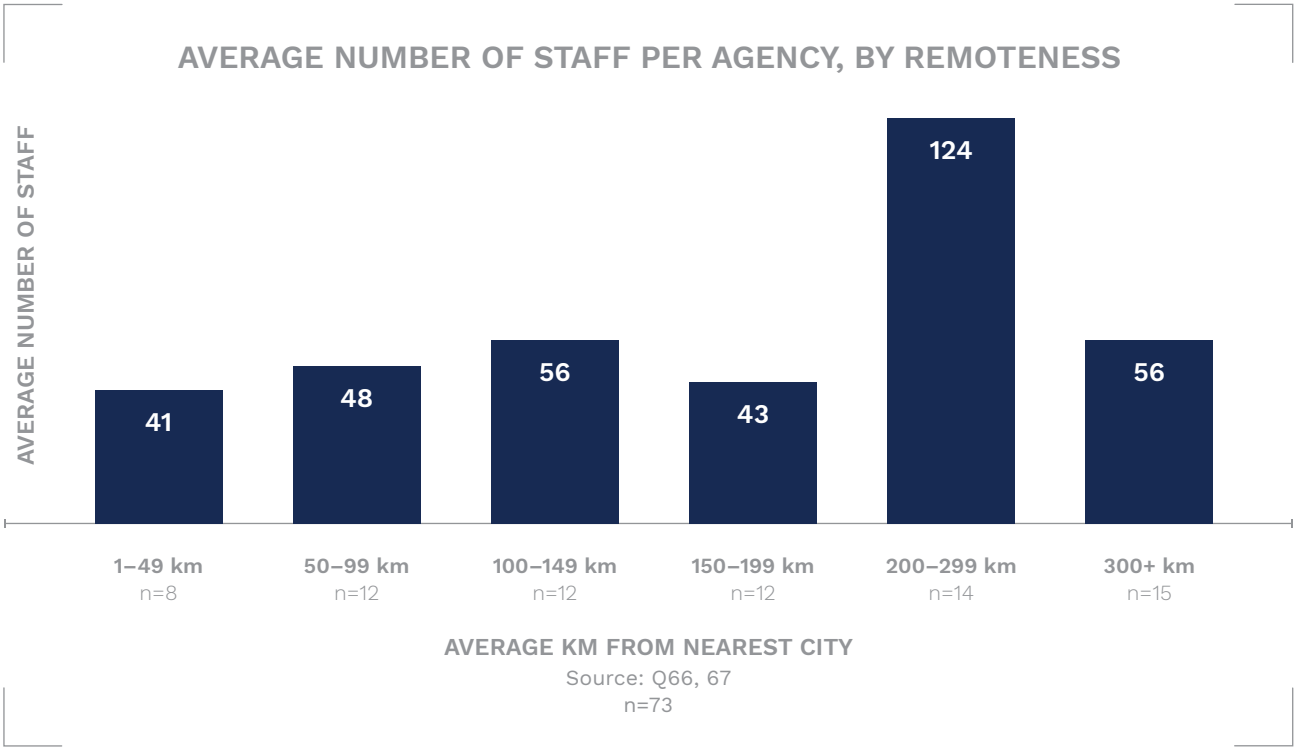

FIGURE 28

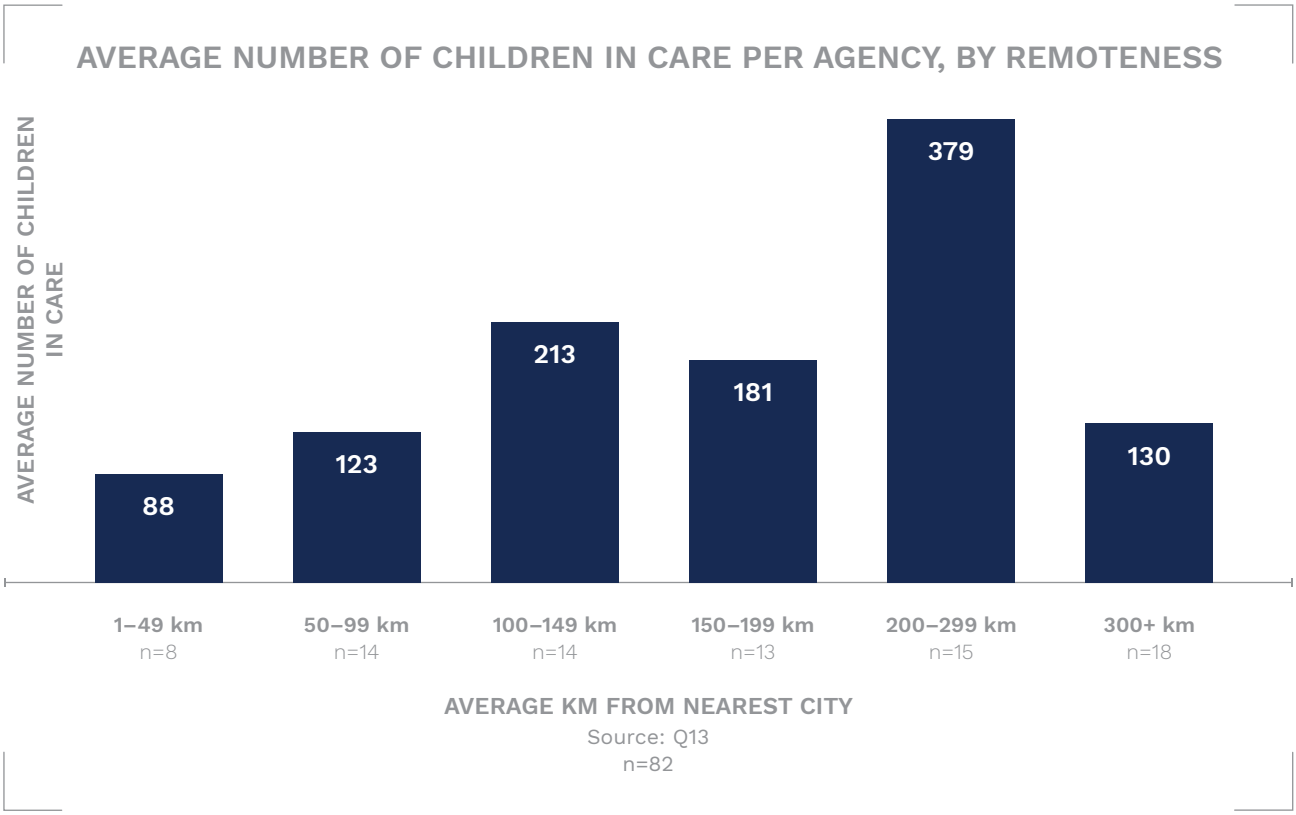

FIGURE 29

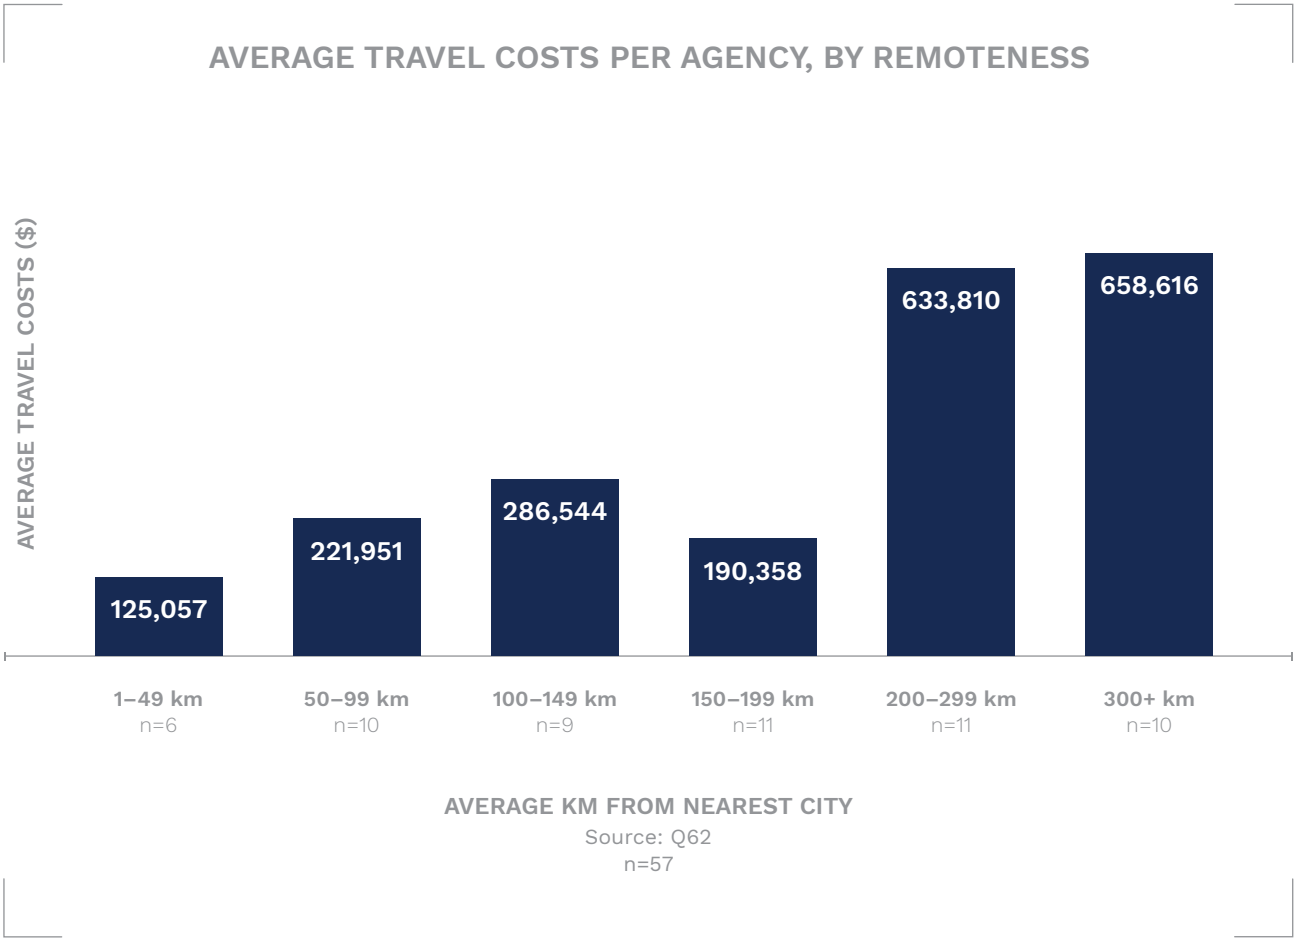


Clustering agencies by relevant typology was necessary to understand trends and to assess if specific characteristics influenced agency expenditures. The data suggests that agencies serving at least one community with limited road access have increased overall expenditures. By contrast, it is only travel costs that increase significantly when agencies are 200 km or more from a city centre. Analysis by typology suggests that the total population of children served is a useful indicator of resource requirements for agencies that are not remote and that are accessible year-round by road, as expenditures generally trend upwards with larger populations. Agencies with at least one community without year-round road access have higher average budgets, staff, children in care and substantially larger travel budgets. Remoteness, beyond serving as an indicator for service gaps, has limited explanatory value with respect to agency expenditures.

Correlations were run to explore associations between independent and dependent variables in the data set (Table 5). Calculations were run between these variables in each of the three typologies (total child population served, remoteness, accessibility) and for the total population. The correlations were undertaken to explore potential cost drivers and to determine which variables drive agency expenditures. Running correlations across typologies and the general population provided a test of reasonableness to determine if cost driving relationships were the same or differed among types of agencies. When clustered by typology, the strength of the relationships between the variables was mixed.

TABLE 5
INDEPENDENT AND DEPENDENT VARIABLES TESTED IN CORRELATIONS

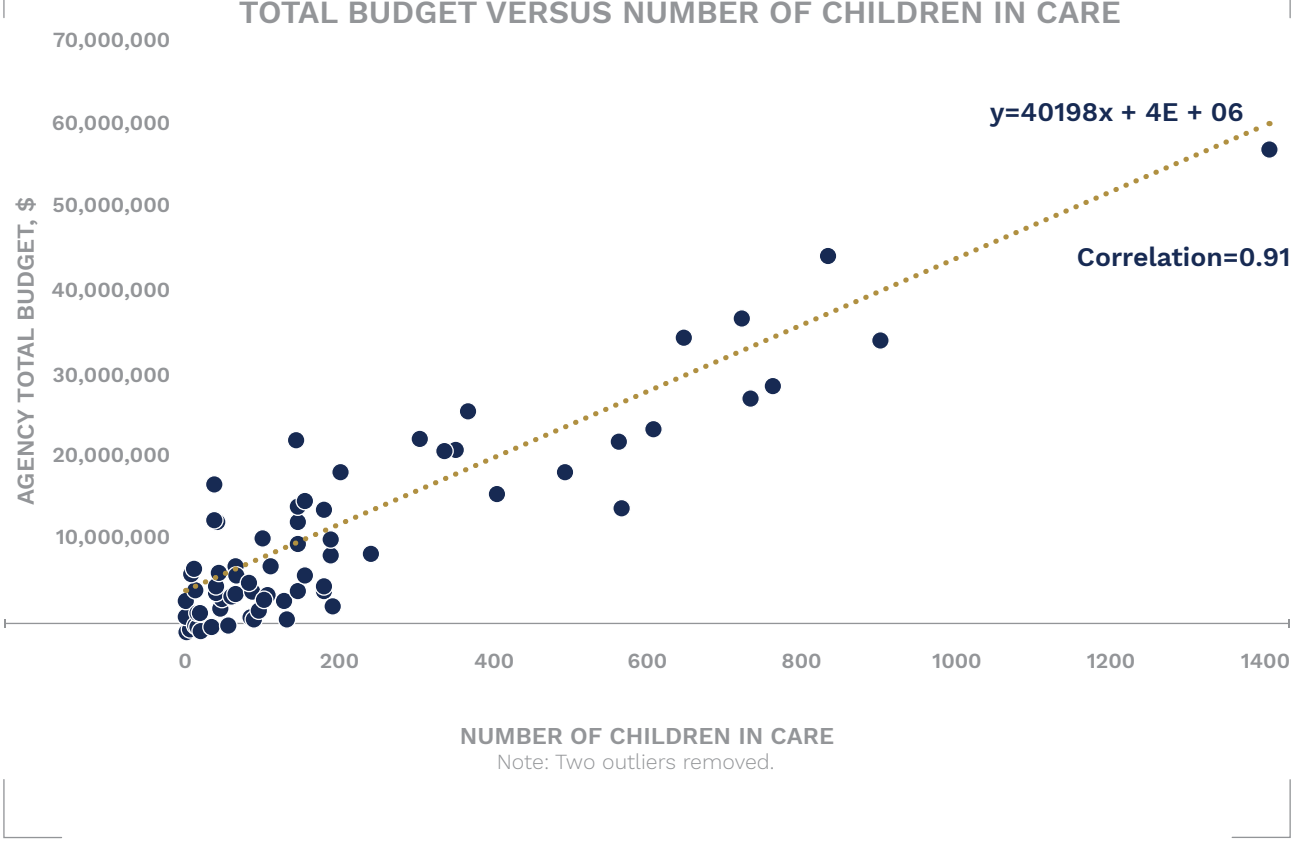
INDEPENDENT VARIABLES	DEPENDENT VARIABLES
▪ Remoteness (distance to city center) ▪ Accessibility (by year-round road to communities served) ▪ Child population served ▪ Number of offices ▪ Number of communities served ▪ Children in care	▪ Total budget ▪ Staff total ▪ Salary and benefits expenditures ▪ Professional or contract services expenditures ▪ Travel expenditures ▪ Overhead and other expenditures ▪ Repairs and maintenance expenditures ▪ Protection and maintenance program expenditures ▪ Prevention program expenditures

Across typologies and the general population, there was no consistently strong relationship other than that between total budget and children in care. This result suggests that regardless of agency characteristics, children in care is what drives budgets. This also suggests that as an indicator of total costs, the number of children in care is a reliable way of estimating the total cost of the current system. The result confirms that the system operates as designed by unlocking funding when a child is placed in protection.

The number of children in care correlates tightly with total budget (see Figure 30). Total budget was used to test expenditure behaviour as it should be independent of the source of funds. This approach permits an assessment of cost behaviour independent of individual provincial agreements. With the strength of the relationship, children in care is used as the cost driver because it is by far, the most reliable cost driver to forecast the baseline funding requirement, i.e. protection focused. Children in care, while it serves as a forecasting baseline, represents the

minimum baseline of funding required to ensure that children are safe. Additional programing requirements, tied to desired outcomes, are built from this base scenario.

FIGURE 30



IFSD's analysis provided a financially-driven description of the program's current state, presented a means of organizing agencies by typology, and defined key program activities of agencies and the challenges and opportunities therein. The data confirmed what stakeholders may have intuitively known: the current program structure is underfunded, reinforces protection, and does not deliver results. An improved prevention-focused future state is desired but will require a structural change in funding and a holistic vision of child well-being.

Costing

The cost estimations in this project are designed to provide a baseline profile of financial and operational characteristics of FNCFS agencies based on the current program and to estimate needs-based supplementary expenditures for a desired future state. The future state models derive from agency consultations and expert counsel (from a roundtable hosted by IFSD) on improving child, family and community well-being among First Nations.

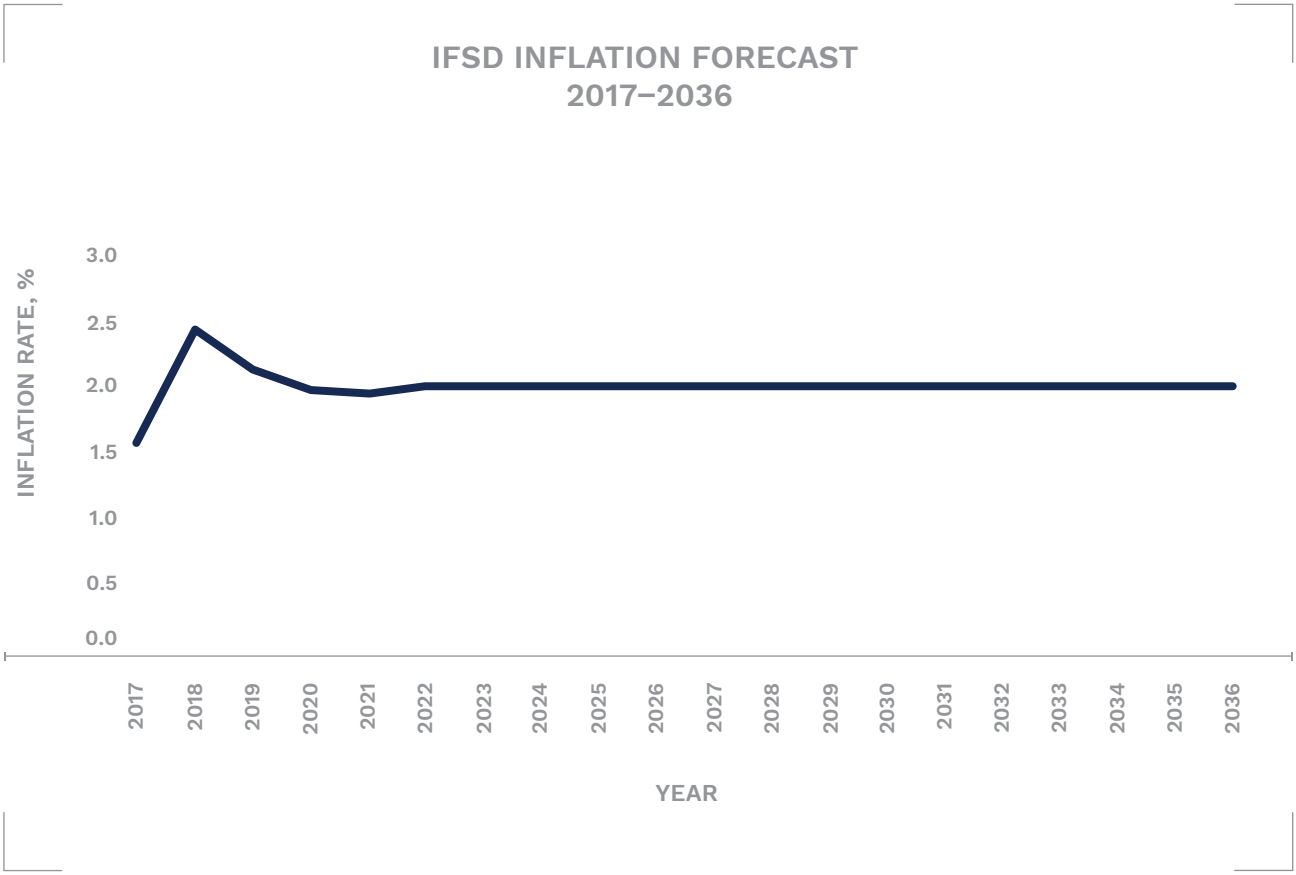
A costing is an estimate of the financial resources required for an activity over time, based on a series of assumptions about independent variables, such as population growth. A costing does not produce a single number, but rather a range of estimates based on a variety of scenarios. As an estimate, a costing is not absolute but is meant to be indicative of future expenditure requirements based on current trends and assumptions about the future. For this project, two sets of cost estimates are produced: 1) a baseline profile of the current program's costs into the future; 2) estimates of needs-based expenditures for an alternative program model focused on well-being.

For each of these cost estimates, population and inflation are applied as growth factors. Widely used, population and inflation changes are applied to existing program costs to estimate their costs into the future. For cost models in this project, two population growth scenarios and three inflation assumptions are used to present a range of possible costs.

INFLATION

Inflation is the rate at which the price of a basket of goods and services is projected to increase overtime, reflecting the decrease in purchasing power of a currency. IFSD's inflation forecast, holding steady at 2% to 2036 is used in this project's calculations (see Figure 31). Other agencies, such as the Bank of Canada and the Parliamentary Budget Office have similar long-term inflation forecasts. Scenarios with inflation at 2%, 2.5% and 3% were calculated to illustrate cost impacts, should the inflation rate change. Inflation was applied to program costs and compounded over time.

FIGURE 31



POPULATION SCENARIOS

Custom population projections were requested from Statistics Canada to project the population growth of First Nations in Canada for all ages and for the 0–18 age group. Statistics Canada produces a total of five scenarios for these population projections,[43] two of which are used for cost estimates in this project. The convergence scenario assumes that gradually, the fertility rate of First Nations will converge to that of the general population (see Appendix J). This implies a decline in the First Nation population over time. Deemed the 'reference' scenario, all other scenarios differ from this (the convergence scenario) by only one element. The constant scenario is also used (see Appendix J). This scenario assumes that the fertility rate among First Nations does not converge with that of the general population. This implies that the First Nations population is expected to grow over time. Sharing similar slight

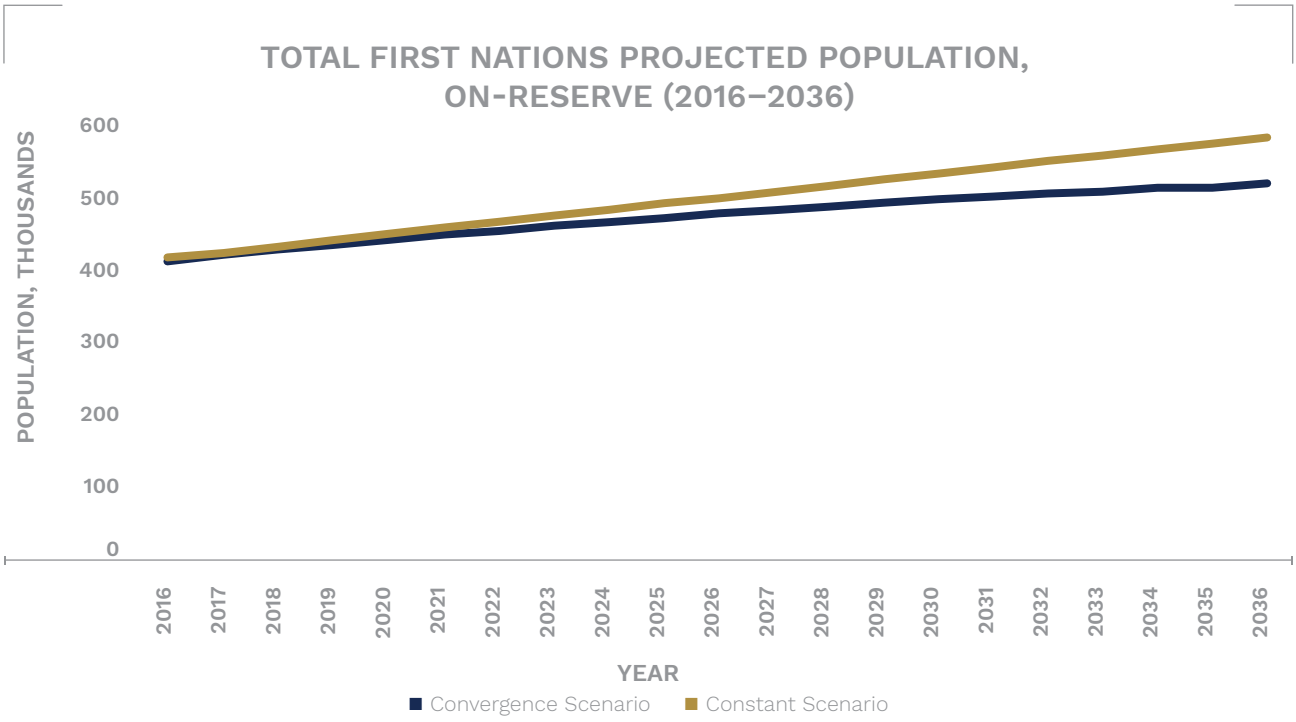
[43] Detailed descriptions of Statistics Canada's scenarios are available here https://www150.statcan.gc.ca/n1/pub/91-552-x/2015001/section06-eng.htm.

upward trends, the convergence scenario trends downward as the constant scenario grows the population into 2036 (Figure 32).

As with the general First Nations population projection on-reserve, the 0–18 population initially increases in both the convergence and constant scenarios. The convergence scenario however, trends steeply downward as the constant scenario trends upward (Figure 33).

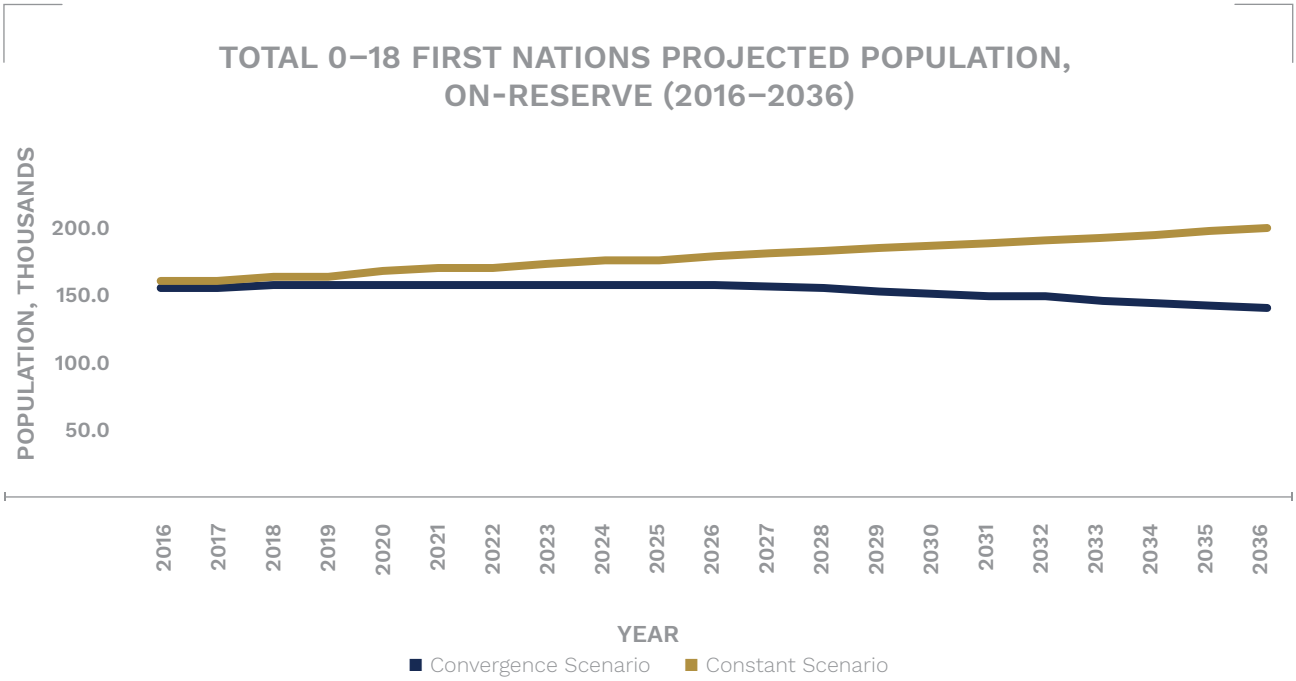
Total populations and projections were provided at five-year intervals. Growth rates were interpolated on an annual basis (see Appendix J) in order to estimate yearly program costs. The total population growth rates were applied to current total agency catchment populations to estimate the costs of prevention funding per capita. The agency catchment populations were a custom tabulation developed with Statistics Canada's census data. For the child population in the custom catchments, the 0–19 population was used. This slight difference between the catchment and 0–18 population projection age group is a function of the census data that was used in the custom catchment tabulations.

FIGURE 32



Source: Statistics Canada (2015), Projections of the Aboriginal Population and Households in Canada, 2011 to 2036.

FIGURE 33



Source: Statistics Canada (2015), Projections of the Aboriginal Population and Households in Canada, 2011 to 2036.

The only instance in which the 0–18 growth rate is applied to the 0–19 age group is when the number of children in care is being imputed for 22 non-responding agencies in the children in care calculations (see Table 6). In all other instances, when calculating future numbers of children in care, the 0–18 growth rate is applied to current numbers of children in care, that covers the 0–18 age group. The 0–18 category however, makes up most of the 0–19 age group, and is hypothesized to have sufficiently similar growth trends over time. Thus, the groups are considered sufficiently similar to apply the 0-18 growth rate onto the 0–19 population base from 2016.

CHILDREN IN CARE

The number of children in care reported by agencies participating in the survey was 15,786 for fiscal year 2017–2018. To estimate the projected number of children in care for the entire system (including non-responding agencies) and to project the number of children in care in future years, two calculations of children in care were undertaken. One approach uses the agency self-reported number of children in care and

assigns the average children in care for non-responding agencies. The other approach calculates the rate of children in care as a percentage of the child population served, and applies that rate to non-responding agencies by using their Statistics Canada defined total child population served. Two different estimates of children in care are produced (see Table 6).

TABLE 6
OVERVIEW OF CHILDREN IN CARE ESTIMATE CALCULATIONS

	ESTIMATED NUMBER OF CHILDREN IN CARE (2017–18)	DEFINITION	ESTIMATED TOTAL SYSTEM COST ($63,136.87/CIC)
Average number of children in care	20,032	▪ Using only data from agencies that reported their children in care (CIC) (n=82, CIC=15,786), an average number of children in care was calculated (15,786/82 = 193). ▪ The imputed average number of children in care (193) was applied to 22 non-responding agencies, for a total of 4,246 children in care (193 x 22 = 4,246). ▪ The estimated system total children in care was calculated as follows: (15,786 + 4,246) = 20,032.	$1.27B
Children in care as a % of total child population served	19,252	▪ Using only data from agencies that reported their children in care (n=80, CIC=15,664) and having Statistics Canada's custom agency catchments of total child population served for those agencies (n=80, total child population served=91,285), a rate of children in care of 17.2% was calculated by dividing children in care by the total child population served ((15,664/91,285) x 100% = 17.2%). ▪ For agencies that did not report their children in care (n=22), the rate of 17.2% was applied to Statistics Canada's custom agency catchments of total child population served for twenty-two agencies (18,615 x 17.2% = 4,681). ▪ Among agencies who reported their children in care (n=82), two agencies did not have custom agency catchments of total child population served as they were deemed incompletely enumerated by Statistics Canada, meaning that data collection on-reserve was not permitted or interrupted. For these two agencies, the average number of children in care (193) was assigned (193 x 2 = 386). ▪ The estimated system total children in care was calculated as follows: 15,664 + 3,202 + 386 = 19,252.	$1.22B

Projections of children in care up to 2036 were estimated using four approaches that combine the two approaches for estimating the total number of children in care (described in Table 6 above) and the convergence and constant population growth scenarios from Statistics Canada (discussed in the population scenarios section). Table 7 provides a summary of the four combinations used to estimate future numbers of children in care on an annual basis. The growth rates were interpolated from custom population projections from Statistics Canada for the 0–18 age group. The custom agency catchment data to identify the total child population served uses the 0–19 age group, due to the limitations of census age categorizations (the 0–18 age group is considered sufficiently representative of the 0–19 group for reasonable application of the growth rate).

Using the convergence scenario, the number of children in care increases until roughly 2026 before declining. Using the constant scenario, the number of children in care increases (see Figure 34 and Figure 35). For the complete children in care estimates, see Appendix K.

TABLE 7
DATA AND ASSUMPTION COMBINATIONS FOR ESTIMATING PROJECTIONS OF CHILDREN IN CARE (CIC)

CIC as a % of total child population served + CONVERGENCE population scenario	CIC as a % of total child population served + CONSTANT population scenario

FIGURE 34

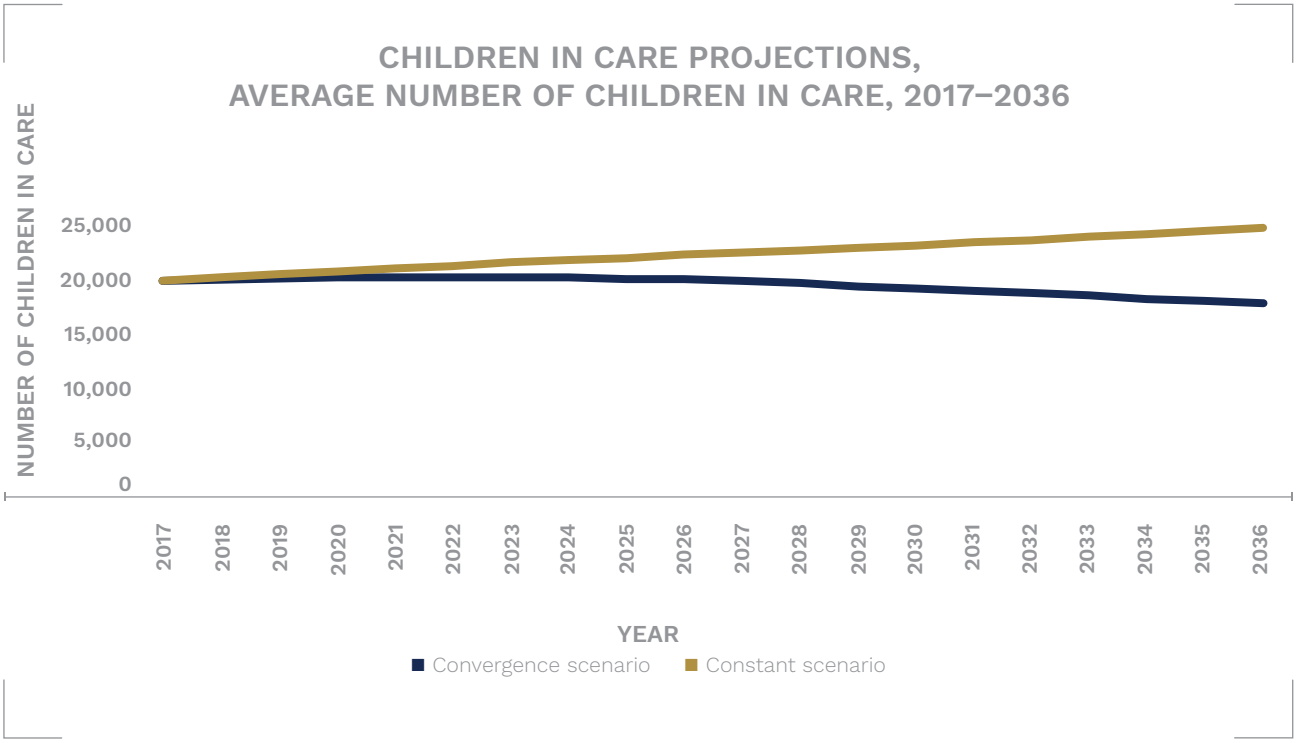

FIGURE 35

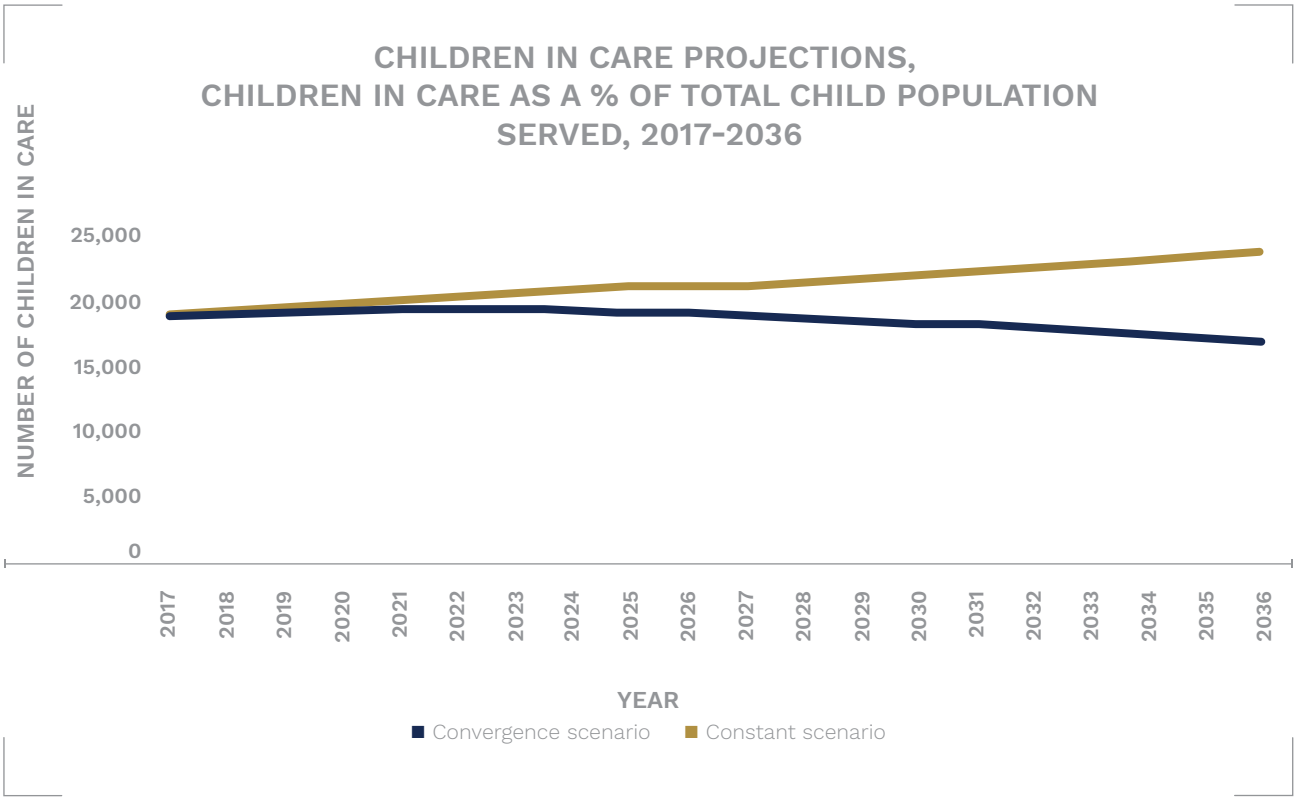

CURRENT STATE

With estimates of children in care, the total costs of the current FNCFS program can be estimated into the future using the per capita cost of a child in care with population and inflation as growth factors.

To calculate total program costs, the following formula was used:

TOTAL COST = POPULATION X (AVERAGE COST X INFLATION)
Example:
Population = 100 children in care
Average cost = $500 per child in care
Inflation = 2%
Total cost = 100 (500 x 1.02)
Total cost = $51,000

In the current FNCFS system, approximately $1.3 billion was spent this year with poor results for First Nations children, families and communities (see Table 8). The baseline cost of the current system was calculated using survey data. Total budgets were tabulated for all responding agencies (n=77, $965 million). For those agencies that did not respond, the average budget of approximately $12 million ($965 million/77) was imputed. To estimate the total cost of the current system, the budgets of the responding agencies, plus the value of the non-responding agencies (n=27) were tabulated, with a system cost estimated at $1.3 billion.

TABLE 8
CURRENT SYSTEM EXPENDITURE OVERVIEW

TOTAL BUDGET (N=77) All sources of funds, rounded	**$965,000,000**
Estimated total system cost, rounded (n=104)	$1,300,000,000
Average budget per agency (n=77) All sources of funds, rounded	$12,000,000
Total children in care (n=82)	15,786

FIGURE 36

RATIO OF FEDERAL PROTECTION VERSUS PREVENTION EXPENDITURE

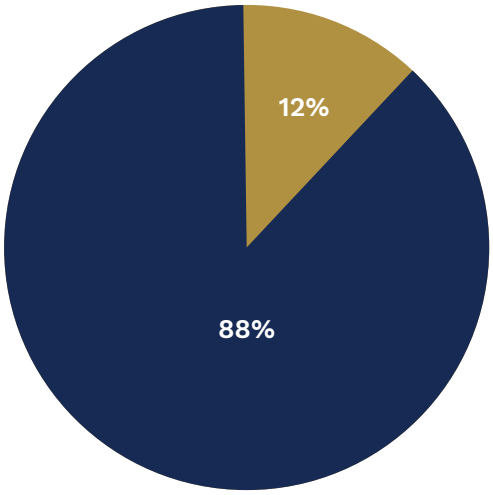

TABLE 9
CURRENT SYSTEM AVERAGE EXPENDITURES

AVERAGE COST/CIC (N=76), ROUNDED	$63,137
Average prevention (federal only)/per capita (total population served) (n=55), rounded	$416

The current FNCFS program's incentive to place children in care is reflected in federal funding allocations with 88% of federal funding dedicated to protection versus 12% of federal dollars allocated to prevention (see Figure 36). On a per capita basis, federal prevention spending across an agency's catchment population (all ages, not only children) is approximately $416 (Table 9).

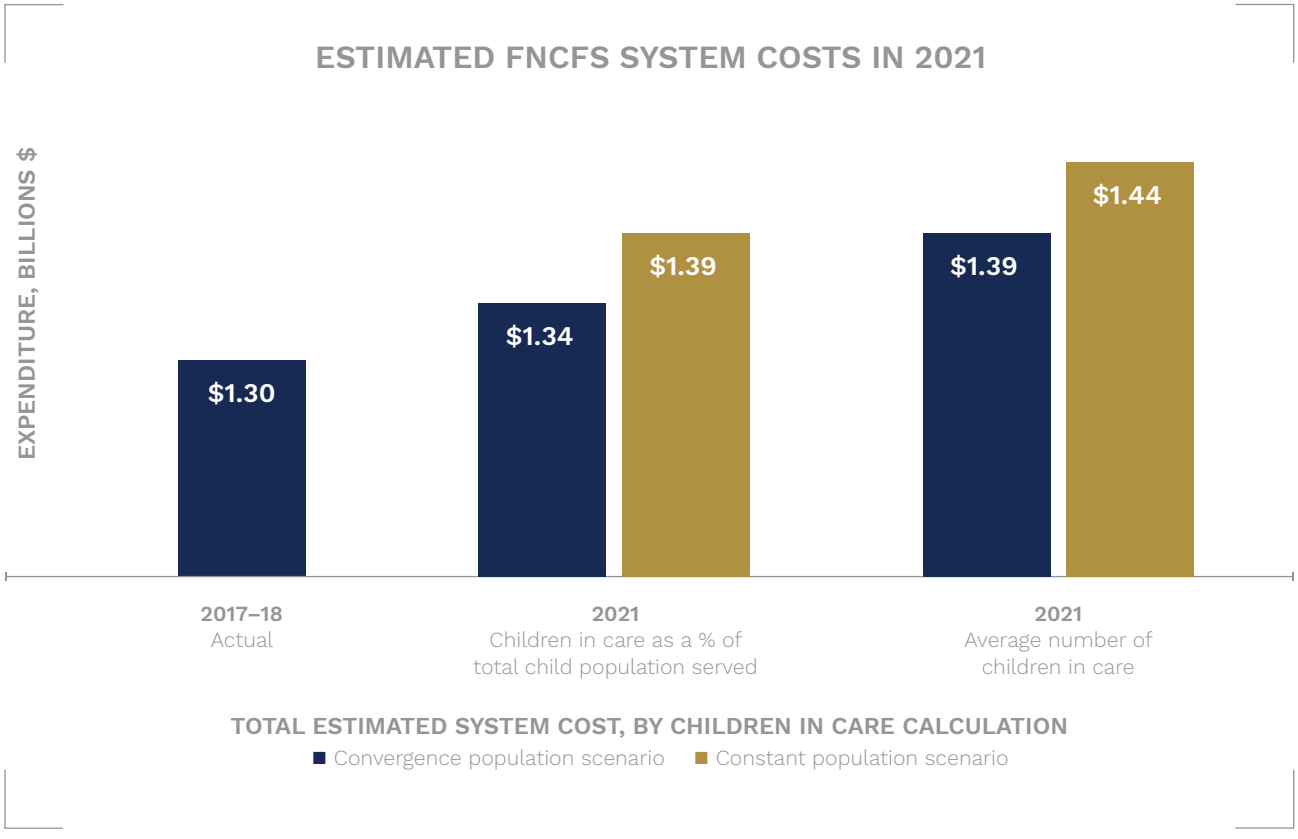
In the current program state, system-wide agency expenditures are expected to increase due to demographic and inflationary pressures. To estimate the total cost of the current FNCFS system in future years, the average cost of a child in care adjusted for population and inflation is used. As a function of total budget, the average cost of a child in care was determined by dividing the total budget by the reported number of children in care (using only data from agencies that answered both

questions (n=77, $965 million/15,786 CIC). With the strength of the relationship between children in care and total agency budget, it is the most reliable driver of cost for the current system.

Assuming no program changes, the cost of the FNCFS system is estimated by taking the current per capita cost of a child in care, approximately $63,137, and multiplying by inflation and population. See Appendix L for an overview of the total system cost using four estimates of projected numbers of children in care and three inflation scenarios (2%, 2.5% and 3%). These models provide a range of potential scenarios, reflecting that a costing does not produce a single number, rather a range based on hypothetical contextual changes (i.e. population and inflation, for this report).

Net annual increases over the next three years range from $40M to $140M (see Figure 37). The ranges result from the four children in care projection scenarios. If the program and its structure remain the same, system-wide expenditure needs will continue to increase over time without any commensurate improvements in outcomes for First Nations children.

FIGURE 37



FUTURE STATE

ENABLING CHILDREN TO THRIVE

There was consensus among agencies, experts and existing research that the holistic well-being of children, families and communities was crucial to improve outcomes for children. Through research from existing literature, consultations with agencies during workshops and an expert roundtable[44] a future normative state for agencies was developed, rooted in the vision *enabling children to thrive.*

A normative state is premised on a restructuring of the current system to fund for outcomes. This requires a new funding model that enables agencies to drive outcomes as opposed to the current model that funds inputs and outputs, with an incentive to place children in care to unlock funding.

The message from agencies and experts was clear: FNCFS is not only about safety, it is about well-being. There are contextual challenges connected to poverty, inadequate housing, access to potable water and, intergenerational trauma, among others that disadvantage First Nations communities and future outcomes for children. FNCFS agencies are not alone the solution; they are one important part of the holistic network of service, care and infrastructure needed to support well-being. With 44% of households in communities served by FNCFS agencies below their provincial poverty line, there are broader challenges that remain and that must be addressed.

An emphasis on children thriving does not eliminate the safety role that agencies will have to continue to play, but refocuses the agency's role to encompass additional services that target multiple, interdependent components of a child's environment which are shaped by the social determinants of health. Equipping FNCFS agencies with the resources and tools to combat issues broader than protection (i.e. the "causes

[44] IFSD convened experts in child welfare, Indigenous health, substance misuse, and performance measurement in November 2018 for a one and a half-day roundtable on refining a normative state of FNCFS. The roundtable built on the desired goals of agencies shared during the workshops. The experts worked with IFSD to develop a series of goals, indicators, and required resources for communities and agencies to frame a new way forward for FNCFS agencies that are focused on well-being of children, families, and communities.

of the causes" which drive children into care) is what can make a sustainable difference for outcomes of at-risk children, their families and communities.

The path to a future state informed by context and focused on well-being must include families and communities (see Figure 38). To this end, funding gaps related to poverty, prevention, capital and technology must be addressed.

FIGURE 38

LINKING SAFETY, CHILD, FAMILY AND COMMUNITY WELL-BEING

FUTURE STATE OVERVIEW

Poverty

In this report, poverty is used euphemistically as a marker of the contextual inequities and disadvantaged starting points of many First Nations people living on-reserve. Challenges such as inadequate housing, lack of potable water, limited access to broadband internet, intergenerational trauma, food security, etc. influence people, communities and the organizations that serve them. While not directly within the mandate of FNCFS agencies, these contextual matters contribute to the substantively inequitable point of departure for First Nations children, families and communities and the work of agencies.

An improved funding model and outcomes-based performance structure for FNCFS agencies will not solve broader contextual challenges or repair all existing service gaps. For instance, over half of responding agencies reported being unable to access services at reasonably commutable distances (Figure 39), and a majority of all agencies reported significant service gaps in mental health services, addiction treatment centres, and medical specialists for their communities (Figure 40).

This next section is designed to highlight specific challenges related to poverty through the lenses of household income, with connections to child welfare. Gaps in housing, water and broadband internet access are highlighted as they are impediments to any sustainable progress. While costing these specific gaps are beyond the scope of this project, these and other gaps are highlighted as critical directions for future studies and needs assessments.

FIGURE 39

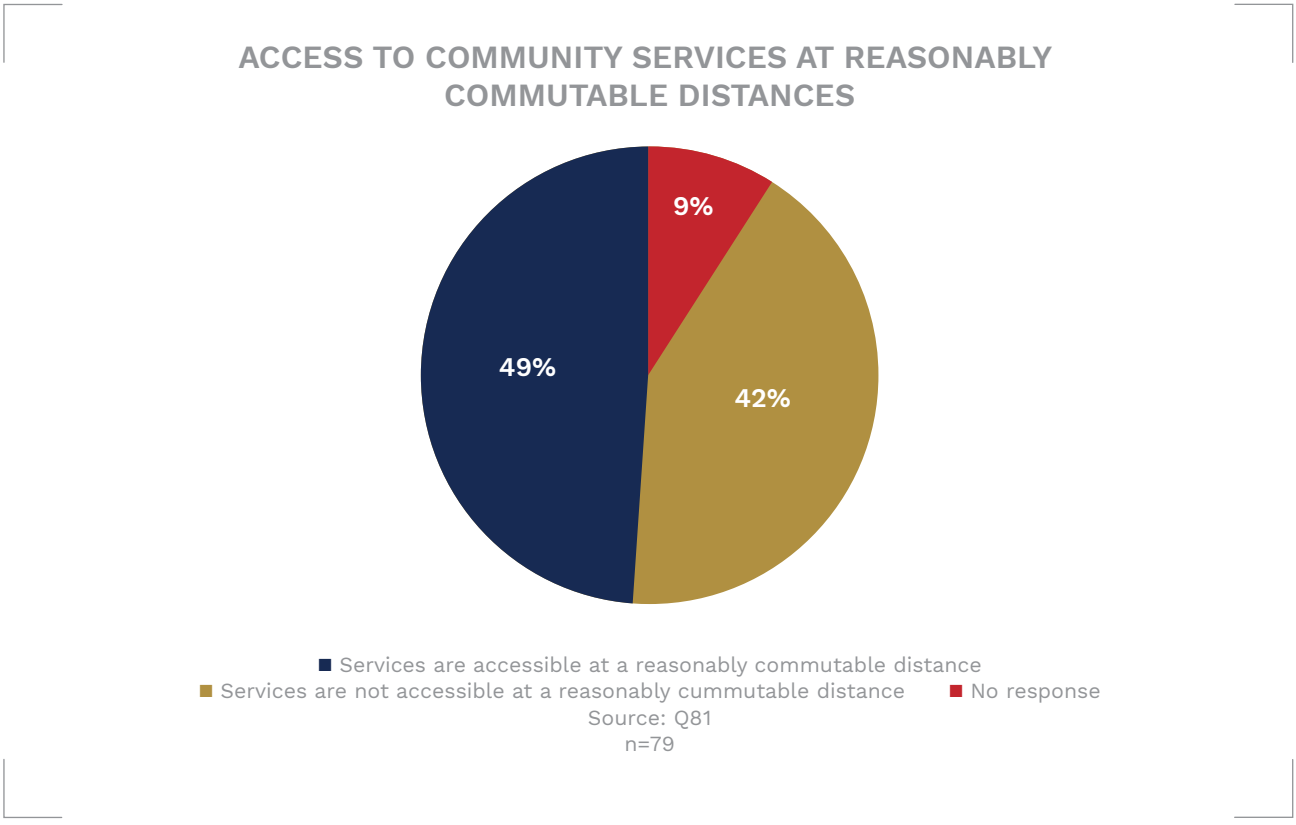


FIGURE 40

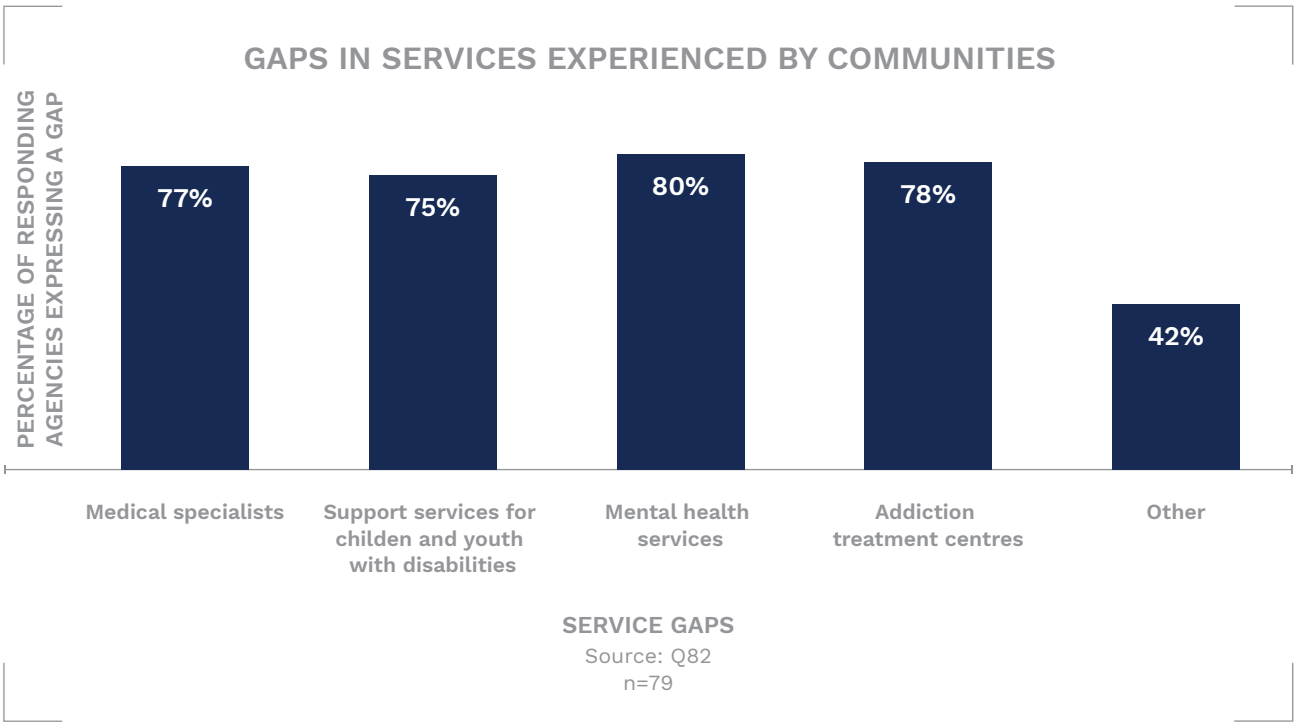

POVERTY AND CHILD WELFARE

As Gustavsson and MacEachron (2010) assert, "there is little disagreement about the association of poverty with child welfare involvement."[45] Individual poverty levels—and increasingly, community poverty levels—have been repeatedly linked with a multitude of negative child welfare outcomes. Precisely identifying poverty's repercussions can be difficult, as its influence is broad, and its ramifications can vary.

From a national perspective, nearly half of all households on-reserve (44%) served by FNCFS agencies are below their provincial poverty line (see Figure 41 and Figure 42). Using Statistics Canada's "Official Poverty Line," known previously as the "Market Based Measure," household poverty was assessed on a provincially-defined basis (with variation by population size).[46] The median household income was compared to that of their provincial poverty line. Populations in Saskatchewan and New Brunswick have more households on-reserve below than above their provincial poverty lines.

[45] Nora Gustavsson and Ann E. MacEachron, "Poverty and Child Welfare, 101 Years Later," *National Association of Social Workers* (2010), 279.

[46] Agency specific catchments were tabulated by Statistics Canada and assume that on-reserve populations are exclusively First Nations. While Household Median Total Income is not divided by Aboriginal identity, the specificity of the catchment assumes that all respondents are on-reserve First Nations. The provincially-specific Mixed Basket Measure is available for urban and rural areas. For this report, the measure applied was that for a population under 30,000, since most communities have populations below 10,000. Excluded exclusively from the household median income analysis is Toronto-based Native Child and Family Services. The urban agency serving off-reserve populations was an outlier relative to the other 103 agencies. For reliability and specificity of the analysis, the outlier was removed.

FIGURE 41

FIRST NATIONS ON-RESERVE MEDIAN HOUSEHOLD INCOMES COMPARED TO PROVINCIAL POVERTY LINES

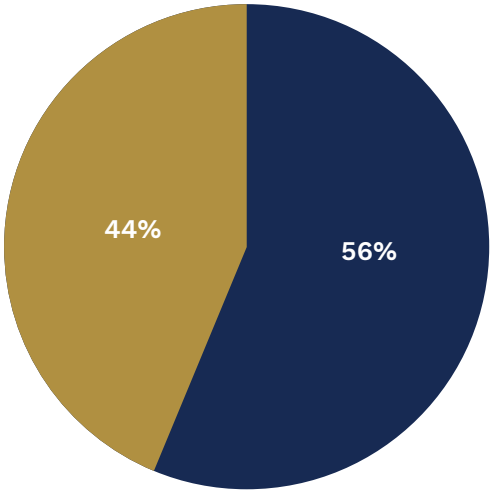

FIGURE 42

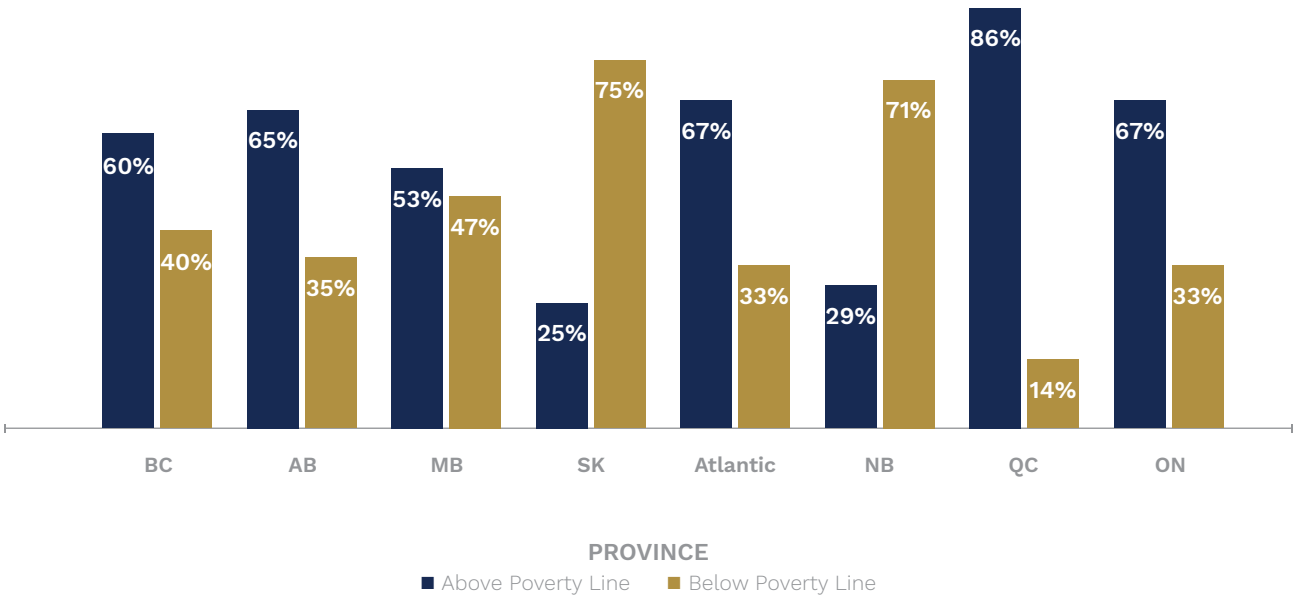
FIRST NATIONS ON-RESERVE MEDIAN HOUSEHOLD INCOMES COMPARED TO PROVINCIAL POVERTY LINES



A household is considered to be in poverty if it does not have enough money to buy a specific basket of goods and services that allows it to meet its basic needs and achieve a modest standard of living in its community. As this measure is based on having or not having enough money to purchase a fixed basket of goods and services, it is an absolute measure of poverty.[47]

An estimated $205M investment is needed just to raise all households on-reserve to their provincial poverty lines (by comparison, the gap to raise these households to the median household income of their provinces is roughly $2.6B).

Typical child welfare systems are not always effective at addressing overarching issues such as poverty. Rather, they function to address the immediate needs of children and families interacting with the system, with intervention often times targeting the symptoms of the issue rather than the issue itself.[48]

The current FNCFS program is safety-focused, with an emphasis on placing children in care. This approach—while designed to ensure children's lives are not endangered—fails to address challenges to the holistic well-being of children and families, and not addressing their underlying causes. Designing public policy to address a 'problem' (like child safety) is different than designing policy to address the "broader social inequalities from which problems stem,"[49] with for instance, a focus on well-being.

There is a strong association between poverty and child abuse and neglect.[50] In addition to a lack of material resources, the stress of living in poverty can lead to issues with child safety and to the "accumulation of negative life experiences that contribute to increases in risk factors such as depression, low self-esteem, or substance abuse," which can lead to challenges in the family's ability to properly protect and nurture

[47] Statistics Canada, "Mixed Basket Measure," November 27, 2015, https://www150.statcan.gc.ca/n1/pub/75f0002m/2014003/mbm-mpc-eng.htm.

their children.[51] The challenge of intergenerational trauma may only be compounded in these instances.

When a parent or family is living in poverty, the impacts on the child can be cumulative: "children can be hungry, be living in substandard housing or be homeless, be unsupervised while a parent works or is meeting other responsibilities, be truant from failing schools, lack medical care, or have a caretaker with untreated mental illness or substance abuse."[52] The stressors that exist for children living in poverty can lead to emotional and behavioral problems as well as further disruptions in schools and to friendships.[53]

Poverty is also associated with poor early childhood development and is a risk factor for family breakdown, both of which have been linked to poor educational performance in children.[54] While the primary aim of child welfare services is to protect the child from further maltreatment and abuse, many of these programs do not address poverty as a root cause of these outcomes.

Economically distressed areas experience higher rates of child maltreatment reports, that often correlate with inadequate housing and single-parenthood.[55] Community poverty has also been linked to health disparities and language development in children.[56] Naturally, this implies that interventions at the level of the community are critical for children's development, especially in disadvantaged circumstances.[57]

Housing:

The link between housing and improved health and well-being is well established.[58] On First Nations reserves however, access to and the quality of housing have been persistent problems. In 2016, 44.2% of First Nations people living on-reserve lived in a home that needed major repairs.[59] An earlier study suggested that 94% of First Nations had waiting lists for housing and that for 30% of those on the lists, the wait was four to six years.[60] Waitlists for housing far exceed the capacity of First Nations to build new homes.[61]

While there is agreement that a housing shortage exists on-reserves, the number of units needed is often debated. There is no federal legislation that addresses housing on-reserve, although the federal government retains accountability. It is currently ISC that provides some funding for on-reserve housing through the First Nation On-Reserve Housing Program, with an annual budget of $143 million.[62]

The literature suggests that policies have thus far neglected to address the multigenerational impact of poverty as well as the need to focus on community aspects of poverty. Without a focus on creating greater equality within communities, the child welfare system will continue to support one-off interventions that do not address the root causes of poor outcomes for children.[63]

Water:

The problems with access to safe-drinking water on-reserve are well-documented and long-standing. The federal government is legally and financially responsible for First Nations drinking water on-reserve. The *Safe Drinking Water for First Nations Act* came into effect in 2013, and allows the federal government to develop regulations surrounding: access to safe, clean, and reliable drinking water; effective treatment of wastewater; and protection of sources of drinking water on First Nations lands. First Nations are responsible for the design, construction, and operation of their water systems (though this process is overseen by ISC).[64] First Nations split construction, operation, and maintenance costs 20/80 with ISC.[65]

A 2017 report by the Parliamentary Budget Officer suggested that 560 First Nations were served by 807 drinking water systems,[66] with water delivered to reserves through three principal means: piped systems (72%), water truck deliveries (13.5%), and individual water wells (13%).[67] Long- and short-term water advisories abound. ISC reports 66 current long-term drinking water advisories (lasting longer than 12 months)[68] and 42 short-term advisories (which last less than 12 months).[69] Federal approaches and policies on water have not accounted for the diversity of water management challenges on-reserve,[70] nor for the jurisdictional confusion on roles and responsibilities.[71]

Reliance on social services was also found to be linked to involvement with protection services. Evidence suggests that bias exists within the system when the child welfare system is involved with First Nations families. Further analysis using data from the CIS-2008 study found

that "the weight that workers assigned to caregiver substance abuse, housing problems, and presence of a lone caregiver when substantiating neglect [differs] for First Nations and non-Aboriginal children."[72] In order to meet the needs of First Nations families, child welfare services must be equipped to address these factors that disproportionately affect First Nations and influence the ability to care for children.[73]

Broadband:

The internet is a critical communication tool, especially for remote communities. There is a recognized lack of access to broadband on reserves, but the severity of the problem is difficult to diagnose given the lack of quantitative data. ISC (then AANDC) tracked broadband access for First Nations on its website, but the site has not been updated since 2012.[74] At the time, most First Nations had some access to broadband, but many were not operating at CRTC established minimum speeds.[75] In 2013, a report by the Centre for the Study of Living Standards estimated that 30% of reserves did not have access to broadband.[76] The Assembly of First Nations adopted a resolution calling for greater broadband access on reserves in 2008.[77] Ten years later, there may be consensus among First Nations, government officials and legislators that broadband access is an issue, but no decisive action has been taken.[78] Broadband access is more than an issue of internet connectivity, but one of access to services that connect to health, education, and well-being.

It is recommended that contextual issues such as poverty, be recognized and addressed through policy, programs and funding.

Prevention

Preventive child welfare services are a continuum of services from public education campaigns for the general population, to targeted programs for at risk populations, to intensive family preservation programs to assist families in crisis. Preventive care can address the physical and mental health of the child, can teach good parenting practices, can address underlying causes of neglect such as poverty and can counsel and support a family in crisis. More than a clinical approach to care, prevention programs and initiatives are designed to heal, and to promote the development of life skills. Preventive care can keep children out of the protection system, can support their reunification with their family (in an improved environment) after protection, and can also support children who are not in the protection system.

Programs such as Carrier Sekani Family Services' Intensive Family Preservation Services are designed to support families in crisis and provide them support to keep them together. This 28-day program includes in-home counselling and crisis intervention, the direct support of a clinician for 10 hours a week, as well as the ability to access support 24 hours a day, 7 days a week. The outcomes for children participating in the program have been positive. In 2016–17, of 66 participating cases, 61 have resided with their parents, 3 resided with extended family, and only 2 resided in foster care.[79]

When there are no options other than protection, Nisichawayashik Cree Nation Family and Community Wellness Centre developed an alternative to the placement of children in care. At their Nelson House (Manitoba) location, the Centre introduced the *Intervention and Removal of Parents Program* beginning in 2002. Novel at the time, the Centre worked to encourage a Band Council Resolution requiring the removal of anyone causing harm to children from a home on-reserve. As the landlord of all homes on-reserve, the Band Council could refuse tenancy to anyone harming children. The Centre could then keep children in need of protection in their homes with a member of their extended family or with an emergency worker. The approach flipped the traditional protection model on its head: instead of removing children from their

[79] Carrier Sekani Family Services, *2017 CSFS Annual General Assembly,* 2017, http://www.csfs.org/uploads/CSFS%2027th%20Annual%20AGA%20Booklet%20WEB.pdf.

home, parents were removed and were forced to face trauma as would their children being placed in foster care, not knowing where they were going or who would care for them. Since 2013, rates of children in care at the Nelson House location have declined from 167 to 114 in 2017.[80] According to the Centre, with the Removal of Parents Program and an integrated approach to family care, the agency has been able to reunify families 85% of the time.[81]

At its core, preventive care is about holistic, wrap-around services and support for a community in order to build social trust, that educates, and promotes health and wellness on multiple levels. Kanaweyimik Child and Family Services in Saskatchewan encourages a holistic approach to well-being by facilitating monthly inter-agency meetings with key service providers including those in health, social development, education, justice, members of the Royal Canadian Mounted Police (RCMP) as well as Kanaweyimik and band officials. The objective of these meetings is to improve services to community members by creating effective partnerships and awareness of what services are offered by various service providers.[82] Prevention oriented programs extend beyond reactions to concerns for child safety and are meant to encompass a broader community perspective.

As an approach to child and family services, prevention departs from the current protection-oriented model by focusing on families and their preservation, as well by addressing and attempting to mitigate contextual challenges that can lead to the need for protection. With prevention, the goal is healing and with a focus on building tool sets to improve the likelihood of positive results for families and children into the future. While not a panacea, a prevention-focused approach is an important step in managing the contextual challenges that impact overall well-being.

Current data on prevention suggests that enhanced prevention services helps to reduce the number of children in care. The number of children

[82] Ibid.

in care alone however, is not a sufficient indicator of improvement. Ideally, evaluations of impacts of prevention programming would be connected to results for children in the medium- and long-terms. Indicators of a child's results could include a child's school success, social relationships etc. Linking desired outcomes to data and budgets would be an important step in better understanding results for children, resource requirements, and would enable agencies to improve their program and strategic planning.

The case of West Region Child and Family Services (WRCFS) in Manitoba provides lessons on the importance of prevention programing. In 1992, WRCFS entered into a block funding agreement with the federal government. This provided the agency with flexibility to determine how funds would be spent and enabled WRCFS to develop community-focused programming for parenting, violence prevention, etc. The funding model shifted WRCFS's model to one focused on prevention, even in instances of child protection (with an emphasis on extended family placements). In a 1994 evaluation of the then pilot program, Dr. Brad Mackenzie found that the approach was working well. WRCFS had a well-developed cost-analysis tracking mechanism connected to its services to families and children, better informing its planning practices.[83] For instance, children in care planning emphasized treatment to identify and address challenges. Mackenzie's report recommended that the block funding approach be maintained for WRCFS and even extended as an option to other agencies.[84]

In a subsequent study, Mackenzie estimated savings from prevention focused services to be $21 million dollars by 2005. Rates of children in care declined at WRCFS from 10.5% to 5.2% over the span of the pilot block funding program. The focus on prevention is credited with the results.[85] in 2013–2014, many of those programs had to be cancelled due to a change in funding formulas[86] in which WRCFS lost its block funding

[86] Manitoba agencies moved to the Enhanced Prevention Focused Approach (EPFA), implemented from 2010–2013 https://www.aadnc-aandc.gc.ca/eng/1431520132322/1431520217975.

and saw a significant reduction to its ability to provide prevention services. Rates of children in care began to increase following the end of the pilot, after having been on the decline.

Evidence on outcomes of youth who have aged out of care provides a compelling argument that efforts to enhance prevention services and approaches to children and families in crisis should be actively pursued.

Numerous studies from other countries, like the United States, have demonstrated an association between experience in foster care and a host of poor outcomes in adulthood, including lower high school completion and employment rates, lower income, and higher rates of homelessness, poor mental health, substance abuse and criminality. There is a gap however, in Canadian studies on outcomes of children in care (with much less information available on First Nations children).[87]

One of the more well-known studies examining longitudinal outcomes of youth who have aged out of foster care is the Midwest Evaluation of the Adult Functioning of Former Foster Care Youth (the "Midwest Study"). Since 2001, researchers have documented outcomes of 763 former foster youth in the states of Illinois, Iowa and Wisconsin, on a variety of indicators including relationships with family of origin, physical and mental well-being, education, employment, involvement in the criminal justice system, etc.[88] Compared to a nationally representative sample of young adults who participated in the National Longitudinal Study of Adolescent Health (the "Add Health Study"), results show that former foster care youth fare much worse in nearly every outcome measured, such as high school completion rates, receipt of food stamps, employment rates, median income, arrests, incarceration, etc.[89]

Foster care experience has also been found to be a strong risk factor for homelessness. Often lacking social support and receiving little to no financial assistance or guidance when transitioning out of care

[87] Laura Gypen, Johan Vanderfaeillie, Skrallan De Maeyer, Laurence Belenger, and Frank Van Holen, "Outcomes of Children Who Grew up in Foster Care: Systematic-Review," *Children and Youth Services Review* 76 (2017): 74–83.

[89] Ibid.

(sometimes as young as 18 years old), these youth face significant housing challenges compared to the general population who are typically supported by parents beyond this age.[90]

In a study published in 2017, the Canadian Observatory on Homelessness found that nearly 60% of youth who had experienced homelessness had been in contact with child protection services at some point in their lives, and that "youth experiencing homelessness are 193 times more likely to have been involved with the child welfare system than the general public".[91] Risk of homelessness among this subgroup has been associated with multiple moves while in care, a history of running away, presence of a mental health disorder, a history of physical abuse, and being male.[92]

Much less is known about the long-term outcomes of First Nations adults who have aged out of care. A 2001 study by Correctional Service Canada found that approximately two-thirds of incarcerated Indigenous Peoples had entered protective care at some point in their childhood, compared to one-third of non-Indigenous inmates.[93] Based on information provided by the RCMP, news sources report that young Indigenous women in foster care are at high risk of becoming victims of sexual violence and trafficking, contributing to the missing and murdered Indigenous women and girls crisis.[94] Limited empirical data on First Nations youth who have aged out of care impedes the ability to reach firm conclusions; however, it is not unreasonable to assume that this subpopulation is exhibiting similar, if not worse outcomes than the general population given the disadvantaged starting point of many communities.

The results of prevention and early intervention programming in education and early childhood development provide compelling evidence to support increased prevention funding. Early intervention does not have a fixed definition but is rather a broad concept to describe various approaches to improving developmental outcomes in early childhood.[95] The delivery of early intervention programs can be as varied as the groups which they target and the outcomes they intend to influence. Programs can be administered by delivery services directly to the child, parent, or both. It may be professionally trained staff or community members delivering the programming in the home, at a centre or at some combination of the two. No matter how it is delivered, in children who are at risk for suboptimal development, intervening in the most critical, sensitive years of growth offers a window opportunity to improve a child's developmental trajectory and future outcomes.[96]

Outcomes, especially in social areas, can be difficult to assess, but education, health, and family well-being can be useful proxies in understanding changes in a community. A well-established home-visiting intervention that has shown to improve a variety of outcomes for both new mothers and their children is the United States' based Nurse-Family Partnership (NFP).

Analysis by Heckman and colleagues (2017),[97] suggests that at two years of age, statistically significant treatment effects were found "on home environments, parenting attitudes, and maternal mental health", and at six years of age, the NFP yielded improvement in cognitive development. This analysis also examined mediating program factors that were linked to treatment effects and found that improvements in maternal mental health as well as enhancing parenting skills as a result of participating in the NFP by age two were key drivers of positive childhood outcomes.[98] Programs such as the Martin Family Initiative's Early Years program combine early intervention for both mothers and children with activities

such as home visiting and centre-based early childhood education (or preschool).

While it is clear that child welfare is not something that can be approached in isolation of its context, it is also unrealistic for FNCFS agencies to bear the responsibility of addressing all elements impacting well-being. In this sense, it is essential that lateral initiatives that address substantive equality and reconciliation (e.g. the Spirit Bear Plan and Touchstones of Hope) are realized. It is inevitable that families will encounter hardship or conflict at some point. What can make the difference of whether or not children are apprehended by protection services is the degree to which their families have social support and resources within community to help navigate through a crisis and foster resilience.

The federal government is spending significant resources in a number of critical areas for First Nations health and social programming, with a subset of these programs oriented toward prevention. There are few, if any performance measures focused on outcomes. The majority are focused on outputs, without consideration of targets connected to well-being and the results the programs generate. Following a special request, ISC produced the data table in Appendix M and shared it with IFSD on December 14, 2018. The program spending breakouts were collected by program staff, since public data is unavailable. Without connecting activities to outcomes, it is nearly impossible to assess the results of the current program and their connections to the well-being of children. The future state in child welfare should include a clear and trackable means to assessing the results of programming.

Prevention was the focus of experts and agencies, and consistently defined as the most significant funding gap that agencies are facing. The gap in prevention funding is a challenge and is connected to the system's current funding structure that incentivizes the placement of children in care.

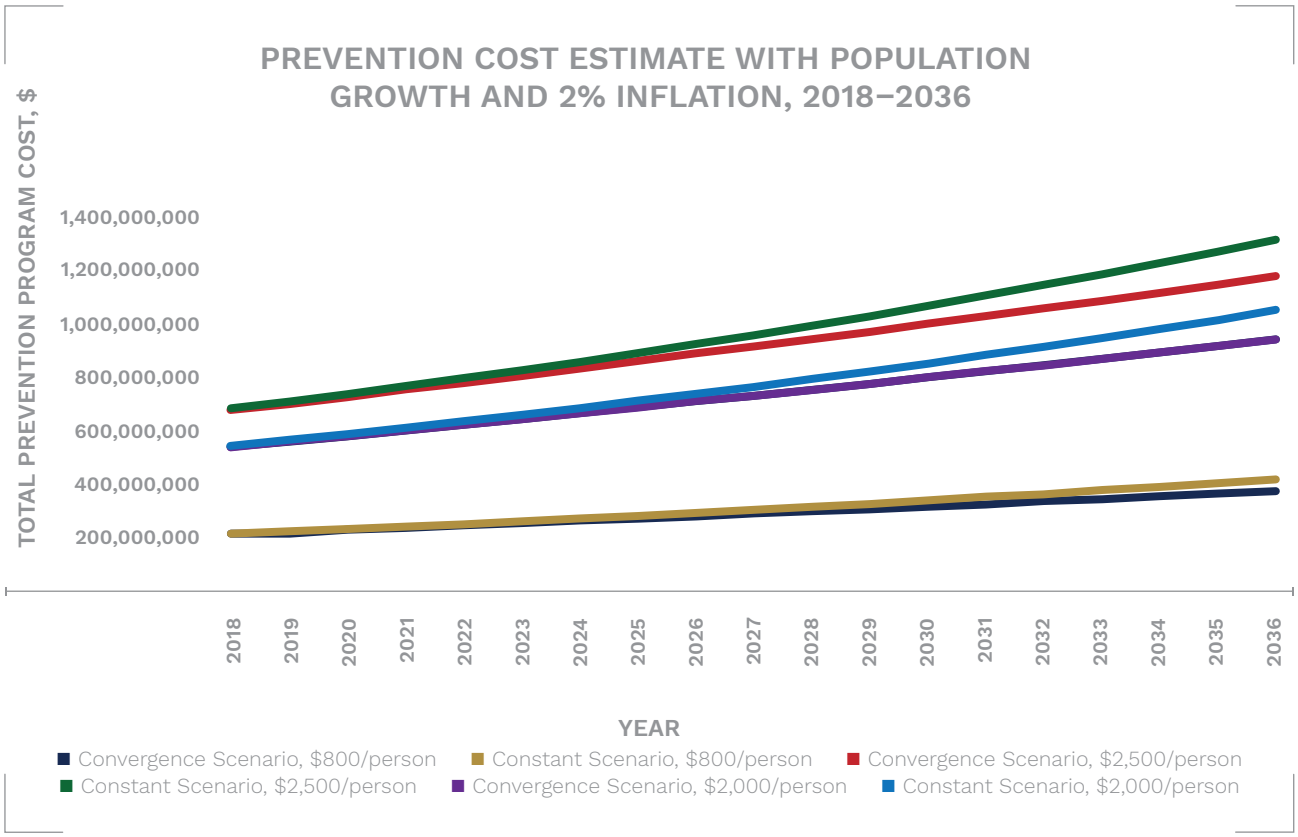
Shifting to a prevention-focused approach will require increased investment and a change in funding structure, such that agencies have the ability to allocate resources to meet community need. To cost-estimate an increase in prevention funding for FNCFS agencies, benchmarks of current prevention spending were identified and a range

of per capita investments in prevention were defined: $800, $2,000 and $2,500.

The per capita costs are based on current prevention services and actual spending described in the case studies below. The prevention cost estimates are premised on the assumption that prevention should target the entire population in the agency's catchment and not only the child population served.

Cost estimates for increased prevention funding were calculated based on Statistics Canada's custom tabulations of on-reserve populations within FNCFS agency catchments. In this analysis, the two agencies serving incompletely enumerated reserves were not included in the calculation, as no total population data was available.

FIGURE 43



Prevention cost scenarios were estimated using the three benchmark costs $800, $2,000, and $2,500, agency catchment populations, and inflation at 2%, 2.5% and 3% to present a range of possible

circumstances (see Appendix N for an overview of prevention cost calculations). On a per capita basis, the total prevention cost estimate for 2019 ranges from $224 million to $708 million. Overtime, prevention costs are projected to increase based on population growth and inflation (Figure 43).

Profile 1[99]—$800 per person (and $2,000 per person)

In October 2017, a First Nation community appointed a Prevention Coordinator. Chief and Council made the decision to fund the position after the community decided they needed help with social challenges. The role, complemented by one prevention worker, was designed to support the community, work through intergenerational issues and break cycles.

"Not waiting for things to happen, but working so that things don't happen."

A former social worker, the Coordinator has 10 years of experience working as a consultant and trainer for the provincial ministry of social services.

The community's population is mixed with both traditional and Western educated people. This provides community-based resources the Coordinator can leverage in their work, e.g. facilitators, educators, etc. All instructors in prevention programming come from the community.

Current program offerings for youth include drama and acting, bead work, drumming and singing. Prevention programming extends beyond youth and includes programming for parents, such as the young fathers hunting program, parenting courses, and suicide assistance.

"It's okay to say that you need help."

[99] The participant requested that the name of the First Nation and their name be withheld.

It has taken time for the Coordinator to build trust with the community. The community is under the child welfare jurisdiction of the provincial ministry, which fostered initial concerns that the Coordinator was a conduit for protection services only. While at times, community members may be hesitant to reach out to the Coordinator for help, they are even more hesitant to phone provincial social services. The combination of a personalized approach and regular programming however, has helped the Coordinator to build relationships with community members and organizations, like the school. For instance, the Coordinator will reach out directly to parents if their child is underperforming at school or will congratulate others when their child is doing well.

"What do you want for your children when they grow up?"

To build confidence in prevention programming and to break the stigma of taking part in prevention activities, the Coordinator ensures it's known that training is open to all community members. It's not only "prevention" families that are invited to attend activities.

The community is now exploring prevention related programs, such as community "safe houses," on-reserve so that children in trouble have a safe place in community to stay if their parents are being taken away or need time heal.

Prevention is not just about keeping children out of care, it's about working with families to build healthy communities. Regular life challenges like divorce, grief, depression, suicide, etc. can be amplified when communities face internal challenges. The prevention programming in the community is designed to reach as close to 100% of the population as possible, whether through personal contact or through program participation.

The need for prevention programming in the community is greater than the funds available for the Coordinator. The Coordinator and their team regularly volunteer their time to drive community members to various meetings and appointments, take them on hunting trips, etc.

For a team with two people, the Coordinator and prevention worker appear to take on a variety of roles in the community from social worker, to counsellor, to personal support worker.

When asked what funding would be required to achieve a suitable level of programming to meet the needs of the community, the Coordinator estimated a cost of $500,000 per year or $2,000 per community member. This estimate provided the third scenario for the prevention funding estimates of this study. The estimate was deemed to be reasonable, falling within the $800–$2,500 per capita spending range identified from different agencies.

By the numbers:
On-reserve population = 250
Total funding = $200,000 (from ISC)
Per capita funding on-reserve only = $200,000/250 = $800 per person
Funding covers:

- 2 salaries
- Programming (e.g. buses, vehicles to visit parents, shuttle service)
- Snacks for youth attending after-school activities
- Teachers/facilitators
- Special excursions (e.g. laser tag)
- Family integration and connection activities

Profile 2—$2,500 per person
K'wak'walat'si Child and Family Services
'Namgis First Nation

K'wak'walat'si Child and Family Services (KCFS), serves the 'Namgis First Nation and the village of Alert Bay on Cormorant island off the coast of British Columbia (First Nation and non-First Nation communities live side-by-side). Since 2007, not a single child has been placed in care. This success has been largely credited to the introduction of comprehensive prevention programming.

"Prevention is a no-brainer."

The community is older, which is attributed to increasing rates of urbanization, with young people and families moving in search of employment opportunities. The small size of the community, both geographically and population-wise, has facilitated the development of a community-based model to prevention programming.

"Care is NOT an option."

Following unexpected changes in 2005, a new Director (a former social worker) was hired. Taking charge, the Director combined existing programs (and eventually, introduced new ones) and formed the 'Namgis Community Service. Combining services meant combining resources from all federal sources and from the province. The decision integrated programs and services to focus on holistic well-being. Programming is guided by four principles: belonging, mastery, independence and generosity.

The focus of the agency is "better serving families."

While the primary focus of prevention is early childhood and adolescence to build resilience, much of the programming does not just target the child—it targets the entire community. The agency offers a variety of programs, including community-based activities and family support, legal support, victim services, social work, and social assistance. The active learning style initiatives range from education on fetal alcohol syndrome and brain development to emergency homes for respite.

When a crisis arises, the agency plays the role of facilitator, focusing on family and community ownership. Working with the family, the agency provides information, resources, support and food. Families coming together and owning their own solutions is considered to be the best course of action to move forward.

"It's not about what works outside, it's what works for them [families]"

The agency focuses on building capacity by leveraging partnerships with several sectors of the community, including schools, healthcare services and the police. This is to ensure that everyone "speaks the same language" when it comes to child and family well-being and to promote consistency and solidarity in the approach. For example, KCFS maintains a close relationship with local schools, sharing knowledge and working together to identify root causes of family problems, their impacts on the child, and the best course of action to support the child and their family. These partnerships also ensure that staff at KCFS know where to turn when certain resources that are needed are not accessible within the community.

"Be the community, not the ministry."

Given the long history of removal of First Nations children from their families, feelings of distrust towards the Ministry are widely prevalent in the community. This is especially relevant for families struggling to cope with mental health issues, addictions, and poverty. However, persistently engaging in the community and displaying compassion and respect for families has over time established a more trusting relationship between families and child welfare services. In times of crises, allowing families to take authority and ownership over their decisions moving forward has been influential in developing trust. Fear of using child welfare services as a resource for help when family issues arise seems to be declining.

The biggest obstacle to providing services and programming has been the issue of recruiting and retaining qualified staff, such as social workers. As a result, the Director and the small team at KCFS have taken on a number of roles to support programming.

By the numbers:
Population of the island = 900
Total funding = $2,307,115 (federal and provincial governments)
Per capita funding = $2,563.46 (rounded to $2,500)
Funding covers: all agency programs and services

The case for prevention is clear from both FNCFS agency cases and from existing research. The unanimity from agencies and experts on the importance and need for a focus on prevention services and funding to match cannot be overemphasized.

It is recommended that prevention be funded on a per capita basis for the total population served by the agency (not only children) at a rate of $800–$2,500 per person.

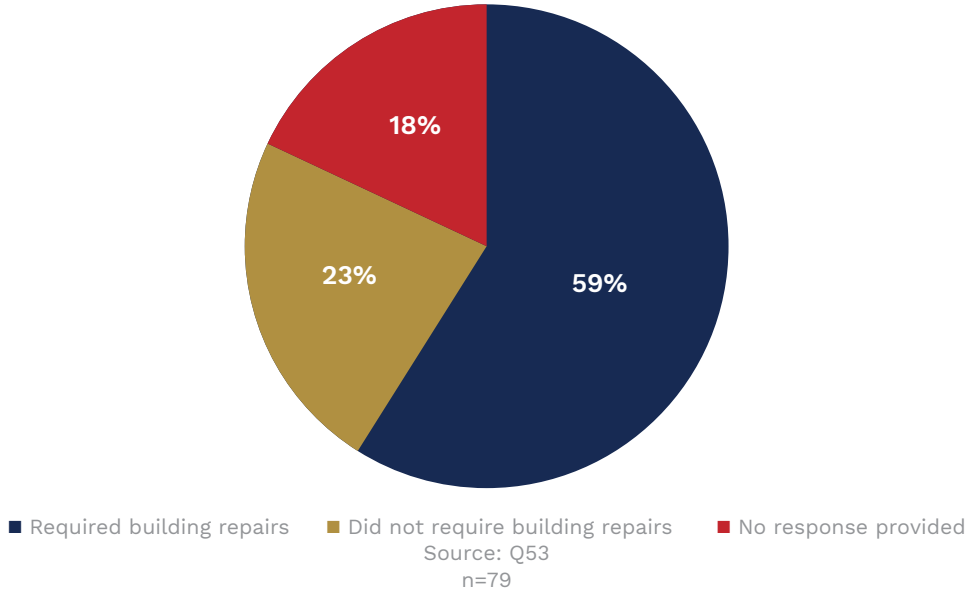
Capital

The IFSD-FNCFS Survey sought to better understand the nature and condition of the assets underlying agency operations. The survey found that the large majority of agencies rented their facilities and had relatively modest asset bases. Agencies, especially those more remotely located, tended to also have vehicles as part of their asset mix.

When respondents were asked to identify whether or not they needed building repairs, 59% of agencies reported requiring building repairs (Figure 44). Further, during the various workshops held by IFSD, agencies also expressed concern about the suitability of their facilities for program needs, particularly prevention programming.

FIGURE 44

BUILDING REPAIR REQUIREMENTS AMONG AGENCIES (2017–18)



Source: Q53
n=79

With approximately 88% of federal funding for FNCFS agencies associated with protection, it is expected that facilities reflect this orientation. The desired future state of FNCFS agencies is prevention-focused. To this end, a reconsideration of facilities is necessary to support the shift in activities.

The FNCFS space footprint was costed as a one-time capital investment under three scenarios:

- Scenario 1: Federal space allocations only
- Scenario 2: Survey reported headquarters square footage + federal space allocations for non-responding agencies
- Scenario 3: Survey reported headquarters square footage + average square footage (based on survey reporting) for non-responding agencies

It should be noted that the costs to construct and fit-out the office space requirements for the FNCFS agencies is largely based on the *current state* space requirement. It is assumed that such an analysis would be used as a *baseline* to consider the space requirements of a future program activity structure.

In Scenario 1, the first step was to allocate space per full-time equivalent (FTE) based on the assumption that agencies had an average of 15% of leadership workers and 85% fixed workers. In the case of the Government of Canada federal space allocation approach, the following square feet of office space were applied to each category of agency worker: leadership worker (153 sq. ft./worker) and fixed worker (48 sq. ft./worker) for total agency FTEs based on Government of Canada Workplace 2.0 Fit-up Standards. Non-responding agencies were assigned an average of 64 FTEs.

In Scenario 2, the survey responses were used to estimate the required costs to build equivalently sized office space. Using the square footage of headquarters office space reported in the survey, on average square footage of 95.7 sq.ft./FTE was calculated. Non-responding agencies were assigned office space allocations based on the Government of Canada standards.

In Scenario 3, the survey responses were used (as in Scenario 2), with non-responding agencies assigned average square footage based on survey reporting.

Once the required space allocation was determined, the cost for construction and fit-out was applied to each of the office space scenarios using the 2018 Canadian Cost Guide (Altus Group) with median construction costs for commercial, Class B office building, under five storeys with surface parking and related Class B interior fit-out costs.[100] Regional indices were applied to estimate costs for each metropolitan area.[101]

[100] According to the Altus Group: "The costs assume base building construction only, including mechanical and electrical services, washrooms, and finishing of ground floor entrance lobby and elevator lobbies to upper floors. The cost of tenant partitioning and finishes, with the exception of ceiling and column finishes, are excluded. The cost of finishing this space can fluctuate depending on the density of partitioning and the quality of finishes. Costs assume standalone buildings and are not representative of a component within a mixed use building" (Altus Group 2018, p. 14–15).

[101] See Altus Group, "2018 Canadian Cost Guide," p. 11 and 13.

TABLE 10
ESTIMATED REQUIRED CAPITAL INVESTMENT

SCENARIO 1 Federal space allocations	**SCENARIO 2** Survey reported square footage + federal space allocations	**SCENARIO 3** Survey reported square footage + average square footage (based on survey reporting)
$116,797,983	$151,708,061	$175,251,101
NB: Based on industry standards, a minimum 2% annual recapitalization rate should also be included.		

With various repair needs of FNCFS agencies and new infrastructure requirements for changing activities, the three one-time capital investment scenarios were modelled. Costs range from approximately $116 million to $175 million to rebuild agency headquarters.

It is recommended that there be a one-time capital investment, and a benchmark recapitalization rate of a minimum 2% per annum added to agency budgets.

Information technology

Information technology (IT) has become a crucial element in the successful operations of modern organizations. It supports mission critical processes ranging from service delivery to finance to governance. Properly applied, technology has the potential to transform organizations and way the people inside them work.

Adequate investments are necessary to maximize the benefits technology can offer, as is an understanding of the risks and opportunities created by emerging technologies such as the cloud, big data and much more.

An examination of the IT spending of FNCFS agencies was undertaken via the survey (see Table 11) to understand the current state and how it compares to sector benchmarks.

There are certain commonly used benchmarks related to IT spending. These include IT spending as a percentage of revenue/budget and IT spending per employee.

Spending as a percentage of revenue/budget

Overall, businesses appear to spend between 4–6% of their revenue on IT, and this range is recommended by CIO Magazine:

- The average small company (less than $50 million in revenue) spends 6.9% of their revenue on IT
- Mid-sized companies (between $50 million—$2 billion) spend 4.1%
- Larger companies (over $2 billion) spend a relatively small 3.2%

Data from the Deloitte Insights November 2017 CIO Insider report citing "Deloitte 2016–2017 Global CIO Survey" (n=747) corroborates the ranges published by CIO Magazine and puts the education and non-profit sector at an average of 5.77% with an average of 3.28% across all sizes and industries.

The tenth annual "Non-profit Technology Staffing and Investments Report" published by NTEN in May 2017 focused specifically on technology in non-profits (n=259). NTEN found, across all sizes of non-profits, technology accounted for 5.7% of annual budgets on average.[102] Additionally, they found that smaller non-profits had higher spending as a percentage of their total budget.

IT spending per employee

IT spending per employee can also vary significantly from sector to sector and across company size. Nonetheless, the consensus of several credible sources suggests that a value of at least USD 10,000 per employee would not be unusual.

- Gartner indicated that average IT spend (USD) per employee rose from $12,724 to $13,164 in 2013.
- The all-industries average from IDC's US IT Budget Benchmarks program, which collects multiple IT statistics across all industries (excluding government and education), is just under USD 9,900 per employee.

[102] NTEN reported on operating budgets. Since FNCFS agencies are primarily service organizations with operations accounting for most of their costs, the technology spend was imputed as a percentage of the total budget.

- CIO Magazine surveys report mid-sized companies spend USD 13,100 per employee on IT. Large companies spend USD 11,580 per employee.

TABLE 11
AVERAGE TECH SPENDING REPORTED BY AGENCIES

Average tech spend per full-time equivalent (FTE) N=37	$3,731.41
Average tech spend as % of total budget N=37	1.5%

As technology transforms how and where organizations can conduct operations, technology-related spending has steadily risen over time. Failure to make adequate investments can hamper productivity, security and even staff retention. The IFSD FNCFS Survey data indicates that, on average, agencies are not investing/spending adequately on technology versus industry benchmarks. Agencies surveyed cover the entire spectrum from very current technology with major upgrades in the past 12 months to those who have not seen updates in more than five years.

The survey results are also supported through anecdotal evidence, acquired through the workshops, such as the age of tools used by agency staff. Many of the workshop participants were using significantly older versions of productivity software, operating systems and dated hardware—some of which are no longer even updated or supported by the manufacturer.

At the other extreme, one agency described how they equipped staff with state-of-the-art tools such as Microsoft Surface tablet computers for use in the field to directly enter case notes. This has resulted in significant productivity gains as social workers no longer have to transcribe hand written notes upon returning to the office.

Agencies were asked to estimate the required one-time capital investment to bring their technology platform to a state where it can fully support their requirements. This was an attempt to understand the size of the investment gap to modernize the current technology platform to meet agency needs. However, agencies responding to these questions estimated requirements well below industry averages at 2.8% of their annual budget or an estimated $303,600 investment. While it is possible that these numbers accurately reflect agency needs, it is more

likley that respondents may not have had a full understanding of their IT requirements. Few respondents, if any, were technology specialists.

The emergence of cloud computing represents one of the largest transformations IT has experienced in a generation. This has created tremendous opportunities and introduced new risks that must be considered.

Cloud spending/adoption is rapidly expanding across most organizations in the broader economy. The use of cloud technologies offers numerous benefits including, but not limited to, reduced need for capital, quicker deployments, continuously upgraded solutions, as well as better alignment of capacity with demand. Further, cloud-based tools can lessen the dependency on IT resource supporting the agencies.

Agencies were asked to "describe any cloud-based technology services (such as Office 365) currently in use by your agency or under consideration by your agency." Only 40% of agencies indicated they were using or considering cloud-based technologies. Microsoft Office 365 was the most commonly cited cloud service in use, but others included disaster recovery, online backup and accounting software.

Many survey responses included statements indicating that cloud would not be considered. This may indicate a lack of knowledge regarding the opportunities offered by the cloud or concerns regarding perceived risks of the cloud.

Significant strides have been made in recent years by cloud offerings in Canada. Major organizations, such as Microsoft, now operate multiple data centres on Canadian soil easing concerns over data residency issues. Additionally, major providers have obtained and maintain advanced certifications for the security and privacy of their offerings and facilities.

One of the greatest impacts the cloud is having on IT spending is the shift from capital expenditures to operating expenses. Cloud services are typically offered on a subscription basis charged on either an annual or monthly basis. This allows an organization to tightly align technology service consumption with demand. This fundamental shift requires a different approach to IT budgets. Traditional, capital intensive, IT budgets and associated depreciation are shifting to a more flexible operating

expense orientation. While some agencies may be slow in adopting cloud technologies, any revised funding model should consider this new budgeting reality.

Many major technology vendors offer exceptional discounts to non-profits. These companies include Microsoft, Google, Amazon, Adobe, and many more. TechSoup Canada operates a website to help non-profits take advantage of offers from many of these vendors. Additionally, major vendors host additional offers on their own sites. Discounts are particularly compelling for their cloud offerings.

With most sectors targeting 4–6% it is clear that (when combining the capital plus operating and maintenance spending) agencies appear dramatically below normal investment levels, reporting average IT spending at 1.5% of total budgets, or approximately $3,730 per employee in fiscal year 2017–2018. There may be a number of causes to the lower level of spending by FNCFS agencies. It is possible that benchmark levels of expenditures are not contemplated in the planning cycle or that available funds are diverted to program activities that may be deemed a higher priority. The risk to the agencies of chronic underspending is not just the loss of productivity but also the risk that case management itself is inadequately supported by agency infrastructure.

When estimating required IT investment for FNCFS agencies, funding was calculated as a percentage of reported total budget. This approach was considered to be the most reliable based on the consistent available industry benchmarks for IT spending for the education and not-for-profit sectors. Two scenarios were used to estimate required annual IT budgets: 5% and 6% (the rounded industry average). The average total budget of approximately $12 million was used for agencies that did not provide a total budget and for non-participating agencies.

TABLE 12
ESTIMATED REQUIRED TECHNOLOGY INVESTMENT

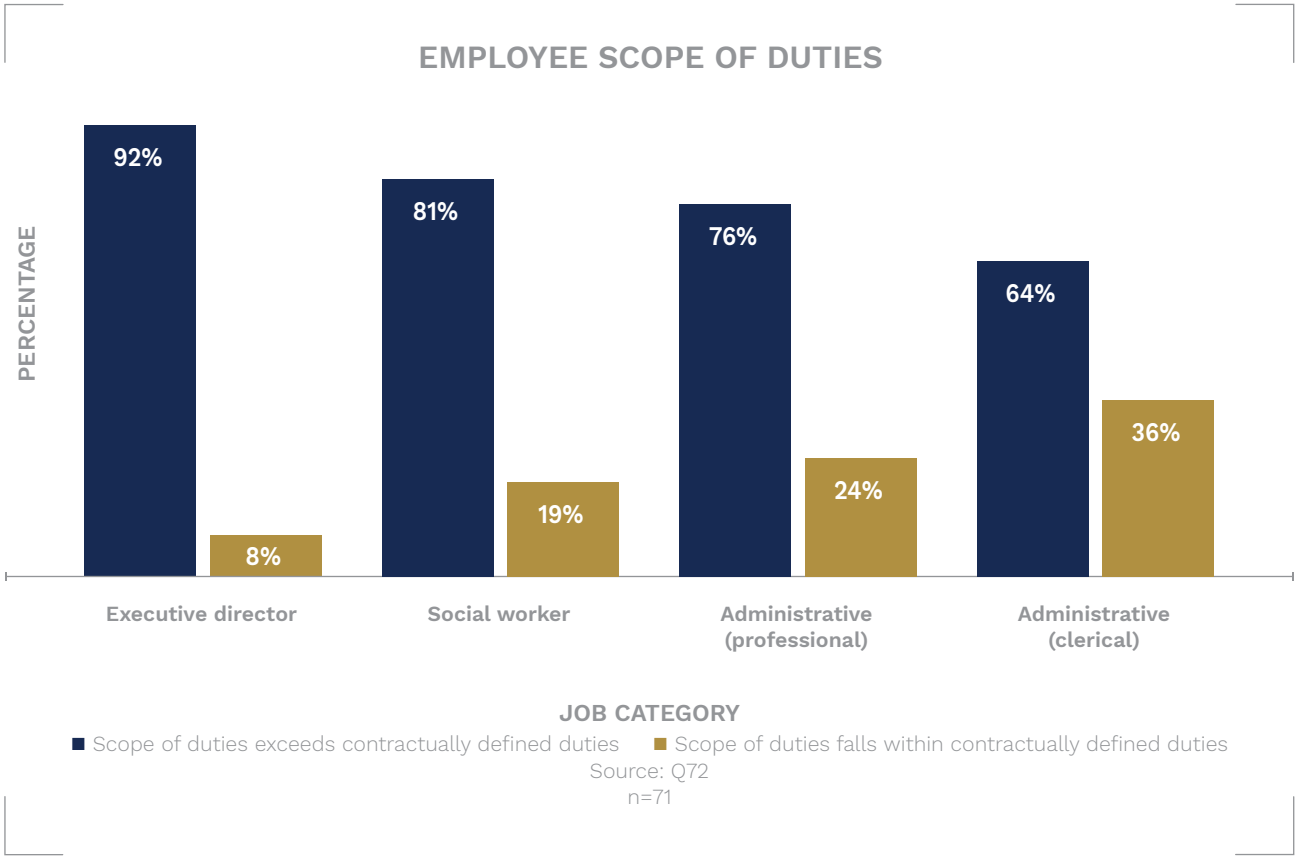
PERCENTAGE OF TOTAL BUDGET	ESTIMATED ANNUAL IT COSTS
5%	$65,143,213
6%	$78,171,855

It is recommended that IT be funded at a rate of 5%–6% of total annual budgets, consistent with industry practices.

Salaries

During workshops and visits to agencies, experiences and anecdotes were shared with examples of agency staff going above and beyond their duties, often without compensation. In the survey, agencies reported that the scope of duties of their employees exceeded those that were contractually defined. This trend was most prominent among executive directors and social workers (see Figure 45), with 92% and 81% respectively, reportedly exceeding their agreed duties.

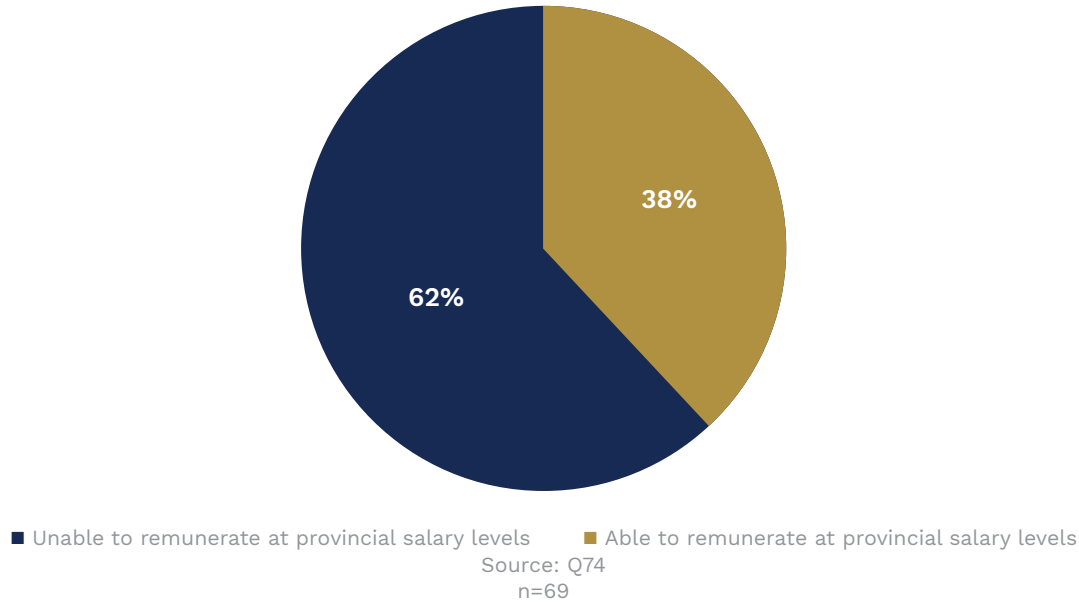
FIGURE 45



Beyond the extended duties, 62% of agencies reported being unable to remunerate employees at provincial salary levels (see Figure 46). The two exceptions were Alberta and the Atlantic region, which reported greater numbers of agencies able to remunerate at provincial salary levels than those that could not.

FIGURE 46

AGENCIES' ABILITY TO REMUNERATE STAFF AT PROVINCIAL SALARY LEVELS



Source: Q74
n=69

These findings raise two matters for further consideration. First, is the issue of pay equity. FNCFS agencies are not compensating their employees at provincial salary levels. The reasons for this difference in pay merit further study. Second, employees are exceeding their contracted duties and hours of work. This may point to issues of case complexity and the different resource profiles required to address them.

The matter of case complexity has been raised by the Canadian Association of Social Workers (CASW)[103] in their 2019 pre-budget submission, calling for a caseload study to collect national data and to begin to develop national standards on reasonableness of caseloads. CASW's proposed study would seek to better understand cases through their complexity and apply that measure to determine appropriate caseloads for social workers.[104]

[103] The Canadian Association of Social Workers (CASW) was established in 1926 to set professional standards of practices for social workers in Canada. Its mission today is to "promot[e] the profession of social work in Canada and advances social justice," through activities such as professional development and training, advocacy, resource development, etc.

[104] Canadian Association of Social Workers' Pre-Budget Submission to the Standing Committee on Finance, "Supporting Social Workers for Better Social Outcomes," 2018 (for the 2019 Pre-Budget Consultation).

A 2017 study[105] by the CASW interviewed current and previous social workers from child protection services. The results suggest that an unmanageable workload was a common reason for leaving (46%), along with stress, compassion fatigue or vicarious trauma (45%) and the emotional toll of their work (34%). Pay and benefits were causes to leave for fewer than 20% of respondents.[106] Of those still working in the field, unmanageable workload was frequently identified as an issue (75%) and was also reported to be the most significant challenge. Emotional toll of the work (63%) and a lack of resources to address compassion fatigue (56%) were also cited as critical challenges,[107] with 54% of respondents wishing they had the resources to address the fatigue.[108]

The CASW findings on employees overburdened by workloads and fatigue parallel IFSD FNCFS Survey findings of overworked FNCFS employees. While salary ranges between provinces and FNCFS agencies may vary, the most important challenge faced by social workers appears to be the issue of workload, making case complexity a matter in need of further study. It may be likely that the challenge of a social workers role is only compounded by the complexities of the community and environment in which they do their work. Social workers serving FNCFS agencies face not only the challenges of families in crisis, but also those of their communities, such as poverty and intergenerational trauma. It is not only First Nations communities that experience these challenges, but they are disproportionately affected relative to the general population. Beyond the contextual challenges, a lack of related services and resources (e.g. mental health workers, specialists, child psychologists, etc.) makes a social worker's job more difficult by not being able to access or refer their clients to the services required. Anecdotally, FNCFS agencies have shared that

[105] The purpose of this survey was to explore the issues, challenges and barriers that social workers experienced in their practice, their working conditions, their reasons for leaving the child welfare field, sources of job satisfaction and trends in de-professionalism. Conducted in 2017, the survey contained 35 questions that were predominantly closed-ended, with some opportunity for qualitative responses. It was divided in three parts: (1) information on participant characteristics, completed by all respondents and also by social workers who had never worked in child welfare; (2) completed by social workers who had previously worked in child protection and currently worked in a different social work role; (3) completed by social workers currently working in child welfare. A total of 3,258 social workers across the country responded; (1,389 to part two and 1,438 to part three). Since the total number of social workers in Canada is unknown, calculating the response rate was not possible. Over 10% of CASW members responded to the survey.

[106] Canadian Association of Social Workers, 2018, *Understanding social work and child welfare: Canadian survey and interviews with child welfare experts,* chart 7.

[107] Ibid, chart 13.

[108] Ibid, chart 15.

their social workers and staff sometimes have to be "all things, to many people."

The importance of assessing caseload through the lens of case complexity is highlighted well in the 2013 testimony of Sylvain Plouffe, former director of the Centre de Jeunesse de l'Abitibi-Témiscamingue.[109] In a nearly perfect comparative case, M. Plouffe's agency served two communities: one First Nations (East, characterized by Lac Simon) and one non-First Nations (West, characterized by Val d'Or). The differences in the communities' experiences were striking and connected to their social and economic contexts.

In Lac Simon, there were approximately 380 reported cases of substantiated abuse or neglect for every 1,000 children, whereas Val d'Or had only 35 cases per 1,000 children (see Table 13). Reflective of their case rates, Lac Simon and surrounding communities registered higher rates of negligence, substance misuse, housing overcrowding and unemployment relative to neighbours in non-First Nations communities such as Val d'Or. Compared to the East, the West had lower case rates which M. Plouffe speculated, may be linked to the paper mill in the West, which generated more opportunity for employment among members of the community and thus lead to lower rates of poverty.

TABLE 13
OVERVIEW OF THE CENTRE DE JEUNESSE DE L'ABITIBI-TÉMISCAMINGUE CHRT PROFILE

	VAL D'OR (NON-FIRST NATION)	LAC SIMON
Staff (not necessarily all front-line workers)	**200 (approx.)**	**20 (approx.)**
Cases per 1,000	35	380
Staff : population	1:205	1:75

[109] Testimony before the Canadian Human Rights Tribunal, (2013) (statement of Sylvain Plouffe, director general of the Centre Jeunesse de l'Abitibi-Témiscamingue).

The social workers serving the communities in the East and West had the same training and the same pay, but their contexts differed. Communities such as Lac Simon required more resources, especially staff, to support the more complex needs. M. Plouffe and his team were able to secure a federal block funding grant to hire local prevention-focused staff and develop programming to respond to the community challenges in the East.

The case of the Centre de Jeunesse de l'Abitibi-Témiscamingue and the research undertaken by the CASW, suggest that case complexity merits attention, especially in First Nations contexts. With challenges and needs that may outstrip standard agency service offerings, FNCFS agencies require supplementary prevention-focused services to address the needs of their communities that may range from poverty, to substance misuse. The matter of salaries is not only about equity, but about the need to consider the complexity of the issues that staff address in different communities.

It is recommended that:

- **Social workers be remunerated at levels comparable to provincial salary levels.**
- **A study be undertaken to assess why FNCFS agencies are unable to remunerate their employees at provincial levels.**
- **A study on case complexity be undertaken, with consideration of differing community contexts when determining reasonable caseload levels.**
- **FNCFS employees have access to professional support and development, including leave for compassion fatigue.**

FUNDING STRUCTURE FOR THE FUTURE OF FNCFS AGENCIES

A funding structure is not only about financial allocations; it's about the ways in which money can be used as a tool to incentivize or alter outcomes. Both governance (including performance, reporting, and accountability) and the value of the allocations must be considered. Internal consistency that aligns inputs, outputs, and outcomes is necessary for accountability to communities and stakeholders. As a foundation for a performance framework it is critical that, resources and activities are connected to the desired outcomes for First Nations children.

In the current FNCFS system, agencies are funded for children in care with limited control and flexibility over how to allocate and spend their money. Placing a child in care represents a nearly guaranteed means of unlocking resources required for the child, incentivizing their placement in care. The current funding structure fails to account for the contextual challenges with which agencies must grapple in their work. Further, for FNCFS agencies there is little connection between the resources that they expend and the outcomes that they are trying to achieve. This mis-match is fundamental to effective budget and performance management in virtually any public administration context. Beyond the challenging socio-economic context for First Nations communities, for FNCFS agencies, there exist pronounced funding gaps in prevention, capital, and information technology, that impact operations and results.

Moving beyond the current system requires an alternative structure. Funding in this new structure should be allocated in blocks and align to the activities of agencies, in the areas of: protection and maintenance, prevention, capital, operating, data and governance. The approach to block funding is one where resources are allocated to specific activity areas through a grant-style allocation.

Working with experts convened to build on the future vision defined by agencies, overviews of FNCFS service delivery and services to First Nations children, families and communities through the lenses of indicators (i.e. what to measure), activities (i.e. programs or services), and inputs (i.e. required resources) was developed (see Table 14). These

overviews emphasize the connections between outcome definition and measurement, related activities and required resources.

As a point of departure, this mix of indicators, activities and resources was developed recognizing the heterogeneity of agencies and their communities. Instead of defining a single approach that combines results definition with activities and resources, the experts defined a framework that can be applied in a variety of circumstances and to varying degrees.

Importantly, the framework recognizes the often substantively unequal point of departure experienced by FNCFS agencies working in their communities and the layers of holism that must be nurtured around the core agency mandate of protection. In the framework, from both the perspectives of agencies as service delivery organizations and that of services to communities (including children and families), there are four streams of activity to consider: safety, child well-being, family well-being, and community well-being. While an agency may not be solely accountable for the outcomes of the people that they serve, their work has broader impacts and should be understood, evaluated, and resourced accordingly. Consider for instance, using school success as an indicator of child well-being or the number of moves a child experiences in care to better understand how they are faring in their care placement.

TABLE 14

RESULTS-BASED OVERVIEW OF A DESIRED FNCFS SYSTEM

		CHILD SAFETY	CHILD WELL-BEING	FAMILY WELL-BEING	COMMUNITY WELL-BEING
INDICATORS	Service Delivery, FNCFS Agencies	▪ Child injury (non-accidental) ▪ Child sexual abuse ▪ Staff qualifications (based on activities and services) ▪ Retention rates of staff ▪ Staff vacancies	▪ School success (understand how a child is doing) ▪ Staff qualifications (based on activities and services) ▪ Retention rates of staff ▪ Moves in care (understand how a child is doing) ▪ Staff vacancies	▪ Housing stability ▪ Mental health and rates of substance misuse ▪ Staff qualifications (based on activities and services) ▪ Retention rates of staff ▪ Rates of removal of children ▪ Rates of reunification ▪ Rates of reunification breakdown ▪ Staff vacancies	▪ Proportion of children placed in community resources ▪ Staff qualifications (based on activities and services) ▪ Retention rates of staff ▪ Agency responsiveness ▪ Quality of staffing/activities ▪ Perception of care and services ▪ Staff vacancies
	Services for First Nations children, families, communities	▪ Substantive equality ▪ Number of non-voluntary interventions ▪ Perceived coercion in interventions ▪ Non-accidental child injuries (observable and non-observable) ▪ Child sexual abuse ▪ Suicides ▪ Suicide attempts ▪ Self-harm related behaviour ▪ Feeling hope, belonging, purpose and meaning	▪ Substantive equality ▪ Vocabulary (indicator = total word count) ▪ School success ▪ Social/relationships ▪ Well-equipped schools ▪ Awareness/fluency of Indigenous language(s) ▪ Feeling hope, belonging, purpose and meaning	▪ Substantive equality ▪ Time and quality of family time/interaction ▪ Number and quality of partnerships (service partnerships and social support) ▪ Honouring of family rituals and traditions (frequency/regularity) ▪ Feeling hope, belonging, purpose and meaning	▪ Substantive equality ▪ Access to clean water ▪ Food security ▪ Adequate housing ▪ Number of community members to teach Indigenous languages ▪ Self-determination over system (i.e. policing, health, recreation, etc.) ▪ Community rates of substance misuse ▪ Community rates of trauma and psychological distress ▪ Access to services within community (education, health, social services) ▪ Access to broadband and connectivity tools ▪ Feeling hope, belonging, purpose and meaning

		CHILD SAFETY	CHILD WELL-BEING	FAMILY WELL-BEING	COMMUNITY WELL-BEING
ACTIVITIES	Service Delivery, FNCFS Agencies	▪ Programs for prevention of child sexual abuse ▪ Programs for infant injuries (i.e. shaken baby syndrome)	▪ Child support services ▪ Trauma support services for victims of sexual abuse	▪ Family support services (i.e. for kids at risk)	▪ Out of family home-based care ▪ Residential programs for adolescents ▪ Programming for transitions out of care – adult services or independently ▪ Stakeholder engagement
	Services for First Nations children, families, communities	▪ Trauma-based interventions for sexual abuse ▪ Culturally-informed practice ▪ Teaching and revealing healthy behaviours of community ▪ Partnering children and elders	▪ Activities (clubs/camps/ libraries etc) ▪ Special needs programs ▪ Play spaces ▪ Support programs for foster siblings and pets (keeping siblings together; nurturing relationships)	▪ Development of collaborative networks of care/integrated resources (social services, housing, trauma/mental health) ▪ Maternal-child interaction interventions ▪ Father-child programs	▪ Programming/activity options for children ▪ Opportunities to engage in community activities ▪ Community wellness (i.e. addressing history)

INPUTS (RESOURCES)	CHILD SAFETY	CHILD WELL-BEING	FAMILY WELL-BEING	COMMUNITY WELL-BEING
Service Delivery, FNCFS Agencies	▪ Liaison staff with healthcare professionals ▪ IT (broadband/video connection); internal and outside connection ▪ Data architecture and analysis ▪ Peer support among agencies ▪ Staff trained to deliver programs effectively ▪ Employee assistance program ▪ Case mix adjusted case load (must better understand case complexity)	▪ Liaison staff with the school system (staff in schools who can get to know the kids) ▪ IT (broadband/video connection); internal and outside connection ▪ Data architecture and analysis ▪ Staff trained to deliver programs effectively ▪ Personalized coaching support (who does a child have in their community that helps them along?)	▪ Liaison staff with adult substance use and mental health services ▪ IT (broadband/video connection); internal and outside connection ▪ Data architecture and analysis ▪ Staff trained to deliver programs effectively	▪ Capital (buildings, vehicles, IT, staff) ▪ Human (foster parents from community, kinship parents, community care (traditional)) ▪ IT (broadband/video connection); internal and outside connection ▪ Data architecture and analysis ▪ Staff trained to deliver programs effectively
Services for First Nations children, families, communities	▪ Intergenerational program resources (people, funding) ▪ Specialized social workers for issues such as sexual abuse, safety and neglect ▪ Group homes ▪ Family and child care workers ▪ Specialized foster parents ▪ Policy specialists ▪ Legal specialists/in-house counsel ▪ After-care team for family post-removal (mental health, youth, social workers) ▪ Capital (agency building) ▪ Data	▪ Peer support ▪ School buildings ▪ Stable, quality teachers and administrators ▪ Culturally-based learning resources ▪ Social-emotional development (e.g. mall trips) ▪ Mental and physical health workers (for children and family) ▪ Child and youth workers ▪ Group homes ▪ Transportation ▪ Family and child care workers ▪ Trained staff ▪ Specialized foster parents ▪ Data	▪ Capital/per person (IT infrastructure, vehicles, housing, home appliances) ▪ Peer support among agencies ▪ Family resource centres ▪ Mental health and substance misuse workers ▪ Community recreation centres, gardens, kitchens ▪ Access to good legal counsel ▪ Transportation (i.e. trips to Costco) ▪ Family support workers ▪ Family well-being/resource centres ▪ Data	▪ Dispute resolution mechanism; community oversight ▪ Community wellness funding ▪ Peer support among agencies ▪ Knowledge and access to services ▪ Foundations for “healing” ▪ Dispute resolution mechanism ▪ Community wellness funding ▪ Data

To secure this outcomes-based approach in the funding allocations to agencies, one must take a step back to the source of funds (i.e. the consolidated revenue fund and the fiscal framework) for FNCFS program activities. At its source, funding for the FNCFS program should be ring-fenced or allocated as a separate line item in the departmental budget on which Parliament must vote. The ring fencing should encompass funding targeting program activities that are aligned to desired outcomes.

While the Treasury Board may make decisions possible through funding allocations from the planned fiscal framework, Parliament's approval is required before moneys can be disbursed from the Consolidated Revenue Fund (CRF) for the government's use. Annually, Parliament reviews and approves (or rejects) the government's spending proposals for the whole of government by voting on the Appropriations (as supply bills).[110] The bills are supported by the Estimates or "blue books," which are explanatory compendiums of the appropriations acts. Divided by department (as are the supply bills), the Estimates break down spending into voted categories (e.g. program, capital expenditures, operating expenditures, grants and contributions, and other), and provide some high-level information on the nature of departmental spending. For information purposes only, the Estimates also break down spending by program areas.

The current vote structure provides departments with blocks of money to be used for set purposes (e.g. operating, capital, grants and contributions). This vote structure however, does not let one see how money is assigned to program priorities, nor does it prevent a department from reallocating resources between programs and priorities (within the voted category).[111]

Parliament is accountable for financial control before it votes on appropriations, and after the money has been spent (through the

[110] In practice, with a majority government, supply bills, as with most other bills, easily pass. Any money bills, e.g. supply bills, the budget bill, etc., are matters of confidence. Should a government lose such a vote, convention would require that they would seek dissolution by the Governor General.

[111] When cabinet approves a policy or program, the Treasury Board is responsible for assessing and recommending the authorities required for departments to operationalize the policy and funding decision. A committee of cabinet, the Treasury Board is led by the President of the Treasury Board (currently, the Hon. Scott Brison) and is supported administratively by the Treasury Board of Canada Secretariat (TBS).

assessment of results). Performance information, which is critical for assessing value for money, is not presented by operating expenditures, capital expenditures and grants and contributions, but by program activity areas. This further complicates Parliament's ability to assess resource allocations against outcomes.

The purpose of 'ring-fencing' funding (i.e. voting by program activity) is to have a program's allocation appear as a separate line-item in the supply bills i.e. within the Grants and Contribution vote. It is the Treasury Board that makes the recommendation on the vote structure and can suggest that a program appear as a distinct line-item in the supply bills. By ring-fencing funding, a department is allocated a set amount of funding for that specific program or priority that is distinct, easily identifiable and traceable (instead of collapsing that allocation into a broader spending category). Also, the amount cannot be reallocated to other vote categories without Parliament's approval.

Consider for instance, ISC's $9.3 billion in voted appropriations for 2018–2019 (see Figure 47).[112] Of the $9.3 billion total, we cannot determine from the Estimates how that money will be spent on specific priorities or programs, such as First Nations child and family services. All that we can see are three vote categories: operating, capital and grants and contributions. For informational purposes only, program purposes and transfer payments are listed below the vote structure, but we can only surmise as to which funding category will source First Nations child and family services.

The Departmental Plans, which represent the annual business plan of a department can be read in concert with the Estimates. This document offers insight into how spending is being planned for the department, but the government has the opportunity to adjust the plan without going back to Parliament for approval. A department may reallocate money within its appropriated budget to different activities within the vote category. By ring-fencing funding, one establishes a guarantee that a defined amount of the department's budget must be allocated to a specific program and cannot be changed or reallocated by the department, unless approved by Parliament.

For instance, the Department of Transport is part of a pilot project of a program-based vote structure for grants and contributions (see Figure 48).[113] This means that in the department's votes in the supply bills, separate votes were defined for types of grants and contributions. The department had votes for operating expenditures, capital expenditures, and three separate votes for grants and contributions with defined purpose in the vote. This is a positive step ensuring the department must spend in the priority areas and cannot move money away from the vote's set allocation. While this does ring-fence funding in the priority areas, we still have to guess as to which grant and contribution programs fall into each vote category.

In an ideal situation, the grant and contribution vote would breakout funding by a specific activity or funding area. For instance, ISC would have a series of grant and contribution votes for program areas such as child and family services, First Nations and Inuit health, etc.

The separate program activity vote or ring-fencing approach establishes a program to deal with a specific public policy issue, funded by a separate line-item in the Appropriations (supply bills). While annual parliamentary approval is required to allocate the funds, the funding amount for the year is clear as it is published as a separate line in the Estimates. In addition, it helps to focus the attention of the Executive and Parliament on desired outcomes.

This type of funding arrangement offers flexibility, as it can be adjusted on an annual basis before it is voted by Parliament. Should a government wish to reallocate money during the fiscal year, it would have to return to Parliament for approval (obtained through a vote transfer or adjustment to the fiscal framework). While funding may increase, it risks being decreased as well. As a separate vote in the supply process, there is an added measure of accountability to this arrangement. Money allocated to the program cannot be moved around or assigned to other

departmental priorities. While transparent and targeted, this funding arrangement is not responsive in-year to changing user needs.

With the opportunity for changes to the FNCFS funding structure, an approach that ring-fences funding for the program and then allocates it based on program activity areas would be a step to enhanced transparency and accountability for funding. This would enable FNCFS agencies and stakeholders to more clearly track allocations related to the FNCFS program within ISC.

Working from this approach, funding allocations to agencies would also be aligned to activity areas. This means that agency funding would be allocated and performance assessed against program activity areas such as protection and maintenance, prevention, capital, operating, and governance and data.

Once the Estimates vote structure and departmental grant & contribution funding has been reconsidered, agency level funding mechanisms must also reflect the desired performance framework. Grant and contribution funding would then be allocated to individual FNCFS agencies. These agencies will require funding to achieve three objectives: adequacy (short and long term), flexibility (to (re)allocate to priorities) and connected to desired outcomes (for performance, reporting and accountability). IFSD research and consultations regarding best practices has found that *block funding* at the agency level would best support these three fundamental objectives. Funding agencies in blocks, reflecting individual program activities, where agencies are accountable for managing their priorities and resources would alter incentives. Instead of working around the system, agencies could focus on working with the system to plan and deliver their services with regularized funding allocations that align to their operations.

It is recommended that block transfers be used to fund the FNCFS program to provide flexibility in allocation and accountability to stakeholders.

Precedent for block funding to FNCFS agencies exists. West Region Child and Family Services (WRCFS) was part of a pilot project on block funding that was evaluated in 1994. The evaluation found that the approach was successful in not only decreasing the number of children in care, but in

improving planning for children (emphasizing treatment) and focusing on community care programming. It was recommended that the block funding approach be made available to other agencies. Accountable for managing its block grant, WRCFS's approach to cost analysis was considered sophisticated in the evaluation and was reported to be used for program planning.[114] The block funding ended however, with the introduction of the EPFA formula. For WRCFS, this resulted in a reduction in resources and flexibility in its program design and planning abilities. The agency lost its community-focused and prevention-oriented mechanisms for care and services.

The importance of relevant data collection and its use for agency planning and program development cannot be overstated. In an attempt to secure a block funding grant to fund increased prevention-focused services for one of its First Nation communities, the Centre de Jeunesse de l'Abitibi-Témiscamingue,[115] used its own data to make the case for differentiated and increased need. The Centre's data tracked when a child accessed services, whether or not the child was placed in care, and the recurrence of the child's contact with the system. With this information, the Centre was able to demonstrate that children in the First Nation community of Lac Simon had significantly higher demand and need for services than those in the neighbouring non-First Nation community. The cases of WRCFS and the Centre de Jeunesse de l'Abitibi-Témiscamingue reflect the importance of aligning expenditures to outcomes and measuring what matters to improve planning.

In order to better serve the country's most vulnerable families and children, Canada needs to rethink its approach to responding to cases of child maltreatment. Instead of asking "how do we protect children?", experts convened for the IFSD roundtable emphasized that a better point of departure is asking "what do children need to thrive?" In addition to pivoting to an outcomes and prevention-based frame, there is a need to establish contextually-relevant, evidence-based services that are rooted in improving long-term outcomes among children and families involved in the child welfare system.

[114] Mackenzie, 1994, p. 104.

[115] Testimony before the Canadian Human Rights Tribunal, (2013) (statement of Sylvain Plouffe, director general of the Centre Jeunesse de l'Abitibi-Témiscamingue).

Understanding outcomes among First Nations peoples has been traditionally complicated by a lack of reliable data. There are several challenges unique to First Nations data collection and management that have made it difficult to measure the scope of health issues and limit comprehensive analysis. Some of these include the failure to separate First Nations identity from the general population, gaps in coverage, aggregation that is geographically too broad, multiple data sources, ambiguity and lack of regulation over who owns and controls the data, and the use of culturally inappropriate indicators. Current efforts have also been critiqued for focusing on secondary issues (e.g. disease prevalence) as opposed to root causes of ill health and well-being.[116]

More broadly, this is an important issue to address, as "data can highlight inequality and bring an evidence-based lens to policy making," and "provides baselines and benchmarks which allow for measurements of change over time."[117] At the program level, as with child welfare, data is essential to inform good strategic planning and provide the space for knowledge sharing and innovation among FNCFS agencies.

As McBride (n.d.) notes, "data is only as useful as the ability of communities to assess and respond to it," and for "communities to engage with data, there has to be local capacity to access, collect, and analyze it."[118] Many FNCFS agencies currently lack this capacity. Among agencies that do have this capacity, there is no streamlined mechanism around what data is collected, why and how. Therefore, a consistent recommendation from experts is to establish a First Nations data secretariat and resource centre for FNCFS.

In the proposed future state for the FNCFS program, there's an emphasis on performance and outcomes for agencies and communities. Focused on holistic well-being, prevention funding for FNCFS agencies is proposed to address contextual challenges and general population needs, not only those of protection-related services. Various agencies have demonstrated the importance of measuring what matters to better adjust planning and programming for communities. Building

[116] Kate McBride, "Data Resources and Challenges for First Nations Communities: Document Review and Position Paper," (The Alberta First Nations Information and Governance Centre, n.d.).

[117] McBride, n.d.

[118] McBride, n.d.

on data as a tool for improved services, it is also necessary for performance evaluation.

Among FNCFS agencies, there is no consistent set of indicators of well-being that are regularly tracked and collected. This leaves a gap in understanding of outcomes for children, families, communities and the agencies' own organizations. With a new funding structure, there is an opportunity to establish a secretariat dedicated to FNCFS agencies and the well-being of the communities they serve. Working with FNCFS agencies and experts, this secretariat would develop a streamlined reporting system that would have agencies report on overall indicators of well-being for their people and organizations (similar to those in Table 14 from the expert roundtable). Assessing indicators in the categories of child safety, child well-being, family well-being and community well-being would enable agencies and communities to better plan and respond to changing needs.

The proposed secretariat would be guided by OCAP® principles and would ensure that the data shared by FNCFS agencies is returned directly to them, publicizing only national aggregated data with the permission of the participating FNCFS agencies. There would be a learning period of at least one full year in which the secretariat would undertake its work. The secretariat may request that a variety of data be collected to better understand their utility and to identify continued gaps in understanding. The year would allow the secretariat to refine its data collection process with feedback from stakeholders, ensuring it is responsive and relevant in its work.

British Columbia's First Nations Health Authority (FNHA) may be a partial model for the secretariat from the perspective of its data collection, maintenance and dissemination practices. Since 2013, the FNHA has been responsible for planning, managing, funding, and delivering health programs in partnership with First Nations in British Columbia.[119] Their culturally relevant approach to knowledge gathering and indicators to measure well-being may serve as a starting point for developing related data practices that include safety and the well-being of children, families and communities. A stakeholder focused organization, the FNHA frequently and purposefully engages with its communities to gather

[119] First Nations Health Authority, 2018, "About the FNHA."

knowledge and identify areas in need of improvement.[120] The First Nations Information Governance Centre (FNIGC) may similarly offer a model to emulate. First Nations-led, the FNIGC is dedicated to producing "portraits of the lives of First Nations people and the communities they live in," with the goal of improved decision-making. The secretariat's mandate would differ slightly and would focus on indicators to better understand the results of contextual challenges, programs and policies on children, families and communities.

Having reliable data means improving accountability for stakeholders and opportunities for improvement and refinement of policies, programs and activities. Agencies have demonstrated the utility of sound data for decision-making. Enhancing the data collection process to ensure it is meaningful, relevant and produces information agencies and communities can leverage is possible and should be pursued.

It is recommended that a secretariat dedicated to results-oriented data be established to support FNCFS agencies in their work.

The characteristics of FNCFS agencies transcend boundaries and funding formula divisions. Agencies and experts agreed that their shared experiences and common challenges would benefit from a national resource centre at the service of all FNCFS agencies. A resource centre dedicated to aggregating content, developing resources and supporting agencies would serve as a platform for engagement, ideas sharing, and collaboration among agencies.

Developed as an online platform, the resource centre would have a small team dedicated to fulfilling its mandate. The opportunity with the resource centre is to share the human and resource requirements of developing new programming or strategies for addressing challenges common to FNCFS agencies. The centre also has the opportunity to serve as an archive or library of wise practices and approaches to care and holistic well-being. For instance, if an agency has successfully developed a program for supporting families struggling with substance misuse, they may share the details with the centre, which in turn could connect the agency delivering the program to others who may wish to learn from it. The most recurring comment from 60% of workshop

[120] First Nations Health Authority, 2018, "Engagement process."

attendees was that the most valuable part of the workshop was collaborating, sharing ideas and networking with peers from across the country. The possibility of leveraging that knowledge and sharing it across FNCFS agencies represents an unparalleled opportunity for amplification of efforts and the possibility for positive change.

As an organization sharing specific knowledge and expertise, the First Nations Lands Management Resource Centre (FNLMRC) may be a model for the role of an FNCFS resource centre. Dedicated to supporting First Nations at various points in the land management process, the FNLMRC offers a variety of services and strategic advice to meet a diversity of needs. Similarly, the FNCFS centre may seek to develop its expertise in FNCFS wise practices, as well as related issues such as health and supporting infrastructure. The focus of the centre's mandate would be to serve as a platform for collaboration and network building among agencies. Expanding capacity and sharing knowledge can help to multiply FNCFS agency efforts and encourage constant growth and learning.

Should they be established, the secretariat and centre would benefit from including common existing practices of other First Nations organizations in their operations and mandate. Such practices include a board of directors representative of the First Nations served; the provision of First Nations-specific services; and annual reporting on objectives, progress and finances.

It is recommended that a FNCFS resource centre be established as a platform for knowledge sharing and collaboration among FNCFS agencies in support of their common mandates.

CONCLUSION: RECOMMENDATIONS AND FUTURE RESEARCH DIRECTIONS

The current protection-focused system does not produce adequate results for children and families, fails to recognize the contextual challenges that lead to disadvantaged starting points for many communities, significantly underfunds prevention, has important gaps in capital and IT spending, struggles to remunerate employees relative to provincial levels, and falls short on data collection and analytics required to identify and support wise practices.

In this context, IFSD makes a number of recommendations (as listed in the Executive Summary):

1. It is recommended that block transfers be used to fund the FNCFS program to provide flexibility in allocation and accountability to stakeholders.

2. It is recommended that contextual issues such as poverty, be recognized and addressed through policy, programs and funding.

3. It is recommended that prevention be funded on a per capita basis for the total population served by the agency (not only children) at a rate of $800–$2,500 per person.

4. It is recommended that there be a one-time capital investment, and a benchmark recapitalization rate of a minimum 2% per annum (of asset base) added to agency budgets.

5. It is recommended that IT be funded at a rate of 5%–6% of total annual budgets, consistent with industry practices.

6. It is recommended that:
   - Social workers be remunerated at levels comparable to provincial salary levels.
   - A study be undertaken to assess why FNCFS agencies are unable to remunerate their employees at provincial levels.

- A study on case complexity be undertaken, with consideration of differing community contexts when determining reasonable caseload levels.
- FNCFS employees have access to professional support and development, including leave for compassion fatigue.

7. It is recommended that a secretariat dedicated to results-oriented data be established to support FNCFS agencies in their work.

8. It is recommended that a FNCFS resource centre be established as a platform for knowledge sharing and collaboration among FNCFS agencies in support of their common mandates.

Recommendations for Further Research

IFSD has three recommendations with respect to next-steps to further the work undertaken in this study:

1. Establish a performance framework to underpin the First Nations Child and Family Services system across Canada.

2. Develop a range of options with regards to the funding models that would support an enhanced performance framework.

3. Transition to a future state in full consideration of the data, human capital and governance requirements.

April 10, 2018

Re: Request for analysis of existing needs assessments

At the request of the Caring Society, the Assembly of First Nations (AFN), and Indigenous Services Canada (ISC), the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa undertook analysis of First Nations child and family services (CFS) agencies' needs assessments submitted to ISC between June 2017 and March 2018. The needs assessments were submitted in response to a letter from then Indigenous and Northern Affairs Canada (INAC) to First Nations CFS agencies dated October 28, 2016.[1]

In its review, the IFSD was asked to provide:

1) A summary of findings from existing needs assessments prepared by First Nations CFS agencies to inform a funding approach (pursuant the Canadian Human Rights Tribunal's (CHRT) February 2018 order);
2) An assessment as to whether the information from existing needs assessments could inform a cost analysis of First Nations CFS agencies while accounting for operating, capital, programmatic, governance, and other considerations for both average and small agencies (pursuant to 2018 CHRT 4 pars. 231 and 408; 249-250 and 418-419); and
3) A research plan to collect the required data and to conduct analysis to respond to the CHRT's orders, should the existing needs assessments fail to yield the required information.

IFSD received existing needs assessments on a USB key from ISC on March 21, 2018. There were 73 agencies that had completed the needs assessments, as well as reports from three regional organizations that aggregated regional findings, with some appending contributing agencies' needs assessments. Based on an agency list provided by ISC in 2017, there are 109 First Nations child and family services agencies in Canada. IFSD reviewed the 73 needs assessments and regional reports leveraging its approach from the National Advisory Committee (NAC)-IFSD survey of First Nations CFS agencies.

[1] In a letter addressed to "First Nations Child and Family Services Agencies (Executive Directors, Directors, and Managers)," dated October 28, 2016, then Indigenous and Northern Affairs Canada (INAC) offered two one-time funding opportunities, in response to the 2016 CHRT 16, par. 39. The first was $25,000 for a needs assessment, and the second was up to $75,000 for the development and implementation of culturally appropriate programs and tools for the communities served. The needs assessments to provide information about the agencies' "distinct needs and circumstances, the associated costs to meet these needs, and the factors that impact the way you deliver child and family services," was the focus of the IFSD's analysis. IFSD was not asked to comment on the submissions for the second block of funding.

In its analysis, IFSD used a framework that captured the elements of the CHRT order by assessing whether the needs assessments commented on and provided cost data for capital, operating, programmatic, governance and other particular circumstances (see Annex 1 for definitions). The framework was developed to respond to the requests above, by aggregating results to determine if the information in the needs assessments could inform a funding approach and a cost analysis for all agencies, with attention to small agencies. IFSD did not comment on the quality of the information presented, but only on whether a narrative and/or cost estimate appeared in the submitted document (see Annex 2 for the framework). However, while narratives on the current-state provide useful context, without data related to cost estimation, the assessments would not support the fulfillment of the CHRT order.

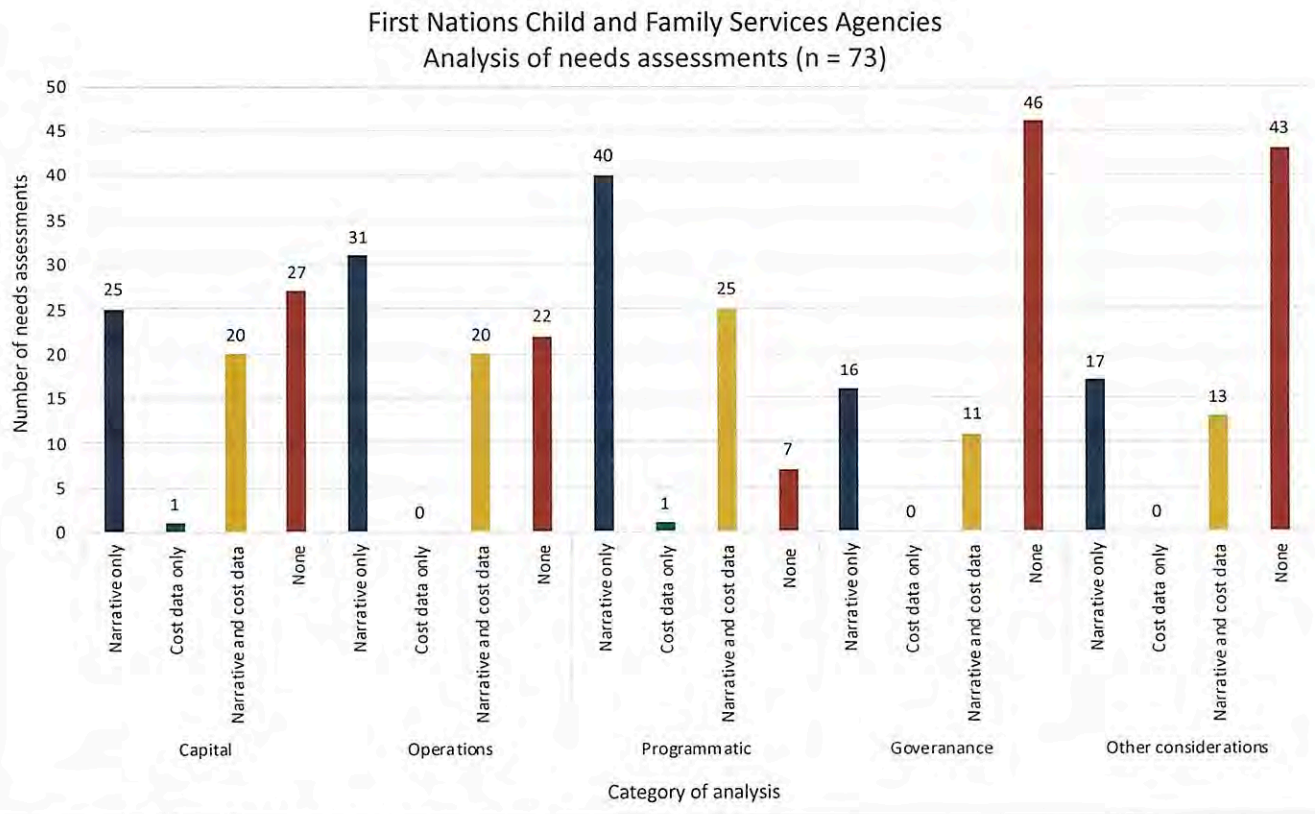

Figure 1: Summary of needs assessments reporting.

While the needs assessment exercise may have been designed to support a number of processes, the results are insufficient and as a result, unusable in the context of a cost analysis to inform a funding approach.

The results of IFSD's analysis of the 73 needs assessments suggest that (see Figure 1):

1) The qualitative and quantitative information submitted in the needs assessments is inadequate to undertake a program cost analysis.
2) It appears that the instructions provided by INAC in the October 28, 2016 letter were sufficiently vague allowing for wide interpretation by agencies and resulting in a variety of responses, that were not conducive to the acquisition of financial data required for cost analysis of funding needs. This may have contributed to the array of data and narrative formats of the needs assessments, resulting in significant variance in the nature and quality of the information presented.
3) Needs assessments from Manitoba-based agencies reported effectively with quantitative cost data and qualitative narratives to define and explain gaps in capital, operating, and programming budgets, as well as to identify other considerations particular to their agencies. While useful, more detailed information will be required for the cost analysis.
4) Nearly all (90%) of needs assessments reported on programmatic considerations (protection and/or prevention), with approximately 61% of those reporting only with a narrative and approximately 38% reporting with both cost and narrative data.
5) 70% of agencies reported on their operational needs, mostly in narrative form.
6) 63% of agencies reported on their capital needs, mostly in narrative form.
7) Few agencies reported on governance considerations (37%) and on other considerations (41%) in their needs assessments.
8) Of the 73 needs assessments, 42% reported on the size of the community they serve. From the reporting group, there are 9 small agencies (serving less than 1,000 children) and 22 average size agencies. The sizes of the other agencies were not reported in the needs assessments.

Financial analysis will require information aligned to the cost categories defined in Annex 1 based on agency needs (e.g. capital, which includes building maintenance, repairs and retrofitting of buildings, land, vehicles, and technology equipment). For compliance with the CHRT order of a cost analysis, the data collected from this exercise is insufficient.

Given this result, the IFSD has appended a proposed research plan to this letter (see Annex 3) to collect the required data and to conduct analysis in fulfilment of the order, pursuant to the request made by the Caring Society, AFN, and ISC.

Respectfully submitted,

Kevin Page

Kevin Page
President & CEO, Institute of Fiscal Studies and Democracy
University of Ottawa
(Former Parliamentary Budget Officer of Canada)

Annex 1 – Definitions

Category		Definition and examples	Tribunal References and Notes
Capital		**The acquisition and maintenance of fixed assets.** Examples include maintenance, repairs and retrofitting of buildings, land, vehicles, and technology equipment (e.g. phones, computers, software).	
Operations		**The ongoing costs of doing business.** Examples include salaries, benefits, agency legal fees, staff training, travel expenses, and small agency deficits.	
Programmatic	Protection	**Programs associated with placing a child in alternative care outside of the parental home.** Examples include non-medical services to children in care with behavioural problems and specialized needs, purchases on behalf of children in care, per diem costs for children in care in placements out of the parental home (including foster care, group homes, institutional care, and kinship care), post-adoption subsidies and supports, professional services not covered by other jurisdiction or by Health Canada's Non-Insured Health Benefits Program,	The Panel, pursuant to section 53 (2) (a) and (b) of the CHRA, orders Canada to analyze the needs assessments completed by First Nations agencies in consultation with the Parties, interested parties (see protocol order below), and other experts; and to do a cost-analysis of the real needs of First Nations agencies including prevention/least disruptive measures, intake and investigation, building repairs and legal fees related to child welfare taking into account travel distances, case load ratios, remoteness, the gaps and/or lack of surrounding services and all particular circumstances they may face. (2018 CHRT 4 para 408)
	Prevention	**Programs designed to reduce the incidence of family dysfunction and breakdown or crisis and to reduce the need to take children into out-of-home care or the amount of time a child remains in out-of-home care.** Examples include violence prevention and family support services, mentoring and non-medical counselling services, home management services, land-based and cultural programming, intensive family reunification programs, least disruptive measures, purchase of basic needs items (eg security deposit, money for diapers), intake and investigation, transportation and accommodation for medical and non-medical appointments, home management services, Child Service Purchase Amount, and respite care.	
Governance		**Accountability, transparency and decision-making mechanisms.** Examples include Content Management Systems, collecting and analysing data, audits and evaluations, Band councils, Elder councils, and advisory boards.	
Size of agency		**Small agencies are agencies that serve a child population of less than 1000. (2016 CHRT 2 para 187)**	The Panel, pursuant to section 53 (2) (a) and (b) of the CHRA, orders Canada to analyze the needs assessments completed by First Nations agencies in consultation with the Parties, interested parties (see protocol order below), and other experts and to do a cost-analysis of the real needs of small First Nations agencies related to child welfare taking into account travel distances, case load ratios, remoteness, the gaps and/or lack of surrounding services and all particular circumstances they may face. (2018 CHRT 4 para 418)
Other considerations		**Related to the unique situation of an agency.** Examples include remoteness, and availability of services in the community.	The Panel ordered INAC to immediately address how it determines funding for remote FNCFS Agencies. Current funding does not account for such things as travel to provide or access services, the higher cost of living and service delivery in remote communities, the compounded effect of reducing core funding for remote agencies that may also be smaller agencies (see paras. 213-233 and 291 of the Decision). In its subsequent ruling in 2016 CHRT 16, the Panel ordered INAC to provide detailed information to clearly demonstrate how it is determining funding for remote FNCFS Agencies that allows them to meet the actual needs of the communities they serve. (2018 CHRT 4 para 339)
Narrative		Qualitative information or explanatory notes to give meaning to the cost category.	
Cost data		Quantitative financial information ($) of the agency's expenses in the cost category.

Annex 3 – Research proposal

Project Plan
Analyzing First Nations Child and Family Services (FNCFS) Agency Needs

Context

The Canadian Human Rights Tribunal (CHRT), in its January 2016 decision and subsequent rulings, has found that Canada has used a discriminatory funding approach for FNCFS agencies. Canada states it is committed to implementing these orders.

In support of Canada's efforts to develop an alternative system to fund First Nations child and family services, Indigenous Services Canada requires the services of a funding/technical and research expert with knowledge of Indigenous issues, and Indigenous practices with respect to data collection and Indigenous intellectual property as well as child and family services.

Purpose

Our understanding of your needs suggests that the purpose of this project is to develop reliable data collection, analysis and reporting methodology for analyzing the needs of FNCFS Agencies. Specifically, this project will support the implementation of the following orders:

1) Work with experts to develop a reliable data collection, analysis and reporting methodology, as well as ethical research guidelines for analyzing the needs of First Nations Agencies (Order defined in par. 421);
2) Canada is accountable for analyzing the needs assessments and undertake a cost-analysis of the needs of agencies, in consultation with the parties and other experts (Orders defined in pars. 408 and 418).

If selected as the Contractor, the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa will provide technical expertise to analyze agency needs, will provide strategic advice on how to best monitor and respond to actual agency needs from fiscal and governance perspectives, with an approach informed by understanding, existing research, and analysis of assessments done by agencies and communities.

The IFSD will engage with the Assembly of First Nations (AFN) as the project contract holder.

Guiding Questions

1) What are agencies' needs in *protection* (e.g. intake and investigation, least disruptive measures (secondary, tertiary prevention and family case conferencing)), *prevention* (e.g. child purchase amount and primary prevention needs (public education, early childhood interventions etc.)), *operations* (e.g. salaries, legal fees related to child welfare), *capital* (e.g. building repairs, vehicles, information technology), and *governance/reporting*?

2) What are the gaps between the current and desired states of agencies?

3) What are the funding requirements to support these agencies at the desired state (i.e. cost analysis)?

4) How can agencies' defined needs and their costs be translated into a new vision for First Nations child and family services, that focuses on leveraging cultural approaches and best evidence to support healthy families and communities and ensure the best interests of children?

5) How can agencies establish performance measures and conduct evaluations that promote organizational learning and development?

Methodology

As an affiliate of the University of Ottawa, IFSD is guided by ethical research guidelines respecting Indigenous peoples, the project will follow the Tri-Council Policy Statement on Ethical Conduct for Research Involving Humans and OCAP principles in all of its work.

This means that IFSD will be subject to the University of Ottawa's ethics board review per the Tri-Council Policy Statements on Ethical Conduct for Research involving Humans.

Part 1: Needs assessments

Defining needs in a way that articulates the problem and performance objectives will drive design, governance, reporting, and implementation strategies.

1) Propose categories of agency activities in table form. Seek approval of table from stakeholders during May 2018 workshop at IFSD. This portion of the project will seek

consensus to define elements of a desired future state for First Nations child welfare. Proposed global indicators include:

a. Protection
b. Prevention
c. Operations
d. Capital
e. Governance/reporting
    i. Policy development capacity
    ii. Organizational evaluation and learning
    iii. Community communication and engagement

The proposed indicators are intended to enable agencies to define their needs on an activity basis and to facilitate the costing of these needs (i.e. desired outcomes) and initiatives in Phase 3. This part of the project will invite agencies to present their desired or normative state of operations, including multi-year funding structures to support long-term planning and program sustainability.

2) Analyze existing needs assessments undertaken by agencies and communities. Any gaps in data will be identified and filled by liaising directly with agencies or more granular research will be undertaken as required to support robust program design, effective governance, reporting and sustainable implementation strategies.
3) Leverage results of NAC-IFSD First Nations agency surveys to develop typology of agencies based on mandates, size, and needs.

NOTE: IFSD will produce monthly updates to communicate project progress and interim results to the project's stakeholders. These written updates (submitted via email and potentially posted on the project website) can be supplemented with briefings to interested parties by IFSD.

Part 2: Baseline definition and gap analysis

1) Define current baseline of agency *resource inputs* (i.e. financial, human resources (including regular working hours, and those supplementary hours worked without pay) budgets and *outputs* (i.e. activities). Design a survey to assess agency baseline indicators. Test the survey with agencies in different regions and of different sizes (based on NAC-IFSD survey research on agency characteristics).
Note: A more granular assessment of the current state can be undertaken by IFSD with agency/community visits. Having built existing research partnerships with various jurisdictions, IFSD understands the challenges and importance of building

trust, and co-developing research approaches with agencies and members of their communities. Establishing a clear current baseline across inputs, outputs, and outcomes will be paramount to defining the gap between the current and desired state of agencies.

2) Review results from Phase 1. Scrub data and prepare for program-level bottom-up costing, based on aggregated agency needs data for each type of agency.
3) Define detailed costing procedure and sources of actual cost data from agencies. Consider factors (beyond those defined in the needs assessment in Part 1) such as:
    a. Cross-agency collaborations on items such as peer support, professional development, communications, etc.
    b. Lost purchasing power related to the lack/insufficiency of inflation adjustments in Directive 20-1 and EPFA
    c. Identify extraordinary cost items that may require the establishment of national or regional pools such as liability costs, natural disaster contingencies, community emergency response contingencies)
4) Identify any missing data or other required analytic elements before proceeding with costing.

Part 3: Cost analysis

1) For each type of agency (defined in Part 1), cost agency needs by leveraging actual cost data. Costing will be undertaken on an indicator-basis (protection, prevention, operations, capital, governance/reporting), with line-items generated based on agency needs assessments.
2) Produce an overview of the costing exercise by agency type (for projections, cost analysis will include inflation).
3) Seek acceptance of findings during stakeholder workshop at IFSD in September 2018.

Phase 4: Final reports

1) Produce an initial assessment of findings:
    a. Cost analysis (by agency type)
    b. What does the agency organization have to look like to close the gap between the desired and current state?
    c. What procedure can be integrated for monitoring on-going agency and governance across inputs, outputs and outcomes?
2) Present report to stakeholders for feedback.

3) Allow for minor corrections or minor revisions to report based on stakeholder feedback.
4) The final report will make recommendations for DISC in pursuit of reforms to support a new funding approach, that promote long term planning and program sustainability (i.e.: multi-year funding, avoiding reliance on proposal-based projects).

Timelines and Deliverables

See Annex A

NOTE: Timelines are indicative and subject to the pace of data availability and acquisition commensurate with the needs and resources of the project. Based on previous experience, acquiring sufficient and reliable data is critical to establishing a strong foundation for subsequent stages of the project including the development of a forward strategy for First Nations child welfare. Data collection should be considered an ongoing exercise in continual improvement.

Data Sources

This work is to build on the extensive body of previous research in this area, including (but not limited to):

- Bridging Econometrics with First Nations Child and Family Services (Joint National Policy Review of First Nations Child and Family Services);
- Wen:de: We are Coming to the Light of Day;
- Wen:de: The Journey Continues;
- Decision and Orders of the Canadian Human Rights Tribunal;
- Phase 1 of the Remoteness Quotient research;
- Auditor General of Canada Reports (2008, 2011);
- NAC-IFSD survey of First Nations child welfare agencies;
- Existing agency and community needs assessments;
- Data requested from Indigenous Services Canada;
- National Advisory Committee Interim Report (2018);
- Other publicly available data and research relevant to the project.

Future Research Directions

It is expected that this research project will inform a new program architecture for funding First Nations child welfare and inform the following questions:

1) To what degree have agencies been supported to design culturally appropriate long-term plans to meet the needs of the children and families in the communities they serve? If agencies were supported, how were they funded and at what rate ($)? How was the implementation of existing plans supported in an evolving community context? For those agencies that did not have support, what inputs and implementation supports would be required to produce a long-term plan and implement it?

2) What are the primary current cost drivers for agencies in the areas of operations, protection, and prevention?

3) What are the costs associated with culturally based child welfare policy and program development and evaluation?

4) What are the most significant spending areas in agency budgets?

5) Are most agencies in surplus or deficit statuses?

6) How should "prevention" be defined? How should agencies define their prevention services? How can agencies foster a greater community role in providing well-being and prevention services? To what degree is effective prevention related to a need for equity in other federally funded services? How can prevention services be structured to ensure effective program development and sustainable operations?

7) How can funding be delivered in a way that enables agencies to be responsive to the unique needs of First Nations children, youth, families and communities?

8) What data architecture should be in place to identify and track the needs of First Nations child welfare agencies? What data architecture can agencies use to track the needs of their communities? What supports are needed for agencies to set community based performance measures and institute regular evaluations to enhance organizational learning?

9) What governance arrangements would support the achievement of agreed outcomes for First Nations child well-being? Would the governance arrangements differ based on agency type/characteristics? How does each governance arrangement define accountability, reporting, and evaluation (based on key performance indicators)?

10) What are appropriate models to forecast future agency needs for technology, infrastructure, administration and travel costs?

11) What are the core administrative staffing and related requirements of small agencies? How are these different than larger agencies or multi-site agencies?

12) What is the minimum size of agency and related population consistent with good social work practice to ensure the adequate provision of protection and prevention services based on community needs? What supports can be provided to First Nations communities without a First Nations agency regardless of population (e.g. primary prevention resources)?

Deliverable	Description	Accountability & resources	Deadline
Phase 1			
Approved project plan	– Client approves project plan and timelines	IFSD	April 5, 2018
Ethics reviews	– Submit ethics review to the University of Ottawa Research Ethics Board and to any First Nations communities as needed	IFSD	April 15, 2018
Analysis of existing needs assessment	– Evaluate content of agency needs assessment collected by DISC – Release public letter (addressed to Caring Society, AFN, and DISC) noting relevant data from the needs assessments and any gaps, given the diversity of the cost submissions and narratives	IFSD	April 15, 2018
Indicators table and survey design	– Define needs indicators that will inform needs analysis and costing exercise – Needs indicators will serve as cost categories – Prepopulate indicators (or request where not public available) to capture contextual data including special considerations for child need, agency demographics, community demographics, etc.	IFSD in consultation with client	May 15, 2018
Workshop #1	– Convene stakeholders to seek approval and agreement of indicators table	IFSD in consultation with	May 2018 (date TBC)

		AFN, NAC, Caring Society	
Analysis of existing assessments	– Collect and analyze existing agency and community assessments to inform needs analysis – Liaise directly with agencies to fill any data gaps – Are there needs trends in agencies based on characteristics such as mandate, region, size, etc.?	IFSD in consultation with agencies and communities (as required)	July 31, 2018
Phase 2			
Gap analysis	– Undertake a deep-dive analysis of current agency cost data across Canada – Define current baseline budget and cost information for agencies based on agency consultation visits	IFSD	September 30, 2018
Define costing procedure	– Produce costing procedure plan and approve with client	IFSD in consultation with client	
Cluster agencies based on typology	– Using NAC-IFSD survey data, cluster agencies into characteristic-based typologies – Seek client approval of agency typologies – Prepare to produce aggregate costing based on agency typology	IFSD in consultation with client	
Define and fill data gaps prior to costing	– Confirm access and availability of all costing-related data	IFSD	
Phase 3			

Costing assessment table	– Produce costing assessment based on agency typology – Present in table form based on needs indicators	IFSD	October 31, 2018
Draft findings	– Produce draft report on high-level findings of costing – Review results with client	IFSD in consultation with client	October 31, 2018
Workshop #2	– Convene stakeholders to seek approval of costing findings – Discuss paths forward for the development of a new program architecture for First Nations child welfare	IFSD in consultation with AFN, NAC, Caring Society	November 2, 2018
Phase 4			
Final report	– Leverage project and related analysis to respond to research questions in "Future research directions" section of project plan – Align needs and costing assessments to way forward for improved outcomes in First Nations child welfare	IFSD	November 15, 2018
Stakeholder feedback	– Review final report with client for feedback – Share final report with stakeholders for feedback – Allow for minor revisions and minor adjustments to final report	IFSD in consultation with client and stakeholders	November 15, 2018
Project completed

Dear Sirs/Mesdames:

Re: Legal Opinion regarding First Nations Child and Family Services (FNCFS)

We write to provide IFSD with a legal opinion on matters related to the delegation of Child and Family Services to First Nations agencies as outlined in our letter of July 31, 2018.

OVERVIEW OF OUR OPINION

In Part I, we provide our assessment of the scope of any legal obligation of the provinces to provide insurance coverage for agencies delegated to provide child welfare services within each province. We conclude that none of the provinces in Canada are statutorily required to provide insurance coverage to child welfare agencies. However, it appears that some provinces include provisions in their delegation agreements that require child welfare agencies to carry liability insurance coverage as a condition of performing delegated services to children. Liability insurance issues between those provinces and their respective delegated child welfare agencies are therefore governed by the principles of contract law.

In Part II, we provide an overview of market-based, third-party liability insurance products available to First Nations child welfare agencies in Canada, and the approximate cost of these insurance products. We focus our inquiry on coverage for physical and sexual abuse claims because, based on our review of the jurisprudence, physical and sexual abuse claims tend to form the basis of actions brought against child welfare agencies.

Our overview of market-based insurance products is based on the information provided to us by IFSD and information from brokers used by IFSD's partner organizations. As such, we have not provided an exhaustive overview in this part, but rather, a sample of the type of coverage available to child welfare agencies.

In terms of the cost of third-party liability insurance, we conclude that the premium payable for an insurance product will be influenced by the nature of the work performed by a

particular agency, the risk-management protocols followed by the agency, and the number and type of staff employed by the agency. Generally however, the premiums range from $5000 for a small organization to $100,000 for a larger organization. The average premium in Canada is around $20,000 for $5,000,000 coverage.

In Part III, we provide an overview of the key liability judgments pertaining to children harmed while in the care, custody or control of a federal, provincial or other child welfare organization. We provide a breakdown of the general heads of damages in these cases and an explanation of the compensation principle, which informs the quantum of all damage awards. We also set out the various legal bases on which an agency may be found liable, whether pursuant to the doctrine of vicarious liability, or by way of direct liability for negligence or breach of a fiduciary duty. Lastly, we set out a range of damage awards, in present day values, to assist child welfare agencies with determining how much third-party liability coverage may be necessary for their services.

I. REVIEW OF PROVINCIAL CHILD WELFARE LEGISLATION

Canada has a decentralized child welfare system. Each province has its own child welfare legislation, which applies to all child and family service agencies, both on and off reserve.

We have reviewed the relevant child welfare legislation in each of the ten provinces. None of the provinces are expressly required by their respective statutes to provide liability insurance to child welfare agencies that are delegated to administer child welfare services, either on or off reserve.

A. British Columbia

In British Columbia, the Master Insurance Program offers commercial general liability insurance to foster parents *only* who perform services on behalf of the Province or a delegated Aboriginal agency. Under the Master Insurance Program, foster parents have $2,000,000 liability coverage per occurrence for claims that arise from incidents that occur during the provision of foster care services. This coverage insures foster parents against personal injury, bodily injury and third party property damage.

The third party coverage includes any person outside the foster family, including the foster child. For example, if the foster parent *accidently* injured the foster child or anybody else outside the family, those claims would be covered. Similarly, *property* belonging to other people is covered under this policy if the foster parent accidentally damaged it in carrying out the foster care services.

The Master Insurance Plan does not provide coverage to First Nations child welfare agencies directly; however, agencies may be added to the plan, by agreement, at the sole discretion of the Ministry of Children & Family Development.

B. Saskatchewan

In Saskatchewan, the *Child and Family Services Act*, SS 1989-90, c C-7.2 provides that child welfare service agreements must contain a clause that requires welfare agencies to carry insurance coverage satisfactory to the minister (s. 62.1(1)(f)). We have reviewed the sample agreement IFSD provided for our consideration (the "Agreement").

The Agreement provides as follows:

> Q. INSURANCE, LIABILITY AND INDEMNIFICATION
>
> 1. The purpose and objective:
>
> 1.1 The Parties acknowledge the risks and responsibilities associated with providing services to children and families. While it is the intention to deliver services which are beyond criticism, it is recognized that claims, which are beyond the control of the Parties, may nonetheless be made and that there are potential costs associated with defending such claims and with the imposition of any liability.
>
> 1.2 The Parties further recognize that in some circumstances such as Case Transfers it may be difficult to separate the acts or omissions of the Parties in the event of an assessment of liability.
>
> 1.3 The Parties further acknowledge that the paramount consideration in all matters shall be the best interests of the child and the welfare of the families that they serve.
>
> 1.4 The Parties therefore agree that is prudent that the [the Agency and First Nation] avail themselves of any limits upon liability which may be available to them in law and that they further require insurance to cover those instances when claims may be made against them.
>
> 1.5 Further, the Parties recognize that it is appropriate to agree to indemnify the other Party in those instances when a claim is made against one Party however liability is ultimately assessed against the other Party.

Additionally, the Agreement includes indemnification provisions, whereby the parties agree to indemnify each other, their officers, employees and agents from and against all claims, actions, damages, costs and expenses arising from any act or omission by the other party, its officers, employees and agents, which contravenes Saskatchewan law or which causes injury to any person (including death) or damages or loss to property where that act or omission is related to the performance or purported performance of the Agreement.

The Agreement also expressly provides that the agency is entitled to rely on the immunity protection set out in section 79 of *The Child and Family Services Act* and that the standard of care expected of the agency shall be no greater than that which is found in section 79 of the act. Section 79 currently provides as follows:

> 79(1) No action lies or shall be instituted against the minister, the ministry, a peace officer or any officer or employee of the ministry or agent of the minister, where the minister, ministry, peace officer, officer, employee or agent is acting pursuant to

> the authority of this Act, the regulations or an order made pursuant to this Act, for any loss or damage suffered by a person by reason of anything in good faith done, caused, permitted or authorized to be done, attempted to be done or omitted to be done, by any of them, pursuant to or in exercise of or supposed exercise of any power conferred by this Act or the regulations or in the carrying out or supposed carrying out of any order made pursuant to this Act or any duty imposed by this Act or the regulations.
>
> 79(2) An agency, or any officer or employee of an agency, is entitled to the same protection provided to the minister in subsection (1).

As we explain in Part III below, immunity provisions such as section 79 provide a statutory defence to negligence claims in the sense that, in the absence of a finding of bad faith, actions against officers, agents or employees of the Minister cannot succeed. Section 79 limits liability for negligence to cases where bad faith in the performance of a statutory duty is alleged and established by a plaintiff.

With respect to insurance coverage, the Agreement requires the agency to purchase and maintain throughout the term of the Agreement, public liability, property damage and directors liability insurance against claims for personal injury, death or damage to property, arising out of the operations of the agency under the Agreement, or as a result of any of the acts or omissions of the agency, it's officers, employees or agents.

In particular, the agency is required to carry insurance that:

(a) names Saskatchewan, it's officers, employees and agents as Additional Insureds;

(b) includes a cross-liability clause;

(c) provides coverage for premises and operations, blanket contractual, extended bodily injury, broad form property damage, non-owned automobile, as well as any applicable errors and omissions or professional liability coverage;

(d) provide one million dollars per occurrence minimum limits for third party liability; and

(e) contains a clause which states that the insurers will not cancel, materially alter or cause the policy to lapse without giving 30 days prior notice in writing to Saskatchewan.

Effectively, the Agreement provides that the agency is required to carry its own insurance and, additionally, is required to indemnify the Province of Saskatchewan for liability arising out of its own acts or omissions or the acts of omissions of its employees, agents and officers, not protected by the immunity clause. We have not reviewed any delegation agreements between other provinces and agencies; however, it is likely that similar liability,

insurance, contribution and indemnity and immunity provisions would be included in agreements of the same nature.

C. Delegation Agreements Generally

Notwithstanding a mandatory insurance coverage provision in a provincial delegation agreement, each of the provinces is subject to the non-delegable duty doctrine, which provides that a party upon whom the law has imposed a strict statutory duty to do a positive act cannot escape liability simply by delegating the work: *Lewis (Guardian ad litem of) v. British Columbia*, [1997] 3 SCR 1145. This ensures that the government responsible for performing certain statutory duties will retain its obligation to perform those duties and to ensure the adequate performance of the same. In the case of a breach of non-delegable child welfare duties, the government will be legally liable for damages that flow from the breach even if the duties were delegated as authorized by the statute: *B. (M.) v. British Columbia*, 2003 CSC 53.

When the courts find a government liable to a plaintiff, the Crown proceedings statute of Canada and each of the ten provinces provides for the payment of the judgment to the plaintiff. Pursuant to these statutes, the government must pay the judgment amount. Each statute requires the Treasurer or Minister of Finance, as the case may be, to pay out of the Consolidated Revenue Fund the amount due by the Crown under a court order. In Ontario and in British Columbia, the duty to pay a debt includes out-of-court settlements.[1]

Despite the government's legal liability for non-delegable duties, a child welfare agency may be contractually liable for the judgment debt in cases where a delegation agreement contains an indemnification clause as set out above.

II. AGENCY ABILITY TO ACCESS LIABILITY INSURANCE

A. First Nations Child Welfare Agency Insurance

In Canada, Aon Reed Steenhouse Inc. ("Aon") appears to be the primary broker for liability insurance for First Nations child welfare agencies. We contacted a commercial account executive at Aon in Saskatchewan to discuss insuring agreements for First Nations child welfare agencies generally. He advised us that any First Nations group in Canada can access Aon's program of insurance automatically. The program includes commercial general liability, health care professional service liability and sexual and physical abuse liability; however, not all First Nations groups will qualify for the sexual and physical abuse coverage. To obtain sexual and physical abuse coverage, First Nations groups must establish that they have strict protocols in place to manage the risk of such abuse. A First Nations group that has the requisite protocols can access sexual and physical abuse coverage that extends to circumstances where the group's protocols fail or where abuse is alleged but unproven.

Our contact advised us that the First Nations liability insurance program usually covers employees of the named insured, including registered professionals etc., except where the policy contains exclusions to the contrary. In general, the program will cover the agency

[1] Hogg, Peter W., and Patrick J. Monahan, *Liability of the Crown*, 3rd ed, Scarborough, Ont.: Carswell, 2000, 52-54.

against liability for the acts of others but it does not cover direct liability judgments where there are findings of criminal or intentional wrongdoing. In cases of criminal or intentional wrongdoing, the insurer would agree to defend allegations up to the point that there is a guilty finding, after which it would cease to offer coverage.

As with any insurance product, the premiums payable for the First Nations liability insurance program is largely determined by the specific insurance needs of a particular agency and can vary greatly depending on the nature of the services provided by the agency. For example, the premiums can range from $5000 for a small organization to $100,000 for a larger organization with the average premium being around $20,000. Similarly, the coverage limits in this program range from $5,000,000 to $10,000,000.

B. Professional Liability Coverage offered by Associations

Separate and apart from agency liability insurance, many professional associations, including the Canadian Association of Social Workers, the Canadian Psychological Association and the Canadian Counselling and Psychotherapy Association offer their members professional liability insurance. BMS Canada Risk Services Ltd. ("BMS") appears to the primary broker for these professional liability policies.

Professional regulators in Canada, such as the board of registration for social workers in British Columbia (established by the *Social Workers Act,* SBC 2008, c. 31) and the Council of the College of Social Workers and Social Service Workers in Ontario (established by the *Social Work and Social Service Work Act,* 1998 SO 1998, c. 31) are authorized by statute to require registrants and members to carry professional liability insurance. In British Columbia for example, the *Health Professions Act,* RSBC 1996, c. 183 authorizes the colleges responsible for the regulation of the various health professions, including psychiatry and psychology, to establish requirements respecting professional liability insurance. The effect of these statutes is to require registered professionals to carry professional liability insurance often in addition to the insurance carried by a child welfare agency.

We spoke with a portfolio manager at BMS and were advised that typically, child welfare agencies carry professional liability insurance for the agency. Agency professional liability policies can include coverage for employees, whether registered with a regulatory body or not, depending on the needs of the agency. Our contact at BMS was not able to provide us with a range of premiums for agency professional liability policies because, as with Aon, the premiums vary significantly depending on the number of professionals, number of employees, the nature of the work of the agency, and the type of professionals employed to do the work of the agency. We note that through the Canadian Association of Social Workers (and BMS) social workers can obtain professional liability coverage for $105/year.

C. The Manitoba Policy

To assist us with determining the cost range for liability insurance premiums, ISFD provided us with a Public Entity Casualty Policy issued to a First Nations child welfare agency in Manitoba (the "Manitoba Policy"). The Manitoba Policy provides an example of the policy wording for Children's Aid Society Liability as well as an example of the premiums and coverage limits for physical and sexual abuse policies.

The Manitoba Policy grants $5,000,000 liability coverage for all damages arising out of one accident or occurrence or series of accidents or occurrences from one cause, except in the case of claims containing any allegations of actual or threatened abuse. Abuse claims are limited to $2,000,000 liability coverage.

Abuse is defined in the Manitoba Policy as sexual abuse, physical abuse, psychological or emotional abuse, molestation or harassment including corporal punishment. For clarity, the following definitions are included in the limit of liability:

> **"Physical Abuse"** means wilful and deliberate misconduct;
>
> Causing or permitting another person to suffer unjustifiable pain or suffering, or
>
> Causing or permitting another person to be placed in a situation in which his or her life or limb likely would be endangered or his or her health likely would be impaired.
>
> **"Sexual Abuse"** means any conduct constituting a sexual offence under the Criminal Code of Canada including sexual assault offences resulting from physical contact.

The total premium for the Children's Aid Society Liability is $68,012. We have not reviewed the declarations page for this policy and, therefore, we are unable to provide an overview of who might be covered under this policy. For example, it is unclear whether this policy includes registered health care professionals (i.e. social workers, psychiatrists, psychologists and/or counsellors) and/or support staff such as office and janitorial staff and volunteers. As we were advised by BMS and Aon, the premium payable by an agency will be largely influenced by the extent to which the agency requires coverage for its operations.

In addition to the Manitoba Policy, IFSD provided us with details about various policies held by First Nations child welfare agencies across Canada. The annual premiums range from $58,000 for umbrella liability insurance, to $10,700 for health care professional insurance with $5,000,000 coverage. The premiums appear to be as low as $5000 for general liability; however, as illustrated above, the specific wording of each of these insurance policies, which we have not reviewed, will determine what coverage is available to the agency.

III. LIABILITY JUDGMENTS

A. Damages Generally

When a child welfare agency is liable to a plaintiff for harm caused by the agency, or someone acting on behalf of the agency, the plaintiff is entitled to full compensation for pecuniary losses, both past and future and, with respect to non-pecuniary losses, to compensation that is fair and reasonable in the circumstances: *Andrews v. Grand & Toy Alberta Ltd.* (1978), 83 DLR (3d) 452 (SCC).

(a) Pecuniary Damages

Pecuniary damages are awarded to compensate a plaintiff for losses that have monetary value. For example, they include: (a) special damages such as pre-trial cost of care, pre-

trial loss of working capacity and other pre-trial out-of-pocket expenses; (b) future loss of earning capacity; and (c) future cost of care such as counselling, therapy, medical treatments and prescriptions. Typically, in cases involving harm to children, pecuniary damages can be hard to establish in law, because the plaintiff's losses must be causally related to the conduct at issue in order for the losses to be compensable.

(b) Non-Pecuniary Damages

In addition to pecuniary damages, where liability has been established, the plaintiff will be entitled to compensation that is fair and reasonable for non-pecuniary damages, which are awarded to compensate a plaintiff for losses that cannot be monetarily quantified. Non-pecuniary damages include pain, suffering and loss of enjoyment of life: *Wilhelmson v. Dumma,* 2017 BCSC 616 at para 169.

In Canada, non-pecuniary damages are currently capped at approximately $367,000, an amount that is adjusted for inflation each year. In *Andrews, supra*, the Supreme Court of Canada explained that the cap on non-pecuniary damages is necessary because no amount of money will ever truly compensate a person for the loss of happiness and therefore, full compensation for lost happiness will never be possible.

When assessing the quantum of non-pecuniary damages, courts will look at the plaintiff's individual circumstances to determine the plaintiff's personal need for solace. This will have a major influence on where the award is eventually placed, whether that is inside or outside the customary range for the nature of the plaintiff's specific injuries. The following is a non-exhaustive list of factors used to quantify an award for general damages: (a) age of the plaintiff; (b) nature of the injury; (c) severity and duration of pain; (d) degree of disability; (e) emotional suffering; (f) loss or impairment of life; (g) impairment of family; (h) marital and social relationships; (i) impairment of physical and mental abilities; and (j) loss of lifestyle.

(c) Aggravated and Punitive Damages

Aggravated damages are non-pecuniary in nature and are often awarded in cases where the damage to the plaintiff was aggravated by the manner in which the conduct at issue was committed. Generally, aggravated damages are awarded to compensate a plaintiff for injury to dignity and pride. Punitive damages are also available to a plaintiff in cases where a person's wrongful conduct was intentional, high-handed, arrogant, and where the conduct demonstrates a reckless disregard for the plaintiff's rights, resulting in damage to the plaintiff's pride, self-respect and reputation.

Our review of the case law below includes damages payable for pecuniary losses; however, for the purpose of establishing a range of damages payable by child welfare service providers, we focus primarily on non-pecuniary damages because pecuniary damages require a contextual analysis of the specific factual circumstances of the plaintiff.

(d) Joint and Several Liability

When more than one person or legal entity is found liable to a plaintiff, the law considers each of the liable parties fully responsible to the plaintiff for the full amount of the loss. The plaintiff is therefore generally entitled to pursue payment of the damage award from either or both of the liable parties.

B. Basis for Liability of an Agency

In Canada, child welfare agencies face exposure to liability under the doctrine of vicarious liability, in negligence and for breach of a fiduciary duty.

(a) Vicarious Liability

Under the doctrine of vicarious liability, employers are held liable for the tortious conduct of their employees whether or not the tortious conduct was intentional or based in negligence: *Bazley v. Curry*, [1999] 2 SCR 534.

In *B. (K. L.)*, 2003 SCC 51, the Court explained that vicarious liability, unlike direct liability, is imposed on the theory that the person may properly be held responsible where the risks inherent in his or her enterprise materialize and cause harm, provided that liability is both fair and useful (at para 18). Accordingly, a plaintiff must demonstrate that the relationship between the tortfeasor and the person against whom liability is sought is sufficiently close as to make a claim for vicarious liability appropriate. Second, a plaintiff must demonstrate that the tort is sufficiently connected to the tortfeasor's assigned tasks that the tort can be regarded as a materialization of the risks created by the enterprise.

The concept of liability in the absence of fault was described by the Supreme Court of Canada in *John Doe v. Bennett*, 2004 SCC 1:

> 17 ...The doctrine of vicarious liability imputes liability to the employer or principal of a tortfeasor, not on the basis of the fault of the employer or principal, but on the ground that as the person responsible for the activity or enterprise in question, the employer or principal should be held responsible for loss to third parties that result from the activity or enterprise.

In *Bazley*, the seminal case on vicarious liability, a non-profit organization was held liable for the sexual abuse of one of its employees. The organization operated residential facilities for children and employed individuals to act as substitute parents authorized to do everything a parent would do, from general supervision to bathing children, and tucking children in at bedtime. In assessing the application of vicarious liability to intentional tortious conduct, the Supreme Court of Canada determined that a key determination in child welfare cases will be whether the employer's enterprise increased the opportunity for the employee to commit a wrong, and whether the enterprise fostered power-dependency relationships that materially enhanced the risk of harm.

In *Blackwater v. Plint*, 2005 SCC 58, former students of a residential school claimed damages for sexual abuse and other harm perpetrated by employees of the school, against the federal government and the church that ran the school. At trial, a dormitory supervisor was found liable to six of the plaintiffs for sexual assaults. The federal government was held to be vicariously liable for the assaults, together with the church. Non-pecuniary damages, including aggravated damages, were awarded as follows as against the federal government and the church jointly:

Frederick Leroy Barney	$145,000
R.F.	$85,000
R.J.	$20,000
D.S.	$10,000
M.W. (1)	$125,000
M.W. (2)	$15,000

Similarly, in *W. (D.) v. Canada (Attorney General),* 1999 SKQB 187, a student at a residential school operated by the federal government was sexually assaulted by the administrator of the school. Years after the student left the school, he commenced an action against the administrator and the federal government. He claimed against the government directly on the basis that it had negligently failed to properly evaluate, monitor and investigate the administrator and on the basis that it had breached its fiduciary duty to him by failing to prevent the administrator's conduct. The court found that the government did not have the requisite knowledge of the administrator's conduct to support direct liability or breach of fiduciary duty, but found that it was vicariously liable nonetheless. The court awarded damages against the federal government and the administrator jointly in the amount of $69,500 for pre-trial loss of earning capacity, $65,000 for non-pecuniary damages, and $10,000 for aggravated damages. Additionally, the court awarded punitive damages in the amount of $ 25,000.00 against the administrator.

(b) Intentional Torts

Vicarious liability often arises where the perpetrator of an intentional tort is deceased or impecunious. Intentional torts in the child welfare context can include assault and battery, intentional infliction of mental suffering, false imprisonment and breach of privacy.

(i) Assault and Battery

Assault and battery are typically claimed against the perpetrator of the violence, in addition to the perpetrator's employer and/or the province. Assault and battery are defined as causing another person to apprehend the infliction of immediate harmful or offensive force on her person coupled with the actual infliction of that harmful or offensive force: *M.K. v. M. H.,* [1992] 3 SCR 6 at para 25.

(ii) Intentional Infliction of Mental Suffering

Intentional infliction of mental suffering is often pleaded alongside assault and battery, but can constitute its own claim. For example, if a person is intimidated and sexually harassed through repeated telephone calls or emails, or if a person witnesses violence perpetrated on another person, that person may have a claim for intentional infliction of mental harm: *S. J. v. Clement* (1995), 122 DLR (4^{th}) 449 at 531 and *Boothman v. Canada*, [1993] 3 FC 381.

(iii) False Imprisonment

While less common, claims for false imprisonment can arise in the context of providing care to children. In the case of *Y. (A.D.) v. Y (M.Y.)*, [1994] 5 WWR 623, the son was physically and emotionally abused by his parents. He was often punished by being locked in his

bedroom, meals were passed into him to eat and he was forced to use a hole in the wall to urinate and defecate.

In *Y. (A.D.) v. Y (M.Y.),* the plaintiff recovered $85,000 in non-pecuniary damages, $125,000 for loss of future earning capacity, and $50,000 in punitive damages, for a total of $260,000 for assault, battery, false imprisonment and intentional infliction of mental harm.

(iv) Breach of Privacy

Breach of privacy varies across the provinces according to the relevant statutes. In British Columbia for example, the tort is constrained by the *Privacy Act*, RSBC 1996, c. 373, and there is no common law equivalent of the tort: *Ari v. Insurance Corporation of British Columbia*, 2015 BCCA 468. In Ontario, however, the court has recognized the existence of a common law cause of action for breach of privacy: *Jones v. Tsige*, 2012 ONCA 32. In the child welfare context, breach of privacy can arise, for example, if a person surreptitiously observes or video-records a child while they undress or shower: *L. (T.K.) v. P. (T.M.),* 2016 BCSC 789.

Notably, the government may not be vicariously liable for torts committed by foster parents against foster children in their care because foster parents are generally not, in their daily affairs, acting "on account of" or on behalf of the government: *B. (K. L.) v. British Columbia*, 2003 SCC 51 and *G. (E. D.) v. Hammer*, 2003 SCC 52. Whether vicarious liability will attach in certain circumstances requires a consideration of the relationship at issue and the nature of the duties imposed by the statutory regime at issue.

(c) Negligence

Negligence is the most commonly pleaded cause of action giving rise to direct liability for child welfare agencies. Generally, to make out a claim in negligence, the plaintiff must establish: (a) that the defendant owed the plaintiff a duty of care; (b) that the defendant breached the duty of care; (c) that the plaintiff suffered damages which were a reasonably foreseeable consequence of the breach; and (d) that the defendant's breach caused those damages. In most provinces, the plaintiff must also establish that the defendant acted in bad faith in performing the particular duty of care at issue.

With the exception of Alberta, each province has included a variation of Section 79 of Saskatchewan's *Child and Family Services Act* (the immunity provision discussed above) in its child welfare legislation. For example, in British Columbia, section 101 of the *Child, Family, and Community Service Act*, RSBC 1996, c 46 provides as follows:

> 101 No person is personally liable for anything done or omitted in good faith in the exercise or performance or intended exercise or performance of:
>
> (a) a power, duty or function conferred under this Act, or
>
> (b) a power, duty or function on behalf of or under the direction of a person on whom the power, duty or function is conferred under this Act.

In Ontario, the *Child, Youth and Family Services Act*, 2017, SO 2017, c. 14 provides that:

> 34(6) No Crown liability
>
> No action or other proceeding shall be instituted against the Crown in right of Ontario for any act or omission of a society or its members, officers, employees or agents.
>
> ...
>
> 37. No personal liability
>
> No action shall be instituted against a member of the board of directors or an officer or employee of a society for any act done in good faith in the execution or intended execution of the person's duty or for an alleged neglect or default in good faith in the execution of that duty.

By comparison, in Manitoba, the immunity provision is narrower in that it applies only to directors of the First Nations of Northern Manitoba Child and Family Services Authority; the Southern First Nations Network of Care (formerly the First Nations of Southern Manitoba Child and Family Services Authority); the Metis Child and Family Services Authority; and the General Child and Family Services Authority.

Section 10 of *The Child and Family Services Authorities Act*, SM 2002 c 35 provides:

> 10 No action for damages may be commenced against a director of a board for anything done or not done by that person in good faith while carrying out duties or exercising powers under this or any other Act.

There is no parallel provision in *The Child and Family Services Act*, SM 1985-1986, c 8, which sets out the duties required of the authorities named above.

Subject to the variations in scope between the provinces, these immunity provisions enable the court strike a plaintiff's claim in negligence unless the plaintiff properly pleads that the agency and/or its employee acted in bad faith in the performance of the duty set out in the legislation. In cases where bad faith is pleaded, the agency and/or employee will be entitled to rely on good faith as a statutory defence, such that, if the duty was performed in good faith, the defendant may not be liable to the plaintiff notwithstanding a breach of the duty: *Lowery v. Saskatchewan,* 2008 SKQB 115 at para 57 and *D. (M.L.) v. British Columbia (Ministry of Children and Family Development),* 2014 BCSC 1104 at para 54.

The presence or absence of good faith is an important consideration in determining whether the standard of care has been breached: *M. (B.) (Litigation Guardian of) v. M. (R.),* 2009 BCCA 413 at para 54. In British Columbia, for example, the courts have found that a high degree of negligence can amount to bad faith in certain circumstances: *H. (C.) v. British Columbia,* 2004 BCCA 385.

In negligence, whether a defendant in an action owes the plaintiff a duty of care will be determined by: (a) the common law; (b) the defendant institution's internal codes or policy statements, which articulate the standard of conduct that inform the reasonable expectations of the parties; and, (c) the applicable legislation: *J. (A.) v. D. (W.),* [1999] 11 WWR 82 (Man QB). However, commonly pleaded negligence claims against child welfare service providers (including provincial and federal governments) include a failure to apprehend, a failure to supervise and/or negligent supervision, negligent placement and negligent performance of specific statutory duties.

In *B. (K. L.) v. British Columbia,* 2003 SCC 51, four siblings were placed into two foster homes by the province of British Columbia after they were removed from the care of their biological parents. The siblings were subjected to harsh and arbitrary discipline measures in both foster homes. They alleged that the province was negligent because the social workers failed to visit the home for several months after the placement, they failed to investigate prior concerns with the placement, they placed double the recommended number of children in the home and they failed to investigate the reported unhappiness of the children in the home.

The Supreme Court of Canada held that the province owed the siblings a duty of care to place them in adequate foster homes and to supervise their stay under the *Protection of Children Act.* Finding that it is reasonably foreseeable that some people, if left in charge of children, will use excessive physical and verbal discipline the Court held that the province was liable to the siblings on the basis of direct negligence.

Damages were assessed globally for each of the siblings. In each of the cases, the judge considered the harm the siblings had suffered prior to being placed in the foster homes. She awarded $25,000, $15,000, $10,000 and $13,000 based on the individual experiences of each sibling.

In *K. (K.A.) (Litigation Guardian of) v. British Columbia*, 2011 BCSC 1391, six of eleven children brought a claim against the Province for failing to apprehend them from the care of their parents when it was, or should have been, apparent to the Province that the siblings needed to be removed from the home. At trial, the Province admitted liability. The Court particularized the damage awards as follows.

CHILD 1		**CHILD 2**	
Non-pecuniary damages	$80,000	Non-pecuniary damages	$120,000
Future care costs		Future care costs	
Assisted living	$170,000	Substance abuse treatment	$30,000
Substance abuse treatment	$ 30,000	Psychological treatment	$25,000
Psychological treatment	$ 25,000	Education assistance	$10,000
Employment assistance	$ 8,000	Employment assistance	$ 5,000
Total	$233,000	Total	$70,000
Future loss of earning capacity	$50,000	Future loss of earning capacity	$80,000
Total	**$363,000**	**Total**	**$270,000**

CHILD 3		**CHILD 4**	
Non-pecuniary damages	$95,000	Non-pecuniary damages	$30,000
Future care costs		Future care costs	
Substance abuse treatment	$25,000	Psychological treatment	$10,000
Psychological treatment	$35,000		
Education assistance	$20,000	**Total**	**$40,000**
Employment assistance	$ 5,000		
Total	$85,000		
Future loss of earning capacity	$95,000		
Total	**$275,000**		
CHILD 5		**CHILD 6**	
Non-pecuniary damages	$15,000	Non-pecuniary damages	**$20,000**
Future care costs			
Psychological treatment	$ 5,000		
Total	**$20,000**		

In *M. (K.M.) v. Roman Catholic Episcopal Corp. of the Diocese of London in Ontario*, 2011 ONSC 2143, the plaintiff was sexually assaulted by a priest for a period of time when she was between 7 and 10 years old. The diocese admitted vicarious liability and was also found to be directly liable. The plaintiff recovered $190,000 in general damages.

(d) Breach of Fiduciary Duty

Although the breach of a fiduciary duty is a commonly pleaded claim in child welfare cases, it is much more difficult for a plaintiff to establish. A fiduciary duty is a trust-like duty, involving duties of loyalty and an obligation to act in a disinterested manner that puts the recipient's interest ahead of all other interests: *B. (K.L.) v. British Columbia*, *supra* at para 49. A fiduciary duty has, at its core, an undertaking of loyalty on the part of the fiduciary to act in the best interests of the beneficiary: *Perez v. Galambos,* 2009 SCC 48 at para 69.

In *B. (K.L.),* the Court explained that:

> 38 ...The government, through the Superintendent of Child Welfare, is the legal guardian of children in foster care, with power to direct and supervise their placement. The children are doubly vulnerable, first as children and second because of their difficult pasts and the trauma of being removed from their birth families. The parties agree that, standing in the parents' stead, the Superintendent has considerable power over vulnerable children, and that his placement decisions and monitoring may affect their lives and well-being in fundamental ways.

Concern for the best interests of the child informs the fiduciary relationship of a parent or a person standing in the place of a parent. The duty imposed is to act loyally, and not to put one's own or others' interests ahead of the child's in a manner that abuses the child's trust or exploits their vulnerability.

In *M. (F.S.) v. Clarke*, [1999] B.C.J. No. 1973, the plaintiff brought a claim against his former dormitory supervisor after he was repeatedly sexually assaulted while he was a student residential school operated by the defendant Diocese. The plaintiff had informed the bishop at the Diocese about the abuse, but the Diocese took no action against the supervisor.

The only issue at trial was whether the Diocese was liable to the plaintiff for the supervisor's abuse. Damages were agreed to by the parties. In reaching her conclusion, the judge reiterated the three general characteristics required to establish a fiduciary duty: (a) the fiduciary must have scope for the exercise of some discretion or power; (b) the fiduciary can unilaterally exercise that power or discretion so to affect the beneficiary's legal or practical interests; and (c) the beneficiary must be particularly vulnerable. In applying this test, the judge concluded that the Diocese had breached its fiduciary duty to the plaintiff because it took no action after the plaintiff disclosed the abuse.

SUMMARY OF OUR OPINION

- Provincial child welfare legislation does not expressly require a province to provide insurance coverage to child welfare agencies; however some provinces appear to have included provisions in delegation agreements that require agencies to carry liability insurance coverage as a condition of exercising delegated authority to care for children.

- First Nations child welfare agencies in Canada can access market-based, third-party liability insurance products. We recommend that each child welfare agency seeking insurance coverage consult with an insurance broker to determine which insurance products are best suited to meet the individual needs of the agency.

- Damages for liability in child welfare cases, whether for intentional torts or for negligent conduct, vary depending on the losses established. The range for non-pecuniary damages is a minimal award of $12,500 to the current maximum available at law of $367,000. In addition, our case review shows pecuniary damages ranging from $10,000 to $300,000.

- First Nations child welfare agencies, as employers, are exposed to liability under the doctrine of vicarious liability, as well as liability based in negligence (subject to any relevant statutory immunity provisions), and for breaches of their fiduciary duty to children in their care.

- Depending on the nature of the claim, a First Nations child welfare agency may share liability with the province and/or the federal government from which the authority to provide services is delegated. Ultimately, the specific facts of each case will determine the quantum payable to the particular plaintiff and the degree of liability of each named defendant in the action.

We look forward to discussing any questions you may have at your convenience.

Yours truly,

ALEXANDER HOLBURN BEAUDIN + LANG LLP

NAC-IFSD Survey of First Nations Child and Family Services Agencies

11. How does your province define 'child'? Please provide the range, e.g. 0-18.

12. How many children does your agency serve (to identify small agencies)?

On-reserve

Off-reserve

NAC-IFSD Survey of First Nations Child and Family Services Agencies

13. How many children are currently in care in your agency (protection only)?

On-reserve

Off-reserve

14. How many requests did you receive for services (e.g. prevention programming, protection) from families/children off-reserve in fiscal year 2017-2018?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

15. Is your agency child-protection delegated?

- ◯ Yes
- ◯ No

16. Does your agency provide ancillary services outside of delegated duties? Please check all that apply. For the purpose of this survey, ancillary services include all services beyond child protection offered by the agency, e.g. health services, family services, etc.

- ☐ Health
- ☐ Family
- ☐ Cultural and traditional healing
- ☐ Land-based programming
- ☐ Other (please specify)

NAC-IFSD Survey of First Nations Child and Family Services Agencies

17. What is your agency's mandate? Please define.

NAC-IFSD Survey of First Nations Child and Family Services Agencies

18. Please describe the history of your agency including year of founding and reason for its creation. (500 words maximum). If preferable, you can append a succinct document that provides an overview of the history. What is your agency's mandate? Please define.

19. Should you wish to include a document about your agency's history, please upload it here.

Choose File No file chosen

NAC-IFSD Survey of First Nations Child and Family Services Agencies

20. What are your agency's principal functions in:

Prevention (e.g. running an intensive family reunification program, hosting violence prevention workshops)

Protection (e.g. intake investigations, family placements)

NAC-IFSD Survey of First Nations Child and Family Services Agencies

21. What are your agency's principal activities in:

Governance (i.e. how your agency fulfills its mandate accountably relative to stakeholders)

Data collection and reporting (i.e. internal data collection to support planning and decision-making)

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Budget and Finances

NAC-IFSD Survey of First Nations Child and Family Services Agencies

22. What was your agency's total annual budget for the 2017-2018 fiscal year (include funding from all orders of government and any other sources, for all activity areas)?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

23. What was your agency's total annual budget exclusively for child and family services for the 2017-2018 fiscal year?

24. Approximately what percentage of your overall budget would you estimate to be related to each of these functions, including salaries, travel, materials? (Note that the total may not add up to 100% of your child and family services budget).

Prevention	
Protection	
Governance	
Data collection and reporting	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

25. What amounts were spent in the 2017-2018 fiscal year on the following maintenance cost categories? (Maintenance includes: direct costs of placing First Nation children into temporary or permanent care out of the parental home (such as foster care rates and group home rates)).

Foster care	
Group homes	
Institutional care	
Kinship care	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

26. What amount of your total annual budget was allocated by the federal government exclusively for protection and related services, i.e. intake and investigation (excluding maintenance)?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

27. What were your agency's actual protection related costs in the 2017-2018 fiscal year (irrespective of the allocation noted above)? For the purpose of this survey, protection costs are those associated with placing a child in alternative care outside of the parental home.

Intake and investigation	
Purchases on behalf of children in care	
Non-medical services to children in care with behavioural problems and specialized needs	
Other provincially-approved purchases not covered by other federal/provincial funding sources	
Post-adoption subsidies and supports	
Per diem costs for children in care in placements out of the parental home (i.e. maintenance costs)	
Professional services	
Professional services not covered by other jurisdiction or by Health Canada's Non-Insured Health Benefits Program	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

28. What amount of your total annual budget was allocated by the federal government for prevention and least disruptive measures?
(For the purpose of this survey, prevention costs are designed to reduce the incidence of family dysfunction and breakdown or crisis and to reduce the need to take children into out-of-home care or to reduce the amount of time a child remains in out-of-home care).

NAC-IFSD Survey of First Nations Child and Family Services Agencies

29. What are your agency's actual prevention and least disruptive measures related costs (irrespective of the allocation noted above) under the following categories?

Violence prevention and family support services	
Mentoring and non-medical counselling services	
Home management services	
Land-based and cultural programming	
Intensive family reunification programs	
Least disruptive measures purchase of basic needs items, e.g. security deposit, money for diapers	
Respite care	
Transportation and accommodation for medical and non-medical appointments	

30. What are two best practices for prevention that exist in your agency? Please define/explain the program. How do you currently fund the program (e.g. federal, provincial, private donor, etc.)? What are the annual costs?

Program description 1	
Sources of funds program 1	
Cost of program 1	
Program description 2	
Sources of funds for program 2	
Cost of program 2	

31. This question relates to the actual cost of the Child Service Purchase Amount as referenced in the CHRT 2018 order paragraph 416.

What are your agency's costs for the Child Service Purchase Amount?

On what was the money from the Child Service Purchase Amount spent?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

32. This question and the following question relate to the actual cost of performing intake and investigations at your agency as referenced in the 2018 CHRT order paragraph 410.

Choose the statement that best applies to your agency.

- ◯ My agency does not perform intake or assessment work. (Intake assessment worker: Receives referrals, responds to allegations and establishes whether a child is a in need of protection).
- ◯ My agency does perform intake and assessment work. All our social workers perform these duties in conjunction with their other guardianship duties.
- ◯ My agency does perform intake and assessment work. We have specialized intake and assessment social workers who performs theses duties specifically.

NAC-IFSD Survey of First Nations Child and Family Services Agencies

33. If your agency does perform intake and assessment work with specialized social workers:

How many specialized intake and assessment social workers does your agency have?

What is the average caseload of your specialized intake and assessment social workers?

34. What additional costs does your agency incur while performing intake and investigation work? (e.g. are these social workers compensated at a higher rate, additional travel funds). Please provide the name of each cost category and its related cost.

Cost category 1	
Cost category 2	
Cost category 3	
Cost category 4	
Cost category 5	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

35. What is your spending ratio between protection costs and prevention costs? (Identify how a dollar is split between major cost categories)?

36. Does your agency fund a band designate? If yes, at what cost?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

37. For the fiscal year 2017-2018, what were your sources of funds and their amounts?

Department of Indigenous Services Canada	
Health Canada	
Other federal government departments	
Province	
Other (please define)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

38. What is your current funding model (e.g. Directive 20-1, EPFA, 1965 Agreement)?

How frequently do you receive funding? Monthly, yearly?	
How are your payments transferred, e.g. grant (no conditions), contribution, lump sum payments?	
Are there conditions on receiving your payments?	
Does your agency have specific requirements for its reporting on spending and outcomes to orders of government that fund its activities? If yes, please describe the criteria.	

39. In the 2017-18 fiscal year, did your agency reallocate money from one funding category to another to cover budgetary shortfalls (e.g. moving money from prevention to operating budget)? Please explain.

NAC-IFSD Survey of First Nations Child and Family Services Agencies

40. Was your agency in deficit in the 2017-2018 fiscal year?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

41. In the last ten years, has your agency experienced significant changes in its funding or operating budget? If yes, why? If no, why? Please describe.

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Capital Assets

NAC-IFSD Survey of First Nations Child and Family Services Agencies

42. What were your agency's capital expenditures in the following categories for the 2017-18 fiscal year (excluding operating and maintenance costs (O&M))? For the purpose of this survey, capital refers to the acquisition of assets (including upgrades) where economic benefits are likely to accrue beyond a year.

Property	
Structures	
Vehicles	
Technology equipment (e.g. phones, computers, software, other equipment)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

43. What were your agency's operating and maintenance costs (O&M) (all period costs such as minor repairs, maintenance, rent etc.) on the fixed assets identified in the following categories for the 2017-18 fiscal year?

Property	
Structures	
Vehicles	
Technology equipment (e.g. phones, computers, software, other equipment)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Agency Headquarters

44. Are your agency’s headquarters owned or rented?

45. What is the square footage of your agency’s headquarters?

46. What are the composing elements of agency’s headquarters (i.e. what’s it made of? e.g. steel and concrete, wood)?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

47. Are your agency's headquarters accessible in the following ways:

Offering service in the local Indigenous language(s) (Y/N)? If yes, how many staff speak the language(s)?	
Is your main office accessible by provincial standards?	

Satellite Offices

48. Are your satellite offices owned or rented?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

49. Please provide the 1) location; 2) square footage; 3) composing elements (i.e. what's it made of? e.g. steel and concrete, wood) of your satellite offices, individually.

Mission Critical Applications (Case Management, Accounting Software, etc.)	○	○	○	○	○
Mobility Tools (Tablets, Smart Phones, Remote connectivity, etc.)	○	○	○	○	○

NAC-IFSD Survey of First Nations Child and Family Services Agencies

56. On average (across your organization) how satisfied would you estimate your agency to be with the following categories of technology investments.

	Very dissatisfied	Moderately dissatisfied	Neutral	Moderately satisfied	Very satisfied
Worker Productivity Hardware (Desktop PCs, Laptops, etc.)	○	○	○	○	○
Worker Productivity Software (Microsoft Office, Video Conferencing, etc.)	○	○	○	○	○
IT Infrastructure (Servers, Data Storage, Networks, etc.)	○	○	○	○	○
Mission Critical Applications (Case Management, Accounting Software, etc.)	○	○	○	○	○
Mobility Tools (Tablets, Smart Phones, Remote connectivity, etc.)	○	○	○	○	○

NAC-IFSD Survey of First Nations Child and Family Services Agencies

57. Can you estimate the required capital investment ($ by category) to bring your agency's technology platform to a state where it can fully support your requirements?

Worker Productivity Hardware (Desktop PCs, Laptops, etc.)

Worker Productivity Software (Microsoft Office, Video Conferencing, etc.)

IT Infrastructure (Servers, Data Storage, Networks, etc.)

Mission Critical Applications (Case Management, Accounting Software, etc.)

Mobility Tools (Tablets, Smart Phones, Remote connectivity, etc.)

58. Please describe any cloud-based technology services (such as Office 365) currently in use by your agency or under consideration by your agency.

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Operating and Maintenance Costs

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Salaries and Benefits

59. What were your agency's operating expenses in the 2017-2018 fiscal year for child and family services only in the following categories ($):
(For the purpose of this survey, operational expenses are related to the ongoing cost of doing business).

Total wages (annualized; based on full-time equivalents (FTE))	
Professional services/contractors	
Other (please define)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

60. What were your agency's employee benefit expenses in the 2017-2018 fiscal year for child and family services only in the following categories:

Health and dental benefits (monetary equivalent)

Retirement benefits (monetary equivalent)

Other (please define)

NAC-IFSD Survey of First Nations Child and Family Services Agencies

61. What were your agency's staff professional development expenses (monetary equivalent) for the 2017-2018 fiscal year in the following categories:

Training

Well-being

NAC-IFSD Survey of First Nations Child and Family Services Agencies

62. What were your agency's costs in the 2017-2018 fiscal year for the following services:

Audit and evaluation

Travel

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Legal Fees

63. What was the actual cost of legal fees for your agency in the 2017-18 fiscal year?

64. What proportion of these legal fees dealt exclusively with children?

65. Has your agency faced any situations where you were unable to cover the cost of legal services? If fees were met, did this result in cuts elsewhere?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Employee Details

NAC-IFSD Survey of First Nations Child and Family Services Agencies

66. What number of full-time equivalents (FTE) are employed by your agency?

67. What number of part-time equivalents (PTE) are employed by your agency?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

68. How full-time employees in your agency have the following job titles?

Executive Director	
Social Workers	
Health care workers (please define the type of health care worker, such as psychologist, nurse practitioner, other)	
Administrative (professional, e.g. financial officer)	
Administrative (clerical, e.g. receptionist)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

69. How many part-time employees in your agency have the following job titles?

Executive Director	
Social Workers	
Health care workers (please define the type of health care worker, such as psychologist, nurse practitioner, other)	
Administrative (professional, e.g. financial officer)	
Administrative (clerical, e.g. receptionist)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

70. How many hours on average do employees in each of the following job categories work per week (e.g. 40 hours, 35 hours)?

Executive Director	
Social Workers	
Health care workers (please define the type of health care worker, such as psychologist, nurse practitioner, other)	
Administrative (professional, e.g. financial officer)	
Administrative (clerical, e.g. receptionist)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

71. In order to understand your agency's experience with retention, how long, in years, do employees typically spend in the following positions (e.g. 5 years, 2 years)?

Executive Director	
Social Workers	
Health care workers (please define the type of health care worker, such as psychologist, nurse practitioner, other)	
Administrative (professional, e.g. financial officer)	
Administrative (clerical, e.g. receptionist)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

72. On average, do the actual scope of employees' duties in each job category exceed their contractually defined ones?

	Exceeds
Executive Director	
Social Workers	
Health care workers (please define the type of health care worker, such as psychologist, nurse practitioner, other)	
Administrative (professional, e.g. financial officer)	
Administrative (clerical, e.g. receptionist)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

73. What are the salary ranges (wages only) for agency employees in the following job categories (e.g. $30,000-40,000, $54,000-$75,000, $100,000-$120,000, etc.)?

Executive Director	
Social Workers	
Health care workers (please define the type of health care worker, such as psychologist, nurse practitioner, other)	
Administrative (professional, e.g. financial officer)	
Administrative (clerical, e.g. receptionist)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

74. Do you believe you are able to pay your employees at the level of provincial employees for comparable work?

- ◯ Yes
- ◯ No

75. Are your employees compensated for overtime? If yes, how (e.g. monetary compensation, vacation time)?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Small agencies, remoteness, travel costs, gaps in service

NAC-IFSD Survey of First Nations Child and Family Services Agencies

76. This question relates to remoteness as referenced in the CHRT 2018 order paragraph 418. Does your agency remunerate for remoteness, i.e. a salary supplement to compensate for location of work?

- ◯ Yes
- ◯ No

NAC-IFSD Survey of First Nations Child and Family Services Agencies

77. If your agency remunerates for remoteness, in one or more of the following categories, what is the cost ($) to the agency?

% of salary supplement	
Bonus	
Credit for gas	
Housing allowance	
Other (please define)	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

78. This question relates to travel distances and its associated costs as reference in the CHRT order paragraph 418. To fulfill their job requirements, do employees in your agency travel (between their principal office and project site(s))

	Distance travelled
Executive Director	
Social Workers	
Health care workers (please define the type of health care worker, such as psychologist, nurse practitioner, other)	
Administrative (professional, e.g. financial officer)	
Administrative (clerical, e.g. receptionist)	
Members of the Board of Directors	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

79. On average, how far must a family or child seeking your agency's services travel to receive them (at the nearest available agency office/site)?

- ◯ 100km or more in a single direction
- ◯ Between 50km-99km in a single direction
- ◯ Between 20-49km in a single direction
- ◯ Between 0-19km in a single direction

NAC-IFSD Survey of First Nations Child and Family Services Agencies

80. What is the cost your agency spent on the following items related to travel in the 2017-18 fiscal year?

Gas	
Vehicle wear and tear and repairs	
Accommodations during travel	
Flights	
Incidentals during travel	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

81. This question relates to service gaps in your catchment area in reference to the CHRT 2018 order paragraph 418. Do you consider your agency and its clients in the communities you serve able to access surrounding services at a reasonably commutable distance?

- ◯ Yes
- ◯ No

82. If the communities you serve are lacking services, what are the gaps in surrounding services accessible at a reasonably commutable distance?

- [ ] Addiction treatment centres
- [ ] Mental health services
- [ ] Support services for children and youth with disabilities
- [ ] Medical specialists
- [ ] Other (please specify)

NAC-IFSD Survey of First Nations Child and Family Services Agencies

83. Was your agency required to do additional work in order to connect community members to typical social services? If yes, how much money did your agency spend in the 2017-18 fiscal year connecting community members to social services beyond your child and family services mandate (e.g. travel costs, employee time spent coordinating services)?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Caseloads

NAC-IFSD Survey of First Nations Child and Family Services Agencies

84. What is your agency's current total caseload? Please include all cases.

(Case: The most recent number of active cases (children or families) currently assigned to a social worker).

85. How many of these cases are being served in a culturally-appropriate way and/or leveraging traditional healing practices?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

86. What is your agency's current exclusively child welfare caseload?

(Caseload: Caseload reflects a ratio of cases (or clients) to full time equivalent staff members.)

87. On average, what is the number of staff (including social workers, support staff, administrative staff) assigned to an open case?

88. What is the average number of open cases a social worker manages? (e.g. 5 cases/social worker)

NAC-IFSD Survey of First Nations Child and Family Services Agencies

89. What's the average caseload of each category of employees (staff : cases)?

Executive Director	
Social Workers	
Health care workers (please define the type of health care worker, such as psychologist, nurse practitioner, other)	
Administrative	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

90. In an attempt to better understand the complexity of cases in your agency, please estimate the percentage of your total cases where your agency spends:

1-5 hours per week per case	
6-10 hours per week per case	
10-15 hours per week per case	
15-20 hours per week per case	
More than 20 hours per week per case	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

91. What percentage of substantiated maltreatment cases at your agency had the following as its primary category of maltreatment over the 2017-2018 fiscal year?

Emotional Maltreatment	
Exposure of intimate partner violence	
Neglect	
Physical Abuse	
Sexual Abuse	
Other, please define	

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Governance and Data Collection

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Governance

92. How is your agency governed, e.g. does it have a board of directors?

93. Are Chiefs members of your board of directors?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

94. What are your standards of practice that guide your agency's activities, e.g. code of ethics, wise practices, cultural guidelines, etc.?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

95. How do you involve local communities in your governance (e.g. community councils, community representatives etc.)?

96. How would you characterize your relationship with your communities?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

97. Do your community/ies engage in prevention activities?

98. Do your community/ies guide your prevention activities?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

Data and Reporting

99. How does your agency define success? Please share your existing vision and mission statements.

NAC-IFSD Survey of First Nations Child and Family Services Agencies

100. How does your agency measure success in its prevention program outcomes? Please provide all performance indicators your agency uses to track its progress/success.

NAC-IFSD Survey of First Nations Child and Family Services Agencies

101. How does your agency measure success in its protection activity outcomes? Please provide all performance indicators your agency uses to track its progress/success.

NAC-IFSD Survey of First Nations Child and Family Services Agencies

102. Does your agency use scorecards to track what you do and confirm ongoing progress/success? If yes, please share a copy of your scorecard. If you do not use a scorecard, please elaborate on the approach you use for tracking & reporting.

NAC-IFSD Survey of First Nations Child and Family Services Agencies

103. Does your agency have a policy or programming to support children aging out of care? If yes, please describe. What resources are allocated ($)?

NAC-IFSD Survey of First Nations Child and Family Services Agencies

104. Are there other particular circumstances that your agency faces that were not captured in this survey? If yes, please describe them here and include a cost ($) where possible.

NAC-IFSD Survey of First Nations Child and Family Services Agencies

105. Please share any further comments, notably unique practices or services your agency provides or other details that may not have been captured in this survey.

11. Quelle est la définition ‘d’enfant’ dans votre province? Prière de fournir la gamme, ex. 0-18 ans.

12. Combien d’enfants votre agence sert-elle (pour identifier si c’est une agence de petite taille)?

Sur réserve	
Hors réserve	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

13. Combien d’enfants sont pris en charge (protection) actuellement?

Sur réserve	
Hors réserve	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

14. Combien de demandes de services (ex. programme de prévention ou protection) avez-vous reçu de la part de familles/d'enfants hors réserve durant l'année financière 2017-2018?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

15. Est-ce que votre agence est déléguée à la protection de l'enfance?

- ◯ Yes
- ◯ No

16. Est-ce que votre agence fournit des services auxiliaires en dehors des fonctions déléguées? Choisissez toutes les options pertinentes. Pour le but de ce sondage, les services auxiliaires incluent tous les services offerts par l'agence au-delà de celui de la protection de l'enfant, par exemple les services de santé, les services familiaux, etc

- ☐ Santé
- ☐ Famille
- ☐ Soins culturels et traditionnels (par exemple par les anciens, les cérémonies, etc.)
- ☐ Programmation terrestre
- ☐ Autre (décrivez-le nous)

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

17. Quel est le mandat de votre agence? Prière de nous le définir.

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

18. Veuillez décrire l’historique de votre agence incluant l’année de sa fondation et la raison de sa création (500 mots maximum). Si jugé nécessaire, vous pouvez partager un document succinct fournissant une vue d’ensemble de l’historique.

19. Si vous avez un document à partager, prière de le téléverser ici.

Choose File No file chosen

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

20. Quelles sont les principales fonctions de votre agence dans :

La prévention (par exemple : administrer un programme de regroupement familial intensif, la tenue d’ateliers de prévention de la violence).

La protection (par exemple : les enquêtes d’admission, les placements familiaux).

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

21. Quelles sont les principales activités de votre agence dans :

La gouvernance (i.e. comment l'agence réalise son mandat vis-à-vis ses partis prenants).

La collecte de données et le rapportage (i.e. la collecte de données interne pour informer la planification et la prise de décision).

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Budget et finances

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

22. Quel était le budget total annuel de votre agence pour l'année financière 2017-2018 (inclure toutes allocations des ordres de gouvernement et d'autres sources, pour tout vos activités)?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

23. Quelle somme de votre budget annuel de l'année financière 2017-2018 était dédié exclusivement aux services à l'enfance et aux familles?

24. De façon approximative, quel pourcentage de votre budget total, selon votre estimation, est lié à chacune de ces fonctions, y compris les salaires, voyages et les matériaux? (Prenez-note que la somme totale ne sera probablement pas 100%).

Prévention	
Protection	
Gouvernance	
Collecte de données et rapportage	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

25. Quelle somme de votre budget annuel est associé aux coûts d'entretien des catégories suivantes? (Entretien : coûts directs de placement des enfants des Premières nations dans des soins temporaires ou permanents hors de la maison parentale (par exemple, taux de prise en charge familiale et taux de foyer de groupe).

Famille d'accueil	
Foyers collectifs	
Soin institutionnel	
Placement dans la parenté	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

26. Quelle somme de votre budget total annuel allouée par le gouvernement fédéral était consacrée exclusivement aux services à l'enfance et à la famille (incluant uniquement la protection et les services afférents, par exemple l'admission et l'enquête, en excluant les coûts d'entretien)?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

27. Quels étaient les coûts actuels reliés à la protection de votre agence pour l’année financière 2017-2018 (peu importante le montant alloué ici-haut)? Pour les besoins du présent sondage, les coûts de protection sont ceux associés avec le placement d’un enfant en protection alternative hors du domicile familial.

Admission et enquête.	
Achats au nom de l’enfant placé.	
Services non médicaux aux enfants placés avec des problèmes de comportement et des besoins spécifiques.	
Autres achats approuvés pas la province non couverts par d’autres sources de financement fédéral/provincial.	
Coûts quotidiens pour les enfants pris en charge dans des placements hors du domicile familial (coûts d’entretien).	
Subventions et soutiens post-adoption	
Services professionnels non couverts par d’autres compétences ou par le Programme de soins de santé non couverts de Santé Canada.	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

28. Quelle somme de votre budget total annuel alloué par le gouvernement fédéral était exclusivement consacrée à la programmation préventive et aux mesures les moins perturbatrices?

Dans le contexte de ce sondage, les coûts de prévention sont conçus pour réduire l’incidence du dysfonctionnement familial, de la rupture ou de la crise et pour réduire le besoin de placer un enfant ou réduire le temps où un enfant reste placé.

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

29. Quels sont les coûts actuels liés à la programmation prévention et aux mesures les moins perturbatrices de votre agence (peu importante la somme mentionnée ici-haut) selon les catégories suivantes?

Prévention de la violence et services de soutien familial.	
Mentorat et services de conseil non médicaux.	
Services de gestion domestique.	
Programmation terrestre et culturelle.	
Programmes de regroupement familial intensif.	
Achat de biens de première nécessité dans le cadre des mesures les moins perturbatrices, par exemple : dépôt de garantie, argent pour les couches.	
Soins de répit.	
Transport et logement pour les rendez-vous médicaux et non médicaux.	

30. Quelles sont les deux meilleurs pratiques pour la prévention qui existent dans votre agence? Veuillez définir/expliquer le programme. Comment financez-vous actuellement ce programme (par exemple : fédéral, provincial, donateur privé, etc.)? Quels sont les coûts annuels associés?

Description du programme 1	
Source de financement 1	
Coût du programme 1	
Description du programme 2	
Source de financement 2	
Coût du programme 2	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

31. Cette question est liée au coût réel du Montant d'achat de services pour enfants tel que référencé dans l'ordonnance de 2018 du TCDP au paragraphe 416.

Quel est la valeur du Montant d'achat de services pour enfants de votre agence?	
Comment est-ce que les fonds étaient dépensés?	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

32. Cette question est liée au coût réel de l'admission et des enquêtes pour votre agence tel que référencé dans l'ordonnance de 2018 du TCDP au paragraphe 410.

Choisissez l'énoncé qui s'applique le mieux à votre agence.

- ◯ Mon agence n'assure pas le travail d'admission et d'enquête. (Préposé à l'évaluation à l'admission : reçoit des recommandations, répond aux allégations et détermine si un enfant a besoin de protection).
- ◯ Mon agence n'assure pas le travail d'admission et d'enquête. Tous nos travailleurs sociaux remplissent ces fonctions conjointement aux autres fonctions de tutelle.
- ◯ Mon agence assure le travail d'admission et d'enquête. Nous avons des travailleurs sociaux spécialisés en admission et évaluation qui remplissent spécifiquement ces fonctions.

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

33. Si votre agence assure le travail d’admission et d’enquête avec des travailleurs sociaux spécialisés:

Combien de travailleurs sociaux spécialisés en admission et évaluation a votre agence?

Quel est le nombre moyen de dossiers de vos travailleurs sociaux spécialisés en admission et évaluation?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

34. Quels coûts additionnels encourt votre agence en assurant ce travail d’admission et d’enquête? (par exemple : ces travailleurs sont rémunérés à un taux plus élevés, fonds de voyage additionnels). Veuillez fournir le nom de chaque catégorie de coût et son coût afférent.

Catégorie 4

Catégorie 5

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

35. Quel est votre ratio de dépenses entre les coûts de prévention et ceux de protection? Identifiez comment un dollar est partagé entre ces principales catégories de coûts.

36. Est-ce que votre agence finance un agent de bande désignée? Si oui, à quel coût?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

37. Pour l’année financière 2017-2018, quelles étaient vos sources de financement et leurs montants?

Ministère des Services autochtones Canada	
Santé Canada	
Autres ministères fédéraux	
Province	
Autre, veuillez définir	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

38. Quel est votre modèle de financement actuel (par exemple, Directive 20-1, l'approche améliorée axée sur la prévention)?

Quelle est la fréquence à laquelle vous recevez le financement? Mensuellement, annuellement?

Comment vos versements sont-ils transférés, par exemple : subventions (sans condition), contributions, paiements forfaitaires?

Existe-t-il des conditions aux versements de vos paiements?

Existe-t-il des exigences de rapportage de dépenses et/ou de résultats aux autres ordres de gouvernement qui subventionnent les activités de l'agence? Si oui, prière de nous fournir les critères.

39. Est-ce que votre agence a redistribué de l'argent d'une catégorie de financement à une autre pour couvrir les déficits budgétaires (par exemple : déplacer l'argent du budget de prévention vers le budget opérationnel)? Prière de nous informer.

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

40. Est-ce que votre agence était en déficit pour l'année financière 2017-2018?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

41. Lors des 10 dernières années, est-ce que votre agence a subi des changements de subvention ou de budget majeurs? Si oui, pourquoi? Si non, pourquoi? Prière de nous les décrire.

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Immobilisations

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

42. Quelles étaient les dépenses en capital de votre agence pour l'année fiscale 2017-2018 (excluant les coûts non incorporables tels que réparations mineures, entretien, location etc.) dans les catégories suivantes? Pour les besoins de ce sondage, le capital réfère à l'acquisition (incluant la modernisation pour laquelle les retombées économiques vont être probablement générées au-delà d'un an).

Propriété	
Structures	
Véhicules	
Équipement technologique (par exemple : téléphones, ordinateurs, logiciels, autre équipement).	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

43. Quels étaient les coûts non incorporables pendant l’année fiscale 2017-2018 tels que les réparations mineures, entretien, location etc. dans les catégories suivantes?

Propriété	
Structures	
Véhicules	
Équipement technologique (par exemple : téléphones, ordinateurs, logiciels, autre équipement)

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

53. Cette question est liée au coût réel des réparations de bâtiment à votre agence tel que référencé à l'ordonnance de 2018 du TCDP au paragraphe 410.

Votre agence avait-elle besoin d'effectuer de réparations d'immeubles (en lien avec le bien-être des enfants) durant l'année financière 2017-2018? Si oui, est-ce que les réparations ont été effectuées et à quel coût? Si non, pourquoi pas?

54. Si vous deviez compléter toutes les réparations d'immeuble nécessaires sur les bâtiments de votre agence, quelle serait l'estimation des coûts de ces réparations?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Profil technique

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

55. En moyenne, à travers votre organisation, quel est l’âge estimé des catégories d’investissements technologiques suivantes:

	Généralement nouveau, 12 derniers mois	Amélioré dans les derniers 12-36 mois	Amélioré dans les derniers 3-5 ans	Il y a 5 ans ou plus depuis la dernière amélioration	Incertain
Matériel pour l’amélioration de la productivité (ex. ordinateurs, portables, etc.)	○	○	○	○	○
Logiciel pour l’amélioration de la productivité (ex. Microsoft Office, videoconference, etc.)	○	○	○	○	○
Infrastructure informatique (ex. (serveur, réseaux, stockage des données etc.)	○	○	○	○	○
Applications critiques (ex. gestion des cas, comptabilité, etc.)	○	○	○	○	○
Outils de mobilité (ex. tablettes, téléphones intelligents, connectivité à distance etc.)	○	○	○	○	○

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

56. Moyennement, à travers votre organisation, comment satisfait estimerez-vous est votre agence dans les catégories d’investissement technique suivantes:

	Très insatisfait	Moyennement insatisfait	Neutre	Moyennement satisfait	Très satisfait
Matériel pour l’amélioration de la productivité (ex. ordinateurs, portables, etc.)	○	○	○	○	○
Logiciel pour l’amélioration de la productivité (ex. Microsoft Office, videoconference, etc.)	○	○	○	○	○
Infrastructure informatique (ex. (serveur, réseaux, stockage des données etc.)	○	○	○	○	○
Applications critiques (ex. gestion des cas, comptabilité, etc.)	○	○	○	○	○
Outils de mobilité (ex. tablettes, téléphones intelligents, connectivité à distance etc.)	○	○	○	○	○

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

57. Pouvez-vous estimer l’investissement capital requis ($ par catégorie) afin d’augmenter votre profil technique pour soutenir vos besoins:

Matériel pour l’amélioration de la productivité (ex. ordinateurs, portables, etc.)	
Logiciel pour l’amélioration de la productivité (ex. Microsoft Office, videoconference, etc.)	
Infrastructure informatique (ex. (serveur, réseaux, stockage des données etc.)	
Applications critiques (ex. gestion des cas, comptabilité, etc.)	
Outils de mobilité (ex. tablettes, téléphones intelligents, connectivité à distance etc.)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

58. Prière de nous décrire vos services techniques dans le nuage (ex. Office 365) qu’utilise actuellement votre agence ou qui sont en considération.

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Coûts d’opération et d’entretien

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Salaries and Benefits

59. Quelles étaient vos dépenses d'opération de votre agence pour l'année financière 2017-2018 uniquement pour les services aux enfants et aux familles dans les catégories suivantes ($):

(Dans le contexte de ce sondage, les dépenses opérationnelles sont liées au coût récurrent d'exploitation).

Total des salaires (annualisé : basé sur les équivalents temps plein (ETP))	
Services professionnels/entrepreneurs	
Autre (le définir)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

60. Quelles étaient vos dépenses pour les régimes de prestations aux employés (RPE) de votre agence pour l'année financière 2017-2018 dans les catégories suivantes:

Régime d'assurance-maladie et d'assurance dentaire (équivalent monétaire)	
Prestations de retraite (équivalent monétaire)	
Autre (le définir)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

61. Quelles étaient vos dépenses pour le développement professionnel (équivalent monétaire) de votre agence pour l'année financière 2017-2018 dans les catégories suivantes:

Formation	
Bien-être	

62. Quelles étaient vos dépenses pour les services suivants (équivalent monétaire) de votre agence pour l’année financière 2017-2018?

- ◯ Coûts de vérification et d’évaluation
- ◯ Dépenses de voyage

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Legal Fees

63. Quel était le coût réel des frais juridiques pour votre agence pour l’année financière 2017-2018?

64. Quelle proportion des coûts des frais juridiques s’appliquent exclusivement aux enfants?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

65. Est-ce que votre agence a rencontré des situations où vous étiez incapable de couvrir les coûts des services juridiques? Si vous aviez payé les coûts, fallait-il couper vos dépenses quelque part d’autre?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Détails sur les employés

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

66. Quel est le nombre d’équivalents temps plein sont employés par votre agence?

67. Quel nombre d’équivalents temps partiel sont employés par votre agence?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

68. Combien d’employés à temps plein dans votre agence ont les titres de poste suivants :

Directeur exécutif	
Travailleurs sociaux	
Travailleurs de la santé (veuillez définir le type de travailleur de la santé tel que psychologue, infirmière praticienne, autre)	
Personnel administratif (ex. agent financier)	
Personnel de bureau (ex. réceptionniste)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

69. Combien d’employés à temps partiel dans votre agence ont les titres de poste suivants :

Directeur exécutif	
Travailleurs sociaux	
Travailleurs de la santé (veuillez définir le type de travailleur de la santé tel que psychologue, infirmière praticienne, autre)	
Personnel administratif (ex. agent financier)	
Personnel de bureau (ex. réceptionniste)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

70. Combien d’heures par semaines en moyenne travaillent les employés dans chaque catégorie d’emploi (par exemple, 40 heures, 35 heures)?

Directeur exécutif	
Travailleurs sociaux	
Travailleurs de la santé (veuillez définir le type de travailleur de la santé tel que psychologue, infirmière praticienne, autre)	
Personnel administratif (ex. agent financier)	
Personnel de bureau (ex. réceptionniste)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

71. Afin de comprendre l’expérience de votre agence en ce qui concerne la rétention, quel temps moyen, en années, les employés passent-ils dans les postes suivants? Par exemple, 5 ans, 2 ans.

Directeur exécutif	
Travailleurs sociaux	
Travailleurs de la santé (veuillez définir le type de travailleur de la santé tel que psychologue, infirmière praticienne, autre)	
Personnel administratif (ex. agent financier)	
Personnel de bureau (ex. réceptionniste)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

72. En moyenne, est-ce que la portée des fonctions des employés dans chacune des catégories d’emploi dépasse celle définit contractuellement?

	Dépasse
Directeur exécutif	
Travailleurs sociaux	
Travailleurs de la santé (veuillez définir le type de travailleur de la santé tel que psychologue, infirmière praticienne, autre)	
Personnel administratif (ex. agent financier)	
Personnel de bureau (ex. réceptionniste)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

73. Quelle est l’échelle salariale (rémunération seulement) des employés de l’agence pour chacune des catégories d’emploi (par exemple : 30 000$ - 40 000$, 54 000$-75 000$, 100,000$-120,000$)?

Directeur exécutif	
Travailleurs sociaux	
Travailleurs de la santé (veuillez définir le type de travailleur de la santé tel que psychologue, infirmière praticienne, autre)	
Personnel administratif (ex. agent financier)	
Personnel de bureau (ex. réceptionniste)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

74. Vous croyez-vous capable de rémunérer vos employés au niveau des employés provinciaux pour un travail comparable?

- ◯ Oui
- ◯ Non

75. Est-ce que vos employés sont indemnisés en cas d’heures supplémentaires? Si oui, comment, ex. indemnisation financière, vacances.

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Petites agences, éloignement, frais de voyage, lacunes de services

76. Cette question et la question suivante sont liées à l'éloignement tel que référencé à l'ordonnance de 2018 du TCDP au paragraphe 418. Est-ce que votre agence indemnise l'éloignement, c'est-à-dire qu'il y a un supplément salarial à titre d'indemnisation dû au lieu de travail?

- ◯ Oui
- ◯ Non

77. Si votre agence indemnise pour cause d'éloignement, quel est le coût ($) pour l'agence?

% de supplément salarial	
Prime	
Crédit pour l'essence	
Allocation de logement	
Autre (le définir)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

78. Cette question est liée aux distances de voyage et leurs coûts associés tel que référencé dans l’ordonnance de 2018 du TCDP au paragraphe 418. Afin de satisfaire aux exigences du poste, est-ce que les employés de votre agence voyagent (entre leur bureau principal et le(s) site(s) de projet)?

	Distance de voyage
Directeur exécutif	
Travailleurs sociaux	
Travailleurs de la santé (veuillez définir le type de travailleur de la santé tel que psychologue, infirmière praticienne, autre)	
Personnel administratif (ex. agent financier)	
Personnel de bureau (ex. réceptionniste)	
Membres du conseil d'administration	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

79. En moyenne, quelle distance parcourt une famille ou un enfant qui recherche les services de votre agence afin d’en bénéficier (au bureau/site de l’agence disponible le plus proche)?

- ◯ 100 km ou plus dans une seule direction
- ◯ Entre 50 et 100km dans une seule direction
- ◯ Entre 20 et 49 km dans une seule direction
- ◯ Entre 0 et 19 km dans une seule direction

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

80. Quel est le coût que votre agence a payé pour les éléments suivants reliés au voyage durant l’année financière 2017-2018?

Essence	
Usure du véhicule et réparations	
Logements pendant le voyage	
Vols	
Frais accessoires durant le voyage	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

81. Cette question est reliée aux lacunes des services dans votre zone de dessertest tel que référencé dans l’ordonnance de 2018 du TCDP au paragraphe 418. Considérez-vous que l’agence et ses clients dans les communautés que vous servez sont capables d’accéder aux services environnants à une distance de trajet raisonnable?

- ◯ Oui
- ◯ Non

82. Si les communautés que vous servez manquent de services, quelles sont les lacunes dans les services environnants accessibles à une distance de trajet raisonnable?

- ☐ Centres de traitement de la dépendance
- ☐ Services de santé mentale
- ☐ Services de soutien pour les enfants et les jeunes souffrant d’handicaps.
- ☐ Spécialistes médicaux
- ☐ Autre (le définir)

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

83. Est-ce que votre agence a dû faire du travail additionnel afin de mettre en contact les membres des communautés avec des services sociaux typiques? Si oui, combien d'argent votre agence a dépensé durant l'année financière 2017-2018 pour mettre en contact les membres des communautés avec les services sociaux au-delà de votre mandat de services à l'enfance et à la famille (par exemple : frais de voyage, temps de l'employé passé à coordonner les services)?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Nombre de cas

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

84. Quel est le nombre de cas total de votre agence? Veuillez inclure tous les cas.

(Cas : le nombre de cas actifs (enfants ou familles) actuellement assignés à un travailleur social le plus récent).

85. Combien de ces cas sont traités de façon appropriée culturellement/ ou optimisent les pratiques de soins traditionnels?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

86. Quel est le nombre de cas actuel exclusivement consacrés aux enfants et aux familles?

(Nombre de cas : le nombre de cas reflète un ratio de cas (ou clients) par membres du personnel travaillant en équivalent temps plein.)

87. En moyenne, quel est le nombre d'employés (incluant les travailleurs sociaux, le personnel de soutien, le personnel administratif) affectés à un dossier ouvert?

88. Quel est le nombre moyen de dossiers ouverts que gère un travailleur social (par exemple : 5 dossiers/ travailleur social)?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

89. Quel est le nombre moyen de dossiers de chaque catégorie d'employé (personnel : cas)?

Directeur exécutif	
Travailleurs sociaux	
Travailleurs en santé (veuillez définir le type de travailleur en santé tel que psychologue, infirmière praticienne, autre).	
Personnel administratif	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

90. Pour tenter de mieux comprendre la complexité des cas dans votre agence, veuillez estimer le pourcentage du total de vos cas pour lesquels votre agence passe :

1 à 5 heures par semaine par dossier	
6 à 10 heures par semaine par dossier	
10 à 15 heures par semaine par dossier	
15 à 20 heures par semaine par dossier	
Plus de 20 heures par semaine par dossier	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

91. Quel pourcentage de cas de maltraitance corroboré dans votre agence était la catégorie principale de maltraitance parmi les points suivants pendant l'année financière 2017-2018?

Maltraitance psychologique	
Violence conjugale	
Négligence	
Violence physique	
Violence sexuelle	
Autre (le définir)	

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Gouvernance et la collecte de données

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

Governance

92. Comment est gouvernée l’agence, c’est-à-dire : a-t-elle un conseil d’administration?

93. Est-ce que les Chefs siègent comme membres du conseil d’administration?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

94. Quelles sont vos normes en matière de pratique qui guident les activités de votre agence, c’est-à-dire un code d’éthique, des pratiques éclairées, des lignes directrices au niveau culturel, etc.?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

95. Comment impliquez-vous les communautés locales dans votre travail (c’est-à-dire les conseils communautaires, les représentants communautaires, etc.)?

96. Comment qualifieriez-vous vos relations avec les communautés?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

97. Est-ce que votre (vos) communauté(s) est/sont engagée(s) dans des activités de prévention?

98. Est-ce que votre (vos) communauté(s) guide(nt) vos activités de prévention?

103. Est-ce que votre agence a une politique ou programme pour les jeunes quittant la prise en charge? Si oui, prière de nous le décrire. Quelles ressources y sont consacrées ($)?

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

104. Est-ce qu'il y a d'autres circonstances particulières auxquelles fait face votre agence qui n'ont pas été évoquées dans ce sondage? Si oui, veuillez les décrire ici et inclure un coût ($) où c'est possible.

CCN-IFPD: Sondage des agences aux services à l'enfance et aux familles Premières Nations

105. Veuillez partager tout commentaire, notamment des pratiques ou services uniques que votre agence fournit ou d’autres détails qui pourraient ne pas avoir été pris en compte dans ce sondage.

APPENDIX D

Sample Agenda

First Nation Child and Family Services (FNCFS) Agency Workshop

DATE

Welcome to IFSD!

Wifi at IFSD
Network:
Password:

Day 1

08:00	Breakfast
08:30	Welcome Ceremony
09:00	Opening Remarks from Cindy Blackstock (via video)
09:15	Getting to know our communities of practice Working toward the goals of healthy and happy children, families, and communities, there's much to learn from our diverse community of practice. What's something unique or notable about child and family services at your agency or in your province? Does your agency have a lesson to share about a practice or program? *Survey Part 1: Agency Details*
10:15	Budgets and Finances Ideally, the allocation of resources is an exercise in aligning priorities to spending. However, it can sometimes be a reaction to current or emerging needs. How does your agency align its resources to its priorities? Has your agency experienced significant changes in its funding in the last ten years? How does your agency grapple with competing demands on its resources?

	Survey Part 2: Budget and Finances
12:00	Lunch
13:00	*Survey Part 2: Budget and Finances* (Continued)
14:30	Health Break
14:45	Operational and other considerations Staff teams are critical drivers of the success of any organization – especially one at the service of children, their families, and communities. Does your agency have the staff it requires to fulfill its mandate? What are some of the operational tradeoffs your agency has had to make to balance budget and results? *Survey Part 3: Employee details and remoteness*
17:00	Close

Wifi at IFSD
Network:
Password:

Day 2

08:00	Breakfast
08:30	Future directions Agencies are at the centre of efforts to improve the lives of children, families, and their communities. What resources do they require to achieve their mandates and goals? How can community input be integrated into agencies' visions? What does the future of First Nations child welfare look like? How can it be achieved?
9:30	Caseloads and workloads Agencies manage a variety of programs and initiatives from protection to culturally-based prevention programming. What does it take for a child to enter into care in your jurisdiction? When your agency manages cases, how are the number and nature of support determined? Do caseloads at your agency influence the complexity and time of your staff's work? *Survey Part 4: Caseloads*
10:45	Health Break
11:00	Governance, data, and performance Sound measurement is a tool for agencies to refine and enhance their existing operations. How does your agency take stock of its progress? Does your agency have tools or processes in place to use data to assess performance? What does sound governance look like for agencies? *Survey Part 5: Governance*

12:00	Lunch
13:00	Closing ceremony

APPENDIX E

Survey Definitions

Category		Definition and examples	Tribunal References and Notes
Capital		**The acquisition and maintenance of fixed assets.** Examples include maintenance, repairs and retrofitting of buildings, land, vehicles, and technology equipment (e.g. phones, computers, software).	The Panel, pursuant to section 53 (2) (a) and (b) of the CHRA, orders Canada to analyze the needs assessments completed by First Nations agencies in consultation with the Parties, interested parties (see protocol order below), and other experts; and to do a cost-analysis of the real needs of First Nations agencies including prevention/least disruptive measures, intake and investigation, building repairs and legal fees related to child welfare taking into account travel distances, case load ratios, remoteness, the gaps and/or lack of surrounding services and all particular circumstances they may face. (2018 CHRT 4 para 408)
Operations		**The ongoing costs of doing business.** Examples include salaries, benefits, agency legal fees, staff training, travel expenses, and small agency deficits.	
Programmatic	Protection	**Programs associated with placing a child in alternative care outside of the parental home.** Examples include non-medical services to children in care with behavioural problems and specialized needs, purchases on behalf of children in care, per diem costs for children in care in placements out of the parental home (including foster care, group homes, institutional care, and kinship care), post-adoption subsidies and supports, professional services not covered by other jurisdiction or by Health Canada's Non-Insured Health Benefits Program.	
	Prevention	**Programs designed to reduce the incidence of family dysfunction and breakdown or crisis and to reduce the need to take children into out-of-home care or the amount of time a child remains in out-of-home care.** Examples include violence prevention and family support services, mentoring and non-medical counselling services, home management services, land-based and cultural programming, intensive family reunification programs, least disruptive measures, purchase of basic needs items (eg security deposit, money for diapers), intake and investigation, transportation and accommodation for medical and non-medical appointments, home management services, Child Service Purchase Amount, and respite care.	
Governance		**Accountability, transparency and decision-making mechanisms.** Examples include Content Management Systems, collecting and analysing data, audits and evaluations, Band councils, Elder councils, and advisory boards.	
Size of agency		**Small agencies are agencies that serve a child population of less than 1000. (2016 CHRT 2 para 187)**	The Panel, pursuant to section 53 (2) (a) and (b) of the CHRA, orders Canada to analyze the needs assessments completed by First Nations agencies in consultation with the Parties, interested parties (see protocol order below), and other experts and to do a cost-analysis of the real needs of small First Nations agencies related to child welfare taking into account travel distances, case load ratios, remoteness, the gaps and/or lack of surrounding services and all particular circumstances they may face. (2018 CHRT 4 para 418)
Other considerations		**Related to the unique situation of an agency.** Examples include remoteness, and availability of services in the community.	The Panel ordered INAC to immediately address how it determines funding for remote FNCFS Agencies. Current funding does not account for such things as travel to provide or access services, the higher cost of living and service delivery in remote communities, the compounded effect of reducing core funding for remote agencies that may also be smaller agencies (see paras. 213-233 and 291 of the Decision). In its subsequent ruling in 2016 CHRT 16, the Panel ordered INAC to provide detailed information to clearly demonstrate how it is determining funding for remote FNCFS Agencies that allows them to meet the actual needs of the communities they serve. (2018 CHRT 4 para 339)
Narrative		Qualitative information or explanatory notes to give meaning to the cost category.	
Cost data		Quantitative financial information ($) of the agency's expenses in the cost category.	

APPENDIX F

Workshop Future State Summaries

First Nations Child and Family Services (FNCFS)

Workshop Exercise:
Identifying Ideal States for Agencies

2018

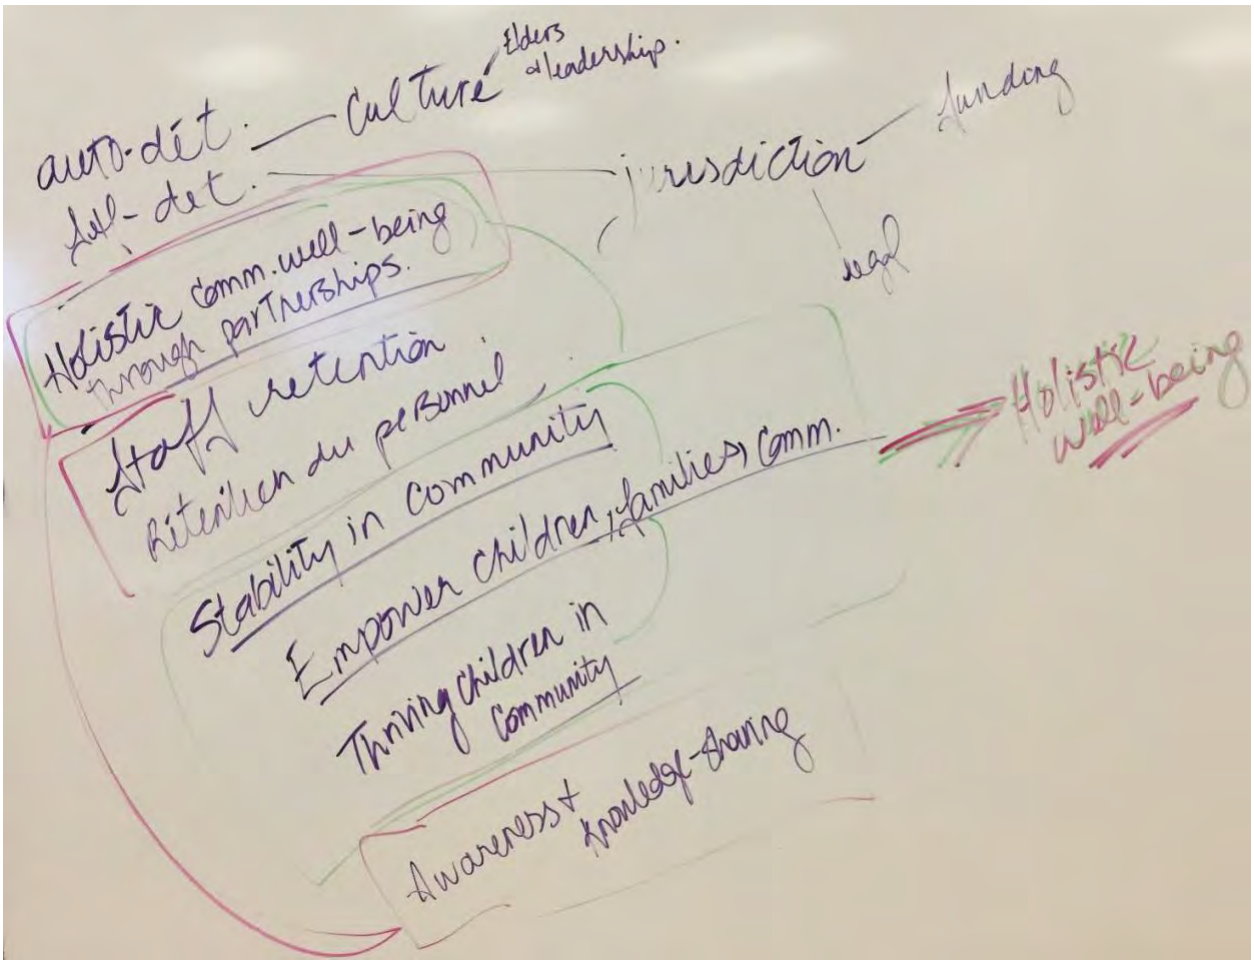
There are four main areas related to agency and community success: Self-determination, Holistic Well-being, Partnerships through Awareness and Knowledge, and Sustainable Capacity Building.

Self-determination
Self-determination is about the community's ability to direct its own course. Clear jurisdiction and a clear understanding of the legal and funding responsibilities of Provincial and Federal governments to agencies is necessary and can support this goal. The support of Elders and community leadership was also identified as important for grounding self-determination in a strong cultural identity.

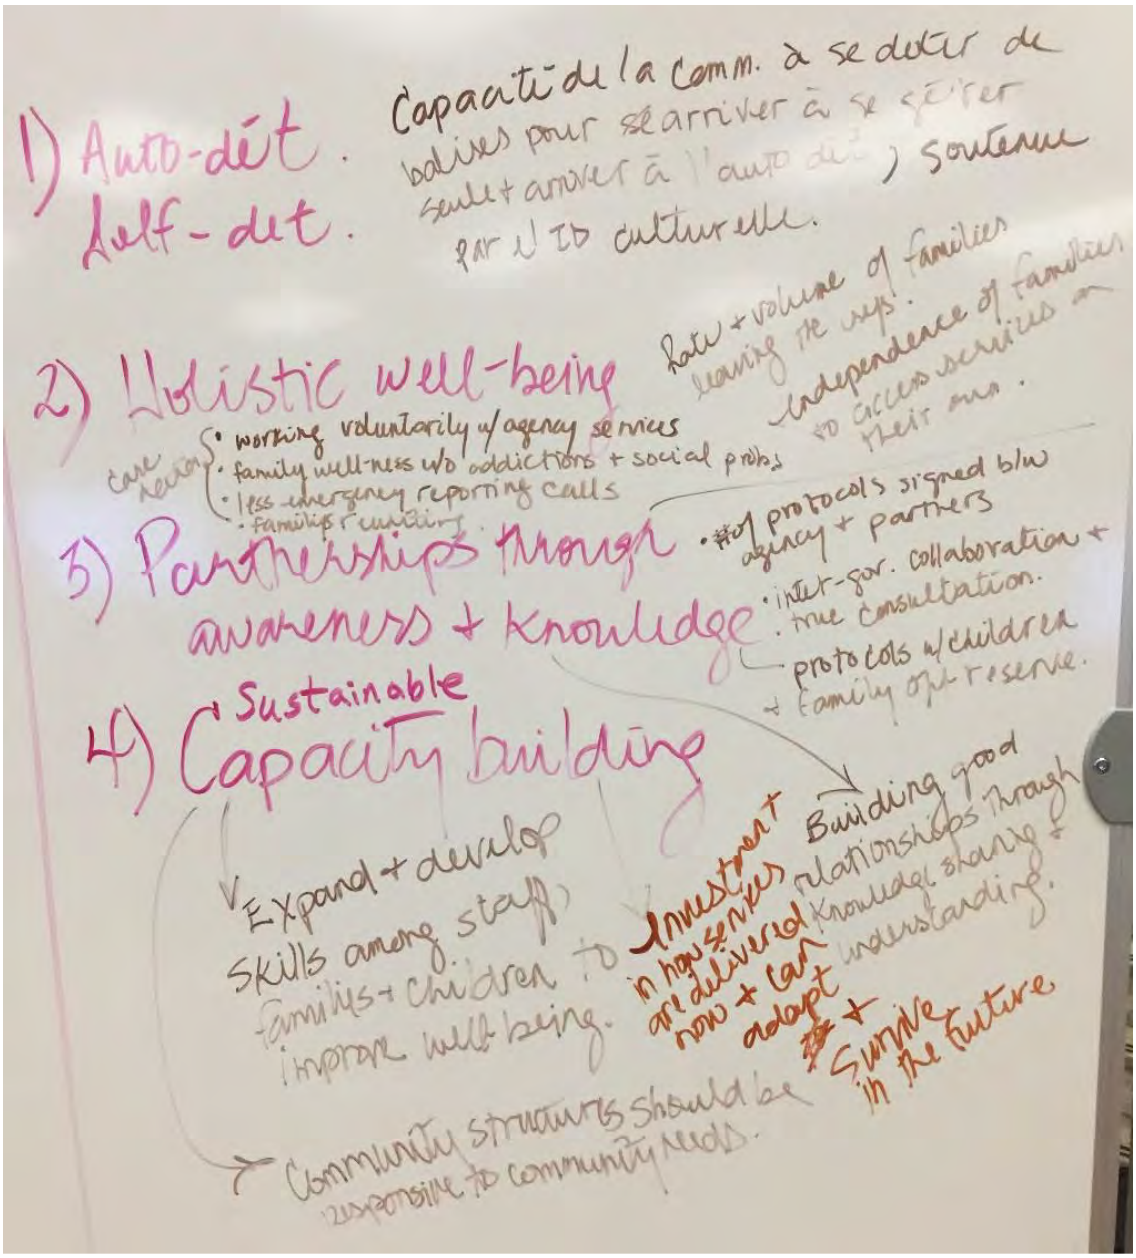
Holistic Well-being
The goal of agencies is to empower children, families, and communities so that children can thrive. Retaining long-term staff at agencies is as an important way to encourage stability in the community. Agency success in nurturing holistic well-being might be measured by the rate and volume of families leaving the system, the number of families accessing services voluntarily, reduced instances of addiction or social problems, less emergency reporting calls, and by families reuniting.

Partnerships through Awareness and Knowledge
Partnerships involve establishing protocols between agency and partners, promoting intergovernmental collaboration and true consultation, establishing protocols with children and families off reserve, and building good relationships through knowledge sharing and understanding.

Sustainable Capacity Building
Skills among staff, families and children must be expanded and developed to improve well-being, community structures should be responsive to community needs, and investments must be made to services delivered now so that they can adapt and survive in the future.



Photos of workshop exercise



1) Auto-dét. Self-det.
Capacité de la comm. à se doter de balises pour s'arriver à se gérer seule + arriver à l'auto dét) soutenue par l'ID culturelle.
2) Holistic well-being
Rate + volume of families leaving the sys.
Independence of families to access services on their own.
care leavers
• working voluntarily w/ agency services
• family well-ness w/o addictions + social probs
• less emergency reporting calls
• families reuniting
3) Partnerships through awareness + knowledge
• # of protocols signed b/w agency + partners
• inter-gov. collaboration + true consultation.
protocols w/ children + family off-reserve.
4) Sustainable Capacity building
Expand + develop skills among staff, families + children to improve well-being.
Investment in how services are delivered now + can adapt to survive in the future
Building good relationships through knowledge sharing + understanding.
Community structures should be responsive to community needs.

Services à l'enfance et à la famille des Premières Nations (SEFPN)

Exercice en atelier : Détermination des états idéaux pour les agences

2018

Pour les agences et les communautés, il existe quatre facteurs de succès : l'auto-détermination; le bien-être holistique; les partenariats fondés sur la prise de conscience et le savoir; un renforcement durable des capacités.

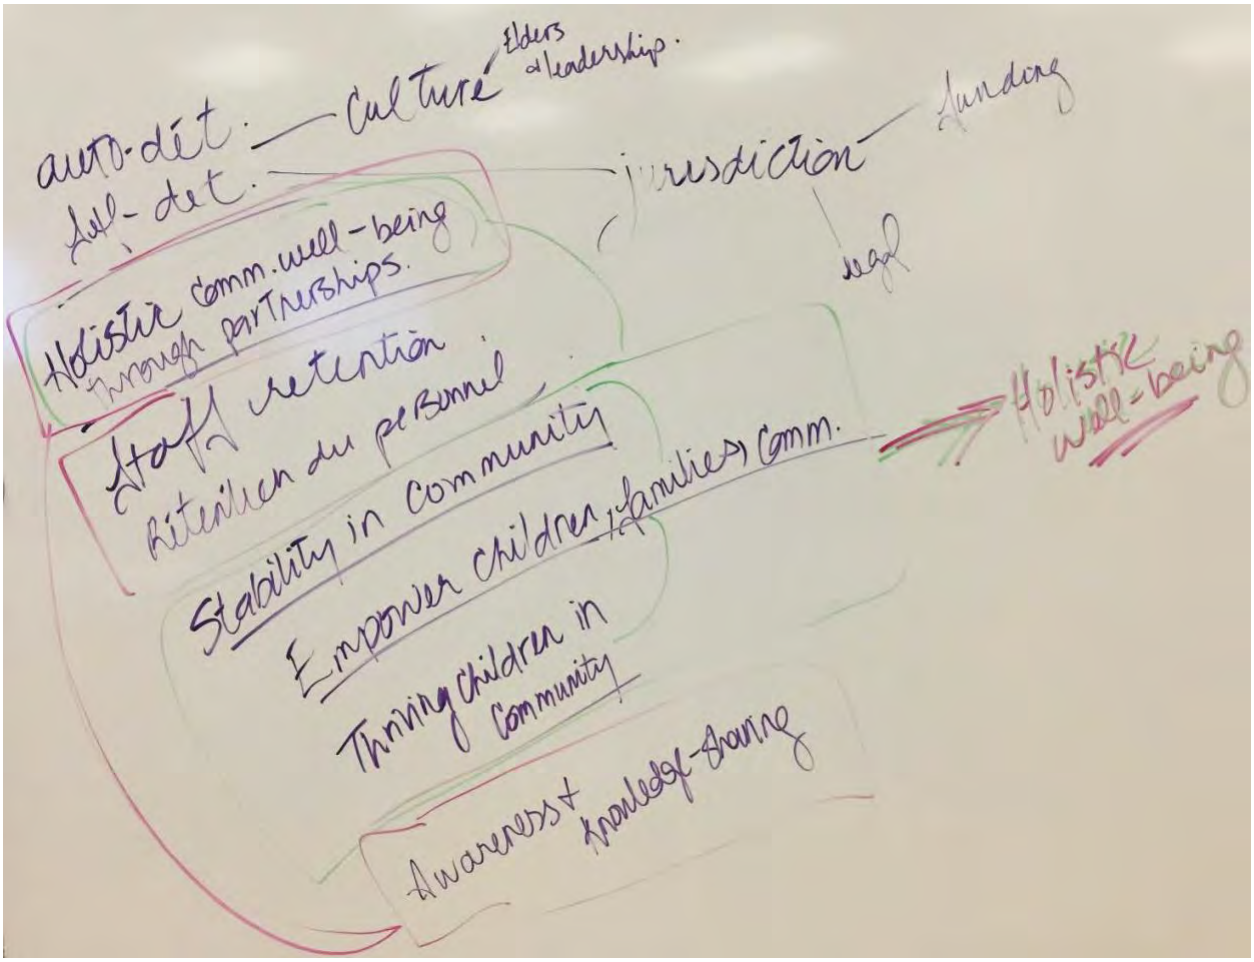
Auto-détermination
L'auto-détermination réside dans la capacité d'une communauté à tracer sa propre voie. L'atteinte de cet objectif passe obligatoirement – et peut être favorisée – par une délimitation et une compréhension claires des responsabilités juridiques et financières qui incombent au gouvernement fédéral et aux provinces à l'égard des agences. Le soutien des aînés et des leaders de la communauté a également été jugé important pour ancrer l'auto-détermination dans une solide identité culturelle.

Bien-être holistique
Les agences ont pour objectif de donner aux enfants, aux familles et aux communautés les outils nécessaires à l'épanouissement des enfants. La rétention à long terme du personnel des agences est un moyen important d'encourager la stabilité dans la communauté. Le degré auquel les agences réussissent à favoriser un bien-être holistique peut être mesuré par le taux et le nombre de familles qui quittent le système, par le nombre de familles accédant volontairement aux services, par la baisse du nombre de cas de dépendance ou de problèmes sociaux, par la diminution du nombre d'appels signalant des urgences et par la réunion de familles.

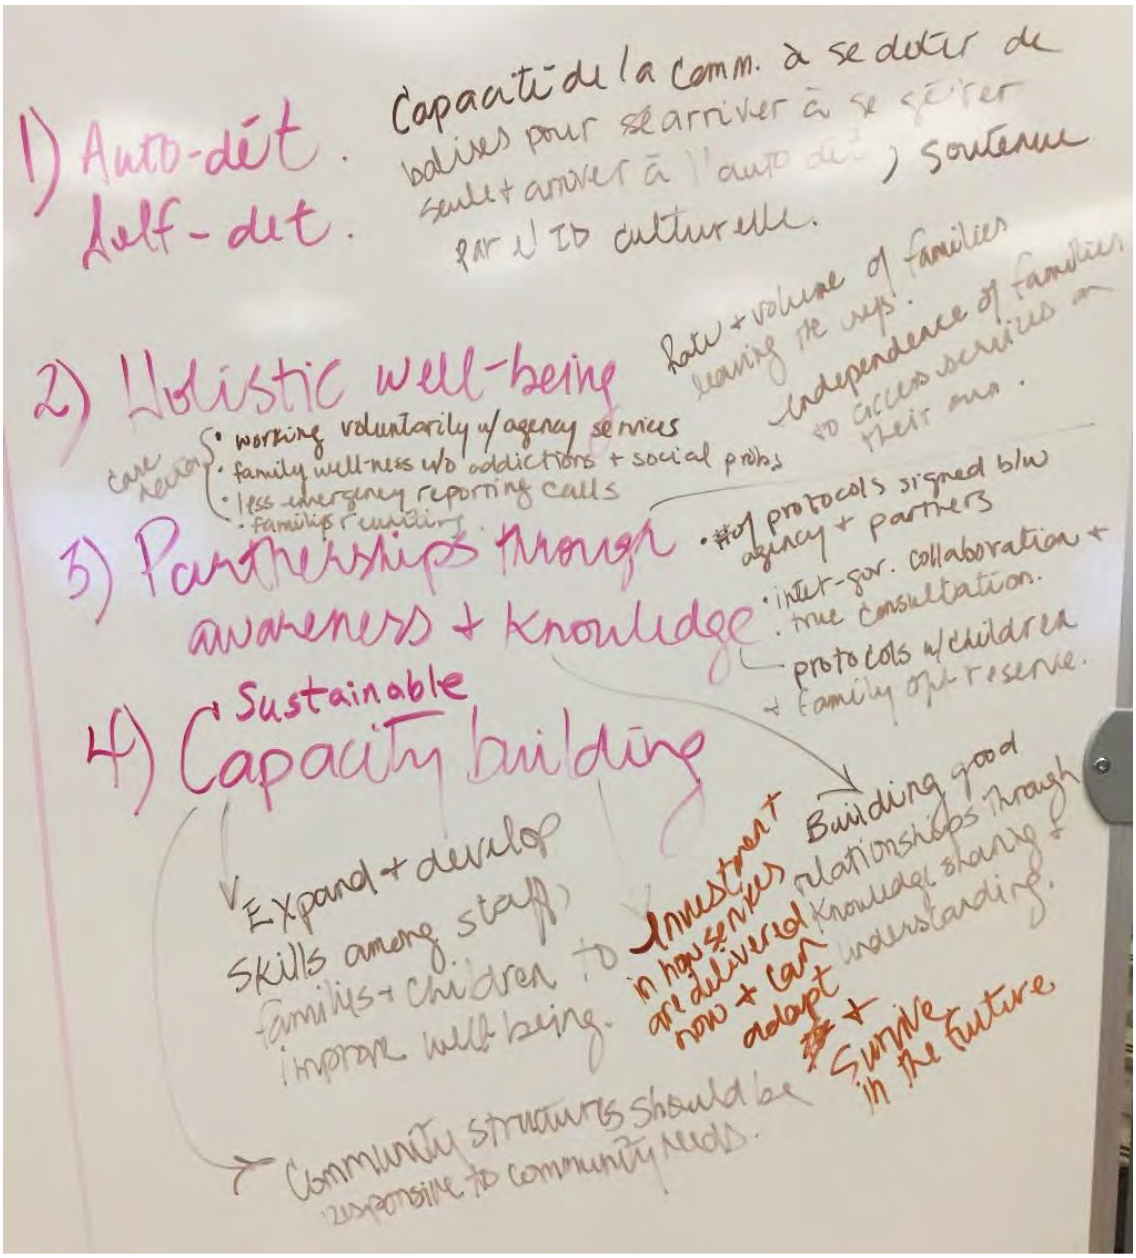
Partenariats fondés sur la prise de conscience et le savoir
Les partenariats consistent à établir des protocoles entre l'agence et ses partenaires, à promouvoir une collaboration intergouvernementale et une réelle consultation, à

instaurer des protocoles pour les enfants et les familles vivant hors-réserve et à forger de bonnes relations par le partage du savoir et la compréhension.

Renforcement durable des capacités
Il faut élargir et développer les compétences du personnel, des familles et des enfants pour améliorer le bien-être communautaire, il faut que les structures communautaires donnent suite aux besoins de la communauté, et il faut investir maintenant dans les services offerts pour pouvoir ultérieurement les adapter et les pérenniser.



Photos de l'exercice en atelier



1) Auto-dét. Self-det.
Capacité de la comm. à se doter de balises pour s'arriver à se gérer seule + arriver à l'auto dét) soutenue par l'ID culturelle.
2) Holistic well-being
Rate + volume of families leaving the sys.
Independence of families to access services on their own.
care leavers
• working voluntarily w/ agency services
• family well-ness w/o addictions + social probs
• less emergency reporting calls
• families reuniting
3) Partnerships through awareness + knowledge
• # of protocols signed b/w agency + partners
• inter-gov. collaboration + true consultation.
protocols w/ children + family off-reserve.
4) Sustainable Capacity building
Expand + develop skills among staff, families + children to improve well-being.
Investment in how services are delivered now + can adapt to survive in the future
Building good relationships through knowledge sharing + understanding.
Community structures should be responsive to community needs.

First Nations Child and Family Services (FNCFS)

Workshop Exercise:
Identifying Ideal States for Agencies

2018

Healthy communities, pursuing "the good life" is the ultimate goal for agencies. Working toward the "the good life" involves a holistic approach to community health, in which the community is engaged from "womb-to-tomb" in the economic, legal, social and political aspects of an individual's life.

Togetherness, unity, and a sense of belonging, through truth telling, empowerment and knowledge sharing are integral to overall community well-being. Connections to community, land and self are paramount. The ability of communities to know and lay claim to their inherent rights and to self-govern are necessary to achieve an ideal state for agencies and communities.

A holistic approach to community well-being embraces culture and tradition, such as language, land-based practices and Elders, to foster identities firmly grounded in cultural roots. Importantly, this approach involves encouraging emotional intelligence and helping individuals build foundational skills, such as the ability to adapt and respond to challenges in a healthy way.

Exercice en atelier : Détermination des états idéaux pour les agences

2018

Les agences ont comme objectif ultime de faire émerger des communautés en santé et en quête de « la bonne vie ». Cheminer vers « la bonne vie » suppose l'adoption d'une approche holistique de santé communautaire, où la communauté participe « du berceau au tombeau » aux aspects économiques, juridiques, sociaux et politiques de la vie des individus.

Le vivre-ensemble, l'unité et un sentiment d'appartenance sont essentiels au bien-être global de la communauté et nécessitent le dévoilement de la vérité, l'autonomisation et le partage du savoir. Les liens avec la communauté, avec le territoire et avec soi-même revêtent une importance vitale. Pour les agences et les communautés, l'atteinte d'un état idéal passe par la capacité des communautés à connaître leurs droits inhérents et à se gouverner elles-mêmes.

Une approche holistique du bien-être communautaire recouvre la culture et la tradition (langue, pratiques basées sur le territoire, aînés, etc.) afin d'encourager la constitution d'identités solidement enracinées dans la culture. Point important, cette approche exige qu'on encourage l'intelligence émotionnelle et qu'on aide les individus à acquérir des habiletés de base, telles que la capacité de s'adapter et de réagir aux défis d'une façon saine.

Workshop Exercise:
Identifying Ideal States for Agencies

2018

Relational Accountability, Family Connection and Community Support, and Continuity and Stability through Flexibility are key components of community and agency success.

Relational Accountability
Relational accountability is about "relating as one," by promoting relationships grounded in ritual, being perceptive to the uniqueness of communities and stakeholders, and encouraging mutual respect (rather than one-way compliance).

The emphasis on relational accountability recognizes people as a community's strongest resource, encourages strong family and community connections, and values knowledge sharing and giving back to the community.

Relational accountability might be measured according to agency engagement with the community, such as through agency participation in non-Child Family Services activities, or in meetings with stakeholders and funders that aim to build relationships and dialogue. Success might be tracked according to the number of legal fees or cases in court.

Family Connections, Well-Being and Community Support
A holistic approach to child and family services is one that creates a "circle-of-care" around the child to ensure their well-being throughout their life in the community.

Collaboration within the agency and with different departments, engaging with communities and leadership to make holistic well-being a focus, drawing on Elder and community knowledge, rebuilding trust with communities, and taking into account social determinants of health were identified as ways of fostering a holistic approach.

Measuring success in developing family and community support could be measured by the number of attendees at programs offered by the agency, and by the extent that agencies have the support and participation of community leadership (Chief, council, board).

Success might also be indicated by the level of trust community members place in the agency, which might be measured by families and individuals accessing services by self-referral. Social determinants of health might be tracked by establishing a checklist for different ages and life stages. Also identified as important to overall community well-being was education, which might be tracked by grading at age level, and the number of people graduating high school or accessing post-secondary education.

Continuity and Stability through flexibility

With the child at the centre of care, sometimes plans have to be adapted to support them. A holistic approach to chart paths for healing requires ongoing communication between child, family, and community. A child's ongoing adaptability is an important marker of success.

It is also important for an agency to be adaptable and flexible. Flexibility might be fostered through exercises such as seeking community opinion to evaluate the usefulness and efficacy of programs. This might also be measured through entrance and exit interviews with children in care to identify implications, as well as internal and external reviews for staff and agency.

Accessing services can sometimes be a challenge, especially when some are not aware of options and opportunities available to them. Those who require services must be able to access equitable services and resources across the country without being deterred by bureaucratic barriers or limited experience.

Workshop Exercise:
Identifying Ideal States for Agencies

2018

A holistic approach to Child and Family Services, is one that promotes a "good life" and "good mind." A community-based and culturally rooted approach to the well-being of individuals and places the child at the centre of a circle of care, supported by their extended family, the community, and the Nation.

Community connection, cultural awareness, inclusivity and respect are important components of community well-being. Reviving, revaluing and following traditional First Nation laws and practices, while at the same time striving to balance First Nations laws with modern life, are elements of community-building.

Living fully in culture by "walking in culture" might involve embracing traditional cultural practices such as traditional adoption ceremonies, co-parenting, or naming ceremonies. Speaking traditional language, practicing traditional medicine, and respecting the land were also identified as elements of cultural connection. As important as promoting cultural connection is ensuring community members' basic needs are met (such as access to clean water and housing).

Education and awareness between First Nations and non-First Nations to work towards reconciliation are crucial. Identified as equally important was the need to acknowledge history and past, to revalue connection to the land, and to continue to challenge the existing system where injustices exist.

This workshop identified the importance of trust and stability for agencies. They emphasized the importance of regular communication with children and families to appreciate their unique needs, exercising empathy for parents of children in care to

promote healing for the whole family, and valuing the role of grandparents as mentors.

A caring and responsive approach on behalf of the agency is needed to meet the needs of families. Children are viewed as a gift from the Creator, and their health and success reflects the health and success of the community. It is important to keep children close to the community where they are valued.

Workshop Exercise:
Identifying Ideal States for Agencies

2018

Self-determination is crucial for nations and agencies because they are distinct.

There is no "cookie cutter" approach for child and family service agencies. Agencies are unique, as are the individuals and communities they serve. The uniqueness of provinces, traditions, languages, and cultures must be taken into account.

An actuals-based funding formula will be rejected.

Financial autonomy is a tool that recognizes self-determination and distinctness as it would enable spending based on community needs. Agencies need the authority to allocate funding as needed to achieve their goals and require flexibility to manage spending and respond case-by-case.

Clear legislation regarding jurisdiction is necessary to define the responsibilities of the Provincial and Federal governments to Child and Family Service agencies.

Community well-being is very important and requires resources and staff to be oriented towards the well-being of the whole community. Doing the right thing for the child, family or community, regardless of institutional obstacles is important.

Integral to the well-being of the community is the well-being of families. Relationships with children and families must be grounded in integrity, honesty, dignity, and respect. The intention of agencies is to have children safe and families together. This focus involves supporting children as they learn good and healthy "ways of life".

Agency Outreach for Workshops

Le texte français suit l'anglais.

May 1, 2018

Attention: First Nation Delegated Child and Family Services Agencies

I am writing on behalf of the National Advisory Committee (NAC).

We at the Institute of Fiscal Studies and Democracy (IFSD) are pleased to be working with NAC, the Assembly of First Nations (AFN), and the Family Caring Society of Canada (Caring Society) to support Canada's efforts in developing a data-driven program architecture for First Nations Child and Family Services agencies. I invite you to review the attached letter from NAC on this matter.

Members of my team at IFSD will contact you this week with an invitation to participate in this project. Should you have any questions, I invite you to contact Dr. Helaina Gaspard (helaina.gaspard@ifsd.ca).

With kind regards,

Kevin Page

À l'attention des: Organismes de services à l'enfance et à la famille délégués des Premières Nations

Je vous écris de la part du Comité consultatif National (CCN).

Nous à l'Institut des finances publiques et de la démocratie (IFPD), ont le plaisir de travailler avec le CCN, l'Assemblée des Premières Nations (APN) et la Société de soutien à l'enfance et à la famille des Premières Nations du Canada (Société de soutien) afin de soutenir les efforts du Canada de développer une architecture de programme axé sur les données pour les agences de services à l'enfance et à la famille des Premières Nations. Je vous invite à consulter la lettre du CCN ci-jointe à cet effet.

Mon équipe à l'IFPD vous contactera cette semaine avec une invitation à participer à ce projet. Pour toutes questions, je vous invite à contacter la Dr. Helaina Gaspard (helaina.gaspard@ifsd.ca).

Très cordialement,

Kevin Page

UNIVERSITY OF TORONTO

May 1, 2018

Attention: First Nation Delegated Child and Family Services Agencies

The Canadian Human Rights Tribunal (CHRT), in its January 2016 decision and subsequent rulings, has found that Canada has used a discriminatory funding approach for First Nations Child and Family Services and has issued specific orders regarding funding for First Nations child and family service agencies. Canada states it is committed to implementing these orders.

In support of Canada's efforts to meet the CHRT compliance orders, the National Advisory Committee (NAC) (see Appendix 1 for a description), the Assembly of First Nations (AFN) and the First Nations Child and Family Caring Society of Canada (Caring Society) are working with Mr. Kevin Page, former Parliamentary Budget Officer and now President & CEO of the Institute of Fiscal Studies and Democracy (IFSD) | l'Institut des finances publiques et de la démocratie (IFPD) at the University of Ottawa to develop reliable data collection, analysis and reporting methodology for analyzing the needs of First Nations child and family services agencies (see Appendix 2 for Mr. Page's biography).

Many of you may be familiar with the work undertaken by Mr. Page and his team at IFSD in Fall 2017 at NAC's request on the characteristics of First Nations child and family services agencies. Thanks to your participation, the research initiative was successful with a 57% response rate. The final report helped to inform Indigenous and Northern Affairs Canada (INAC) on the financial needs of agencies in the areas of salaries and benefits, capital, etc.

With the recent CHRT orders, we are at a critical juncture for First Nations child welfare and have an important opportunity to create meaningful positive change in the funding approach for First Nations child and family services that supports culturally based and equitable services. We can only do this with your help.

This week, you will receive a phone call followed by a letter of invitation from IFSD to participate in a project that will help to inform a way forward in First Nations child welfare through a cost estimation of current and future needs. This is a significant undertaking that will depend on the participation of agencies. We urge you to support IFSD's efforts by responding to their request for participation.

IFSD is committed to working in partnership with agencies to develop baseline information on cost and need, work that has not been done since the Wen:de reports in 2005. This data will be crucial in establishing a program architecture with funding that meets the needs of agencies and the communities that they serve.

For this project, IFSD has been resourced to support the participation of agencies in an Ottawa-based workshop to complete the data request. IFSD is inviting up to two representatives per agency to join them in Ottawa. We hope you will participate. IFSD will provide you with as much support as possible to ensure your meaningful participation does not detract from your important work with children, their families and communities.

Any information collected from this survey will be shared publicly or with the government only in an anonymized and aggregate form to protect the rights of agencies and communities. The collection and use of this information will follow the OCAP principles of Ownership, Control, Access and Possession as well as the Tri-Council Policy on Research Ethics.

Please do not hesitate to contact Dr. Helaina Gaspard at IFSD (helaina.gaspard@ifsd.ca) or Martin Orr at AFN (morr@afn.ca) at any time with questions or concerns.

Sincerely,

The National Advisory Committee

Appendix 1

TERMS OF REFERENCE
National Advisory Committee on
First Nations Child and Family Services (FNCFS) Program Reform

Purpose:
The purpose of these Terms of Reference is to set out the mandate, membership and roles and responsibilities of the National Advisory Committee.

Background:

1. The Joint INAC/AFN NAC met regularly from 2001-2008, primarily to oversee implementation of the National Policy Review's 17 Recommendations to the Minister of INAC on changes needed to the DIAND policy governing the FNCFS Program. In 2004 and 2005, the NAC produced three reports regarding the FNCFS Program known as the *Wen:De* reports.

2. On January 26, 2016, the Canadian Human Rights Tribunal ("the Tribunal") released its decision (2016 CHRT 2 "Decision") in *First Nations Child and Family Caring Society of Canada et al. v. Attorney General of Canada* ("the Complaint"). The Complaint had been filed in 2007. The Tribunal determined that the federal government discriminated against First Nations children on the grounds of race and national ethnic origin by failing to ensure substantive equality in the provision of child and family services for First Nations peoples. The Tribunal also found that the federal government's definition, policies and application of Jordan's Principle to be discriminatory. The Tribunal has retained jurisdiction over the matter and issued a subsequent order on April 26, 2016 (2016 CHRT 10). A further Tribunal order is pending.

3. The Tribunal ordered Aboriginal Affairs and Northern Development Canada (now Indigenous and Northern Affairs Canada ("INAC"), to cease its discriminatory practices and reform the First Nations Child and Family Services ("FNCFS") Program and the *Memorandum of Agreement Respecting Welfare Programs for Indians* applicable in Ontario ("1965 Agreement") to reflect the findings in the Decision. INAC was also ordered to cease applying its narrow definition of Jordan's Principle and to take measures to immediately implement the full meaning and scope of the principle. In 2016 CHRT 10, the Tribunal further clarifies that the order is to "immediately implement" not immediately start discussions to review the definition in the long term. The Tribunal further "orders INAC to immediately consider Jordan's Principle as including all jurisdictional disputes (this includes disputes between federal departments) and involving all First Nations children (not only those children with multiple disabilities). Pursuant to the purpose and intent of Jordan's Principle the government organization that is first contacted should pay for the service without the need for policy review or case conferencing before funding is provided." In 2016 CHRT16, the

Tribunal further noted that Jordan's Principle applies on and off reserve and ordered INAC to immediately implement several measures regarding child and family services funding.

4. INAC has committed to working with First Nations leadership and organizations; child and family services agencies; front-line service providers; the parties to the Complaint; and other stakeholders, on steps towards FNCFS Program reform and meaningful change for First Nations children and families.

5. The Tribunal has deferred consideration of medium- to long-term relief until its consideration of immediate relief has concluded. In their submissions to the Tribunal, both the AFN and the Caring Society sought the establishment of a joint policy development initiative between INAC and the Complainants to reform the FNCFS Program, and which also may guide the Tribunal in determining appropriate Orders on mid-terms and long-term relief.

6. INAC has undertaken to immediately establishing and adequately resourcing a NAC, in order to begin the necessary and critical reform of the FNCFS Program. Establishing a NAC is a crucial first-step in addressing the medium to long-terms changes to the FNCFS Program.

Guiding Principles

7. The National Advisory Committee's process will be guided by the following principles:

   a. Consistent with the United Nations Convention on the Rights of the Child, the United Nations Committee on the Rights of the Child General Comment 11, the United Nations Declaration on the Rights of Indigenous Peoples and the TRC's Calls to Action, the best interests and well-being of First Nations children will be paramount.
   b. Federal, provincial/territorial and First Nations' decision-making processes must be respected.
   c. Involvement of community, parents, and extended family as a corner stone of effective and culturally based child and family services.
   d. INAC and other federal government departments engaged in the provision of services to First Nations children and families have a legal obligation not to discriminate against those children and families.
   e. Policies, programs and services must be responsive and relevant to the distinct needs of children and to community needs and realities.
   f. Whenever possible, families have the right to stay together. All services and preventative measures ought to be exhausted before a child is removed from the family.

   g. First Nations have an interest in the well-being of all of their members, regardless of where they live.

Mandate

8. The NAC is mandated to provide advice, input into the design and assist in the development of reforms of First Nations child and family services policies and programs on-reserve to First Nations leaders and agencies and the Minister of INAC. The NAC shall review across-

the-board reforms, including federal government authorities, policies and practices, to the national framework to support FNCFS Agencies, the greater needs of First Nation children, each First Nations community's cultural vision of safe and healthy children and families, provincial/territorial variances, and mechanisms to ensure communication, accountability and dispute resolution.

9. The National Advisory Committee will provide advice on future reforms to the First Nations Child and Family Services Program in a way that promotes the safety and best interests of First Nations children, taking account of the distinct needs and circumstances of First Nations children and families – including historical and ongoing disadvantage and their cultural, linguistic and geographical needs and circumstances – in order to ensure substantive equality in the provision of child and family services to them.

10. Upon agreement by the members of NAC, NAC may select and retain experts to assist it in its work, on an as-needed basis. Preference will be given to experts with demonstrated expertise regarding First Nations child and family services.

11. In addition, the NAC may establish action tables to further the goals, work and objectives of NAC, as appropriate.

12. The NAC will address, but will not be limited to, the elements of the current FNCFS Program. The NAC can provide advice to assist in the reform of the program on an interim basis throughout its term as well as producing reports or research as it sees fit.

13. The NAC's deliberations, and the information provided to and/or produced by the NAC, will be made available to the public.

14. The copyright of materials produced at the direction of the National Advisory Committee will be determined within the individual service contracts. Members of the NAC and participating member organizations respect the intellectual and moral property rights regarding Indigenous cultures, languages and traditional knowledge. All research will be conducted in keeping with the OCAP research principles (Ownership, Control, Access and Possession) and observe ethics review processes, including First Nations research ethics boards where they operate.

15. INAC agrees to provide documentation on an ongoing basis of all CFS and Jordan's Principle documents, reports, data, budgets and policies that it is legally able to provide to the NAC and the NAC will be provided with copies of documents requested (including portions of documents that are not redacted), in a timely manner, to enable the NAC to complete its work and mandate.

16. The members of the Committee agree to work together to achieve the mandate of the Committee and to collectively provide recommendations for the program reform of the FNFCS program.

Term of the NAC

17. The NAC will commence its work in January 2017 and will complete its recommendations by January 31, 2018. Extension of time will be agreed to by the members of the Committee.

Membership

18. The National Advisory Committee will be composed of the following members:
    a. One (1) national chair;
    b. Three (3) representatives of the Federal Government including one or more regional INAC representatives;
    c. One (1) representative of the AFN;
    d. One (1) representative of the First Nations Child and Family Caring Society of Canada;
    e. Ten (10) regional representatives, one representative from each of AFN's regions, with alternates available when needed;
    f. One (1) First Nation youth representative; and
    g. One (1) First Nation Elder(s) representative.

19. The ten (10) regional representatives/their alternates, youth and elder members will be selected by the AFN through its ordinary processes. Observers are also welcome to attend.

20. INAC will provide adequate funding that is necessary for the NAC to complete its work, activities and mandate.

21. The National Advisory Committee will be chaired by a person agreed to by INAC, the AFN, and the First Nations Child and Family Caring Society of Canada.

22. By consensus representatives of the Provinces and Yukon Government may be invited to participate in the NAC's work, in order to provide assistance to the NAC and its members.

23. The Canadian Human Rights Commission may participate as an interested party.

Responsibilities of the National Advisory Committee

24. The Committee will be responsible for:
    a. Making recommendations, input into the design and assist in the development of FNCFS Program reform(s).
    b. Making recommendations on the design of engagement processes to assist in developing approaches for reform.
    c. Providing an advisory and support role to existing regional tables in the engagement processes and supporting the development and operation of regional tables in regions where they do not currently operate.
    d. Developing mechanisms for sharing information of the work and the activities of NAC, including with First Nations and Provincial Territorial Organizations, as appropriate.
    e. Developing and providing approval of a work plan for the work of the committee and

the work of any advisory or expert action tables

f. Overseeing processes for decision making, and recording decisions, understandings and minutes of NAC meetings.
g. Making recommendations regarding implementation activities and following-up as appropriate.

Operating Principles

25. The NAC will operate on the basis of consensus and any dispute will be resolved by the Chair, with the assistance of an Elder.

26. The costs for regional representatives to participate in the work of the NAC shall be borne by the INAC/AFN.

Canadian Human Rights Tribunal (Tribunal)

27. These Terms of Reference shall be filed with the Tribunal. The Committee shall provide reports and/or minutes of its meetings to the Tribunal as long as the Tribunal retains jurisdiction over the complaint or until it orders otherwise or the parties to the complaint agree otherwise.

ANNEX A

Suggested Topics to be addressed by the National Advisory Committee

(to be discussed once Committee is fully formed)

The National Advisory Committee may address the following elements of the FNCFS Program:

A. General

i. Jurisdictional models eligible for funding under the FNCFCS Program

ii. General funding structure, stacking provision considerations, and considerations of eligible costs including funding arrangements between INAC and Provinces/Territories and non-Aboriginal service providers.

iii. Provisions for First Nations children not served by a FNCFS Agency to ensure comparable and culturally appropriate services.

iv. Provisions for extraordinary costs related to unusual occurrences that engage higher child welfare costs such as natural disasters, substantial increases in mental health or substance misuse, and unusual requirements for mandatory staff participation in inquiries.

v. Provisions for organizational networking and learning to promote the sharing of research and best practices among FNCFS Agencies.

vi. A process for economically modelling revisions to funding policy and formula and evaluating the efficacy of such changes on an ongoing basis to ensure they are non-

discriminatory and safeguard the best interests of the children.

vii. A funding structure that takes into account costs related to historic disadvantage and distinct cultures and languages of First Nations.

viii. FNCFS Agency staff salaries, benefits, and training.

ix. Training for public servants involved in the FNCFS Program to ensure proper training for management of the program, including professional development on child development, First Nations cultures/histories, the Truth and Reconciliation Commission, and the history of the FNCFS Program including the Tribunal decisions.

x. Creating a new definition of "neglect" that takes into account First Nation norms, values and culture.

xi. Mechanisms for ensuring that reforms do not reduce current funding levels or numbers of arrangements for FNCFS Agencies.

xii. Levels of service provided by FNCFS service providers and INAC reporting requirements imposed on FNCFS service providers should be comparable to the level of service provided by or imposed on provincial territorial governments and not pose an undue burden on agency staff .

xiii. FNCFCS funding agreements should promote long term planning, sustainable service provision and evaluation.

xiv. FNCFS services should be based on effective First Nations models, including jurisdictional models, for the design, delivery and evaluation of First Nations Child and Family Services and on sharing information and effective practices.

xv. FNCFS service providers serving small populations of eligible children should receive sufficient resources to allow them to provide culturally appropriate services that are comparable to those provided by FNCFS service providers serving large populations of eligible children.

xvi. FNCFCS funding for service providers serving more than 1000 children in care must account for the full population served.

xvii. There are to be no reductions or further restrictions in the level of FNCFS funding for any agency.

xviii. INAC approval criteria and processes for the development and operation of new First Nations child and family service agencies.

xix. First Nations efforts to exercise jurisdiction and/or initiatives to create separate self-

governing child welfare regimes are to be supported and acknowledged

xx. The Touchstones of Hope framework for the design and implementation of community based visions of child safety and wellbeing.

B. Creation of a new FNCFS regime

i. Creation of a new FNCFS regime to fully replace the existing programs and services.

ii. New regime shall consider the distinct needs and circumstances of First Nations children and families living on-reserve, including their cultural, historical and geographical needs and circumstances.

iii. Program shall address the higher service needs of Frist Nation children resulting from intergenerational impacts of Indian Residential School and

effects of colonization, along with higher costs to deliver those services

iv. Ensure substantive equality in the provision of child and family services to First Nations children and families living on-reserve.

v. Develop enhanced funding mechanisms to ensure isolated, remote and northern communities serviced by agencies will be provided with equitable services and a full range of programs offered elsewhere.

C. Maintenance

i. Calculation of yearly maintenance.

ii. Appeal mechanisms regarding eligible maintenance expenses.

iii. Reimbursement of legal costs.

iv. Funding of support services intended to reunite children in care with their family.

D. Operations

i. Baseline assumptions of children in care for funding of FNCFS Agencies.

ii. Mechanisms to account for historical and ongoing inflation losses and annual adjustments going forward to ensure FNCFS Agency funding keeps pace with inflation.

iii. Corporate legal costs and costs for liability claims.

iv. Funding of remote agencies and agencies in urban areas to account for higher operations and maintenance costs.

v. Funding for records management, policy development and human resources management, liability insurance, audits, janitorial services, and security.

vi. Funding of costs related to the receipt, assessment and investigation of child welfare

reports for all FNCFS Agencies that hold delegation for these functions including costs for after-hours service delivery.

vii. Funding of capital costs that takes into account increased need due to augmentation of prevention staff, services, and programs, and to ensure that buildings, computers, and vehicles meet the applicable safety regulations, are child safe, accessible by persons with disabilities, and support comparable child and family services.

viii. Funding of emergency repairs and maintenance of buildings.

ix. Funding for staff travel and travel costs related to children and families

receiving child welfare services.

x. Definition of eligible child.

xi. Any changes to the funding structures to FNCFS Agencies or their reporting requirements.

E. Prevention Funding

i. Funding for the adequate and sustained provision of primary, secondary, and tertiary prevention services.

ii. Funding for the development, operation and evaluation of culturally-based prevention programs and reforms based on those evaluations.

F. Jordan's Principle

i. An approach to implement the full meaning and scope of Jordan's Principle in compliance with the CHRT orders across all children, all jurisdictional disputes and all federal services ensuring no delays in service provision related to the child's First Nations status.

ii. The creation of a non-discriminatory, accessible and transparent process for reporting of federal Jordan's Principle cases.

iii. The creation of non-discriminatory and transparent assessment criteria and assessment processes for reports of federal Jordan's Principle cases.

iv. The creation and implementation of an independent appeal process for federal Jordan's Principle cases.

v. Recommending mechanisms and required resources for public education regarding Jordan's Principle among First Nations, FNCFS Agencies, federal/provincial/territorial government officials and other stakeholders (such as: health professionals, teachers, and early childhood educators).

G. Accountability

i. The creation of an independent permanent expert structure with the authority, resources and mandate to monitor and publicly report on INAC's performance in maintaining non-discriminatory and culturally-appropriate First Nations child and family services and in fully implementing Jordan's Principle.

ii. The creation of a mechanism to act as a national and publicly accessible repository for all non-privileged information relevant to the provision of FNCFS services.

iii. All proposed reforms will be presented to the AFN Chiefs-in-Assembly for consideration, discussion and input.

iv. INAC shall carry out its duty to consult with first Nation governments and accommodate any First Nation interests with regard to any final proposal for program reform.

v. Training and capacity building for INAC and other federal government officials to ensure non-discriminatory, culturally based and equitable child and family services and implementation of Jordan's Principle.

Appendix 2
Kevin Page, Biography

Kevin Page is the founding President & CEO of the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa.

Mr. Page was appointed Canada's first Parliamentary Budget Officer on March 25, 2008 where he served a five-year term providing Canadian parliamentarians and taxpayers with independent analysis on trends in the national economy, the state of nation's finances and the estimates of the government. Mr. Page led a small but talented team that built the first legislative budget office in Canada and one that was viewed as a leading practice among peer nations by such organizations as the IMF and OECD. While PBO, Mr. Page documented the shortfalls in First Nations school funding in 2009.

Following his tenure as Parliamentary Budget Officer and a 27-year career in the federal public service (many of these years were spent in central agencies, e.g. Department of Finance, Treasury Board of Canada, Secretariat and Privy Council Office), Mr. Page was appointed Chair of the Jean-Luc Pepin Research Chair at the University of Ottawa. As Chair, Mr. Page designed and taught courses in public finance and economics and oversaw research and advisory projects in Canada and around the world.

A globally recognized authority on fiscal matters, Mr. Page serves as advisor to the South African Parliamentary Budget Office, the Slovakian Fiscal Council, as well as the World Bank's Global Network of Parliamentary Budget Offices (GN-PBO).

1er mai, 2018

À l'attention des: Organismes de services à l'enfance et à la famille délégués des Premières Nations

Le Tribunal canadien des droits de la personne (TCDP), dans sa décision de janvier 2016 et ses décisions ultérieures, a déterminé que le Canada a utilisé une approche de financement discriminatoire envers les agences délivrant le Programme des services à l'enfance et à la famille des Premières Nations (SEFPN) et a publié les ordonnances en ce qui concerne le financement pour les SEFPN. Le Canada déclare qu'il s'engage à mettre en œuvre ces ordonnances de conformité.

En soutien aux efforts du Canada de respecter les ordonnances exécutoires du TCDP, le Comité consultatif national (CCN) (pour une description, voir l'annexe 1), l'Assemblée des Premières Nations (APN) et la Société de soutien à l'enfance et à la famille des Premières Nations du Canada (Société de soutien) travaillent présentement avec M. Kevin Page, ancien Directeur parlementaire du budget et maintenant président et directeur général de l'Institut des finances publiques et de la démocratie (IFPD) | Institut of Fiscal Studies and Democracy (IFSD) de l'Université d'Ottawa, pour développer une méthodologie de collecte de données, d'analyse et de rapport fiable pour analyser les besoins des agences du programme de services à l'enfance et à la famille des Premières Nations (voir l'annexe 2 pour la biographie de M. Page).

Plusieurs d'entre vous sont peut-être familiers avec le travail entrepris par M. Page et son équipe de l'IFPD | IFSD en Automne 2017 à la demande du CCN sur les caractéristiques des agences du programme de services à l'enfance et à la famille des Premières Nations. Grâce à votre participation, l'initiative de recherche a été un succès avec un taux de réponse de 57%.

Le rapport final a aidé à informer le ministère des Affaires indiennes et du Nord Canada (AINC) sur les besoins financiers des agences dans les domaines des salaires et des avantages sociaux, du capital et autres caractéristiques.

Avec les ordonnances de conformité du TCDP, nous sommes à un point crucial concernant le bien-être des enfants des Premières Nations et avons une occasion énorme de créer un changement positif significatif dans l'approche financement pour les agences de services à l'enfance et à la famille des Premières Nations qui soutient des services équitable et basé culturellement. Nous ne pouvons pas l'accomplir sans votre aide.

Cette semaine, vous recevrez un appel suivi d'une lettre d'invitation de la part de l'IFPD | IFSD afin de participer à un projet qui aidera à informer sur le moyen d'aller de l'avant à propos du bien-être des enfants des Premières Nations à travers une estimation des coûts des besoins actuels et futurs. C'est une entreprise significative qui dépendra de la participation des agences. Nous vous exhortons à soutenir les efforts de l'IFPD | IFSD en répondant à sa demande de participation.

L'IFPD | IFSD s'engage à travailler en partenariat avec les agences afin de développer une base de référence sur les coûts et les besoins qui n'a pas été établie depuis les rapports Wen :de en 2005. Ces données seront cruciales pour l'établissement d'une architecture de programmes avec un financement qui respecte les besoins des agences et des communautés qu'ils servent.

Pour ce projet, l'IFPD | IFSD a obtenu les moyens financiers pour soutenir la participation des agences à un atelier à Ottawa afin de compléter la demande des données. Nous espérons que vous y participerez en envoyant jusqu'à deux représentant(e)s de votre agence. L'IFPD | IFSD vous soutiendra autant que possible pour assurer que votre participation significative ne diminuera pas votre travail essentiel avec les enfants, leurs familles et leurs communautés.

Tout renseignement recueilli dans ce sondage sera partagé publiquement ou au niveau gouvernemental uniquement, sous une forme anonyme et cumulative, afin de protéger les droits des agences et des communautés. La collecte et l'utilisation de ces renseignements suivront les principes de PCAP (propriété, contrôle, accès et possession) ainsi que l'Énoncé de politique des trois Conseils en matière d'éthique de la recherche.

N'hésitez pas à contacter la Docteure Helaina Gaspard à L'IFPD | IFSD (helaina.gaspard@ifsd.ca) ou bien Martin Orr de l'APN (morr@afn.ca) à tout moment pour toute question ou toute préoccupation sur ces enjeux.

Sincèrement,

Le Comité consultatif national

Annexe 1

TERMS OF REFERENCE

National Advisory Committee on

First Nations Child and Family Services (FNCFS) Program Reform

Purpose:

The purpose of these Terms of Reference is to set out the mandate, membership and roles and responsibilities of the National Advisory Committee.

Background:

1. The Joint INAC/AFN NAC met regularly from 2001-2008, primarily to oversee implementation of the National Policy Review's 17 Recommendations to the Minister of INAC on changes needed to the DIAND policy governing the FNCFS Program. In 2004 and 2005, the NAC produced three reports regarding the FNCFS Program known as the *Wen:De* reports.

2. On January 26, 2016, the Canadian Human Rights Tribunal ("the Tribunal") released its decision (2016 CHRT 2 "Decision") in *First Nations Child and Family Caring Society of Canada et al. v. Attorney General of Canada* ("the Complaint"). The Complaint had been filed in 2007. The Tribunal determined that the federal government discriminated against First Nations children on the grounds of race and national ethnic origin by failing to ensure substantive equality in the provision of child and family services for First Nations peoples. The Tribunal also found that the federal government's definition, policies and application of Jordan's Principle to be discriminatory. The Tribunal has retained jurisdiction over the matter and issued a subsequent order on April 26, 2016 (2016 CHRT 10). A further Tribunal order is pending.

3. The Tribunal ordered Aboriginal Affairs and Northern Development Canada (now Indigenous and Northern Affairs Canada ("INAC"), to cease its discriminatory practices and reform the First Nations Child and Family Services ("FNCFS") Program and the *Memorandum of Agreement Respecting Welfare Programs for Indians* applicable in Ontario ("1965 Agreement") to reflect the findings in the Decision. INAC was also ordered to cease applying its narrow definition of Jordan's Principle and to take measures to immediately implement the full meaning and scope of the principle. In 2016 CHRT 10, the Tribunal further clarifies that the order is to "immediately implement" not immediately start discussions to review the definition in the long term. The Tribunal further "orders INAC to immediately consider Jordan's Principle as including all jurisdictional disputes (this includes disputes between federal departments) and involving all First Nations children (not only those children

with multiple disabilities). Pursuant to the purpose and intent of Jordan's Principle the government organization that is first contacted should pay for the service without the need for policy review or case conferencing before funding is provided." In 2016 CHRT16, the Tribunal further noted that Jordan's Principle applies on and off reserve and ordered INAC to immediately implement several measures regarding child and family services funding.

4. INAC has committed to working with First Nations leadership and organizations; child and family services agencies; front-line service providers; the parties to the Complaint; and other stakeholders, on steps towards FNCFS Program reform and meaningful change for First Nations children and families.

5. The Tribunal has deferred consideration of medium- to long-term relief until its consideration of immediate relief has concluded. In their submissions to the Tribunal, both the AFN and the Caring Society sought the establishment of a joint policy development initiative between INAC and the Complainants to reform the FNCFS Program, and which also may guide the Tribunal in determining appropriate Orders on mid-terms and long-term relief.

6. INAC has undertaken to immediately establishing and adequately resourcing a NAC, in order to begin the necessary and critical reform of the FNCFS Program. Establishing a NAC is a crucial first-step in addressing the medium to long-terms changes to the FNCFS Program.

Guiding Principles

7. The National Advisory Committee's process will be guided by the following principles:

    a. Consistent with the United Nations Convention on the Rights of the Child, the United Nations Committee on the Rights of the Child General Comment 11, the United Nations Declaration on the Rights of Indigenous Peoples and the TRC's Calls to Action, the best interests and well-being of First Nations children will be paramount.
    b. Federal, provincial/territorial and First Nations' decision-making processes must be respected.
    c. Involvement of community, parents, and extended family as a corner stone of effective and culturally based child and family services.
    d. INAC and other federal government departments engaged in the provision of services to First Nations children and families have a legal obligation not to discriminate against those children and families.
    e. Policies, programs and services must be responsive and relevant to the distinct needs of children and to community needs and realities.
    f. Whenever possible, families have the right to stay together. All services and preventative measures ought to be exhausted before a child is removed from the family.

g. First Nations have an interest in the well-being of all of their members, regardless of where they live.

Mandate

8. The NAC is mandated to provide advice, input into the design and assist in the development of reforms of First Nations child and family services policies and programs on-reserve to First Nations leaders and agencies and the Minister of INAC. The NAC shall review across-the-board reforms, including federal government authorities, policies and practices, to the national framework to support FNCFS Agencies, the greater needs of First Nation children, each First Nations community's cultural vision of safe and healthy children and families, provincial/territorial variances, and mechanisms to ensure communication, accountability and dispute resolution.

9. The National Advisory Committee will provide advice on future reforms to the First Nations Child and Family Services Program in a way that promotes the safety and best interests of First Nations children, taking account of the distinct needs and circumstances of First Nations children and families – including historical and ongoing disadvantage and their cultural, linguistic and geographical needs and circumstances – in order to ensure substantive equality in the provision of child and family services to them.

10. Upon agreement by the members of NAC, NAC may select and retain experts to assist it in its work, on an as-needed basis. Preference will be given to experts with demonstrated expertise regarding First Nations child and family services.

11. In addition, the NAC may establish action tables to further the goals, work and objectives of NAC, as appropriate.

12. The NAC will address, but will not be limited to, the elements of the current FNCFS Program. The NAC can provide advice to assist in the reform of the program on an interim basis throughout its term as well as producing reports or research as it sees fit.

13. The NAC's deliberations, and the information provided to and/or produced by the NAC, will be made available to the public.

14. The copyright of materials produced at the direction of the National Advisory Committee will be determined within the individual service contracts. Members of the NAC and participating member organizations respect the intellectual and moral property rights regarding Indigenous cultures, languages and traditional knowledge. All research will be conducted in keeping with the OCAP research principles (Ownership, Control, Access and Possession) and observe ethics review processes,

including First Nations research ethics boards where they operate.

15. INAC agrees to provide documentation on an ongoing basis of all CFS and Jordan's Principle documents, reports, data, budgets and policies that it is legally able to provide to the NAC and the NAC will be provided with copies of documents requested (including portions of documents that are not redacted), in a timely manner, to enable the NAC to complete its work and mandate.

16. The members of the Committee agree to work together to achieve the mandate of the Committee and to collectively provide recommendations for the program reform of the FNFCS program.

Term of the NAC

17. The NAC will commence its work in January 2017 and will complete its recommendations by January 31, 2018. Extension of time will be agreed to by the members of the Committee.

Membership

18. The National Advisory Committee will be composed of the following members:
    a. One (1) national chair;
    b. Three (3) representatives of the Federal Government including one or more regional INAC representatives;
    c. One (1) representative of the AFN;
    d. One (1) representative of the First Nations Child and Family Caring Society of Canada;
    e. Ten (10) regional representatives, one representative from each of AFN's regions, with alternates available when needed;
    f. One (1) First Nation youth representative; and
    g. One (1) First Nation Elder(s) representative.

19. The ten (10) regional representatives/their alternates, youth and elder members will be selected by the AFN through its ordinary processes. Observers are also welcome to attend.

20. INAC will provide adequate funding that is necessary for the NAC to complete its work, activities and mandate.

21. The National Advisory Committee will be chaired by a person agreed to by INAC, the AFN, and the First Nations Child and Family Caring Society of Canada.

22. By consensus representatives of the Provinces and Yukon Government may be invited to participate in the NAC's work, in order to provide assistance to the NAC and its members.

23. The Canadian Human Rights Commission may participate as an interested party.

Responsibilities of the National Advisory Committee

24. The Committee will be responsible for:
    a. Making recommendations, input into the design and assist in the development of FNCFS Program reform(s).
    b. Making recommendations on the design of engagement processes to assist in developing approaches for reform.
    c. Providing an advisory and support role to existing regional tables in the engagement processes and supporting the development and operation of regional tables in regions where they do not currently operate.
    d. Developing mechanisms for sharing information of the work and the activities of NAC, including with First Nations and Provincial Territorial Organizations, as appropriate.
    e. Developing and providing approval of a work plan for the work of the committee and the work of any advisory or expert action tables
    f. Overseeing processes for decision making, and recording decisions, understandings and minutes of NAC meetings.
    g. Making recommendations regarding implementation activities and following-up as appropriate.

Operating Principles

25. The NAC will operate on the basis of consensus and any dispute will be resolved by the Chair, with the assistance of an Elder.

26. The costs for regional representatives to participate in the work of the NAC shall be borne by the INAC/AFN.

Canadian Human Rights Tribunal (Tribunal)

27. These Terms of Reference shall be filed with the Tribunal. The Committee shall provide reports and/or minutes of its meetings to the Tribunal as long as the Tribunal retains jurisdiction over the complaint or until it orders otherwise or the parties to the complaint agree otherwise.

ANNEX A

Suggested Topics to be addressed by the National Advisory Committee

(to be discussed once Committee is fully formed)

The National Advisory Committee may address the following elements of the FNCFS Program:

A. General

i. Jurisdictional models eligible for funding under the FNCFCS Program

ii. General funding structure, stacking provision considerations, and considerations of eligible costs including funding arrangements between INAC and Provinces/Territories and non-Aboriginal service providers.

iii. Provisions for First Nations children not served by a FNCFS Agency to ensure comparable and culturally appropriate services.

iv. Provisions for extraordinary costs related to unusual occurrences that engage higher child welfare costs such as natural disasters, substantial increases in mental health or substance misuse, and unusual requirements for mandatory staff participation in inquiries.

v. Provisions for organizational networking and learning to promote the sharing of research and best practices among FNCFS Agencies.

vi. A process for economically modelling revisions to funding policy and formula and evaluating the efficacy of such changes on an ongoing basis to ensure they are non-discriminatory and safeguard the best interests of the children.

vii. A funding structure that takes into account costs related to historic disadvantage and distinct cultures and languages of First Nations.

viii. FNCFS Agency staff salaries, benefits, and training.

ix. Training for public servants involved in the FNCFS Program to ensure proper training for management of the program, including professional development on child development, First Nations cultures/histories, the Truth and Reconciliation Commission, and the history of the FNCFS Program including the Tribunal decisions.

x. Creating a new definition of “neglect” that takes into account First Nation norms, values and culture.

xi. Mechanisms for ensuring that reforms do not reduce current funding levels or

numbers of arrangements for FNCFS Agencies.

xii. Levels of service provided by FNCFS service providers and INAC reporting requirements imposed on FNCFS service providers should be comparable to the level of service provided by or imposed on provincial territorial governments and not pose an undue burden on agency staff .

xiii. FNCFCS funding agreements should promote long term planning, sustainable service provision and evaluation.

xiv. FNCFS services should be based on effective First Nations models, including jurisdictional models, for the design, delivery and evaluation of First Nations Child and Family Services and on sharing information and effective practices.

xv. FNCFS service providers serving small populations of eligible children should receive sufficient resources to allow them to provide culturally appropriate services that are comparable to those provided by FNCFS service providers serving large populations of eligible children.

xvi. FNCFCS funding for service providers serving more than 1000 children in care must account for the full population served.

xvii. There are to be no reductions or further restrictions in the level of FNCFS funding for any agency.

xviii. INAC approval criteria and processes for the development and operation of new First Nations child and family service agencies.

xix. First Nations efforts to exercise jurisdiction and/or initiatives to create separate self-governing child welfare regimes are to be supported and acknowledged

xx. The Touchstones of Hope framework for the design and implementation of community based visions of child safety and wellbeing.

B. Creation of a new FNCFS regime

i. Creation of a new FNCFS regime to fully replace the existing programs and services.

ii. New regime shall consider the distinct needs and circumstances of First Nations children and families living on-reserve, including their cultural, historical and geographical needs and circumstances.

iii. Program shall address the higher service needs of Frist Nation children resulting from intergenerational impacts of Indian Residential School and

effects of colonization, along with higher costs to deliver those services

iv. Ensure substantive equality in the provision of child and family services to First Nations children and families living on-reserve.

v. Develop enhanced funding mechanisms to ensure isolated, remote and northern communities serviced by agencies will be provided with equitable services and a full range of programs offered elsewhere.

C. Maintenance

i. Calculation of yearly maintenance.

ii. Appeal mechanisms regarding eligible maintenance expenses.

iii. Reimbursement of legal costs.

iv. Funding of support services intended to reunite children in care with their family.

D. Operations

i. Baseline assumptions of children in care for funding of FNCFS Agencies.

ii. Mechanisms to account for historical and ongoing inflation losses and annual adjustments going forward to ensure FNCFS Agency funding keeps pace with inflation.

iii. Corporate legal costs and costs for liability claims.

iv. Funding of remote agencies and agencies in urban areas to account for higher operations and maintenance costs.

v. Funding for records management, policy development and human resources management, liability insurance, audits, janitorial services, and security.

vi. Funding of costs related to the receipt, assessment and investigation of child welfare reports for all FNCFS Agencies that hold delegation for these functions including costs for after-hours service delivery.

vii. Funding of capital costs that takes into account increased need due to augmentation of prevention staff, services, and programs, and to ensure that buildings, computers, and vehicles meet the applicable safety regulations, are child safe, accessible by persons with disabilities, and support comparable child and family services.

viii. Funding of emergency repairs and maintenance of buildings.

ix. Funding for staff travel and travel costs related to children and families receiving child welfare services.

x. Definition of eligible child.

xi. Any changes to the funding structures to FNCFS Agencies or their reporting requirements.

E. Prevention Funding

i. Funding for the adequate and sustained provision of primary, secondary, and tertiary prevention services.

ii. Funding for the development, operation and evaluation of culturally-based prevention programs and reforms based on those evaluations.

F. Jordan's Principle

i. An approach to implement the full meaning and scope of Jordan's Principle in compliance with the CHRT orders across all children, all jurisdictional disputes and all federal services ensuring no delays in service provision related to the child's First Nations status.

ii. The creation of a non-discriminatory, accessible and transparent process for reporting of federal Jordan's Principle cases.

iii. The creation of non-discriminatory and transparent assessment criteria and assessment processes for reports of federal Jordan's Principle cases.

iv. The creation and implementation of an independent appeal process for federal Jordan's Principle cases.

v. Recommending mechanisms and required resources for public education regarding Jordan's Principle among First Nations, FNCFS Agencies, federal/provincial/territorial government officials and other stakeholders (such as: health professionals, teachers, and early childhood educators).

G. Accountability

i. The creation of an independent permanent expert structure with the authority, resources and mandate to monitor and publicly report on INAC's performance in maintaining non-discriminatory and culturally-appropriate First Nations child and family services and in fully implementing Jordan's Principle.

ii. The creation of a mechanism to act as a national and publicly accessible repository for all non-privileged information relevant to the provision of FNCFS services.

iii. All proposed reforms will be presented to the AFN Chiefs-in-Assembly for consideration, discussion and input.

iv. INAC shall carry out its duty to consult with first Nation governments and accommodate any First Nation interests with regard to any final proposal for program reform.

v. Training and capacity building for INAC and other federal government officials to ensure non-discriminatory, culturally based and equitable child and family services and implementation of Jordan's Principle.

Annexe 2
Biographie de Kevin Page

Kevin Page est le président fondateur et le président directeur général de l'Institut des finances publiques et de la démocratie (IFPD) de l'université d'Ottawa.

M. Page a été nommé tout premier Directeur parlementaire du budget le 25 mars 2008, où il a exécuté un mandat de 5 ans afin de fournir aux parlementaires et contribuables canadiens une analyse indépendante sur les tendances de l'économie nationale, l'état des finances de la nation et les dépenses du gouvernement. M. Page a dirigé une petite mais talentueuse équipe qui a bâti le premier bureau du budget législatif au Canada qui a été remarqué pour ses pratiques d'excellence parmi les nations paires par des organisations telles que le FMI et l'OCDE. En tant que DPB, il a documenté les insuffisances du financement des écoles des Premières Nations en 2009.

Suite à son mandat de Directeur parlementaire du budget et une carrière de 27 ans dans la fonction publique fédérale (dont plusieurs années au sein des agences centrales : ministère des finances, Conseil du Trésor du Canada, Secrétariat et Bureau du Conseil privé) M. Page a été nommé président de la chaire de recherche Jean-Luc Pépin de l'université d'Ottawa. En tant que titulaire de la chaire, il a conçu et a donné des cours en finances publiques et en économie et a supervisé des projets de recherche et de consultation au Canada et à l'international.

Figure d'autorité reconnue internationalement en ce qui concerne les enjeux financiers, M. Page agit en tant que conseiller du Bureau parlementaire du budget d'Afrique du Sud, le Conseil des finances de Slovaquie ainsi que le Réseau mondial des Bureaux parlementaires du budget de la Banque Mondiale.

May 2, 2018

Dear

The Institute of Fiscal Studies and Democracy (IFSD), led by Kevin Page, is pleased to be working with the Assembly of First Nations (AFN), the National Advisory Committee (NAC) and the First Nations Child and Family Caring Society of Canada (Caring Society) to support Canada's efforts in developing a data-driven program architecture for First Nations Child and Family Services (FNCFS) agencies.

You may remember the research IFSD conducted at NAC's request in Fall 2017 to identify gaps in salaries and benefits in FNCFS agencies. IFSD will be building on this work by analyzing and providing strategic advice on how to best monitor and respond to actual agency needs from financial and governance perspectives. For further information, please consult the project overview.

The success of this project depends on your participation. FNCFS agencies have an historic opportunity in response to the Canadian Human Rights Tribunal's (CHRT) orders to revisit the program architecture and associated funding for First Nations child welfare. **We need your help** to develop a baseline of existing resources (financial, human, programmatic, etc.) in order to measure the gap between the current and desired states of FNCFS agencies.

A survey will be the main tool for data collection to complete the baseline (a copy of the survey is attached). IFSD is committed to working collaboratively with FNCFS agencies throughout this project. To this end, **you and a colleague are invited to attend a two-day workshop in Ottawa** during which time you will complete the agency survey, working with IFSD staff. For further information on preparing for the workshop, please consult our short guide. Travel, accommodation, and related expenses for up to two representatives per agency will be covered by IFSD (e.g. Executive Director and Director of Finance).

In an effort to work with the response timelines of the CHRT, you are requested to register for an Ottawa workshop on or before May 8, 2018 by completing the online registration form. Shortly after your registration, you will receive a travel booking request from Merit Travel in Ottawa, who will directly manage all travel-related information.

As an affiliate of the University of Ottawa, IFSD is guided by ethical research guidelines respecting Indigenous peoples. The project will follow the Tri-Council Policy Statement on Ethical Conduct for Research Involving Humans and OCAP principles in all of its work. All information that will be collected will only be shared in an aggregate, anonymized (i.e. unidentifiable) form. For further information, please consult the overview of the project's research ethics guidelines.

As your agency's delegate for this exercise, you will play an important role as representative and liaison between IFSD and your agency. You are invited to visit the project website where you will find helpful information on the project.

Your efforts will directly contribute to the development of the first-ever baseline on the cost and needs of FNCFS agencies since the Wen:de reports in 2005. We value your time and your commitment, and we look forward to working collaboratively with you to improve outcomes for First Nations communities, children, and families.

I welcome your comments, questions, and feedback. Please do not hesitate to reach out to me directly via phone or email.

With kind regards,

Helaina Gaspard, Ph.D.

APPENDIX I

Expert Opinion: Data Reliability and Methodological Review

An Assessment of Major Phases of the Research Methodology Used in IFSD's First Nations Child and Family Services Project

By: Scott Edward Bennett, PhD

October 22, 2018

Preface

The author was involved with commenting on and observing many aspects of this project and was given good access to relevant documents and data. In addition, when constructing the final stages of this assessment, he was able to communicate with key personnel in order to clarify final questions. Dr. Helaina Gaspard and Ms. Janoah Willsie were particularly helpful as sources of final clarification.

Although the author of this assessment was not involved in the decisions preceding this study, it is important to consider the decisions and processes that led to the project which this assessment considers. These decisions and processes cannot be described in detail here, but readers of this assessment are encouraged to look at the relevant documents leading to the IFSD's First Nations Child and Family Services Project. A brief overview of the background follows.

The organizational and policy history preceding the IFSD study is complex and involves a variety of institutional actors. The National Advisory Committee (NAC) has been one of the central organizations in this area. The National Advisory Committee was created after the "First Nations Child and Family Services Joint National Policy Review Final Report" was issued in 2000, and this was done in order to fulfill the recommendations made by the report. Recently, The NAC took on guidance and oversight of some activities that followed from a number of Canadian Human Rights Tribunal (CHRT) decisions.

In 2016, the Canadian Human Rights Tribunal issued a decision (2016 CHRT 2) stating that First Nation's Child and Family Services (FNCFS) have been subject to discrimination and ordered that this discrimination be addressed by the Government of Canada. This was shortly followed by 3 other CHRT decisions relating to non-compliance

(2016 CHRT 10, 2016 CHRT 16 and 2017 CHRT 14) which provided for clarification and implementation of the original decision. Basically, discriminatory polices had to be changed immediately, applied with a broad definition of coverage and not hindered by intergovernmental disputes about financial responsibility for service. Most recently an order was issued (2018 CHRT 4) which had a number of components. Of central importance to the project on which the paper focuses is the requirement that a study be done to assess the needs to be met by FNCFS agencies and to cost those needs. The IFSD was charged with the conduct of such a study of the current and future states of First Nations Child and Family Services, This assessment covers the main part of the IFSD's data oriented activities in this area. The NAC (composed of a various stakeholder representatives)[1] was charged with oversight and guidance of the research. The Assembly of First Nations (AFN) plays a central role in providing functional support to the NAC and financial support to the IFSD project.

Much more could be said about the complexity of the organizational background to the IFSD research, but the above at least suggests the basic organizational relationships of interest. In addition, the IFSD had to work within fairly exacting ethical standards. These standards include: OCAP principles and the Tri-Council Policy Statement on research involving humans as well as the University of Ottawa's research standards. In light of all this, the successfully conducted study to be considered in the following comments is particularly remarkable

[1] One national chair, three representatives of the federal government including at least one or more regional INAC representatives, one representative of the AFN, one representative of the First Nations Child and Family Caring Society of Canada, 10 regional representative one from each of AFN's regions, one First Nations youth representative, one First Nations Elders representative

Introduction

The IFSD was tasked with gathering and analyzing data to assist in the description and possible improvement in Child and Family Services organizations that serve various First Nations communities. Central to this project was the characterization of costs of providing services and using this characterization to suggest improvements in funding arrangements. Between the initial conception of the project and the final analysis leading to recommendations are a great many stages of activity, and each one affects the quality of the project.

This report will consider the major stages of activity in the project and comment on the quality of each stage. For our purpose, the major stages to be considered are:

-General research design

-Design of the data collection instruments

-Administering the instruments to gather data

-Coding and quality control procedures used with gathered data

-Analytic decisions and techniques

-Foundation for reporting and recommendations

At a general level, this project is based on a fairly well known type of research design. However, this design has been implemented in a way that is complex, and it serves analytic purposes that have special policy implications. All of this was intended as it suited the policy making purposes of this project, which are indeed innovative, and the organizations being studied.

General Research Design

The design used in this project is similar to what is often called a "cross-sectional survey". A cross-sectional survey is simply a survey questionnaire based project that is administered to a sample (or, in some cases, a population) at one point in time or during a definable period of time. This is a very strong design if one is primarily concerned with measuring the characteristics of a group at a given point or period of time. This includes both the basic univariate characteristics as well as more elaborate bivariate and multivariate relations. At the same time, this design, while very powerful and often used, is less useful in sorting out some kinds of causal relationships that require measurement over several points or period in time. Having said that, very few commonly used policy designs provide a flawless basis for sorting out causality, and causality is not always a central analytic concern. Furthermore, project researchers for this study took some care to understand the temporal context in which the data emerged, and this strengthens our ability to make reasonable assumptions about causal patterns.

One other important aspect of the logic of research design is the way researchers conceive of the sample being used and its relation to the population. In very broad, non-technical terms, samples can be thought of as probability samples, non-probability samples and censuses. Of course, there are many variations within each of these categories. The appropriate way to view the case selection aspect of this project is that it is an attempted census. Since some readers will be unfamiliar with this perspective, some further elaboration of this point is provided below.

A census is any survey in which the intent is to give every element in the population of interest a chance to provide data. So, the intended sample is the same as the population

of interest, and the population of interest is the intended sample. Since most people probably associate a census with the near perfect coverage of a census of individuals conducted by a national statistical agency, it is important to remember that the concept of census has a broader meaning. Thus, there will be censuses where the intent is to measure a whole population, but it is not implemented at the near perfect levels of typical official censuses of individuals.

In the case of the IFSD study, the population was child welfare agencies that provide services to First Nations communities. An attempt was made to contact every one of them. A high degree of success was achieved with 80 out of 106 agencies providing some useful information. Thus, the census was successfully implemented with respect to 75.5 percent of the population. While this is a lower response rate than a government census of individuals, it compares very favorably with other censuses of organizations in which the author has been involved. It is certainly much better than the typical response rate in almost any sort of sample survey conducted in recent years for almost any sort of reasonably large population.

By way of specific comparison with other types of studies, a very well conducted census of individuals might achieve a response rate percentage in the high 90s. Of course, this is achieved with a massive infusion of government resources and the compulsion of law. In a recent non-mandatory census of Canadian municipalities focused on infrastructure, there was a gross response rate of 57 percent. Note that this is an organizational population where most organizations have some established capacity for dealing with information requests. Of course, when one looks beyond censuses to samples

surveys, contemporary response rates are often below 20 percent apart from surveys done by official statistical agencies with massive resources and the support of legislation.

Since this is viewed as a census, it will have implications for analysis and decisions about statistical presentation. This will be discussed in more detail later. The important point to summarize here is that this is a well-conceived and well implemented example of an organizational census and based on a design logic that is suitable for the analytic purposes at hand. The specific suitability of design features to analytic goals will emerge in various parts of this report.

Design of the Data Collection Instruments

The questionnaire was developed during the period of April 9, 2018 to May, 16 2018. However, the form of the questionnaire was influenced by even earlier activities. Specifically, the IFSD was involved in an earlier version of this data collection activity in the fall of 2017. Based on that experience, the contents of the current questionnaire were expanded. In addition, there were additions to the current questionnaire made in response to an order from the Canadian Human Rights Tribunal of February, 2018. Several experts reviewed the questionnaire as well as the National Advisory Committee It is worth noting that there were some minor updates made to the instrument after the first set of workshops involving child welfare agencies was held in May of 2018. Additional questions were added, and some questions were reformulated. Those who took the slightly different earlier version of the instrument were given a chance to complete the later questions, and some did this. All information from the initial early form of the survey was easily merged into the slightly different new format. Basically, this is a simple example of adaptive survey research design.

Once the instrument was stabilized, it was translated from English into French. After translation, the instrument was input into SurveyMonkey for online administration. There were some minor problems in using SurveyMonkey initially, but workarounds were found for this, and, ultimately, formatting was successfully adjusted to use with SurveyMonkey. However, in the early stages before issues with SurveyMonkey were resolved, respondents had to submit responses in WORD or Excel Format. This was then entered into a master Excel spread sheet.

The most important thing to consider when viewing the instrument is that it differs in certain general ways from a typical, survey questionnaire. However, this was intended and appropriate to the goals of the project. This is a very long instrument that often requires detailed information of numeric and textual natures. The PDF version of the instrument is 90 pages long with 105 questions, many of which have detailed subsets. It is not the typical survey questionnaire which must be constructed with an eye to reduce respondent fatigue while measuring certain features of a respondent in a highly condensed and sometimes artificial manner. This was a detailed framework for recording fundamental budgetary and organizational information about child welfare agencies and the communities they serve.

Despite it being different it worked very well, and there are very good reasons for this. First of all, the respondents represented organizations that had a definable interest in improving information on budgetary information relating to child welfare services for First Nations communities. Second, considerable energy and resources were directed to helping respondents think through and work with the questionnaire. More will be said on this later. Third, the project has always been conceived as one in which participants could gain a

better basis for future organizational decision making, and, in this respect, more is involved here than measuring more or less complex characteristics during a given period of time. So, the instrument made it possible to characterize organizations while, at the same time, involving respondents in a learning experience with ample time to refer to relevant informational sources.

It is useful to understand the scope of the instrument and to get some idea of what it does include and what it doesn't include. The major blocks of items in the instrument are:

Agency Details --- This includes the agency name, its relevant contact information and coordinates, the catchment areas served by the agency, the identifiers for the First Nations communities served by the agency, the form of transport used to access each community, the number and locations of any satellite office of the agency, definitional aspects of the administrative meaning of child as well as the number of children served by an agency (on or off reserve), number of children currently in protective care of agency (on or off reserve), number of times requests from off –reserve for certain types of services (prevention and protection) were received during fiscal year 2017-2018, agency's designation to provide child protection, types of ancillary services provided by an agency, a detailed description of an agency's mandate, a detailed description of an agency's history, an agency's functions in both protection and prevention, an agency's activities in the realms of governance and data collection

Budget and Finances --- an agency's total annual budget for fiscal year 2017-2018; total annual budget for fiscal year 2017-2018 specifically related to child and family services; percentage breakdown of budget for protection, prevention, governance, data collection and reporting; maintenance costs in 2017-2018 for each of foster care, group homes,

institutional care and kinship care; percentage of total annual budget allocated by the federal government exclusively for protection and related services, i.e. intake and investigation (excluding maintenance); a detailed breakdown of an agency's protection related costs for fiscal year 2017-2018; annual amount allocated by federal government for prevention and least disruptive services; a detailed breakdown of agency's budget for various aspects of prevention and least disruptive services; detailed description of best practices for prevention and related funding and costs; spending and service description relating to child service purchase amount under definitions determined by CHRT; presence of intake and investigation and mode of delivery; for an agency with intake and investigation functions how many staff are utilized and what are their average caseloads; detailed additional cost breakdown for different aspects of intake and prevention; spending ratio between protection and prevention coasts, presence and funding of a band designate; detailed breakdown of sources of funds for 2017-2018 fiscal year; identification of current funding model and administrative features of payment frequency and reporting; any transferring of funds from one category to another to cover shortfalls during fiscal year 2017-2018, was agency in deficit in 2017-2018 fiscal year; agency experienced any change in funding or operating budget with descriptions; physical features and ownership status of agency headquarters

Capital Assets --- breakdown of agency's capital expenditure budget for fiscal year 2017-2018; operating and maintenance costs for main categories of assets for fiscal year 2017-2018; nature of agency headquarters accessibility; ownership status of agency satellite office; locations and physical features of satellite offices; accessibility of each satellite office; indigenous language capability of each satellite office; does associated First Nation

provided rental accommodations for agency; cost of building repairs needing for agency in fiscal year 2017-2018

Technical Profile --- Detailed indication of how new agency software, hardware and related are; satisfaction with current software and related; detailed breakdown of estimated costs to bring agency's technology platform to a state where it can fully support requirements; description of any cloud based technology used by the agency

Operating and Maintenance Costs --- Salaries and benefits for the fiscal year including employee salaries, costs of professional services and contractor, other expenses similar to salary or fees; employee benefit expenses for the fiscal year including health and dental, retirement, other benefits; staff professional development expenses for the fiscal year including training, well-being; agency fiscal year costs for audit and evaluation, travel; legal fees for the fiscal year including total legal fees, legal fees pertaining exclusively to children; any shortfalls in capacity to cover legal fees either through not using legal service or through budget reallocation

Employee Details --- Number of full-time equivalents employed by agency; number of part-time equivalents employed by agency; distribution of number of employees by type of job; distribution of number of part time employees by type of job; Average hours worked per week for different types of employees; length of time different types of employees typically spend in a position; do the scope of different types of employees typically exceed their contractual duties for different types of employees; salary ranges for different types of employees; is agency able to pay its employees at a level comparable to provincial employees who do similar work; are employees compensated for over time; agency and clients able to access services at a reasonably commutable distance; gaps ins services due

to lack of reasonably commuting distances; amount in fiscal year spent on connecting community members to services beyond mandate

Small Agencies, Remoteness, Travel Costs, Gaps in Service --- Does agency remunerate for remote work; cost of different forms of remuneration to agency; distances travelled by different types of employees to do their job; average distances people seeking help from agency must travel; cost of different types of travel expenses to the agency during the fiscal year

Caseloads --- Current total caseload; number of cases within total caseload served in a culturally appropriate manner; agency's current exclusively child based case load; average number of staff assigned to an open case; average number of cases per social worker; average caseload for each of various categories of employees; percentage of cases per various ranges of hours of service per week; percentage of substantiated maltreatment cases during fiscal year per various types of maltreatment

Governance --- How agency governed; are chiefs members of the board; agency standards of practice; how are communities involved in governance; characterization of relations with communities; does community engage in prevention activities; do communities guide prevention activities.

Data and Reporting --- Describe agency's definition of success; how agency measures success in prevention programs; how agency measures success respecting protection activity outcomes; how does agency monitor activities and measure success, does agency have program to support children aging out of care and if relevant an indication of resources devoted to this; any circumstances for agency not covered in the survey with a

description and resource implications if relevant; any other comments on practices or services of agency not covered in survey.

It is clear that there is a lot of detail here. Agency representatives sometimes, but not always, had appropriate data on hand from existing documents. However, it was often the case that an agency would not have a clear response to some detailed item without doing a bit of special assessment of some aspect of the agency. So, the instrument is something like a conventional questionnaire but a questionnaire in which agency respondents could draw on existing or producible records and reports. In some ways, the instrument represents a melding of administrative data and the reasoned response of the agency representatives. It produced a data set that is essentially a merging of individual responses and administrative data. This, by the way, is not a negative thing. Many surveys would be better if they allowed for thoughtful assessment of records prior to a final informed response. In addition, one of the latest themes in survey methodology concerns how different data sources can be integrated to reduce overall error.

This sometimes means that questions will be posed in the instrument in a way which is not purely consistent with what one might find in a conventional survey questionnaire. However, this is appropriate because the instrument is not a typical questionnaire. As noted it merges data from a variety of sources as filtered through the judgement and participation of the agency representatives.

Perhaps the point that will stand out most for those who are used to conventional policy oriented questionnaires is that it does place a heavy weight on asking agency respondents their subjective views about how well the agency was doing in some area or how satisfied they were with some aspect of the agency. There is some of this, but there are

many parts of the instrument that do not generate that kind of data. In light of this, it should be stressed that this is all consistent with the purposes of the project. The main concern was to get at objective organizational dimensions of agencies and to analyze those with a view to predicting costs. Furthermore, this all had to be done with an emphasis on obtaining particular kinds of hard organizational data.

It may well be that future iterations of this project could ask additional subjective questions about satisfaction, preferences, etc. this would seem more feasible once participants are used to the core aspects of the questionnaire. At the same time, it is worth noting that the motivations behind people's responses to preference and satisfaction questions can be very complex and somewhat strategic. This is particularly true when dealing with the funding of agencies where respondents are employed. Thus, there is a certain wisdom to the balance of question formats used here, and a stress on the more objective aspects of organizational profiles is wise.

In summary, the instrument differs in some ways from what has come to be seen as a typical survey questionnaire, but that is perfectly acceptable in that serves a purpose different from a typical questionnaire. Furthermore, it gathers and integrates much more complex kinds of data than a typical survey questionnaire. The instrument was developed with very detailed attention to the policies of interest and with detailed involvement of the organizations and communities involved in the policy. Thus, it is well designed to reflect the current state of child welfare agencies serving First Nations communities, and it also provides a basis for reflective learning by all those involved in the administration and development of these services.

As we shall see this level of detailed attention to quality and usefulness is further pursued in the next stage of the research process, data collection.

Administering the Instruments to Gather Data

Data collection took place from between May 14, 2018 to July 31, 2018. [2]The first part of this stage began with an email from Kevin Page May 1, 2018, President and CEO of the IFSD, to the Executive Directors of the 104 First Nations Child and family service agencies that formed the initial population of interest in this study. The initial contact information was provided by Indigenous Services Canada (ISC). The email contained an endorsement of the project from the National Advisory Committee (NAC). This is excellent practice for this type of project. It serves to underline the legitimacy of the research and to prepare agencies for the content of interest in the project. This sort of early description and support for a project is critical to encouraging a good response rate.

Dr. Helaina Gaspard, Director of Governance and Institutions at IFSD, emailed a letter to the agency Executive Directors on May 3, 2018. It provided a more detailed outline of the project and invited agency representatives to attend one of four workshops scheduled in Ottawa in May or one in Saskatoon at the end of May. The Saskatoon workshop was added a bit later in the decision process based on suggestions from First Nations Child and Family Services agencies in Saskatchewan. A sixth workshop in June was added to further accommodate agencies who could not attend a May workshop. This is

[2] It should be kept in mind that a few responses that come in after this deadline will not be refused, and, if they are received before too much time passes, it may be possible to integrate them into the final analysis data set. It is just worth noting that eventually one must decide to accept a given set of agency responses as a stable data set so that a final report can be produced.

further evidence of the detailed groundwork that was laid to ensure participation in the project.

It is also worth noting that those agency representatives who came to the Ottawa workshops had their relevant expenses covered or reimbursed. Flights and accommodations for up to two representatives per agency were booked for them by IFSD. Representatives were reimbursed for any travel by car or taxi as well as provided a per diem for food and expenses. This is in some ways similar to the response incentive systems that are part of many well-funded research programs. In some respects, it is more neutral than an incentive because it is covering costs of participation and not providing a reward or a payment for time utilized.

Further advance preparation and participation priming took place when every agency in the population received at least one phone call starting on email on May 4, 2018. At least one email reminder was sent to each agency starting on May 9, 2018. Response rates for the project were further encouraged by NAC regional outreach and by Cindy Blackstock's video promoting the project and associated workshops. This was sent to all project stakeholders including potential participants on May 8, 2018.

So, as we can see, there were extensive preparations made to alert agencies about the study and to encourage to participate in the workshops. The level of effort in this area is at a superior level compared to basic standards for contacting and encouraging respondents. Ultimately, the proof of its excellence is in the level of response, and we shall see that that was very good. One of the secondary effects of this contact effort is that 2 agencies came forward that had not been included on ISC lists. They were not on those lists

because of some of their special characteristics. However, they were relevant to the study and were included in the relevant population which now counted 106 agencies.

Of the 106 agencies that constituted the population, 68 were able to attend one of the 6 workshops thus yielding an initial response rate of 64 percent. Those who attended a workshop were administered the instrument in a format presented on SurveyMonkey. They were assisted with necessary by IFSD staff who were available at the workshops. This is an interesting feature of the study in that it very directly allows respondents to seek clarification regarding questions and formats in the instrument. This kind of clarification is sometimes provided in other types of surveys through contact emails or phone numbers, or in a telephone interview, it might be provided remotely by an interviewer or supervisor. In this case, assistance was provided in a much more direct and potentially detailed way. It assisted the respondents in providing more detailed context to their responses, and this was an intended and important part of the project.

Another aspect of the workshop experience was that respondents were involved in future state exercises to discuss goals and measures of success for their agencies and communities. While this might not be a standard aspect of a conventional survey or strictly designed policy experiment, it was always intended that there would be a qualitative element to this project as well as an element that allows respondents to put current and future responses into a richer context.

Even though the level of response encouragement had been very high and the results of that initial effort were very good, the project staff went even further and extended the initial deadline to register for a workshop. There was additional email or telephone follow up to encourage participation. A fifth Ottawa workshop was scheduled for

June 4-5, 2018 to accommodate those who had not been able to attend a May workshop. Finally, 5 agencies that were not able to make any of the workshops were allowed to complete the instrument remotely online with assistance from IFSD staff.

Data Collection was finally closed off on July 31. In conjunction with these data collection activities, there were also initial quality control activities that will be described in the next part of these comments. Again, note that there may be some minor adjustments to this cutoff date depending on the amount and nature of any late responses.

As we can see, efforts to encourage the response rate were at a very high level. Furthermore, efforts to make sure that respondent could seek clarification about the instrument were also at a very high level. The final results of this data collection stage were 80 completions out of a sample of 106 yielding a response rate of 74.5 percent. In the current era, this is an extremely good response rate and well above what is achieved in surveying many types of populations. At the end of the day, the only things that I would recommend here are of a very secondary nature and could be explored at a later time. For example:

1. Examine the differences between late responding agencies and early responding agencies.
2. In so far as possible, examine differences between non-responders and responders. This has already been done in a preliminary way, and there does not appear to be any major differential non-response by province.
3. As a very minor point, explore responses differences between those who completed the instrument remotely and those who completed it as part of a workshop.

4. Consider in more detail the relationship between the future state exercises at the workshop and various instrument topics. This is a legitimate part of the study and its long term trajectory, but more details about it would be useful.

The above are very minor points but will provide more context for considering secondary analysis of the data. They do not affect the fundamental excellence of the data collection stage. There are conventional ways to approach all of these aspects of data quality analysis

Coding and Quality Control Procedures Used with Gathered Data

The main coding and quality control phase of the project took place from June 12, 2018 to August 3, 2018. However, partially preceding this and overlapping with main coding and quality control activity, all submitted surveys were reviewed for completion. Follow-up emails and calls were made to address missing or unclear responses whenever they occurred. Follow-ups began in Mid-May of 2018 following the first workshop. They continued into early July of 2018. Approximately one third of the attempted follow-up contacts received responses. A final reminder was sent on July 13, 2018, and, as indicated before, data collection was closed on July 31, 2018.

While this activity is part of the data collection process, it is also part of quality control activities, and it is described here for that reason. This was a well-conceived and implemented part of the project which is seldom matched in data collection and quality control activities in the current era. Such high level quality control activity was once a common part of excellent surveys in an earlier era prior to the advent of various technologies for contacting respondents electronically.

The main quality control and coding phase came next as indicated. Here, the primary concern was accurate coding and data recording, but there was quality control

with respect to that activity itself. The main steps in this process as described by project staff member Janoah Willsie are as follows:

1. A spreadsheet was designed to capture responses and to facilitate coding. Codes were assigned for multi-part questions and for questions with qualitative responses. Data input sheets provide more information on coding details.
2. All surveys were printed. Data was entered into the spreadsheet from the surveys and marked on the paper copy as it was inputted. Each entry was inputted by one team member and checked at least once by another member of the team.
3. Following initial data entry, the more complex qualitative questions were coded and integrated into the master spreadsheet.
4. The full data set was spot-checked by a third person. Over half of the surveys (41/80) were selected at random and entries were checked to ensure consistent coding and accuracy.

Considerable effort was made to enter and code data in a manner that was checked at two different points in the process. This is an excellent level of quality control and coding. Perhaps the one thing that could be suggested for future activity is that a method should be found to transfer data entered in the computerized online instrument into a software based spreadsheet, thus avoiding any printing and transcription. This not so much a suggestion with respect to accuracy as with respect to efficiency. There were enough checks in the process to ensure that data were accurately input into a spreadsheet from a printout, but the activity could have been completed more quickly had there just been an export from the digital instrument to some kind of spreadsheet or data file software. It is likely that there is software that could accommodate this. Having said that, the step of

printing out survey results and entering them into a final file did create another opportunity to view some of the qualitative aspects of the data. Yet, I still think something like this could have been achieved without hard copy as an intermediate stage.

As a first major pass at this kind of project, the process that was used was fine. However, in the future hard copy printouts could probably be avoided. Coding can also be done on a digital spreadsheet and double checked or cross checked in that format as well. This is an appropriate point to discuss one other aspect of data quality having to do with any variations in the quality of responses across instruments across different types of questions. This can have just as much impact on the quality of data as the overall gross response rate. We can actually get a pretty good picture of this aspect of data quality because of the intimate involvement of the main coding and quality control people with the detail of the data. We will relate some of the determinations on these matters as they emerged from discussion with coding and quality control staff.

First of all, of the 80 responding cases, one of the agencies submitted an instrument that had so few useful responses that it was essentially unusable as a case. Two other instruments were lacking useful responses to about one third of the questions. So, these were of some use but not ideal. This does not substantially affect the overall quality of the data.

In addition, we can look across the whole spectrum of questions and see if there were some that generally did not yield many useful responses. Although there was nothing extremely problematic to report here, it does appear to be the case that respondents in general were less likely to give useful responses to items 99 to 104 near the end of the instrument. This is very likely just a function of respondent fatigue and is not unusual in

very long instruments. Other questions that tended to be answered in a less than ideal fashion or did not have many usable responses were items 31, 35, 36, 42, 43, 77, 90 and 91. In examining those items, it is likely that they required respondents to think in terms of accounting and administrative categorizations that may be relatively detailed and/or relatively rare in the context of some agencies. This is useful to be aware of for the future, but it does not fundamentally impact the main objectives of the project.

Analytic Decisions and Techniques

Analysis began on June 28, 2018, and is ongoing as this report is being written. It is expected that analysis will be completed by the end of September, 2018. The first part of the analysis was essentially an examination of the properties of the main variables represented in the data. For the most part, variables were examined independently in a kind of basic univariate analysis. Apart from providing a first view of the data, this was used to begin to conceptualize further characterizations of the data. These characterizations were called "typologies," and they were focus of the next stage of analysis.

Initial analysis indicated that six typologies would be useful means to summarizing the data. These were defined in terms of: agency budget, child population served, distance from nearest city, rurality, province and funding formula that relates to an agency. Within each of these typologies, data were analyzed to see connections with other variables and relationships with agency costs across different parts of a typology. An example of the preliminary results of this part of the analysis was the finding that travels costs were an important cost-driver for agencies. This particular finding was further examined to see whether agencies with fly-in vs. road accessible communities differ in terms of travel costs

represented in their budgets. Of the original six typologies, it proved fruitful to direct further analysis to three in particular. These were the child population served typology, the remoteness typology and the accessibility typology. This typology analysis is essentially a form of bivariate analysis, and in, in some cases, verges on a very basic type of multivariate analysis. In later stages of analysis which are still ongoing, regression analysis will be used to see more directly how much certain variables can explain costs and how sensitive costs are to other factors.

What has been done thus far has proved to be quite useful and illuminating. The analysis is not based on the use of highly sophisticated statistical techniques, but it more in the realm of basic to intermediate techniques. Nevertheless basic techniques are often sufficient to reveal the main patterns of interest in a policy related research, and, in this instance, they have been applied with skill. Having said that, there is probably more that could be done with more complex regressions, cluster analysis, factor analysis and so forth. There is also probably more information to be mined from the richer qualitative responses. However, much of this can be left to researchers involved in secondary analysis of the data. The important point at this stage is that useful and illuminating analysis has been done in a way which provides insights into the central policy problems of interest. For the most part, that has been achieved.

Now that the basic outline of the analysis has been described, let us proceed to some background analytic issues that are useful to keep in mind and which are linked to comments in other parts of this report. These comments are more directed at potential readers of the results of the study on which this note comments. It is not intended as guidance or criticism of what has been done.

Specifically, let us consider how one approaches the analysis of census data and the sometimes unexpected features of such analysis. One of the interesting things about census data is that it does not need to be analyzed using conventional statistical inference or significance tests. This is not commonly understood in some circles, but it is a point that is making inroads into various official guidelines. So, while a full range of descriptive (non-inferential) statistics can be applied to much of the data, there is really no fundamental reason to apply tests of significance or inference. That is not to say, they can't or absolutely shouldn't be applied. It is just to say that it is not really necessary to apply them with this sort of data.

The reasoning here is that inference and significance is usually examined in terms of random sampling error generated when a subset of a population, the sample, is drawn to generate an estimate of the whole population. When one is targeting the whole population there is no sampling error as such. Therefore, significance and inference tests are not necessary or of central importance. However, to the extent that the census is not perfectly implemented there may well non-response bias. This is worth considering, but it cannot be addressed with inference and significance statistics.

People sometimes make more or less knowledgeable defenses for the use of significance tests in these situations. Often, this has to do with having some tool to decide what relationships or estimates are more important than others. This is somewhat misguided, but since people are used to it, there is no harm in including such statistics as long as their limitations are noted. With census data, the important issue is how big are the effects and relationships generated from the population data. People have to arrive at their own bench marks for this that are appropriate to a specific set of analytic goals. This forces

one to come to grips with the nature of census data. Also, as noted, one should give some thought to the possible non-response bias arising from less than 100 percent coverage of the population.

As a minor side comment, note that even if one wanted to deal with this kind of data as if it were a sample, the precision of the estimates it produced would be extremely good as this would then be an example of finite population sampling. However, as indicated, this writer does not favor viewing this as a sampling process.

Foundation for Reporting and Recommendations

To summarize and conclude, let us consider the foundation on which analysis and reporting will be constructed. We have found that the project:

1. Utilizes a well-known research design in that it is a cross-sectional attempted census. This is quite a powerful and useful design though, in and of itself, it might have some limitations in sorting out causality or over-time changes. However, it could be extended to cover the passage of time.
2. The instrument was designed with a great deal of care and attention to detail and translated in to both official languages. It differs to some extent from a typical survey research questionnaire in that it does not, for example, make use of certain overall preference questions to the same extent as a typical questionnaire, but this is consistent with the research purposes and future plans for this project. There are some preference items, and this writer was interested to see that additional ones are being experimented with in requests embedded in updates sent out to responding agencies and other relevant parties. It is also true that the instrument is quite long and detailed compared to many questionnaires, but this is also consistent

with research purposes and seemed to work well with the specific types of agencies studied and their representatives.

3. Enormous effort was made to prepare the relevant population of agencies for participation in the study and to make it possible for them to complete the instrument. The results were outstanding, yielding a response rate of 75.5 percent. Generally, completed instruments were consistently completed, but there may be some merit in considering in more detail whether there is a subset that tend to be less responsive on an item or question basis. Earlier we noted some of the question items that seemed to attract fewer useful responses. This is quite acceptable, and the writer expects that these will improve in any subsequent studies simply because respondents will have become more used to some of the concepts involved.
4. Quality control really began while some aspects of field work were being completed and continued on for some time. This happened in conjunction with coding and data transcription activities. All of this done with double checking and cross –checking throughout the process. These were well managed activities involving a very high level of effort, and this was obviously positive from the standpoint of data quality. It may be that future iterations of this sort of project could benefit from exporting directly from survey instrument software to spreadsheet or analytic software.
5. Initial analysis of the data was completed using basic and intermediate analytic techniques, and this was done with excellence. Some interesting and useful profiles were produced which will provide a foundation for further analysis and reporting. Readers of the report should be alerted to the census nature of the design and its

implication that significance tests are not all that useful and, if provided, are provided on an "as if" basis. [3]

6. There would probably be some merit in analyzing differences between non-respondents and respondents and similar kinds of distinctions. [4]In the longer term, it may also be useful to apply more advanced techniques to some of the data. However, this is more of a matter for late stage, secondary analysis.

In summary, this is a very high quality project that involved an enormous amount of effort in characterizing organizations that are not typically easy to reach. In many respects, it is outstanding. It should be a very reliable foundation for characterizing and analyzing the needs of the First Nations child and family service agencies. This is true in general as well as with respect to specific concerns with budgetary and cost analysis.

This is such high quality and interesting data that I hope its use will be permitted in a wide variety of secondary analysis.

---

[3] To illustrate the "as if" aspect of the way some organizations portray sample precision, consider the following as an example. Some organizations try to create an imagined sense of precision for a non-probability sample by calculating confidence intervals for the non-probability sample results as if they were based on a probability sample with the same number of cases.

[4] The basic idea in looking at differences between respondent and non-respondents is to take the background information we have on members of both groups and see if there are any major differences. We do indeed know some things about both responding and non-responding agencies in that we know their location. This creates the opportunity to look at a number of location based variables. For that matter, if one wanted to take this a step further, one could also get (in some cases) meaningful aggregate data about the socio-economic characteristics of communities associated with respondents compared to non–respondents. In some cases, this may not be possible because some standard government surveys do not deal with certain situations such as very remote communities or reserves.

APPENDIX J

Population Projections and Growth Rates

FIRST NATIONS POPULATION PROJECTIONS ON-RESERVE, CONVERGENCE SCENARIO

0–18 FIRST NATIONS POPULATION ON-RESERVE CONSTANT SCENARIO (IN THOUSANDS)			
Year	**Population**	**5-year overall growth**	**Annualized growth rate**
2011	152		
2016	159	4.61%	0.90%
2021	170	6.92%	1.35%
2026	180	5.88%	1.15%
2031	189	5.00%	0.98%
2036	200	5.82%	1.14%

Total populations and projections were provided at five-year intervals. The annual growth rate was needed to calculate program costs. By interpolation (assuming that every year has the same growth rate), the annual growth rate was determined by reverse compounding within the five-year interval. This approach can be modelled as:

$(1+r)^5$= five-year growth rate, accounting for the previous year's population increase

To calculate the annual growth rate within that five-year period, the following interpolation was used:

$(1+r)^5$= five-year growth rate
1 = the benchmark year's population
r = the growth rate
5 = the five-year period

As an example, the calculation for the annual growth rate between 2016-2021 for the 0-18 First Nation population (on-reserve only, constant scenario) is modelled below.

2016 is the benchmark population year
Population in 2016 = 159,000
Population in 2021 = 170,000
Five-year growth rate between 2016 and 2021 = 6.92%

The five-year growth rate was determined by calculating the percentage difference between the two populations in 2016 and 2021. The percentage difference calculation is modelled as:

% difference = (B-A)/A
B = population in 2021
A = population in 2016

% difference = (170,000-159,000)/159,000
% difference = 11,000/159,000
% difference = 0.0692
% difference = 6.92%

To interpolate the annual growth rate, we solve for "r" in the formula:

$(1+r)^5$= 6.92%
$(1+r) = \sqrt[5]{6.92\%}$
$r = (\sqrt[5]{6.92\%})-1$
r = 1.35%

Annual population growth rates for the convergence and constant scenarios were interpolated for the total First Nation population on-reserve (see. The total population growth rates were applied to current total agency catchment populations to estimate the costs of prevention funding per capita. The agency catchment populations were a custom tabulation using Statics Canada's census data.

APPENDIX K

Children in Care Calculations

The calculation of estimated future number of children in care can be modelled as:

(1 + annual growth rate) x Number of Children in Care** in Year*$_{n-1}$ *= Number of Children in Care in Year*$_{n}$

The annual growth rate is the rate at which the 0-18 on-reserve population increases or decreases.

APPENDIX M

Indigenous Services Canada (ISC) Program Spending Breakouts

Program Name	17-18 Funding5	Breakout in Departmental Costs vs. funds to First Nations6	Performance criteria and results reporting for each program
FNIHB / HC			
Aboriginal Head-start on-reserve	$30,561,340	Vote 1 $607,678 Vote 10 $29,953,662	Number of children in First Nations communities accessing early literacy and learning services and supports https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1
Healthy child development	$32,044,848	Vote 1 $5,638,051 Vote 10 $26,406,797	Percentage of First Nations communities that screen for risk factors for developmental milestones through participation in healthy child development programs and services https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1 Percentage of First Nations communities with maternal and child health programming that provide group breastfeeding support activities. https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1
Mental Wellness	$160,210,929	Vote 1 $11,245,084 Vote 10 $148,965,845	Percentage of addictions counsellors in treatment centres serving First Nations and Inuit clients who are certified workers. https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1 Percentage of First Nations communities that report service linkages with external service providers in delivering Mental Wellness promotion https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1
Canada Prenatal Nutrition Program (on-reserve First Nations and Inuit)	$12,935,948	Vote 1 $240,866 Vote 10 $12,695,082	Number of women in First Nations communities accessing Prenatal and Postnatal Health services and supports including Nutrition https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1
Brighter Futures	$56,295,405	Vote 1 $39,319 Vote 10 $56,256,086	Brighter Futures focuses on community-based health promotion and ill-health prevention programs for First Nations and Inuit communities. Performance criteria and results for programs such as these are sought from Healthy Child Development, Mental Wellness, and Healthily Living

[5] Information collected from Program staff

[6] For most programs this is distinguished through Vote 1 (departmental operations) and Vote 10 (Grants and Contributions)

Program Name	17-18 Funding5	Breakout in Departmental Costs vs. funds to First Nations6	Performance criteria and results reporting for each program
Building Healthy Communities	$46,241,107	Vote 1 $457,533 Vote 10 $45,783,554	Building Healthy Communities is designed to assist First Nations and Inuit communities to develop community-based approaches to drug abuse and mental health crises. Performance criteria and results are sought from Mental Wellness.
Children's Oral Health Initiative	$6,300,779	Vote1 $1,991,149 Vote 10 $4,309,630	Average number of decayed teeth in the 0–7 year population in First Nations communities with access to the Children's Oral Health Initiative (COHI). https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1
Fetal Alcohol Spectrum Disorder Initiative – First Nations and Inuit component	$7,735,902	Vote 1 $208,966 Vote 10 $7,526,936	% of communities with access to a Fetal Alcohol Spectrum Disorder Community Coordinator or Mentoring programs* Indigenous Services Canada, First Nations Inuit Health Branch, Community Based Level Reporting-National Summary Report 2015-16 Fiscal Year.
Maternal and Child Health Program	$15,694,477	Vote 1 $354,878 Vote 10 $15,339,599	Difference in percentage of children aged 0 to 11 who we Percentage of First Nations children on-reserve who have received the MMR vaccine.re breastfed longer than six months in First Nations communities with Maternal Child Health (MCH) programs versus those without MCH programs. https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1 Percentage of First Nations communities with maternal and child health programming that provide group breastfeeding support activities. https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1 Percentage of women in First Nations communities accessing maternal and child health program activities who breastfed for 6 months or more https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1

Program Name	17-18 Funding5	Breakout in Departmental Costs vs. funds to First Nations6	Performance criteria and results reporting for each program
Jordan's Principle	$145,067,987	Departmental $3,193,423 First Nations $141,874,564	Number of approved service requests for services and supports under Jordan's Principle https://www.canada.ca/en/indigenous-services-canada/services/jordans-principle.html
Other			Percentage of First Nations children on-reserve who have received the MMR vaccine. https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1 Percentage of First Nations communities that deliver physical activities. https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1 Percentage of First Nations and Inuit communities that deliver healthy eating activities under the Aboriginal Diabetes Initiative. https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a4_1
ISC - Social Programs			
Family Violence Prevention Program	$41,795,145	Vote 1 - $1,576,939 Vote 10 - $40,218,206	Number of women and children accessing the department's funded shelters Percentage of projects directed to community priorities/needs
Income Assistance	$973,376,126 (Includes day care)	Vote 1 - for 2017-2018: $7,557,278.15 Vote 10 - for 2017-2018: $965,818,847.74 (includes day care)	https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a2_2_1

Program Name	17-18 Funding5	Breakout in Departmental Costs vs. funds to First Nations6	Performance criteria and results reporting for each program
On reserve Day Care in AB and MB ON	$19,249,525 This amount is also included in the 2017-2018 funding for Income Assistance as on-reserve day care in AB and ON is funded within the Income Assistance Program.	Vote 10 for 2017-2018: ON: $2,657,313.00 AB: $16,592,212.00 National total: $19,249,525.00 This amount is included in the Income Assistance Vote 10 amount.	See Income Assistance
Assisted Living	$115,899,008	Vote 1 for 2017-18: $1,888,651.79 Vote 10 for 2017-18: $114,010,356.14	https://www.sac-isc.gc.ca/eng/1538154166265/1538154312961#a2_2_2
ISC – Education			

Program Name	17-18 Funding5	Breakout in Departmental Costs vs. funds to First Nations6	Performance criteria and results reporting for each program
Elementary & Secondary	$ 1,245,608,813	Vote 1- $27,252,721 Vote 10- $1,218,356,092	In 2017-18, Education programs sought to measure results on 6 publically-reported indicators, as listed on the GC Infobase. Funding recipients are required to submit data through a number of DCIs, which are uploaded to the Education Information System (EIS). EIS is an information technology system that was designed to provide the Department with the ability to analyze and report on education data, to reduce the reporting burden to First Nations, and to provide a reporting mechanism back to the funding recipients. Once reports are finalized within the EIS system, data is transferred to the Education Reports and Analysis Solution (ERAS), where de-personalized data is extracted and used for purposes such as reporting on performance indicators, informing program decisions, and developing policy to improve education outcomes for First Nations students.
High Cost Special Education Program (HCSEP)	$270,428,162	Vote 1- $1,747,894 Vote 10- $268,680,268	Collected through Education Information System (EIS). See note above.
First Nation Student Success Program (FNSSP) – Ending Apr 1, 2019	$106,323,084	Vote 1- $1,763,595 Vote 10- $104,559,489	Proposal based program ending April 1, 2019. Funding flowing directly to First Nations' education budget to support principle of First Nation control of First Nation education.

Program Name	17-18 Funding5	Breakout in Departmental Costs vs. funds to First Nations6	Performance criteria and results reporting for each program
New Paths for Education (NP) – Ending Apr 1, 2019	$133,972,831	Vote 1- $173,753 Vote 10- $133,799,078	Proposal based program ending April 1, 2019. Funding flowing directly to First Nations' education budget to support principle of First Nation control of First Nation education.
Cultural Education Centres Program (CECP)	$9,894,600	Vote 1- NA Vote 10- $9,894,600	Collected through Education Information System (EIS). See note above.
Post-Secondary Education (PSE)	$369,414,978	Vote 1- $2,435,317 Vote 10- $366,979,661	Collected through Education Information System (EIS). See note above.
Post-Secondary Partnerships Program (PSPP)	$25,032,745	Vote 1- NA Vote 10- $25,032,745	Collected through Education Information System (EIS). See note above.
Indspire	$7,817,000	Vote 1- NA Vote 10- $7,817,000	Annual reporting to the Department.

Jonathan Thompson
Director, Social Development
Assembly of First Nations
55 Metcalfe Street, Suite 1600
Ottawa, ON K1P 6L5

Dear Mr. Thompson,

Pursuant to contract no. 20-00513-001, the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa is pleased to submit the report: *Funding First Nations child and family services (FNCFS): A performance budget approach to well-being.*

We trust that this report meets the expectations set out in the terms of reference for this project.

We are grateful for the support of the Assembly of First Nations, the National Advisory Committee, and the First Nations Child and Family Caring Society, as well as to our consulting experts. We especially wish to thank the First Nations child and family services agencies, their leadership, and their staff for their exceptional work.

Yours sincerely,

Kevin Page
President & CEO

Funding First Nations child and family services (FNCFS): A performance budget approach to well-being

Helaina Gaspard, Ph.D.

This report was prepared under the supervision of Kevin Page, President & CEO of the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa.

With contributions by Sahir Khan, Azfar Ali Khan, Mostafa Askari, Aimeric Atsin, Vivian Liu, and Alex Reeves.

The author wishes to acknowledge the contributions of IFSD's research assistants: Taylor Rubens-Augustson, Laura Fernz, Jordon White, Andrew Heffernan, Nicholas Dahir, Kyra Carmichael, and Jan Kurman. With administrative support from Kim Paquet.

This project was supported by the expert contributions of Dr. Fred Wulczyn, Dr. John Loxley, and Elsie Flette.

We are grateful to the contributing FNCFS agencies and communities for sharing their lived experiences and wise practices as case studies and through the FNCFS survey. Your insight and contributions have shaped this work.

We are indebted to the members of the consultative working group and to the National Advisory Committee (NAC) who served as advisors throughout this project.

We wish to recognize the efforts of Statistics Canada's Centre for Indigenous Statistics and Partnerships, Social, Health and Labour Statistics Field, for clarifying availability and applicability of data.

Dedication

This report is dedicated to First Nations children and their futures and to John Loxley, Ph.D., FRSC. Dr. Loxley was a professor of economics at the University of Manitoba. A scholar, teacher and advisor in international finance, international development and community economic development, Dr. Loxley was also highly regarded for his work on Indigenous economic development and the funding of First Nations child and family services. Dr. Loxley passed away in July 2020 and his collaboration on this report would prove to be among his final research projects. The authors wish to recognize Prof. Loxley's life and career and dedicate this report in his memory. John Loxley's contribution will carry on in the lives of the First Nations children that he held so dear.

National body that advocates on behalf of First Nations in Canada.

Child and Family Services (CFS)
Services provided by governmental or non-governmental organizations to support the well-being of children and their families.

Canadian Human Rights Tribunal (CHRT)
Tribunal mandated to apply the Canadian Human Rights Act and hears cases related to discrimination.

First Nations Child and Family Services (FNCFS)
Indigenous Services Canada (ISC) program that funds prevention and protection services with the aim of supporting the safety and well-being of First Nations children and families living on-reserve.

First Nations Information Governance Centre (FNIGC)
Non-profit organization that receives its mandate from the AFN's Chiefs in Assembly. Working with its regional partners, FNIGC conducts data-gathering initiatives to put together culturally relevant portraits of the lives of First Nations peoples and their communities.

First Nations and Inuit Health Branch (FNIHB)
A branch of Indigenous Services Canada (ISC) responsible for health care and related services in First Nations and Inuit communities.

Institute of Fiscal Studies and Democracy (IFSD)
Canadian research institute in public finance and state institutions at the University of Ottawa.

Indigenous Services Canada (ISC)
Government of Canada department responsible for supporting self-determination of Indigenous peoples, as well improving access to services for Indigenous communities. Formerly, Indigenous and Northern Affairs Canada (INAC).

Indigenous and Northern Affairs Canada (INAC)
See Indigenous Services Canada (ISC).

National Advisory Committee (NAC)
Mandated to assist in reforming FNCFS policies and programs on-reserve by supporting First Nations leaders and agencies, as well as the Minister of ISC. The NAC is comprised of a national Chair, three representatives of the federal government, one representative of the AFN, one representative of the Caring Society, ten regional representatives (one from each AFN region), one youth representative, and one Elder(s) representative.

Treasury Board of Canada Secretariat (TBS)
Advises the Treasury Board committee of ministers with regards to how the government spends money on programs and services, and how public money is managed.

Executive Summary

Introduction

With the endorsement of the National Advisory Committee (NAC), the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa was asked by the Assembly of First Nations (AFN) and the Caring Society to define a **funding approach** and **performance measurement framework** for First Nations child and family services, with funding support from Indigenous Services Canada (ISC).

The purpose of this project is to present stakeholders with a funding **structure**; a means of developing **evidence** to understand the well-being of children, families and communities; and a range of scenarios to **cost** the proposed approach. There are four parts to this work:

1. **Expenditure analysis and funding impacts:** Defining the existing baseline of FNCFS program allocations, expenditures and their impacts, including CHRT-mandated funding.

2. **Performance framework:** Defining a measurable future state from which to build a funding approach for thriving children.

3. **Funding approaches:** Identifying and analyzing approaches to funding that support improved outcomes for children.

4. **Transition plan:** Defining approaches and considerations in moving to a new system of performance and funding focused on thriving children.

Context for change

Supporting the well-being of First Nations children, families, and communities is the principal goal of this work. The current state is a challenging point of departure, with disparities in poverty, access to potable water flowing from a tap, health outcomes, the effects of intergenerational trauma, food sovereignty, safe and suitable housing, and broadband connectivity. Well-being is holistic and connected to an individual's environment and their community. Fostering well-being means considering the many contextual factors and considerations that shape children, families, and communities.

An Act respecting First Nations, Inuit, Métis children, youth and families, commits to reconciliation, substantive equality, and the well-being of

Indigenous children, youth, and families. Read through the lens of its preamble, the Act is an opportunity to restructure and resource First Nations child and family services (FNCFS) to deliver better results for children, families and communities with commitment to substantive equality, a culturally informed approach and the best interests of the child.

There is an opportunity to address the challenges associated to the protection system that the Canadian Human Rights Tribunal (CHRT) found to be discriminatory and underfunded in its rulings. A child's contact with the protection system has long-term consequences and increases their likelihood of interacting with social services such as the welfare system, the criminal justice system etc. later in life. These systems are corrective measures, often addressing downstream effects of risks that had the potential for mitigation. Independently costly to run, these systems are designed as final backstops to social challenges rather than addressing the *causes of the causes*. The current system invests in reactionary measures rather than proactive ones, that end up being more costly and less effective (see The cost of doing nothing).

This project seeks to reset the structure, funding, and governance of the current FNCFS system to mitigate and address the causes of contact with the protection system.

Phase 2 approach

This work is developed from the ground-up, with collaboration and insight from FNCFS agencies, First Nations, and experts. Twelve in-depth case studies, a survey on FNCFS expenditures, three expert roundtables, and supplementary research and analysis from Canada and the United States, form the foundation of this work.

The existing funding gaps in the FNCFS system were well-defined by the Phase 1 project, *Enabling First Nations Children to Thrive*. With the participation of 76% of FNCFS agencies, gaps in funding for prevention, poverty, information technology, and capital were identified.

This project (Phase 2) builds on the findings from Phase 1. With the goal of holistic well-being, Phase 2 proposes a performance framework (Measuring to Thrive) and a need-based block funding approach (Table 1).

BLOCK FUNDING APPROACH:

Resources are allocated based on a combination of previous financial data (to fund maintenance and protection) and need (e.g. population size, geography, poverty level, etc.).

Funds are provided for general purposes identified under terms and conditions in a contribution agreement or a statute. Service providers have flexibility to adjust allocations (e.g. operations and capital, protection and prevention).

The capacity to "carry forward" money (ability to move monies forward if not spent, in a current year, like the 10-year grant) and access to emergency funding, as provided, are consistent and additive to a block funding approach.

Emergency funds would be available should a service provider—due to an exceptional increase in service demands (e.g. protection requests, an increase in health-related issues)—be unable to meet the needs of their communities with pre-defined revenues.

In the proposed approach, risk is managed to empower service providers to act in the best interest of children, families, and communities.

TABLE 1: Current state and proposed future state comparison of the FNCFS program.

Current state	Proposed future state
▪ Funding driven by children in care	▪ Funding driven by indicators of well-being
▪ Top-down; formula-based funding with ad-hoc supplements	▪ Bottom-up budgeting complemented by need and performance components
▪ Mixed governance model	▪ First Nation control (*An Act respecting First Nations, Inuit and Métis children*)

Performance framework

The Measuring to Thrive framework marks a departure from the current state of performance measurement for the FNCFS program. From four output-based measures focused on protection, to seventy-five indicators that capture the well-being of a child, their family, and their community environment (Figure 1). Understanding a child's environment is integral to their well-being. How can a child be well if their housing is not safe and

secure? If potable water is not readily available? If the effects of trauma and addictions impact their communities? Measuring to Thrive connects children, families, and communities to capture a holistic vision of well-being. Thriving First Nations children need thriving First Nations communities.

FIGURE 1: Current state and proposed future state comparison of performance measures.

Current state FNCFS performance measures

1) Percentage of First Nation communities offering family support services aimed at keeping families together.

2) Percentage of First Nations children on-reserve, in care.

3) Percentage of First Nation children entering care for the first time.

4) Percentage of children in care placed with a family member.

Proposed future state:
Measuring to Thrive

FAMILIES
(6 indicators)

Performance area	Sample measures of indicators
Wellness and social engagement	▪ Families reporting livable income to meet needs ▪ Families demonstrating social engagement through participation in cultural traditions, teachings and ceremonies ▪ Incidents of family violence

CHILDREN
(42 indicators)

Performance area	Sample measures of indicators
Safety	▪ Incidences of child sexual abuse ▪ Number of moves in care ▪ Rates of family reunification
Cognitive development	▪ Children achieving basic numeracy and literacy targets
Social relationships	▪ Youth reporting ties to elders ▪ Youth reporting ties to siblings, extended family, friends
Emotional, cultural and spiritual well-being	▪ Children/youth reporting eating traditional foods ▪ Children/youth reporting pride in Indigenous identity
Physical health and well-being	▪ Children/youth reporting regular physical activity ▪ Percentage of teenage births

COMMUNITY
(27 indicators)

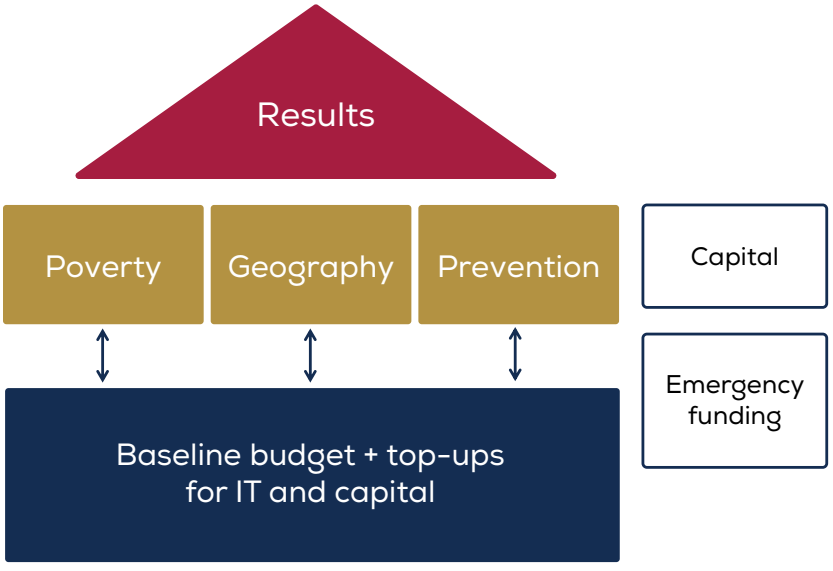
Performance area	Sample measures of indicators
Basic needs	▪ Households with drinking water flowing from tap for consumption, bathing and other uses ▪ Households with internet connectivity ▪ Community employment rate
Community services and engagement	▪ Community spaces for gatherings ▪ Community controls and runs health services
Wellness	▪ Rates of violent crime ▪ Rates of chronic health conditions
Education	▪ Community offers and controls elementary education ▪ High school graduation rates

The approach in Measuring to Thrive is a manifestation of the Treasury Board of Canada Secretariat's Policy on Results and *Guide to Departments on the Management and Reporting of Horizontal Initiatives.*[1] By collecting data on the *causes of the causes* that inform well-being, the measurement framework is a results-based tool to plan, monitor, and assess the performance of policies and programs, against the goal of thriving First Nations children, families, and communities. The horizontal view adopted in the framework is an expression of the interrelated criteria of wellness.[2] This type of integrated performance framework could be considered by provinces and unaffiliated First Nations to capture and track well-being in communities.

Funding approach

To deliver on the desired goal expressed in Measuring to Thrive, a funding approach that is informed by need with latitude for service providers to act in the best interests of those they serve is necessary. A bottom-up funding approach was designed as a block transferred budget with components addressing gaps in need, including prevention, poverty, geography, IT, capital, with supplements for the shift to a results-focused approach (Figure 2).

FIGURE 2: Proposed funding approach overview.



[1] Treasury Board of Canada Secretariat, "Guide to Departments on the Management and Reporting of Horizontal Initiatives," *Government of Canada*, updated May 17, 2018, https://www.canada.ca/en/government/system/finances/horizontal-initiatives-database/guide-departments-management-reporting-horizontal-initiatives.html.

[2] A cloud-based application for data collection, tracking, and reporting has been developed by IFSD for use by FNCFS agencies and First Nations.

The funding approach is connected to the Measuring to Thrive framework and is intended to provide FNCFS agencies with the resources necessary to deliver the programs and services needed for thriving First Nations children, families, and communities. The approach is consistent with the Act that commits to fiscal arrangements to support the delivery of FNCFS to secure long-term positive outcomes,[3] as well as the efforts on devolved fiscal relations for First Nations.

Spending implications

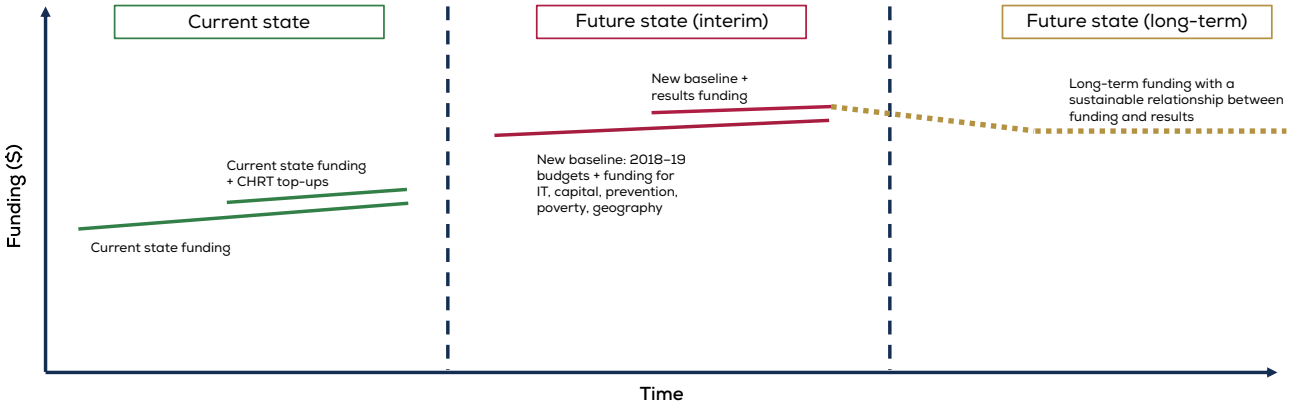
Children, families and communities have needs. Some may need more support than others for various reasons. Professionals and communities should have the tools, resources, and flexibility with which to employ them to address the *causes of the causes* of need. The choice of tools should not have adverse fiscal consequences, when accountable decisions are made for the well-being of children, families and communities.

Working to improve well-being means increasing resources to prevention services, while maintaining support for protection services. Over the long-term, we expect the relationship between spending and results to change (Figure 3). There is well-established research that demonstrates the long-term benefits of early investment in child well-being, including better health, social and cognitive development, and even parental benefits. This and other research support a business case[4] for significant investment in prevention to mitigate potential negative downstream effects such as incarceration, homelessness, and lost opportunities, which can result in significant financial and social costs.

[3] *An Act respecting First Nations, Inuit and Métis children, youth and families*, c. 24, s. 20 (2)(c), last modified July 14, 2020, https://laws.justice.gc.ca/eng/acts/F-11.73/page-1.html.

[4] A business case provides a justification for undertaking a project with relevant supporting evidence.

FIGURE 3: Modelling an adjustment to current state funding to achieve long-term goals, with a sustainable relationship between funding and results.



For the 2018–19 fiscal year, FNCFS agencies reported total expenditures of approximately $1.7B (through the IFSD survey) which may include supplementary funding from CHRT-mandated payments.

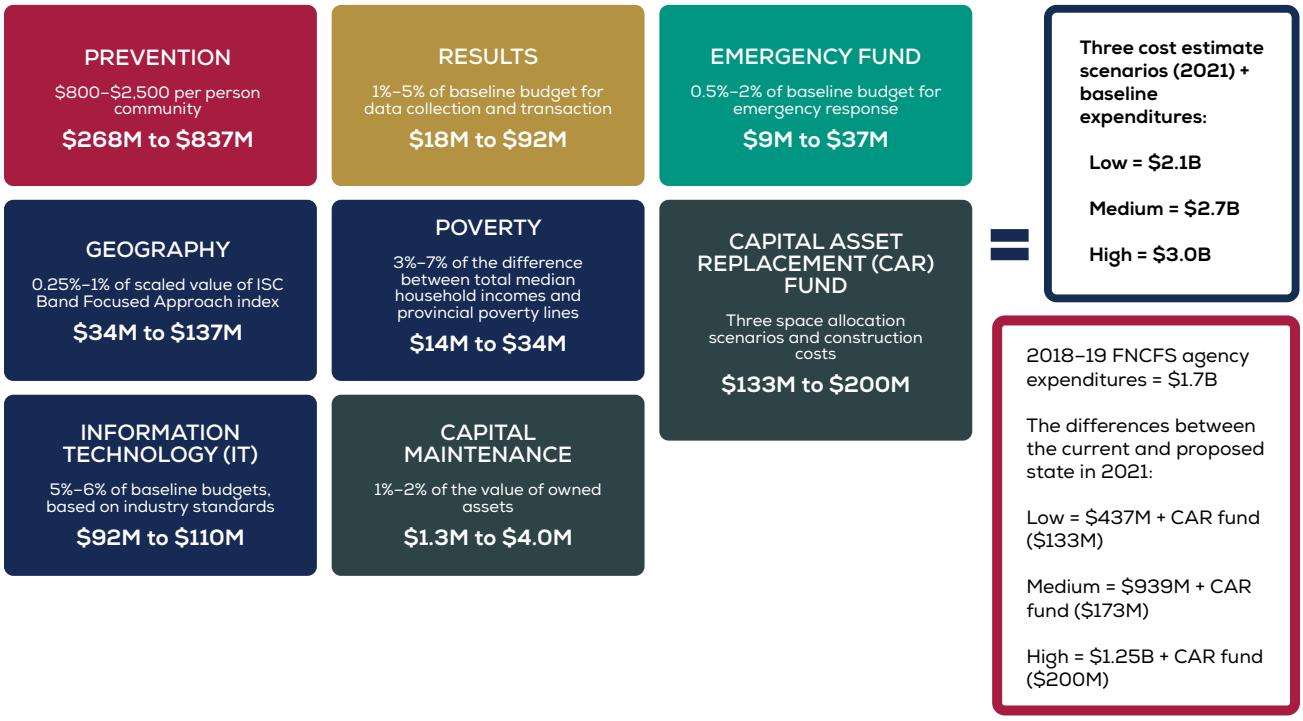
With 2018–19 FNCFS expenditures as a baseline, the approach adjusts the baseline budget by adding components to reflect the First Nations served, to support the Measuring to Thrive performance framework, grown by the standard factors of inflation and population (Table 2).

TABLE 2: Funding approach components and their applications.

Component	Quantification
Results	▪ Funding to support goals in the Measuring to Thrive framework. Percentage of baseline budget.
Prevention	▪ Per capita allocation, $800, $2,000 or $2,500 by population on-reserve.
Geography	▪ Factor increase to baseline budget, using ISC's weighted remoteness quotient.
Poverty	▪ Household basis; relative to provincial poverty line; Census 2016 data.
Capital	▪ Percentage (e.g. 2%) of total value of capital assets for capital maintenance. ▪ Application-based fund for major capital projects, e.g. new building, extensive renovation, etc.
IT	▪ Percentage top-up to baseline budget of 5% to 6% based on industry standards for not-for-profit service organizations.
Emergency funding	▪ Percentage top-up to baseline budget to address unanticipated circumstances related to CFS, that affect demand for an agency's core services.

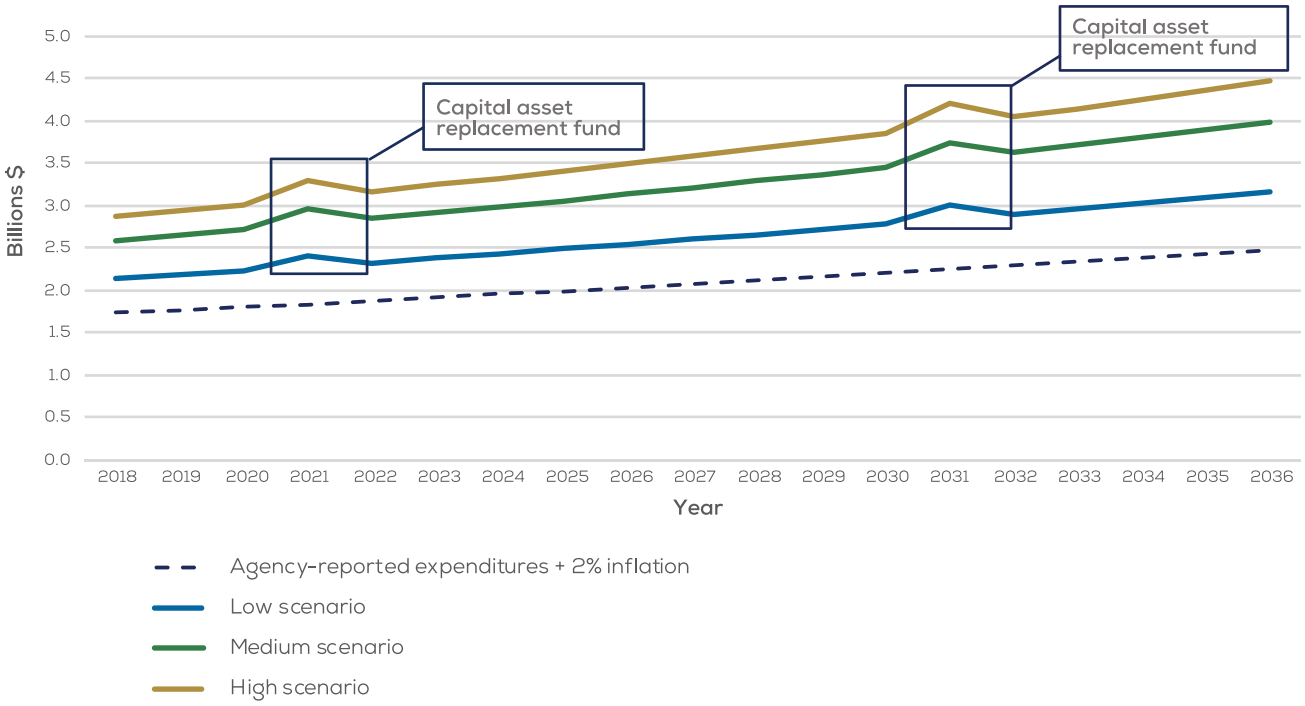
To model the funding approach, three scenarios are proposed, based on low, medium and high points in the ranges associated to each of the cost factors (Figure 4).

FIGURE 4: Cost estimate overview of the proposed funding approach.



The proposed funding approach represents an increase in overall system costs between $437M and $1.25B in 2021, depending on the selected scenario, plus capital asset replacement fund investments (Figure 5).

FIGURE 5: Total estimated system costs (low, medium and high scenarios), 2018–2036 (with Statistics Canada's constant population scenario and 2% inflation).



The performance framework and funding approach are directionally consistent with the Act, seek to address CHRT findings, and propose a way forward focused on the well-being of First Nations children, families, and communities.

Challenges

Change is difficult. Transitioning to a bottom-up funding approach and performance framework informed by the lived realities of First Nations children, families and communities will impact existing practices. It will take great effort to shift the system from one focused on protection to one focused on well-being, which includes child safety. This transition from a protection-based fee-for-service model to a block funding approach that supports both protection and prevention will require a new system structure, a results-focused performance framework, and related governance practices.

Data availability, access, and collection will take time to develop. There will be challenges along the way. Shifting from the current to future state system will require an openness to collaboration, in-course adjustments, unforeseen challenges, data-driven approaches, and learning.

To support the transition from the current to future state, a First Nations-led secretariat is proposed. With a dual mandate to support data collection and analysis and operations, the secretariat will be a resource for FNCFS agencies and First Nations.

Resourcing for substantive equality in outcomes will require investment. The new funding and performance architectures represent fundamental changes to the way FNCFS is funded, as well as its accounting for results through the Measuring to Thrive framework, and accountability is reoriented to a dual dynamic between ISC and FNCFS agencies and First Nations.

Recommendations

Pursuant to the findings in this report, the following four recommendations are made:

1. Adopt a results framework for the well-being of children, families, and communities, such as the Measuring to Thrive framework.

2. Budget for results with a block funding approach that addresses gaps and is linked to the results framework.
   a. Undertake a full assessment of current capital stock.

3. Establish a non-political First Nations policy and practice secretariat to support First Nations and FNCFS agencies to transition to First Nations governance.

4. Establish a group of FNCFS agencies and First Nations willing to be early adopters of the new performance and funding approach to model implementation.

Introduction

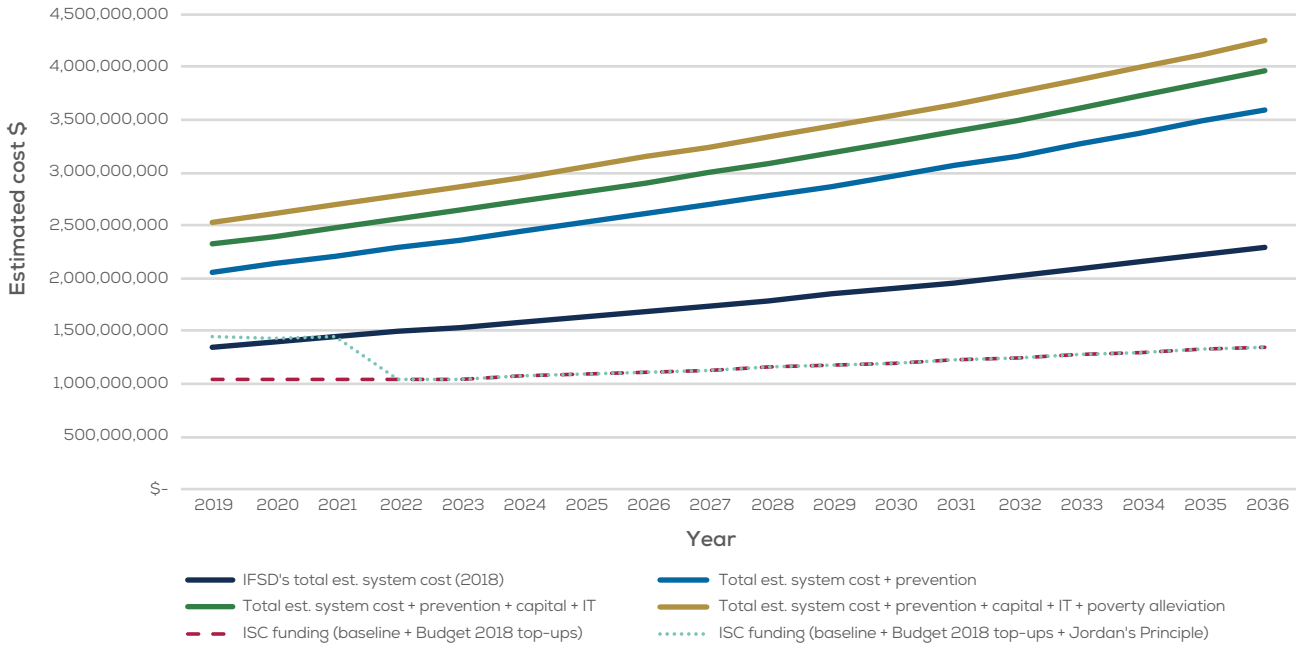
Context

With the endorsement of the National Advisory Committee (NAC), the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa was asked by the Assembly of First Nations (AFN) and the Caring Society to define a **funding approach** and **performance measurement framework** for First Nations child and family services, with funding support from Indigenous Services Canada (ISC).

This report (Phase 2) builds on the findings and recommendations of IFSD's Phase 1 report, *Enabling First Nations Children to Thrive*. Accepted by NAC in February 2019, the Phase 1 report was produced as a response to Canadian Human Rights Tribunal (CHRT) (2018) orders 408, 418 and 421, related to the discriminatory funding approach applied by Canada for First Nations child and family services (FNCFS) agencies. The report highlighted funding shortfalls in prevention, capital and IT, as well as contextual and funding structure challenges.

With the participation of 76% of FNCFS agencies, IFSD was able to construct a bottom-up portrait of expenditures, expenditure relationships, and gaps in FNCFS agency operating budgets. The representative data sample demonstrated a near perfect correlation between the number of children in care and the size of an agency's total budget. The existing funding structure has shaped the system. Funding is principally linked to protective services (with exception to the supplementary CHRT-mandated funding). The strength of the relationship between the number of children in care and agency budgets made it a reliable means of estimating the total cost of the FNCFS system, based on the average annual cost of a child in care estimated at $63,000. The total system cost was estimated and projected out to 2036, with various combinations of assumptions (see Figure 6).

FIGURE 6: Phase 1 First Nations child and family services cost estimate scenarios.



The data suggested that expenditure patterns did not follow provincial lines, and that spending, and outcomes were not meaningfully shaped by funding formulas. The characteristic that most shaped agency expenditures was the year-round road accessibility of the First Nations served by the agency. If an agency served at least one First Nation without year-round road access, its budget was twice that of its peers, and travel costs were five times as high.

Phase 1 analysis developed the first known national baselines of the FNCFS program through agencies' actual expenditures.

Using the baselines from Phase 1, this report proposes an alternative funding structure and performance framework to redefine FNCFS through holistic well-being. IFSD's role was to find the optimal and sustainable combination of inputs and outputs to deliver desired outcomes. This required contributions from FNCFS agencies and experts, First Nations, and other data and analysis.

The purpose of this project is to present stakeholders with a funding **structure**; a means of developing **evidence** to understand the well-being of First Nations children, families and communities; and a range of scenarios to **cost** the proposed approach. There are four parts to the Phase 2 project:

1. **Expenditure analysis and funding impacts:** Defining the existing baseline of FNCFS program allocations, expenditures and their impacts, including CHRT-mandated funding.

2. **Performance framework:** Defining a measurable future state from which to build a funding approach for thriving children.

3. **Funding approaches:** Identifying and analyzing approaches to funding that support improved outcomes for children.

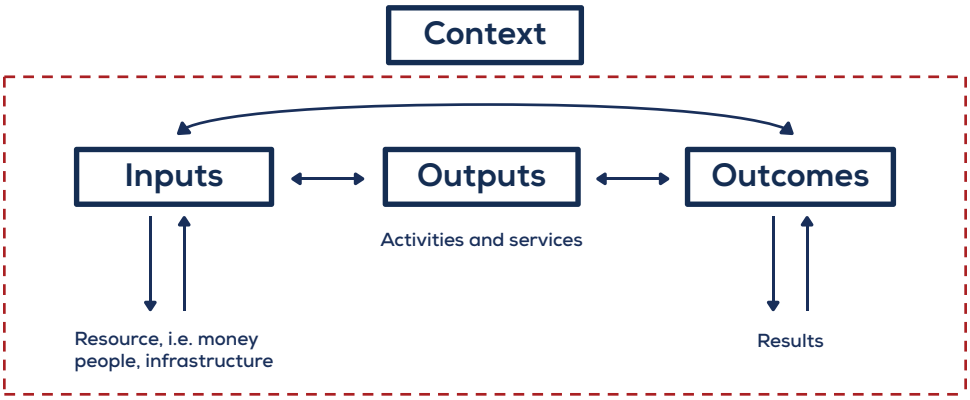
4. **Transition plan:** Defining approaches and considerations in moving to a new system of performance and funding focused on thriving children.

This work was undertaken with consideration of a changing federal context. The pre-amble of *An Act respecting First Nations, Inuit and Métis children, youth and families* commits the federal government to "engaging with Indigenous peoples and provincial governments to support a comprehensive reform of child and family services that are provided in relation to Indigenous children". There is an opportunity to leverage these legislative commitments to reset the course on FNCFS, reorienting funding and performance to a holistic vision of well-being.

The proposed funding approach responds to the requirement in the Act to determine fiscal arrangements that address long-term positive outcomes, substantive equality, and needs. Designed and built from the bottom-up, this funding approach and performance measurement framework capture a critical mix of resources and structures for thriving First Nation children, families, and communities, as expressed by those working and living in communities.

Effective program design, implementation, and delivery requires an explicit connection among resources (inputs), activities (outputs) and results (outcomes). This is a complex undertaking that required data, contributions from FNCFS agencies and other experts, as well as cost-benefit analysis. Changes in inputs will translate into changes in activities with impacts on results (all informed by context) (Figure 7). The challenge is optimizing inputs and activities for sustainable, positive results. More inputs do not automatically translate into better outcomes.

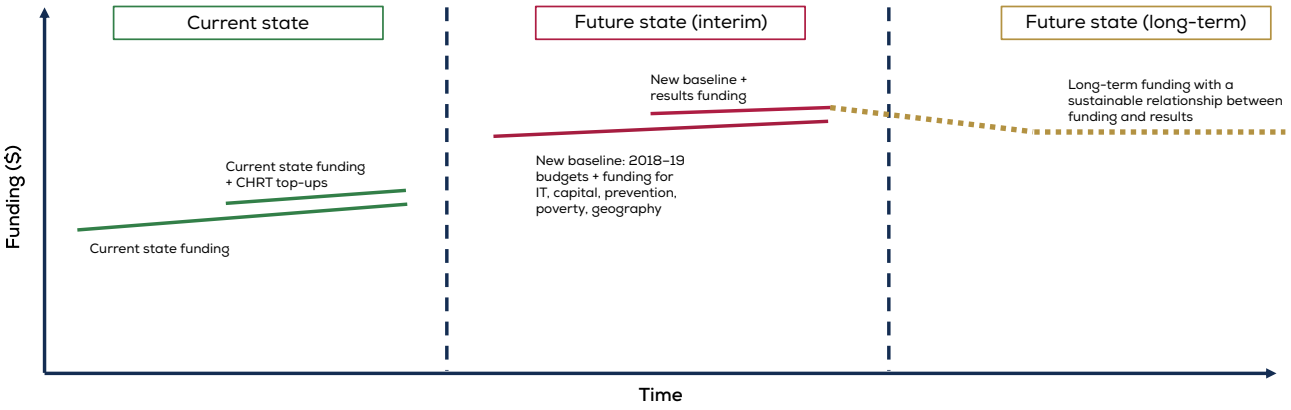
FIGURE 7: Standard performance framework overview.



This work is about changing the funding structure (*how money moves*), aligning performance measurement to desired outcomes (*evidence for decision-making*) and supporting the change through governance (*operational support and accountability*), to support well-being.

In the short-term, the approach requires an increase and redirection of resources to prevention and well-being services. It does not mean reducing the need for child and family services and protective services. Over the long-term, it is expected that the relationship between spending and results will change, with less investment generating positive, more sustainable outcomes (see Figure 8).

FIGURE 8: Modelling an adjustment to current state funding to achieve long-term goals, with a sustainable relationship between funding and results.



Our approach

IFSD's approach to this project is collaborative and informed by OCAP® principles. As an affiliate of the University of Ottawa, IFSD is guided by ethical research guidelines respecting Indigenous Peoples and complies with the Tri-Council Policy Statement on Ethical Conduct for Research Involving Humans in all of its work.

This report and its findings are informed by the contributions of FNCFS agencies, First Nations, experts, and secondary sources of data. Twelve in-depth case studies, a survey on FNCFS expenditures, three expert roundtables, and supplementary research and analysis form the foundation of this work.

As is its usual practice, IFSD updated its stakeholders monthly on the project's progress with email notices and full updates posted to the FNCFS project website.[5]

All information shared during this project has the consent and participation of participating FNCFS agencies and communities. Any financial data shared through the FNCFS survey has been aggregated and anonymized to protect the privacy of agencies and the communities they serve. In addition to its regular updates to NAC and monthly updates to stakeholders, IFSD participated in joint update meetings with AFN, Caring Society and ISC.

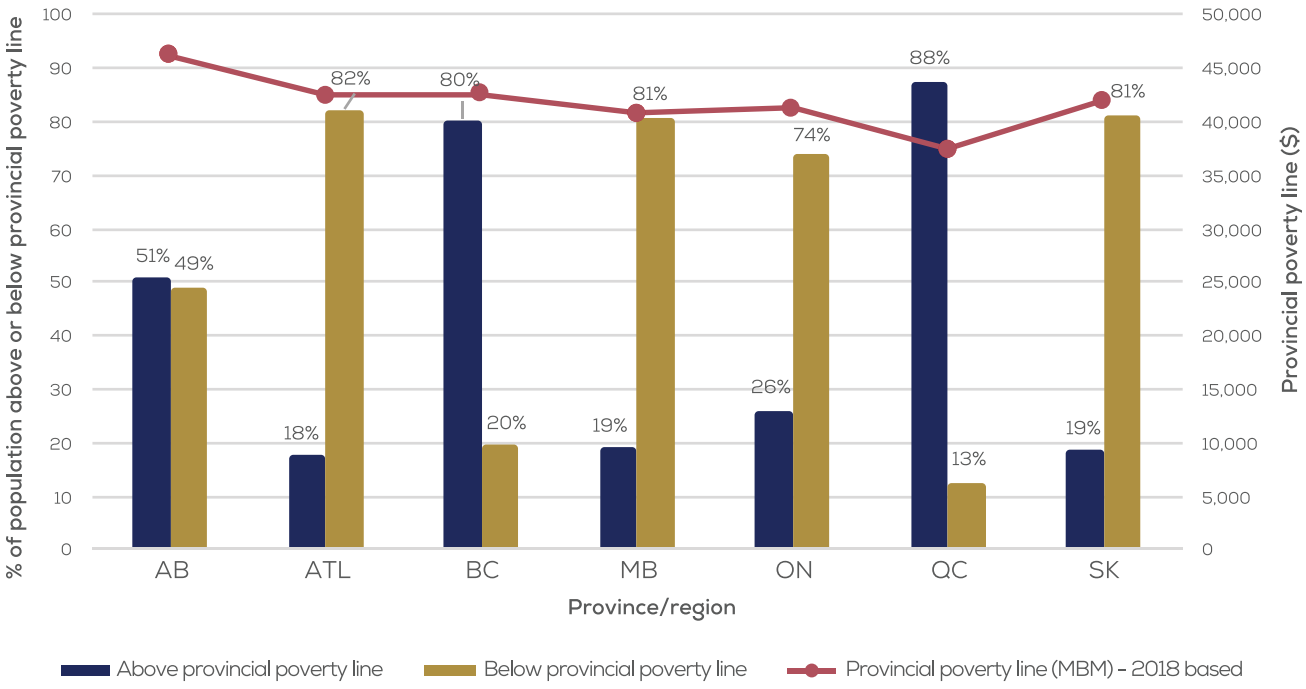
The current state

Supporting the well-being of First Nations children, families, and communities is the principal goal of this work. The current state is a challenging one.

The majority (60%) of First Nations on-reserve have total median household incomes below their respective provincial poverty lines (see Figure 9 and Appendix A).

[5] FNCFS project website: www.ifsd.ca/fncfs.

FIGURE 9: Total median household incomes on-reserve, relative to provincial poverty lines (n=591).

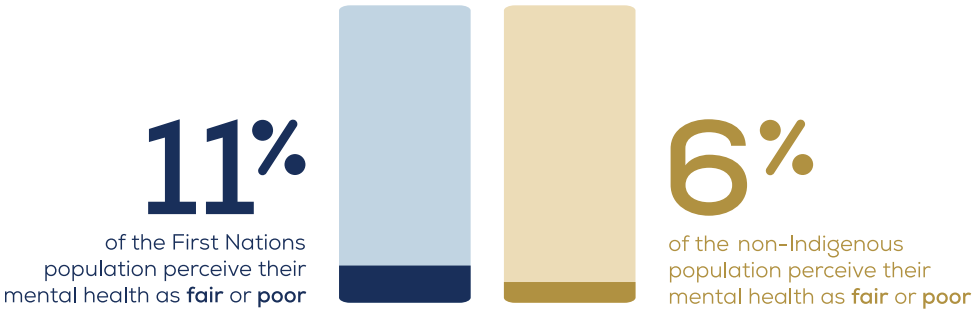


Source: Statistics Canada, 2016 Census and "Report on the second comprehensive review of the Market Basket Measure."

First Nations report poorer perceived mental and physical health than the non-Indigenous population (see Figures 10A and 10B and Appendix B).

FIGURE 10A: Disparity in perceived health between First Nations peoples and the non-Indigenous population in Canada (age-standardized rate, 2011–2014).

FIGURE 10B: Disparity in perceived mental health between First Nations peoples and the non-Indigenous population in Canada (age-standardized rate, 2011–2014).



Source: Statistics Canada, Table: 13-10-0099-01 Health indicator profile, by Aboriginal identity and sex, age-standardized rate, four year estimates.

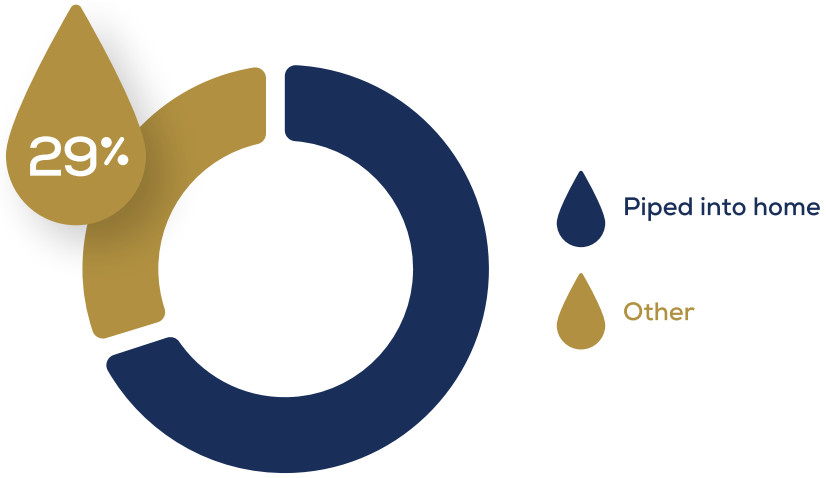
Nearly three-quarters of dwellings on-reserve are in need of repair (see Figure 11 and Appendix C).

FIGURE 11: Statistics Canada estimates of dwellings in need of repair (Census 2016).

Source: Statistics Canada, 2016 Census, Catalogue no. 98-400-X2016164.

Twenty-nine percent of First Nations do not have water piped to their households (see Figure 12 and Appendix D).

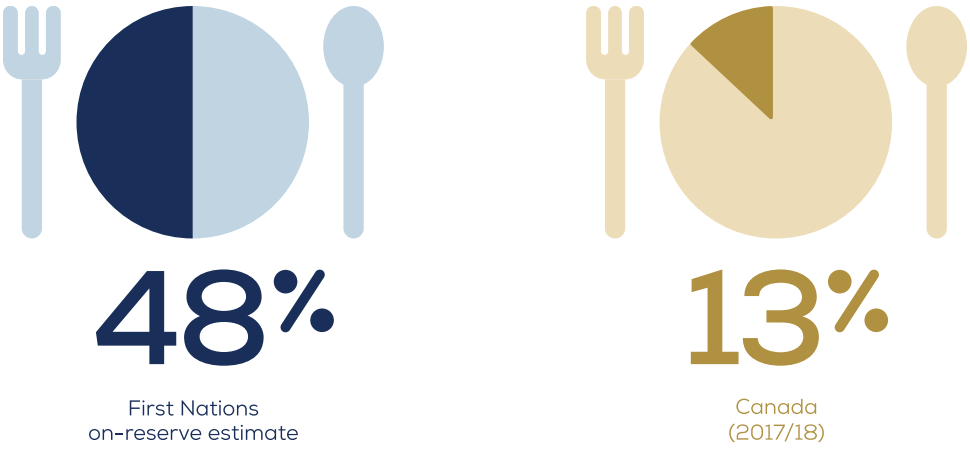
FIGURE 12: Regional Health Survey estimates of main water supply in First Nations households (RHS 2015–2016).



Source: First Nations Information Governance Centre (FNIGC), "National Report of the First Nations Regional Health Survey Phase 3: Volume One," (March 2018): 32.

Nearly 50% of First Nations on-reserve report food insecurity (see Figure 13 and Appendix E).

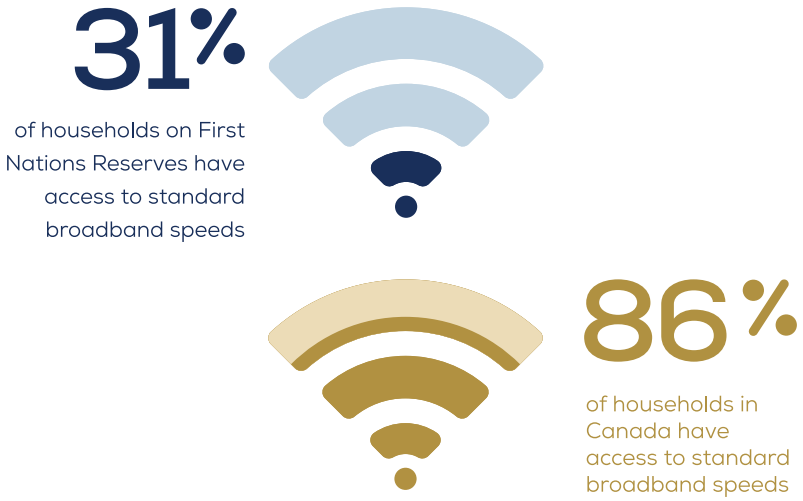
FIGURE 13: FNFNES and Statistics Canada estimates of prevalance of food insecurity.



Sources: First Nations on-reserve estimate: First Naitons Food, Nutrition and Environment Study (FNFNES), November 2019, "Draft Comprehensive Technical Report"; Canada: Statistics Canada, Household food security by living arrangement, Table 13-10-0385-01.

Nationally, less than one-third (31%) of households on-reserve have access to standard broadband speeds (see Figure 14 and Appendix F).

FIGURE 14: Percentage of households with access to government-standard broadband speeds (50/10/unlimited).

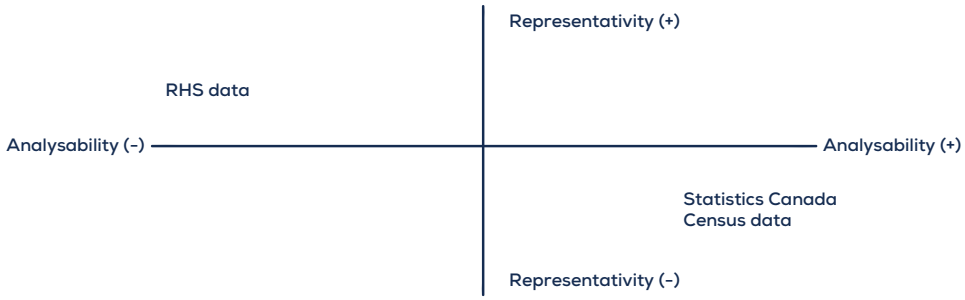


Source: Canadian Radio-television and Telecommunications Commission, "Communications Monitoring Report 2019."

These characteristics indicate an inequitable point of departure for many First Nations living on-reserve. Service gaps and a reduced network of voluntary supports can compound impacts (see Appendix G). The holistic well-being of First Nations children and families means also supporting the well-being of communities.

There are limitations in availability and granularity of data consistently available for First Nations communities. There are existing gaps in data. Publicly accessible data tends to be available (e.g. housing, access to potable water, broadband access, etc.) but aggregated, which limits its applicability for decision-support in specific domains. Granular data may be available at the level of the individual agency or First Nation, but is not always readily available, comparable or consistently captured (i.e. loss of time series) (see Figure 15).

FIGURE 15: Representativity and analyzability of data sources.



The cost of doing nothing

First Nations child and family services (FNCFS) do not exist in a vacuum. Programs and services are delivered in often complex environments, with the realities of poverty and intergenerational trauma impacting approaches and results. To promote the well-being of children, families, and communities, a holistic approach is needed. This approach is different than the protection-focused system currently in place.

The most commonly cited source of contact for Indigenous children is neglect.[6] Neglect is often connected to contextual risks, e.g. poverty, limited housing, etc. that can be mitigated. These risks should be mitigated for good reason. Phase 1 of IFSD's, research, *Enabling First Nations Children to Thrive*, found that children in care (CIC) is an exceedingly strong predictor of agency budget and overall system cost. Contact with the protection system is known to increase lifelong vulnerabilities for individuals, with broader societal implications. The Midwest Study (United States) has demonstrated that former foster care youth have worse outcomes in nearly every measured outcome (when compared to youth without contact with the foster system), including a higher likelihood of experiencing homelessness; higher levels of unemployment; a higher likelihood of incarceration; higher rates of mental and physical illness; as well as hampered educational attainment.[7]

A child's contact with the protection system has long-term consequences and increases their likelihood of interacting with social services such as the welfare system, the criminal justice system etc. later in life. These systems are corrective measures, often addressing downstream effects of risks that had the potential for mitigation. Independently costly to run, these systems are designed as final backstops to social challenges rather than addressing the *causes of the causes*. The current system invests in reactionary measures rather than proactive ones, that ends up being more costly and less effective.

When the potential downstream costs associated with a child's contact with the protection system, the true costs extend beyond the singular child to issues such as homelessness, incarceration, substance misuse, etc. Mitigating the risks associated to protection can have longer-term benefits to the individual and their community. The cost of staying the

[6] Nico Trocmé et al., "Differentiating Between Child Protection and Family Support in the Canadian Child Welfare System's Response to Intimate Partner Violence, Corporal Punishment, and Child Neglect," *Int J of Psychology* 48, no. 2, (2013): 130-131.

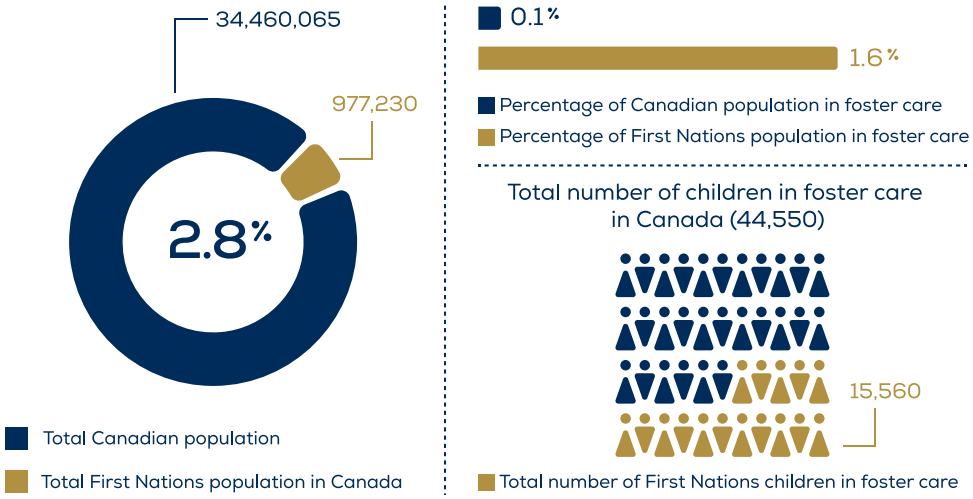
[7] Mark E. Courtney et al., "Midwest Evaluation of the Adult Functioning of Former Foster Youth: Outcomes at Age 26," (Chicago, IL: Chapin Hall at the University of Chicago, 2011): 1-117; James Heckman, "There's more to gain by taking a comprehensive approach to early childhood development," *The Heckman Equation*, (2016).

course is higher fiscally and socially than reducing risk factors through targeted interventions in the early years of a child's life.

Costs associated to contact with the protection system are not all linear. Based on existing research (see Figure 17), inferences of costs associated to contact with protective services (across the general population on an annual basis) include: direct costs (of operating the FNCFS system) and indirect costs (downstream challenges associated to contact with the protection system), and potential cost avoidances (costs that could be mitigated by addressing inequitable points of departure in many First Nation communities). This is an illustration and not meant to be an exhaustive list of associated costs. Nor is this meant to represent the experiences of all First Nations children in contact with the protection system. The general case is represented, based on existing research that suggests the costs and challenges associated to protection can be substantive for individuals and communities.

First Nations represent approximately 3% of Canada's total population but make up 1.6% of all children in care (relative to 0.1% of the general population). First Nations children are overrepresented relative to their demographic weight of the population (Figure 16).

FIGURE 16: Statistics Canada's estimates of First Nations children in care.

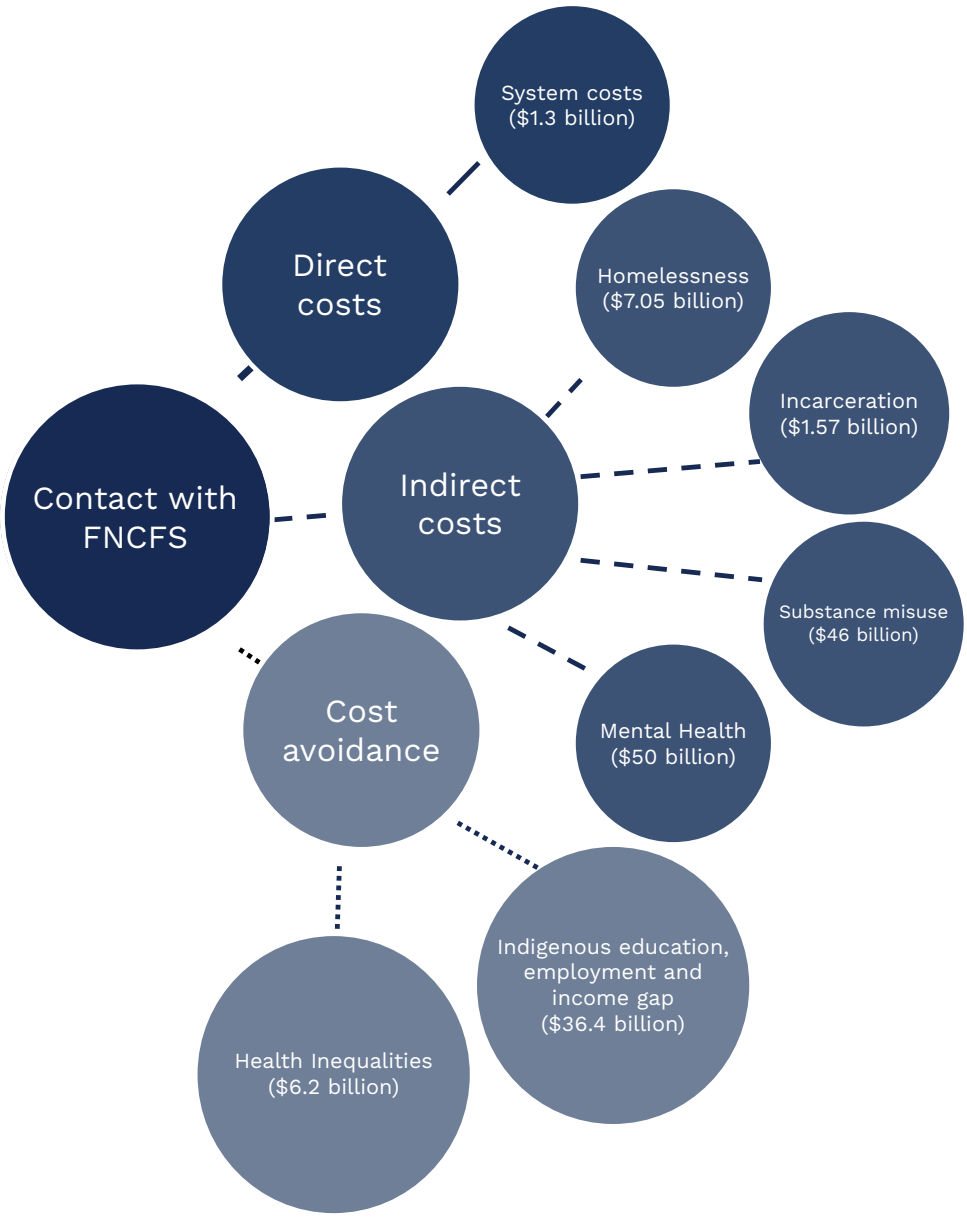


Source: Statistics Canada, "Data Products, 2016 Census," January 3, 2018.

A FNCFS system that emphasizes the well-being of children, families and communities would invest early to mitigate risks rather than paying for corrective measures later on. The costs of inaction can be summarized in four categories: 1) Homelessness and Socio-Economic Health Disparities; 2) Mental Health Issues and Substance Misuse; 3) Contact with corrective services/incarceration; and 4) Educational attainment and lost opportunity costs (Table 3).

The current FNCFS system is largely driven by protection and maintenance, where service providers are reimbursed in a fee-for-service model. The model restricts funding uses, often beyond costs associated to the delivery of protective services. Relying solely on protective services drives a range of costs that are direct, indirect, and avoidance in nature. Agency professionals have long recognized this challenge and seek ways of working around the system to deliver needed programming on the ground that mitigates risk for children.

FIGURE 17: Inferred annual costs associated with contact with the protection system across the general population.[8]



There are known prevention-focused models that emphasize early intervention that suggest upfront investment yields better results over the long-term. Realizing the financial savings to the public treasury would require a shift from the current protection-based approach to one that is focused on well-being. This would require a fundamental change in program goals/orientation and in funding approach. However, such a change would enable communities and service providers to redirect funding to address the root causes of a child's contact with protective services.

The CHRT rulings and *An Act respecting First Nations, Inuit and Métis children, youth and families*, provide an important opportunity to reset a system that has neglected, disadvantaged and discriminated against children for decades. An approach that aims to realize better outcomes for children and families does not eliminate the need for protective services, but rather, shifts (and enhances) resources and program activities towards the root causes of contact with the protection system. Children, their families and the nation's public finances would all be beneficiaries of this fundamental change in strategy.

TABLE 3: Downstream costs associated to contact with the protection system.

Social challenges	Disproportionate impact of the social challenge within Indigenous communities	Relationship between social challenge and child welfare services	Overall magnitude of the problem and associated costs in Canada
Homelessness and Socio-Economic Health Disparities	▪ Indigenous Peoples account for 28–34% of the homeless population, compared to their demographic weight of 4.3% of the general population.[9] ▪ Indigenous peoples use emergency shelters at a rate 11x higher than non-Indigenous peoples.[10]	▪ In North America, homeless individuals are between 10–40 times more likely to have been involved with child welfare services (CWS).[11] ▪ A 2017 study published by the Canadian Observatory on Homelessness found that almost 60% of youth who had experienced homelessness had been in contact with child protection services during their lives. Thus, "youth experiencing homelessness are 193 times more likely to have been involved with the CWS than the general public."[12] ▪ A study of homeless youth in BC reported that 46% of all participants and 70% of Indigenous participants had been a part of the CWS.[13] Furthermore, those that are more likely to experience early vs late onset of homelessness (before 25) are more likely to be Indigenous, have not finished high school and had been involved in the CWS. ▪ *Without a Home* study uncovered that while a high percentage of youth first became homelessness before they were 16 (40%), young people with a history of being in foster care or group homes were almost twice as likely to experience early homelessness as those who were not in care (52.5% vs. 27%).[14] ▪ Many of the Midwest Study (United States) participants (individuals who had previously interacted with the foster care system) at age 26 still experienced repeated episodes of homelessness (14.5%) or couch surfing (24.5%); 35% of participants who reported couch surfing, reported at least four episodes. Further, one third of the young adults who had been homeless had been homeless for at least a month.[15]	▪ Over 235,000 Canadians experience homelessness, and on any given night there are 35,000 who are homeless.[16] ▪ In 2013, the estimated cost of homelessness in Canada was $7.05 billion.[17] ▪ The average monthly cost of housing someone in a shelter bed was $1,932.[18] ▪ In a Canadian study, it was found that homeless populations visit the emergency department on average 2.1 times per year for an annual cost of $1,464 per person. Comparatively, the cost for the non-homeless population was 13% the cost for homeless participants. Further, when admitted to the hospital the annual cost of hospitalization for homeless persons was $2,495 per year, as compared to $524 per year for the housed population.[19] ▪ In 2005, 74% of homeless youth in BC reported having at least one chronic medical condition.[20] ▪ A Canadian study showed that 22.9% of prisoners were homeless at the time of being incarcerated. Furthermore, there is a high likelihood of becoming homeless following discharge (32.2% of respondents).[21] ▪ Examining the annual cost homeless people with mental illnesses generate for society, a study found that (excluding medications) the costs per person were $56,000 per year in Canada's 3 largest cities, and approximately $30 000 in smaller cities like Moncton, New Brunswick.[22] ▪ Socio-economic health inequalities carry a heavy economic burden estimated at least $6.2 billion annually. Further, Canadians in the lowest income group account for 60% of this cost ($3.7 billion).[23]

Social challenges	Disproportionate impact of the social challenge within Indigenous communities	Relationship between social challenge and child welfare services	Overall magnitude of the problem and associated costs in Canada
Mental Health Issues and Substance Misuse	▪ Due to contextual factors, including colonialism and more difficult access to health services, First Nations and Inuit communities experience significantly higher rates of mental health challenges as compared to the general population.[24] ▪ Much of the data analysis has focused on the higher rates of suicide within the Indigenous population. ▪ Statistics Canada found that between 2011 and 2016, the suicide rate among First Nations people was three times higher than among the non-Indigenous population. Furthermore, the suicide rate was around twice as high for First Nations people living on reserve than among those living off reserve.[25] ▪ Among Indigenous peoples, suicide rates and disparities were highest for youth and young adults (15–24 years).[26] ▪ In 2017, the House of Commons Standing Committee on Indigenous and Norther Affairs found that levels of psychological distress for First Nations adults living on reserve is generally higher than the general Canadian population (40% as compared to 33%).[27]	▪ When looking specifically at young Indigenous people who struggle with addiction, a study of two cities in BC found that 65% of the youth had been involved in the CWS, and that many of these individuals experienced negative health outcomes.[28]	▪ A 2020 study by the Mental Health Commission of Canada found that the cost from mental health problems and illnesses to the Canadian economy is at least $50 billion per year.[29] ▪ Estimated cost of substance abuse in Canada in 2017 was $46.0 billion; lost productivity costs accounted for $20.0 billion, health care costs accounted for $13.1 billion, criminal justice costs accounted for $9.2 billion and other direct costs accounted for $3.6 billion.[30]

Footnotes for table can be found on page 18

Social challenges	Disproportionate impact of the social challenge within Indigenous communities	Relationship between social challenge and child welfare services	Overall magnitude of the problem and associated costs in Canada
Contact with corrective services/incarceration	▪ In 2016, Indigenous peoples represented approximately 5% of the overall Canadian population, but 23.1% of the total offender population.[31] ▪ In 2019, Indigenous women accounted for 41.4% of all federally incarcerated women.[32] ▪ Since 2010, the population of white inmates has decreased by 23.5%, whereas the Indigenous population has increased by 52.1%.[33] ▪ Research shows that Indigenous offenders are less likely to receive parole, and more likely to have parole revoked for minor infractions.[34] ▪ Indigenous offenders account for a disproportionate number of self-inflicted injuries (52% of all incidents) and 39% of all incidents of attempted suicide over the past 10 years.[35]	▪ A 2001 study conducted by the AFN, Correctional Service Canada and Department of Justice, demonstrated Aboriginal inmates had a more extensive history within the CWS. ▪ The study found that 48% of Aboriginal inmates were placed for adoption by the province (relative to 11% of non-Indigenous inmates), further, 82% of Indigenous inmates were places in foster care (relative to 63% of non-Indigenous inmates).[36] ▪ The cyclical nature of involvement in these systems is highlighted by a study of gang affiliation which found that a key pathway into gang life is multiple out-of-home placements in child welfare and correctional facilities. Of 41 youth in the Prince Albert gang project, 31 had spent most of their childhood and adolescence in child welfare and youth justice facilities.[37]	▪ The average cost of incarceration per inmate in 2016–2017 was $114,587/year or $314/day (96% of costs are associated with custody).[38] ▪ The total operating expenses associated with custody in 2016–2017 was $1.57 billion.[39]

Footnotes for table can be found on page 18

Social challenges	Disproportionate impact of the social challenge within Indigenous communities	Relationship between social challenge and child welfare services	Overall magnitude of the problem and associated costs in Canada
Educational attainment and lost opportunity costs	▪ Based on the 2016 census, 92% of non-Indigenous young adults (20–24) have at least a high school certificate; 75% of First Nations adults living off reserve have completed high school; and 48% of First Nations young adults living on reserve have completed high school.[40] ▪ A pilot microsimulation study done in collaboration of the Canadian Centre for Statistics and Statistics Canada demonstrated that by eliminating the education gap between Indigenous and non-Indigenous people in Saskatchewan, one could reduce the number of people who come into contact with the criminal justice system. They found that if the current educational attainment gap is left unaddressed the number of contacts with police would increase by 27% between 2011 and 2036 (this would result from a 58% increase in the number of Indigenous peoples coming into contact with the police, and a 14% decrease in non-Indigenous populations contact with the police). However, a 25% progressive reduction in the education gap between 2011 and 2036 would result in only a 25% increase in the number of people coming into contact with police; a 50% progressive reduction would result in a 22% increase; and a 100% progressive reduction would result in a 17% increase.[41]	▪ A study in BC suggested that only 51% of youth in care graduated six years after starting grade 8, compared to 89% of the general population of youth. ▪ The educational attainment gaps persisted in Midwest study participants, even at the age of 26. When compared to data from the National Longitudinal Study of Adolescent Health (Add Health), Midwest Study (United States) participants were three times more likely to not have a high school diploma or GED. Add Health participants were also six times more likely to have a post-secondary degree, and nine times more likely to have a degree from a four-year school.[42] ▪ Furthermore, at age 26, only 46% of Midwest study participants were currently employed, compared to 80% of the Add Health study participants.[43] ▪ Of Midwest Study participants who did have employment income, the median annual earnings of their group were over $18,000 lower than the Add Health peers.[44]	▪ A report by the Centre for the Study of Study of Living Standards estimated, if the Indigenous education attainment gap and related gaps for employment rates and income by level of employment were closed, Canada's GDP would be $36.4 billion greater.[45]

Part I: Indigenous Services Canada (ISC) Expenditure and Outcome Analysis

Introduction

As part of the Phase 2 research project, IFSD asked ISC to provide historical information on resources, programming, and results associated to the department's mandate and functions. This request was made to establish an understanding of the current state of financial information, particularly as it related to results and outcomes for First Nations children, families, and communities. The analysis undertaken on this data was not designed to provide an assessment of the practices of ISC but rather to ensure that design considerations would be novel and additive and not simply replicate past practices.

Publicly available data, e.g. public accounts, estimates, on ISC's expenditures was aggregated and did not have the detail necessary for the intended portrait. Accordingly, a request for information was submitted to the Deputy Minister of ISC on August 26, 2019 (Appendix H). In September 2019, ISC provided a list of FNCFS agencies in a PDF document. IFSD worked with NAC regional representatives and phoned the agencies on the list to confirm they aligned to the desired sample population of agencies.[46] Certain agencies notified IFSD that they did not belong in the sample because they did not receive federal funding. The final sample was determined to be 112 FNCFS agencies.

The request for information submitted at the end of August 2019 remained outstanding in October 2019. The office of the Chief Financial, Results and Delivery Officer (CFRDO) assumed a coordinating role for the request in October 2019. IFSD and the CFRDO's team met on several occasions to ensure IFSD's request was clear and that the data would be fairly interpreted. With the CFRDO's office coordinating the request, an Information Sharing Agreement was developed and executed in March 2020, that covered elements such as privacy and data security. All outstanding data in IFSD's original request (if it was available) was transferred in March 2020 following the signature of the agreement.

ISC provided IFSD with spending information for fiscal years 2014–15 to 2018–19 and projected spending for fiscal years 2020–21 to 2022–23.

[46] In this project, agencies include both delegated and non-delegated agencies serving communities on First Nations reserves who receive federal funding for their protection and/or prevention activities. This excludes agencies that are exclusively provincially funded.

Comprehensive program expenditure and performance information were provided in machine readable format. The purpose of defining the current expenditure baseline was to connect resources with results, a purpose for which this data did not appear to be designed.

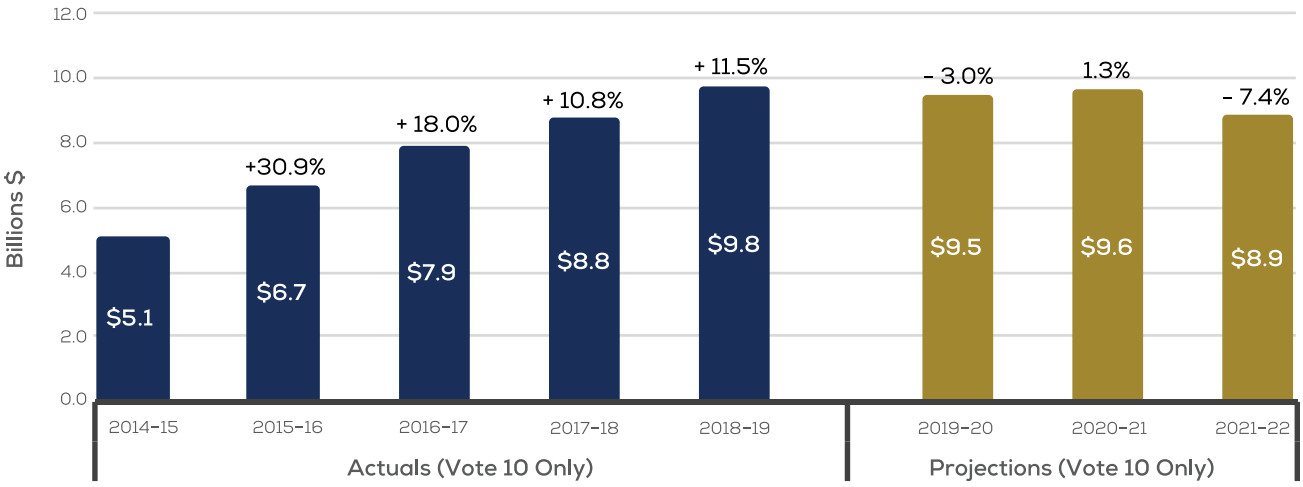
ISC's current expenditures

IFSD is accountable for analysis associated to ISC's data published in this report. All data provided by ISC is only shared in aggregate and non-identifiable formats. IFSD has taken its best efforts to consult with ISC for clarification and information associated to the data provided, as required.

Analysis of the data provided by ISC for fiscal years 2014–15 to 2018–19 is presented below by program, funding approach, and other clustering. Analysis of ISC expenditures on a per capita basis was not undertaken given that the expenditures could not be reconciled clearly to the population those dollars were intended to target. The data provides a baseline spending portrait to understand expenditure areas and the ways in which funding flows.

Since 2014–15, ISC's departmental spending[47] has increased. Prior to 2015, health and related funding resided outside of ISC (hence the approximately 31% increase in overall spending in 2015–16) (see Figure 18 and Figure 19). After 2019, overall expenditures are projected to decrease.

FIGURE 18: Total ISC spending by fiscal year with projected spending.

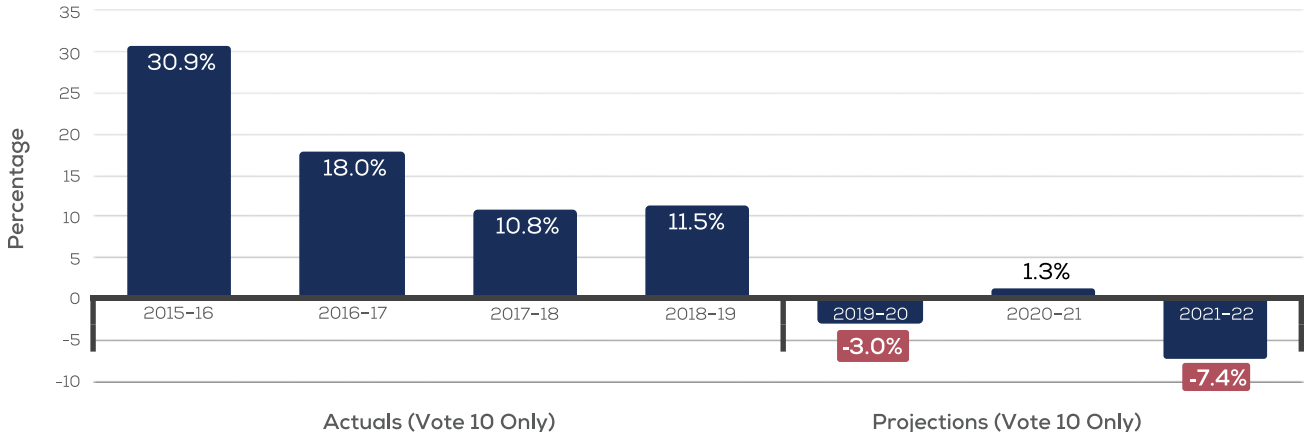


Sources: Indigenous Services Canada (ISC), Institute of Fiscal Studies and Democracy (IFSD).

Note: FNIHB for fiscal year 2014–15 is not included.

[47] Departmental spending includes grants and contributions, i.e. funding associated to program expenditures appropriated in 'vote 10' by Parliament. These expenditures do not include the department's internal operating expenditures appropriated in 'vote 1.'

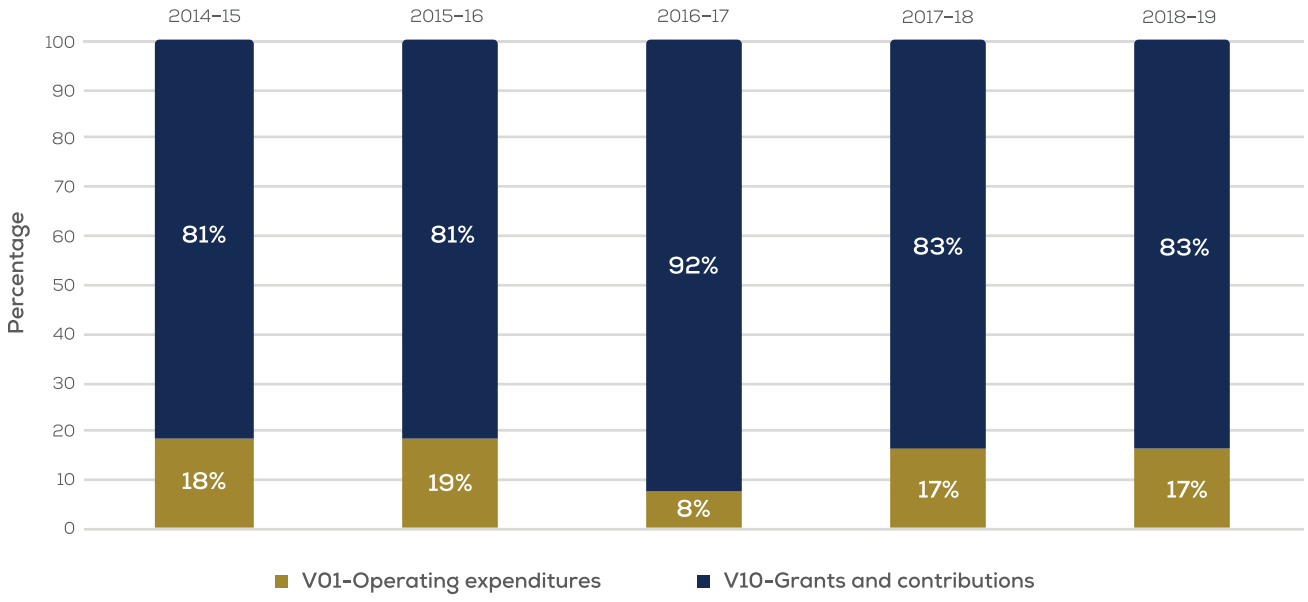
FIGURE 19: Year-over-year percentage change for total ISC spending.



Sources: Indigenous Services Canada (ISC), Institute of Fiscal Studies and Democracy (IFSD).
Note: First Nations Inuit Health Branch (FNIHB) expenditures excluded in fiscal year 2014–15, which explains the 31% increase in fiscal year 2015–16.

On a percentage basis, the majority of ISC's expenditures are allocated to grants and contributions (vote 10), i.e. transfers to recipients. Less than 20% of ISC's total costs are allocated to operating expenditures (vote 1) (see Figure 20).

FIGURE 20: Percentage of Vote 1 and Vote 10 total spending by fiscal year.



This expenditure pattern is consistent with ISC's role allocating funding for service delivery to various recipients (rather than delivering the services itself). The majority of recipients of ISC funding are First Nations and First Nations and Inuit (see Figure 21), with nearly half of all spending allocated to First Nations in fiscal year 2018–19 (see Figure 22).

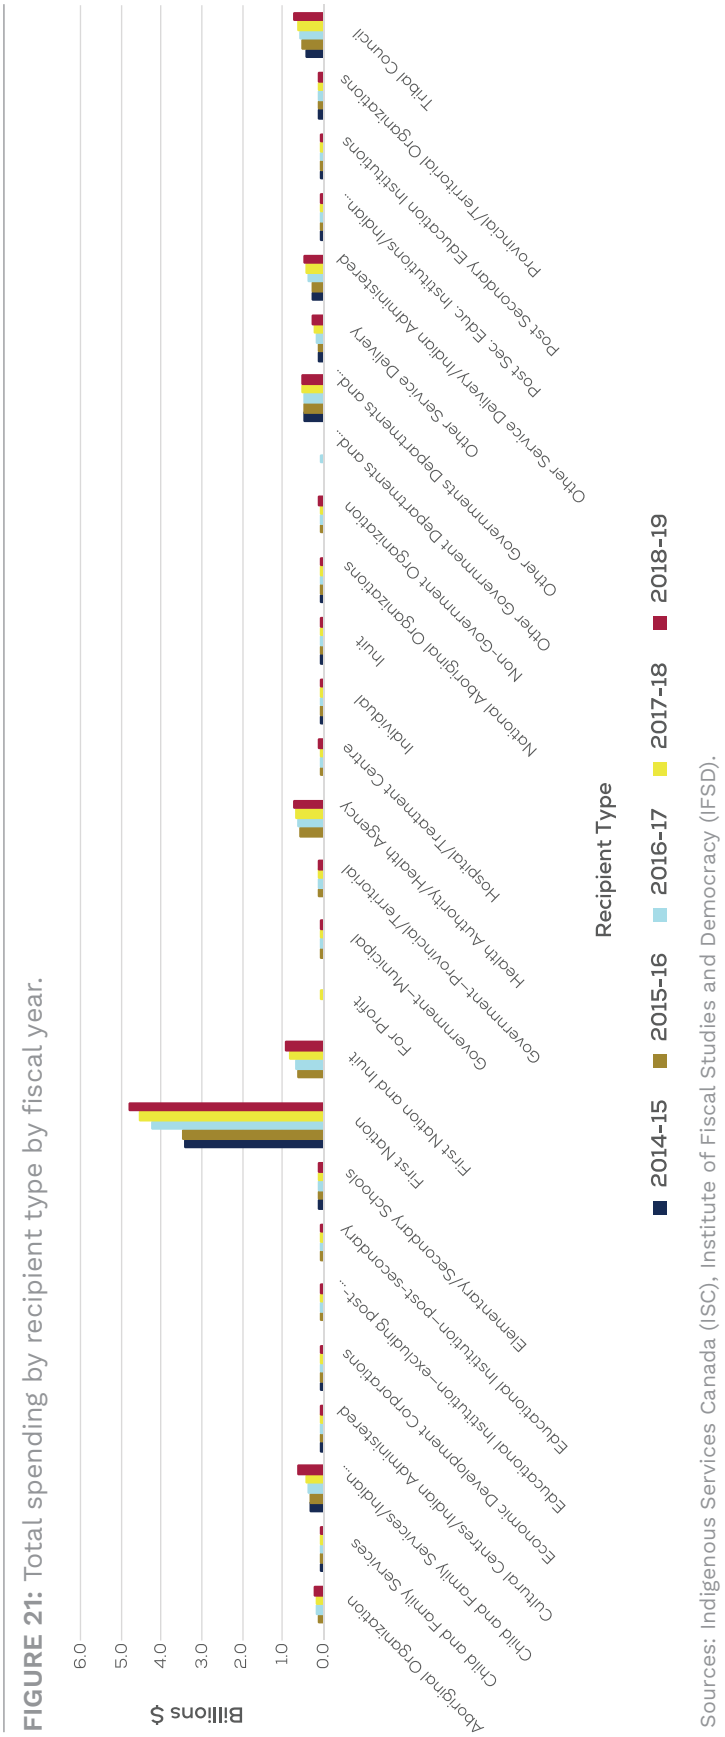


FIGURE 21: Total spending by recipient type by fiscal year.

Sources: Indigenous Services Canada (ISC), Institute of Fiscal Studies and Democracy (IFSD).

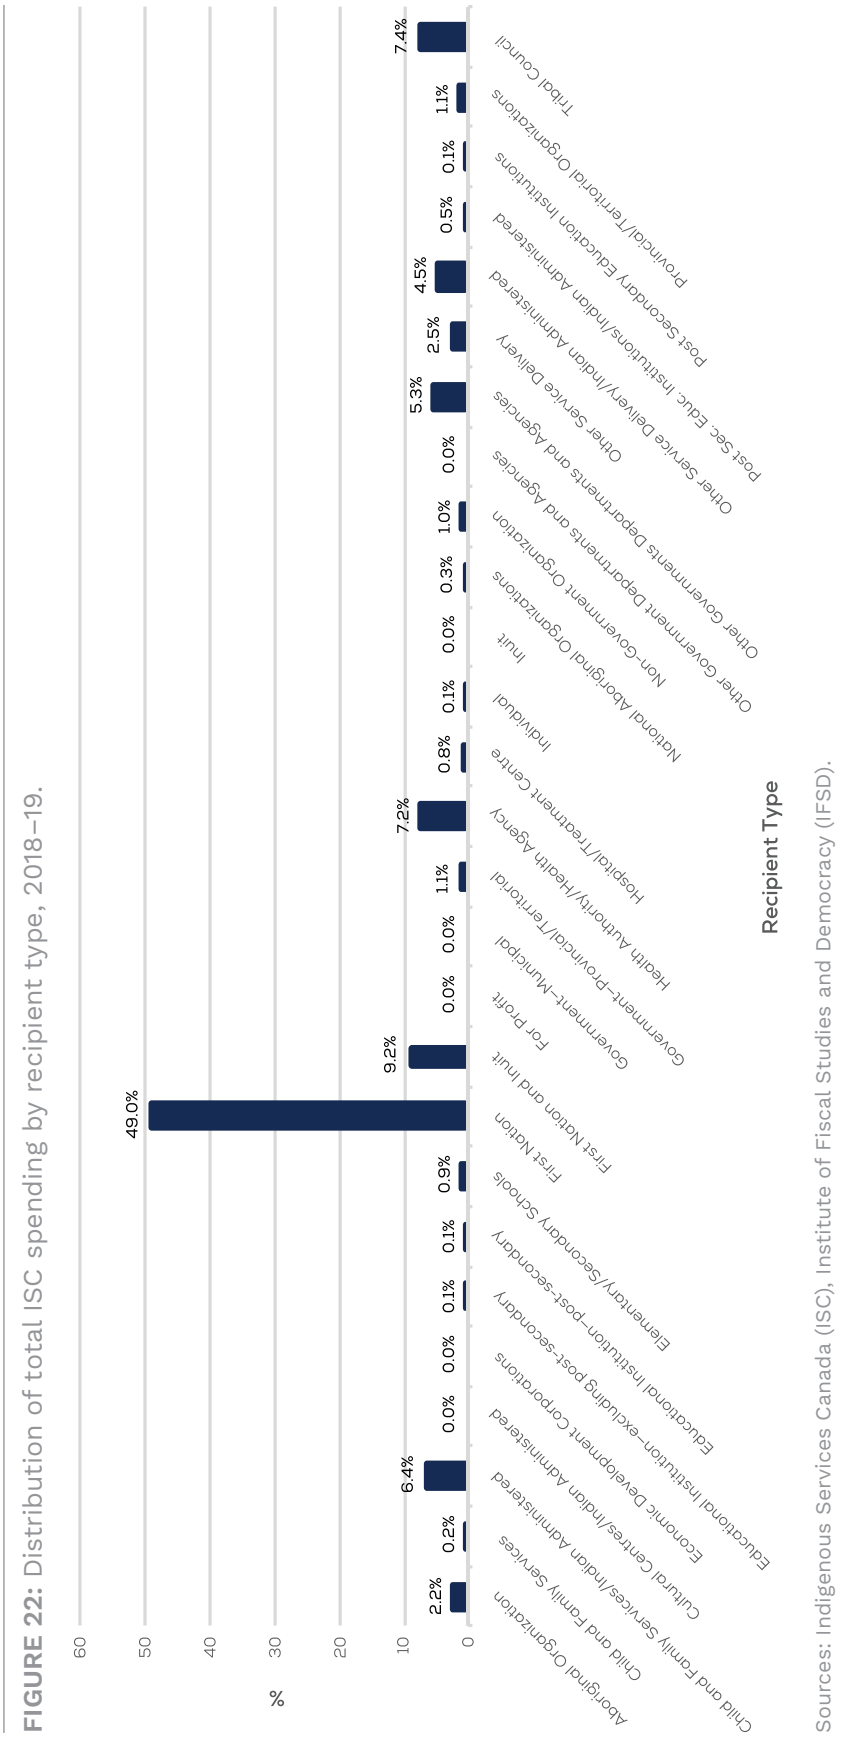

FIGURE 22: Distribution of total ISC spending by recipient type, 2018–19.

Sources: Indigenous Services Canada (ISC), Institute of Fiscal Studies and Democracy (IFSD).

Current First Nations recipient spending is focused on: infrastructure capacity and development; education; social development; and government and institutions of government (see Figure 23).

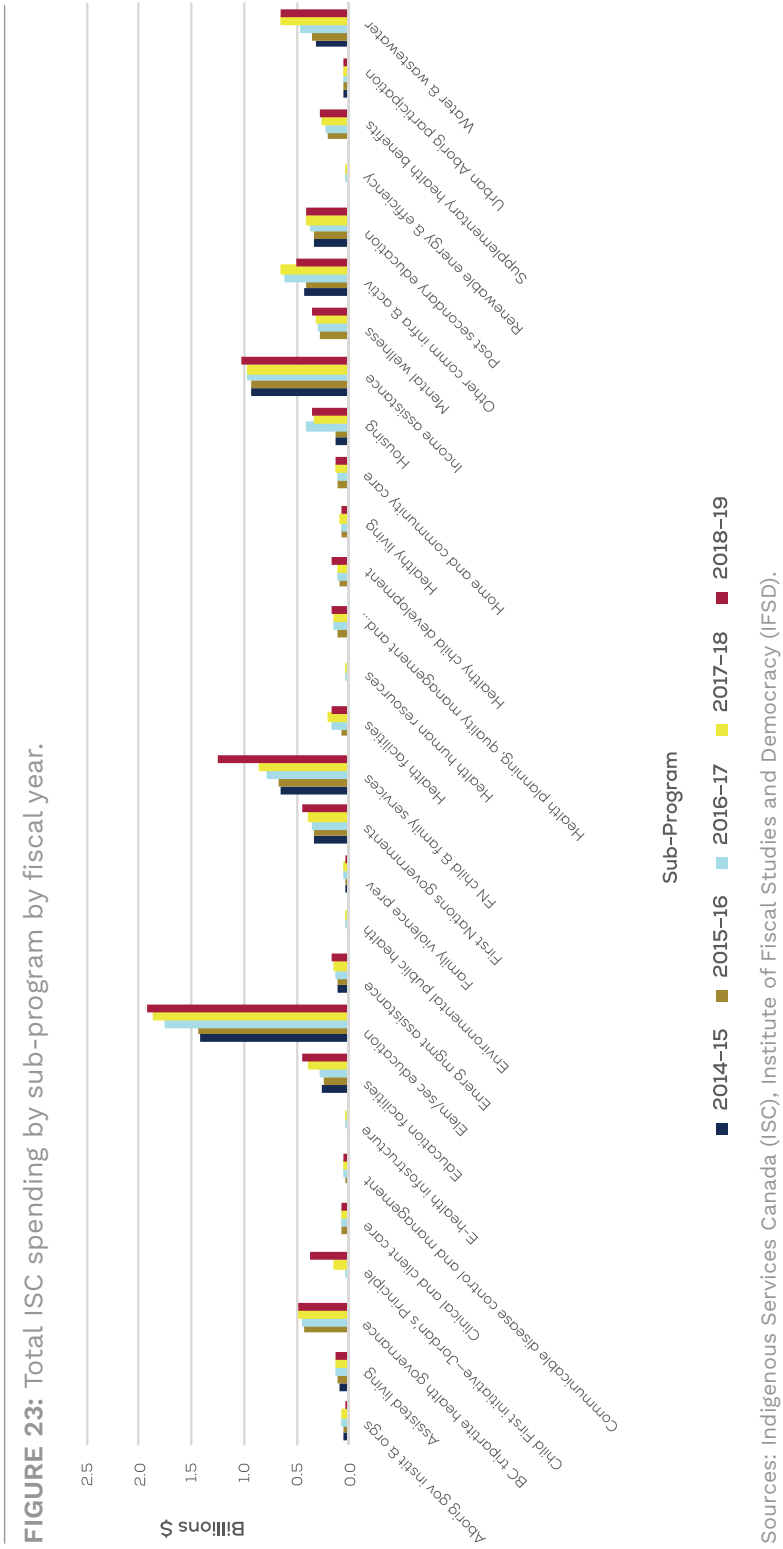

FIGURE 23: Total ISC spending by sub-program by fiscal year.

Sources: Indigenous Services Canada (ISC), Institute of Fiscal Studies and Democracy (IFSD).

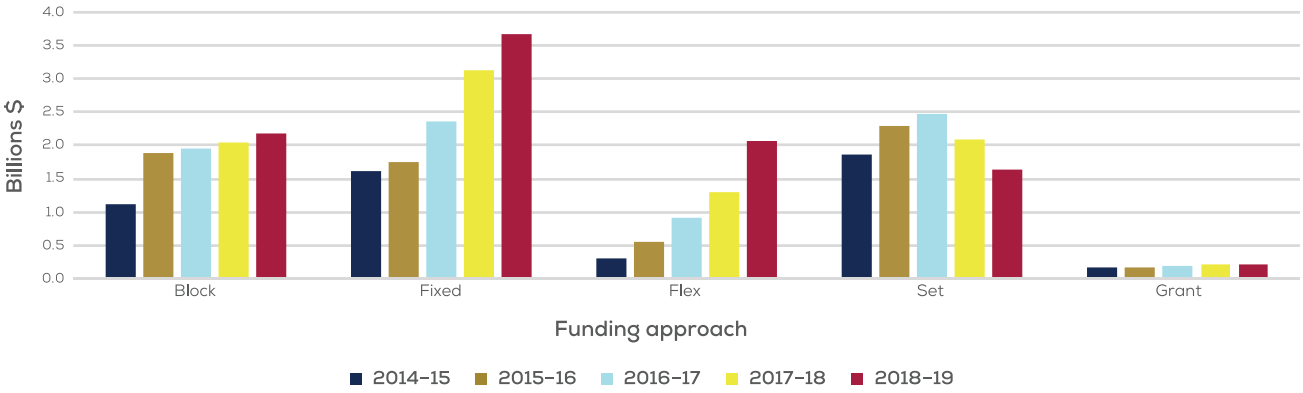
The conditions attached to funding can be just as important as the amount of the allocation (see Table 4). Since 2014–15, set and fixed funding have decreased, as flex funding increased between 2017–18 and 2018–19 (see Figure 24). Fixed funding remains the approach governing the largest funding amount. This suggests that most funding uses are pre-determined with limited latitude for recipients.

TABLE 4: Overview of funding contribution approaches.[48]

Contribution approach	Description
Grant	▪ Transfer payment based on agreement. ▪ Must report on results, but not required to account for spending. ▪ Recipient must meet "eligibility and other entitlement" criteria. ▪ Duration is flexible.
Set	▪ Funds used for a defined purpose. ▪ Any unused funds must be returned at the end of the fiscal year (no carry forward option). ▪ Note: this approach has been limited since April 1, 2018 and used only as needed, e.g. risk management.
Fixed	▪ Funds determined by reliable estimates (annual basis). ▪ Carry forwards are possible; cost-overruns are the responsibility of the recipient. ▪ Approach applied to a defined purpose or program and must be (re)issued annually.
Flexible	▪ Funds can be reallocated between cost categories within a program area. ▪ Carry forwards are possible, as long as the agreement is not in its final year. ▪ Requisite capacity and relationship with department are required for this minimum two-year agreement.
Block	▪ Funds are moveable between a block of programs (so long as objectives are achieved). ▪ Unspent funds can be kept and used within the same program block. ▪ Recipient must meet "readiness assessment criteria," for this contribution.

[48] Indigenous and Northern Affairs Canada, "Funding approaches," *Government of Canada*, updated April 16, 2018, https://www.aadnc-aandc.gc.ca/eng/1322746046651/1322746652148?=undefined.

FIGURE 24: Total ISC spending by funding approach by fiscal year.

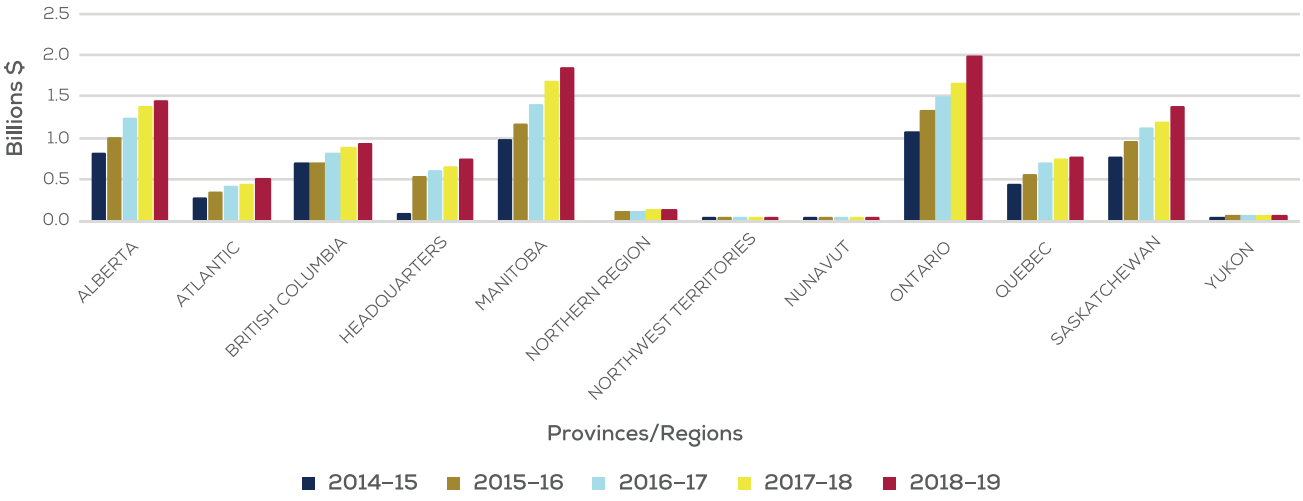


Sources: Indigenous Services Canada (ISC), Institute of Fiscal Studies and Democracy (IFSD).

Notes: Undefined funding approaches are excluded.

On a provincial and regional basis, ISC's expenditures have increased, with Manitoba, Ontario, Alberta and Saskatchewan, receiving the highest total investments, between fiscal years 2014–15 and 2018–19 (see Figure 25). The regional variances may be attributable to different geographic/remoteness contexts, poverty, and related contextual factors that tend to be captured in the Community Well-Being Index.[49]

FIGURE 25: Total ISC spending by region by fiscal year.

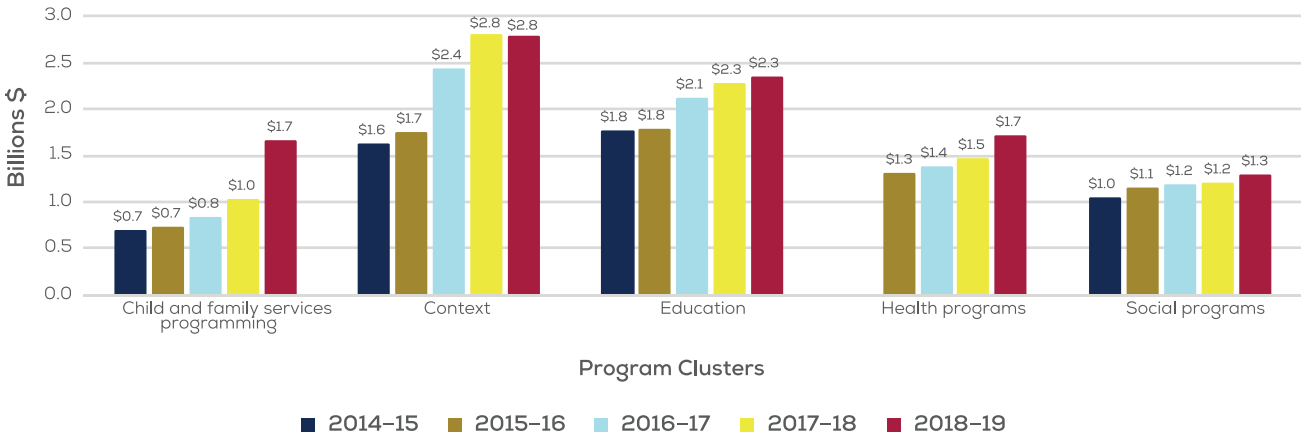


Sources: Indigenous Services Canada (ISC), Institute of Fiscal Studies and Democracy (IFSD).

[49] The Community Well-Being Index tracks the wellness of First Nations communities across four indicators: education, labour force activity, income and housing. The data comes from the Census and the National Household Survey. See Indigenous Services Canada, "Community Well-Being Index," *Government of Canada*, updated May 24, 2019, https://www.sac-isc.gc.ca/eng/1100100016579/1557319653695.

To help to understand spending trends, IFSD developed policy clusters (child and family services programming; context; education; health programs; social programs, see Appendix I for definitions) (Figure 26). The data suggests that overall ISC spending across program areas has been consistent, with exception to the increases in child and family services and health spending.

FIGURE 26: Total ISC spending by cluster by fiscal year.



Sources: Indigenous Services Canada (ISC), Institute of Fiscal Studies and Democracy (IFSD).

The significant 48% increase in FNCFS program spending in 2018–19 is attributed to the CHRT-mandated payments (the FNCFS program spending is projected to decrease by 9% in 2019–20) (see Figure 27). Case study analysis suggests that the CHRT payments have had immediate impacts on programming and operations. The supplementary investments, however, are one-time payments and not guaranteed beyond the next fiscal year. This reality puts progress on prevention programming and practices at risk.

PIIKANI CHILD AND FAMILY SERVICES ALBERTA

Piikani CFS serves a significant on-reserve population. With the supplementary funding from CHRT, it has bolstered its prevention services and prevention-focused approach. Piikani CFS's shift in focus is a testament to the impact of funding when paired with latitude for action on the ground.

Context

Piikani Child and Family Services (CFS) was established through a negotiated tripartite agreement in 1999–2000 and was delegated in 2001. From a small team of five staff, it has grown to 22. All staff serving in Piikani are Blackfoot, which helps to reduce turnover.

Piikani CFS serves the Piikani Nation. For over five years, the community was under third-party management with major debt. There were no homes built between 1995 to the mid-2000s, which is telling of the challenges, as most of its membership resides on reserve. Economic opportunity and development remain a challenge without external capital investment. While the community has worked to manage its financial challenges, the community-level trauma of residential schools within 10 km of the reserve remains, and is expressed in various forms, namely through addictions.

Piikani CFS has adopted a prevention-focused approach to its care with resources acquired through the Canadian Human Rights Tribunal (CHRT) rulings on First Nations child and family services.

Programming

Piikani CFS has leveraged supplementary funding from CHRT to develop its prevention programming and associated tools (in 2018, funding was just over $1 million). In the last two years, there has been a downward trend of the number of children in care in the agency with the prevention funding increase. Permanent placements in foster care have also decreased as kinship care increases.

While children in care numbers have decreased and kinship arrangements increased, it remains a challenge to find foster parents and kinship arrangements on-reserve. There is a resource gap in housing and other areas, which limits the ability of homes to meet the provincial foster home standards required. This reality is a function of the broader contextual challenges that Piikani Nation must manage.

Bolstered with supplementary resources, Piikani CFS has worked to address the *causes of the causes* of contact with the protection system, e.g. poverty. Given the trends in protection placements, Piikani CFS considers the approach to be successful. Prevention funding allows for increased flexibility in approaches to support children in families (instead of always reverting to protection to unlock funding).

One of its prevention focused programs, has been the development of a Piikani cultural connection application. The app was designed to promote cultural connections and continuity for children, especially for those living with foster families off-reserve. A cultural conduit, the app is a point of access to Piikani's culture, language and history.

Prevention programming increases have highlighted capital needs, especially to support programming and to continue to house all staff in a single building.

Governance

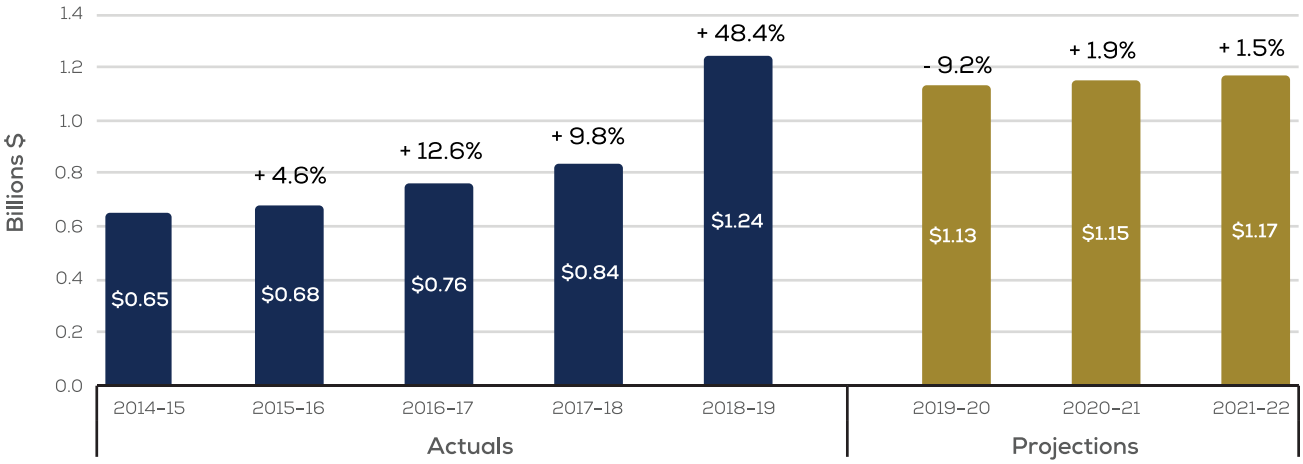
Piikani CFS is incorporated, an arrangement that supports Piikani CFS' independence. Governed by a board of directors with representation from the Band Council, Piikani CFS follows Alberta's provincial CFS laws. All data is collected and controlled by the Province of Alberta (Piikani CFS has had to request its own data). Data is protection-focused, with limited data on prevention (if any).

Lessons and Considerations

Even in the short-term, supplementary CHRT funding has had impacts on refocusing resources and activities from protection to prevention. Piikani CFS has altered the orientation of its organization, to focus in a meaningful way, on prevention and the *causes of the causes* of protection.

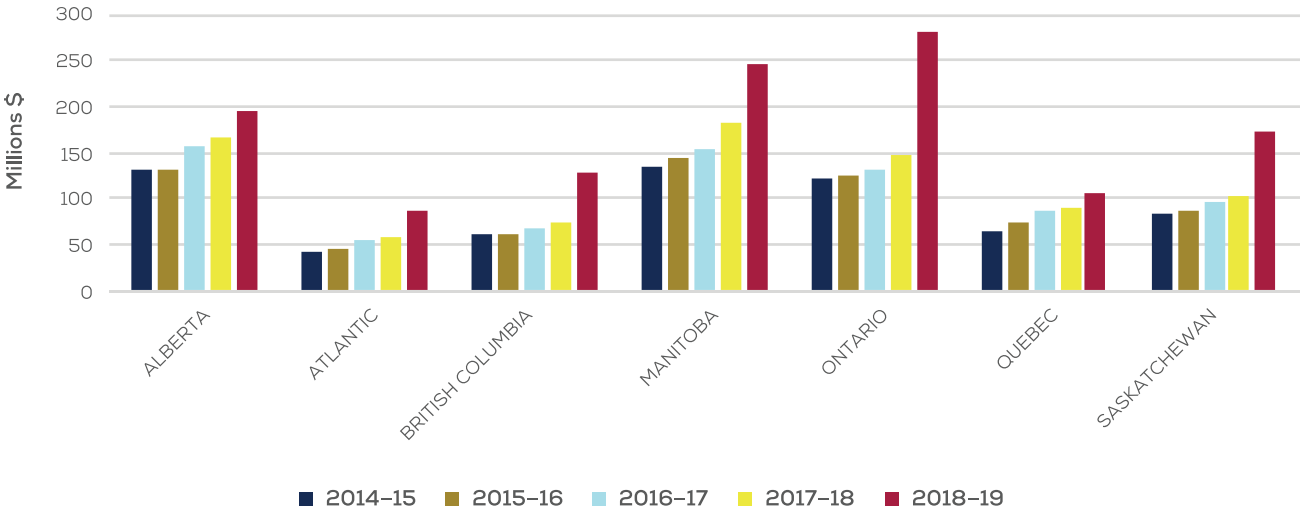
The crucial lesson from this experience is the expediency with which funding changes can influence activities and operations on the ground. Piikani CFS's work in shifting its practice to focus increasingly on prevention with supplementary funding, is a testament to the impact of funding when paired with latitude for action on the ground.

FIGURE 27: FNCFS spending by fiscal year with projected spending.



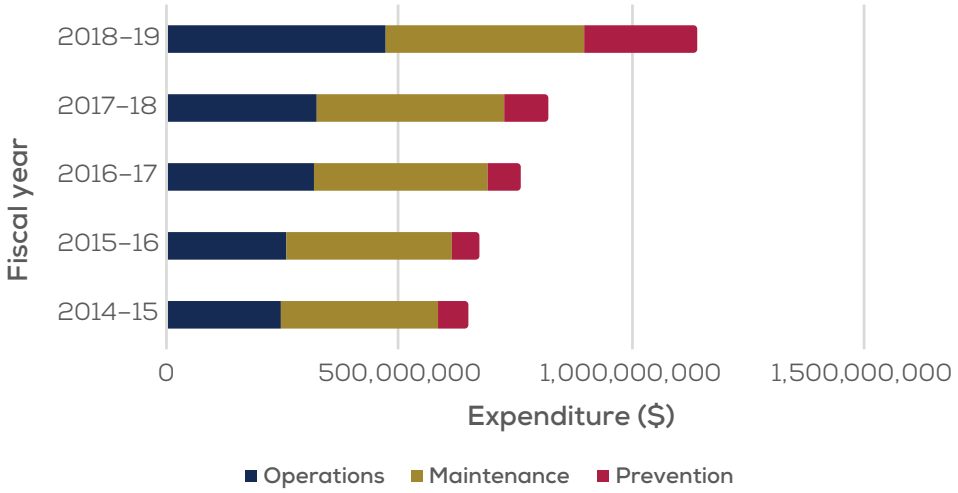
On a provincial and regional basis, similar trends for the FNCFS program are exhibited (see Figure 28). Total funding generally increases on an incremental basis, with a significant increase in fiscal year 2018–19 for all provinces and regions with exception to Quebec, which exhibits a smaller comparative increase relative to fiscal year 2017–18.

FIGURE 28: FNCFS spending by province/region by fiscal year.



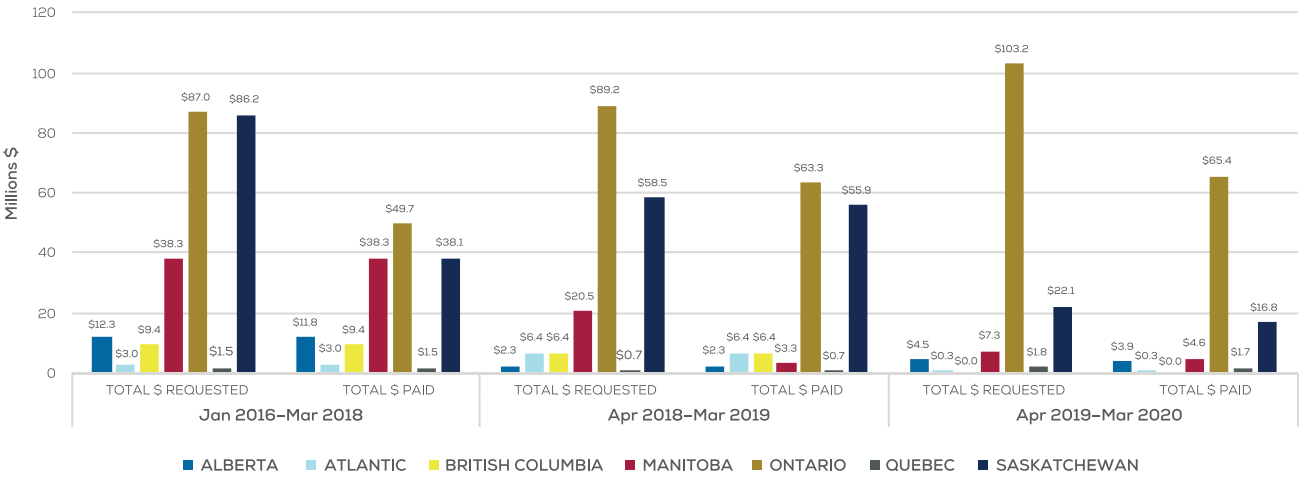
FNCFS program-level data was provided separately to IFSD in October 2019. This data is used for illustrative purposes only, as there are some minor differences with the program data and the ISC provided dataset (see Figure 29). The program information is useful in depicting the shift in allocations between maintenance (payments for children in care), protection and prevention from fiscal year 2014–15 to 2018–19. Relative to the other fiscal years, overall spending increased in 2018–19, notably in prevention.

FIGURE 29: Total FNCFS spending by category by fiscal year.



CHRT-related spending is captured at the program level by ISC but is not separately coded. The supplementary funding mandated by CHRT was application-based and transferred to recipients through the FNCFS program. For a portrait of requested CHRT spending, IFSD obtained a breakdown prepared by program specialists in ISC. Most CHRT-related requests came from Ontario and Saskatchewan. A subset of the requested funds was provided to recipients. This breakdown is illustrative only (see Figure 30).

FIGURE 30: CHRT funding—overview.



Results-focused evaluations of the impact of CHRT spending are not available through ISC. The framework used to capture applications of CHRT spending was input-focused, limiting understanding of the short-term impacts of the supplementary investments. IFSD attempted to supplement the data gap on CHRT spending to FNCFS agencies through

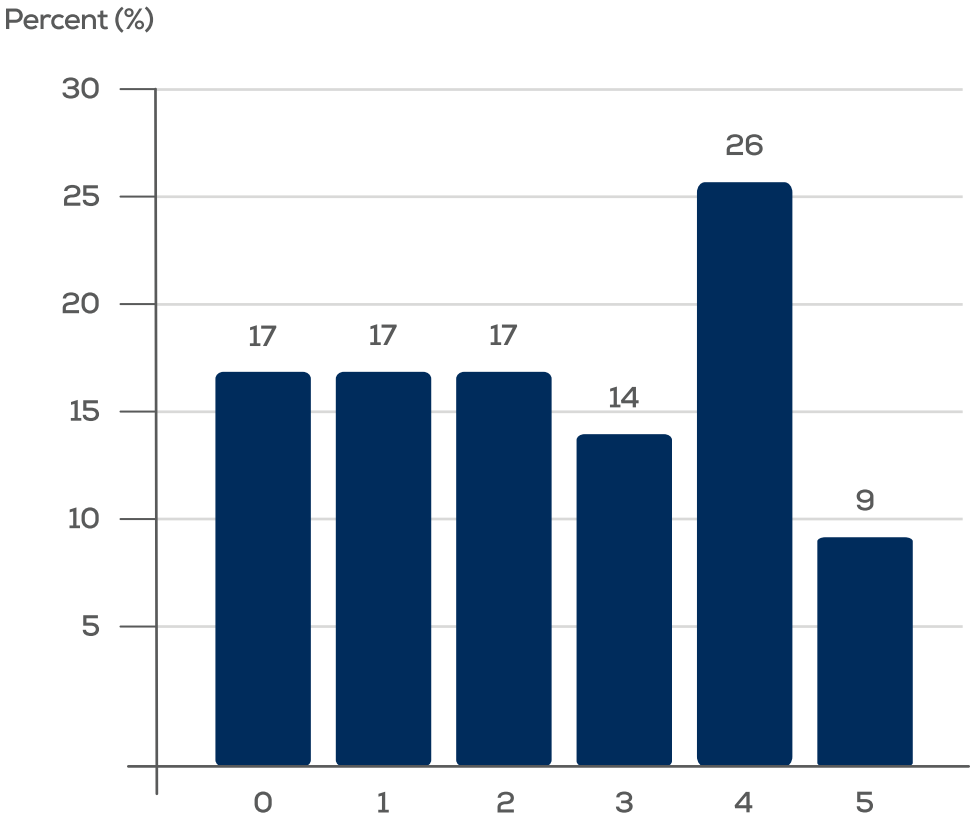
its 2019 FNCFS survey (see Application of the approach). For those agencies that requested and received CHRT funding, most applied funds to salary top-ups (to align to provincial salary scales), prevention programming, operating, and capital needs.

A well-formed public sector performance architecture will connect data through inputs (i.e. resources), outputs (i.e. program activities) and outcomes (i.e. results for stakeholders). Most tracking associated to ISC's program is based on inputs and outputs in an architecture that aligns to programs and aggregated at a national level. However, the current data architecture does not connect *results* at the level of First Nations with resource allocation. For example, four performance indicators are associated to the FNCFS program. All four are focused on inputs and outputs:

1. Percentage of First Nation communities offering family support services aimed at keeping families together.
2. Percentage of First Nations children on-reserve, in care.
3. Percentage of First Nation children entering care for the first time.
4. Percentage of children in care placed with a family member.

Across all programming activities, ISC tracks 115 separate indicators between fiscal years 2014–15 and 2018–19. Over this period of time, 10 of the 115 performance indicators (approximately 8.6%) had five years of continuously recorded data. As depicted in Figure 31, approximately 35% of indicators have four or more years of data. In contrast, just over half (51%) of indicators have two years or less of recorded data. Among indicators, there are instances (approximately, 20%) where there is a gap between one or more years between recorded data points. Half of those indicators missing data, exhibit a gap of two or more years.

FIGURE 31: Chart 1: ISC outcomes data by number of data points (%).



Approximately half of the indicators (49%) had associated measures. For instance, one measure on water and water systems tracked: "% of on-reserve public water systems financially supported by Indigenous Services Canada that have low risk ratings". The remaining fifty-eight indicators had targets that were to be determined, not applicable, or blank.

The financial data provided by ISC allowed for a number of observations. It provided a better understanding of the amount of funding, the approach through which funding was allocated, and offered clarity on recipient type. There are limitations to the data and opportunities to improve the connection between resource allocation and results. The lack of continuity in indicators and data collection limits analysis beyond the aggregate level of the program. Outcomes cannot be tied to recipients, regions, rural v. urban areas, etc. to improve resource application.

An alternative approach to performance

This report proposes an alternative approach to performance measurement, rooted in Treasury Board policy. The current policy and its predecessor, the Policy on Management, Resources and Results Structures, has been implemented in an uneven manner across Government of Canada departments. It often appears that reporting on results is oriented towards external reporting to Parliament, rather than for the purposes of managing to outcomes. Implementing a results-focused framework for linking expenditures to outcomes (not only inputs and outputs), requires departmental commitment in that it requires the performance architecture and information to support the department's allocation of resources and the management of results.

In the public sector, linking resources and results can be challenging due to actors often conflating attribution of performance outcomes with reporting on results. For instance, Environment Canada measures the weather daily but is not accountable for the forecast. Measuring results does not imply a direct accountability for the outcome. Instead, results measurement is about generating evidence for improved decision-making.

While the implementation of results policy has been uneven across the Government of Canada, there are federal initiatives with a results framework that connect outcomes and expenditures, with an evidence-driven approach. The National Crime Prevention Strategy (NCPS), within the National Crime Prevention Centre, invests in crime prevention strategies by targeting the risk factors that lead to criminal activity. The initiative is premised on early intervention to reduce crime by addressing risk factors. The program's structure allows programming dollars to be allocated to the initiatives that work. This ability to directly align funding to practices is not always an option.

To assess its results, the NCPS logic model[50] defines results-oriented indicators, such as increasing the sense of security of users of facilities and reducing hate-motivated crime in community facilities. These targets are examples of how to define programmatic outcomes, by identifying the long-term intention of the investment and linking resources and results through evaluation.

[50] Public Safety Canada, "2017–2018 Evaluation of the National Crime Prevention Strategy," last modified September 20, 2018, https://www.publicsafety.gc.ca/cnt/rsrcs/pblctns/2017-18-rprt-vltn-ncps/index-en.aspx#a01.

To apply the principles of results-oriented measurement to FNCFS, the Measuring to Thrive framework was developed in consultation with agency leadership and experts to build an evidence-focused understanding of the holistic well-being of children, families and their communities. This framework will help to define two-way accountability between the federal government as funder and the agency as service provider. As with the cases of New Zealand and Scotland[51] who have published well-being budgets and regularly track progress, performance-based budgeting requires a focus on results rather than only inputs and outputs.

[51] Helaina Gaspard and Emily Woolner, "Budgeting for Well-Being," *Policy Magazine* 2020, https://policymagazine.ca/budgeting-for-well-being/.

Part II: Measuring to Thrive performance framework

Introduction

As a new and improved performance framework, Measuring to Thrive[52] will offer perspective on the well-being of First Nations children, families, and communities (see Figure 32), in keeping with the legislatively defined principles of **substantive equality**, the **best interests of the child**, and a **culturally-informed approach**. The intent of Measuring to Thrive is to provide FNCFS agencies with a portrait of the people they serve and the context in which they operate to support enhanced decision-making and eventually, to better inform funding approaches (see Appendix J for the full framework).[53]

What you measure, you manage. This framework is a tool to promote better understanding of community in order to ensure an agency has the resources required to meet the needs of the people it serves. Measuring to Thrive is a vision to promote better results for children; it is not about measuring an agency's individual performance.

[52] Agency leadership and experts convened for a roundtable on February 21, 2020 in Ottawa at the Institute of Fiscal Studies and Democracy (IFSD), to refine a measurement framework based on the work of First Nations child and family services (FNCFS) agency leadership in 2018.

[53] The Children's Health and Well-being Measure (CHWM) is a 62 multiple choice question survey, with three open ended questions to help to assess the spiritual, emotional, physical and mental health of Indigenous children. Administered via tablet in five First Nations communities in Ontario, the survey results have helped to develop community portraits of children's wellness and the delivery of services and resources of children in need. Focused exclusively on children's health and wellness the CHWM was not designed to assess child, family and community holistic well-being.

KW'UMUT LELUM
BRITISH COLUMBIA

The dashboard agency: It's about outcomes, not about band-aids.

A focus on outcomes must be accompanied by clear lines of accountability, requisite human capital, IT and data resources.

Context
Kw'umut Lelum serves nine First Nations in British Columbia. With populations below 2,000 per community, close collaboration and engagement is facilitated. Working closely with band councils, Kw'umut Lelum works to address service gaps and not duplicate services in its communities.

The agency's appreciation for relevant data focused at the level of the child and their community, supports the development of needs-based programs built from the bottom-up. In the last two years, Kw'umut Lelum has undergone organizational shifts to build and integrate a new outcomes-focused data system. From budgets to programs, Kw'umut Lelum is building real-time portraits of its communities, their needs and what works for them.

Operating
Kw'umut Lelum had a substantive shift in its operations in 2018, with prevention funding that changed internal structures and practices. From the hiring of prevention workers for each First Nation served, to the development of a data team, the agency finally had the resources to orient its practice toward holistic well-being.

The way Kw'umut Lelum frames its challenges is rooted in a life-cycle perspective. When considering access to services, it is not only about counting which services are there an which are not, but also about barriers to access and the appropriateness of those services for communities. This nuance is an important one. Connecting context to inputs, outputs and outcomes, from the ground-up, facilitates a different way of delivering a mandate.

To build this perspective, Kw'umut Lelum began collecting quantitative and qualitative data in an integrated database. This approach helps the agency track the progress of an individual child and also understand how they, their family and community are faring together. Linking contextual information about

communities to the experiences of the individual paints a clearer portrait of the ways in which services, environment and resource allocation interact.

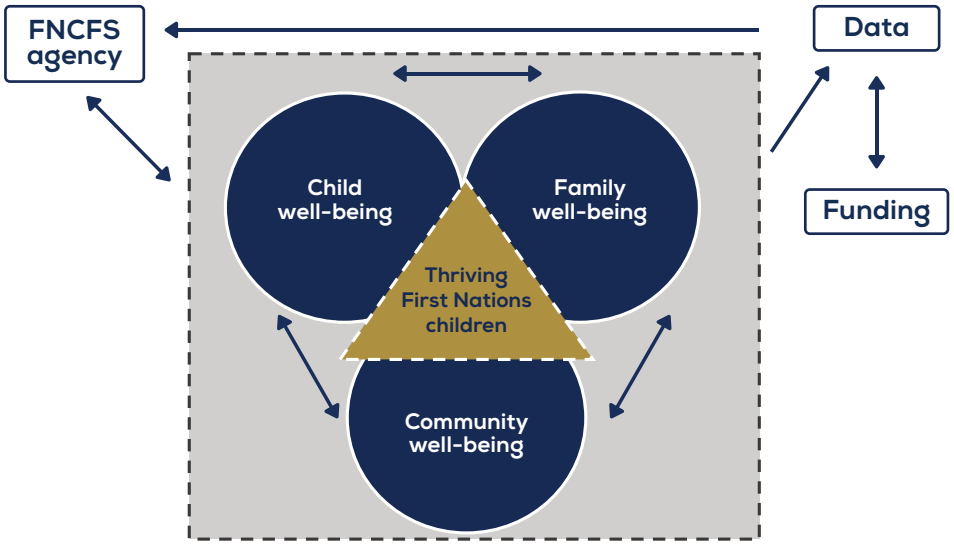
The evidence generated from the data is very useful for budget and resource planning. With an enriched perspective, budgets can be aligned to need, and verified through consultations and regular assessments with chiefs and communities. Budget allocations, especially on well-being and prevention matters are determined with input from the senior management team, the board of directors, and community consultations.

Kw'umut Lelum has three points of accountability in its organization: to their board of directors, to band management, and to the communities and their front-line staff. The system of accountability promotes cross-collaboration, connections to and knowledge of communities.

Lessons and Considerations

Change such as the type Kw'umut Lelum has introduced in the last two years does not come easily. Organizational change needs confidence building leadership and a cohesive senior team. Change may not suit everyone equally and some staff may choose to leave. Agencies should be prepared with a well communicated plan to deliver the change and be open to adjusting in-course to meet unexpected circumstances.

FIGURE 32: Measuring to Thrive framework's holistic conception of well-being.



WHAT WE HEARD

1. Context matters: The experiences and needs of individual agencies and their communities differ, e.g. urban, rural, remote, etc. ***The measurement framework must abstract to a common collective vision of well-being.***

2. Culture is key: Culture, language and land are crucial elements of belonging. Opportunities for children and families to connect with their community are important. ***The measurement framework must be read through the lens of individual cultural practices, traditions and languages.***

3. Safety is an element of well-being: Safety is not an independent goal of FNCFS, it is an important element of overall child well-being. ***Safety must be a measure within child well-being.***

4. Measuring what matters: FNCFS agencies recognize the value of collecting and using their own meaningful data for improved decision-making and funding approaches. ***Measuring what matters will take time and will require a period of testing and adjustment to refine the approach.***

5. Capacity requirements: Agencies require internal capacity and support to leverage data collection and analysis that reflects them. ***A third-party independent and trusted custodian of the data should be established to support this need, along with resources internal to agencies.***

The vision in Measuring to Thrive is expressed through three interrelated elements: the well-being of communities, families and children. Measuring to Thrive is meant to be read in the spirit of holistic well-being. As such, it is meant to be informed by the unique cultural practices, traditions and Indigenous languages integral to thriving First Nations and their communities (see Figure 33).

FIGURE 33: Measuring to Thrive framework overview.

FAMILIES
(6 indicators)

Performance area	Sample measures of indicators
Wellness and social engagement	▪ Families reporting livable income to meet needs ▪ Families demonstrating social engagement through participation in cultural traditions, teachings and ceremonies ▪ Incidents of family violence

CHILDREN
(42 indicators)

Performance area	Sample measures of indicators
Safety	▪ Incidences of child sexual abuse ▪ Number of moves in care ▪ Rates of family reunification
Cognitive development	▪ Children achieving basic numeracy and literacy targets
Social relationships	▪ Youth reporting ties to elders ▪ Youth reporting ties to siblings, extended family, friends
Emotional, cultural and spiritual well-being	▪ Children/youth reporting eating traditional foods ▪ Children/youth reporting pride in Indigenous identity
Physical health and well-being	▪ Children/youth reporting regular physical activity ▪ Percentage of teenage births

COMMUNITY
(27 indicators)

Performance area	Sample measures of indicators
Basic needs	▪ Households with drinking water flowing from tap for consumption, bathing and other uses ▪ Households with internet connectivity ▪ Community employment rate
Community services and engagement	▪ Community spaces for gatherings ▪ Community controls and runs health services
Wellness	▪ Rates of violent crime ▪ Rates of chronic health conditions
Education	▪ Community offers and controls elementary education ▪ High school graduation rates

The vision in Measuring to Thrive is meant to be universal. No matter where you reside, there can be agreement on the highest order elements that indicate thriving communities, families and children. While Measuring to Thrive is a common expression of well-being, individual agencies will deliver their mandates in the best interests of the communities they serve. This means that remote, rural, urban, large and small agencies may have differing needs and approaches to their practice, but may find unity in the pursuit of well-being for thriving children, families and communities.

Ideally, the Measuring to Thrive framework receives strong and broad-based support and is used in part or in full as a common tool for data development and tracking among federally funded FNCFS agencies. As proposed and agreed during the roundtable, it would be imperative for FNCFS agencies and for their communities to have any data collected through this framework transferred to a neutral, reliable and trusted third-party who would be a custodian of the data. This data would belong to FNCFS agencies and their communities. An institution such as the First Nations Information Governance Centre (FNIGC) could be leveraged or an agency similar in style to the University of Chicago's Chapin Hall, could be established in Canada to securely house, analyze and support FNCFS agencies in the collection and application of their data. Over time, as increased amounts of data are collected and analyzed, the data's predictive value would improve making it a helpful planning tool.

In the current state of FNCFS, there is a lack of alignment between social policy and financial resources. Social policy research and FNCFS agencies have repeatedly emphasized the importance of prevention-focused approaches to care that empower children, families and communities, rather than focusing on protection. Approaches taken by FNCFS agencies in pursuit of the well-being of their communities are numerous. There are, however, established gaps in their regular funding in areas such as prevention, capital and information technology. Poverty is a critical gap to address and was used euphemistically to capture the challenging contexts in which many FNCFS agencies operate. Such challenges include limited housing and housing in need of major repairs, access to potable water from the tap, access to broadband, etc.

FNCFS agencies do not operate in a vacuum but are influenced by the realities of the communities they serve. Ensuring that financial resources are aligned to the realities of their circumstances is necessary to support the well-being of communities. Achieving alignment between policy and resources requires people, processes and data to deliver operations and promote accountability.

As active organizations in a network of services in their communities, FNCFS agency activities are ideally focused on investing in people and collaborating to support the development of capable human beings. Inter-relationality is paramount, as individuals are wholly well with a sense of community.

In the Measuring to Thrive framework, **community** is a network of belonging and support; **family** is a collection of people who may have blood relations that support each other almost every day; **child** is a young person on a journey to adulthood.

CARRIER SEKANI FAMILY SERVICES BRITISH COLUMBIA

Empower your staff to deliver the best programming, informed by your own data, evidence and cultural approach, to build a trusted organization focused on well-being. Scale matters. Large and sophisticated agencies have the resources for such activities as research and communications that drive results and community connectedness. No matter an organization's size, its growth has to be paired with change management and resources in IT infrastructure, human resources, and capital assets.

Context

Carrier Sekani Family Services (CSFS), is a large prevention-focused organization serving eleven First Nations from three offices in and around Prince George, Vanderhoof, and Burns Lake, as well as Health Centres on-reserve in north central British Columbia. The agency's life cycle model (from cradle to grave), informed by its own research, extends across health and social programs and services. From intensive family preservation to telehealth initiatives, CSFS has empowered its staff to innovate, try, fail, and succeed, in support of the people and communities they serve.

Operations and Programs

Working cohesively as an organization, CSFS seeks to design its services to strengthen capacity in communities, and to support the development of happy and healthy children and families. There is no 'wrong door' in at CSFS. Staff are well connected and freely collaborate within the organization. An individual or family in need of support will find a wrap-around approach to services.

Strong leadership, research and policy are pillars of CSFS's integrated approach. Senior executives are credited with creating an environment that empowers staff, making them feel accountable for the organization and its outcomes. Managers run business lines in the organization, with latitude to solve problems and innovate to meet community needs. The organization has developed a Terms of Reference, unique to each First Nation, outlining its process for integrated care meetings.

CSFS's over 200 staff are regularly convened for meetings (typically, virtually), in which updates are shared and ideas discussed. Complex care clients/patients are reviewed at monthly integrated care meetings. The regular contact and awareness reinforce the integral role staff play in the operation. Staff retention is high.

CSFS's research program is a defining element of the agency. Current research in health, psychology, social services, etc. is paired with internal data and evidence to build policies and programs that support outcomes. Staff value the relationship they describe as 'symbiotic' with the research team, as they engage in 'true collaboration,' in their work. The research team maintains connection to community through a Research Advisory Board made up of knowledge holders from each member nation.

There are direct linkages between research and programming at CSFS. Programs such as, the Intensive Family Preservation Program are informed by research on traditional child rearing and traditional laws. The youth program, Walk Tall, was shaped by research and findings from the Youth Suicide Project. Following ten years of research, the Family Law Program was established to support families. Mediators associated to this program are trained through a specialized course, delivered in partnership with the University of Northern British Columbia for which university course credits are earned.

An in-house curriculum, "Our Way," was developed define a culturally informed approach to services, specific to the eleven First Nations CSFS serves. The approach has become very popular in the organization and even outside of it, with paid training.

The emphasis on data, evidence and evaluation is built-in to new initiatives and programs. Services are accredited with the highest recommendation possible in audits. For example, Youth Services, a relatively new department is building in community consultations and evaluations with participating members into their practice from the outset. This work encourages in-course corrections by adjusting practices to meet needs.

This theme of informed, accountable and empowered staff extends across the agency. There is a focus on care with social workers carrying an average of eight cases. This changes the dynamic of care, with social workers able to focus on people instead of paperwork. The agency's vision is core to staff retention; the organization doesn't just respond to crises; they work with families to build better futures. Staff feel valued, contribute ideas, engage in research, build programs and policies from the ground-up.

Outward Facing Connections

Serving eleven communities and a large staff, CSFS has built a Communications Team that runs social media accounts, a YouTube page and contests. The team helps to share stories and practices for well-being in the communities. They share information, promote events, and encourage awareness of CSFS.

The community engagement goes beyond a one-way transfer of information to focus on development. CSFS contracts the Nicola Valley Institute of Technology to run customized training programs. With training funded by CSFS, community members can pursue human resource training and social work training and work for the agency. CSFS's presence in communities is constant, and not exclusively associated to protection problems. By investing in communities, CSFS benefits from their engagement and trust.

Conscious that service offerings differ in community and in cities, CSFS is working to foster a similar continuum of services. Programming tends to be more extensive in communities, while many members are moving into urban centres. The continuity of service is important to CSFS, and they are extending their capacities to meet their community members wherever they reside. Infrastructure, such as CSFS's electronic medical record, provides real time access to the same information throughout the territory, helping staff to support patients wherever they are accessing services.

In the last two years, CSFS has expanded its programming offerings with funding from CHRT rulings. The growth while exciting, highlighted the importance of pairing change with requisite IT infrastructure, human resources, and capital assets. Responding to the concerns of managers who had lengthy hiring waits and a need for space, was critical to sustaining morale in changing circumstances.

Lessons and Considerations

Major growth can be exciting and challenging. When circumstances change, it is imperative that staff are supported and are actively engaged in change management. Technical, human and infrastructure resources should be commensurate to mandate and grow/change with priorities.

Research, data and evidence can be powerful tools to inform and enhance policies and programming. While not all agencies will have a research directorate, emulating program-level evaluation practices, data tracking and in-course adjustments can yield benefits by capturing and applying learnings in future decisions.

A cohesive and high-functioning organization is built on trust and the contributions of its members. CSFS has nurtured an environment that creates a supportive space for staff to innovate, with accountability for outcomes.

Applying the framework

On a quarterly basis, data on the indicators in the Measuring to Thrive framework would be collected. Data will come from various sources, including case files from the agency, as well as external publicly accessible data, e.g. Regional Health Survey, Statistics Canada, etc. Any data to complete the framework will not identify individuals. Measuring to Thrive is designed to collect information in aggregate to protect the privacy of individuals.

As the agency completes the framework, the data would be accessed by the third-party custodian (i.e. First Nations-led secretariat) responsible for scrubbing and analyzing the data. On a quarterly basis, researchers from the third-party will meet with agency leadership to discuss the analysis and potential applications on the ground.

Transitioning to a data collection and monitoring system that supports FNCFS agencies is not expected to be seamless. There will be a period of transition where testing and further refinement will be essential. It is expected that in order to get to the best possible version of Measuring to Thrive, revisions through use will be necessary. Testing the framework is the only way to ensure it reliably reflects the realities of FNCFS agencies and their communities.

FNCFS agencies have an opportunity to leverage the information (data); heart (stories); and resource needs (funding) of their communities to support them. There are four parts to the Measuring to Thrive framework:

1. Support improved decision-making by collecting relevant data aligned to a common vision;

2. Ensure data is good quality and connected to the realities and stories on the ground;

3. Ensure agencies have the capacity and support required to collect and analyze the data;

4. Inform resource allocation moving forward to promote a results-focused approach and allocative efficiency.

Taken together, the parts of the Measuring to Thrive framework can encourage a culture of accomplishment within FNCFS agencies wherein measurement is a tool to promote holistic well-being, supported through requisite resources.

Supporting software

FNCFS agencies will have their own case management systems to track their activities. Often, the data collected in these systems aligns to provincial requirements for child and family services and may not connect to overall holistic well-being of the child, family and community. IFSD has collaborated with software developers to build a complementary tool for FNCFS agencies to collect data and track their progress in alignment to the Measuring to Thrive framework (see the Measuring to Thrive software application details below).

There are other software providers, such as RedMane Technology,[54] that can offer agencies cloud-based solutions to data collection and integration with case management tools. A Chicago-based company, RedMane has offices in Vancouver and works with several FNCFS agencies across Canada. Its self-described expertise are in social service-oriented tools, including the mCase platform,[55] with capacity for systems integration, and off-the-shelf software implementation.

[54] See RedMane Technology's website, https://www.redmane.com/.

[55] See RedMane Technology's mCase platform, https://www.redmane.com/mcase/.

FNCFS agencies will have options and resources on how best to pursue their data collection and analysis in connection to the Measuring to Thrive framework.

Consistent, national data collection is possible. The United States and Australia—both federations with state-level governments involved in the provision of social policy—have national data collection practices on children in contact with the protection system, their experiences in care, and their transition out of care. Australia's data is principally an aggregation of child-level data, with additional sources. The United States has different databases, associated to the child's contact with the protection system. The Adoption and Foster Care Statistics (AFCARS) database collects information on care placement and adoptions. States are required to provide the information twice a year. Data for the National Child Abuse and Neglect Data System (NCANDS) database is voluntary for states, whereas information for the National Youth Transition database is collected through a mandated state-administered survey (see Table 5). The practice of regular, national data collection on child protection is possible, even in federal states. A national authority is often integral in defining the requirement or in orchestrating the aggregation.

TABLE 5: National data collection in child welfare in the United States and Australia.

Jurisdiction	Primary data sources	Data collected	Data custodian
United States	*Adoption and Foster Care Statistics (AFCARS)*: Collects information from Title IV-E agencies[56]	Case-level information on children in foster care[57]	United States Children's Bureau
	National Child Abuse and Neglect Data System (NCANDS): Data are submitted voluntarily by the states	Child welfare outcomes and characteristics of child maltreatment[58]	
	National Youth in Transition survey: States administer the survey to cohorts of youth at ages 17, 19 and 21[59]	Outcomes of youth currently in or recently aged out of foster care	
Australia	*Child Protection National Minimum Data Set/National Child Protection Data Collection*: Extracted from state and territory child protection administrative data sets[60]	Information on[61]: ▪ belonging and identity ▪ care planning ▪ connection to family, culture and community ▪ education ▪ health ▪ participation in decisions ▪ safety, stability and security of children and young people in care ▪ social and recreational needs ▪ training and support for careers ▪ transition from care	Australian Institute of Health and Welfare
	National survey of children in out-of-home care: Data are collected by the state/territory departments[62]

"MEASURING TO THRIVE" SOFTWARE APPLICATION

To deliver on results-focused outcomes for thriving children a web-based online system is being developed to capture outcome data from each CFS agency and to report the collected results. The current working name for this performance framework is "Measuring to Thrive". **It is important to note that all elements of the system are customizable, including branding. The IFSD logo was merely included as a placeholder in this mock-up.**

Technical Architecture

The solution is entirely "cloud-based" and designed and built to run on the Microsoft Azure cloud platform. All critical elements such as the application, web and database servers are located in Canadian data centres.

Database Technology

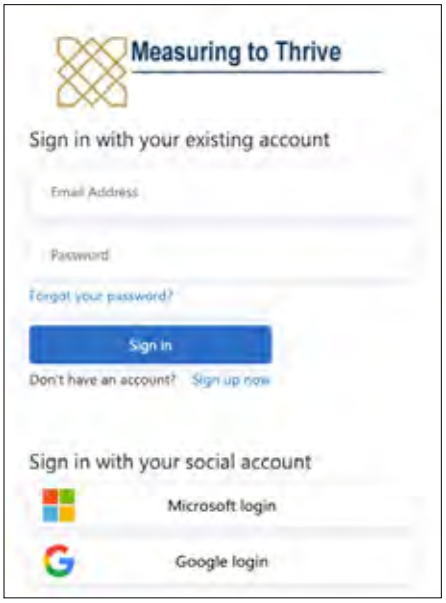
The system is built using the Microsoft Cosmos DB service (MS-SQL). The database can be easily configured to scale up and down to maximize cost efficiencies while still allowing for performance growth as demands require.

Application Server Technology

The application uses modern open-source technologies (Node.js) and is configured to only permit authenticated encrypted connections (HTTPS exclusively).

Application Analytics and Monitoring

The system leverages Azure's sophisticated Monitoring and Alerting features to provide administrators with relevant and timely information regarding the system's health and performance. All data gathered is automatically anonymized in a manner that preserves user privacy.



Identity & Access Management

The system permits an authorized user to login leveraging a Microsoft or Google ID or another email account of their choosing. The underlying technology uses Azure Active Directory B2C (AAD B2C)—a cloud-based identity and access management solution that can scale to hundreds of millions of identities.

Data Residency

All core application code as well as all sensitive application data and reported outcomes are stored exclusively on Canadian servers.

Data Model Overview

Agencies

There are 100+ First Nation Child and Family Services agencies in Canada. One record will exist for each agency and will contain descriptive information such as Agency Name, Address, etc. Each agency can have multiple user identities associated with it for secure login and data entry purposes. Agency records are setup and maintained by the system operator—not individual agencies.

Users

Each agency may have more than one individual who is permitted to login and view, enter or edit appropriate outcome data for an agency's communities. Each user will have a unique identity linked to an authoritative third-party provider such as a Microsoft or Google ID or a user selected email address linked to an Azure Active Directory B2C Local Account.

Bands

For the purposes of this performance reporting system each First Nation corresponds to a federally recognized Band—each of which has a unique Band Number. Each Band can be associated with one or more Reserves (Communities). Band records are setup and maintained by the system operator not individual agencies.

Reserves

For the purposes of this performance reporting system each community corresponds to a federally recognized Reserve—each of which has a unique Reserve Number. Each Reserve is associated with a Band. Each agency is responsible for one or more reserves (communities). Data entry (input) will occur at the reserve level of granularity. Reserve records are setup and maintained by the system operator not individual agencies.

Key Performance Indicators and Hierarchy

Indicators are grouped into a hierarchy illustrated below.

Component	Description
Strategic outcome	Broad but distinct societal areas of focus to achieve the strategic outcome.
Performance areas	The lenses through which progress on strategic outcomes can be understood.

As an example: The overarching goal is "*Enabling First Nations Children to Thrive*".

The overarching goal is made up of three Strategic Outcomes: Child and Youth Well-being, Family Well-being, and Community Well-being.

As a further example, the Child and Youth Well-being Strategic Outcome consists of five Performance Areas: Safety; Cognitive development; Social relationships; Emotional, cultural and spiritual well-being; Physical health and well-being

The Safety Performance Area breaks down to distinct Indicators:

- Number of serious injuries or deaths; Recurrence of child protection concerns after ongoing protection services; Child abuse (excluding sexual abuse); Child sexual abuse; Rate of family reunification; Timeliness of customary care; Percentage of children with kin and/or Indigenous families within their community; Quality of caregiver and youth relationship; Regular opportunities for relational connections to community; Out of home placement rate; Number of moves in care

KPI Definitions & Effective Dates

The system defines the Indicator name, data types, formula, description, etc. Since the Indicators in use will likely need to evolve over time, indicators include effective dates to dictate when they go live in the system and when they are retired from use. The data entry interfaces as well as reporting leverage effective dates to filter for relevant Indicators.

Periods

It has been decided that Government of Canada (GoC) financial years and fiscal quarters will be the basis of the application's calendar. GoC fiscal quarters are defined as: Q1 = April–June; Q2 = July–September; Q3 = October–December; Q4 = January–March.

Outcomes (Indicator Data)

Outcomes are the measurements of KPIs that are entered into the system. This is the most granular level of data in the application.

- Indicators for Child and Youth Well-being and Family Well-being will be reported by each agency for each reserve they serve on a quarterly basis.
- Indicators for Community Well-being will be entered by the system operator for each reserve on an annual basis using authoritative data from sources such as Statistics Canada, ISC, or other sources.

Record Level Security

All data entry and reporting in the system is filtered and secured such that only relevant data is visible/accessible to users based on their roles. In particular, it should be noted an agency user is only able to see the Bands and Reserves they serve and not the Bands and Reserves of other agencies.

Roles

The system envisions different roles for Agency and System Operator personnel with each having access to different privileges, capabilities and visibility over data. It is possible for a single user identity to have more than one role assigned. Specifically, while Agency staff will typically only have the "User" role assigned, System Operator personnel may have either "Administrator", or "Data Manager", or both "Administrator" and "Data Manager" assigned.

Administrator Role

The role of Administrator is assigned to System Operator personnel. This role will manage the general application settings and branding, updating the KPI definitions and associated hierarchy and maintaining text elements such as the help files, Terms of Use, etc.

Data Manager Role

The role of Data Manager is assigned to System Operator personnel. This role has three primary functions:

1. Create or edit Agency records and manage Agency License Keys for user onboarding;
2. Create or edit Band and Reserve records;
3. Enter or Edit Community Well-being data as required. Also, occasionally enter or edit Child and Youth Well-being & Family Well-being Outcomes data as required to support Agency personnel.

User Role

The role of User is assigned to an Agency User associated with a specific Agency. Each user will have a unique login that permits them to:

1. View/Enter/Edit data for Child and Youth Well-being as well as Family Well-being outcomes for each of their agency's reserves.
2. View/Select and export historical outcomes data for their reserves (including Child and Youth Well-being, Family Well-being as well as Community Well-being) for presentation or further analysis using tools such as Microsoft Excel.

User Interface/Experience (UI/UX)

The system is developed to support modern desktop browsers. The nature of the performance reporting system is "information dense". As such, the application is designed/optimized to be accessed primarily via desktop-grade web browsers. While the application can work with mobile devices, such as tablets, the experience may be suboptimal.

English or French User Experience

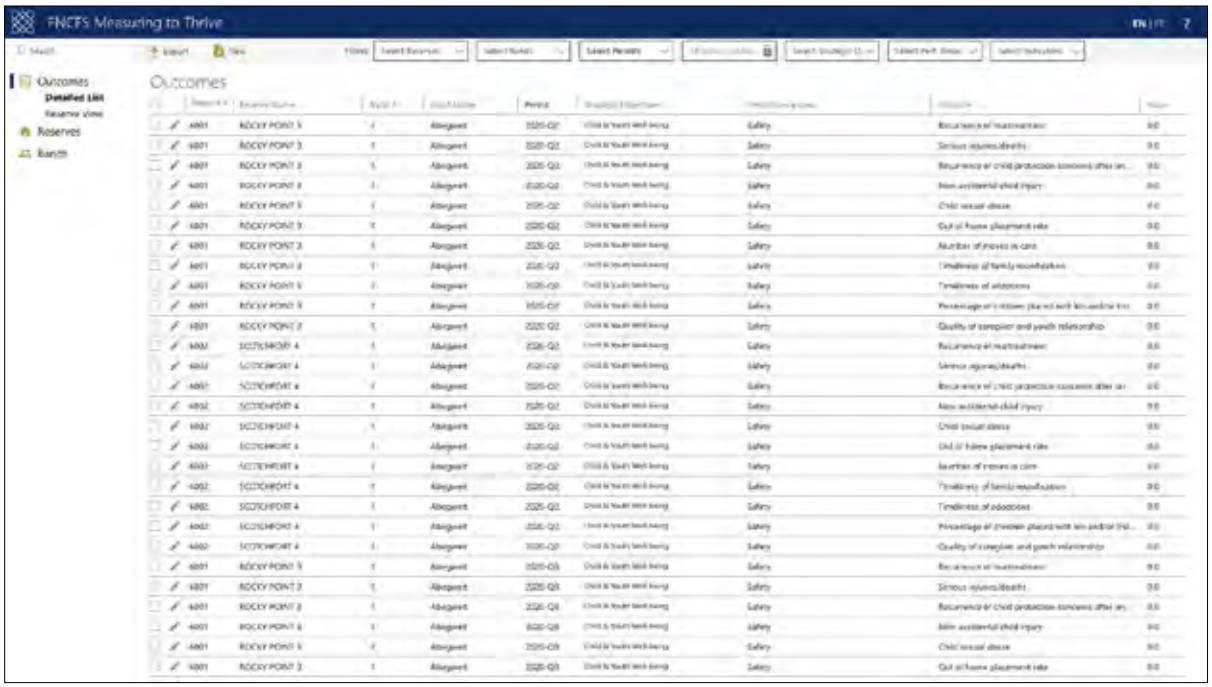
The application permits any user to operate the system in English or French and dynamically switch between the languages via a toggle.

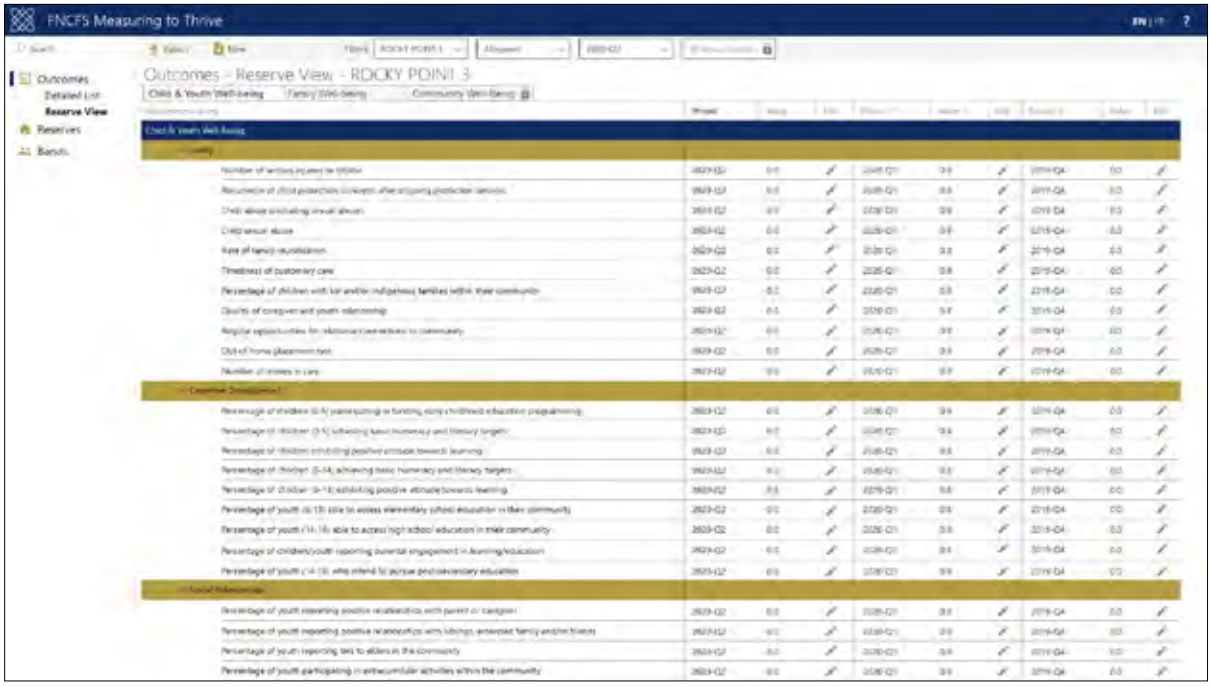
Dynamic filters

The application is very "data dense" and thus the UI employs a series of filters to allow selection of a subset of Agencies, Bands, Reserves, Indicators and Outcomes, in addition to "Time-based" filters for desired periods, to efficiently isolate desired historical records as required.

Screenshots

The screenshots shown below illustrate the initial mockup of a user's experience of Outcomes both as a Detailed List view and a Reserve View. Please note the data shown is only a placeholder—not actual outcomes.





Building well-being into performance

While the concept of well-being has received increasing attention from scholars and practitioners, both from states and international organizations, the issue of citizen well-being originally gained momentum during the 1970s. The child well-being indicator movement grew out of the broader recognition of social indicators of well-being. As a result, in 1979, UNICEF launched the State of the World's Children reports and the World Bank published a World Atlas on the Child. That year, Child Trends was established by the Foundation for Child Development to monitor child well-being. The OECD also started producing reports on family demography and education during this time.

The importance of measuring and tracking child well-being in particular is clearly articulated in the relevant literature as being imperative to ensuring thriving futures, both for individual children and for society as a whole. As reported by the World Health Organization (WHO), "The early child period is considered to be the most important developmental phase throughout the lifespan (…) What happens to the child in the early years is critical for the child's developmental trajectory and life course."[63]

Originally, the intent of child well-being indicators was to monitor children's survival[64] and to protect children from the most severe and pressing risks to safety. Hence, these national social indicator systems focused on sounding alarms to focus attention upon pressing problems that needed to be rectified and included very few positive indicators.

Over time, the concept of child well-being expanded to address a broader range of competencies.[65] In recent decades, a theoretical shift has occurred in understanding the development of children's needs and behaviours and how to support optimal development.[66]

Roehlkepartain, "Adolescent thriving: The role of sparks, relationships, and empowerment," Journal of youth and adolescence 40, no. 3 (2011): 263–277.

This new conceptual approach is explicitly strengths-based, focusing on cultivating children's assets, positive relationships, beliefs, morals, behaviours, and capacities to give children the resources they need to grow successfully across the life course.

There has also been a shift from an adult perspective on child well-being towards a child-focused perspective, with broad acceptance for children's subjective perspectives on their own well-being and for children as reporters as a preferred method of assessing their well-being. In the future, children will likely be increasingly active participants in measuring and monitoring their well-being.[67] Positive indicators have been used to describe the competencies, skills, behaviours, and qualities, as well as the relationships and social connections, which foster healthy development across the domains of a child's life.

THE HUMAN DEVELOPMENT ECOSYSTEM

Inherent in the relationship between individual and collective well-being is the concept of a human development ecosystem. Urie Bronfenbrenner, founder of the US federal program Head Start and one of the world's leading scholars on the impact of public policy on child development, has called this interdependence of individuals and societies the "Ecosystem of Human Development".[68] As a reflection of this multidimensional approach to child welfare, many theoretical approaches to family and community well-being have since adopted Bronfenbrenner's Ecological Systems Theory as a underlying basis for intervention.

According to this theory, child development is comprised of four layers of systems which interact in complex ways and can both affect and be affected by an individual child. Later, Bronfenbrenner added a fifth dimension comprising an element of time. In this conception, the microsystems in a developing child's life (family, school, peers) are proximal contexts which directly influence an individual child and their development. In other words, these are "activities, roles, and interpersonal relations experienced by the developing person in a given setting with particular physical and material characteristics"[69] at the innermost level. These microsystems, however, are nested and affected by broader contexts (exo- and macrosystems).

Moen & G. H. Elder, Jr., (Eds.), "Examining lives in context: Perspectives on the ecology of human development," (Washington, DC: American Psychological Association): 619–647.

[69] Bronfenbrenner, (1979): 22.

Bronfenbrenner's approach emphasizes the influence of complex relationships within various levels in the environment on a child's development. In the practice of child and family services, these insights reflect the importance of a holistic approach to well-being that includes consideration of a child's context. As a result of these insights, Bronfenbrenner has been described as a pioneer in the study of child and youth care.[70]

As documented in an OECD report[71] on child welfare, there are two prominent strands in the literature on child well-being. The "developmentalist perspective," emphasizes the detrimental effects of costly outcomes, using indicators such as sickness and poverty. The "child rights perspective," by contrast, tends to focus on positive or strength-based measures of child well-being.

CHILD WELL-BEING TODAY: THE SHIFT TOWARDS PREVENTION AND EARLY INTERVENTION

According to the United States' Children's Bureau, in the last fifty years there has been an increased focus on prevention services in child welfare. The change in approach recognizes the contextual factors that impact a child's well-being and the important roles that communities, intervention services, and others play in child safety and wellness.[72] In the 1990s, the United States began funding family support services more intensively to help reduce abuse and neglect. From counselling to in-home assistance programs, the funding recognized the value of prevention-focused interventions for children, families and communities.[73] The downstream social and financial costs of contact with the protection system outweigh the costs of early intervention (see The cost of doing nothing).

INDIGENOUS PERSPECTIVES ON WELL-BEING

Insofar as First Nations child well-being is discussed within the context of health, social determinants of health are often mentioned. Social determinants of health refer to the living and working conditions which exert an influence over health outcomes. Oftentimes, these relate to an individual's place in society, such as income, education or employment. Other examples of social determinants of health for First Nations adults living in First Nations communities in Canada include community wellness, education, labour force characteristics, personal health practices, health services, culture, and the physical environment.

Similarly, the framework proposed by Finlay, Hardy, Morris, and Nagy (2009) suggest that, in Canada, Aboriginal status, early life, education, employment and working conditions, food security, health care services, housing, income and its distribution, social safety net, social exclusion, as well as unemployment and employment security are identified as social determinants of health.[74] Other determinants of health among First Nations peoples include colonization, globalization, migration, cultural continuity, access, territory, poverty, self-determination, disempowerment, and a lack of control over one's destiny.[75]

According to the Cultural Framework developed by the First Nations Information Governance Centre (FNIGC), health and well-being in a First Nations context can be defined comprehensively as the total health of the total person in the total environment. FNIGC references work by traditional teacher, Jim Dumont (2005), who defines total health as: "all aspects and components of health and well-being seen as integrally interconnected with one another within an inclusive, inter-related and interactive web of life and living." The total person encompasses "all dimensions of personhood—understood to be body, mind, heart and spirit." Total environment refers to "a healthy connection and relationship with the living environment—this being constituted of the land and the natural, cultural, structural/material, political, historical, behavioural, community, family and everyday living environment."[76]

According to McCubbin et al. (2013),[77] Indigenous well-being denotes a relational perspective which emphasizes 'the collective' over 'the individual' as a distinct entity. Hence it is closely tied to culture and spirituality, as well as to social and emotional, physical, subjective and economic well-being.[78]

In Canada, FNIGC has conducted the Regional Health Survey (RHS) of Aboriginal populations since 1997. The RHS collects information of on-reserve and northern First Nations communities based on Western and traditional understandings of health and well-being.[79] The Government of Canada also employs the Community Well-Being Index, which measures socio-economic well-being for individual communities across Canada. It includes 4 components: education, labour force activity, income and housing.[80]

For an overview of well-being initiatives in Australia, Canada, New Zealand, and the United States, see Appendix K. A review of the approaches suggests commonality among Indigenous peoples in holistic perceptions of health and well-being. There are, however, differences in the framing and approaches that individual countries adopt when engaging on Indigenous health.

Performance budgeting and performance measurement

Performance measurement frameworks underpin a well-functioning performance-based budgeting system. A well-articulated performance measurement framework aligns desired outcomes to resources, to evaluate the impact of a program in achieving these results over time.

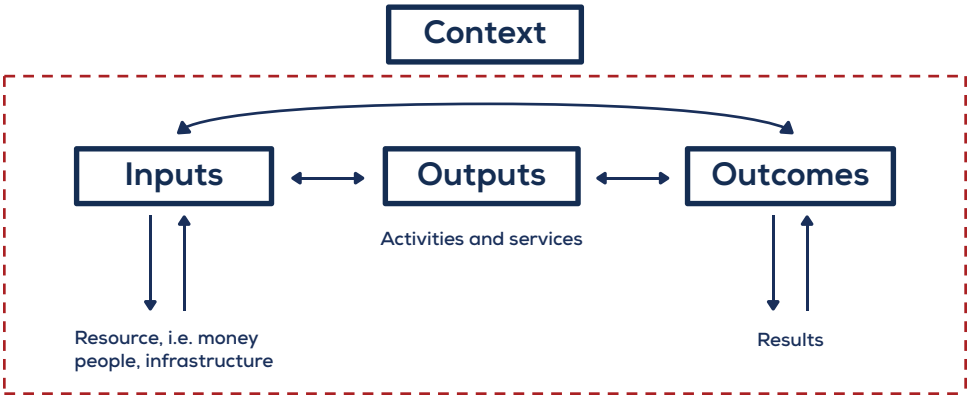
Effective management requires an explicit connection among resources (inputs), activities (outputs) and results (outcomes). IFSD's role is to find the optimal and sustainable combination of inputs and outputs to deliver desired outcomes. This is a complex undertaking that requires data, contributions from FNCFS agencies and other experts, as well as cost-benefit analysis.

An effective performance measure framework will maintain a clear connection between structures, incentives, and results-tracking. Although the implementation of a performance measurement framework for a large-scale program can be administratively challenging, it is undoubtedly a crucial component of sound financial management and clear accountability. Changes in inputs will translate into changes in activities with impacts on results, all of which are informed by context (see Figure 34).

A performance framework is a means through which to establish accountability and conduct regular evaluations and reviews of performance to ensure that resources and funding are optimally allocated and aligned towards the realization of the desired strategic outcome. If there is a well-functioning governance and management system supporting the FNCFS performance measurement framework then an evidence-based answer to the fundamental question of the progress in the welfare of First Nations children may be ascertained.

FNCFS, like any service, does not occur in a vacuum. First Nations children often have disadvantaged points of departure (housing, poverty, health, etc.). Recognizing these contextual realties and resourcing (in human, financial, and infrastructure terms) to mitigate them, is necessary to support FNCFS agencies in their work. Simply throwing money at the system will not necessarily generate better results for children, families and communities.

FIGURE 34: Standard performance framework overview.



Based on the literature on child welfare at the individual, familial, and community levels, many experts and practitioners now recognize the multiple dimensions of child well-being rooted in social ecosystems, as well as the importance of utilizing results-based frameworks to promote these attributes. Building from this research detailed earlier in this section, the performance measurement framework is intended to provide a measurable outcome-based framework that will underpin a results-focused FNCFS funding approach across Canada.

The long-term and medium-term outcomes and results are captured at the top of the performance measurement framework by the 'thriving First Nations children' outcome with child well-being, family well-being and community well-being sub-strategic outcomes.

The performance elements and programs supporting each sub-strategic outcome are the basis for linking activities, budgetary inputs and short-term performance indicators with the long-term and medium-term outcomes at the strategic and sub-strategic outcome level.

Thus, the performance measurement framework is the means by which we are able to link short-term resource allocations with long-term performance outcomes and better understand the current state along with the progress being made towards the attainment of the long-term outcomes being sought.

The challenge is optimizing inputs and activities for sustainable, positive results. More inputs do not automatically translate into better outcomes. Some of the key definitions inherent to the performance measurement framework are illustrated in the figure below.

PERFORMANCE MEASUREMENT IN CHILD WELFARE

The long-term strategic outcome being sought is thriving First Nations children. This strategic outcome is broken down into three sub-strategic outcomes that

represent broader but distinct societal areas of focus that will help to achieve the strategic outcome. The three areas of focus are child well-being, family well-being and community well-being (see Figure 35) Sub-strategic objectives associated with the four areas of focus are detailed in Table 6.

FIGURE 35: Strategy map overview of the Measuring to Thrive framework.

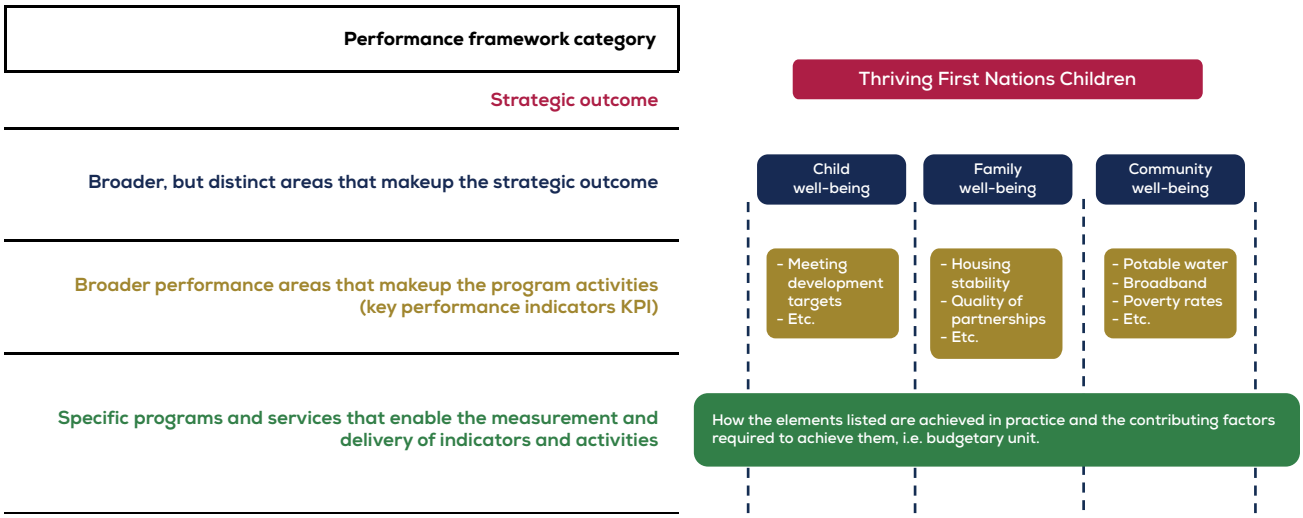


TABLE 6: Strategic outcome definitions of the Measuring to Thrive framework.

Strategic outcome	Definition
Child well-being	**Purpose:** Children reach their full developmental potential and have a sense of hope, belonging, purpose and meaning. **Definition:** Child well-being is a multi-dimensional concept that is influenced by a child's interaction with the environment. It includes cognitive, social, psychological/emotional, cultural/ spiritual and physical development and wellness. These interdependent components provide the foundation for a child to reach their full developmental potential and for children to feel positive about life and have a sense of hope, belonging, purpose and meaning.
	Purpose: Child safety, a crucial component of child well-being. Children are protected from harm and achieve permanency in their living situation. **Definition:** Protecting children from harm and abuse will always be at the core of an agency's mandate. While it is preferable to preserve the family unit, this is not always an option for some children. An agency must not only be equipped to respond to these cases, but also ensure that children achieve permanency in their living situation as swiftly as possible to avoid further disruption. Child safety refers to preventing and responding to cases of child maltreatment (including physical abuse, sexual abuse, physical neglect, emotional maltreatment and exposure to domestic violence). For children placed in out-of-home care, this also includes permanency and stability in their new living arrangement.

Family well-being	**Purpose**: Families enjoy a safe, stable environment in which to foster healthy familial relationships. **Definition:** Family well-being is a relational concept, referring to the interactions between family members but also affected by the larger environments in which parents and children exist. Within the family unit, well-being comprises family self-sufficiency, meaning the labour force participation of caregivers and the ability of the family to meet basic needs, and family health and social factors, meaning the mental and physical well-being of caregivers and family protective factors.
Community well-being	**Purpose:** Reliable public infrastructure, access to basic needs, and resources and services to foster safe, stable, thriving communities. **Definition:** Community well-being is the combination of social, economic, environmental, cultural, and political conditions identified by individuals and their communities as essential for the fulfilment of their full potential. This dimension of well-being is determined by a community's access to basic needs (potable water, access to suitable housing, broadband connectivity, the presence of community infrastructure, and overall community poverty level). In addition to these aspects, community well-being is also affected by health and social services provision among band councils and community agencies, as well as by broader indications of public safety and community health, such as rates of suicide, rates of illicit drug use, rates of heavy drinking, BMI rates, rates of chronic conditions, and rates of violent crime.

DATA COLLECTION

The successful implementation of a performance measurement strategy requires routine collection of data both at baseline and over time. Data can be administrative (e.g. it is already collected through program files), primary performance data (e.g. specialized for the individual program), or secondary data (e.g. data that applies to the program but has been collected but for other purposes). It is also important to identify:

- The frequency of data collection (how often will it be collected?);
- The responsibility for data collection (who is responsible?);
- Baseline information (what is the current state?);
- Targets (what is the goal?), and;
- Timelines (when does the data need to be collected?).

Building a system for results means building-in data for better decision-making and the ability to adjust practices for mid-course corrections. Data is a tool for agencies and communities to improve planning and resource allocation. In order for data to be an effective tool for informed decision-making, the following requirements are necessary:

- Data collected must be relevant to mandate and desired outcomes;
- Analysis must include context/point of departure;
- Agencies will be assessed against themselves;

- Data richness and applications for predictability will improve with time;
- Data handling must follow OCAP principles, and;
- Only aggregate data is shared publicly.

As will be expanded in the discussion of the application of the framework, the issue of concern in this report is not the lack of data collected on First Nations in Canada (indeed it is the case that many First Nations groups are extensively surveyed) but rather that the quality of data, mainly in terms of granularity, does not allow for sufficient performance measurement at the level of the child welfare agency. As the majority of this data information cannot be analyzed at the level of individual First Nations communities, it does not enable strategic planning and results-tracking over time.

Performance framework justification

Achieving the strategic outcome of *Enabling First Nations Children to Thrive* is built on three sub-strategic outcomes: child well-being, family well-being and community well-being (see Figure 36). These sub-strategic outcomes are divided into performance areas, and each performance area consists of proposed measures and indicators to evaluate progress in performance areas. Performance areas, measures and indicators have all been developed with aforementioned theoretical and Indigenous perspectives of well-being in mind. The following section provides a justification for these components of a performance framework that is focused on thriving First Nations children (see Table 7).

TABLE 7: Strategy map components.

Component	Description
Strategic outcome	The overarching goal, to which all activities contribute. It is measurable and represents an end-state or maintenance of an end-state.
Sub-strategic outcomes	Broader but distinct societal areas of focus to achieve the strategic outcome.
Performance areas	The lenses through which progress on sub-strategic outcomes can be understood.
Measures	Means of assessing progress in performance areas.
Indicators	The variables measured. They can be qualitative or quantitative, and should be valid, reliable, affordable, available and relevant.
Activities	The actions or processes undertaken to achieve outcomes. It includes the “how” of achieving outcomes, such as targeted programs or direct front-line services.
Inputs	The resources required (both financial and non-financial) to support activities.

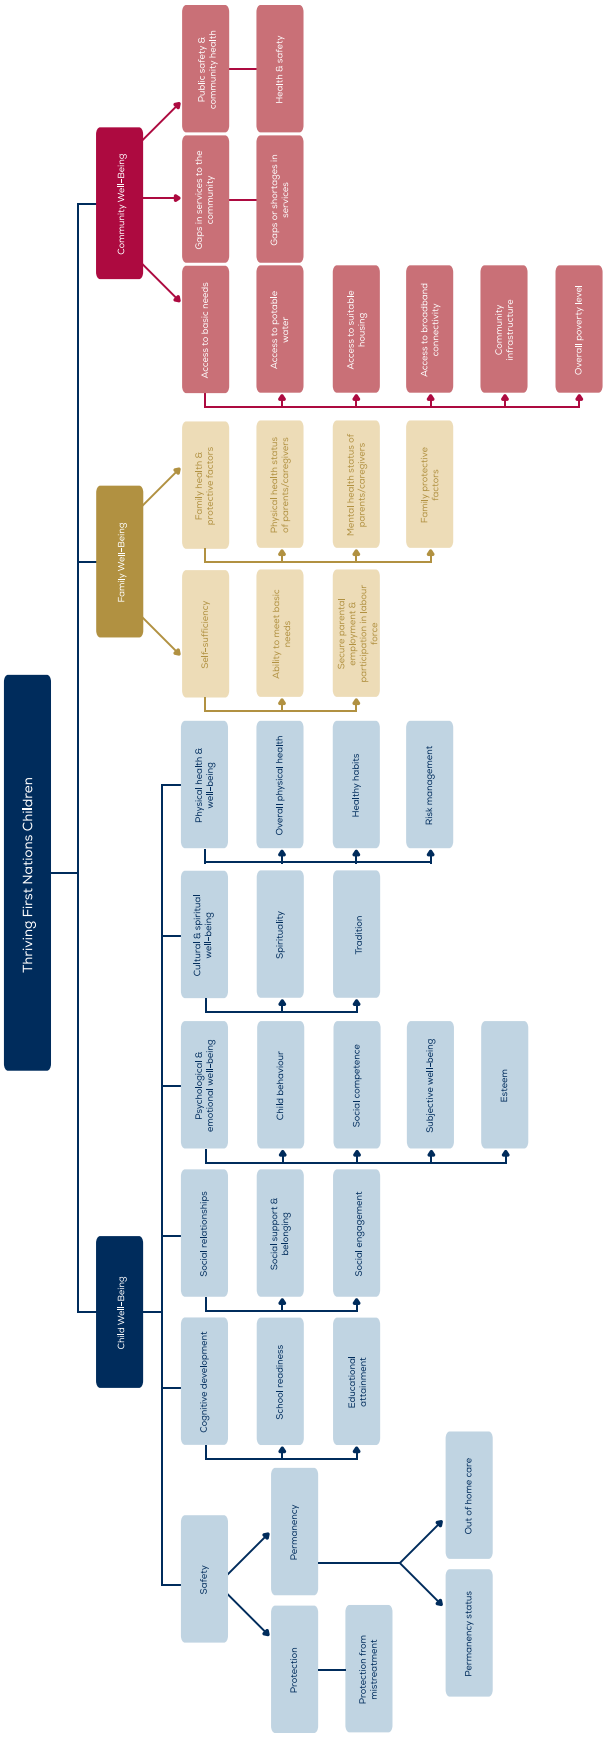

FIGURE 36: Mapping the Measuring to Thrive framework.

SUB-STRATEGIC OUTCOME: CHILD WELL-BEING

Child well-being is a multifaceted concept, for which there is no consensus on measurement. Depending on contextual factors such as family, community, and socio-political considerations, child well-being requires consideration of multiple dimensions influenced by a child's environment.[81]

To improve well-being, it must be understood through a holistic lens. Pollard and Lee[82] cite Columbo's (1986) definition of child well-being as a useful one: "A multidimensional construct incorporating mental/psychological, physical, and social dimensions." The definition is useful as it encapsulates several spheres of influence on a child's and adolescent's well-being at individual and environmental levels. In line with the multi-dimensional approach to defining child well-being, Asher Ben-Arieh, notes that child well-being encompasses quality of life in a broad sense. It refers to a child's economic conditions, peer relations, political rights, and opportunities for development. Most studies focus on certain aspects of children's well-being, often emphasizing social and cultural variations. Thus, any attempts to grasp well-being in its entirety must use indicators on a variety of aspects of well-being.[83]

Consistent in the literature on measuring child well-being is the need to conceptualize and develop indicators that focus on strengths as opposed to deficits, as this is how "we discover the core elements of well-being that enable children to flourish and thrive."[84] In a literature review on child well-being and how it is studied, Amerijckx and Humblet[85] understand the multidimensional nature of child well-being across 5 axes:

- Positive vs. negative (e.g. strengths-based approaches as opposed to deficit-based approaches to conceptualizing child well-being)
- Objective vs. subjective (e.g. others' perceptions of child well-being, as opposed to the child's perception of their own well-being)
- State vs. process (e.g. child's well-being in present day, versus well-being over a longer period of time/lifetime/life trajectory; also referred to as the "developmentalist" vs. the "child rights" perspectives)

[81] Gaëlle Amerijckx and Perrine Claire Humblet, "Child Well-Being: What Does It Mean?," *Children & society* 28, no. 5, (2014): 404–415; Jonathan Bradshaw, Petra Hoelscher, and Dominic Richardson, "Comparing child well-being in OECD countries: Concepts and methods," (2007): 1–117; Simon Chapple and Dominic Richardson, "Doing better for children," vol. 168 (OECD, 2009): 1–192; Elizabeth L. Pollard and Patrice D. Lee, "Child Well-being: A Systematic Review of the Literature," *Social Indicators Research* 61, no. 1, (January 2003): 59–78.

[82] Pollard and Lee, "Child Well-being: A Systematic Review of the Literature."

[83] Asher Ben-Arieh and Ivar Frønes, "Indicators of Children's Well being: What should be Measured and Why?," *Social Indicators Research* 84, no. 3 (December 2007): 249–250.

[84] Pollard and Lee, "Child Well-being: A Systematic Review of the Literature."

[85] Amerijckx and Humblet, "Child Well-Being: What Does It Mean?."

- Material vs. spiritual (e.g. well-being in terms of financial, health, educational and family resources or lack thereof, as opposed to non-material aspects of well-being)
- Individual vs. community (e.g. the extent to which a collective group matters for an individual's well-being)

The dimensions of child well-being are interdependent; growth in one area is highly dependent on well-being in other areas, and all of it is connected to the well-being of their family and community. If we were to direct our attention to the individual, however, what does a thriving child look like? What contributes to child well-being in the here and now, and what is important to ensuring children grow into thriving adults? Based on a review of academic and grey literature, five dimensions have been identified as essential for child well-being:

1. Safety
2. Cognitive development
3. Social relationships
4. Emotional, cultural and spiritual well-being
5. Physical health and well-being

The following review defines each dimension of child well-being, key measures and indicators to evaluate progress in each dimension, and evidence to support why these matter for child well-being.

SAFETY

Ensuring that children are safe, especially those who face immediate threat to their health and safety, will always be at the core of a child welfare agency's mandate. Child abuse and neglect (also referred to as child maltreatment in the literature) is generally defined by the Canadian Child Welfare Research Portal as "acts of commission or omission by a parent or other caregiver that result in harm, potential for harms, or threat of harm to a child," and includes "physical abuse, sexual abuse, physical neglect, emotional maltreatment and exposure to domestic violence."[86]

[86] Canadian Child Welfare Research Portal, "Child Abuse & Neglect," accessed July 27, 2020, https://cwrp.ca/child-abuse-neglect.

Abuse in the early years of life can have detrimental effects on future health and well-being and can disrupt early brain development.[87] As the WHO notes, "maltreated children are at increased risk for behavioural, physical and mental health problems, such as: perpetrating or being a victim of violence, depression, smoking, obesity, high-risk sexual behaviours, unintended pregnancy, and alcohol and drug misuse" in adulthood.[88] These consequences may extend into further health problems, such as chronic disease and sexually transmitted infections.[89] Poor outcomes resulting from child maltreatment also present major costs to society.

Upholding the rights of children and promoting their well-being across the life course is essential to ensuring that they thrive. Child safety, which includes preventing and responding to cases of child maltreatment, as well as achieving permanency, safety and stability for children who have been placed in out-of-home care, is a fundamental component of child well-being. In this performance framework, the concept of child safety has been divided into two key dimensions:

1. Protection
2. Permanency

The following review examines key measures and indicators that should be used to evaluate progress in each dimension, and evidence to support why these matter in order for children to thrive.

PROTECTION

Measure: Protection from all forms of maltreatment

Central to the work of a child welfare agency is to protect children from harm and abuse. The Canadian Child Welfare Research Portal identifies five primary forms of maltreatment: physical abuse, sexual abuse, physical neglect, emotional maltreatment and exposure to domestic violence.[90] The indicators for this measure include:

- Recurrence of maltreatment
- Recurrence of child protection concerns in a family after ongoing protections services were provided
- Serious injuries/deaths
- Non-accidental child injury
- Child sexual abuse

[87] World Health Organization, "Child maltreatment," June 8 2020, https://www.who.int/news-room/fact-sheets/detail/child-maltreatment.

[88] World Health Organization, "Child maltreatment."

[89] World Health Organization, "Child maltreatment."

[90] Canadian Child Welfare Research Portal, "Child Abuse & Neglect."

Why these indicators matter

Children who have been maltreated are at increased risk of recurrence of maltreatment.[91] Research has found that compared to children who had not been previously maltreated, children who had been were nearly six times more likely to experience it again.[92]

While any case of maltreatment is serious, there is consensus in the literature that chronic maltreatment is associated with more negative outcomes.[93] In a prospective study examining outcomes of chronic child maltreatment, researchers found that the number of maltreatment reports predicted negative childhood outcomes in a linear fashion. In other words, the more often a child was maltreated, the greater the number of negative outcomes later in life. Chronic maltreatment may be especially alarming for outcomes related to suicidal behaviour. The same study found that "suicide attempts before age 18 showed the largest proportionate increase with repeated maltreatment."[94] The recurrence of child protection concerns in a family after ongoing protections services were provided is not only important to protect the well-being of children and prevent chronic abuse; it is also an indicator of how effective child welfare services are at preventing maltreatment.[95]

As Jaffee and Maikovich-Fong[96] summarize, compared to both non-maltreated children and children experiencing transitory maltreatment, those who have experienced chronic maltreatment exhibit more behavioural issues. Compared to non-maltreated children, chronically maltreated children have more difficulties with peers, aggressive, delinquent and withdrawn behaviour, internalizing symptoms, and decreased prosocial behaviour. Compared to children experiencing transitory maltreatment, they show more externalizing problems, lower

levels of ego resilience, higher rates of juvenile offending, increased levels of anxious and depressed behaviours, increased levels of aggressive behaviours, depression, and symptoms of post-traumatic stress, as well as decreased levels of interpersonal and coping skills.

Leading researchers in the field of child development have found that exposure to strong, frequent and/or prolonged adversity, such as chronic abuse, parental substance abuse, or exposure to violence, can elicit a toxic stress response. This type of stress can have a profound effect on the architecture of the developing brain, which "can have potentially permanent effects on a range of important functions such as regulating stress physiology, learning new skills, and developing the capacity to make healthy adaptations to future adversity."[97]

Though rare, serious injuries and deaths are an important indicator to prevent these tragedies from occurring in the future and to evaluate whether the child welfare system is appropriately responding to cases of maltreatment. Research in this area of child welfare has shown that previous reports of child maltreatment is a risk factor for child deaths,[98] further substantiating indicators of recurrence as an important measure of child safety.

In summary, protecting the safety and rights of children is at the core of a child welfare agency's work. Indicators highlight the importance and effectiveness of an agency's ability to prevent subsequent cases of maltreatment from occurring, which have a major impact on a child's ability to thrive in the present and in the future.

Measure: Emergency mental health

Another important measure to consider when it comes to protecting children is providing effective services when they may be a harm to themselves. Emergency mental health refers to when children are in crises and are at risk of harming themselves in any way, or contemplate, attempt, or commit suicide. The indicators for this measure include:

- Suicidal ideation
- Suicide attempts
- Suicide rate
- Self-harm related behaviour

[97] Jack P Shonkoff et al., "The lifelong effects of early childhood adversity and toxic stress," *Pediatrics* 129, no. 1 (January 2012): e232–e246.

[98] Melissa Jonson-Reid, Toni Chance, and Brett Drake, "Risk of Death Among Children Reported for Nonfatal Maltreatment," *Child Maltreatment* 12, no. 1 (February 1, 2007): 86–95.

Why these indicators matter

The rate of suicide among First Nations people is three times higher than the rate among non-Indigenous people.[99] The suicide rate among First Nations living on-reserve have been found to be twice as high as those living off-reserve, and the highest rates are among youth aged 15 to 24 compared to other age groups.[100]

Risk factors for youth suicide include socio-economic disadvantage, parental psychopathology such as depression and substance use disorders, family history of suicidal behaviour, parental discord and separation, a history of physical and/or sexual abuse during childhood, and dysfunctional parent-child relationships.[101] Furthermore, suicidal behaviour within families, personality traits such as low self-esteem, external locus of control and hopelessness, and mental health disorders such as affective disorder, substance abuse and antisocial behaviours are considered risk factors for youth suicide.[102] From an Indigenous perspective, a review of the literature found that depression, having a friend attempt or commit suicide, substance or alcohol abuse, having a psychiatric disorder and experiencing childhood abuse were the strongest predictors of attempting suicide.[103]

The impacts of multigenerational trauma stemming from negative experiences in the residential school system have been associated with a history of suicidal thoughts and attempts.[104] Furthermore, given the contextual challenges facing First Nations communities, including poverty and intergenerational trauma, First Nations children coming into contact with the child welfare system are likely exposed to one or even several of these risk factors. Implementing effective services that promote mental health among Indigenous children more generally and in crises is integral to their safety and ability to thrive.

PERMANENCY

Measure: Permanency status

In situations where children require out-of-home care, the primary goal is for them to eventually be reunified with their families, although this is not always possible. In any case, achieving a permanent or stable living situation is important for healthy child development and well-being. The indicators to assess performance for this measure include:

- Out-of-home placement rate
- Number of moves in care
- Timeliness of successful family reunification or adoption

Why these indicators matter

A stable and permanent living situation is essential for healthy development and establishing more secure and strong relationships with caregivers, which in turn impact a child's ability to thrive. As Trocmé and colleagues note, "a stable placement experience can assist children in out-of-home care to develop and maintain family, peer, and community relationships while separated from their families."[105] Stability promotes fewer school changes and thus stronger relationships with peers, as well as more consistent access to community services and activities.[106]

Multiple moves in care are associated with various negative outcomes among children. Instability may elicit a toxic stress response, which can result in developmental delays and behaviour problems. In turn, this can propagate a negative cycle of displacement and worsening attachment disorders.[107] Children who experience ongoing separation from both their biological and foster families may develop an inability to form trusting relationships with adults, which can lead to "persistent rage, chronic depression, asocial and antisocial behaviour, low self-concept, and chronic dependency."[108] It is not surprising that unstable placements in foster care, characterized by placement frequency and episodic foster care, have been associated with increased rates of mental health service utilization.[109]

[105] Nico Trocmé et al., "National Child Welfare Outcomes Indicator Matrix (NOM)," *Centres of Excellence for Children's Well-Being: Child Welfare*, (June 2009): 1–8.

[106] Joseph M. Price et al., "Effects of a foster parent training intervention on placement changes of children in foster care," *Child Maltreatment* 13, no. 1 (February 1 2008): 64–75.

[108] Gauthier, Fortin, and Jéliu, "Clinical Application of Attachment Theory in Permanency Planning for Children in Foster Care: The Importance of Continuity of Care."

[109] David M. Rubin et al., "Placement Stability and Mental Health Costs for Children in Foster Care," *Pediatrics* 113, no. 5 (May 2004): 1336–1341.

As Trocmé and colleagues[110] describe, the out-of-home placement rate is not necessarily a negative indicator, as some children may need to be removed from their living situation to ensure their safety. However, at an aggregate level, the out-of-home placement rate can indicate the effectiveness of preventative child welfare services and the well-being of children in the community as a whole.

In summary, as a last resort, children may need to be removed from their homes to address cases of chronic child maltreatment. Measuring the child welfare system's ability to achieve permanency in their living situation is important for the well-being of the child and future outcomes.

Measure: Out-of-home care

In addition to achieving stability in a child's living situation, it is also important to consider the characteristics of the living situation and their impact on child well-being. The indicators for this measure include:

- Children placed with kin and/or Indigenous families in their community
- Quality of caregiver and youth relationship

Why these indicators matter

In the event that children must be removed from their homes and families, placing them with "kin" is the preferred option in many jurisdictions. According to the Canadian Child Welfare Research Portal, kinship care refers to "children placed out-of-home in the care of extended family, individuals emotionally connected to the child, or in a family of similar religious or ethno-cultural background."[111] Compared to foster children, children in kinship care have displayed better outcomes with respect to behavioural development and mental health functioning.[112]

Kinship care has become increasingly popular as it promotes continuity and connection to a child's culture and community. This may buffer the traumatic experience of being separated from one's parents by offering a sense of familiarity and belonging with extended family.[113] This has been regarded as especially important in the Indigenous context given

[113] Pamela Gough, "Kinship care," *Centre of Excellence for Child Welfare*, Faculty of Social Work, University of Toronto (Toronto, ON, 2006): 1–4.

the policies and practices that have used child removal as a tool for assimilation in the past. In a First Nations community in Manitoba, one study found that kinship care provided a link between culture and traditions, promoted a child's connection with their caregiver and community (which enhanced the connection to their culture and ability to speak their Indigenous language), and participants reported improved school performance and fewer behavioural issues.[114] Studies have also suggested an association between kinship care and placement stability, i.e. fewer moves in care.[115]

To understand the well-being of children who have been removed from their homes, it is also important to understand the quality of their relationships with their caregivers. Establishing secure, trusting and positive relationships with their caregiver is essential for healthy development, impacting outcomes across the life course.

COGNITIVE DEVELOPMENT

Cognitive development refers to "the construction of thought processes, including remembering, problem solving, and decision-making, from childhood through adolescence to adulthood."[116] Healthy cognitive development is important for a child's trajectory, and is often measured in relation to educational outcomes.

Measure: School readiness

Among children approaching school age, one important measure of development is school readiness. According to Engle and Black, school readiness is defined as "a broad set of skills that affect children's ability to learn in school: physical health, motor skills, self-care, emotional and behavioural regulation, social skills, communication skills, pre-academic skills, attention, and curiosity and motivation to learn."[117] Based on this definition, healthy growth in all dimensions of well-being are important for school readiness. The indicators of language and cognition to measure academic school readiness are chosen in accordance with

[117] Patrice L. Engle and Maureen M. Black, "The Effect of Poverty on Child Development and Educational Outcomes," *Annals of the New York Academy of Sciences* 1136, no. 1 (2008): 243–256.

Brownell et al.,[118] that "the types of skills assessed in this domain are the strongest predictors of subsequent school performance and educational attainment". It is important to note, however, that there are several non-cognitive indicators of school readiness; these are conceptualized in other dimensions of child well-being in the performance framework.

Helpful indicators include:

- Basic literacy score;
- Basic numeracy score;
- Interest in literacy and numeracy score;
- Advanced literacy score;
- The number of 3 and 4-year-olds participating in funded early years education

Why these indicators matter

Gaps in school readiness at school entry are indicative of suboptimal development and characterized by the child's socioeconomic environment. For example, children of mothers with low educational attainment made up 32% of children entering school lacking printing and writing skills, as opposed to 8% of children with mothers who had a bachelor's degree or higher.[119] Similar gaps are also seen in proficiency in literacy and math, and disadvantaged children are also more likely to exhibit behavioural problems.[120] What is more, these gaps tend to widen as opposed to shrink as the child proceeds through formal schooling and are predictive of future school performance and educational attainment.[121] Heckman's work suggests that, "most of the gaps at age 18 that help to explain gaps in adult outcomes are present at age five."[122]

Participation in early childhood education is a well-evidenced intervention to enhance school readiness, especially among children from disadvantaged backgrounds. Ensuring that children are better prepared when entering school aims to improve educational achievement—a key factor in social mobility and escaping poverty.[123] As Shonkoff states, "high quality early childhood programs designed to

produce positive effects on educational achievement and later work-force participation offer an important, unrecognized infrastructure for addressing the stress-related roots of social class disparities in health."[124]

Measure: Educational attainment

Another important measure of cognitive development from childhood into adolescence is educational attainment. Indicators chosen for this measure include:

- Literacy and numeracy test scores (middle childhood)
- Positive attitudes towards learning/school
- Youth who intend on going to post-secondary school (e.g. trades, university, college)

Why these indicators matter

Educational attainment is important for child well-being, particularly in the context of a child's socio-economic trajectory. Literacy and numeracy scores tell us how well the child is performing in school and are a gauge of cognitive functioning.[125] Academic success also has a reciprocal effect on a child's attitude towards learning (often referred to as academic self-concept).[126] Learning begets learning, and academic achievement and motivation to learn are key factors to a high level of educational attainment.

This is important, as educational attainment often translates into levels of skill and ability in society, which are linked to a host of outcomes in adulthood.[127] More obvious impacts of low education are reduced rates of employment and earnings. Failure to complete high school is linked to higher rates of welfare dependency and criminality.[128] Educational attainment is also a determinant of participation in the Canadian labour market, especially for Indigenous people.[129] For example, in 2009, 82% of adults aged 25 to 64 with post-secondary qualifications were employed,

compared to 55% of those with less than a high school education.[130] Indeed, employment rates are higher for Indigenous people with post-secondary credentials.[131]

PSYCHOLOGICAL AND EMOTIONAL WELL-BEING

Psychological and emotional well-being in childhood includes the ability to self-regulate emotions; healthy self-esteem, which is affected by the presence of optimism, hope, resilience and looking to the future; as well as their own perceptions of their mental health and well-being. According to the WHO, "mental health is a state of well-being in which an individual realizes his or her own abilities, can cope with the normal stresses of life, can work productively and is able to make a contribution to his or her community."[132] Promoting psychological health and well-being in childhood is an important pathway to good mental health in adulthood.

Measure: Child behaviour

Child behaviour is a good measure of how children are faring psychologically and emotionally, particularly with respect to self-regulation. Indicators chosen for this measure include:

- Anxious and fearful behaviour
- Aggressive behaviour
- Hyperactivity and inattentive behaviour

Why these indicators matter

As Trocmé describes, "abused and neglected children are at high risk of developing emotional and behavioural problems at home, school, and in the community," and experience decreased placement stability.[133] This lack of stability may only reinforce behavioural and emotional problems. Therefore, child behaviour is an important measure to monitor in the context of children who are in contact with the child welfare system so that they can be referred to appropriate early intervention services.

Behavioural issues among children are associated with socioeconomic disadvantage and have been linked to worse outcomes in adulthood. For example, research has found an association between attention deficit

[130] Statistics Canada, "Educational Attainment and Employment: Canada in an International Context," (February 2012), https://www150.statcan.gc.ca/n1/en/pub/81-599-x/81-599-x2012008-eng.pdf?st=bfdP0Wao.

[133] Nico Trocmé et al., *National Child Welfare Outcomes Indicator Matrix (NOM)* (Centre of Excellence for Child Welfare, 2009).

problems and poor labour outcomes in adulthood, such as lower rates of employment, lower earnings and worse jobs.[134] Conduct disorders in childhood, which include antisocial behaviours such as disobedience, tantrums, fighting, destructiveness, lying and stealing, increase the likelihood of violence, criminality, poor relationships, and poor mental health.[135]

This incurs significant societal costs as well.[136] Scott and colleagues[137] found costs for individuals with conduct disorder in childhood to be 10 times higher than for those with no problems, the bulk of which were associated with criminality, extra educational support, out of home care and state benefits. Another study examining physical health in adulthood among children who displayed childhood aggression found a direct and positive link to the use of medical services, "as well as medical visits due to lifestyle-related illnesses and injuries, with indirect paths through educational attainment."[138]

Measure: Social competence

There are varying definitions of social competence, but it can generally be described as "involving the personal knowledge and skills which persons develop in order to deal effectively with life's many choices, challenges and opportunities."[139] More specifically, it involves the quality of interactions and relationships. Indicators chosen for this measure include:

- Communication skills
- Prosocial and helping behaviour
- Social intelligence

Why these indicators matter

While skills related to achievement outcomes in school are undoubtedly important for future success, James Heckman, a Nobel Laureate in Economics, argues that equal attention must be paid to the development of noncognitive skills that are relevant for participation in the workforce and in society, which include those such as socioemotional regulation, personality factors, motivation, perseverance, and the capacity to collaborate with others.[140]

This was demonstrated in Heckman's research on the General Education Development (GED) testing program in the United States, which is a series of cognitive tests that high school dropouts can take to determine if they meet the minimum academic standard of high-school graduates. They found that although they have similar test scores to regular high school graduates, GED recipients have earnings that compare to high school dropouts.[141] Heckman and his colleagues conclude that "the GED surplus of cognitive skills is not outweighed by the GED deficit in noncognitive skills."[142]

The importance of noncognitive skills for success in adulthood is bolstered by Heckman and others' work in the field of early childhood intervention among disadvantaged children. Take, for instance, the Perry Preschool Project, which aimed to improve intellectual and social development among African American children at risk for school failure. Upon initial follow-up, the program was considered a failure as it did not appear to boost IQ compared to non-participating children. However, they did have higher achievement test scores, and upon follow-up at age 40, participating children had higher rates of high school graduation, higher earnings, higher percentages of home ownership, lower rates of welfare assistance, fewer out-of-wedlock births and fewer arrests compared to non-participating children.[143] Heckman attributes many of these differences to the development of noncognitive skills in these programs, contributing to social success.

[140] James J. Heckman, "Skill Formation and the Economics of Investing in Disadvantaged Children," *Science* 312, no. 5782 (2006): 1900–1902.

[141] James J Heckman and Yona Rubinstein, "The importance of noncognitive skills: Lessons from the GED testing program," *American Economic Review* 91, no. 2 (2001): 145–149.

[142] James J Heckman, Jora Stixrud, and Sergio Urzua, "The Effects of Cognitive and Noncognitive Abilities on Labor Market Outcomes and Social Behavior," *Journal of Labor Economics* 24, no. 3 (2006): 411–482.

[143] James J. Heckman, "Skill Formation and the Economics of Investing in Disadvantaged Children," *Science* 312, no. 5782 (2006): 1900–1902.

As Denham[144] concludes, in the context of academic outcomes, there is a strong body of evidence linking social-emotional competence to improved attitudes towards school and higher educational achievement. By contrast, those who have not developed in this area have weaker relations with peers and teachers. This decreases interest in school and persists into later years of learning, which can lead to dropping out.

Measure: Subjective well-being

Subjective well-being among children has emerged as an important measure, which has largely stemmed from the United Nations Convention on the Rights of the Child, in which children are assured rights as individuals, and that their views are important and must be taken into consideration.[145] Indicators chosen for this measure include:

- Self-reported happiness/life satisfaction
- Self-reported mental health

Why these indicators matter

Indicators like self-reported happiness and mental health distinguish the concept of "well-becoming" into adulthood from "well-being" among children in the present. In light of the recognition that children's rights are human rights, it is important to study and understand well-being from the child's experience and perspective. Huebner and colleagues[146] describe life satisfaction as "a person's subjective, global evaluation of the positivity of her/his life as a whole or with specific life domains," that can "encompass judgements ranging from very negative to neutral to very positive."

These indicators may complement understanding of other indicators important to child well-being. While there is a large body of evidence highlighting associations between life satisfaction and well-being outcomes among adults, the extent to which this is relevant for children is still being studied. Emerging research has found life satisfaction to be a mediating factor on how stressful life events influence parenting behaviour and problem behaviour among adolescents.[147]

Measure: Esteem

Esteem is an important part of psychological and emotional well-being. Many components of esteem are captured in the First Nations Mental Wellness Continuum Framework, where metal wellness is defined as:

> *...a balance of the mental, physical, spiritual, and emotional. This balance is enriched as individuals have: PURPOSE in their daily lives whether it is through education, employment, care-giving activities, or cultural ways of being and doing; HOPE for their future and those of their families that is grounded in a sense of identity, unique Indigenous values, and having a belief in spirit; a sense of BELONGING and connectedness within their families, to community, and to culture; and finally a sense of MEANING and an understanding of how their lives and those of their families and communities are part of creation and a rich history.*[148]

As Dumont and Provost note, "research has shown that individuals with high self-esteem or a high feeling of control will adopt active coping strategies focused on problems, whereas individuals with low self-esteem will adopt passive-avoidant coping styles focused on emotions."[149] Low self-esteem has been associated with mental health issues such as anxiety and depression.[150] Indicators chosen for this measure include:

- Sense of purpose
- Optimism and hope
- Resilience
- Confidence
- Agency

Why these indicators matter

Fostering resilience among disadvantaged children is a complementary approach to mitigating risk factors to promote well-being. In practical terms, it will never be possible to remove all risks; therefore, cultivating psychological resilience and coping strategies offers a strengths-based method to navigating stress and adversity, in turn promoting better outcomes.[151]

---

[150] Dumont and Provost, "Resilience in Adolescents: Protective Role of Social Support, Coping Strategies, Self-Esteem, and Social Activities on Experience of Stress and Depression."

[151] John Harvey and Paul H. Delfabbro, "Psychological resilience in disadvantaged youth: A critical overview," *Australian Psychologist* 39, no. 1 (2011).

Scholars have recognized the importance of these indicators given the effects of intergenerational trauma on mental health among Indigenous peoples. For example, self-esteem and optimism are important protective factors for depressive symptomology among Aboriginal youth;[152] a desire to contribute to one's community and believing in one's self have also been found to improve mental health among Indigenous youth.[153]

SOCIAL RELATIONSHIPS

Social relationships in both early childhood and adolescence are widely regarded as one of the most important factors for healthy development and well-being in childhood through to adolescence. In the earliest years of life, it is argued that the quality of relationships and parenting carries the heaviest weight among the factors that drive healthy development.[154] Establishing warm, secure and responsive relationships with caregivers are key to establishing a child's confidence to play, socialize and explore their environment, which is what propels development.[155]

Measure: Social support and belonging

As defined by Cohen, "social support refers to a social network's provision of psychological and material resources intended to benefit an individual's ability to cope with stress."[156] This is especially important for the well-being of vulnerable children that face many different adversities in life. Indicators chosen for this measure include:

- Youth who report positive relations with their parents
- Youth who report 5 or more close friends
- Youth who report positive relations with siblings and extended family
- Youth who report positive relations with non-family adults
- Youth who report strong ties with elders in the community

Why these indicators matter

As children progress into adolescence, strong social relationships continue to be an important protective factor as individuals navigate major developmental changes. Strong social relationships, or lack thereof, have been tied to several aspects of well-being. For example, in

a population-based study on young Canadian adolescents, Gadermann[157] and colleagues found that social relationships such as belongingness with peers and adults at school and connection with adults at home were the strongest predictors of life satisfaction. Research has also found positive associations between social relationships and physical and psychological well-being by promoting healthier lifestyles, better self-esteem, and a greater sense of purpose and internal locus of control.[158]

Social support can also act as a protective factor when it comes to the impact of stress on health, as supportive, responsive relationships have been found to be a major factor in preventing the effects of toxic stress on the developing brain.[159] Dumont and Provost[160] summarize research on how this may apply to preadolescents and adolescents, noting a link between low social support satisfaction and mental health issues such as anxiety, depression, sleep disturbances, and interpersonal sensitivity. When faced with adversity and instability, social support and positive relationships with parents can act as a buffer against poor outcomes,[161] and attachment to parents are associated with psychological well-being particularly in adolescence.[162] Socially isolated people have been found to have higher mortality rates, are more likely to commit suicide, have higher rates of tuberculosis, accidents and psychiatric disorders.[163]

Social support has also been found to moderate the relationship between socioeconomic status and academic performance. Malecki and Demaray[164] found that socioeconomic status and support from parents,

teachers, classmates, close friends and the school was significantly associated with grade point average.

Measure: Social engagement

Related to social engagement, Cohen defines social integration as "participation in a broad range of social relationships,"[165] which includes both behavioural and cognitive components. Indicators chosen for this measure include:

- Youth who report some involvement, participation or contribution within the community
- Youth who participate in extracurricular activities

Why these indicators matter

Participation in social activities is important for developing social competence and skills and is linked with fewer behavioural problems and higher self-esteem.[166]

In the Indigenous context, a review by MacDonald found that community and culture were cited as the most common protective factors for mental health among Indigenous youth, which included things like healthy relationships with family and community members.[167]

CULTURAL AND SPIRITUAL WELL-BEING

It has been recognized by Indigenous scholars, practitioners, and the Pan American Health Organization that solutions to persisting health and socioeconomic inequities among Indigenous peoples must go beyond the social determinants of health to include Indigenous knowledges and ways of being. This includes language, culture, spirituality, connection to the land, and self-determination.[168] Indigenous children are born into a history of colonialism and attempts of forced assimilation, which is considered to be at the root of widespread health and socioeconomic disparities. The impacts of these policies and practices has resulted in intergenerational trauma and a loss of culture and language among

Indigenous communities.[169] As King and colleagues note, "the definition of indigeneity is…inherently social….[and] being isolated from aspects of this identity is widely understood to have a negative effect on Indigenous health."[170] As such, culture has become an important determinant of Indigenous well-being, and experts emphasize that it must be at the core of all efforts to improve well-being among children.

Measure: Spirituality

Spirituality is a broad term and has not been generally defined from an Indigenous perspective. Fleming and Ledogar[171] discuss Indigenous spirituality through the lens of two conceptual frameworks. The first is enculturation, which involves "the degree of integration *within* a culture"; the second, is cultural spiritual orientations, "which distinguishes between cultural and spiritual *orientations* and tribal spiritual *beliefs*". Indicators chosen for this measure include:

- Sense of belonging to cultural group
- Pride in Indigenous identity
- Sense of connection to the land
- Participation in spiritual practice/knowledge/ceremony

Why these indicators matter

While considered an important dimension of child well-being more generally, expert academics, practitioners and agencies have stressed the importance of cultural and spiritual well-being among First Nations children. One of the effects of colonial policies and practices of assimilation that First Nations children are born into is "the systemic devaluing of Indigenous identity," as well as the loss of a connection to the land—a core element of Indigenous culture and spirituality.[172] The importance of restoring the connection to one's Indigenous culture and identity is emphasized in relation to mental health outcomes and resilience.[173] In a study examining suicide rates among First Nations

youth in British Columbia, researchers[174] found that among communities where cultural continuity was preserved through avenues such as securing land claims, were self-governing, had band-administered education, police, fire and health services as well as cultural facilities within the community had lower suicide rates than communities where these factors were less present. This is an interesting strengths-based example where in-group variability was examined (and not just compared to the non-Indigenous population). Other studies have yielded similar results, with Indigenous spirituality acting as a protective factor against alcohol abuse and suicide.[175]

Measure: Tradition

Passing tradition on to Indigenous children is another component recognized as important for cultural identity and well-being. Indicators chosen for this measure include:

- Speaks traditional language
- Eats traditional foods

Why these indicators matter

Language is considered to be at the core of identity and how culture is passed down from generation to generation. Available statistics indicate that young children are learning to speak their heritage language as a second language.[176] Although they have persisted through colonization, preservation of Aboriginal languages is of particular importance as they are not spoken anywhere else in the world.[177] Though there is limited research on the association between knowledge of traditional Indigenous language and health outcomes, one study found that First Nations who had high levels of language knowledge had significantly lower rates of suicide than those with lower levels and for non-Indigenous youth. In fact, "youth suicide rates effectively dropped to zero in those few communities in which at least half of the band members reported a conversational knowledge of their own "Native" language."[178] Researchers identified language as the strongest cultural continuity factor contributing to this difference.

Traditional foods are also tied to Indigenous culture and connection to the land and are relied upon for well-being. One of the many effects of colonization is poor nutrition habits that have been passed down through generations. As Wilton Littlechild,[179] a Cree Nation Chief, describes, this stems from the residential school system where food was inadequate or used as a means of punishment. Furthermore, loss of land and access to traditional foods has meant that healthy food choices, especially among rural and isolated First Nations, are expensive and often unavailable.[180] This has, in part, led to disproportionately high rates of chronic diseases related to lifestyle factors such as type 2 diabetes and obesity.[181] As MacIvor and Napoleon[182] note, traditional food gathering not only promotes a healthier diet, but also more exercise and a connection to one's Indigenous identity.

PHYSICAL HEALTH AND WELL-BEING

Physical health and well-being constitute another important pillar supporting development in other dimensions and overall child well-being. Physical health does not equate to merely the absence of illness and disease; it goes beyond this definition to include the presence of healthy habits and behaviours that promote well-being now and in the future. This includes good maternal health and parenting knowledge for a healthy start in the earliest years of life, eating a healthy diet, being physically active, having a good sleeping routine, and reducing participation in risky behaviour as a child progresses into their adolescent and teenage years.

Measure: Overall physical health

Ensuring a healthy start in life lays the foundation for health and well-being across the life course. This measure aims to capture factors that promote healthy growth and development in the early years, which can have implications for health across the life course. The indicators chosen for this measure include:

- Low birth weight
- Breastfed for at least 6 months
- Children living with a disability or chronic illness

[179] Wilton Littlechild, "Indigenous peoples must look to the past to nourish our children," *The Globe and Mail* April 19, 2018, https://www.theglobeandmail.com/opinion/article-indigenous-peoples-must-look-to-the-past-to-nourish-our-children/.

[182] McIvor and Napoleon, "Language and culture as protective factors for at-risk communities."

Why these indicators matter

In addition to adequate nourishment and uptake of antenatal care services, maternal health status and health behaviours influence development in utero. Low birthweight is also an important indicator of maternal health status and poverty.[183] Risk factors for low birthweight include smoking, alcohol or drug use during pregnancy, infection during pregnancy, insufficient weight gain during pregnancy, and young or older maternal age.[184] Low birthweight has been associated with a number of poor outcomes, including cognitive and language development impairments, decreased academic achievement, and increased risk of chronic illnesses later in life.[185] It is important to monitor maternal health status and behaviours that influence healthy physical development of children to identify opportunities for early intervention.

Also critical to health in infancy is exclusive breastfeeding, which is not only important for nourishment, but also for protection against infection, cognitive development and developing a secure attachment to the child's primary caregiver.[186] Adequate maternal and child nutrition before and after birth is influential in promoting physical growth and brain development, which has consequences for language-cognitive and social-emotional development, and ultimately, for future health and socioeconomic outcomes.

In addition to maternal health status and behaviours, another important indicator of overall physical health and well-being of children is the presence of a disability or chronic illness. As Kim and colleagues summarize, "children with chronic health conditions often experience pain, fatigue, and emotional distress and other problems that may affect their well-being."[187] An epidemiologic survey of 3,294 children in Ontario found that children with both chronic illness and associated disability

[187] Jiseon Kim et al., "Symptoms and quality of life indicators among children with chronic medical conditions," *Disability and health journal* 7, no. 1 (2014): 96–104.

were at three times greater risk of experiencing psychiatric disorders.[188] Learning and behavioural disabilities have been associated with a higher risk of school difficulties, criminality, higher medical needs, difficulty establishing emotional relationships, and employment challenges as adults.[189] Therefore, providing accessible, effective and timely support for children experiencing disability or chronic illness is important to promote well-being.

Measure: Healthy habits

Establishing healthy habits is important for growth and development. Moreover, reinforcing a healthy lifestyle in childhood and adolescence increases the likelihood that these behaviours will continue into adulthood. The importance of measuring healthy habits in the context of child well-being has been primarily explored among adolescents, as this is a time when children are gaining more independence and autonomy in their lifestyle choices.[190] The indicators chosen for this measure include:

- Eating habits
- Level of physical activity
- Sleep habits

Why these indicators matter

Healthy habits, which include things such as levels of exercise, a healthy diet and sleep hygiene, lay an important foundation for development among children, as well as for future outcomes in adulthood. Establishing patterns of regular physical activity and a healthy diet are important for preventing obesity and chronic illnesses such as type 2 diabetes and promoting healthy body image.

Measure: Risk management

Preventing and managing risky behaviours among children and adolescents is very important as this may influence many different domains of well-being. The indicators chosen for this measure include:

- Teenage birth rate
- Percentage who report using illicit drugs in the last month
- Percentage who report binge drinking in the last month
- Smoking in the last month

Conceptualizing and Measuring Indicators of Positive Development,* ed. Kristin Anderson Moore and Laura H. Lippman (Boston, MA: Springer US, 2005).

Why these indicators matter

Early prevention of risky behaviour such as alcohol, tobacco and illicit drug use or unprotected sex is important, as these problem behaviours can manifest in youth and extend into adulthood. For example, a study of 727 Indigenous adolescents in the United States found that those who began drinking at an earlier age (i.e. 11–13 years old) were at a much greater risk of developing problem drinking than those who started later.[191] Adolescence is a time when risky behaviours tend to occur at the same time and are associated with "increased risk of poor educational attainment, future morbidity and premature mortality."[192] This is true of the Indigenous context as well, where high rates of binge drinking among adolescents "has been identified as a leading case of adolescent morbidity and mortality consequent to violence, falls, suicide, drowning, motor vehicle accidents, and risky sexual behaviour."[193]

SUB-STRATEGIC OUTCOME: FAMILY WELL-BEING

As stated above, there is a vast literature documenting the integral relationship between child well-being and family well-being. As summarized by Newland (2015), many studies have demonstrated child well-being as being predicated on family well-being and parenting quality.[194] Throughout the relevant literature, family well-being denotes that a family has the capacity to care for children and fulfill their basic developmental, health, educational, social, cultural, spiritual, and housing needs. Similarly, Newland (2015) defines family well-being as a relational concept, referring to the interactions between family members but also affected by the larger environments in which parents and children exist. Within this research, family well-being comprises two sub-components: Family Self-Sufficiency (parental employment and a family's ability to meet basic needs) and Family Health and Protective Factors (parental mental and physical well-being and family protective factors).

Roggman, Lisa K. Boyce and Mark S. Innocenti, *Developmental parenting: A guide for early childhood practitioners* (Baltimore: Paul H. Brookes Publishing, 2008).

SELF-SUFFICIENCY

Families' overall level of self-sufficiency is typically measured in terms of economic resources. This aspect of family life is frequently cited as a crucial determinant of child thriving. The indicators selected as the measures of this indicator include:

- Secure parental employment and labour force participation, and;
- Ability to meet basic needs, including transportation, housing and utilities, food, clothing, childcare and other necessary expenses.

Self-sufficiency is among the most cited factors in the literature on family well-being. Many studies have found that low parental income and economic hardships cause increased economic pressure in families, which adversely impacts parental mental health, conflict between parents/caregivers, parent-child interactions and parenting practices, as well as cognitive, academic, and socioemotional outcomes in children. Indeed, when parents are lacking the skills and resources necessary to be self-sufficient, they are more likely to struggle to provide adequate support and educational assistance for their children.[195] Families in chronic and persistent poverty are especially prone to challenges with self-sufficiency and may require additional support to reach this objective.[196] In the context of First Nations, risks to self-sufficiency are often more pronounced than in the rest of Canada. For many First Nations households, life choices can be severely compromised by high food costs, poor availability of healthy food, low income, and/or high housing and heating costs.

FAMILY HEALTH AND PROTECTIVE FACTORS

In addition to the immediate financial needs captured in the self-sufficiency component, there is the equally important consideration of health status of parents and/or caregivers, as well as the degree of protective factors within the family unit. As a result, we have classified the measures in this sub-strategic outcome as follows.

- Physical health status of parents or caregivers;
- Mental health status of parents or caregivers, and;
- Family protective factors.

Newland, "Stress, maternal depression, and negative mother–infant interactions in relation to infant attachment," *Infant Mental Health Journal: Official Publication of The World Association for Infant Mental Health* 23, no. 1–2 (2002): 145–163; Yvonne Rafferty, Kenneth W Griffin and Dimitra Robokos, "Maternal depression and parental distress among families in the Early Head Start Research and Evaluation Project: Risk factors within the family setting," *Infant Ment Health* J. 31, no. 5, (September 2010): 543–569.

Parental physical and mental health

Parental mental and physical health are necessary conditions for maintaining a stable and positive family environment. Parents who are suffering from poor mental health will likely have a negative impact on the entire family system, including co-parents, children, as well as other networks outside of the family such as work and social support systems.[197] Mental health disorders, combined with the daily challenges of parenting, can cause parents to feel overwhelmed by the demands of everyday life. Moreover, parents suffering from subclinical mental health issues (e.g. distress, mild depression, anxiety, stress, fatigue, somatic symptoms) rarely seek treatment for their conditions.[198] Under these conditions, parents have been found more likely to resort to inappropriate coping devices, such as avoidance or drug/alcohol use, as a way of managing the challenges in their lives.[199]

These persistent conditions of heightened levels of stress, combined with low levels of social support, are particularly problematic for families.[200] Conversely, when parents use appropriate emotion regulation, stress management, and support-seeking strategies, they tend to exhibit more positive physical and mental health, decision making, job performance and stability, parenting skills, and social relationships.[201] Markers of positive parental mental health, including life satisfaction, positive mood, and efficacy, are related to better individual and family

functioning.[202] It is essential that parents who have mental health issues be treated properly if they are to be self-sufficient and resilient.[203]

Parental physical health is an equally important component of family well-being which impacts parent–child interactions and child well-being.[204] Parental health behaviours and management strategies are related to parental mental health and family functioning (e.g. family interactions, outcomes, roles, self-sufficiency, and parent involvement), all of which impact children's life outcomes.[205] Finally, parents also serve as "the primary gatekeepers of their children's health", therefore making choices about their child's healthcare, nutrition, physical activity, mental healthcare, and physical and emotional environments.[206]

Family protective factors

The last component of family well-being in this research is family protective factors, which consist of family resilience, social connections, knowledge of parent and child development, concrete support in times of need, and developmental parenting and attachment. Many child welfare and family support systems have emphasized the importance of protective factors in preventing negative outcomes for children. These factors can mitigate risk and promote healthy development of children and families such as strengths that help buffer and support families at risk. These risk factors include stressful conditions such as maternal psychiatric disorders, family violence, persistent poverty, and substance use. Increasing the strength of protective factors is an effective prevention and intervention strategy to offset risk exposure and promote enduring gains.[207]

Strengthening Families™, developed by the Center for the Study of Social Policy (CSSP), identifies five protective factors: (1) parental resilience; (2) social connections; (3) Knowledge of parent and child development; (4) Concrete support in times of need; and (5) social and emotional competence of children. Many child welfare systems have used the CSSP framework to develop strength-based intervention initiatives.[208] Strengthening Families is a research-informed approach to improve family well-being, enhance child development, and reduce the likelihood of child abuse and neglect.[209] This framework is widely used as an intervention in many child welfare agencies to reduce child maltreatment and foster positive relationships between parents and children.

According to the CSSP:

> Protective factors act as a counterweight to risk factors. They buffer the impact of what the researchers call "toxic stress". Risk factors, it turns out, are not very predictive of future events. And we cannot get to good outcomes for children only by focusing on reducing risk. The protective factors in the Strengthening Families framework both protect against risk and promote positive outcomes.[210]

Strengthening Families is also consistent with the shift in the child welfare sector from a protection to a prevention-based system in its emphasis on a changed relationship with parents. As summarized by the CSSP:

> Programs and service providers in these systems sometimes see parents as irrelevant to their work, or worse, as obstacles to achieving the outcomes we all want for children. But we know that children grow up in families, not programs—and we cannot achieve good outcomes for children without engaging their parents as partners.[211]

Finally, Strengthening Families is aligned with developmental science and emphasizes the importance of nurturing and responsive relationships in the critical period of early childhood. The CSSP clearly references the

effects of traumatic experiences in children, which can "carry into the rest of a young person's life."[212]

Parental resilience refers to the ability of parents to manage stress (either parental or general life stressors) and for the parents and the family to function well when faced with challenges, adversity, and trauma. According to the CSSP, it has been frequently demonstrated that how parents respond to stressors is more significant to determining the outcomes for themselves and for their children than the stressor itself.[213]

Second, social connections refer to parents' constructive and supportive relationships with family members, friends, neighbours, co-workers, community members, and service providers, which provide emotional, informational, and spiritual support. These connections have been associated with positive parental mood, positive perceptions and responsiveness of parents towards children, as well as parental satisfaction, sense of competence, and reduced anger, anxiety and depression.

Third, knowledge of parenting and child development, simply an adequate understanding of child development and parenting strategies that support physical, cognitive, language, social and emotional development, contribute to emotionally available parents and caregivers who recognize and respond to the needs of children, and who interact with them in an affectionate, sensitive, and nurturing manner. This type of care allows children to develop a bond of secure attachment towards their parents or caregivers and, in turn, to develop a sense of trust, safety, self-confidence, and security.[214]

Fourth, concrete support in times of need refers to strategies and resources which parents can utilize during exceptionally trying times, such as job losses, home foreclosure, acute poverty (e.g. inability to pay for basic necessities), substance abuse, or other family trauma. As summarized by the CSSP, when parents are able and willing to navigate through and access health care and social service resources offered in their community, they are taking a critical step towards improving their circumstances and "learning to better manage stress and function well."[215]

Finally, developmental parenting, a term coined by Roggman et al.,[216] encompasses a set of parenting practices meant to be developmentally appropriate and adjusted as children's needs and skills change. Roggman and others have found that developmental parenting includes four key components: affection, responsiveness, encouragement, and teaching.[217] More recently, Newland expanded that list to include engagement, appropriate discipline, and supportive co-parenting.[218] In general, developmental parenting is described as responsive and sensitive to children's needs in order to foster positive attachment relationships with parents and caregivers in infancy and early childhood, which are a crucial conditions to facilitate of child well-being.[219] Indeed, both the quality of parenting and the quality of parent–child relationships are extremely important for children's well-being.[220] High-quality parenting is characterized as being developmentally appropriate, consistently with a child's needs, and adjusted as those needs change in order to foster well-being.[221]

SUB-STRATEGIC OUTCOME: COMMUNITY WELL-BEING

Community well-being is the broadest domain of well-being utilized in this research project, encompassing many contextual factors which can enable or constrain a child's thriving. Poverty has known impacts on development, a matter highlighted in Phase 1.[222]

As Liebenberg and Hutt-Macleod attest, "Reducing the number of children in care will depend in large part on providing families and communities the resources required to heal so that they are better

able to care for children."[223] However, the importance of community well-being denotes a focus beyond simply reducing the number of children in care. Rather, a community focus shifts the objective towards promoting substantive equality and wellness for children, families, and communities to have a chance for healthy development. As Bronfenbrenner explained, "Children don't grow up in programs. They grow up in families and in communities."[224]

The community capacity-building framework proposed by Liebenberg and Hutt-Macleod (2017) demonstrates how development at the community level is critical to well-being in general, including that of children.

The definition of community well-being employed in this research is derived from the University of Minnesota's Earl E. Bakken Center for Spirituality & Healing, as "the combination of social, economic, environmental, cultural, and political conditions identified by individuals and their communities as essential for them to flourish and fulfill their potential."[225] While the factors inherent in community well-being in an Indigenous context are numerous, for the purposes of this research, these have been limited to three sub-components. The components of community well-being are as follows:

- A community's access to basic needs;
- The gaps in service provision to communities, and;
- Public safety and community health.

ACCESS TO BASIC NEEDS

Access to basic needs in a community will comprise five key indicators: access to potable water, access to suitable housing, access to broadband connectivity, proximity and presence of community infrastructure, and overall poverty level. These components have been included in numerous studies and surveys documenting Indigenous well-being in Canada.

Access to potable water

Firstly, access to potable water is widely recognized as a fundamental condition for human health, and the lack of access to safe drinking water and adequate sanitation is one of the greatest threats facing vulnerable populations in the world. Indigenous teachings in particular demonstrate

that water has various meanings and uses for people including a "...home for living beings, a life-enriching cleansing agent, an element of interconnection, and a symbol of both strength and softness."[226] As documented by Sanderson, the meaning attached to water among First Nations is that of being: "life; ...sacred; ...power; ...our first medicine; and, water connects all things."[227]

In Canada, providing safe drinking water to First Nations on reserves is a significant issue. As Bharadwaj and Bradford note, many reserve communities in Canada live with long-term drinking water advisories and high-risk water systems, and experience health and water quality below that of non-reserve populations.[228] The Government of Canada's federal department of Indigenous Services Canada provides data on long-term drinking water advisories in First Nations communities, which refer to water advisories which have been in effect for more than 12 months.[229] As of July 27, 2020, there were 30 short-term drinking water advisories and 61 long-term drinking water advisories on public systems on reserves.

The Parliamentary Budget Officer in Canada has estimated that the government would have to invest a minimum of $3.2 billion in capital investment to bring First Nations water systems up to the standards of comparable non-Indigenous communities in order to eliminate boil-water advisories.[230] When this estimate was released in 2017, it was found that the government was spending only 70 per cent of what is needed to end boil water advisories on First Nations Reserves within five years.

Access to suitable housing

Access to suitable housing is an equally important basic need. According to Statistics Canada, 'housing suitability' refers to whether a private household is living in suitable accommodations according to the National

Occupancy Standard (NOS); that is, whether the dwelling has enough bedrooms for the size and composition of the household.[231] Statistics Canada has recently devoted greater attention to measuring housing needs in Canada through the new Canadian Housing Survey in 2018. Access to suitable housing can also be determined through the core housing need metric developed by the Canada Mortgage Housing Corporation (CMHC).

According to the CMHC,[232] core housing need is a situation in which:

1. Major repairs are required and residents do not have the means to move to a good unit in their community;

2. There are not enough bedrooms for the residents, and they do not have the means to move, and;

3. The current home costs more than the residents can afford, and they do not have the means to make a move or find an available affordable home in their community.

As defined by the CMHC,[233] a household is defined as:

- Its housing is unacceptable (does not meet one or more of the adequacy, suitability or affordability standards), and;
- Acceptable alternative housing in the community would cost 30% or more of its before-tax income.

Affordable, stable housing in a safe, supportive neighbourhood is essential for a healthy family life.[234] There is a substantial body of research linking adequate housing to indicators of human health.[235] Recent guidelines released by the WHO, for instance, highlights that improved housing conditions lead to better standards of health and overall well-being.[236]

In this report, the WHO demonstrates that a healthy home is one that provides a safe, comfortable and hygienic environment, as well as a psychological sense of home through a feeling of belonging, security, and privacy.

In Canada Indigenous People are far less likely than non-Indigenous Peoples to live in such a home, particularly those living on reserves.[237] According to recent data, approximately 20% of Indigenous People lived in a dwelling in need of major repairs in 2016, and 18.3% of Indigenous People lived in housing that was crowded.[238]

Families experiencing homelessness often report a loss of parental control, and are more likely to experience domestic or community violence and an increase in fear and anxiety.[239] Poor housing has also been linked to the spread and chronic occurrence of viruses and bacteria[240], and the increased prevalence of unintentional injuries.[241] Moreover, housing instability is associated with decreased family engagement in children's early school-related activities and poor early school attendance, and children who experience homelessness during their infancy, toddler, or preschool years tend to have poorer early academic outcomes overall.[242] Housing improvements linked with improved health include renovations, relocation, and energy efficiency projects.

Access to broadband

Broadband connectivity has been associated with numerous community benefits and has been recognized as a pressing issue for Aboriginal communities.[243] According to Benkler, internet connectivity is necessary infrastructure to contribute to "high and sustainable economic growth

and to core aspects of human development."[244] As acknowledged by the Government of Canada, broadband is "a critical tool for Aboriginal people as broadband infrastructure can improve health and safety, increase social well-being and provide economic development opportunities and growth for Aboriginal communities".[245] Today, only about 24% of households in Indigenous communities have access to broadband connections of 50/10 Mbps.[246] As a result of these recognized benefits, since early 2011, Indigenous Services Canada (formerly, Indian and Northern Affairs Canada (INAC)) was developing an Aboriginal connectivity strategy, while other federal departments including Industry Canada are creating a comprehensive National Digital Strategy. In some cases, broadband infrastructure has been framed as a component of indigenous self-determination.[247] There is general consensus that broadband infrastructure is an integral component of a thriving community, from a tool for cultural preservation and language learning to service delivery in health care and education.[248]

Presence of community infrastructure

The inclusion of the presence and proximity of community infrastructure is consistent with the definition of community well-being developed by the Earl E. Bakken Center for Spirituality & Healing as being based on three factors: Connectedness (e.g. social support, civic engagement), livability (e.g. housing, transport), and equity (e.g. basic needs are met, equality of opportunity).[249]

The Earl E. Bakken Center for Spirituality & Healing makes reference to numerous studies showing the positive effects of community spaces and services for community well-being, including transportation systems, health and social service centres, public safety and emergency services, parks, recreation, and arts centers, and government and legal institutions. Research shows that community infrastructure is essential to fostering services, facilities, and networks which increase quality of life and reducing poverty.[250] Investments in many Indigenous communities in hard and soft infrastructure are necessary to promote quality of life for community members. This can also help to attract people to the community and can act as a disincentive to out-migration.[251]

Community infrastructure is also significant to the degree that it promotes safety and security among neighbourhoods which, in turn, promote safety within families.[252] Safe neighbourhoods contain resources which support family activities and community health and connections, including parks, sidewalks or walking paths, libraries, and community centers.[253] Neighbourhood safety can create opportunities for children to learn social customs, develop feelings of confidence in their communities, and build interpersonal relationships with peers.[254]

Poverty

Overall poverty is included as a component of community well-being. According to Gustavsson and MacEachron, "there is little disagreement about the association of poverty with child welfare involvement."[255] The negative effects of poverty are often complex and self-reinforcing:

> children can be hungry, be living in substandard housing or be homeless, be unsupervised while a parent works or is meeting

> other responsibilities, be truant from failing schools, lack medical care, or have a caretaker with untreated mental illness or substance abuse.[256]

Parental or familial experiences of poverty have been associated with numerous detrimental effects to child well-being, including emotional and behavioral problems as well as further disruptions in schools and to friendships. Poverty is also associated with poor early childhood development and is a risk factor for family breakdown, both of which have been linked to poor educational performance in children. Moreover, economically distressed areas often experience higher reports of child maltreatment, correlated with inadequate housing and single parenthood.[257] Finally, community poverty has also been linked to health disparities and language development in children.[258]

Community connections and cultural safety

Consideration of community connections and cultural safety to assess social cohesiveness and cultural attachment are important elements of community well-being. Cultural safety refers to social environments and practices which recognize, respect, and honour diverse cultural identities.[259] A measurement of cultural safety is important given that the harmful effects of racism and colonialism experienced by people from non-dominant cultures can affect stress levels, health status, and even life expectancy.[260] As Czyzewski notes, colonialism can be understood as a social determinant of health among Aboriginal populations.[261] Cultural safety also refers to an approach to service delivery that respectfully engages families to select the most individually appropriate path to well-being.[262] The prevalence and use of traditional languages within a First Nation will be used as a proxy to determine cultural connections within a community.

Applications

Successful implementation of a performance framework depends on relevant, timely and high-quality data. The following section examines the current state of data on First Nations in Canada, where gaps in data exist, and what is needed to support a performance framework that focuses on a future state of thriving First Nations children.

DATA ON FIRST NATIONS IN CANADA: CURRENT STATE

While there is a vast amount of information collected on First Nations, it is largely uncoordinated and carried out in a piecemeal fashion across various federal departments, agencies, regions and organizations by both Indigenous and non-Indigenous groups (see Table 8).[263] Oftentimes, data is not collected frequently enough to be used for planning and operations, nor is it sufficient to answer relevant questions due to gaps in coverage for First Nations living on-reserve (for example, Statistics Canada's Aboriginal Peoples Survey only collects data from First Nations living off reserve, Métis and Inuit). Some surveys fail to separate First Nations identity from the general population, with inconsistency in how Indigenous identity is defined (e.g. self-identified, Status Indian, etc.). Certain efforts have also been critiqued for using culturally inappropriate indicators[264] and focusing on secondary issues (e.g. disease prevalence) as opposed to root causes of ill-health and well-being.[265] Furthermore, First Nations communities are often unable to use this data for planning purposes as it is aggregated to provincial and national levels.

There have been some efforts to address these challenges. For example, the First Nations Information and Governance Centre (FNIGC) was established in 2010, and works mainly to develop and administer national First Nations surveys in collaboration with Regional Partners.[266] One of their larger initiatives is the First Nations Regional Health Survey (RHS), which gathers information on health and well-being from over 250 First Nations communities. The RHS has filled important data gaps for First Nations peoples living on reserve and in northern communities, and as a First Nations-led initiative, includes culturally appropriate indicators on a holistic set of outcomes. FNIGC also houses the First Nations Data Centre, which

provides data access to researchers, policymakers and other stakeholders on a pay-per-use basis. Census data can offer broad coverage of certain indicators at the level of the individual First Nation but may not always be considered representative.

TABLE 8: Available data and application considerations for the Measuring to Thrive framework.

Data source	Types of data collected	Limitations for FNCFS purposes
Statistics Canada	*Census* ▪ Demographic and family characteristics ▪ Education, labour and income outcomes ▪ Household and dwelling information ▪ Language, mobility and migration	▪ Aggregated to give national level overview ▪ Conducted every 5 years ▪ Indigenous indicator self-identified ▪ Indicators are not always culturally relevant
First Nations Information and Governance Centre (FNIGC)	*Regional Health Survey (RHS)* ▪ Health, well-being and social determinants on children, youth and adults *Early Childhood, Education and Employment Survey (REEES)* ▪ Early childhood education and development ▪ Youth employment and education ▪ Adult employment and education ▪ Labour-market conditions *Community Survey* ▪ Environment ▪ Shelter, infrastructure and housing ▪ Food security and employment ▪ Early childhood development and education ▪ Health and social services ▪ First Nations identity ▪ Justice and safety ▪ First Nations governance	▪ Administered to only a sample of First Nations communities and/or sample of the population ▪ RHS and REEES data aggregated to give national level overview (and cannot always be disaggregated to community level) ▪ Some communities cannot access data due to confidentiality concerns ▪ No clear timeline for further data collection and reporting
Indigenous Services Canada (ISC)	▪ Broadband connectivity profiles ▪ Boil water advisories ▪ Population and profile data on individual First Nations	▪ Can be difficult to access ▪ Data can be outdated (e.g. most recent publicly available data from ISC on connectivity in First Nations communities is from 2013) ▪ No aggregation of data

ANALYZING THE GAPS: WHAT IS MISSING?

Among the most significant challenges to the success of this project are the gaps in high-quality data pertaining to First Nation communities. To align what data currently exists to what is required for supporting a FNCFS performance framework, two dimensions of data source quality were considered: accessibility of data and granularity of data (see Figure 37).

Data accessibility, as the name suggests, refers to the ability to access or retrieve the data stored in a database. Publicly accessible (e.g. housing, access to potable water), data tends to be aggregated, which limits its applicability for decision-support in specific domains. Conversely, granular data refers to the degree of detail and specificity of data, in this case whether data can be divided into Frist Nations and family units. As data is more subdivided, it is more granular. Granular data can be aggregated or disaggregated to allow for different scopes of analysis. If data is not granular, it becomes very difficult to analyze clearly. Granular data may be available at the level of the individual agency or First Nation, but is not always readily available, comparable or consistently captured (i.e. loss of time series).

In the current state, there is limited consistent information and data available on the overall performance of the FNCFS system. What is known, is that the system is underfunded, the system incentivizes the placement of First Nations children in protection, and there is no commonly used results-focused framework. One of the immediate priorities with respect to transition to an alternative funding approach, is the adoption of a commonly supported and used performance framework rooted in the goal of thriving First Nations children, families and communities.

The draft diagram below plots the indicators from the performance framework based on their current-state accessibility and granularity. Several indicators are accessible but insufficiently granular (bottom right quadrant). This suggests that while there is aggregate data at the level of a First Nation, a province or region, the data may not have the necessary detail to measure the indicator defined in the performance framework. For instance, there may be data at the level of the First Nation on alcohol and drug misuse, but that data may not be available for the individual child. Even though individual data will not be shared, it is a useful internal metric for agency decision-support and planning for the child and family. The mismatch between accessibility and granularity is not insurmountable. It will require agency action with requisite resources.

The upper right quadrant is both accessible and sufficiently granular. Most of this data relates to child safety, as it is expected that agencies already collect this information at the level of the individual child for their case files. It is anticipated that while this data will not be made public at the level of the individual, the aggregated data can be a reliable source of information to assess overall outcomes for children and families in a community. Some community level data is also included, as it can be accessed from public sources at the level of the First Nation. Such data includes housing suitability and access to potable water to fulfill certain indicators. The two community well-being indicators

related to infrastructure and health and social services in the bottom left corner are deemed both insufficiently granular and insufficiently accessible because the data does not tend to exist. It would be up to individual communities or agencies to collect or produce this data.

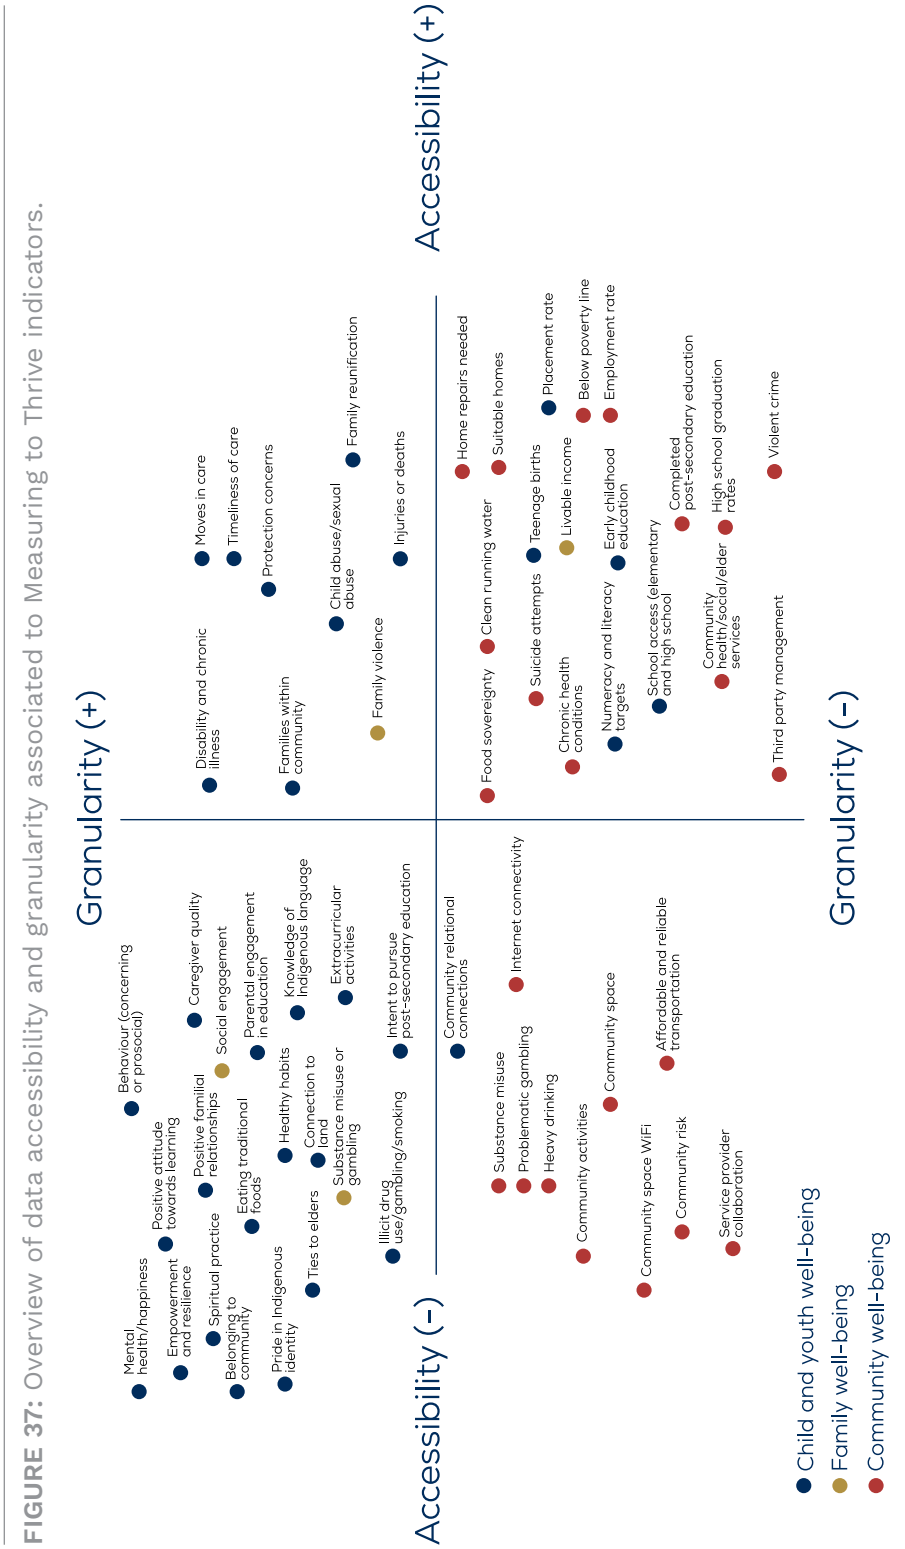

FIGURE 37: Overview of data accessibility and granularity associated to Measuring to Thrive indicators.

FEASIBILITY AND CRITICALITY OF DATA COLLECTION

Given the large gaps that exist, analysis was undertaken to determine the feasibility of obtaining data, and the criticality of it to understand progress to achieving sub-strategic and strategic objectives. This was evaluated using the following criteria:

TABLE 9: Defining feasibility of access and criticality of data for the Measuring to Thrive framework.

	Feasibility	Criticality
1	Easy to access: Data source is already publicly available or very core to agency mandate AND is available at the sufficient level of granularity to fulfil the indicator.	Data is imperative to assessing whether or not the sub-strategic and strategic outcomes are being achieved.
2	Somewhat easy to access: Data is likely not publicly available but close enough to agency mandate that they could reasonably collect it.	Data is somewhat essential to assessing whether or not the sub-strategic and strategic outcomes are being achieved.
3	Difficult to access: Data is not collected by agency and outside of agency mandate, would require external cooperation.	Data is not essential to assessing whether or not the sub-strategic and strategic outcomes are being achieved.

In this configuration, a *Feasible* coding (green) applies to data that is already being captured or an agency could easily collect the data. A *Somewhat Feasible* coding (yellow) describes data that may not exist publicly, nor is it likely being captured by agencies, but of which a request falls within an agency's mandate and the data could be feasibly collected by an agency. Finally, a *Difficult* coding (red) indicates some challenge in accessing the data as it falls outside of a typical agency's mandate and may require collaboration with a third party to capture the information (see Table 9).

Determining the criticality of collecting data on a particular indicator was based on findings from the literature on what is needed to ensure child well-being. Consideration was also given to whether the indicator measured the child's immediate health and safety or well-being more generally, whereby ones related to safety took precedence.

CHILD WELL-BEING

Child well-being is a multi-dimensional concept, and data is required from several different areas in order to holistically understand how a child is faring. In terms of feasibility, the majority of indicators were categorized as somewhat easy to access, meaning that social workers could likely collect this information through assessments with the child

and family. This is with the exception of indicators related to school performance, such as numeracy and literacy scores. In cases like these, there may be opportunities for collaboration with external entities on a community-by-community basis. For example, agencies may collaborate with school boards to collect information on educational achievement outcomes and behavioural issues in the classroom. Likewise, if early intervention programs such as Aboriginal Head Start On-Reserve are delivered within an agency's community, there may be potential to share data on maternal health and early childhood development outcomes.

The child well-being sub-strategic program is the most comprehensive of the four sub-strategic programs and consists of cognitive development, social relationships, psychological & emotional well-being, cultural & spiritual well-being and physical health and well-being performance elements. Cognitive development is supported by school readiness and educational attainment programs. Social relationships is supported by social support & belonging and social engagement programs. Psychological and emotional well-being is supported by child behaviour, social competence, subjective well-being and esteem programs. Cultural and spiritual well-being is supported by spirituality and tradition programs. Physical health and well-being are supported by overall physical health, healthy habits and risk management programs.

FAMILY WELL-BEING

The family well-being sub-strategic outcome consists of self-sufficiency and family health & protective factors performance elements. Self-sufficiency is made up of ability to meet basic needs programs and secure parental employment and participation in labour force programs. Family health and protective factors are made up of physical health of parents/caregivers programs, mental health of parents/caregivers programs and family protective factors programs.

In terms of feasibility, most of these indicators are somewhat easy to access, meaning that social workers could reasonably collect this information through assessments with the child and family. Some indicators referring to family health and protective factors, such as illicit drug use, and symptoms of anxiety and depression and thoughts of suicide and self-harm among caregivers, are presumably feasible to be collected by the agency (and to some extent are already being collected) as these are central to the mandate of agencies and critical to achieving sub-strategic and strategic outcomes.

COMMUNITY WELL-BEING

The community well-being sub-strategic outcome consists of access to basic needs, gaps in services to the community and public safety & community health performance elements. Access to basic needs

has a heavy focus on community infrastructure and looks at access to potable water, suitable housing, broadband connectivity and community infrastructure. It also looks at programs that address the overall poverty level. Gaps in services to the community is made up of programs that seek to address gaps or shortages in services. Public safety and community health consist of health & safety and educational attainment programs.

In terms of feasibility, most of these indicators qualify as relatively easy to access, with the exception of community infrastructure and public safety and community health indicators, as these will require collaboration with external organizations are not within the core mandate of child welfare agencies.

CONNECTION TO THE MEASURING TO THRIVE FRAMEWORK

It is clear that there are several gaps and challenges to utilizing First Nations data more broadly and at the level required by FNCFS agencies. The need to create a more coordinated and standardized approach to managing First Nations data to support an FNCFS performance framework raises the question of which entities and institutional relationships can be developed to collect and store this data. To that end, the example of Chapin Hall at the University of Chicago provides a useful parallel.

Chapin Hall, an independent organization affiliated with and located on the campus of the University of Chicago, engages in extensive partnerships with communities to share information and data on performance indicators of child welfare agencies. Chapin Hall serves as a steward of administrative data from a number of public agencies regularly. These data are used with the express permission of the source agency; for purposes approved by the source agency; and to benefit the source agency and the individuals and families the source agency serves.

One example of a key partnership is with the state of Tennessee, which introduced performance-based contracting (PBC) in child welfare to promote timely permanency for children in 2006. In this model, providers are financially incented to promote the permanent placement of children and are benchmarked against their own performance. The state pays for a result and bills providers that do not meet their agreed targets. Underpinning Tennessee's PBC model is data collected by providers and aggregated by Chapin Hall, which provides expertise on data analysis and performance, as well as in evaluating results and adjusting the program as needed.

Through its frequent use of high-quality reliable data and working partnerships across sectors, systems, and programs, Chapin Hall advances evidenced-based policy and funding solutions to address the complex needs of children, families, and communities. A First Nations-led secretariat is proposed to support First Nations and agencies to transition to a future state with a results approach focused on child, family, and community well-being.

Availability of data needed to benchmark and evaluate if outcomes among First Nations children are improving is scarce, and much of it will need to be collected by FNCFS agencies and providers. It is recognized that collection, analysis and management of the data will require an institutional capacity that is not currently present among all FNCFS agencies. Adequate funding for establishing this infrastructure, stakeholder buy-in and ownership over all aspects of performance measurement and strategic planning will be essential. Allowing communities to define their own success, establishing a positive, no-fault culture around measurement and tying it to an opportunity to improve (as opposed to viewing it as an assessment of performance) must also be integrated.

Connection to the Government of Canada's Expenditure Management Architecture

The Treasury Board of Canada Secretariat has set many standards and requirements for evaluation in the federal government, including the *Policy on Results* (2016)[267] and the *Directive on Results* (2016),[268] the latter of which contains Mandatory Procedures for Evaluations and Standards for Evaluation. The *Policy* replaced three Treasury Board policies, including the *Policy on Evaluation*. TBS continues to demonstrate functional leadership in implementing, using and developing evaluation practices across the federal government. This *Policy on Results* in particular is intended to allow the federal government to move towards performance-informed budgeting in the future.[269]

[267] Treasury Board of Canada Secretariat, "Policy on Results," July 1, 2016, https://www.tbs-sct.gc.ca/pol/doc-eng.aspx?id=31300.

[268] Treasury Board of Canada Secretariat, "Directive on Results," (July 1, 2016), https://www.tbs-sct.gc.ca/pol/doc-eng.aspx?id=31306.

[269] Derek Armstrong, "Performance (-informed) Budgeting in the Government of Canada," *Treasury Board of Canada Secretariat*, October 2018, https://fmi.ca/wp-content/uploads/2019/04/en-presentation-derek-armstrong-to-fmi-oct-25-pd.pdf.

Prior to this, the Secretariat had established a guiding document on performance measurement strategies in the federal government.[270] As explained in this guide, performance measurement is a results-based management tool used to plan, monitor, and assess the performance of policies and programs in relation to their progress against explicit benchmarks and goals. In general, the purposes of performance measurement are two-fold: first, to support ongoing program monitoring, and second, to support and facilitate effective evaluation. More specifically, performance measurement allows governments and evaluators to:

1. Monitor and assess program effectiveness;

2. Evaluate the economy and efficiency of programs to determine the value of results in relation to expenditures;

3. Enhance accountability and transparency in the delivery and spending on programs, and;

4. Facilitate strategic program planning to improve its effectiveness and achieve intended results.[271]

ELEMENTS OF THE *HORIZONTAL INITIATIVES GUIDE*

The complexity and breadth of the system-wide approach to FNCFS is evident when considering the contextual influences on well-being. Adhering with the guidance set out in the *Guide to Departments on the Management and Reporting of Horizontal Initiatives* would be beneficial with respect to achieving a successful outcome.

The *Horizontal Initiatives Guide* promotes the management and reporting on horizontal initiatives by:

- Clarifying the definition of a horizontal initiative
- Outlining appropriate governance (First Nations-led)
- Describing the roles and responsibilities of lead and partner departments and agencies
- Setting out the process for their management and reporting
- Prescribing reporting requirements for Parliament and to TBS

[270] Treasury Board of Canada Secretariat, "Supporting effective evaluations: A guide to developing performance measurement strategies," September 29, 2010, https://www.canada.ca/en/treasury-board-secretariat/services/audit-evaluation/centre-excellence-evaluation/guide-developing-performance-measurement-strategies.html.

[271] Treasury Board of Canada Secretariat, "Supporting effective evaluations: A guide to developing performance measurement strategies," September 29, 2010, https://www.canada.ca/en/treasury-board-secretariat/services/audit-evaluation/centre-excellence-evaluation/guide-developing-performance-measurement-strategies.html.

1. *Does FNCFS meet the criteria for a horizontal initiative?*

The performance measurement framework Measuring to Thrive meets the definition of a horizontal initiative. The performance measurement framework is holistic as it seeks to address the root causes in the system that have prevented First Nations children from thriving. This performance measurement framework covers protection, mental health, physical health, education and infrastructure to name a few of the areas of focus. The funding associated to meet the goas of this framework will implicate ISC and other departments.

2. *Appropriate governance for the FNCFS performance measurement framework*

Having established that the Measuring to Thrive framework meets the definition of a horizontal initiative it is important to outline appropriate governance. The following steps should be taken as part of the roadmap towards the implementation of the framework:

a. The appointment of a senior-level First Nation oversight committee
    i. Responsible for data collection, monitoring of indicators and spending, resolution of disputes, timing of meetings and agenda, liaison and ongoing reporting and engagement with key stakeholders and central agencies, communication strategies etc.
b. Establish appropriate subordinate bodies for the sub-strategic outcomes
c. Ensure governance deals with simple issues and roadblocks
d. Ensure that the oversight committee reports high-risk, high-impact issues to the First Nations-led secretariat and/or other appropriate body

The establishment of appropriate and effective governance is critical towards success of this horizontal initiative.

3. *Establish the roles and responsibilities of lead and partner departments and agencies*

Building off the need for appropriate governance it is important that the roles and responsibilities of the lead and all partner agencies/entities are clearly identified to ensure that there is system-wide coordination and synergies with all the moving parts of the performance measurement framework. Alignment and a system-wide view of the effectiveness and efficiency (i.e. value-for-money) of the totality of operations will demonstrate fiscal probity and stewardship with respect to Measuring to Thrive.

4. *Setting out the Process for the Management and Reporting of the Horizontal Initiative*

In order to be successful, the process for managing and reporting of this horizontal initiative requires a shared understanding of:

- The outcomes anticipated
- The indicators of success
- The activities required
- The capacities needed for execution

This shared understanding underscores the importance of ensuring there is accountability for data collection, analysis and reporting. The FNCFS performance measurement framework is horizontal and measures progress in strength-based approaches and overcoming contextual barriers. Given the current data gap in understanding system-wide performance, the initial priority must be to establish a baseline of performance and financial data in the current state. This will help to clearly identify the scope of the challenge as well as being able to identify a medium-term to long-term performance roadmap that will help to measure and report on the success of the funding formula and the performance measurement framework moving forward. First Nations are best positioned to gather, analyze and report on data relevant to well-being.

5. *Prescribing Reporting Requirements for Parliament and to TBS*

Given the importance of the FNCFS funding approach and performance measurement framework it is critical that the oversight committee establish clear evaluation and reporting requirements to Parliament to be able to provide an evidence-based and transparent evaluation of what has been successfully achieved and what gaps remain. Regular reporting and evaluations on performance and the resources allocated to realize this performance will provide a high-quality evidence-based assessment on the progress towards the Vision of *Enabling First Nations Children to Thrive*.

DETAILED CHECKLIST BASED ON THE HORIZONTAL INITIATIVES GUIDANCE DOCUMENT

For a detailed checklist that applies the guidance in the *Guide to Departments on the Management and Reporting of Horizontal Initiatives* to the FNCFS performance measurement framework, see Appendix L. The purpose is to provide a quality assurance best practice checklist for the implementation of the renewed FNCFS system.

Part III: Funding approach

Introduction

The idea of using public money to solve public problems has a long history. As Schick (1966) explains, "Budgeting always has been conceived as a process for systematically relating the expenditure of funds to the accomplishment of planned objectives."[272] OECD research suggests that performance budgeting has been practiced in many different countries since the 1960s, but was adopted more widely by OECD countries beginning in the 1990s.[273] Among OECD countries, impetus for adopting performance budgeting practices include: a financial crisis, growing pressure to reduce public expenditure, or a change in political administration.[274]

Performance budgeting changes often accompany other reforms, instigated by other events. Denmark and Sweden introduced performance budgeting following spending control policies in reaction to the economic crises of the 1980s and 1990s. Nearly a decade later in South Korea, the rapid deterioration of public finances after the Asian financial crisis triggered ambitious wide-ranging reform of the budget process. The United Kingdom's changes in 1997 included public sector management reforms and changes to the budget process.[275] Performance budgeting requirements can be codified in legislation, established through formal policy guidelines, or use a mix of both.

Performance budgeting

One of the most popular definitions of performance budgeting comes from Schick's writings in the OECD. Distinguishing between a broad (standard) definition and a strict (limited) definition of performance budgeting, Schick explains that:

> Broadly defined, a performance budget is any budget that presents information on what agencies have done or expect to do with the money provided to them. Strictly defined, a

[272] Allen Schick, "The Road to PPB: The Stages of Budget Reform," *Public Administration Review* 26, no. 4 (1966): 244.

[273] OECD, "OECD good practices for performance budgeting," last modified May 10, 2019, https://doi.org/10.1787/c90b0305-en.

[274] OECD, "OECD good practices for performance budgeting," last modified May 10, 2019, https://doi.org/10.1787/c90b0305-en.

[275] Austria also implemented 'Gender Budgeting' as part of its comprehensive performance budgeting reforms in 2009 and 2013.

> performance budget is only a budget that explicitly links each increment in resources to an increment in outputs or other results. The broad concept views budgeting in presentational terms, the strict version views it in terms of allocations. Many governments satisfy the broad definition, few satisfy the strict definition.[276]

More recently, according to Page (2016), performance budgeting is a term that describes how performance information (on outputs and outcomes) is used in the budget process. It is a form of budgeting that relates funds allocated to measurable results. Resources can be related to results in a direct or indirect manner.

Governments use performance information (management & budgeting) for four reasons

- Improve decision making in budget process (allocation)
- Improve efficiency
- Achieve savings (fiscal prudence)
- Improve transparency and accountability[277]

According to the OECD, performance budgeting is:

> The systematic use of performance information to inform budget decisions, either as a direct input to budget allocation decisions or as contextual information to inform budget planning, and to instil greater transparency and accountability throughout the budget process, by providing information to legislators and the public on the purposes of spending and the results achieved.[278]

Typically, adopting a performance budgeting approach, "implies a shift in the focus of budgeting, away from management of inputs and towards a focus on the results of spending and the achievement of policy objectives."[279]

Performance budgeting takes a wide variety of forms, which the OECD classifies as presentational, performance informed, managerial and

[276] Allen Schick, "The performing state: Reflection on an idea whose time has come but whose implementation has not," *OECD Journal on Budgeting* 3, no. 2 (2003): 72–95.

[277] Kevin Page, "Performance Budgeting & Legislative Budget Offices," (presentation, World Bank GN-PBOs, Washington DC, June 6–9, 2016).

[278] OECD, "OECD best practices for performance budgeting," *OECD Public Governance Committee Working Party of Senior Budget Officials* (November 23, 2018), https://one.oecd.org/document/GOV/PGC/SBO(2018)7/en/pdf.

[279] OECD, "OECD best practices for performance budgeting," *OECD Public Governance Committee Working Party of Senior Budget Officials* (November 23, 2018), https://one.oecd.org/document/GOV/PGC/SBO(2018)7/en/pdf.

direct. In this classification, each form of performance budgeting represents a progressively stronger link between performance measurement and budgetary decision making. The 2018 survey results showed that countries were more or less equally divided between the first three approaches. None reported using "direct" performance budgeting, which directly links budget allocations to performance measures. This highlights the inherent limitations of such a technocratic approach, given the political nature of the budget, as well as the many conceptual and practical problems in relating resource allocations and outcomes in the public sector.

The approaches to performance budgeting classified by the OECD are as follows[280] (see Table 10: *Summary of approaches to performance budgeting*.):

1. Presentational performance budgeting: budget document and outputs, outcomes and performance indicators are presented separately. The approach may be useful to demonstrate alignment of spending to declared priorities, but tracking is a challenge because performance and spending data are not connected.

2. Performance-informed budgeting: budget document is presented on a program basis, linking expenditures to programme performance. This is the most commonly adopted approach among OECD countries.

3. Managerial performance budgeting: organizational approaches to performance budgeting changes are tracked, to focus on managerial impact.

4. Direct performance budgeting: spending and results are directly linked in reporting. The approach clearly demonstrates how resource allocation impacted performance.

[280] OECD, "OECD best practices for performance budgeting," *OECD Public Governance Committee Working Party of Senior Budget Officials* (November 23, 2018): 7–8, https://one.oecd.org/document/GOV/PGC/SBO(2018)7/en/pdf.

TABLE 10: Summary of OECD approaches to performance budgeting.[281]

Type of performance budgeting	Main purposes in the budget process	Link between performance information and funding	Planned or actual performance
Presentational	Accountability and public discussion of policies.	No Link: The information does not play a role in spending decisions.	Performance Targets and/ or Performance Results
Performance-informed budgeting	Planning and/or Accountability. The weight given to performance information depends on particular circumstances.	Indirect Link: There is no automatic linkage between performance and funding levels.	Performance Targets and/ or Performance Results
Managerial performance budgeting	Planning and/or Accountability. The weight given to performance information depends on particular circumstances.	Indirect Link: There is no automatic linkage between performance and funding levels.	Performance Targets and/ or Performance Results
Direct performance budgeting	Resource Allocation and Accountability.	Direct Link: Explicit link between budget allocations to units of performance.	Performance Results

Performance budgeting is an integral component of a transparent and accountable public sector. It is also an important companion to what is the more popular practice of political budgeting; that is the collection of government revenue and the expenditure of such sums against the spending priorities of a given public entity. The OECD describes this as a 'performance ecosystem'.[282] Performance budgeting can be viewed as a passive reporting process to meet statutory or regulatory obligations (e.g. parliamentary appropriations) or decision support that is part of the broader fiscal ecosystem of a government and its constituent parts.

[281] OECD, "OECD best practices for performance budgeting", *OECD Public Governance Committee Working Party of Senior Budget Officials*, (2018); OECD, "OECD good practices for performance budgeting," last modified May 10, 2019, https://doi.org/10.1787/c90b0305-en; Kevin Page, "Performance Budgeting & Legislative Budget Offices," (presentation, World Bank GN-PBOs, Washington DC, June 6–9, 2016).

[282] OECD, "OECD best practices for performance budgeting," (2018).

The budgetary system of a government begins with the political platform of the winning party in a general election and culminates with the Public Accounts. For performance budgeting and performance management systems to be successful, they must be seen as integral to a range of financial and operational elements of a government's budgetary system, including:

- Strategic planning at both national and sector levels;
- Medium-term budget frameworks;
- Spending reviews;
- Individual performance appraisal, as part of human resource management;
- Performance-based contracting and payment systems;
- Ex-ante and ex-post programme evaluation, and;
- Performance audit.[283]

Effectively, this means that the process by which funding is initially allocated, re-allocated and, potentially, cut, must be integrate performance information as part of the decision-support criteria of government.

Performance budgeting in health and social services

Performance budgeting approaches have been applied to many policy areas in the health and social services sector in the past few decades. The following will provide a brief discussion of these applications to post-secondary education in advanced economies (Australia, Canada, and the United States (US)) and in the health sector for developing economies.

POST-SECONDARY EDUCATION

Outcomes-based funding, or performance-based funding, is broadly defined as the linking of public funding (either from the national or subnational government) for post-secondary and tertiary institutions to institutional performance based on identified outcomes.[284] Higher education outcomes-based funding, particularly in the US, has seen two basic phases. The first phase, implemented in Tennessee in the late 1970s, tied additional funding to specific student outcomes such as graduation rates. This contrasted with enrollment being the sole

[283] OECD, "OECD best practices for performance budgeting," (2018).

[284] Mary B. Ziskin et al., "Outcomes-Based Funding: Current Status, Promising Practices and Emerging Trends," *Higher Education Quality Council of Ontario*, 2014, http://www.heqco.ca/SiteCollectionDocuments/Outcomes-Based%20Funding%20ENG.pdf.

driver of funding. Throughout the 1990's, similar practices spread to other US states as part of a broader political drive towards public sector accountability to taxpayers.

The second phase, implemented in recent years, has seen much tighter integration of funding, operations and stakeholder outcomes. The Council of Ontario Universities provides an overview of performance-based funding (PBF) in post-secondary education and presents three basic types of PBF:[285]

1. *Output/outcomes-based funding formulas (or payment for results):* This model links funding formulas to outputs such as increasing the number of students who attain credit and degree completion milestones.

2. *Performance set-asides:* This model allocates a percentage of higher education funding for PBF where funds may be drawn from either the base funding or from additional sources. Institutions compete for shares of the performance fund by producing results that meet or exceed certain targets.

3. *Performance contracts:* This model involves agreements between states and individual institutions in which a certain level of funding or a regulatory provision is guaranteed if the institution meets specific goals.

Ontario

The Wynne government introduced more conditions to post-secondary funding, and increasingly tied the funding of Ontario colleges and universities to performance outcomes. In 2019, the new Ford government announced in its first budget that the small proportion of post-secondary funding that had been linked to institutional performance in recent years, namely 1.4% for universities and 1.2% for colleges, would increase to up to 60% in the next 5 years. The first year of the new agreements will reportedly tie 25% of funding to these outcomes, and this will rise annually until 2024–25.[286] While graduation and employment rates are already used to gauge performance,[287] the extent of the change would be quite significant for institutions that had seen little change in their operating model for decades.

United States

Performance funding for post-secondary institutions is widely adopted in the US. In fact, such approaches are currently in place in approximately 40 US states.[288] There are a number of common performance indicators that aid in the development of benchmarks and performance evaluation across organizations:

- Course completion or achieving a certain threshold number of credit hours;
- Successful transfers to other institutions;
- The number of degrees awarded;
- Premiums for low-income students; and
- Premiums for production of STEM degrees.

With its first year of operation in 2011–2012, Tennessee is the first state to base 100% of higher education funding on course completion and other performance indicators. Tennessee is a leading adopter of performance budgeting for post-secondary institutions but it's lead is being followed by other US states.

Australia

In 2019, in response to the recommendations of an expert panel for performance-based funding,[289] the Government of Australia announced the implementation of PBF to university funding from the Commonwealth Grant Scheme (CGS).[290] Beginning in 2020, funding for bachelor-level institutions would grow with population growth in the 18–64-year-old age bracket, contingent on universities meeting specified performance targets.

In 2020, the amount of PBF (1.36% of CGS funding, in line with population growth), more than $80 million per year, would be added to a university's maximum basic grant amount. According to the Department of Education, Skills and Employment, universities will continue to be able to access CGS funding of around $7 billion per year without any reference to their performance, and more than $17 billion per year in funding for higher education and research in total. The government of

Australia has announced that it will continue to ensure the PBF model is fit for purpose, with reviews scheduled in 2020 and 2023.[291]

The Australian approach is relatively limited when compared to that of Tennessee. It will be useful to see if Australia's very gradual approach leads to the type of outcome-based budgeting and the accompanying results that performance budgeting aims to achieve.

HEALTH IN DEVELOPING CONTEXTS

PBF, or pay-for-performance (P4P) is also applied to health financing, according to the World Health Organization[292]. Often targeted to low- and middle-income countries, P4P is defined as fee-for-service-conditional-on-quality, where health providers are, at least partially, funded on the basis of meeting performance targets. More specifically, the WHO, defines the model as follows:

- Incentives are directed only to providers, not beneficiaries;
- Awards are purely financial; and
- Payment depends explicitly on the degree to which providers achieve certain pre-established verified performance indicators.[293]

Performance-based financing conditions payment for performance on output indicators and adjusted by quality measures. Design of performance budget model are adapted to be country specific but they tend to explicitly link financing to results based on the delivery of select reproductive, maternal, newborn, and child health, usually with formal verification. Operating models tend to feature autonomy, strengthened accountability, and empowered frontline providers and facility managers.

The WHO has identified a number of lessons from the implementation of performance budgeting models. The causes of poor performance are often complex. Performance budgeting must be part of a larger transformation, as it alone will not generate outcomes. The existing service delivery structure will influence how providers respond to incentives in a new budgeting system.[294]

PERFORMANCE FUNDING IN CHILD WELFARE

Much like performance budgeting in post-secondary education, the United States has been an innovator in performance funding for child welfare and family services. The change first occurred at the state level (and was therefore varied from one state jurisdiction to the other). The change was the result of three factors; one fiscal change and two shifts in the provision of child welfare services. Many US states have constitutional amendments requiring balanced budgets. This has forced difficult rationing of resources and the integration of funding allocation and results. On the child welfare and family services side, the rapid growth in privatization child and family services, and second, federal government accountability efforts.

At the state level, particularly in the late 1980s and 1990s, many state and local governments began to respond to rising numbers of children in foster care and concern over the costs of child welfare service. At the same time, there was increasing pressure to meet federal performance standards under the Child and Family Service Review (CFSR) process established under the Adoption and Safe Families Act (ASFA).[295] The ASFA in 1997 explicitly established outcome expectations with respect to the delivery of child welfare services in the areas of child safety, timely permanency, and well-being.[296]

These changes drove fiscal reforms in child welfare, from traditional fee-for-service payment arrangements towards managed care by child welfare authorities. Prior to this shift, most contracts were largely fee-for-service arrangements, in which the provider was paid by the state or county for delivering specific services; similar to much of the Canadian FNCFS system. While fiscal pressures, in Canada, are not dominant features of the funding environment, there are similar drivers of change including: concerns over (culturally relevant) performance standards, the number of children in foster care and the long-term consequences (and costs) of a system that does not drive results for First Nations children and families.

[295] Quality Improvement Center on the Privatization of Child Welfare Services, "Examples of Performance based contracting in child welfare services", *Quality Improvement Center on the Privatization of Child Welfare Services (QIC PCW) on behalf of the Children's Bureau, US Department of Health and Human Services*, 2009, https://www.fox.temple.edu/cms/wp-content/uploads/2012/09/Performance-Based-Contracts-in-Child-Welfare.pdf.

Funding approach

The current steady-state funding model for FNCFS is a fee-for-service model, in which agencies are reimbursed for maintenance costs for children in protective services. The principle driver in the current model is children in care. Given the nature of the funding model, there is a near perfect correlation between the size of an FNCFS agency's budget and the number of children in care. As the number of children in care increases, so too does an agency's budget. While this approach may provide regularity and predictability of funding for specific services (i.e. maintenance), it is rigid and limits the ability of agencies to address the needs of the people they serve without engaging the protection system.

Following various rulings of the Canadian Human Rights Tribunal (CHRT) that found the FNCFS system to be discriminatory and inadequately funded, the current model has been supplemented by Tribunal mandated funding for retroactive payments, as well as wellness/prevention focused programming. The funding structure itself, however, has remained intact, with exception to the supplementary CHRT-mandated funding. For many, the supplementary CHRT funding has enabled the development of new programming and services tracks, the renovation of buildings, and hiring new staff. These are positive developments from the increased funding, but the funding is short-term in focus and does not solve the underlying challenge of the system.

To work toward the well-being of children, families and communities, an alternative funding approach that recognizes the need for flexible applications of funding and that addresses funding gaps is necessary. Children, families and communities have needs. Some may need more support than others for various reasons. Professionals and communities should have the tools and resources necessary to address the *causes of the causes* of need (e.g. poverty, intergenerational trauma, etc.). The choice of tools or means of delivering on this mandate should not have averse fiscal consequences, when accountable decisions are made for the well-being of children, families and communities.

The pre-amble of *An Act respecting First Nations, Inuit and Métis children, youth and families* commits the federal government to "to engaging with Indigenous peoples and provincial governments to support a comprehensive reform of child and family services that are provided in relation to Indigenous children."[297]

[297] Government of Canada, "An Act respecting First Nations, Inuit and Métis children, youth and families," *Justice Laws Website*, Date modified: June 26, 2020, https://laws.justice.gc.ca/eng/acts/F-11.73/index.html.

Informed by its work with FNCFS agencies, community leaders, experts, and stakeholders, IFSD is presenting a funding architecture to reform the funding structure for FNCFS, to promote thriving First Nations children, families and communities. The funding approach is designed to address gaps identified by the CHRT and FNCFS agencies, while aligning the approach to commonly held goals of well-being. The goals, defined in the Measuring to Thrive framework, align to the three core principles that frame *An Act respecting First Nations, Inuit and Métis children, youth and families* (section 9): acting in the best interest of the child; substantive equality of services; the importance of cultural continuity.

Affirming the right to self-governance (section 18(1)), the Act provides a platform for those interested Indigenous governing bodies to assume jurisdiction in child and family services. Whether through an existing FNCFS agency or through the development of an alternative structure, the planning, delivery, and ongoing assessment of child and family services requires resources. Section 20(2) of the Act requires a coordination agreement to exercise the jurisdiction. The federal Minister responsible for the Act, the province, and the Indigenous governing authority, are required to coordinate, among other matters, "fiscal arrangements, relating to the provision of child and family services by the Indigenous governing body, that are sustainable, needs-based and consistent with the principle of substantive equality in order to secure long-term positive outcomes for Indigenous children, families and communities and to support the capacity of the Indigenous group, community or people to exercise the legislative authority effectively" (Section 20 (2)(c)).

The proposed funding approach responds to the Act's commitment to determine fiscal arrangements that address long-term positive outcomes, substantive equality, and needs. Designed and built from the bottom-up, this funding approach captures a critical mix of resources and structures for thriving First Nation children, families, and communities, as expressed by those working on the ground.

SPLATSIN
BRITISH COLUMBIA

"A commonsense approach to care."

Splatsin is an important case study given that it is the only FNCFS agency with full jurisdiction. This case highlights the utility of flexibility in operations for achieving desired results. While Splatsin achieves its operational flexibility from the Splatsin First Nation's (formerly Spallumcheen First Nation) jurisdiction and bylaw for child and family services, others could use block funding, i.e. funding with flexibility in use/application, to achieve similar latitude in decision-making.

Context

Splatsin Stsmamlt Services (formerly the Spallumcheen Child Welfare Program) is an organization of Talkstaltn neglmucw (social workers) and family support workers who are responsible for carrying out the community's stsmamlt (child) and family service program. Currently, they are the only First Nation child and family services (FNCFS) agency with full jurisdiction, i.e. child and family services (including protection) in the First Nation.

Splatsin is the most southern tribe of the Secwépemc Nation, the largest Interior Salish speaking First Nation in Canada whose aboriginal territory stretches from the BC/Alberta border near the Yellowhead Pass to the plateau west of the Fraser River, southeast to the Arrow Lakes and to the upper reaches of the Columbia River.

The Splatsin First Nation's bylaw governing child and family services, extend to any member of the band anywhere in the world *(A By-Law for the Care of Our Indian Children: Spallumcheen Indian Band By-Law #3).*[298] Jurisdiction was negotiated in 1980, following much effort and demonstrations known as the "Indian Child Caravan." The Splatsin people were no longer willing to accept the high rates of removal of their children from their community by the state. The chief at the time, Chief Christian, who had himself experienced the challenges associated to being in care, led the negotiations and was instrumental in asserting jurisdiction.

"We lay awake at night thinking about how we can do things better. How do we know we're doing better?"

The community's jurisdiction in child and family services confers flexibility in programming approaches to meet the needs of the community.

Splatsin First Nation—Overview

Splatsin First Nation's history was described as challenging by members of the community. The reserve has been segregated by hydro and rail projects, which displaced members of the community. There is a difficult history with the ramifications of residential schools and the racism experienced by community members. Substance misuse challenges, especially, alcoholism, have burdened the community. When young people from Splatsin find success outside of the First Nation, often they tend not to return.

[298] The bylaw asserts self-determination and jurisdiction and defines practices for child and family services interventions in Splatsin First Nation.

Splatsin understands the relationship between positive economic development and the benefits that it can bring to its people. Splatsin has recently liaised with the University of Victoria for entrepreneurial training for the First Nation to create a tourism event on-reserve. With many tourists and tour buses traveling through the area, Splatsin is working with the community to create industry close to home. The tourism event would include a visit to the community centre with dancing, drumming, and art; a general authentic experience for the visitor. For the agency, the initiative is an opportunity to assist in providing the community purpose, meaning and practical skills.

Programmatic and operational considerations

Splatsin adopts a "common sense approach" to child and family services. Their mandate, equal parts protection and family preservation, is guided by the needs of their community. Operating under their own law, Splatsin has the latitude and flexibility to manage its child and family services program based on the best interests of the child and family. Seeing as they are not aligned to any laws or procedures other than their own, Splatsin can make decisions to address the *causes of the causes* of contact with the protection system (e.g. poverty, parents in need of modelling/support, food security, housing, etc.) in their work. For many staff, this encourages creativity and innovation in their work. Further to this, workers consistently facilitate family visits and family involvement in community events. The comprehensive "wrap-around family support" programming that is offered is a cornerstone of the program and an integral element to addressing the multi-generational effects of the Canadian residential schooling system and the Sixties Scoop. The unique practices of the Splatsin program were developed to address the multi-factorial nature of historical and continued settler-colonial traumas.

With 12 full-time equivalent staff, Splatsin considers its role to be a supporting one for the community. The protection process in the community does not use mainstream assessment tools; rather it relies on knowledge of the family and its unique circumstance (a benefit of being a small and engaged agency). When a call is placed to the agency, Splatsin staff evaluate and propose one of four courses of action: no action or referral, support services, a voluntary care agreement or the removal of the child. Unique to Splatsin, the Band Council (as defined in the bylaw), will be contacted by the program immediately in the rare case of a removal; once Council is notified a "hearing" involving the family, program staff and Council occurs within seven days. At that time Council either concurs with the removal plan or alternate arrangements are made to ensure protection of the child and support of the family. The Band Council can by law, direct the agency's actions in child and family services, although in practice the program and Band Council typically come to consensus and agree with each action plan.

If a child is in care, Splatsin manages the case, as kinship arrangements are not supported at this time (to mitigate risks of unknown or unspoken traumas within families). Splatsin makes every attempt to place children with extended family but believes that it is good practice to remain attached to the child and extended family to ensure all are getting the support they need.

Splatsin spends significant effort and resources identifying foster parents, working with them, and keeping close account of how the child is doing in his/her respective placement. For instance, a Splatsin social worker may accompany foster parents to medical assessments. The regular interface between child, social worker and foster parent is only achievable due to the small case load of Splatsin social workers.

To maintain constant and regular connections to family and the community, if a child is in care, Splatsin, if able, practices a co-parenting approach. In this model, through prior agreement, the child has regular and ongoing contact with their biological parents and community while in care, e.g. weekend visits, special events.

Splatsin, while at times not 'popular' in the community, is perceived to be a reliable and trusted organization. Beyond its child and family services work, the agency contributes actively to after-school and summer programs, which serves as prevention-style programming without naming it as such. Splatsin helps to build a safe and nurturing environment for children and youth, that is open to all children (not only those involved in child and family services). Serving a small community, Splatsin staff have come to know their people well and share a vision for building a stronger community.

Governance

Splatsin's governance arrangement is particular to the Splatsin legislation. The Splatsin Band Council acts as a board of directors with decision making authority on individual cases and has input regarding the agency's operations. The Band Council can approve or reject a voluntary care agreement or the removal of a child. Although it is not common that the Band Council overrides the Splatsin program's recommendation, it is possible. At times, the Band Council offers contributions or ideas on the management of cases. These suggestions can be additive, if there is community knowledge the agency may not have.

To enable jurisdiction, the Band Council carries a substantive liability insurance policy, as it is legally accountable for Splatsin children in care.

Lessons and considerations

Jurisdiction in child and family services can increase flexibility in operations but also results in ultimate legal accountability for children in care.

Splatsin's governance arrangement has the potential for complications with the involvement of Band Council in decision-making. For some, this is a testament to community care, but it also risks political interference or complexities, if for instance, a Band Council member's family was involved (which in these situations the Council member must declare conflict and recuse themselves from proceeding). While the approach may work in Splatsin, it may not be universally applicable, as it is dependent on the judgement and discretion of Band Councillors and compliance to the By-law and the program's policy and procedures. The role of the agency director is central in this approach and requires dispassionate professionalism. The agency director must have the confidence and respect of the community but must also maintain their professional obligations.

Splatsin's approach in its small community is informed by on-the-ground perspectives for needs-based decision-making. Block funding as a mechanism could offer similar decision-making latitude to agencies without jurisdiction or those seeking jurisdiction.

WHAT WE HEARD

There is general consensus on the funding approach architecture by the expert roundtable.[299] The approach is designed to close gaps and provide agencies with the flexibility required to meet the needs of those they serve.

1. You cannot have the same quantum and structure of resources and expect different results.

2. Data and good governance can promote accountability. Build capacity to **convert data into evidence** for better decision-making.

3. A funding model should focus on **holistic well-being** and break-down silos between operating entities in a community, e.g. CFS, health.

Funding foundations

Any funding approach should have a desired goal or defined purpose. In this case, the proposed funding approach is intended to promote thriving First Nation children, families and communities. Whether through an existing FNCFS agency or in support of a band council repatriating its jurisdiction in CFS, this funding approach is designed to align to the desired goals defined in the Measuring to Thrive framework.

Moving from the current state to the proposed future state means shifting the basis on which funding is allocated, how need is defined, and the source of governance and control (see Table 11).

TABLE 11: Current state and proposed future state comparison of the FNCFS program.

Current state	Proposed future state
▪ Funding driven by children in care	▪ Funding driven by indicators of well-being
▪ Top-down; formula-based funding with ad-hoc supplements	▪ Bottom-up budgeting complemented by need and performance components
▪ Mixed governance model	▪ First Nation control (*An Act respecting First Nations, Inuit and Métis children*)

[299] On April 15, 2020, practitioners and experts convened to review and debate an alternative funding approach for First Nations child and family services. This approach is informed by agencies and the communities they serve. The funding approach architecture is designed to address gaps identified in Phase 1, *Enabling First Nations Children to Thrive*, and reflects the lessons from case studies for this work.

Changing a funding approach will not by itself, immediately change the system or the results it delivers. Short-term changes however, have resulted from agencies who were able to quickly capitalize on the CHRT funds. The transition process will be gradual and will require agencies and communities to adapt to changing practices. Shifting from the current state to the proposed funding approach will require collaboration and in-course adjustments, to address unforeseen challenges. Stakeholders will learn from one another, as the proposed data-driven approach supports an enhanced planning and accountability environment.

As this work is informed by agency participation, feedback, and their own evidence, we can have confidence in the bottom-up budgeting approach informed by Phase 1. Through the contribution of 76% of FNCFS agencies, *Enabling First Nations Children to Thrive* had the necessary representative data to identify and scope the gaps in the existing system. Agencies identified prevention, geography/remoteness, capital, and IT as principal funding gaps. Framing these gaps is poverty and related issues such as housing shortages and quality, access to potable, etc. To build a funding approach that responds to the needs of agencies, their mandates, and crucially, the people they serve, the Phase 1 gaps are built-in to the proposed funding approach.

TABLE 12: Funding approach components.

Factor	Definition
Poverty	Capturing household poverty (relative to provincial poverty line) on-reserve; euphemistic capture of inequity on-reserve.
Prevention	Per capita by total community population (not only children, 0–18 years); three potential per capita rates based on existing models.
Geography	Road access and proximity to service centre; 2x budget increase when at least one community does not have year-round road access.
Capital	Variance in need of fixed assets among agencies to deliver on community mandates; general need for investment.
IT	Substantive gaps in the hardware and software used by agencies; need for investment to raise overall functionality and extend capacity.
Results	Funding to close gaps identified in the Measuring to Thrive framework.

Identifying and closing funding gaps are critical steps in working toward the goal of thriving children, families and communities. How funding moves to recipients is just as important as the amount of resources. In the current state, funding is closely aligned to specific activities. In the proposed funding approach, service providers would be funded in a block. This means that their total budget would be clearly defined at

the start of the fiscal year to facilitate planning and resource allocation (see Table 12). The total block would grow at least by standard growth factors (i.e. population (for prevention) + inflation) every year. After five years, the entire funding approach would be evaluated and revisited to ensure that agencies can deliver on their mandates to meet the needs of children, families and communities.

Agencies will not be alone in this journey. Stakeholders proposed the establishment of a secretariat to support agencies in their transition to the proposed funding approach. With differentiated needs and points of departure, the secretariat will be designed as with a dual mandate as an evidence developing centre and a centre for operational/organizational support. Staff will help agencies identify challenges and remedies for operating matters, and will assist with the development and training of a core data team, as needed. Alternatively, the agency can pay the secretariat an annual fee to outsource its data collection and monitoring work.

At the five-year mark, agencies, with the support of the secretariat, can determine if the measurement framework demonstrates the need for further investment. The secretariat will support measurement and monitoring for agencies and service providers on a regular basis, from the start of the alternative funding approach.

OVERVIEW OF FUNDING APPROACHES

There are two main types of funding:

1. Prospective: service delivery agencies receive payments to deliver services;

2. Retrospective: service delivery agencies are reimbursed for specific activities.

Within these two main funding types, various mechanisms exist to deliver resources to agencies. For child and family services, commonly identified mechanisms include: fee-for-service; block funding; and performance-based contracts (a variant of block funding).

The difference between the two clusters of mechanisms is the way the funding transfer is calculated. In the fee-for-service model, the allocation is retrospective. Revenue and cash flow are the same, since the rules by which the service provider is transferred money is about process, not about outcomes. With a fee-for-service model, the unit cost of service is unknown as it depends on the number of cases, making revenue unknown because revenue is driven by unit cost. Fee-for-service can limit service providers in the effectiveness of

their services. The funding mechanism does not offer an incentive to perform better. Instead, it creates a tension between meeting needs and improving services.

Block funding and the performance-based contracting approach are prospective, separating revenue and cash-flow. While the total revenue allocation (or total budget) is known at the beginning of the fiscal year, the way the revenue flows to recipients can differ. For instance, with performance-based contracting, revenue flow is determined by the terms of a contract. With block approaches, the service provider has the freedom to set the number of units and unit cost, enabling them to adjust practices to work within their revenue. In block approaches, service providers bear the risk of operating within defined revenue parameters. However, they benefit from the flexibility of delivery on their terms. This funding approach can incentivize improved outcomes and efficiency (assuming adequate funding).

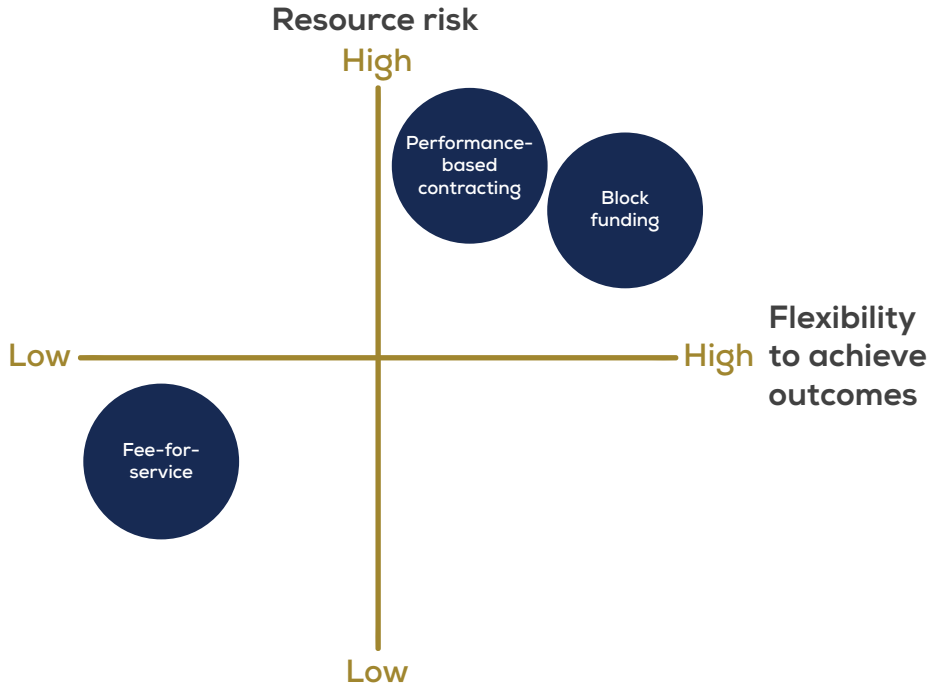
As with any policy question, there are trade-offs in funding mechanisms. Resource guarantees and flexibility in delivery vary among the two funding types (and their associated mechanisms) (see Figure 38).

TABLE 13: Funding mechanism descriptions.

Funding mechanism	Case study	Description
Fee-for-Service	Current funding mechanism for FNCFS	Required resources are provided by payment for specific activities by unit cost or by population served. Funding may be consistent but there is limited flexibility in delivery as reimbursement is defined for specific allowable activities.
Block Funding	West Region's Child and Family Services Center block pilot funding program	Resources are allocated based on a combination of previous financial data and need. A set funding amount is allocated, leaving the service provider to determine its best uses. While flexibility in approach is promoted, the service provider bears the risk of operating within the set funding amount.
Performance-based contracting (variant of block funding)	State of Tennessee child welfare program	Resources are disbursed by achieving pre-established goals. Goals are defined through a service provider's past performance. This approach promotes flexibility in delivery but requires the service provider to meet expectations to receive funding.

Retrospective funding approaches (e.g. fee-for-service), tend to offer better resource guarantees (as funded activities are clearly defined), but tend to limit flexibility in delivery (since fundable activities can be restricted). Prospective approaches (e.g. block funding, performance-based contracting) by contrast, tend to offer greater flexibility in delivery (as service providers can allocate resources as needed), but service providers are required to work within established resource parameters (supplementary resources may not be guaranteed) (see Table 13).

FIGURE 38: Trade-offs in resource risk and flexibility in achieving outcomes.



There is no perfect approach to funding social policy, but there are acceptable trade-offs that support FNCFS agencies in best serving their children, families and communities. Identifying the critical mix of resources required and leveraging lessons from other cases and jurisdictions has informed the approach proposed here. As a new approach is implemented, collaboration between Canada, First Nations, and NAC will be essential to assess progress and adjust the approach as required.

BLOCK FUNDING APPROACH

Resources are allocated based on a combination of previous financial data (to fund maintenance and protection) and need (e.g. population size, geography, poverty level, etc.).

Funds are provided for general purposes identified under terms and conditions in a contribution agreement or a statute. Service providers have flexibility to adjust allocations (e.g. operations and capital; protection and prevention).

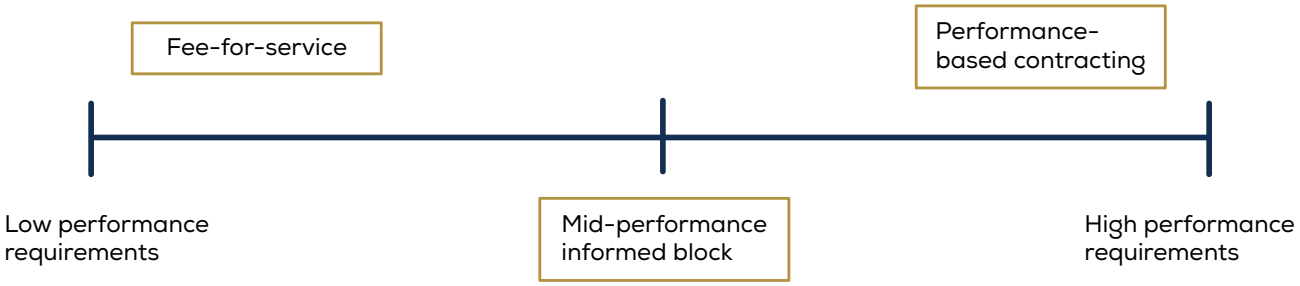
The capacity to "carry forward" money (ability to move monies forward if not spent, in a current year, like the 10-year grant) and access to emergency funding, as provided, are consistent and additive to a block funding approach.

Emergency funds would be available should a service provider—due to an exceptional increase in service demands (e.g. protection requests, an increase in health-related issues)—be unable to meet the needs of their communities with their pre-defined revenues.

In the proposed approach, risk is managed to empower service providers to act in the best interest of children, families, and communities.

The proposed funding approach integrates a block transfer of funds with allocation based on population, need, and budget top-ups. The block approach is distinct from the fee-for-service model currently in place, and the performance-based contracting approach, well-defined by the case of Tennessee. If these two funding approaches were considered on a performance continuum (see Figure 39), Tennessee would be on the high-end of performance, where funding is contingent on the delivery of predetermined results. The performance-based contracting approach uses both a carrot and stick approach to encourage results: if the service provider performs well and efficiently, it can keep the money it saves (carrot); but if the service provider does not deliver on its agreed-upon targets, their budget is reduced (stick). At the other end of the spectrum is the current state, fee-for-service model, without a performance framework. This approach allocates funding for specific activities, without consideration of overall results.

FIGURE 39: Funding mechanisms on a performance continuum.



The proposed funding approach sits at the performance midpoint between performance-based contracting and a fee-for-service model. It is designed as a multi-year (five year) block transfer, allocated annually to agencies. The results-focused program is intended to maximize flexibility in delivery and to meet needs in communities.

The proposed funding approach would guarantee a baseline amount of funding for service providers, which would serve to fund protection and maintenance. This funding floor would be set based on 2018–19 budgets with top-ups for funding gaps. Transferred as a block, service providers would be required to work within defined revenue parameters, allocating resources to best meet the needs of their communities. As service providers, agencies would bear the risk of ensuring funding is well allocated to achieve desired results. They would also benefit from being able to run their organizations to support the well-being of those they serve, however that may be best achieved.

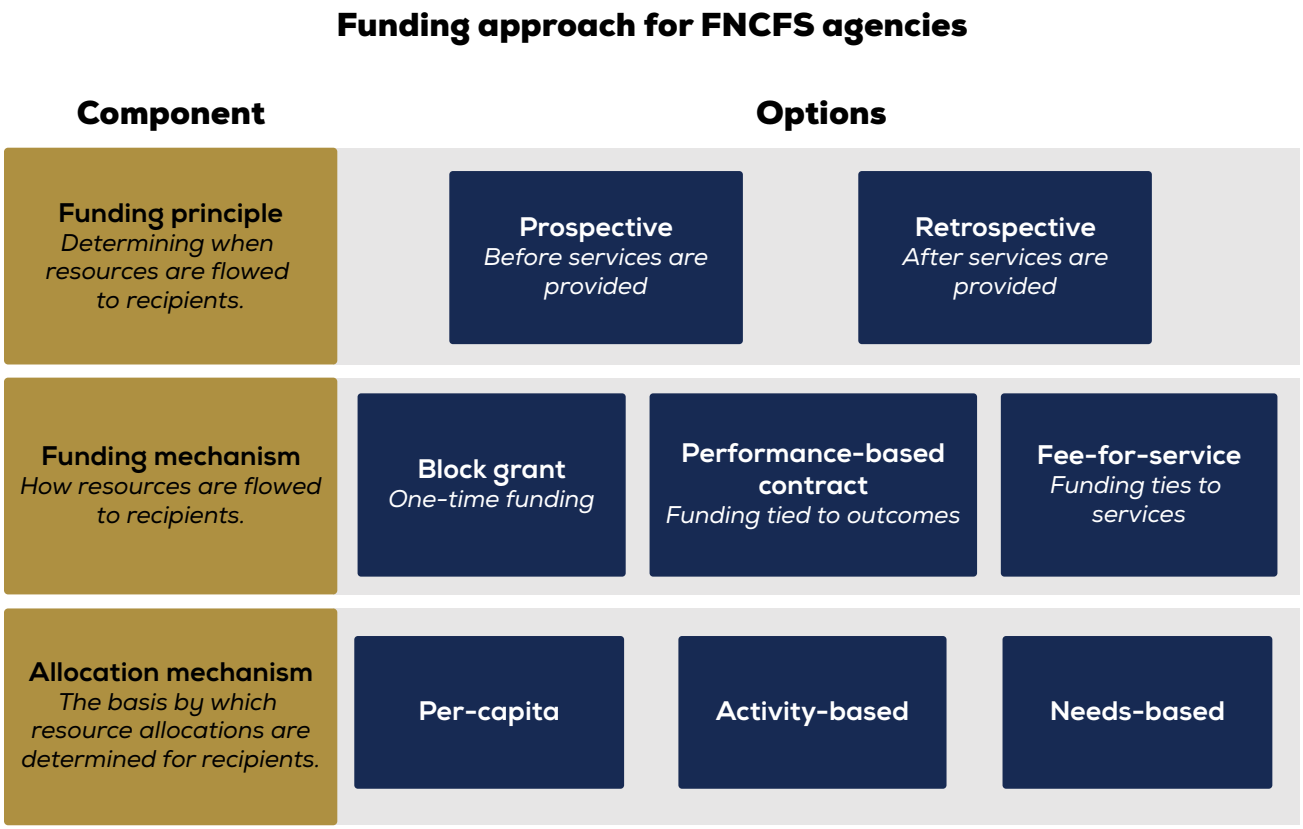
In the current fee-for-service funding arrangement, the federal government as funder is exposed to the risk of an increase in the number of children in care, since that is the means through which services are funded. In principle, the service provider is not incentivized to alter their approach to a more efficient one because they would risk losing their funding. In this environment, agencies spend time working around the system, rather than having a system that works for them and those they serve. In the proposed model, the number of children in care is no longer driving budgets. Service providers would receive their revenues in a known block, guaranteed. If they do not spend all of the money in their block in one fiscal year, they can redirect funds to improve performance, e.g. increase prevention measures). The federal government would act as insurer of last resort, with emergency funds available should an agency—due to an exceptional increase in service demands (e.g. protection requests, an increase in health-related issues)—be unable to meet the needs of their communities with their pre-defined revenues. In the proposed approach, risk is managed to empower service providers.

The risk sharing rate would be assessed on a case-by-case basis. Overages associated to demonstrated increases in demand (for specific services, e.g. protection) would be covered in full. With increased demonstrated need, e.g. higher than usual number of children in care, service providers would be eligible to have any budget overages covered by an emergency fund. The emergency fund is for exogenous factors, outside of the control of the service provider. The emergency fund will not cover operational matters, e.g. mismanagement, poor use of funds, etc.

Building a funding approach

A new funding approach to FNCFS will require consideration of the funding principle, the funding mechanism and the allocation mechanism. Combinations of options are possible and require consideration based on the desired results for the funding system (see Figure 40).

FIGURE 40: Overview of funding component options.



In the current state of FNCFS, there is a lack of alignment between social policy and financial resources. Social policy research and FNCFS agencies have repeatedly emphasized the importance of prevention-

focused approaches to care that empower children, families and communities, rather than focusing on apprehension. Approaches taken by FNCFS agencies in pursuit of the well-being of their communities are numerous. Achieving alignment between policy and resources requires people, processes and data to deliver operations and promote accountability.

FNCFS agencies do not operate in a vacuum but are influenced by the realities of the communities they serve. Ensuring that financial resources are aligned to the realities of their circumstances is necessary to support the well-being of communities.

Funding architecture

This approach should be read holistically. The individual parts alone are not sufficient to contribute to an FNCFS system that promotes thriving children, families, and communities. The current funding approach is not working and can be replaced with a future-focused results driven approach that empowers those delivering services in communities.

At the five-year mark, the Measuring to Thrive framework and the funding approach will be reviewed in full. This first review will help to determine if funding levels are sufficient and if any adjustments are necessary to meet the goals of the framework. At the ten-year mark, the framework will have collected a sufficient amount of data and converted it into evidence to determine if the overall structure of funding and measurement supports better results for children, families, and communities. The baseline budget contains protection funding, a core element of FNCFS agency activity.

A two-step process is proposed to achieve an alternative funding approach:

1. **Interim:** Input based; adjustments for gaps in poverty, geography and prevention, with baseline budget top-ups for capital, IT and results. Designed to support FNCFS agencies as they transition from the current state to a future state focused on thriving First Nations children, families and communities.

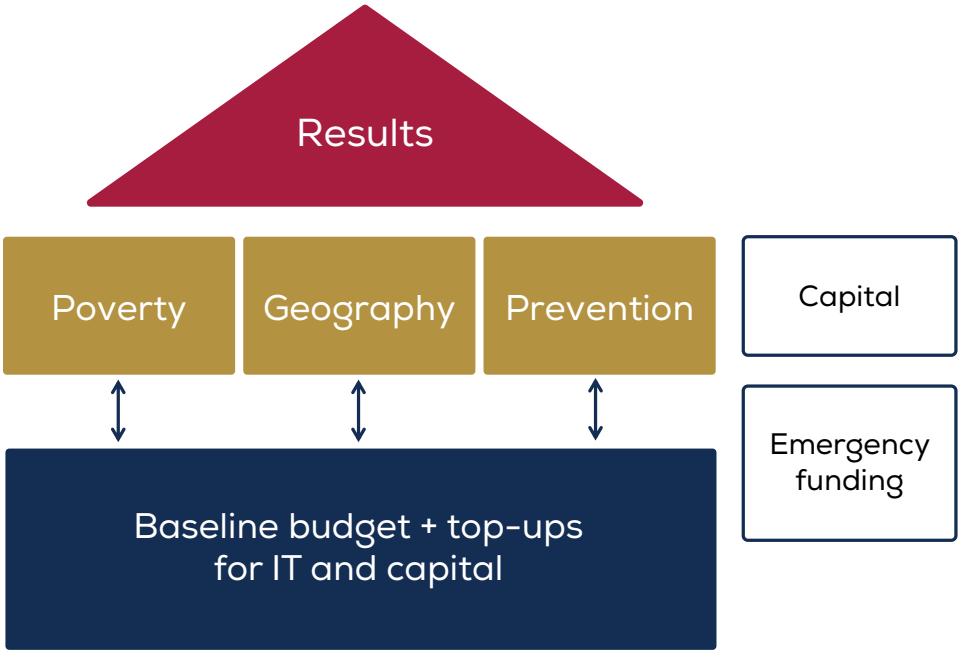
2. **Long-term:** Results-based top-up on the current baseline to drive substantive equality in services and outcomes; budget baseline variance among agencies connected to community, family and child well-being, captured through a measurement framework. Designed to reflect realities on the ground.

Working to improve well-being means allocating additional resources to prevention and well-being services (rather than just protection). It does not imply a reduction in need for child and family services. With the needs-based supplement, a budget should not shrink unless need decreases or population numbers change substantively.

For the proposed funding approach, IFSD recommends a block approach to funding, with a combination of allocation approaches meant to capture needs on the ground, based on demographic and economic changes. Standard growth factors, i.e. inflation and population, will be applied to the overall approach.

The funding approach is premised on an architecture that will be described below (see Figure 41). For each of the funding components, i.e. poverty, geography, capital, information technology (IT), and prevention, a range of cost estimates will be presented. As with any cost estimation or modelling exercise, there is no single answer, but a variety of scenarios that stakeholders may wish to consider as they negotiate within the parameters of the funding architecture. The most important element is the needs-based architecture built from the bottom-up based on the contributions of agencies. The architecture should be treated as a whole, although there are scales or ranges of approaches possible within each of the components that create the whole.

FIGURE 41: Proposed funding approach overview.



The baseline of the approach is FNCFS agencies' total reported expenditures for 2018–19 in the FNCFS survey (see Appendix M for the questionnaire). The budgets are considered sufficiently representative of actual agency expenditures, which covers protection and maintenance (as the current model is a fee-for-service approach) with requisite CHRT-enabled additions to support the development of various programming and capital needs, e.g. prevention, programming space, etc. The baseline is the budget component notionally allocated to protection and maintenance costs. With the full budget transferred as a block, the service provider will have latitude to allocate resources as appropriate.

The baseline expenditures increase by inflation every fiscal year. The supplementary funding is added to the inflation-adjusted baseline each fiscal year. Since the supplements are calculated on the baseline expenditure, they are also growing with inflation.

INFORMATION TECHNOLOGY (IT)

There is substantial variance in the hardware, software and technical capacities of FNCFS agencies. To propel those agencies that are excelling with various uses of technology, and to support those that require a refresh, an investment of 5–6% of an agency's total baseline budget is recommended. The range represents the industry standard for IT-related expenditures in not-for-profit service organizations, based on Phase 1 research.[300]

CAPITAL

A range of capital needs were expressed among FNCFS agencies in Phase 1. For some, entirely new buildings were required as existing ones were derelict or unusable for child and family-focused programming. Others required retrofits or more space to develop specific types of wellness-oriented programming. For others still, fleets of vehicles are required to transport children and families for visits, appointments, and related services.

Beyond the variance in capital needs, it is important to recognize the particularities of property on-reserve. An agency may be a part of a band council organization, a tribal council, or an independent organization operating on-reserve. Some agencies have offices in urban centres, even if they primarily serve clients on-reserve, while others will have at least one office in every First Nation community served. With the

[300] IFSD (2018), *Enabling First Nations Children to Thrive*, 2018, 97–101, http://www.ifsd.ca/web/default/files/public/First%20Nations/IFSD%20Enabling%20Children%20to%20Thrive_February%202019.pdf.

variety of organizational arrangements, capital project funding can be an opportunity and a tangle of jurisdictions and politics.

Beyond the various capital needs for child and family services programming, **there is a broader infrastructure needs-assessment required among First Nations communities.** With the results-based funding structure for the FNCFS program proposed in this approach, a needs-based mechanism to allocate funding for the lifecycle costs of capital assets that includes both the initial capital disbursement, ongoing maintenance expenditures, future recapitalization and capital asset replacement outlays, is proposed.

To support need and the best interests of children, families and communities, a two-track approach to capital funding for FNCFS is recommended.

Track one: For agencies that own their assets, an annual capital maintenance is proposed in the range of 1% to 2% of the value of the assets (e.g. building), based on Treasury Board standards. This supplement is to ensure agencies have funds available for basic asset maintenance to extend the useable life of the asset. If an agency rents their facilities or if they are owned/operated by a band council or property manager, the maintenance of the asset is assumed to be at the owner's expense. An assessment of existing agency assets is required to determine the accurate value of capital maintenance funding.

Track two: A capital asset replacement fund should be established. It is suggested that this fund be appropriated by Parliament exclusively for capital projects for child and family services (i.e. ring-fenced funding). This will enable agencies to apply for funding, or to collaborate with band council or tribal council partners for major capital projects, such as buildings, wellness programming centres, etc.

There are three estimates for the value of the capital fund, based on findings from Phase 1.[301] The estimates are representative of the cost to rebuild a main office structure for FNCFS agencies using Altus Group (2018) construction costs on a square footage basis. The space requirements are estimated in three ways:

> Scenario 1: Full-time equivalent (FTE) space requirements, per Government of Canada space allocations for employees, with average for non-responding agencies;

[301] IFSD (2018), *Enabling First Nations Children to Thrive*, 2018, 94–97, http://www.ifsd.ca/web/default/files/public/First%20Nations/IFSD%20Enabling%20Children%20to%20Thrive_February%202019.pdf.

Scenario 2: Agency estimated square footage of main office, with FTE equivalents (#1) for non-responding agencies;

Scenario 3: Agency estimated square footage of main office, with average square footage for non-responding agencies.

The range of the estimates for capital asset replacement fund in 2021 is $133M and $200M. Such an application-based fund could be funded every decade with service providers making the case for replacement or augmentation of their facilities based on a template, such as is presented in Appendix N. The amount of the once-a-decade capital fund is currently notional but could be better substantiated after the capital asset review.

To roughly estimate the value of capital maintenance needs, a percentage of the value of the capital asset fund is calculated between 1% and 2%. This calculation is illustrative, to book an estimated cost of capital maintenance until a needs assessment is undertaken.

The new results-based funding structure for the FNCFS program requires an appropriate mechanism to allocate funding for the lifecycle costs of capital assets that includes both the initial capital disbursement, ongoing maintenance expenditures and any future recapitalization outlays.

Effective capital asset investment strategies make better use of assets through alignment with strategic goals and all relevant business drivers during decision-making processes. This section will outline the preferred mechanism for capital allocation funding that will support the renewed FNCFS performance measurement framework.

A capital asset must meet all of the following criteria:

- Has been acquired, constructed, developed or bettered with the intention of being used on a continuing basis (not just in the year of acquisition).
- Is held for use in the production, supply or rental of goods and services, for administrative, academic or research purposes.
- Is not intended for sale in the ordinary course of operations.
- Is usually repaired and not replaced, when damaged.
- Has a useful life expectancy extending over 1 year under normal use.
- Is valued at an amount greater than a materiality threshold that is established on an organization by organization basis. For example, the Directive on Accounting Standards: GC 3150 Tangible Capital Assets dictates that all assets with a per-item cost greater than $10,000 must be capitalized.

Life-cycle cost refers to all the costs associated with an initiative over its life cycle, which would be the costs from initial conception until the end the program or the disposal of the asset. There are generally four phases in life-cycle costing, which are described differently depending on whether the project is an asset or a program.

An asset's life-cycle cost has the following four phases:[302]

1. **Planning:** This phase is composed of defining requirements, selecting options and planning, which can include research, design and prototyping.

2. **Acquisition:** This phase is composed of acquiring a capital asset or improving an existing capital asset. The phase could also include coordination and support activities, such as those performed by the project management office.

3. **Sustainment and operations:** This phase continues throughout the asset's useful life.

4. **Disposal and remediation:** This phase includes clean-up costs which would be subtracted from the residual value of the asset.

FNCFS CAPITAL ASSETS

The capital asset base of FNCFS agencies can effectively be broken down into two primary asset classes (buildings and vehicles) that effectively serve three distinct needs, as well as a catch all other asset category that would capture any unforeseen capital needs that may arise in the future. The following lists these needs:

- Vehicles: Protection and other transportation needs
- Building: Programming office space needs
- Building: Administration office space needs
- Other

With respect to the renewed funding model, it is proposed that the maintenance for these asset classes will also be included in the capital top-up for capital expenditures. Effectively, this means that the lifecycle cost for FNCFS assets will be accounted for in the capital allocation funding mechanism.

It should be noted that some agencies lease their facilities, rather than own. It is assumed that, in the case of leased facilities, landlords would

[302] Treasury Board of Canada Secretariat, "Guide to Cost Estimating," last updated June 4, 2019, https://www.tbs-sct.gc.ca/pol/doc-eng.aspx?id=32600&section=html.

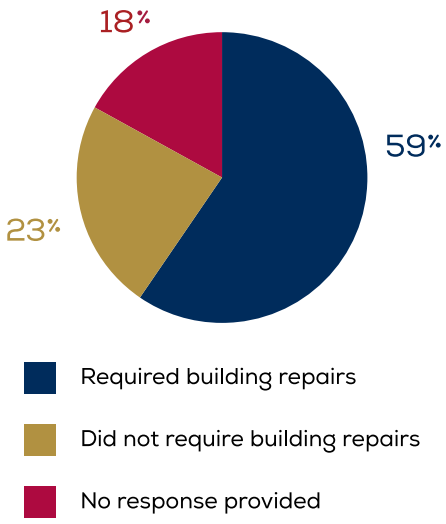
be accountable for lifecycle capital budgeting which would avoid the need for additional facilities funding for such agencies.

Phase 1 findings: Capital

As part of its Phase 1 survey, IFSD attempted to better understand the nature and condition of the assets underlying agency operations.

The survey of 104 FNCFS agencies found that most agencies rented their office space. In terms of the condition of the assets, the following chart summarizes the survey response results, with nearly 60% reporting a need for repairs (see Figure 42):

FIGURE 42: Building repair requirements among agencies (2017–18).



In addition, during the course of the Phase 1 workshops, agencies expressed concerns with respect to the suitability of their facilities with respect to a transition towards a greater focus on prevention-based programming.

Given the lack of data and evidence around the capital asset base of FNCFS agencies, IFSD attempted to estimate the aggregate building (main office) replacement values for the FNCFS agencies utilizing three scenarios as a means to quantify a one-time capital top-up.

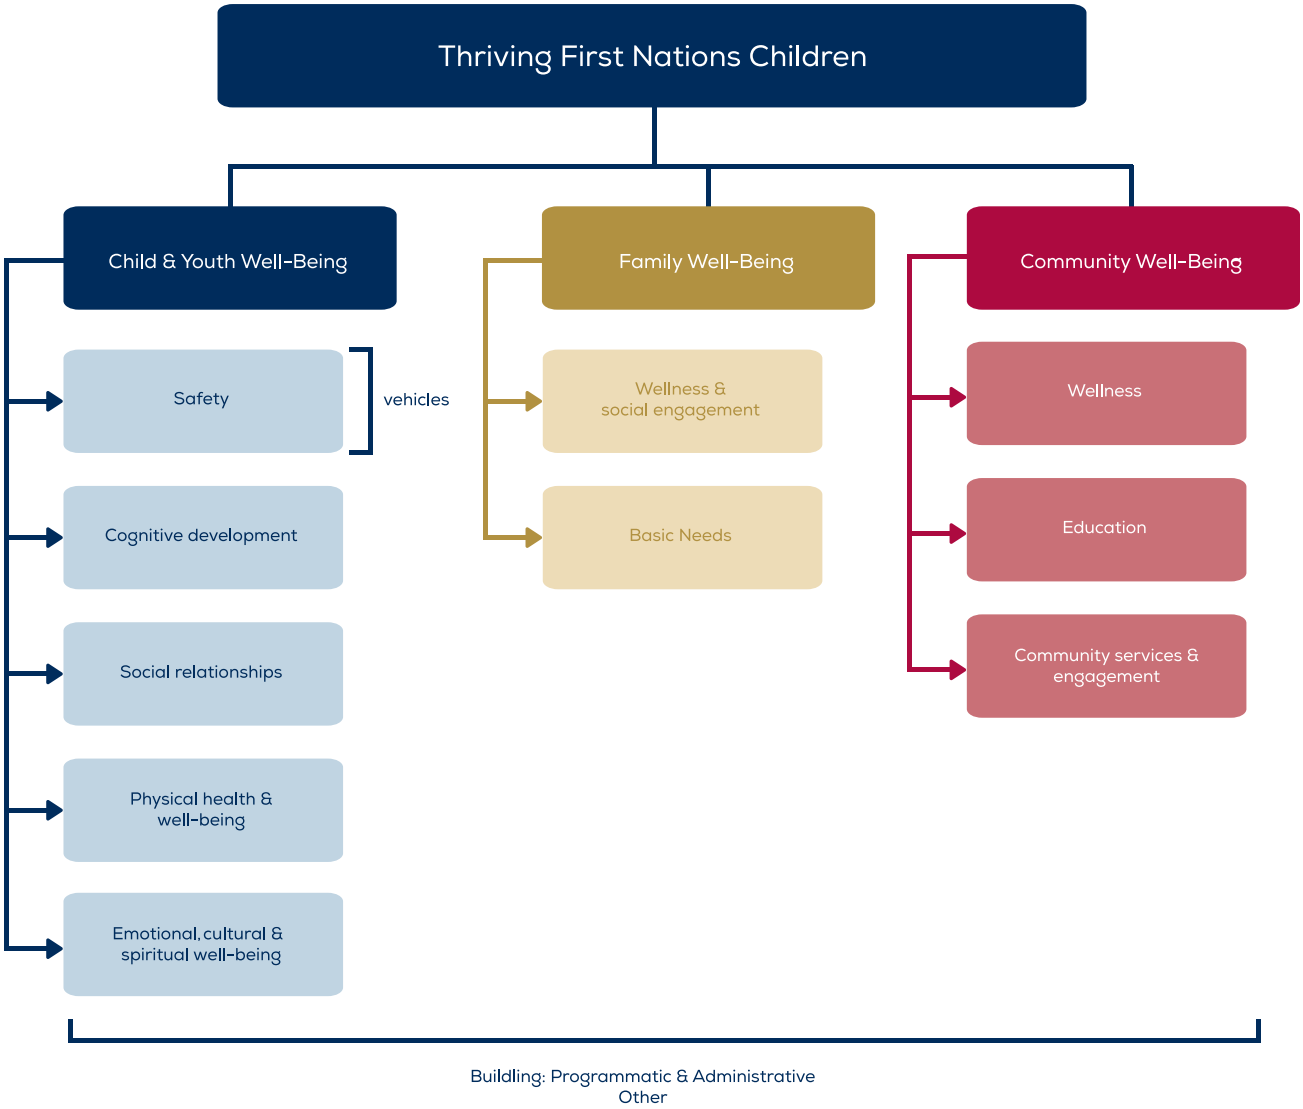
Once the required space allocation was determined, the cost for construction and fit-out was applied to each of the office space scenarios using the 2018 Canadian Cost Guide (Altus Group) with median construction costs for commercial, Class B office building, under five stories with surface parking and related Class B interior fit out costs. Regional indices were applied to estimate costs for each metropolitan area.

The building replacement value was then calculated for each scenario. The aggregate building replacement value ranged from approximately $117M under Scenario 1 to $175M in Scenario 3. With a larger sample of agencies for this work, the estimates were adjusted using the publicly available data. An average capital replacement cost per agency was estimated for each scenario, and then multiplied by 112 for adjustment to the current sample ((Scenario ($)/104 (number of agencies in Phase1))*112).

Alignment of FNCFS Asset Classes to the Renewed FNCFS Performance Measurement Framework

The high-level performance measurement framework for FNCFS is as follows (see Figure 43):

FIGURE 43: Alignment of FNCFS asset classes to the Measuring to Thrive framework.



The alignment of the asset classes to the performance measurement framework is relatively straightforward.

The vehicles are aligned to the Child and Youth Well-Being sub-objective and specifically to the Protection measure that is part of the Safety performance area. The vehicles are used to transport children and youth at risk into protective custody and other prevention activities. The service level component is to ensure that there is an adequate number of vehicles to cover the population and geographic area of the FNCFS agency in question and that the vehicles are in satisfactory working condition so that no children or youth are at risk of harm.

The building is needed to ensure that there is sufficient office space for both the administrative staff and the programmatic office staff and their programmatic service requirements. The service level component is to simply ensure that the building is in good condition. Typically, a Facility Condition Index (FCI) is used to assess the condition of the building.

As FNCFS transitions towards the new funding model and performance measurement framework it is highly recommended that FNCFS agencies review their holistic capital needs as they move towards providing more prevention-oriented programming relative to protection programming. As such, a one-time review of the adequacy of capital needs (building, vehicle and other) is highly recommended to provide an objective evidence-based data foundation with respect to the condition, service levels and needs from the capital infrastructure in order to realize the outcomes from the new Thriving Children performance measurement framework. The benefit of this needs analysis is that *it does not build off historic activity*; instead, it is aligned to the *future outcomes* and direction of FNCFS programming as it transitions to the new performance measurement framework.

With respect to vehicles, in the future it is hoped that there would be a reduced need for protection services as FNCFS agencies start to reap the benefits from an increased emphasis on prevention programmatic services that address the root causes preventing First Nations children from thriving.

The other asset category is a catch all category in the event that any other assets that meet the definition of a capital are required in order to realize Thriving Children outcomes in the future.

Need-based considerations in determining the appropriate capital allocation mechanism

The ideal approach is to ensure that the capital allocation mechanism is aligned to the needs underlying the Thriving Children performance

measurement framework. The linkage between capital assets/capital outlays and how their performance will contribute towards the realization of the Thriving Children strategic outcomes is central towards the renewed FNCFS performance-based funding model.

As noted earlier, the two asset classes serve three primary needs of the Thriving Children performance measurement framework. Specifically, the buildings are needed to provide office space for programmatic services and the administrative function. The vehicles are used for protection, prevention, and other services for First Nations children.

Principal needs-based considerations are as outlined in the following table (see Table 14):

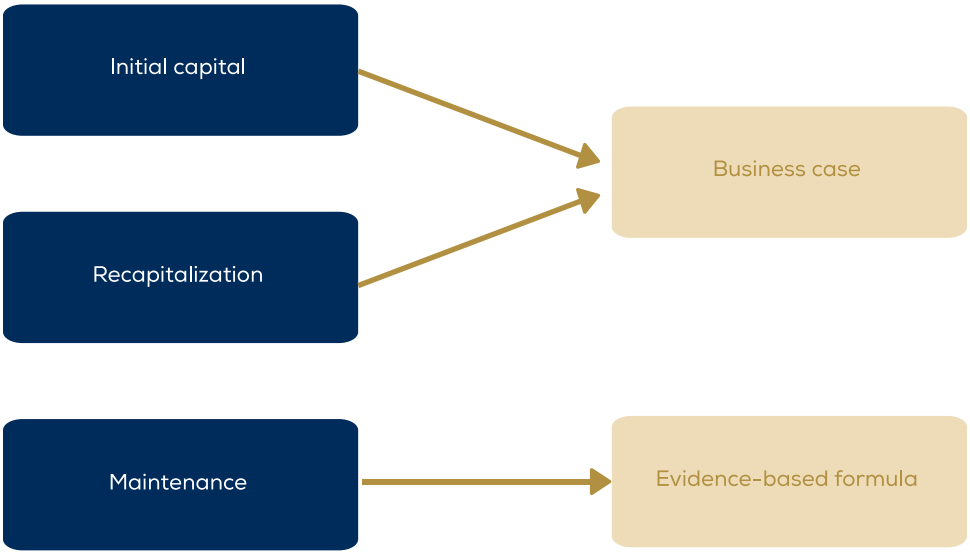
TABLE 14: Need-based considerations in determining capital asset type and allocation.

Capital asset type	Need-based considerations
Building	▪ A one-time review of the adequacy of spacing might be required to reflect the transition towards an increased emphasis on prevention over protective programming ▪ Office space required for prevention programmatic services that are sufficient to meet the prevention needs of the population of children being served in the community ▪ Office space required for protection programmatic services that is sufficient to meet the protection needs of the population of children based on the prevalence of abuse and violence in the local community ▪ Office space required for administrative space that meets the needs of the administrative staff
Vehicle	▪ The appropriate vehicle fleet size to meet the protection, prevention and other needs of the FNCFS community ▪ Key factors that would influence the protection, prevention and other needs include the average annual number of children in protection, the geographic size and remoteness of the local community
Other	▪ Any other capital request would need to be clearly tied into the outcomes articulated in the child and youth well-being, family well-being and community well-being Thriving Children performance measurement framework

The proposed capital allocation funding mechanism

As noted, the annual capital allocation funding mechanism needs to provide for the lifecycle costs of the capital asset that includes the initial capital outlay, annual maintenance as well as any future recapitalization outlays. The recommended capital allocation mechanism for outlays is as follows (see Figure 44):

FIGURE 44: Proposed capital allocation funding approach.



As noted in the diagram there are two means by which FNCFS agencies are allocated funding for capital. These two means are necessary to reflect the fundamental difference in nature between periodic capital spending and annual maintenance operations spending.

A business case[303] will be required for the purchase of a new building (or major upgrade to an existing building), new vehicle or other asset purchase. These are major capital purchases and as such FNCFS agencies will be required to complete a business case to justify the initial capital outlay as well as any expected future recapitalization, if applicable. The business case will need to articulate the justification for the capital purchase by clearly articulating the service level contributions from the asset towards realizing the child/youth well-being, family well-being and community well-being outcomes. An annual capital fund will need to be established from which FNCFS agencies will be able to access capital requirements once the business case has been completed, reviewed and approved.

An annual evidence-based formula will be utilized to provide for the annual operating maintenance costs for buildings, vehicles and other capital assets. The annual maintenance capital top-up will have to reflect generally accepted benchmarks and best practices for buildings as well as vehicles.

[303] A business case provides a justification for undertaking a project with relevant supporting evidence.

Building maintenance best practice benchmark

According to the Treasury Board Secretariat (TBS),

> The informal rule of thumb is that a minimum 2% of what it would cost to rebuild an asset is what should be invested annually for its maintenance and repair. Assuming that a built asset will last about 50 years, an additional 2% should be invested in capital projects that renew the life of the asset. The rule of thumb for a minimum level of annual investment to maintain real property in good condition is therefore thought to be 2% of replacement value.[304]

As mentioned, this is a "rule of thumb," and TBS states that asset recapitalization rates should be determined for individual assets, taking into account risk. Accounting practices vary by municipality, and several reports stress the importance of standardizing the calculation of replacement values. This is a complicating factor in consistent determination of asset recapitalization rates.

The Canadian Infrastructure Report Card states that the capital reinvestment rate for buildings should range from 1.7–2.5%. A report on Department of Defense infrastructure states that "consistent with the *Canada First* Defence Strategy and TBS targets, the Department has committed to a yearly recapitalization rate of 2.5% of realty replacement cost," with an additional "2% for maintenance and repair."[305]

However, a 2002 report for the City of Ottawa surveyed a variety of municipalities and found that, while there was consensus around a roughly 2% number for major repairs and maintenance (plus 2% for ancillary minor repairs and maintenance), "none of the organizations canvassed have been successful in establishing a rate at this level."[306]

For FNCFS agencies, it would therefore be reasonable to have an annual building maintenance funding allocation capital of 2% of the building replacement value that reflects the majority position of the industry standards.

Vehicle maintenance best practice benchmark

The maintenance vehicle costs proposed in this report are based on the Corporate Fleet Services Annual report—2019 that was mandated by TBS as part of the National Joint Council Rates and Allowances guidelines.[307]

The following table indicates Canadian average expenses by cost component as calculated in the current study, in dollars per kilometre, before rounding up to the nearest half-cent (see Table 15):

TABLE 15: Vehicle-associated costs.

Cost component	Cost (dollars/km)
Depreciation	$0.188
Interest	$0.017
Acquisition Sales Tax	$0.039
Registration	$0.007
Insurance	$0.082
Fuel	$0.111
Preventative Maintenance	$0.049
Repairs	$0.018
Tires	$0.013
Miscellaneous	$0.007
Maintenance Sales Tax	$0.011

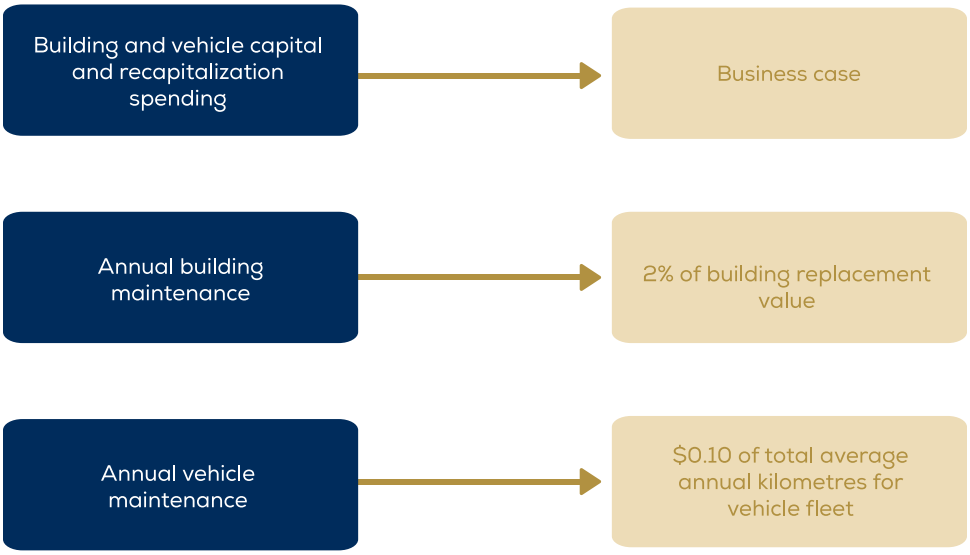
The methodology underlying the report classifies preventative maintenance, repairs, tires, miscellaneous expenses and maintenance sales tax as the key variable components of vehicle maintenance. The total of these components is $0.098 per kilometre.

For FNCFS agencies, it would therefore be appropriate to round up and allocate $0.10 per average annual kilometres travelled to provide for the annual vehicle maintenance funding allocation.

Based on the analysis above, the following is the preferred capital funding allocation mechanism to complement the FNCFS funding model (see Figure 45):

[307] Corporate Fleet Services, "Reimbursement for Business Use of Personal Vehicles Model Year 2019," (November 2018), https://www.njc-cnm.gc.ca/s3/d711/en.

FIGURE 45: Preferred capital funding allocation approach.



With respect to establishing the appropriate amount for the annual capital fund, the challenge is that there is inadequate high-quality data available to provide an evidence-based assessment of the annual capital fund for the needs of the FNCFS agencies. As previously mentioned, a capital needs assessment is highly recommended to provide the evidence base with respect to the capital requirements that are aligned to the new Thriving Children performance measurement framework.

As noted, capital is made up of buildings and vehicles. Buildings typically have a 25–30 year life cycle and vehicles typically have an average useful life of 8 years.

Proposed transition funding allocation mechanism

It would be ideal to apply the preferred capital funding allocation mechanism from day one. However, this will not be possible as many FNCFS agencies do not have accurate and objective data that would support the building replacement value in calculating the annual building maintenance.

In addition, there has not been a proper needs analysis completed that would identify the building, vehicle and any other capital needs of FNCFS agencies as they transition towards the new performance measurement and funding framework. It is highly recommended that such a needs analysis be undertaken in order to provide evidence-based support for the preferred capital allocation lifecycle costs that consist of both capital and maintenance outlays.

As a result, there is a need to establish a reasonable basis for allocating capital in the interim until such a point that a capital needs analysis is completed.

In order to determine a reasonable interim basis for allocating capital, the IFSD performed a limited outreach survey to a select number of FNCFS agencies to estimate their percentage of annual expenditures allocated to capital asset maintenance. In addition, the IFSD reviewed the underlying Phase 1 data on total budget amounts and repairs and maintenance expenditures (excluding IT related costs). The purpose of the outreach and review of the Phase 1 data was to try and better understand the actual maintenance outlays of FNCFS agencies that would help to inform the interim basis for allocating capital in the new funding model.

The results of the survey and review of Phase 1 data underscored the high variability and unpredictability of the data with respect to building maintenance expenditures.

This variability highlights the unpredictability of the expenditures given that the qualitative feedback received by the IFSD noted that many agencies are typically underfunded with respect to capital maintenance expenditures but then in any given fiscal year these expenditures might be significantly higher as they perform a catch-up to try and remediate the underfunding of prior years.

Accordingly, there are two options available to allocate building maintenance on an interim basis prior to the completion of a capital needs analysis:

1. Allocate building maintenance on a percentage of the total operating budget.

2. Allocate building maintenance based on the 2% industry standard that is applied to the best estimate building replacement value estimated by IFSD in the Phase 1 Enabling Children to Thrive Report.

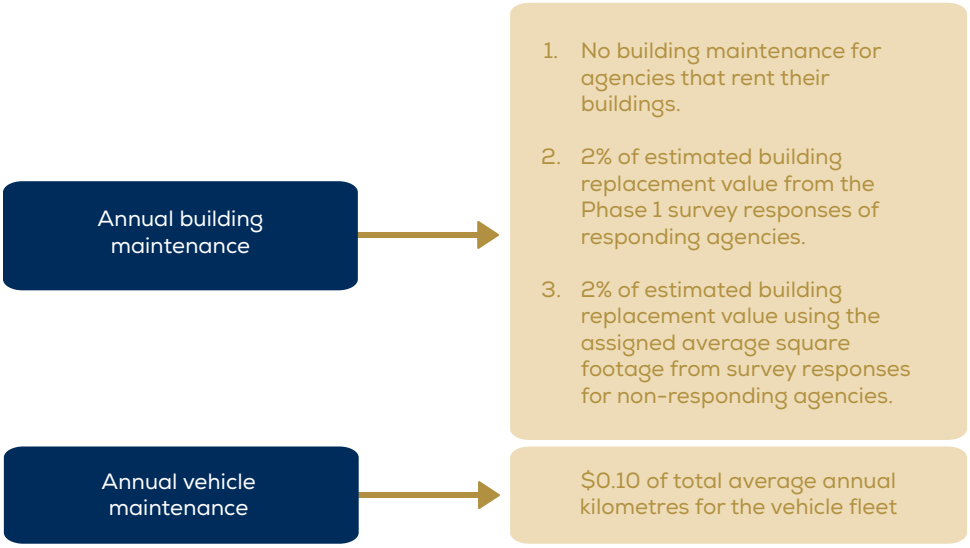
IFSD would recommend option 2 as it best approximates a fair and representative building maintenance allocation from the industry benchmarking best practice research.

Vehicle maintenance can utilize the preferred capital allocation mechanism. The average annual kilometres is easily established by dividing the odometer reading of the total kilometres by the age of the car. The average annual kilometres would then apply a rate of $0.10 per kilometre to allocate annual vehicle maintenance. For example, in 2020 if

an FNCFS agency had a 2017 vehicle with an odometer reading of 80,000 kilometres this would translate into 20,000 average annual kilometres. The annual vehicle maintenance for this vehicle would be $2,000 calculated at $0.10 of the 20,000 average annual kilometres.

The following is the proposed interim basis to allocate annual building and vehicle maintenance for FNCFS agencies (see Figure 46):

FIGURE 46: Allocation of annual building and vehicle maintenance.



The process to implement the capital allocation funding mechanism

1. Establish the capital asset replacement fund valued between $133M–$200M.
2. Obtain Parliamentary approval for the capital asset replacement fund.
3. Formalize the business case process to access capital asset replacement fund.
4. Apply the recommended building replacement value model to determine interim annual building maintenance allocation for FNCFS agencies that own their buildings.
5. Each FNCFS agency to provide inventory of vehicle fleet with the age of each vehicle and the total kilometre odometer ready to determine annual vehicle maintenance allocation.
6. FNCFS capital needs analysis to be initiated to establish capital needs requirements in support of the renewed FNCFS Measuring to Thrive performance framework.

Framework for completing capital purchase business cases

Business cases will be required to justify capital expenditures for initial capital outlays and any future recapitalization. As noted, these expenditures are typically for buildings and the office space needed to provide administrative, protection and prevention services as well as the vehicles needed in order to provide protection services by transporting First Nations children from their place of residence to a safe and secure environment.

It is recognized that as the FNCFS community transitions to a new funding model with the increased emphasis on prevention programmatic services that the existing office space might be insufficient and that additional capital outlays might be required.

Vehicle replacements would be expected periodically as the existing vehicle fleet for an agency ages and reaches a point where the purchase of a new vehicle is more cost effective than maintaining the older vehicle.

IFSD has developed a capital request form template modelled on TBS's business case template form.[308] A simplified version of the TBS business case template offers guidance on the information and evidence typically required to complete an independent assurance and review of capital purchases (Appendix N).

POVERTY

Poverty was used euphemistically to capture the challenging contexts in which many FNCFS agencies operate. Such challenges include limited housing and housing in need of major repairs, access to potable water from the tap, access to broadband, etc. Addressing this gap is one way of enhancing an agency's ability to address the basic needs, e.g. first and last month's rent, diapers and other necessities, that have been sources of neglect and the entry of children into care. Various agencies have expressed challenges stemming from poverty that could have been mitigated with adequate flexible funding, rather than placing the child in care.

[308] Treasury Board of Canada Secretariat, Government of Canada, "Business Case Template," accessed on July 27, 2020, https://www.canada.ca/en/treasury-board-secretariat/services/information-technology-project-management/project-management/business-case-template.html.

YORKTON CHILD AND FAMILY SERVICES (YELLOW THUNDERBIRD LODGE) SASKATCHEWAN

This case is a useful example of the implications of a mismatch between agency mandate and funding. Funding is a tool that can enable and constrain activities. Reliable and consistent funding sources are crucial for planning, program and policy development. In the context of a child and family, a missed opportunity for early and constructive intervention may result in more problematic and costly cases in the future.

Context

At the service of fourteen First Nations, Yellow Thunderbird Lodge (Yorkton Child and Family Services), is a large agency serving a large population in often challenging environments. An agency focused on prevention, finds itself having to place children in protection to unlock funding to manage addressable problems.

Operating

Poverty, low income, high unemployment and limited educational attainment contribute to complex programming environments with ramifications for communities. Yellow Thunderbird's approach attempts to address the results of these contexts, e.g. child hunger, neglect, but cannot consistently access the resources needed through child and family services. The agency attempts to offer interventions and supports without apprehension, but often finds no other means of unlocking resources. With a lack of housing and overcrowding in many of its communities, bed bugs and cockroaches become problematic. There have been instances where children have been placed in protection in order to unlock funding to fumigate.

"ISC is keeping our children at risk." The funding that does flow has limited flexibility in uses and applications. If the agency does ask for special funding, the approvals and steps required take time, and when a response is eventually provided, it is often too late to intervene meaningfully for the children at risk. Response times tend to far exceed established timelines. There are struggles with shifts in interpretations of claims, making special requests for funding gambles. The result is inconsistent funding which makes planning a challenge.

Lessons and considerations

Funding is a tool that can enable and constrain activities. Reliable and consistent funding sources are crucial for planning, program and policy development. When working to serve communities with complex challenges, staff on the ground are often best placed to respond in the best interests of the child and family. Actively working to foster prevention-focused services is a challenge when funding flows reliably for protection.

The community or communities served by an agency were assessed separately, as poverty levels can differ. Not every agency will receive a supplement for poverty, if the median household incomes of the communities served are above their provincial poverty line. While being at the poverty line does not imply a living wage, it is one metric to ensure that basic needs can be provided when faced with more substantive levels of community-level poverty.

The value of the poverty supplement was calculated on a household basis by First Nation. Using Statistics Canada Census 2016 data,[309] the difference between the total median household income of a First Nation and their provincial poverty line[310] was calculated. For First Nations with total median household incomes at or above their respective provincial poverty lines, a value of $0 was assigned. That difference was then multiplied by the number of dwellings on-reserve to obtain an estimate of the cost to close the poverty gap on a household basis in the First Nation. The cost to close the poverty gap at an agency level was calculated by tabulating the differences between total median household incomes and the provincial poverty line for all First Nations served by the agency.[311] To allocate the poverty supplement to FNCFS agency budgets, a range of 3% to 5% of the agency-level cost to close the poverty gap was modelled.

To model a hypothetical poverty calculation, consider the case of Agency Y.

Agency Y serves First Nations A and B. Total median household incomes on-reserve are $20,000 for First Nation A and $25,000 for First Nation B. There are 500 households in First Nation A and 1,000 households in First Nation B. The provincial poverty line is $30,000.

To determine the poverty supplement for Agency Y, the following calculations are made:

[309] IFSD recognizes that not all First Nations participate in the Census. If no 2016 Census data was available for a First Nation served by a FNCFS agency, an average total median household income and average number of residences were assigned to estimate if a poverty supplement would be applied.

[310] Provincial poverty lines are based on the mixed basket measure (MBM) for individual provinces, in regions with populations below 30,000. Poverty is calculated at the household level, using median income. Source: Statistics Canada https://www150.statcan.gc.ca/n1/pub/75f0002m/75f0002m2020002-eng.htm.

[311] The cost to raise all First Nations across Canada to their respective provincial poverty lines would cost roughly half a billion dollars ($494M). Debates on the merits of a universal basic income or guaranteed income supplement have been ongoing and will not be resolved through child and family services.

Difference between total median household income and provincial poverty line
First Nation A: $30,000–$20,000 = $10,000
First Nation B: $30,000–$25,000 = $5,000

Difference between total median household income and provincial poverty line x number of households
$10,000 * 500 = $5,000,000
$5,000 * 1,000 = $5,000,000

Tabulated estimate to close poverty gap for First Nations served by Agency Y
$5,000,000 + $5,000,000 = $10,000,000

Value of poverty supplement for Agency Y (modelled at 3%, 5% and 7%)
$10,000,000 * 3% = $300,000
$10,000,000 * 5% = $500,000
$10,000,000 * 7% = $700,000

PREVENTION

There is broad consensus on the importance of wellness programming. The rationale behind funding prevention or early intervention programs is that is it more effective and less costly to address the conditions that lead to social problems later in life, rather than waiting for these problems to arise and having to invest in programs to mitigate their impacts on individuals and communities.

MI'KMAQ CHILD AND FAMILY SERVICES PRINCE EDWARD ISLAND

Prevention starts with knowing the people that you serve.

MCFS provides a useful "control" to learn about the value of prevention services in the context of child and family well-being. The case demonstrate that programming is not only about children, but about their parents, families and communities. Defining and tracking well-being is essential to better understanding how children, families and communities are faring. Simply staying out of protection does not equate to well-being.

Context

Mi'kmaq Child and Family Services (MCFS) is a prevention-focused agency established in 2007. With the province of Prince Edward Island covering protection services, MCFS is mandated to deliver

prevention services to two First Nations on the island. Prevention activities include supporting families when a child protection worker is present, ensuring just treatment during apprehensions, working with families in contact with the protection system, and delivering programming to meet a variety of community needs.

With a prevention-only mandate, the organization highlights the sobering challenges of finding what works in communities that struggle with poverty, trauma, and history.

Programming

Prevention starts with knowing the people that you serve.

MCFS staff have offices in community and work formally and informally to keep a pulse on happenings whether or not there are protection concerns. Prevention work is rooted in empirical research that is tailored to meet the needs of a community. For instance, MCFS has evolved its programming to include resources for safe practices for children online, parenting workshops, etc. The flexibility of MCFS's approach is essential to delivering responsive and timely programming to meet needs.

From dropping in at home to running group sessions, MCFS has built trust with its communities over time. Building trust and confidence takes time. Building the program from scratch required time and patience so that community members were comfortable to seek out the agency for support (rather than the agency reaching out to them). Such trust can be fragile and can be easily disrupted by changes in politics or other events.

With a prevention mandate, MCFS's experience demonstrates that protection or prevention alone cannot change a community. Child and family services is not only about children, but about their parents, families and communities. When parental, familial or community level trauma exists, it may be normalized or silenced as a coping mechanism. Prevention programming must then extend beyond the child to build an environment that promotes their well-being. *There is contention between struggles within the community and a desire to keep children in their homes. If a family or community is unhealthy, what good does it do to keep the child in it?*

Demonstrating that an increase in prevention dollars leads to a reduction in protection cases may be positive, but just because is not entering protection, it does not imply their well-being. Qualifying well-being and defining baselines that include families and

communities, is essential to understanding the mix of resources and programming needed to support holistic wellness in communities.

Governance

Band Councils can influence the operations of agencies, especially if funding flows through them. In some instances, the withholding of funds or decisions can be tacit tools to constrain or inform the operations and decisions of entities, such as FNCFS agencies.

As Band Councils control most operations and activities on reserve, they can also shape perspectives of services through the provision or withholding of various incentives. The politics on-reserve can at times be challenging.

Resource struggles may become more of a reality with *An Act respecting First Nations, Inuit and Métis children, youth and families* in effect. Band Councils may consider agencies a challenge to their opportunity to access and share resources destined for child and family services.

There is considerable evidence to support that from both a social and economic standpoint the rate of return of these programs is high. James Heckman, a scholar who researches how to redress childhood inequality, views start at birth interventions as achieving the best economic and social gains. Heckman concludes that early childhood programs can break the cycle of poverty for multiple generations, and that investing in high-quality early childhood education not only helps disadvantaged children but also delivers better outcomes for society.[312]

A more recent 2020 study, that looks at the benefits of social programs in the US found that, when accounting for "fiscal externalities" (the indirect ways programs affect the government's budget, arising from how programs change the choices that participants made) many social programs are ultimately profitable for taxpayers.[313] These findings are echoed in the Canadian context, with a report by the Mental Health Commission of Canada finding that return on investment ratios are between $1.80 to $17.07 for every dollar invested in parent education and family support programs which improve the outcomes for people living with mental illnesses.[314]

THE CHILD AND FAMILY ALL NATIONS COORDINATED RESPONSE NETWORK (ANCR) WINNIPEG, MANITOBA

ANCR has the ability to focus resources and support on a case at the initial point of contact with the child and family. Their funding approach provides flexibility to enable this approach.

The Child and Family All Nations Coordinated Response Network (ANCR) is responsible for all intake and emergency child and family services in Winnipeg, including providing after-hours intake services for twenty agencies. Governed by a board of directors (with membership appointed by Manitoba's four child welfare authorities), ANCR is a provincially incorporated not-for-profit agency, dedicated to serving All Nations in the city.

Fully provincially funded, ANCR receives its funding quarterly.[315] *The nature of its funding allows the flexible application of resources to areas of need, especially for preventive services.* ANCR can focus resources and support on a case at the initial point of contact with the child and family. In 2018–19, family support services cost roughly $530,000. The model is sustainable financially because ANCR will not typically provide the services for as lengthy a period as other agencies. With a total budget of approximately $15 million, ANCR's main expense category is *salaries and benefits* for nearly 200 staff members (a mix of full-time and part-time). This costs structure is consistent with ANCR being a service-based organization.

ANCR's role as a service provider is unique, as it can, at once, intervene for preventive services, apprehend when necessary for protection, and refer a case to a more appropriate agency to ensure the child and family are receiving the best available care. Early intervention approaches have demonstrated success, when considering that over 75% of the over 450 families per year that receive early intervention supports do not go any further in the protection system.

As Winnipeg's Indigenous population continues to grow, agencies like ANCR will play a central role in providing urban-based culturally appropriate services, while working with children and families to connect them to the most relevant long-term solution.

[315] ANCR's funding has not been adjusted, e.g. for inflation, cost of living, etc. since 2007. The only funding changes have been through program changes.

To support agencies to collaborate with other partners in the band council, tribal council, or community, and to foster the development of child and family services focused wellness programming, a prevention supplement on a per capita basis will be applied. For each person in the communities served by the agency, a $800, $2,000 or $2,500 per capita investment will be applied to their budget. These per capita amounts represent a spectrum of actual programming, based on Phase 1 research.[316] Agencies such as Mashteuitsch have developed high levels of coordination and collaboration on their prevention programming, linking child and family services to health and wellness.

KANIKANAPIT—MILUELINIUN MAHK MAMU MILUELIMUN (MASHTEUITSCH)
QUEBEC

The importance of structure to manage contextual realities.

The clear distinction in roles between elected community leadership and agency management and professionals supports a results-oriented culture based on data, evidence and evaluation.

Context

With a fused mandate of health and social services, *Kanikanapit—Milueliniun mahk mamu miluelimun*, emphasizes well-being and ensuring that the First Nation it serves is thriving. In 2008, a major mental health crisis forced a shift in thinking in health and social services. With high suicide and protection rates, the organization and its community made a strategic decision to focus on prevention. Since that time, protection cases have decreased, and multi-disciplinary prevention programming has extended to elders, families, and the community at large. Social workers, the physician, dietician, healthy lifestyle coordinator, etc. collaborate to build and deliver holistic wellness focused programming.

Operations

The centre benefits from a professional band council organization in which there is a separation between elected and bureaucratic officials. With regular election cycles, the stability of the professional bureaucracy at the band council promotes continuity and expertise. This structure enables directors, such as the director of the health and social services centre, to manage

[316] IFSD, *Enabling First Nations Children to Thrive*, 2018, 89–94, http://www.ifsd.ca/web/default/files/public/First%20Nations/IFSD%20Enabling%20Children%20to%20Thrive_February%202019.pdf.

their portfolio and liaise with other directors with limited political interference.

Data and evidence play a critical role in demonstrating relevance and generating operational independence from elected officials. The centre's data system is aligned to its program architecture. This allows the centre to track client uptake and changing needs across health and social services. Paired with the evaluation of its programs, the centre has a real-time understanding of happenings in the community, with the ability to respond to address needs.

To maintain the culture of strategic planning and performance for improved community outcomes, the centre invests in its staff. Latitude in action and decision-making comes from competent and reliable staff. Maintaining and developing the talents of high-performers, is integral to the success of the centre. Engaging staff in planning and strategic decision-making, offers a sense of empowerment and accountability for outcomes. Especially in challenging circumstances or moments of major change, a committed and reliable team can work to manage change.

Lessons and considerations

Politics is an inescapable contextual reality. While politics can enable action, they may also constrain it. Service providers can mediate contextual challenges with evidence for planning, programming, and decision-making. Building tools and practices for the collection and analysis of relevant, informative, data is an important first step for existing and new service providers.

Breaking down programming silos with collaborative program development for prevention activities can help to improve scope, the resource base, and uptake in the community. Collective action for holistic well-being is more likely to yield community-level sustainable benefits than siloed actions.

GEOGRAPHY

The location of communities served by agencies impact costs, human resource pools, and service delivery. Phase 1 and Phase 2 analysis indicated that an agency that serves at least one community without year-round road access has a budget about twice the size of those serving communities with year-round road access. In child and family services, remoteness has been regularly identified as an issue but has not been consistently addressed. Analysis of agency budgets suggests that remoteness is being tacitly compensated (those that are more

remote or serve First Nations not accessible by road tend to have larger overall budgets). However, the allocations appear arbitrary in that the statistical connection between agency budgets and their associated remoteness score, in ISC's Band Focused Approach[317] is relatively low.

AWASIS
MANITOBA

"It's not just what we see as not being there."

Poverty coupled with remoteness is not just an economic condition but one that pervades all aspects of family and community life. Without more and flexible resources, child and family services are forced to focus on crisis response rather than better long-term outcomes for children and families.

Context

Following the lobbying efforts of Northern Manitoba Chiefs, Awasis was established in 1983. The original intention of delivering FNCFS through Awasis, was to eventually, devolve the services to First Nations for community-level delivery. While some First Nations have established their own agencies, Awasis remains the primary conduit of service delivery for eleven First Nations, especially in remote First Nations in Northern Manitoba. Often, the agency's staff is the only regular service in the community. Staff are "always in crisis management mode," trying to be many things to many people in underserviced areas. This reality focuses the agency's efforts on crisis response instead of being able to focus on the rebuilding of communities.

Operations and Programming

An observer can easily see markers of poverty such as, housing shortages, a lack of infrastructure. A holistic view of poverty, however, is about what cannot always be 'seen.' Poverty, as described by Awasis, is "not just what *we* see as *not* being there." Emotional, spiritual, mental, and physical impoverishment are challenges in community healing that not may be readily visible and influence the agency's work.

[317] ISC's Band Focused Approach uses the same data as Statistics Canada's Remoteness Index. ISC's approach is more nuanced as it cross-references and adds the band name and number. In some cases, a remoteness score weighted by band population is calculated when the band is comprised of more than one Census sub-division (CSD). If however, one CSD contains multiple bands, each band retains its own remoteness score.

Awasis's operations are shaped by its context. With the majority of First Nations served in remote areas, the agency often lacks basic infrastructure to undertake its work. Information technology (IT) infrastructure and broadband connectivity do not always exist. This can make contact with different resources nearly impossible. *"We want to do great things, but we also need the tools to enable us to do them."* A tool as basic as internet access for Skype can be revolutionary for a community.

Staffing is also a challenge, as employees can be difficult to retain in remote areas. Often, staff can be early in their careers and while well-intentioned, they may not have the experience necessary to address the complex challenges in Awasis's communities. The ideal would be to have staff and resources to invest heavily upstream, instead of repairing downstream.

To rebuild communities, Awasis emphasizes a 'two-eyed' approach: Western skills and technologies, paired with traditional knowledge, language and cultural practices. The approach combines the best of both to build capacity and resiliency in communities.

Capacity and resiliency take time and resources to build. The Family Enhancement Program is connected to the approach. Designed to support families, the program addresses the causes of contact with the protection system, and will reconnect children with their community (if they are in care). The Elders Council is a new addition to support planning, program development and delivery, especially in family enhancement. Elders on the council are selected by their respective communities and will even intervene in moments of crisis as trusted community members. Especially when staff are not regularly present in remote or difficult to access communities, Elders play a supporting role.

Lessons and considerations

Agencies and communities confront a variety of challenges, that can be amplified or complexified by their context. Remote and isolated communities require supplementary resources to deliver programming due to limited complementary services and infrastructure gaps.

A holistic conception of poverty, beyond what can be 'seen', is a point of departure to reconceptualize the scope and breadth of early intervention and investment. Community-focused and dedicated to capacity and resiliency building, ensuring there is a resource base for prevention can support longer-term change.

In the proposed funding approach, remoteness is compensated in the baseline expenditure for consistency and clarity in the allocation. Professor John Loxley (University of Manitoba) led analysis for this project on existing approaches for compensating remoteness, e.g. NAN remoteness exercise, Statistics Canada's Remoteness Index, etc. (Appendix O). The assessment considers the suitability of various approaches and remoteness compensation practices in the United States and Australia, for application to FNCFS. For national applicability, Loxley concludes that ISC's Band Focused Approach or Statistics Canada's Remoteness Index would be the most reliable scales for determining remoteness. The amount of compensation, however, would be arbitrary, as no reliable standard exists.

Agency remoteness was assigned using the scores in ISC's Band Focused Approach. For agencies serving more than one First Nation, the remoteness score was determined by weighting all associated First Nations scores by population (Census 2016 population data was used for consistency with the dataset). A compensation scale for remoteness was developed by IFSD using three scales to provide different options for the remoteness budget adjustment and a polynomial profile to ensure that the scale remains progressive. The scales change the relative importance of remoteness in terms of budget needs. As the scale increases, those agencies that serve more remote communities receive proportionally more funds for remoteness than the less remote agencies.

Three options are provided as available data does not provide enough information to help us choose a specific scale:

Original remoteness index to the power 1.1: original remoteness index$^{1.1}$
Original remoteness index to the power 1.2: original remoteness index$^{1.2}$
Original remoteness index to the power 1.3: original remoteness index$^{1.3}$

There are three scales and three reference points. Each scale provides a different range of budget adjustments. In total, there are nine options for remoteness budget adjustment.

To define the supplementary funding allocation for remoteness, the agency with the lowest remoteness index (considered the least remote agency) was set as the reference point against which all other remoteness was measured.

Formula:

$$\text{Ratio} = \frac{\text{Agency's Remoteness Index}}{\text{Remoteness Index of the Reference Point}}$$

Remoteness compensation (dollars) was calculated relative to the reference point using three factors: 0.25%, 0.5% and 1%. The factor is multiplied by the ratio calculated from the equation above. That percentage is the percentage increase of the agency's budget to compensate for remoteness relative to its total reported expenditures.

To illustrate, we use the case of Agency Z:

Remoteness score: 0.5
Total budget: $10M
Remoteness index of the reference point: 0.06

Ratio = 0.5/0.06
Ratio = 8.3

Note: Agency Z is 8.3X more remote (on a population weighted basis) than the reference point agency.

Compensation based on three arbitrary factors multiplied by the Ratio:
Scenario A, 0.25% of reference: 0.25*8.3 = 2.1%
Scenario B, 0.5% of reference: 0.5*8.3 = 4.15%
Scenario C, 1.0% of reference: 1*8.3 = 8.3%

The values of the three remoteness compensation scenarios for Agency Z's $10M budget are:

Scenario A: $10,000,000*2.1% = $210,000
Scenario B: $10,000,000*4.15% = $415,000
Scenario C: $10,000,000*8.3% = $830,000

Thus, Agency Z's remoteness compensation is suggested to range from $210,000 to $830,000, based on the assumptions used.

Case studies and consulting experts raised a number of considerations related to geography. While some agencies and the communities they serve may be within commutable distance to a service centre by road, those roads may be dangerous (e.g. not maintained), or accessible in a limited way based on weather. When service access is at risk or the ability for children in care to return to their communities for visits, there must be consideration given to agencies in these situations. Furthermore, public transit is limited, if available at all to those working or residing on-reserve. It will be necessary to consider and respond to these realities or equip agencies with the resources and flexibility to find solutions.

When it comes to FNCFS, attention tends to be focused on-reserve (Canada funds FNCFS on-reserve only and in the Yukon). Demographically, however, Indigenous peoples are the fastest growing group in the country, and they tend to reside in urban centres. There is a cost to delivering services in urban centres, e.g. rent tends to be more expensive (Toronto, Vancouver), staff salaries may have to be higher to be more competitive, etc. This is a reality for agencies such as Native Child and Family Services in Toronto, who are regularly faced with climbing costs because of their location.

NATIVE CHILD AND FAMILY SERVICES TORONTO, ONTARIO

Funding diversification for the liberty to practice.

Funding diversification provides latitude for practice. Funding mechanisms are also important. The opportunity for a block-funding approach in FNCFS would promote cohesive responses to child and family services, reducing the siloed billing practices in place. With the growth in urban Indigenous populations there is a case to revisit how urban agencies and agencies serving urban communities are being resourced to deliver on their mandates.

Context

From one main office and 18 satellite offices and with 285 staff, NCFS delivers culturally-informed child and family services, including prevention and protection, to Indigenous Peoples in Toronto, those passing through Toronto, and across Canada.

With a history of prevention, Native Child and Family Services had to work for 18 years for a protection mandate from the Province of Ontario. Originally established as a prevention organization in Toronto, NCFS learned early on that its funding sources had to be diverse, to build their practice culturally-informed practice.

Operations and programming

NCFS is a service delivery organization (with registered charity status). Their core funding comes from their role as a service provider. Other organizations pay them to deliver services because they're good at what they do, e.g. the Early ON (formerly 'early years') is delivered by NCFS.

The organization actively seeks to demonstrate the impact of its service model for funders and for its own internal planning.

NCFS's program evaluation model is connected to program development. Its initiatives and programs are grounded in best practices and existing literature, informed by Indigenous well-being. Once the program is delivered, clients are surveyed, regular follow-ups are undertaken, and services are adjusted based on these findings.

NCFS's structure requires and enables creativity. The funding structure from multiple sources enables NCFS to work through the prevention angle, finding resources to deliver in the best interests of the child, and to build its practice with long-term vision. For instance, NCFS's board of directors encouraged the agency to buy, not rent its space. Owning space provides the liberty to practice in a culturally relevant way. From smudging on-site, to building lodges, owning space meant a freedom to practice in the best interests of the children and family served, without being beholden to government check boxes.

While core funding is stable, resources to build responsive, bottom-up programming is dependent on securing funding from grants and donors. Senior leadership is responsive and regularly seeks out 10%–15% of their overall funding to ensure needs-based programming can be developed and delivered.

Operating as an urban agency, NCFS is faced with the challenges of housing shortages and homelessness, mental health and addictions. To address the challenges, the agency breaks down operational silos by leveraging resources to address a broad-spectrum of programs and services, rather than distinguishing between protection and prevention, and their respective funding sources.

The urban environment can be a draw for staff, but also imposes constraints. The cost of living in Toronto can reduce the relative competitiveness of salaries, and can increase the cost of doing business from real estate to parking (limiting the practicality of needed vehicle fleets). While NCFS is not constrained by funding streams and protection-focused fee-for-service budgeting, its funding diversification requires it to be a competitive leader in child and family services.

As urban Indigenous populations increase, so too will the demand for Indigenous-focused services. Prior to CHRT funding, NCFS was not a regular recipient of federal funding (beyond program funding for the delivery of the urban Aboriginal Head Start program). As

demographics shift, the reality that Indigenous People may have a connection to a band or reserve, may have multiple, or may not have any at all and will still seek out services will have to be addressed.

Lessons and considerations
Define your core functions and deliver them well.

Funding diversification provides latitude for practice. While not all service providers will have NCFS's diverse resource base, the lesson that funding mechanisms influence activities is important. The opportunity for a block-funding approach in FNCFS would promote cohesive responses to child and family services, reducing the siloed billing practices in place.

Urban Indigenous populations are growing and will require culturally informed services. Resourcing these activities is a constant challenge. As the CHRT highlighted discriminatory practices in federal underfunding of FNCFS, there is a case to revisit how urban agencies and agencies serving urban communities are being resourced to deliver on their mandates.

Access to service tools, such as broadband were also considered. Communities closer to urban centres may be more likely to have access to reliable broadband with workable download and upload speeds. There are many however, who do not have regular or reliable access. Broadband is not only a tool for connectivity, but a conduit for expanded opportunities for services and programming. From telemedicine, to consultations with experts such as nutritionists and psychologists, broadband represents an opportunity to build existing capacity and to scale services as required. As with any tool, broadband can be a useful addition if agencies and communities have connections to providers to leverage the connectivity.

RESULTS FUNDING

The Measuring to Thrive framework represents a set of trackable indicators that guide the goal of thriving First Nations children, families and communities. The framework is a tool to help to identify need. Used as a program performance tool, Measuring to Thrive will guide relevant data collection to better understand realities of communities and eventually, to support and anticipate their needs. The federal government committed in the preamble of *An Act respecting First*

Nations, Inuit, and Métis children, youth and families, to funding FNCFS consistent with the principle of substantive equality.

It is expected that a two-year transition period will be necessary for a fully functional framework. In that period, the secretariat will work closely with agencies to determine what data is already available, what data will have to be collected and how, and in what way need should be monitored and quantified. Data from reliable sources, e.g. Statistics Canada, will be leveraged to populate the Measuring to Thrive framework wherever possible, especially for community-level indicators. Working with the secretariat, agencies can leverage the data as evidence for decision-making to determine the types of intervention necessary, e.g. budgetary top-up, access to organizational support, etc.

The utility of the framework is that it can help individual agencies identify where they have need or if they are operating well within the parameters of their budget. In public finance, more money is not always the answer. More effective and efficient application of resources in a well-designed program can yield results. FNCFS agencies will have to establish performance targets to align their activities to desired results.

Results funding will be allocated to agencies as a percentage of their baseline expenditures. The supplement is modelled at 1%, 3% and 5% of total 2018–19 expenditures. The value of the top-up is anticipated to support hiring one or more staff. Complemented by supplements in IT and supported by the secretariat, FNCFS agencies are expected to be sufficiently resourced to transition to capturing data through the Measuring to Thrive framework.

EMERGENCY FUNDING

FNCFS is an essential service, that must continue to operate in regular and crisis situations. Emergency situations tend to increase demand on social services such as child and family services (Appendix P). The funding will be available to support responses to unanticipated circumstances related to CFS, that affect demand for an agency's core services. This could be a suicide crisis in a community or support to respond to a natural disaster or pandemic, in so far as the expenditures are directly linked to child and family services. Dakota Ojibway Child and Family Services in Manitoba has a well-developed emergency response plan.

DAKOTA OJIBWAY CHILD AND FAMILY SERVICES MANITOBA

"At no time will children be left at risk."

Key Lessons Learned from DOCFS' emergency response:

1. *Be prepared: a business continuity plan/emergency plan that includes communication with band councils and tribal councils can determine and pre-plan how you will collaborate and collectively face an emergency.*
2. *Empower staff: crisis situations are fluid and require changing responses. Staff should have input in planning, clear direction and latitude to act in the best interest of the children, families and communities they serve.*
3. *Have access to financial resources: to procure goods and services, money is necessary. There's much uncertainty in a crisis and having reserve funds (or access to funds) is crucial for expeditious action and response.*
4. *Connect: work closely and ongoingly with your communities and leadership to respond to the needs of children, families and communities.*

"At no time will children be left at risk."

Dakota Ojibway Child and Family Services (DOCFS) is not a novice when it comes to emergency response. From floods, to ice storms, to now, a pandemic, the agency has responded to protect the most vulnerable in the eight First Nations communities it serves. An integral component of a broader Tribal Council structure, DOCFS works collaboratively with other organizations (e.g. health, education) and community-based offices. Daily directors' calls and constant contact coordinate actions and response to changing circumstances across the Tribal Council.

DOCFS wants kids and families to be healthy and safe. Emergencies don't stop this drive; they amplify it. CFS is an essential service, and DOCFS remains available 24/7 during a crisis (as it would in regular times). As concerns for the safety and well-being of children and families can increase during emergencies, DOCFS' actions in emergency response extend beyond the physical safety of children, and includes food security, supplies and educational resources.

Be prepared

DOCFS' business continuity plan (BCP), which serves as a roadmap for the agency's action in a crisis to fulfil its core mandate and maintain (at least) their basic operations.

In one half-day, DOCFS' entire business continuity plan (BCP) apparatus can be mobilized, as staff are pre-briefed and familiar with their responsibilities. Staff have pre-assigned roles and areas of action for which they are responsible in an emergency. This enables the organization to keep a measure of consistency when faced with unexpected crises.

DOCFS' model is premised on strong linkages to the eight communities that it serves. With trust between DOCFS and its community offices and employees, the agency depends on the local First Nation's collaboration and support to understand need on the ground, and to ensure an appropriate response. Each of the eight communities served have their own emergency operating plans for local-level actions. From back-up staffing plans to operating plans, each community has a pre-planned approach to managing CFS when in crisis response mode.

There are plans in place, but staff members are expected to solve problems and find solutions.

Empowered leadership; empowered people

As emergency response ramps up, there is significant pressure on senior management to orchestrate the initial response. For example, senior staff worked from 8am to 11pm to define and implement the initial crisis management approach to COVID-19.

Senior leadership and the DOCFS board encourage flexibility in crisis response. They are known to create space for employees' ideas to respond to community needs. Emergencies are fluid and DOCFS staff must adjust its actions accordingly and in real time.

Various ad-hoc teams emerge in crises to address changing needs. For example, in the response to COVID-19, a holistic wellness team was created to develop resources for the distribution of reliable information and to connect people with the services they need. This small team of six people leverages outside resources, such as extra physicians and mental health experts, and develops their own tools to support the overall pandemic response.

The main concern among communities is food security. Families can be big and as communities enter lock-down, not everyone

can access needed supplies in time. DOCFS stepped in as a procurer of essential food items and supplies for delivery through local community offices. The items are distributed without cost to recipients in need through the local office. In an emergency situation, DOCFS will assist any community member in need (although their child focus is primarily, children in care). This initiative, orchestrated in conjunction with community-based staff, demonstrates the importance of connectivity and trust between agencies and people, especially in a time of emergency response.

To mobilize the required resources, an agency needs ready money.

Always have ready money

DOCFS emphasizes the importance of advocacy for their agency. From the Tribal Council's Chief to ISC to outside resources, DOCFS advocates to 'anyone who will listen,' to ensure their organization and children in care have what they need. Building a reserve fund and practicing active resource-development are ongoing. This helps to ensure that when a crisis hits, there is some flex in the budget.

When faced with a crisis, there is the added stress of uncertainty and delay in cost recovery. Until a state of emergency is enacted by the Tribal Council, resources commensurate to an emergency will not flow. In the context of COVID-19, ISC has indicated that agencies can keep track of costs associated to the pandemic response.

The fact remains however, that agencies and communities need ready money to act and respond in an emergency. For instance, at DOCFS, expenses for COVID-19 have been paid through expense accounts, cheques, corporate credit cards and personal credit cards. When it comes to major expenses, the executive director checks with ISC regional staff for the approval of the expense in advance, to mitigate any uncertainty of reimbursement. From basic food supplies, to educational resources for children in care, staff overtime, IT supplements, and beyond, agencies must be able to maintain their core operations to keep children and families safe, while supporting an emergency response. Unexpected circumstances can require unexpected resources.

As an alternative funding approach for CFS is being developed, options for emergency funding are being considered. Combinations of funding mechanisms are being explored to propose tools to respond to immediate needs, as well as to address the underlying challenges that influence crisis management. DOCFS is a helpful example of a well-coordinated agency that leverages resources beyond its organization to respond in a timely and decisive manner in the face of emergencies.

With the proposed block funding approach, agencies will operate within predefined revenue parameters, with a supplement to achieve the results defined in the Measuring to Thrive framework. Should demand for its services change due to exogenous factors, however, agencies will have recourse to supplementary funding. This funding is like an insurance policy triggered if factors external to the organization change. Such factors include, increase in the number of protection demands, increase in the number of prevention services requests, etc.

This insurance funding is distinct from the needs-based supplement to achieve results. Results-focused funding is designed to support an agency's performance to help it sustain or enhance its program and service offerings. The insurance for increased demand, by contrast, is funding to address changes to baseline operating requirements. Should this increased demand last longer than one fiscal year, the agency may require a revision to its baseline budget. This makes relevant data collection crucial for service providers, as it links to its overall organization, activities, and funding alignment. Relevant data can be analyzed as useful evidence for better decision-making.

There are two proposed options to manage emergency funding. One option is to have an annual supplement between 0.5% and 2% to agencies' baseline budget. It would be incumbent upon agencies to manage this funding, building their own emergency reserves when the funding is not needed. Should a top-up be applied to agencies' budgets, there would be no further recourse to the federal funder for emergency provisions in child and family services (unless there were exceptional circumstances, unmanageable with regular funding).

The second option is to establish an emergency fund. This fund would be appropriated exclusively to respond to changes in demand and emergencies, with funding ring-fenced within the department. In order to trigger the release of funds, a set of criteria defined in legislation would have to be met. Similar to legislation in various jurisdictions (Appendix Q), emergency provisions are triggered for instance, when a disaster is declared. Once declared, resources would flow to the parties in need to fulfill their mandates.

To determine the amount of money allocated to the emergency fund, whether appropriated by statutory or non-statutory means, various models exist. Jurisdictions such as Mexico, appropriate a portion (0.4%) of the country's annual total budget to disaster relief and prevention funds. The state of Utah determines the allocation to its disaster funds relative to other state appropriations. Other states, such as North Dakota and California appropriate a set amount of money every one or two fiscal years for disaster relief. The value of the emergency fund is proposed to range from 0.5% to 2% of FNCFS agency baseline expenditures.

The emergency fund would have to be created, and preferably, defined in legislation. The emergency fund's appropriation could be covered by statute, where Parliament would only approve the expenditure by vote once. After which time, e.g. five years, ten years, the money in the fund would automatically be appropriated, without requiring another parliamentary vote. Alternatively, the emergency fund could be endowed by non-statutory means. This would require Parliament to appropriate the value of the fund annually. In principle, if the fund is covered in legislation, there may be few reasons for Parliament to refuse the expenditure. There is however, the risk that the appropriation is not approved and the emergency fund may not have the requisite resources.

SECRETARIAT

The secretariat will be designed as a First Nations-led dual-mandate organization. As the trusted third-party among stakeholders, the secretariat would be a neutral expert organization governed by a board of directors. The secretariat would be a centre for best practices, operational support and results-funding allocation.

As an independent data and operations-focused organization, the secretariat would be well positioned to lead annual data collection on interim progress with the proposed funding approach, even during transition. The secretariat should lead assessments on funding applications and interim results. The CHRT-mandated supplementary payments suggest that change in programming and operating practices are possible, even within a fiscal year. To this end, the secretariat could support national data collection efforts on how resource allocation and programming have changed with the new funding approach.

These annual evaluations are distinct from the data to be collected for the Measuring to Thrive framework, as it will be operational in nature. Annual evaluations will be designed to assess funding impact in the short-term, in preparation for a medium-term evaluation of the funding approach at the three-year mark of transition. Then, at year five, a full evaluation of the funding approach and the results tracked in the Measuring to Thrive framework will be undertaken.

The full external evaluation at year five of the proposed funding approach will assess the connection between resources and results. Has the change in funding structure supported better results for children and families? Have allocated resources been commensurate to achieving desired outcomes? Has the Measuring to Thrive framework effectively captured changing realities for First Nations? These and other questions should be addressed as the full funding approach and its associated resource profile are reconsidered in connection to long-term goals.

Funding for the secretariat is estimated at $3M per year (grown with inflation), to support operations (see the Transition section for a full discussion of the secretariat).

Application of the funding approach

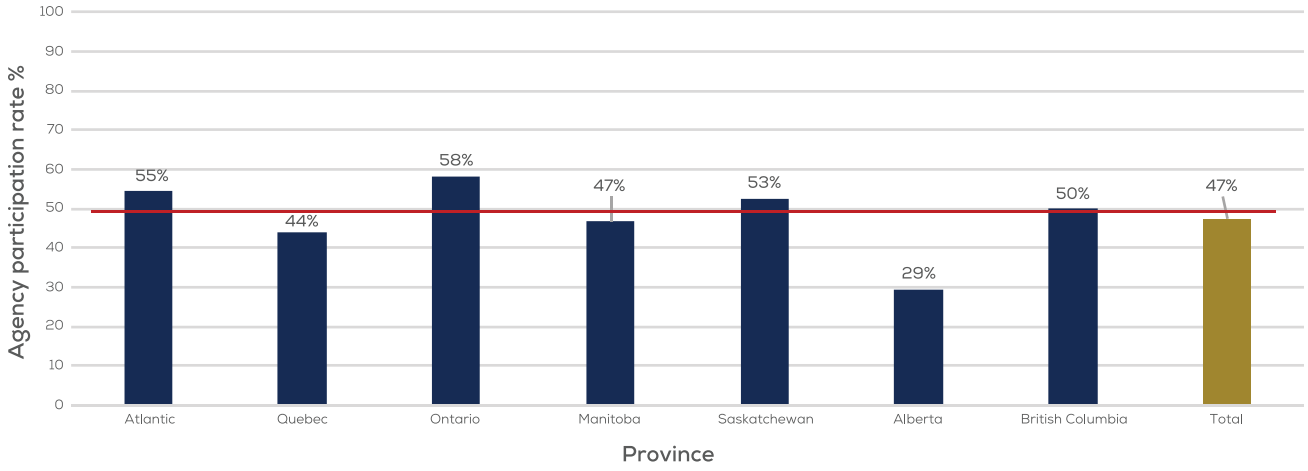
The proposed estimates of agency funding levels were developed using 2018–19 FNCFS agency reported expenditures and informed by industry standards.

As with any estimation exercise, there is no single estimate, rather a range of estimates dependent on various combinations of scenarios.

FNCFS SURVEY[318]

In fall 2019, a seven-question survey was released to FNCFS agencies (Appendix M). The survey was designed to capture expenditure and revenue information, CHRT funding requests, and performance measurement practices for fiscal year 2018–19. The survey was released as a fillable PDF to agency directors with an accompanying explanatory note on the survey and its application. Of the 112 FNCFS agencies on IFSD's list, 53 completed the survey, an overall 47% response rate (see Figure 47).

FIGURE 47: Agency survey participation rate by province (n=112).



Note: Atlantic includes New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland.

[318] All FNCFS agency-associated data in this section's figures are from IFSD's 2019 FNCFS survey.

The participating agencies are generally representative of the broader sample population across population clusters (Figure 48), geographic zone[319] (Figure 49), and road accessibility of all First Nations served (Figure 50).

FIGURE 48: Percentage of FNCFS agencies by on-reserve population cluster, ISC 2018 population data (n=112).

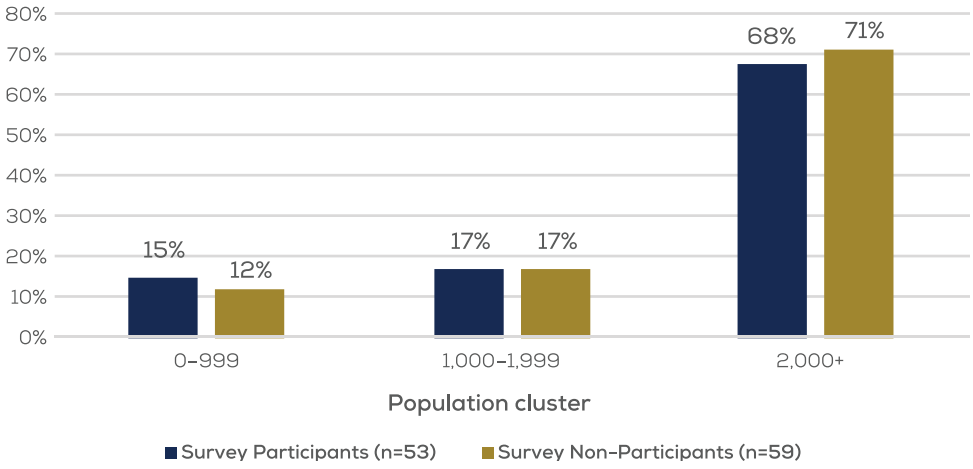


FIGURE 49: Percentage of FNCFS agencies by geographic zone (n=112).

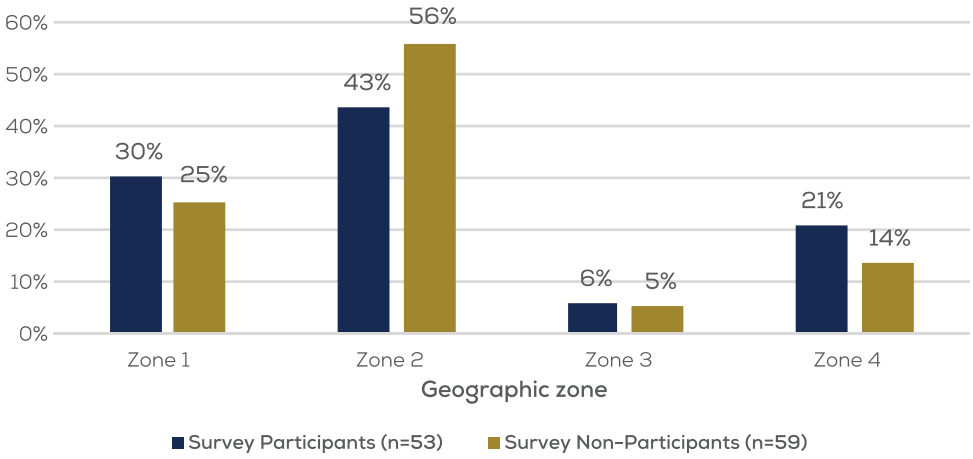


[319] Geographic zone refers to a First Nation's distance to a service centre and associated mode(s) of transportation.

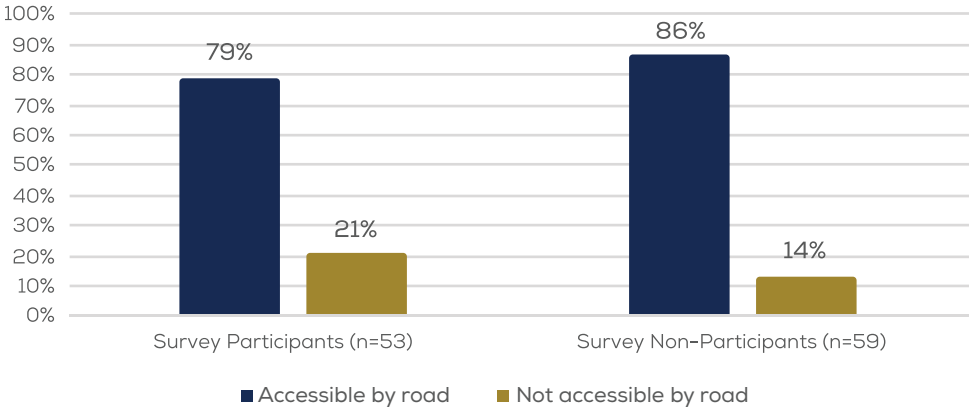
Zone 1: First Nations located within 50 km of a service centre.

Zone 2: First Nations located between 50–350 km of a service centre.

Zone 3: First Nations located over 350 km from a service centre.

Zone 4: First Nations with air, rail or boat access to service centre.

FIGURE 50: Percentage of FNCFS agencies by survey participation and road accessibility (n=112).

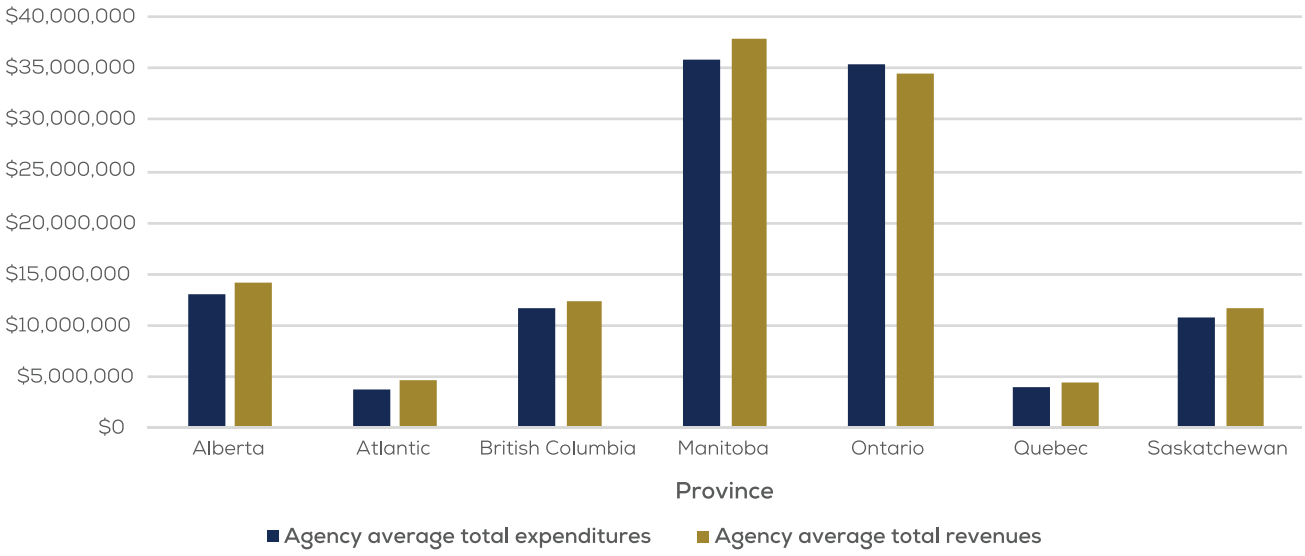


Responding FNCFS agencies reported average expenditures of $15M and average revenues of $16M (Table 16). The slightly higher revenues may be explained by the CHRT-supplementary payments or unspent revenues at the time of reporting. Manitoba and Ontario FNCFS agencies reported the highest overall revenues and expenditures (Figure 51). The size of the population served and the geographic profiles of the First Nations served may help to explain the higher average revenues and expenditures.

TABLE 16: Overview of FNCFS survey findings.

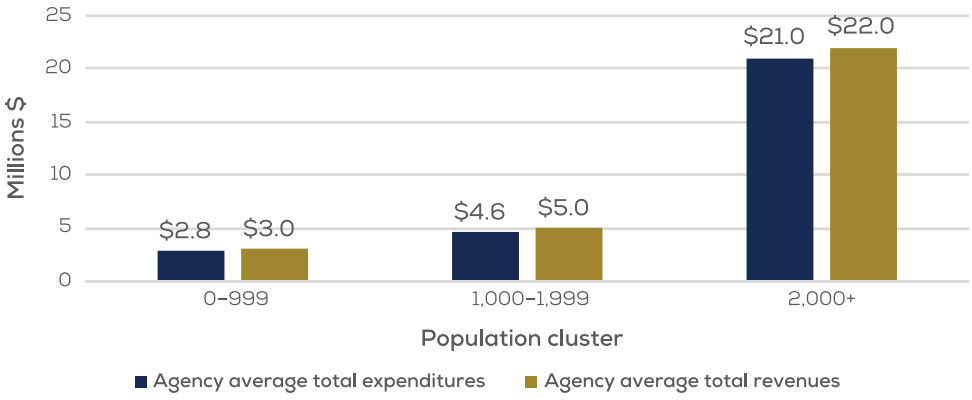
Total number of survey responses	57
Total number of useable survey responses	53
Average expenditure (n=53)	$15,462,653
Average revenue (n=53)	$16,217,900

FIGURE 51: Agency average total expenditures and revenues by province/region (n=53).



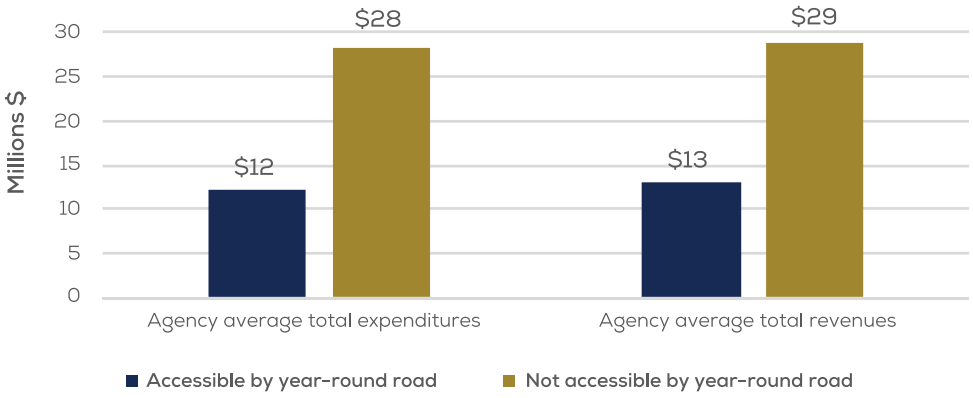
Greater variance in average agency budgets is displayed when the data is sorted by population cluster (Figure 52). Agencies serving larger total populations report larger average total expenditures and revenues.

FIGURE 52: Agency average total expenditures and revenues by on-reserve population cluster, ISC population 2018 (n=53).



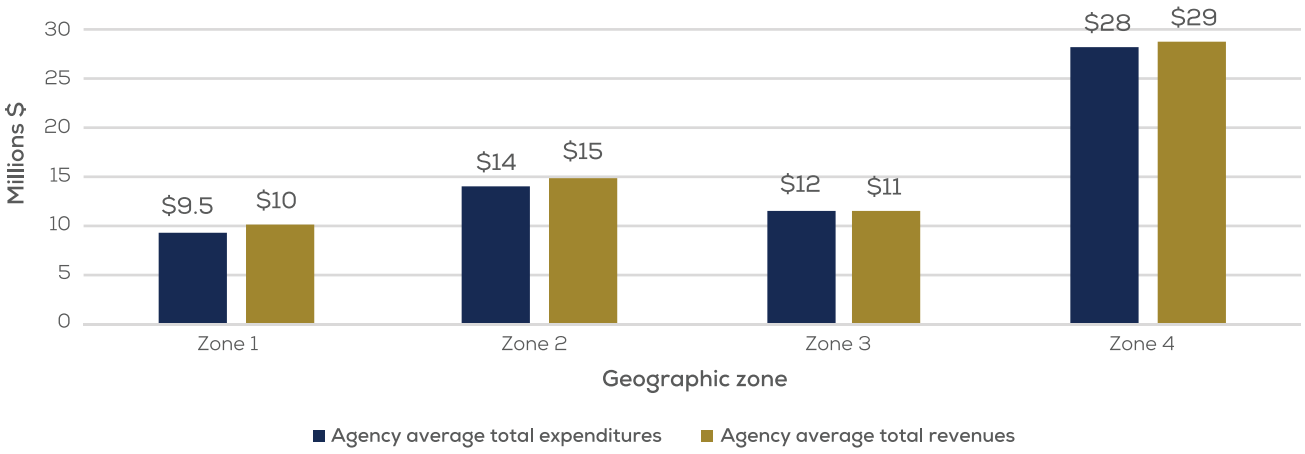
Agencies serving at least one First Nation without year-round road access report expenditures and revenues at least twice as high as those agencies serving First Nations with year-round road access (Figure 53).

FIGURE 53: Average agency total expenditures and revenues by road accessibility (n=53).



When sorted by the most distant geographic zone[320] of the First Nations served, agency average expenditures and revenues are highest for zone 4, consistent with the findings on road accessibility (Figure 54).

FIGURE 54: Average agency total expenditures and revenues by geographic zone (n=53).



On a per capita basis, agencies serving First Nations generally below their respective provincial poverty lines report higher revenues and expenditures than those above their respective provincial poverty lines (Figure 55). Possible explanations may include higher numbers of children in care (as poverty and neglect are a cause of contact with protective services) and the geographic location of agencies (the more remote, the costlier to deliver services).

[320] Geographic zone refers to a First Nation's distance to a service centre and associated mode(s) of transportation.

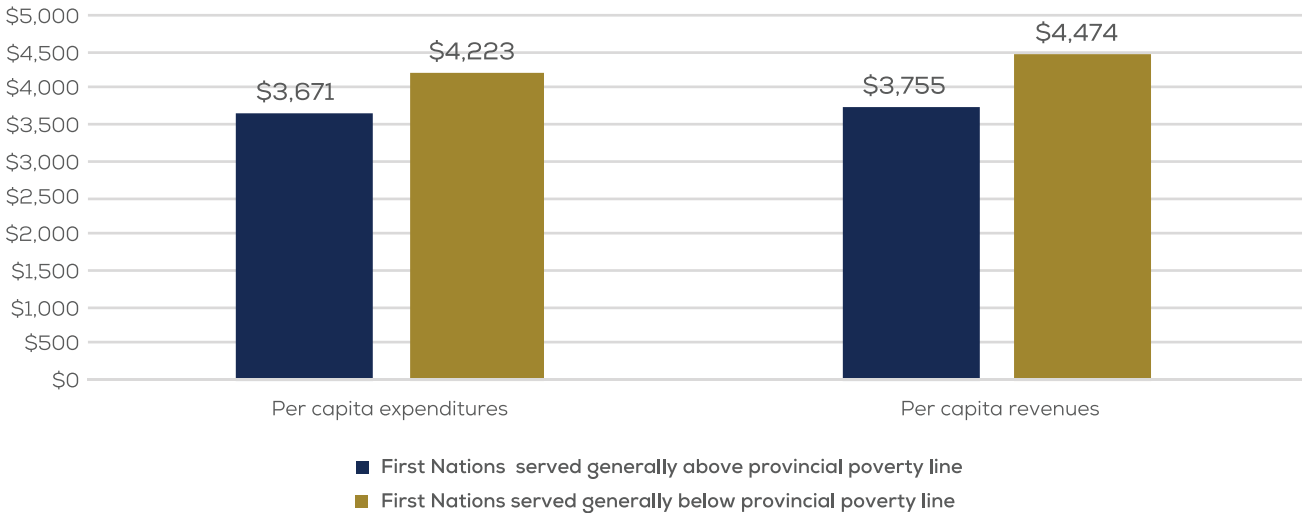
Zone 1: First Nations located within 50 km of a service centre.

Zone 2: First Nations located between 50–350 km of a service centre.

Zone 3: First Nations located over 350 km from a service centre.

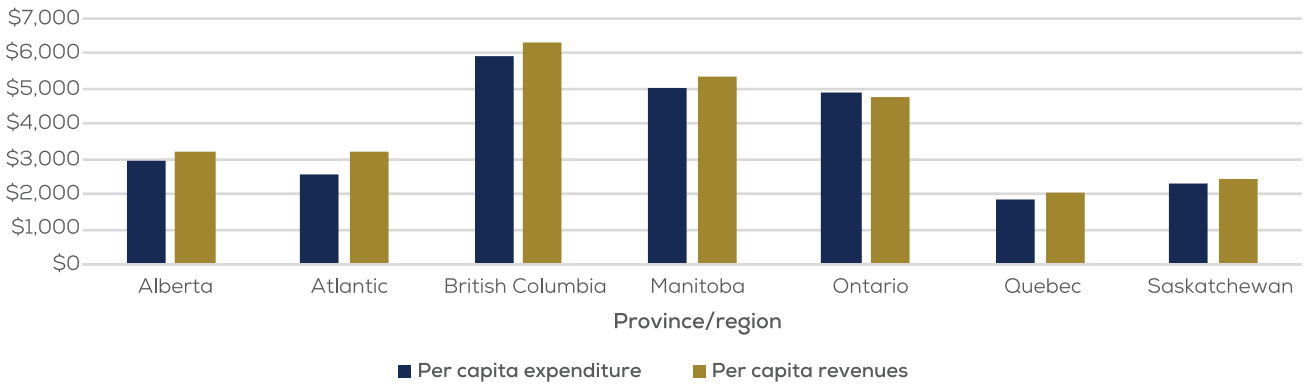
Zone 4: First Nations with air, rail or boat access to service centre.

FIGURE 55: Average per capita expenditures and revenues by poverty level (n=52).



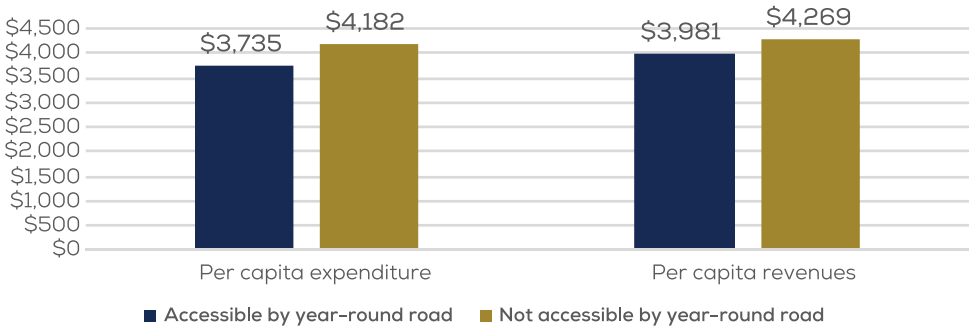
British Columbia's FNCFS agencies have the highest and Quebec's the lowest per capita expenditures and revenues when compared to their peers (Figure 56).

FIGURE 56: Average agency per capita expenditures and revenues by province/region (n=53).



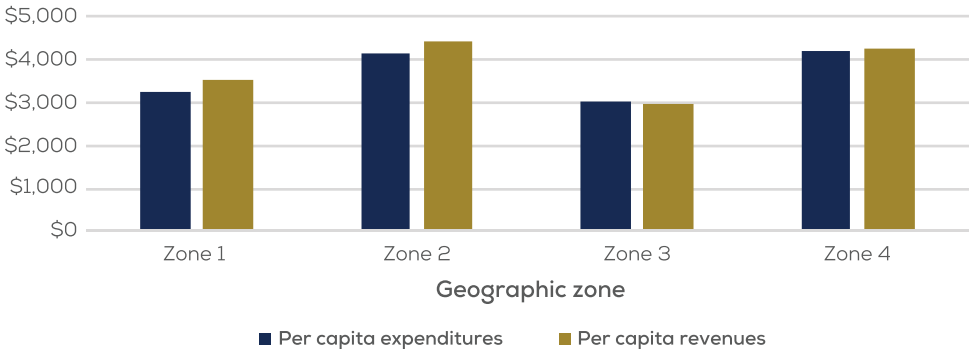
Consistent with previous findings on road accessibility, per capita expenditures and revenues for FNCFS agencies serving at least one First Nation without year-round road access are slightly higher than those accessible by year-round road (Figure 57).

FIGURE 57: Agency average per capita expenditures and revenues by year-round road accessibility (n=53).



By geographic zone[321], the highest per capita expenditures are exhibited by zone 4, whereas the highest per capita revenues are in zone 2 (Figure 58). FNCFS agencies with their most remote agency in zone 3 exhibit the lowest per capita expenditures.

FIGURE 58: Average agency per capita expenditures and revenues by geographic zone (n=53).



The majority (81%) of FNCFS agencies requested CHRT-mandated funding (Figure 59). Of the requesting agencies, those in British Columbia, Manitoba and Ontario reported receiving the supplementary funding (Figure 60).

[321] Geographic zone refers to a First Nation's distance to a service centre and associated mode(s) of transportation.

Zone 1: First Nations located within 50 km of a service centre.

Zone 2: First Nations located between 50–350 km of a service centre.

Zone 3: First Nations located over 350 km from a service centre.

Zone 4: First Nations with air, rail or boat access to service centre.

FIGURE 59: Percentage of FNCFS agencies requesting CHRT funding (n=52).

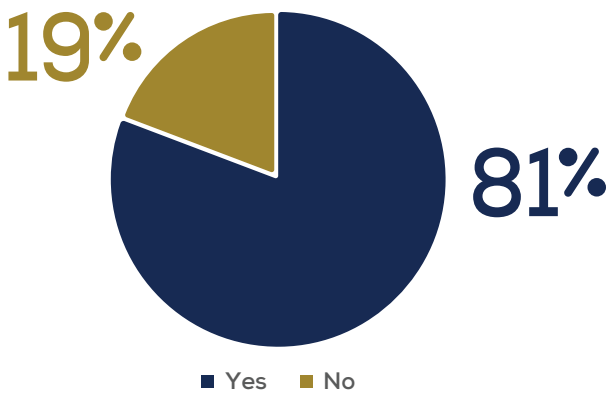


FIGURE 60: Percentage of agencies that received CHRT funding, by province (n=41).

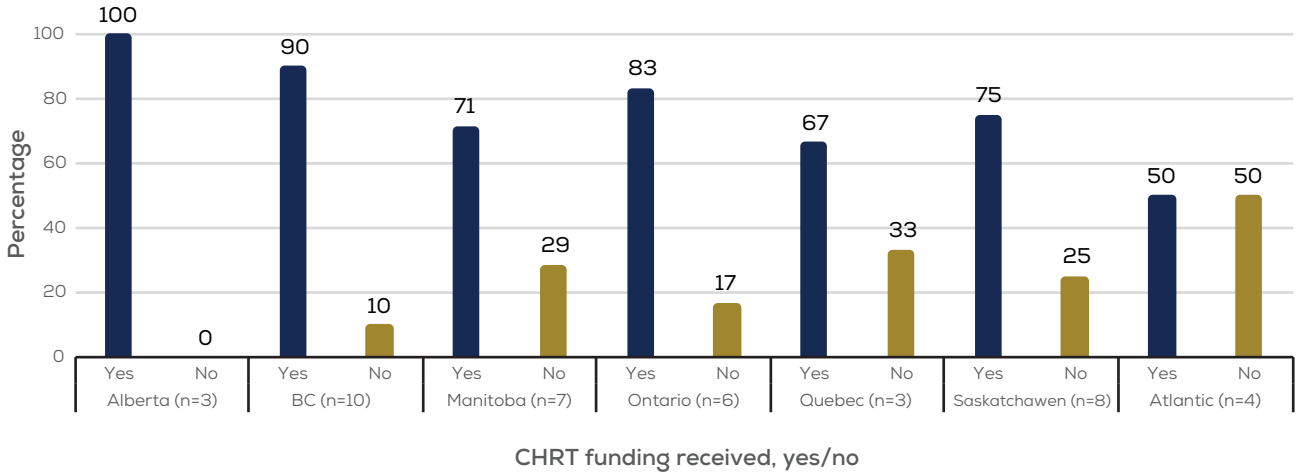

There is a slight variance between the intended CHRT funding applications and the actual ones (Figure 61). Most of the CHRT funding was applied to capital and operating costs among agencies, with several others reporting program and prevention applications (Figure 62).

FIGURE 61: Proposed applications of CHRT funding, percentage basis, multiple responses possible (n=42).

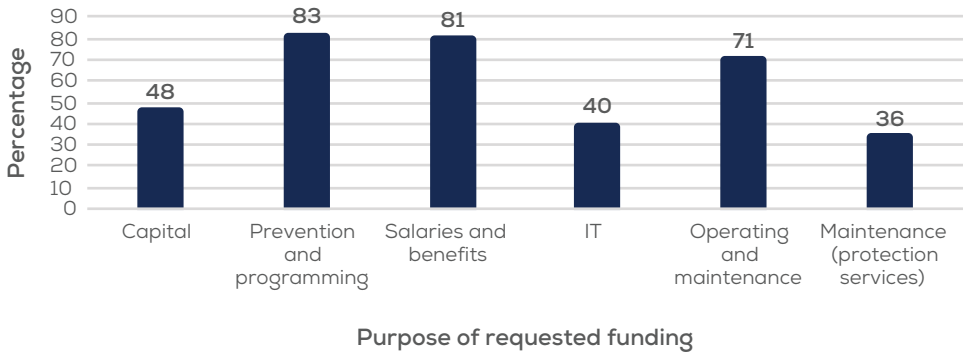

FIGURE 62: Actual applications of CHRT funding (more than one response possible) (n=42).

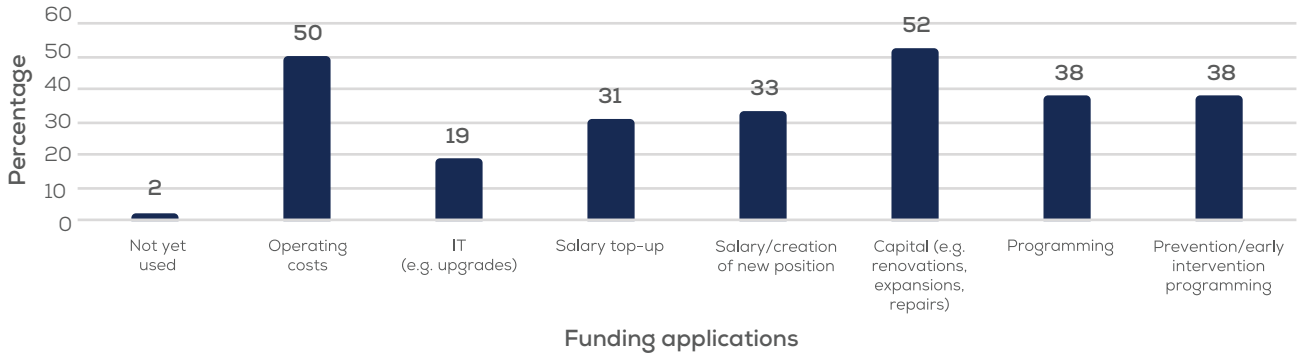


Over three-quarters of FNCFS agencies report collecting data at the program-level and approximately two-thirds on spending. The data is most frequently applied to budgeting and program development, and funding requests.

Funding approach scenarios

The proposed funding approach is designed to address identified gaps in FNCFS agency operations clearly. An agency or recipient should be able to easily understand the contributing components of their funding allocation. With 2018–19 FNCFS expenditures as a baseline, the approach adjusts the baseline budget by adding components to reflect the First Nations served and to support the Measuring to Thrive performance framework (Table 17).

The current expenditure baseline likely includes expenditures across funding components. The implementation of the funding approach will require an assessment of current capital stock, i.e. structures and vehicle fleets, existing IT infrastructure, to ensure there are adequate provisions and not an overcompensation for pre-existing expenditures on these budgetary components.

TABLE 17: Funding approach components and their applications.

Component	Quantification
Results	▪ Funding to support goals in the Measuring to Thrive framework. Percentage of baseline budget.
Prevention	▪ Per capita allocation, $800, $2,000 or $2,500 by population on-reserve.
Geography	▪ Factor increase to baseline budget, using ISC's weighted remoteness quotient.
Poverty	▪ Household basis; relative to provincial poverty line; Census 2016 data.
Capital	▪ Percentage (e.g. 2%) of total value of capital assets. ▪ Application-based fund for major capital projects, e.g. new building, extensive renovation, etc.
IT	▪ Percentage top-up to baseline budget of 5% to 6% based on industry standards for not-for-profit service organizations.
Emergency funding	▪ Percentage top-up to baseline budget to address unanticipated circumstances related to CFS, that affect demand for an agency's core services.

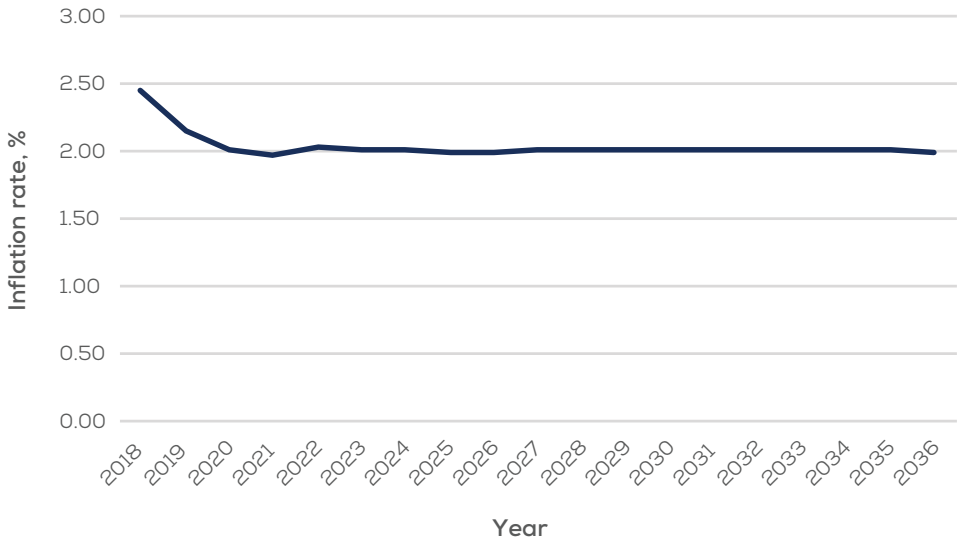
To model the funding approach, three scenarios are proposed, based on low, medium and high points in the ranges associated to each of the cost factors. To estimate the total system cost into the future, standard growth factors of inflation and population are applied. A standard 2% inflation is used (Figure 63) and Statistics Canada's constant population scenario[322] (for projections) are applied to the estimates.

The funding approach is premised on an existing baseline to cover protection and maintenance costs associated to safety. For new and emerging agencies, a different mix of resources may be required to support the needs of their communities. If no previous data on protection is available, estimates on the proportion of children that may have contact with the protection system can be estimated using findings from Phase 1.[323] Building from the proportion of the population served estimated to require protection services, the average cost per child in care of $63,000 could be applied to estimate a new agency's baseline budget for protection and maintenance activities.

[322] The constant population scenario assumes that the probability of giving birth estimated in 2011 remains constant among Indigenous Peoples until 2036. There are other population projection scenarios. The second scenario has birth rates converging moderately to reach half of the general population rate by 2036. The third scenario assumes complete convergence with the general population's birth rate by 2036. The constant scenario is adopted in this work for cost-estimating purposes. For more information: https://www150.statcan.gc.ca/n1/pub/91-552-x/2015001/section06-eng.htm.

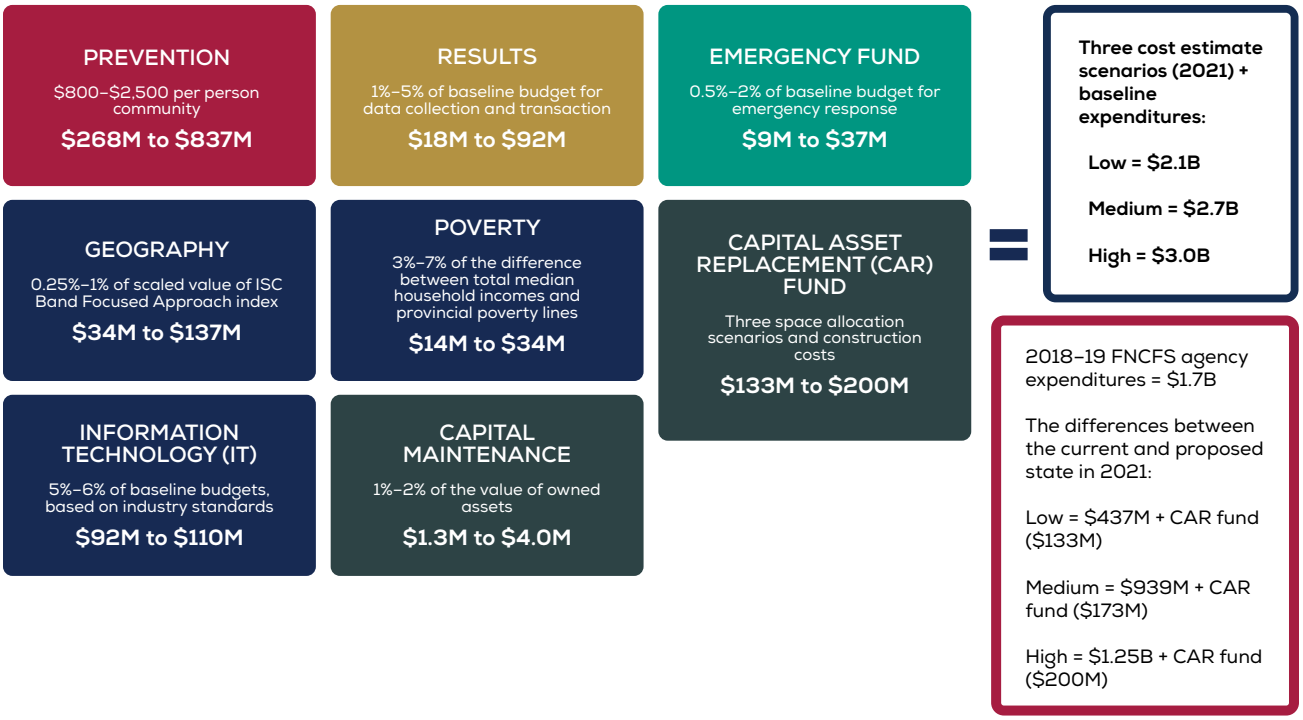
[323] IFSD, *Enabling First Nations Children to Thrive*, 2018, p. 63, Table 6 and p. 67, Table 9, http://www.ifsd.ca/web/default/files/public/First%20Nations/IFSD%20Enabling%20Children%20to%20Thrive_February%202019.pdf.

FIGURE 63: IFSD inflation forecast (2018–2036).



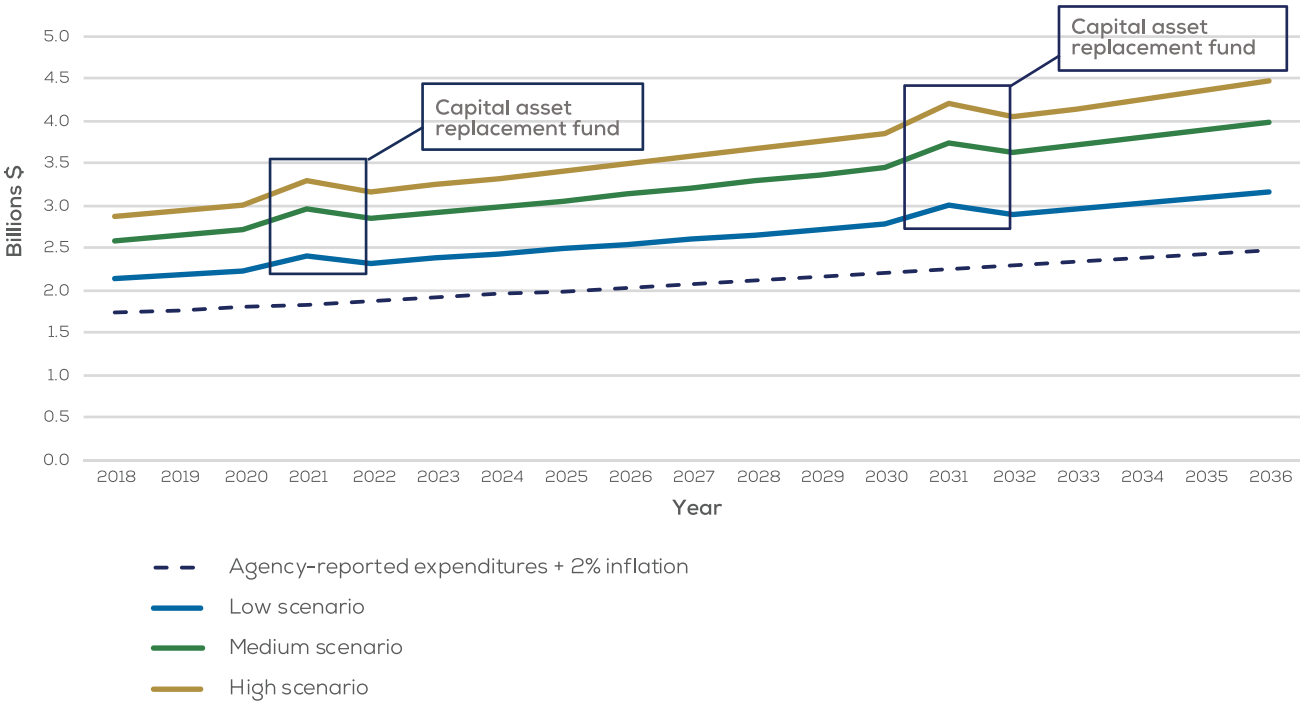
The proposed approach is modelled for 2021 using the constant population scenarios (Figure 64). The proposed funding approach represents an increase in overall system costs between $437M and $1.25B in 2021, depending on the selected scenario, plus capital asset replacement fund investments.

FIGURE 64: Cost estimate overview of the proposed funding approach.



The estimates are then projected out to 2036 with inflation and population (constant population scenario) as growth factors (Figure 65).

FIGURE 65: Total estimated system costs (low, medium and high scenarios), 2018–2036 (with Statistics Canada's constant population scenario and 2% inflation).



The performance framework and funding approach are directionally consistent with the Act, seek to address CHRT findings, and propose a way forward focused on the well-being of First Nations children, families, and communities.

Part IV: Transition

Introduction

IFSD's December 2018 report *Enabling First Nations Children to Thrive*, focused a great deal of analysis on the current state of operations, governance and funding for First Nations child and family services. The Phase 2 effort has focused on a future-state design based on desired outcomes, measurement and a new approach to funding. Designing the future state has been a bottom-up collaborative effort with First Nations agencies and the communities they serve. The exercise has been augmented by case studies from First Nations wise practices and international comparative analysis.

However, success in achieving a future-state vision for the benefit of First Nations children, families and communities can only be implemented with *change* and *transition* management strategies that are built on: credible strategies and plans, effective communications, phased/gated approaches, leadership and on-going support.

MANAGING CHANGE AND TRANSITION

The literature on organizational change and transition tends to coalesce around the idea that change is difficult. The US Department of Health and Human Services, Administration for Children and Families defines organizational change as "changes in child welfare agency policies, procedures, and practices resulting from the implementation of the Systems of Care initiative."[324] Implementing this kind of change can be difficult for an individual or a small enterprise, but the larger the organization gets, the more difficult change is to successfully realize. This is largely due to what Romanelli and Tushman discuss as the grounded inertia that develops in large organizations that becomes engrained over years and becomes extremely difficult to break free.

Understanding change is one of the keys to realizing successful transitions. Gray separates two types of change: incremental and discontinuous. The former occurs during periods of relative stability and slowly over time, while the latter occurs in a state of disequilibrium, often involving radical changes. With discontinuous change the organization leader is paramount but cannot do it alone and the executive team at the top needs to be central as well for successful

[324] US Department of Health and Human Services, "Systems and Organizational Change Resulting from the Implementation of Systems of Care," (November 2010): 32.

large-scale change. Discontinuous change requires innovative approaches to the development of people by linking people's motivation and skills to the change agenda.[325] It is important to understand these different types of change as Romanelli and Tushman argue for successful meaningful change to occur it must be sufficiently radical to break the grounded inertia of organizations.[326]

While managing change is very difficult, there are generally some key points the literature agrees are part of an approach for successful transition. These can broadly be summarized as having a clear plan/strategy, good communication, using a gradual or phased in approach, the importance of good leadership, and planning for and adapting to the unforeseen.

CLEAR PLAN/STRATEGY

For any kind of change to be successful there must be a clear, coherent and communicable plan for what the change is and what it will entail. Sirkin, Keenan and Jack contend that while change is indeed difficult, the real challenges usually stem from disagreements on what goals/results the change is seeking to realize.[327] Therefore, the most important starting point is having broad-based buy-in and agreement on what the change is seeking to accomplish and how this will be accomplished/measured.

Change cannot be seen as something where a policy is simply implemented and the outcome is improved results—it takes a comprehensive plan/approach to enable a environment conducive to success. Ostroff suggests that a plan usually has three major phases: identify performance objectives; set priorities; and roll out the program. He suggests engaging stakeholders ahead of time at workshops and discussing transition by asking questions such as: "Does the process have any redundant steps? Are there handoffs that should be eliminated? Are there steps that should be added? Which ones should be automated?"[328] It helps to have some tangible results that can be achieved early to point to success for continued buy-in even if it is not the ultimate goal. He also suggests it is important to "sow the seeds

[328] Frank Ostroff, "Change Management in Government," *Harvard Business Review*, May 1, 2006, https://hbr.org/2006/05/change-management-in-government.

of change in fertile grounds."[329] Start with top performers, those most willing to adopt changes and those positioned most well for success so they can set an example and pull others along showing how it is done and that it is both possible and worthwhile.

One of the biggest challenges to improvements in organizations as laid out by Johnson and Austin is the lack of evidence-based organization culture within various public and social services agencies. These authors lay out three main strategies for doing so: "(a) agency-university partnerships to identify the data to support evidence-based practice, (b) staff training (in the agencies and on campuses) that features problem-based learning approaches to support the introduction and utilization of evidence-based practice, and (c) the modification of agency cultures to support and sustain evidence-based practice."[330]

All of these various experiences and approaches outline the absolute importance of beginning with a clear plan that is broadly agreed on with end goals in mind. While the process is an important part of the change, it is only with the goal of producing results and this must be where the focus lays.

COMMUNICATION

Realizing successful organizational change is difficult, and this is largely because it is complex and is often done against forces of organizational inertia. Baines argues that the type of systemic organizational change that is discussed here cannot be treated as an apolitical set of policy tools, but instead effective communication must be utilized to ensure those affected by the change will realize the broader implications of the proposed transition.[331] Changes in funding approaches have been used throughout the OECD in a variety of sectors masked in the cloak of performance or productivity but often with the main goals targeted at cutting spending in one way or another. Nelson argues that one of the keys to success for transitioning to program-based budgeting for the City of Indian Well was actually using this change to promote transparency and accountability. Beyond achieving other goals, by having funding tied to clearly stated metrics and making the information publicly available, the entire process was demystified, and residents and policymakers welcomed the shift rather than resisting it.[332]

[332] Kristen Nelson, "Transitioning to Program-Based Budgeting," *Alliance for Innovation*, August 2017, https://www.transformgov.org/articles/transitioning-program-based-budgeting.

Communication is the first key to successful change outlined by Kezar as she says it is important to begin by mobilizing, which she suggests includes; "develop initial awareness of the need for change (data); create vision; galvanize support for change through discussion; mobilize leadership and collective action."[333] This communication is key to winning over stakeholders. Ostroff concludes there will be many stakeholders and theoretically you need to speak to and convince all of them, but to be effective you should focus your energy and resources on the biggest, most important, most directly implicated ones who can act as leaders in pulling in the rest. His findings suggest that usually around one quarter of stakeholders will be receptive to change, one quarter resistant and about half on the fence.[334] Thus, while beginning with a sound strategy and plan is the most important first step, effectively communicating this plan becomes just as important for successful transition.

PHASED-IN APPROACH

Intense occupational stress has a clear negative correlation to organizational change. The more stressed organizations are in general, the less willing they will be to change and hence less successful they will be at effectively implementing changes.[335] Newman looks at the case of ex-Soviet countries following the end of the Cold War. Communism disappeared quickly, but it took time for new mechanisms to take hold in its place as there were so many structural and foundational changes going on around the entire system which inhibited effective change happening quickly. These major changes are what she refers to as institutional upheaval, characterized by fundamental change to norms, values, and assumptions underlying economic activity. Major changes like this are difficult to accomplish until the institutional context becomes predictable and stable which must include a "social consensus [...] about the new values, norms, and assumptions that will underpin economic activity."[336]

Successful change must be sufficiently radical to break away from organizational inertia. Romanelli and Tushman found "supportive results [which] showed that (1) a large majority of organizational transformations were accomplished via rapid and discontinuous change over most or all domains of organizational activity, [and] (2) small changes in strategies,

[336] Karen Newman, "Organizational Transformation during Institutional Upheaval," *The Academy of Management Review* 25, no. 3 (July 2000): 616.

structures, and power distributions did not accumulate to produce fundamental transformations."[337] Each step of the change process must be something that is proactively planned for and managed. This means creating readiness within the organization, not simply waiting for change to be welcomed with open and ready arms.

Part of the gauging of readiness is assessing how much change the organization is ready for and how quickly. This should also be an ongoing assessment with constant monitoring as the change is implemented. The Council of Ontario Universities suggests this should often take a phased-in approach that, for PBF for example, sees a smaller percentage of funding being tied to performance at first that grows over time. Other cases have used a 'learning year' where you can work with providers to model what the new approach would have looked like had it been implemented. Another method has been a funding protection mechanism so that in any individual case funding can only shift by a limited amount in any given year. It can be beneficial to have user-friendly modeling tools to allow providers to estimate and plan for changes in funding.[338]

For the City of Los Angeles' transition to performance-based budgeting this took the form of a phased in approach along with pilot programs for two city departments. As the program develops and depending on political realities as it progresses these two departments can be used as blueprints for expansion. The plan consists of seven performance-based budget elements, and for the phased-in approach only the first two will be implemented with the following five left as options for future planning. The two were 1- redefining the city's organization structure around outcomes and 2- creation of a performance measurement process. The two pilot projects implement all seven budget elements to show what that would look like in practice to make broader decisions about the final five steps moving forward. They foresee needing a dedicated full-time equivalent (FTE) position as well as existing positions throughout departments to help with the ongoing transition process.[339]

Looking at the United Kingdom National Health Service, McNulty and Ferlie ask, 'do large scale changes work?' What they found was fairly complex as trying to change everything at once often does not work and

can have adverse consequences. Meanwhile incremental change can be held back by the existing parts of the organization which are still working in the old ways. Ultimately incremental change is seen as best when it is done in a way to have change in blocks sufficient enough to break organizational inertia, without trying to force through too much at once and creating unproductive stress.[340]

LEADERSHIP/SUPPORT

Strong and competent leadership starting from the top is a key success factor for effective organizational change. In a public sector context, Hornstein posits that this means political support from upper levels of government first, but also important is effective leadership throughout the rank and file as well. This leadership must foster creativity, partnerships and empowerment.[341] Tams argues successful change starts at the top—the CEO must be fully invested and a champion of the change. Ramanelli and Tushman had findings that similarly demonstrated successful transformations were heavily influenced by CEOs.[342] Leadership is key to institutionalizing the change and ensuring it is meaningful and lasting. To do so Kezar suggests leaders must "disseminate results; review; commit; persist."[343]

The Council of Ontario Universities have also found that beyond leadership at the top, it is important to provide transitional support at the ground level for successful change to be realized.[344] To do so Lawler and Foster argue data should be managed by a party outside of the providers as providers might lack skills, technology, methodology etc. to do so and it can add an extra burden during transition. It is important and necessary to lay out strict guidelines for the program relating to monitoring, reporting etc. However, once implemented having flexibility and latitude is important for keeping the end goals in sight rather than focusing on the process. Acknowledge perverse incentives and try to account for them.[345]

PLAN FOR CHALLENGES

Organizational change is often centred on some form of funding approach. When actors within the organization hear of change the first thing they will consider is 'am I going to lose funding/resources as part of this change?' Therefore, it is important to be open about these types of challenges and part of this will be the possibility of unforeseen costs in the implementation process of change. The Council of Ontario Universities reports that one of the gaps that exists in transition literature is the degree of unexpected costs associated with data tracking, developing learning capacity, initiatives to import performance and results evaluations.[346] Some states have used a "stop-gap" or "stop-loss" mechanism for the first year of transition to ensure that no providers are less well-off due to change implementation and any unforeseen costs which helps create a soft landing.[347] Similarly the Ontario Ministry of Advanced Education and Skills Development suggests that, as transition can be so costly colleges should receive one-time funding for restructuring costs associated with new funding formulas.[348]

There will inevitably be many challenges and concerns, and any resistance to change must be listened to and effectively addressed, argues Hornstein, not ignored.[349] No one will be under any illusions that any attempt at change will be perfect either with the new policy or with the transition process. It will be beneficial to all to openly address any perceived weaknesses, perverse incentives, extra costs, additional efforts required etc. in order work toward solutions collectively. Rather than have issues build up quietly and fester, developing responses to them head on will maximize successful change and transition.

Finally, the literature highlights two important considerations: formal organizational structure depicting how the plan ought to look like, and the informal organization design, how it actually looks in practice. This basically suggests that a perfect plan can be drawn up with an expert communication strategy for an ideally phased in approach, but in practice the transition will be met with unexpected challenges. It is important to keep the 'ideal' version plan in mind, while remaining flexible and having contingencies built in throughout. Keys to a successful approach for doing so include developing an administrative system for delegating duties, establishing oversight mechanisms and using metrics to report on performance.[350]

Considerations for FNCFS transition strategy

A review of the key success factors for the effective management of change provides some guidance for the transition strategy for a new performance framework, approach to measurement and funding models for FNCFS. Credible strategies and plans, effective communications, phased/gated approaches, leadership and on-going support will all be key components to a successful implementation. However, any approach to transition would have to be done in the context of First Nations needs and aspirations. It will be incumbent on First Nations' leadership and child welfare professionals to take the lead on transition and to integrate the findings of transition management research with their own wise practices and traditions.

Transition to the proposed future state is rooted in the vision expressed in the *Measuring to Thrive* framework. This approach emphasizes holistic well-being through children, families, and their communities. The focus on results is a departure from the current state that is segmented by activity streams (i.e. maintenance, protection, prevention). In the Measuring to Thrive vision, holistic well-being is pursued by recognizing need and contextual realities are not neatly segmented into policy areas. Instead, they must be understood and addressed as interconnected elements informing outcomes.

Funding approaches incentivize action. The current FNCFS system is driven by protection, with agency budgets correlating near perfectly with the number of children in care. It stands to reason that changing funding parameters would influence operations, programming, governance, and eventually, results. On an interim basis, there is evidence of such change with the supplementary investments from the CHRT ruling. Many agencies are enhancing prevention programming, building their staff teams, and developing evaluation and quality assurance practices. Elements of a future state have emerged from the CHRT exercise.

Transitioning from the current state to the proposed future state will require changes in performance measurement, funding practices, and governance. The future state represents a significant change in practice for agencies, First Nations and ISC. Built from the bottom-up with attention to need and realities on the ground, the proposed future state is informed by practice and lived experiences.

While the transition from the current to the future state will not happen overnight, there are contextual factors that will enable change. The CHRT's initial and subsequent rulings have driven change on an interim basis by increasing funding and requiring system reform. Complementing the openings provided by the CHRT are the legislatively defined

principles of substantive equality, a culturally informed approach, and the best interests of the child encapsulated in *An Act respecting First Nations, Inuit and Métis children*, on which to build change in the provision of child and family services. With the current context enabling change, First Nations, FNCFS agencies, ISC, and provincial governments have an important opportunity to take decisive action to chart a path forward for thriving First Nations children, families, and communities, rooted in holistic well-being.

TABLE 18: Transition considerations for FNCFS.

Organization	Immediate action (3–6 months)	Short-term action (6–9 months)	Medium-term action (9–12 months)	Long-term action (1 year +)
Agency Type 1	▪ Engage First Nations served ▪ Select team (or prepare to hire staff if required) to implement Measuring to Thrive framework ▪ Collect past 5–7 years of expenditure and program data for review and preparation for transition	▪ Consider serving as transition pilot agency ▪ Identify capital assets (for recommended needs assessment) ▪ Mock-up internal assessment of new funding approach, i.e. estimate new budget ▪ Determine data availability and requirements for Measuring to Thrive data needs ▪ Review human resource plans and necessary changes for new funding approach	▪ Begin regular data collection for Measuring to Thrive framework ▪ Prepare for fiscal year with new funding arrangement and reporting structure ▪ Note challenges in transition ▪ Collaborate with secretariat	▪ Note and suggest changes to Measuring to Thrive framework ▪ Support other agencies and First Nations transitioning to new approach ▪ Collaborate with secretariat
Agency Type 2	▪ Engage First Nations served ▪ Plan hiring for Measuring to Thrive framework integration ▪ Identify needs (human resources, contextual factors) to support transition ▪ Begin collecting expenditure and program data for review	▪ Consider serving as transition pilot agency ▪ Mock-up internal assessment of new funding approach, i.e. estimate new budget ▪ Determine data availability and requirements for Measuring to Thrive data needs ▪ Review human resource plans and necessary changes for new funding approach	▪ Identify capital assets (for recommended needs assessment) ▪ Prepare for fiscal year with new funding arrangement and reporting structure ▪ Note challenges in transition ▪ Collaborate with secretariat	▪ Begin regular data collection for Measuring to Thrive framework ▪ Note and suggest changes to Measuring to Thrive framework ▪ Collaborate with secretariat

Organization	Immediate action (3–6 months)	Short-term action (6–9 months)	Medium-term action (9–12 months)	Long-term action (1 year +)
Agency Type 3	▪ Begin collecting expenditure and program data for review	▪ Engage First Nations served ▪ Identify needs (human resources, contextual factors) to support transition ▪ Collaborate with secretariat	▪ Mock-up internal assessment of new funding approach, i.e. estimate new budget ▪ Determine data availability and requirements for Measuring to Thrive data needs ▪ Review human resource plans and necessary changes for new funding approach ▪ Collaborate with secretariat	▪ Identify capital assets (for recommended needs assessment) ▪ Prepare for fiscal year with new funding arrangement and reporting structure
Agency Type 4	▪ Begin collecting expenditure and program data for review	▪ Engage First Nations served ▪ Identify needs (human resources, contextual factors) to support transition	▪ Mock-up internal assessment of new funding approach, i.e. estimate new budget ▪ Collaborate with secretariat	▪ Review human resource plans and necessary changes for new funding approach ▪ Prepare for fiscal year with new funding arrangement and reporting structure ▪ Identify capital assets (for recommended needs ▪ Collaborate with secretariat
ISC	▪ Launch capital needs assessment ▪ Define recommendation for funding approach change ▪ Explore data architecture change for FNCFS within the department	▪ Support recommendation for funding approach change through cabinet ▪ Office of the Chief Financial, Results, and Delivery Officer and FNCFS program teams to guide architecture change within department ▪ Reset internal practices to align to new funding structure; adjust HR structure as needed ▪ Work collaboratively with pilot FNCFS agencies to implement new funding approach	▪ Prepare for interim evaluation of funding approach and data collection practices ▪ Liaise with pilot FNCFS agencies on interim progress of results framework and data collection ▪ Prepare for transition to new funding approach for first fiscal year	▪ Evaluate funding approach and results framework
Secretariat	▪ ISC to fund establishment of secretariat ▪ NAC as board of directors, to hire executive director of secretariat	▪ Engage with NAC as feedback mechanism/ advisory board ▪ Hire staff ▪ Define work plan for supporting agencies and First Nations	▪ Work collaboratively with pilot FNCFS agencies to monitor Measuring to Thrive framework results ▪ Engage in operational support activities	▪ Adjust activities as needed ▪ Receive and assess initial/draft results from Measuring to Thrive framework

Linkages to the performance framework

As a new and improved performance framework, Measuring to Thrive will offer perspective on the well-being of First Nations children, families, and communities, in keeping with the principles of **substantive equality**, the **best interests of the child**, and a **culturally-informed approach**. The Measuring to Thrive framework is intended to connect evidence, to funding, and outcome assessment. Designed to initially define a baseline for First Nations and FNCFS agencies, the framework will pinpoint challenge areas, and offer an evidence-focused means of readjusting their plans and priorities. The framework is intended to define two-way accountability between the federal government as funder and the agency as service provider.

This approach aligns to the Treasury Board's policy on results and marks a significant change from current practices. Rather than reporting on inputs, such as the number of children in care or the number of times a child moves in care, the framework will focus on how children, families and communities are faring through contextually-relevant and culturally informed indicators. Rather than collecting information and reporting on program basis (and largely on inputs), the Measuring to Thrive framework captures information at the level of the individual child, family and community and aggregates the findings to understand overall well-being.

Adapting to this performance approach will require major reform within ISC's approach to program management. Performance indicators and programs would no longer be understood in silos, but as an integrated whole. For FNCFS agencies and First Nations, there would be requirements to adopt data collection practices, connecting qualitative and quantitative information from various sources. FNCFS agencies and First Nations would not be alone in this journey. Through the consultation process, NAC and the project working group, it is recognized that some agencies and First Nations already collect and analyze their own data and may be prepared to adapt to the new approach with ease. Others, however, will require additional support and resources. A First Nation-led secretariat, with a mandate for data collection, analysis and operational support, will be a critical source of information, analytical tools and knowledge, available to work with agencies and First Nations in transitioning to this new approach.

Service delivery

FNCFS protective and prevention services are primarily delivered by agencies with varying mandates and levels of delegation (for interventions and removal). Jurisdictions governing CFS tend to define

functions and parameters of service delivery in legislation.[351] Agency staff tend to be social work professionals with the skills and training for the specialized care at times needed by children, families, and communities.

There are existing networks of practice in social work, provincial legislation, and codes of ethics that help to guide actions and decisions. At the provincial level, Colleges of Social Workers are the regulatory bodies that govern the profession, with other associations engaging in advocacy. For instance, in British Columbia, the British Columbia College of Social Workers (BCCSW) oversees the practice of social work, through an entry to practice exam, regulations (standards of practice and a code of ethics), a Continuing Professional Development Programs and processing complaints against Registered Social Workers.[352] The British Columbia Association of Social Workers (BCASW) supports members, works to strengthen social work practices, and advocates for social justice. At a national level, the Canadian Association of Social Workers (CASW) has a Code of Ethics and guidelines for ethical practice. CASW also assesses the credentials of social workers trained abroad, and offers professional development opportunities, and resources for social workers, among other responsibilities.[353]

One of the primary aims behind the professionalization of social and health services is improving the quality of care received by clients, for this reason different measures including clinical guidelines are implemented.[354] Broadly, research demonstrates that properly developed evidence based guidelines minimises potential harms.[355] Researchers have also demonstrated the benefits of evidence-based practice (EBP) within Child Welfare Services, and how social workers could implement an EBP framework.[356]

In the United States (US), there is a history of partnerships between the US Children's Bureau, state child welfare agencies and schools of social work within public and private universities. These partnerships

have led to the development and professionalization of public child welfare services.[357] The federal government has committed to increasing the number of social workers within public child welfare services. The underlying belief is that employing more qualified social workers will improve service delivery.[358] When assessing the US approach, research has found that "children whose caseworker held a social work degree were more likely to have their situations investigated, to have their abuse substantiated, to be placed in the home of a relative, to have fewer moves during foster care, to experience more visits with family while in care, and to be placed in adoptive homes."[359] A 2012 study found that social workers reported knowing more about community resources, and felt more skilled at creating service plans than their non-social worker counterparts. The same study found that within agencies, retention rates after three years were significantly higher for social workers than for non-social workers.[360]

The benefits of professional delivery of CFS are established, but not free of bias. Research demonstrates the influence of racial bias in professional decision-making. One study suggests that "race is a primary determinant of the difference in decision-making outcomes among child welfare professionals and collaborating systems."[361] Furthermore, families of colour express the need to have people who look like them representing their voices in child welfare decision-making.[362] Some social work associations, such as the National Indian Child Welfare Association (NICWA), focus on representing racialized communities. NICWA's programming centres around structural risks and strengthening the holistic well-being of American Indian/Alaska Native children in the US.[363]

Scholars also point to valuing different forms of knowledge and expertise as crucial elements of successful community empowerment work.[364] This approach emphasizes the value of experienced local people in providing CFS. There are also studies that highlight the success of community approaches in child welfare.[365] David Este, among others, has written on the value of cultural competency within the social work field.[366] He notes that most theoretical approaches and practice models are Eurocentric, and hence deny the social and cultural experiences of racialized groups.[367] An approach centered around cultural competency recognizes that the values, beliefs and norms of the community receiving services must be taken into account.[368] The Canadian Association of Social Workers national code of ethics endorses emphasizing cultural competency at the individual and organizational level.[369]

Given the realities of racial disparities within the social services sector,[370] and the overrepresentation of Indigenous children within the child welfare system; it is critical that best practices in child and family services be adapted to the Indigenous communities they are serving. A community building approach in the context of FNCFS, would help advance the principle of cultural continuity as elaborated in *An Act respecting First Nations, Inuit and Métis children, youth and families*.

There are several Canadian educational institutions that deliver social work programs that emphasize bringing together different forms of expertise to ensure that Indigenous communities are served by culturally competent professional social workers. For instance, the Faculty of Social Work within the University of Manitoba offers a Master of Social Work—Indigenous Knowledges Program.[371] This program ensures that social work education, as well as practice skills are rooted in Indigenous

ways of knowing and being. One of the objectives of the program is "[t]o maintain a close connection with Indigenous communities and agencies in the delivery of the program."[372] Laurentian University also has an accredited degree in Indigenous Social Work (which can lead to registration and licensing from the provincial social work body). The program includes two field education placements and focuses on Anishnaabe traditional teachings.[373]

Other institutions, like Yellowhead Tribal College and the University nuhelot'įne thaiyots'į nistameyimâkanak Blue Quills, also use educative approaches to ensure the cultural competence of community social workers.[374] The Yellowhead Tribal College was established by the Yellowhead Tribal Council and operates in Treaty 6 territory to serve its four member nations. The college offers an Indigenous Social Work Diploma. The program is founded on Indigenous knowledge that also examines Western concepts and approaches.[375]

As agencies and First Nations continue to engage in and explore the delivery of FNCFS, professional practice to support children, families and communities, legal liability for practice, and the centrality of cultural context should be carefully considered.

Funding practices

The proposed changes to the funding architecture are intended to enhance practice on the ground, through sustainable, reliable, flexible and consistent funding. The approach would also benefit the federal government as funder, by enabling a longer-term planning horizon, with the allocation and reporting of public funding tied to results. Effective outcomes for First Nations children, families, and communities are not incompatible with sound public finance practices and are, in fact, underscored in the business case for the proposed approach. Case studies will highlight the benefits of new funding approaches as well as the strategic consideration of transition to a future state.

West Region Child and Family Services (WRCFS) block pilot in the early 1990s, offers important lessons on transition, the value of leveraging internal data for planning and practice development, and the importance of addressing the *causes of the causes* in child and family services for better results and improved alignment of resources to outcomes.

Existing funding policies and guidelines impeded WRCFS from delivering services that could mitigate risk to children, and, where children did come into care, promote cultural and relationship permanency for the children. Based on the analysis that WRCFS had done on children in care and historical spending patterns, WRCFS believed that it was feasible to move to a block fund. It was the Agency's position that with the ability to be more flexible, there were some immediate savings that could be realized in maintenance spending, thereby leaving funds that could be diverted for prevention/alternative programs and services without additional funds.

While there were risks involved, the Agency's analysis and risk mitigation strategies indicated that the benefits of capping maintenance were greater than the risks. The WRCFS pilot project began in fiscal year 92/93. Initially to run for one year, the pilot project was renewed on an annual basis until fiscal year 10/11.

The first and second quarter of the first fiscal year were devoted primarily to transitioning the Agency operations and staffing to what was envisioned as possible under a block funding arrangement. During the first six months of this first year, the Agency collected, reviewed, and analyzed data about the children in care and the costs of child maintenance in prior years.

The block fund allowed the Agency to expand the definition of children-in-care to include children *in need* of care, and so provide robust family support services aimed at keeping children in their own home. Without the flexibility offered by the block funding, such family support services would not have been possible.

It was one of the key advantages of block funding that the Agency was able to provide services to address child safety concerns without having to place the child in formal out of home care. With the provision of the various community prevention and regional programs, as well as individual supports provided to a family and/or child, the Agency was able to reduce the children in care through reunification back with family, reducing the length of time a child spent in out of home care, and/or avoiding placement in care in the first instance.

With the move to block funding of maintenance, WRCFS agreed to cap maintenance and manage child maintenance expenditures within a set block of money. The agency succeeded in diverting funds to alternative preventive programs and services, with a determination to ensure child safety was upheld.

To achieve the change in practice, considerable changes in attitude, policy, and practice at all levels of the agency were required. Equally, or perhaps more, critical to success was the need to have community engagement and support in making this shift (see Appendix R for a more detailed assessment of the WRCFS experience).

Lessons from Tennessee

The State of Tennessee's approach to child welfare is premised on the goal of timely permanency for children (either through family reunification or adoption). By reducing the length of stay of a child in care, there are improved outcomes for the child and lower associated costs.

To achieve the goal of permanency, Tennessee adopted a performance-based contracting (PBC) model. In this model, providers are financially incented to promote the permanent placement of children and are benchmarked against their own performance. The state pays for a result and bills providers that do not meet their agreed targets.

There are three core components to the PBC model:

1. Reduce the length of stay of a child in care;
2. Increase rates of permanency;
3. Reduce rates of re-entry of children into the protection system.

Since its initial implementation in 2006, Tennessee's PBC model has proven to be cost-neutral for the state and has promoted a reduction in the number of children in care.

Tennessee's child welfare system is comprised of state-run apprehension services supplemented by a network of providers. The providers undertake all maintenance, placement, family-support and care services post-apprehension or contact with the child welfare system.

To help to ease the transition process, Tennessee paid providers a higher per diem rate per child to help the providers adapt to the change. Once transition was complete, per diems were standardized.

Operating, programming and capital considerations

The foremost concern of any agency in transition will be to the well-being of the children, families and communities in need of their support. Agencies and First Nations have different points of departure based on their individual contexts, geographies, political realities, etc. Transition would be informed by these realities, with the experiences of each agency and First Nation different than that of others.

Agency size, budget, and mandate complexity inform activities and approaches. Consistently, FNCFS agencies have demonstrated adaptability to changing circumstances in communities and in resource/funding changes. This adaptability is informed by the scale and circumstances of the agency. This suggests that: operational sophistication/complexity and agency size and/or mandate complexity appear to be primary factors in managing change. Operational consistency, i.e. knowing your 'business' and having existing policies, practices and procedures, can help to navigate change. Agency complexity, i.e. having a multi-faceted mandate or serving a large population, will inform the resources required to manage change.

Recognizing that there are different points of departure, an agency's **size** (based on the total population served) and its **operational complexity** will shape its management of transition. Based on the series of case studies developed for this report, four typologies of agencies are identified (Figure 66).

FIGURE 66: Agency typologies based on size and operational complexity.

An agency may have one or all of the characteristics in the category. The typologies are meant to be illustrative and not exhaustive, to capture core considerations in transition. Large agencies tend to have above average total budgets, which means higher numbers of staff, and typically, a degree of operational flexibility, owing to scale, to reallocate resources based on changing circumstances. Furthermore, large agencies tend to bring various services in-house for cost-savings and efficiency. From finance and human resource expertise, to quality assurance departments, large agencies tend to exhibit operational independence. By contrast, small agencies will have a higher fixed cost of doing business, as their expenses cannot be spread across a larger population. To this end, some smaller agencies have expressed the utility of leveraging back-office supports from their band councils. From human resource support to space, small agencies may not need or have the flexibility in their budgets to acquire a complete suite of internal structures and services.

Transition for large and small agencies must be clearly defined in financial, performance and governance terms. It is expected, however, that any change in funding approach and performance framework would require notice, clear information, consultation, and a phased approach. Agencies and First Nations cannot be expected to change courses instantly on child and family services, but as the cases of WRCFS and the State of Tennessee suggest, transition with appropriate pre-planning, data, and leadership can be successful.

While the way large and small agencies may manage their operations and manage changes may differ, there are common lessons from the case studies that are universally applicable. Resources and time are necessary to undertake impact analyses and plan the human, financial, and governance implications of changing a funding approach and performance structure. Unforeseen challenges, such as the COVID-19 pandemic, natural disasters, or mental health crises, can impact planning. While these challenges cannot always be foreseen, strategies for risk management and resiliency building can be additive for agencies and First Nations. As the case of DOCFS demonstrates, an emergency plan for the mobilization of human and financial resources can be applicable to various emergency and unanticipated situations.

In normal and exceptional times, agency staff are essential to delivering mandates and navigating complex circumstances. Carrier Sekani Family Services (CSFS) has empowered its staff to innovate, test, fail and succeed in their programming and services. While not all agencies will be large enough to sustain a communications department, CSFS depends on outreach across various platforms to engage communities and staff in agency activities. During transition, regular, consistent and clear communication with staff and First Nations will be essential. When faced with their own internal changes, Mashteuitsch engaged staff in regular planning sessions. Their working groups that required the integration and collaboration of various sectors and departments, carried into the new organizational model.

Leadership is an essential component of operational success and transition. Agencies that have competent, respected leaders tend to build cohesive staff teams. The culture the leader helps to instill in the organization can motivate and encourage staff. Executive directors seldom promote their own work. Their staff however, are quick to remind that their leadership style is a decisive factor for the agency's culture.

Transitioning to a model that leverages data and evidence for decision-making requires leadership and vision. Kw'umut Lelum's experience demonstrated that a *focus on outcomes must be accompanied by clear lines of accountability, requisite human capital, IT and data resources*. The agency's appreciation for relevant data focused at the level of the child and their community, supports the development of needs-based programs built from the bottom-up. From budgets to programs, Kw'umut Lelum is building real-time portraits of its communities, their needs and what works for them, through an outcomes-focused data system.

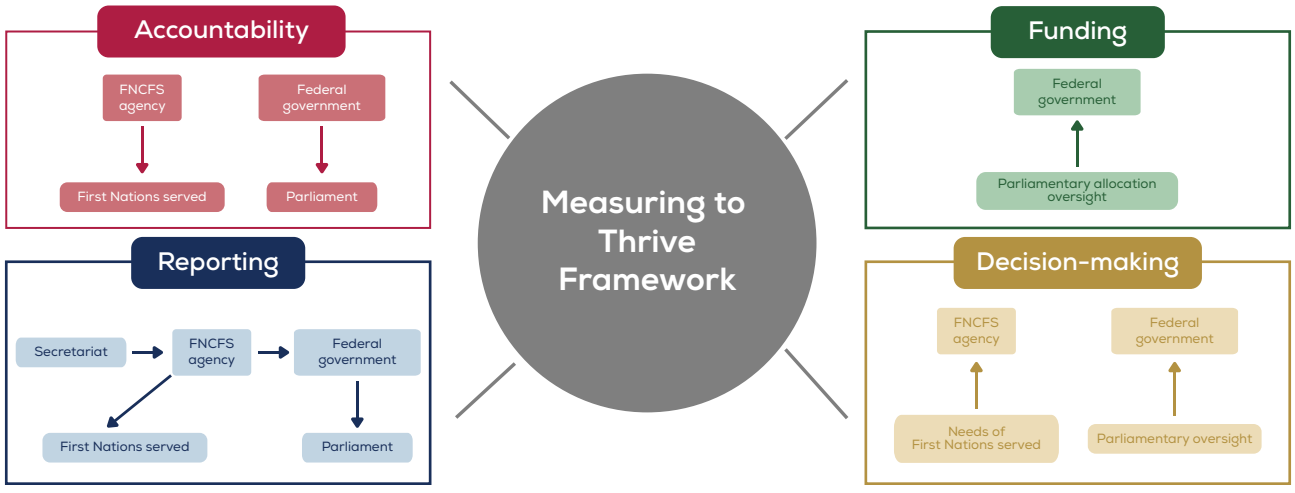
Governance

Transitioning to a bottom-up funding approach and performance framework informed by the lived realities of First Nations children, families and communities, will impact existing governance and accountability practices (Figure 67).

For the federal government, accountabilities for funding and its associated reporting obligations to Parliament will remain consistent. What will change are internal linkages among results for children, families, and communities, and funding for FNCFS. The FNCFS program will no longer be siloed, but understood horizontally with connections between the core elements of the framework.

In the current state, most First Nations and FNCFS agencies follow provincial child welfare laws, especially, for protective services. The majority (if not all) funding for FNCFS on-reserve comes from the federal government. Ontario's agencies are an outlier, with funding governed by the Ontario 1965 Agreement. While provinces are not expected to be immediately impacted by funding and performance framework changes, they may benefit from leveraging the integrated approach.

FIGURE 67: Governance overview.



The engagement of First Nations and band councils in transition is inextricably linked to its success. Various case study agencies identified practices and approaches to engage First Nations, particularly during times of change. WRCFS, for instance, introduced regular briefings on its block pilot and built community-based teams, to support prevention activities.

NOGDAWINDAMIN
ONTARIO

Nurture your community; plant the seed of wellness.

Nogdawindamin is a large agency, with strong reporting and evaluation practices, that focuses on prevention across policy areas. The agency demonstrates a professional approach to administration, with strong leadership. Its data-driven approach is an integral component of its model. Engaging with communities is essential for sustainability, programming relevance, and for building trust in the organization.

Context

Established in 1990 as a prevention-focused service organization, Nogdawindamin expanded in 2017 to become a fully provincially designated First Nation child and family services (FNCFS) (Society) agency. Culture informed its founding, with grandmothers rallying to put forth a community-focused vision of wellness by strengthening families through their communities.

The tradition of strong community engagement continues today. Nogdawindamin has grown its practice to leverage the knowledge of elders and community leaders to support the seven First Nations it serves.

Nogdawindamin has worked to close service gaps in child welfare by deterring families from entering the child protection system. Their prevention-focused approach extends beyond child and family services and includes neo-natal care, children's mental health, and cultural programming. The agency has a large quality assurance department that employs 12 staff, it is performance-focused with interval reporting, program-level data, and regular impact and outcome assessments.

Nogdawindamin's success can be characterized by:

1. Professional planning and administration;
2. Community engagement;
3. Space for action (non-interference).

Nogdawindamin in brief

Nogdawindamin's mandate extends across a large geographic area to reach the seven First Nations it serves. The differentiated contexts of these communities require different approaches and considerations in the provision of prevention and protective services.

Programming

Culture as a moral compass

Nogdawindamin considers itself a support organization for communities, as they work to develop their programming. Communities engage on their terms, with some prepared to take on substantive roles, and other's smaller ones. While some First Nations-run their programs, others prefer Nogdawindamin to run them as they do not have the capacity. In its approach to program development, Nogdawindamin works directly with communities to understand needs and takes a collaborative approach to assist to build their capacity.

In Nogdawindamin, culture is considered a tool to help the organization walk with people, to let them know that the agency is there and available anytime they might need help. The approach is about empowering children and families by giving them options, tools, and support.

The Anishnaabe Audziwin Cultural Service Team and Elder Council exemplify the approach. The team intervenes by self-referral or referral by a worker and performs a variety of roles from supporting in times of crisis to ceremonies. Initially established in September 2009, with three employees and a $250,000 budget, the program today has grown to 33 employees and a $2.5 million budget. The program's growth reflects the community uptake of the approach. Similarly, the Elder Council is composed of a team of elders who work across 600 km to support and provide guidance as needed.

Jurisdiction and self-determination are carefully guarded by Nogdawindamin. Resources from CHRT (and other sources) have supported Nogdawindamin's prevention-focused approach to care. With the extra resources, Nogdawindamin can stretch conceptions of risk and foster care prevention, to work in the best interest of the child. The trust of communities is high, which enables the approach.

The challenge, however, is that the current funding approach is piecemeal and must sometimes be renegotiated and reinterpreted as staff change in government departments.

Operating

Nogdawindamin has built a quality assurance department for its organization. The team plays an integral role by supporting organizational cohesiveness, using data to ensure programs and

policies are meeting needs, aligning to budgets, and informing short-, medium- and long-term planning.

Data is collected from programs and activities for internal use and analysis to improve policy, planning, and program development. Just as the agency has two parts to its mandate, the quality assurance department has two branches:

1. Prevention: focused on impact assessment and ongoing alignment on service objectives and outcomes.
2. Protection: focused on compliance, auditing, and the application of pre-existing policies.

The focus on data and alignment of activities to organizational goals has facilitated the linkage between expenditures and services. Nogdawindamin regularly leverages the alignment of its charter of accounts to program activities to substantiate its expenditures and disputes on resources with funders. When it comes to protection, children in care undergo quarterly, multi-service assessments to better identify services and supports required for children. Through the process of reviewing and auditing psychotropic medication, enhanced and specialized services have been developed. The result has been a reduction in the prescription of psychotropic medications for children.

Information technology (IT) planning has been central to the organization's growth. As Nogdawindamin expanded, it consciously ensured its hardware and software grew in tandem to meet needs and integrate into operations.

Governance

Nogdawindamin's operations are the responsibility of the Executive Director and nearly 355 hundred staff. The Executive Director maintains regular governance and accountability practices with the First Nations served. Quarterly reports are shared with communities that include service updates and details related to child welfare and well-being. Assist's in the role of regional gatherings for collaboration on services. There is a regular collaboration with First Nation communities and departments of the North Shore Tribal Council, e.g. health, social, etc. to leverage resources and build stronger programming.

The board of directors that oversees Nogdawindamin's activities has played an important role at critical moments for the organization. When Nogdawindamin wanted to assume child welfare designation, the board required that a substantive

prevention budget be maintained to approve the protection mandate. There is always at least one member of the board of directors with a 25-year corporate memory, to help to guide the organization in its decision-making. All directors serve two-year terms and can be re-elected. Board members are appointed and are from the North Shore First Nation Communities and have Indigenous life experiences, which along with their corporate and community knowledge, is instrumental in navigating community politics.

As a result of Nogdawindamin's mandate coming from the communities, the agency has benefited from, a natural trust that affords space for action, without political interference from elected officials. Politicians trust administrators and their competencies at Nogdawindamin and recognize that the burden of accountability for the well-being of children in care resides with the organization.

Lessons and considerations

Nogdawindamin is a large agency, that serves seven communities, with culture as its moral compass, and a budget reflective of its scope and mandate. The robustness of its internal operations would be difficult to replicate without the scale and staff.

The lessons to take away from Nogdawindamin—irrespective of agency or community size—are threefold:

1. A professional administration, with strong leadership dedicated to responsive planning, is crucial for meeting challenges and addressing changes. Data is a crucial component of the approach, with a clear conception of what happens financially and operationally in the organization.
2. Engaging communities is essential for sustainability and the relevance of programming and support. Fostering well-being starts with understanding the people you serve and meeting them on their terms.
3. The space for action is expanded through confidence building. Trust in the organization and its people is essential, especially in matters as personal as child and family services.

The politics of any community can influence its operations. Band councils have different laws and electoral practices, with some changing every two years and others every four years. This can sometimes make it challenging to reconcile faster moving political cycles with medium-term oriented change management strategies. The frequency

of political change and associated decisions can alter relationships and perspectives on various programs and services on-reserve, including FNCFS. While there are agencies that have exhibited strong working relationships with their band councils, other agencies have expressed negative impacts from band council politics, for various reasons, e.g. mistrust of protective services, interest in managing finances, etc. There is a spectrum of relationships between First Nations, band councils, and FNCFS agencies. With *An Act respecting First Nations, Inuit and Métis children* in force, First Nations, band councils, and FNCFS agencies are entering a new dynamic phase of their relationships. In the context of this report, the focus remains on substantive equality, the best interests of the child, and a culturally-informed approach, to support holistic well-being.

Transition support: First Nations-led secretariat

The secretariat will be designed as a First Nations-led dual-mandate organization with responsibilities for data collection, analysis and operational support. It is proposed that such a secretariat be funded by ISC for the benefit of FNCFS agencies and communities.

As the trusted third-party among stakeholders, the secretariat would be a neutral expert organization governed by a board of directors. The secretariat would serve FNCFS agencies and First Nations. Independent from government, the secretariat will not play an advocacy role but rather one focused on evidence generation and operational support (e.g. programming, offering drafting support for child and family services laws for First Nations, etc.)

The secretariat would be a centre for best practices and operational support. With two main branches of activity: 1) data/evidence and 2) operations and programming, the secretariat will serve as a centre of excellence for First Nations and FNCFS agencies in Canada.

Leveraging the proven model and experience of the Center for State Child Welfare Data which resides in Chapin Hall at the University of Chicago, the secretariat will work with service providers to turn data into evidence and to support operational matters. Rather than simply transposing the US approach, a First Nations-led secretariat would be informed by practice and lived experiences of Canadian First Nations and the practitioners that support them.

The secretariat will have an executive director that oversees operations, a director of evidence for child and family services, and a director for operational supports and programming. Each director will have three to

five staff, with the addition of extra research and analysis support should it be necessary. Should the secretariat be affiliated to an existing entity such as the FNIGC or a university, it could leverage the existing overhead services (e.g. IT services, accommodations, libraries, etc.). It is proposed that a budget of $3 million per annum be set aside for the secretariat and funding provided by ISC.

The board of directors for the secretariat could be NAC or a sub-committee of NAC, with one agency/practitioner representative from each region, one representative from AFN, one representative from the Caring Society, and one from ISC. The board of directors would ensure the transparent operation of the secretariat and fulfillment of its mandate. It would be expected that the board convene quarterly to review progress, practices, and support the executive director in the discharge of their mandate.

DATA AND EVIDENCE

The secretariat would be responsible for supporting the application of the Measuring to Thrive framework. Agencies and their communities will have differing approaches and desired means of achieving the commonly defined goals of well-being. The secretariat will be positioned to support agencies who wish to build their data monitoring and reporting capacities, as well as to support those who have data that needs to be turned into evidence for decision-making. Working directly with agency staff to understand context and current matters, it is expected that a collaborative working relationship would be developed. Agencies would be collaborating with known partners in the secretariat.

It is recognized that agencies have different case management tools and data collection methods in place. The secretariat's role will be to help agencies determine what exists, what can be used, and what changes to data collection practices would best work for them. The Measuring to Thrive framework is about agencies and communities journeying together toward the *North Star* of well-being. It is anticipated that service providers will set their own internal targets relative to the overall Measuring to Thrive framework. Paths and approaches may differ, but all are striving for the same destination.

OPERATIONAL SUPPORTS AND PROGRAMMING

The purpose of this branch would be to support a service provider's internal operations and programming practices.

As an operational resource, the secretariat staff would serve as a 'tiger team' for agencies who need or desire organizational expertise. From

process improvement to job advertisements, the operational side of this unit will be available free of charge for agencies. Especially in the early years of funding approach transition, it is expected that the secretariat will be a crucial resource. For this reason, former agency leadership and experts in management would be helpful resources that the secretariat may wish to retain for the benefit of agencies.

The secretariat will work to develop an inventory of programs and practices that agencies across the country can leverage for their own organizations. From prevention program toolkits to staff training practices, the secretariat would collect the best approaches available, quantify the resources required (human, financial, capital), and would work with agencies who wish to adapt, adopt or implement them. This growing inventory would be a platform for agencies to connect with each other and to learn from each other's experiences. With a well-developed online platform, agencies and First Nations can collaborate and exchange with ease.

Similar to the Center for State Child Welfare Data at Chapin Hall at the University of Chicago, data experts would work with agencies to unpack the trends of the information they are collecting and determine ways of applying the findings to enhance their decision-making.

The information shared by agencies in the 2019 FNCFS survey, indicated that most of the CHRT funding received were applied to prevention programming, capital investments, and salaries and benefits. With the funding supplements for prevention, capital, IT, poverty, and geography now built-in to the funding approach, it is expected that agencies should have the resources they need to discharge their mandates and do more work focused on well-being. With the overall growth of the budget with inflation and population, an agency's revenue parameters will be known and defined to enable an agency to allocate its resources how it sees fit. Agencies will also be able to keep any unused revenue and reapply it to other initiatives or future fiscal years. There should be enough room in the budget to support an agency in the delivery of their mandate and to close known gaps in funding.

The results funding applied to agency budgets would supplement efforts, offer some resources to build or launch a new program, or to serve as one of several contributors to an agency's initiative. **The results top-up is not designed to be a replacement for the core budget.** This funding is for special projects or initiatives to help an agency achieve the goals in the Measuring to Thrive framework. The evidence generated through the agency's data collection and liaison activities with the secretariat can support these activities.

For the first five years of the new funding approach, as agency's transition to block funding, and engage in data collection, a 1% to 5% results top-up to agency total budgets is recommended. This funding supplement would be designed to support agencies as they build data collection and evidence analysis capacity and develop new programming and initiatives to support them in achieving the results of the Measuring to Thrive framework. These additional resources are consistent with *An Act respecting First Nations, Inuit and Métis children, youth and families* to enable service providers to deliver on the core principles of the legislation: to act in the best interest of the child, to promote substantive equality, and to foster cultural continuity.

At the five-year mark, the funding approach will be reviewed in full.[376] With data collection associated to the Measuring to Thrive framework, agencies, communities, and stakeholders will have generated evidence to trace the impact of funding on outcomes for children, families and communities. With such evidence in hand, the nature of the results funding can be revisited on an informed basis.

SECRETARIAT STRUCTURE AND GOVERNANCE

The secretariat would join a network of organizations that provide various operational and data supports at national and regional levels to First Nations and supporting organizations (Table 18).

From child and family services to health and social supports, the organizations offer different combinations of programming, governing and data capacity, funded principally by the federal and/or provincial governments. The First Nations Health Authority (FNHA) in British Columbia is an organization without direct peers, as it is accountable for distributing funding for health services to First Nations in the province.

[376] A five-year cycle was chosen for the full evaluation to provide a runway for implementation of the new approach. The five-year period is regularly adopted as it crosses standard political cycles (with elections every four years).

TABLE 19: Regional First Nations supporting organizations.

Organization	Mandate	Stakeholders/clients	Governance	Funding source(s)
Manitoba Southern First Nations Network of Care	Mandated by First Nations in Southern Manitoba and through *The Child and Family Services Authorities Act (CFSAA)*. Along with the three other Child and Family Services (CFS) Authorities, they are responsible for the "establishment and management of a province-wide service delivery system. This includes ensuring that services are delivered to Southern First Nation Citizens throughout the province, as well as people who choose the Southern Network."[377]	Ten member FNCFS agencies.[378]	Overseen by a Board of Directors comprised of eight members.[379] Operations are run by the CEO and Management Team.[380]	Manitoba provincial government.[381] Project funding from Indigenous Services Canada,[382] and certain initiatives, including "Restore the Sacred Bond," are funded through private investors.[383]
First Nations of Northern Manitoba Child and Family Services Authority	Supporting and empowering FNCFS agencies in Northern Manitoba with the overarching aim of enhancing family well-being.[384]	Seven member FNCFS agencies.	Governed by a board of directors comprised of ten members from the areas that each of the seven agencies serve. Operations are run by the CEO.[385]	Principally funded by the Province of Manitoba, as well they special project funding from ISC.
British Columbia First Nations Directors Forum	To address child and family services issues that impact First Nations communities.[386]	British Columbia's FNCFS agencies.	The organization is composed of Executive Directors of British Columbia's FNCFS agencies.[387]	Funding is provided by the BC Ministry of Children and Family Development (MCFD).[388] Technical support is provided by the Caring for First Nation Children Society.
Saskatchewan First Nations Family and Community Institute (SFNFCI)	A non-profit organization formed in June 2007, to build capacity within organizations serving child and family services based on First Nation values.[389]	Professional services provided to their members comprised of sixteen of the seventeen FNCFS Agencies in Saskatchewan. The institute also works closely with First Nations Group Homes in Saskatchewan.[390]	Overseen by a Board of Directors comprised of nine members (6 representing the 17 First Nations CFS Agencies in Saskatchewan and 3 from other disciplines).[391] The organization's staff support program and service delivery. Along with providing training and support, SFNFCI undertakes research, has working groups on different issues, including income assistance and prevention.[392]	SFNFCI receives funding from the Saskatchewan Ministry of Social Services and Indigenous Services Canada.[393]

Organization	Mandate	Stakeholders/clients	Governance	Funding source(s)
First Nations of Quebec and Labrador Health and Social Services Commission	A not-for-profit organization that aims to support the First Nations of Quebec in planning and delivering culturally appropriate and preventive health and social services programs (they act as a technical advisor).[394] Their services fall into four categories: accompaniment, training, tools, and information management.[395]	FNQLHSSC works regularly with First Nations political authorities and regional organizations. Additionally, they work with representatives from the federal and provincial government. They are also called to address the media as part of their mandate, to help educate audiences on the experiences of First Nations in Quebec.[396]	Governed by a Board of Directors composed of seven members who are elected by their General Assembly. The powers and duties of FNQLHSSC and its Board of Directors must be ratified by the Assembly of First Nations of Quebec-Labrador (AFNQL).	Federal departments including ISC and Employment and Social Development Canada, with other funds from the Government of Quebec, as well as private partners.[397]

Across the dimensions of stakeholders/clients; mandate; governance; and funding source, existing organizations provide services focused on programming, operating and practice supports, with elements of advocacy in their work. Organizations including FNQLHSSC, Southern First Nations Network of Care, First Nations of Northern Manitoba CFS Authority, BC Directors Forum, SFNFCI, play integral roles in their regions in the provision of programming and operating support.

The secretariat is intended to solely focus on data collection and analysis for evidence generation, and operational support to FNCFS agencies and First Nations. A small and focused organization, the secretariat should be seen to be a neutral organization, of modest scale, that complements the work of existing FNCFS entities.

With the new measurement framework, the secretariat is intended to play a specific role linking data collection and analysis to programming and operating supports. It is at this area of intersection that the secretariat can play an additive role. The national scope of the organization reflects the findings from the Phase 1 report that provincial borders and funding approaches did not have significant bearing on the activities and results the organization. Contextual factors such as geography, poverty, etc. had more influential roles, and exhibit similar results across the country.

It is recommended that the secretariat be established as soon as the alternative funding and performance approach are approved. This will ensure the secretariat is in place to support agencies as they transition their funding and operations.

The way forward

The new funding and performance architectures represent fundamental changes to the way FNCFS is funded, as well as its accounting for results through the Measuring to Thrive framework, and accountability is reoriented to a dual dynamic between ISC and FNCFS agencies and First Nations.

Should First Nations, FNCFS agencies, and their associated organizations such as AFN and Caring Society agree to the new approach, they may begin advocacy efforts. If there is agreement within ISC, the proposal may be brought forth to cabinet. Should there be political will from the Prime Minister, there are opportunities to expedite the consideration and approval of the approach.

Implementing new funding and performance structures for FNCFS will require a series of steps within the federal apparatus. While the steps are being described at the ministerial and cabinet levels, there are public service roles in ISC and central agencies to support those steps with impartial analysis and recommendations. The general steps are as follows:

1. ISC's Minister and Deputy Minister must bring forward a Memorandum to Cabinet (MC) outlining the required policy, program, funding, and legislative considerations associated to the new architecture. The MC must receive the attestation of ISC's Chief Financial Officer.

2. The MC would first be considered by Cabinet Committee on Operations for scheduling and coordination purposes. The schedule may include inter-departmental meetings that involve ISC officials and their central agency counterparts.

3. The MC would be then be submitted to a policy committee of Cabinet (i.e. Cabinet Committee on Reconciliation) for policy approval to seek a Committee Recommendation (CR). It would then be considered by the Prime Minister and Finance Minister for funding approval (i.e. funding note or Budget).

4. The CR and funding note would then prepare the MC for consideration by full Cabinet.

5. With Cabinet approval, an announcement of the policy, program and funding shifts may occur.

6. Treasury Board approval of the changes to program structures and authorities (i.e. the right of the department to move funding between activities) is required. This may trigger consequential changes within ISC to accommodate the new program structure and its associated performance framework.

7. Any additional funding increase would have to be included in an appropriations bill, via the Estimates process, subject to parliamentary approval. At this stage, there may be additional considerations by parliamentary committee (e.g. Standing Committees on Indigenous and Northern Affairs, Finance). Supply bills go through the same process as other government bills in the Senate with one exception, they are not customarily sent to committee for study.[398]

[398] Senate of Canada, "Procedural Notes, Number 15," last updated June 4, 2019, https://sencanada.ca/en/about/procedural-references/notes/n15/.

8. Once the appropriations have been approved, funding will move from the Consolidated Revenue Fund to the fiscal framework and to the reference levels of ISC, subject to the authorities granted by Treasury Board and approved by Parliament.

The length of time for this process could be many months following a typical schedule of an unfunded MC or it could be a matter of several weeks, when associated to a Budget '2-pager' and related announcement. The timing is heavily dependent on the prioritization of the proposal by the Prime Minister and Cabinet. It should be considered that in a minority parliament context, legislative change and financial appropriations are not always granted, and in some instances, can be considered matters of confidence.

Lessons from West Region Child and Family Services' block funding pilot

The new approach will require adaptation and implementation among FNCFS agencies. As the experiences with the WRCFS and State of Tennessee suggest, transition requires credible strategies and plans, effective communications, phased/gated approaches, leadership and on-going support.

Beginning in 1990, WRCFS began looking at the feasibility of options to provide services more in keeping with the cultural context and the values, mission, and goals and objectives of the Agency. The Agency began compiling/collecting data to take a proactive and predictive approach to the possible implementation of block funding. To determine the feasibility of the Agency moving to a block funding of maintenance, it was essential to look at the profiles and prior spending of children in care. The Agency reviewed child in care data for the prior three years. There was some data from earlier years, but it was not robust and/or reliable. A spreadsheet was developed that could collect data about every child in care, and the costs related to their care. The agency expended substantial effort in developing plans, leveraging its internal data, and liaising with its communities.

West Region anticipated full transition to the block would require up to three years. Throughout the transition period, WRCFS identified and addressed procedures and program policies that required adjustment to meet the new approach. The organizational shift required changes at operational levels, such as finance, and practice levels, such as programming and service delivery.

To transition its PBC model into practice in 2006, Tennessee consulted with its existing networks of providers on the new funding approach. The state then selected its top-5 performing providers to serve as test cases for the transition. Tennessee made it clear that PBC was non-negotiable and that it would be the state's new approach to child welfare. All providers would be required to move to the model during a four-year phase-in or no longer be eligible to contract with the state.

A critical ingredient in this process was leadership at both the state and provider levels. When PBC became the new normal for Tennessee, providers were given notice that they would have up to four years to transition to the new system. At the outset, the state spent a year dialoguing, consulting and engaging with providers to prepare them for the new funding model. This was not easy, as it would require a complete shift in mindset for the providers. The state knew the approach was final; there was no going back as PBC was court mandated. Those providers that made the shift early on grasped the potential of the approach and are continuing to thrive.

The shift in the child welfare program structure was gradual. The incremental transition allowed different types of agencies to prepare and join the new system at a time appropriate for them within the four-year transition period. This was important because the providers in Tennessee's network come in a variety of sizes and levels of technological and service sophistication. Most of the providers are not-for-profit, with approximately one-third established as private for-profit entities. There is not one single typical provider-type in the network. Tennessee does, however, have specific baseline requirements for providers to be considered for the network, which take the form of service provision, certain capital requirements, etc.

The heterogeneity of the providers was reflected in the performance model: Tennessee's providers would be benchmarked against themselves. To determine how a provider's performance would be assessed, the state considered the provider's performance from the three years prior to its transition to PBC. As the program progressed, the data available for benchmarking increased, and Tennessee could reassess performance targets for providers on a two-year basis. *The state was not asking providers for the impossible, they were just asking that the provider beat their own track records.* This would enable each provider to reflect their unique context in the baseline that would serve as the departure point for performance measurement under the new approach.

It is anticipated that the transition from the current to future states should take approximately five years. Once the federal apparatus has

integrated the changes, agencies willing and able to begin transition will be invited to do so. As in the case of Tennessee, the early adapters offer lessons and practice models to those that follow. Moving first toward the change will require a solid understanding of organizational practices and processes, regular communication and engagement with First Nations, and motivated leadership and staff to support the transition. It is expected that agencies transitioning first will benefit from supplementary supports from the secretariat.

FNCFS agencies and First Nations will have different points of departure. As described in earlier sections of this chapter, there are various considerations and risks to mitigate. With appropriate planning and an expectation to address unforeseen challenges, the transition—while it may not be easy—will benefit generations to come.

Part V: Assessments of need for First Nations unaffiliated to a FNCFS agency

Introduction

It is estimated that 170 First Nations are unaffiliated to a FNCFS agency, most of which are in British Columbia. Approximately 60% of First Nations unaffiliated to a FNCFS agency have total median household incomes above their respective provincial poverty lines (Figure 68). The populations of unaffiliated First Nations tend to be small, with the majority (62%) of 2019 populations below 500 people on-reserve (Figure 69).

FIGURE 68: Percentage of First Nations above/below their respective provincial poverty lines (Census 2016).

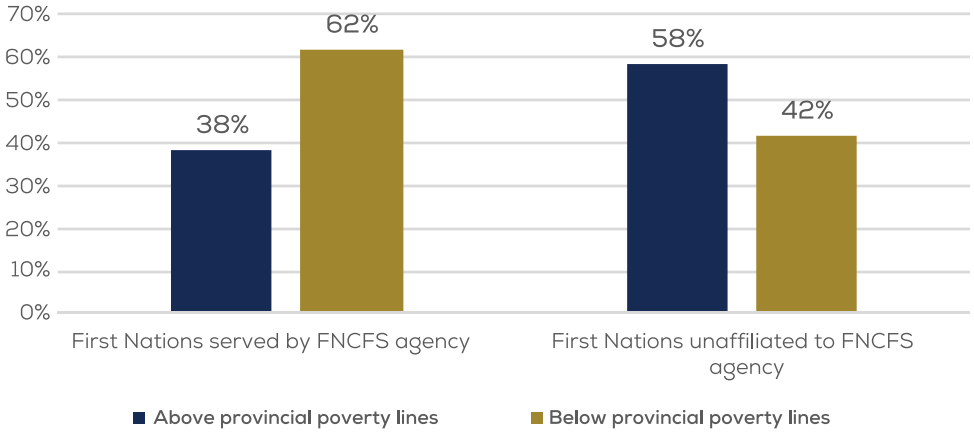

FIGURE 69: Distribution of First Nations by 2019 ISC on-reserve population by cluster.

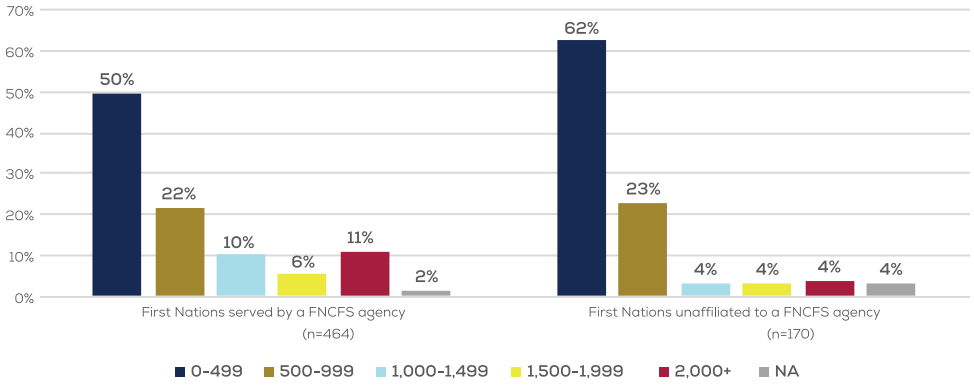
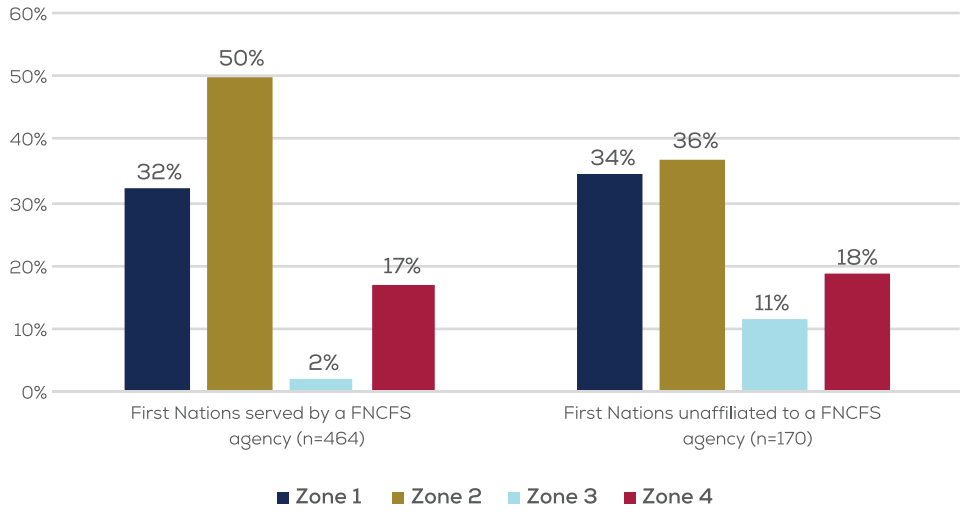


The majority of First Nations served and unaffiliated to a FNCFS agency reside in geographic zones[399] 1 and 2. There are similar proportions of affiliated and unaffiliated First Nations in zone 4 (Figure 70).

FIGURE 70: Distribution of First Nations by geographic zone.



Prevention services in CFS, as with health, should be community-level initiatives. Promoting wellness is not the work of a single entity or organization, but a community expression of how they care for their own members. For some First Nations, this means working with a delegated or undelegated FNCFS agency. For others, this vision includes various program streams run by the community. The provision of CFS is not about band councils versus FNCFS agencies (although, it is recognized that these challenges exist in various communities).

As with any service, there is variability in need based on the distinct and desired approach of each First Nation. Some unaffiliated First Nations are contemplating jurisdiction in protection the context of the *An Act respecting First Nations, Inuit and Métis children, youth and families*, while others prefer to focus exclusively on prevention services with protection provided by the province. Variability in provincial CFS laws may also influence a First Nation's approach. British Columbia has various levels of delegation associated to prevention and protection services, offering a range of levels at which First Nations may choose to engage. Quebec commonly fuses health and social service provision in communities, encouraging an integrated approach among services.

[399] Geographic zone refers to a First Nation's distance to a service centre and associated mode(s) of transportation.

Zone 1: First Nations located within 50 km of a service centre.

Zone 2: First Nations located between 50–350 km of a service centre.

Zone 3: First Nations located over 350 km from a service centre.

Zone 4: First Nations with air, rail or boat access to service centre.

Need-assessment

There is sufficient variability in the desired approaches of unaffiliated First Nations to warrant a need-assessment tool. This tool could take the form of a survey for those First Nations seeking supplementary funding to grow their CFS-focused activities. While federal resources have not typically been directed to unaffiliated First Nations for CFS, there is an opportunity for targeted investments. Such investments would be consistent with the view that CFS is about the well-being of children, families and communities, and not exclusively protection.

As detailed in the cases of unaffiliated First Nations below, efforts on CFS vary based on resources and community structures. In the case of Esquimalt, CFS-focused programming is a challenge to design and develop as their current resource mix does not allow for such targeted programming. Prevention programming in Esquimalt is focused broadly on wellness. By contrast, First Nation W (anonymized at the request of the First Nation), has rebalanced resources to develop housing-oriented programming in support of CFS.

With the variance in current programming and resourcing among unaffiliated First Nations, a detailed need-assessment could support informed resource allocation. By developing a better understanding of current state practices and contexts, federal funding could be allocated on a case-by-case basis to respond to the variety and changing circumstances of unaffiliated First Nations. While the contexts and needs of First Nations served by a FNCFS agency are similarly dynamic, it is the agency's responsibility to ensure community connections and responsive programming suitable to the needs of communities served.

With circumstances favouring CFS reform, it is advisable to undertake a need-assessment survey of unaffiliated First Nations with the following components:

1. Context:
   a. Tell us about your community and the people you serve.
   b. Tell us about what child and family services focused services and programming work well and which work less well.
   c. What do you think your community needs to be better meet the needs of children and families?

2. Organization overview:
   a. Tell us about your governance structure.
   b. Are there one or more organizations involved with children and families?
   c. How do organizations work together?

3. Programming overview:
   a. Tell us about the programs and services provided by your community.
   b. How do you align resources (human, financial, infrastructure) to your programming priorities?
   c. Are there program gaps or future directions/considerations for programs and services?

4. Resources and allocation:
   a. Do you have the resources (human, financial, infrastructure) necessary to provide programming for child and family services?
   b. Has your community requested CHRT-mandated funding for prevention or other programming?
      i. If yes, was it received?
      ii. If not, why?

5. Data and performance:
   a. How does your community make programming decisions?
   b. How does your community determine what programming works?

6. Other considerations:
   a. Challenges/obstacles faced or overcome by your community
   b. Wise practices to share

Building from these six questions, a mix of quantitative and qualitative data would be collected. Assuming a participation rate of at least 50% of unaffiliated First Nations, representative of the broader group of 170 First Nations, the data returned could be analyzed and returned to First Nations for further consultation. To determine how best to build a course forward should be an exercise specific to individual First Nations.

ESQUIMALT NATION
BRITISH COLUMBIA

Governance Structure and Resources

Esquimalt Nation has a small population with 171 residents on-reserve,[400] near Victoria, British Columbia (BC). An urban Nation, Esquimalt occupies 44-acres on southern Vancouver Island and is a member of the Coast Salish language group. The Nation is adjacent to the Songhees Nation, the Township of Esquimalt, and the Town of View Royal, and is in close proximity to the City of Victoria. Located near an urban centre, members benefit from access to transport, walkability, and various provincial services.

Even with its proximal location, employment is a concern for the community. With housing shortages and the by-products of intergenerational trauma, cyclical challenges of poverty and welfare are even more pronounced.

Governed by a Chief and a Council (comprised of five members), monthly meetings are held to discuss strategic planning and the development of the Nation. There have been efforts in recent years to help to define the Nation as a centre for resources and support, rather than a crutch or source of handouts for members. The focus on empowerment and motivation of members, has for instance, introduced criteria for accessing social assistance and offering more supports for building resiliency and wellness from the ground up.

Esquimalt has struggled to have its resources meet its ambitions. To fund its programming, Esquimalt depends on various project-based funding sources. In this context, available funding tends to drive its activities (instead of activities being funded based on need). Developing own-source revenue has proved challenging (e.g. lease of land for parking), having to navigate timelines of bureaucracies of different orders of government.

Historical Treaty and Current-Relationship with the Crown

The Esquimalt Nation is one of the signatories to the Douglas Treaty in the 1850s. A key provision in the treaty granted the Nation the right: “to continued use”, the “liberty to hunt over

[400] Indigenous Services Canada, “Registered Population, Esquimalt,” June, 2020, https://fnp-ppn.aadnc-aandc.gc.ca/FNP/Main/Search/FNRegPopulation.aspx?BAND_NUMBER=644&lang=eng.

unoccupied lands", and "to carry on their fisheries as formerly."[401] The issue of access to resources as they were "formerly" is a preoccupation for Esquimalt, as defining that practice with urban development, and forest and fisheries management is a complex challenge.[402] Efforts continue to advocate for the recognition and implementation of treaty rights. The Government of British Columbia reports ongoing work on land and resource issues with Esquimalt Nation outside the British Columbia treaty process.[403]

Esquimalt's physical resources are constrained by the small size of their reserve territory. Alongside their land, some off-reserve resources are shared with the Songhees Nation, including the West Bay property, the Rock Bay property and Water Lot A (Plumper Bay). With regards to financial interests, they have the James Bay trust, and a few business interests including Salish Sea Marine Services.[404] With respect to water and sanitary services, Esquimalt Nation has a servicing agreement with Town of View Royal and Capital regional District.

Population

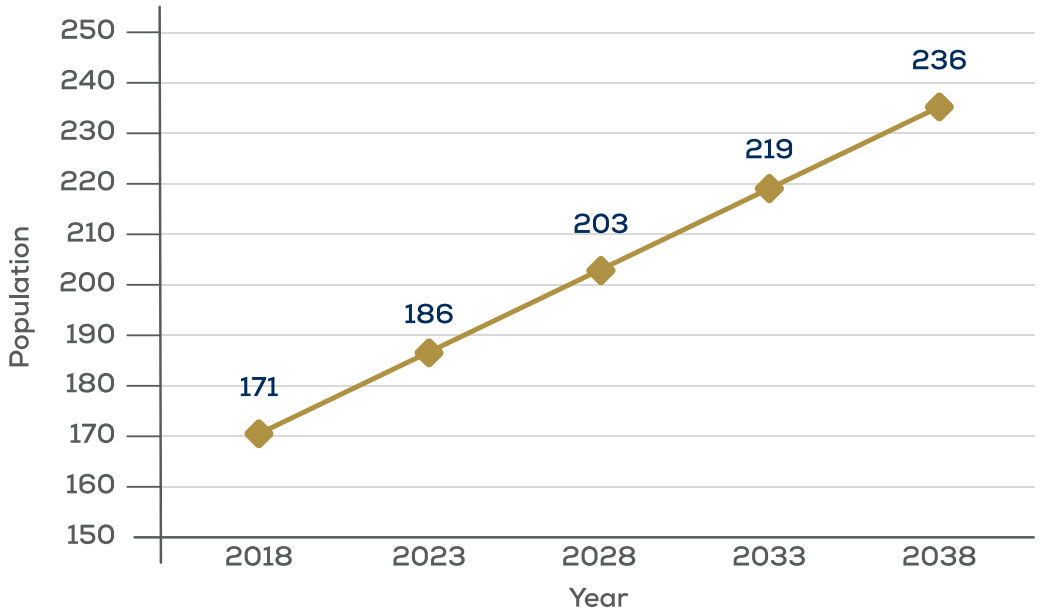
FIGURE 2: On-Reserve Population Projections of Esquimalt Nation 2018–2038



Source: Esquimalt Land Use Plan, 2018.

On-Reserve population was 171 in 2018, with 143 off-reserve members, 122 members living in other areas, and 21 living on other reserves for a total of 314 members.[405] Approximately 60% of the membership population is under the age of 20.[406] Estimates project the on-reserve population to grow to 236 by 2038.[407] One of the goals Esquimalt Nation outlined in their 2018 Land Use Plan is to expand housing units on-reserve to create opportunities for off-reserve members to return to the Nation's territory.

Financial profile

The Nation successfully entered into a ten-year grant with Indigenous Services Canada (ISC), after meeting various criteria and developing their own financial administration law. Beyond revenues from ISC, other sources include various federal and provincial departments, as well as the First Nations Health Authority (FNHA) (see Figure 4 for an overview of revenue sources).[408]

In 2019, Esquimalt Nation received the majority of their revenues from the Government of Canada ($17,600,796.00). As indicated in Figure 5, over three quarters of Esquimalt's expenditures target settlement trusts and fund activities. There is no comparable spending area, with only economic development far behind at 5% of overall spending.

[405] Esquimalt Nation, "Esquimalt Nation Community Plan," (March 31, 2013): 14.

[406] Esquimalt Nation, "Esquimalt Nation Community Plan," (March 31, 2013): 14.

[407] Esquimalt Nation, "Esquimalt Nation Land Use Plan," (March, 2018): 14.

[408] Esquimalt Nation, "Esquimalt Nation Community Plan," (March 31, 2013): 11.

This expenditure is associated to the Cadboro Bay Settlement.[409] The agreement requires the net proceeds to be held in a trust for the benefit of the members of the Nation but allowed for a one-time payment to each member that was alive as of November 20, 2017 of $10,000.[410] Given the median household income in Esquimalt is $45,267,[411] these payments represent approximately, a 20% increase in transitory income for individuals in the community.

Administrators are concerned with current revenues relative to the cost of living near Victoria. When it comes to funding allocations, some are determined using factors including population size and land base. Such an approach does not capture the different cost of living in different communities, e.g. it is more expensive to live in or near Victoria than in Nanaimo. Esquimalt finds itself challenged by revenue sources, as they constrain decision making on internal allocation of resources (see Table 1).

TABLE 1.

Fiscal year	Revenues	Expenditures	Population	Per capita revenue	Per capita expenditure
2018	$6,943,476.00	$5,664,844.00	ISC On-Reserve N=171	$40,605.12	$33,127.74

The current state: Child and family services (CFS)

Esquimalt Nation's prevention-focused activities target parents and their children. From parenting groups to empower parents with young children through a combination of cultural practices and developmental goals, to after school clubs to engage school-aged children, Esquimalt staff work to connect and build trust with their community.

Benefitting from a small population on-reserve, Esquimalt staff can observe and monitor children and families who may need extra support. Referrals are made and resources are brought in to support children and families as required. With services that extend to the Nation's full membership, Esquimalt has worked to build a complement of community-based staff, including a community health nurse, clinical counsellor, and family support worker. Retention rates among staff are high, which helps to promote stable programming.[414]

[413] Statistics Canada, "Market Basket Measure 2018-base, Report on the second comprehensive review of the Market Basket Measure," *Statistics Canada*, February 24, 2020.

[414] One full-time director is dedicated to internal capacity and skills development to support continuous staff improvement.

Current program offerings do not target child and family services directly but focus instead on overall well-being of the community. For instance, many youths were struggling with anxiety and high school completion. In response, Esquimalt started a group for young people to support their social and emotional health. While still early in the initiative, benefits including youth engagement have been noted by staff. With youth showing up, staff have the opportunity to monitor and find ways of supporting their well-being. Protection services in Esquimalt are delivered by the Ministry for Child and Family Development (MCFD), with involvement of the Nation. It is important to note that the Nation follows its own practice with respect to CFS and has not ratified a formal agreement with the province as provider of protection services.

At the time of writing, Esquimalt Nation had approximately 15 children in care. Ideally, children in care would be placed within the community. This, however, has not been practical due to housing shortages and overcrowding in the community. It has subsequently been a challenge designating healthy families for foster services on-reserve.

South Island Wellness, a third-party organization, is designated to provide basic support services to Esquimalt Nation Peoples in contact with the protection system. Esquimalt does not pay this provider directly; it receives funding from Canada for its services. There appears however, to be a lack of clarity as to the outcomes of the organization's services and role. Much of its impact appears dependent on the person designated to the community. Greater community-based child and family services supports are necessary.

With the current revenue generation and allocation challenges, it appears impractical that Esquimalt take on child and family services. In order to deliver a fully or even partially delegated child and family services mandate, Esquimalt would require financial and human resources to design, build and deliver the community's needed services.

Funding for child and family services

Esquimalt's entire administration is composed of 19 staff (a mix of full-time, part-time and casual personnel). Half of the staff is dedicated to programming design and provision across all services areas from health to environment. With the small team, staff have many roles and often are unable to focus exclusively on an issue or program area.

Program funding contributes to the multiple areas of focus and competing priorities. There are 32 different projects that fund personnel services. Applied for and delivered on an ad-hoc basis, long-term planning becomes a challenge when funding is not guaranteed beyond the life of the project or program. When submitted proposals, vague descriptions are often included to maximize staff latitude in delivering programming on-reserve that meets the needs of the community. This multi-source funding makes developing and delivering specific programs, e.g. child and family services, a challenge. The funding structure spreads resources thinly across a number of areas, instead of focusing on specific issues.

The future state vision

Long-term planning has been difficult without consistent funding sources. The Nation lacks internal processes and the people necessary to support long-term planning. Often, planning is reactive to the funding source. The goal tends to be to obtain multi-year grants, even if the Nation does not have expertise in the area. In an effort to maximize revenues, program coherence and consistency can suffer. Esquimalt recognizes that long-term planning is an area in need of action, that must connect community needs to available resources.

Esquimalt's experience building prevention programming is an important reminder that consistent funding with flexibility for the service provider is essential for the consistent delivery of services. Esquimalt is an example of how to build broad-based programming for maximum uptake. A potential next step for the Nation is to build the discussed connections between its programming inputs and community-level results.

FIRST NATION W

Context

This case study examines an anonymous First Nation that has become a self-governing modern treaty nation. The modern treaty era began after the Supreme Court of Canada *Calder* decision in 1973. This decision recognized Aboriginal rights and led to the Comprehensive Land Claims Policy.[415] Upon coming into effect, the Treaty has enabled the transfer of land and self-government jurisdiction to the First Nation.

Now established as a treaty nation, the First Nation is no longer a band under the *Indian Act*. Instead, it now maintains government-to-government relationships at both the provincial and federal levels of government. The First Nation has law-making authority on lands under their direct control and ownership. As a modern treaty nation, this law-making authority is how the First Nation differentiates itself from other communities in Canada.

The Treaty provides that the parties (Canada, the province, and the First Nation) will negotiate and attempt agreement on a Fiscal Financing Agreement (FFA). The First Nation receives block funding through the FFA and raises own source revenue through economic development and taxation. The Treaty also allowed for a total rewiring of governance, enabling the First Nation to align its structure and practices to their traditional way of knowing. Since the implementation of the Treaty, the way the First Nation undertakes its business is fundamentally different and rooted in its conception of community well-being. From the running of government to programming, actions and initiatives are rooted in their unique culture and practices.

The First Nation has a small membership population, with more than 50% of members living off-lands. Given the size of the community, there is little aggregate health and social data available.

The First Nation is located within proximity to a large Canadian population centre. Members tend to be fairly young, with roughly three in every four members being under the age of 40. The staff know their people. The community is actively working on healing and cannot keep up with the demand for services.

The current state: Child and family services (CFS)

The First Nation's Members are resilient, but the impacts of intergenerational trauma are still felt by some members of the community. Some individuals still struggle with poverty, and financial challenges/financial management, as well as with addictions, poverty, abuse, and lateral violence. Some parents may not have the skills needed to raise a child because they may not have had a healthy script to follow or model to emulate. Knowledge on raising children may be missing in families affected by residential schools, and intergenerational

[415] Government of Canada, "Treaties and agreements," last modified September 11, 2018, https://www.rcaanc-cirnac.gc.ca/eng/1100100028574/1529354437231#chp4.

trauma. The aim of the government is to deliver family empowerment programming, but it does not reach every individual.

In the First Nation, 4.8% of children are in contact with the provincial child and family services with open files. The First Nation has managed to keep these children in the community. There are other children outside of the First Nation that are a challenge to track and support.

Provincial CFS is delegated to remove children in need of protection in the First Nation. An enduring challenge, however, is that children may be removed from struggling parents who could succeed with extra support. The First Nation prioritizes wrap-around services to families and children in challenging circumstances. Provincial CFS has been notionally supportive of the approach and role but has offered little in regular resources to finance these services. The First Nation uses its own resources to fill in gaps in CFS programming for its children and families.

Earlier this year, there was an important turning point for Child and Family Services in the First Nation. A child from the First Nation was placed outside of the community in what was considered an unacceptable placement. To protect the best interests of the child, the First Nation mobilized by renting a house near their lands and staffed the home with people the children needing support knew and trusted. The actions taken by the First Nation helped to stabilize the situation and provided opportunities for family reunification and wrap-around services.

Providing Temporary & Flexible Support

The First Nation has recently begun developing a more detailed proposal for respite homes for children and families on-lands. One support home is in operation that can house up to five children (there are currently four children in the home). This safe, secure and known environment is close to the community and is led by the 'den mother.' The current den mother is a very well-known, well-respected and trusted member of the community. Two full-time staff live in the home 24 hours a day. The staff are instrumental in fostering a safe and comfortable environment. They engage in family and community-oriented activities from cooking, playing, visiting with family, taking part in cultural activities at school, etc.

The home is currently funded through the First Nation's budget allocations and some contributions from the provincial CFS. The First Nation is working to secure funding to build data tracking on their wrap-around prevention services, to better understand results over time.

The levels of child protection delegation the First Nation chooses to take on will depend on the community's comfort with assuming the responsibility of these kinds of services. The First Nation will consult with Members to understand what the community's vision for child protection reform is before undertaking a jurisdictional switch away from provincial CFS.

Funding for child and family services

The First Nation emphasizes the importance of wrap-around services and funds them through budget allocations. The First Nation has not assumed jurisdiction on child protective services, which means that it continues to be the province's responsibility. The First Nation has chosen to collaborate with provincial CFS in the delivery of child protection services to ensure the well-being of the community's children. While the First Nation continually attempts to expand its CFS services, little provincial support is available and federal support is non-existent. The First Nation uses its own source revenue to support the large majority of prevention and family support programming.

There is some funding on an activity basis that comes from provincial CFS. The Province transfers roughly $40,000 annually to the First Nation for a family empowerment worker to prevent contact with provincial CFS. This amount, however, only covers roughly half of the salary associated with this position. The Province also contributes in a piecemeal fashion to the community's respite home with $2,000 per month for rent (total monthly rent is $3,000) and through payments to caregivers. Payment for caregivers is calculated at the foster parent rate per child, based only on the length of stay ($900/month), on a case by case basis.

The unpredictability of the funding at foster parent rates (as it is based on contact with the protection system) limits the reliable development of CFS services in the First Nation. The ad-hoc payments may cover the costs of children in the support home (instead of out-of-community care), but limit recruitment, staff retention, and do not cover the hidden costs of operating CFS services and trying to obtain funding. This makes staff retention and remuneration a challenge. Also, the funding based only on children who are already in the system significantly affects the ability to fund prevention services designed to keep families from reaching the point of breaking down and needing more extensive service.

The First Nation is seeking stable funding to cover its current initiatives, as well as proposed initiatives, including a new housing proposal to ensure children can stay in the community when they need a short-term alternate care arrangement (see Table 1). The costs described in the table below are for personnel costs only and would address core needs, not an expansion of the program.

TABLE 1.

Community Health Centre Housing Proposal			
Type of housing	**Description**	**Staffing requirements**	**Overall estimate**
Level 1	Community Member's Home: can support up to 3 children if needed	Caregiver at a rate of $25/hour for 16 hours; overnight 8 hours $20/hour	$860.00/daily $313,900/yearly
Level 2	Respite in six-plex on-lands: staffed home which can support 3 children	2 people per 8-hour shifts per 24 hours	$1,200.00/daily $438,000.00/yearly
Level 3	Respite house off-lands: staffed home which can support 3 children	2 people per 8-hour shifts per 24 hours	$1,200.00/daily $438,000.00/yearly
Level 4	Short term support: Emergency support home on-lands Community member's home which can support 2 children	Depending on need for additional support: 24-hour option available to caregiver	$1,200.00/daily $438,000.00/yearly

Considerations for future planning

Prevention oriented approaches to child and family services are focused on holistic well-being and early intervention to reduce or eliminate the need for child protective services. In First Nations, prevention approaches are informed by culture and community practices, regularly engaging families and the broader community in healing and resiliency building.

There are many positive examples of First Nations child and family services agencies prevention activities that have demonstrated positive results for children and their families.[416] A report by the British Columbia Representative for Children and Youth, highlighted how "inequitable and inconsistent funding arrangements between the B.C. government and Delegated Aboriginal Agencies (DAAs) have resulted in significant differences in the level and types of support available for B.C.'s Indigenous children, depending on where in the province they live and which DAA serves them." In turn, these funding issues have limited the capacity of DAAs to offer culturally-based prevention services.[417]

Crucially, prevention services help to limit avoidable contact with the protection system, which tends to have negative long-term effects for children. The Midwest Evaluation of the Adult Functioning of Former Foster Care Youth (known as the Midwest Study) has documented outcomes of youth in care relative to a nationally representative sample of youth in the United States. Across nearly every outcome measured, such as high school

[416] IFSD, "*Enabling First Nations Children to Thrive*," (2018), http://www.ifsd.ca/web/default/files/public/First%20Nations/IFSD%20Enabling%20Children%20to%20Thrive_February%202019.pdf.

[417] Representative for Children and Youth, "Delegated Aboriginal Agencies: How resourcing affects service delivery," (March 2017): 3.

completion rates, receipt of food stamps, arrests, employment rates, etc. youth formerly in care were worse off than their counterparts.[418]

These negative long-term trends are reflected in Canadian studies. The Canadian Observatory on Homelessness found that 60% of youth who had experienced homelessness had previous contact with the child protection system and were 193 times more likely to have had contact with protection than the general population.[419] In a 2001 study, Correctional Service Canada found that two-thirds of incarcerated Indigenous Peoples had contact with the protection system at some point in their lives, compared to one-third of non-Indigenous inmates.

There is a case for the regular funding of prevention-oriented programs, especially for young people in challenging contexts associated with poverty, social difficulties, etc. For many First Nations, mitigating the effects of contextual factors such as poverty and inter-generational trauma are integral components of prevention programming. The work of Nobel-prize winning economist James Heckman is well-known for demonstrating the economic and social benefits of early intervention programs for children.[420]

From long-term cost benefits to improved cognitive development of children and even enhanced parenting, there are many reasons to focus on prevention services. West Region Child and Family Services had a block-funding pilot that enabled the agency to shift its funding to prevention services. Studies of the pilot found that the rates of children in care declined from 10.5% to 5.2% throughout the pilot, credited to the substantive budgetary shifts to prevention programming.[421] Supporting the development of healthier children, families and communities is possible and can be fostered through a number of programming styles and initiatives.

As the First Nation contemplates the future design and delivery of CFS, it may wish to consider existing models of service delivery. There are several First Nations health and social services centres in Quebec that fuse the delivery of health and social services with positive results for communities. The arrangement can promote increased collaboration and resource-sharing in the community to leverage funding and other resources for program delivery and evaluation. In other instances, First Nations may deliver a subset of prevention

[421] See also, ISC, "Implementation Evaluation of the Enhanced Prevention Focused Approach in Manitoba for the First Nations Child and Family Services Program," December 14, 2015, https://www.aadnc-aandc.gc.ca/eng/1431520132322/1431520217975.

programming initiatives to complement or support other services, with protection delivered by a provincial ministry or third-party. There is also the option of a First Nation child and family service agency unique to the community. With 113 FNCFS agencies serving several First Nations, there is a well-developed network of practice to consult.

The cost of prevention and protection services can vary based on location, mandate and other contextual factors. In its Phase 1 study that costed the FNCFS system, IFSD estimated (based on actual models) that per capita expenditures for prevention should range from $800 to $2,500 across the entire community. At $800, programming is principally youth-focused and may not be CFS focused. At $2,500 per person, a full lifecycle approach to programming can be possible with linkages between health, social and development programming.[422] The cost of prevention may appear significant, but it expected to reduce expenditures over time associated with the social challenges listed above.

The First Nation's current per capita CFS expenditure estimates align to previous findings for communities unaligned to an FNCFS agency (ranging from $500 to $1,000 based on the population source). As the First Nation contemplates its next steps in CFS, it may wish to consider increasing its per capita budget to expand its resources for program and service delivery. IFSD estimated that the average cost of a child in care to be $63,000 per year. With opportunities for prevention program that have demonstrated positive results, there are various options for supporting the well-being of children, families and communities through wrap-around holistic services.

TABLE 2.

Population estimate	per capita CFS spending
2019 Membership Population (N=491)	$795.01
2016 Census (N=750)	$520.46
ISC (N=388)	$1,006.05

In brief, the First Nation may wish to consider three common options for the delivery of CFS:

1. Through *An Act respecting First Nations, Inuit and Métis children, youth and families*,[423] negotiate jurisdiction for protection delegation in the First Nation or seek to establish a delegated FNCFS agency for the First Nation;
2. Continue to work with provincial CFS for protection services, with the First Nation to seek delegation for all services prior to, during and post-removal;
3. Maintain the current course and seek out more regular and reliable funding for CFS-focused prevention services.

The future state vision

The First Nation is focused on improving quality of life for all members. Their holistic approach to family and community well-being is the driving force behind the health and social services' centre's approach to CFS in the First Nation.

The First Nation values a united community where children are supported by those around them. One of their principal goals is to ensure that children remain within their community where they can access support for families, elders, and the First Nation's Members, and grow up with a sense of understanding of the community's tradition and cultural values.

The aim of the health and social services centre in the First Nation is always to support families to remain intact and supported and that if outside care is required, families and children are able to access supportive and culturally sensitive resources. The vision of the First Nation is one of wellness, community strength, and resilience, which define how the centre responds to crises. The community health and social services centre is mandated to support families to remain intact and supported and that if outside care is required, families and children can access supportive and culturally sensitive resources.

The community health and social services centre is also concerned with ensuring consistency in the social workers who are working with the community. The preference of the community health and social services centre would be to have one provincial CFS social worker support the First Nation rather than multiple social workers coming in and out of the community. Overall, the aim is to ensure strong working relationships with the provincial CFS while ensuring culturally-informed child welfare practices.

The First Nation is best placed with regards to safeguarding community well-being, and given their knowledge of their members and their core values, they are most effective at making decisions on how to meet the needs of their community's children.

The First Nation's Prevention Services

Child Psychologist and Nurse Practitioner

The First Nation has contracted a child psychologist for three days a week (a full-time psychologist would not be enough by staff estimates). The psychologist works with parents and children to address the significant mental health and well-being gaps in the community. To help to fill the mental health service gap, a nurse practitioner collaborates with the psychologist and they are able to collaborate to provide mental health assessments and medications as well as long term mental health support on the First Nation's lands. Working in a culturally safe way, this team is able to ensure services are accessible, timely and trauma informed.

Community Family Empowerment Program

The First Nation's Members are able to access a family empowerment worker who acts as an advocate and systems navigation support (supervised visitation services, referrals to counselling, treatment, food bank, ceremonies, etc.). The program aims to decrease interactions with provincial CFS through prevention services and reconnect separated families. The program is partially funded by the provincial CFS.

Daycare

A free program for member children, the daycare offers wrap-around youth-focused education. There are important differences in the teaching approach of the daycare versus those in local school boards. Daycare programming connects learning to the community, its people, and its practices. The First Nation's language and culture are woven into the early childhood curriculum in a meaningful way. Children attending local schools build resiliency and confidence. When children make the move to mainstream schools, they often lose those positive attributes in a change described as "shocking." Children appear to perform well in learning and personal development on-Lands, but trends indicate that outcomes change when in a non-local school setting.

Post-Secondary Educational Services and Other Services

The First Nation pays the full cost of tuition and living expenses for any of their Members who attend post-secondary education in Canada. HSS also offers a variety of other programs to help support community members, including an Elders program, justice support program, community nursing, and so forth.

Resources

The human and financial resources necessary for unaffiliated First Nations will vary based on their desired CFS-related programming. In the case of Esquimalt Nation, CFS-oriented expenditures could not be extricated from the overall programming spending baseline because they do not exist as a separate line-item. In First Nation W, depending on the population source used, current per capita expenditures on CFS-focused programming range from approximately $520 to $1,000 per member. For comparison, Phase 1 estimates for base-level prevention programming for an unaffiliated First Nation was approximately $800.

Conditions on programming funding to First Nations can impact their flexibility in need-focused expenditure. Esquimalt Nation highlighted that their programs are driven by funding sources, rather than program need driving funding. With over thirty sources of funding for programs, Esquimalt Nation often finds itself developing programs to respond to funding opportunities. To support the design and development of a CFS prevention programming stream, reliable funding should be allocated. The regular funding can be built into planning to allocate human and financial resources to desired programming goals.

First Nation W experiences similar resource limitations for CFS. The First Nation actively seeks opportunities in its existing budget to fund CFS activities, especially those focused on housing. Working with some funding from the province, First Nation W expressed the challenges of inconsistent funding for CFS programming, especially, when tied to provincial support payments for children in care. While the resources are welcome to take care of their children, the resources are irregular as they are connected to a child in protection.

The unaffiliated First Nations consulted in this project exhibit the challenges of attempting to design and deliver programming when resources are inconsistent. Not all unaffiliated First Nations may wish to design and deliver their own CFS programming. For those that may prefer pre-developed programs, the Martin Family Initiative's Early Years program can be an option.

The Early Years (EY) program was a pilot project, originally launched in Ermineskin Cree Nation, designed to improve maternal and child health outcomes for Indigenous women who are either pregnant or have newborn babies. The program underscores the importance of the initial years of life in shaping the structures and functions of the brain. Conducting comprehensive early childhood programming in a culturally appropriate manner for Indigenous children and families is a core component of EY programming.

The project's community-based approach emphasizes Indigenous knowledge and cultural values in the context of child well-being. Through weekly visits and group gatherings, trained EY Visitors from the community support pregnant women and their families by promoting healthy prenatal activities and guiding development in early childhood.[424] EY Visitors assist families by providing sensitive and competent caregiving, developing visions for their future, planning subsequent pregnancies, and continuing their education or securing employment.[425]

Since its implementation, participants and staff have reported the central role played by the EY program in the communities. Participants are gaining new and valuable knowledge, which has often fueled their motivation to make behavior changes that build strong foundational relationship with their children. The program has also provided them with strategies and coping mechanisms to constructively deal with new and ongoing challenges.[426]

EY was inspired by other established evidence based and culturally tailored home-visiting programs like the Family Spirit Program of Johns Hopkins Centre for American Indian Health.[427] There is considerable evidence that suggests investments in early intervention programs like EY have high social and economic rates of return. James Heckman, concluded that birth to-five programs can have an up to an annual 13% return on investment.[428] According to Heckman, one of the greatest sources of disadvantage is the quality of parenting a child receives, thus returns to early childhood programs are highest for disadvantaged children who receive lesser parental investment in their early years.[429] The EY program addresses this issue by providing parents with the strategies and competencies necessary to help raise children effectively. Leveraging community resources, the EY program is a potential program option designed from best practices that First Nations affiliated and unaffiliated to a FNCFS agency may wish to adopt.

Considerations for transition

For First Nations unaffiliated to a FNCFS agency to transition to a future state with resource opportunities for regular prevention programming, an informed portrait of the current state is necessary. Leveraging the Measuring to Thrive framework, unaffiliated First Nations would gain a holistic perspective of well-being in their community. By leveraging its own data on the well-being of children, families, and the community, unaffiliated First Nations could develop improved planning tools for their own programming in CFS and beyond.

The Measuring to Thrive framework is not about FNCFS agency performance. It is designed so that any service provider or community can leverage the framework to generate a better understanding of the people they serve and the context in which they operate. Consider for instance the case of First Nation W that has limited health and social data on its own community members. The horizontal and integrated perspective from the Measuring to Thrive framework could offer a source of community-relevant data connected to health and well-being.

To transition from the current to a future state will require clarity on the desired outcome. In the case of FNCFS agency, the commonly expressed objectives were resource consistency and sufficiency to support well-being among First Nations through their programs and services. For unaffiliated First Nations, goals and programming needs will differ based on context and community vision. To support the approaches of First Nations, program-focused resources on a case-by-case basis may be the most practical and expeditious way forward to funding prevention in unaffiliated First Nations.

To support an informed transition to a desired future state, it is recommended that:

1. A detailed need-assessment be undertaken with unaffiliated First Nations to scope their desired community programming goals and better understand current resources and resource needs;

2. The Measuring to Thrive or similar holistic performance framework be adopted for use by First Nations to develop their own data for evidence, analysis and decision-making;

3. Variability in First Nation approaches to CFS-focused prevention programming be an accepted characteristic of transition and long-term operation.

Conclusion

There is context for change in FNCFS with the commitments to substantive equality, the best interests of the child, and a culturally informed approach, in *An Act respecting First Nations, Inuit and Métis children, youth and families*. In its rulings, the CHRT has found the current protection-focused system to be discriminatory and underfunded.

The long-term negative consequences of contact with the protection system increase the likelihood of interactions with social services in the welfare system, the criminal justice system, etc. later in life. These corrective systems have downstream social and fiscal costs.

This work seeks to reset the structure, funding and governance of the current FNCFS system to mitigate and address the causes of contact with the protection system. Developed from the ground-up, this work is built on collaboration and insight from FNCFS agencies, First Nations, and experts, twelve in-depth case studies, a survey on FNCFS expenditures, three expert roundtables, and supplementary research and analysis from Canada and the United States.

Leveraging findings from the Phase 1 report, *Enabling First Nations Children to Thrive*, this report:

1. Undertook a review of ISC's current expenditures and associated program measures.

2. Developed the Measuring to Thrive framework, with a horizontal and holistic view of well-being, informed by TBS's best practices on results tracking.

3. Proposed a funding approach designed as a block and supplemented with components for prevention, poverty, geography, IT, capital and results, to address gaps and to align to the Measuring to Thrive framework.

4. Identified considerations for transition to move from the current to future state, with the support of a First Nations-led secretariat.

Recommendations

Pursuant to the findings in this report, the following four recommendations are made:

1. Adopt a results framework for the well-being of children, families, and communities, such as the Measuring to Thrive framework.

2. Budget for results with a block funding approach that addresses gaps and is linked to the results framework.
   a. Undertake a full assessment of current capital stock.

3. Establish a non-political First Nations policy and practice secretariat to support First Nations and FNCFS agencies to transition to First Nations governance.

4. Establish a group FNCFS agencies and First Nations willing to be early adopters of the new performance and funding approach to model implementation.

Appendix A: Poverty

The State of Poverty in First Nation Communities in Canada

Poverty is a complicated and multifaceted issue that is often misunderstood as a simple lack of income. One of the most recognizable measures of poverty, the World Bank's thresholds for extreme and moderate poverty ($1.90 USD and $3.10 USD per day, respectively) are examples of poverty measures that fail to consider how factors beyond income and expenditure contribute to quality of life.[1] A more complete definition of poverty describes the phenomenon as the lacking of resources necessary to provide the goods essential to life such as food, clean water, shelter and clothing.[2] In the sense of a developed country, this may extend itself to the ability with which one can access education and other standard services like health care. As such, the thresholds for poverty set by the World Bank would fail to capture the vast majority of poverty in developed countries like Canada. A more appropriate indicator of poverty for developed countries would resemble the United Nation's Multidimensional Poverty Index (MPI), which considers a broad range of contributing factors. Included in the MPI are measures of health, education, and standard of living further broken down into nutrition, child mortality, years of schooling, school attendance, cooking fuel, sanitation, drinking water, electricity, housing, and assets.[3] Taking these indicators into account, it is apparent that the Indigenous population of Canada is disproportionately impoverished relative to the rest of the country.

Poverty is an overbearing condition that is highly disruptive to human life. This is especially true for families, and even more so for children. Poverty in utero and early childhood have been shown to pose significant challenges, setting children up for lifelong disparities in health.[4] At any stage of development, poor children are more likely to notice lesser physical health than non-poor children by most measures.[5] The health of poor children has also been noticed to worsen with age and time spent in poverty. The root of this is not necessarily that poor children lack the resources to improve their health, but they are instead subject to more negative health shocks that compound and worsen over time.[6] The effects of poverty are noticeably cumulative beyond the scope of health, as "children can be hungry, be living in substandard housing or be homeless, be unsupervised while a parent works or is meeting other responsibilities, be truant from

failing schools, lack medical care, or have a caretaker with untreated mental illness or substance abuse."[7]

Moreover, there is a growing body of research that indicates a strong relationship between poverty and child abuse.[8] Overall, the conditions poverty creates are not conducive to a positive environment that fosters growth and development in children. A positive environment early in childhood is crucial not only for the health of a child, but for shaping the abilities, capabilities, and development of children, ultimately producing better outcomes in education and adult life.[9]

As a developed country, most Canadian children and families live beyond the reaches of poverty. However, it has been estimated that around 60% of Indigenous children living on-reserve are in poverty compared to the 17% of non-Indigenous children in Canada that live in poverty.[10] While poverty is devastating for all children, Indigenous children in Canada are disproportionately impoverished. Given the impacts of poverty on children and the prevalence of Indigenous children in poverty, agencies like First Nations Child and Family Services (FNCFS) may be interested in the overall incidence of poverty in First Nation communities, how it compares to the general population, and its overall impact on Indigenous children and families. By improving the understanding of these issues, it may be possible to guide policy in a manner that improves a variety of outcomes for Indigenous children and families for generations.

The remainder of this brief will examine data from the *2016 Census of Population* (Census) on median total household income. To determine the overall degree of poverty in First Nation communities, median household income was examined for 591 First Nation communities across Canada and compared to provincial poverty lines. The unweighted average of median total income of First Nation community households before and after-tax is shown in Table 1.

Comparisons between average median income for First Nation communities made to the provincial poverty lines are calculated by using the Mixed Basket Measure (MBM). The MBM estimates the income necessary to lead a decent life by calculating a weighted average of the cost of purchasing essential items like shelter, clothing, and food, among others, for a family of four in a given region.[11] This measure provides a more accurate method of describing poverty than other measures commonly used in Canada like the Low-Income Measure (LIM) and Low-Income Cut-Off (LICO). The LICO has not been updated since 1993 except to adjust for inflation and does not include expenditures on transportation and communication technology.[12] As such, the LICO would not be appropriate for measuring poverty in a country that is as reliant on technology and communication infrastructure as Canada is in 2020.

On the other hand, the LIM uses a poverty threshold that is 50% of the median household income. While useful for establishing a relative measure of poverty, the LIM is highly sensitive to changes and variations in economic conditions.[13] The MBM separated by province is both a robust measure of relative and absolute poverty, as it indicates the ability to access a basket of goods deemed necessary to lead a decent life in a given region. For this brief, MBM cutoffs have been calibrated to communities with less than 30,000 inhabitants to allow for realistic comparisons to the conditions in First Nation communities. Provincial poverty lines based on the 2018 MBM are listed in Table

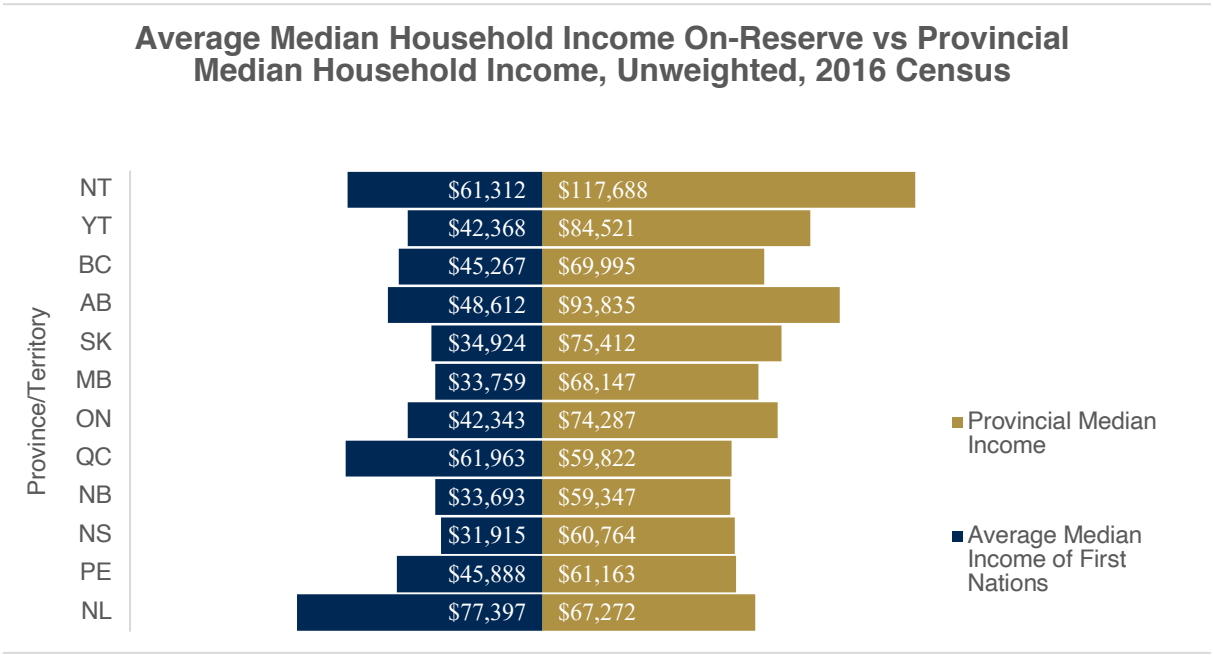
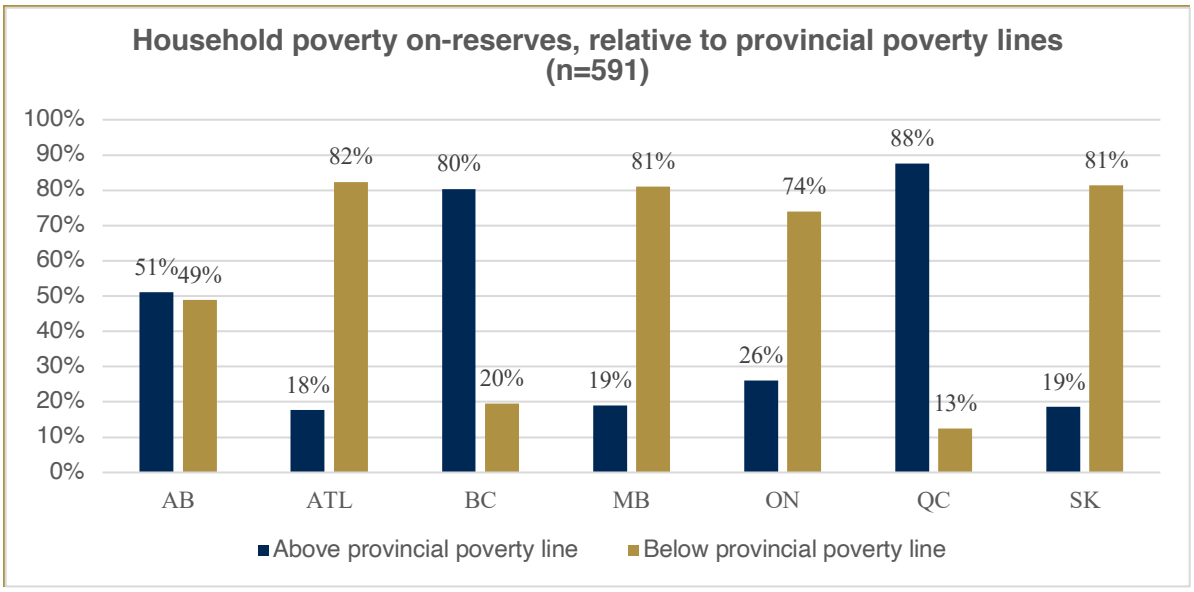
Before analyzing poverty, it is important to note that, in general, there are income disparities amongst the First Nation and general populations of Canada. Figure 1 shows both provincial median household income and the average median household income of First Nation communities in each province. Only First Nation community households in Quebec (4% above) and Newfoundland and Labrador (15% above) have average median household incomes that exceed that of their respective provinces. Among the remaining provinces and territories that are below provincial median household income, the size of gaps ranges from 54% below provincial median household income in Saskatchewan to 25% below provincial median household income in PEI. When considering poverty as the ability of a household to afford an MBM basket, the sizeable gaps in median household income suggest that Indigenous households are likely less able to afford the MBM basket than non-Indigenous households in the same province.

Figure 1.



Source: Statistics Canada, 2017.

Figure 2.



Source: Statistics Canada, 2017.

Analyzing Poverty Gaps

There is significant variation in the distribution of First Nation communities above and below poverty lines across provinces [Figure 2]. Notably, 100% of First Nation communities in New Brunswick and Nova Scotia have median household incomes that fall below the provincial poverty line. On the other hand, 100% of First Nation

communities in Prince Edward Island and Newfoundland and Labrador have median household incomes above their provincial poverty line. While observing the absolute proportions of First Nation communities falling below or above the provincial MBM defines the incidence of poverty, it may be impacted by outlier communities possessing median household incomes that are comfortably above the provincial poverty line. By removing all communities with median household incomes above the provincial poverty line and observing only the average of median household income for those communities that fall below the provincial poverty line, poverty gaps are sizeable.

By removing communities with median incomes above provincial poverty lines, the severity of poverty in the poorest First Nation communities across the country becomes more apparent. The gaps between average median household income and provincial poverty lines vary from a 12% gap in Quebec to 25% gaps in both British Columbia and Manitoba.

Discussion

Poverty is the condition of lacking the resources necessary to access items that are essential to living a decent life. Data from the 2016 Census show that poverty is both prevalent and severe in many First Nation communities in Canada. Across all Canadian provinces, only two provinces (PEI and Newfoundland and Labrador) had no First Nation communities with median incomes below the provincial poverty line. First Nation communities in those provinces only make up 6 of the 591 (1%) First Nation communities analyzed in this brief. Overall, 52% of First Nation communities have median household incomes that fall below their provincial poverty line. These results suggest that large portions of the First Nation population in Canada live in poverty and are unable to access the items necessary to live decent lives by standards set within their provinces.

If eliminating poverty in First Nation communities is an objective, it could prove extremely costly to do so. Estimates of the cost to eliminate poverty in each province have been calculated in the table below by taking the average median household poverty gap in each community, multiplying by the estimated number of homes falling below the poverty line, and summing across provinces. This shows just how resource-intensive it could be for governments to eliminate poverty in First Nation communities. For example, in any scenario, it will cost over $100 million to close poverty gaps in Manitoba or Saskatchewan alone. To eliminate poverty in First Nation communities across the country, it would cost somewhere between roughly $490 million (see Figure 5).

It is worthwhile to note that, since poverty is a multifaceted issue extending far beyond income and consumption, investing in the most impoverished First Nation

communities in ways other than lump-sum transfers will likely be the most effective way to alleviate poverty. For example, by expanding existing infrastructure for water and broadband, more essential services may become available to these communities. By doing so, it may be possible to improve the quality of life in First Nation communities.

Appendix B: Health

Health Disparities between Indigenous and non-Indigenous Populations of Canada

Health is a broad and subjective term that is generally difficult to measure. Health is often measured by examining the incidence of certain conditions, perceived health, and life expectancy. Across North and South America, Indigenous people are consistently disadvantaged across all measures of health.[1] Some of the disparity in health for Indigenous Canadians has been justly attributed to the lasting and pervasive impacts of colonialism and the intergenerational trauma that has followed.[2] Moreover, another source of disparity in health may stem from income differentials. Average income is lower in Indigenous populations across North America than other demographics.[3] A more profound understanding of the roots of health disparities for Indigenous Canadians can be found by examining the lasting effects of colonialism and environmental degradation, areas in which Indigenous peoples, particularly in Canada, are disproportionately impacted.[4]

It is also important to note that Indigenous Canadians, particularly those living in remote environments, face unique challenges in accessing essential health services. In remote communities, health care services can be of lesser quality than in mainstream Canadian society. A report from the Auditor General of Canada in 2015 revealed that nursing stations in remote First Nation communities in Ontario and Manitoba had severe deficiencies and lacked the capacity to provide essential health services to their communities.[5] The report also found that the majority of nurses employed by these stations, while often registered with provincial regulatory bodies, had failed to complete all of Health Canada's mandatory training programs. Moreover, traditional First Nation medical customs and practices are not permitted to influence local health practices, leaving many communities to choose between sub-standard biomedical practices and underfunded cultural medicine.[6] Given the systemic and geographic barriers impeding access to medical care in many First Nation communities, disparities in health outcomes from the rest of the population are to be expected, and likely to persist.

The remainder of this brief will examine several health indicators and outcomes for the First Nation, Métis, and Inuit populations compared to the non-Indigenous identity population of Canada. The most recent health indicator profile from Statistics

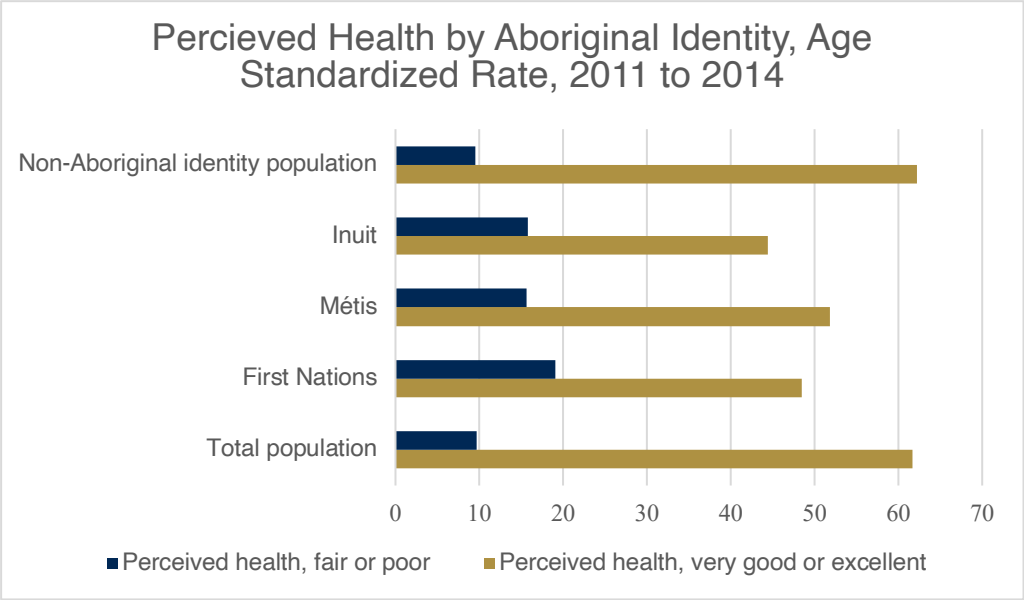
Canada presents data broken down by Indigenous identity on access to care, incidence of chronic conditions, smoking and alcohol usage, self-reported health, body mass index, and life expectancy. For almost every indicator, the Indigenous population groups exhibit worse outcomes than both the Non-Indigenous identity population and the total population. While this data, published by Statistics Canada in 2016, is relatively old, they reveal consistently large gaps in health. Considering large portions of these health disparities originate from structural barriers[7], the differences in health between the Indigenous and general populations in Canada are unlikely to have changed drastically by 2020.

Self-Reported Health

Figure 1.



Source: Statistics Canada (2016)

Self-reported measures of health have been demonstrated to be reliable and stable predictors of actual health.[8] In Canada, Indigenous populations are more likely to report age-standardized rates of fair or poor health (19.1 for First Nations, 15.6 for Métis, 15.8 for Inuit) and less likely to report very good or excellent (48.5, 51.8, 44.4) than the non-Indigenous population (9.5 poor/fair, 62.2 very good/excellent) [Figure 1].[9] Similarly, Indigenous identity populations are less likely to report very good or excellent mental health (61.3, 63.7, 59.6) and more likely to report fair or poor mental health (10.8, 8.7, 6.8) than non-Indigenous Canadians (72.7, 5.7). Moreover, Indigenous

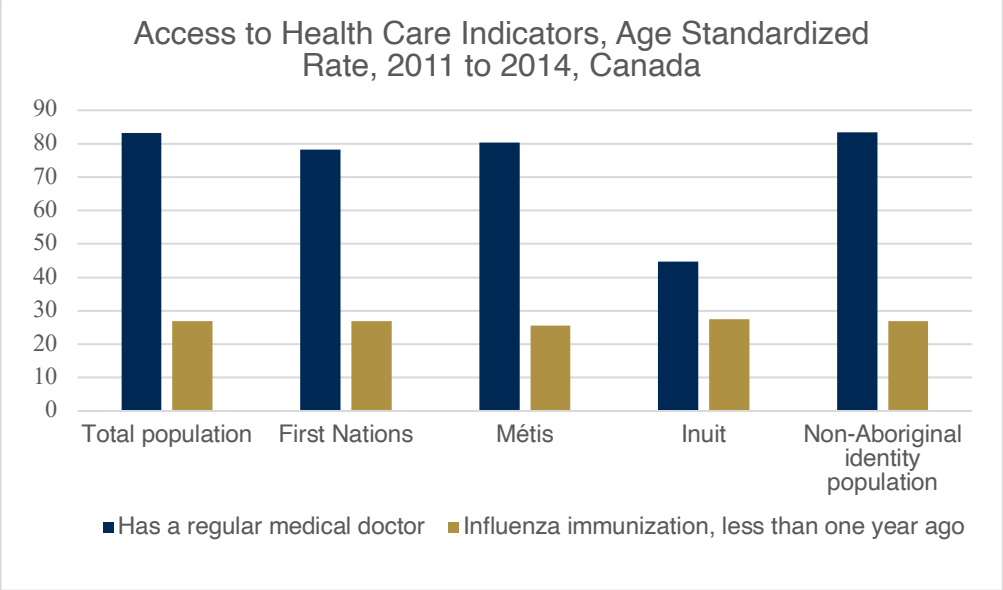
[9] Statistics Canada, “Health indicator profile, by Aboriginal identity and sex, age-standardized rate, four-year estimates,” 13-10-0099-01, (December 9, 2016).

identity populations reported lower overall age-standardized rates of life satisfaction (88.6, 91.6, 87.9) than the non-Indigenous population (93.1).[10]

Access to Health Care

Consistent with the access to care hypothesis, the Indigenous population has less access to health care than the general population. While having access to a regular to a medical doctor is relatively close between First Nations (78.2), Métis (80.4), and non-Indigenous Canadians (83.4), the Inuit population lags considerably behind in this indicator with an age-standardized rate of only 44.8. However, the Inuit population is more likely to have received influenza immunization in the last year (27.4) than all other Indigenous population (26.9, 25.5) groups and the non-Indigenous population (26.9) [see Figure 2] .

Figure 2.



Source: Statistics Canada (2016).

Health Conditions

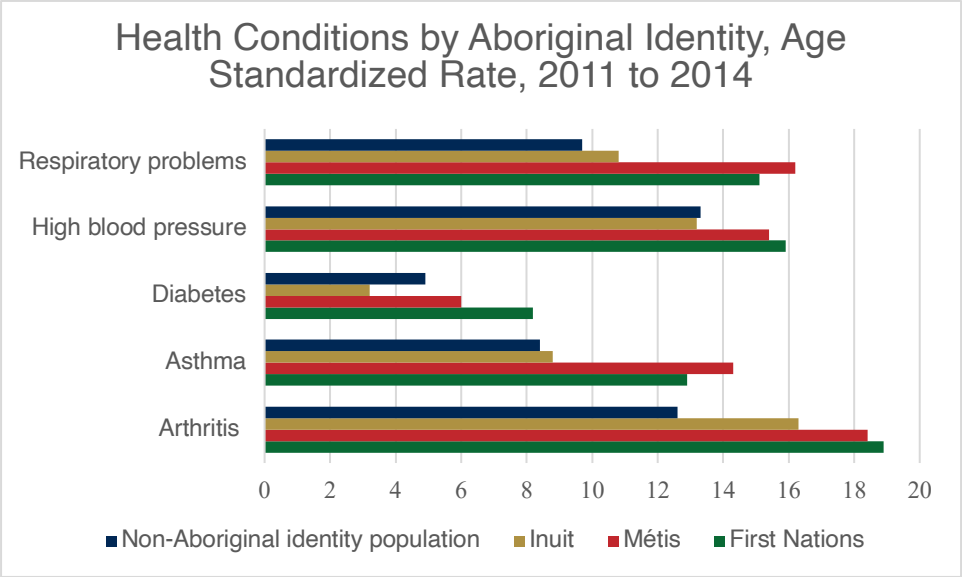
The Indigenous population groups in Canada are more likely to report one of the health conditions reported in Figure 3 than the non-Indigenous population. The only exception is high blood pressure, where the Inuit population (13.2) is slightly less likely to report an issue compared to the non-Indigenous population (13.3). In fact, when it comes to reporting respiratory problems, diabetes, asthma, and arthritis, Inuit Canadians experience these conditions in frequencies only slightly above the non-Indigenous

[10] Statistics Canada, "Health indicator profile, by Aboriginal identity and sex, age-standardized rate, four-year estimates," 13-10-0099-01, (December 9, 2016).

population. First Nation and Métis Canadians report these conditions in much greater frequencies than the Inuit population.

Figure 3

.

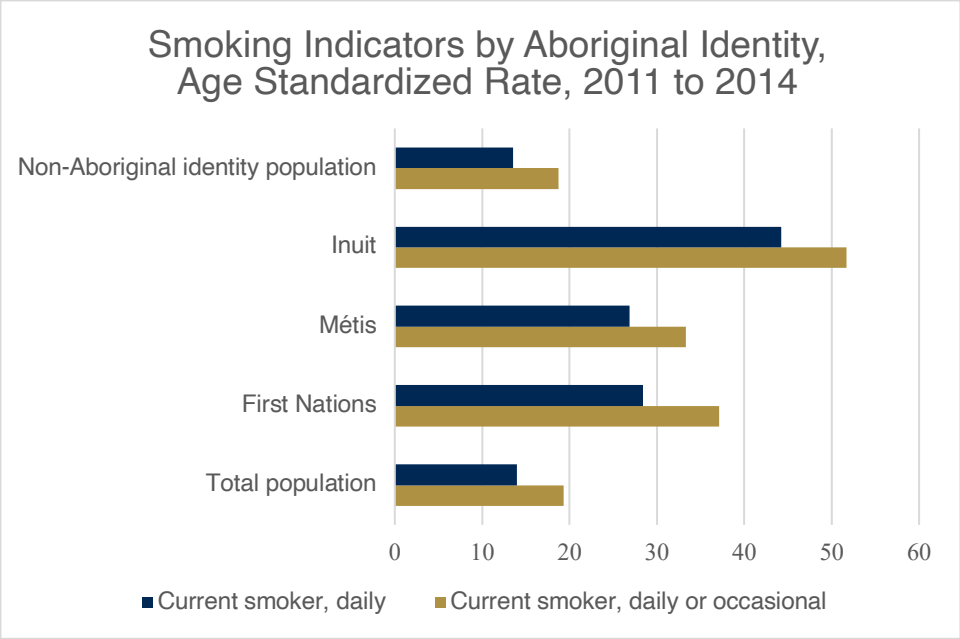


Source: Statistics Canada (2016)

Smoking and Alcohol Use

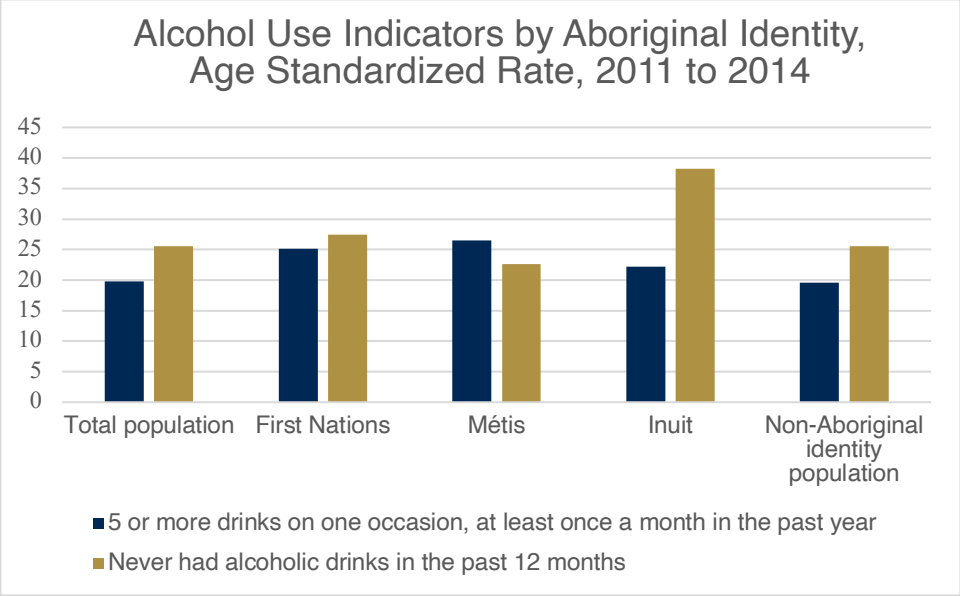
Some of the disparity in health conditions like high blood pressure and respiratory problems may stem from the increased frequency of smoking and alcohol use amongst the Indigenous population groups. Each of the Indigenous population groups reports being a daily smoker (28.4, 26.9, 44.2) in frequencies at least twice as great of that in the non-Indigenous population (13.5) [Figure 4]. Indigenous population groups are also more likely to be exposed to second-hand smoke at home (11.3, 8, 8.9) compared to the non-Indigenous population (5.1). In terms of alcohol use [Figure 5], Indigenous population groups were more likely to have reported consuming five or more drinks on one occasion in a given month (25.1, 26.5, 22.2) compared to the non-Indigenous population (19.6). However, First Nations and Inuit Canadians (27.4, 38.2) were each more likely to have not drunk alcohol in the previous year than non-Indigenous Canadians (25.5).

Figure 4.



Source: Statistics Canada (2016).

Figure 5.

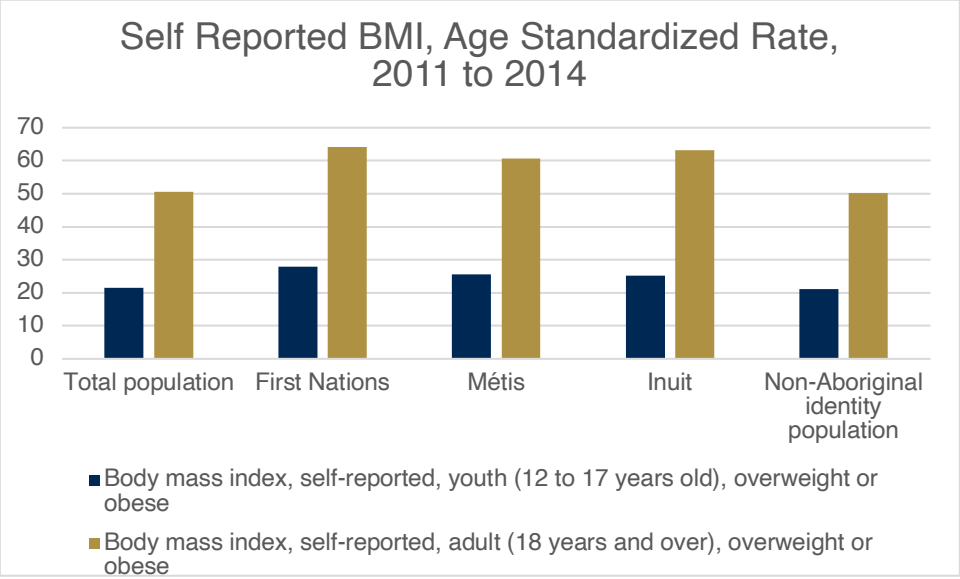


Source: Statistics Canada, 2016.

Body-Mass Index

Age-standardized rates of self-reported body mass index (BMI) suggest that both Indigenous youth (age 12 to 17 years) and adults (age 18 years or greater) are more likely to be overweight or obese than the non-Indigenous segment of the population. Of Indigenous adults, First Nation adults reported age-standardized rates of overweight/obese BMI of 64.2, Métis reported 60.6, and Inuit reported 63.2 compared to the 50.2 reported by non-Indigenous adults. Across all populations, youth report lower rates of overweight/obese BMI, although the overall trend is the same, with Indigenous youth reporting higher rates (27.9, 25.5, 25.1) than non-Indigenous youth (21.2) [Figure 6].

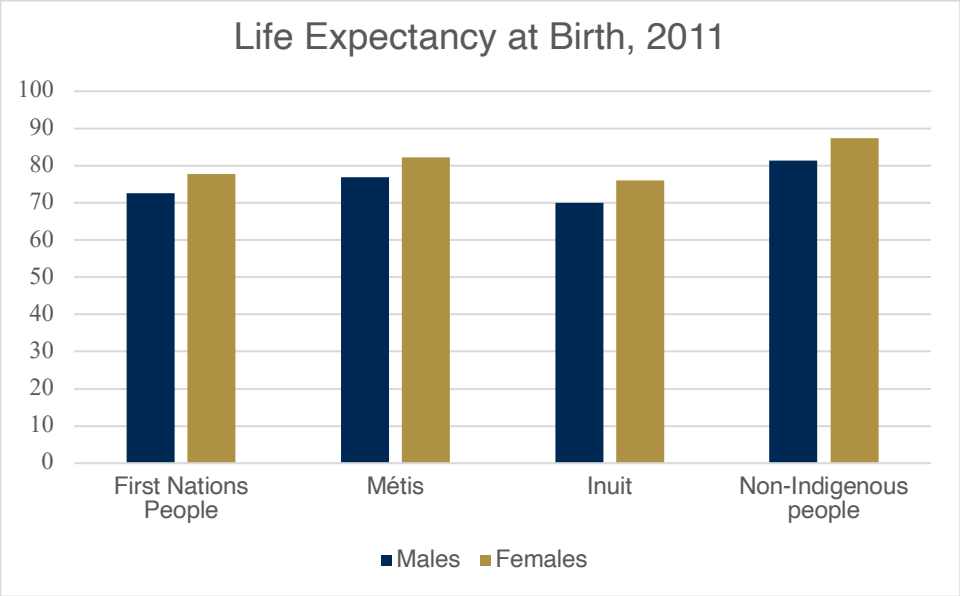
Figure 6.



Source: Statistics Canada, 2016.

Life Expectancy

Figure 7.

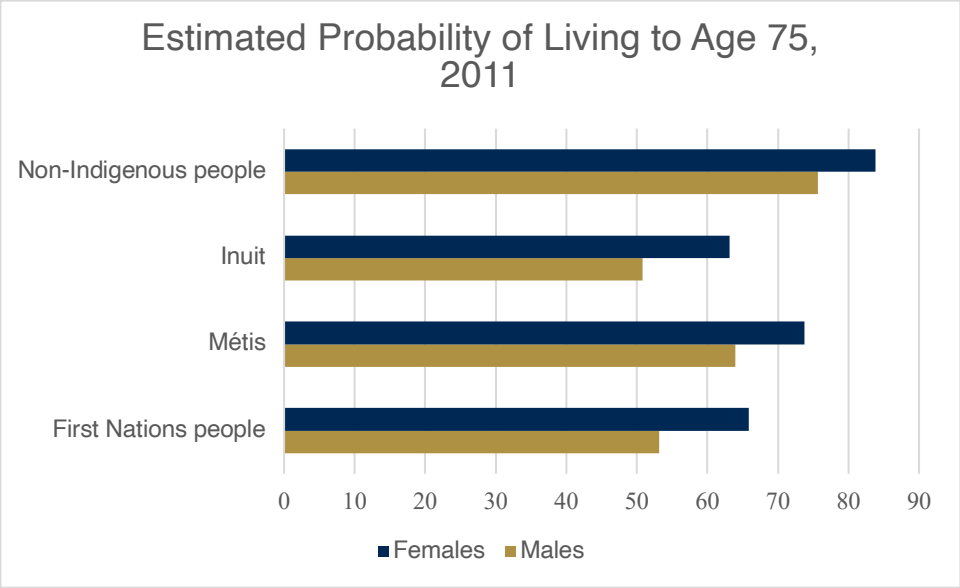


Source: Tjepkema, Bushnik, and Bougie, 2019.

Life expectancy is a common way of measuring the health of a community or group of people by observing trends in mortality. Life expectancy at birth encapsulates the health of a population across all age groups to estimate the expected life span of an individual at birth.[11] Given that health is influenced by several factors including access to clean water, housing quality, income, and education, it is unsurprising that the Indigenous population groups have lower life expectancies for both males and females than non-Indigenous populations [Figure 7].

[11] Statistics Canada, “Life expectancy,” September 28, 2016.

Figure 8.



Source: Tjepkema, Bushnik, and Bougie, 2019.

In 2011, life expectancy for men was 72.5 years for First Nations, 76.9 years for Métis, and 70 years for Inuit.[12] However, for men in First Nations, it was estimated that in 2011, the probability of living to age 75 was 53.2%, 64% for Métis men communities, and 50.8% for Inuit men [see Figure 8]. Comparatively, life expectancy for non-Indigenous men was 81.4 for non-Indigenous men with a 75.7% chance of living to age 75. Females in Indigenous population groups fair slightly better in terms of life expectancy, with 77.7 years for First Nations, 82.3 years for Métis, and 76.1 for Inuit. First Nations, Métis, and Inuit women have probabilities of 65.9%, 73.8%, and 63.1%, respectively, of living to age 75 [see Figure 8]. Non-Indigenous women still fair much better with a life expectancy of 87.3 years and an 83.8% probability of living to at least 75 years of age.

Discussion

Overall, health indicators like life expectancy suggest that there are disparities in health between Indigenous population groups and non-Indigenous Canadians. This is supported by data for health outcomes, which almost always produce negative results for Indigenous Canadians relative to the non-Indigenous segment of the population. While these are important results, data used for this brief is dated, with most measures of health being reported from nearly a decade ago. While there is more recent data available for Canadians in general, this data is not available at the level of Indigenous identity, rendering comparisons between Indigenous and non-Indigenous segments of the Canadian population extremely difficult. Although it is not difficult to imagine that

[12] Michael Tjepkema, Tracey Bushnik and Evelyne Bougie, "Life expectancy of First Nations, Métis and Inuit household populations in Canada," *Statistics Canada Health Reports*, (December 18, 2019: 5..

health disparities persist in 2020, more recent data is necessary to fully understand the current nature of disparities.

From a policy perspective, what is important to take away from this brief is that there have been disparities in health between Indigenous and non-Indigenous Canadians that have persisted throughout the history of this country. While this brief has explored some of the potential underlying reasons as to why disparities exist, such as the use of alcohol and prevalence of smoking, more research is necessary to uncover the true impacts of other causes of differential health outcomes. Among the list of things that may be key contributors are access to clean and safe water, housing and overcrowding in living conditions, and access to quality health care. By better understanding the causes of differential health outcomes, policy can be guided to alleviate differences and promote the health of all Canadians.

Appendix C: Housing

The State of Housing in First Nation Communities

Access to safe, secure, and affordable housing plays a critical role in personal stability and overall quality of life. Studies have shown that access to housing is a socioeconomic indicator of both physical and mental health.[1] As people living in a developed economy, the majority of Canadians typically have access to adequate housing. First Nation communities in Canada, however, still notice overcrowding, poor states of repair, inadequate infrastructure, and issues relating to the affordability of housing. Of homes on-reserve, only three quarters are considered adequate for living by First Nation housing managers.[2] The Assembly of First Nations (AFN) has consistently expressed concern with the living conditions in First Nation communities. Mould contamination, lack of infrastructure, and obstacles to accessing housing programs are commonplace for on-reserve First Nation communities.[3]

The *2016 Census of Population* (Census) is the most recent source of Canadian housing data. An assessment of Census data reveals that there are disparities in living conditions between on- and off-reserve communities. The remainder of this brief will examine the Census data and analyze key housing areas where disparities between Indigenous populations and the general population exist. This brief will also explore disparities between on- and off-reserve populations in Canada.[4] Two particular variables that will be examined from the 2016 Census data are the number of dwellings in need of repair and the number of persons per room in a given dwelling. The number of dwellings in need of repair categorizes dwellings as one of "regular maintenance needed," "minor repairs needed," or "major repairs needed." This measure provides an approximation of the quality of housing amongst the population segments of interest. Persons per room categorizes dwellings as "1 person or fewer per room" or "more than 1 person per room." The latter is subdivided into "more than 1 person but less than 1.50" and "1.50 persons or more." The persons per room variable estimates the degree of overcrowding in the populations of interest.

Dwellings in Need of Repair

Observing the general population (the population of Canada, regardless of Indigenous identity or geography), the Census data estimates 22,933,440 (66.6%) people live in dwellings that require regular maintenance, 9,227,860 (26.8%) live in

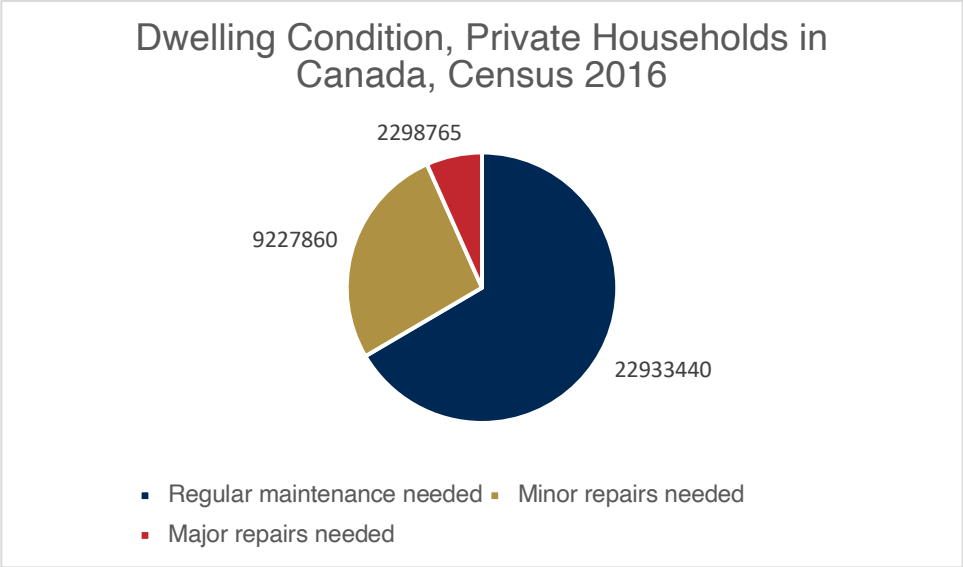
[3] Assembly of First Nations (AFN), “Fact Sheet – First Nations Housing On-Reserve,” (June 2013).

[4] “Aboriginal identity” is defined as an amalgamation of the 2016 census responses “First Nations (North American Indian),” “Métis,” “Inuk (Inuit),” “Multiple Aboriginal responses,” and “Aboriginal responses not included elsewhere.”

dwellings that require minor repairs, and 2,298,765 (6.7%) live in dwellings that require major repairs [Figure 1.].[5]

Figure 1.

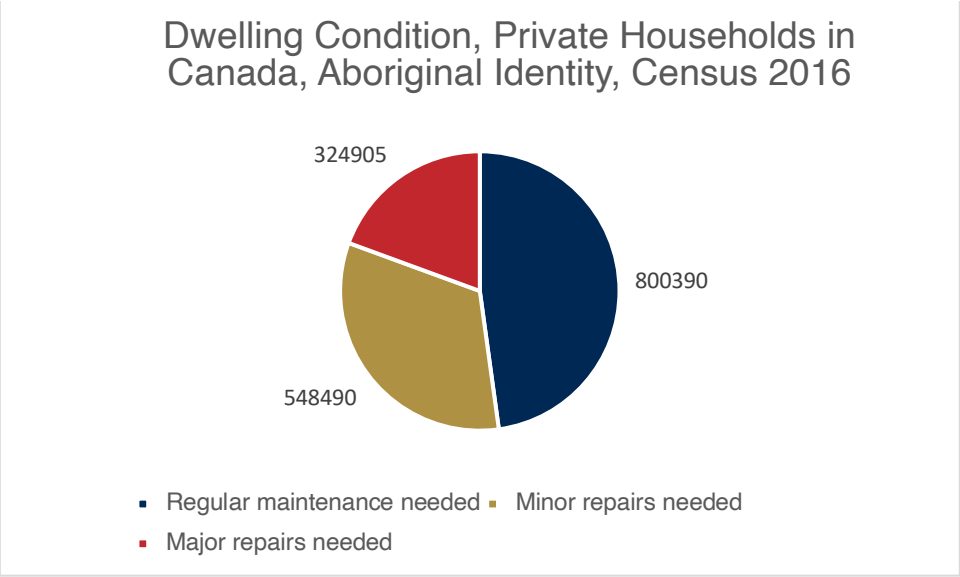


Source: Statistics Canada.

By contrast, the Census estimates that of Canadians with Indigenous identity 800,390 (47.8%) live in dwellings that require regular maintenance, 548,490 (32.8%) live in dwellings that require minor repairs, and 324,905 (19.4%) live in dwellings that require major repairs [Figure 2].[6]

[5] Statistics Canada. 2017, "Aboriginal Identity, Dwelling Condition, Registered or Treaty Indian Status, Residence by Aboriginal Geography, Age and Sex for the Population in Private Households of Canada, Provinces and Territories, Census Metropolitan Areas and Census Agglomerations, 2016 Census - 25% Sample Data," *2016 Census*. 98-400-X2016164, Modified 2019-06-17.
[6] Statistics Canada, 98-400-X2016164.

Figure 2.

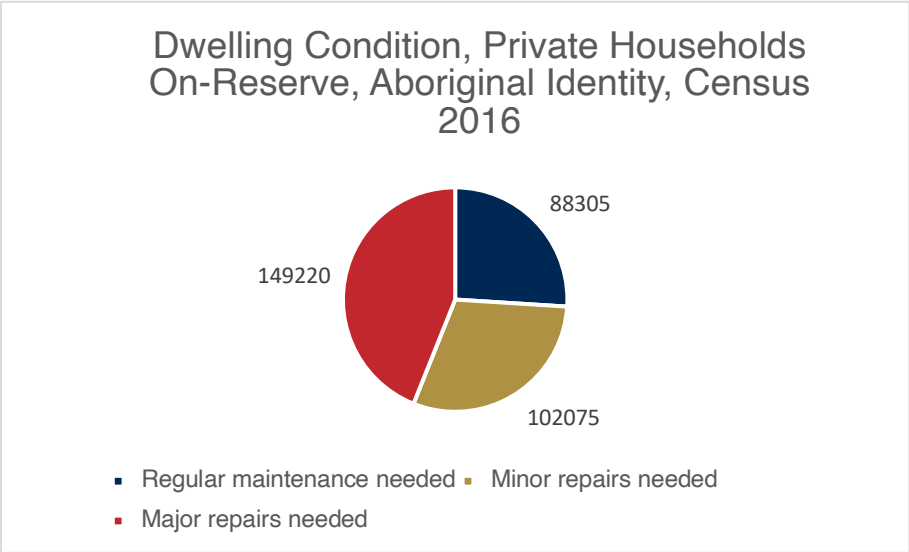


Source: Statistics Canada

Overall, the Census estimates that roughly half of Indigenous-identifying Canadians live in a dwelling in need of some type of repair (minor or major), while only one-third of the general population lives in a dwelling of similar conditions. When considering Canadians of Indigenous identity who live on-reserve, the Census estimates that 88,305 (26%) live in dwellings that require regular maintenance, 102,075 (30%) live in dwellings that require minor repairs, and 149,220 (44%) live in dwellings that require major repairs [Figure 3].[7] That is to say that the Census estimates three-quarters of Indigenous identity Canadians living on-reserve live in households that require some degree of repair.

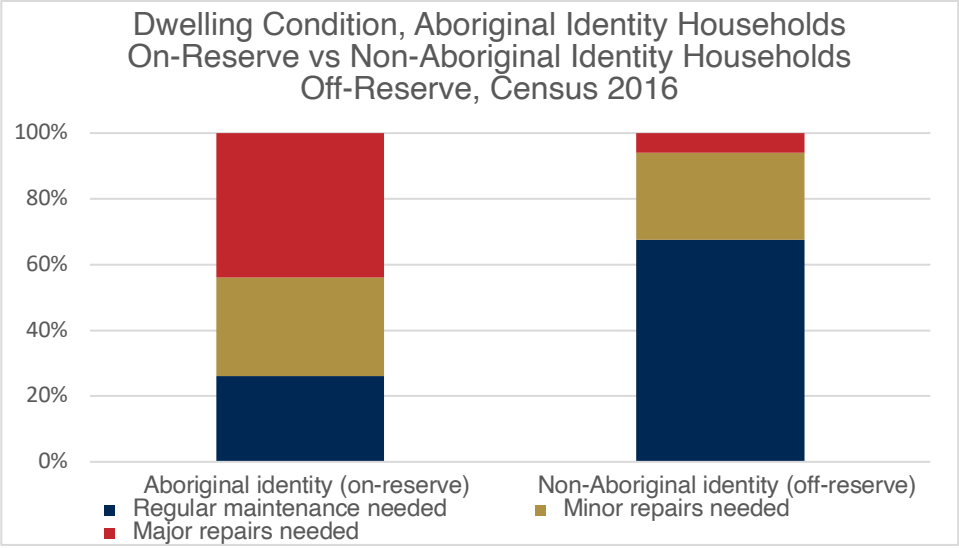
[7] Statistics Canada, 98-400-X2016164.

Figure 3.



Source: Statistics Canada.

Figure 4.



Source: Statistics Canada.

The differences in estimated dwelling conditions are between the Indigenous identity population living on-reserve, and the non-Indigenous identity population living off-reserve are compared in Figure 4. The Census approximates that 22,105,415 (68%) non-Indigenous identity Canadians residing off-reserve live in dwellings that require regular maintenance, while 8,670,250 (26%) live in dwellings that require minor repairs, and 1,969,855 (6%) live in dwellings that require major repairs [see Figure 4].[8] The Census estimates suggest that the population living on-reserving and reporting

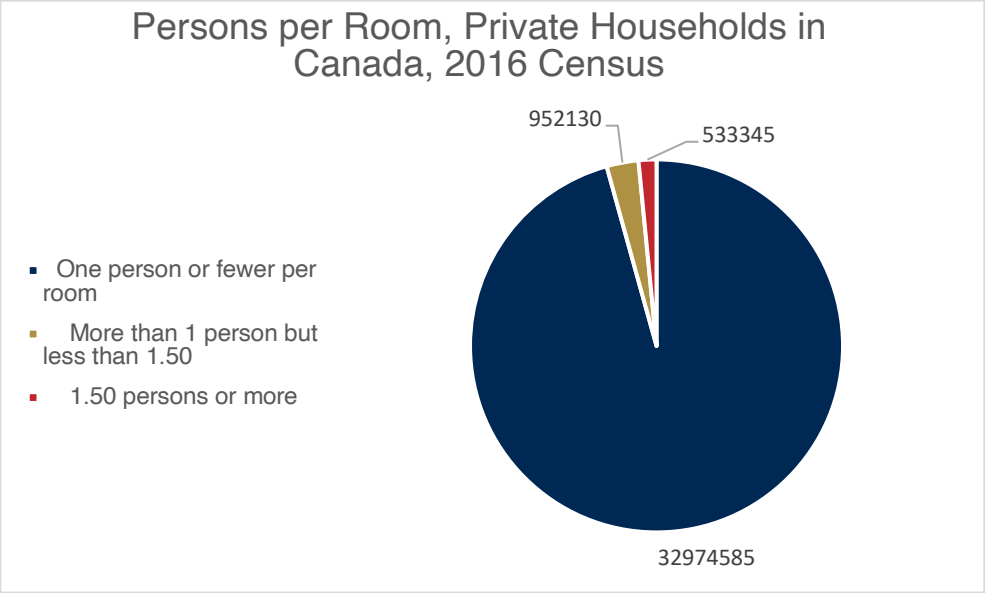
[8] Statistics Canada, 98-400-X2016164.

Indigenous identity are more than twice as likely than those of non-Indigenous identity living off-reserve to reside in a dwelling requiring some degree of repair.

Persons per Room

The Census estimates that in the general Canadian population 32,974,585 (95.7%) people live in dwellings the have 1 person or fewer per room, 952,130 (2.8%) live in dwellings with more than 1 person but less than 1.5, and 533,345 (1.5%) live in dwellings with more than 1.5 people per room [Figure 5].[9]

Figure 5.



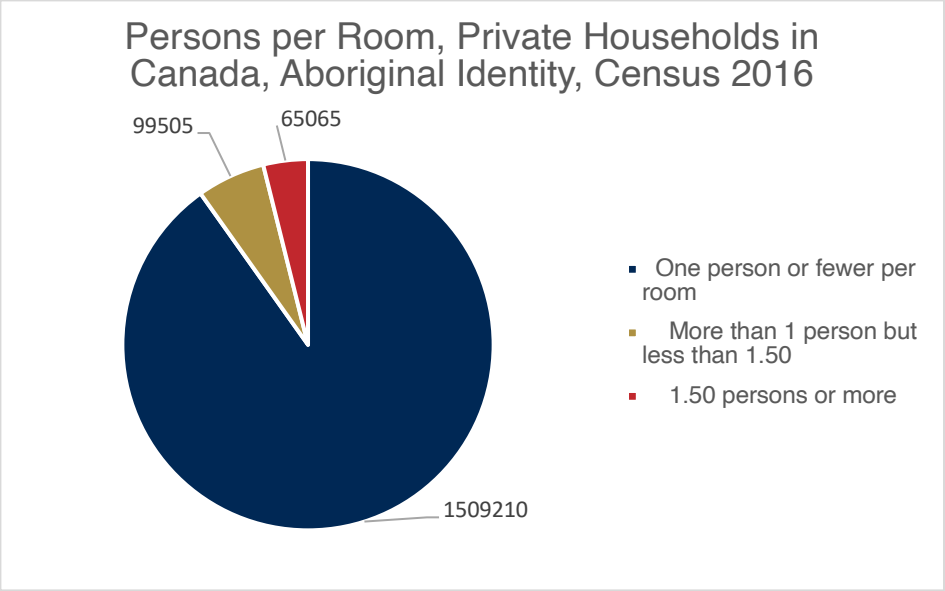
Source: Statistics Canada

The Census estimates that of Canadians with Indigenous identity 1,509,210 (90.2%) live in dwellings with 1 person or fewer per room, 99,505 (5.9%) live in dwellings with between 1 and 1.5 persons per room, and 65,065 (3.9%) live in dwellings with more than 1.5 persons per room [Figure 6].[10] The estimates suggest that roughly 9.8% of the Indigenous identity population live in dwellings with more than one person per room, while 4.3% of the general population live in dwellings with more than one person per room.

[9] Statistics Canada. 2017, "Aboriginal Identity, Number of Persons per Room, Registered or Treaty Indian Status, Housing Suitability, Residence by Aboriginal Geography, Age and Sex for the Population in Private Households of Canada, Provinces and Territories, 2016 Census - 25% Sample Data," *2016 Census,* 98-400-X2016163. Modified 2019-06-17.

[10] Statistics Canada, 98-400-X2016163.

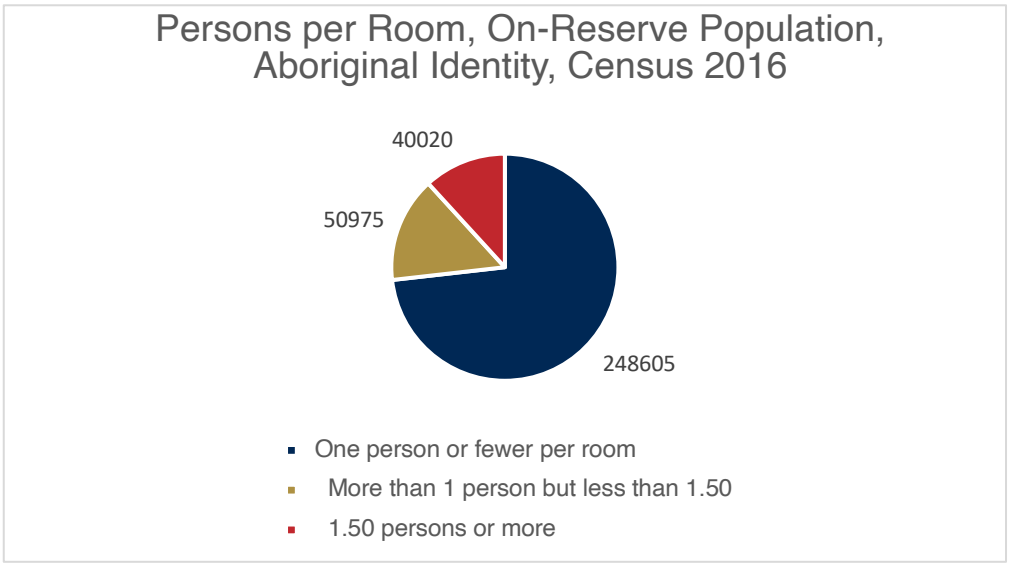
Figure 6.



Source: Statistics Canada

As was the case with the repair of dwelling, variation in persons per room becomes more pronounced when observing the estimation of the Indigenous identity population who also live on-reserve. The Census estimates that of those with Indigenous identity who also live on-reserve 248,605 (73%) live in dwellings with 1 person or fewer per room, 50,975 (15%) live in dwellings with between 1 and 1.5 persons per room, and 40020 (12%) live in dwellings with more than 1.5 persons per room [Figure 7].[11]

Figure 7.



Source: Statistics Canada.

[11] Statistics Canada, 98-400-X2016163.

Inequalities are apparent when comparing the Indigenous identity population living on-reserve with the non-Indigenous identity population living off-reserve. The Census estimates that of non-Indigenous identity Canadians living off-reserve, 31,425,775 (96%) live in dwellings with 1 person or fewer per room, 851,920 (3%) live in dwellings with more than 1 person but less than 1.5 persons per room and 467,825 (1%) live in dwellings with more than 1.5 persons per room [Figure 8].[12] Overall, Indigenous identifying Canadians living on-reserve are about eight times more likely than non-Indigenous identifying Canadians living off-reserve to live in crowded conditions of more than one person per room in a household.

Figure 8.

Discussion

Studies have shown that access to safe, secure, and affordable housing is a socioeconomic indicator of both physical and mental health while also being a contributor to overall well-being. The vast majority of Canadians live in homes that are of acceptable repair and are not overcrowded. The same cannot be said for the segment of the population living in First Nation communities. Estimates from the *2016 Census of Population* suggest that there exist disparities in housing quality and living conditions between Indigenous identity Canadians and the rest of the population. Notably, the Census estimates suggest that the population living on-reserve and reporting Indigenous identity are more than twice as likely than those of non-Indigenous identity living off-reserve to reside in a dwelling requiring some degree of repair and

[12] Statistics Canada, 98-400-X2016163.

about eight times more likely to live in crowded conditions. These estimates speak to the concerns of groups like AFN regarding the living conditions on-reserve in Canada. Nevertheless, the Census only produces an estimate of living conditions. Conducting more comprehensive surveys and collecting data on housing at a larger scale and a greater degree of granularity may allow for more concrete conclusions about the state of housing in First Nation communities in Canada to be drawn.

Appendix D: Water

The State of Access to Water in First Nation Communities

Water is an essential part of human life to which many Canadians enjoy safe, secure, and regular access. Canada is home to the third-largest supply of renewable fresh water in the world, with 103,899 m^3 per capita.[1] With access to a vast supply of water, the majority of Canadians avoid the consequences of consuming contaminated water, which include preventable conditions like cholera, diarrhea, dysentery, hepatitis A, and polio.[2] Studies have shown that drinking contaminated water is associated with a 5 to 7% lower likelihood of reporting good health and a 4% higher probability of reporting a health condition or stomach problem.[3] Despite the ubiquity of water found in Canada and the global understanding of the vital role water plays in human well-being, there remain significant gaps in the ability to access water in First Nation communities across the country. Access to safe and clean drinking water has been recognized internationally by the United Nations General Assembly as a human right since 2010.[4] The lack of access to water in First Nation communities has been seen internationally as Canada failing to uphold its commitments under the *United Nations Declaration on the Rights of Indigenous Peoples* (UNDRIP), while also failing to uphold its legal obligations under treaties like the *International Covenant on Economic, Social, and Cultural Rights* (ICESCR).[5] Canada has been urged in recent years by the United Nations Committee on Economic, Social, and Cultural Rights to fulfill its commitment to ensure safe drinking water and sanitation for First Nations while also promoting their active participation in water planning and management.[6]

The ability to access water is often viewed as a binary topic in that one either can or cannot access water safely. However, access to water is a multi-dimensional issue that relies on several components. The Center for Disease Control and Prevention (CDC), the United Nations International Children's Emergency Fund (UNICEF) and the World Health Organization (WHO) have adopted a method of assessing access to water based on the incidence of "improved drinking water sources," which encapsulates the complexities of access to water. Examples of improved drinking water sources include: piped household water connection, public standpipe, borehole, protected dug well, protected spring, and rainwater collection.[7] Among unimproved drinking water sources are: unprotected dug well, unprotected spring, surface water (river, dam, lake, pond, stream, canal, irrigation channel), vendor-provided water (cart with small tank/drum,

tanker truck), bottled water, and tanker truck water.[8] One may technically have access to water if the only means of doing so is through bottled or trucked water. However, this method of accessing water is inconvenient, expensive for individuals, and environmentally unsustainable. That is why such methods are considered unimproved sources of drinking water by the CDC, UNICEF, and WHO. Likewise, having access to water by a pipe through community water systems, although convenient, neglects that such water may be unsafe for daily use if the source water is highly contaminated or if the treatment facility is poorly monitored.

At the federal level, Canada has failed to adopt similar standards for access to water. Health Canada does employ the *Guidelines for Canadian Drinking Water Quality*, designed to direct the focus of water quality regulation for provinces and territories.[9] Quality of water, while essential, is only part of the story. When judging access to water, it is also important to consider how individuals get their water, and whether or not quality water is easily accessible. Canadians learned this through the tragedy in Walkerton, Ontario, after nearly half of the community fell ill, and seven people died from an E. coli outbreak in the summer of 2000.[10] In the wake of the Walkerton tragedy, it became incumbent upon the provinces and territories to regulate water quality within their jurisdictions. In the early 2000s, provincial governments adopted a multi-barrier approach to protecting the drinking water supply, which includes source water protection, water treatment, water monitoring, and on-going water supply management for communities in their jurisdiction.[11] The multi-barrier approach ensures that Canadians not only have water that is easily accessible but also safe for daily use.

First Nation communities, however, do not benefit from the multi-barrier strategy to water supply protection and are at a disadvantage in terms of the way water quality is regulated. Since on-reserve communities are considered Crown land, and thus under the direct control of the federal government, they do not benefit from the protection afforded to non-reserve communities by provincial water quality standards. In practice, it is the First Nation chiefs and band council that are responsible for providing services, including water systems, on-reserve through a budget provided by the federal government.[12] This system has the federal government cover a portion of the operations and maintenance costs for First Nation public water systems, leaving a 20 percent gap to be filled by First Nation communities themselves, regardless of the community's ability to contribute necessary funds.[13] While there was a framework for regulating the

[13] HRW, 2016.

quality of the water supply in First Nation communities set forth by Indigenous and Northern Affairs Canada (INAC) in 2013, such measures are largely symbolic as they do not impose legally binding obligations for community water systems to reach a certain threshold for water quality.[14] The INAC framework was criticized by leaders in First Nation communities for failing to consult with the communities themselves appropriately.[15]

By contrast, a given non-reserve water system is subject to strict regulations and standards controlled by all levels of government. At the federal level, Health Canada's Water and Air Quality Control Bureau conducts research and development for community water systems.[16] Since the Walkerton tragedy, it has been the provincial government's responsibility to oversee day-to-day regulation of water quality. Municipal governments are to oversee the day-to-day operation of water treatment facilities.[17] While off-reserve communities have their water systems monitored by each level of government in some capacity, First Nation communities are responsible for operating, maintaining, and even funding portions of their water systems with little external aid. Given the governance gap, any disparities that may arise between First Nation communities and the general population in terms of access to water are unsurprising.

The issue of access to water in Canada has been poorly informed due to gaps in data collection and availability on the subject. The most notable effort to gather data on water quality, availability, and overall risk was undertaken by Neegan Burnside Limited at the direction of INAC and was published in 2011. The purpose of this survey was to highlight deficiencies in First Nation water and wastewater systems, identify water needs for each community, and guide infrastructure projects for the following decade.[18] Through a survey of 571 First Nation communities and 807 water systems, data was collected in addition to a risk level analysis conducted per INAC guidelines.[19]

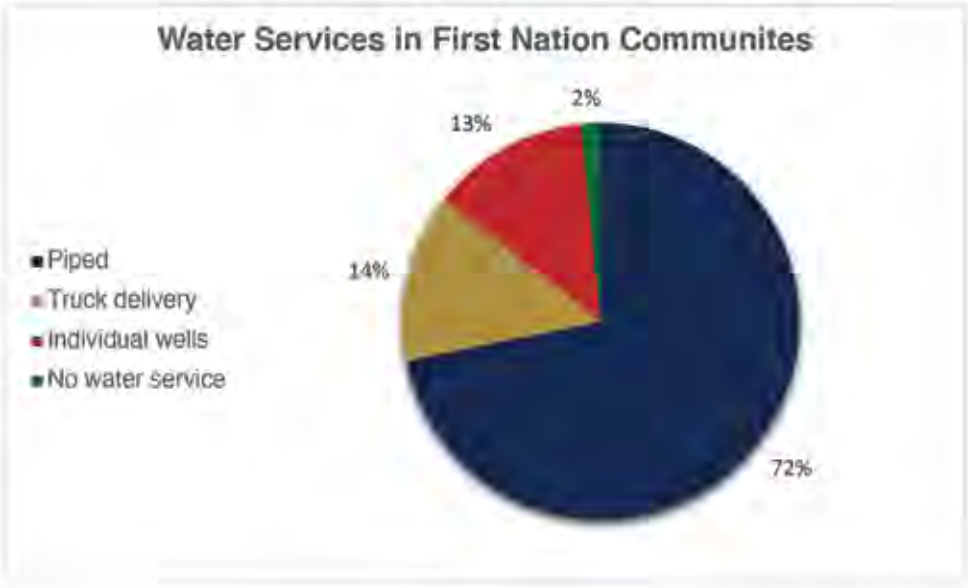
[19] Neegan Burnside ltd, 1.

Figure 1.



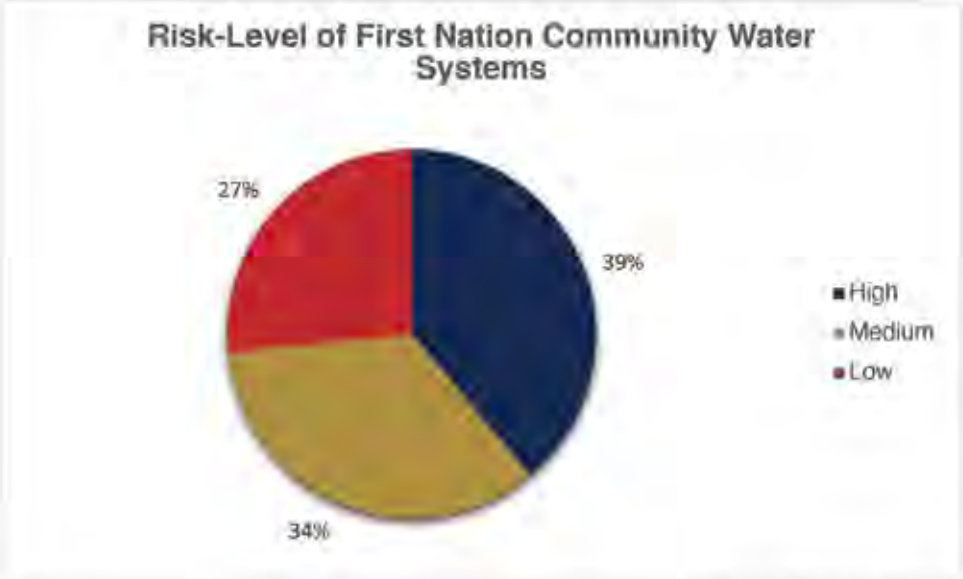
Source: Neegan Burnside Ltd. (2011)

Of the homes in the 571 First Nation communities that participated in the study: 72% (81,026) of homes are piped, 13.5% (15,451) of homes receive on truck delivery, 13% (14,479) of homes are serviced by individual wells, 1.5% (1,880) of homes are reported to have no water service.[20] The report demonstrates that over one-quarter of homes in First Nation communities were getting their water from what the CDC, UNICEF, and WHO would consider to be unimproved drinking water sources. Moreover, these results suggest that thousands of homes in First Nation communities lack the basic infrastructure necessary to access water easily, if at all.

For the 807 First Nation community water systems, risk was calculated as a weighted average of source (10%), design (30%), operations (30%), reporting (10%), and operators (20%).[21]

[20] Neegan Burnside ltd, 4.
[21] Neegan Burnside ltd, 16.

Figure 2.



Source: Neegan Burnside Ltd. (2011)

Of the 807 water systems inspected: 314 (39%) were high overall risk, 278 (34%) were medium overall risk, and 215 (27%) were low overall risk.[22] Notably, while high overall risk was the most common risk level amongst on-reserve water systems, this categorization represents roughly one-quarter of the on-reserve population.[23] In general, small water systems are of a higher risk level than large water systems due to the lack of resources available to operate on the same scale.[24] The authors also note that the overall risk of a given system increases with the degree of community remoteness.[25]

Beyond the Neegan Burnside report, publicly available data regarding access to water in First Nation communities was also documented by the First Nations Information Governance Centre (FNIGC) through the First Nations Regional Health Survey (FNRHS, or RHS for short), most recently published in March 2018. The latest iteration is a cross-sectional survey of 23,764 individuals within 253 First Nation communities conducted between March 2015 and December 2016 (a 78.1% response rate). Of these responses, 76.1% were considered useable for the final analysis.[26] The focus of the RHS is broad but does contain a section devoted to access to water in First Nation communities. In terms of methods of accessing water, the 2015-16 RHS findings were similar to that of the Neegan Burnside report in 2011 [Figure 3]: 71.3% of surveyed First Nation adults reported the primary source of water supply in their household to come from piped-in water, 16.4% reported trucked in water as the primary source of water supply, 9.9% reported using either an individual or shared well, while the remaining

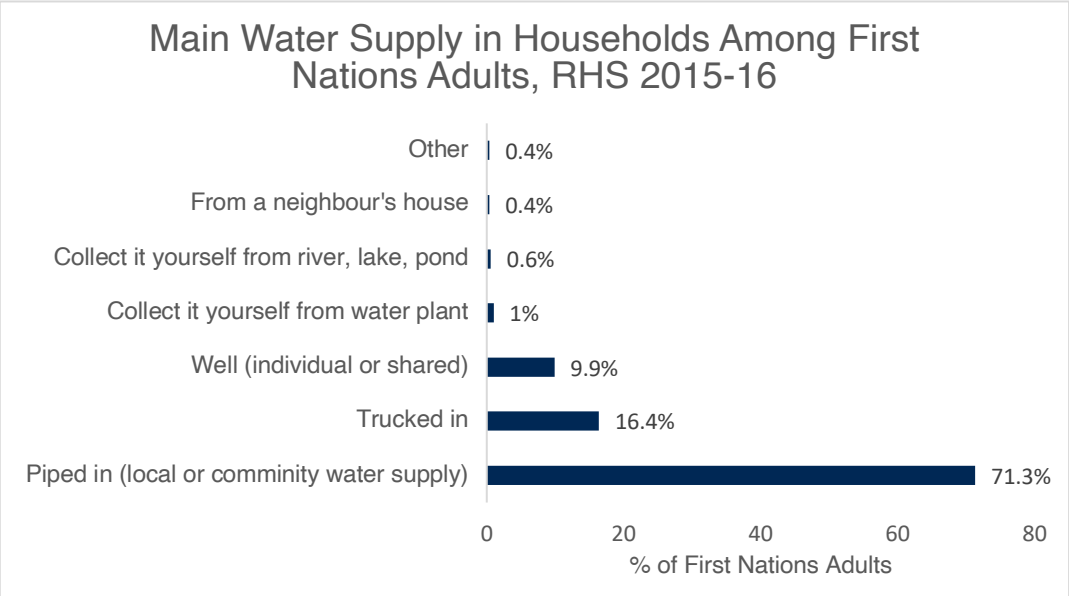
2.4% reported other ways of getting water, including collecting it themselves from a water plant, river, lake, pond, or from a neighbour's house.[27]

Figure 3.



Source: FNIGC RHS 2015-16

Additionally, the RHS found that 72.5% of First Nation adults consider their primary water source to be safe for year-round drinking, an improvement from 64.2% in the 2008-2010 survey while finding no statistically significant differences among urban, rural, and remote communities in terms of drinking water perception.[28] The overwhelming majority of surveyed First Nation adults had access to both cold and hot water from the tap (97.9% and 97.4%, respectively), according to the RHS.[29] The RHS found that 77.9% of those who considered their water safe for year-round drinking reported having water piped in from local or community water supply, compared to 54.4% of those who did not consider their water safe for year-round drinking.[30] Overall, the results from the RHS suggest that having access to water from a tap does not mean that water is necessarily safe for daily use. As a result, individuals who cannot trust water from a tap will explore other alternatives, like trucked or bottled water, which are considered to be unimproved sources of drinking water by the CDC, UNICEF, and WHO.

In the time since the Neegan Burnside report and 2015-16 RHS were published, the government of Canada has invested billions of dollars in infrastructure projects to

[27] FNIGC, 32.
[28] FNIGC, 32.
[29] FNIGC, 30.
[30] FNIGC, 32.

end all long-term drinking water advisories (L-T DWA) on public systems on-reserves.[31] The federal government has made progress towards this goal. When the mass infrastructure projects began in November 2015, there were 105 L-T DWAs on public systems on-reserves across the country.[32] Since then, the federal government has funded 441 projects to repair, upgrade, or build infrastructure, 59 supporting projects and initiatives, and 74 feasibility studies and projects in the design phase.[33] The infrastructure expansion project has helped resolve 88 L-T DWAs and is projected to reach its goal of eliminating such advisories by March 2021.[34]

Despite the progress of the federal government's project, significant challenges towards First Nation community drinking water will persist upon the project's completion. The approach of the federal government's infrastructure spending is focused solely on ending long-term drinking water advisories on public systems on-reserve. This approach neglects the nearly 500 non-public drinking water systems on-reserve that, rather than being the responsibility of the federal government, these are the responsibility of the owner, operator, or other stakeholders.[35] Another potential problem with the approach taken by the federal government is that the infrastructure projects may ultimately be temporary solutions, and that long-term drinking water advisories may be replaced by more frequent and persistent short-term drinking water advisories (S-T DWA). As of July 24, 2020, there are 45 S-T DWAs across the country, not including DWAs in British Colombia and within the Saskatoon Tribal Council. [36] Additionally, previous research suggests that large-scale infrastructure projects, like the one currently being undertaken by the federal government, have been mostly unsuccessful due to the high cost of water treatment plants relative to the small population bases they will serve.[37] A proposed solution to this problem is a more holistic water system improvement, focusing on watershed and groundwater protection as part of a multi-barrier approach similar to that adopted by the provinces following the Walkerton tragedy.[38]

Access to water is a critical component of human health, and a fundamental human right recognized internationally that is absent from First Nation communities across Canada. Despite recent efforts from the federal government, there still exist significant legal, regulatory, and logistical challenges impeding the expansion of access to water. Of particular concern is the gap in regulation and governance of water quality between on- and off-reserve communities. Harmonizing the regulation of water quality

to the provincial level may allow for improved outcomes in access to safe and clean water. Additionally, a lack of recent and relevant data on access to water in First Nation communities obstructs the degree to which conclusions can be drawn on the subject. As such, one thing to take away from this brief is the need for rigorous, granular, and regular data collection on access to water not only for First Nation communities but for the general population. By doing so, it may be possible to guide policy in a manner that alleviates disparities in access to water for all Canadians.

Appendix E: Food Insecurity

Food Sovereignty and Security in First Nation Communities

Food insecurity is defined as inadequate or insecure access to food due to financial constraints.[1] This measure ranges from marginal to severe, based on the intensity of the situation. In practice, marginal food insecurity may resemble a household running out of food before there is money to buy more while, in extreme cases, severely food insecure households may go days without eating due to lack of food or money for food.[2] Like many measures of poverty, food insecurity is a clear mark of a general inability to afford or have access to items necessary to live a decent life. A primary contributor to any level of food insecurity is food sovereignty, defined as: "the right of peoples to healthy and culturally appropriate food produced through ecological and sustainable methods, and their right to define their food and agriculture systems."[3] The main difference between food security and food sovereignty is that the former describes an outcome while the latter describes a process.

Given that, in many cases, it is easier to quantify an outcome, the vast majority of the existing literature is focused on food security. There is a large and growing body of research that outlines the consequences of food insecurity on human health and well-being. One study from 2005 to 2017 found that Canadian adults suffering from food insecurity were more likely to die prematurely than food-secure adults, with those suffering from severe food insecurity dying on average nine years earlier than food-secure adults.[4] Other studies notice less severe consequences stemming from food insecurity, such as inadequate nutrient intake in adults.[5]

For children, however, particularly of school-age (5-17 years), studies have been unable to associate food insecurity with the same dietary compromise noticed in adults.[6] Hypothesis for this phenomenon are varied but are mainly since children, be it through school, friends, extracurricular activities, or work, have other ways of supplementing their nutrition. However, food-insecure children are less likely to meet expectations in school in both reading and mathematics when compared to their food-secure counterparts.[7] Moreover, the hunger that stems from persistent food insecurity can have

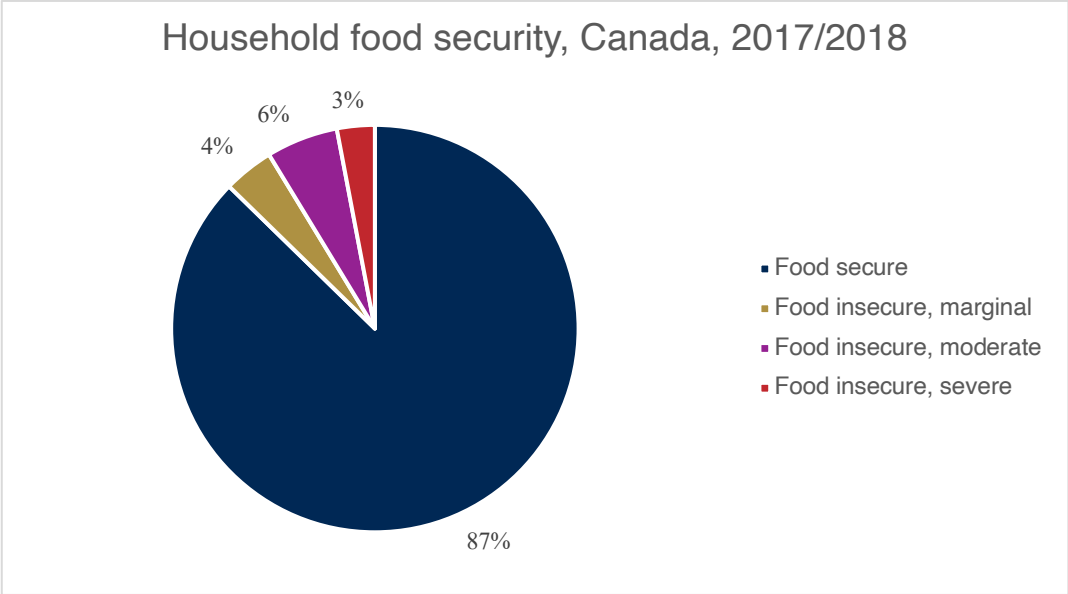
particularly disastrous consequences for children. Children that are consistently hungry children have been shown to experience a greater prevalence of chronic conditions and asthma when compared to children who are never hungry.[8]

In Canada, food insecurity is an issue that impacts millions of families and children every day. While roughly 87% of Canadian households are considered food secure, 13% (1.8 million) of households experienced some degree of food insecurity in 2017/2018.[9] Of Canadians who experienced food insecurity, 569,500 households were marginally food insecure, 817,400 were moderately food insecure, and 429,400 were severely food insecure [Table 1].

Figure 1.



Source: Source: Statistics Canada, Table 13-10-0385-01.

Recently published First Nations Food, Nutrition, and Environment Study (FNFNES) suggests that Indigenous communities suffer from food insecurity to a significantly greater degree than the general Canadian population. The Study, which observed a large number of variables in 92 First Nations representative of 11 ecozones below the 60th parallel,[10] found that 47.9% of households in First Nation communities experienced some degree of food insecurity.[11] Regionally, food insecurity rates in First

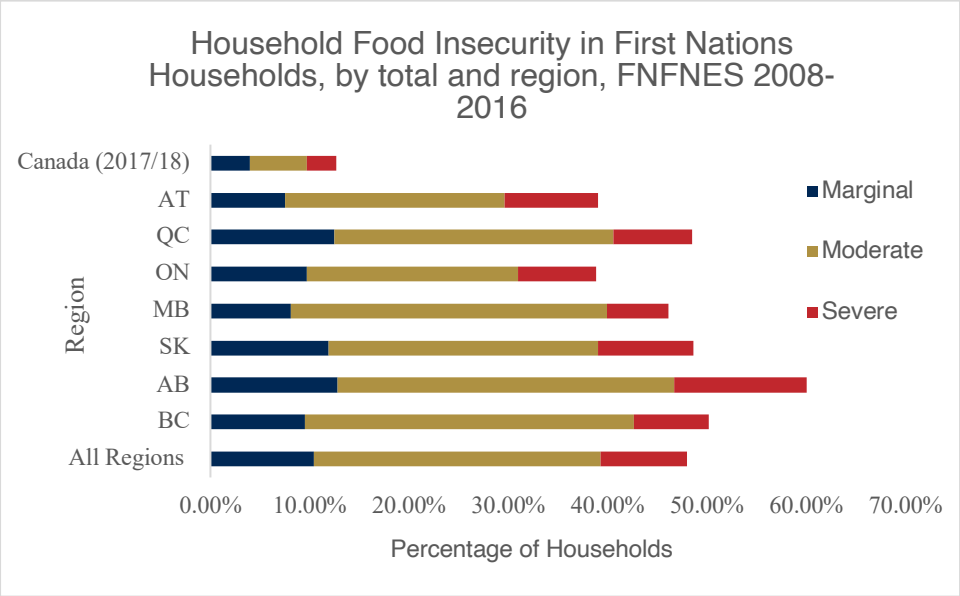
[10] Because the Study took place in First Nation communities below the 60th parallel, data from this Study is unavailable for the Territories.
[11] Laurie Chan, Malek Batal, Tonio Sadik, Constantine Tikhonov, Harold Schwartz, Karen Fediuk, Amy Ing, Lesya Marushka, Kathleen Lindhorst, Lynn Barwin, Peter Berti, Kavita Singh and Olivier Receveur, “First Nations Food, Nutrition & Environment Study: Final Report for Eight Assembly of First Nations Regions: Draft Comprehensive Technical Report," *Assembly of First Nations, University of Ottawa, Université de Montréal*, (2019): 66.

Nation communities are highest in Alberta at 60%, while the lowest rate of food insecurity is found in First Nation communities in Ontario at 38.8%.[12] Figure 2 outlines the food insecurity findings of the Study by region throughout data collection (2008-2016), compared to the most recently available rate of food insecurity for the Canadian population.

Figure 2.



Source: Chan et al., 2019 and Source: Statistics Canada, Table 13-10-0385-01.

Since Chan et al. focuses on First Nation communities below the 60th parallel, food insecurity in Indigenous communities in the Territories is not reported. Nevertheless, Food insecurity is a significant issue in Canada's Territories. Statistics Canada data shows that in 2017/2018, each of the three Territories experienced elevated levels of food insecurity relative to the general Canadian population [Figure 3].[13] Food insecurity is prominent in Nunavut, with only 43.1% of households considered to be food secure.[14] These results outline that there does exist an issue of food insecurity in the Territories. However, Statistics Canada observes all households. If data were available in only Indigenous communities, the results would likely be more pronounced, particularly in Yukon and Northwest Territories.

Food insecurity in each FNFNES region is more pronounced when observing households with and without children [Figure 4]. Across all regions, the prevalence of food insecurity is heightened within households that have children compared to those without. When only considering households with children, Alberta still notices the

[12] Chan et al., (2019): 66.
[13] Statistics Canada has indicated that portions of this data set should be used with caution.
[14] Statistics Canada, Table 13-10-0385-01.

highest proportion of food insecurity, with 64% of households, while the lowest proportion is found in Atlantic Canada with 44%. The highest proportion without children is in Alberta at 45%, while the lowest is in Ontario with 27%. Given the potential mental and physical health challenges food insecure children have demonstrated, these figures are particularly alarming. The outcomes for First Nation households with children are worse than the comparable general population. Food security for households with children less than 18 in the general population is displayed in Figure 5.

Households with children under 18 years old in the general population of Canada demonstrate lower levels of food insecurity than the total population, with 11.7% of such households demonstrating food insecurity.[15] These results, combined with the differences noticed between households with and without children from Figure 4, suggest that having children in First Nation communities may jeopardize food security.

Figure 3.

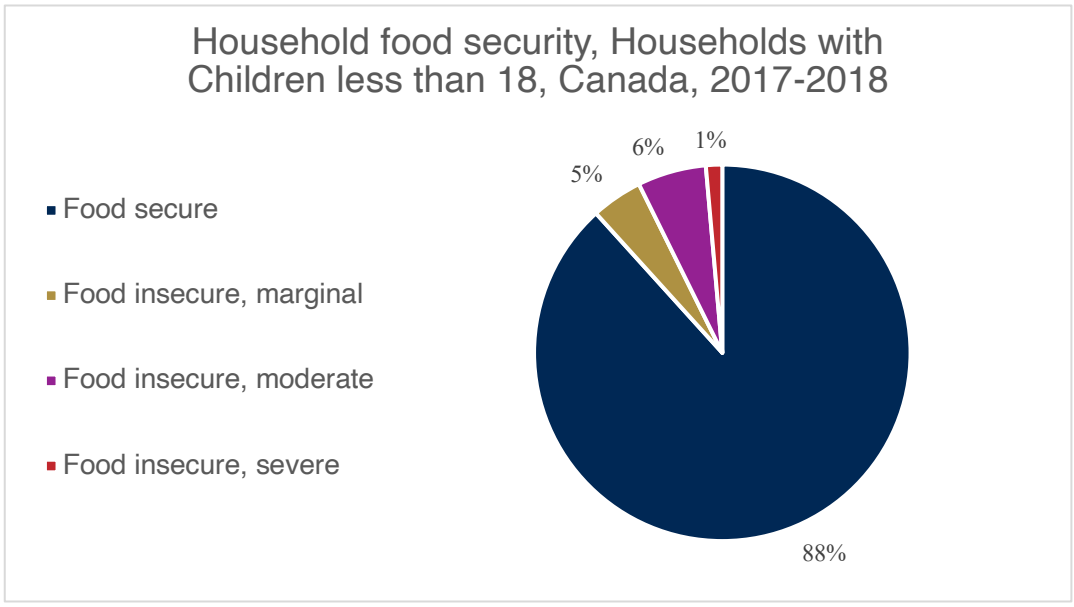
Figure 5.



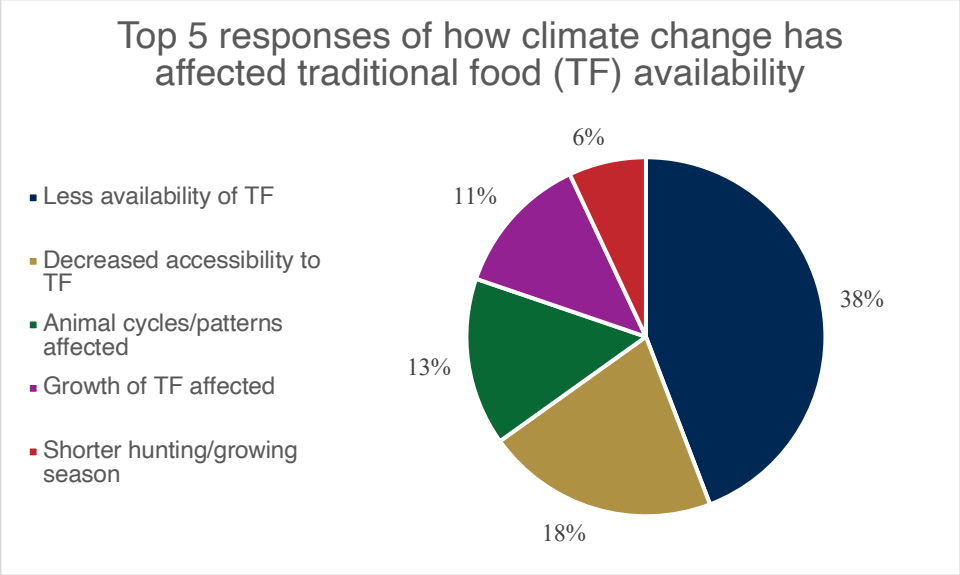
Source: Statistics Canada, Table 13-10-0385-01.

Alongside the findings of food insecurity, FNFNES also found diets of many First Nation adults to be nutritionally inadequate, likely a consequence of the elevated levels of food insecurity. One of the primary causes of food insecurity in First Nation communities appears to be a decline in food sovereignty, as traditional food access is failing to meet current needs. The process of food sovereignty is crucial to a people's cultural identity and plays a pivotal role in establishing and maintaining food security in

any society. In the context of First Nations and Indigenous peoples in Canada, food sovereignty comes in the form of consumption and cultivation of traditional foods. Among FNFNES respondents, traditional food was generally preferred to store-bought, is of higher nutritional quality, and has been shown to improve diet quality in First Nation adults significantly.[16]

However, over half of the adults participating in the study report that traditional food is becoming scarce and more difficult to harvest.[17] Respondents reported climate change and industry-related activities as primary drivers of traditional food scarcity. Climate change particularly has impacted traditional First Nation foods through environmental degradation and negative impacts on animal spawning and migratory patterns. The top 5 responses of how climate change has impacted traditional food availability are displayed in Figure 5. Regardless of the cause of the reduced availability of traditional foods, 43% of the FNFNES participants worried that traditional food supplies would run out before they could get more, and 47% had previously experienced a shortage in their traditional food supply.[18] The threat posed to Indigenous food sovereignty may have persistent and negative impacts on food security in many cases, particularly in isolated or remote communities where it is costly to import food.

Figure 6.



Source: Chan et al., 2019.

Food security remains a serious issue in Canada, particularly in First Nation communities. Among the most likely to be at risk of food insecurity are First Nation households with children. Given the severe health consequences, food insecurity and hunger pose to children and adults, investigating policy options to promote food security

[16] Chan et al., 2019: 8.
[17] Chan et al., 2019: 8.
[18] Chan et al., 2019: 53-54.

in Indigenous communities may be of particular interest to agencies like FNCFS. From a policy perspective, food security is negatively related to healthcare usage in Canada. This result suggests that by improving food security in Canada, the strain and costs borne by the healthcare system could be reduced.[19]

To achieve the goal of food security, it is important to encourage a food sovereignty approach that is both relevant and culturally sensitive to the segments of the population at the greatest risk, like the Indigenous population of Canada. An important consideration is the pressing need for data on food security and food sovereignty at an appropriate granularity. Without the work of Chen et al., there would be very little data on food security in First Nation communities. Since FNFNES focused on First Nation communities below the 60th parallel, gaps in data are still present for Indigenous communities in the Territories. A meaningful next step would be to replicate and improve upon the FNFNES to include even the most remote communities in the northern parts of the country. By conducting such a survey in more frequent intervals, policy can be directed effectively and appropriately to address the process of food sovereignty and improve food security outcomes in First Nation communities.

Appendix F: Broadband Access

The State of Broadband Service in First Nation Communities

In the last two decades, the global economy has rapidly digitalized in the developed world. This digitalization has been driven significantly by increasing technological progress that has allowed for tasks that were once highly time- and resource-intensive to become relatively routine. Likely the most important phenomenon that has contributed to digitalization is the increased availability and penetration of broadband connectivity technologies across the world. Broadband itself refers to high-speed Internet that is always on and faster than the traditional dial-up method of accessing the Internet.[1] While there are many types of broadband technologies, among the most common in Canada today include digital subscriber lines (DSL), fibre optic cable, broadband over powerlines (BPL) and Low-Earth Orbiting satellites. Broadband connectivity is defined as access to Internet services that support inbound (or download) data transmission rates of 1.5 megabits per second (Mbps) or more.[2] The ubiquity of broadband technologies found in modern society allows individuals and businesses alike to access the Internet with ease and has contributed significantly to the expansion of modern economies. One study suggests that a 10% increase in broadband service would lead to a 1.2 to 1.4 percentage point increase in per capita GDP growth in a given economy.[3] In Canada, broadband access has played an even more crucial role in the development of rural areas by decreasing regional disparities and promoting economic viability. From 1997 to 2012, it is estimated that broadband expansion accounted for a 1.17 percentage point per year increase in service employment in rural areas.[4]

Having understood the economic implications of expanding access to broadband, the Government of Canada and the Canadian Radio-television and Telecommunications Commission (CRTC) have set out to improve connectivity across the country. In 2016, the CRTC proclaimed broadband access Internet service to be considered a basic telecommunications service for all Canadians.[5] It was also established that 50 Mbps download by 10 Mbps upload speeds with unlimited data options to be the new standard for internet connectivity in Canada.[6] These speeds were chosen based on what would be necessary for Canadians to take full advantage of cloud-based software applications, multiple government services, online learning

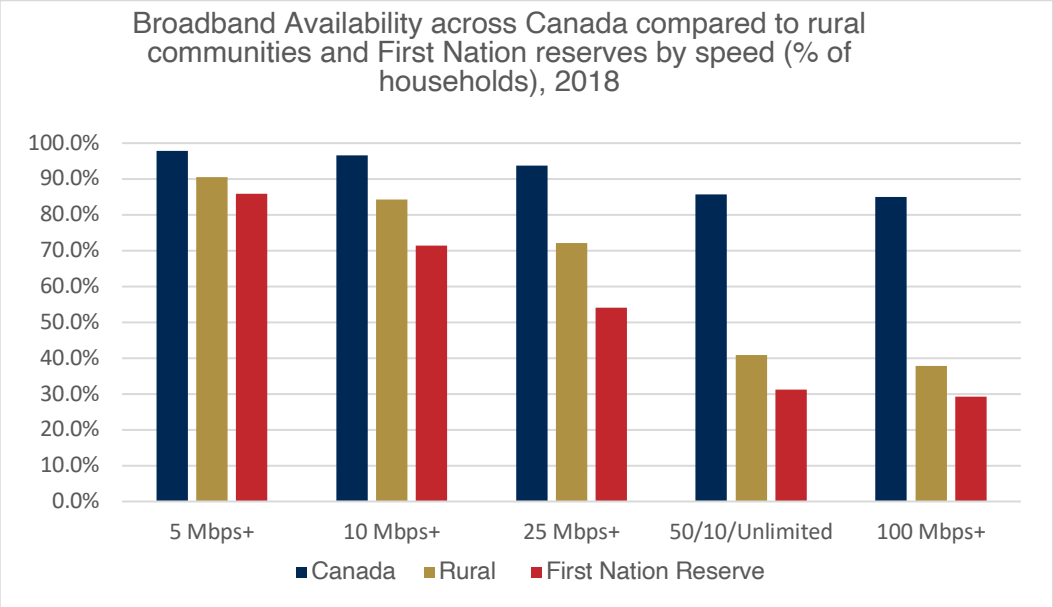
[6] Government of Canada, 2016.

resources, and high-definition video streaming, all while supporting multiple users.[7] As of 2018, availability of the target 50/10/unlimited (50 Mbps download, 10Mbps upload, unlimited data option) reached 85.7% of Canadian households.[8] However, only 40.8% of rural households had access to broadband at such speeds, a significantly lower proportion than the 97.7% of urban households with 50/10/unlimited access.[9]

When it comes to broadband access at the government's target range for speed, the most disenfranchised segment of the population is easily those who live on First Nation reserves. Figure 1 shows the availability of broadband at various speeds across Canada, in rural communities, and on First Nation reserves.

Figure 1.



Source: CRTC, 2020.

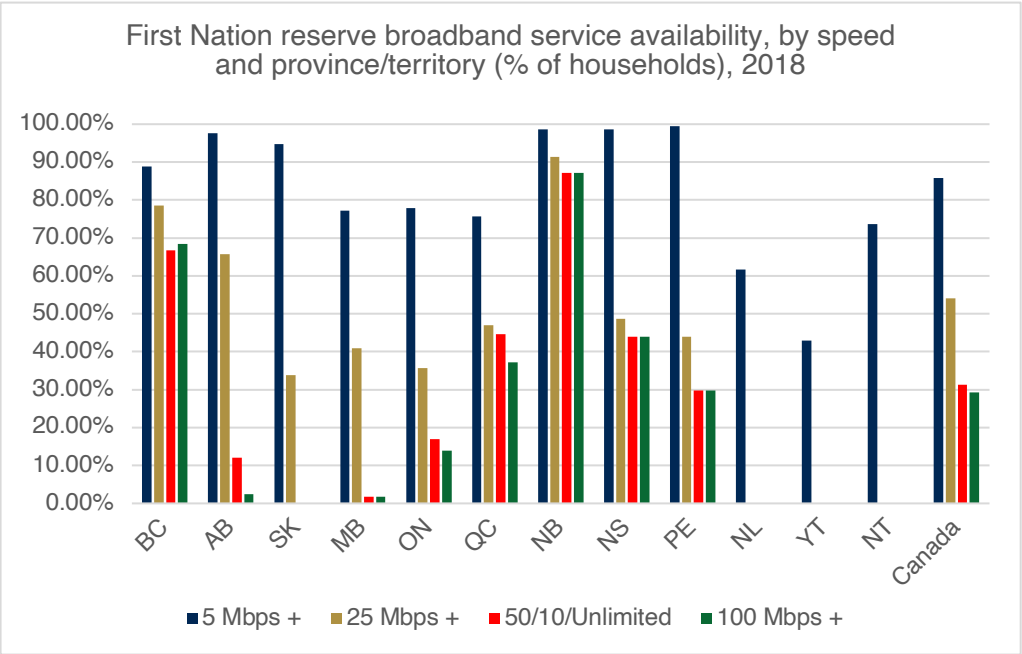
While significant portions of the on-reserve population have access to broadband (roughly 85% with access to 5 Mbps+ download and 71% with access to 10 Mbps+ download), at each progressively faster speed they lag behind both rural and Canadian populations. In terms of the government standard of 50/10/unlimited, only 31.3% of First Nation reserves had access to broadband that met the target as of 2018.[10] Notably, this service was entirely inaccessible to First Nation communities in Saskatchewan, Newfoundland and Labrador, Yukon, and Northwest Territories.[11] With participation in the modern Canadian economy requiring faster speeds and more data availability,

[7] Government of Canada and Innovation, Science and Economics Development Canada (ISED), "High-Speed Access for All: Canada's Connectivity Strategy," 2019.
[8] Canadian Radio-television and telecommunications Commission (CRTC). "Communications Monitoring Report 2019," 2020.
[9] CRTC, 2020: 274.
[10] CRTC, 2020: 281.
[11] CRTC, 2020: 282.

expanding government standard broadband access is necessary to help develop on-reserve First Nation communities.

Among First Nation reserves, there is substantial variation in the quality of accessible broadband options available across provinces [Figure 2]. One province that has performed well in providing access to broadband has been New Brunswick, with over 98% of First Nation reserve households having access to downstream broadband speeds of at least 5 Mbps, 91% with access to speeds at least 25 Mbps, 87% reaching the government standard of 50/10/unlimited, and 87% also having access to 100 Mbps or greater.[12]

Figure 2.



Source: CRTC, 2020.

For a province with vast topographical and geographical diversity, British Columbia also fairs well in delivering broadband access to First Nation reserves with roughly 89% of First Nation reserve households having access to download speeds of 5 Mbps or higher, 78.5% of households with access to 10 Mbps or greater, 66.7% reaching the government target of 50/10/unlimited, and 68.5% able to access at least 100 Mbps.[13]

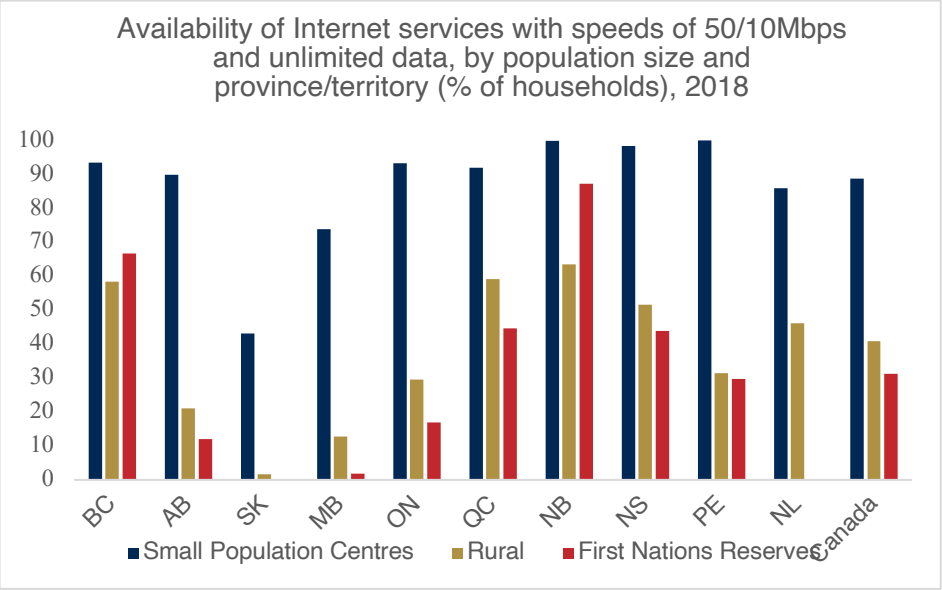
Amongst the remaining provinces and territories, there is a significant drop-off in available internet speeds after 5 Mbps. Six provinces (Saskatchewan, Manitoba, Ontario, Quebec, Nova Scotia, and Prince Edward Island) have greater than 75% of First Nation reserve households able to access 5 Mbps download speeds, but less than

[12] CRTC, 2020: 282.
[13] CRTC, 2020: 282.

50% able to access download speeds of 25 Mbps.[14] Furthermore, the fact that 31.3% of households on First Nation reserves have access to the government target speeds for broadband appears to be skewed upward by a few outlier provinces with acceptable rates of access to broadband. Only four provinces (British Columbia, Quebec, New Brunswick, and Nova Scotia) have greater than 30% of their households on First Nation reserves able to access 50/10/unlimited broadband.[15] Communities on First Nation reserves outside of those four provinces will undoubtedly struggle to utilize services deemed necessary for success in a digitalized economy.

Even when comparing First Nation reserves to small population centres and rural communities, there are gaps in the availability of the government standard 50/10/unlimited broadband [Figure 3]. Small population centres across the country fair relatively well in their access to standard broadband, with 88.7% of such population centres meeting standard broadband availability. There are four provinces (Alberta, Manitoba, Ontario, and Newfoundland and Labrador) who have greater than 70% of small population centres able to meet the government standard for broadband, but less than 25% of First Nation reserves able to do the same. By comparison, only two of those provinces with greater than 70% of small population centres able to access 50/10/unlimited (Alberta and Manitoba) fail to provide the same service to 25% of rural communities.[16]

Figure 3.

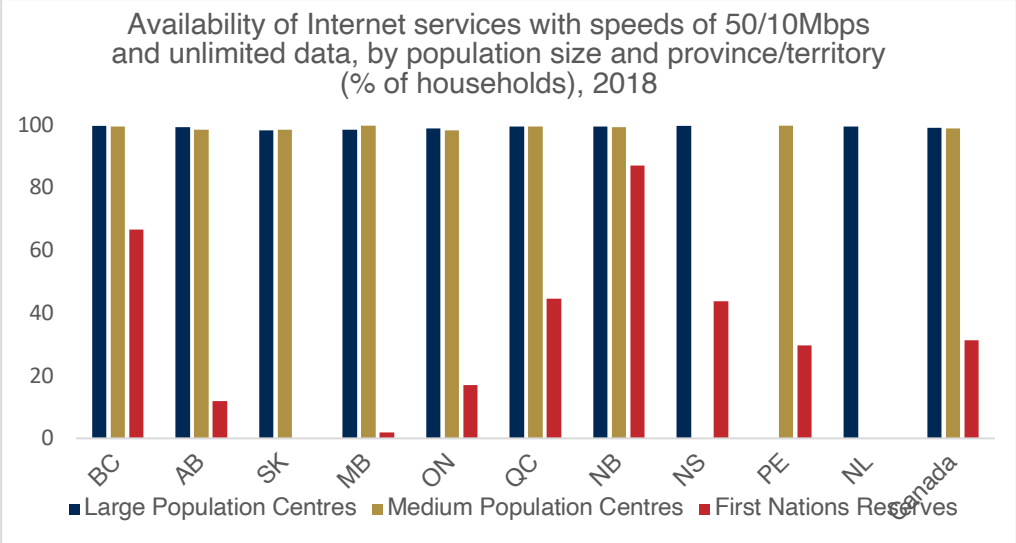


Source: CRTC, 2020.

[14] CRTC, 2020: 282.
[15] CRTC, 2020: 282.
[16] CRTC, 2020: 284.

Inequities in Broadband access are even more drastic when comparing First Nation reserves to Large and Medium population centres [Figure 4]. All provinces in Canada can provide greater than 98% of their large and medium population centres with access to 50/10 broadband with an unlimited option. Naturally, high tech infrastructure is more likely to be built first in larger communities, given that there will be more individuals and businesses to service relative to small and urban population centres. However, this fails to explain why First Nation reserves lag so far behind population centres of similar size. While it is developing slowly, the government of Canada is currently working on infrastructure projects that will see almost all Canadians able to access 50/10 connectivity sometime between 2026 and 2030.[17]

Figure 4.

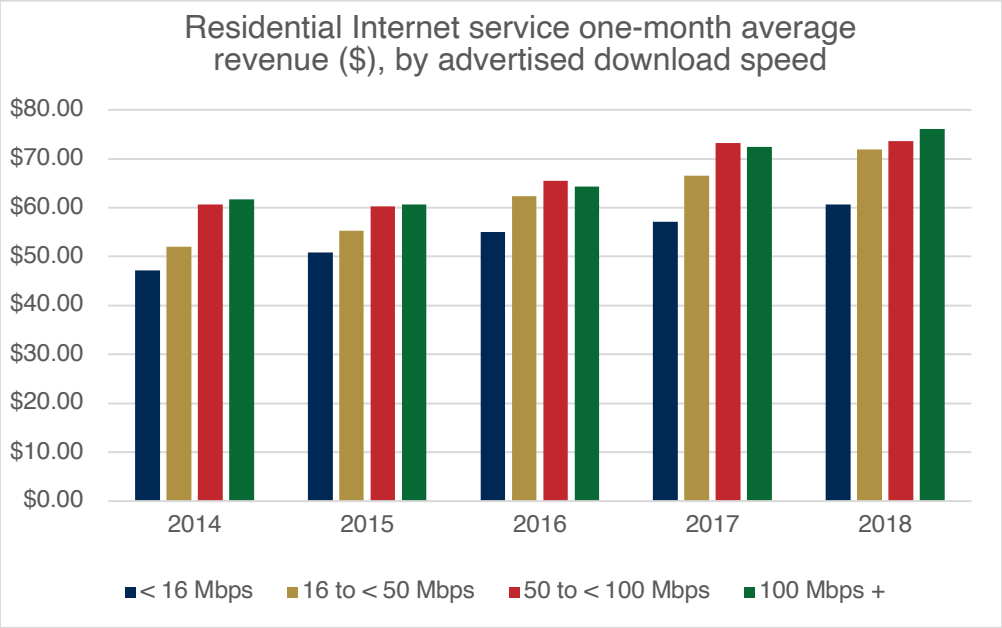


Source: CRTC, 2020.

While broadband is becoming increasingly more available to consumers, it is not becoming any less expensive to use. For residential Internet service, the one-month average revenue per user in 2018 ranged from $60.71 for advertised download speeds of less than 16 Mbps to $76.09 for advertised download speeds at or exceeding 100 Mbps [Figure 5]. This equates to Internet service costing somewhere between $728 and $913 per user per year.[18]

[17] Government of Canada and ISED, 2019.
[18] CRTC, 2020: 261.

Figure 5.



Source: CRTC, 2020.

Average one-month revenue for residential Internet service per user for speeds that meet the government standard of 50/10 was $73.64, which translates to roughly $880 per year for one user. While these figures may vary across regions and service providers, accessing the Internet may be expensive for households. Given that 40% of First Nation communities have median household incomes that fall below their respective provincial poverty lines[19], it may be difficult for residential broadband usage to gain traction on certain First Nation reserves even when they have the ability to access government standard speeds.

While the cost of the current technology will continue to be an obstacle for penetration of broadband in First Nation communities, large population centres will continue to adopt the most recent broadband technologies. Most notably, the new 5th Generation (5G) wireless network will revolutionize Canada's largest cities in the coming decades. In January, 2020 Rogers, a major Canadian wireless provider, would launch its 5G network in downtown Vancouver, Toronto, Ottawa, and Montreal, before expanding into over 20 more markets by the end of the year.[20] On June 11, 2020, Bell announced the launch of its 5G network in Toronto, Montreal, Edmonton, Calgary, and Vancouver. Theoretically, this network would initially provide theoretical peak download speed of up to 1.7 Gbps[21] At its peak, the 5G network is expected to improve

[19] See IFSD brief on the State of Poverty in First Nation Communities.
[20] Reuter "Rogers begins roll out of 5G network in major Canadian cities", Jan 15, 2020

[21] Bell Canada, "The best just raised the bar. Canada's largest 5G network is here," June 11, 2020.

connectivity, reduce latency, and expand upon the bandwidth currently available on 4G networks. Specifically, the Bell network expects to increase download speeds six-fold, at 1000 times greater capacity and provide latency three times lower than their 4G network.[22] Ultimately, 5G will power the upcoming generation of technology, which will almost certainly include innovations in smart cities, autonomous driving, and telehealth, among others.

As previously mentioned, the Canadian government plans on delivering broadband of 50/10/unlimited to all Canadians by 2030.[23] The government of Canada has made it clear that the 50/10 speed target is a minimum and that the infrastructure they plan to use is generally scalable to speeds comparable to 5G (roughly 1 gigabit per second).[24] However, scaling technologies to support faster speeds will require additional investment and time. As such, it is unlikely that Canadians in isolated communities will be receiving the benefits of 5G technologies at the same rate as the rest of the country. While all Canadians should have 2020 standard broadband by 2030, the simultaneous adoption of 5G networks across the country may cause the technological gap between urban and rural communities to persist and perhaps widen.

Although the progress may be slow, expanding access to broadband is an opportunity for the Canadian government to empower First Nation communities in today's increasingly digital economy. With significant technological changes happening all the time, expanding broadband infrastructure is critical for keeping these communities connected with the rest of the world. Broadband expansion is vital for accessing growing online industries like e-learning, telehealth, and work-from-home that will play significant roles in the post-COVID-19 economy. By expanding access and penetration of broadband, keeping in mind the issue of affordability, it will be possible to expand these vital services to even the most remote communities in Canada. In doing so, quality of life has the potential to improve substantially in First Nation communities across the country.

Broadband: Canada-US Comparison

The following table compares Canada to the US in terms of Indigenous population and geography. It is important to observe how other nations are handling the issue of access to broadband in Indigenous communities, as Canada should aim to be a leader in the way we treat all of our citizens.

Country	Broadband Availability
Canada	In 2018, the availability of 50/10 services reached 85.7% of households. 50/10 availability only reached 31.3% of First Nation households.

[22] Bell Canada, 2020.
[23] Government of Canada and ISED, 2019.
[24] Government of Canada and ISED, 2019.

	The plan for broadband expansion will see 90% of Canadians connected by 2021, 95% of Canadians connected by 2026, and the hardest-to-reach Canadians by 2030.
USA	In 2018, 94.4% of Americans had access to the FTC minimum 25/3 standard. On Tribal lands, this number is 72.3%. The lowest available speeds in 2018 (10/1) 97.4% of the US population had access. On Tribal lands, this number is 86.9%.[25]

Appendix G: Voluntary Sector

Volunteerism and Philanthropic Giving in First Nation Communities

The non-profit, volunteer and grant-making sectors of the economy exist to provide beneficial services to communities beyond the scope of for-profit business and government. These organizations are critical to the well being of Canadians as they build social capital, provide solutions to economic, social, environmental, and cultural challenges while forging connections between citizens.[1] Organizations in the non-profit and volunteer sectors rely on the support of charitable donations, grant-making, and volunteer work. For instance, in 2013, it was estimated that the hours contributed by volunteers stood at 1.96 billion in Canada, equating to the work of nearly one million full-time, year-round jobs.[2] Raising funds is particularly valuable to this sector, with the activity of fundraising accounting for 9% of all volunteer hours in Canada for 2013.[3] The voluntary sector, non-profits, and grant-making contribute immensely to the Canadian economy. The value of volunteer time in 2017 was estimated at $55.9 billion and exceeded $87 billion when considering the economic activity of non-profits.[4] More recently, in 2018, charitable donations from Canadians totalled close to $10 billion, coming from 5.3 million individual donors [Table 1].[5]

Grant-making allows agencies to expand their service offerings beyond what may have been initially possible. In Alberta, philanthropic activity has been revolutionary for many charities. From 2004 to 2013, oil- and gas-related companies raised roughly $325 million for the United Way in Alberta.[6] The Children's Aid Foundation of Canada (CAFC) is another mainstream grant-maker to Canadian causes. CAFC works with 74 child- and youth-serving agencies across Canada, in addition to their founding partner, the Children's Aid Society of Toronto.[7] Agencies can have one of two relationships with CAFC. Partner agencies are organizations that the Foundation is working with or funding through a CAFC Flagship Initiative or on a Co-Design Initiative. An agency may also be a Grantee, or an organization receiving funds from the Foundation outside of Flagship Initiatives to help children, youth, and families. Grant-makers like CAFC are critical to the provision of child and family services in Canada.

For First Nation Child and Family Services, the time of volunteers combined with charitable donations and grants can considerably supplement agency activities. There is

no shortage of individual charities that have committed themselves to improving outcomes in Indigenous communities. Save the Children Canada has used their *Ayamitah* (Let's Read Together) program to deliver 230,000 books to First Nation educational organizations, communities, and literacy programs throughout Alberta and Saskatchewan since 2008.[8] The Canadian Red Cross has engaged in the prevention of violence, bullying, and abuse while focusing on the process of reconciliation and diversity in First Nation communities across Canada.[9] Moreover, the United Way of Calgary[10] and Winnipeg[11] each donate roughly $2 million annually to local Indigenous charities that aid individuals who face intergenerational trauma.

Table 1.

Summary of charitable donors, 2018	Number
Number of tax filers	27,394,970
Number of donors	5,324,280
	Years
Average age of donors	55
	Dollars
Average donations, donors aged 0 to 24 years	400
Average donations, donors aged 25 to 34 years	880
Average donations, donors aged 35 to 44 years	1,340
Average donations, donors aged 45 to 54 years	1,720
Average donations, donors aged 55 to 64 years	2,060
Average donations, donors aged 65 years and over	2,600
Total charitable donations	9,952,505,000
Median donations	310
Median total income of donors	61,940
75th percentile total income of donors	95,760

While volunteer and charity work have certainly improved recently in Indigenous communities, there appear to be persistent gaps in grant-making for Indigenous causes. In their seminal paper on the subject of volunteerism and philanthropic giving in First Nation communities, Cindy Blackstock and Samantha Nadjiwan found that less than 10% of funds for the voluntary sector on reserve come from philanthropic foundations.[12] However, since the Blackstock and Nadjiwan paper was published in 2003, little work has been done to measure the level of grant-making to Indigenous communities and causes across Canada.

A 2010 study by the Circle on Philanthropy and Aboriginal Peoples in Canada explored some of the explanations for gaps in grant-making to Indigenous communities and causes. They found that among First Nation communities and charities servicing these communities, there is apprehension in applying for grants. Many charities are unaware that they are eligible for grants and are intimidated by the thought of approaching the private sector for financial support.[13] Moreover, the common myth that federal funding is adequate for First Nation communities has been perpetuated, potentially being a cause for lack of grants to Indigenous communities.[14] Lastly, given the historical variability of funding, many charitable organizations are cautious in their grant-making approach out of fear that the federal government may reduce funding if a large influx of grants to First Nation communities were to manifest.[15]

Although there are many potential underlying causes for gaps in funding and wide-spread apprehension from grant-makers to contribute to Indigenous communities and charities, a rigorous effort to quantify these gaps has not been conducted since Blackstock and Nadjiwan's work in 2003. In a non-Canadian context, Native Americans in Philanthropy and Candid partnered to produce a study in the United States that observed the overall contributions of large U.S. foundations to Native American communities and causes. By examining the tax returns of grant-makers and non-profits, the study provides an approach that could be applied to Indigenous communities in Canada to understand the nature of grant-making. One of the relevant results from the American study, the evolution of grants and grant dollars given to Native American communities and causes, is shared below in Figure 1.

From 2002 to 2016, large U.S. grant-making foundations gave, on average, 0.4% of total annual funding to Native American communities and causes, despite Native Americans making up roughly 2% of the American population.[16] These results suggest

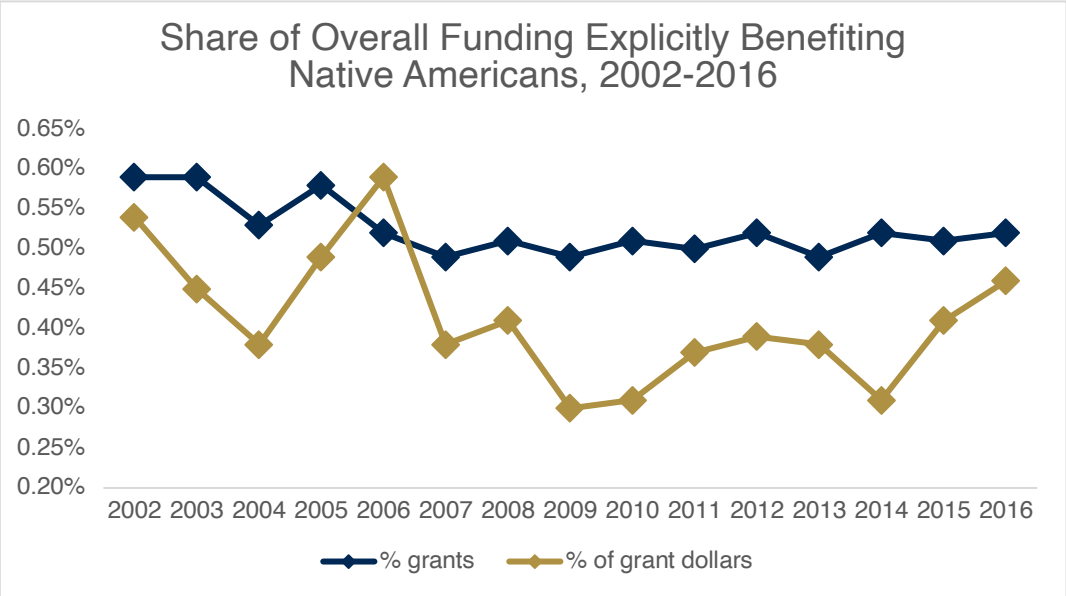
that Native American charities are generally underfunded relative to the proportion of the population they comprise. However, given the challenges that face Indigenous populations in North America stemming from the enduring effects of colonialism, Indigenous populations may require more funding than their composition of the population suggests. Of large grant-making foundations, 20% gave to Native American communities and causes, with the majority of grant dollars going to program support and roughly 15% for operating support.[17] Notably, funding for Native American causes dropped during and in the years following the 2008 financial crisis. Given the current economic downturn stemming from the COVID-19 pandemic, there may currently be a similar reduction taking place in grant-making to Indigenous communities and causes.

Figure 1.



Source: Candid and Native Americans in Philanthropy, 2019.

While this study does not relate to the case of philanthropic giving to Indigenous communities in Canada, it does outline the trend of Indigenous charities being underfunded relative to the population Indigenous people represent in North America. Replicating this study in a Canadian context would inform the issue of gaps in grant-making to Indigenous communities in this country. Observing the trend over time could additionally provide insight on how certain events, like a change in government or pandemic, impacts the contribution of grants to Indigenous communities and causes.

Given the size and economic importance of the volunteer, non-profit, and grant-making sectors, an increased presence of such organizations could conceivably improve outcomes in several areas in Indigenous communities across Canada.

---

[17] Candid and Native Americans in Philanthropy, "Investing in Native Communities: Philanthropic Funding for Native American Communities and Causes," (2019): 14.

However, since the report from Cindy Blackstock and Samantha Nadjiwan found that less than 10% of funds raised on reserves came from philanthropic foundations in 2003[18], little research on the voluntary sector on-reserve has been made publicly available. By replicating Native Americans in Philanthropy and Candid's study from 2010, gaps in grants provided to Indigenous communities and causes relative to those servicing other causes can be identified. A deeper understanding of this issue can guide policymakers and inform grant-providing foundations of the necessary course of action to alleviate these disparities. By improving the quantity and concentration of grants provided to Indigenous communities while simultaneously promoting the efficient use of such funds, disparate outcomes in areas like access to water and housing, development of infrastructure, and incidence of poverty can all be ameliorated to the benefit of Indigenous Canadians.

Appendix H: Request for Information to the Deputy Minister of ISC

IFSD
IFPD

Dr. Jean-François Tremblay
Deputy Minister
Indigenous Services Canada (ISC)
10 rue Wellington
Gatineau, QC K1A 0H4

August 23, 2019

Dr. Tremblay:

IFSD is pleased to continue its collaboration with the Assembly of First Nations (AFN) and the Caring Society on First Nations child welfare. Following the acceptance of IFSD's report, *Enabling First Nations Children to Thrive* by the National Advisory Committee (NAC), IFSD was asked to undertake a follow-on study to identify options and plans for a change in structure and resources in First Nations Child and Family Services (FNCFS) to transition agencies to an outcome-based approach based on well-being for thriving First Nations children.

To ensure this work is complete, a full and accurate portrait of federal expenditures is required. In Part 1 of this study, we have been asked to:

1) Undertake a full allocation and expenditure analysis for the FNCFS program;
2) Assess the impact of Canadian Human Rights Tribunal (CHRT)-mandated spending on FNCFS agency results;
3) Assess current performance indicators and the results of current spending.

To complete our work, we are submitting the request for information appended to this letter. All requested information relates to appropriated expenditures from the current and previous fiscal years. We understand from previous work that such information can be made available in Excel.

I thank you and your team for your attention to this request. IFSD's analysis is to be submitted in mid-October to AFN and the Caring Society. We are working under tight timelines; your department's collaboration in collecting and sharing this analysis by September 13, 2019 will be integral to completing this work.

Yours sincerely,

Kevin Page
President & CEO

IFSD
IFPD

Description	Fiscal year(s)	Required details
List of current FNCFS agencies	N/A most recent available	– First Nation(s) served by agency – Province – Identify which First Nations do not have agencies (served by provincial protection services)
ISC national spending overview	ACTUAL 2014-15 2015-16 2016-17 2017-18 2018-19 PLANNED 2019-20 2020-21 2021-22	– Funding by province (dollars) – Major program categories (dollars) – Internal services (dollars) – Total spending by contribution approach (i.e. fixed, flexible, block, set or agreement with band council)
FNCFS program breakdown	ACTUAL 2014-15 2015-16 2016-17 2017-18 2018-19 PLANNED 2019-20 2020-21 2021-22	– Funding by recipient (dollars) – Funding by province (dollars) – Contribution approach for each transfer/grant/allocation (i.e. fixed, flexible, block, set or agreement with band council) – Program-activity-level code and associated performance indicators and results
CHRT investments	ACTUAL 2017-18 2018-19 PLANNED 2019-20 2020-21 2021-22	– Funding by recipient (dollars) – Funding by province (dollars) – Contribution approach for each transfer/grant/allocation (i.e. fixed, flexible, block, set or agreement with band council) – Associated performance indicators and results

EXCLUSION	Urban Aboriginal Participation (as focus of analysis is on-reserve)

Appendix J: Measuring to Thrive Framework

Strategic objective	Performance area	Indicator name	Indicators	Detailed indicator explanation	Associated outcome
Child and youth well-being	Safety	Injuries or deaths	Number of serious injuries or deaths	Though rare, serious injuries and deaths are an important indicator to prevent these tragedies from occurring in the future and to evaluate whether the child welfare system is appropriately responding to cases of maltreatment.	Children are free from severe physical danger and harm
		Protection concerns	Recurrence of child protection concerns after ongoing protection services	The recurrence of child protection concerns in a family after ongoing protections services were provided is not only important to protect the well-being of children and prevent chronic abuse; it is also an indicator of how effective child welfare services are at preventing maltreatment.	
		Child abuse (excluding sexual)	Child abuse (excluding sexual abuse)	Children who have been maltreated are at increased risk of recurrence of maltreatment. Research has found that compared to children who had not been previously maltreated, children who had been were nearly six times more likely to experience it again.	
		Child sexual abuse	Child sexual abuse	Exposure to strong, frequent and/or prolonged adversity, such as chronic abuse, parental substance abuse, or exposure to violence, can elicit a toxic stress response. This type of stress can have a profound effect on the architecture of the developing brain, which can have potentially permannet damaging effects.	
		Family reunification	Rate of successful family reunification (i.e. no re-entry into care)	A stable and permanent living situation is essential for healthy development and establishing more secure and strong relationships with caregivers, which in turn impact a child's ability to thrive. Research has demonstarted that in general, a child's family is the best way to deliver this environment.	Children are connected to their families and Indigenous communities
		Timeliness of care	Timeliness of customary care	Unstable placements in foster care, characterized by placement frequency and episodic foster care, have been associated with increased rates of mental health service utilization.	
		Families within community	Percentage of children with kin and/or Indigenous families within their community	Compared to foster children, children in kinship care have displayed better outcomes with respect to behavioural development and mental health functioning.	
		Caregiver quality	Quality of caregiver and youth relationship	To understand the well-being of children who have been removed from their homes, it is also important to understand the quality of their relationships with their caregivers. Establishing secure, trusting and positive relationships with their caregiver is essential for healthy development, impacting outcomes across the life course.	
		Community relational connections	Regular opportunities for relational connections to community	Stability promotes fewer school changes and thus stronger relationships with peers, as well as more consistent access to community services and activities	
		Placement rate	Out of home placement rate	While the out of home placement rate is not necessarily a negative indicator, as some children need to be removed from dangerous living situations, at an aggregate level, the out-of-home placement rate can indicate the effectiveness of preventative child welfare services and the well-being of children in the community as a whole.	
		Moves in care	Number of moves in care	Multiple moves in care are associated with various negative outcomes among children. Instability may elicit a toxic stress response, which can result in developmental delays and behaviour problems. In turn, this can propagate a negative cycle of displacement and worsening attachment disorders.	
	Cognitive development	Early childhood education	Percentage of children (0-5) participating in funding early childhood education programming	Participation in early childhood education is a well-evidenced intervention to enhance school readiness, especially among children from disadvantaged backgrounds. Ensuring that children are better prepared when entering school aims to improve educational achievement – a key factor in social mobility and escaping poverty.	Children and youth exhibit positive attitudes toward learning and are supported in their educational development
		Numeracy and literacy targets (0-5)	Percentage of children (0-5) achieving basic numeracy and literacy targets	Educational attainment is important for child well-being, particularly in the context of a child's socio-economic trajectory. Literacy and numeracy scores tell us how well the child is performing in school and is a gauge of cognitive functioning.	
		Positive attitute toward learning (children)	Percentage of children exhibiting positive attitude towards learning	Academic success also has a reciprocal effect on a child's attitude towards learning (often referred to as academic self-concept). Learning begets learning, and academic achievement and motivation to learn are key factors to a high level of educational attainment.	
		Numeracy and literacy targets	Percentage of children (6-14) achieving basic numeracy and literacy targets	Most of the gaps that are seen at age 18 are already present at age five. Gaps tend to widen as opposed to shrink as the child proceeds through formal schooling and are predictive of future school performance and educational attainment.	
		Positive attitute toward learning	Percentage of children (6-13) exhibiting positive attitude towards learning	Academic success also has a reciprocal effect on a child's attitude towards learning (often referred to as academic self-concept). Learning begets learning, and academic achievement and motivation to learn are key factors to a high level of educational attainment.	
		Elemntary school education access	Percentage of youth (6-13) able to access elementary school education in their community	Educational attainment often translates into levels of skill and ability in society, which are linked to a host of outcomes in adulthood. More obvious impacts of low education are reduced rates of employment and earnings. Failure to complete high school is linked to higher rates of welfare dependency and criminality.	
		High school education access	Percentage of youth (14-18) able to access high school education in their community	Educational attainment is a determinant of participation in the Canadian labour market, especially for Indigenous people. Employment rates are higher for Indigenous people with post-secondary credentials	
		Parental engagement in education	Percentage of children/youth reporting parental engagement in learning/education	Parental enagement in their child's learning/education has a large impact on how well children perform and remain enagged in education. Children of mothers with low educational attainment made up 32% of children entering school lacking printing and writing skills, as opposed to 8% of children with mothers who had a bachelor's degree or higher.	
		Post-secondary education	Percentage of youth (14-18) who intend to pursue post-secondary education	Employment rates are higher for Indigenous people with post-secondary credentials.	
	Social relationships	Positive relationships (parents/caregiver)	Percentage of youth reporting positive relationships with parent or caregiver	In the earliest years of life, it is argued that the quality of relationships and parenting carries the heaviest weight among the factors that drive healthy development. Establishing warm, secure and responsive relationships with caregivers are key to establishing a child's confidence to play, socialize and explore their environment, which is what propels development.	Children and youth develop positive relationships with family and friends and are connected to their Indigenous communities
		Positive relationships (siblings, extended family, friends)	Percentage of youth reporting positive relationships with siblings, extended family and/or friends	As children progress into adolescence, strong social relationships continue to be an important protective factor as individuals navigate major developmental changes. Strong social relationships, or lack thereof, have been tied to several aspects of well-being.	
		Ties to elders	Percentage of youth reporting ties to elders in the community	Social relationships such as belongingness with peers and adults at school and connection with adults at home were the strongest predictors of life satisfaction. Research has also found positive associations between social relationships and physical and psychological well-being by promoting healthier lifestyles, better self-esteem, and a greater sense of purpose and internal locus of control	
		Extracurricular activities	Percentage of youth participating in extracurricular activities within the community	Participation in social activities is important for developing social competence and skills and is linked with fewer behavioural problems and higher self-esteem.	
		Chronic concerning behaviour	Percentage of children/youth exhibiting chronic concerning behaviours	Behavioural issues among children are associated with socioeconomic disadvantage and have been linked to worse outcomes in adulthood. For example, research has found an association between attention deficit problems and poor labour outcomes in adulthood, such as lower rates of employment, lower earnings and worse jobs. Conduct disorders in childhood, which include antisocial behaviours such a disobedience, tantrums, fighting, destructiveness, lying and stealing, increase the likelihood of violence, criminality, poor relationships, and poor mental health.	Children and youth are mentally and socially well
		Prosocial behaviour	Percentage of children/youth exhibiting prosocial behaviour	There is a strong body of evidence linking social-emotional competence to improved attitudes towards school and higher educational achievement. By contrast, those who have not developed in this area have weaker relations with peers and teachers. This decreases interest in school and persists into later years of learning, which can lead to dropping out.	
		Mental health	Percentage of children/youth reporting mental health problems	Scholars have recognized the importance of these indicators given the effects of intergenerational trauma on mental health among Indigenous peoples. For example, self-esteem and optimism are important protective factors for depressive symptomology among Aboriginal youth; a desire to contribute to one's community and believing in one's self have also found to improve mental health among Indigenous youth.	

	Emotional, cultural and spiritual well-being	Happiness	Percentage of children/youth reporting happinness	Emerging research has found life satisfaction to be a mediating factor on how stressful life events influence parenting behaviour and problem behaviour among adolescents.	
		Belonging to community	Percentage of children/youth reporting belonging to community	Community and culture were cited as the most common protective factor for mental health among Indigenous youth, which included things like healthy relationships with family and community members.	Children and youth are connected to land, culture, and tradition
		Pride in indigenous identity	Percentage of children/youth reporting pride in Indigenous identity	The importance of restoring the connection to one's Indigenous culture and identity is emphasized in relation to mental health outcomes and resilience.	
		Connection to land	Percentage of children/youth reporting sense of connection to land	In a study examining suicide rates among First Nations youth in British Columbia, researchers found that among communities where cultural continuity was preserved through avenues such as securing land claims, were self-governing, had band-administered education, police, fire and health services as well as cultural facilities within the community had lower suicide rates than communities where these factors were less present.	
		Spiritual practices	Percentage of children/youth reporting participation in spiritual practices and traditional ceremonies	Many studies have demonstarted Indigneous spirituality acting as a protective factor against alcohol abuse and suicide.	
		Knowledge of Indigenous language	Percentage of children reporting knowledge of Indigenous language(s)	One study found that First Nations who had high levels of language knowledge had significantly lower rates of suicide than those with lower levels and for non-Indigenous youth. Researchers identified language as the strongest cultural continuity factor contributing to this difference.	
		Eating traditional foods	Percentage of children/youth reporting eating traditional foods	Loss of land and access to traditional foods has meant that healthy food choices, especially among rural and isolated First Nations, are expensive and often unavailable. This has, in part, led to disproportionately high rates of chronic diseases related to lifestyle factors, such as type 2 diabetes and obesity. Research shows that traditional food gathering not only promotes a healthier diet, but also more exercise and a connection to one's Indigenous identity.	
	Physical health and well-being	Disability and chroinc illness	Percentage of children/youth living with disability or chronic illness	An epidemiologic survey of 3,294 children in Ontario found that children with both chronic illness and associated disability were at three times greater risk of experiencing psychiatric disorders. Learning and behavioural disabilities have been associated with a higher risk of school difficulties, criminality, higher medical needs, difficulty establishing emotional relationships, and employment challenges as adults.	Children and youth are physically well
		Healthy eating	Percentage of children/youth reporting healthy eating habits	A healthy diet lays an important foundation for development among children, as well as for future outcomes in adulthood.	
		Physical acitivty	Percentage of children/youth reporting regular physical activity	Establishing patterns of regular physical activity and a healthy diet are important for preventing obesity and chronic illnesses such as type 2 diabetes and promoting healthy body image.	
		Healthy sleep habits	Percentage of children/youth reporting healthy sleep habits	Healthy habits include sleep hygeine espeically among adolescents, as this is a time when children are gaining more independence and autonomy in their lifestyle choices.	
		Teenage births	Percentage of teenage births	Teen pregnancy can lead to a variety of health problems and is also linked to critical social issues such as poverty, poor education, risky behaviours that lead to poor health issues, and child welfare. It also imposes financial costs that can be financially devastating to families.	Youth exhibit regular positive decision-making
		Illicit drug use	Percentage of youth who reported using illicit drugs in the past month	Early prevention of risky behaviour such as alcohol, tobacco and illicit drug use or unprotected sex is important, as these problem behaviours can manifest in youth and extend into adulthood. For example, a study of 727 Indigenous adolescents in the United States found that those who began drinking at an earlier age (i.e. 11-13 years old) were at a much greater risk of developing problem drinking than those who started later.	
		Gambling	Percentage of youth who reported gambling in the past month	Gambling can become problematic and when it does it can have a serious impact on the physical, emotional and financial health of the individual who gambles, as well as their family and community.	
		Smoking	Percentage of youth who reported smoking in the past month	Those who start smoking as youth often carry the habit which also often worsens over time into adult life. Smoking is highly addictive and becomes not only a costly daily habit financially but can also lead to major costs including health, exposes those around them to health concerns, and have been linked to negative social impacts as well.	
Family well-being	Wellness and social engagement	Livable income	Percentage of families reporting livable income to meet needs	Families in chronic and persistent poverty are especially prone to challenges with self-sufficiency and may require additional support to reach this objective. For many First Nations households, life choices can be severely compromised by high food costs, poor availability of healthy food, low income, and/or high housing and heating costs.	Families have the money they need to live
		Empowerment and resilience	Percentage of families reporting feelings of empowerment and resilience	Self-sufficiency is among the most cited factors in the literature on family wellbeing. Many studies have found that low parental income and economic hardships cause increased economic pressure in families, which adversely impacts parental mental health, conflict between parents/caregivers, parent-child interactions and parenting practices, as well as cognitive, academic, and socioemotional outcomes in children.	Families exhibit social wellness
		Social engagment	Percentage of families demonstrating social engagement through participation in cultural traditions, teachings and ceremonies	Positive associations between social relationships and physical and psychological well-being by promoting healthier lifestyles, better self-esteem, and a greater sense of purpose and internal locus of control. When these positive relationships are associated with cultural rpactices and traditions it has compound positive reinforcing effects on well-being.	
		Family violence	Percentage of families reporting incidents of family violence	Children who witness domestic violence are at higher risk of commiting violent acts in the future. Witnessing or experiencing family violence can also lead to long-term physical and mental health issues.	
		Substance misuse	Percentage of families reporting substance misuse	Substance misuse can lead to a variety of serious health issues both physical and mental and has drastic negative impacts on outcomes regarding employment, income and general well-being.	
		Gambling (family)	Percentage of families reporting problematic gambling	Individuals that gamble are more likely to become adicted to it which can lead to low self-esteem, stress-related disorders, anxiety, poor sleep and apetite, substance misue problems as well as depression.	
	Basic needs	Clean running water	Percentage of households with drinking water flowing from tap for consumption, bathing and other uses	Access to potable water is widely recognized as a fundamental condition for human health, and the lack of access to safe drinking water and adequate sanitation is one of the greatest threats facing vulnerable populations in the world. Clean, accessible, and sustainable drinking water is a basic necessity of life, and indispensable for meeting national and international standards of health, justice, equality, and responsibility.	Households have basic needs
		Food sovereingty	Percentage of households reporting food sovereignty	Proper nutrition is key to both physical and mental health and development. When households do not have enough food and must seek help in attaining food they often lack adequate nutrition and this can also lead to feelings of anxiety depression and low self-worth	
		Home repairs needed	Percentage of homes in need of major repairs	Inadequate, unsuitable, and unaffordable housing has been linked to chronic health conditions such as asthma and poor mental health. Poor housing has also been linked to the spread and chronic occurrence of viruses and bacteria, and the increased prevalence of unintentional injuries.	
		Suitable homes	Percentage of suitable homes	Housing improvements linked with improved health include renovations, relocation, and energy efficiency projects. For children, housing improvements were associated with a decrease in respiratory illnesses and lower rates of school absenteeism. For adults, long-lasting improvements in mental health have been demonstrated.	
		Internet connectivity	Percentage of households with internet connectivity	Broadband connectivity has been associated with numerous community benefits, and has been recognized as a pressing issue for Aboriginal communities. In some cases, broadband infrastructure has been framed as a component of indigenous self-determination. broadband infrastructure plays an important role in community development, and that Indigenous communities can access unique benefits from broadband infrastructure.	
		Below poverty line	Percentage of households below the provincial poverty line	Parental or familial experiences of poverty have been associated with numerous detrimental effects to child wellbeing, including emotional and behavioral problems as well as further disruptions in schools and to friendships. Poverty is also associated with poor early childhood development and is a risk factor for family breakdown, both of which have been linked to poor educational performance in children.	
		Employment rate	Community employment rate	Self-sufficiency is among the most cited factors in the literature on family wellbeing. Many studies have found that low parental income and economic hardships cause increased economic pressure in families, which adversely impacts parental mental health, conflict between parents/ caregivers, parent-child interactions and parenting practices, as well as cognitive, academic, and socioemotional outcomes in children.	

Community well-being	Community services and engagement	Community space	Presence of community space for gathering (Y/N)	Community infrastructure is essential to fostering services, facilities, and networks which increase quality of life and reducing poverty. Particularly in Aboriginal communities, investments in transportation, energy, and telecommunications infrastructure is most strongly connected to creating economic benefits by supporting industrial growth and re-investment in additional economic infrastructure.	Communities offer services and space in support of well-being
		Community activities	Community activities contribute to the development of capable human beings through cultural teachings, traditions, and values (Y/N)	Community activities and gatherings are important for building social trust, belonging, and well-being.	
		Community space wifi	Percentage of community spaces with free public wifi	Broadband connectivity has been associated with numerous community benefits, and has been recognized as a pressing issue for Aboriginal communities. Wifi is crucial for connectivity, education, and services. Publicly available wifi in community spaces can be an important resource.	
		Community health services	Community offers and controls health services (Y/N)	Long term economic growth also relies on community infrastructure that supports a diversified economy and good quality of life for community members. Assets such as education infrastructure; health care infrastructure; water, wastewater and solid waste disposal; and housing infrastructure, enhance quality of life in communities which increases the potential of a business to attract workers and acts as a disincentive to out-migration of community members.	
		Community social services	Community offers and controls social services (Y/N)	Safe neighbourhoods contain resources which support family activities and community health and connections, including parks, sidewalks or walking paths, libraries, and community centers. Neighbourhood safety can create opportunities for children to learn social customs, develop feelings of confidence in their communities, and build interpersonal relationships with peers.	
		Community elder services	Community offers and controls elder services (Y/N)	Programming and infrastructure available to support elder services in-community.	
		Service provider collaboration	Community service providers collaborate and connect for improved service delivery (Y/N)	Community infrastructure is significant to the degree that it promotes safety and security among neighbourhoods which, in turn, promote safety within families.	
		Affordable & reliable transportation	Percentage of community benefitting from affordable and reliable transportation	Particularly in Aboriginal communities, investments in transportation, energy, and telecommunications infrastructure is most strongly connected to creating economic benefits by supporting industrial growth and re-investment in additional economic infrastructure	
		Third party management	Community is under third-party management (Y/N)	Recipient funding agreement is managed by a federally-appointed third-party manager.	Community is financially independent
		Community risk	Community's risk rating	Risk and associated mitigation measures of recipients and their initiatives.	
	Wellness	Suicide attempts	Rates of reported suicide attempts	The rate of suicide among First Nations people is three times higher than the rate among non-Indigenous people. The suicide rate among First Nations living on-reserve have been found to be twice as high as those living off-reserve, and the highest rates are among youth aged 15 to 24 compared to other age groups.	Community exhibits wellness
		Substance misuse	Rates of reported substance misuse	Substance misuse can lead to a variety of serious health issues both physical and mental and has drastic negative impacts on outcomes regarding employment, income and general well-being.	
		Problematic gambling	Rates of problematic gambling	Individuals that gamble are more likely to become adicted to it which can lead to low self-esteem, stress-related disorders, anxiety, poor sleep and apetite, substance misue problems as well as depression.	
		Heavy drinking	Rates of reported heavy drinking	High rates in communities of heavy drinking are associated with negative physical and mental health impacts, developing other substance misuse issues, elevated levels of assault, crime and lower levels of employment and income.	
		Chronic health conditions	Rates of chronic health conditions	Chronic health conditions can negatively influence family life as both those suffering as well as family members can experience strong emotions of guilt, anger, sadness, fear, anxiety and depressed mood. They can have long term medical complication, increased costs and lead to substance misuse.	
		Violent crime	Rates of violent crime	Vilent crime can lead to premature death, or cause serious injuries, placing a toll on health services. People who survive violent crime also suffer depression, anxiety and may continue to enduring physical and metal pain and suffering. Exposure to violent crime can also lead to increased crime rates in a negative spiral.	
	Education	Elementary education	Community offers and controls elementary school education	Educational attainment is important for child well-being, particularly in the context of a child's socio-economic trajectory. When it is provided by the community within the community, the education can be tailored to provide a sense of belonging to children who will grow up appreciating their culture.	Community supports and offers education
		Secondary education	Community offers and controls secondary school education	Learning begets learning, and academic achievement and motivation to learn are key factors to a high level of educational attainment. Providing education within the community and instilling a sense of belonging is key in these formative teenage years which are often the most difficult growing up as well.	
		High school graduation	Rates of high school graduation	Failure to complete high school is linked to higher rates of welfare dependency and criminality. Elevated high school graduationrates lead to higher earnings, higher percentages of home ownership, lower rates of welfare assistance, fewer out-of-wedlock births and fewer arrests.	
		Completed post-secondary education	Rates of completed post-secondary education	Employment rates are higher for Indigenous people with post-secondary credentials.	

Appendix K: Well-being Initiatives in Canada, United States, Australia and New Zealand

Jurisdiction	Health Framework	National Initiatives	Results
Australia	According to the Australian Indigenous Health InfoNet[1] (which is principally funded by the Australian Department of Health), a holistic understanding of health is adopted by the Aboriginal and Torres Strait Islander peoples. Aboriginal health moves beyond physical well-being of an individual, and considers social, emotional, and cultural well-being of the whole community; therefore, health is seen in terms of the whole-life-view. The aim of health care services should be to support individuals achieving their full potential as human beings, as well as bringing about the total well-being of their communities. Similarly, according to the Australian Institute of Health and Welfare[2] (2018), for Aboriginal and Torres Strait Islander	The National Aboriginal and Torres Strait Islander Social Survey (NATSISS)[3] was conducted from September 2014 to June 2015 (a total of 11,178 Aboriginal and Torres Strait Islander peoples took part). The Western Australian Aboriginal Child Health Survey (WAACHS)[4], a large and comprehensive survey undertaken in 2005, measured the health, well-being, and development of Western Australian Aboriginal and Torres Strait Islander children. In 2007, with the aim of reducing disparities among Aboriginal and Torres Strait Islander people, the Government of Australia launched the *Closing the Gap*[5] strategy. The strategy is focused on addressing	Healthdirect (2018)[7] (a publicly funded national health information service) found that many Indigenous Australians experience poorer health than other Australians. Compared to their non-Indigenous counterparts, Indigenous peoples of Australia are more likely to suffer from respiratory diseases, mental health problems, cardiovascular disease, diabetes and other chronic conditions.[8] Furthermore, within Indigenous populations, certain diseases (and their resulting conditions), for instance trachoma (a bacterial infection of the eye) and rheumatic heart disease, continue to occur at high rates. These same diseases are now virtually

	economic well-being). This approach "respects, values, and utilizes First Nations cultural knowledge, approaches, languages, and ways of knowing."[13]		
New Zealand	The New Zealand Ministry of Health sets the direction for Māori health. Their goal is to increase access in the sector to achieve equitable health access and improve outcomes for Māori. He Korowai Oranga, the Māori Health Strategy, a component of the New Zealand Health Strategy,[16] is the overarching framework which guides the government in the health and disability sector to achieve desirable health outcomes for Mâori. The goal of He Korowai Oranga is Pae Ora is healthy futures.[17] Pae Ora (healthy futures) is the government's vision for Māori health; this extends to mauri ora (healthy	The New Zealand government has implemented Te Kupenga (The Maori Social Survey), which collects information on a variety of well-being indicators for Māori in New Zealand. This survey provides key statistics on four areas of Māori cultural well-being: wairuatanga (spirituality), tikanga (Māori customs and practices), te reo Māori (the Māori language), and whanaungatanga (social connectedness). The survey was conducted initially in 2013 and repeated in 2018.[18] The Ministry of Health also publishes statistical publications on Maori health.[19]	The New Zealand Ministry of Health (2018) reports confirm that Maori health inequity is a persistent issue.[21] The Maori population display disparate and negative outcomes across several indicators of health status, including life expectancy, disability, major causes of death, cardiovascular disease, cancer, respiratory disease, diabetes, infectious disease, immunization, suicide and intentional self-harm, interpersonal violence, oral health, mental health, infant health and unintentional injury. In 2013, life expectancy at birth was 73.0 years for Māori males and 77.1 years for Māori females; it was 80.3 years for non-Māori males and 83.9 years for non-Māori females.

	individuals), whānau ora (healthy individuals), and wai ora (healthy environments). For Maori, the He Korowai Oranga (meaning "The Cloak of Wellness") Health Strategy signifies the protective cloak and mana o te tangata (the cloak that embraces, develops and nurtures the people physically and spiritually). In the weaving, of a korowai there are strands called whenu or aho. These strands symbolize all the different people in the strategy who work together to make Maori healthy.	In November 2016, the Government of New Zealand conducted the Waitangi Tribunal Health Services and Outcomes Inquiry (Wai 2575) to gather claims and concerns relating to health services and outcomes of Maori people. In June of 2018, there were around 198 claims seeking to participate in the inquiry.[20] The historical and contemporary claims cover a range of issues relating to the New Zealand health system and specific health services and outcomes, with special attention being paid to health equity, primary care, disability services and Māori health providers.	Irrespective of age, in 2013, Māori had a higher disability rate than non-Māori. Looking at total cancers in 2010-2012, cancer registration rates are significantly higher for Māori adults aged 25 and over, as compared to non-Māori adults. The total-cancer mortality rate was over 1.5 times higher among Māori adults than among non-Māori adults. Māori adults were approximately 1.5 times as likely as non-Māori adults to report having a high or very high anxiety or depressive disorder.[22]
United States	The Department of Health and Human Services' Indian Health Service (IHS) provides federal health services to American Indians and Alaska Natives.[23] The IHS website discusses Behavioral Health, focusing on the necessity of self-determination and holistic frameworks for health. They state "[t]he importance of integrated perspectives that include cultural and traditional practices and community-wide healing	The U.S. government does not implement a separate survey with a specific focus on American Indian or Alaska Natives. Statistics on health are tracked by the Center for Disease Control National Center for Health Statistics, the Office of Minority Health within the Health and Social Services Department, and the Substance Abuse	The IHS (2019) reports that the American Indian and Alaska Native people have long experienced disparity in health status relative to other Americans.[29] American Indians and Alaska Natives' life expectancy at birth is 5.5 years lower than the U.S. all races population

Appendix L: Detailed Checklist on Horizontal Initiatives

ESTABLISHING THE HORIZONTAL INITIATIVE	
Checklist Item	
Identify the lead department and all partner departments	☐
Prepare a Memorandum to Cabinet for approval as a horizontal initiative	☐
Establish timelines	☐
Identify funding levels and outcomes sought	☐

GOVERNANCE	
Checklist Item	
Establish a senior-level Oversight committee	☐
Establish terms of the Oversight committee including reporting, evaluations etc.	☐
Oversight committee responsible for results and resource frameworks	☐
Oversight committee responsible for data collection and consolidation	☐
Oversight committee responsible for monitoring of indicators and spending	☐
Oversight committee responsible for reporting content and frequency	☐
Oversight committee responsible for unforeseen issues and course corrections	☐
Oversight committee responsible for resolution of disputes	☐
Oversight committee responsible for liaison and engagement with central agencies	☐
Oversight committee responsible for coordinating horizontal evaluations and audits	☐
Oversight committee responsible for timing of meetings and agenda	☐
Oversight committee responsible for communication strategies	☐

ROLE & RESPONSIBILITIES OF LEAD DEPARTMENT	
Checklist Item	
Coordinating the MC and TB submission process if applicable	☐
Providing administrative support to the oversight committee and other governing bodies	☐
Identifying a secretariat within the department of sufficient capacity to manage coordination efforts	☐
Coordinating the development and maintenance of the performance measurement framework, including the structured inventory of activities with inputs from partner departments	☐
Coordinating the collection of financial and non-financial information from partner departments	☐
Ensuring that performance measures are populated with actual and meaningful performance data, and that data consistency standards are met	☐
Communicating the format and frequency of the submission of financial information required for consolidated reporting	☐

Coordinating the public reporting of the Child Welfare initiative via the Departmental Plan and Departmental Results Report	☐
Coordinating the preparation of any required horizontal initiative reports	☐
Collecting and storing data for the initiative in a manner that supports subsequent audits and evaluations	☐
Coordinating liaison with central agencies, notably in the event that a high-impact issue arises	☐

ROLE & RESPONSIBILITIES OF PARTNER DEPARTMENTS	
Checklist Item	
Participate in establishing the governance structure and the financial parameters for the horizontal initiative	☐
Provide a complete list to the lead department of their activities that are components of, or linked to, the horizontal initiative	☐
Provide information on relevant departmental activities a required by the Oversight committee to implement their respective activities that are components of the horizontal initiative, in order to contribute to the achievement of the shared outcome	☐
Collect and provide to the department financial and non-financial performance information on all their activities that are components of the horizontal initiative	☐

MANAGEMENT AND REPORTING OF THE HORIZONTAL INITIATIVE	
Checklist Item	
Develop common understanding of departmental roles and responsibilities	☐
Provide a clear and measurable understanding of the successful achievement of Thriving First Nations Children	☐
Develop a shared understanding of the outcomes anticipated, indicators of success, activities required and the capacities needed to execute	☐
Ensure there is a robust process and system in place for the management, collection and transparent reporting of data to Parliamentarians and the public	☐
Ensure alignment of each shared outcome with a performance indicator, a target and target date, a data source and verification of data availability	☐
Clear articulation of the linkage of performance indicators to the achievement of outcomes	☐
A disaggregation of each shared outcome by theme	☐
A listing of activities linked to each theme, including whether funding is for a new program or is incremental to an existing program	☐
The identification of activities by department	☐
Relevant performance indicators for all activities and related baselines and targets for clear tracking of progress and for use in any evaluation	☐
Coordinating liaison with central agencies, notably in the event that a high-impact issue arises	☐

REPORTING REQUIREMENTS FOR PARLIAMENT & TBS	
Checklist Item	
Facilitate assessment of progress toward stated outcomes	☐
Facilitate decisions on renewal of the initiative and new areas of focus	☐
Facilitate decisions on adjustments to resource allocation	☐
Facilitate reporting to central agencies and Parliament	☐
Reporting should strive to be consistent, comprehensive and easy to understand	☐
Reporting should improve horizontal decision-making	☐
Reporting should share information with stakeholders on progress, successes and challenges	☐
Reporting should provide transparent performance reporting to Canadians	☐
Reporting should disseminate lessons learned	☐
Reporting should provide a means to compare the consolidated status of the horizontal initiative with the ultimate plan or outcomes	☐
The oversight committee should determine frequency, level of detail and audience for progress reports with the exception of any related statutory, parliamentary or ministerial requirements	☐
Progress reports should facilitate early detection of horizontal issues and be understandable to the target audience	☐
The consolidated report of summary information to Parliament and Canadians is carried out in departmental plans and departmental results reports of the lead department based on a consolidation of inputs from all participating departments and agencies	☐

Appendix M: IFSD's 2019 FNCFS Survey Questionnaire

IFSD
IFPD

Letter to FNCFS Agency leadership
Re: Phase 2 – Outcome based funding approaches for FNCFS

September 19, 2019

Dear colleagues,

The Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa is pleased to continue its collaboration with the Assembly of First Nations (AFN) and the Caring Society on First Nations child welfare. Following the acceptance of IFSD's report, *Enabling First Nations Children to Thrive* by the National Advisory Committee (NAC), IFSD was asked to undertake a follow-on study to identify options and plans for a change in structure and resources in First Nations Child and Family Services (FNCFS) to transition agencies to an outcome-based approach based on well-being for thriving First Nations children.

Project overview
There are four parts to this project:

1) Expenditure analysis and funding impacts: Defining the existing baseline of FNCFS program allocations, expenditures and their impacts, including CHRT-mandated funding.
2) Performance framework: Defining a measurable future state from which to build a funding approach for thriving children.
3) Funding approaches: Identifying and analyzing approaches to funding that support improved outcomes for children.
4) Transition plan: Defining approaches and considerations in moving to a new system of performance and funding focused on thriving children.

IFSD's ask to FNCFS agencies
To make this possible, we need your support and collaboration. The knowledge and data you share and the insight you provide are invaluable to this work. There are two ways FNCFS agencies will be asked to participate:

1) Survey: IFSD is requesting **input from all FNCFS agencies** for this project through a **short survey** on CHRT funding and performance this fall. You will receive a short questionnaire (fillable PDF) via email on September 19, 2019 and will be asked to complete the questions no later than October 16, 2019. Should it be preferred, IFSD would be pleased to schedule a phone call, Skype or FaceTime call to complete the questionnaire with you.

2) Case studies: IFSD is seeking approximately 12 FNCFS agencies from different provinces and with different characteristics (e.g. geographic location, size, etc.) to serve as representative/model agencies for the project. These FNCFS agencies will be asked for regular input throughout the project. Monthly contact via email or phone is anticipated for follow-ups on project progress or to help to inform IFSD on specific project matters. Leadership from the case study FNCFS agencies will be invited to Ottawa for two workshops between December 2019 and April 2020.

IFSD
IFPD

Participation and data
Throughout this project, the different characteristics among agencies will be taken into account to ensure that analysis and planning considers their differentiated points of departure, experiences and needs. For instance, small agencies and large agencies may require different transition plans; funding approaches may require refinement for remote agencies; etc.

IFSD's approach to this project is collaborative and informed by OCAP® principles. As an affiliate of the University of Ottawa, IFSD is guided by ethical research guidelines respecting Indigenous Peoples and complies with the Tri-Council Policy Statement on Ethical Conduct for Research Involving Humans in all of its work. All information shared during this project with the consent and participation of the agencies will be anonymized and shared back to protect the privacy of agencies and the communities they serve.

All data shared by communities electronically with IFSD will be held on a password protected cloud-storage system (OneDrive), accessible only to IFSD staff engaged in this project. Any locally held data will be stored on IFSD research laptops only. Any physical copies of data or data shared on USB keys will be kept in a locked cabinet in a locked office at IFSD's offices.

As is its usual practice, IFSD will update its stakeholders monthly on the project's progress. Updates will be released via email and posted to the project website (www.ifsd.ca/fncfs).

Having had the opportunity to meet many of you and the pleasure of visiting some of your agencies and communities, we are delighted to have the opportunity to collaborate with you again.

With best wishes,

Helaina Gaspard, Ph.D.
Director, Governance & Institutions

QUESTIONNAIRE FOR FNCFS AGENCIES

Agency name:

First and last name:

Position:

Email: Phone:

---

1. What were your FNCFS agency's total expenditures ($) for fiscal year 2018–19?
2. What were your FNCFS agency's total revenues ($) for fiscal year 2018–19?
3. Did you request CHRT-mandated funding? **(If no, go to question 4).** ◯ yes ◯ no
   a. If yes, what amount was requested ($)?
   b. Did you receive the amount ($) requested? ◯ yes ◯ no
   c. Why did you request funding? Select all that apply:
      i. Maintenance ◯
      ii. Capital ◯
      iii. Prevention and programming services ◯
      iv. Salaries and benefits ◯
      v. Operating and maintenance ◯
      vi. Information technology (IT) ◯
   d. How was the funding used?
   e. What were the results of the supplementary investments?

4. Do you collect data (qualitative or quantitative) on (select all that apply):
   a. Program performance ○
   b. Spending outcomes ○
   c. Other (please describe) ○

5. If you do collect data, how is it used (select all that apply)?
   a. Budgeting ○
   b. Program development ○
   c. Funding requests ○
   d. Other (please describe) ○

6. When you prepare your agency's budget, do you align spending to desired outcomes? For instance, if your goal is to improve child well-being, do you allocate funding to programs or activities specifically designed to promote that goal?

7. May IFSD contact you to discuss your FNCFS agency's work further? ○ yes ○ no

Thank you for completing this questionnaire. Kindly return the completed form to helaina.gaspard@ifsd.ca by October 16, 2019.

Appendix N: Capital Asset Business Case Template

STRATEGIC CONTEXT	
Organization Name	*Detail the name of the organization requesting the capital investment*
Organizational Overview	*To build a strong rationale for a proposed investment, the current environment needs to be described. The organizational overview of the sponsoring agency should include:* – *Mission* – *Strategic vision, goals, and service objectives* – *Current activities and services, including key stakeholders and clients* – *Organizational structure (high level)* – *Existing capacity—financial and human resources*
Problem/ Opportunity Statement	*Express the problem or opportunity to which your agency or First Nation is responding.*
Strategic Fit	*To make a robust case for change, the business case should demonstrate how the proposed investment fits within the agency's or First Nation's broader strategic context and contributes toward its goals and objectives, e.g. successful family reunifications, fewer re-entries into protection. This subsection maps the investment proposal to the organizational framework.*
Drivers for Change	*Identify the drivers that have triggered the investment proposal, e.g. increased demand for services or demand for additional services. Both internal, e.g. organizational reprioritization, and external drivers of change, e.g. mental health crisis, should be identified and clearly linked to the business need.*
ANALYSIS AND RECOMMENDATION	
Options Analysis	*Identify, describe, and explore every possible option that can address the business need. The list should demonstrate due diligence in exploring options.*
Performance Alignment	*Define the evaluation criteria and alignment of the capital request to the Thriving Children Performance Measurement Framework that will be used for screening and analysis of the options and will ultimately determine an overall recommendation.*
Lifecycle Cost for Each Option	*Provide a complete description of the costs. Projected costing estimates should be based on total cost of ownership, which includes*

	ongoing costs over the course of the investment's life cycle as well as potential compliance costs for stakeholder groups.
Cost-Benefit Analysis for Each Option	*Based on the costs established for each option, describe how those costs are weighed against the benefits. Conduct the cost-benefit analysis for each option taking into account costs, benefits, and risks.*
Risk Analysis for Each Option	*Identify the risks and conduct a risk assessment for each option, along with the development of a risk response. Risks may include challenges of working in remote areas, or the investment's importance to the agency's operations. A useful tool for assessing the risk and complexity of a project is the Treasury Board Project Complexity and Risk Assessment (PCRA).*
JUSTIFICATION & RECOMMENDATION	
Identify the Recommended Option	Present the recommendation in a straightforward manner, clearly stating why the agency or First Nation will benefit by focusing its investment on one particular option.
Deciding Factors	*Identify the deciding factors (financial, strategic, and outcome-related) for selecting the preferred option.*
Forecasted Performance Impact of Recommended Option	*Present the contribution of the requested capital item towards the realization of outcomes and service levels required from the Thriving Children Performance Measurement Framework.*
Lifecyle Cost / Funding Formula Impact of Recommended Option	P*resent the lifecycle cost for the requested capital item and specifically identify the cost implication to the funding framework over the lifecycle of the capital asset.*
Risk Mitigation Measures of Recommended Option	*Illustrate why the identified risks are acceptable. Narrative may be included to further contextualize the key factors supporting the overall risk assessment, which include impact, probability, outcomes, and so forth. A useful tool is the Treasury Board PCRA.*

7. CONCLUSION....26

1. Importance of remoteness for First Nations child welfare funding

Operating in a remote location can potentially have several serious implications for the budgets of and quality of service provided by First Nations child welfare agencies. Staffing and travel costs are the two factors mainly affected by geographic location but each has a number of dimensions. On the staffing side, one can generally expect costs to increase over those in non-remote locations because a salary premium is probably required to attract people to more remote locations. To begin with, the cost of living is generally much higher and salaries need to compensate for this. Access to services normally taken for granted in cities, such as restaurants, entertainment, social and medical facilities, is often severely restricted in remote places and staff may need a financial incentive to accept this. Staff costs are likely to be higher for the bread and butter aspects of child welfare, such as visiting families and children at risk, visiting foster children and families, and meeting with fellow agency staff and local boards may also require more staff time. Where remoteness dictates multi-agency arrangements, this compounds the additional expense. So salary costs are likely to be higher for a number of different reasons, each related to remoteness.

Additional travel costs will be incurred to visit children and families at risk and in care. The cost of gas and vehicle maintenance are generally higher in remote places and if roads are non-existent, flying can become very expensive. Taking families and children into centres where services are available is generally more expensive the more remote the agency.

Inadequate provision for remoteness will, inevitably, reduce the quality of service provided to children and families, by reducing available staff, impeding necessary travel or limiting access to services through broadband.

All of this has long been acknowledged. It was flagged as a major issue by the Joint National Policy Review of First Nations Child and Family Services in 2000 (McDonald, Ladd et al., 2000). It was raised again in the Wen:De (FNCFCS, 2004; FNCFCS, 2005a; FNCFCS, 2005b) report and in subsequent evaluations of the Enhanced Prevention Focused Approach (EPFA) of the Department of Indian and Northern Affairs, Canada (INAC)[2] (INAC, 2010; INAC, 2013; INAC, 2014).[3] It also featured prominently in the Canadian Human Rights Tribunal on Child Welfare (CHRT 2, 2016). Some provision has generally been made to compensate for remoteness in funding models, so the principle is long recognized and the issues that remain are

[2] The federal department responsible has undergone a number of name changes over the years and is currently Indigenous Services Canada (ISC).
[3] Evaluations were conducted in Alberta (2010), Saskatchewan and Nova Scotia (2013) and Manitoba (2014) and remoteness seems to have been an issue in all but Nova Scotia.

the method of providing for remoteness and the size of that provision. In 2018, the department announced that it would be studying the issue and made a presentation on the topic to the Canadian Economics Association annual conference (ISC, 2018), but nothing more seems to have come of this.

In what follows we examine different approaches to measuring remoteness that have been put forward in Canada and elsewhere, but first we examine the findings of the Institute for Fiscal Studies and Democracy (IFSD) on the relationship between remoteness and cost of providing First Nation child and family services.

2. The Institute for Fiscal Studies and Democracy Findings on Remoteness

In 2018 the IFSD conducted a survey of First Nation child and family service agencies across Canada to ascertain their needs and how these might influence the costs of providing services. The survey was conducted following the findings of the CHRT that First Nation child welfare services were underfunded and First Nation children discriminated against. It was commissioned by the Assembly of First Nations with direction from and strategic support of the National Advisory Committee on First Nations Child and Family Services (NAC) (IFSD, 2018).

The study concluded that the single most important driver of agency budgets was the number of children in care (CIC) (IFSD, 2018, p. 9), which is not surprising given the bias of funding models towards taking children into care as opposed to preventing child apprehension, as found by the CHRT (CHRT 2, 2016). The study also found that agency costs increased if at least one community it served had no or limited year-round road access, and budgets of such agencies were found to be more than twice the average annual budget of those agencies with all-year road access; they had two times more staff and their travel costs were five times higher (IFSD, 2018). This supports the argument made above (in section 1) on the importance of remoteness which, following the Wen:De reports (Section 4.1), the IFSD defines as distance from city centres providing child welfare services.

3. How and how well is remoteness accommodated in existing funding models?

Remoteness is accounted for differently in child welfare funding models across Canada. The following draws on information submitted to the CHRT on the First Nations Child and Family Services (FNCFS) Funding Formula Template in 2016 by former Indian and Northern Affairs Canada (INAC) (INAC, 2016a; INAC, 2016b). This shows that the Manitoba child welfare funding model accounts for remoteness by providing 5% of salaries, benefits and operating costs for agencies north of the 53rd parallel and southern remote and isolated communities. Manitoba agencies also received $11,500 per direct service worker, supervisor and executive directors annually, for travel related costs.

Although not covered by the Funding Formula Template, the Ontario model also allocates 5% of funding for remoteness, but only on the socio-economic factors which account for 50% of the budget so, in effect, remoteness accounts for only 2.5% of the total budget (Loeppky and Loxley, 2017, p. 39).

Quebec agencies receive a salary adjustment per professional, adjusted in increments depending on the remoteness of the region, ranging from $8,487, to $13,207, in 2016. An additional $3,057 is provided to service delivery staff to account for travel in remote areas. The 2015-16 FNCFS Funding Formula Template (INAC, 2016a, p. 13) makes explicit provision for increases in salaries and travel for remoteness in Quebec of $292,752 which is equal to 9.95% of total funding for an agency servicing 1,000 children. No other province receives such a high amount for remoteness and the logic for this is not obvious, as on remoteness measures in use by INAC (see 4.2 below), the average remoteness of Quebec agencies is actually a little less than that of Manitoba agencies (FNCFCS, 2005b, p. 108 and 129).

Funding to compensate agencies for remoteness in Saskatchewan is allocated as a fixed amount on a recipient by recipient basis and varies by agency.[4] Travel expenditures are provided at $11,500 per direct service worker, supervisor or agency ED annually and in some cases, a remoteness amount is included in the travel cost. Again, this is allocated on a recipient by recipient basis.

Provision for remoteness was built into tri-partite discussions with some recipients of the EPFA (which replaced Directive 20-1), Saskatchewan, Quebec and Manitoba, but not with all. In the 2011 evaluation of the Alberta EFPA, lack of provision for remoteness was raised as a central issue and it was explained that 'First Nations and the Province did not flag remoteness during the discussion to develop the formula; therefore, it was not included' (INAC, 2010, p. viii).

PEI calculates travel costs as $12,000 per direct service worker, supervisor and ED annually and in some cases includes a remoteness amount on a recipient by recipient basis (INAC, 2016b, Annex B).

There is no direct provision for remoteness in the child welfare funding models of British Columbia, Alberta, New Brunswick, Nova Scotia and Newfoundland. Agencies in these provinces receive $11,500 per direct service worker, supervisor and ED annually, for travel related costs (as in Manitoba and Saskatchewan), but this is consistent across agencies regardless of geographical location. The INAC costing models also stipulate that additional funding can be

[4] In the 2016 budget, an amount of $1.5 million is provided for remoteness, all of it under the heading of 'Enhancement' but no further explanation is given for this (INAC, 2016a, Annex C).

provided to agency Boards of Directors to account for remoteness and/or multi-site agencies (INAC, 2016b, Annex B).

In 2016, INAC stated that it does not currently provide funding for remoteness in regions other than Quebec, Manitoba and Saskatchewan 'as the Department did not have sufficient data and information on which to base calculations for funding' (INAC, 2016b, Appendix B, p. 17).

Since 2018 there is no single funding formula as agencies have been billing the department for many actual expenditures. There is, no doubt, some inertia or hysteresis in receipts of funding which will carry forward provisions for remoteness made in the past.

4. Potential approaches to measuring remoteness and their strengths and weaknesses: Canada

There are a number of possible indicators of remoteness that might be used in developing budgets for child welfare agencies, so the question arises as to how to differentiate between them. Moazzami (2018, pp. 2-3) offers sound advice when he suggests that indicators should:

1. be developed for the specific issue or policy under consideration;
2. be based on service centres relevant to the type of service being measured;
3. allow for the assessment of the impact of various policy measures in the area under consideration;
4. be based on theoretical consideration and any proxies used should be sensible;
5. allow for periodic updating and monitoring;
6. be easy to calculate and intuitively appealing;
7. assign different degrees of remoteness, and not just remote or not remote, as costs will differ by degree;
8. give a stable ranking of communities by location for long term planning.

These considerations should be borne in mind when reviewing the following list of possible remoteness measures.

4.1 Using the Statistics Canada Consumer Prices Index to Measure Costs of Remoteness

It has been suggested by Indigenous Services Canada (2018) that the CPI could be a potentialdata source for measuring the costs of remoteness. The CPI however, does not include people living on reserves (Statistics Canada, 2020a). While it does provide data for 15 cities in Canada, it qualifies their usefulness by stating that 'These estimates should not be interpreted as a measure of differences in the cost of living between cities. The indexes provide price comparisons for a selection of products only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities.' (Statistics Canada, 2019a). Only 3 of the 15 cities are located in relatively remote areas. Statistics Canada goes on to explain why data for other cities are not available, arguing that basket weights for goods consumed would be 'quite small' and that price changes in less populated areas generally follow those in populated areas. Above all, 'the CPI aims to

measure price change not price levels' (Statistics Canada, 2019b, p.22). The CPI, therefore, is not useful for our purposes.

4.2 Remoteness and the Wen:De Report

In 2004 the First Nations Child and Family Caring Society (FNCFCS) undertook a review of Directive 20-1, the funding formula for all First Nation Child and Family Service agencies in Canada except Ontario. This review was ultimately published by the FNCFCS as three volumes of Wen:De (FNCFCS, 2004; FNCFCS, 2005a; FNCFCS, 2005b). Directive 20-1 drew on a remoteness factor developed by INAC, which classified agencies according to their distance from service centres, degrees of latitude and year round road access. This factor ranged from 0 to 1.9 (CHRT 2, 2016, p. 127) rising with remoteness. It was used to compensate agencies for the higher cost of remoteness by adjusting three components of the funding formula: the amount of money paid per band, the amount paid per agency and the amount paid per child.

Child welfare agencies recognized the need for remoteness payments but believed the amount being paid was deficient and its calculation based on service centres did not reflect the true costs of accessing child welfare services which were only really available in city centres (FNCFCS, 2005a). Wen:De therefore recommended an increase in the remoteness factor of between 3% for least remote and 8% for most remote agencies. It also recommended replacing service centres, which were really business centres, with cities in which child welfare services were available (FNCFCS, 2005b).

In 2005, INAC revised its remoteness factor, simplifying it. While it assigned each agency to a city, it continued to classify remoteness and in turn determine funding, based on service centres.

4.3 INAC Band Support Funding Remoteness Index

The INAC Band Support Funding (BSF) program is used by the Federal government to determine transfer payments for individual First Nations to facilitate service delivery and allocation of funds according to individual community needs and priorities. The BSF formula last updated in 2005, takes into consideration geographic location of the First Nation, cost of transportation and services through two concurrent indices: a remoteness index and an environmental index. "Both indices are derived based on a combination of the remoteness classification and the environmental classification of a First Nation" (ISC, 2016). The incorporation of these indices in the BSF model is designed to "offset against additional expenditures attributable to geographic location", and could therefore be used similarly in child welfare funding models (ISC, 2016).

The BSF remoteness index incorporates transportation costs and shipping costs for each First Nation, based on the distance to the nearest service centre by the shortest practical route. The BSF defines a service centre as "the nearest community to which a First Nation can refer to gain access to government services, banks and suppliers", including health services, community and social services and environmental services (INAC, 2005). Since the index is based on transportation costs, it is designed to compensate for the increased challenge faced by communities that do not have year-round road access and require fly-in, rail, boat or ice-road transportation.

The environmental index "relates the geographic location of the band to the local climate" and the associated costs of service delivery for members. This includes additional staffing related costs and additional costs for utilities such as electricity and heating associated with the local climate.

Each community is given a numerical score on both the remoteness index and the environmental index, calculated by combining the two measures. Communities are categorized into 4 geographic zones, based on distance to the nearest service centre. Zones 1, 2 and 3 have year-round access by paved or gravel road, including access by vehicular ferry. Communities requiring special access via air, rail or boat are classified as Zone 4 and further sub divided into 7 sub-zones.

Geographic Zones are determined as follows:

Zone 1: First Nations located within 50 km of a service centre.
Zone 2: First Nations located between 50-350 km of a service centre.
Zone 3: First Nations located over 350 km from a service centre.
Zone 4: First Nations with either air, rail or boat access to the service centre.
Zone 4 is further subdivided into to the following sub-zones, according to their distance directly measured from the service centre:

0: distance < 50 km (classified as Zone 2)
1: 50 < distance < 160 km
2: 160 < distance < 240 km
3: 240 < distance < 320 km
4: 320 < distance < 400 km
5: 400 < distance < 480 km
6: distance < 480 km

Communities are also categorized for into the following environmental classifications:

A: geographic location < 45˚ latitude
B: 45˚ latitude < geographic location < 50˚ latitude
C: 50˚ latitude < geographic location < 55˚ latitude

D: 55˚ latitude < geographic location < 60˚ latitude
E: 60˚ latitude < geographic location < 65˚ latitude
F: geographic location > 65˚ latitude

Each community is thus assigned a geographical zone (1, 2, 3, 4.0-4.6) and an environmental classification (A-F), which are combined to result in a corresponding numerical score on the remoteness index, ranging from 0.0-1.85. The index however, is not continuous, but rather yields a discrete score for each combination of geographical zone and environmental classification.

Manitoba and Quebec have the highest average remoteness factor (0.43 and 0.425 in 2006) (FNCFCS, 2005b) while Ontario, BC and Manitoba have the highest number of communities in Zone 4, with 31, 31 and 19 respectively (INAC, 2005).

The BSF indices have several strengths. Firstly, the measure can be applied consistently across the whole country. By incorporating both geographical location and environmental or climatic conditions, the BSF remoteness index provides a comprehensive measure of the costs associated with remoteness. The index has been used widely in a number of other areas, suggesting a potential suitability to child welfare funding models as well. For example, Sharpe and Lapointe (2011) use a simplified version of the INAC measure to investigate the relationship between remoteness and educational attainment, labour market performance and economic outcomes. Due to the small number of communities in Zone 3 (only 10), they collapsed that Zone into Zone 2, creating a dummy variable with 3 categories. They did not however, take into consideration the environmental index in their exercise.

There are several weaknesses in the BSF indices. The use of discrete scores, and more specifically the categorical classification of communities by geographical location is one such limitation. The geographical index uses only 4 zones, and the range of distance to nearest service centre within each zone is quite large (i.e. communities 50km from a service centre by paved or gravel road and communities 349km from a service centre by paved or gravel road, are both classified as Zone 2). As such, there may be large variations in distance, transportation time and costs, between communities classified within the same geographic zone.

Furthermore, the geographical zones used in BSF model are based on the distance to the closest service centre for each First Nation, which is not necessarily where the community or agency prefers to access services. More specifically, these indices are limited by considering the distance to service centres, rather than city centres, which have previously been determined to align more closely with locations that can provide adequate support and where agencies are likely to actually access services (FNCFSC, 2005a). In general, the BSF indices were not designed specifically for child welfare funding, explaining some of these weaknesses.

4.4 Statistics Canada on Rurality and Remoteness

Statistics Canada measures the degree of remoteness by classifying the 5,162 census subdivisions (CSDs) of the 2016 census as urban or rural areas. In 1996 it defined urban areas as having a minimum population of 1000 and population densities of 400 or more people per square kilometer, while rural areas are places of 1000 people or less or have densities of less than 400 people per square kilometer. This definition has been carried forward into its 2017 Remoteness Index, dealt with below. In a 2002 report they classify CSDs in Canada as urban or rural with different degrees of rurality or remoteness depending on the extent of commuting flows from rural and small town centres to large urban areas with populations in excess of 10,000. Commuting flows serve as a proxy for access to various urban services (Moazzami, 2018, p. 6). On the strength of these flows all CSDs in Canada are classified as urban or rural and assigned a Statistical Area Classification Type (SACtype) from 1 to 8 signifying their degree of rurality or remoteness, as in Table 1.

Table 1: CSDs in Canada by degree of Rurality or Remoteness

SACtype	Nature of CSDs	Urban/Rural
1	CSDs within CMAs and CAs	Urban
2	CSDs within CMAs and CAs	Urban
3	CSDs within CMAs and CAs	Urban
4	CSDs outside CMAs and CAs with a strong metropolitan influence zone. => 30% commuting	Rural close to Urban
5	CSDs outside CMAs and CAs :moderate influence zone: at least 5% but <30% labour commuting	Rural limited access to Urban
6	CSDs outside CMAs and CAs: weak influence: more than 0% but < 5% labour commuting	Remote Rural
7	CSDs outside CMAs and CAs with no commuting and a small employed labour force	Very Remote Rural
8	Census subdivision within the territories, outside of census agglomeration	Very Remote Rural

Though useful in measuring rurality and remoteness, these measures have not had widespread applicability, perhaps because they do not directly address the types of services available in different CSDs and CMAs. Certainly, they do not appear to have been put to any use in child welfare policy. The general approach has, however, found limited reincarnation in Statistics Canada's 2017 Remoteness Index.

4.5 The 2017 Statistics Canada Remoteness Index

This 2017 exercise produced a Canadian index of remoteness (RI) and an ancillary set of accessibility measures to selected services, though the primary focus was on remoteness. Three requirements were laid down for the remoteness measure; that it cover the whole of Canada in a detailed way, hence it uses census subdivisions (CSDs); that it would be a continuous, as opposed to a categorical measure and that it be based on physical proximity, rather than economic, cultural or social distance (Alasia et al., 2017, p. 8). Furthermore, the measure should be transparent and not overly complex. The measure arrived at is a remoteness index value for each CSD ranging from 0 to 1, where "0" represents the most accessible area and "1" represents the most remote area.

The remoteness index draws on the gravity model combining proximity to multiple points of service (agglomeration) and their population sizes. Population centres are, therefore the reference point and are defined by Statistics Canada as consisting of at least 1,000 people and a density of 400 or more people per square kilometer and are a proxy for availability of services. Travel cost was used as an indicator of proximity, as opposed to travel distance or time, and cost was calculated by using the most accessible and least expensive travel option between two locations. CSDs were divided into those that connected to a population centre through the national road and ferry network and those that did not. There were 149 in 2011, the base year of the census data, that did not have a national road or ferry connection (Alasia et al., 2017, p.9). For road travel, an average cost of $0.17 per km was applied to all CSDs irrespective of location. For CSDs without regular service by air or boat, a linear model was used to convert linear distances into costs (Moazzami, 2018, p. 11).

The accessibility measures use the same gravity model as used in the remoteness index but measure travel time between CSDs as opposed to cost of travel from CSDs to population centres and population size is replaced by total revenue for different types of business (Alasia, et al., 2017, p. 5). There is a high degree of correlation between the remoteness measures and the accessibility measures, stressing that ‘population counts represent a reasonable approximation for accessibility to basic services across Canada’ (ibid).

The remoteness index (RI) has been used in relation to health, mortality and premature deaths in Canada (Statistics Canada, 2019e). It was also used in the calculation of the Nishnawbe Aski Nation (NAN) Remoteness Quotient (RQ) exercise for Ontario child welfare and has the potential for being used to allocate prevention dollars in child welfare across regions or across Canada as a whole.

It is to be noted, however, that the RI and associated accessibility measures were not developed specifically with child welfare services in mind. The definition of a population centre used (population of 1000 and 400 persons per square kilometer) does not tell us anything about the types of service that might be available for child welfare and their availability in remote communities. The gross revenue measure in the accessibility index suffers from the same weakness.

There are other perceived problems in using the RI. In general, using cost based on travel time makes the index very unstable, as travel time changes daily and seasonally depending on road (e.g. winter roads) and weather conditions (Moazzami, 2018, p. 11). Applying the same average road cost to all CSDs seems also to defeat the purpose of the exercise given that costs in remote areas are clearly higher than those in non-remote areas, so the RQ underestimates the true travel cost in more remote areas.

In addition, both the RI and the accessibility measure are ordinal measures that can be used to rank communities by relative remoteness/accessibility but cannot "measure the differences in the costs of service provision related to the degree of remoteness" (Moazzami, 2018, p. 14).
The RI and the accessibility measure are actually quite difficult to estimate and hence are not as transparent as the originators promised.

4.6 The NAN Remoteness Quotient (RQ) Exercise

The NAN Remoteness Quotient (RQ) Exercise estimated how much the budgets of three NAN agencies would have to increase to allow them to deliver the same level of service as that provided by agencies in non-remote communities in Ontario (Wilson and Barnes, 2019). Calculating the RQ involves a number of discrete steps:

First the Statistics Canada Remoteness Index (RI) (Alasia et al., 2017) was assigned to each agency. As demonstrated, this is a relative measure of the ability to reach population centres within a reasonable amount of time, with a range of 1 for most remote to 0 for least remote. A reference point of 'non-remote agencies' was then determined against which the characteristics of the remote agencies were measured. This consisted of the 10 agencies with the highest percentage of the Indigenous population in the agency's geographic region with remoteness indices at or below the median Ontario remoteness index of 0.118. The unit costs of providing different services were then calculated for the reference agencies as well as for those deemed 'remote' and the proportion of cost differences associated with remoteness was estimated using regression analysis.

The RI for each agency was then multiplied by the proportion of cost differences associated with remoteness to generate the Remoteness Coefficient (RC). The RC was derived, therefore, partly

by geographic remoteness and partly by increased costs of remoteness. It provides an estimate of the incremental costs due to remoteness of providing child welfare services relative to the reference standard of service.

A Remoteness Quotient (RQ) measuring additional funding required to offset higher remoteness costs was then derived by summing all the RQs to 100 and expressing individual RQs as a proportion. 'The RQ represents how a fixed pool of funding would be distributed if the distribution considered nothing but relative remoteness costs' (Wilson and Barnes, 2019, p 10). Theoretically, RQs could be used in other contexts such as in allocating scarce prevention funding.

The exercise estimated remoteness coefficients (RCs) of 1.68 for Tikinagan, 1.59 for Payukotayno and 1.47 for Kunuwanimano. This suggests that additional funding was required in each of these communities to address remoteness, by 68%, 59%, and 47%, respectively (Wilson and Barnes, 2019, pp. 7-8). The remoteness quotients (RQs) suggested that between them, the three NAN agencies should receive about 30% of any funds that might be made available in Ontario to address remoteness (11.7% to Tikinagan; 10.2% to Kunuwanimano; and 8.1% to Payukotayno).

The main strengths of the NAN Remoteness Quotient exercise are that it was commissioned specifically by a First Nations organization in Ontario to address the remoteness compensation issue for its agencies, which is clearly an important one in Ontario. The exercise was in fulfilment of rulings of the CHRT and covered all child welfare agencies in the province, not just those of First Nations. For NAN agencies the financial costs of remoteness were specifically estimated so remoteness calculations could be used to estimate budget short falls.

There are several limitations of the NAN approach. It draws on the 2017 Statistics Canada Remoteness Index the deficiencies of which were pointed out earlier. The reference point for non-remote agencies excludes Toronto, the reason given (Wilson and Barnes, 2019, p. 15) is that Toronto has 'a low First Nation percentage of the population'. But in terms of remoteness in Ontario, Toronto should really be ground zero and hence been included in the reference agencies. This speaks to a weakness in the methodology chosen.[5]

The model yields very wide confidence intervals around the regression parameter for remoteness. For example, the RC for Tikanagan was calculated to be 1.80, suggesting a need for an increase in funding of 80% for remoteness. But the confidence interval was between 1.44 and 2.42 which means that 19 times out of 20, the increase needed would be between 44% and 142%.

[5] It should also be noted that Toronto has a much higher count of Indigenous People than the Government allows for. See Our Health Counts Study (Rotondi, O'Campo, O'Brien, et al., 2017).

This is a result of the small sample used for the calculation, but it raises questions about the practical applicability of the regression parameter (Cooke, 2019).

There are also unresolved questions about the costing approach. For costs such as transport and services to foster families, remote costs exceed those of the reference point agencies, resulting in a need to increase funding for the remote agencies. Salary related costs are, however, higher for the reference group than for the remote agencies. The study accommodates this by inverting salary costs and again, adding them to remoteness costs, on the grounds that lower salaries reflect lack of training, lower qualifications or budget constraints, all of which would be eased by higher remoteness funding. This is controversial empirically and methodologically.

While each of the agencies is treated as a separate entity, each also covers several communities with different degrees of remoteness. Tikanagan covers more than 30 communities, most in Zone 4 with no year-round access by road but Saugeen is in Zone 2 with road access and is only a two-hour drive from Toronto. Taking an agency wide measure as the NAN RQ does, inevitably hides these differences in remoteness.

The Remoteness Quotient (RQ) model was developed specifically for NAN and for Ontario and was not 'intended to provide a one-size-fits-all solution' (CHRT 2, 2016, p. 10). The remoteness coefficients and remoteness quotients derived cannot be applied to other regions or to Canada generally. The authors argue, however, that the model 'is capable of application in other jurisdiction, assuming equivalent data are available in these jurisdictions' (Wilson and Barnes, 2019, p. 10).

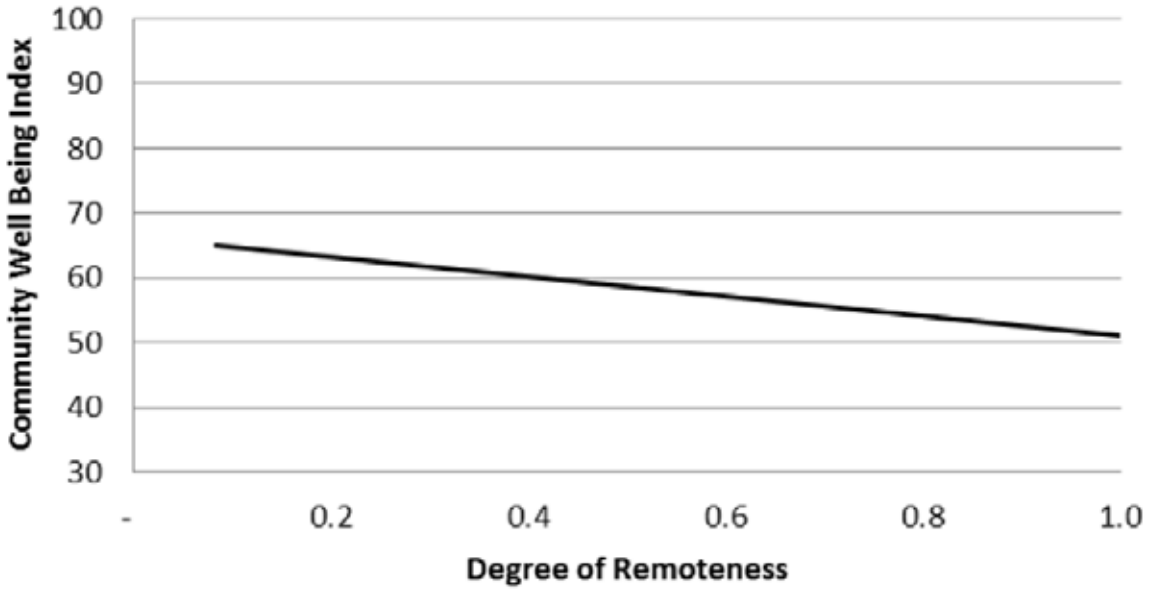
4.7 The Community Well-Being Index

The Community Well-Being Index (CWBI) was developed in 2004 to enable comparison of the well-being of First Nations relative to the rest of society and over time (AANDC, 2006). It is based on Statistics Canada census data at the level of CSDs so the most recent data available is for 2016. The Index is a blend of four socio-economic measures of well-being: income, education, housing and labour force. It ranges from 1 to 100, demonstrating improved well-being the higher the score. A strength of the CWBI is that it is available over a number of censuses dating back to 1991, though with some inevitable issues of comparability. It also enables comparison of other datasets collected at the level of the CSDs (Drawson et al., 2017).

The weaknesses are that it does not directly address the availability of data on child welfare in different communities and it also excludes some important indicators of well-being such as 'physical and emotional health, cultural continuity and environmental conservation' which are not included in the census (Penney et al., 2012, pp. 6-7) and others that are in the census such as the use of local languages (ISC, 2019). The CWBI uses measures of monetary income and paid

employment which do not capture the importance of subsistence and communal or family activities in many First Nation and Inuit communities, activities that improve welfare but which do not involve money. It also may not adequately capture the high cost of living in northern and remote communities due to high shipping or air transport costs (Penney et al., 2012). Notwithstanding these limitations, it could, potentially, be used as an indicator of remoteness as there appears to be a moderate negative correlation between higher remoteness and lower community well-being, as Chart 1 shows.

Chart 1: Trend Line for First Nations Remoteness and Community Well Being Index



Source: Indigenous Services Canada, 2018.

5. Potential non-Canadian approaches to measuring remoteness and their strengths and weaknesses

5.1. Australia

The Accessibility/Remoteness Index of Australia (ARIA) is a purely geographical approach to defining remoteness. It has gone through several iterations since its formation in 1998 and the current versions, ARIA+ and ARIA ++, each offer a continuous index with values ranging from 0 (high accessibility) to 15 (high remoteness). Australia is divided into areas of one square kilometre each and the road distance from each is then calculated to the nearest Service Centres in five size categories based on population size (Hugo Centre, 2020). The greater the road distance, the higher the Index score. The smaller the closest service centre again, the higher is the Index. Thus, an ARIA+ or ARIA++ score is available for each square kilometer in Australia

based on the two variables of road distance to service centres and the population size of those centres.

The five categories of service centre are as follows:

Category 1: Population 1,000 to 4,999:
Category 2. 5,000 to 17,999
Category 3: Population 18,000 to 47,999:
Category 4: 48,000 to 249,999 and
Category 5: Greater than 250,000 (Moazzami, 2018, p. 4).

The calculated remoteness indices are classified into the following five classes:

Major Cities of Australia: Index between 0 and 0.2
Inner Regional Australia: Index >0.2 to 2.4
Outer Regional Australia: Index >2.4 to 5.92
Remote Australia: Index >5.92 to 10.53
Very Remote Australia: Index >10.53 to 15 (Moazzami, 2018, p.5).

While having some similarity with the Statistics Canada Remoteness Index, ARIA does not directly measure the cost of travel. From the point of view of the current exercise, it shares a common weakness in that it says nothing about the ability of service centres to provide child welfare services. General weaknesses pointed out by Moazzami (2018), are that differences in road conditions and road quality which might affect access to service centres, are not allowed for; neither is the fact that not everyone has access to transport. Finally, the cut off points of degrees of remoteness 'are rather arbitrary and can lead to different shares of people in remote areas' (Moazzami, 2018, p. 5).

5.2. The USA

In the USA, four Frontier and Remote Areas (FAR) levels have been developed to capture the degree of remoteness of rural areas at higher or lower population levels, depending on accessibility to different types of goods and services (Cromartie, Nulph, and Hart, 2012). These FARs are defined by the time it takes to travel by car to nearby Urban Areas, measured at the 1x1 kilometer grid level. It includes travel on all Federal, State, and county paved roads.

Level One FAR rural and urban areas are those with up to 50,000 people that are 60 minutes or more by car from an urban area of 50,000 or more people.

Level Two FAR rural and urban areas are those with up to 25,000 people that are 45 minutes or more by car from an urban area of 25,000-49,999 people and 60 minutes or more from an urban area of 50,000 or more people.

Level Three FAR rural and urban areas are those up to 10,000 people that are 30 minutes or more by car from an urban area of 10,000-24,999, 45 minutes or more from an urban area of 25,000-49,999 people, and 60 minutes or more from an urban area of 50,000 or more people.

Level Four FAR are rural areas that are 15 minutes or more by car from an urban area of 2,500-9,999 people, 30 minutes or more from an urban area of 10,000-24,999 people, 45 minutes or more from an urban area of 25,000-49,999 people, and 60 minutes or more from an urban area of 50,000 or more people (Cromartie, Nulph, and Hart, 2012).

Commentators on the methodology have pointed out that some states, such as Alaska, Wyoming, or New Mexico have few urban areas with populations of over 50,000. Others have argued that travel times by road are highly seasonal. Provision does seem to be made, however, for travel by means other than roads in the one-hour time frame. As is the case with other measures of remoteness which rely heavily on population centres, the size of population may not be an accurate measure of the types and range of services available and there is some arbitrariness in the choice of times and sizes of population (Federal Register, 2014).

6. An Alternative Needs-Based Funding Approach for FNCFS

The IFSD (2020), has proposed an alternative needs-based approach to the funding of child welfare. This approach starts with baseline funding and adjusts it for circumstantial effects, such as geography and poverty. Table 2 suggests how this might be done and what follows elaborates on this.

Table 2: An Alternative Needs-Based Funding Approach for FNCFS

Allocation of Prevention Dollars 1. According to Community Well Being Index or 2. Local Needs Analysis: weight of 50% to low income families, 25% lone parent families, 25% to number of Indigenous children and/or 3. NAN Remoteness Coefficient
Remoteness Adjustment to Baseline Funding 1. INAC Remoteness 4. No road access. 2. Stats Can SAC Types 6-8 or 7-8 3. Stats Can 2017 Remoteness Index ≥ 0.6. 4. NAN Remoteness Quotient
Baseline Funding Guaranteed Minimum Operating Grant to Fulfill Core Functions

A function mainly of:
- Children in Care
- Children moving to permanency
- Investigations Completed
- Ongoing Protection Cases

6.1. Baseline funding

Baseline Funding would provide a guaranteed minimum operating grant to enable agencies to fulfill core functions, driven mainly by the number of children in care but also by the number of children moving to permanency, the number of investigations completed and the number of ongoing protection cases. The data requirements for these are not onerous and should be readily available across the country. These factors are already built into the current Ontario model and in 2016-17 for Indigenous agencies were proportioned among factors driving volume as follows: children in care, 46.9%; on-going protection 28.6%; children moving to permanency, 21.6% and investigations, 2.9% (Loeppky and Loxley, 2017. p.47). These proportions could be determined in the model based on data for more years and for agencies elsewhere. They could also be set to try to influence where agencies spend their dollars.

Over time, as more data becomes available, factors outlined in Appendix 1 of the IFSD's Measuring to Thrive Framework (IFSD, 2020), such as those dealing with wellness, safety and basic needs, could be built in as more comprehensive determinants of baseline funding. In addition to baseline funding there would be a financial adjustment for remoteness (the geography component).

6.2. The Remoteness Adjustment

Ideally, for reasons of equity and consistency, there should be one remoteness adjustment factor for the whole country and this should reflect the importance of road access, given IFSD's previous analysis of factors driving agency costs. There would appear to be four possible candidates for this adjustment, ruling out the Australian and USA approaches for which appropriate data is not readily available:

i. INAC's remoteness measure in Band Support Funding and the Band Classification Manual;
ii. Statistics Canada's Rurality and Remoteness Measures;
iii. Statistics Canada's 2017 Remoteness Index and

iv. NAN's Remoteness Quotient.

What follows reviews the suitability of each for inclusion in the Alternative Needs-Based Funding Approach.

INAC's approach is well established and the necessary geographical data for each First Nation is on-line and can be cross-checked against the remoteness measures which are also available on-line. It has been widely used in research and provided that community geographical profiles are updated regularly on-line, as they appear to be, then the fact that the Band Classification Manual was last issued only in 2005 is not an impediment to its use. Although it is not a continuous measure, it has several degrees of differentiation which compensate to some extent for lack of continuity: zones 1, 2 and 3 have year-round access by a paved or gravelled road, each differently distanced from service centres and each with six degrees of latitude. Geographic Zone 4 covers First Nations with either air, rail or boat access to service centres, has 7 sub-zones (from 0 to 6) and again each has 6 categories by degrees of latitude. The Remoteness Index ranges, therefore, from 0 to 0.7 for the three zones with road access and from 0.1 to 1.85 for Zone 4. If we adjust Zone 4 for overlap with Zone 3, the range of the Remoteness Index is reduced in that Zone to between 0.45 and 1.85.

If INAC's remoteness measure in Band Support Funding is to be used in preparing needs-based budgets, then adjustment have to be made for the provision of services for child welfare in cities rather than service centres. Wen:De made such adjustments for all but Ontario and found that this had a relatively modest impact on remoteness funding, constituting only 2.6% of additional money sought for remoteness. The reason for that is that almost 80% of changes in remoteness on this account affected agencies in Zones 2B and 2C which are not very remote. Only 6 agencies in BC had adjustments leaving them in Zone 4 i.e., in centres without road access and these were probably using services in cities anyhow. Access to appropriate centres for child welfare services continues to be an issue and building city access into remoteness measures, where appropriate, is an exercise still needing to be conducted, preferably with agencies stating where they actually use services, but it will not significantly alter average remoteness or average funding for remoteness.

The second possible approach, Statistics Canada's Rurality and Remoteness Measures, are also not continuous measures. Of the eight Statistical Area Classification Types, two (7 and 8) relate to census divisions without road access and hence fit the IFSD's requirement neatly, while a third (6) covers communities with a very low degree of commuting. This measure is census based and hence available only every five years. The data is subject to incomplete enumeration as a number of First Nations did not participate in either the 2011 census or the 2016 census, which does not invalidate national or regional level indicators but can pose problems at the level of the CSD (Statistics Canada, 2019c). There is a convenient on-line categorization of First

Nations and Tribal Councils according to their appropriate CSDs (Statistics Canada, 2019d) which uses information from what was Aboriginal Affairs and Northern Development Canada and is, presumably, updated as First Nation data changes. There does not, however, appear to be a readily available categorization of First Nations by SACtype, so which communities fit into types 6-8 or 7-8 is not accessible. Furthermore, Statistics Canada itself seems to have moved away from this measure towards use of the Remoteness Index.

The third approach, Statistics Canada's 2017 Remoteness Index (RI) is a continuous measure and it appears that communities with an index of 0.6 and higher lack all-round road access, so it could in principle be used to check the cost drivers that IFSD has laid out. It is also moderately positively correlated with INAC's remoteness measure[6], so it could act as a reasonable replacement. The index is available on-line for all CSDs (Statistics Canada, 2020b) and the location of First Nations by CSDs is available from AADNC.[7] The RI is census-based and hence subject to the same limitations as Statistics Canada's Rurality and Remoteness Measures. As was shown in section 4.4 the way travel costs are arrived at also tends to underestimate the degree of remoteness. Nevertheless, it is likely to become the benchmark for measuring remoteness in Canada.

Finally, the NAN Remoteness Quotient differs from the others in that it provides a dollar amount to compensate for remoteness, which is precisely what is needed in calculating IFSD's remoteness adjustment to base-line funding. Given the small sample size, however, the range of possible compensation becomes huge as shown earlier and this is obviously problematic for public policy. If the overall methodology is acceptable, however, then the confidence interval would suggest parameters for negotiating compensation for remoteness. The big question about methodology remains the treatment of costs, such as salaries, which are lower than those incurred in reference agencies. From the point of view of IFSD's needs-based funding approach, the main problem with the NAN RQ is its purely Ontario basis. This would not exclude it being used for estimating child welfare funding needs in Ontario; after all, Ontario has had its own funding system since 1965. But it would be costly and time consuming to apply it nationally.

At the national level, this would leave only two realistic options: INAC's remoteness measure in Band Support Funding and Statistics Canada's 2017 Remoteness Index (RI). It should be emphasized that none of the four possible approaches, and neither of the preferred options, specifically build the provision of child welfare services into their measurement of remoteness using, at best, generic 'service centres' or, in the case of the NAN exercise, none at all. As noted above, an adjustment was made for this in Wend:De (FNCFCS, 2005b) for INAC's remoteness

[6] The correlation coefficient between INAC's remoteness measure and Stat Can's 2017 measure is 0.63 for a sample of 60 First Nations chosen at random from BC, Alberta, Saskatchewan, Manitoba, Ontario and Quebec.
[7] The list of First Nations by CSDs was made available by AADNC/AANDC on 7 May, 2020 in a document 'INSTAT-2016 CSD to Band Linkage' but it can also be found at Statistics Canada 2019b.

measure measuring distance to cities, but Ontario was not included in this exercise. No such adjustment has been made for Statistics Canada's 2017 RI, and neither is one expected.

Whatever their other imperfections, the two preferred measures of remoteness would not directly identify the offsetting compensation required in dollar terms (as the NAN RQ does). What they would do is point to which agencies would require compensation and the relative scale of that requirement based on the size of the remoteness factor. Salaries, travel and other costs in the baseline budget affected by remoteness would still need to be adjusted.

One way of doing that is to convert INAC's remoteness coefficients into % increases in budgets, covering all items, not just salaries. This is the way the coefficients were used and, pre Wen:De, ranged from a budget increase of 0.08 for a remoteness of 0.8 (about the lowest) to 19% for a remoteness of 1.85 (the highest) (FNCFCS, 2005b, p. 25). We could approximate this approach and orders of magnitude by multiplying the remoteness coefficients by 10 to assign a budget weight, as in Table 3.

Table 3: INAC Measures and Shares

Remoteness Index							Budget Weight of Remoteness Index						
Zone 4	A	B	C	D	E	F	Zone 4	A	B	C	D	E	F
2	0.45	0.55	0.63	0.74	0.81	0.87	**2**	4.5	5.5	6.3	7.4	8.1	8.7
3	0.65	0.75	0.82	0.95	1.03	1.10	**3**	6.5	7.5	8.2	9.5	10.3	11.0
4	0.80	0.92	1.00	1.04	1.23	1.30	**4**	8.0	9.2	10.0	10.4	12.3	13.0
5	0.95	1.10	1.18	1.35	1.44	1.53	**5**	9.5	11.0	11.8	13.5	14.4	15.3
6	1.10	1.25	1.35	1.65	1.75	1.85	**6**	11.0	12.5	13.5	16.5	17.5	18.5

Thus, the most remote agencies would have their baseline budgets increased by a maximum of 18.5% and the rest would receive graduated compensation depending on their remoteness measure. The geometric mean of the budget weights is 9%. If the Wen:De proposals to increase remoteness by between 3% for the least remote and 8% for the most had been adopted by the federal government, which they were not, then the budget weight increases would range from 7.5% to 26.5%, with a geometric mean of 14%.

The rationale for adjusting baseline budgets by these two items rests on the argument that while agencies frequently cite insufficient provision for remoteness, their claims for additional required compensation tend, as Wen:De pointed out, to be inflated. Wen:De therefore provided estimates of the additional amount needed to compensate for remoteness more accurately (3-8%). Under Directive 20-1, provision for remoteness, though inadequate, was built into the budget formula in a per cent fashion, so that each and every time baseline budgets increased, the dollar amount

allocated for remoteness increased proportionally. What was not provided for under Directive 20-1 was the additional amount estimated to be needed in Wen:De. So, by the time EPFA was introduced, baseline budgets already had an amount included that provided for remoteness. The EPFA then either added an explicit further amount (Saskatchewan, Manitoba and Quebec), or it didn't (Alberta) but all provinces, even those that never 'graduated' to EPFA, would have had some remoteness provision built into their CFS agency budgets because of hysteresis. Adding the per cent increases recommended by Wen:De makes some provision for the original inadequacy of the INAC adjustment.

The Stats Canada Remoteness Index could be similarly adapted to indicate budget adjustments (Table 4). The most remote agencies could possibly have an index of 100. In line with the INAC numbers above, this would entitle them to an increase in their baseline budget of 18.5%. The least remote agency qualifying for compensation would have an index of 60, entitling it to a budget increase of 4.5%. We might then have a relationship between this measure of remoteness and budget increases as in Table 4 column 2. This would give a geometric average increase in base-line budget of 10.3%.

Table 4: Statistics Canada 2017 Remoteness Index

1. Index	2. % Baseline Budget Increase: INAC	3. % Baseline Budget Increase Wen:De
100	18.5	26.5
90	15.0	22.0
80	11.5	16.5
70	8.0	11.5
60	4.5	7.5

The Wen:De recommended increases for remoteness could also be built in, giving column 3 in the table, with increases ranging from 7.5% to 26.5%, with a geometric mean of 15.3%. This would be very straight forward to apply with base-line budget increases being proportionate within the decile.

Yet another way of adjusting expenditures would be to take existing remoteness agreements negotiated by unions with provincial governments and averaging remoteness allowances against average salaries in First Nations. In the case of Manitoba, The Manitoba Government and General Employees' Union (MGEU) has negotiated a Remoteness Allowance for those working for the provincial government in the north of the province in First Nations the remoteness of which lies between 0.1 and 1.35 on INAC's measure, pretty much the extremes, and between 0.4 and 0.9 on Stats Canada's 2017 measure.

The allowance provides for both single workers and those with dependents. The bi-weekly rates can be seen in Table 5 below (Manitoba and MGEU, 2016). Taking the average salary of social workers in CFS in Northern Manitoba to be around $70,000, and the remoteness allowance is equivalent to an average of around 12% for those with dependents and 7% for those without, or between $7,700 and $4,500. While the allowance is about double that currently built into the Manitoba costing model, and closer to that built into the Quebec model, it is significantly less than the remoteness recommended by the NAN report. The idea would be that these allowances are designed to offset the higher cost of living in remote areas and the % increases could either be applied to individual First Nations or, as is current practice, averaged across the board. Unfortunately, we do not have similar data for other provinces, but at least the Manitoba data suggests orders of magnitude.

Indigenous Services Canada (2018) has suggested that in revisiting remoteness, the National Joint Council (NJC, 2019) Directives on isolated posts allowances might be a useful source of data. These outline allowances the federal government will pay for its workers in isolated posts. Compared with the MGEU allowances, the rates are very generous. For example, the most remote First Nation workplace in Manitoba, Tadoule Lake, would compensate $26,868 in environmental and living cost allowances for a worker with dependents and $16,721 for a single worker or between 24% and 38% of a salary of $70,000. The least remote First Nation, Grand Rapids, would compensate $6,063 for a worker with dependents and $3,638 for a single worker, or between 5% and almost 9% of a salary of $70,000. This compares with MGEU rates of between 8% and 14% for Tadoule Lake and 3% and 5% for Grand Rapids. Since salaries in child welfare are generally supposed to stay in line with provincial salaries, using NJC allowances for remoteness would not be appropriate.

We are left, therefore, with recommending using budget adjustments suggested by the INAC remoteness measure, the 2017 Statics Canada RI or by the rates negotiated by the MGEU for Manitoba. These suggest budget adjustments for remoteness of averages between 10 and 15% on baseline budgets and ranges of between 7.5% and 26.5%.

Table 5: Remoteness Allowances on First Nations: Manitoba

First Nation	Bi-Weekly Allowance		% Ave Salary		Remoteness Measure	
	Dependent	Single	Dependent	Single	INAC	Stats Can

The third tier of the Alternative Needs-Based Funding Approach for FNCFS is the addition of prevention funding, which has grown in importance since the introduction of the EPFA and which plays a key role in IFSD's approach

6.3. The Allocation of Prevention Funding

There are three candidates for allocating funding for prevention between agencies/communities. The NAN Remoteness Quotient has been used precisely for that purpose, showing how much of Ontario prevention dollars should accrue to NAN agencies. If it were decided to use the NAN RQ for funding allocation generally among child welfare agencies, then it might as well be used for this portion of the Alternative Needs-Based Funding Approach. As we have argued, however, it is unlikely to become a model for the rest of Canada.

Another option is to allocate any new prevention funding according to weights assigned to local needs, using low income families, lone parent families and the number of Indigenous children as proxies for local needs, as recommended for Ontario (Loeppky and Loxley, 2017, p. 56). Recognizing the importance of poverty as a driver of child welfare problems, this approach gave a weight of 50% to low income families. A weight of 25% was given to lone parent families, on

the grounds that their prevalence might go some way towards explaining the incidence of neglect, and the number of Indigenous children, the population at risk, was also given a weight of 25%. For each agency each of the three sets of data was weighted accordingly and summed up across all agencies. The contribution of each agency to this total would then determine its share of Prevention funding within the budget for Indigenous agencies only. The weights could be adjusted for each of the three measures of local need if desired. Furthermore, other variables could be added so that a number of measurements of need listed in IFSD's Measuring to Thrive Framework, Appendix 1, could be drawn upon (IFSD, 2020). These broaden the definition of need and wellness at the personal, family and community level.

The third possible way of allocating prevention dollars would be using the Community Well-Being Index. Covering four socio-economic measures of well-being: income, education, housing and labour force, this index is more comprehensive than either of the first two and, unlike the NAN RQ measure, is national in scope. It is readily available on-line and has extensive coverage of communities (ISC, 2019). The idea would be to concentrate prevention dollars in those communities with low CWBIs. This could be achieved by taking the CWB score for each First Nation and subtracting it from 100[8]. The resulting number would then be expressed as a per cent of the sum of all such numbers for First Nations and this would represent the share of prevention funds accruing to each community. There could be variations on this approach if the resulting allocation was felt to be in some way deficient.

7. Conclusion

The need to provide funding to offset the higher cost of operating in remote places has long been accepted in the child welfare community of Canada. Remoteness has, however, not been systematically or consistently built into funding models. Since 2018 it is no longer clear that funding models as such continue to exist for federally supported child welfare, but up to that point remoteness funding was provided only to agencies operating in three provinces and the amount provided varied greatly and seemingly, irrationally, between them. In proposing a new funding model for the whole of Canada, the IFSD makes provision for baseline expenditures to be adjusted for remoteness and this paper has examined ways in which it might be done.

Of the many available ways of addressing the costs of remoteness, two are identified for possible use. The first is the long-standing INAC remoteness measure used in Band Support Funding and the second is Statistics Canada's 2017 Remoteness Index (RI). Either one would allow First Nation child welfare agencies operating in different degrees of remoteness to be compensated rationally. There would, however, still be a degree of arbitrariness in arriving at the average

[8] The CWBI for each agency is subtracted from 100 to deal with the fact that numbers closer to 100 represent higher levels of wellbeing and we are seeking instead to calculate the depth of need.

compensation to be paid. Earlier work on remoteness and a recent collective agreement provision in Manitoba suggest that compensation for remoteness might sensibly be within the average range of 10% to 15% of baseline budgets.

Having built such a provision into the alternative needs-based funding model proposed by IFSD, there would then be a need to allocate whatever funds are available for prevention activities. This paper proposes using either a Local Needs Analysis or the Community Well Being Index for this purpose. For Ontario, a case can be made to use the NAN Remoteness Exercise to determine both remoteness funding and allocation of prevention dollars. There are, however, technical issues in how it is put together and in the precision of its guidance for policy. Also, the NAN model would not be easily applied nationally.

Appendix P: Emergency funding for COVID-19: Responses and support to Indigenous Peoples

Emergency funding for COVID-19:
Responses and support to Indigenous Peoples

Helaina Gaspard
Laura Fernz

SUMMARY

The pandemic has sent economies into recession, is stressing health systems and the people they serve. In response, the Government of Canada has introduced a variety of interim measures to ease the immediate financial pain caused by the pandemic.

While all economic sectors and people have been in some way affected by the pandemic, vulnerable populations or populations with pre-existing social and economic challenges may be more severely burdened. Indigenous Peoples, and especially, First Nations living on-reserve with overcrowded housing, limited access to social and health services, and higher incidences of child and family services interventions, are at greater risk of ramifications.

Recognizing the particular challenges, Indigenous Services Canada (ISC) announced $305 million for the Indigenous Community Services Fund on March 26, 2020. This funding is to be distributed across groups of Indigenous Peoples, with 65% of the funding attributed to First Nations.

When considering three parameters for assessing resource allocation and distribution (allocation, flow and speed), the announced funding falls short. While funding will flow principally to First Nations communities, there is no definition of targeted people or services. Without a plan, the impact of emergency funding may be limited.

Precedents exist to better allocate and distribute funding in crisis situations. Four broad approaches to distributing emergency funding can be defined (see Appendix 1 for more detail), each with its own trade-offs in allocation, flow and speed. These approaches have clear targets and intentions, e.g. immediate financial relief allocated directly to a recipient, or long-term disaster mitigation planning. To address needs in an emergency and to build resiliency for the next unexpected situation, funding targets, approaches and amounts will differ.

There are models of planned and targeted emergency response. Consider for instance, Dakota Ojibway Child and Family Services (DOCFS), based in Manitoba (see Appendix 2 for the case study). The organization has a well-developed business continuity plan that can be actioned in one half-day. From staff roles to connections with other branches of the Tribal Council, DOCFS works to fulfill the emergency needs of the people they serve from the procurement and delivery of food to personal items.

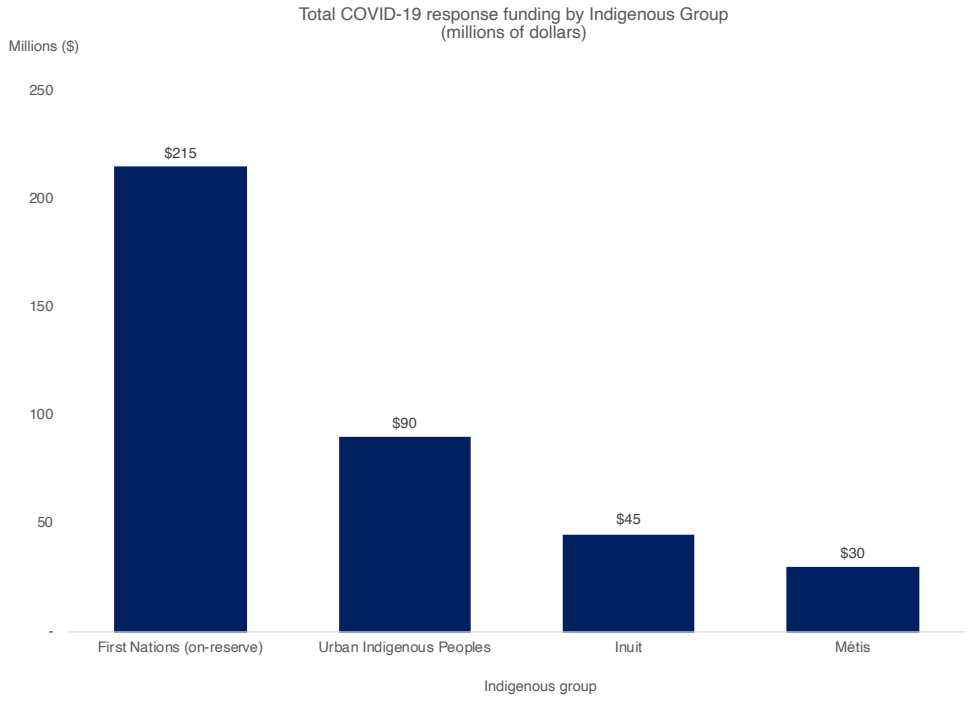
Emergency funding is a tool that should have clearly defined purposes to reach those in need in moments of crisis. Allocating funding is one step, getting it to work is another.

Introduction

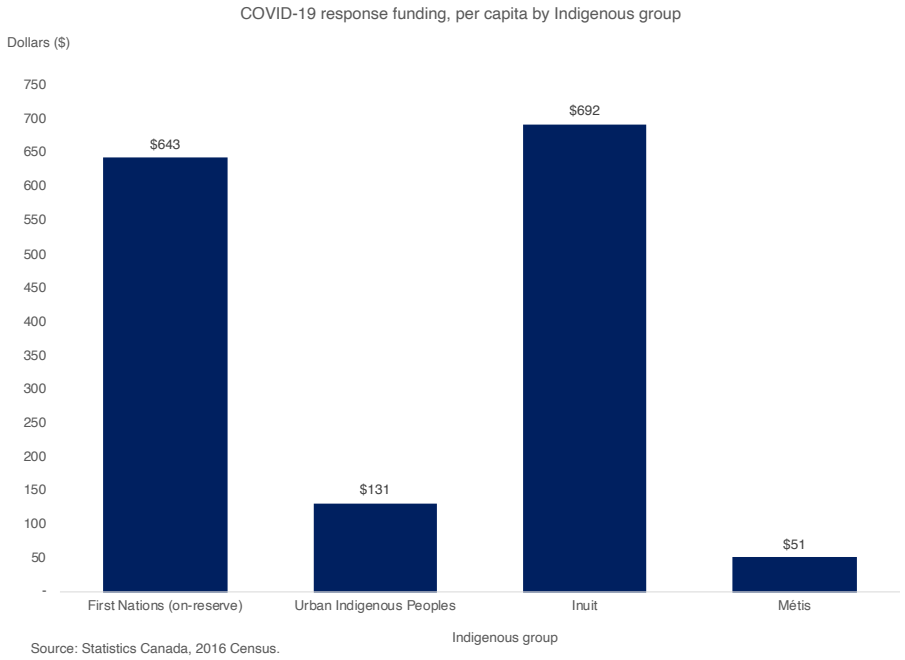
The pandemic has sent economies into recession and is stressing health systems and the people they serve. In response, the Government of Canada has introduced a variety of interim measures to ease the immediate financial pain caused by the pandemic.

While all economic sectors and people have been in some way affected by the pandemic, vulnerable populations or populations with pre-existing social and economic challenges may be more severely burdened. Indigenous Peoples, and especially, First Nations living on-reserve with overcrowded housing, limited access to social and health services, and higher incidences of child and family services interventions, are at greater risk of ramifications.

Recognizing the particular challenges, Indigenous Services Canada (ISC) announced $305 million for the Indigenous Community Services Fund on March 26, 2020. This funding is to be distributed across groups of Indigenous Peoples, with 65% of the funding attributed to First Nations. In mid-April, nearly $307 million was announced for Aboriginal businesses, largely made available through Indigenous financial institutions through short-term interest free loans, and non-repayable contributions. On May 21, 2020, another $75 million was allocated to urban Indigenous Peoples (above the original allocation of $15 million).

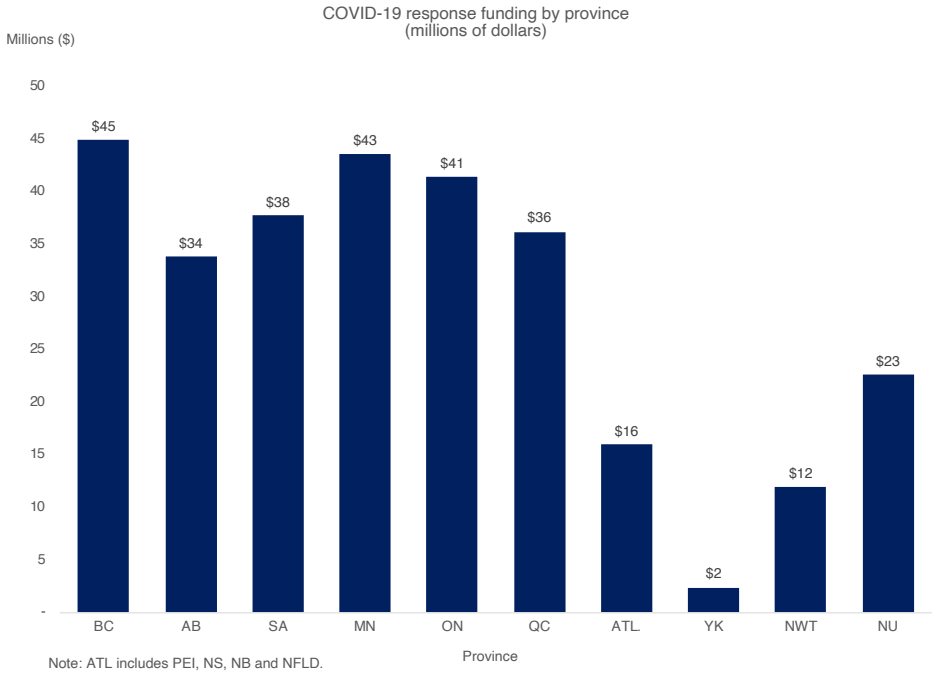


To provide a rough comparative basis on which to understand the funding, per capita calculations suggest that First Nations on-reserve receive approximately $645 per person, Inuit receive approximately $700, with Métis and Urban Indigenous Peoples receiving substantively less on a per capita basis:



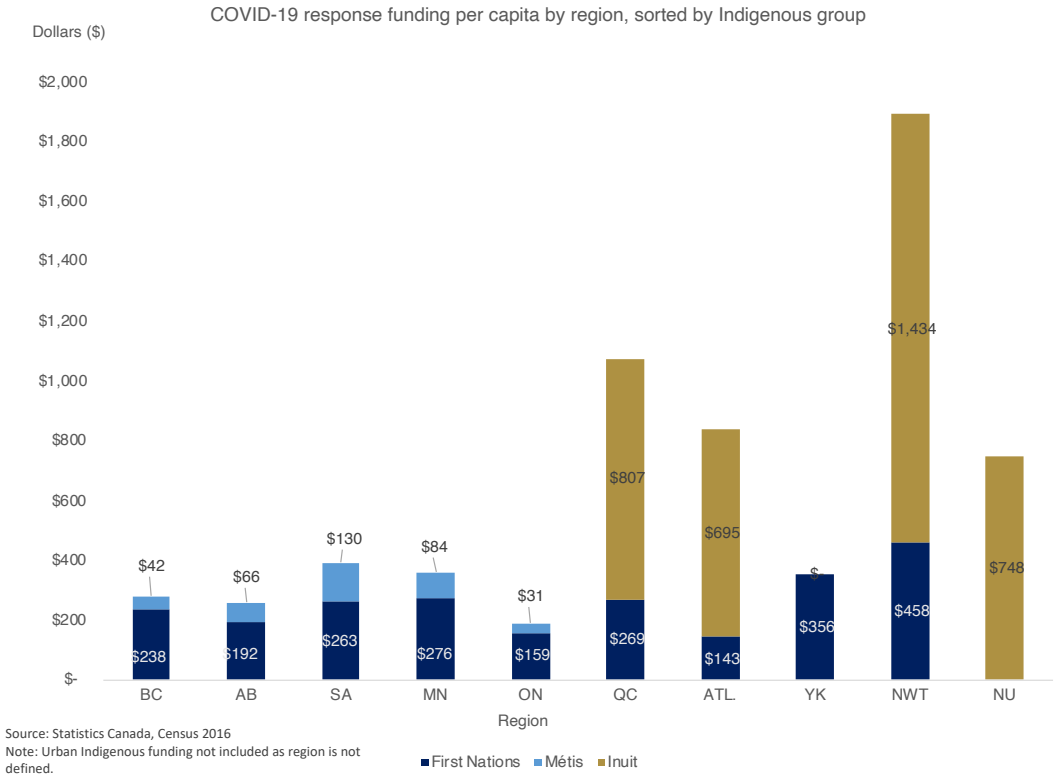
Source: Statistics Canada, 2016 Census.

Most of the total funding (approximately $290 million or 92%) is being allocated on a regional basis. Since funding for urban Indigenous services is proposal-based, there is no defined regional association (until the funding is allocated).



Note: ATL includes PEI, NS, NB and NFLD.

On a per capita basis, Northwest Territories receive the highest per capita funding amounts and Ontario receives the lowest.



At the time of writing, ISC had not released information on if and when allocated resources have flowed to participants. For the funding allocated by proposal, the deadline for proposals was April 13, 2020.

Beyond the dollar amounts, there are three principal considerations on resources:

1) The way in which funding is **allocated** (i.e. who gets what)
2) The way in which funding **flows** (i.e. how money moves to recipients)
3) The **speed** with which funding is distributed (i.e. when it flows to recipients)

Allocation

ISC defines *population*, *remoteness* and *need* as three parameters for distributing funding to First Nations. ISC can be credited with identifying relevant factors for funding with some detail on how the allocations will be made. Each self-governing First Nation will receive a base amount of $50,000 with adjustments for their on-reserve population (based on Census 2016 data), as well as for remoteness, and for their Community Wellbeing Index score. The application, however, of the remoteness and wellbeing factors remain unclear. Furthermore, there is no further publicly available information on the principles for allocating funding among all other First Nations. This is an

important gap for the allocation of hundreds of millions of dollars. Inuit Regional Corporations will receive funding based on a funding formula agreed to by the Inuit Tapiriit Kanatami (ITK) Board of Directors. Funding for Métis will flow through "existing mechanisms" with a "standard distribution model" to determine the amount received on a regional basis.

Flow

On the matter of funding flows, ISC defined different means of moving money based on recipient group. For instance, First Nations dollars will flow directly to communities, whereas funding for Inuit will flow based on an allocation determined by ITK and regional Inuit land claims organizations. In the case of Métis and Urban Indigenous funding, eligible parties can apply for funding.

There is a helpful distinction to be made between emergency response funding to ease the immediate shock/pain of a pandemic, versus the longer-term funding that is meant to support development in communities.

In the current circumstances, it may be helpful to ensure funding flows to recipients as quickly and as efficiently as possible to ensure their basic needs are being met, especially in challenging circumstances.

Speed

The speed with which funding reaches recipients is closely connected to how it flows. ISC has defined different means through which Indigenous Peoples will receive support: directly through their First Nation, through a land-based organization, or by applying for funding.

The most efficient funding receipt will likely be among First Nations. It can be expected that funding will move with relative ease to First Nations (as mechanisms and agreements already exist), and that the band council structures in place should generally be able to put funding into practice. The slowest funding by contrast, may be funding allocated through the call for proposals for those providing services to Indigenous Peoples in urban centres or off-reserve.

Re-thinking emergency funding

There are four principal models that emerge when considering approaches to delivering emergency funding across jurisdictions: application-based temporary assistance; direct transfers to persons; medium- to long-term grants; and third-party managed funding (see Appendix 1).

There are considerations for each of these funding approaches, that may be suitable to responding to different types of crises or particular moments over the course of a crisis and its recovery.

APPENDIX 1

Approach	Description	Allocation	Flow	Speed	Examples
Application-based temporary immediate assistance funding	Upon approval of an application, payouts are made over a short period of time to qualifying individuals, businesses or communities to offset economic impacts of an emergency. Most of these funds emerge in response to an emergency, although there are examples of pre-existing funds, including Australia's Disaster Recovery Payment and Crisis Payment.	Allocations are based on a set of qualifying principles connected to the emergency or the recipient, e.g. percentage of total income, minimum wage, etc. The total size of the fund (available resources), is typically capped.	Direct support to recipients, upon approval of qualifying application.	Funds may be created quickly, but governments typically rely on the robustness of their existing infrastructure, e.g. online tax portals, service centres, to deliver the monetary relief. The speed of delivery is determined by the state of pre-existing infrastructure.	CAN: Covid-19 Economic Response plan ($105 billion allocated); divided into various programs including Canada Emergency Response Benefit ($24 billion: $2,000 per month for up to 4 months to all eligible recipients) and the Wage Subsidy Program (~$71 billion: 75% of weekly renumeration paid to a maximum of $847 per employee).[1]

[1] "Canada's COVID-19 Economic Response Plan," Government of Canada, last updated on April 7, 2020, https://www.canada.ca/en/department-finance/economic-response-plan.html#wage_subsidies .

					AUS: Disaster Recovery Payment[2] (pre-existing fund) ($1,000 for eligible adults, and 400$ for eligible children who have been directly affected by a major disaster either in Australia or overseas). Crisis Payment (pre-existing fund)[3] eligibility is based on being qualified for an income support payment, being in Australia when the claim is submitted, and being in severe financial hardship due to extreme life changes which include a natural disaster not covered by the Disaster Recovery Payment – for instance in the Covid-19 case of a National Health Emergency[4]. The amount an individual receives is equivalent to one week's pay at their existing income support payment rate. You can ordinarily receive up to 4 payments over 12 months, or exceptionally during the National Health Emergency you can receive 2 payments in a 6-month period.

[2] "Disaster Recovery Payment," Australian Government – Disaster Assist, last updated April 16, 2020, https://www.disasterassist.gov.au/Pages/disaster-recovery-payment.aspx.

Direct Transfer to Persons	Direct **one-time** payout to qualifying individuals. No application is necessary. The funding approach typically emerges during a crisis.	The allocation is typically fixed and determined by the funder.	Automatic direct transfer to qualifying persons (no application required).	Direct transfers to persons can flow quickly, assuming pre-existing infrastructure is available.	CAN: Covid-19 Increase to the GST/HST credit amount (based on net income: $443-$886 per individual, $580-$1,160 per married couple, $153-$306 per child under the age of 19, or $290-$580 for the first eligible child of a single parent)[5] AUS: $750 one off Economic Support Payment[6]

[5] COVID-19 Increase to the GST/HST credit amount," Government of Canada, last updated on April 1, 2020, https://www.canada.ca/en/revenue-agency/services/child-family-benefits/covid-19-gsthstc-increase.html .
[6] "A $750 one off Economic Support Payment," Australian Government, last updated March 12, 2020, https://www.servicesaustralia.gov.au/individuals/news/750-one-economic-support-payment .

Medium to Long-Term Assistance Grants	Grants are pre-established (not an emergency response). The structure of the grant is typically set out in legislation, and oftentimes will provide for two tracks of funding. The first track is funding that targets emergency mitigation and building resilience in communities. The second track is funding that can be accessed during a crisis and allows for greater ease in accessing resources during an emergency.	Funding is allocated based on actuals, with requisite proof of expenses.	For most of these grants, federal funds are only dispensed when the financial capacity of the other orders of government, insurance payouts, etc. are exhausted. Furthermore, they require long-term agreements between the parties, with a cost-sharing formula defined in legislation.	The main weakness of this response mechanism is the speed at which communities receive funds. This form of funding is almost entirely retrospective.* Though there may be a timeline with respect to eligible expenses (e.g. up to 12 months after the emergency), there is no set timeline as to when reimbursements will be received by applications. Once agreements are put into place, how quickly funding will flow will be dependent on the structures of the other orders of government and their mechanisms to distribute funds to recipients. This model is impractical for communities that have limited reserve funds; they may not have the capital needed to front the cost of expenses and services while waiting for reimbursements,	CAN: Disaster Financial Assistance Arrangements,[7] Emergency Management Assistance for Activities on Reserve,[8] Disaster Mitigation and Adaptation Fund[9]

* Note: In certain instances, major capital investments may be pre-approved.

[7] "Guidelines for the Disaster Financial Assistance Arrangements," Public Safety Canada, last updated on February 2, 2019, https://www.publicsafety.gc.ca/cnt/mrgnc-mngmnt/rcvr-dsstrs/gdlns-dsstr-ssstnc/index-en.aspx . Program administered through Public Safety Canada that provides disaster relief through provincial and territorial governments. The aim of the program is to assist provincial government with the costs of disaster relief (when the costs exceed what would reasonably expected for the province to bear on their own).

[8] "Contributions for Emergency Management Assistance for Activities on Reserve: Terms and Conditions," Application requirements and assessment criteria, INAC, last updated on April, 4, 2019, https://www.aadnc-aandc.gc.ca/eng/1386012167936/1386012273685. The EMAP is aimed at assisting on-reserve First Nations communities through emergency management. One of the main project objectives is to work with emergency partners and to help with the remediation of critical infrastructure and community assets impacted by emergency events.

[9] "Disaster Mitigation and Adaptation Fund," Infrastructure Canada, last updated May 9, 2019, https://www.infrastructure.gc.ca/dmaf-faac/index-eng.html. "A national merit-based program that will invest $2 billion to support large-scale infrastructure projects to help communities better manage the risks of disasters triggered by natural hazards."

				potentially putting them in a precarious situation.	US: FEMA Public Assistance & Individual Assistance,[10] Hazard Mitigation Grant Program[11] AUS: Disaster Recovery Funding Arrangements – used to fund Emergency bushfire support for primary producers[12]

[10] "Understanding Individual Assistance and Public Assistance," FEMA, last updated January 15, 2018, https://www.fema.gov/news-release/2018/01/15/understanding-individual-assistance-and-public-assistance. Following a Presidential Major Disaster Declaration, FEMA provides two main programs to help with recovery: one is targeted to individuals and households, and the other is for state and local governments (as well as certain non-profits).The first program, Individual Assistance, provides direct assistance to families and individuals who have suffered disaster related losses. The second program, Public Assistance, can help state and local governments get reimbursed for up to 75 percent of eligible costs following disaster-related damage (eligible expenses include emergency protective measures, debris removal, and infrastructure repairs or replacement).

[11] "Hazard Mitigation Grant Program," FEMA, accessed April 6, 2020, https://www.fema.gov/hazard-mitigation-grant-program. Following a Presidential Major Disaster Declaration, HMGP helps communities implement hazard mitigation measures (the key objective of the grant is to enact mitigation measures that reduce the risk of loss of life and property from future disasters).

[12] "Emergency bushfire support for primary producers," Australian Government, last updated on January 22, 2020, https://www.agriculture.gov.au/ag-farm-food/bushfires/primary-producers. $100 million in emergency grants has been committed; up to $75,000 is available to farmers, fishers and foresters located in declared bushfire disaster areas.

Funding to Third Parties (non-governmental support agencies)	During an emergency, a third-party is mobilized to provide relief services, with government funding.	Third-parties typically receive funding by applying for grants or entering into service agreements with government.[13] Contribution agreements are also possible in an emergency, where a government will flow funds directly to the organization to provide relief services.[14]	Funding is utilized and potentially dispersed to individuals through the third-party.	The speed at which third-parties can deliver relief services or disburse funds is dependent on their pre-existing infrastructure.[15]	CAN: Regional agreement between ISC and the Red Cross to assist during flood evacuations in First Nations communities.[16]* For instance, the Red Cross has received grants to help with wildfires in British Columbia,[17] and they have also signed a 5 year agreement with ISC to provide services for evacuees in Manitoba on ISC's behalf.[18] In New Brunswick the $900 Workers Emergency Income Benefit is being administered by the Red Cross.[19]

[13] Canadian Red Cross, *Annual Report 2010-2011*, (2011), page 25.
[14] "Canadian Red Cross welcomes the Government of Canada support to wildfire recovery," Canadian Red Cross, last updated July 23, 2017, https://www.redcross.ca/about-us/media-news/news-releases/canadian-red-cross-welcomes-the-government-of-canada-support-to-wildfire-recovery.
[15] KPMG, *May 2016 Wood Buffalo Wildfire : Post-Incident Assessment Report (Prepared for Alberta Emergency Management Agency,* (May 2017), page # 26 & 98. "[Red Cross'] electronic fund transfers more efficient than the Province's debit cards" & "while the Red Cross was an effective fundraiser, it did not necessarily have all of the supporting infrastructure to disburse the funds to organizations and individuals who needed it to address their response and recovery needs"
*Note: S. 3.4.2.7. of the *On-Reserve Emergency Management Plan* states "At the request of an on-reserve First Nation, INAC, or province or territory, a non-government organization (e.g. the Canadian Red Cross) or other Indigenous organization, may support the management of an emergency. Once identified, these entities become part of the First Nation's emergency planning process, and should have clearly defined roles and responsibilities outlined within the First Nation's all-hazards emergency management plan, in order to develop an integrated emergency management structure and processes/procedures with all stakeholders." When an emergency or unexpected event occurs, such as COVID-19, there may be an immediate need to have financial resources flow directly to persons. In such instances, a direct transfer to persons is useful to help to address an individual's basic needs. The money tends to be easily accessible and can be used virtually, immediately. That funding however, is short-term and serves to ease immediate burdens. It does not provide means to build resilience for future situations. This approach is expeditious and direct.

Resilience and emergency management planning are best developed through medium- and long-term grants. This type of funding enables jurisdictions to look back on an emergency and leverage the lessons to build response plans and the infrastructure required to mitigate the challenges of future events. While the long-term impact of such funding can be beneficial, it is only useful when a jurisdiction has tools for planning and capacity development. There must also be an existing set of resources which the jurisdiction can leverage to meet its needs, as much of the funding is reimbursed. This approach allocates funding for longer-term development but on retrospective timelines.

Third-party managed funding offers a hybrid approach, where service providers have the procedures and practices required to deliver funding and services in response to an emergency in an expedited fashion. For an immediate on-the-ground response, this approach may respond to considerations of speed, allocation and flow, as the third-party is the sole interlocutor with the funder (government) and can deliver a broad response.

When considering approaches to emergency funding, a mix of direct transfers and third-party managed funding tend to be best for immediate responses and service delivery. Grants with application-based proposals for funding are best suited to build resilience, capacity and infrastructure for the medium- to long-term. Irrespective of the approach or mix of approaches selected, pre-existing preparedness and response structures influence an individual's, community's and government's ability to address crises.

In a 2018 study, the House of Commons Standing Committee on Indigenous and Northern Affairs produced the report, "From the Ashes: Reimagining Fire Safety and Emergency Management in Indigenous Communities." The report emphasized the gaps in funding and the challenges in ensuring the timely and reliable delivery of resources for emergency response. These findings echoed a 2013 report by the Auditor General, which deemed the budget of the Emergency Management Program to be insufficient.

While the Standing Committee's report focused exclusively on fire safety and emergency management, the broader takeaways are clear: there is a lack of preparedness among communities, who due to infrastructure and health considerations, tend to be more vulnerable to the ramifications of emergencies. Appropriate crisis

response alone, is not a solution. Crisis mediation is dependent on pre-existing structures, practices and preparedness to organize a response and mitigate risk.

Dakota Ojibway Child and Family Services (DOCFS) provides an array of mandated, early intervention and prevention programs to address the community, families and children's needs, with input from the Local Child and Family Services Committees across eight First Nation communities in Manitoba. In emergencies from floods to COVID-19, DOCFS activates their business continuity plan (BCP), to ensure services are provided. Their case highlights practices that can be emulated and the challenges of organizing broad-scale responses in often uncertain and changing circumstances.

APPENDIX 2

CFS and emergency preparedness and response: The case of DOCFS

By the numbers

DOCFS serves 8 First Nations (plus 3 urban offices)
DOCFS employs 220 staff

In 18 days of crisis response (March 13-31, 2020) DOCFS spent:

- $106,346 in emergency items for 8 communities, e.g. personal protective equipment, baby formula, diapers, food bank items, cleaning supplies
- $1,745 in transportation costs to move the items to the 8 communities
- $45,085 in IT to equip staff to work remotely

Total = $153,176 (and counting as the pandemic continues)

The message: emergency response requires preparedness through appropriate planning, well-trained staff, and financial resources.

Lessons from DOCFS' emergency response:

1) Be prepared: a business continuity plan/emergency plan that includes communication with band councils and tribal councils can determine and pre-plan how you will collaborate and collectively face an emergency.
2) Empower staff: crisis situations are fluid and require changing responses. Staff should have input in planning, clear direction and latitude to act in the best interest of the children, families and communities they serve.
3) Have access to financial resources: to procure goods and services, money is necessary. There's much uncertainty in a crisis and having reserve funds (or access to funds) is crucial for expeditious action and response.
4) Connect: work closely and ongoingly with your communities and leadership to respond to the needs of children, families and communities.

"At no time will children be left at risk."

Dakota Ojibway Child and Family Services (DOCFS) is no novice when it comes to emergency response. From floods, to ice storms, to now, a pandemic, the agency has responded to protect the most vulnerable in the eight First Nations communities it serves. An integral component of a broader Tribal Council structure, DOCFS works

collaboratively with other organizations (e.g. health, education) and community-based offices. Daily directors' calls and constant contact coordinate actions and response to changing circumstances across the Tribal Council.

DOCFS wants kids and families to be healthy and safe. That doesn't stop during an emergency; it amplifies. CFS is an essential service, and DOCFS remains available 24/7 during a crisis (as it would in regular times). As concerns for the safety and well-being of children and families can increase during emergencies, DOCFS' actions in emergency response extend beyond the physical safety of children, and includes food security, supplies and educational resources.

Be prepared

DOCFS' business continuity plan (BCP), which serves as a roadmap for the agency's action in a crisis to fulfil its core mandate and maintain (at least) their basic operations.

In one half-day, DOCFS' entire business continuity plan (BCP) apparatus can be mobilized, as staff are pre-briefed and familiar with their responsibilities. Staff have pre-assigned roles and areas of action for which they are responsible in an emergency. This enables the organization to keep a measure of consistency when faced with unexpected crises.

DOCFS' model is premised on strong linkages to the eight communities that it serves. With trust between DOCFS and its community offices and employees, the agency depends on the local First Nation's collaboration and support to understand need on the ground, and to ensure an appropriate response. Each of the eight communities served have their own emergency operating plans for local-level actions. From back-up staffing plans to operating plans, each community has a pre-meditated approach to managing CFS when in crisis response mode.

There are plans in place, but people are expected to solve problems and find solutions.

Empowered leadership; empowered people

As emergency response ramps up, there is a real pressure on senior management to orchestrate the initial response. Senior staff were working from 8am to 11pm to define and implement the initial crisis management approach to COVID-19.

Senior leadership and the DOCFS board encourage flexibility in crisis response. They are known to create space for employees' ideas to respond to community needs. Emergencies are fluid and DOCFS staff must adjust its actions accordingly, in real time.

Various ad-hoc teams emerge in crises to address changing needs. For instance, in the response to COVID-19, a holistic wellness team was created to develop resources for the distribution of reliable information and to connect people with the services they need. This small team of six people leverages outside resources, such as extra

physicians and mental health experts, and develops their own tools to support the overall pandemic response.

The main concern among communities is food security. Families can be big and as communities enter lock-down, not everyone can access needed supplies in time. DOCFS stepped in as a procurer of essential food items and supplies for delivery through local community offices. The items are distributed without cost to recipients in need through the local office. In an emergency situation, DOCFS will assist any community member in need (although their child focus is primarily, children in care). This initiative, orchestrated in conjunction with community-based staff, demonstrates the importance of connectivity and trust between agencies and people, especially in a time of emergency response.

To mobilize the required resources, an agency needs ready money.

Always have ready money

DOCFS emphasizes the importance of advocacy for their agency. From the Tribal Council's Chief to ISC to outside resources, DOCFS advocates to 'anyone who will listen,' to ensure their organization and children in care have what they need. Building a reserve fund and practicing active resource-development are ongoing. This helps to ensure that when a crisis hits, there is some flex in the budget.

When faced with a crisis, there is the added stress of uncertainty and delay in cost recovery. Until a state of emergency is enacted by the Tribal Council, resources commensurate to an emergency will not flow. In the context of COVID-19, ISC has indicated that agencies can keep track of costs associated to the pandemic response.

The fact remains however, that agencies and communities need ready money to act and respond in an emergency. For instance, at DOCFS, expenses for COVID-19 have been paid through expense accounts, cheques, corporate credit cards and personal credit cards. When it comes to major expenses, the executive director checks with ISC regional staff for the approval of the expense in advance, to mitigate any uncertainty of reimbursement. From basic food supplies, to educational resources for children in care, staff overtime, IT supplements, and beyond, agencies must be able to maintain their core operations to keep children and families safe, while supporting an emergency response. Unexpected circumstances can require unexpected resources.

As an alternative funding approach for CFS is being developed, options for emergency funding are being considered. Combinations of funding mechanisms are being explored to propose tools to respond to immediate needs, as well as to address the underlying challenges that influence crisis management. DOCFS is a helpful example of a well-coordinated agency that leverages resources beyond its organization to respond in a timely and decisive manner in the face of emergencies.

Appendix Q: Social Services Post-emergency: Considerations for Disaster Relief Funding

IFSD

Social services post-emergency: Considerations for disaster relief funding

Evaluating the role of social services post-emergency

When considering how to adequately scale-up social services to respond to emergency situations, the primary determinant of success is whether social services agencies have sufficient pre-emergency to ensure comprehensive service delivery. Though one-time crisis payments can help service providers fill unexpected gaps, allocating sufficient and consistent long-term funding will ensure that service providers are able to build their capacity and resilience, in turn permitting them to develop comprehensive emergency management plans. Service providers, such as First Nation child and family services agencies have unique expertise on the needs of their communities, making their capacity for emergency response and important stabilizing factor in crisis situations.

The COVID-19 pandemic has brought to the fore how underlying inequities, and insufficient social protections can make communities vulnerable to emergency situations, and quickly aggravate the impacts of a crisis. For instance as of June 2020, the Navajo Nation, one of the largest Indigenous reservations in the US, faces a death rate of 177 per 100,000, higher than any single US state.[1] Up to 40% of Navajo households do not have running water, further, many families live in hogans (one-room homes); therefore, implementing self-isolation and sanitation measures can be challenging.[2] As Fawn Sharp the President of the National Congress of American Indians states, "the failure to fund us has left us incredibly vulnerable."[3]

Canada's First Nations face similar challenges with poverty, especially on-reserve. Median household incomes of First Nations in most provinces are below their respective provincial poverty lines. Poverty is at the root cause of various challenges, including contact of First Nations children with the child protection system.[4] The effects of poverty can be aggravated by emergency situations, making it crucial for recovery to consider the reliability and availability of social services to support communities and their recovery.

Greater reliance on social services following an emergency situation

Increase in Financial Insecurity

Of substantiated child maltreatment investigations in Canada, 33% involved families receiving social assistance or other benefits.[5] Socio-economic status is also a large determinant of ability to recover from the emotional, physical and economic difficulties associated with natural disasters.[6] Studies have demonstrated that in certain regions natural disasters can increase food poverty by 3.6 percentage points, capacities poverty by 3 percentage points, and assets poverty by 1.5 percentage points.[7] Additionally, food insecurity puts pressures on other social services including the healthcare system.[8]

Increase in Domestic Violence and Child Abuse

Exposure to intimate partner violence as the primary category of maltreatment accounted for 34% of substantiated child maltreatment investigations in Canada.[9] Moreover, increased financial stress, coupled with other stresses in the wake of an emergency leads to an increase in both child abuse,[10] and domestic violence.[11]

A study of the July 2004 floods in Whakatane, New Zealand demonstrated that in the weeks following the floods New Zealand Police and Victim Support reported a doubling in the number of callouts they received.[12] Women's Refuge (an organization that operates shelters for women fleeing violence) experienced a tripling of its workload immediately after the flood, as did Work and Income New Zealand with respect to their domestic violence work.[13] Women's Refuge reported that they did not receive additional support. During the peak of the flood, due to the shelters being over-capacity, each support worker had at least 3 families staying in their homes.[14]

In 2017-2018 there were more than 4.4 million Canadians living in food-insecure households, and that number is set to climb in the wake of COVID-19. Severely food-insecure adults in Canada use more than twice the amount of health care dollars.

Furthermore, the literature points to a link between economic recessions and an increase in child abuse. Though overall child abuse has been declining over the decades, there were visible spikes in neglect following the 1990-1991 and 2001 recessions.[15] Though according to the *National Child Abuse Neglect Data System* data, substantiated child maltreatment rates continued to decline in the US after the 2008 recession, scholars caution that that the decline may be the result of several other factors including the downsizing of the Child Welfare System (CWS) due to fiscal constraints faced by states.[16] A study of four geographically disparate pediatric hospitals in the US uncovered an almost two-fold increase in abusive head trauma in the wake of the 2008 recession.[17] Moreover, another study found a correlation between reported maltreatment and the rising rates of unemployment in the US; for every percentage point increase in state-level unemployment there was an increase in child abuse reports (0.5 increase per 1000 children).[18] Additionally, researchers highlight a lag in reporting (child abuse reports increased the year after unemployment rose).[19] The full economic and social impacts of COVID-19 cannot yet be fully known, however, doctors are already expressing concern over increased cases of suspected child abuse.[20]

Psychological Impacts of Disasters

As agencies are helping mitigate the physical impacts of a disaster, they must also consider the mental health impact of these events, and how they may lead to greater reliance on social services. Three of the most common mental health problems an individual may develop in the wake of disasters are PTSD, anxiety and depression.[21] Levels of mental illness in survivors of Hurricane Katrina were almost twice as high as estimates for this population in years prior to the hurricane.[22] Whether or not an individual develops these mental health problems is dependent on the effectiveness of individual coping behaviour, as well as received social support.[23]

[22] 2006 GAO report cited in Laura Daughtery and Wendy Blome, "Planning to Plan: A Process to Involve Child Welfare Agencies in Disaster Preparedness Planning," *Journal of Community Practice,* 17, no. 4 (2009): 485.

[23] 2006 GAO report cited in Laura Daughtery and Wendy Blome, "Planning to Plan: A Process to Involve Child Welfare Agencies in Disaster Preparedness Planning," *Journal of Community Practice,* 17, no. 4 (2009): 485. Many scholars have pointed to social capital as an explanation for differences in disaster mental health outcomes across affected groups of people and places.

Children in care are particularly vulnerable to ongoing mental health issues that may be aggravated post-disaster. After being a victim of domestic violence (46%), and having few social supports (39%), having mental health issues is the third most frequently noted concern for primary caregivers (27%).[24] Along with caregivers, children also struggle with their own mental health post-disaster (of particular concern for children in care is the fact that displacement is one of the largest aggravating factors).[25] Studying children and youth recovery post-floods, one study reported 30% of adolescents in grades 4-12, and 9% of children in K-3 failing to recover, and requiring a referral to additional mental health services.[26] Furthermore, 84% of children who had to evacuate reported harm, compared to only 15% of those who did not evacuate.[27] Finally, when assessing mental health needs post-disaster it is important to note that symptoms may not manifest themselves till months or even years later, and may increase with time instead of decreasing[28]; this is particularly true of children who may experience sleeper effect (appear to be coping well during a disaster but develop problems later on).[29]

A national survey conducted by the Centre for Addiction and Mental Health in Canada looking at the impact of COVID-19 on mental health and substance use shows that in the 7 days prior to the survey of the adults between the age of 18-60+, 25.5% experienced moderate to severe anxiety; 23.7% engaged in binge drinking; 23.2% felt lonely; and 20.4% felt depressed.[30] This preliminary survey helps demonstrate that it is likely that the pandemic will have long-term and even widespread impacts on mental health well-being, and addiction recovery.

Impacts of Covid-19 on Social Services

Consistent with what has been documented in previous emergencies, early reporting suggests that the COVID-19 pandemic has led to an increase in domestic violence. In Southern Jianli County, China, police reported triple the amount of domestic violence calls in February.[31] As the pandemic continued to spread across the world, other countries reported similar experiences as China. In Spain, in the first two weeks of lockdown measures, the emergency number for domestic violence received 18% more calls, and in early April nationwide France saw a 30% spike in domestic violence.[32] In

[32] Amanda Taub, "A New Covid-19 Crisis: Domestic Abuse Rises Worldwide," *The New York Times,* April 6, 2020,

Canada, the Minister for Women and Gender Equality consulted with frontline organizations and uncovered a 20-30% increase in rates of gender-based violence and domestic violence in some regions of the country.[33]

As noted above, an increase in domestic violence is linked to an increase in child abuse cases. Furthermore, natural disasters can overwhelm child welfare agencies, and lead to additional challenges. Early feedback from key stakeholders in the child welfare sector suggests that resources and capacity are under considerable pressure during the COVID-19 pandemic, and agencies are struggling to provide services and support clients.[34] Child protection workers are having to rely on virtual meetings, and only undertake face-to-face meetings when critical.[35] Alongside with providing continuity of service for children already in care, child welfare agencies must prepare themselves for an increase in abuse cases post-emergency.[36] In 2018, the Centers for Disease Control and Prevention identified family social isolation as one of the leading risk factors for child maltreatment.[37] The WHO organization published a leaders statement expressing their concerns about children being exposed to an increased risk of violence while measures to contain COVID-19 are in place.[38]

However, given the distinct nature of this pandemic and the strict social isolation measures being imposed by governments, another concern for child welfare agencies is that abuse is going unreported. While some doctors are reporting an increase in suspected child abuse cases,[39] hospitals in other jurisdictions are reporting that fewer children are coming in, which can be a troubling sign that children are not getting the help they need.[40] With children removed from community services and schools due to self-isolation, children may be isolated from potential sources of help (teachers, other family members, neighbours, etc.). Certain initiatives advocated by family violence

[40] Raisa Patel, "Minister says COVID-19 is empowering domestic violence abusers as rates rise in parts of Canada," April 27, 2020, https://www.cbc.ca/news/politics/domestic-violence-rates-rising-due-to-covid19-1.5545851.

experts to help address domestic violence, such as code words or hand signals can be communicated electronically, and may be adapted to help children (the difficulty being young children who may not be able utilize these tools).[41] Child advocates in Ottawa are working with school boards to try and formulate questions to still be able to gauge student well-being even though school has moved online.[42] In Ottawa, a special task force comprised of the children's hospital, the police service, the Children's Aid Society and Ottawa Public Health has been assembled to better pinpoint cases and continue to provide support to at-risk children.[43] Chapin Hall, an independent policy research institution, affiliated with the University of Chicago, focusing on child welfare, has put together an information sheet for providers to facilitate conversations with families with the aim of identifying family stresses and needs.[44]

Further, for parents and children already involved in the CWS, the pandemic has led to delay in crucial advancements in their cases. For instance, visits with biological parents may be halted or moved online, which can significantly hamper successful reunification. Forming secure attachments between parents and children is key to successful reunification. Newly reunified families, as well as those on the verge of reunification are having to deal with the additional stresses and pressures of the pandemic (not being able to take children to activities for respite, financial and employment concerns, and so forth).[45] Additionally, resources like mental health counselling, addiction and peer support groups for parents are either on pause or moving online which can obstruct access to parents who rely on these services not only for their own well-being but also to be in compliance with their reunification plan. Finally, court closures and hearing postponements also lead to delays in reunification.[46] It is clear that social isolation has put new pressures on parents, and those involved in the CWS who were experiencing vulnerabilities prior to the pandemic are now in an even more precarious position with increased stresses and fewer supports.

For older youth who are getting ready to transition out of the CWS, the pandemic poses significant challenges. Under normal circumstances, youth already face significant risks when aging out of care; COVID-19 is only aggravating these risks. A March 2020 survey conducted by the Foster Club, an organization dedicated to providing a peer support network for children and youth in foster care, found that older foster youth reported housing instability (39.6% were force to move or fear losing housing since the start of the pandemic), food insecurity (27.6% were in crisis or very low in food), and insufficient

financial resources (18% in crisis, and 32.8% less than a week of money to pay basic needs).[47] Youth also reported increased mental health concerns and feelings of isolation.[48]

Countries across the world are already implementing measures to increase the capacity of social services during the COVID-19 pandemic. In Italy, as domestic violence reports began to rise in March following lockdown measures being introduced, the government told local authorities they could requisition hotel rooms to be used as temporary shelters for those fleeing domestic violence.[49] In Canada, the Prime Minister announced $40 million in funding to Women and Gender Equality Canada; $30 million is specifically for the immediate needs of shelters and sexual assault centers. Of those funds, Indigenous Services Canada is set to receive $10 million to help fund the 46 emergency shelters on reserves and in Yukon.[50] Additionally, the Ontario government is providing $200 million in social services relief funding to better support municipalities and organizations that administer social services.[51] Further, the Ontario government has put in place a moratorium on youth aging out of care.

Children receiving services through children's aid society, customary care arrangement, or voluntary youth services agreement will continue to receive their current level of support throughout the pandemic even if they turn 18. Likewise, children who turn 21 and are receiving support through the continued care and support for youth program will have their support sustained throughout the outbreak.[52] The Manitoba government is putting in place several measures to better support the CWS. They are extending support to all youth currently in care who turn 18 between March 20 and September 30, by extending foster care placements, and ensuring that those who choose to move out of foster care continue to receive financial support. Youth who have already exited care and chose to transition to an "Agreement with a Young Adult" will continue to receive assistance during this timeframe regardless of their age (typically these agreements are only available to those under the age of 21). Further, the government is extending foster home and residential care licences for 60 days, and has activated a mutual aid agreement with child welfare authorities to offer additional support.[53] Finally, the Ontario

government is providing up to $1.5 million of funding to the Children's Aid Foundation of Canada's COVID-19 Youth Support Fund.[54]

Planning for recovery

Importance of Long-Term Service Delivery

It is clear that providing expanded social services post-disaster is critical to help communities recover, and measures should target the root causes of why families interact with the CWS including poverty, increased levels of domestic violence, and lack of mental health support. There are examples of jurisdictions implementing short term mitigation efforts aimed at addressing socio-economic vulnerabilities, including Canada who announced $100 million to support food banks and other community food programs in light of COVID-19.[55] However, considerable evidence demonstrates the need for medium and long-term investments, in conjunction with immediate relief measures. For instance, Women's Refuge reported that violence did not return to a 'normal' level, but rather there was a second surge in reporting 5 months after the disaster, when social services agencies withdrew from the community.[56]

Therefore, when discussing support to social services it is important that long-term investments are put into place. Measures that can be implemented to bolster social services delivery include service fee waivers for immediate individual relief and social funds for longer term community recovery.[57] For instance, in Australia, following the bushfires, the government announced $76 million to provide distress counselling and mental health support for individuals, families and communities.[58] Recently, the Alberta government announced $53 million in mental health supports to respond to COVID-19.[59] Additionally, post-disaster, FEMA provides funding directly to local mental health providers to help with recovery services and program development.[60]

When examining the role of agencies, it is advised that they areengaged at every stage, including planning before a disaster. This requires a high degree of coordination between government, non-government organizations and the private sector. Furthermore, effective natural disasters systems must give programs the flexibility to

adjust and scale up easily so as to respond to crises in a timely manner (this requires adequate funding and resource allocation prior to the crisis). [61] Finally, some argue that post-disaster, when rebuilding physical and social infrastructure, it is an opportunity to focus on accessibility and integrate the needs of vulnerable populations in the planning phase.[62] Coupled with measures to better support child welfare agencies, these longer term measures are aimed at relieving the acute stresses families may be feeling post-emergency so as to fulfill the overarching aim of better protecting children in and out of care.

Budgeting for disasters

The overarching principle when considering how to finance emergency situations is that you should adequately fund social services so that they have the capacity to scale up efficiently during a disaster. Prior to COVID-19, shelters and sexual assault services in Canada were already over-capacity. Farrah Khan, who sits on the federal advisory council dedicated to preventing and combatting gender-based violence, stated that the social safety net for victims was not strong prior to the pandemic, and this greatly aggravated the current situation.[63]

With regards to approaches to budgeting for disasters, the World Banks argues that prevention is cheaper than cure, and that robust social safety nets can help mitigate crises by reducing the vulnerability of households. They further state that "when operating in a country already, [safety nets] can be relatively easy to scale up in the event of a shock and scale down by altering the targeting and transfer levels; they therefore can transition from short term to longer term rehabilitation after a shock."[64]

When discussing the financing options for a safety net, the World Bank emphasizes that there are many options, however they highlight the revolving disaster funds in Mexico (FONDEN) as particularly innovative.[65] FONDEN is funded through the Federal Expenditure Budget which requires that, at the beginning of the fiscal year, no less than 0.4 of the annual federal budget should be available to FONDEN, FOPREDEN and the Agricultural Fund for Natural Disasters.[66] In 2011, the 0.4% requirement represented around US$800 million, and this has become the standard budget appropriation for these programs. Furthermore, the law stipulates that if the appropriation is insufficient,

additional resources must be transferred from other programs and funds (including the oil revenue surplus).[67]

Another example of how to build a resiliency fund is the State of Utah's "Disaster Recovery Fund."[68] The Disaster Recovery Fund is funded through a restricted account in the General Fund, based on a set calculation roughly equal to the lesser of 25% of the General Fund surplus (after transfers to other accounts) or 6% of the General Fund appropriation amount for the fiscal year in which the surplus occurs.[69] The legislature also has a formula to replace any funds that have been appropriated within the last 10 fiscal years.[70]

Financing disasters through statewide disaster accounts that receive funds from general fund revenues is an approach adopted by numerous states.[71] However, in order to determine the amount allocated to the disaster account, states take different approaches; for example, Alaska typically budgets to cover the costs of two state-declared disasters ($2 million) and two federally-declared disasters (totalling $5-6 million), whereas North Dakota and California establish funding amounts in statute.[72] Ultimately, though there is a wide variety of ways to construct an emergency budget, the consensus is that creating a strong social safety net before the advent of a crisis leads to more resilient communities that are better equipped to adapt to changing circumstances. In the long-term, properly funding robust social services can be less costly overall, and help mitigate some of the impacts of disasters.

Recommendations

1. As part of the recovery package, federal and provincial governments should consider additional resources to address anticipated social service demands.
    - Rather than one-time crisis payments, these should be longer term investments targeting gaps in current social services networks.
2. Social services organizations should be encouraged to develop emergency budgets, and given the tools necessary to do so.

[72] United States Government Accountability Office, ''Budgeting for Disasters : Approaches to Budgeting for Disasters in Selected States,'' (2015) : 11-12. ''North Dakota's Disaster Relief Fund receives an appropriation of $22 million every 2 fiscal years or each biennial budget cycle, while California's Disaster Response- Emergency Operations Account receives an annual appropriation of $1 million at the beginning of each fiscal year, consistent with the state's budget cycle."

3. A proactive response is favoured over a reactive one; therefore, social services providers should be part of every stage of emergency planning. All three levels of government should be consulting social services providers to have a better sense of vulnerabilities within their communities prior to emergency situations.
4. Additional research and discussion is needed on the potential for the development of a program for emergency support for social services (similar to the rationale underpinning EI for the labour market; Fiscal Stabilization for provincial governments etc).

Form of Funding*	Example of Fund	Explanation of Funding Formula
Set percentage from the federal expenditure budget	Mexico's Natural Disaster Fund: Two Complementary Budget Accounts – FONDEN (Program for Reconstruction) and FOPREDEN (Program for Prevention)	FONDEN is funded through the Federal Expenditure Budget which requires that, at the beginning of the fiscal year, no less than 0.4% of the annual federal budget should be available to FONDEN, FOPREDEN and the Agricultural Fund for Natural Disasters.[73] In 2011, the 0.4% requirement represented around US$800 million, and this has become the standard budget appropriation for these programs. Furthermore, the law stipulates that if the appropriation is insufficient, additional resources must be transferred from other programs and funds (including the oil revenue surplus).[74]
Set percentage from the General Fund or other Surpluses	Utah's Disaster Recovery Fund	Calculation is based on the lesser of either the 25% of the General Fund revenue surplus amount, or 6% of the total of the General Fund appropriation amount. There is an additional amount added which is equal to the lesser amount of 25% of the General Fund revenue or the amount necessary to replace any amount appropriated from the State Disaster Recovery Restricted Account within 10 fiscal years before the fiscal year in which the surplus occurs.[75]

* Some funds blend two or more forms of financing, and so the individual examples are organized based on their primary source of financing.

Appendix R: West Region Child and Family Services (WRCFS) Case Study Elsie Flette, Former Executive Director, WRCFS

West Region Child and Family Services (WRCFS) Block Funding Pilot
Elsie Flette, former Executive Director, WRCFS

Key Lessons Learned - Existing funding policies and guidelines impeded the agency from delivering services that could mitigate risk to children, and, where children did come into care, promote cultural and relationship permanency for the children. With the move to block funding of maintenance, WRCFS agreed to cap maintenance and manage child maintenance expenditures within a set block of money. The agency succeeded in diverting funds to alternative preventive programs and services, with a determination to ensure child safety was upheld.

To achieve the change in practice, considerable changes in attitude, policy, and practice at all levels of the Agency were required. Equally, or perhaps more, critical to success was the need to have community engagement and support in making this shift.

WRCFS's block pilot offers important lessons on transition, the value of leveraging internal data for planning and practice development, and the importance of addressing the causes of the causes in child and family services.

Context for change

The First Nations served by WRCFS shared the historic and systemic injustices of First Nations across Manitoba, and, like others, were dealing with the results of colonization, residential school, racism, and poverty. The historical involvement of child welfare with First Nations has left deep feelings of distrust toward child welfare.

The effect of this was reflected in the reasons for children coming into care at WRCFS: inadequate housing, lack of food security, unemployment, addictions, domestic violence, and family support system breakdown. This put families at risk, leading to protection and safety concerns for the children. The mistrust of families towards child welfare involvement made family engagement a challenge.

There was increasing concern, shared by leadership, community members, families, and Agency staff, about the rising numbers of children in care, the lack of culturally responsiveness ways to support and assist families, and the placement of children in out-of-home, out-of-family, and out-of-community care. Maintenance costs of keeping children in care were escalating annually.

Expenditures to maintain children in out-of-home placements were disproportionate to the funds available for support to families and/or prevention initiatives. In 91/92, the only funds being received for prevention was a $300,000 grant for Services to Families (STF). This compared to the $2,654,443 cost for children in care for the same year. The lack of funding for prevention initiatives and alternative service approaches contributed to the increasing number, and rising cost, of children in care.

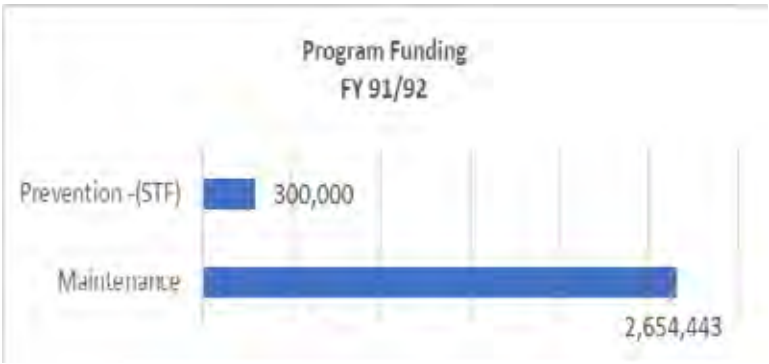

Chart 1:1: *91/92 Distribution of WRCFS funding for maintenance costs and STF funding.*

An Agency review of cases identified several situations where the provision of the kind of supports given to foster parents could sufficiently mitigate the risk to child safety to allow the child to remain at home. This might include services such as the provision of parent aides, mentors, special needs for a child, day care, housing assistance, transportation, counselling, and emergency assistance (food, baby formula, diapers, transportation, etc.).

The limited options available to respond to families at risk to mitigate the risk factors, and the practise of removing children from their homes as the only option for child safety, too often resulted in disruption and destruction to families and communities.

More than legislative barriers, it was existing funding policies and guidelines that impeded the Agency from delivering services that could mitigate risk to children, and, where children did come into care, promote cultural and relationship permanency for the children.
Making the case for a change

Examination of the Agency's operation and service delivery model highlighted the costs of maintenance, which made up the largest portion of the Agency's funding. With some changes in the funding 'rules', the Agency could implement a new / revised service delivery model that would better meet the needs of children, families, and communities.

Making the case for a pilot
With a pilot project that allowed for a different process to administer the federal maintenance stream of funding, changes could be made in a timely and effective way, and perhaps model and test an approach that could be helpful to inform the national policy review tasked with making recommendations about the funding of FNCFS agencies. A pilot project could allow exceptions to be made within existing Treasury Board authorities, allowing for space to 'do things differently' within an accelerated time frame.

Beginning in 1990, WRCFS began looking at the feasibility of options to provide services more in keeping with the cultural context and the values, mission, and goals and objectives of the Agency. The Agency began compiling/collecting data to take a proactive and predictive approach to the possible implementation of block funding.

In 91/92 (the year prior to the start of the pilot project), 90% of the total federal funding for children in care and services to families went to pay the cost of supporting 177 children in out of home placements, at an average annual cost of $15,000 per child in care.
Services to Families, a grant fund of $300,000, was to provide support services to families at risk. These services included the provision of homemakers, parent aides, and emergency assistance, to serve nine First Nations, with an on-reserve child population (0-18) of 1691[1], and an estimated 60% (340) family units receiving some type of service from the Agency (see chart 2:1).[2]

Chart 2:1: Allocation of Service to Family and Maintenance funding

The average amount of family support service funding available per family at risk per year was $882. Based on an average of 3 children per family, this was about $296/child per year ($882/3). In 91/92, the average cost for WRCFS for a child in care was $15,000. Chart 2:2 illustrates this difference.

[1] *Population figures from INAC.*
[2] *Assuming on average 3 children / family (1691/3) =564 family units*60%=340 families receiving service from WRCFS. The assumption of three children per family comes from INAC and has been used to calculate family size/units.*

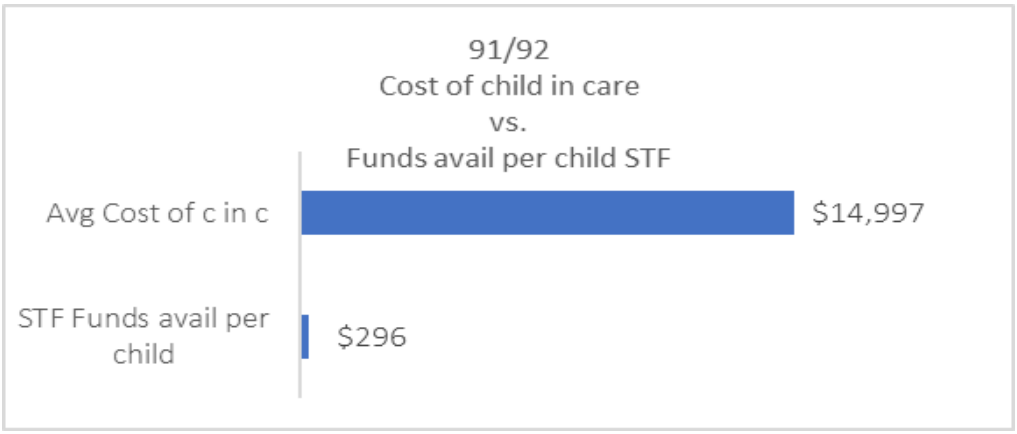

Chart 2:2: Annual average cost of child in care vs. annual funds available for child in family at risk

Poverty is a key driver for children entering care, and most of the families at risk receiving services from WRCFS were on social assistance. In 91/92, the average per diem for a child age 0-11, on social assistance, was about $4.30. The average maintenance per diem paid to a foster home for a child age 0-11 was $41/diem, almost ten times the amount paid to the parent on social assistance. In addition, the foster parent (and the child) had access to additional supports.

For 91/92	
Child pop on-reserve 0-19	1691
Avg # of children in care	177
% of child pop in care	10%
Total mtce costs	$2,654,443
Avg cost per year per child in care	$ 14,997
Avg cost per day per child in care	$ 41
Child pop not in care	1514
# of family units (3 children/family)	564
60% with services	338
STF funds available	$ 300,000
STF per year per family	$ 887
STF per month per family	$ 74
STF per week per family	$ 18
STF per day per family	$ 3
STF per day per child	$ 1

Table 2:3 Comparison of funding for child in care and a child in own home

To determine the feasibility of the Agency moving to a block funding of maintenance, it was essential to look at the profiles and prior spending of children in care. The Agency reviewed child in care data for the prior three years. There was some data from earlier years, but it was not robust and/or reliable. A spreadsheet was developed that could collect data about every child in care, and the costs related to their care.

The Agency collected detailed data about children in care to get a good understanding of the children in care and the costs associated with that care. Given that maintenance funding related solely to children in care, the information was vital to assessing feasibility for block funding, making short- and longer-term projections on maintenance spending, and assessing the risk of moving towards a block fund of maintenance.

The review of maintenance expenditures and children in care included:

- Collecting and analyzing data to get a profile of the children in care
- Reviewing and analyzing maintenance expenditures for prior years
- Reviewing the purpose and the premises for the expenditures
- Examining the who, what, where, when, and why of maintenance expenditures
- Examining where savings might be found that could be diverted to alternative preventive programming
- Developing detailed budgets, how spending might be controlled, and looking at strategies to have funds to divert to alternative preventive programming

This provided a detailed overview of the children in care and associated maintenance costs, giving the Agency baseline data from which to make budget projections for ongoing costs for children in care and comparisons to future years. Table 2:4 lists the data collected and Table 2:5 gives examples of the type of analysis possible.

Table 2:5: Types of analysis possible

Collecting data on each child in care was used to answer key questions and identify significant trends to assist in making accurate spending projections; setting out metrics to measure ongoing feasibility and effectiveness of actions taken; determining necessary budget cycles and budgeting accurately; monitoring expenditures; and being accountable and transparent in reporting to staff, leadership, community CFS committees, and funders.

To effectively manage a block funding arrangement, it was important to know what contributed to the monthly variations and if spikes or drops in case counts were one-time events or part of a trend. Based on the analysis of the maintenance and child in care data, projections were made where the anticipated savings might be, and setting the priorities and the timing for developing alternative and/or preventive programs and services.

Identifying and managing risks

As part of the consideration of block funding federal maintenance, the Agency undertook a risk assessment prior to completing a strategic service plan, and prior to meeting with INAC to propose the pilot project. The Agency wanted some certainty that making the move to block funding was realistic and feasible, and that risks could be adequately mitigated.

Table 2:6 provides a summary of the risk factors, the risks involved, and the risk mitigation strategies that were considered.

Engaging in the pilot project had its risks, risks that would impact services to children and families. Contingency plans were developed to address degrees of 'what ifs', including a 'worst case scenario. The overarching question for these contingency plans was: what if this does not work and the Agency cannot successfully implement a revised service delivery model? What if a significant deficit is created? What if the volume and price of maintenance expenditures is greater than projections and the Agency does not have funds to pay the maintenance costs of children in care and/or must discontinue the prevention programs?

Assuming the pilot project would have an impact on all the Agency's operations, and to predict and mitigate potential risk, a strategic service plan was completed. This included a summary of community profiles, an environmental scan (SWOT), the core areas of focus, articulation of the strategies to be implemented to achieve stated goals and objectives, and the metrics to measure hoped for outcomes. This provided a potential baseline for evaluating the pilot project, and a blueprint for transition.

Table 2:6 WRCFS: Risk Assessment of a Block Funding Approach re. federal Child Maintenance Funding

("Maintenance" refers to costs related to children in care)

	Risk Factor	Risk Involved	Risk Mitigation Strategies
1	There was risk in moving to cap maintenance and subsequently having maintenance costs exceed what was in the fund and being unable to pay required costs for children in care, resulting in deficits and/or lack of services to children in care. This would result in an inability to generate savings in maintenance expenditures and thus not being able to divert funds to preventive/alternative programming.	Under the Block Fund arrangement, Prevention and Alternative programs were dependent on funds being diverted from the block fund. It was understood that maintenance of children in care had the first draw on the block fund. Under a block funding arrangement, maintenance would be capped, unlike the current reimbursable of actual maintenance expenditures. This would be a significant change in the budgeting, expenditures, and monitoring of maintenance costs. Should the block fund be totally expended for maintenance costs, there would be no funds to divert to preventive programming. Thus, there would be 'pain with no gain' in moving to block funding. The funding for Prevention programs that became operational was dependent on deferred funds being available on an ongoing basis. Those programs would be able to continue operating only if funds continued to be available from the block fund, dependent then on the Agency being able to contain/manage maintenance costs. Maintenance was an area where the Agency could not completely predict costs. One could not know with certainty how many children would be coming into care, when, and what their per diems would be. Nor could the Agency refuse to take a child into care. Maintenance costs could escalate quickly, and without close monitoring and questioning of assumptions predicating	Rigorous pre-pilot data collection and analysis, to get detailed profiles of the children in care over the past 3 years, and to establish baselines for future evaluation and analysis. Making projections about current and future maintenance expenditures based on evidence. Determine the level of financial risk Agency was prepared to take. Prepare detailed budgets for all the areas of maintenance expenditures and conduct, at a minimum, monthly financial reporting on actual expenditures. Flag over/under expenditures and make necessary adjustments in a timely manner. Establishing clear policies for maintenance expenditures (levels of payments; under what conditions/criteria; internal approval processes); include the social work staff and finance staff in the development of the policies. Provide in-service training for staff about the policies. Undertake sound program development for all prevention programs, particularly for those programs that would require multi-year funding. Implement prevention programming in an orderly, planned, phased-in fashion. Limit year one to short term prevention programs, while planning and preparing for the implementation of longer-term programs. Seeking possible revenue sources for ongoing funding and/or partnerships for prevention programs established

		expenditures, managing the block fund would be difficult.	with the block fund that would decrease the dependence on the block fund. Setting up review and evaluations of prevention programs to make sure the programs were effective and efficient, met targets, and operated within budgets.
2	There was a risk that a change in INAC staff, at HQ and/or at the Regional office, and/or a change in federal policy and/or ministerial support for the pilot project could result in a move to abruptly and/or unilaterally terminate or alter the block funding arrangement.	Reversing support for a baseline in the block fund could result in the block fund being reduced based on declining maintenance expenditures - this would directly impact on deferral of funds to prevention programs, thereby curtailing and/or eliminating any prevention programming. Adjustments to increase block would be resisted by INAC. INAC would change key provisions and/or terms and conditions of the agreement.	Willingness on part of WRCFS to walk away from the table if the terms and conditions required by INAC could not be mutually agreed to. Continuing to build on the positive working relationship with key INAC staff at the Manitoba Region and at HQ in Ottawa. Involving Regional INAC staff in the working group to transition, and participation by INAC in regular review sessions. Willingness to provide INAC staff with all reasonable requests for information on spending, progress, etc. To the extent possible, planning for future renewals/extensions of the pilot project, including discussions on what might follow should the pilot project show positive outcomes.
3	INAC would take a limited interpretation of a surplus policy and not permit deferral of funds to future years.	The pilot project agreement was premised on the deferral of unspent maintenance funds to prevention programming. It was important for INAC to recognize and support program development over time. Good management of a block fund required planning for future years, and a deferral of annual funds for that purpose was necessary.	Work in cooperation with INAC to regularly provide information on program development and plans for deferred revenue. Maintain records of expenditures, for both maintenance and prevention programs, and share these with INAC staff.
4	Commencing the pilot project under a one-year term, with possible year by year renewals, and with no firm commitment that the block funding could/would	Ongoing negotiations with INAC could prove to be unsuccessful, and Agency would need to operate with a block fund that was inadequate and/or revert to the pre-pilot method of funding maintenance. Given the changes made to work	See mitigation strategies under #3. Keep Agency Board of Directors/Chiefs fully informed and engage them in negotiations with INAC and federal political leaders.

	become an ongoing funding approach for WRCFS should the pilot project prove successful.	within a block fund, this would create both a funding pressure and disruption in services.	Collect data and prepare regular output and outcome results.
5	Expectations and benchmarks set by INAC would be unrealistic / not achievable and not in line with Agency own benchmarks.	Unrealistic benchmarks would result in outcomes not being met and jeopardizing ongoing block funding. Withdrawal of INAC support in the transition process to the block fund arrangement, including mutual agreement on the amount of the block fund, the base line funding, and the terms and conditions for the pilot project.	Take a proactive approach in setting Agency determined outcomes and seek to achieve mutual agreement on outcomes.
6	Inaccurate / insufficient data being collected and/or available to the Agency.	The Agency did not have well established data collection capacity. Without good data and financial records, it would be difficult to manage within a block fund. Data would be crucial, not only for tracking expenditures, but to track programs outcomes.	Improvement of data collections already in use. Development of data collection tools for data not currently collected but necessary for the pilot project. Reviewing electronic data collections methods and upgrading where needed. Sharing the data analysis with staff and linking this to their own job satisfaction. Education and training for staff about the value of data collection.
7	Loss and/or lack of skilled, competent, and committed management staff. Resistance from staff to implement a block funded approach.	Without competent Finance and Management staff, it would be a difficult to control expenditures and bring about the necessary internal changes to work within a block fund. Going into the pilot project, the Agency had a competent, experienced Finance Director who shared the enthusiasm for the potential in block funding, and two finance maintenance clerks who understood how the block fund was to work. Other key management staff were experienced and competent and committed to the pilot project idea. Should one or more of these individuals	Implementing cross-training of finance staff. Reviewing and updating the succession plan for key finance and management personnel. Involving staff in planning committees, review processes. and regular updates about the progress on negotiations. Celebrating achievements and regularly reviewing lessons learned with staff. Management recognition of demands on staff and creating an environment/process for staff share and provide feedback and input.

		leave the employ of WRCFS in the early stages of the block fund, it could lead to disruption and financial instability. There were not a lot of individuals that the Agency could immediately look to internally that understood what the internal impact of the block was on admin and finance system and that could administer the block fund with a short learning curve. Recruitment of skilled staff was often a challenge, given the rural location of the Agency. Management of a block fund required a major change in office procedures – from workers role in setting rates, approval of the rate by supervisors, admin systems, and finance policies and procedures. Expenditure for each child needed to be tracked closely, and changes in trends or child profiles needed tracking. Staff needed the knowledge and the willingness to make the needed changes on short notice. Staff had been working under a system where maintenance was reimbursed on actuals, with over expenditures reconciled at year end. Questioning expenditures was generally limited to determining if the expenditure would/could be reimbursed. The block funding approach would require scrutiny of all expenditures, which could cause resentment from staff. Staff cooperation would be important. If staff were resistant to the changes, implementation would be more challenging. The	Creating a positive work environment for staff, including staff recognition and team building events. Education sessions for staff, to inform about the pilot project and the hoped-for outcomes, highlighting the anticipated benefits this could have for children and families. Providing staff with results of analysis of children in care, and the demonstrating to them how this was useful and helpful in their role as front line staff Provide opportunities for FAQs. Getting staff feedback on new forms or new processes being suggested, to avoid a duplication of paperwork and unnecessary administrative requirements on front line staff.

		changes necessary would affect the staff: the service delivery model would change; there would be changing expectations on staff in how to address the needs of children from a different perspective; would almost certainly be some glitches and/or unforeseen things that would occur during transition and in particular in the beginning year of the pilot that would require working through; staff job responsibilities would change. Staff are an important voice in the community and community engagement would become more challenging if staff were actively / passively opposed.	
8	Non-acceptance and/or resistance to the change by leadership, and/or the community CFS committees	Agreement and participation to the pilot project arrangement, from key community partners and leadership, was critical to the success in making these changes effectively and achieving the hoped-for outcomes.	Presentations to leadership and the Board of Directors about the pilot project and the hoped-for outcomes for the pilot project. Regular briefings for the leadership and involvement of leadership at negotiating tables. Developing / updating a presentation package for staff to use in informing the community CFS Committees and setting up a formal process that provided for regular input and feedback from the CFS Committees. Providing orientation and ongoing training for CFS committee members.
9	Strained or deteriorating relationship with the Province of Manitoba.	The pilot project was with INAC and the block fund arrangement was limited to federal maintenance. Manitoba was aware / informed of the pilot project, but MB was not a key partner in the pilot project. However, Manitoba was a key partner in the tripartite arrangements that had been agreed to in transferring service delivery responsibility on reserve to FNCFS, and as MB determined the maintenance rates/guidelines	Including the Province in updates, and where appropriate, in discussions with INAC. Formally planning to include the Province in completing quality assurance reviews. Including an evaluation process as part of the terms and conditions of the pilot project.

	that INAC followed, and had overall responsibility for the operation of all CFS agencies under provincial legislation, it was important for WRCFS to maintain a good relationship with the Province so that any changes would be mutual, and WRCFS would not be left without participation in any discussion between the Province and INAC.	

Negotiating and implementing the block pilot

The consensus at the Agency was to proceed to negotiate[3] for a pilot project that would test a block funding of federal child maintenance. There was optimism that with a different approach to the allocation and funding "rules" of maintenance funds, it would be possible financially support a service model that promoted preventive services and programs, rather than child removal, as the first response to child protection and safety.

Concern about escalating costs and rising numbers of children in care was shared by both WRCFS and INAC, and it was common ground where discussions could begin. The Agency considered these shared concerns to be motivating factor for both parties.

Based on the analysis that WRCFS had done on children in care and historical spending patterns, WRCFS believed that it was feasible to move to a block fund. It was the Agency's position that with the ability to be more flexible, there were some immediate savings that could be realized in maintenance spending, thereby leaving funds that could be diverted for prevention/alternative programs and services without additional funds.

While there were risks involved, the Agency's analysis and risk mitigation strategies indicated that the benefits of capping maintenance were greater than the risks.

Continuing with a 'child only' focus on programs/expenditures and/or child protection would not address the fundamental shift that the Agency felt was necessary to achieve better outcomes for children over the long run. Therefore, INAC was requested to agree to permit the Agency to expand the thinking of what child protection included.

The Agency wanted to implement ways of improving child well-being and protecting children that would recognize and incorporate the importance of supporting families and family well-being and playing a key role in community well-being.

The Agency wanted considerable flexibility in determining how to allocate and/or expend the maintenance funds beyond the provincial maintenance guidelines. To be successful, the Agency would need to carefully plan, track, and monitor expenditures and be accountable and transparent to stakeholders.

The Agency looked at the options and scenarios of block funding, the risks involved, the feasibility of achieving desired outcomes, what changes would be needed throughout the Agency to implement a block funded approach, and what assets the Agency had that would contribute to a successful pilot project.

[3] The parties involved in the negotiation were management representatives from WRCFS and INAC Regional Office. On a few occasions, INAC HQ participated in the meetings. Sign off on positions and agreements came from INAC HQ and from WRCFS Executive Director.

Within a larger context of wanting to provide services to children and families in a way that was consistent with the Agency's values, vision, goals, and objectives, there were some common objectives. Both WRCFS and INAC wanted a way that would provide the Agency with increased flexibility; ensure accountability; provide predictability in costing out accurate budget projections; and allow for improved administrative ease.
The WRCFS proposal for block funding maintenance had the potential to meet all three of these shared objectives. In addition, such a pilot could be done within existing TB authorities.[4]
Agreement was reached on five principles that would guide the negotiations:

1) ***Cost Neutral***
   Block funding was to be *"cost-neutral"* – that is, this was not a cost saving exercising. It would not cost INAC more to block fund maintenance, but it would not cost less. On an annual basis, a review of the block fund needed to compare costs to similar agencies not on block funding, and to project what the costs at WRCFS would have been if maintenance funding had continued a reimbursement basis.

2) ***Block Amount/ Base***
   The initial block would be a base amount, and the block fund would not decrease past that level.

3) ***Surplus/ Deficit***
   The Agency would retain any surplus in the block fund at end of the FY and be able to: divert the funds to prevention/alternative services/programs, and/or defer spending to future years, and/or set up a contingency fund for child maintenance costs for future years.

4) ***Exceptional Circumstances***
   Exceptional circumstances that came up over the course of the pilot project, that were not present when the initial block was set, could be considered as an increase to the block fund in the following fiscal year. These costs would be annualized.

5) ***One-time only costs***
   Exceptional circumstances that came up that were one-time only events would be funded in the same fiscal year. The Agency would not be expected to fund these costs from the block fund. The costs would be invoiced to INAC for reimbursement. Example: flooding; political standoff, inquests).

Based on the cost-neutral principle, regular reviews would occur to project what the costs might have been if WRCFS had remained on the pre-pilot maintenance

[4] *INAC did have TB authority to enter pilot projects. Both Regional Office and HQ were involved in the agreement discussions and approvals.*

arrangement. The Block fund was to adjust for these increases. If projections indicated that the WRCFS costs, without a block fund, would have seen a decrease, any decrease would not go below the baseline of 92/93.
The Agency could secure other sources of revenue for programs without a reduction in the block fund.

WRCFS and INAC would meet quarterly to review progress and expenditures; WRCFS to provide quarterly statement of maintenance costs. Quality Assurance reviews of services to children to be regularly completed during the pilot project.

The WRCFS pilot project began in FY 92/93. Initially to run for one year, the pilot project was renewed on an annual basis until FY 10/11.

Maintenance funding: Pre-block funding	**Maintenance funding: Block funding**
Annual allocation for maintenance based on prior year actual expenditures.	Initial Block fund determined using prior year actual mtce expenditures, plus 8% volume increase, plus 3% price increase; provisions in the agreement for exceptional circumstances; provision for ongoing adjustments for cost of living; Provision to re-base.
Annual Agreement	Annual Agreement
Maintenance was funded under a Contribution Agreement, with approved expenditures reimbursed upon receipt of monthly billings from Agency.	Block fund provided under a Flexible Funding Arrangement (FFA). The Agency was provided with a pre-determined block fund for the fiscal year, paid to the Agency on a quarterly basis.
Working capital advance equivalent to 1-2 months of actual mtce expenditures. Reconciled at year end. Rolled over from year to year. Might be adjusted from time to time to reflect rising maintenance costs.	Block funding sent to Agency at beginning of each quarter.
Using provincial maintenance guidelines, rates, and processes, Agency pays maintenance costs and provides details of expenditures by child to INAC for reimbursement.	Agency pays maintenance costs using required provincial guidelines but able to use own policies and rates for non-statutory payments. Agency keeps detailed records and data for internal use.
Agency invoices INAC for the monthly maintenance expenditures. INAC reviews invoice and reimburses allowable expenditures.[5] Turnaround time varies and can be up to 3-6 months.	Agency sends INAC a quarterly report of expenditures for children in care (this was changed to annual report during the term of the pilot project.
Expenditures that INAC considered ineligible were 'crossed off', and in the absence of a formal dispute resolution process, the Agency and INAC jointly reviewed the decision. Generally, these were resolved in favor of the Agency and costs were reimbursed. This process was lengthy and time	Agency and INAC cooperate in adjustments to Block Fund and/or in re-basing of the block fund.

[5] *Provincial guidelines were used by INAC, as per federal policy, to determine eligible expenses*

consuming, and the delays in resolution and reimbursement often resulted in cash flow issues for the Agency.	
Over expenditures are reconciled through the PAYE process. This was a lengthy process, and with over-expenditures frequently in the $400K to $800K range, it created cash flow pressures.[6]	Over expenditures are Agency responsibility unless they fall within the provisions for adjustments to the block fund.
Annual audits include audit of maintenance expenditures.	Annual audit of the Block Fund includes child in care costs, alternative and preventive programming costs.
Where Agency actual costs are less than the allocated amount, the Agency cannot 'keep' the money.	Agency can defer annual surplus for use in later years and/or set up a contingency fund for child in care costs.
Where there are year-end surpluses (reimbursables received exceed actual costs), surplus amount deducted from first quarter maintenance in the new year (unless arrangement made for a gradual repayment over the FY).	See above.
Maintenance funds cannot be used for operations.[7]	Agency has flexibility between operations and block funds, with provision that statutory child maintenance requirements are met.

Table 3:2: Comparison of pre-block and block funded federal maintenance

Implementing the block pilot

The pilot project began in FY 92/93 and the first and second quarter of the first FY were devoted primarily to transitioning the Agency operations and staffing to what was envisioned as possible under a block funding arrangement. During the first six months of this first year, the Agency collected, reviewed, and analyzed data about the children in care and the costs of child maintenance in prior years.

To align with the Agency service priorities for improving services to children and families that focused on a community-based model to support child, family, and community well-being, and to reduce maintenance costs and divert funds to preventive programs, the Agency focused on two areas:

1) Reducing group home/institutional placements in favor of community based and/or Indigenous special needs foster homes.

---

[6] *The PAYE process resulted in continued under-reporting of the actual maintenance expenditures since the government budget cycle required submissions from departments much earlier. The Agency frequently started a fiscal year with the maintenance allocation in the contribution agreement less than the actual expenditures in the prior year. Occasionally the Regional office was able to do a budget adjustment mid-year, which was helpful in resolving cash flow issues for both parties, and in ensuring somewhat more accurate allocations for next fiscal year.*

[7] *Operations funding under Dir 20-1 did not adjust for the growing workload in administering maintenance.*

2) Reducing expenditures for treatment costs by establishing a treatment/counselling capacity within the Agency, to provide culturally sensitive and culturally competent services to families and children within their home communities and/or geographic area.

It is important to recognize that effective preventive programs could not be developed and implemented 'overnight'. Careful planning, jointly with community engagement, was important to get community support and improve the achievement of positive outcomes for the initiatives.

Summary of Expenditures	92/93	93/94	94/95	95/96	96/97	97/98	98/99
Operations	1,654,366	1,618,881	1,721,986	1,721,986	2,027,033	2,027,032	2,049,326
Maintenance Billings	2,394,744	2,073,287	1,874,846	1,977,936	2,031,975	2,353,967	2,575,968
Prevention Services from Block	504,067	886,960	974,813	858,236	1,071,070	1,299,461	973,152
Total Block Expenditures	2,898,811	2,960,247	2,849,659	2,836,172	3,103,045	3,653,428	3,549,120
Surplus (Deficit) from Block	47,621	- 13,815	96,773	110,260	- 306,613	- 856,996	- 752,688
Offset STF Grant	300,000	300,000	300,000	300,000	225,000	75,000	-
FY Total Surplus (Deficit)	347,621	286,185	396,773	410,260	- 81,613	- 781,996	- 752,688
Cumulative Surplus (Deficit)	347,621	633,806	1,030,579	1,440,839	1,359,226	577,230	- 175,458

Table 5:1: Expenditures Summary 92/93 to 98/99

While possible to do projections in planning for child maintenance costs, an Agency does not have full control over this. Intervention is needed when a child is at risk and an Agency must respond. Where an Agency has options to child apprehension in order to keep a child safe/protected, it can begin to address and/or have some control over admissions to care. The ability under the block funding to develop these kinds of options is an important factor in reducing the number of children in care, the days care provided, and even the cost of care. It is one of the greatest advantages in having a block approach – assuming that the block fund is adequate in the first instance, and that there are mechanisms to increase a block fund under certain circumstances. The principles of being cost neutral and of having a baseline are critical.

Rethinking supports for children in need of protection

The block fund allowed the Agency to expand the definition of children in care to include children *in need* of care, and so provide robust family support services aimed at keeping children in their own home. Without the flexibility offered by the block funding, such family support services would not have been possible.

It was one of the key advantages of block funding that the Agency was able to provide services to address child safety concerns without having to place the child in formal out of home care. With the provision of the various community prevention and regional programs, as well as individual supports provided to a family and/or child, the Agency was able to reduce the children in care through reunification back with family, reducing the length of time a child spent in out of home care, and/or avoiding placement in care in the first instance.

Supports provided to at risk families and/or to a child at home or in out of home care, that were not part of the usual child maintenance allowable billable payments, were now provided through the block fund provisions. Alternative programming included policies and activities that provided support to children in care, in addition to the usual maintenance costs. To name a few examples: tutoring for a child; therapy /counselling not covered by other funders such as FNIHB; increased support for youth moving to independent living; participation in ceremonies, powwows and other cultural events; computers; clothing needs, and so on. The types of costs/supports could now be provided to a child who remained in own home placement.

Engaging communities as partners
A key Agency objective was to build capacity in each community. This included developing human resource capacity in each community; expanding child care resources in each community; building a base of programs accessible to the community; partnering with Chief and Council to secure facilities and space for meetings and events; delivering/supporting a variety of programming in the community; opening up training events to community members.

The 'core' of this approach was the community-based team (CBT). A community-based team (CBT) was established at each community, with the complement of staff determined by the population and/or service demands/needs of the community. Over time, these teams were strengthened and enhanced and, for the larger/busier sites, included at least one clerical support staff as part of the team.

A community CFS committee was established in each community. Members were appointed by Chief and Council, and included Elders, a representative from Chief and Council, and representatives from other community programs, such as Education, Health, Police, Income Assistance, Housing, Addictions Services, Day Care, and Economic Development. The Committees were trained and resourced by WRCFS. Coordination and support of the CFS Committee became the responsibility of the CBT supervisor.

The CFS Committee had a key role in the planning of prevention programs for their respective community, and in making recommendation for regional programs. They assisted the CBT in securing resources for families in need, advocated for families, and, where appropriate participated in family conferencing and case planning with families.

A two-year training initiative for CFS Committee members was regionally developed and delivered with the Agency assigning a staff person dedicated to this initiative. Subsequent ongoing training for the Committee members was done primarily by the community team supervisor, with occasional regional training events. Committee members were eligible for consideration for conferences and third-party training events.

The regional training brought tougher CFS Committee members from all nine First Nations and became a forum for sharing experiences and knowledge, increasing awareness of the needs of the families in the community and how the community might support these families in caring for their children. The training provided to the community CFS committees became an important factor towards improved community engagement, which began to reverse the historical negative perception towards CFS.

Financial planning and management
The Agency developed detailed methods of monitoring, controlling, and projecting expenditures, and budgeting and allocating funds. This was critical to effective management of a block fund. A planning and budget cycle included community, staff, management, and Board in finalizing the annual Operational Plan and accompanying annual budgets.

Initially, the pilot project agreement called for WRCFS and INAC to meet quarterly to review progress and expenditures, with WRCFS providing quarterly statements of maintenance costs. In fact, this happened sporadically during the first two year of the pilot, and then became an annual audit and program report being submitted to INAC. There was, however, a good working relationship with INAC, and frequent contact, verbal updates, and issues management occurred.
The Management Team reviewed expenditures at monthly management meetings to stay on top of over/under expenditures. Expenditures were closely monitored, and issues flagged. Detailed financial records with respect to children in care were maintained for Agency use.
The Finance Team followed up on any adjustments made to the block fund based on provisions of the FFA and the Pilot Project Agreement. Adjustments were done for the following fiscal year and were annualized.

Adjustments made for exceptional circumstances were included in the following fiscal year. Depending on the circumstance, this adjustment might be a one-time only adjustment, or it might be annualized into the block fund. One-time only costs would be approved as they occurred and upon Agency request. Funds would be paid to the Agency apart from the block fund as a one-time cost.

Based on the cost-neutral principle, regular reviews were done to project what the costs might have been had WRCFS continued on the pre-pilot maintenance arrangements. If projected costs under the pre-pilot arrangement indicated a decrease to the block fund, the 92/93 block amount was to be the baseline. If the projected cost was an increase, a re-basing of the block was to occur.

When re-basing was complete, calculations showed that the Agency had realized considerable savings for the government under the block arrangement. This is an important factor to include in any future block funding arrangements, so that the process and timing of re-basing is clear. Had re-basing occurred regularly, the Agency might

have had additional funds for increased prevention programming. However, capacity to deliver increased programming, particularly human resource capacity, would have to be considered.

Data
Key areas of children in care data and maintenance expenditures were collected and analyzed on a regular basis. Relevant monthly child in care data was provided to each worker and supervisor for review at monthly team meetings. Monthly data was reviewed by senior finance and management staff.

The Agency developed a number of templates for worker use that assisted in standardizing expenditures, collecting data, and controlling expenditures. Data on the movement and profiles of children in care – admissions, re-admissions, discharges, aging-out of care, intakes, special needs, ages etc. – was collected and analyzed in order to identify shifts or spikes in expenditures and profiles. This data provided important metrics for evaluating outcomes. Evaluations and reviews were part of WRCFS's block experience.

Program, financial and practices evaluations were built-into the agency's monthly and annual operations, using data collected to track the block experience. In 1999, Dr. Brad Mackenzie of the University of Manitoba undertook a five-year review of the initiative. A subsequent cost-benefit analysis followed in 2005, as Directive 20-1 was being introduced, eliminating WRCFS's block pilot and changing the agency's funding dynamics. WRCFS's innovation with the block was recognized in 1998 with the Peter T. Drucker Foundation Award for "Innovation in a Canadian Non-Profit," for its work to build best practices for children.

Conclusion
With the move to block funding of maintenance, WRCFS agreed to cap maintenance and manage child maintenance expenditures within a set block of money. The agency succeeded in diverting funds to alternative preventive programs and services, with a determination to ensure child safety was upheld.
To achieve the change in practice, considerable changes in attitude, policy, and practise at all levels of the Agency were required. Equally, or perhaps more, critical to success was the need to have community engagement and support in making and this shift.

WRCFS's block pilot offers important lessons on transition, the value of leveraging internal data for planning and practice development, and the importance of addressing the *causes of the causes* in child and family services.

Jessica Quinn
Acting Director, Social Development
Assembly of First Nations
50 O'Connor Street, Suite 200
Ottawa, Ontario K1P 6L2

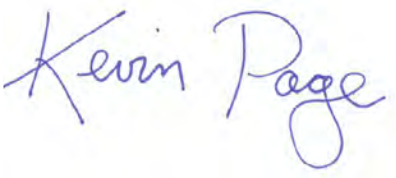
Dear Ms. Quinn,

Pursuant to contract no. 22-80503-003, the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa is pleased to submit the report: *Funding First Nations child and family services (FNCFS): A blueprint for FNCFS Program reform*.

We trust that this report meets the expectations set out in the terms of reference for this project.

We are grateful to our Phase 3 collaborators for their generous contributions, and to the many other FNCFS agencies and First Nations who shared their time and knowledge throughout this project. We thank the Assembly of First Nations and the First Nations Child and Family Caring Society for their confidence in undertaking this work.

Yours sincerely,



Kevin Page
President & CEO

Helaina Gaspard, Ph.D.

This report was prepared under the supervision of Kevin Page, President & CEO of the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa.

With contributions by Sahir Khan, Mostafa Askari, Azfar Ali Khan, Aimeric Atsin, Eli Dzik, Clara Geddes, Vivian Liu, and Tianna Tischbein.

IFSD gratefully recognizes the extensive and generous contributions of Phase 3 collaborators. Along with contributions from many FNCFS agencies and First Nations, their shared knowledge and information have informed this work.

EXECUTIVE SUMMARY

IFSD has undertaken research and analysis for the reform of the First Nations child and family services (FNCFS) Program at the request of the Assembly of First Nations (AFN) and the First Nations Child and Family Caring Society (Caring Society). IFSD was mandated to provide its best advice based on the evidence. With the support of its clients, IFSD is offering independent analysis and recommendations.

We, at IFSD, have been humbled by the generosity of spirit of the many contributions from FNCFS agencies and First Nations. We are grateful to have worked alongside fierce champions and tireless advocates for children. This report lays out a blueprint for FNCFS Program reform.

The Canadian Human Rights Tribunal (CHRT) delivered two orders that guide IFSD's work:

1. end discrimination in FNCFS; and,
2. ensure it does not reoccur.

Upholding these orders requires sustainable change of the FNCFS Program. Since 2018, IFSD has been working on FNCFS Program reform:

Phase 1: Costed the FNCFS system and identified gaps.

Phase 2: Developed a bottom-up needs-based funding structure, and the *Measuring to Thrive* framework (a well-being focused measurement framework).

Phase 3: Tested and modelled the approach from Phase 2, into First Nation and agency specific delivery models.

Each phase of work relied on the quantitative and qualitative contributions of FNCFS agencies, First Nations, and other technical experts. Through questionnaires, case studies, working groups, and extensive collaborations, Phase 3 modelled and tested the funding approach and performance framework defined in Phase 2.

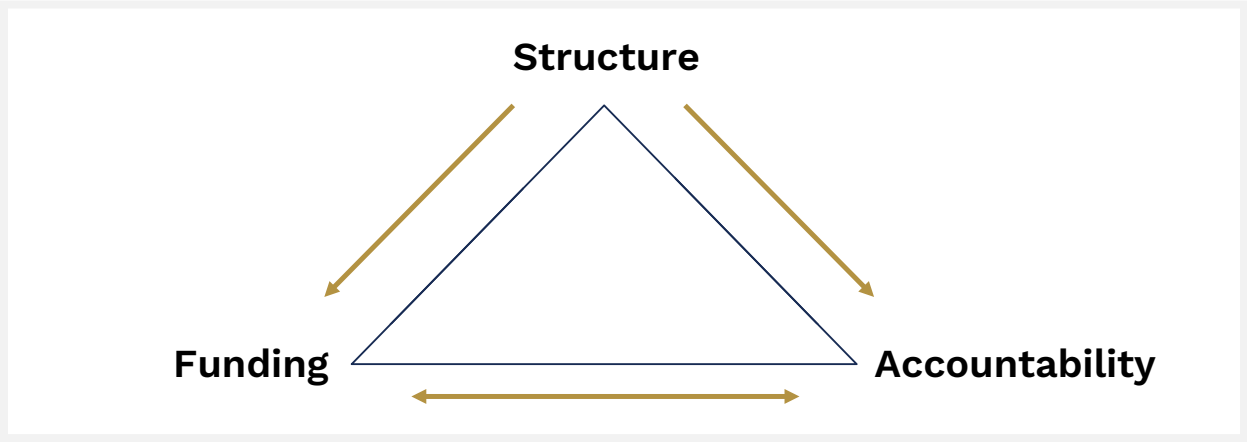
With the contributions of 20 collaborators (a combination of FNCFS agencies and First Nations exercising/contemplating jurisdiction) alongside many other FNCFS agencies and First Nations, IFSD's approach was refined and considerations for transition were defined.

This report provides a blueprint for FNCFS Program reform with consideration of structure, funding, and accountability, and transition. The section on transition captures lessons from collaborators testing and modelling elements of the approach. Findings indicated the time and challenges associated with service delivery and the importance of clarity around accountability. Existing service providers will be better positioned to implement changes in 2 to 5 years, whereas those without existing services can take 10 to 15 years to achieve operational stability.

Regardless of the type of service provider, there are significant constraints on delivery capacity. The reform of the FNCFS Program must consider the evidence. The FNCFS Program funds *FNCFS on reserve and in the Yukon* (and the provinces/territories providing services on reserve). This means that the FNCFS Program is funding FNCFS agencies, First Nations, transfers to provinces/territories, and jurisdiction.

There are three related areas of focus for reform of the FNCFS Program: structure, funding, and accountability (Figure 1).

FIGURE 1



1. **Structure:** The incentives, rules, and conditions that determine when and how funding moves within a system.
2. **Funding:** The amount of money allocated to recipients.
3. **Accountability:** Monitoring of detailed indicators to determine if the system structure and funding are working to achieve desired goals.

Upholding the CHRT's orders to end discrimination and ensure it does not reoccur will require changes to structure, funding, and accountability, alongside consideration of the transition process. The challenge of sustainable reform is linking an increase in funding with competent delivery and monitoring of outcomes to improve the well-being of children.

IFSD makes the following recommendations:

STRUCTURE

1. Clarify federal policy and associated regulations (including terms and conditions and outcome-based performance indicators) for the FNCFS Program to focus on well-being with alignment to the principles of *An Act respecting First Nations, Inuit and Métis children, youth and families*.
2. Implement a block funding approach for existing FNCFS agencies, with a carry-forward provision.
3. Ensure resources for the FNCFS Program are secure and cannot be used for other purposes by Indigenous Services Canada (ISC) through a Special Purpose Allotment (SPA), with a carry-forward provision.
4. Adopt the allocation approach proposed in this report for FNCFS agencies with a holistic understanding of the allocation for existing service providers. This means leaving the approach and its components intact and not artificially segmenting the allocation, as ISC has done with its interim funding commitments.
5. Stop all ad hoc decision making and changes to funding and to FNCFS Program rules.
6. Adopt a cohesive reformed approach that includes recommended changes to structure, funding, and accountability. Notify service providers of the full intended reform and its parameters at least one full fiscal year in advance of the change.
7. Provide service providers at least one full fiscal year in advance of the change with:
   a. A clear statement of policy on the FNCFS Program and its associated terms and conditions;
   b. A five-year funding allocation in a block approach;
   c. Performance reporting indicators aligned to the goals of a reformed FNCFS Program.

FUNDING

8. Allocate resources to the service provider able to continue to or immediately deliver child and family services in First Nations. This includes protection and prevention (primary, secondary, tertiary) services.
9. Understand the funding approach and allocation holistically. Do not pull apart the allocation intended for a service provider, as the amounts may not be sufficient for the discharge of their mandate.
10. Ensure the existing federal baseline for service providers is maintained as the foundation on which to add activity and context specific components (adjusted by inflation and population escalators).
11. Develop allocations to service providers with funding principles linked to their activities and different contexts (e.g., poverty, geography, and over time, outcomes). IFSD provides recommendations for each funding component.

ACCOUNTABILITY

12. Require a national reporting practice for FNCFS for transparency to First Nations and their delegated service providers while holding the Government of Canada accountable.
13. Establish a First Nations-led secretariat to support data gathering and analysis and best practices in FNCFS.
14. Define the reporting and service obligations of different funding recipients through the FNCFS Program, e.g., if FNCFS agencies and First Nations are expected to deliver secondary and tertiary prevention services, their reporting obligations on an activity basis should be the same.
15. Ensure ISC's performance indicators for a reformed FNCFS Program reflect the structural drivers of contact with protective services.
16. Include a review of the allocations to reform the FNCFS Program, e.g., $47.8B from the Draft Final Agreement (assuming it is ratified), its allocation, and outcomes as part of a five-year program review.

Ending the discrimination against First Nations children and ensuring it does not reoccur takes more than writing a cheque — although additional resources are essential. It means fixing the policies, rules, terms and conditions, performance indicators, reporting requirements, and incentives that shape the decisions of actors in the system, both inside and outside of the Government of Canada.

FNCFS agencies and First Nations have shared their knowledge, their data, and their experiences to shape an approach that comes from the front lines. IFSD's proposed approach fits within the Government of Canada's existing contribution approaches and policies on results. Canada should not miss this opportunity.

True reform of the FNCFS system will take years. This is an opportunity to get a major policy change right.

IFSD'S MANDATE

The Institute of Fiscal Studies and Democracy (IFSD) is pleased to provide this final report to the Assembly of First Nations (AFN) on its work in Phase 3 to support the reform of First Nations child and family services (FNCFS).

This work builds on prior phases of analysis:

Phase 1: Costed the FNCFS system and identified gaps. The **Phase 1** report demonstrated that FNCFS agencies faced inadequate funding and structural constraints, often requiring them to place children in care to access resources.

Phase 2: Developed a bottom-up needs-based funding structure, with a well-being focused measurement framework (the *Measuring to Thrive* framework). The **Phase 2** report recommended an alternative structure in which service providers would receive resources tied to their context as a block. This was crucial to break the need to place a child in protection to access resources. With a block, service providers could allocate resources to seamlessly integrate protection and prevention services. The *Measuring to Thrive* performance framework developed in collaboration with FNCFS agency directors and supporting experts, emphasized the need to consider context in understanding the well-being of children. Community, family, and child well-being were integrated in the approach.

Phase 3: Tested and modelled the approach from Phase 2, into First Nation and agency specific delivery models. In Phase 3, IFSD worked closely with a representative group of 20 collaborators including FNCFS agencies and First Nations exercising/contemplating jurisdiction to explore the implications of implementing a reformed approach of the FNCFS Program. Strategy, people, processes, and systems were considered. Existing service providers will be better positioned to implement changes in 2 to 5 years, whereas those without existing services can take 10 to 15 years for operational stability. Regardless of the type of service provider, there are significant constraints on delivery capacity.

In Phase 3, IFSD was mandated to prepare for implementation of a reformed approach to FNCFS. This work was undertaken in collaboration with a total of 20 FNCFS agencies and First Nations exercising/contemplating jurisdiction, as well as other contributing agencies and First Nations. Phase 3 was designed to gather primary data on the current expenditures and operations of FNCFS agencies, test funding principles from Phase 2, review and refine the *Measuring to Thrive* framework for use, assess the path to transition for different service provider types, and define options for a First Nations-led secretariat.

The generous contributions of the collaborators inform the findings. The group of 20 collaborators is generally representative of the population of FNCFS agencies and First Nations exercising/contemplating jurisdiction. Working with the collaborators, representative models of change are developed by assessing transition strategies, measurement approaches, capital considerations, and funding approaches.

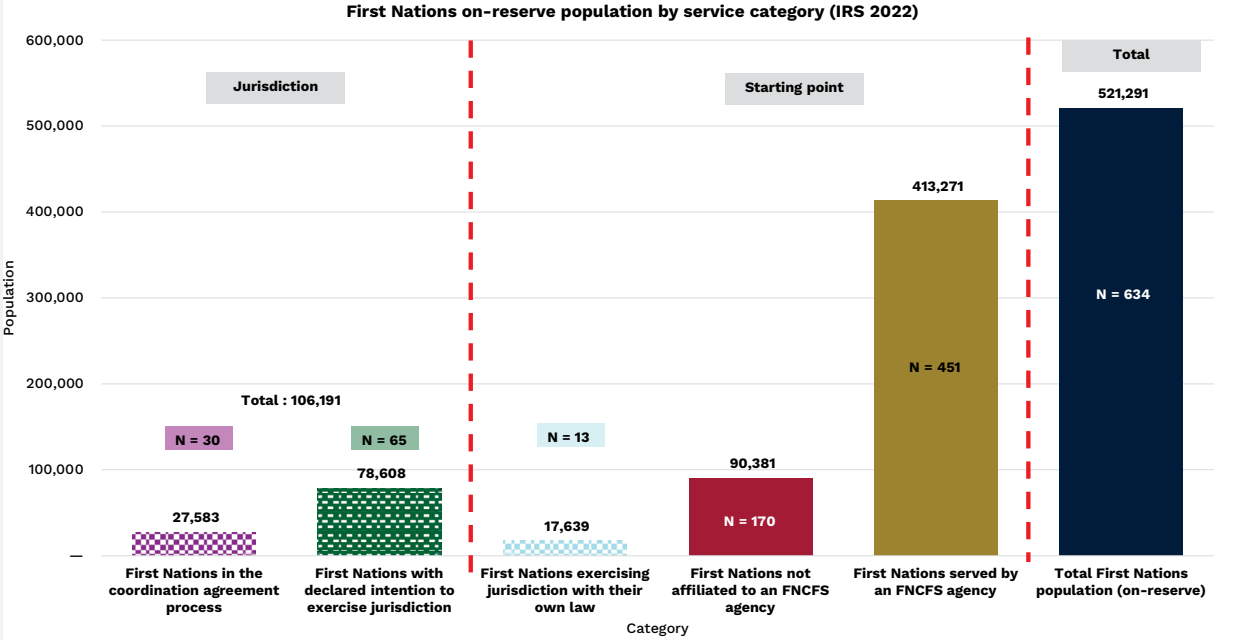
This final report provides a review of context, structure, funding, accountability, and transition.

INTRODUCTION

The universe of FNCFS delivery is in transformation. At the time of writing, most First Nations (approximately, 80% of the on-reserve population) are served by an existing FNCFS agency. Approximately 17% of the on-reserve population is not affiliated to an FNCFS agency,[1] i.e., receives protection services from the province/territory, and 3% are operating under their own CFS laws (Figure 2). The composition of service delivery approaches and providers is expected to change as some First Nations resume jurisdiction from the province/territory, leave an FNCFS agency, join an agency, seek services from the province/territory, or some other approach to service delivery.

Note: The chart below is current to August 8, 2024. The other calculations and estimates in this report are current to March 2024. The slight differences do not have a material impact on the estimates.

FIGURE 2



Source: Indigenous Services Canada (ISC) (2024), Indian Registry Service (population).
Note: The data on service categories is current to August 8, 2024. Some First Nations intending to exercise jurisdiction can also be considered as served by an FNCFS agency (78 of 95) or not affiliated to an FNCFS agency (17 out of 95).

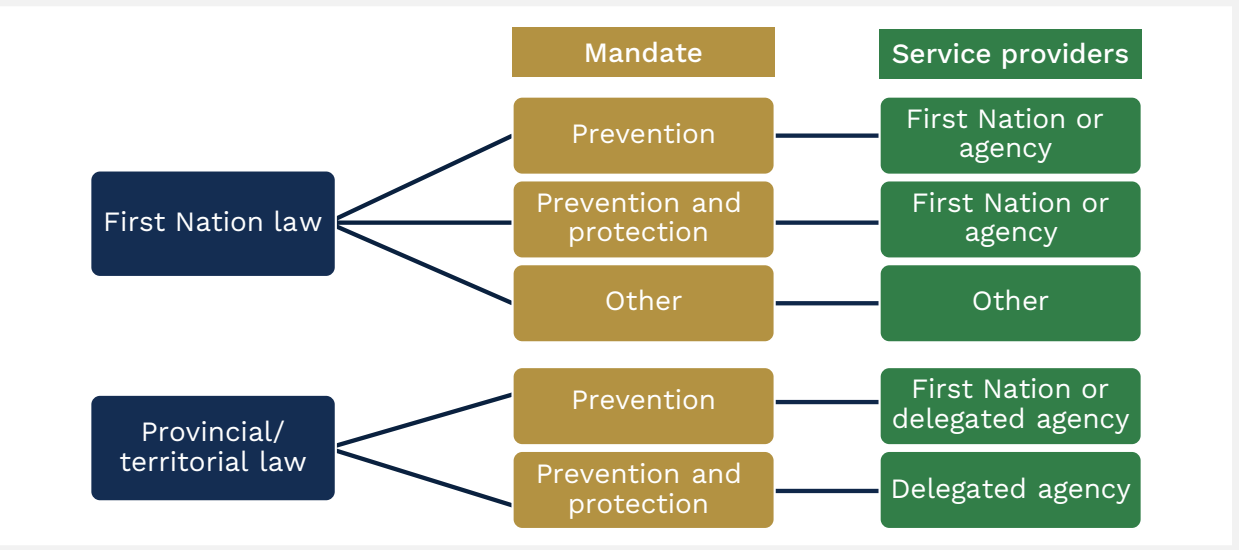
However service delivery is pursued, there are two broad categories of CFS mandates, defined through prevention, i.e., supporting the well-being of children and families, keeping them out of contact with protective services, and protection, i.e., supporting children and families when an incident of harm has occurred. Expressions of prevention and protection will differ based on

1 For additional details on service and funding considerations for First Nations not affiliated to an FNCFS agency, Institute of Fiscal Studies and Democracy, *First Nations Not Affiliated to an FNCFS Agency* (IFSD, 2024), https://ifsd.ca/wp-content/uploads/2024/08/2024-07_en_first-nations-not-affiliated-to-an-fncfs-agency-final-report.pdf.

law, cultural practices, context, etc. (see Appendix A1 for a review of context data, e.g., housing conditions, labour market indicators, etc.).

Approaches to delivering FNCFS can be grouped by legal framework with consideration of mandate and possible service providers (Figure 3):

FIGURE 3



There are 112 FNCFS agencies serving 451 First Nations. Nearly all agencies follow provincial laws for protection services. Some First Nations have brought their agency, e.g., Peguis Child and Family Services, under their own law or have declared their intent to do so. Given the availability of FNCFS agency data (through their generous contributions over the last five years), IFSD has applied the primary information to funding and related elements. There are some who disagree with the very premise of IFSD's approach to responding to the CHRT's orders using FNCFS agency data (see Figure 4 for Misipawistik Cree Nation's dissent).

FIGURE 4

MISIPAWISTIK CREE NATION

Misipawistik Cree Nation provided the text below to IFSD in July 2024 and consented to its publication in the final report. This text is being reproduced as provided to IFSD.

Misipawistik Cree Nation (MCN) is not a branch of the colonial government. We are a sovereign people holding treaty with the Crown. Treaty 5 demonstrates our Ininewak sovereignty. Nations make treaties, treaties do not make nations. In our treaty between Misipawistik and the Crown,

it specifically states that there would be a sharing in the bounty and benevolence that the land provides. For MCN, this does not mean being subject to the remaining crumbs of a federal budget, divided up by a population very much controlled and unilaterally identified by the Crown, or being subject to spending approval by a nation that has yet to understand our worldview and practices. Instead, what this means is that we have full locus of control over our own financial affairs.

MCN's laws are not the same as provincial or federal laws. Though we have never surrendered our inherent right to make laws, we are only now beginning to witness a respect and recognition for our own laws after watching generations of our children be stolen and harmed against our will and right.

Bill C-92 is not only an opportunity to reform the imposed child welfare system, but also an opportunity for the Crown to fulfill the treaty, to right historical wrongs through real reconciliation — that which recognizes true nationhood — and bring equilibrium to the autonomy of our distinct nations, as it was and is understood through the treaty agreement. Our resilience to the many atrocities committed against us, stems from our continual effort to bring our truth into light and our conviction and belief in our sovereignty. We are Treaty nations, not Canadian subjects. This is why we insist on a new model of relationships that help our families and their children flourish. The budget must put into practice the honouring of our treaty which we understand as a promise to share the land, and the bounty that she provides, in accordance with our own avocation and mode of life. Anything less will further erode our rights.

Jurisdiction over the well-being of our children and families without autonomous control over funding preserves discrimination against our children and almost certainly ensures its reoccurrence.

One of MCN's primary agreements with Bill C-92 is that our law, "*Mino Opikiyawasowin*" (raising our children in a good way), will be "prevention" based and not protection based — which brings children into care, considers placements outside of the nation, reduces family, community, and cultural connectivity, and brings other numerous harms against our children. As a prevention-based model this requires us to take care of every member before they come into need of assistance, it is an active and caring approach that prevents the need for intervention and is more conducive to our society's way of being and our natural law, which is the source of our self-governing authority. Though Canada/the Crown would have us believe section 35, the *Indian Act*, and other legislation created by our Treaty companion are our sources of authority, we know this is an untruth that has left Indigenous nations oppressed, impoverished, and at risk of genocide by policy for centuries. We must think outside of these boxes if we are to achieve the goals we desire and deserve.

To reform any aspect of our relationship with the Crown, without the treaty as being central and fundamental to that reform, is to dishonour our treaty while preserving the unilateral and dominant interpretation of a nation that wrongfully claims superiority over another. There has never been a surrender of our sovereignty, only an interference. Reform requires a new path, one that is focussed on culture and prevention. Currently, there is not enough systemic data on evidence-informed well-being indicators for First Nation children, youth, families and Nations themselves to perform this work. Where prevention data does exist as a focal point for an agency utilizing a pan-indigenous approach by capitalizing on that data is the wrong approach as it assumes sameness across many distinct and diverse nations. As such, rights holding First Nations ought to take the primary lead on the long-term reform of the First Nations Child and Family Services program and Jordan's Principle.

Utilizing existing data points from a system of oppression and attempting to meet the needs of our people through calculations based on those data points is merely shuffling the deck while expecting different cards to be dealt.

For these reasons Misipawistik Cree Nation dissents against the recommendations of the IFSD. The MCN perspective on child welfare reform is not that *it* will do better but that *we will do better ourselves*; essentially,

1. The principles of our approach are that we are and remain a sovereign nation in a nation-to-nation treaty-based relationship with Canada. There are two understandings of the Treaty yet only one nation dominates the narrative. Our understanding is that the spirit and intent of the treaty is to share in the bounty and benevolence while allowing each nation to exist as their own and progress as they will. Our sovereignty was never surrendered, our laws were never forgotten, our land is for us to share.
2. This very much informs the budget. We have always had the inherent right to raise our children according to our ways of being. Canada has only recently recognized our right to have jurisdiction over the lives of our families and children. This **jurisdiction must include financial resources without restriction**. We must have the ability to provide sustainable programs and projects, led by our own determinations, that heal our nation from the over 150 years of colonial harm — including the numerous attempts to assimilate and disregard our laws and governance. We are supported by Canada's implementation of UNDRIP which nullifies the Doctrine of Discovery — a papal bulls, which led to the notion that our land was terra nulius and we were not a civilized people therefore everything was up for the taking. We are fundamentally supported by the spirit and intent of the treaty we made through the pipe which recognizes our sovereignty.

3. Our goals to our funding approach are to be able to, without limitation or coerced direction but with certainty and fiscal sustainability, meet the needs of our children, families, community and nation collectively. As such, funding agreements that can be modified according to a colonial regime's agenda or budget will not begin to meet our requirements. Further, such an agreement perpetuates our subjugation to injustice.
4. We, our children, families and nation, are not to be regarded as under the assumed control of a colonial government. All we require of Canada to change is their oppressive and dominating paternalism by relinquishing their sense of superiority and recognizing our inherent authority over our own lives — as was the day before and during Treaty, we are equals.

This perspective was presented to IFSD early in our engagement, yet MCN has not seen even a slight shift towards implementing or actualizing any of these reform recommendations. In our view it is an error to rely on existing agencies' information and data to help reform the long-damaging system of colonial child welfare, simply because each agency is a byproduct of provincial self-assumed supremacy over First Nation livelihood. This statement is not intended to discredit First Nation child welfare agencies, it is simply an honest observation that the control over programming, projects and policies is not vested in the autonomy of any First Nation. If it were, as an example, program funding requests to the provincial government would not be a reality. First Nations seek autonomy not continued paternalistic approaches to how we may manage and provide for the lives of our own members.

In relation to data gathering exercises to reform the child welfare system, MCN also felt there was a miss in relying on existing data because the data from this system was not solely designed by our own people. MCN does not believe that IFSD's data collection is supportive in our initiative to restore First Nation jurisdiction over our children in our own ways. It is limited by what is seen, not supportive of what we First Nations know.

In developing an entirely new way of addressing family concerns through Bill C-91 *[sic]*, MCN was looking for data that would support prevention service development and implementation based in our worldview. What was relied on was protection service data based in a colonial view of our world. For instance, our children do not reside on a "reserve", they reside in our "territory". To rely on "on-reserve" data — a colonial construction intended to limit our access to our lands and participation in the larger society — is to admit discrimination is acceptable. Our "off-territory" children hold every existing inherent right to our nations sovereignty as those who are raised or living on our traditional lands.

MCN's Mino Opikiyawasowin law and model moves away from protection services and into prevention services, as such we are already well aware of the overrepresentation and harm caused to our children, we need to know "what works" in efforts to heal families — i.e., what

programs and services have the most beneficial impact on families; what is the current success rate of kinship care models; how have culture, language, and spirituality-based services helped in the reunification of families; what First Nation culturally specific treatment programs have resulted the most rewards, were those programs accessible in the community/nation, and how do we treat one another when intervention is necessary. This data requirement is not captured in current child welfare systems.

We understand that IFSD's mandate was to support the reform of the FNCFS Program, consistent with the rulings of the Canadian Human Rights Tribunal. IFSD's work is designed to respond to the rulings to end discrimination and ensure it does not reoccur in the context of the Government of Canada's existing appropriations and public financial management systems. We also understand that IFSD's official mandate was received from the AFN, and that IFSD's role is to work with First Nations and FNCFS agencies to propose a path forward in that context. Neither party are First Nation inherent or treaty rights holders.

MCN's contractual agreement with IFSD articulates that all contributions to IFSD's research would help to ensure it reflects the *actual experiences and needs* of First Nations/Bands and those they serve and will "produce objective analysis, *informed by the contexts* of First Nations". However, MCN does not trust that our input helped shape the work IFSD has done to reform child welfare. Too often a learning opportunity seems to have been swayed by a predetermined outcome and our input set aside as being on a separate trajectory. It is easier to paint an old building than it is to build a new one.

Throughout IFSD's process towards reform recommendations, MCN representatives personally spoke at length of First Nation sovereignty, treaty relationship with the Crown, and the actual experiences and needs and context of MCN. MCN articulated many times that First Nation jurisdiction, laws and ways of being are not colonial and will, in themselves, generate significant long-term reform. Nonetheless, the direction remained, in our observation, very colonial agency focussed and not community based or driven. The result, in our opinion, is a huge miss in reparation, reconciliation, and reinvigoration of distinct First Nation ways. MCN views the resulting recommendations as a revision of non-Indigenous ways left to the will and control of the Crown, rather than a reform that respects the autonomy of First Nations. Thus, our children move closer to within our grasp but ultimately remain in the hands of the colonial powers. Had the room been full of First Nations charting a new path forward through the reinvigoration and implementation of their own child raising laws, discussions would not have been what they were, and the outcome of IFSD's report would predictably be significantly different.

FUNDING FNCFS

Funding for FNCFS on reserve (and to the provinces/territories providing services on reserve) comes through the FNCFS Program. This means that the FNCFS Program is funding FNCFS agencies, First Nations, transfers to provinces/territories, and jurisdiction. The description of the FNCFS Program through InfoBase[2] (the Government of Canada's public facing reporting on its programs) includes *supporting safety and well-being for First Nations children ordinarily resident on reserve* (for an overview of the program, its desired results and related indicators, see Appendix A2).

In April 2022, IFSD submitted its request to ISC for disaggregated expenditure data (see Appendix B1) in five expenditure areas (Table 1). The process to receive the data took over one year and covered IFSD's CHRT-mandated work, i.e., Phase 3, First Nations not affiliated to an FNCFS agency. IFSD retained an expert privacy lawyer to manage ISC's requirements in areas of information security and privacy. In October 2023, IFSD sent a letter to ISC's Associate Deputy Minister to express its concerns with respect to the delays in the delivery of data for analysis and subsequent times for review. At the time of writing, all data requested by IFSD was provided by ISC, over one and a half years after it was originally requested.

However, on April 19, 2024, ISC indicated to IFSD that a new dataset would be provided for planned expenditures for fiscal years 2022-23 and beyond. At the time of writing, ISC has not produced the updated dataset. As a result, the expenditure analysis in this final report is based on the latest data provided by ISC. The last year of expenditure data provided by ISC is for fiscal year 2021-22.

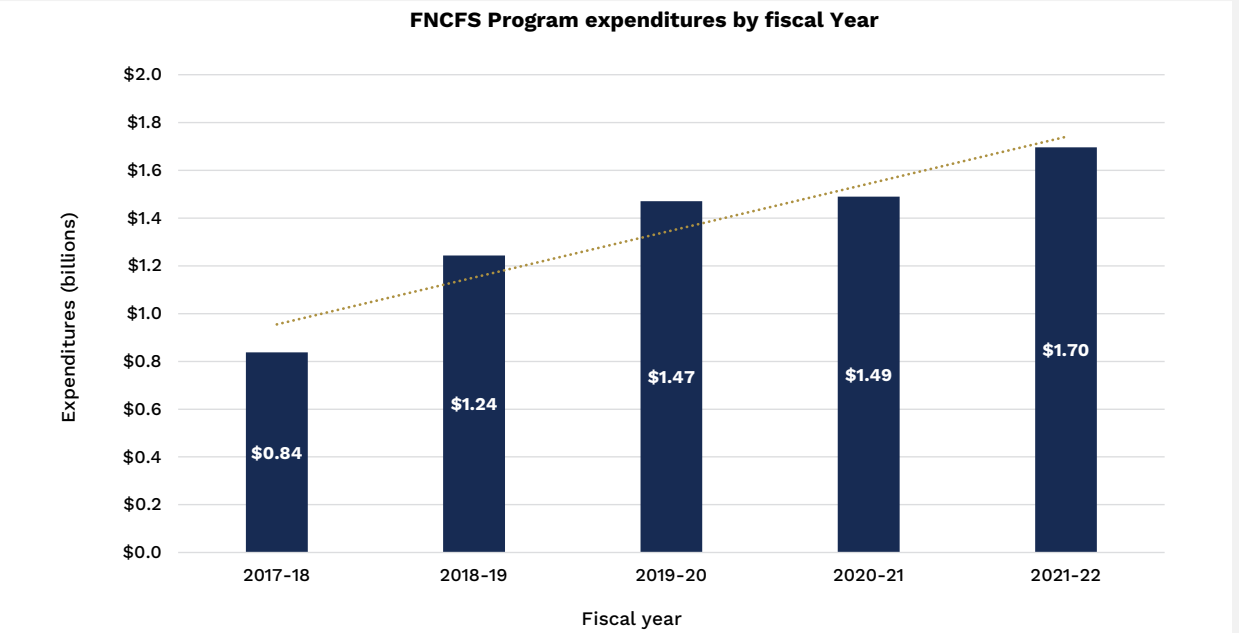
2 GC InfoBase, "Infographic for Child and Family Services," Government of Canada, last updated August 19, 2024, https://www.tbs-sct.canada.ca/ems-sgd/edb-bdd/index-eng.html#infographic/program/INDSC-BYP08/intro.

TABLE 1

EXPENDITURE AREA	DESCRIPTION	RESULT
Program data	IFSD requested detailed program, sub-, and sub-sub-program level expenditure information at the national level. The information was used to produce a current state portrait for the modelling work in First Nations child and family services (FNCFS), as well as for assessing the needs of First Nations not served by an FNCFS agency.	ISC provided an initial data set in April 2023 and an updated data set in November 2023.
Breakdown of the FNCFS Program	IFSD sought detailed information on the lowest level of granularity of spending through the FNCFS Program, e.g., sub-, sub-sub, sub-sub subprogram, etc. This information was necessary to understand the components that make up the FNCFS Program.	ISC provided the data in September 2023.
Prevention/actuals funding	IFSD sought information on the actuals/prevention funding requests and allocations of FNCFS agencies and other eligible recipients mandated by the CHRT. In subsequent e-mail communications, ISC indicated that only eligible paid expenditures are tracked by the department. Claims that were ineligible or that were denied were not recorded in the financial system.	ISC provided the data in September 2023.
Transfers	IFSD sought information on transfers to provinces and territories for First Nations child and family services, and related activities. IFSD requested financial and related details for all votes/associated activities defined in the Public Accounts.	ISC provided the data in December 2023.
Post-majority care	IFSD sought information on funding for post-majority care provided to FNCFS agencies or other eligible recipients. The information is necessary to understand current funding practices in post-majority care and identify demand (and changes in demand with the pandemic-induced extension).	ISC could not provide data for this request. ISC indicated that the activity was being newly funded at actual costs with no information available to share.
Band representative services	IFSD sought information on funding for band representative services provided to FNCFS agencies or other eligible recipients. In October 2022, IFSD asked ISC how it developed its internal estimates for the First Nations Representative Services (then Band Representative Services). ISC responded indicating that "[...] Canada created a national estimate based on Ontario per capita expenditures over a 5 years [sic] period."	ISC provided the data in September 2023.

Analysis exclusively of the FNCFS Program indicates increased expenditures across fiscal years (Figure 5). Most of the expenditures are provided through a fixed contribution approach, i.e., funds have a defined purpose and total expenditures are defined annually.

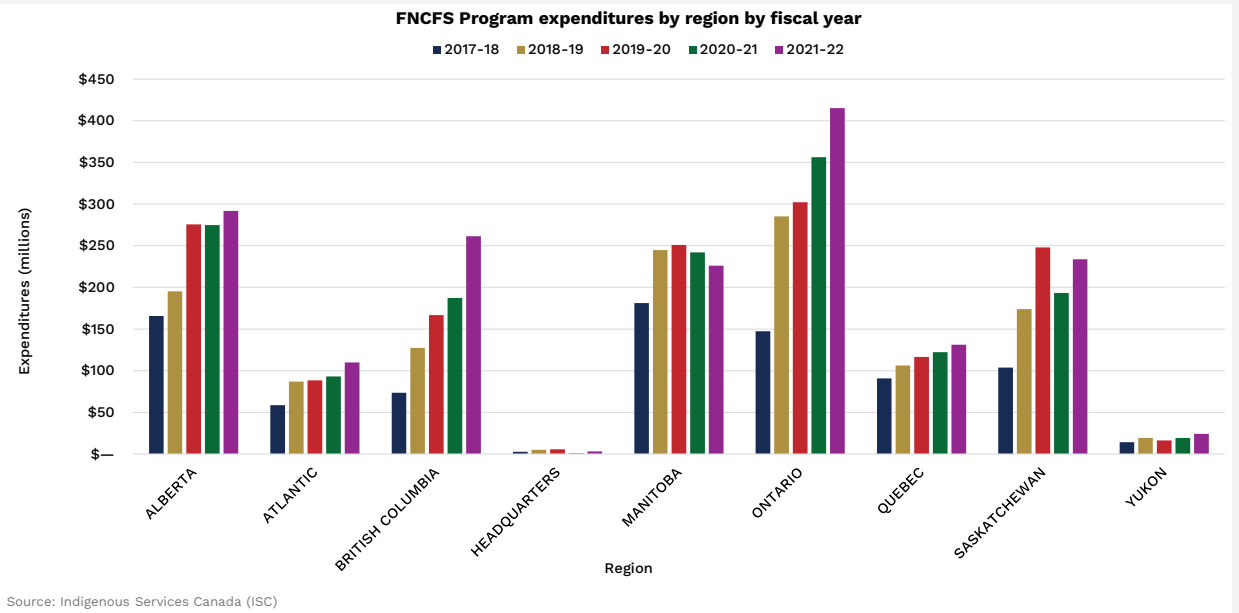
FIGURE 5



Source: Indigenous Services Canada (ISC)

In the FNCFS Program, funding by region generally increases across fiscal years. Ontario-based recipients receive most of the expenditures, followed by those in Alberta (Figure 6).

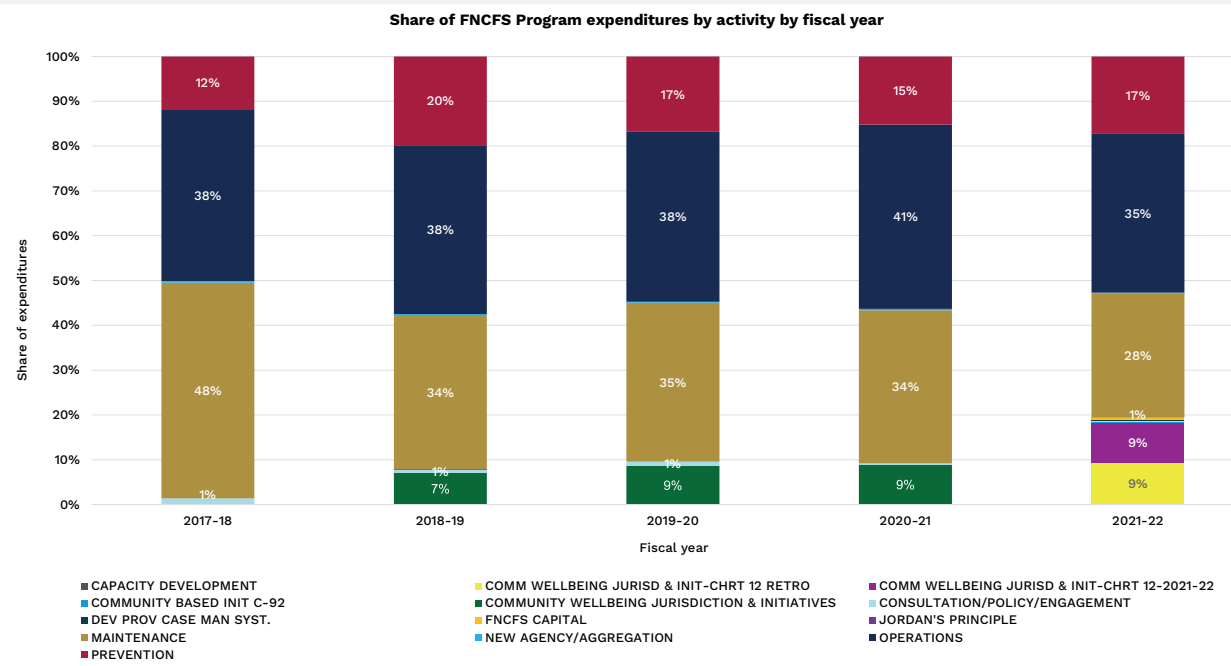
FIGURE 6



Source: Indigenous Services Canada (ISC)

Within the FNCFS Program, there are three main activity areas (maintenance, prevention, and operations), as well as others that are funded through the program, e.g., CHRT mandated retroactive payments, development of a case management system, etc. The three main activity areas, however, represent upwards of 80% of total annual expenditures (Figure 7).

FIGURE 7

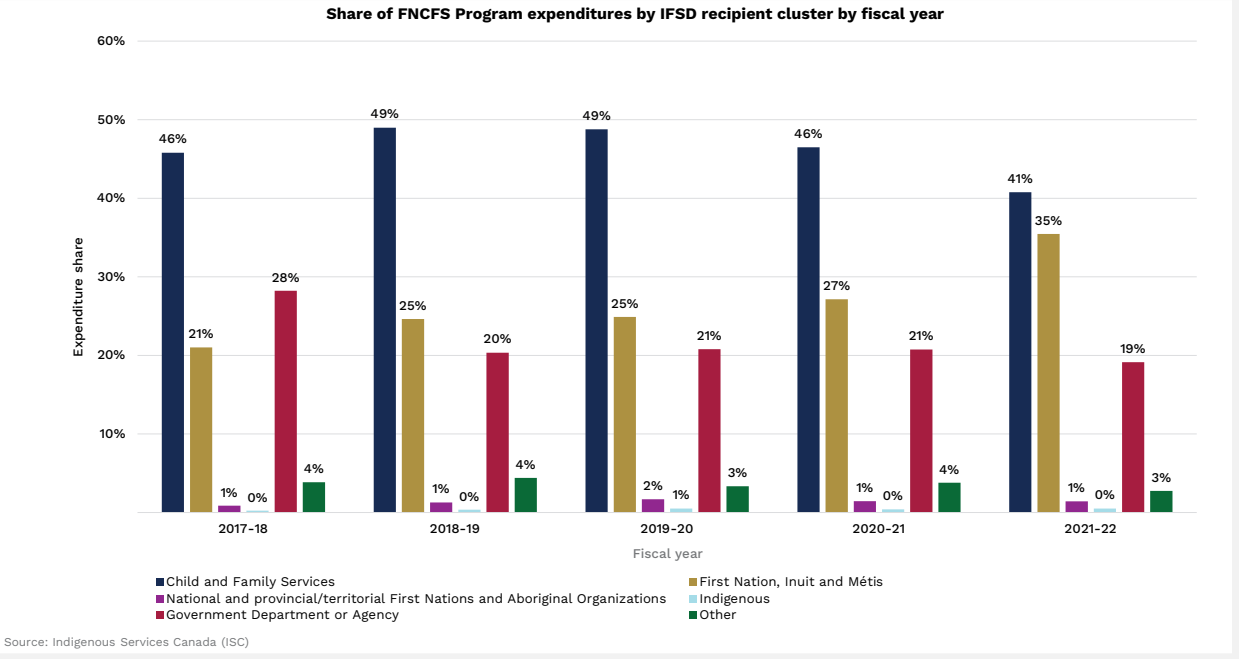


Source: Indigenous Services Canada (ISC)

For clarity, IFSD clustered recipient types into five categories: child and family services (which includes FNCFS agencies); First Nation, Inuit, and Métis; National and provincial/territorial First Nations and Aboriginal[3] organizations; Indigenous; government department or agency, e.g., provincial/territorial government; other. FNCFS agencies and similar service providers receive over 45% of the FNCFS Program funding, although their share is trending slightly downward to 41%. The share of funding for First Nations, Inuit, and Métis increases across fiscal years. Funding for a government department or agency remains relatively constant at approximately 20% (Figure 8).

3 Aboriginal is used for consistency with ISC's expenditure codes.

FIGURE 8



Source: Indigenous Services Canada (ISC)

At the time of writing there were two per capita funding amounts defined by ISC:

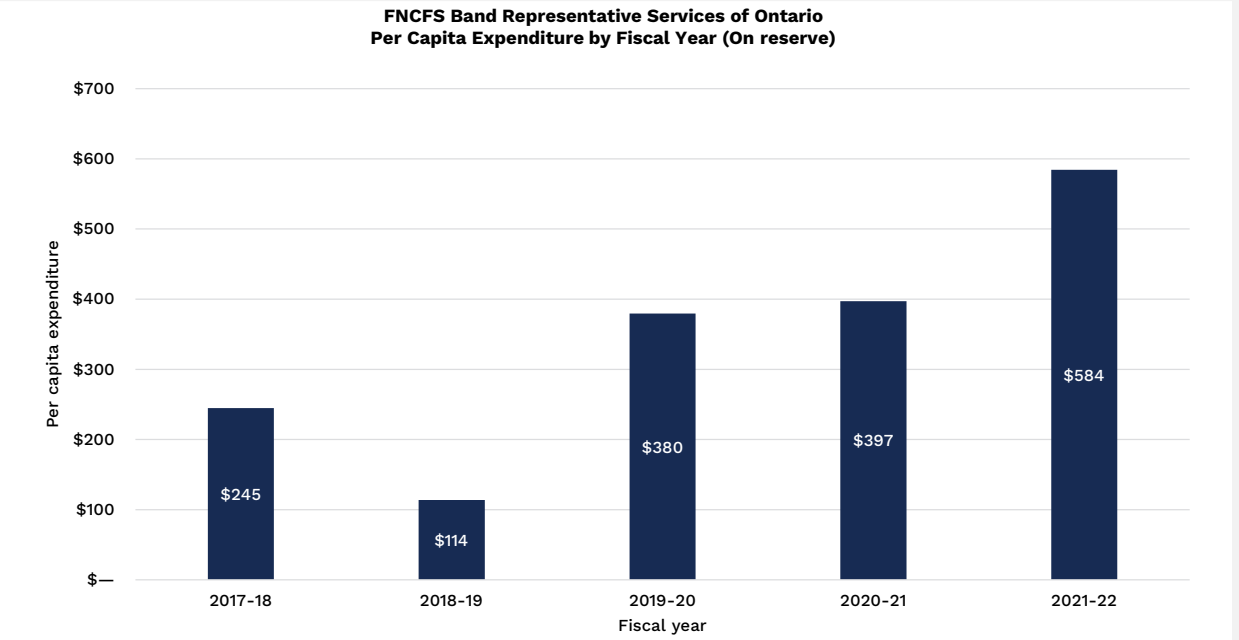
- Prevention at $2,500 per person on reserve, upwardly adjusted for inflation;
- First Nations Representative Service (FNRS) funding at $283 per person on reserve, upwardly adjusted for inflation.

The per capita prevention allocation comes from IFSD's previous analysis.[4] The per capita allocation for the FNRS was developed by ISC using Ontario per capita expenditures for the activity over a five-year period (as Ontario First Nations received funding for the services since 2017). However, in its analysis of the expenditure data, IFSD could not produce the allocation defined by ISC. Using on-reserve population by fiscal year in Ontario, per capita allocations range from a low of $114 to a high of $584 (Figure 9). The parties may wish to clarify the calculation of the estimate and the activities associated with the allocation.

4 The cost per person for prevention services, estimated at $2,500 per person, comes from an operating agency providing only prevention services. The program activities include: "community-based activities and family support, legal support, victim services, social work, and social assistance. The active learning style initiatives range from education on fetal alcohol syndrome and brain development to emergency homes for respite" (Enabling First Nations Children to Thrive, p. 92).

The $2,500 per capita allocation for prevention is built from an existing FNCFS agency that provides full prevention services to its community. The $2,500 per capita allocation represents a specific set of program activities. It does not represent the upper end of a range. The full case study and program activity description is from IFSD's report, Enabling First Nations Children to Thrive, p. 91-94. It is **important** to keep in mind, that the allocation of $2,500 for prevention activities is **part of a larger approach** described in IFSD's report, Funding First Nations child and family services (FNCFS): A performance budget approach to well-being. The allocation of $2,500 per person is part of a funding approach that ensures adequate and needs-based resourcing for contextual factors such as, geography and differences in need (i.e., poverty). **Pulling out the $2,500 per person from the overall funding approach is an artificial representation of the full resource profile that is being proposed as part of the broader reformed approach.**

FIGURE 9



Source: Indigenous Services Canada (ISC)
Note: Population for each fiscal year is the IRS population at the end of the first year in the fiscal year, e.g., for fiscal year 2017-18, 2017 population data was applied.

For an overview of ISC's total expenditures and additional analysis of the FNCFS Program see Appendix B2, and for Band Representative Services, see Appendix B3.

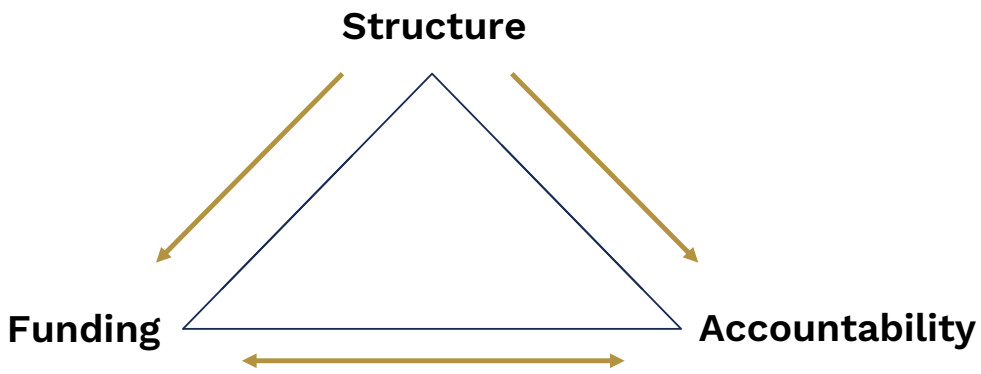
Hear from Mary Teegee, Executive Director, and Warner Adam, Chief Executive Officer, Carrier Sekani Family Services on considerations for the long-term reform of the FNCFS Program.

https://youtu.be/7uthwy6kNbI

FACTORS FOR THE SUCCESSFUL IMPLEMENTATION OF A REFORMED FNCFS PROGRAM

Sustainable change of the FNCFS Program with the goal of well-being requires changes to structure, funding, and accountability (Figure 10).

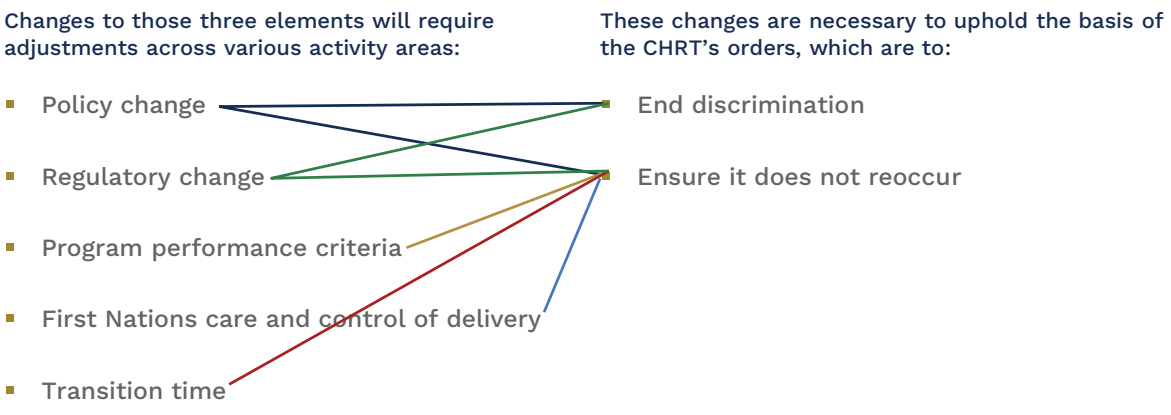
FIGURE 10



1. **Structure:** The incentives, rules, and conditions that determine when and how funding moves in a system.
2. **Funding:** The amount of money allocated to recipients.
3. **Accountability:** Monitoring of detailed indicators to determine if the system structure and funding are working to achieve desired goals.

These three changes will require adjustments across various activity areas (Figure 11):

FIGURE 11



1. **Policy change:** Define the purpose of the FNCFS system, i.e., the well-being of children, families, and communities through a culturally-informed, substantive equality approach, focused on the best interests of the child.
2. **Regulatory change:** Recognize that the development of new activities and programs to support children, families, and communities will require different Terms and Conditions (aligned to the policy change).
3. **Program performance criteria:** Use the *Measuring to Thrive* framework (or a similar set of indicators), aligned to the goal of well-being. The financial (expenditure data) and non-financial information (from *Measuring to Thrive*) will be necessary to improve funding and results tracking over time. Changing the way funding is allocated and performance is captured will link policy and funding to support better outcomes for children, i.e., performance budget informed approach.
4. **First Nations care and control of delivery:** First Nations should lead on the collection and analysis of their own information to improve decision-making and outcomes for children, families, and communities. Leveraging the Secretariat (and/or other bodies), First Nations could share best practices, approaches for training, service delivery, etc.
5. **Transition:** Establish provisions for adjustment and refinement of the approach throughout the two-to-five-year period for transition (for existing service providers). The time for implementation of jurisdiction is expected to take much longer, e.g., 10+ years when legislative adjudication is considered.

A reform to the FNCFS Program requires changes to policy, financial, and management authorities. (Table 2).

TABLE 2

AUTHORITY TYPE	DESCRIPTION	SOURCE
Financial	Allocation of public funds for a specific program or activity.	Prime Minister and Minister of Finance
Policy	Definition of program and performance objectives.	Cabinet Committee
Management	Program terms and conditions to operationalize the policy.	Treasury Board (Committee of Cabinet)

All three authorities are required to initiate a new program or reform an existing one. In the case of FNCFS, financial authorities have already been granted. The policy authority is being negotiated by the parties, and once defined, management authority will be sought to ensure consistency between them.

This final report proceeds by discussing analysis and recommendations on structure, funding, and accountability, followed by a review of considerations for transition, with guiding questions and guides for estimating allocations, preparing for data gathering and measurement, etc.

STRUCTURE

The structure of the FNCFS Program shapes incentives through rules and conditions. Adjusting the underlying structure of the existing FNCFS Program means changing its purpose through policy, its rules for funding allocations (including how and when resources flow to participants), and defining how progress will be assessed (discussed further in the accountability section). Structural reform is imperative to sustainable change. It cannot be expected that the system is set up to fund protection, report on protection, and measure instances of protection to deliver a different result by changing an amount of funding. To ensure that financial resources can be applied in ways to achieve the well-being of children, families, and communities, a different approach to the definition of policy and its implementation is required.

It is unwise to expect a change in outcomes from financial resources alone. To change the impact of funding, change the rules for its use and its monitoring. Once the system structure, funding, and accountability mechanisms are aligned to support a common goal, change can be expected with time. Adding more money to a broken system will not support sustainable change or better results for children. A 2022 report by the Office of the Parliamentary Budget Officer,[5] indicated that Indigenous Services Canada (ISC) struggles to demonstrate results despite its spending increases. There is sufficient evidence to that effect with the CHRT's orders and non-compliance orders for administrative issues against Canada.

To change the results of the system, its structure needs to be changed. IFSD makes the following recommendations:

1. Clarify federal policy and associated regulations (including terms and conditions and outcome-based performance indicators) for the FNCFS Program to focus on well-being with alignment to the principles of *An Act respecting First Nations, Inuit and Métis children, youth and families*.
2. Implement a block funding approach for existing FNCFS agencies, with a carry-forward provision.
3. Ensure resources for the FNCFS Program are secure and cannot be used for other purposes by Indigenous Services Canada (ISC) through a Special Purpose Allotment (SPA), with a carry-forward provision.
4. Adopt the allocation approach proposed in this report for FNCFS agencies with a holistic understanding of the allocation for existing service providers. This means leaving the approach and its components intact and not artificially segmenting the allocation, as ISC has done with its interim funding commitments.
5. Stop all ad hoc decision making and changes to funding and to FNCFS Program rules.
6. Adopt a cohesive reformed approach that includes recommended changes to structure, funding, and accountability. Notify service providers of the full intended reform and its parameters at least one full fiscal year in advance of the change.

5 Office of the Parliamentary Budget Officer, *Research and Comparative Analysis of CIRNAC and ISC*, Ottawa: Office of the Parliamentary Budget Officer, *2022*, https://distribution-a617274656661637473.pbo-dpb.ca/4dd5db44bd0d5ddc57fd166053a5ee-6703753a32baa02d6906a3082c84b23a38.

7. Provide service providers at least one full fiscal year in advance of the change with:
    a. A clear statement of policy on the FNCFS Program and its associated terms and conditions;
    b. A five-year funding allocation in a block approach;
    c. Performance reporting indicators aligned to the goals of a reformed FNCFS Program.

CLARIFYING FEDERAL POLICY AND ASSOCIATED REGULATIONS

A reformed FNCFS Program should define its objectives in alignment to *An Act respecting First Nations, Inuit and Métis children, youth and families*. The objective and funding authority for the FNCFS Program should support a culturally informed approach to service delivery, the best interests of the child, and least disruptive measures. The purpose of the FNCFS Program should be to promote the well-being of children, families, and communities consistent with the holistic understanding of well-being in the *Measuring to Thrive* framework (or a similar set of indicators).

Funding associated to the FNCFS Program should be predictable (for planning and capacity building), transparent, with resources linked to outcomes for accountability, and renewal. Focused on well-being, there should be space for a variety of approaches to service delivery. The diversity of approaches should be supported by a transfer policy with a five-year funding envelope, with the provision for carry-forwards of unspent funds. Terms and Conditions associated to the FNCFS Program should be aligned to policy objectives. **They should not be defined before the parameters of a reformed program are in place.**

There are two principles that should be reflected in the Terms and Conditions for long-term funding (consistent with CHRT orders):

1. That discrimination ends;
2. That discrimination does not reoccur.

Achieving these objectives requires consideration of: funding; structure; and accountability.

Terms and conditions associated to the long-term funding approach should be drafted to ensure recipients can allocate resources with flexibility, to meet the needs of children, families, and communities, consistent with the goal of holistic well-being. This should include consideration of:

- Capacity, e.g., demonstrating ability to deliver program activities to achieve results;
- Results, e.g., reporting on results annually;
- Comptrollership, e.g., including clean and timely audit opinions.

Terms and conditions for recipients should leverage indicators from the *Measuring to Thrive* framework, or a similar framework, that consider the well-being of children, families, and communities. This would embed a performance-informed approach to budgeting that promotes flexibility for recipients, with consideration of holistic results.

This approach requires recognition of different points of departure. Consideration should be given to capacity development for program design and delivery, data collection, and evidence generation.

Performance of the FNCFS Program should be assessed through outcomes by monitoring and measuring changes in holistic well-being. Indicators, such as those in the *Measuring to Thrive* framework should consider children, families, and communities.

BLOCK FUNDING APPROACH FOR EXISTING FNCFS AGENCIES

Where should care and control in delivery and accountability in FNCFS rest? *Should it rest with First Nations and their delegated service providers or with ISC?* When funding is sufficient, determining how resources should be applied to meet needs should be done by those on the ground. Even with the actuals process mandated by the CHRT, ISC retains control of what is an eligible or ineligible expenditure in FNCFS. If First Nations and their service providers are seeking autonomy in the provision of services, it will come with trade-offs.

In a fee-for-service model (i.e., ISC pays bill for activity), power rests with ISC:

- ISC dictates funding streams and uses
- ISC determines allowable expenditures
- ISC reallocates resources within the department and different priorities because funding is not infinite, nor is it protected (through an SPA) for FNCFS

In a block approach, decisions on how to spend resources rests with the service provider:

- Service provider has an agreement with a defined funding amount which supports planning
- Service provider has autonomy in allocation and does not seek approvals or reimbursements from ISC on spending
- Service provider is accountable for delivering on the mandate

Whether considering the past or current approaches to funding, the accountability for results rests with the service provider (Table 3). If the service provider is accountable for delivering services to children and families, they should want to control *how* they spend their resources to meet needs.

TABLE 3

CONSIDERATION	PAST	CURRENT	"FUTURE (IFSD'S APPROACH)"
Funding approach	Fee-for-service	Fee-for-service via actuals process	Block (provider controls how they spend)
Control of spending	ISC	ISC, with increased flexibility with reimbursement for actual spending	First Nation/delegated service provider
Accountability for results	Service provider	Service provider	Service provider

The current approach to the FNCFS Program is a fee-for-service model (Table 4). ISC's approach funds service providers to deliver specific activities. Eligibility is defined and determined by ISC.

In both the current system (fee-for-service) and the proposed reformed system (block contribution approach), Parliament must appropriate resources annually.[6] This means that resources — in either the existing or reformed system — could be constrained or increased by proposal of the federal government and parliamentary (approval/rejection). While both systems rely on parliamentary appropriations, they have different premises. In the fee-for-service model, ISC determines what is eligible and ineligible, even though resources are at actuals for the interim period. In the block approach, the provider determines how best to expend funds, with clarity around the formulation of the allocation.

6 The Government requires the approval of Parliament to raise or spend funds. In a majority Parliament (where the governing party holds a majority of seats), votes on Government proposals are expected to pass. In a minority Parliament (where the governing party holds a plurality of seats but not the majority of seats), votes on Government proposals may not pass. Money bills (in which revenues are raised or spent) are matters of confidence. Failure to pass a money bill is a tacit vote of non-confidence and a government would resign and seek dissolution of Parliament, triggering an election. Government can seek Parliamentary approval to spend funds in two ways: 1) annual appropriations acts: Government prepares spending proposals for Parliamentary review. The Estimates (documents supporting the appropriations bills) include amounts and broad use of funds. Should the appropriations bills be passed, they will receive Royal Assent and Government will have its requested funds. Government may return to Parliament to seek additional resources should they be required throughout the fiscal year; 2) statutes: legislatively defined authority to make payments at an amount specified in the statute. Parliament approved the statute and authorities, i.e., funding, is deemed to be granted until such time the statute is amended or rescinded, or it sunsets. Examples of statutes include Equalization, Canada Health Transfer. All money raised or spent by Government is subject to Parliamentary approval. No Parliament can bind a future Parliament, therefore, spending approval through an appropriations act for one program in year 1 does not guarantee funding for the program in year 2. A statute, however, would provide greater security as laws require more effort and time to change than an appropriations bill. Statutory funding, however, is not guaranteed as legislation can still be amended. See for instance, Treasury Board of Canada Secretariat, "Estimates Publications and Appropriation Acts," Government of Canada, last updated February 13, 2024, https://www.canada.ca/en/treasury-board-secretariat/services/planned-government-spending/expenditure-management-system/estimates-publications-appropriation-acts.html; Treasury Board of Canada Secretariat, "Appropriation Acts (Supply Bills)," Government of Canada, last updated December 20, 2024, https://www.canada.ca/en/treasury-board-secretariat/services/planned-government-spending/appropriation-acts.html; House of Commons, "Financial Procedures," Ottawa: House of Commons, no date, https://www.ourcommons.ca/procedure/our-procedure/financialProcedures/c_g_financialprocedures-e.html.

TABLE 4

COMPONENT AND DEFINITION	DESCRIPTION — ISC'S CURRENT APPROACH
Structure: The incentives, rules, and conditions that determine when and how funding moves in a system.	• The FNCFS Program follows terms and conditions for various streams of related funding, e.g., protection, prevention, etc. • Most funding is allocated through the 'fixed' allocation mechanism. This means that allocated resources have a defined purpose and cannot be used for different purposes, even within program objectives • Funding is on a fee-for-service basis, i.e., payment for services (currently at actuals) and per capita allocations, i.e., prevention
Funding: The amount of money allocated to recipients.	• The FNCFS Program is funded through a combination of actuals, i.e., reimbursement for allowable expenditures, and fixed funding, e.g., per capita allocation for prevention of $2,500 divided among First Nations and service providers • This is an interim approach until a final funding approach is implemented
Accountability: Monitoring of detailed indicators to determine if the structure and funding are working to achieve desired results.	• The FNCFS Program requires reporting by recipients for reimbursements and for overall program performance • Performance indicators are being revised by ISC

In IFSD's proposed approach to funding the FNCFS Program, funding is understood holistically, i.e., you cannot segment the approach. Service providers have flexibility to adjust allocations within their block (e.g., operations and capital; protection and prevention, etc.).

In the block funding approach proposed by IFSD (Table 5), funds are provided for general purposes identified under terms and conditions in a contribution agreement or a statute.

In a reformed program, it is expected that recipients will provide protection and/or prevention related programs and services. This requires recipients to have consistency in funding (for planning purposes) and to have the flexibility required to respond to changing/evolving circumstances in communities, within the scope of the *Measuring to Thrive* framework, or an equivalent framework.

TABLE 5

COMPONENT AND DEFINITION	DESCRIPTION — IFSD PROPOSED APPROACH
Structure: The incentives, rules, and conditions that determine when and how funding moves in a system.	• Funds transferred through the block contribution approach with adjustments • Funds are provided for general purposes under a contribution agreement or statute to be used by service providers with flexibility to meet needs in communities • Carry forwards are allowed, unexpended funds can be retained • Special purpose allotment established to restrict repurposing of FNCFS funds within department • Funding flows to recipients in a single transfer at the start of the fiscal year, having received prior notice (12 months in advance) of their budget allocation, consistent with the terms of the reformed FNCFS Program
Funding: The amount of money allocated to recipients.	• Allocations are defined based on a set of principles, consistent with program objectives • Allocations are adjusted with updated information to meet changing needs, e.g., population, inflation (CPI), income-based poverty, etc. (it is expected that updates, other than population and inflation be revisited through evaluation every five years) • Funding amounts are reliable and known
Accountability: Monitoring of detailed indicators to determine if the structure and funding are working to achieve desired results.	• Outcome-based performance indicators that consider the well-being of children, families, and communities to define a baseline and track changing results over time • Use information to evaluate and adjust funding and structure to ensure objectives are being achieved

Funding amounts would be predetermined every fiscal year: baseline budget + funding top-ups, e.g., prevention, poverty, etc. + adjustments for population + inflation (there should be limited changes to annual funding for service providers within the five-year period, other than adjustments for population and inflation). The approach, i.e., amount of funding, structure, and results should be evaluated before the end of the fifth fiscal year.

This approach is expected to be manageable for service providers working in established organizations, e.g., those organizations with well-developed business practices, internal management, and service delivery, who know the people they serve and their needs.

For organizations that are new or in a state of crisis, the approach could be more challenging. Without clarity and consistency around service offerings and existing expenditures, the block approach could provide supplementary funds that risk being unused or insufficient funds for what the organization will eventually do. However, the amount of funding, structure, and results would be reviewed every five years, which would provide an opportunity to rebalance the approach.

IFSD's proposed funding approach is designed as a trade-off for recipients: maximum flexibility to make decisions in the best interests of children and families, in a culturally informed approach, in pursuit of substantive equality, with an understanding that the recipient will work within a predefined set of resources (assuming they are sufficient). This trade-off is reasonable, from IFSD's perspective, as the current fee-for-service based approach restricts planning, program development, and problem-solving.

The proposed approach aligns to ISC's existing block funding mechanism with some refinements:

- funding allocation based on principles;
- a special purpose allotment to ring-fence funding designated for FNCFS within ISC;
- emergency funding; and,
- outcome-based performance criteria.

The refinements are not expected to be fiscally significant but tied to achieving results and aligned with the Government of Canada's Policy on Results. See Table 6 for a comparison of ISC's existing block funding approach and IFSD's proposed approach.

TABLE 6

ELEMENT OF FUNDING APPROACH	FUNDING APPROACH		COMPARISON (SIMILAR; SOMEWHAT SIMILAR; DIFFERENT)
	IFSD FUNDING APPROACH[7]	*ISC BLOCK FUNDING*[8]	
Resource Allocation	Funds are allocated based on a combination of previous financial data (to fund maintenance and protection) and need (population size, geography, poverty level, etc.)	Funds are provided for a block of programs under a contribution agreement.	Somewhat similar
Reallocation of Funds	Funds are provided for general purposes identified under a contribution agreement or statute. Service providers have flexibility to adjust allocations based on need. Allocations are defined on a set of principles, consistent with program objectives.	Funds can be reallocated within block, as long as program objectives are being achieved.	Similar
Carry Forwards	Carry forwards are allowed.	Carry forwards are allowed.	Similar
Retention of Funds	Unexpended funds can be retained and directed to program activities by service providers on an as-needed basis.	Unexpended funds can be retained (even at the end of the program), assuming use of funds is consistent with program objectives.	Similar
Eligibility Criteria	Recipient must meet criteria established in contribution agreement or statute.	Recipient must meet general assessment criteria.	Similar
Special purpose allotment	Funding for FNCFS should be ring-fenced, i.e., defined as a special purpose allotment within the department.		Different
Emergency funding	Assuming sufficient funding, recipients are expected to work within the block. Should circumstances beyond the recipient's control, e.g., natural disaster, suicide crisis, etc., emerge requiring additional resources, emergency funding is available within the FNCFS Program.		Different
Performance criteria	Outcome-based performance indicators that consider the well-being of children, families, and communities to define a baseline and track changing results over time. That may be considered in the future for program design and/or funding level changes.	In-progress; current indicators are output-focused.	Different

7 Institute of Fiscal Studies and Democracy, *Funding First Nations Child and Family Services (FNCFS): A Performance Budget Approach to Well-Being,* IFSD, 2020, https://ifsd.ca/wp-content/uploads/2024/06/ifsd-report-2020-07-funding-first-nations-child-and-family-services-fncfs.pdf.

8 Treasury Board of Canada Secretariat, "Directive on Transfer Payments: Appendix K," Government of Canada, last updated April 1, 2022, https://www.tbs-sct.canada.ca/pol/doc-eng.aspx?id=14208.

The Government of Canada transfers funds to recipients for various reasons, e.g., acquisition of goods or services, compensation, equalization, etc. There are different approaches and criteria to transfer funding to uphold constitutional and legal obligations and ensure transparency for Parliament and the public.

To obtain funding through a block approach and apply it with latitude, a recipient must meet eligibility criteria. It is IFSD's understanding from ISC that most First Nations and FNCFS agencies would qualify for block-style funding approaches based on the assessment criteria. Increased flexibility in the use of funds comes with eligibility criteria and differentiated reporting requirements.

IFSD considers the block funding approach a crucial element for care and control in delivery of FNCFS by First Nations and their service providers. ISC does not deliver services in FNCFS and is not placed to adjudicate on the most suitable use of funds to meet the best interests of the child, through least disruptive measures, in a culturally informed approach. Service providers are required to maintain provincial/territorial CFS standards or those of their First Nation's law. From that position, with the practice standards and legal requirements, service providers are best placed to allocate funds to meet the FNCFS needs of communities.

THE SPECIAL PURPOSE ALLOTMENT (SPA)

The funding for the FNCFS Program should be allocated to ISC through a Special Purpose Allotment (SPA). An SPA is a specific authority in the Treasury Board Transfer Policy designed to protect funds from departmental internal vote transfers. Funding for FNCFS is embedded in a larger transfer — grant and contribution — vote).

From Treasury Board Policy on Transfer Policy:

> An SPA is used to set aside a portion of an organization's voted appropriation for a specific program or initiative, thereby prohibiting its use for another program. An SPA is established, for example, when the Treasury Board wishes to impose special expenditure controls.
>
> Any unspent funds remaining at year-end in an SPA are not eligible to be carried forward to the next fiscal year under the TBS operating budget carry-forward guidelines, unless separate Treasury Board approval has been obtained. If such an approval has been obtained, then that amount within the SPA is carried forward and placed in an SPA for the next fiscal year.[9]

Adjusted terms and conditions and a carry-forward provision would be tailored to define an SPA and ensure the funds cannot be used for other purposes within the department. An SPA can include Treasury Board approval (Finance Minister is a member of Treasury Board) of a carry-forward provision. It will also send a transparent signal to Parliament and Canadians that these authorities are treated separately from other departmental transfers (grants and contributions).

The SPA is an important component of the approach, as ISC should not be allowed to reallocate FNCFS funds internally to cover shortfalls in other policy areas.

9 Treasury Board of Canada Secretariat, "Commonly Sought Authorities," Government of Canada, last updated November 25, 2020, https://www.canada.ca/en/treasury-board-secretariat/services/treasury-board-submissions/guidance/commonly-sought-authorities.html.

FUNDING

At the time of writing, a $19.08B allocation to the 'long-term reform' of FNCFS over five years was made by the Government of Canada. It is unclear what resources come from that allocation and what remains of the allocation (Table 7).

TABLE 7

FUNDING ISSUE	ESTIMATES KNOWN/UNKNOWN
FNCFS agencies	Unknown, only IFSD estimate available
Post majority supports and services	Unknown, paid at actual costs
First Nation Representative Service (FNRS)	Known, per capita estimate
Prevention and other allocations to First Nations served by an FNCFS agency	Unknown, split of prevention resources and other allocations calculated by ISC
Capital (new purchases and builds + maintenance for owned assets)	Unknown, by application
First Nations not affiliated to an FNCFS agency	Unknown, only IFSD estimates available (March 2024)
Housing for FNCFS	Known, allocation approach to be confirmed

To ensure funding is not discriminatory and reflective of the diverse contexts of First Nations, IFSD makes the following recommendations:

1. Allocate resources to the service provider able to continue to or immediately deliver child and family services in First Nations. This includes protection and prevention (primary, secondary, tertiary) services.
2. Understand the funding approach and allocation holistically. Do not pull apart the allocation intended for a service provider, as the amounts may not be sufficient for the discharge of their mandate.
3. Ensure the existing federal baseline for service providers is maintained as the foundation on which to add activity and context specific components (adjusted by inflation and population escalators).
4. Develop allocations to service providers with funding principles linked to their activities and different contexts (e.g., poverty, geography, and over time, outcomes).

IFSD provides recommendations for each funding component.IFSD provides its recommendations for each funding component in Table 8.

IFSD modelled national cost estimates for FNCFS agencies based on:

1. IFSD uses FNCFS agency-reported federal portions of expenditures from FY 2021-2022.
2. The agency-reported federal expenditures for FY 2021-2022 were adjusted for inflation and population to bring them to 2023-2024 dollars.
3. For any non-reporting FNCFS agencies, their estimated federal expenditures were extrapolated based on province and whether the First Nations they serve have year-round road access.

4. The total value of agency-reported federal expenditures is defined by IFSD as the baseline budget in its calculations.
5. To this baseline budget, all top-ups, i.e., prevention, poverty, etc. are added.
6. All components are adjusted for remoteness.
7. Projections for future fiscal years are grown by inflation and population.

What is NOT included in FNCFS agency estimates:

1. Post-majority supports and services (Appendix C).
2. First Nations Representative Services (Appendix B3).
3. Capital (new acquisitions/builds and maintenance of owned assets). IFSD's recommendation is a national, application-based pool. Cost estimates were revised following collaborator feedback on the original estimate (Appendix D1 and Appendix D2).

To build national bottom-up estimates for FNCFS agencies, IFSD applied the following calculations and assumptions:

1. Baseline budgets estimates include only federal funding sources.
   a. Baseline budgets for FNCFS agencies have two sources:
      i. Actual expenditures reported by participating FNCFS agencies through the 2021-2022 questionnaire (49% participation rate)[10] (see Appendix E1 for the questionnaire, and Appendix E2 for a summary of the findings). All federal expenditures are included (as they were reported as a total by FNCFS agencies), e.g., maintenance, least disruptive measures, prevention, protection, etc.
      ii. Imputed budgets based on weighted per capita average budgets for FNCFS agencies within the reporting province/region (with and without year-round road access);
   b. For any agency that reported their expenditures (but not the federal portion) or for any agency with an imputed

10 The outreach approach to contact FNCFS agencies involved both calling and emailing the 117 FNCFS agencies identified at the time the questionnaire was issued in April 2022. Note: The number of FNCFS agencies was revised to 112 later in the project period.

The first phone call to each FNCFS agency began in the week of April 4, 2022. If contact was made with the relevant person, an email including the project overview and questionnaire were sent within that week as well.

Following the initial contact, follow-up attempts occurred between April-end of June 2022. **Agencies were contacted by phone at least 3 times, and by email, 5-7 times.**

British Columbia and Saskatchewan agencies received additional outreach as working sessions were hosted by regional organizations to complete the questionnaire that occurred in June 2022. Individual virtual sessions were offered to assist in the completion of the questionnaire with minimal uptake.

Issues identified during outreach:

- Challenge connecting with directors; messages left with assistants or by voicemail and unsure if transmitted.
- Lack of familiarity with IFSD.
- Contacts are extremely busy; some noted not having the time to complete the questionnaire.

In June 2022, IFSD offered a $300 gift card to each agency that completed the questionnaire.

The questionnaire process was closed on November 4, 2022. FNCFS agencies that did not participate in the questionnaire were contacted the week of November 28, 2022, and were invited to respond to five questions (from the questionnaire). The five questions captured basic information on revenues/expenditures for the baseline exercise.

budget, a 75% average portion of baseline budgets (the national average) was applied to model the federal allocation.

c. To build the baseline budget for cost modelling for Ontario FNCFS agencies:
    i. Ontario FNCFS agencies reported federal funding sources with significant variability. It was not possible to use their reported federal proportion of their baseline budgets for this exercise;
    ii. Nationally, including Ontario FNCFS agencies, the average portion of a baseline budget paid by Indigenous Service Canada (ISC) is 75%;
    iii. 75% was applied to estimate the federal portion of baseline budgets of Ontario FNCFS agencies (participating or not participating in the FNCFS questionnaire).

2. Two scenarios based on the remoteness allocation are used in estimates. Both models are premised on 15% of the Cost Adjusted Factor (CAF) calculated based on the remoteness index of a community and whether it has access to roads, developed by ISC. The resulting CAF estimates were scaled down to an average of 15% across all FNCFS agencies. The remoteness top-up is applied to the baseline budget and to top-ups:
    a. Scenario 1 (CAF_15%_>0.4): 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
    b. Scenario 2 (CAF_15%_>0.0_agency-level): 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
3. There are 7 components that build on the baseline budget to develop an estimated federal allocation for FNCFS agencies. Post-majority support is being funded at actuals and is not included in the model. Capital allocations are not included, nor is capital maintenance (as that would apply only to owned assets).
    i. Geography/remoteness (see Appendix F)
    ii. Poverty
    iii. Prevention
    iv. IT
    v. Results
    vi. Emergency funding (see Appendix G)
    vii. Maintenance allocation (see Appendix H)
    a. The principles underlying the components are the same for FNCFS agencies across Canada.
    b. There are high, medium, and low scenarios for each component, other than geography/remoteness and prevention.
4. Prevention at $2,500 per person is fully allocated to FNCFS agencies in this model.
5. To forecast expenditures for the next five fiscal years, the total estimated budget is grown by population (Indian Registry System (IRS) data) + inflation (based on the Consumer Price Index (CPI)) (see Figure 40).

The funding allocation is meant to be understood and applied holistically. On their own, none of the components are sufficient to address the issue to which they relate. The total budget on its own, understood to be transferred through the block contribution approach,

is intended to be sufficient for the discharge of a FNCFS agency's mandate with the goal of supporting the well-being of children, their families, and communities.

Across all scenarios, the baseline, prevention, and remoteness (applied to all FNCFS agencies) allocations are the same, as are program escalators for projections, i.e., population and inflation. National estimates of the low, medium, and high scenarios with remoteness applied only to those FNCFS agencies serving First Nations with an index of 0.4 or above are included in Appendix I. IFSD's recommended funding allocation draws on different levels of top-ups as presented in Table 8.

TABLE 8

COMPONENT	DESCRIPTION AND CONSIDERATIONS	IFSD'S RECOMMENDATION
Baseline budget	FNCFS agency's total federal expenditures for the delivery of CFS reported through the 2021-22 questionnaire and adjusted to 2023-24 dollars.	Total federal expenditures for the delivery of CFS as reported by FNCFS agencies.
Prevention[11]	Resources to deliver activities and services to stop or reduce the risk of child maltreatment. 3 types of prevention (it is expected that at least secondary and tertiary services are being delivered by FNCFS agencies): Primary: Directed to the community as a whole, designed to educate and prevent child maltreatment. Secondary: Aimed to support a child who may be at risk of harm or maltreatment, e.g., home visit programs for parents, addictions treatment for parents, etc. Tertiary: Used when a child has been identified as at risk of harm of child maltreatment, e.g., immediate crisis intervention.	$2,500 per person resident on-reserve
Remoteness/ geography	15% scaled average of Cost Adjusted Factor (CAF). Remoteness can impact FNCFS agency operations and budgets. The remoteness/ geography component should be recognition of the differentiated costs of delivering and acquiring needed services in different geographic contexts (beyond year-round road access alone).	15% scaled average of CAF applied to all FNCFS agencies
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards. Different needs and IT sophistication among agencies. Some will require complete reset, others will be adding to existing capacity.	5.5% of the baseline budget

11 IFSD understands protection and prevention services to be integrated. This is crucial for service delivery that meets the needs of children and families by ensuring safety, while leveraging least disruptive measures.

Protection: Services for child safety to ensure children are free from harm, abuse, and neglect.

Prevention: Activities and services to stop or reduce the risk of child maltreatment (primary, secondary, tertiary).

Poverty	Difference between the Market Basket Measure (MBM) (by region and population size) and total after-tax median household income (Census 2016)[12] on-reserve). This is not poverty alleviation and not an income supplement. The resources recognize that poverty is a known driver of contact with protection services. The allocation recognizes that resources are needed to mitigate the impacts of deprivation as a driver of contact with protection.	5% of the difference between regionally-relevant MBM and total after-tax median household income
Results	Allocation to support data collection and analysis. Data is essential for control and improved decision-making. Collecting and analyzing relevant information can be an early warning sign of challenges and can highlight successes. For many FNCFS agencies, this will be a new activity in need of support.	5% of the baseline budget
Maintenance	Support to mitigate the changing costs of child maintenance (over and above inflation) within the regular course of business.	3% of the baseline budget
Emergency	Support responses to unanticipated circumstances related to CFS that affect demand for core services (protection and prevention).	2% of the baseline budget
Inflation	The purpose of an inflation adjustment on program funding is to correct for changes in purchasing power. Working with an adjusted inflation rate, such as one based on the Consumer Price Index (CPI) inflation, would be generally reflective of changes in the costs of goods and services. For five-year projections, the inflation rate is assumed to be 3% (the higher end of the Bank of Canada's inflation target).	CPI, adjusted annually
Population	Changes in population size impact service delivery. Population and projections should use the Indian Registry Service (IRS) by Band.	IRS population by Band

IFSD's funding approach generates national allocations between the medium and high scenarios (Figure 12). Five-year national projections estimate the total system cost to be $17.5B with IFSD's recommended scenario (Table 9).

By comparison, system costs range from $16.7B with the low scenario, $17.2B with the medium scenario, and $17.7B with the high scenario (Table 10 and Figure 12).

12 Following a consultation with Statistics Canada, IFSD will continue to use Census 2016 total median household income data with adjustments for inflation in its cost estimation, as it considers the number a more accurate (albeit imperfect) reflection of the current state of First Nations.

Total median household incomes as captured in Census 2016 and Census 2021 increased significantly for First Nations. Statistics Canada has also observed general growth in income across Canada (see Statistics Canada, "Pandemic Benefits Cushion Losses for Low-Income Earners and Narrow Income Inequality – After-Tax Income Grows Across Canada Except in Alberta and Newfoundland and Labrador," Government of Canada, last updated July 13, 2022, https://www150.statcan.gc.ca/n1/daily-quotidien/220713/dq220713d-eng.htm).

Nationally, pandemic relief programs and other direct transfers to persons, e.g., increases to the child benefit, contributed to the income growth. While every First Nation is different, and the sources of their income changes unique, the pandemic relief programs and direct transfers were nationally available and were likely an important factor in the income growth observed for First Nations. Moreover, Statistics Canada indicated a change in Canada Revenue Agency (CRA) reporting with Form T90 for First Nations (starting in 2019) which could contribute to differences when making historical comparisons—although the size and direction of the impact is unknown.

TABLE 9

IFSD RECOMMENDATION	2023-24	2024-25	2025-26	2026-27	2027-28	TOTAL
Alberta	$447,364,457	$469,937,027	$492,464,316	$516,036,650	$540,164,897	$2,465,967,347

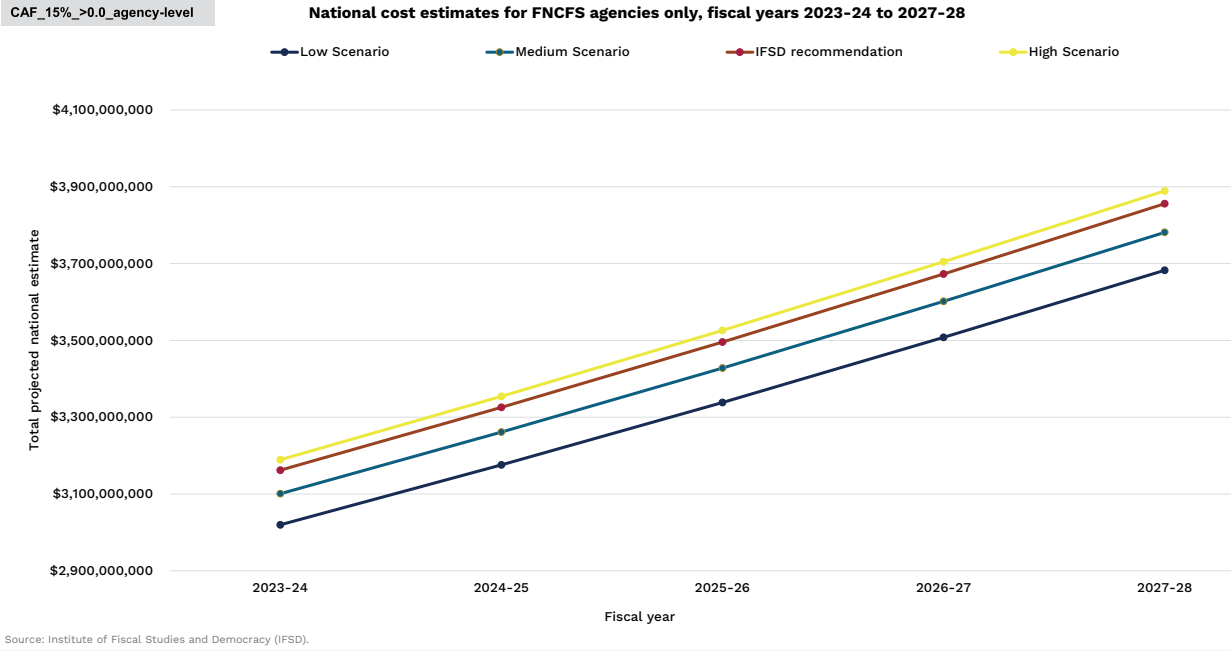
Total	$3,162,085,678	$3,325,613,358	$3,495,691,741	$3,672,981,228	$3,855,898,545	$17,512,270,550

FIGURE 12



IFSD's recommended funding allocation approach reflects the different starting points of service providers, the widely reported needs, e.g., IT, data gathering analysis, and consideration of emergency and maintenance needs as activities in the system stabilize. Protection and prevention are assumed to be integrated in service delivery (Figure 13).

FIGURE 13

CONSIDERATIONS ON THE SPLIT OF PREVENTION RESOURCES

Protection and prevention are integrated services. This is crucial for service delivery that meets the needs of children and families by ensuring safety, while leveraging least disruptive measures. There are three types of prevention services:

Primary: Directed to the community as a whole, designed to educate and prevent child maltreatment.

Secondary: Aimed to support a child who may be at risk of harm or maltreatment, e.g., home visit programs for parents, addictions treatment for parents, etc.

Tertiary: Used when a child has been identified as at risk of harm of child maltreatment, e.g., immediate crisis intervention.

ISC split the allocation of prevention resources between existing service providers and First Nations. It was (and remains) unclear who was accountable for which types of prevention service delivery.

There should be an assessment of the effectiveness of prevention funding to First Nations served by an FNCFS agency to ensure children and families can immediately receive needed services. Secondary and tertiary prevention services are complex interventions that require trained professionals. It is unfair, without warning or time to plan, to expect that First Nations are prepared to deliver secondary and tertiary prevention services, especially if they are served by an FNCFS agency. While not all First Nations are pleased with their FNCFS agency, an existing FNCFS agency mandated by the First Nation can be a source of expertise with a history of practice, service delivery, and a network of practice.

The following questions should be asked of First Nations receiving prevention funding (whether or not that are currently served by an FNCFS agency):

1. Has there been a needs assessment or readiness assessment to determine the ability to immediately deliver secondary and tertiary prevention services?
2. What are the service requirements for prevention (primary, secondary, tertiary)?
3. How is service provision integrated with protection?
4. How is the service provider accountable for delivering prevention services (primary, secondary, tertiary) ensuring consistency with the Act? With other CFS providers?

Care and control of First Nations in prevention service delivery should include a respectful and adequate period to plan and prepare for the complexity of secondary and tertiary services, and its integration with protection.

ACCOUNTABILITY

There are different parties responsible for ensuring the appropriate delivery and results from CFS, e.g., service providers, funders, etc. Each actor has a role and reporting obligations. Service providers are accountable to the First Nations they serve and to ISC for the use of resources. ISC is accountable for ensuring funding is sufficient, non-discriminatory, and consistent with goals of the FNCFS Program.

Ensuring those accountabilities are upheld requires information to understand how the children are doing. Asking and understanding how the children are doing will provide the information needed to assess whether the structure and funding of the FNCFS Program are delivering on the needs of children.

Upholding the CHRT order to ensure discrimination does not reoccur requires relevant information. Not just any information, but information that measures and monitors how the children are doing.

Information for First Nations and service providers can be used for planning, reporting to community, reporting to funders, improving practice, and advocacy. For ISC, that information is required to report to Parliament, and back to the First Nations and service providers funded through the program.

Accountability in FNCFS requires the measuring and monitoring of relevant information to ensure discrimination does not reoccur. Measuring what matters means identifying and addressing structural drivers of contact with protective services and having the information to improve service access for First Nations children and families. IFSD recommends accountability be ensured by:

1. Require a national reporting practice for FNCFS for transparency to First Nations and their delegated service providers while holding the Government of Canada accountable.
2. Establish a First Nations-led secretariat to support data gathering and analysis and best practices in FNCFS.
3. Define the reporting and service obligations of different funding recipients through the FNCFS Program, e.g., if FNCFS agencies and First Nations are expected to deliver secondary and tertiary prevention services, their reporting obligations on an activity basis should be the same.
4. Ensure ISC's performance indicators for a reformed FNCFS Program reflect the structural drivers of contact with protective services.
5. Include a review of the allocations to reform the FNCFS Program, e.g., $47.8B from the Draft Final Agreement (assuming it is ratified), its allocation, and outcomes as part of a five-year program review.

Research and analysis on indicators consistent with a holistic well-being framework has been defined by FNCFS agency directors and reviewed by Indigenous and non-Indigenous experts. The *Measuring to Thrive* framework is a collection of indicators meant to help assess the well-being of First Nations children, families, and communities. The framework is not a

case management tool. It is an approach based on gathering information at the level of the First Nation, and potentially, aggregated to the level of a service provider, regionally, or nationally.

Measuring to Thrive is intended as a linking mechanism between realities and changes in communities, funding, and accountability in FNCFS. The approach recognizes that levels of income, poverty, housing shortages, and other structural factors impact children and families. These factors weigh on families raising children, increasing the likelihood of contact with child protection services. As a performance framework, consistent with the Government of Canada's policy on results, *Measuring to Thrive* is outcome-based and emphasizes wellness across its measures. The performance approach considers context and various indicators of individual and familial well-being.

IFSD's proposed funding approach for a reformed FNCFS Program is rooted in *Measuring to Thrive* by reflecting and qualifying community-level differences, such as poverty or geography that impact service provision.

Working with the 20 collaborators (a combination of FNCFS agencies and First Nations exercising/contemplating jurisdiction), a set of indicators were defined for measuring and monitoring change in FNCFS for service providers and for ISC.

IFSD maintains, consistent with collaborators' recommendation, that ISC's indicators for the FNCFS Program reflect the structural drivers of contact with protective services and realities in First Nations. Mitigating the effects of structural drivers means working to reduce immediate protection concerns for children. The five proposed indicators for ISC were (see Appendix J1):

1. Safe and suitable housing
2. Sufficient and safe water from source to tap
3. Family reunification
4. Livable income
5. Access to mental health and specialized services within the community

At the time of writing, ISC's indicators for the FNCFS Program focus on the safety of children without any consideration of well-being. This is problematic for accountability. There is no understanding of *why* children are in contact with protective services, what happens to them while they are in care, when they exit, why they exit, or the realities of their communities.

The work of the parties to reach a final agreement is a step toward reforming the FNCFS Program to end discrimination and prevent its reoccurrence. Actual reform is not yet underway (Table 11). There is a requirement to recognize that true reform in FNCFS will take several years and will be inextricably linked to changes in structure, funding and accountability. Services and activities will not have an opportunity to stabilize until the FNCFS Program's funding to recipients, i.e., service providers, have a consistent and clear structure and funding approach. The current state is ad hoc and in constant flux which does not allow for medium- or long-term planning.

TABLE 11

HIGH-LEVEL STEPS	IFSD RESEARCH
1. What's the problem you're trying to solve? Define gaps between current state and desired future state.	Phase 1 Costed the FNCFS system and identified gaps.
2. Propose an alternative approach.	Phase 2 Developed a bottom-up needs-based funding structure, with a well-being focused measurement framework.
3. Test the proposed approach.	Phase 3 Tested and modelled the approach from Phase 2, into First Nation and agency specific delivery models.
4. Implement changes to structure, funding, and accountability for reform.	Not yet started.

In this ad hoc environment, there has been no consideration of how recipients receiving funding are required to report on results. For instance, existing FNCFS agencies have existing reporting requirements for their federal funding. It remains unclear, however, how First Nations receiving prevention and other resources will be asked to report on their results. If the funds they receive are consistent with the purpose of the FNCFS Program to promote the safety and well-being of children, they too should be required to demonstrate how resources are supporting the desired outcome.

Accountability among funding recipients from the FNCFS Program requires clarity on service delivery. All recipients of the FNCFS Program providing or assumed to be providing protection and/or prevention services (mainly secondary and tertiary) should be undertaking their activities consistent with the principles of *An Act respecting First Nations, Inuit and Métis children, youth and families*. Since 2022, ISC decided to split resources between FNCFS agencies and First Nations without consideration of accountability for program and service delivery, let alone outcomes. There should be reporting consistency among funding recipients expected to deliver the same programs and services. It is not prudent, in anticipation of a program review, to only understand results from the work of a subset of service providers but not all of them.

The requirement for reporting should be welcomed by all parties. Without clear reporting requirements to First Nations served by an FNCFS agency and to the federal government, there is a risk that system outcomes and contributing elements through funding and structure decisions remain unknown. With its current approach, ISC is indicating that it does not want to know how resources are being expended by recipients, especially by First Nations receiving resources and the results generated. This limits the ability of stakeholders to hold ISC to account for its structure and funding decisions.

Stakeholders should demand transparency by providing ISC information that First Nations and their delegated service providers own and control. Only then will a lack of transparency and poor data management cease to be excuses for the failures of the existing system.

Without data collection and reporting there will be no evidence as to whether discrimination has indeed ended. Evidence over time about the structural drivers of contact with protective services and changes in well-being outcomes for children will be the only way to ensure discrimination is not reoccurring.

THE FIRST NATIONS-LED SECRETARIAT

The First Nations-led Secretariat should be established to play a coordinating role in supporting First Nations and their delegated service providers in gathering and analyzing their data in FNCFS. In addition, the Secretariat as a centre for best practices would be a place of knowledge sharing, with the development of a national network of practice. Peer-to-peer learning in FNCFS would be a powerful tool for the design and development of program and service delivery. Appendix K provides an overview of models for the secretariat. In March 2024, IFSD hosted an expert roundtable to reflect on options for the design and mandate of the Secretariat. The recommendations and summary of the discussion are presented in Figure 14.

In brief, an expert roundtable of First Nations child and family services (FNCFS) leaders, practitioners, and academics (First Nation, Indigenous, and non-Indigenous) worked with IFSD to prepare recommendations on a First Nations-led Secretariat in FNCFS. The call for the body has been documented by IFSD in its work since 2018 with FNCFS providers.

The roundtable differentiated the immediate need for analysis of FNCFS administrative data from the longer-term strategy of First Nations-led enumeration in their communities. The focus of the discussion and recommendations were on the immediate need to leverage administrative FNCFS data for analysis to monitor and improve the FNCFS Program.

It is a fundamental human right to be counted, especially, when a child is being cared for by anyone other than their parent/guardian. Counting in FNCFS is a critical first step to establishing a baseline from which to monitor well-being.

To this end, a two-part mandate for the FNCFS Secretariat was defined:

1. **Data and evidence generation:** "The Centre for Measurement in CFS," a staffed entity within an existing First Nations-led organization would hold, scrub, analyze, and report on evidence from data provided by existing service providers.
2. **Best practices and operational support:** a devolved network of regional organizations with a coordinating national office to share program and operating practices, as well as disseminate research prepared by the Centre for Measurement in CFS.

FIGURE 14

Summary of the measurement roundtable: Defining next steps for a national First Nations child and family services data strategy.

Purpose

In February 2024, IFSD convened an expert roundtable of First Nations child and family services (FNCFS) leaders, practitioners, and academics (First Nation, Indigenous, and non-Indigenous). The group advised and challenged IFSD as it prepared its recommendations on the First Nations-led Secretariat.

The concept of establishing a 'Secretariat' for FNCFS came from service providers. The call from providers for a centre to support data analysis and to share best practices was documented in IFSD's first report, Enabling First Nations Children to Thrive, and was further detailed in its second report, Funding First Nations Child and Family Services: A performance budget approach to well-being.

The concept of a First Nations-led Secretariat for FNCFS was included in the Agreement-in-Principle among the parties to the Canadian Human Rights Tribunal (CHRT).

The primary focus of this expert roundtable was the immediate need for a national FNCFS data strategy, leveraging existing administrative data.

A separate but related matter is a long-term strategy for First Nations-led enumeration. This is a distinct matter on its own timeline that should be addressed separately from the immediate issues confronting FNCFS.

The opportunity

The Secretariat is an opportunity for First Nations to lead a solution to build an evidence base focused on the well-being of children. Information shared by existing service providers will inform practice, standards, policies, and laws to shape the care and control in delivery of First Nations child and family services.

Leveraging existing information (already captured by service providers) and an analytic approach with decades of operating history in states and major cities in the United States, the Secretariat can generate evidence for decision-making. This is an opportunity to use data on practice to generate evidence to build better services, improve decisions in resource allocations, and over time, anticipate community needs based on past trends.

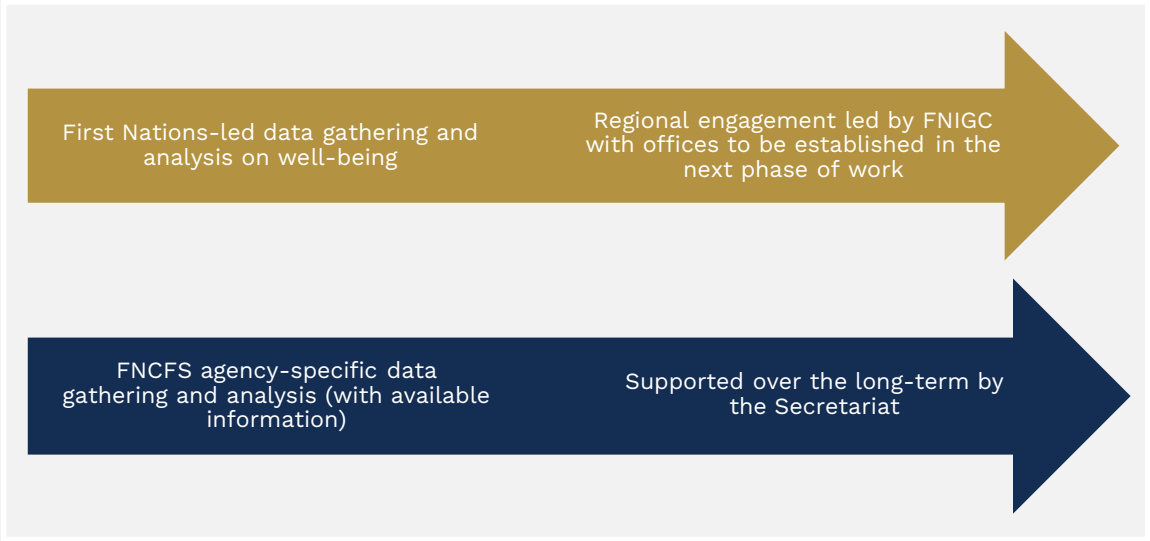
Context

It is a fundamental human right to be counted, especially, when a child is being cared for by anyone other than their parent/guardian. Counting in FNCFS is a critical first step to establishing a baseline from which to monitor well-being.

When compared to Australia and the United States, Canada is a poor performer in its counting of children in care, let alone in its understanding of their well-being. Information about children is being collected by service providers and the provinces/territories, without any consistent aggregation or reporting. There is an opportunity for change.

There are two separate matters that require different responses:

1. First Nations gathering their own data about their well-being (general and specific to FNCFS-related topics);
2. Existing FNCFS agencies sharing their data for analysis.



The first matter is a work in progress led by the First Nations Information and Governance Centre (FNIGC). At the time of writing, FNIGC and its regional partners are implementing Phase 1 of the First Nations Data Governance Strategy. The end goal is to establish a national network of fully functional data and statistical centers, led by First Nations in every region and at the national level. As envisioned by the Strategy, these centers will aim to provide a comprehensive suite of expert-driven data and statistical services, including data gathering and analysis, to support the common data capacity needs of communities, their governments, their service delivery entities, and advocacy organizations.

The second matter should be actioned immediately, and was the focus of the discussion, defined as the *Secretariat*. There is an opportunity to leverage data from FNCFS agencies to understand *how the children are doing*. The evidence generated from the data analysis will be crucial for assessing the impact of system reform and whether discrimination in FNCFS is recurring.

Mandate of the Secretariat

The Secretariat will have two functions: 1) data and evidence generation; 2) best practices and operational support.

The discharge of the mandate will be done through two separate structures:

1. Data and evidence generation: "The Centre for Measurement in CFS," a staffed entity within an existing First Nations-led organization. Separating the data and evidence functions from best practices and operations is imperative for independence. Hosted within an established and trusted national First Nations-led organization, such as the First Nations Information Governance Centre (FNIGC), would hold, scrub, analyze, and report on evidence from the data. The Centre for Measurement in CFS would work with existing service providers to gather data and generate evidence. The gathering and analysis of data requires a group of consistent people with requisite expertise.

   Sustainable infrastructure and a research practices are necessary for building and analyzing longitudinal datasets. To ensure the integrity and objectivity of the data gathering and analysis within the realm of CFS, it is crucial that the Centre for Measurement operate with independence from the entities focused on the development and dissemination of best practices and operational support. By maintaining a clear separation, the Centre for Measurement will function as a neutral body, dedicated to the empirical aspects of CFS.

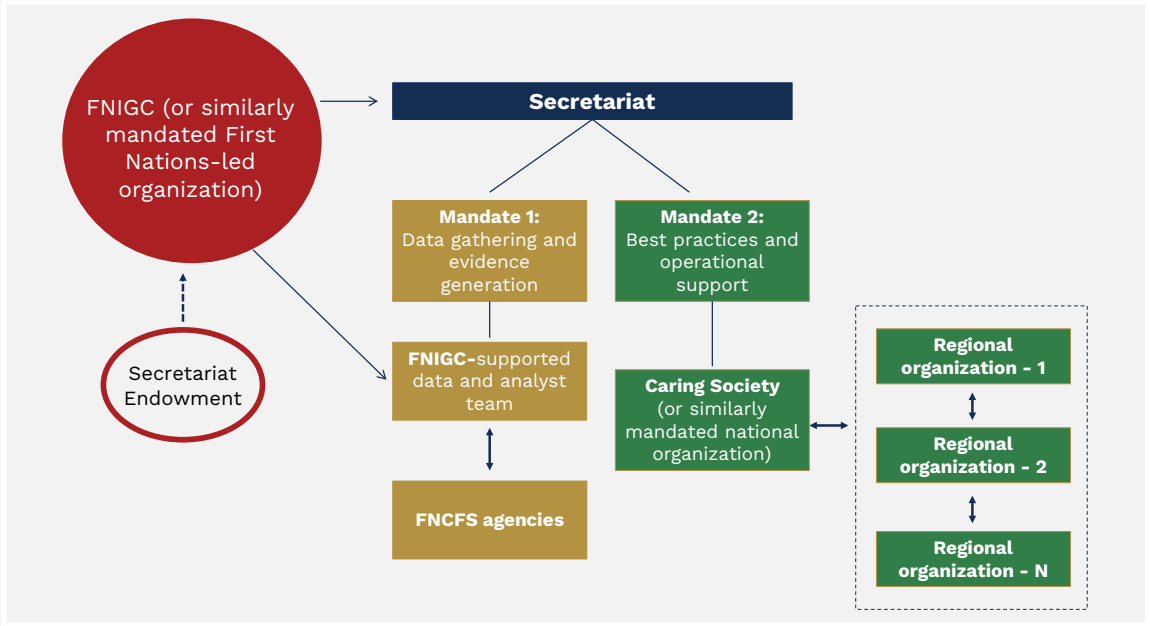
2. Best practices and operational support: a devolved network of regional organizations with a coordinating national office in the Caring Society, or similar organization. The contributing organizations would create a de facto network of practice to share program and operating practices, as well as disseminate research prepared by the Centre for Measurement in CFS. The regional organizations and national coordinating office may identify priority areas in practice, refine program design, monitor service delivery policies, and prepare reports to disseminate and share knowledge.

Taken together, the two mandates of the Secretariat would be positioned to lead on the renewal of the FNCFS Program with evidence generated from service provider data and the collection of practices from local innovations. Regional organizations could explore grants or awards to encourage service providers to innovate in the gathering and analysis of data for program design and outcomes for children and families.

To demonstrate sustainable opportunities for improved monitoring and evidence generation, the 112 FNCFS agencies could be convened in anticipation of the establishment of the Centre for Measurement in CFS. The gathering would provide a platform for these agencies, in partnership with First Nations regional representatives, to assess their willingness to

share their data for analysis and identify the questions they and the communities they serve would like answered. It is imperative to recognize that First Nations are the sovereign custodians of their data. The agencies and the forthcoming Centre for Measurement are envisioned to serve as trusted stewards, facilitating the use of the FNCFS administrative data in a manner that respects ownership and governance principles established by First Nations. Participation from all FNCFS agencies is ideal but not compulsory, the involvement of those prepared to share will be instrumental in helping to define a sustainable path forward for improving data and evidence on the well-being of First Nations children in care.

In addition, established regional organizations should be convened to define an approach to their devolved network for sharing best practices and research dissemination. For provinces/regions without an established support organization, e.g., Alberta, some Atlantic provinces, a rotating chair may be established, they may wish to join an existing organization, or establish their own.



The mandate of the Secretariat should include a requirement for evaluation in its fifth year by a third-party organization. This assessment will be structured to function autonomously, separate from the general FNCFS Program review. The framework for the evaluation could be included in the Secretariat's mandate.

The dual mandate would be funded through an endowment. It is recommended that the endowment structure and value be allocated independent from ongoing negotiations on First Nations child and family services.

The endowment structure is intended to promote independence and resource sufficiency for the mandates of the Secretariat. Resources from the endowment would be allocated on a differentiated basis to the data and evidence generation function, and the best practices and operational support function. Sufficient and independent resources would contribute to local innovation in service provision.

The endowment would be held by a national organization that has First Nations-led governance, research, and data analysis expertise consistent with OCAP ® Principles. The board governing the endowment would work with Executive Director of the Centre for Measurement in CFS, as well as that of the Caring Society or a similar organization to allocate resources to the regions and the Centre for Measurement in CFS.

Local capacity remains crucial. Data gathered from providers and analyzed by the Secretariat will remain at least one year behind. Field-leading work will be undertaken locally and ideally, supported, and informed by evidence.

Recommendations

1. Recognize and leverage the opportunity for two tracks of data gathering and analysis:
    a. First Nations-specific data gathering and analysis, supported by FNIGC and its existing regional structures until such a time as the future data capacities to be built at the regional and national levels as part of the First Nations Data Governance Strategy come on line;
    b. FNCFS-specific data gathering and analysis, that leverages data from existing service providers.
2. Establish a First Nations-led Secretariat with a focus on FNCFS for existing service providers.
    a. The Secretariat will be mandated to report back to First Nations, and FNCFS agencies.
3. Define two separate but related functions and mandates of the Secretariat:
    a. Data gathering and analysis;
    b. Best practices and operational support.
4. Fund the Secretariat through an endowment.
    a. The endowment will be held by a First Nations organization, such as FNIGC or a similar organization.
    b. Emphasize innovation through the endowment through local practice of service providers.
    c. Ensure the Secretariat and its functions are separate from politics. Separate the funding of the Secretariat and its functions in the negotiations for a final settlement agreement.
5. Link the data gathering and analysis function to an existing First Nations-led independent organization, such as FNIGC or a similar organization, with established governance and practices aligned to OCAP ® Principles.

6. The best practices and research dissemination role should be undertaken by existing regional organizations with expertise in child and family services (separate from the data gathering and analysis function). Their activities should be supported by the coordinating work of a national organization, such as the Caring Society or a similar organization.
7. Immediately resource a data gathering and analysis exercise for existing willing FNCFS agencies to demonstrate the possibilities of working with available data and established practices for analysis.
8. Call on the provinces and territories to produce the data on First Nations children in care in their possession.

PROGRAM EVALUATION

The Government of Canada has a well-articulated legislative and policy framework for the evaluation of programs. More specifically, in the case of the FNCFS Program the *Financial Administration Act* requires an evaluation at least every five years. Further, the Treasury Board's policy and directives on evaluation prescribe "good practices" for evaluation. The Government of Canada will lead an evaluation of the FNCFS Program within the next three years. The results from this evaluation will inform future funding and programming decisions.

The mandatory evaluation presents an opportunity for FNCFS delivery organizations. Most notably, the absence of a clear federal evaluation framework provides First Nations and their delegated service providers the chance to present their own that could be adopted by the Government.

Drawing from the federal government's policy framework, this could include the up-front identification of *how* and *what* will be evaluated.

Why is program evaluation necessary?

The Government of Canada funds the FNCFS Program through ISC. Recipients include FNCFS agencies, First Nations, Tribal Councils, provinces, etc. Program evaluation is a legal obligation of the federal government (in order to report to Canadians on results), and is consistent with sound program management practices.

The legal requirement for program evaluation comes from the *Financial Administration Act* which provides that:

> Subject to and except as otherwise provided in any directives issued by the Treasury Board, every department shall conduct a review every five years of the relevance and effectiveness of each ongoing program for which it is responsible.[13]

ISC must lead an evaluation at least every five years. More importantly, by policy and convention the results of this evaluation are reported publicly. This ensures that parliamentarians and the public can use the information to hold the federal government accountable for issues of funding and results.

13 Canada, *Financial Administration Act* (1985), s. 42.1. , https://laws-lois.justice.gc.ca/eng/acts/F-11/section-42.html.

Sound program management requires measuring the effectiveness of spending in achieving results. To that end, the Government of Canada has implemented an evaluation policy framework to ensure *value* for *money* in service delivery. In principle, this involves an obligation on the part of ISC to monitor outcomes to identify opportunities to improve program delivery and the overall efficacy of the FNCFS Program.

How do you know programs are achieving results?

The Government of Canada's evaluation policy recommends departments and agencies articulate a "theory of change" (ToC). The ToC outlines how the government's proposed money and funded activities will result in the desired goals. The goals typically fall within two categories: outputs and/or outcomes.

- *Outputs* are the programs and services a provider would deliver. This would include specific types and numbers of interventions for FNCFS and generally corresponds with the government's old funding model. It is focused on what is being done.
- *Outcomes* focus on the overall results of programs and services for children, families, and communities. It is generally agnostic to the modalities of service delivery. It focusses on what is being achieved.

ISC's current practice is to control the program through management of outputs — the allowable/fundable activities. A focus on measuring outcomes is consistent with a block approach in which First Nations and their delegated service providers take on care in control and delivery.

Considerations for a path forward

There are two key considerations for a path forward in measurement and accountability. First, consensus needs to be solidified among all stakeholders regarding the overarching intent of the FNCFS Program: to end discrimination and ensure it does not reoccur. Second, the core elements of a reformed program need to be instituted for all service providers, specifically:

- Recognize the structural drivers (root causes) of contact with protective services.
- Reduce contact of children with protective services.
- Integrate protection with secondary and tertiary prevention.

POTENTIAL PERFORMANCE INDICATORS

As a starting point, First Nations and their delegated service providers may wish to consider identifying potential indicators that provide all stakeholders with the requisite information to monitor well-being in First Nations communities. If possible, such indicators would also allow ISC to fulfil its responsibility to demonstrate the value for money in FNFCS programming as well as provide ongoing opportunities to improve program efficiency and effectiveness.

Data is sovereignty and can be an effective tool for First Nations and their service providers. First Nations care and control in collecting, analyzing, and using data should be a core tenet of any FNCFS reform.

First Nations and their FNCFS service providers will take a variety of paths on FNCFS data capture and analysis. To improve outcomes for children, families, and communities, we must first ask and track how they are doing.

IFSD's collaborators on the Phase 3 project defined a combination of case-level and community-level indicators for use by service providers for measurement to monitor change in FNCFS. Following the November 2022 meeting in Ottawa, a sub-working group of collaborators made additional contributions by defining the indicators and their potential measures. The indicators reflect a combination of case-level and community-level information relevant to the delivery of FNCFS with consideration of well-being. The collection of indicators, their definitions, and measurement considerations are included in Appendix J2.

Using their own data systems as models, the collaborators prepared a gap analysis relative to the indicators. Their gap analysis indicated that case level information, especially, as it related to protection services was available among FNCFS agencies. Other data, such as knowledge of Indigenous languages, spiritual, and cultural indicators could be retrieved from case notes (but not readily available through data systems).

Some of the community-level indicators, e.g., those related to education completion rates are accessible through the Census (the limitations of the data are recognized). The balance of the community-level indicators, e.g., substance misuse, and perceived access to services were not available through publicly accessible sources.

The takeaway from the gap analysis was the recognition that current data gathering was focused on the reporting requirements of funders (federal and provincial in FNCFS). Some collaborators engaged in program-specific data gathering about secondary and prevention programming, but they were the exception. Most of the gathered data aligned to practice standards and requirements.

The results of the gap assessment indicated that data was being gathered in different systems and in different ways across the country. While the commonly available information was related to protection services, it was gathered in different systems. Thus, to test even a subset of the indicators with the collaborator group, an alternative approach to organizing information was necessary in order to build a common base for analysis.

Organizing the data needed to monitor change in CFS means tracking what is happening with children and families in need of support, tracking the services received, and incorporating the community context, in the data model.

One approach to organizing the data is to consider the "events" associated to a child (or the person/family with whom interventions are being made). In this approach, information about the person receiving supports is captured by coding the events based on a date and related activity descriptors (Appendix J3). The approach is premised on understanding a trajectory from a starting point, with a series of events to assess change.

The event-based approach comes from Multistate Foster Care Data Archive, an information database on child welfare managed by Chapin Hall Center for Children, at the University of Chicago. Several state child welfare agencies compile administrative data for analysis by Chapin Hall. As in Canada, state jurisdictions gather different types of data and it is not always comparable. To manage differences, Chapin Hall's approach uses the basic, most commonly understood data terms for comparability across time and with other jurisdictions. Administrative data captures information about the population served. Analyzing this information can be helpful to understand trends and changes for children in the child welfare system. The more data that is included, the more complete the analytic portrait, and the monitoring of changes.

The event-based approach makes four assumptions:

1. There is a record of the person/persons receiving supports.
2. Events related to the person/persons are relevant and are tracked in chronological order.
3. The First Nation or FNCFS agency would define the events to be tracked, e.g., an assessment, a service received, a change in living arrangement. An assessment might capture facets of cultural identity, language, etc. Events also refer to the steps taken to protect a child.
4. Data is captured and organized for analysis. There is no pre-judgement of outcomes.

In October 2023, IFSD convened Phase 3 collaborators in Ottawa to review a data organization strategy for the *Measuring to Thrive* pilot (Appendix J4). The workshop was attended by all 20 collaborators for Phase 3 (a mix of First Nations exercising jurisdiction and FNCFS agencies), with 43 participants contributing to the discussion. Collaborators were invited to code up to 100 case files from two fiscal years using the event-based approach. Collaborators with their own coded data sets applied the analytic script to their own information. For those without data, a dummy data set was provided for analysis.

To assess the impact of interventions for children, data is required. Gathering and organizing data into a useable format that captures different interventions is a crucial first step. By coding events and corresponding date as well as related activity descriptors for the child or family in need of services, the trajectory of the service recipient from a starting point can be tracked through to exiting care of the agency. Tracking a range of events, e.g., prevention, protection, and recording information relating to children and families in need of support is about gathering data and organizing it.

The exercise was engaging and challenging. It demonstrated the importance of a common approach to organizing data for analysis and the power of good information to answer a relevant set of questions about outcomes of children. To promote access, the full exercise was done in Excel. The event-based approach is an option for a forward strategy in national data gathering.

Building a culture of measurement can be challenging. It represents extra work, it may pose IT challenges, there may be concerns about blame in the process or for outcomes. This, however, does not mean it cannot be done. The United States and Australia both have national reporting approaches to child welfare. Canada should take this as an opportunity to lead with First Nations and their delegated service providers on a relevant and well-being focused approach to measurement and monitoring in child welfare.

In an assessment of what comes after the shock of uncovering unmarked graves and the clarity of CHRT's orders on discrimination in FNCFS, Dr. Fred Wulczyn, a global expert in child welfare measurement and analysis, notes:

> In its relationship with First Nations people, Canada finds itself at a critical moment in time. One path forward is built around a commitment to empowering communities so that they know the state of their child. What of the other path? It is the path with which we are already familiar.[14]
>
> Even if the choice is clear, the way forward requires due diligence. Again, history offers guidance. There are two parts to the answer. First, is what we might call the data capture phase. [Orville] Brim [1975] said it best — to know the state of the child one needs measures repetitively applied over time. The second phase involves interpretation — using the data so that everyone with an interest in the state of the child knows the state of the child.

Gathering and analyzing data is imperative for First Nations and FNCFS agencies to ensure the structure and funding of the FNCFS Program are delivering desired results for children and families. Ensuring discrimination does not reoccur requires an understanding of the starting point and changes from that starting point.

For those existing FNCFS agencies with case-level information, a starting point for national data gathering and analysis could be the five indicators in Table 12. Service providers would have to extract the data from their case files to populate the indicators. **(Note that this streamlined approach has not been tested with collaborators nor has it been proposed to them. Service providers may not wish to provide this information in aggregate to ISC)**.

14 Fred Wulczyn, "Why Measuring Matters. The Callousness of not Asking how Children are Doing," prepared for the *Institute of Fiscal Studies and Democracy*, May 30, 2023, https://ifsd.ca/en/blog/last-page-blog/Why-measuring-matters.

TABLE 12

REPORTING ELEMENT	DATA REQUIRED	WHAT QUESTION DO WE ANSWER?
Count of all entries of children into care (i.e., out of home placement or removal of parents)	Date of entry into care to generate counts of all entries: Number of first-ever entries into care, by fiscal year Number of non-first entries into care, by fiscal year	How many children are entering care for the first time ever or on a re-entry into care?
Rate of placement in care per thousand children	Number of placements into care standardized by total population of children	How often do children enter care after controlling for the size of the population?
Probability of family reunification	Reason for exit, e.g., age-out, adoption, reunification, etc. Date of exit	What is the likelihood of a child being returned to parent(s)/ guardians?
Length of stay in care	Date of entry Date of exit 6-month interval (or other time interval) to determine conditional probability of leaving care	What is the likelihood of discharge within a period of time?
Probability of re-entry	Count of children re-entering care with reason for exit, i.e., all reasons other than age-out of care	What is the likelihood of re-entering care after being discharged?

There are outstanding questions on measurement and accountability for the reform of the FNCFS Program that should be answered for a final settlement:

1. What are the proposed indicators for a *reformed* FNCFS Program?
2. Will all recipients of FNCFS Program funding be expected to provide data on the indicators?
3. Will there be differentiated indicators for recipients, based on activities?
4. If recipients are expected to deliver common services to established standards, why would their reporting requirements differ?
5. In practice, ISC does not require provinces/ territories to report on their uses of funding. Should First Nations insist on provinces/ territories reporting operating data to their communities?

Answers to these questions should be obtained to ensure a final settlement is designed with consideration of the best interests of First Nations children. Accountability for program and service delivery must be ensured through clarity in accountability, measurement, and monitoring to ensure discrimination does not reoccur for First Nations children.

The impacts of recent prevention funding increases could be instructive on the realities of time and capacity required for planning and implementation in CFS. How were resources applied to support and improve the well-being of children, families, and communities? This final report provides considerations for broader program reform and transition.

TRANSITION

The intent of FNCFS Program reform is to reduce the contact of children with the protection system through prevention services. This does not mean eliminating protection, but shifting the composition of services over time to emphasize early intervention and support through prevention.

Transitioning to a new system and engaging in reform will take time and effort. As one collaborator explained,

"They think it's going to be easy. It's not."

There are different service providers in FNCFS with different states of readiness (Figure 15). Existing FNCFS agencies have had the longest runway to develop approaches to service delivery, relative to First Nations exercising jurisdiction and First Nations not affiliated to an FNCFS agency. The history of practice, alongside the existing operating base, and staff, mean FNCFS agencies are best placed to manage a change in the FNCFS Program. For First Nations, that change will take more time and will be more complex to manage.

FIGURE 15

COLLABORATOR TYPE	TRANSITION ELEMENT		
	SERVICE DELIVERY	FUNDING	REPORTING
FNCFS Agency			
FNCFS Agency serving a First Nation exercising jurisdiction			
First Nation exercising jurisdiction			
First Nation not affiliated to an FNCFS agency			

LEGEND	
Not ready to transition. May take upwards of 5 years to be transition ready	
Partially ready to begin transition. Critical elements may not be in place	
Widespread inconsistency in starting points	
Ready to begin transition	

Notes:

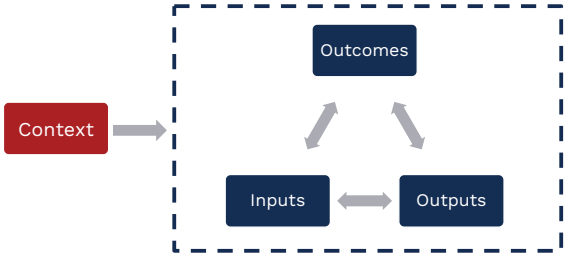
- Service delivery — new or additional service delivery (staff, capital, etc.)
- Funding — change in funding level, terms, etc. (incl. in funding block)
- Reporting — change in requirements for reporting, or who reporting is to, e.g., community, band, etc.

The experiences of First Nations not affiliated to an FNCFS agency offer perspective on the delivery of CFS with limited opportunity to design and deliver services consistently in environments with multiple service providers, i.e., province/territory, First Nation. In an IFSD report published in 2024[15] contributions from several First Nations not affiliated to an FNCFS agency indicated changes to funding amounts were a starting point. The complexity of their existing service environments with protection offered by the province/territory and the requirement to integrate those services with the prevention activities, was a work in progress for many First Nations.

Given the diversity in points of departure and variability in consistency in service delivery, contributing First Nations were clear that any attempts at reform were a starting point not a solution. They require consistency in resources and clarity on mandates to effectively plan, design, and deliver the services their communities want and need. This is not a quick exercise. Service delivery requires community consultation and participation, people with the right skills and training to deliver services, approaches and practices to align activities and services to needs. Service delivery should evolve to meet changing needs and evolution requires a starting point.

Based on collaborator feedback, existing service providers will be better positioned to implement changes in 2 to 5 years, whereas those without existing services can take 10 to 15 years for operational stability. Service providers are shaped by their contexts and are distinguishable through several characteristics, e.g., remoteness, operational sophistication, size of the population served, etc. These characteristics and contexts can be captured and recognized through funding approaches and addressed through practice and operations. Wherever a provider operates, their general goal, i.e., the well-being of children, families, and communities through prevention and potentially, protection, is consistent. The consistency means that tools for the building blocks of service provision, e.g., funding, accountability mechanisms, operations, for most providers will share similarities, with nuances based on their contexts.

FIGURE 16



Whether you are engaged in prevention and protection, one or the other, or your own new approach to fostering well-being, you will require resources to deliver activities and services to meet your goals in your environment (Figure 16 and Table 13). The building blocks of planning, implementation, and evaluation are common but should be sequenced differently when applied for planning and implementation (Table 14), and evaluation (Table 15).

15 See, Institute of Fiscal Studies and Democracy, *First Nations Not Affiliated to an FNCFS Agency,* IFSD, 2024, https://ifsd.ca/wp-content/uploads/2024/08/2024-07_en_first-nations-not-affiliated-to-an-fncfs-agency-final-report.pdf.

TABLE 13

Context	Socioeconomic, environmental, and political/governance realities.
Inputs	Resources applied to discharge a mandate, e.g., money, people, capital, etc.
Outputs	Activities or products generated by applying inputs, ideally linked to mandate and desired results.
Outcomes	Results of the outputs that may be short-, medium-, or long-term. Monitoring results should force a reconsideration of inputs and outputs with consideration of context to help achieve desired goals.

When considering planning and implementation, the framework can be useful by defining a starting point (context), desired results (outcomes), the actions to achieve the outcomes (outputs), and the resources required to deliver the activities (inputs).

TABLE 14

Context	What's your starting point? What socioeconomic, environment, and political/governance realities will impact your plans?
Outcomes	What are you trying to achieve? What are your goals? For instance, the well-being of children and families in a resilient community.
Outputs	What actions will you take to achieve your goals? For instance, deliver new services.
Inputs	What resources do you need to deliver on the actions? For instance, people, money for salaries, buildings, cars, etc.

To evaluate a service or program, the approach to planning and implementation is reversed. For an evaluation, an accounting of resources (inputs) is tied to activities (outputs) to assess whether goals (outcomes) have been achieved.

TABLE 15

Context	What's your starting point? What are your current socioeconomic, environment, and political/governance realities?
Inputs	What resources are you using? Quantify expenditures, staff organization, etc.
Outputs	What actions, e.g., activities, services, programs, are being delivered? How?
Outcomes	What results are being generated? Do they align to mandate and defined goals?

Turning these components into a plan for execution or transition requires strategy, systems, processes, and people.

This section on transition proceeds by:

1. Presenting a general framework for transition and operational considerations with strategy, systems, people, and processes;

2. Discussing guiding questions and tools for:
    a. Self-assessment to define a starting point;
    b. Estimating required funding; and
    c. Defining and executing a performance framework.
3. Providing summary analysis of operational tools:
    a. Capital considerations;
    b. Common positions and job descriptions (Appendix L); and
    c. Prevention and protection programs (Appendix Q).

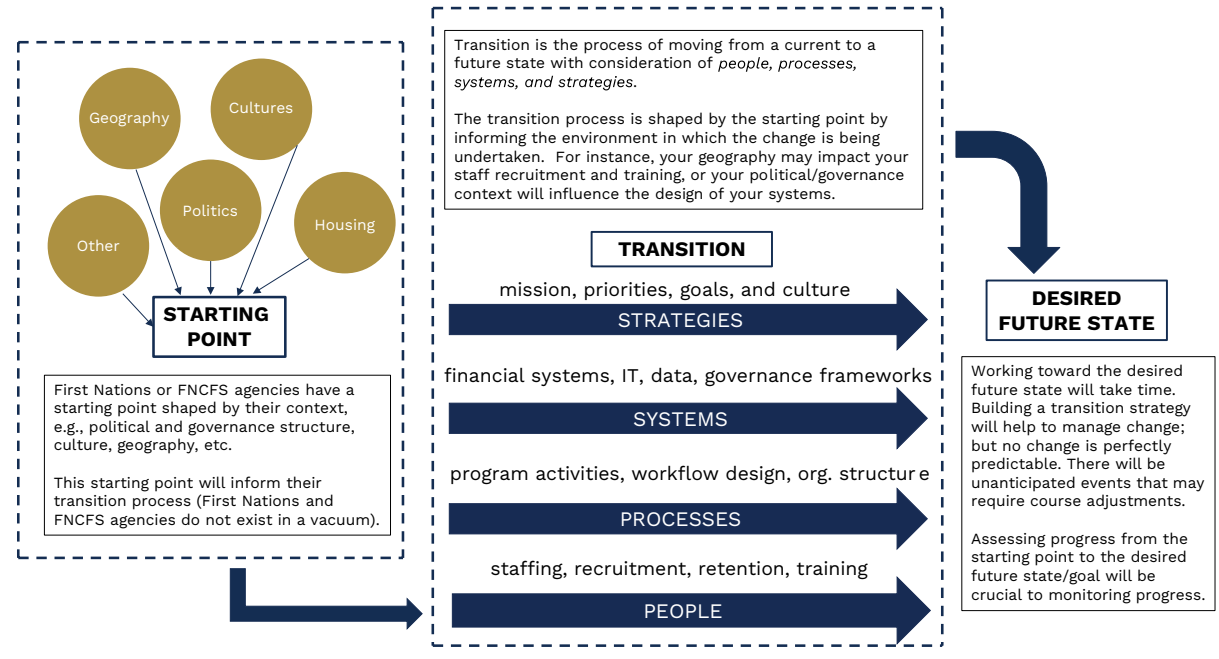
Hear from Neil Perley, Chief Operating Officer, Tobique Child and Family Services Agency Inc. on transition.

https://youtu.be/bJlCduGv6gY

GENERAL TRANSITION FRAMEWORK

In this report, transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process (Figure 17). Transition will look different for every community and agency.

FIGURE 17



The components of this approach are connected (see summary in Table 16). While they are presented separately, they are not mutually exclusive. Consider for instance the development of systems and processes. These are activities that should be led by the senior team responsible for service delivery and informed by strategy. Even though the "people" component of the approach is presented last, it does not imply that hiring may not occur throughout the establishment process. People are needed to oversee and execute decisions on systems and processes. In terms of sequencing, strategy is the sole exception. There must be clarity around purpose and intent before any other elements of the approach are actioned (see Figure 18).

FIGURE 18

COLLABORATOR E

Collaborator E is refining its organizational design in preparation for exercising jurisdiction. It is sequentially establishing strategy, systems, processes, and people to facilitate a smooth transition.

Strategy guides the entire transition process for Collaborator E, making it important to define clear strategic goals. This involved answering the following key questions:

- Where are we as an organization?
- Where do we want to be?
- What is the history of the community?
- What does a healthy community, family, and individual look like?

Collaborator E is actively evaluating and upgrading systems to meet the needs of its future state. Collecting and gathering their own information, such as through a community census, is an integral component of this process. The community context, the alignment of programs to needs, and measurement of outcomes informs funding and capital requests.

Clear strategic goals guide the development of processes to ensure alignment. Establishing feedback loops enables Collaborator E to continuously re-evaluate its programs, ensuring they meet community needs and signaling when adjustments are necessary.

After designing the strategy, upgrading systems, and establishing processes, Collaborator E has a strong foundation to recruit and retain staff. Guided by its strategic plan and vision, Collaborator E can anticipate future staffing needs and begin the recruitment process concurrently with the other elements. Collaborator E recognizes that over this 10–15-year journey, they will need to be responsive to shifting realities and make adjustments along the way.

TABLE 16

	CONSIDERATIONS, MILESTONES, AND CHALLENGES
Strategy	Defining the mission, priorities, and goals, shaped by culture is an essential first step in service delivery design. In CFS, whether a First Nation's law or provincial/territorial law is being followed will influence strategy. *Guiding questions:* • What does a healthy community, family, and individual look like? • What is our starting point, e.g., environment, history, culture? • What are we doing now to support them? • What can we do to better support them? • What is our vision for children and families in our community? • How will we express our vision? • What goals are associated to our vision? *Who should lead?* Defining a strategy should be led by those in the First Nation or FNCFS agency accountable for or overseeing the establishment of service delivery. Collaboration with the community, i.e., Elders, youth, adults, existing services, etc., and its leadership will be essential and should be ongoing. Some First Nations and FNCFS agencies have hired external services to support them in this work. *Illustrative timeline:* 12 months to 3 years, depending on the consistency of activities, community capacity for participation, reporting, and review of proposals. Consistent and devoted leadership is helpful for supporting engagement and continuity.
Systems	Identifying (or building) the financial and information technology practices and services, and governance frameworks should connect to the defined strategy. The systems will help to ensure the foundations for service delivery are in place. *Guiding questions:* • Where will your services be located, e.g., within the First Nation, in an independent not-for-profit FNCFS agency, etc.? • Are there existing systems that can be leveraged? If yes, what are the associated costs? If no, will these systems be outsourced/rented or established? • What are the basic functions you require from your: ◇ Finance system, e.g., pay staff, ensure accounting controls are in place, etc. ◇ IT system, e.g., staff tools, security for data privacy, website, etc. • Do you have an approach for tracking service delivery? Consider: ◇ Case management (protection and/or prevention) ◇ Performance, i.e., what you will monitor to report to your First Nation(s) on the well-being of children, families, and communities (or the defined mission and goals)? ◇ What type of information is required? What sources of information can you access, e.g., from the First Nation(s), Census, etc.? What sources of information will you develop, e.g., individual/family assessments? *Who should lead?* The director or person accountable for establishing services in the First Nation or FNCFS agency should oversee the definition of systems. They should be supported by an informed team who can support them in assessing and selecting appropriate systems to launch service delivery. Depending on the size and location of the service delivery, considering the outsourcing of certain functions, e.g., IT, pay system, etc., may be more cost effective than managing them internally.

	Illustrative timeline: 12 to 18 months for initial setup. This process is iterative. As processes are established, a change in systems may be required.
Processes	As the approach to service delivery is defined, the strategy, i.e., mission and goals should be aligned, and systems should be considered at relevant points of interface, e.g., linking case management to staffing functions. Processes will evolve with service delivery changes. *Guiding questions:* • What do you know about the population to be served? Consider: ◇ Size ◇ Declared areas of need ◇ Input on the strategic direction of service delivery ◇ Context, e.g., environment, existing services, etc. • What activities and services will help to fulfill mandate and goals? • Are CFS activities and services being delivered? Are activities and services supporting or adjacent to CFS being delivered? If yes, how are they being considered in planning? • What organizational structure will be implemented? Consider: ◇ Accountability, e.g., legal, technical, governance ◇ Activity and service requirements ◇ Alignment to mandate and goals to support accountability to First Nation(s) • How will you know what activities and services are working? Consider: ◇ Data gathering and analysis on relevant indicators ◇ Engagement with First Nation(s) and their leadership ◇ What practices will ensure adjustment to service delivery based on results? *Who should lead?* Leadership and middle management, i.e., program managers, supervisors, etc. should define and design the activities and services they will provide. *Illustrative timeline:* 6 months-12 months for initial development. Processes should be iterative and adjusted as activities and services are consistent.
People	Trained and qualified staff are required to implement strategy, leverage systems, and operationalize processes (see Appendix L for a list of positions and descriptions associated to CFS). *Guiding Questions:* • What people do you need to deliver your programs/services? • Are you hiring people from your community? • What training do you need to provide? • How will you recruit and retain staff? • What salaries and benefits can you offer? *Who should lead?* Different staff will be required at various periods of the development process. For instance, senior staff that will manage activities and services should be hired early in the process. They will then be accountable for defining positions and hiring staff for service delivery. *Illustrative timeline:* Timelines for hiring qualified personnel will vary. Existing service providers regularly highlight staff shortages. Access to pools of relevantly trained candidates will be an important consideration for planning. If new staff are to be trained, depending on the required qualifications and education, it may take months to several years. It is prudent to consider hiring across several years as service delivery is designed and developed.

FIGURE 19

Challenges of Implementation and Major Policy Change: Indigenous Affairs in Australia

Mark Moran, Geoff Richardson, Michael Woolcock

An excerpt of this analysis is presented in this report. Read the full analysis.[16]

[...] The paper has three principal themes: challenges and opportunities with implementation; the resistance of existing policies to substantive reform; and the capacity and leadership on the ground to create and sustain change. The intended audience in Canada is First Nations and First Nations leadership, First Nation Child and Family Service Agencies, policymakers, politicians, and advocacy organisations.

[...]

Many of the problems faced in Aboriginal and Torres Strait Islander are known in social science as 'wicked' problems due to their resistance to resolution. Because of their complex interdependencies, efforts to solve one aspect of the problems often only reveal others. Intractable social problems — such as family and gender violence, alcohol and other drug abuse, youth suicide, child neglect, parolee reoffending, and foetal alcohol spectrum disorder — do not respond to simplistic programmatic solutions. With complex problems, implementation pathways cannot be predicted. Fixating on contracting New Public Management style 'end-of-investment' outcomes puts the "cart before the horse" and perversely abrogates government of its responsibility to achieve those outcomes. Aboriginal and Torres Strait Islander people, while acknowledging that their challenges may be complex, contend that it's the so-called solutions that are the 'wicked' part.

As demonstrated through the case studies, successful initiatives in Australia tend to have four things in common:

1. a strong alignment with Aboriginal and Torres Strait Islander culture, with community-controlled organisations who specialise in delivering culturally safe and specific services to their constituents.
2. recognised representational authority with clear jurisdictional boundaries or a well-defined service delivery catchment area, especially if this authority is legislated.
3. ability to adapt and innovate in finding solutions to complex problems.
4. stability in leadership, key personal and funding.

[...]

---

16 Mark Moran, Geoff Richardson, Michael Woolcock, "Challenges of Implementation and Major Policy Change: Indigenous Affairs in Australia," *Institute of Fiscal Studies and Democracy*, May 2023, https://ifsd.ca/2023/05/challenges-of-implementation-and-major-policy-change-indigenous-affairs-in-australia/.

Every First Nation and FNCFS agency will have distinct starting points and contexts that will shape their approach to designing and delivering CFS. The strategy, systems, processes, and people approach is an illustrative framework for consideration. There is no supplement for context-specific planning and decision-making. Consider lessons from Australia on the challenges of implementation and major policy change among Indigenous peoples (Figure 19).

FIGURE 20

MINO — OBIGIWASIN SERVICES ENFANCE FAMILLE

Mino — Obigiwasin Services Enfance Famille (Mino) is an agency that is changing and adapting as it prepares to assume control of child and family services, in accordance with forthcoming legislation. Although Mino expects this legislation to be finalized by 2025, the transition toward self-governance will be a gradual one to ensure continuous and uninterrupted service delivery to children and families. To achieve this, the agency is following a plan that engages First Nations served by Mino, its staff, and its Board of Directors. Integrated processes, strategies, and systems will be used to manage the hurdles and successes arising from the new models of service delivery. The step-by-step approach used by Mino in the transition process is a considerable asset.

FIGURE 21

NIL TU, O CHILD AND FAMILY SERVICES SOCIETY

NIL TU, O Child and Family Services Society (NIL TU, O) serves seven First Nations in British Columbia (BC). These Nations confront conditions of poverty, housing shortages, inadequate housing, etc. Despite these First Nations being considered urban, transportation access remains a challenge, which affects the recruitment and retention of employees.

NIL TU, O responds to these challenges by offering services that meet the needs of the First Nations it serves. For instance, it is in the process of developing an office on wheels to provide clients with a safe and private meeting option to "[meet] them where they are." Additionally, NIL TU, O strategically partners with other organizations to meet the needs of community members. For example, it is collaborating with Threshold Housing Society in Victoria, BC, to provide supportive housing for youth ageing out of care.

NIL TU, O has already made significant efforts to engage with communities for future planning. Progress is slow, but NIL TU, O uses community input to better align its service offerings with the needs of the communities it serves. Continuing these efforts can help NIL TU, O prepare for ongoing transitions and develop strategic plans to respond to evolving community needs and dynamics.

UNDERSTANDING DIFFERENT POINTS OF DEPARTURE

Phase 3 collaborators offered insight on developing service provider typologies. These typologies are intended to support other First Nations and FNCFS agencies in identifying their characteristics in the Phase 3 contributions (Figure 22).

FIGURE 22

Guiding principles for service providers, regardless of typology:

1. **Communication:** Engage effectively with First Nations, stakeholders, service providers, etc.
2. **Research to inform policies and define best practices:** Develop policies informed by local, regional, national, and global best practices, e.g., Australia and New Zealand.
3. **Build trust:** Foster trust with community by ensuring consistency, transparency, and regular reporting.
4. **Supportive relationships:** Walk alongside those you're serving, offering support throughout all phases of the journey, whether that's the journey through healing or jurisdiction.
5. **Change is a process:** Whether building a new service model with community or exercising jurisdiction, promote a gradual increase in decision-making, recognizing these processes are not binary.

Collaborators identified two general approaches to service delivery:

1. Those exercising jurisdiction or implementing a First Nations law;
2. Those delivering services under the provincial/territorial CFS law.

In each approach, there are considerations across two continuums: whether the provider is **operational** or **in development**, and whether the provider is **walking alongside** (prevention services) or has **deemed intervention** (protection and prevention) in their mandate. Whatever the service delivery model, points of departure shaped by the First Nations served are unique.

Recognizing the unique contexts, collaborators shared their experiences to define considerations along the two continuums (see Appendix M for a summary of the collaborators' approach).

Working from the foundations defined by collaborators, IFSD depicts most cases of CFS delivery through the defining legal framework (First Nation law or provincial/territorial law) and broad activity areas associated to mandates (prevention, prevention and protection, other). From the legal framework and mandate, whether the provider's services are operational or in-development is considered (Figure 23).

FIGURE 23

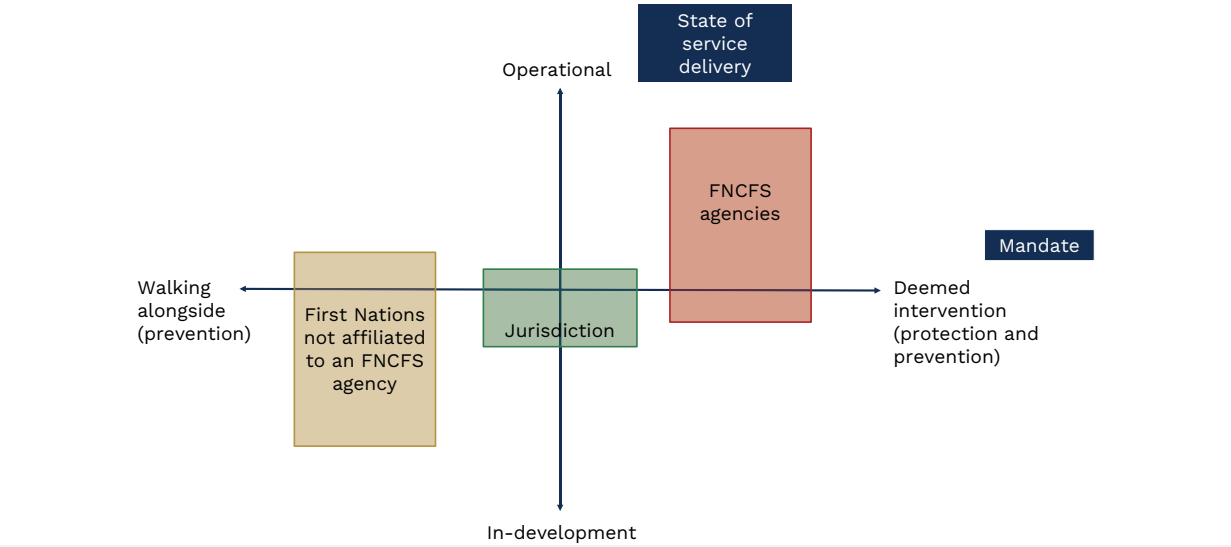

FIGURE 24

AWASIS AGENCY OF NORTHERN MANITOBA

Awasis Agency of Northern Manitoba (Awasis) is preparing to operate under multiple legal frameworks simultaneously. This presents challenges for managing its strategy, systems, processes, and people.

Of the 11 First Nations Awasis serves, some plan to sign a collective law, while others are in the process of drafting their own. Awasis will have to ensure its strategy, systems, processes, and people are aligned not only with two different First Nations laws, but also the provincial law.

While Awasis aims to operate under one mandate, this will depend on the outcomes of the First Nation laws. During this transition period, Awasis's strategy, systems processes, and personnel will undergo changes to ensure alignment to multiple legal frameworks.

Systems will upgrade to meet various requirements for reporting, adjudication methods, case management, etc. Additionally, processes such as policies, services, and workflows will have to be modified and clearly defined to align with three different laws. Operating under three laws will likely create additional demands on employees, making it essential to establ ish clear procedures and provide consistent communication and training to uphold these laws.

Awasis is preparing for this transition by implementing activities and services that reflect First Nations approaches. This includes clearly communicating their vision to the First Nations they serve and expanding community-based prevention services.

For most existing FNCFS agencies, they are operational and are mandated for protection and prevention. For most First Nations not affiliated to an FNCFS agency, they are developing their prevention services. In the case of jurisdiction, their starting points are varied. For instance, a First Nation that brings an operating agency under their own law may transition (or continue) service delivery with greater ease than a First Nation building their service delivery approach from scratch.

Collaborators provided their input on defining states of service delivery and expressions of mandate (Table 17). Their contributions may help other service providers identify their current state.

FIGURE 25

COLLABORATOR F

Collaborator F is on a journey to redevelop its organization plan and structure to improve its existing organizational design. It is reforming the structure internally by defining strategy, upgrading systems, establishing processes, and developing an organizational structure for employees. Collaborator F recognizes that for smooth operation, these elements require an overhaul.

Key to this internal reform is maintaining constant communication from upper management to all employees. As Collaborator F defines its strategic goals and vision, effective communication is critical for ensuring cohesive operation from the top-down. Concurrently, Collaborator F is upgrading its systems such as financial and data management to ensure alignment with the newly defined policies and procedures of the organization.

The agency is reintroducing and adapting a previously successful service delivery model while continuing its current operations. Changes in policies, procedures, and service delivery must be communicated to employees to ensure they are implemented in practice.

Collaborator F is establishing a new organizational structure by redefining employee roles and responsibilities to improve stability within the organization. It is evaluating how to best align existing employees with its reformed strategic goals, systems, and processes. This involves transitioning employees into roles that better match their skill set, creating teams with clear responsibilities and reporting structures, and updating human resource policies.

Collaborator F is reforming its internal structure while continuing to maintain operations and service delivery. A critical component of this journey is ensuring clear and constant top-down communication about changes to maintain organizational stability and effectively implement changes to strategy, systems, processes, and personnel.

TABLE 17

TERM	ACTIVITIES/CHARACTERISTICS
In Development	A service provider in development may be: • Developing community profiles and engaging with community to understand needs • Identifying practice and policy frameworks • Identifying community values and standards • Gathering available data on CFS and community needs • Confirming community context and needs • Designing a service delivery model • Holding meetings to develop service needs, expectations, and guidelines • Fostering collaborations with other services in the community • Seeking external support on unfamiliar topics, e.g., legal, financial, etc. • Identifying capital and expenditure requirements to operationalize their model • Creating a culturally relevant service delivery plan and policy framework.
In Operation	A fully operational service provider may have: • Policies that continue to evolve • Enacted their own law • Prevention protocols • Developed and operational programs • Hired and trained staff • Alternative dispute resolution/mediation practices • Cultural protocols • Nation-based decision-making processes • Standardized practices • Enforcement and appeals processes • Elder and youth committees • Community consultations • Regular meetings with staff and supporting experts, e.g., lawyers, accountants, etc.
Walking Alongside/ Prevention	When walking alongside or providing primary prevention, activities are: • Voluntary • Proactive • Available upon request by families • Least intrusive • Inclusive • Replacing provincial/territorial policies • Supported by comprehensive infrastructure • Focused on building relationships and trust • Redesigning protection services • Based on comprehensive needs assessments • Culturally relevant • Maintaining family connections • Recognizing First Nations law and autonomy
Deemed Intervention/ Protection-Prevention	When engaging in a deemed intervention or protection/prevention activities are: • A last resort • Intrusive • For higher-risk situations • Involving out-of-home care or supports in-home with the possible removal of parents • Applied after surpassing a threshold of deemed risk or need for treatment.

COLLABORATOR LESSONS ON TRANSITION

The 20 collaborators that contributed to Phase 3 were existing FNCFS agencies, First Nations contemplating/exercising jurisdiction, and agencies preparing to exercise jurisdiction for their associated First Nation. The service providers represented various:

- Approaches to service delivery
- Sizes of populations served
- Geographies (including with and without year-round road access)
- Practice histories, i.e., ten years plus
- Size of service provision teams/ organizations
- Provinces

Table 18 summarizes some of these characteristics, with the others omitted to respect the anonymity requests of various collaborators.

Many collaborators generously consented to publishing their working documents to ensure others could learn from their approaches and experiences. See Appendix N for collaborator materials including, sample allocations (using IFSD's funding approach and requested adjustments), transition cases, and capital estimates.

The collaborator group was reflective of the general population of service providers. They operate in different contexts, confront structural drivers of contact with protective services, and work to enhance the well-being of children, families, and communities. While no two service providers are identical, several share common characteristics and may have practices to emulate or lessons learned to share. Collaborator contributions informed findings and offer examples for other service providers in CFS.

The collaborators shared their work in anticipating transition. With 20 different profiles on transition, one from each collaborator, operational and service delivery considerations were raised. Their learnings suggest the importance of time to plan, to work with community, and to recognize that transition (especially, in the case of jurisdiction), is an ongoing exercise (Table 19). There is no end point, only evolution as service providers respond to changes in program parameters, funding, and community needs.

TABLE 18

* These First Nations are currently served by an FNCFS agency, with their future path still under development. The information in this table reflects the details of their respective agencies.

** Any instance of prevention activity, i.e., primary, secondary, and/or tertiary is captured in this table. Prevention activities are not distinguished by type or complexity. All forms of prevention services are treated equally.

TABLE 19

CHALLENGE/ LESSON	DISCUSSION
Long time horizon	Collaborators are, in general, at the early stages of transition. Many are just beginning to plan out their future vision, or capture their community's baseline context and needs. Some collaborators spoke about transition requiring a complete cultural shift, and undoing 400 years of colonization. This will likely require at least 15 years, and the process will be iterative.
Law development, adjudication, and alignment	Many communities are working on, or have completed, their own CFS law. While this can be an important step along the path of transition, it is not an end goal. Collaborators highlighted challenges that will follow: 1. How will the law be adjudicated? 2. How will service delivery align with the new law? 3. Will existing CFS staff want to work under a new legal framework, or for a new employer?
Liability	There is uncertainty over the liability and insurance impacts of operating under a new legal framework. Collaborators expressed concern that they would not be able to obtain insurance from current providers. Some collaborators expressed that Canada may have to develop an insurance specifically for the reformed FNCFS Program.
Recruitment, retention, and "under-hiring"	Recruitment and retention are industry-wide issues. Frontline workers have particularly high turnover. In many communities, this challenge is exacerbated by remoteness, a lack of suitable housing, and other community issues. Some collaborators have sought to fill gaps by hiring less-qualified candidates, i.e., hiring a high-school graduate instead of a university graduate.
Community context challenges	Many communities are facing significant issues outside of CFS, e.g., poverty, addiction, inadequate housing, etc. This creates more demand for CFS and places greater strain on existing staff and communities.
Communication	Open and adequate communication is critical. This applies internally, e.g., between management and frontline staff, and externally e.g., between an agency and a First Nation. Collaborators with strong communication consistently highlighted positive outcomes, e.g., greater political support, stronger organizational partnerships, etc. Conversely, collaborators with less communication reported frequent challenges, e.g., staff lacking understanding of corporate policies, inability to plan over the medium- and long-term, etc.
(Re)building institutional trust	High institutional trust allows an agency or First Nation to operate effectively. Many collaborators highlighted that they were starting from a deficit, i.e., community members distrusted CFS staff, and the organization in general. Collaborators discussed communication and delivering prevention services as being critical to trust-building, i.e., CFS is more than just protection.

FIGURE 26

PIMICIKAMAK CREE NATION

Pimicikamak Cree Nation's (Pimicikamak) journey in jurisdiction recognizes the value of having a child and family services organization that is independent from the Band. As such, its law will be implemented by its existing FNCFS agency.

Pimicikamak has a clear vision for child and family services, which includes caring for people from birth to death, and supporting the development of capable individuals. This vision guides its transition process.

Pimicikamak faces housing gaps, including a shortage of housing, inadequate housing, overcrowding, and a lack of access to potable water. Pimicikamak aims to address these gaps through child and family services, which will require funding and planning.

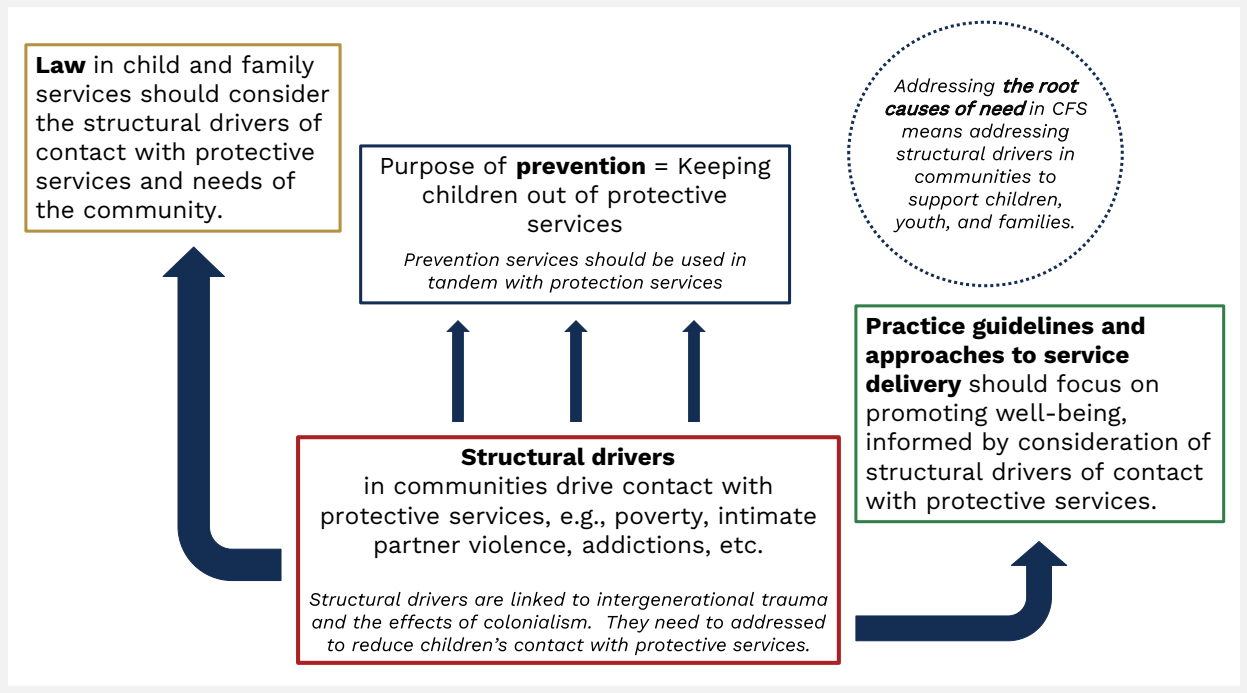
While the agency is in place structurally, the transition will focus—even ahead of the enactment of the law—on realigning its practice to emphasize prevention, in a culturally relevant manner, with the best interests of the child at its core.

Analysis of the collaborators' transition profiles indicates that service providers are falling into a better-funded system by integrating changes as they arise. Instead of deliberately planning to focus practice on the well-being of children and families with community engagement, service providers are reacting to funding changes. This lack of deliberate, purposeful, and informed, reform results from ad hoc funding decisions from ISC.

Lessons from transition analysis for reform

Reform must focus on well-being to mitigate the effects of structural drivers of contact with protective services (Figure 27). To implement reform that ensures discrimination ends and does not reoccur will require changes in the practice of FNCFS (through communities and service providers), funding and structure (at the level of funders/governments), and in measuring and monitoring change in communities for accountability to First Nations.

FIGURE 27



Laws and practice guidelines governing protection and prevention services must consider the structural drivers of contact with protective services. Addressing the root causes of need of children and families is the only sustainable way of promoting reform. This type of change will take decades of sustained efforts.

Children come into contact with protective services most often from structural drivers of need, e.g., poverty, inadequate housing, intimate partner violence, parental mental health challenges, addictions. These structural drivers are linked to intergenerational trauma and the effects of colonialism.

FIGURE 28

KINOSAO SIPI MINISOWIN AGENCY (KSMA)

Kinosao Sipi Minisowin Agency (KSMA) serves Norway House Cree Nation (Norway House), which is pursuing jurisdiction. Norway House families face high rates of poverty, food insecurity, high living costs, inadequate housing, and intergenerational trauma. These are structural drivers of children entering care and affect KSMA and its transition path.

KSMA is continually updating its programs and services to meet the needs of Norway House. For instance, it has established a food cupboard in the community to help address food insecurity. Additionally, KSMA supports families by providing financial assistance, with the most support going towards families with medical needs.

KSMA is anticipating its transition by updating its services to be culturally appropriate. Throughout this process, KSMA should focus on core activities and services to ensure that existing needs for people, processes, and systems are being met.

There are three principal reasons why children come into contact with protective services:

1. Immediate needs (0 to 1 month): Child needs emergency assistance and placement in protective services because of existing threats to their safety e.g., intimate partner violence, caregiver substance misuse, caregiver death, etc.
2. Short-term needs (1 month to 2 years): Child needs protective services because caregiver cannot ensure their well-being, e.g., caregiver in rehabilitation, caregiver incarcerated, caregiver in hospital, etc.
3. Long-term needs (2 years +): Child needs protective services for the foreseeable future, e.g., severe abuse, severe neglect, complex special needs, caregiver has long-term addictions or is incarcerated.

Addressing immediate needs means reducing the interaction with protective services (even if prevention services continue). Without addressing immediate needs, the child/family enters the short- or long-term phases of protection. Prevention services should be continuously offered (for parent(s)/guardian(s)) even if children are in care.

Over time, the goal is to reduce the need for protective services (Figure 29). The need for protective services would be reduced by mitigating the effects of structural drivers of care and leveraging prevention services. This will take time.

FIGURE 29

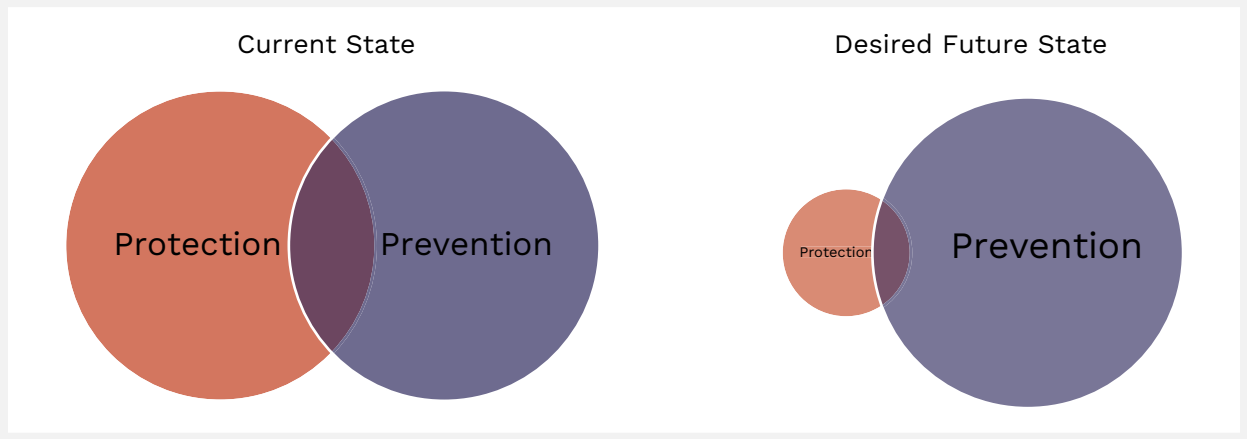


FIGURE 30

GARDEN RIVER CHILD AND FAMILY SERVICES

Garden River Child and Family Services (GRCFS) is in the early stages of preparing for exercising jurisdiction. It is beginning to concurrently update and establish its strategy, systems, processes, and people to ensure readiness for the devolution of protection services.

GRCFS is delivering prevention services that meet the needs and demographics of the community it serves; however, it would like to expand its service offerings. This desire is constrained by challenges across strategy, systems, processes, and people.

The primary challenge for GRCFS is a lack of capacity and people. This limits its ability to deliver services and meet future goals. GRCFS faces recruitment challenges primarily driven by pay. It cannot offer competitive compensation as it is limited by the First Nations pay band, which defines pay rates and thresholds for Band employees. While GRCFS is updating its strategic plan, capacity issues constrain its ability to set and meet goals.

GRCFS is working towards expanding prevention services to meet evolving community needs; however, it is operating in an environment with limited resources, space, and people. This limits its ability to implement strategies, systems, and processes.

Organizational transitions will take years. Transitioning from the current state to a desired future state to implement organizational changes will take several years (approximately 2 to 5 years for established FNCFS agencies, and longer for those exercising jurisdiction without an existing

CFS practice). Adequate and sustainable funding based on needs is critical, but money alone cannot guarantee results. All communities and service providers face different circumstances and are at different starting points. The time and resources required to navigate from starting point to a future steady state will vary significantly between communities and service providers.

FIGURE 31

COLLABORATOR H

Collaborator H is confronting uncertainty in its planning as the First Nation it serves contemplates the pursuit of jurisdiction. Given the uncertainty, Collaborator H is only able to plan at most six months at a time. This limits long-term program development and delivery as well as complicates staff retention.

Administratively, Collaborator H is independent from the First Nation and is externally accredited for its service standards. This means that Collaborator H must maintain certain operational standards to retain the designation. Its independence means it can manage salary levels and employment matters directly with its staff. A change in structure through jurisdiction may mean a loss in accreditation and staff should the same standards and practices not be upheld.

This highlights several considerations for First Nations contemplating the pursuit of jurisdiction independently from an FNCFS agency, with a key consideration being the translation of the law into practice. In addition to having a law in place, it is essential to develop policy manuals, establish governance structures, and hire qualified staff.

Clear communication between an agency and a First Nation planning to exercise jurisdiction is critical for supporting long-term planning for both parties.

First Nations facing a major transition (or those starting service delivery from scratch) will likely take longer to arrive at a steady state than established service providers. This includes communities that are developing their own law, those building a new organization from the ground up, and those facing significant challenges in their community (e.g., severe addictions, trauma, housing inadequacy, etc.).

Conversely, some communities service providers will take less time to transition. These communities and service providers may be adapting existing systems to suit their needs, already have adequate staff, or have relatively fewer community or political challenges. Consider the case of Payukotayno James & Hudson Bay Family Services (Figure 32), which covers a complex geography and works alongside the First Nations it serves to build prevention service capacity.

FIGURE 32

PAYUKOTAYNO JAMES & HUDSON BAY FAMILIY SERVICES

An excerpt of this case study is presented in this report. Read the full case study.[17]

Context

Payukotayno James & Hudson Bay Family Services (Payukotayno) is a Children's Aid Society serving all community members – both First Nation and non-Indigenous - on- and off-reserve, including a municipality and a local area services board, along the western coast of James and Hudson Bay, geographically prescribed by the Ontario Ministry of Children, Community and Social Services, of approximately 8,000 people. For 40 years, the agency has provided a range of services including, child welfare, children's and youth's mental health services, foster and customary care, adoption, and prevention services.

The communities served are geographically remote and are often only accessible by boat, aircraft, or ice road. The seasonal cycle, including the annual flood threats that result in community evacuations, further complicate accessibility. This makes commuting and service-delivery costs high. Payukotayno charters a plane from Timmins three times a week at a cost of $11,000 per day to reach three First Nation communities. For the farthest and most northern community, a special charter, costing $17,000 per day per Transport Canada regulations, is required. Due to travel costs and logistics, staff are encouraged to work from or stay in the community they serve to minimize costs. However, a lack of on-reserve and off-reserve housing and accommodations makes this challenging, and impacts program delivery and staff retention.

Payukotayno navigates these realities to serve children, youth, and families, with an approach premised on culturally-relevant community building and capacity development for program and service delivery. Most staff are members of the First Nations served, and have been personally impacted by the child welfare system. Staff are making decisions not only as employees, but as part of the community fabric.

[...]

Now, Payukotayno is working towards the communities' original vision: "[o]ur families are healthy and empowered to nurture and care for their own." The organization is moving forward with an Omushkego approach to child welfare ("As One Family"). This approach focuses on children as gifts from the Creator, extended family networks as collective, and adopts a holistic perspective that integrates spirituality, local culture and the relationship with the land, ways of knowing and being, and rites of passage.

17 Institute of Fiscal Studies and Democracy, "Paykotayno James & Hudson Bay Family Services," IFSD, August 29, 2024, https://ifsd.ca/en/blog/last-page-blog/Payukotayno-James-Hudson-Bay-Family-Services/.

Community building

Payukotayno is a partner with each First Nation, and considers a gradual transformational strategy to be essential to supporting and sustaining change in service delivery. The agency's board members are appointed by leadership of Weenusk, Attawapiskat, Kashechewan, Fort Albany, Moose Cree, and Taykwa Tagamou First Nations, Mocreebec, and Moosonee. Annually, it presents at the Mushkegowuk Council Assembly.

Payukotayno sees First Nations taking the lead as a critical long-term goal. Working with the First Nations communities, the agency is transforming in coordination with each First Nation to create community-based service hubs. Payukotayno supports the First Nation communities by planning and mapping steps to service delivery, "meet[ing] them where they're at." There is recognition that First Nation communities all have different starting points on their reclamation of sovereignty over child welfare, education, health, etc. The agency works alongside First Nations communities, supporting them through the planning and execution processes, specifically through the input and guidance of the Deputy Chiefs/First Nation Representative Services Table: "We need to look through a lens of intervention, prevention and partnership. We need to change our thinking on how we are supporting communities... the original intent."

First Nation communities working with Payukotayno had two years of funding to support and establish their service hubs. There is no arguing over prevention dollars, their approach was pre-determined. Each on-reserve First Nation community determined what they would do with prevention funding and how services would be designed and delivered. The agency is working alongside each First Nation through an established regional prevention network to support community-based, First Nation-led prevention programs, e.g., "The Prevention House Toolkit."

While the warmth and integration of the agency-First Nation relationship varies based on community and context, roles for each of the partners are becoming more clearly defined as each First Nation asserts its sovereignty over child and family well-being. The First Nations deliver prevention services with support from the agency, and the agency delivers protection services along with tertiary or intensive prevention services. This is an interim model, as each First Nation is determining their unique vision of child and family well-being.

In one example, the healthy working relationship between First Nation and agency has seen an exceptional increase in trust and capacity development. According to the agency: "...they [the First Nation] are doing a fantastic job with prevention. [...] They are building a relationship of trust where community members are seeking out prevention before protection."

The capacity building piece within First Nations is crucial to the agency, *"our communities know themselves better than we [agency] do. It's our job to set them up for success."*

Children in Care – Placements

Payukotayno is working towards having all children in care remain within the Mushkegowuk territory. Year over year, the relative number of children placed in care outside of the territory has decreased, while the number of placements in customary care and placements in James Bay have increased. This has also been accompanied by an increase in the total number of children in care. Payukotayno emphasizes that this increase "creates challenges due to inadequate housing infrastructure and the need to comply with restrictive and community-inappropriate standards and directives issued by the provincial Ministry standards."

Capacity development

The majority of Payukotayno's staff are members of the First Nations served. Payukotayno staff highlighted community-based staffing as important to effective service delivery. They are making decisions not only as employees, but also as part of the community. However, two key barriers exist to the staffing approach.

First, there is a lack of housing within all communities, on-reserve and in the municipality. Community members who would like to return home to work are unable to find adequate housing on- and off-reserve. Other provincial social services (e.g., police, education, health) have subsidized housing available to staff, but not for child and family services. This makes it difficult to recruit and retain staff. One staff member said "people can't come home because they've got nowhere to live."

Second, there is a shortage of human resource capacity within communities. Provincial regulations now stipulate post-secondary educational requirements to work in provincial child welfare. There are community members that meet these professional requirements, yet are employed in other organizations, making it difficult for Payukotayno to recruit. The agency employs 130 staff members, but these staff members are not paid at provincially comparable rates. Additionally, access to community-based career and training opportunities is limited (especially for those interested in social work). This includes many of Payukotayno's current childcare workers, who have worked in the field for many years.

Payukotayno is addressing this barrier by partnering with a university and a regional tribal organization to deliver a community-based social work degree learning and career continuum model. Payukotyano is working with these partners to ensure applicants to the four-year program will have advanced standing for their prior educational and work experience and are investigating the recognition of concurrent application of learning for the practicum component.

The program and internal capacity delivering approach are essential for jurisdiction, for the agency and for each First Nation. Building capacity and expertise within the First Nation by integrating cultural and traditional practices with Western ones increases support and staff availability, benefitting both the agency and each First Nation's programs and service delivery models.

[...]

Delivering services takes time and requires capacity. Staff need to be trained, competent, and available (i.e., not managing an unsustainable workload). Processes and systems need to be designed and implemented. Organizational strategies need to be determined by senior leadership and executed, with room for adjustment. Developing partnerships, like Payukotayno's parternship with a university, can help agencies develop long-term capacity and stability. Capacity can be built internally, but it cannot be built overnight. It takes time for an agency to reach stability and organizational maturity.

Read the full case study.

SELF-ASSESSMENT TOOLS

When a service provider is anticipating a change to their funding, operations, service delivery, or starting something new, reviewing the experiences of other providers with similar characteristics or approaches is useful. Rather than confronting a blank page, there is an established network of service providers from which to learn. To help assess starting points for service providers, IFSD developed a general, four-stage approach to capturing and analyzing transitions:

1. Future Vision Determining and articulating a future-state vision (i.e. where do you want to be?)
2. Current State Articulating the current state (i.e. where are you now?)
3. Gap Analysis Identifying misalignment between the current state and the future state (i.e. what are the gaps?)
4. Transition Planning Preparing plans and timelines for addressing the gaps (i.e. how do you get there?)

There are two approaches presented: one for FNCFS agencies (Table 20) and one for First Nations contemplating/exercising jurisdiction (Table 21). The questions in the self-assessment tool are intended to define and align to operational readiness. It is expected that FNCFS agencies are mostly operational with some elements of mandate in development, whereas First Nations exercising/contemplating jurisdiction are in varying states of development. Assessing the state of readiness for service delivery/operations can help to orient transition efforts.

FIGURE 33

YELLOW THUNDERBIRD LODGE

Yellow Thunderbird Lodge (YTL) serves a large geographic area in Saskatchewan consisting of 14 First Nations. It is anticipating changes to the FNCFS Program and has begun adjusting its strategy, systems, and processes.

YTL integrates both Western and Indigenous approaches to delivering child and family services, as defined in its policies, models, and procedures. YTL has developed unique service delivery models for each cultural group that it serves, incorporating culture, identity, and languages. YTL's strategy is continuously evolving, with new guidelines and procedures outlining these approaches. This departure from the provincial mandate is evidenced by data and outcomes generated by YTL's robust data system. The data is used for improved decision-making and funding requests to ensure continued funding.

FNCFS agencies

TABLE 20

FNCFS AGENCIES

COMPONENT	GUIDING QUESTIONS	INFORMATION AVAILABILITY	LESSONS AND CONSIDERATIONS FROM COLLABORATORS
Future vision	1. What does well-being mean to the First Nation(s) served? To your agency? 2. What are the characteristics and practices of a well-functioning agency? 3. How should your agency's vision be defined? By whom? 4. What is your agency's vision for CFS?	Is the information available? Yes, or no? If no, how much time will it take to develop or obtain? What factors will influence the process?	*Engage with staff and First Nations served to define and/or adjust vision to meet needs in communities.* *Mino-Obigiwasin Services Enfance Famille is defining the transition process by engaging with First Nations served, its staff, and the Board of Directors, see Appendix N (transition case study).* *Carrier Sekani Family Services (CSFS) is working closely with the First Nations it serves to define and navigate transition by sharing resources, establishing services such as Child Safety Departments, and building capacity within the Nations through a Community Development Program. See Appendix N (transition case study).*
Current state	1. What are the socioeconomic, environment, and political/governance realities your agency confronts/addresses? 2. What are the agency's governance and accountability frameworks? How are they performing relative to First Nation(s) served and compliance requirements and practice standards? 3. What is your agency's mandate? 4. What resources do you use to deliver your mandate? Consider, people, capital, program requirements, etc. 5. What programs and services do you deliver? How? 6. How do you assess the results of your work? 7. What results have been generated? Do they align to the mandate and defined goals of the agency?	Is the information available? Yes, or no? If no, how much time will it take to develop or obtain? What factors will influence the process?	*Secwépemc Child and Family Services Agency is an example of an FNCFS agency that leveraged its current state analysis to identify housing as an area of need in the First Nations it serves. It expanded its mandate to include housing in response to the gaps. See Appendix N (transition case study).*

Gap analysis	**Strategy:** 1. How does the agency's mandate compare to its desired/future vision and goals? 2. Do the First Nation(s) served support the future vision and/or the current mandate? **Systems:** 1. What systems, e.g., IT, financial, performance exist? 2. How do existing systems align to desired/future vision and goals? 3. Do the systems need to be revised to align to the desired/future vision and goals? **Processes:** 1. How does your agency understand current and future needs of the First Nation(s) served? 2. How do current activities and services align to the desired/future vision and goals? Do activities and services need to be realigned or reimagined for consistency? 3. How does your agency's organizational structure align to the desired/future vision and goals? **People:** 1. Are existing staff qualified and able to discharge the current mandate? Will additional or different skills be required to align to the desired/future vision and goals? 2. Is training required? 3. How is staff retention at the agency?	Have gaps been defined relative to the starting point? Yes, or no? If yes, how was the gap defined and what was the result? If no, how much time will it take to develop?	*With the future vision and current state defined, the agency's senior leadership team and managers responsible for the activity areas should assess whether current systems and practices are sufficient to address the vision.* *In some instances, outside consultants are retained to undertake or assess the gap analysis generated by the agency.* *CSFS is strategically planning for the evolution of its data system by establishing the necessary processes, systems, and expertise for its Quality and Innovation Program (See Figure 50).* *Collaborator A is an example of an FNCFS agency that is examining its internal data systems with the goal of integrating and upgrading them as it works with 6+ First Nations served on the exercise of jurisdiction (see Figure 44).*

Transition planning	Strategy: 1. How will you operationalize your new vision, mandate, and goals? 2. How will you engage with First Nation(s) served to share planning and transition expectations? 3. How will alignment between vision, mandate, goals, and operations be ensured? Systems: 1. Will the change impact your governance and accountability frameworks? 2. Is an adequate IT system in place? 3. Is an adequate financial system in place? 4. Is an adequate performance management system, i.e., data gathering against relevant indicators, analysis, and reporting, in place? 5. Are practices in place for regular reporting to the First Nation(s) served? Processes: 1. Is an organizational structure aligned to the new approach in place? 2. Are positions defined and relevant job postings prepared? 3. Are revised or redefined programs, services, and activities defined? 4. Are workflow and processes defined for the new approach? People: 1. Is hiring required to meet objectives? 2. Are current staff being retained? 3. Are staff from community being recruited? 4. Is training required? What are the timelines? 5. Are salaries and benefits competitive?	Has transition been considered? Yes, or no? If yes, how? If no, how will it be planned for? Does the agency have lessons from previous experiences designing and delivering new services or managing major change?	*Communication with the agency's staff and First Nations served will be crucial for managing any transition. While internal processes are shifting, front-line and internal services may be impacted.* *Clearly defining the steps for transition, the people and activities involved, and the expected timelines can help to manage expectations and create an environment conducive to learning to adjust as required.* *Collaborator F is planning for transition by practicing regular top-down communication to effectively implement changes across strategy, systems, processes, and personnel (see Appendix N, transition case study).* *Nogdawindamin Family and Community Services is an example of an FNCFS agency adjusting the types of services it delivers in preparation for the eventual devolution of prevention services to the First Nations it serves. This process involves regular communication and knowledge transfer with these First Nations (see Appendix N, transition case study).* *Awasis Agency of Northern Manitoba is anticipating operating under multiple First Nations' frameworks. It is preparing for transition by implementing activities and services that align with First Nations approaches to well-being (see Figure 24).*

First Nations exercising/contemplating jurisdiction

TABLE 21

FIRST NATIONS EXERCISING/CONTEMPLATING JURISDICTION

COMPONENT	GUIDING QUESTIONS	INFORMATION AVAILABILITY	LESSONS AND CONSIDERATIONS FROM COLLABORATORS
Future vision	1. What does well-being mean to your community? 2. How is the vision defined? By whom? 3. How can jurisdiction support your vision of well-being? 4. What's the goal of jurisdiction? 5. How will the vision and goals of jurisdiction be expressed?	Is the information available? Yes, or no? If no, how much time will it take to develop or obtain? What factors will influence the process?	*A person should be appointed or named to lead the vision exercise. They may have an established team, e.g., if prevention services are already being offered in the First Nation. Some First Nations have sought an outside firm to lead engagement exercises and gather feedback for reporting.* *Working with youth, Elders, leadership, and the community at large will be important to capture a complete vision.* *Piikani Child and Family Services is defining its future vision by conducing in-depth consultations with the community members, see Appendix N (transition case study).* *Collaborator E defined key strategic goals for the organization's future as it exercises jurisdiction for the First Nation it serves (see Figure 18).*
Current state	1. What are the socioeconomic, environment, and political/governance realities of your community? a. What's the community's starting point, consider culture, elders, housing, water, etc.? 2. Does your First Nation offer CFS? a. If yes, what are the services/activities? b. How are they delivered, e.g., staff, infrastructure, etc. 3. What have been the results of the existing approach to CFS? 4. What CFS resources exist in your community, e.g., people, infrastructure, history of practice, training opportunities, etc.? 5. How is CFS governed in your community? 6. Are there consistent resources, i.e., funding, people, infrastructure, allocated to CFS?	Is the information available? Yes, or no? If no, how much time will it take to develop or obtain? What factors will influence the process?	*Collaboration with other service providers in the First Nation will be helpful. Consider engaging with education, early childhood education, health, infrastructure, etc. to define the community's starting point. Are there common areas of action or concern? How can the different service areas collaborate to support well-being across the community?* *The CFS lead and their team should identify accessible data that can support planning, e.g., population, health outcomes, etc. There may be various sources of information available, especially, if the First Nation gathers their own information.* *Piikani Child and Family Services is addressing data gaps by developing a robust data system, beginning with tracking prevention services. This system links service provision with culture, relationships, and participation in activities. The approach is part of Piikani Child and Family Services' preparation to exercise jurisdiction on behalf of its First Nation (see Figure 49).*

Gap analysis	**Strategy:** 1. How does the future vision compare to the current state? 2. How will the community continue to be involved in jurisdiction activities? **Systems:** 1. How will be jurisdiction be expressed, e.g., within the structure of the First Nation, as an independent not-for-profit organization affiliated to the First Nation, etc.? 2. What systems, e.g., IT, financial, performance exist in the First Nation? Will they be available for use for jurisdiction? 3. Are additional systems required or existing ones revised to align to the vision of jurisdiction? **Processes:** 1. How does your community define current and future needs related to the vision of well-being and jurisdiction? 2. What activities and services will be designed and delivered to give meaning to the vision of well-being and jurisdiction? Are these different than or in addition to those being offered? 3. How will a service delivery and oversight structure be designed and implemented to operationalize the vision of well-being and jurisdiction? **People:** 1. Are appropriately qualified and skilled people in place to fulfill the mandate? Will additional or different skills be required to align to the vision of well-being and jurisdiction? 2. Is training required? 3. What entity employs staff, e.g., First Nation, separate organization?	Have gaps been defined relative to the starting point? Yes, or no? If yes, how was the gap defined and what was the result? If no, how much time will it take to develop?	*The CFS lead and their team should leverage information from the vision and current state assessments to define gaps across systems, processes, and people considerations. They may wish to liaise with related fields, e.g., early childhood education, health, where similar resources (people, tools, etc.) are working.* *In some instances, outside consultants are retained to undertake or assess the gap analysis produced by the CFS team.*

Transition planning	**Strategy:** 1. How will you operationalize the vision of well-being and jurisdiction? 2. How will you engage with the community to share planning and transition expectations? 3. How will alignment between vision, jurisdiction, and operations be ensured? **Systems:** 1. What governance and accountability practices will be introduced to align to the vision of well-being jurisdiction? 2. Is an adequate IT system in place? 3. Is an adequate financial system in place? 4. Is an adequate performance management system, i.e., data gathering against relevant indicators, analysis, and reporting, in place? 5. Are practices in place for regular reporting to the community? **Processes:** 1. Is an organizational structure aligned to the new approach in place? 2. Are job positions defined and aligned to jurisdiction? 3. Are revised or redefined programs, services, and activities defined? 4. Are workflow and processes defined in alignment to jurisdiction? **People:** 1. Is hiring required to meet objectives? 2. Are current staff being retained? 3. Are staff from community being recruited? 4. Is training required? What are the timelines? 5. Are salaries and benefits competitive?	Has transition been considered? Yes, or no? If yes, how? If no, how will it be planned for? Does the First Nation have lessons from previous experiences designing and delivering new services or managing major change?	*Planning for implementation will require the CFS lead and their team to define and execute activities to operationalize service delivery. Certain activities, e.g., defining staff profiles and preparing job postings, may happen at the same time as IT requirements are being defined.* *Determining the structure of the service delivery approach, e.g., part of the Band Council/First Nation, at arm's length independent organization, etc. would be an important first step. From there, governance considerations can be defined, and operational components designed.* *Communication with the First Nation will be crucial. Clearly defining the steps for transition, the people and activities involved, and the expected timelines can help to manage expectations and create an environment conducive to learning to make adjustments as required.* *Misipawistik Cree Nation (MCN) is planning for transition by acknowledging the importance of regular communication with the First Nation to effectively integrate the CFS law within the fabric of society, see Appendix N (transition case study) for these considerations.* *Garden River Child and Family Services is preparing for transition by concurrently updating and establishing its strategy, systems, processes, and people to ensure readiness for the devolution of protection services (see Figure 30).*

SUPPORTING TOOLS

ESTIMATING FUNDING REQUIREMENTS

Service providers require resources to discharge their mandates, ideally, connected to their differentiated contexts. Public funding can be allocated in different ways, e.g., per capita, by application, by formula, direct transfer, etc.

Funding CFS is dependent on the service provider and the law(s) they follow. In this section, two approaches to estimating federal funding allocations for populations living **in community** (i.e., on reserve) are presented:

1. FNCFS agencies (following provincial laws):
    a. Funded through the FNCFS Program and subject to its terms and conditions;
    b. Following provincial CFS laws for delegation.
2. Jurisdiction service providers:
    a. Funded through the FNCFS Program as described in the jurisdiction funding agreement and operationalized based on the First Nation's law.

The differences between the approaches include the principles for determining allocations, e.g., how the funding amount is defined, and the terms and conditions associated to their application/use. These elements are dictated by the laws and programs governing practice and funding.

FIGURE 34

IFSD's mandate related to federal funding for FNCFS. Service providers, however, even if they are principally funded by the federal government, will interface with provinces and often, their funding practices. At the request of a collaborator, the following questions were defined to seek clarification from a provincial government on activities and approaches to FNCFS:

- What are the goals of the province's child welfare system?
- Are the different starting points of Indigenous and non-Indigenous children considered?
- Are results for children in contact with the child welfare system tracked? What have been the results?
- How are costs for children in care determined?
- Are prevention services funded by the province? At what rate? How have they changed?
- How is funding for service providers determined?
- Is funding reviewed for sufficiency relative to the needs of children and families?
- How is the province supporting First Nations jurisdiction in child welfare?

This section presents IFSD's approach estimating CFS funding allocations informed by contributions from FNCFS agencies and First Nations.

IFSD's allocation approach was designed to connect to local contexts and ensure service providers were equipped to deliver on their mandates. The individual components of the allocation were meant to reflect known gaps in the FNCFS system.[18] Some gaps were addressed through industry standard benchmarks (e.g., IT), others based on case studies (e.g., prevention).[19] From a practical perspective, general operating costs are included in the model, e.g., legal fees, travel costs. When the baseline and components are taken together through a block contribution ap-proach (see the Structure section of this report), the expectation is that service providers will apply resources in ways to best meet the needs of children and families.

IFSD's approach to allocating funding is premised on local decision-making. While IFSD presents the components of the allocation as separate items, they are not expected to be treated as such in practice. For instance, just because the prevention allocation for is a service provider is $5M, it does not imply that the service provider can or should only spend $5M on prevention activities and services. The intent behind the block contribution approach is to empower those making decisions that are closest to children and families. It is up to a service provider to budget based on the needs of its community because it knows it best.

In a discussion of IFSD's Phase 3 recommendations, collaborators were clear that more time, resources (human, financial, etc.,) and consistent structural change would be required to uphold the CHRT's orders to end discrimination and ensure it does not reoccur.

Transparency in decision-making and clarity were required immediately for:

1. Monitoring of program performance to ensure accountability of the service delivery provider;
2. Funding amounts, recipients, and activities; and,
3. Governance of resources and reporting on funding.

---

18 See IFSD's past reports on costing the gaps in the FNCFS system, *Enabling First Nations children to Thrive* (IFSD, 2018), https://ifsd.ca/wp-content/uploads/2024/06/ifsd-report-2018-12-enabling-first-nations-children-to-thrive.pdf; and defining an alternative funding approach and performance framework, *Funding First Nations Child and Family Services (FNCFS): A Performance Budget Approach to Well-Being* (IFSD, 2020), https://ifsd.ca/wp-content/uploads/2024/06/2020-09-09_final-report_funding-first-nations-child-and-family-services.pdf.

19 The cost per person for prevention services, estimated at $2,500 per person, comes from an operating agency providing only prevention services. The program activities include: "community-based activities and family support, legal support, victim services, social work, and social assistance. The active learning style initiatives range from education on fetal alcohol syndrome and brain development to emergency homes for respite." (Enabling First Nations Children to Thrive, p. 92)

The $2,500 per capita allocation for prevention is built from an existing FNCFS agency that provides full prevention services to its community. The $2,500 per capita allocation represents a specific set of program activities. It does not represent the upper end of a range. The full case study and program activity description is from IFSD's report, Enabling First Nations Children to Thrive, p. 91-94. It is **important** to keep in mind, that the allocation of $2,500 for prevention activities is **part of a larger approach** described in IFSD's report, Funding First Nations Child and Family Services (FNCFS): A Performance Budget Approach to Well-Being. The allocation of $2,500 per person is part of a funding approach that ensures adequate and needs-based resourcing for contextual factors such as, geography and differences in need (i.e., poverty). **Pulling out the $2,500 per person from the overall funding approach is an artificial representation of the full resource profile that is being proposed as part of the broader reformed approach.**

Essentially, who is getting funding, to deliver what services, and with what obligations, needs to be clarified. These elements are required for planning, service delivery, and reporting.

There was agreement with IFSD's recommendations, but not consensus across all categories. Collaborators indicated that capital estimates were low, especially for those exercising jurisdiction. Prevention resources were also deemed to be too low, especially for agencies in provinces previously covered under Directive 20-1 (which did not include prevention resources), e.g., British Columbia, New Brunswick, etc. Until a steady state of prevention services could be defined, resources, from collaborators' perspectives, should not be limited.

Given the foregoing, collaborators make the following recommendations (Figure 35):

FIGURE 35

1. Capital funding should be needs-based. It should not be circumscribed by the FNCFS Program, especially for those exercising jurisdiction.
2. Prevention funding should be needs-based.
3. Establish a national pool of funds for emergency needs in CFS to address unexpected or costs of high-needs children.
4. ISC must clarify its funding and policy decisions aligning them to CHRT orders, e.g., capital, housing, etc.
5. Housing resources intended for CFS should be free of political influence and should be administered in collaboration with the CFS service provider.
6. Allocations for First Nation Representative Services should be revisited with a baseline for small First Nations and consideration of provincial/territorial variances in mandates.
7. To support the delivery of CFS, existing gaps in housing, health, and education in First Nations should be defined.
8. Population on-reserve does not represent true population served in First Nations as members may move in and out of community. Until such time that First Nations define their own populations, total population should be used for funding estimates.
9. Provincial and territorial governments should report all CFS-related information, e.g., expenditures, child outcomes, etc., on a distinctions basis, i.e., Inuit, Metis, etc.
10. Those negotiating the reform of the FNCFS Program should be engaging with rights holders and their delegated service providers.

Estimating a funding allocation should align to mandate and contextual realities. As delivery approaches to CFS continue to evolve, so will funding. Service providers may grapple with funding amount and approach changes, as exemplified in the cases of Sagkeeng Child and Family Services (Figure 36) and Animikii Ozoson Child and Family Services (Figure 37). Due to changes outside of their organizations, these service providers grappled with funding approach and amount changes by revising their planning and services. For Sagkeeng Child and Family Services, an underfunded provincial fixed envelope forced internal reallocation exercises. The team used the challenge to realign resources to their mandate and maximize their local control.

For Animikii Ozoson Child and Family Services, the resumption of jurisdiction in a nearby First Nation increased the number of children in care in the urban agency. Initially, the province did not fund them for the change in service demand, although that was resolved. Their case highlights the relevance of defining service populations for funding estimates.

FIGURE 36

Sagkeeng CFS block funding and accountability[20]

Since 2019, Manitoba child and family services agencies have been operating under block funding, i.e., single envelope funding. From the outset, the block was underfunded. For many agencies in the province, the block has a negative connotation because of its association to reduced funding. However, Sagkeeng Child and Family Services (SCFS) embraced the challenge of working with the block. The agency had to change the dynamic of its spending to meet the parameters of the block approach. Its efforts enhanced flexibility in decision-making and accountability to its First Nations.

The lessons from SCFS's experience with the provincial block are relevant as funding approach reforms for the federal First Nations Child and Family Services Program are being negotiated. In a federal context, should a block approach be adopted it would be expected that the resources in a block would be commensurate to agency mandates, i.e., not underfunded as in the case of Manitoba.

The block approach:

1. Means *autonomy* as a service provider.
2. Enables *allocations* to meet service delivery needs.
3. Requires *accountable* planning.

Changing the dynamic of spending in SCFS required action on three fronts:

1. Making tough internal decisions on performing versus non-performing activities;

20 Institute of Fiscal Studies and Democracy, "Sagkeeng CFS block funding and accountability," IFSD, May 8, 2024, https://ifsd.ca/en/blog/last-page-blog/Sagkeeng-CFS-Block-funding-and-accountability.

2. Revisiting practice and (re)educating staff to focus on preventive services rather than removals;
3. Building accountability into planning.

"My objective as an agency is to be completely autonomous, so as to operate as if our own laws are already in place."

Tough internal decisions

Manitoba's block funding incentivized agencies to reduce their caseload because fewer cases of children in care meant lower expenditures for maintenance payments, protection staff, etc. SCFS carefully reviewed its internal services and activities and made difficult decisions to cut non-essential services. The management team worked to determine which services and activities were unused or non-performing and they were eliminated.

As this exercise was happening, SCFS spent time educating caregivers, e.g., about changes to their rates and services, and with leadership. SCFS needed its community to understand and support its approach of working within its parameters to make it possible.

For established agencies or other organizations, managing a block will be easier from SCFS's perspective because they understand their approach to service delivery, needs, and issues. For newer agencies a block risks being harder to manage as their approach to practice and history of service delivery is not well-established.

Revisiting practice

With the block funding, SCFS had to shift the 'mindset' of practice from placing children in care to manage liability to accepting the risk of supporting children in their families. While supporting children and families through intensive prevention services was a way to keep children out of care, it also meant lower maintenance expenses. This meant that resources could be redeployed to focus on supports and services to keep children with their families. SCFS used the incentive of the block, i.e., to work within a fixed budget, to use its resources to focus on prevention services.

Caseload composition at the agency has shifted. There are *more* protection cases that lead to more work with families, continuous supports and services, but *fewer* children placed in out of home care. The approach means doing more to reduce the need for removal and addressing safety concerns for children. The agency differentiates between a *risk* and an *immediate* safety concern. When the concern is immediate, the child is removed. If there is a risk, that means further action is taken but not necessarily a removal to support the child and their family.

SCFS changed the dynamic of its spending with the block approach. Using the block's flexibility to allocate resources to meet needs, SCFS could make decisions like hiring their own

therapist. They treated this as a reasonable expense to support children and families in contact with their agency. By controlling their resource allocation, they improved their approach to practice. SCFS used the block to move money where it makes the most difference for children and families.

Accountable planning

A block funding approach means the recipient takes on care and control in service delivery. While the provider benefits from the flexibility of applying funds where they are needed, they are also accountable for working within the fixed budget.

During their planning exercise for block funding, SCFS decided to retain 2% of their budget for unanticipated situations. The decision was prudent as it provided SCFS with a cushion that it controlled for unanticipated situations. For instance, there continue to be children with specialized support needs with costs that stress the agency's budget. Fortunately, the agency's retained funds could be applied to manage the circumstance. The situation, however, is not indefinitely sustainable. From the outset, the provincial block was underfunded. While SCFS has leveraged the flexibility of the structure, it remains accountable for working with insufficient resources. SCFS has had to seek resources elsewhere to sustain its practice.

As an agency serving First Nations in and outside of community, i.e., on- and off-reserve, SCFS receives both provincial and federal funding. Provincial funding under the block approach was focused on protection and prevention services for children and families in need of support. The agency's federal funding had different uses depending on the source, e.g., First Nations child and family services Program, Jordan's Principle, etc. Funds are managed separately for transparency, accountability, and ease of reporting on use.

What did SCFS learn from the block funding approach?

1. Changing a funding approach takes time, commitment, and good internal information.
2. Ensure your management team is strong, competent, and supported by your First Nation.
3. Build and manage your own contingency fund.
4. Accept that changes to your service model may be needed and can be achieved.
5. Establish a training unit to support staff to change their approach to practice.
6. Accept that tough decisions will be required. Use your own information on practice and the needs of your children and families to make them.

For Animikii Ozoson Child and Family Services, the resumption of jurisdiction in a nearby First Nation increased the number of children in care in the urban agency. Initially, the province did not fund them for the change in service demand, although that was resolved. Their case highlights the relevance of defining service populations for funding estimates.

FIGURE 37

A CASE STUDY ON ANIMIKII OZOSON CHILD & FAMILY SERVICES

An excerpt of this case study is presented in this report. Read the full case study.[21]

Animikii Ozoson Child & Family Services (AOCFS) is an urban agency in Winnipeg that serves First Nations across Northern Ontario, Manitoba, Saskatchewan, and beyond. While delegated (in 2005) and funded by the province of Manitoba, it principally serves Ontario First Nations. AOCFS operates on an inter-provincial/inter-territorial basis to ensure First Nation and Indigenous children in Winnipeg have culturally informed services.

As an agency in an urban centre serving children and families residing on and off reserve, AOCFS experiences service delivery challenges compounded by jurisdictional issues. As an urban Indigenous agency, AOCFS often self-describes as being 'overlooked' by the province because its community and service delivery approach do not align to typical funding streams. To AOCFS, typical funding streams should not compromise the availability or accessibility of the maintenance funding of children under state care.

"Are these kids just a figment of their imagination?"

[...]

AOCFS operates in an urban centre serving Indigenous children from different communities. This means that children may be connected to a First Nation, may reside in an urban centre, or other, and require different approaches to service delivery to meet their best interests in a culturally-informed way. AOCFS operates outside of the typical territorial boundaries (on-/off-reserve) that determine funding (federal/provincial), which can create precarity in resource access for First Nations children. Just because children do not fall neatly in territorial boundaries, their needs are no less real. As an AOCFS representative stated "Are these kids just a figment of their imagination?"

Challenges

AOCFS faces two principal challenges: funding and jurisdiction. *Funding* is an issue of who should be paying for services for children. Jurisdictional disputes exist between provincial and federal responsibility for funding, because AOCFS serves children from several provinces outside of Manitoba, notably, Ontario. *Jurisdiction* is the issue of who cares for children when boundaries for service delivery change. Children can be transferred to AOCFS for various reasons (e.g., not covered by a First Nations child and family services (FNCFS) agency, not

21 Institute of Fiscal Studies and Democracy, ""Are these kids just a figment of their imagination?" A case study on Animikii Ozoson Child & Family Services," IFSD, September 18, 2023, https://ifsd.ca/2023/09/animikii-ozoson-child-family-services/.

a member of the First Nation where they reside, Indigenous child does not meet federal criteria to be a 'status Indian', etc.). Funding does not always follow a child expediently, leaving the agency to pursue the province for the transfer of funds. The funding transfer process can be disorderly. Ensuring resources follow children is important for maintaining their care.

Funding

As AOCFS works with First Nations in Northwestern Ontario, Manitoba, and Saskatchewan, each jurisdiction brings unique needs and challenges, which requires increased resources from AOCFS. Different communities have different systems, protocols, and standards that AOCFS must work within. Accordingly, it is impossible for AOCFS staff to develop one standardized approach to case management. Instead, staff manage cases within diverse systems, including both government and First Nations, consistent with the new federal legislation. This increases the workload on staff and ultimately, costs.

A shifting legal context

An Act respecting First Nations, Inuit and Métis children, youth and families has created space for Indigenous Governing Bodies (IGB) to pursue jurisdiction in CFS for their members *wherever they may reside*. While the federal Act would notionally make funding available for children recognized through jurisdiction (whether they reside in their community (on-reserve or elsewhere), the same does not apply to AOCFS. The federal government does not fund off-reserve children with 'Indian status' that are in care with AOCFS, despite ongoing efforts by the agency. There is an increasing risk that children are being left out of the evolving funding structure intended to meet their best interests in a culturally informed fashion just because their home community has not exercised jurisdiction in CFS. This practice risks instituting a two-tiered approach in CFS for 'status Indians': one for those exercising jurisdiction (a minority) and another for those without jurisdiction (the majority).

AOCFS staff have high caseloads (each case manager has 25-30 cases). Historically, up to the current fiscal year, salaries were lower than those of other agencies. Provincial funding for AOCFS staff salaries is based on 2014 salaries. This forced AOCFS to use funding from other areas to meet annual salary changes. With the high caseloads and salary pressures, attracting and retaining staff (especially, front line staff), is an ongoing challenge.

[...]

Relying principally on funding from the province of Manitoba means that AOCFS is subject to their terms with limited federal support for services provided to children outside the boundaries of the province.

[...]

Jurisdiction

Membership to a First Nation and status are driving the current service model. If an Indigenous child does not have status, the federal government does not pay for them. If a child does not have membership, the First Nation or related FNCFS agency will not necessarily serve them. This creates a service vacuum for many displaced Indigenous children that AOCFS has filled in Manitoba and across provincial boundaries.

For instance, when a First Nation's new CFS law covered only its members through its agency, any other children living in the community, whether they are First Nation, Indigenous, or non-Indigenous, were no longer served by the agency. When these children were transferred to AOCFS, no maintenance funding followed them (it had been paid in full to the agency earlier in the fiscal year). AOCFS appealed directly to the province and demanded the funding to cover maintenance for the 30+ children. Manitoba responded to the appeal, and AOCFS received the maintenance funding. However, this instance highlights a standing issue for AOCFS. Children are being transferred to AOCFS without the requisite funding to support them. In this case, AOCFS had to advocate to receive the maintenance funding associated to the 30+ children transferred to its care. From AOCFS' vantage point, the province has not developed an effective plan to manage the transfers of Indigenous children impacted by the new federal legislation with the constant transfer of children in Manitoba.

First Nations jurisdiction in child and family services is to be celebrated. It must be recognized however, that the decisions of First Nations on who to serve, where, and how, will impact children and families. As the case of the First Nation above whose law covered its agency and only its members, there will be children and families that will require services from other providers. Ensuring those children have culturally appropriate supports and services in the best interests of the child is consistent with federal legislation.

[...]

Canada's urban Indigenous population continues to grow, as does the First Nation population on-and off-reserve. This reality should be recognized and reflected in policy and in funding decisions. *An Act respecting First Nations, Inuit and Métis children, youth and families* commits to culturally relevant services in the best interests of the child in CFS. Upholding that standard requires that urban Indigenous agencies and FNCFS agencies have the services provided in urban centres recognized with adequate funding. The case of AOCFS highlights the pressures of service delivery in environments with limited funding and changes from the exercise of jurisdiction.

[...]

Read the full case study.

BUILDING A FUNDING ALLOCATION ESTIMATE

A funding allocation is different than a budget (although the terms are often used interchangeably). For the purposes of this report, the funding allocation is an amount of money transferred to a service provider to discharge their mandate. A budget is the internal and locally determined application of resources by the service provider. IFSD was mandated to help understand funding allocations, it is up to service providers to determine how to apply resources in practice to define their budget.

To build a funding allocation, IFSD leverages information public sources, e.g., Indian Registry Service (IRS) for population, Census for household income, as well as from existing service providers, e.g., through a questionnaire.

FIGURE 38

DATA LIMITATIONS AND NATIONAL ESTIMATES

IFSD was mandated to produce *national* estimates for the FNCFS Program for First Nations on reserve. National estimates are built on common sources of information, e.g., population, inflation, etc. Having common sources of information, while imperfect, enables the development of a consistent and statistically reliable set of estimates necessary to identify overall program funding requirements and other important program attributes. National estimates may or may not correspond precisely to local conditions.

It is entirely possible that a First Nation or an FNCFS agency has their own population data. However, for IFSD to use the information for a consistent national reliable estimate, every First Nation or FNCFS agency would have to have captured their population data in a methodologically consistent manner and provide IFSD with that data. This is the burden of the exercise being undertaken with imperfect information.

Without a consistent and reliable alternative source of data available for all First Nations served by an FNCFS agency, IFSD is required to work with the best available information. Data developed by First Nations, for First Nations is limited or nonexistent nationally. Analysis is therefore restricted by the national-level information that could be accessed for the national estimates for the FNCFS Program.

The population issue has been debated among experts but usually between IRS and Census data sources. In past consultations with the National Advisory Committee (NAC), IFSD has been encouraged by the technical experts to use only IRS population data and not Census data. It should be noted that in IFSD's work with population data, IRS population data on reserve is *generally* higher than Census population data.

Following a consultation with Statistics Canada, IFSD will continue to use Census 2016 total median household income data with adjustments for inflation in cost estimation, as IFSD considers the number a more accurate (albeit imperfect) reflection of the current state of First Nations.

Total median household incomes as captured in Census 2016 and Census 2021 increased significantly for First Nations. Statistics Canada has also observed general growth in income across Canada (see Statistics Canada, "Pandemic Benefits Cushion Losses for Low-Income Earners and Narrow Income Inequality – After-Tax Income Grows Across Canada Except in Alberta and Newfoundland and Labrador," *Government of Canada*, last updated July 13, 2022, https://www150.statcan.gc.ca/n1/daily-quotidien/220713/dq220713d-eng.htm).

Nationally, pandemic relief programs and other direct transfers to persons, e.g., increases to the child benefit, contributed to the income growth. While every First Nation is different, and the sources of their income changes unique, the pandemic relief programs and direct transfers were nationally available and were likely an important factor in the income growth observed for First Nations. Moreover, Statistics Canada indicated a change in Canada Revenue Agency (CRA) reporting with Form T90 for First Nations (starting in 2019) which could contribute to differences when making historical comparisons — although the size and direction of the impact is unknown.

IFSD's approach is built from a baseline with top-ups based on specific contexts. To estimate the allocation, the following information is needed (see Table 22):

TABLE 22

INFORMATION	DESCRIPTION
Baseline	Foundation of the funding approach determined by service provider type, e.g., FNCFS agency v. First Nation exercising jurisdiction. IFSD's focus is exclusively on federal funding. The baseline includes resources to fund core operations. In the case of existing FNCFS agencies, the baseline is expected to cover protection services costs, e.g., intake, maintenance payments, etc.
Total population	Population on-reserve, consistent with federal funding terms. IFSD uses IRS on-reserve data in its calculations. IFSD recognizes that publicly available population data is imperfect. It is entirely possible that a First Nation or FNCFS agency has their own population data. Should that data exist, they may wish to apply it to a funding allocation estimate.
Household income	The after-tax household income on-reserve from Census 2016 (data from Census 2021 was not used due to the impacts of individual and household supports related to the COVID-19 pandemic).[22] The information is used to calculate the gap between the after-tax median household income on-reserve and Market Basket Measure (MBM). If the difference is positive, i.e., household income is greater than the MBM, no adjustment is included in the funding approach. If the difference is negative, i.e., household income is lower than the MBM, and adjustment is included. Some collaborators requested that a territorial or Northern MBM be applied to better reflect the cost-of-living pressures in their communities. These were applied only to their estimated allocations. General concerns were raised about using an income-based measure to quantify deprivation or a lack of access to services. IFSD agrees with the limits of an exclusively income-based measure, but without an alternative consistent national measure, the top-up could not be quantified.
Remoteness quotient	Applied to adjust allocation estimates based on geography. IFSD re-estimated ISC's Cost Adjustment Factor model (CAF) and used it to estimate remoteness quotients. CAF uses Statistic Canada's remoteness index and considers whether a community has access to roads. ISC has recommended that CAF-based quotients be scaled down such that the average quotients across all agencies be 15 percent. IFSD used the same scale factor to estimate remoteness quotients (see Appendix O for IFSD's estimates of remoteness quotients for FNCFS agencies, First Nations not affiliated to an FNCFS agency, and First Nations affiliated to an FNCFS agency).

22 See Figure 38 for an overview of data considerations and limitations.

After the information is gathered, there are five steps to building the funding approach (steps 2-5 are discussed in this section):

1. Prepare the spreadsheet (or other tool for calculations). To access a copy of the script, contact the Assembly of First Nations Social Development Sector (via email: social.development@afn.ca). The script, produced by Dr. Fred Wulczyn, is being made available to First Nations and FNCFS agencies under copyright of the AFN, as an associated product of this report. The script cannot be licensed or used for any purposes other than for the internal work of the First Nation or FNCFS agency.
2. Define or infer a baseline.
3. Define and calculate top-ups.
4. Define growth factors, i.e., inflation and population.
5. Calculate the estimated funding allocation and any relevant scenarios.

The discussion focuses on IFSD's funding approach. There are other approaches to generating funding estimates. Various accounting and consulting firms have leveraged these principles to develop funding estimates for First Nations, especially in the exercise of jurisdiction.

Defining or inferring a baseline

Note: The examples below are generated for illustrative purposes only. First Nations and FNCFS agencies should use actual data from service providers or other relevant data on the costs of service delivery to estimate their baselines and related allocation components.

For an existing service provider, e.g., FNCFS agency, the baseline is the federal portion of their total expenditures for the most recent fiscal year. Consider, for instance, the case of Agency Z (Table 23).

TABLE 23

	AGENCY Z
Mandate	Protection and prevention
Total population served (on-reserve)	7,000
Number of First Nations served	5
Total expenditures 2023-2024	$25,000,000
Baseline (equivalent to total federal expenditures)	$17,000,000

If a baseline is unavailable or is being developed for the exercise of jurisdiction, it can be estimated in different ways. Consider the case of First Nation Y, preparing to exercise jurisdiction (Table 24):

TABLE 24

FIRST NATION Y	
Mandate	Protection and prevention
Total population served (on-reserve)	1,500
Number of First Nations served	1
Baseline	TBD (see examples below)
Geographic zone	1
Remoteness adjustment factor	0.15
Formerly served by Agency Z	

To estimate its federal allocation, First Nation Y phoned FNCFS agencies in different provinces with similar mandate, population size, and geographic considerations. First Nation Y produced Table 25 to summarize the information shared by other service providers.

TABLE 25

COMPARABLE SERVICE PROVIDERS	NUMBER OF FIRST NATIONS SERVED	HIGHEST GEOGRAPHIC ZONE	PROVINCE	ON-RESERVE POPULATION	FEDERAL BASELINE ALLOCATION FY 2023-24	PER CAPITA EXPENDITURE
Agency A1	4	1	Province A	1461	$4,300,000	$2,943
Agency A2	1	2	Province D	1599	$6,300,000	$3,940
Agency A3	5	2	Province C	1543	$7,000,000	$4,537
Agency A4	1	1	Province D	1514	$2,900,000	$1,915
Agency A5	1	2	Province D	1484	$600,000	$404
				Average total federal expenditure	$4,220,000	
				Average total federal expenditure of service providers in Province D	$3,266,667	
					Average total per capita expenditure	$2,748
					Average per capita expenditure of service providers in Province D	$2,087

Three approaches are presented to estimate a baseline for First Nation Y:

1. *It can be inferred by using the baseline of another provider with a similar mandate, size of population served, and geographic context. "Scenario 1"*
   When considering its location, mandate, and size of population served, First Nation Y identified Agency A4 as a relevant and comparable service provider. In this model, First Nation Y adopts Agency A4's $2.9M federal baseline allocation for its estimates.
2. *A per capita estimate of baseline expenditures for service providers with the same geography and province can be calculated. The average per capita expenditure is then multiplied by the size of the population served to generate a baseline. "Scenario 2"*
   First Nation Y identifies Agencies A2, A4, and A5 as comparable service providers. Their average per capita allocation is $2,087. First Nation Y multiplies its total population by the average per capita allocation to generate an estimated baseline:
   =1,500*$2,087
   = $3,130,500
3. *The percentage of the existing provider's baseline expenditures based on the weight of the population being served can be calculated to serve as the baseline. "Scenario 3"*

First Nation Y was previously served by Agency Z. To estimate an alternative baseline, First Nation Y calculates the weight of its population relative to Agency Z's total population served (21%) (Table 26). First Nation Y then calculates 21% of Agency Z's federal allocation as a baseline allocation of $3.57M.

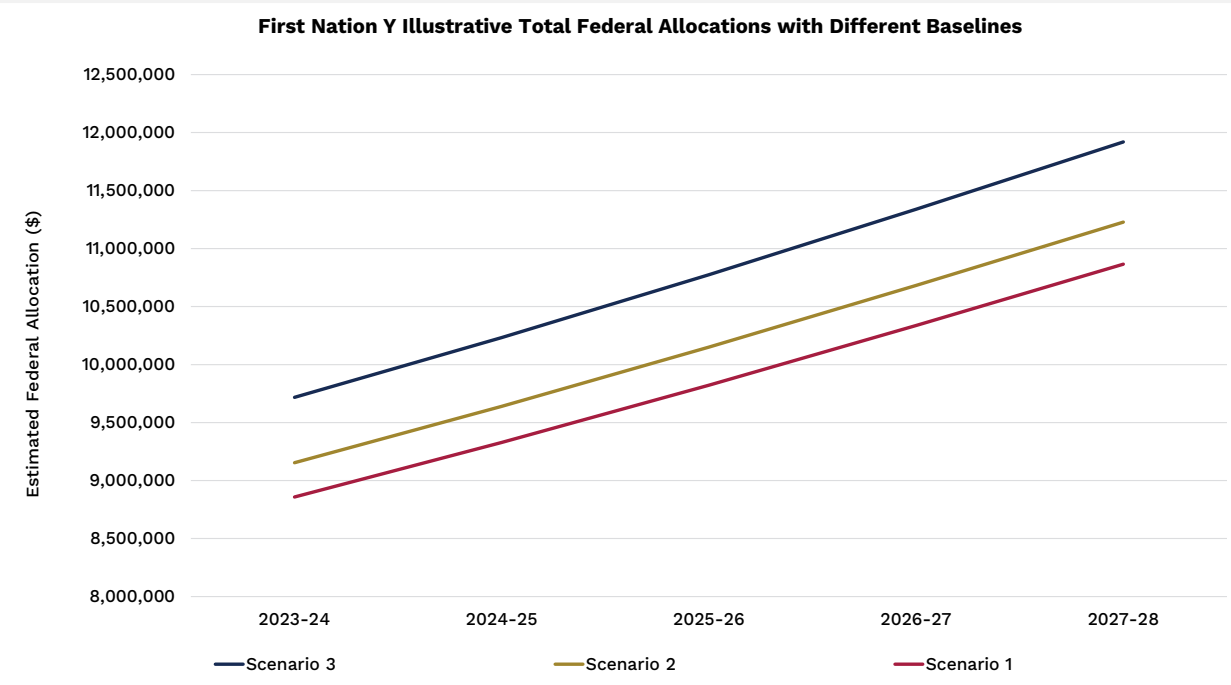
TABLE 26

ESTIMATING FIRST NATION Y'S BASELINE FEDERAL ALLOCATION USING AGENCY Z'S DATA	
Total population served (on-reserve)	7,000
Total expenditures 2023-2024	$25,000,000
Baseline (equivalent to total federal expenditures)	$17,000,000
First Nation Y's population	1,500
Population weight of First Nation Y (relative to total)	=1,500/7,000 =0.21 0.21*100 =21%
Value of federal baseline relative to First Nation Y population weight (Agency Z federal baseline * First Nation Y population weight)	Federal baseline = $17,000,000 First Nation Y population weight = 21% =$17,000,000*0.21 =$3,570,000

Having calculated or inferred three estimated baseline allocations, First Nation Y recognizes that its population weighted estimate (using data from its current service provider) and the average per capita allocations of service providers in the same province with similar mandates and population sizes are similar. First Nation Y decides to omit the baseline of $2.9M, and instead use one of the other estimated baselines. Since First Nation Y is currently served by Agency Z, it decides to adopt its population-weighted value of the agency's federal allocation as its baseline.

To depict the different impacts of initial baseline values on the total estimated allocation for First Nation Y, see Figure 32. The largest baseline, i.e., Scenario 3, produces the largest total estimated allocation when the top-ups are included.

FIGURE 39



Source: Institute of Fiscal Studies and Democracy (IFSD)

Defining and calculating top-ups

The baseline and components are useful tools for estimating allocations (see Table 27 for an overview of components and calculation approaches). It is up to the service provider to determine the resource mix that will best support the discharge of their mandates. For a list of specific start-up costs that may be relevant to operations (that are assumed to be covered by the baseline), see Appendix P.

TABLE 27

COMPONENT	DESCRIPTION AND CONSIDERATIONS	IFSD'S RECOMMENDATION	CALCULATION APPROACH OR VALUE
Baseline	FNCFS agency's total federal expenditures for the delivery of CFS for the most recent fiscal year. Inferred or estimated baseline for the exercise of jurisdiction.	Total federal expenditures for the delivery of CFS as reported by FNCFS agencies.	Defined by provider or inferred (see examples of Agency Z and First Nation Y below)
Prevention[23]	Resources to deliver activities and services to stop or reduce the risk of child maltreatment. 3 types of prevention: Primary: Directed to the community as a whole, designed to educate and prevent child maltreatment. Secondary: Aimed to support a child who may be at risk of harm or maltreatment, e.g., home visit programs for parents, addictions treatment for parents, etc. Tertiary: Used when a child has been identified as at risk of harm of child maltreatment, e.g., immediate crisis intervention. When estimating the prevention allocation, the roles and responsibilities of service providers should be considered.	$2,500 per person resident on-reserve	Multiply value of prevention funding by total population served, i.e., $2,500 x population See Appendix Q for examples of protection and prevention programs

23 IFSD understands protection and prevention services to be integrated. This is crucial for service delivery that meets the needs of children and families by ensuring safety, while leveraging least disruptive measures (see Appendix Q for examples of protection and prevention programs).

Protection: Services for child safety to ensure children are free from harm, abuse, and neglect.

Prevention: Activities and services to stop or reduce the risk of child maltreatment.

3 types of prevention:

Primary: Directed to the community as a whole, designed to educate and prevent child maltreatment.

Secondary: Aimed to support a child who may be at risk of harm or maltreatment, e.g., home visit programs for parents, addictions treatment for parents, etc.

Tertiary: Used when a child has been identified as at risk of harm of child maltreatment, e.g., immediate crisis intervention.

Remoteness/ geography	15% scaled average of Cost Adjusted Factor (CAF). Remoteness can impact FNCFS agency operations and budgets. The remoteness/ geography component should be recognition of the differentiated costs of delivering and acquiring needed services in different geographic contexts (beyond year-round road access alone).	15% scaled average of CAF applied to all FNCFS agencies	See Appendix O
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards. Needs and IT sophistication among agencies differ. Some will require complete reset, others will be adding to existing capacity.	5.5% of the baseline Other options: 5% or 6% of the baseline	% of baseline
Poverty	Difference between the Market Basket Measure (MBM) (by region and population size) and total after-tax median household income (Census 2016) [24] on-reserve. This is not poverty alleviation and not an income supplement. The resources recognize that poverty is a known driver of contact with protection services. The allocation recognizes that resources are needed to mitigate the impacts of deprivation as a driver of contact with protection.	5% of the difference between regionally-relevant MBM and total after-tax median household income Other options: 3% or 7% of the difference	% of difference between MBM and after-tax household income multiplied by number of households (on-reserve)
Results	Allocation to support data collection and analysis. Data is essential for control and improved decision-making. Collecting and analyzing relevant information can be an early warning sign of challenges and can highlight successes. For many FNCFS agencies, this will be a new activity in need of support.	5% of the baseline Other options: 1% or 3% of the baseline	% of baseline

24 Following a consultation with Statistics Canada, IFSD will continue to use Census 2016 total median household income data with adjustments for inflation in its cost estimation, as it considers the number a more accurate (albeit imperfect) reflection of the current state of First Nations.

Total median household incomes as captured in Census 2016 and Census 2021 increased significantly for First Nations. Statistics Canada has also observed general growth in income across Canada (see Statistics Canada, "Pandemic Benefits Cushion Losses for Low-Income Earners and Narrow Income Inequality — After-Tax Income Grows Across Canada Except in Alberta and Newfoundland and Labrador," Government of Canada, last updated July 13, 2022, https://www150.statcan.gc.ca/n1/daily-quotidien/220713/dq220713d-eng.htm).

Nationally, pandemic relief programs and other direct transfers to persons, e.g., increases to the child benefit, contributed to the income growth. While every First Nation is different, and the sources of their income changes unique, the pandemic relief programs and direct transfers were nationally available and were likely an important factor in the income growth observed for First Nations. Moreover, Statistics Canada indicated a change in Canada Revenue Agency (CRA) reporting with Form T90 for First Nations (starting in 2019) which could contribute to differences when making historical comparisons—although the size and direction of the impact is unknown.

Maintenance	Support to mitigate the changing costs of child maintenance (over and above inflation) within the regular course of business.	3% of the baseline Other options: 1% or 2% of the baseline	% of baseline
Emergency	Support responses to unanticipated circumstances related to CFS that affect demand for core services (protection and prevention).	2% of the baseline Other options: 0.5% or 1% of the baseline	% of baseline
Inflation	The purpose of an inflation adjustment on program funding is to correct for changes in purchasing power. Working with an adjusted inflation rate, such as one based on the Consumer Price Index (CPI) inflation, would be generally reflective of changes in the costs of goods and services. For five-year projections, the inflation rate is assumed to be 3% (the higher end of the Band of Canada's inflation target).	CPI, adjusted annually Other options: Region-specific inflation rate, fixed inflation rate	Per CPI (see overview in Figure 40).
Population	Changes in population size impact service delivery. Population and projections should use the Indian Registry Service (IRS) by Band.	IRS population by Band Other options: Census, own-source population data	Per population source

FIGURE 40

OVERVIEW OF THE CONSUMER PRICE INDEX (CPI)

1) What is the Consumer Price Index (CPI)?

Consumer price inflation is defined as the change in the Consumer Price Index (CPI) over time. Statistics Canada describes the CPI as follows:

"The Consumer Price Index represents changes in prices as experienced by Canadian consumers. It measures price changes by comparing, through time, the cost of a fixed basket of goods and services."

Inflation adjustments do not replace program funding that is adequate for the needs of a First Nation. **If a program area is underfunded relative to need, it will remain insufficient even with an inflation adjustment**.

The purpose of an inflation adjustment on program funding is to correct for changes in purchasing power. Working with an adjusted inflation rate, such as one based on the CPI, would be generally reflective of changes in the costs of goods and services.

2) What is included in the CPI?

The CPI is based on a fixed basket of goods and services in 700 product classes. The products are selected based on what consumers normally purchase. They include necessities, luxuries, and products such as tobacco and alcoholic beverages.

Every month prices of a sample of goods and services in each product class are surveyed through various methods to measure the value of the CPI for that month. The prices are what consumers pay including discounts and all the taxes. The observed prices are then weighted based on their importance.

It is important to note that the CPI is not a measure of the cost of living for every household or individual. It is the cost of a fixed basket of goods and services. The CPI may overestimate or underestimate the cost for a specific consumer buying a different basket of goods. Moreover, the CPI does not represent purchases made in First Nations reserves, military bases, prisons, and long-term care institutions, as it is based on consumption information from the majority of the Canadian population residing outside of these places.

3) When is the CPI adjusted?

The CPI is adjusted monthly.

Every month Statistics Canada releases the value of the CPI for the previous month. The release includes the CPI for all items included and several subcategories like shelter, energy, transportation, etc. The headline rate of inflation is measured as the change in the value of the CPI relative to its value twelve months ago (year-over-year inflation rate). One could also examine the month-to-month inflation rate or the annual average inflation rate.

4) When applying the CPI, is the entire estimate or a subset of product classes applied?

If the CPI is used to correct for purchasing power (as it would be in the FNCFS Program), the annual average CPI should be applied to allocations for the upcoming fiscal year. Applying only a subset of product classes risks being restrictive on the service provider.

5) How does IFSD apply the CPI in its estimates for the FNCFS Program?

IFSD applies the annual average CPI-based inflation rate to its national estimates to the FNCFS Program. IFSD applies the inflation adjustment to the **total allocation** (along with population). This means that all allocations (including remoteness, information technology, etc.) associated to a service provider are adjusted for inflation and population.

Service provision in FNCFS continues to evolve. An example of a change is when a First Nation served by an FNCFS agency decides to exercise jurisdiction. How should the agency's allocation be adjusted? How can the First Nation model its own funding allocation? The examples below model the approach to estimating the allocation for an FNCFS agency and estimating the allocation for a First Nation exercising jurisdiction.

Consider Agency Z (Table 28) and First Nation Y: Agency Z serves 5 First Nations, one of which, First Nation Y is leaving the agency to exercise jurisdiction. To model the possible changes to Agency Z's (Table 29) allocation and to estimate First Nation Y's (Table 33) allocation, IFSD prepared the models below. It is important to note that the approach to revising agency allocations with service changes, i.e., First Nation leaving an agency, remains unconfirmed at the time of writing.

TABLE 28

AGENCY Z	
Mandate	Protection and prevention
Total population served (on-reserve)	7,000
Number of First Nations served	5
Total expenditures 2023-2024	$25,000,000
Baseline (equivalent to total federal expenditures)	$17,000,000
Geographic zone (highest of all First Nations served)	2
Remoteness adjustment factor	0.14
First Nation Y's population	1,500
Population weight of First Nation Y (relative to total)	=1,500/7,000 =0.21 0.21*100 =21%
Value of federal baseline relative to First Nation Y population weight (Agency Z federal baseline * First Nation Y population weight)	Federal baseline = $17,000,000 First Nation Y population weight = 21% =$17,000,000*0.21 =$3,570,000
Revised baseline with First Nation Y's portion excluded (Agency Z federal baseline - First Nation Y's portion based on population)	Federal baseline = $17,000,000 First Nation Y value of baseline based on population weight = $3,570,000 =$17,000,000-$3,570,00 =$13,430,000

TABLE 29

AGENCY Z REVISED (EXCL. FIRST NATION Y)	
Total population served (on-reserve)	5,500
Number of First Nations served	4
Baseline (equivalent to total federal expenditures)	$13,430,000
Geographic zone	2
Remoteness adjustment factor	0.15
Average after-tax median household income on-reserve (among First Nations served)	$11,836
Total number of households on-reserve	732
Value of Market Basket Measure (relevant province, population >30,000)	$48,000

To model the funding allocation impacts of the departing First Nation on Agency Z:

1. Subtract the weight (%) of the departing population from the baseline
2. Adjust components using the revised baseline and population

To model these impacts the weight of the departing population is calculated from the denominator of the total population served (on reserve). The per capita calculation of prevention resources (assuming they exist) will be revised downward, based on the departing population.

To illustrate Agency Z's revised allocation using IFSD's approach, the revised baseline is applied to generate an estimate. In this model, remoteness is assumed to be applied to all FNCFS agencies and Agency Z's remoteness index remains unchanged. For an overview on how to estimate the poverty top-up, see Figure 41.

TABLE 30

COMPONENT	DESCRIPTION	OPTIONS	ESTIMATES
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures	$13,430,000
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget	$772,225
		MED: 5.5% of the baseline budget	$849,448
		HIGH: 6% of the baseline budget	$926,670
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget	$154,445
		MED: 3% of the baseline budget	$463,335
		HIGH: 5% of the baseline budget	$772,225
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, the population-weighted average of the after-tax median income of the First Nations for which we have data was used to extrapolate the missing data.	LOW: 3% of the difference	$744,993
		MED: 5% of the difference	$1,241,655
		HIGH: 7% of the difference	$1,738,317
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget	$77,223
		MED: 1% of the baseline budget	$154,445
		HIGH: 2% of the baseline budget	$308,890
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget	$154,445
		MED: 2% of the baseline budget	$308,890
		HIGH: 3% of the baseline budget	$463,335
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500	$17,450,675
Geography/ Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.	$2,014,500
		Total LOW allocation	$34,798,506
		Total MED allocation	$35,912,948
		Total HIGH allocation	$37,104,612

To illustrate how to project costs for the next four fiscal years, the medium allocation scenario is adjusted for population and inflation. To generate the estimate for the next fiscal year: (FY-1)*Inflation*Population change.

As indicated in Table 31, the on-reserve population is expected to grow by approximately 2% every year. Based on IFSD's forecast of the CPI, inflation should be approximately 3% per year.

TABLE 31

NATIONAL POPULATION PROJECTION	2.23%	2.24%	2.23%	2.18%	2.05%
INFLATION FORECAST (PER CPI)		3%	3%	3%	3%

To calculate the projections, the total costs of the previous fiscal year are multiplied by the anticipated population change for that year and by inflation to generate the estimate for the next fiscal year (Table 32).

For instance, to calculate the allocation for FY 2024-2025:

=Allocation FY2023-24*population 2024-25*inflation 2024-25

=$35,912,947.50*1.0224*1.03

FIGURE 41

ESTIMATING THE POVERTY GAP

To model the hypothetical poverty gap for Agency Z

Agency Z serves 5 First Nations: A, B, C, D, and Y:

FIRST NATIONS IN AGENCY Z	NUMBER OF HOUSEHOLDS	MEDIAN H. INCOME AFTER-TAX	PROVINCIAL POVERTY LINE (MBM)
First Nation A	183	$20,000	$48,000
First Nation B	183	$15,000	$48,000
First Nation C	183	$17,000	$48,000
First Nation D	183	$22,000	$48,000
First Nation Y	183	$11,836	$48,000

To determine the poverty top-up for Agency Z, the following calculations are made:

Step 1: Identify the after-tax median household income for each First Nation. Identify the relevant MBM. Then, calculate the difference between the after-tax median household incomes and the MBM. A positive value means there is a poverty gap; a negative value means there is not a poverty gap, and no top-up is applied. In the example of Agency Z, all First Nations have a positive difference, i.e., a gap exists.

First Nation A: $48,000 - $20,000 = $28,000

First Nation B: $48,000 - $15,000 = $33,000

First Nation C: $48,000 - $17,000 = $31,000

First Nation D: $48,000 - $22,000 = $26,000

First Nation Y: $48,000 - $11,836 = $36,164

Step 2: Multiply the poverty gap in each First Nation by the number of households in the First Nation. For the purposes of this illustration, all First Nations served by Agency Z have 183 households on-reserve.

First Nation A: $28,000 * 183 = $5,124,000

First Nation B: $33,000 * 183 = $6,039,000

First Nation C: $31,000 * 183 = $5,673,000

First Nation D: $26,000 * 183 = $4,758,000

First Nation Y: $36,164 * 183 = $6,618,012

Step 3: Sum the poverty gaps to determine the overall poverty gap for First Nations served by the FNCFS agency.

$5,124,000 + $6,039,000 + $5,673,000 + $4,758,000 + $6,618,012 = $28,212,012

Step 4: In IFSD's approach, there are three top-up options, 3%, 5%, or 7% of the value of the poverty gap. To generate those estimates, the total poverty gap is multiplied by the percentage. The poverty gap is then adjusted for remoteness (based on the remoteness adjustment of the service provider).

$28,212,012 * 3%*(1+0.15) = $973,314

$28,212,012 * 5%*(1+0.15) = $1,622,191

$28,212,012 * 7%*(1+0.15) = $2,271,067

Since First Nation Y will be exercising jurisdiction, the value of its poverty gap is subtracted from that of Agency Z. To do so, First Nation Y's value is removed at step 3.

$5,124,000 + $6,039,000 + $5,673,000 + $4,758,000 = $21,594,000

Therefore, Agency Z's revised poverty gap options are:

$21,594,000 * 3%*(1+0.15) = $744,993

$21,594,000 * 5%*(1+0.15) = $1,241,655

$21,594,000 * 7%*(1+0.15) = $1,738,317

To model the poverty gap options for First Nation Y, steps 1, 2, and 4 are followed using First Nation Y's total after tax median household income ($11,836) and its number of households (183).

Step 1:

First Nation Y: $48,000 - $11,836 = $36,164

Step 2:

First Nation Y: $36,164 * 183 = $6,618,012

Step 4:

$6,618,012 * 3%*(1+0.15) = $228,321

$6,618,012 * 5%*(1+0.15) = $380,536

$6,618,012 * 7%*(1+0.15) = $532,750

To illustrate an allocation for First Nation Y, the service provider's baseline is assumed to be $3,570,000 (one of the three sample baseline allocation estimates defined above) (Table 33 and Table 34). IFSD adopts the remoteness index from Agency Z and assumes the same remoteness index for First Nation Y (0.15). The assumption is made because IFSD estimates the remoteness allocation on a relative basis. To apply this approach, the list of service providers must be defined. A quotient is developed on a relative basis (from least to most remote) based on the existing group of service providers. See Appendix O for the remoteness adjustment factor by service provider type.

TABLE 33

FIRST NATION Y	
Mandate	Protection and prevention
Total population served (on-reserve)	1,500
Number of First Nations served	1
Baseline	$3,570,000
Geographic zone	1
Remoteness adjustment factor	0.15

For an overview of the calculation of the poverty top-up, see Figure 41.

TABLE 34

COMPONENT	DESCRIPTION	OPTIONS	ESTIMATES
Baseline budget	Population-weighted value of existing service provider's federal allocation.	Estimated federal allocation.	$3,570,000
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget	$205,275
		MED: 5.5% of the baseline budget	$225,803
		HIGH: 6% of the baseline budget	$246,330
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget	$41,055
		MED: 3% of the baseline budget	$123,165
		HIGH: 5% of the baseline budget	$205,275
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For the service provider, the population-weighted average of the after-tax median income of the First Nation(s) for which data was available was used to extrapolate the missing data.	LOW: 3% of the difference	$228,321
		MED: 5% of the difference	$380,536
		HIGH: 7% of the difference	$532,750
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget	$20,528
		MED: 1% of the baseline budget	$41,055
		HIGH: 2% of the baseline budget	$82,110
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget	$41,055
		MED: 2% of the baseline budget	$82,110
		HIGH: 3% of the baseline budget	$123,165
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500	$4,759,275
Geography/ Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	15% CAF applied to the baseline + top-ups.	$535,500
		Total LOW allocation	$9,401,009
		Total MED allocation	$9,717,443
		Total HIGH allocation	$10,054,405

To project the estimated allocation, the same growth factors (population + inflation) are applied as described above. They are repeated for ease of reference.

As indicated in Table 35, the on-reserve population is expected to grow by approximately 2% every year. Based on IFSD's forecast of the CPI, inflation should be approximately 3% per year.

TABLE 35

NATIONAL POPULATION PROJECTION	2.23%	2.24%	2.23%	2.18%	2.05%
INFLATION FORECAST (PER CPI)		3%	3%	3%	3%

To calculate the projections, the total costs of the previous fiscal year are multiplied by the anticipated population change for that year and by inflation to generate the estimate for the next fiscal year (Table 36).

For instance, to calculate the allocation for FY 2025-2026:

=Allocation FY2023-24*population 2024-25*inflation 2024-25

=$9,717,443.19*(1+0.0224)*(1+0.03)

=$10,233,167

TABLE 36

PROJECTION — MEDIUM SCENARIO				
2023-24	**2024-25**	**2025-26**	**2026-27**	**2027-28**
$9,717,443	$10,233,167	$10,775,208	$11,340,411	$11,920,076

The examples of Agency Z and First Nation Y are instructive. As the FNCFS environment evolves, service providers should be equipped to assess changes. This requires clear information on how allocations will be revised as the service population increases or decreases, as well as consideration of sustainability in service delivery.

Ideally, funding analysis and accountability measures are assessed together. Understanding what a service provider expends, how, and what results it generates can be useful for planning, advocacy, and oversight. While financial management and performance frameworks may be managed separately, linking the analysis and processes internally is an effective practice for ensuring alignment between expenditures and desired outcomes.

Estimates can be generated using the approach. Service providers may wish to adjust the value of components or run alternative scenarios to depict different needs or circumstances. For instance, when IFSD built allocations with collaborators, these are some of the adjustments requested to generate alternative scenarios:

1. 1.5x or 2x the prevention allocation per capita
2. % reduction of prevention allocation or elimination of prevention allocation
3. % reduction in population served
4. % increase in population served
5. Total membership (rather than population on-reserve)

6. Application of a Northern MBM (rather than province specific MBM)
7. Alternative inflation scenario, e.g., Northern, fixed, etc.

MODELLING SHOCK SCENARIOS

Funding for CFS is external to the service provider. Therefore, funding is subject to changes that may result in shocks the provider is required to absorb.

To model changes to funding allocations for FNCFS agencies, IFSD assumes that there has been a shift to a **block contribution approach** (for details, see the Structure section of this report). This means that FNCFS agencies gain flexibility in use of their funding (it is no longer restricted by pre-defined activity streams) but the amount of funding is pre-defined. IFSD assumes that the amount of pre-defined funds or block of funds with which an FNCFS agency is working with are sufficient for the discharge of their mandate and are linked to the contextual realities of the First Nation(s) they serve.

The "shock" or hypothetical scenarios modelled in this section represent changes to federal funding levels that an FNCFS agency may be required to manage. These shocks would be exogenous or outside of the FNCFS agency's control and unrelated to their use of funds. The exogenous shocks may be political, i.e., a change in government decision-making, fiscal, i.e., a change in available funds, inflationary, i.e., a change in the cost of goods or services.

In the scenarios, IFSD assumes that:

- The federal government will not provide additional funds
- FNCFS agencies will manage internal allocations, priorities, etc. to address the changes

Based on these scenarios, it would be prudent for FNCFS agencies to maintain a reserve fund, whenever possible, to insulate themselves from political decision-making in the short-term. It is expected that any long-term or sustained changes would be reflected in the review of the FNCFS Program, approximately every five years.

To model the scenarios, IFSD presents the impacts locally in three sample agency cases (Table 37).

TABLE 37

MODEL AGENCY	DESCRIPTION	BASELINE ALLOCATION
Agency 1	Population served on-reserve <500	$2,885,872
Agency 2	Federally funded allocation of $16M (reflective of the national average reported by FNCFS agencies in the 2021-2022 questionnaire)	$16,729,090
Agency 3	Serving at least one First Nation without year-round road access	$49,552,744

The five scenarios applied to the model agencies present the different impacts external changes may have on an FNCFS agency's federal allocation (Table 38). The allocation model is assumed to reflect (in the next fiscal year) changes such as, an increase or decrease in inflation and an increase or decrease in population. Since the changes would be captured in the funding approach, they are not presented as scenarios here.

TABLE 38

SCENARIO	DESCRIPTION	CONSEQUENCE FOR FNCFS AGENCY
Scenario 1	3% increase to per capita costs	FNCFS agency absorbs higher costs for various reasons, e.g., salary changes
Scenario 2	Prevention allocation reduced by 50%	FNCFS agency loses a part of its allocation
Scenario 3	Prevention allocation reduced to 0	FNCFS agency loses a portion of its allocation
Scenario 4	5% reduction in overall allocation	FNCFS agency allocation is reduced
Scenario 5	10% reduction in overall allocation	FNCFS agency allocation is reduced

The scenarios and their impacts are presented for each of the three agencies relative to the estimated IFSD "Recommended" allocation for FY 2024-25 (see Table 39, Table 40, and Table 41). The difference between the scenario and the IFSD "Recommended" allocation indicates the impact the agency would be required to absorb. Scenario 3 presents the greatest impact with the prevention allocation reduced to 0. Reductions in overall allocations at 5% and 10% would require substantial internal reallocations but are not as stark as the elimination or partial reduction of prevention funding.

TABLE 39

AGENCY 1: POPULATION <500	2024-25	DIFFERENCE BETWEEN "RECOMMENDED" AND SHOCK SCENARIO
IFSD "Recommended" allocation	$2,885,872	
Scenario 1	$2,972,448	$(86,576)
Scenario 2	$2,325,889	$(559,983)
Scenario 3	$1,765,907	$(1,119,965)
Scenario 4	$2,741,578	$(144,294)
Scenario 5	$2,597,285	$(288,587)

TABLE 40

AGENCY 2: FEDERALLY-FUNDED ALLOCATION OF $16M	2024-25	DIFFERENCE BETWEEN "RECOMMENDED" AND SHOCK SCENARIO
Baseline scenario	$16,729,090	
Scenario 1	$7,230,962	$(501,872)
Scenario 2	$12,203,524	$(4,525,566)
Scenario 3	$7,677,959	$(9,051,131)
Scenario 4	$15,892,635	$(836,454)
Scenario 5	$15,056,181	$(1,672,909)

TABLE 41

AGENCY 3: SERVING AT LEAST ONE FIRST NATION WITHOUT YEAR-ROUND ROAD ACCESS	2024-25	DIFFERENCE BETWEEN "RECOMMENDED" AND SHOCK SCENARIO
Baseline scenario	$49,552,744	
Scenario 1	$51,039,326	$(1,486,582)
Scenario 2	$38,426,090	$(11,126,654)
Scenario 3	$27,299,436	$(22,253,308)
Scenario 4	$47,075,107	$(2,477,637)
Scenario 5	$44,597,469	$(4,955,274)

From a funding perspective, the scenarios indicate a change in financial resources with direct implications on staff, capital, and other items required to deliver CFS. Should these or other scenarios external to agencies (or another service provider) impact funding amounts, their ability to discharge their mandates would be affected. For those with funding reserves, some changes, e.g., 5%-10% reduction in overall allocation in scenarios 4 and 5, may provide a period for adjustment and planning. For more severe scenarios where significant activity areas such as prevention are eliminated, more drastic internal reallocations will be required or external resources will have to be sought to cover impacts.

The purpose of the shock scenarios is to illustrate the scale of possible impacts for service providers. While not all shocks and impacts can be anticipated, some risk planning and provisioning would be prudent.

Assuming a block contribution approach for funding transfers to recipients, a modest but meaningful reserve could be established to support providers in managing impacts with some resources.

ESTIMATING CAPITAL COSTS

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model. **This is not a replacement for formal engineering assessments and detailed bottom-up cost analysis.**

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1. Clinical
2. Residential
3. Offices
4. Programming space
5. Storage
6. Fixed cultural assets
7. Vehicles
8. Moveable cultural assets

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per square foot construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios.

Table 42 provides an overview of the bottom-up model's design and assumptions. Appendix D1 provides a summary of each asset type included in the model.

TABLE 42

INDIVIDUAL BOTTOM-UP CAPITAL COSTING MODEL DESIGN
Model benefits:
• The individual bottom-up capital costing model provides cost estimates for a standard set of asset types common to FNCFS service providers. • It converts program requirements (e.g., number of FTEs/clinicians) to capital requirements, providing an intuitive way for service providers with limited experience in capital planning to identify their organization's capital needs.
Model inputs:
• Collaborators provide program requirements (i.e., number of FTEs), which serve as the model's inputs for costing fixed assets.[25] • The model requires collaborators to specify their movable asset requirements (i.e., vehicles) on a per-unit basis.
Model assumptions:
• The model employs SF assumptions based on a building's use and capacity (i.e., office space for 25 FTEs) to determine the gross area required for fixed assets (i.e., buildings). • It costs moveable assets (i.e., vehicles) on a per-unit basis. • The model then uses unit cost assumptions (i.e., SF costs, price per vehicle) to estimate investment costs for the collaborator's specified asset portfolio. • The model assumes a phased 5-year investment period for fixed assets, where a percentage of the overall fixed asset portfolio is acquired each year. • The model assumes a 5-year useful life for movable assets. As such, the model assumes service providers acquire all movable assets in year one, and replace these in year six. • The model applies a 25% contingency factor to the total investment requirement, aligned with INFC and PSPC guidelines, and adjusts for inflation using Budget 2024 projections.[26] • The model applies a 2% annual recapitalization/renewal rate to the inflation-adjusted sum of all fixed assets acquired in all previous periods. This aligns with TBS guidelines.[27]

25 In cases where collaborators had already developed conceptual designs for proposed buildings, the model was reconfigured to use the gross area defined in these plans.

Note: this document is archived on the TBS webpage; however, more recent guidelines do not provide advice on appropriate recapitalization/renewal rates.

Model outputs:

- The model produces low, medium, and high 10-year capital expenditure schedules for collaborators, based on their defined program and/or capital requirements. Cost scenarios are based on the per SF construction cost range specified for each building type.
- Estimated costs are driven by collaborators' program requirements, publicly available capital requirement benchmarks from Canada and US (e.g., SF per FTE), and unit cost assumption based on industry benchmarks and vendor information (see Table 43).
- The model functions on a cash accounting basis, where all costs occur in the year that cash changes hands. In other words, it does not amortize asset costs over their useful lives.

Model limitations:

- The model is not predictive; it requires service providers to specify their program requirements to estimate their capital needs.
- It cannot estimate how much capital a service provider requires based on variables such as population, number of children/families served, rates of children in care, etc.

The individual bottom-up capital model applies a remoteness CAF to each collaborator's capital estimate. IFSD calculated CAFs for all FNCFS agencies in Canada. The CAF calculation adjusts for remoteness (using Statistics Canada's Index of Remoteness) and whether the First Nations served have year-round road access. As per ISC's requirements, IFSD scaled all CAFs to reflect an average adjustment factor of 15%.[28]

For First Nations collaborators, IFSD applied the CAF of the agency currently serving them (if applicable).

When assigning unit cost assumptions, the model either employs cost standards from recognized sources commonly used for public sector costing (i.e., Altus Group and National Joint Council), or vendor information for specific asset types (see Table 43).

TABLE 43

ASSET TYPE	COST ASSUMPTION SOURCE
All buildings, including for land-based camps	Altus Group's 2024 Canadian Cost Guide[29]
Passenger vehicles	National Joint Council corporate fleet services guidelines[30]
15 passenger vans	Vendor information
Mini-buses	Vendor information
Moveable assets and shipping containers (sea cans)	Vendor information

In some cases, collaborators told IFSD they needed assets that were external to IFSD's bottom-up model (e.g., playground). In these cases, IFSD costed the assets on a one-off basis using the best available information (vendor information, project proposals and guidebooks, established media reports).

Primary Cost Drivers

The primary cost drivers for the model are collaborator-defined program requirements. The model uses publicly available capital requirement benchmarks from Canada and US to convert collaborators' program requirements to capital requirements. For example, the model calculates office space requirements based on the number of FTEs required to deliver CFS, healing centre space requirements on the requisite number of clinicians, and residential treatment centres on the required number of beds. Lastly, the model uses per unit cost assumptions based on industry standards and vendor information to arrive at a capital estimate for each participating collaborator.

An individual collaborator's understanding of their communities' unique needs impacts both their overall capital estimate and its distribution by asset type. The result of cost estimates being driven by individual collaborators' understandings of need is significant heterogeneity in the capital estimates across collaborators. For instance, the majority of one collaborator's capital requirement was for clinical spaces (i.e., residential treatment centres, rehabilitation centres, and healing centres), whereas other collaborators' largest asset type requirement by value was either office space or programming space.

The variability between collaborators' understandings of their own needs underpins IFSD's recommendation that ISC fund FNCFS capital through a national pool. The inability to identify consistency in the cost drivers behind collaborator's capital needs makes extrapolating overall program requirements at the national level difficult. A proposal-based approach to funding capital would allow FNCFS service providers to articulate their capital requirements on a case-by-case basis until a comprehensive understanding of capital needs across the entire FNCFS Program is established.

Considerations

1. The bottom-up modelling approach provides a detailed framework for converting programmatic requirements to capital requirements. This makes it a useful tool for assisting FNCFS agencies and First Nations with limited capital planning experience in identifying their capital needs.
2. The modelling approach is based on service providers' needs, as articulated by the service provider. It does not account for variables such as population, rates of children involved with FNCFS, etc. As such, it is not a predictive model that can project service providers' capital needs based on demographic data.
3. The prescribed investment timeline (i.e., 5 years) is illustrative but does not account for local factors such as labour and/or material availability that could impact the deliverability of projects within this timeframe.

See Appendix D1 for the full summary on the bottom-up capital cost assessment and Appendix D2 for the top-down national assessment.

DEFINING AND EXECUTING A PERFORMANCE FRAMEWORK

Gathering and analyzing data is imperative for First Nations and FNCFS agencies to ensure the structure and funding of the FNCFS Program are delivering desired results for children and families. Ensuring discrimination does not re-occur requires an understanding of the starting point and changes from the starting point. Asking and understanding how children are doing is critical to understanding whether the structure and funding of the FNCFS Program are working to deliver supports and services to children.

In FNCFS, measurement can ensure the accountability of stakeholders such as service providers, funders, Indigenous Services Canada (ISC), etc. to the First Nations served.

Accountability in FNCFS requires the measuring and monitoring of relevant information to ensure discrimination does not reoccur. Measuring what matters means identifying and addressing structural drivers of contact with protection services and having the information to improve service access for First Nations children and families. Data is sovereignty and can be an important tool for First Nations and service providers. First Nations care and control in collecting, analyzing, and using data is paramount.

The basics of measurement and monitoring exist across organizations. In CFS, especially among established service providers delivering prevention and/or protection, input and output data is regularly gathered. Service providers will know the number of people they employ, how many people access a service, the days a child spends in out-of-home care, their annual revenues and expenditures, etc. This information is often required for reporting to government funders and to the First Nation(s) served.

Service providers will know the contexts in which they operate, their strengths, their issues, and needs. That information, however, is not always formally tracked or monitored. With a reformed FNCFS Program, there is an opportunity to build on existing data practices or develop new ones that are focused on outcomes. Based on IFSD's work with collaborators, existing reporting requirements for federal and provincial resources are focused on outputs, i.e., what activities and services were undertaken or provided with resources, the number of people accessing them, etc.

With that type of monitoring, no one is answering the question, **how are the children doing (**Figure 42**)?**

FIGURE 42

Why measuring matters

Dr. Fred Wulczyn

An excerpt of this analysis is presented in this report. Read the full analysis.[31]

In late May 2021, after hundreds of unmarked graves were uncovered at a former Indian residential school near Kamloops, British Columbia, there was a shock that resounded globally. First Nations children in Canada had suffered unspeakable outcomes. Callous disregard is a hard phrase to use when talking about someone else's children but there are times when it is an inescapable conclusion. That was one of those times.

The repercussions of that dark chapter in Canadian history raise many, many questions. There is one that stands out at this moment of truth and reconciliation: what next?

The Canadian Human Rights Tribunal (CHRT) ruled that the First Nations child and family services system — linked to the intergenerational trauma and repercussions of residential schools — was discriminatory and underfunded. Subsequently, the CHRT defined two critical elements in its rulings: end discrimination and ensure it does not recur. There have been expenditures (approximately $20B) committed to invest in the past — a righting of wrongs — for children and families that suffered from the child protection system. There must be a connection to how those same wrongs might be avoided going forward. While an additional roughly $20B has been committed to investing in a better system for the future, there must be a commitment to knowing how young people are doing (by and for the First Nations that care for them). Is the Government of Canada prepared to invest more wisely in the tools and technology needed to uphold what is a fundamental obligation to ensure discrimination does not recur? It is an uncomfortable and costly question to answer, but as it often does, history tells us that ignoring the question is even more costly than addressing it.

It is, of course, fair to ask about the way forward. History is again instructive. Speaking before the U.S. Congress in 1975, Orville Brim called on the United States to document the well-being of children in the same way we worked to document the health of the economy. His words ring true today. We are obliged to know, with a sense of purpose, how children are doing — the state of the child if you will. "Nothing esoteric is meant by using the term 'indicators of the state of the child' or 'indicators of child development', or even 'childhood indicators." Children rely on the adults in their community to understand how well they are doing.

Brim also had advice for how we might come to know the state of the child. "To produce these facts clearly requires there be identical measures, repetitively applied over time, to

31 Fred Wulczyn, "Why Measuring Matters. The Callousness of not Asking how Children are Doing," prepared for the *Institute of Fiscal Studies and Democracy*, May 30, 2023, https://ifsd.ca/en/blog/last-page-blog/Why-measuring-matters.

comparable populations of children." As a collaborator and confidant of Urie Bronfenbrenner, Brim understood the importance of rigor. One does not come to know the state of the child haphazardly. A sense of purpose has to be matched with investment in the collection of data that provides the evidence needed to judge the well- being of children and whether our efforts to improve the state of the child are paying off in the expected ways.

In its relationship with First Nations people, Canada finds itself at a critical moment in time. One path forward is built around a commitment to empowering communities so that they know the state of their child. What of the other path? It is the path with which we are already familiar.

Even if the choice is clear, the way forward requires due diligence. Again, history offers guidance. There are two parts to the answer. First, is what we might call the data capture phase. Brim said it best — to know the state of the child one needs measures repetitively applied over time. The second phase involves interpretation — using the data so that everyone with an interest in the state of the child knows the state of the child.

Best practices suggest the following steps:

1. It starts with a **conceptual** model of child development and the factors the influence healthy development: the child, the child's family, the child's community, and the investments made to support healthy development. The *Measuring to Thrive* framework provides the groundwork for the measurement model and the accountability framework.
2. An investment in **data capture systems**. Data capture refers to the recording of the relevant data, laid out in the *Measuring to Thrive* framework. Data capture requires investment in data management technology (this is how the data is recorded) and the human resources needed to enter data if data entry is not accomplished in some other way. For relatively simple tasks, such as recording the dates of placement or the reason for leaving placement, the types of data have to be defined but no specialized data collection instruments are required. In the case of a child's well-being, assessment instruments have to be selected along with an operational plan for measurements.
   [...]
3. To support regular reporting, the **data captured have to be used** in ways that help communities manage their investments in children and families. This is the evidence-building phase of the monitoring function.
   [...]
4. The **data captured** are used by the local community to manage their investments. **Data sharing** enriches our understanding of how well our investments in children pay off by way of comparison. To support data comparison, there are several options.
   [...]

Read the full analysis.

In the context of a reformed FNCFS Program, where service providers are receiving funding allocations via a block contribution approach or a fiscal arrangement through jurisdiction, measuring to monitor changes will be crucial. With a reformed program and with the devolved accountability to a variety of service providers through funding, it will be important to know how children, families, and communities are doing.

First Nations and their service providers should lead by measuring and monitoring what matters for the well-being of children and families in their communities. For some existing service providers, namely, agencies, they may gather and analyze data through case management systems. Others may rely on observational data. Some may combine case and observational data by using quantitative information to monitor "what" is happening, and using qualitative information to explain "why" these phenomena are being observed.

Working with collaborators, IFSD piloted a measurement approach. There were many lessons learned. It was not an easy or straightforward exercise. The approach piloted derives from the *Measuring to Thrive* framework[32] (originally developed with FNCFS agency directors). Collaborators worked together to identify indicators relevant to their work and communities, and for ISC. Indicators were defined and approaches to measurement were proposed (see Appendix J2 for a list of indicators, definitions, and measurement approach).

To operationalize the selected indicators, an event-based approach was adopted. The approach allowed collaborators (with different data sets) to commonly code information for analysis. Excel was used to code the data and a script (a set of instructions for analysis) were followed to answer questions and analyze the data. Through the exercise, together we learned that measurement is a practice that requires strategy, systems, processes, and people to execute (Figure 43). It is not easy or straightforward, but it is possible and a regular practice among many service providers.

---

32 *Measuring to Thrive* is a set of indicators meant to help assess the well-being of First Nations children, families, and communities.

Measuring to Thrive is not a case management platform. The framework was developed with First Nations child and family services agency directors. See Funding First Nations child and family services (FNCFS): A performance budget approach to well-being (p. 39-116), for a complete overview of the framework, supporting research, and linkages to the Government of Canada's Policy on Results. *Measuring to Thrive* is a linking mechanism between realities in communities, funding, and accountability.

The approach recognizes that levels of income, poverty, housing shortages, and other structural factors impact children and families. These factors weigh on families raising children, increasing the likelihood of contact with child protection services. *Measuring to Thrive* is the basis for IFSD's proposed funding approach for the reformed First Nations child and family services (FNCFS) by qualifying community-level differences, such as poverty or geography, in the funding approach. As a performance framework, *Measuring to Thrive* is outcome-based and emphasizes wellness across its measures. The performance approach considers context and various indicators of individual and familial well-being.

FIGURE 43

People

- *Building Relationships* — Engaging with First Nations to "bring people along" and ensure data reflects community needs.
- *Building Capacity* — Human capacity is a challenge. Collaborators have adopted different strategies, e.g., hiring from nontraditional educational backgrounds, focusing on core positions.

Process

- *Tailoring an Approach* — Collaborators have different priorities and will capture and analyze data differently. The event-based approach can be modified to suit different approaches. Data capture and organization is critical for any approach.
- *Consistency* — Consistent data collection and analysis, aligned with internal standards, is key to building a narrative.

Strategy

- *Evidence* — Analyzing good data to develop evidence is required to justify program changes and decisions, and used as a tool for funding advocacy.
- *Alignment of Data and Evidence with Goals* — Data being collected should align to the mandate. Evidence derived from the data should align with the goals of a service provider. Tools like a data governance strategy, policy framework, data dictionary, are useful supports for an effective data management system. Care must also be taken when developing evidence from data.
- *Transparency* — A culture of information sharing (internally and externally) can help build support and engagement from community members and internal stakeholders on data gathering, analysis and reporting.

Systems

- *Building a Data System* — Collaborators are currently using a variety of data gathering systems. The event-based approach can work across systems by linking mandate and activities to desired outcomes.
- *Structure Over Tool* — Collaborators recognized that it was dedication and coding of the event information rather than the complexity of the tool that is paramount to a well-functioning data system.

FIGURE 44

COLLABORATOR A

Collaborator A is pursuing jurisdiction over child and family services with the development of a collective law with 6+ First Nations it currently serves. Collaborator A acknowledges that this is a long-term process, with the development of the law alone anticipated to take four years to complete. During this process, Collaborator A will continue to update its strategy, systems, processes, and personnel to ensure alignment with the collective law.

With this collective law, Collaborator A will deliver both prevention and protection services to the First Nations it serves. This integrated service delivery approach will help understand if prevention services are having the intended impact in mitigating the need for protection interventions. A robust data system, which provides evidence on outcomes, is critical to this process. Collaborator A is working with a consultant to review and prepare for upgrading its existing data system. This is an intensive process that requires:

- Buy-in from stakeholders, including First Nations served,
- Individuals to support and back the changes,
- Training for all staff, and
- Capacity building, including the design and integration of a new database.

Collaborator A is concurrently evaluating and updating its strategy, systems, processes, and personnel, to ensure readiness for implementing the collective law.

Hear from Kelly Provost, Executive Director, Piikani Child and Family Services, on the importance of culture and tradition in service delivery.

How do you start the measurement process?

1. Define your starting point.
    a. Do you gather data on CFS, e.g., well-being of children and families, contact with protection or prevention services?
    b. How do you/will you make programming decisions?
    c. How do you/will you determine what programming works?
    d. What information is available on the well-being of children and families in community, e.g., health, languages spoken, community engagement, and participation in cultural activities, etc.? What gaps need to be filled?
2. Identify relevant actors or contributors to the exercise.
    a. Who will define the strategy, i.e., goals/purpose of measurement?
3. Define the strategy for measurement, including scope, purpose, and goals.
    a. What are you trying to understand? Why?
    b. What questions are you looking to answer?
    c. Is CFS staff/practice supported by other services? Will they be included in this work, e.g., housing, water, education, etc.?
4. What will be monitored?
    a. Define indicators to align to strategy.
    b. Leverage existing work, e.g., *Measuring to Thrive*, and other frameworks for a starting point.
    c. Consider integrating community-level information with family and child level information.
5. Prepare indicators by defining them and assigning measurement approaches.
    a. Work with other service providers that have done this work. Are they in your First Nation? Other organizations? Are there external expert supports, e.g., universities, best practice centres, that can be useful?
    b. Review the approach and ask others for peer review.
6. Identify data sources and undertake gap analysis.
    a. What data do you have?
    b. What data can you access?
    c. Is the information relevant for the indicators to be monitored?
    d. Undertake a gap analysis to determine whether the information you have or can access align to the measurement framework.
7. Define a data gathering approach.
    a. Who will gather information? When? How?
    b. How will the data be commonly coded for analysis?
8. Define an approach for analyzing data.
    a. How will data be turned into evidence?
    b. Will the work be undertaken by the service provider? An external organization?
    c. What questions should be answered with the analysis?
9. Run a pilot exercise.
    a. Start with a small group and a subset of indicators. It won't be perfect, it won't be easy, but it can be done.
10. Revise the approach.
    a. Undertake internal audits/assessments. Is data being gathered consistently? Is it helpful in answering questions?
    b. Seek out external supports and assessment of the approach.
    c. Leverage what has already been learned or designed by other service providers.

FIGURE 45

Dilico Anishinabek Family Care: collecting and applying strengths-based data on health, mental health, and child and family services[33]

"No one is going to do it if we don't."

Dilico Anishinabek Family Care (Dilico) long ago realized that they had to capture their own data to understand and meet client needs. No one else was gathering the data necessary to improve needs-based client supports and services with a focus on their strengths. The focus of Anishinabek people is on the gift and purpose of our people, and not on their deficits. The focus on strengths means being concerned with what has happened to them versus what is wrong with them. Dilico's approach uses a circle of care of professionals to work with the individual to restore balance in areas of their life that are causing them issues. Gathering information and measuring on terms that support the best interests of the communities served is an approach to improving the alignment of services to needs.

In the 1980s, a group of chiefs from Ontario joined together declaring a problem with the existing child and family services system. They wanted their children back in their communities and they wanted an emphasis on prevention. From that effort, Dilico emerged as a child welfare organization.

Since its establishment, Dilico has changed and grown. When two First Nations-led health and mental health organizations were struggling in the 1990s, Dilico took them over, expanding its mandate. Dilico now has an **integrated mandate across child and family services, health, and mental health**.

By the numbers:

- **Date of establishment:** 1986
- **Number of First Nations served:** 13 (child and family services and mental health), with health services for 9 of the 13 First Nations
- **Total population served from First Nations served (on-reserve):** 4,439
- **Total population served from First Nations (off-reserve):** 9,312
- **Total population served (Thunder Bay District):** 146,862
- **Total revenues and expenditures (FY 2022-23):** $72M
- **Governance:** Board of Directors, with one director appointed from each of the 13 First Nations

33 Institute of Fiscal Studies and Democracy, "Dilico Anishinabek Family Care: collecting and applying strengths-based data on health, mental health, and child and family services," IFSD, January 9, 2024, https://ifsd.ca/en/blog/last-page-blog/The-Dilico-Case.

Average expenditure per client served by service sector:

Child and Family Services (CFS): approx. $15,000/client

Health services: approx. $1,200/client

Mental health and addictions treatment: approx. $3,700

In 2012, leadership was Indigenized, replacing senior ranks with Indigenous people. This represented an important change for the organization. As Indigenous leaders brought forth Indigenous practices and perspectives, the organization began tracking and monitoring their successes. Dilico leveraged the approach because it had to advocate to provide services to their own people (when faced with mainstream organizations). Gathering and analyzing their own data equipped them to demonstrate their successes (which it still does).

"No one could ever say we weren't as good as the mainstream. We do everything they do but in a way that works for people, in a way that gives them what they need."

Dilico's approach is premised on addressing the root causes of issues with strengths-based approaches. Fully accredited by Accreditations Canada (with distinctions in various categories), the team works to identify root causes of challenges and supports clients to reclaim their identity, building confidence along the way. Treatment approaches are based on need and link the best of Indigenous and Western techniques. In this model, the focus is on what happened, why, and how can we work through it, rather than Western power approaches that dictate behaviours without understanding why and how they arrived at this circumstance in the first place.

There is a lot of demand for supports and services in Thunder Bay. Most of Dilico's clients are First Nations or Indigenous peoples that find their way to Thunder Bay through transiency. For instance, some have come to the hospital, having been jailed, released from jail, being excommunicated from their First Nation, do not know how to get home, etc. Addictions are a major challenge (for a sense of scale, there are 13 methadone clinics in Thunder Bay, with a population of approximately 123,000 people).

Dilico offers direct services in communities and supports First Nations in delivering their own services. Most community-led services are addictions related. These services focus on pre-treatment supports, after care, cultural services and land-based services, and community health nurses. To build skills in communities, Dilico offers community-based workers access to their professional training, the same as it offers to its own employees. Supporting this capacity building is job shadowing where community-based workers shadow employees at Dilico's treatment centre. The on-the-job training supports community-based workers in their service delivery.

Central to Dilico's approach to service delivery is the individual and relative measure of success. This means that Dilico has a different baseline for every client and works to support and measure against that baseline. There is no universal threshold for success. The approach requires that data is gathered using strength-based tools, mental health measures, and outcomes on an individual basis.

In addictions treatment, for instance, clients are assessed multiple times in their treatment cycle. There are intake and exit assessments that compare changes, strengths-based assessments are done early on so that clients leverage those capacities during treatment. Gathered data is a combination of observational and narrative-based (a mix of quantitative and qualitative) that is leveraged to support individual plans, and aggregated and anonymized to assess overall program outcomes. Working with Dr. Christopher Mushquash (Lakehead University), Dilico analyzes data and makes sense of the changes.

Residential treatment centre

Coming around the bend, you are met with the vastness of Lake Superior on the left and rustling trees on the right. The secluded, quiet location of the treatment centre feels like it could be hundreds of kilometres away from the city centre. A garden of sacred medicines guides your path into the centre and the faint sound of drumming greets you. Asked to wait to respect the privacy and intentions of those in circle, the smell of burning sweet grass fills the space as drumming subsides.

Clean and bright, there are hallways with rooms on either side of the main gathering space that is filled with natural light. The residential treatment facility is home to approximately 20 individuals at a time (plus staff) for 5-6 weeks.

The average cost per client for the full in-care residential program is approximately $13,400.

The cost includes:

- Residential program
- In-house staff
- Personalized treatment plan
- Cultural supports and services
- Pharmaceutical supports and medical services
- Unlimited follow-ups post-treatment

Clients at the treatment centre vary from those on the streets to professionals, e.g., nurses struggling with addictions. There's a 90% completion rate of the program with 60% of those that took part continuing on a good path. Success is measured on an individual basis, with no universal indicator of what defines success.

Demand for treatment far outstrips capacity. There were 776 requests for treatment/referrals in fiscal year 2022-2023, with 221 people admitted (squeezing in extra beds to meet demand). Taking the toughest cases is a point of pride for Dilico.

The program is always changing and is adjusted with client feedback, “nothing is ever the same.” There is no cookie cutter approach when the program is designed to meet people’s different needs.

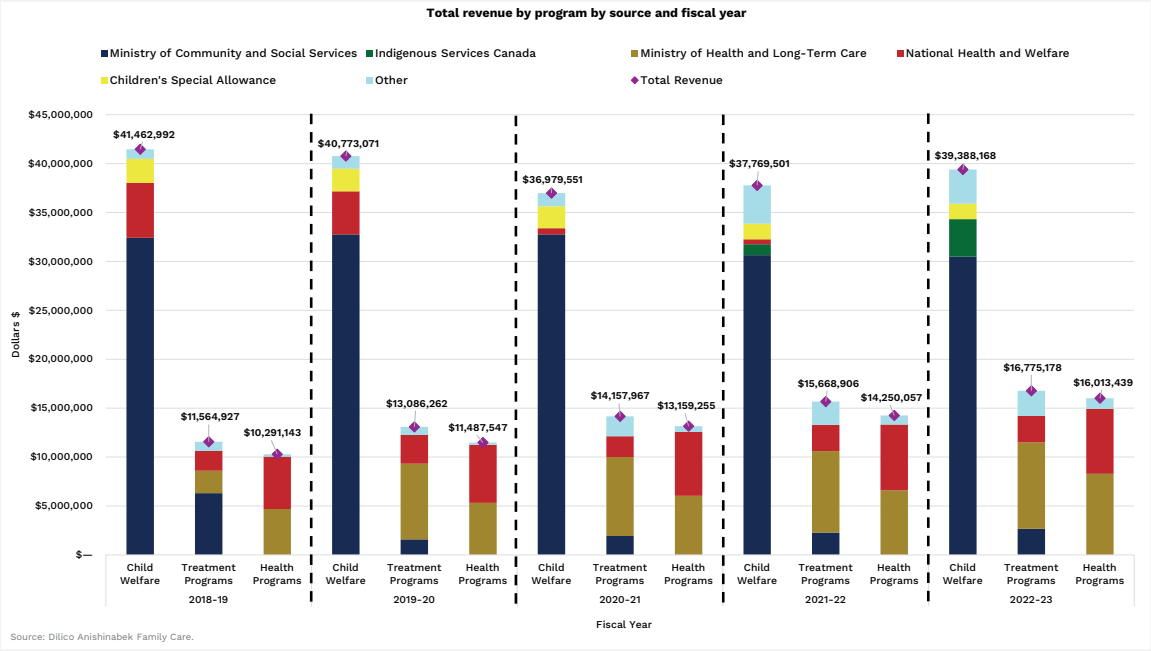
As a central part of the approach, culture is woven into the treatment approach and the physical space it occupies. There are Lodges for sweats and a sacred fire. Walking out onto the healing grounds offerings are laid among the trees with gratitude.

Dilico’s approach to integrated service delivery means that they can integrate problem solving and work to meet people’s unique needs. With expertise and service offerings across child and family services, health, and mental health, Dilico’s employees can “yell down the hall” to build an integrated approach to supporting clients in need.

Resource analysis

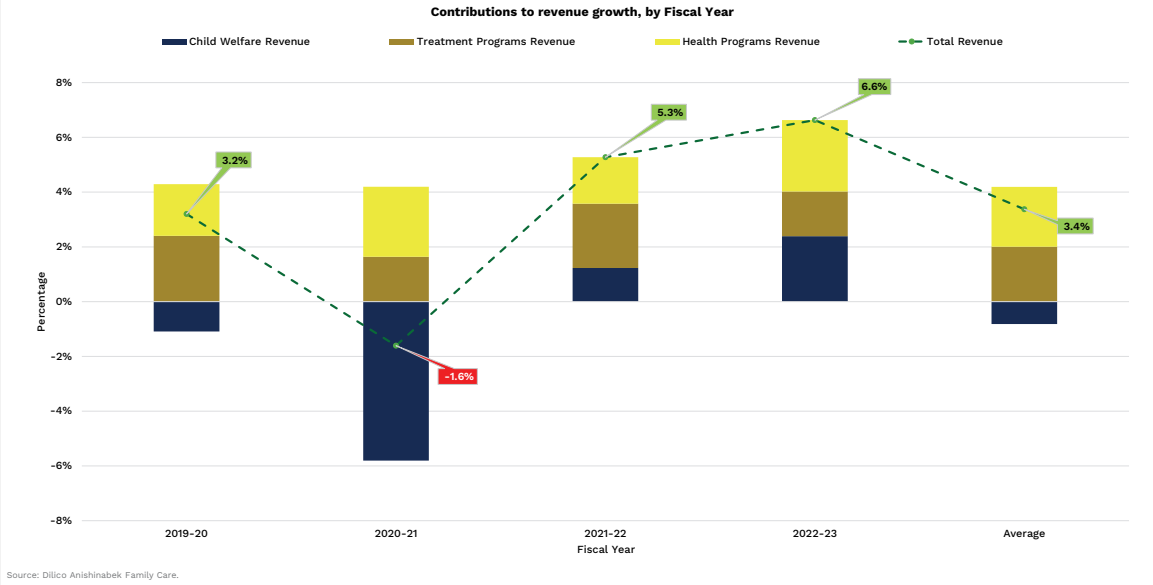
As an integrated service provider, from the outside, Dilico looks like one large centre. Through a financial lens, Dilico is operating three agencies with funding from different sources. The majority of the agency’s funding comes from the province of Ontario for child and family services, as well as health funding (Figure 1).

Figure 1



The increase in Dilico's overall revenues is attributable to health services funding (Figure 2), which is awarded based on competition through a request for proposals (RFP) process with Ontario. Often, the RFPs have strict criteria for uses of funds and even dictate parameters of how programs will be delivered by providers, e.g., defining numbers of particular types of employees, maximum salaries, etc. The approach restricts problem solving and the ability to address changing needs by predefining what will be done. In its RFP process, Ontario is procuring for a good rather than a service. If Ontario procured for a desired service, e.g., providing addictions treatment support to Indigenous clients, the service provider could determine how to best deliver by deciding on its staffing complement, salaries, operating needs, etc. Procuring for a service would better align to an integrated mandate.

Figure 2

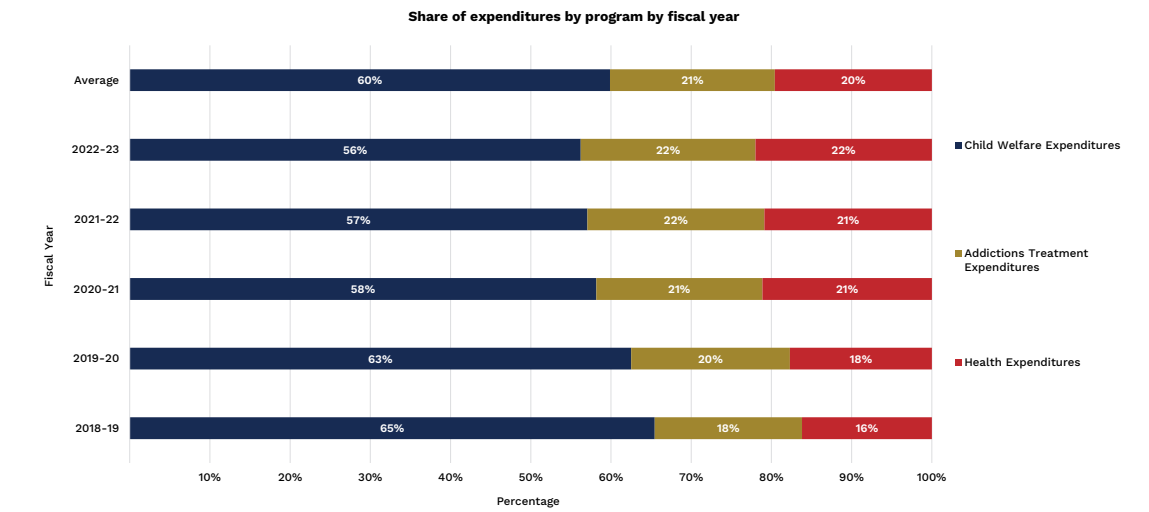


By contrast, federal funding for Dilico is often received through a block transfer. This means that Dilico can decide on how use the funds in the block to achieve a specific goal. The approach is preferred because it empowers the provider to make decisions in the best interests of the people served, rather than following what can appear to be arbitrary constraints imposed by government.

With most of Dilico's non-child and family services funding awarded through contracts, the organization often reacts to revenues obtained. This can make long-term planning a challenge. While needs are defined through their own data collection system and changes monitored, the ability for Dilico to align resources and service activities is dependent on contracts and their changes.

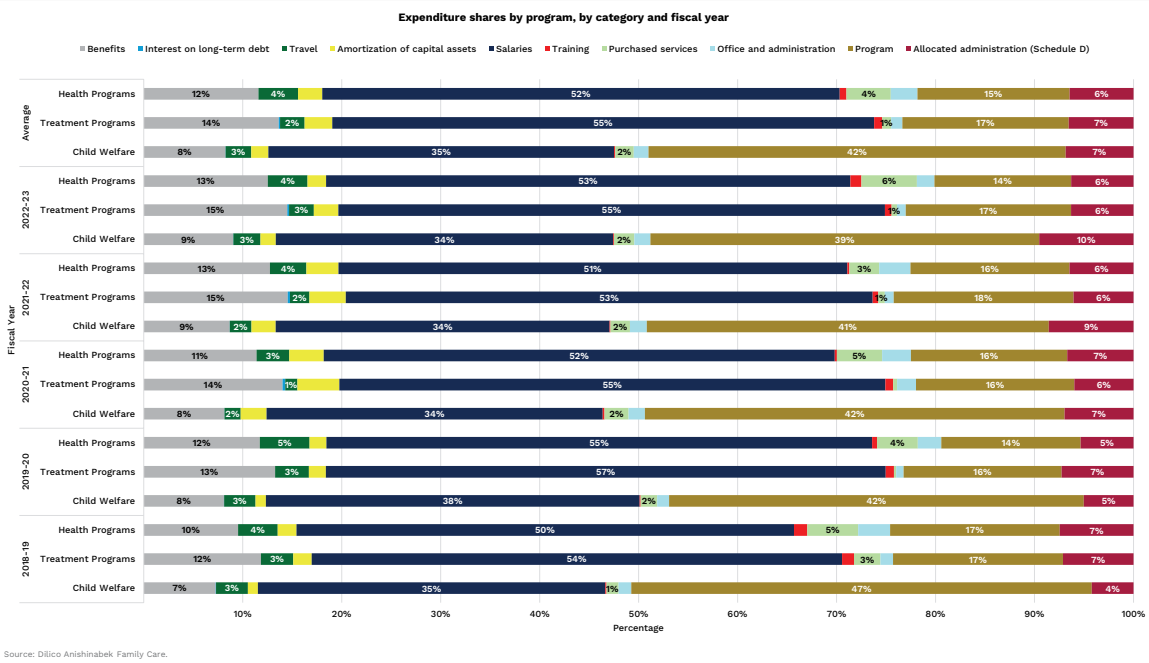
Consistent with service-delivery organizations, the majority of Dilico's expenditures are allocated to salaries, benefits, and training (Figure 3). While child and family services has the highest revenues and expenditures, most costs are attributable to the delivery of the program, e.g., maintenance payments, services for children in care, etc. On a percentage basis, child welfare has the lowest salary, benefits, and training allocation, whereas health and addictions treatment are higher (Figure 4).

Figure 3



Source: Dilico Anishinabek Family Care.

Figure 4



Source: Dilico Anishinabek Family Care.

For a large, mature, integrated service provider like Dilico, service-based procurement, block transfers, and funding certainty better align to the ever-changing realities and needs for service delivery.

Conclusion

Dilico's integrated service delivery approach is an example of an Indigenous model that leverages the best of Indigenous and Western practice to meet the needs of the people it serves.

Delivering services in a way that works for people means giving them what they need in a way that suits them. The individual-focused approach means that there's often no black and white in defining success, "it's often gray."

To demonstrate the successes of its approach and outcomes, Dilico gathers and analyzes its own data. Measurement and analysis can be done in a strengths-based Indigenous-led approach to support, sustain, and improve practice.

COLLABORATOR PILOT PROJECT ON IMPLEMENTING *MEASURING TO THRIVE*

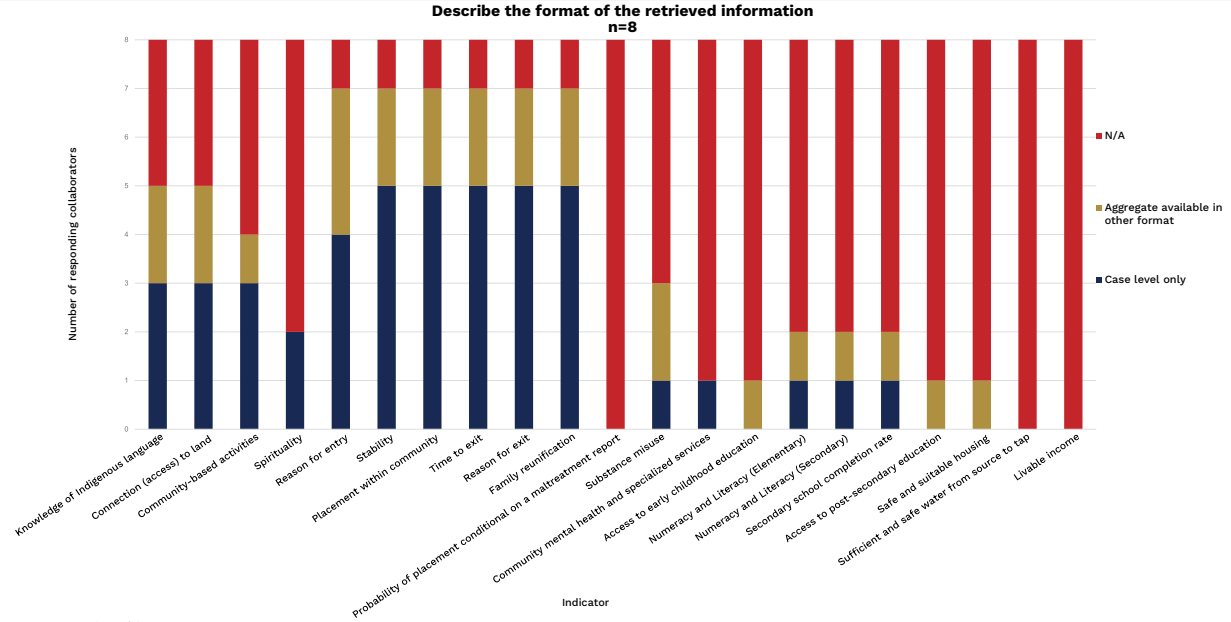
The pilot exercise was initiated with collaborators in November 2022. At a gathering, collaborators identified a subset of indicators from the *Measuring to Thrive* framework for their use and for ISC[34] to monitor the FNCFS Program (see Appendix J1).

With the indicators selected, a working group of approximately 10 participants representing three collaborators committed to defining and proposing measures for the selected indicators. At this phase of the pilot, it was incorrectly assumed that collaborators already gathering data could track the indicators. A gap analysis was undertaken with collaborators to determine:

1. What information they were gathering
2. What information they could access
3. The format of that information

The results of the gap analysis were instructive. Among the group of 20 collaborators, some actively gathered case-level information (protection and/or prevention) and others did not. Figure 46 summarizes the availability of information from reporting collaborators. Over half of the data needed to measure the collaborator-selected indicators was reported as not available. When considering available data, most comes from case-level sources.

FIGURE 46



34 The five proposed indicators for ISC were (see Appendix J1 for summary of collaborator meeting on measurement):

1. Safe and suitable housing
2. Sufficient and safe water from source to tap
3. Family reunification
4. Livable income
5. Access to mental health and specialized services within the community

While existing service providers were actively gathering data, mainly case data associated to protection services, the systems they used were different. Some collaborators were operating with multiple systems with information that could not easily be leveraged for comparison. In response, an alternative approach to data gathering was proposed.

FIGURE 47

NOGDAWINDAMIN FAMILY AND COMMUNITY SERVICES

Nogdawindamin Family and Community Services' (NFCS) has a dedicated quality assurance (QA) department consisting of seven employees. With a well-established approach to data collection and analysis, NFCS is leveraging the *Measuring to Thrive* framework to connect community context with program outcomes. NFCS is using the 75 indicators outlined in the framework by adapting them to meet the agency's specific needs. This adaptation process involves reviewing the indicators, defining them with parameters that match their service model (e.g., defining age ranges for measurement), and measuring them using queries to extract data from existing systems to connect with program outcomes.

Key factors driving this process include a dedicated database administrator, supported by strong processes, robust systems, and solid inter-departmental relationships conducive to data collection. Recognizing this is a long-term learning process, NFCS is exploring alternative ways to gather data to avoid overburdening front-line workers during the indicator definition and testing phases.

NFCS navigates a culture where there is concern associated with measurement. This concern can influence how data is presented, potentially leading to selective representation of program outcomes. For instance, unsuccessful program outcomes may be overlooked, while unrepresentative but positive data could be exaggerated. To address this, the QA team works with staff to build understanding and gradually shift culture around data collection and analysis. NFCS regularly communicates its findings internally and to the First Nations it serves, educating on the purpose and benefits of data collection and analysis. This shift will take time, but maintaining positive relationships with departments by balancing competing priorities and addressing tensions will support the transition.

NFCS defines their priorities clearly and works toward them efficiently. They gain actionable insights without overburdening employees. For this process to be effective, it requires access to resources, expertise, and building a supportive environment conducive to testing and course corrections. This approach demonstrates that practitioners with an established approach to data collection and analysis supported by an existing team, are well-positioned to leverage the *Measuring to Thrive* framework. This framework can operate within existing systems and connect community context with program outcomes.

The event-based approach was proposed as a consistent mechanism for coding data from different sources for common analysis (Figure 48).

In this approach, information about the person receiving supports is captured by coding the events based on a date and related activity descriptors. The approach is premised on understanding a trajectory from a starting point, with a series of events to assess change.

This approach makes four assumptions:

1. There is a record of the person/persons receiving supports.
2. Events related to the person/persons are relevant and are tracked in chronological order.
3. The First Nation or FNCFS agency would define the events to be tracked, e.g., an assessment, a service received, a change in living arrangement. An assessment might capture facets of cultural identity, language, etc. Events also refer to the steps taken to protect a child.
4. Data is captured and organized for analysis. There is no pre-judgement of outcomes.

In the event-based schema, 'assessment' is used to define a learning about a child or family. The assessment need not be a formal assessment. The assessment event simply acknowledges what has been learned about some relevant aspect of child and/or family well-being. The reason for capturing the data within the event structure has to do with the fact that the assessed strengths may change over time. For example, language exposure may change as living arrangements change. By capturing these changes within the event structure, it becomes easier to see how the services provided relate to changes in the well-being of the child. This is one of the ways in which First Nation's service providers can monitor the impact their service investments are having.

The event-based approach is *one approach* to measurement in FNCFS. Service providers will take a variety of paths on FNCFS data collection and analysis. Whatever the chosen approach, there is a benefit to knowing whether goals are being achieved as well as if the lives of children, families, and communities improved with the allocated resources.

FIGURE 49

PIIKANI CHILD AND FAMILY SERVICES

Piikani Child and Family Services utilized the *Measuring to Thrive* framework to link service provision with culture, relationships, and participation in activities. This database aligns with Blackfoot culture by gathering contextual and program-specific information, such as child enrolment in school, attendance at community events, and participation in prevention programs. It also builds a profile for each child that includes their Blackfoot name, genealogy, and other cultural aspects. Piikani Child and Family Services tracks these activities over time as events.

Piikani Child and Family Services adapted aspects of the *Measuring to Thrive* framework to create a database that aligns with Blackfoot culture. This database tracks various information related to children, like participation in cultural events, to help Piikani Child and Family Services improve service delivery. This example highlights the importance of training employees on the benefits of data collection and analysis to ensure their engagement, enhance service delivery, and improve program effectiveness. Additionally, it illustrates how FNCFS agencies and First Nations can apply the *Measuring to Thrive* framework to develop measurement practices that align with their cultures and unique practices while tracking indicators of children's well-being.

Piikani Child and Family Services measures cultural engagement by tracking the number of cultural events (e.g., language classes, ceremonies, etc.) a child attends. They assign each cultural event a unique code and track it over time. Piikani Child and Family Services plans to use the information in three ways:

1. Demonstrating the importance of cultural activities to funders.
2. Informing child placements by prioritizing those that support cultural participation.
3. Identifying connections between experiences in care and long-term outcomes, such as high school graduation rates.

This database requires data, time, and expertise, which Piikani Child and Family Services is currently developing. Front-line workers who engage directly with children will be responsible for collecting and populating much of the data into the system. Piikani Child and Family Services is actively training employees on how to use the system and explaining its importance to ensure their engagement with it. It plans to eventually expand its data collection to include protection services, post-majority care, and band designate services, recognizing that this is a long-term process.

As Piikani Child and Family Services continues to build the necessary processes, systems, and expertise for data collection and analysis, it will develop a more comprehensive understanding of a child's life in comparison to relying only on a case management system, supporting evidence-based decision making.

Organizing the data needed to monitor services delivered and to monitor change in CFS means tracking what is happening with children and families in need of support, tracking the services received, and incorporating the community context in the data model.

The event-based approach was attempted because the information is available (or accessible to) most collaborators and presents an opportunity to try the events-based approach with ready data. There was a strategic decision during the pilot to use existing data: a result of the pilot was needed in a specific timeframe. The decision was also practical: if a national approach to measuring to monitor was to be defined, it was a reality that service providers would have different approaches to collecting and storing information. There had to be a way to leverage the existing information for analysis.

The pilot used Excel. A software tool had been developed by IFSD but it was set aside. The pilot indicated the issue was not data *entry* for analysis, but a lack of a common basis for gathering and coding information for analysis. In addition, the use of Excel meant accessibility for service providers. There was no requirement to train staff, manage logins, etc. on an alternative tool.

A data entry spreadsheet was prepared to code case-level information in a non-identifiable format to organize data for analysis. A list of codes for event type and modifiers which provide additional information for the event, is available to code each event in a case file (see Appendix J3 for the framework). The event types and modifiers could be altered to be relevant to the user. For instance, additional data e.g., spirituality of child, connection to land, etc. can be included as an event type.

The data is organized by:

- Information on the child
- Information about the community
- Information about the history of service involvement
- Event type codes
- Event modifiers

Once collaborators coded their entries, they followed a 'script' or instructions in Excel to analyze the data and answer questions about their datasets. The analysis answered a series of questions associated to children in out-of-home care. This was a function of the nature of available data.

- What is the number of children admitted to care for the first time?
- How has the number of children admitted changed by fiscal year?
- What is the age composition of children admitted to care?
- Has the age composition of cohorts changed?
- What are the reasons for entering out-of-home care?
- Have the reasons for entering out of home care changed?

These questions offer a starting point for service providers navigating data collection and analysis. In the future, it is anticipated that data will focus on child, family, and community well-being.

FIGURE 50

CARRIER SEKANI FAMILY SERVICES

Carrier Sekani Family Service (CSFS) uses the *Measuring to Thrive* framework to guide long-term planning for data collection and analysis. Over the past 2-3 years, CSFS has been guided by its Strategic Plan, *Measuring Our Way Forward*, and focused on establishing a strong foundation for these efforts by developing the necessary processes, systems, and expertise. A key component driving this process is the Quality and Innovation (QI) Program. With a team of 10 full-time employees (FTE), it has the mandate to support the organization in its research and planning activities, conduct program evaluations to assess quality standards and indicators, and perform analytics to track organizational and program performance.

CSFS views data as integral to making evidence-based decisions, particularly for evaluating program effectiveness. This data-driven approach is supported by CSFS's leadership and has been adopted throughout its various departments. As a result, CSFS is well-positioned to integrate the *Measuring to Thrive* framework into its internal practices.

The steps for using the *Measuring to Thrive* framework, including the gap analysis, provided CSFS with valuable insights about what data is being collected and its accessibility. Following this exercise, CSFS developed a data dictionary to clearly outline how and where they store data. It also offered lessons in the importance of having a dedicated team, data management practices, covering topics like data collection methods, storage protocols, privacy and confidentiality considerations, and aligning practices with OCAP ® Principles.

CSFS reviewed their existing data collection and analysis approach, identified gaps, and set goals for improvement. This process helped CSFS become ready to measure the indicators in the *Measuring to Thrive* framework, which will inform resource allocation, funding requests, and help prevent discrimination from reoccurring. This example demonstrates that implementing a new measurement approach, such as integrating the *Measuring to Thrive* framework, takes time, especially in establishing the necessary processes, systems, and expertise for data collection and analysis.

The pilot exercise was useful in highlighting the opportunity with measurement and the time, effort, and appropriate skills it requires for operation. Many providers measure and monitor across a variety of indicators. Learning from their experiences and adopting their known approaches (rather than developing new ones) can shorten time for implementation and reduce resource requirements.

Among collaborators, there were organizations who shared practices and lessons on measurement.

Hear from Riley Randall and Matthew Hayman, Quality Assurance Supervisors, Nogdawindamin Family and Community Services on defining and adapting performance frameworks in service delivery.

https://youtu.be/UAPy1TtKMmY

Hear from Janna Olynick, Data Analyst, Carrier Sekani Family Services on their journey in data governance.

https://youtu.be/EZ11s9cFvtA

The service providers already engaging in measurement were willing to share their time and resources with others who were planning their approaches. There is an established network of practice that service providers can leverage to exchange ideas and design their approaches. It is anticipated that the First Nations-led secretariat will play a supporting role in data analysis and best practice sharing.

CONCLUSION

This report presents a blueprint for reform of the FNCFS Program. The content is a reflection of the generous contributions of collaborating FNCFS agencies and First Nations and builds on analysis IFSD has undertaken since 2018 on FNCFS reform.

Guided by the CHRT's orders on FNCFS to end discrimination and ensure it does not reoccur, IFSD makes recommendations for changes to structure, funding, and accountability. Sustainable reform of the FNCFS Program will require linking an increase in funding with competent delivery and monitoring outcomes to improve the well-being of First Nations children.

IFSD makes the following recommendations:

STRUCTURE

1. Clarify federal policy and associated regulations (including terms and conditions and outcome-based performance indicators) for the FNCFS Program to focus on well-being with alignment to the principles of *An Act respecting First Nations, Inuit and Métis children, youth and families*.
2. Implement a block funding approach for existing FNCFS agencies, with a carry-forward provision.
3. Ensure resources for the FNCFS Program are secure and cannot be used for other purposes by Indigenous Services Canada (ISC) through a Special Purpose Allotment (SPA), with a carry-forward provision.
4. Adopt the allocation approach proposed in this report for FNCFS agencies with a holistic understanding of the allocation for existing service providers. This means leaving the approach and its components intact and not artificially segmenting the allocation, as ISC has done with its interim funding commitments.
5. Stop all ad hoc decision making and changes to funding and to FNCFS Program rules.
6. Adopt a cohesive reformed approach that includes recommended changes to structure, funding, and accountability. Notify service providers of the full intended reform and its parameters at least one full fiscal year in advance of the change.
7. Provide service providers at least one full fiscal year in advance of the change with:
    a. A clear statement of policy on the FNCFS Program and its associated terms and conditions;
    b. A five-year funding allocation in a block approach;
    c. Performance reporting indicators aligned to the goals of a reformed FNCFS Program.

FUNDING

8. Allocate resources to the service provider able to continue to or immediately deliver child and family services in First Nations. This includes protection and prevention (primary, secondary, tertiary) services.
9. Understand the funding approach and allocation holistically. Do not pull apart the allocation intended for a service provider, as the amounts may not be sufficient for the discharge of their mandate.
10. Ensure the existing federal baseline for service providers is maintained as the foundation on which to add activity and context specific components (adjusted by inflation and population escalators).
11. Develop allocations to service providers with funding principles linked to their activities and different contexts (e.g., poverty, geography, and over time, outcomes). IFSD provides recommendations for each funding component.

ACCOUNTABILITY

12. Require a national reporting practice for FNCFS for transparency to First Nations and their delegated service providers while holding the Government of Canada accountable.
13. Establish a First Nations-led secretariat to support data gathering and analysis and best practices in FNCFS.
14. Define the reporting and service obligations of different funding recipients through the FNCFS Program, e.g., if FNCFS agencies and First Nations are expected to deliver secondary and tertiary prevention services, their reporting obligations on an activity basis should be the same.
15. Ensure ISC's performance indicators for a reformed FNCFS Program reflect the structural drivers of contact with protective services.
16. Include a review of the allocations to reform the FNCFS Program, e.g., $47.8B from the Draft Final Agreement (assuming it is ratified), its allocation, and outcomes as part of a five-year program review.

Ending the discrimination against First Nations children and ensuring it does not reoccur takes more than writing a cheque — although additional resources are essential. It means fixing the policies, rules, terms and conditions, performance indicators, reporting requirements, and incentives that shape the decisions of actors in the system, both inside and outside of the Government of Canada.

FNCFS agencies and First Nations have shared their knowledge, their data, and their experiences to shape an approach that comes from the front lines. IFSD's proposed approach fits within the Government of Canada's existing contribution approaches and policies on results. Canada should not miss this opportunity.

True reform of the FNCFS system will take years. **This is an opportunity to get a major policy change right.**

APPENDIX A1

CENSUS 2021 OVERVIEW BY SERVICE PROVIDER TYPE

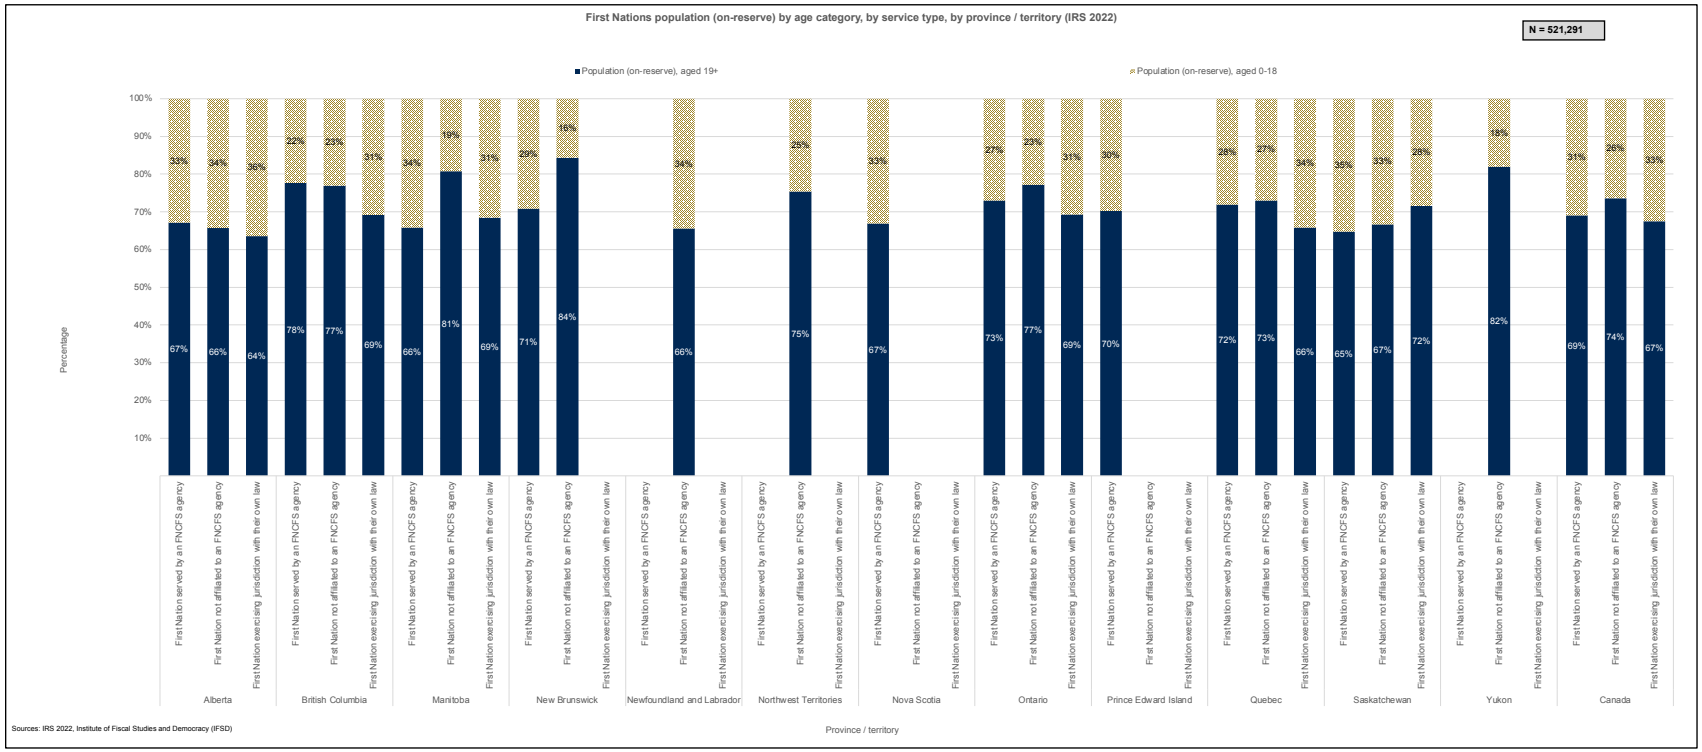
IFSD recognizes the limitations of Census data. Not all First Nations participate and extrapolations are made. However, there is no other national dataset on issues such as housing suitability and labour market participation. For these reasons, IFSD uses Census 2021 (and Census 2016) data for illustrative purposes. The information provides contextual details of First Nations.

Note:

1) The n-value, or size of the participating population/population for which data is available changes across indicators.
2) Service type refers to the approach to CFS, i.e., First Nation served by an FNCFS agency, First Nation not affiliated to an FNCFS agency, or First Nation exercising jurisdiction with own law enacted.

The population aged 0-18 represents on average, approximately 30% of the total on-reserve population using IRS 2022 data, across all service types (Figure 1).

Figure 1



Of First Nations (i.e., reserves), approximately 80% are in geographic zones 1 and 2 (Figure 2). This means they are accessible by year-round road within driveable distances to service centres. Just over 20% of First Nations are in geographic zones 3 and 4. Accessibility, especially for those in zone 4, is restricted. First Nations in zone 4 will not have year-round road access.

Geographic Zones

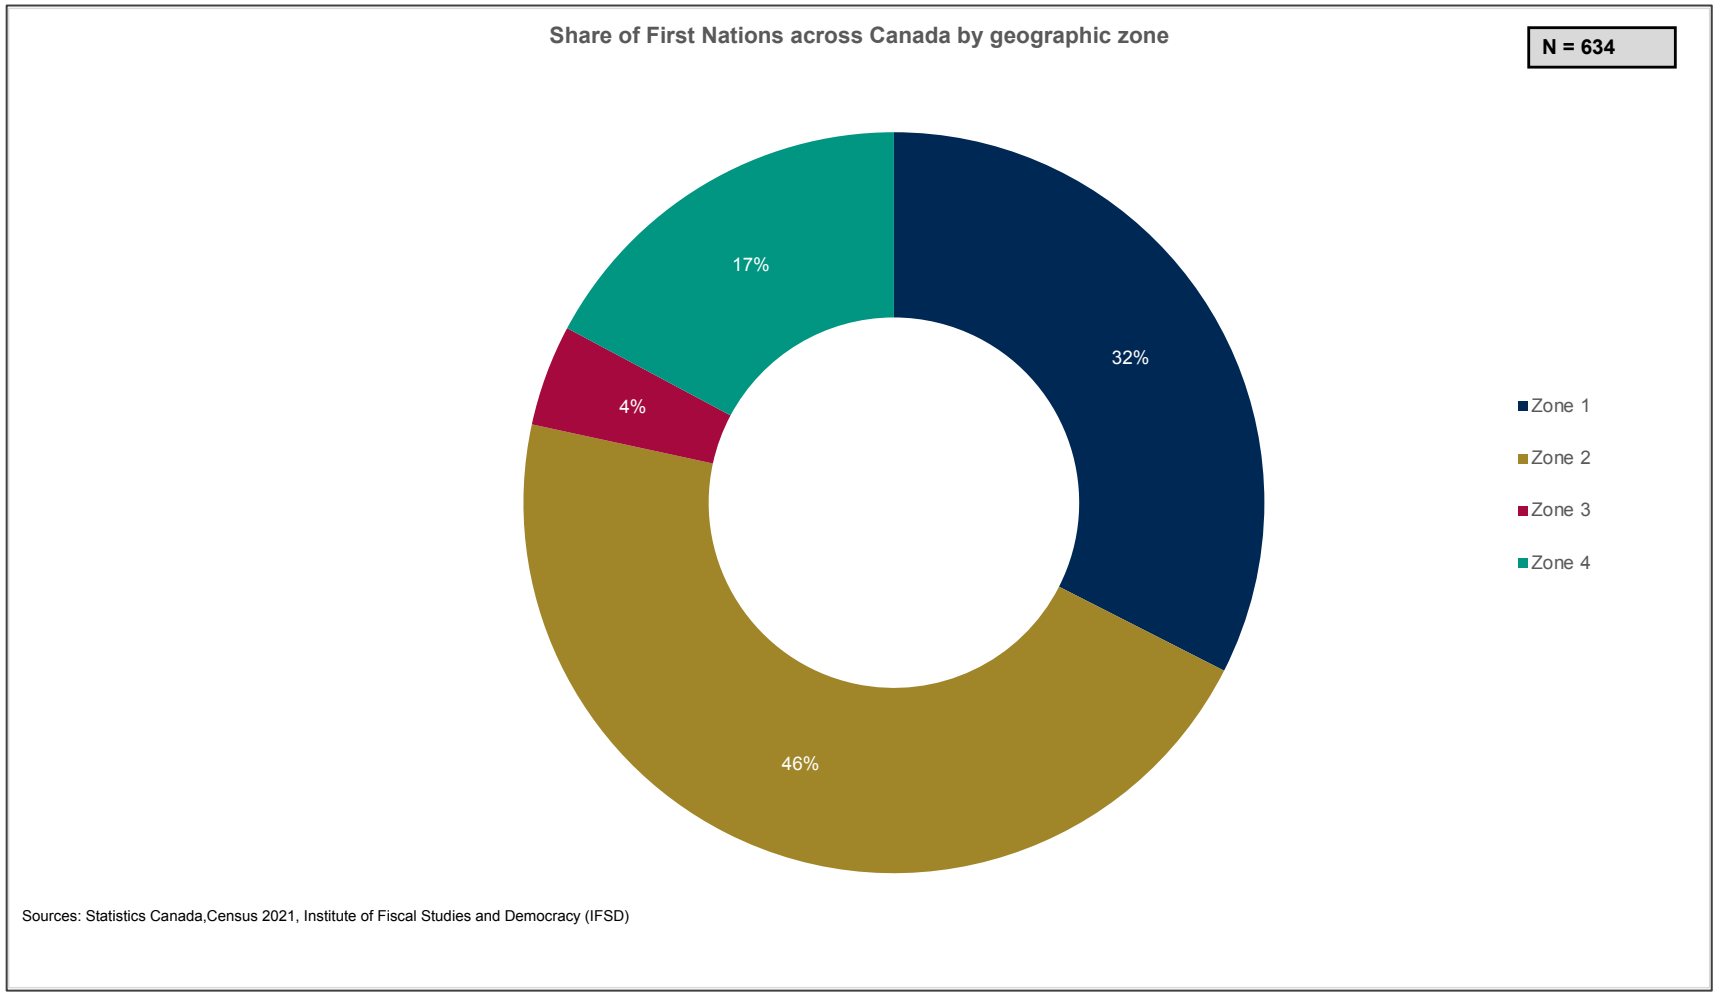
Zone 1: A geographic zone where the First Nation is located ***within 50 km*** of the nearest service centre with year-round road access.

Zone 2: A geographic zone where the First Nation is located **between *50 and 350 km*** from the nearest service centre with year-round road access.

Zone 3: A geographic zone where the First Nation is located ***over 350 km*** from the nearest service centre with year-round road access.

Zone 4: A geographic zone where the First Nation has ***no year-round road access*** to a service centre and, as a result, experiences a higher cost of transportation.

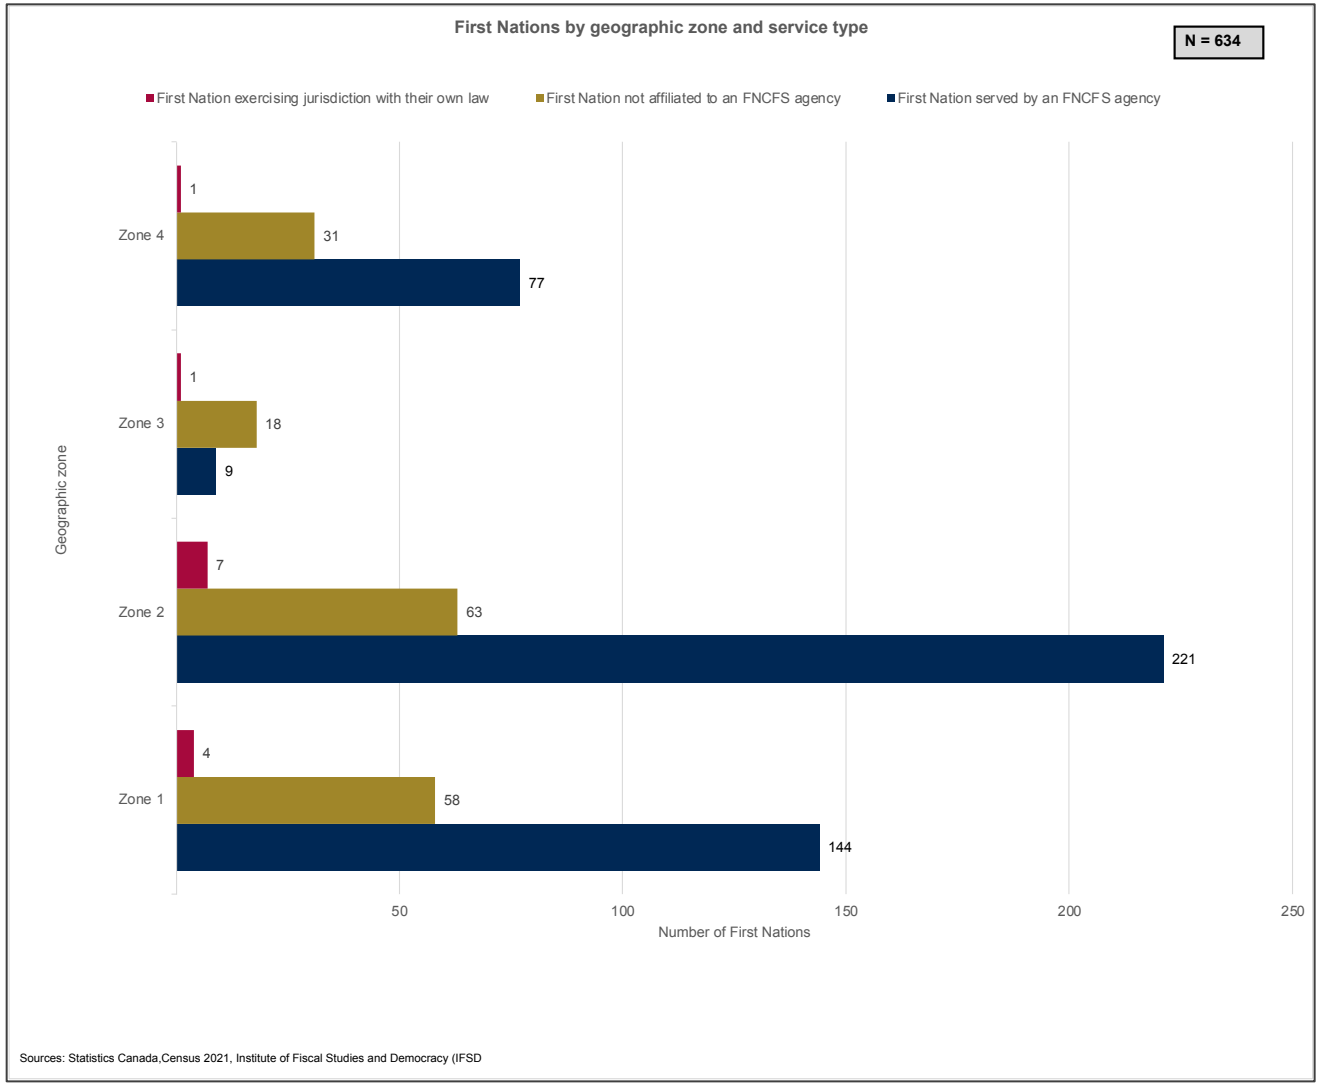
Figure 2



Share of First Nations across Canada by geographic zone
N = 634
32%
46%
4%
17%
Zone 1
Zone 2
Zone 3
Zone 4
Sources: Statistics Canada,Census 2021, Institute of Fiscal Studies and Democracy (IFSD)

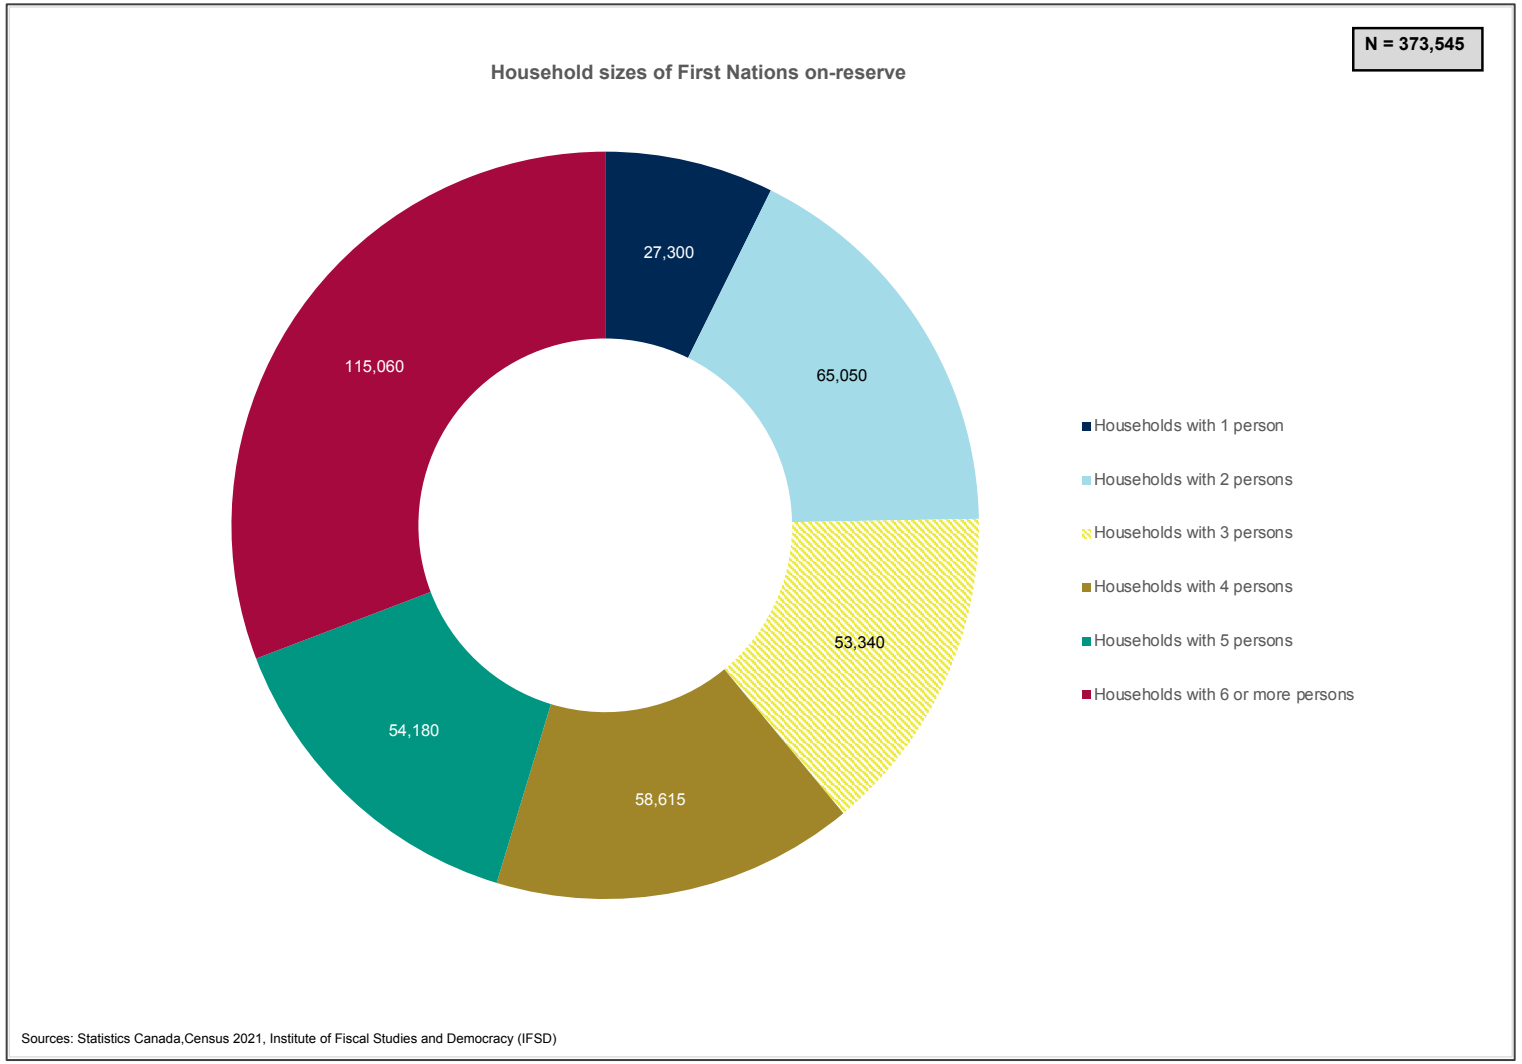
Most First Nations are served by an FNCFS agency, and most are in geographic zones 1 and 2. More First Nations in geographic zone 4 are served by an FNCFS agency than in zone 3 (Figure 3).

Figure 3



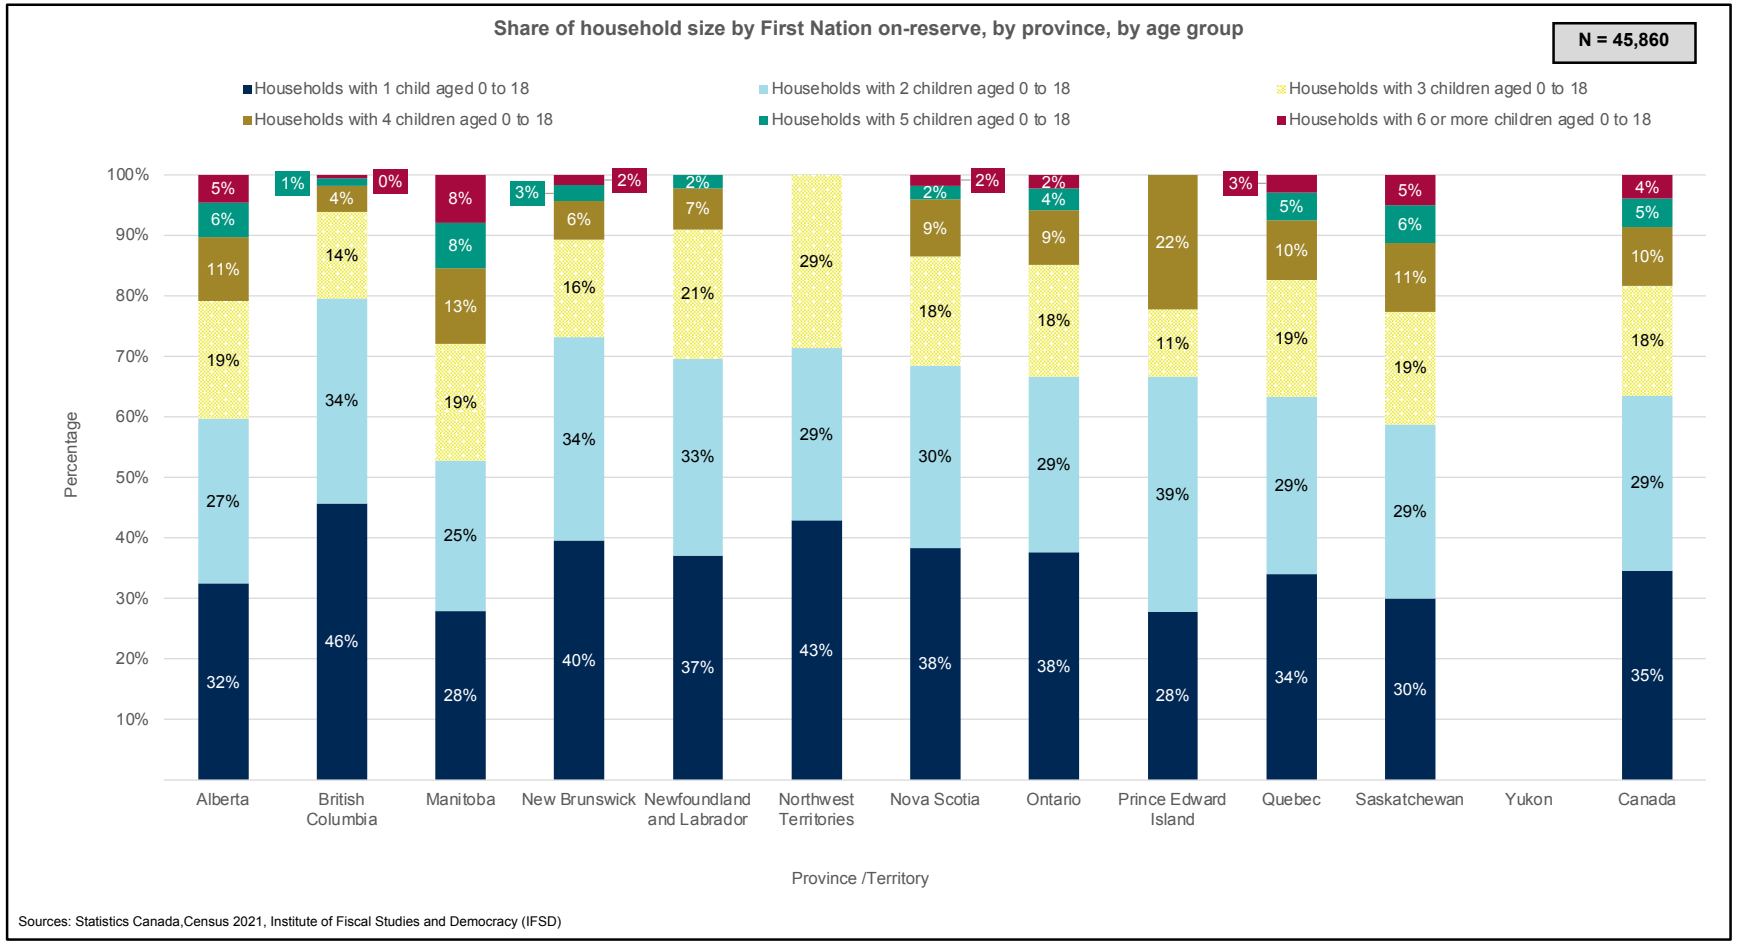
Approximately 31% of First Nations on-reserve reside in households with 6 or more persons. Household size is a relevant consideration for issues of crowding, health, and well-being, e.g., intimate partner violence, school performance, etc.

Figure 4



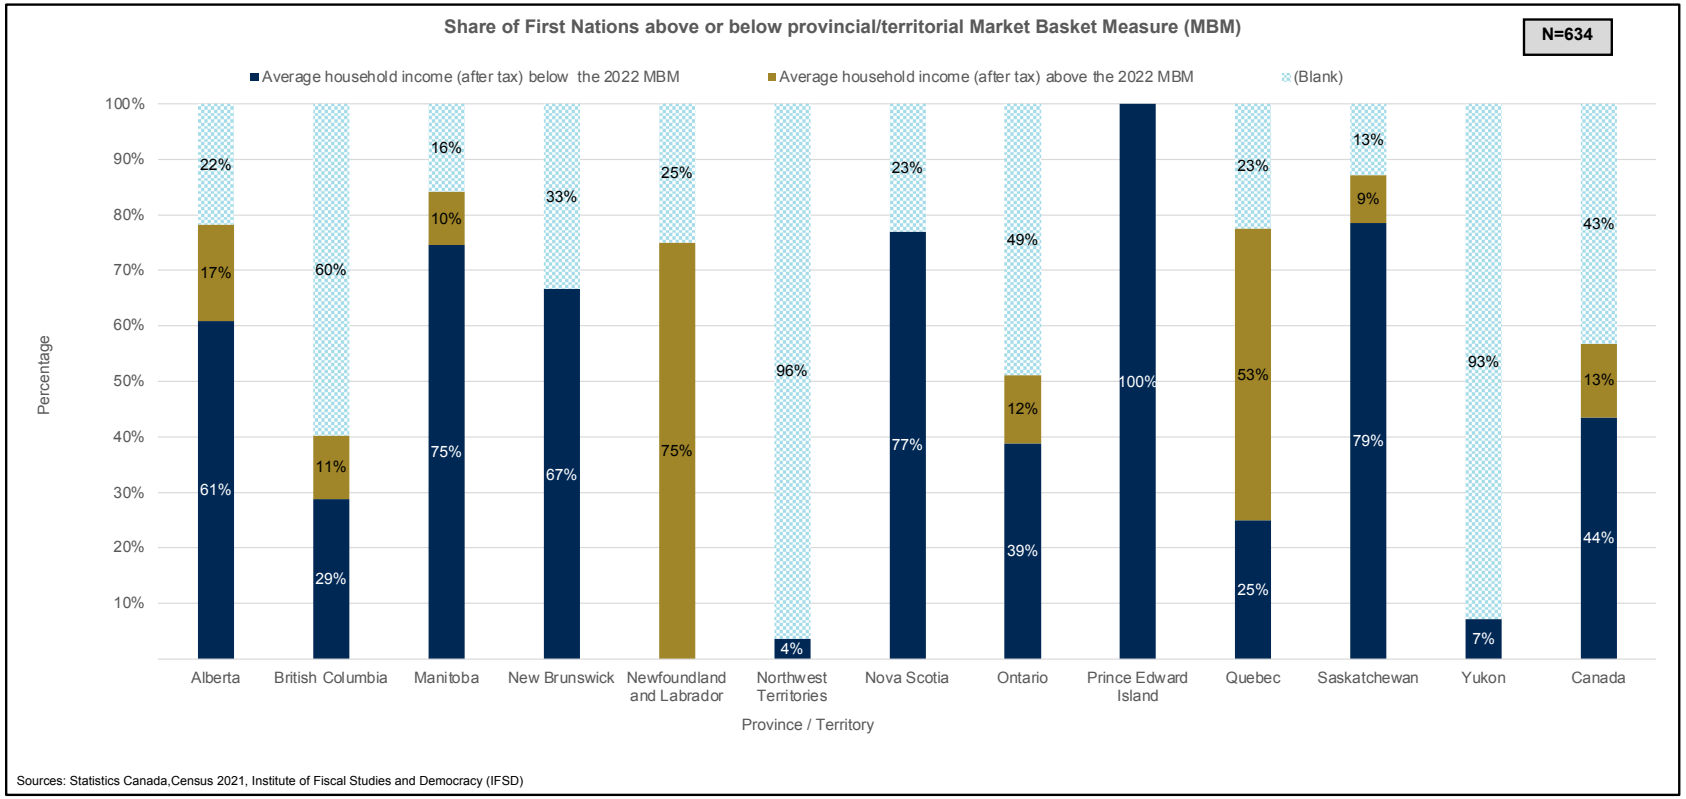
Households on-reserve tend to have at least one child (aged 0-18) residing in them (Figure 5). Most households across all provinces and territories have between 1-2 children, with an average of 33% reporting 3 or more children.

Figure 5



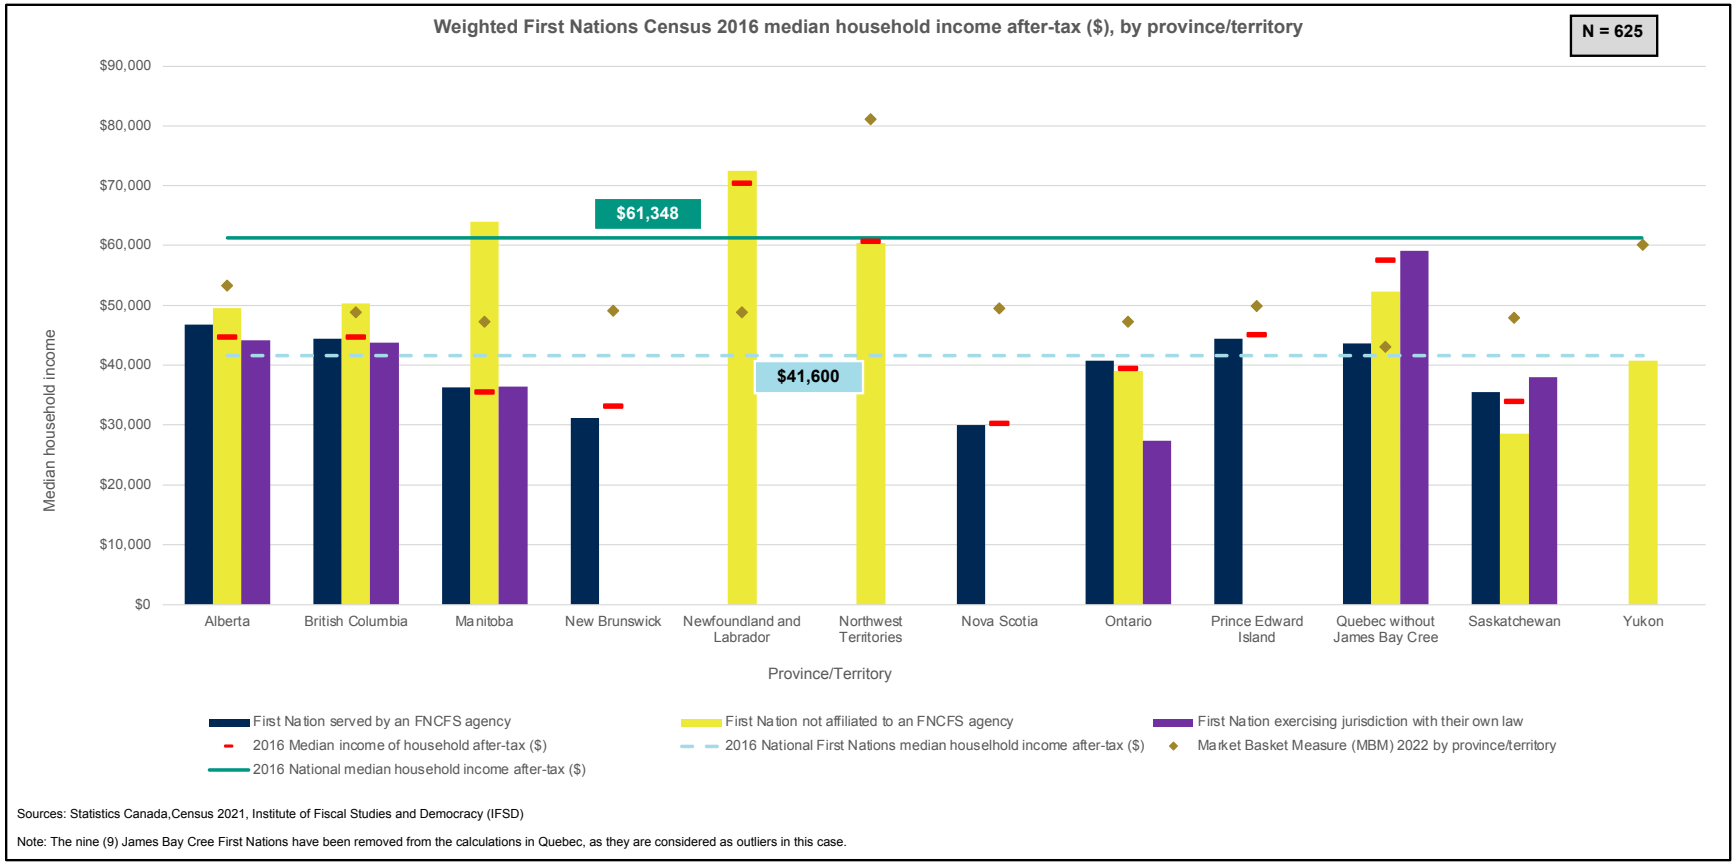
There are significant shares of First Nations across provinces and territories for which household income data is unavailable (blank) (Figure 6). For those reporting household income (after tax), most are below the 2022 Market Basket Measure (MBM) for the relevant province/territory. The MBM is Canada's official measure of poverty that captures the cost of standard goods required for a modest living. Income-based deprivation is an important consideration for CFS and the well-being of children.

Figure 6



To illustrate the difference between median household income (after tax) in First Nations and the relevant Market Basket Measure (MBM), a weighted value (by province/territory) is applied to First Nations without data. Census 2016 data is applied in the calculation (Figure 7) because Census 2021 median household income data (after tax) includes COVID-19 related income supports that artificially increase values (Figure 8). When Census 2021 median household income data (after tax) is applied, most First Nations are above their relevant MBM.

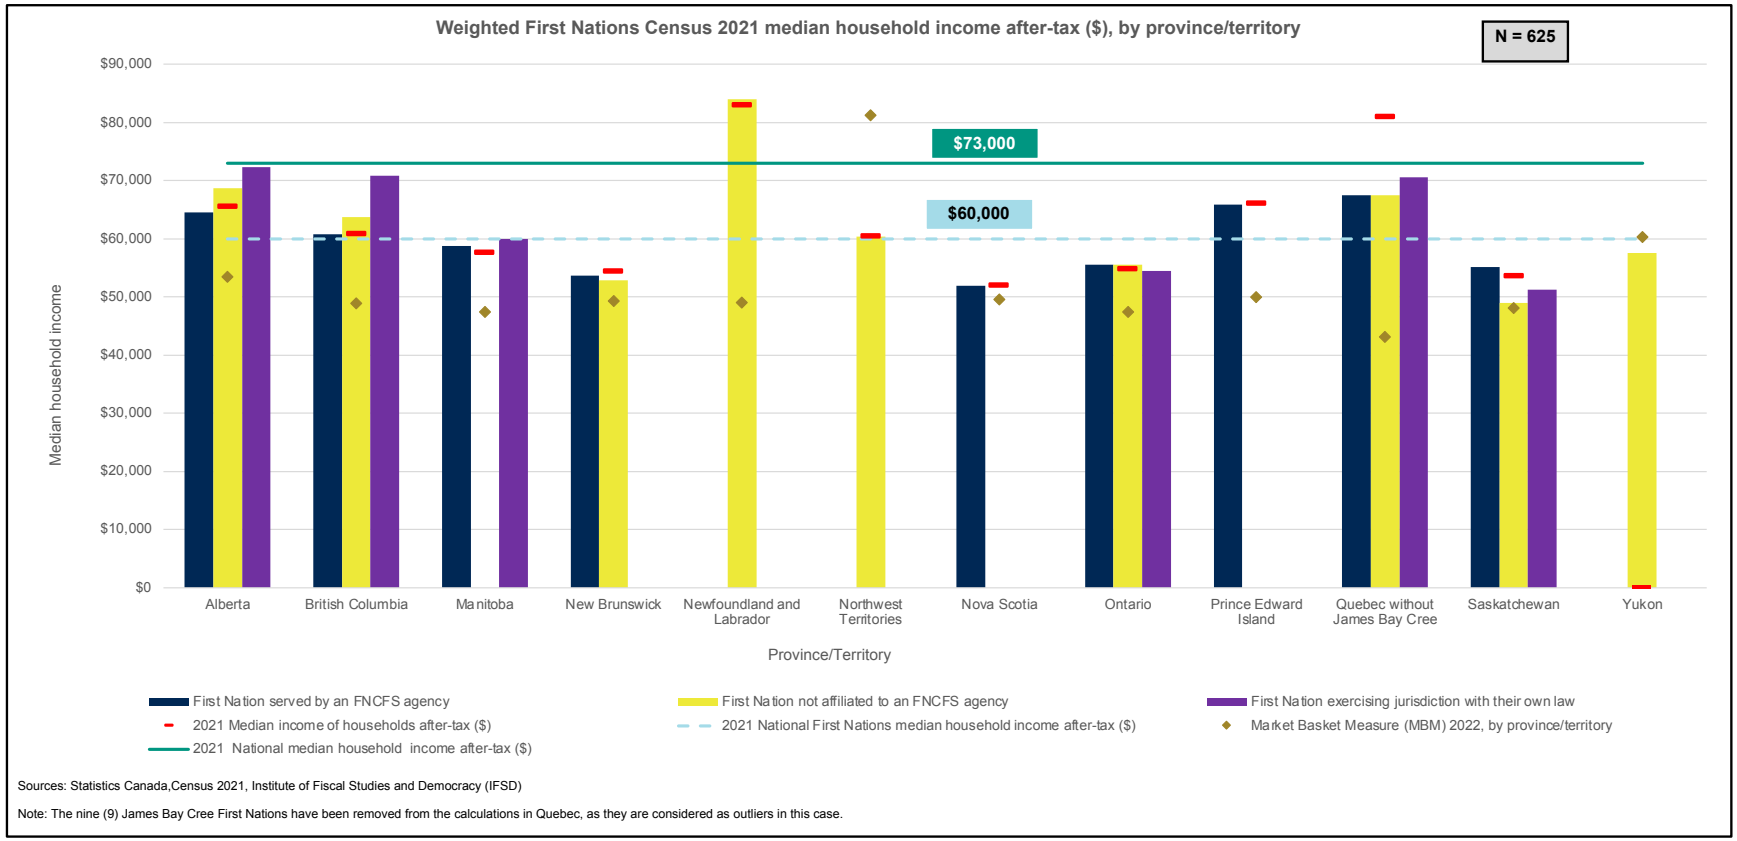
Figure 7



Sources: Statistics Canada,Census 2021, Institute of Fiscal Studies and Democracy (IFSD)

Note: The nine (9) James Bay Cree First Nations have been removed from the calculations in Quebec, as they are considered as outliers in this case.

Figure 8

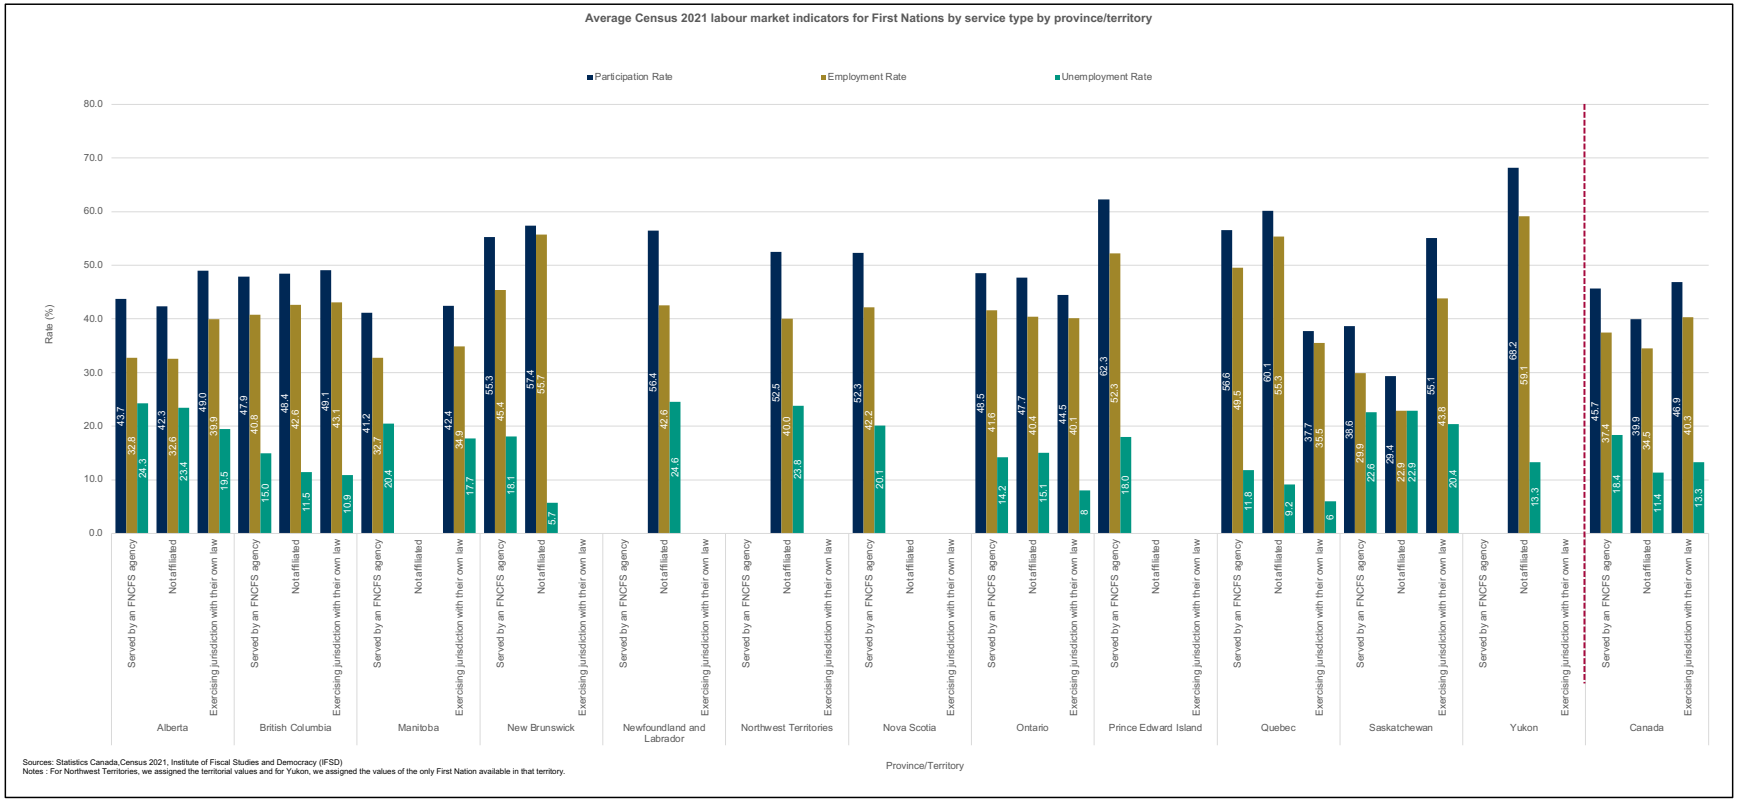


Sources: Statistics Canada,Census 2021, Institute of Fiscal Studies and Democracy (IFSD)

Note: The nine (9) James Bay Cree First Nations have been removed from the calculations in Quebec, as they are considered as outliers in this case.

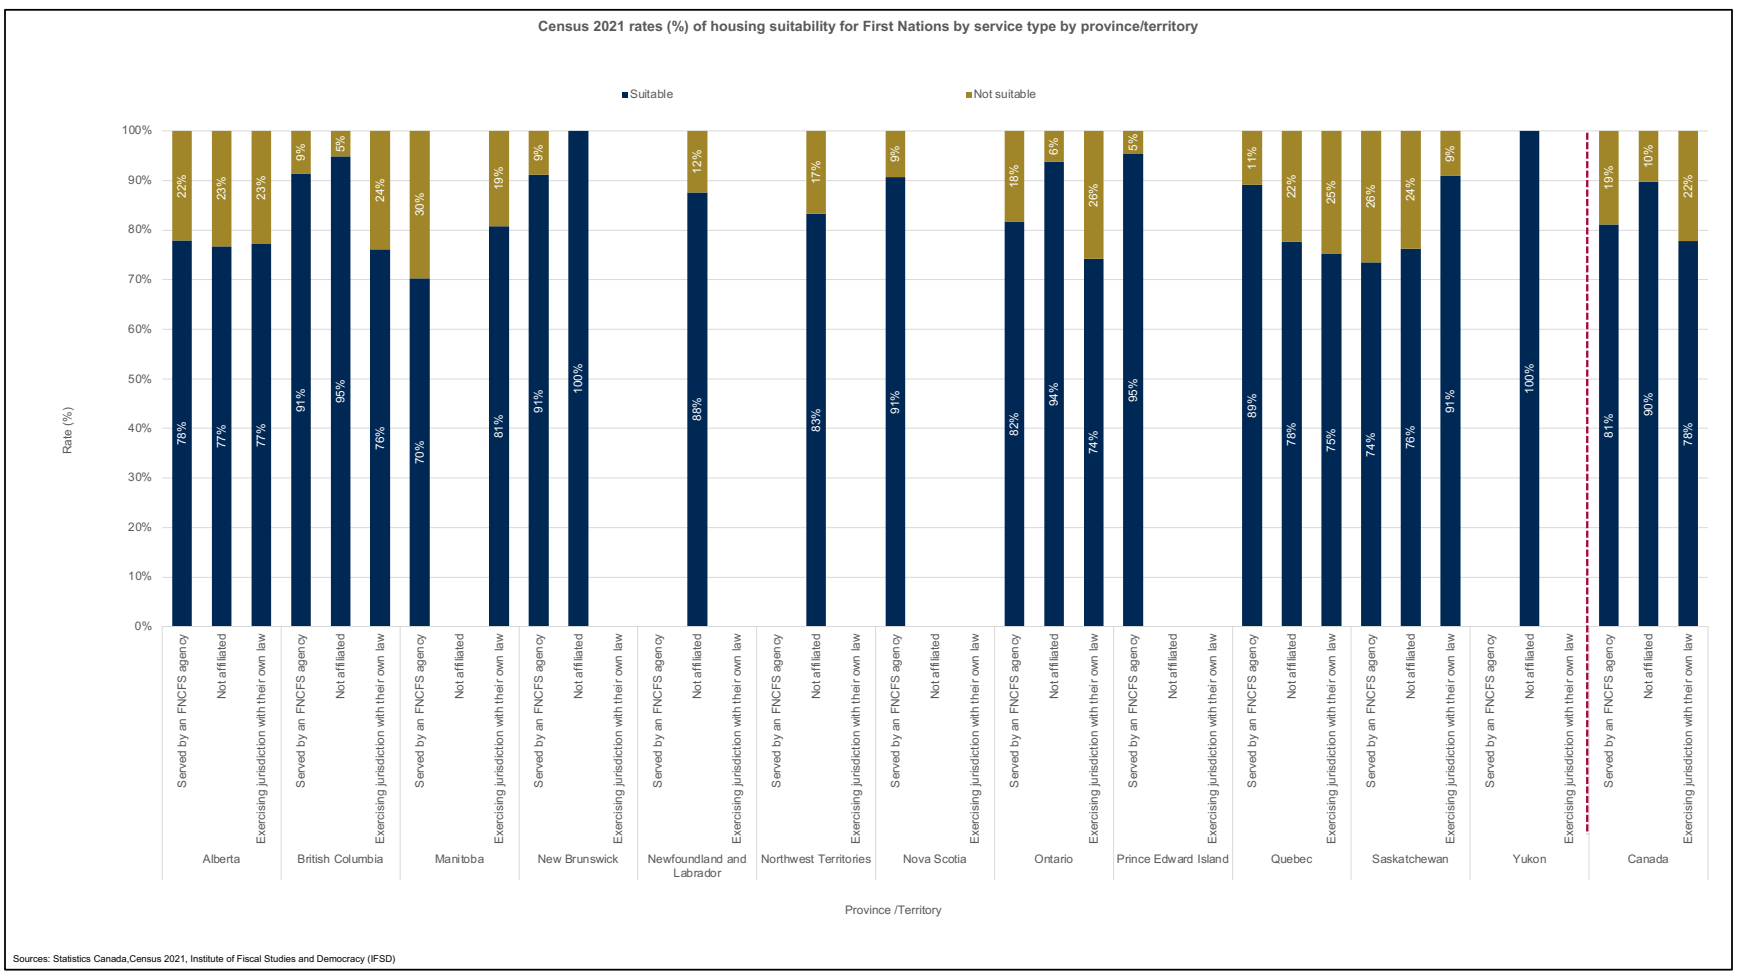
When assessed at a national level, First Nations served by an FNCFS agency have the highest unemployment rates, while First Nations not affiliated to an FNCFS agency have the lowest (Figure 9). The highest employment rate is reported among First Nations exercising jurisdiction, followed by First Nations served by an FNCFS agency. There is no clear relationship between service provider type and labour market indicators. Given the difference in numbers between First Nations served by an FNCFS agency, those that are not affiliated, and those exercising jurisdiction, those served by agencies remain the broadest and most representative group.

Figure 9



Rates of national unsuitable housing are approximately 20% for First Nations served by an FNCFS agency and those exercising jurisdiction (Figure 10). First Nations not affiliated to an FNCFS agency have the lowest rates of unsuitable housing. It is unclear if this is a function of location, i.e., mainly in zones 1 and 2, a matter of reporting/participating in the Census, or related to income and labour market participation/unemployment.

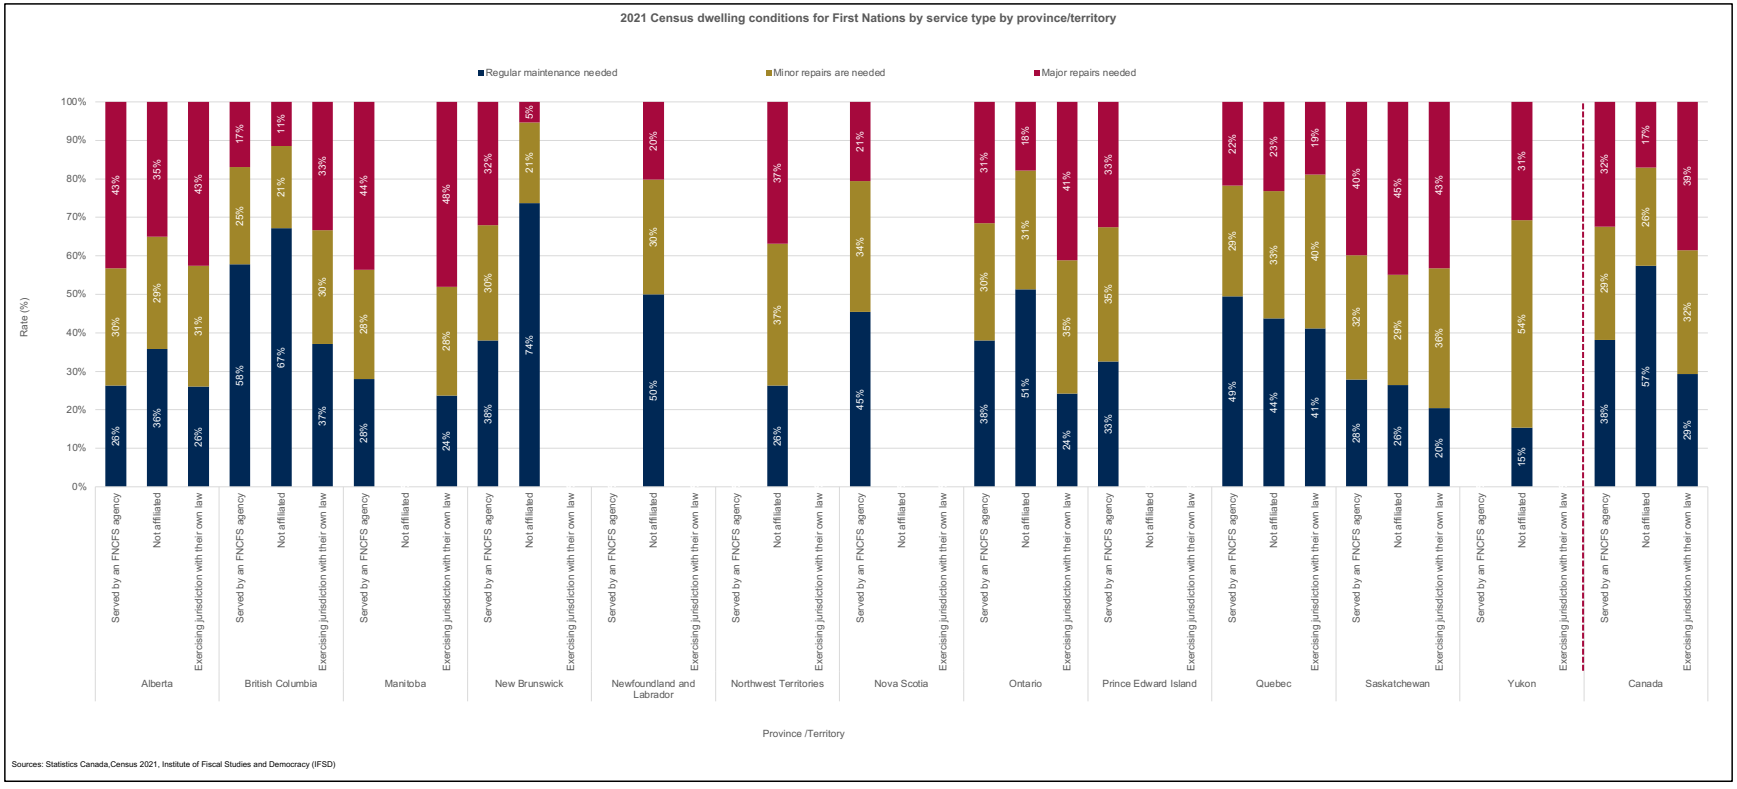
Figure 10



Sources: Statistics Canada,Census 2021, Institute of Fiscal Studies and Democracy (IFSD)

Consistent with issues of housing suitability nationally, most major repairs are required among First Nations exercising jurisdiction and those served by an FNCFS agency (Figure 11). It is unclear if this is a function of location, i.e., mainly in zones 1 and 2, a matter of reporting/participating in the Census, or related to income and labour market participation/unemployment.

Figure 11



APPENDIX A2

FNCFS PROGRAM OVERVIEW

Funding for FNCFS on-reserve (and to the provinces/territories providing services on-reserve) comes through the FNCFS Program. This means that the FNCFS Program is funding FNCFS agencies, First Nations, transfers to provinces/territories, and jurisdiction. The description of the FNCFS Program through InfoBase (the Government of Canada's public facing reporting on its programs) includes *supporting safety and well-being for First Nations children ordinarily resident on-reserve*.

Figure 1

Name	Child and Family Services
Previously Named	First Nations Child and Family Services
Description	First Nations Child and Family Services support the safety and well-being of First Nations children ordinarily resident on-reserve. The program provides funding to First Nations child and family services agencies which are established, managed and controlled by First Nations agencies and delegated by provincial authorities to provide prevention and protection services. In areas where these agencies do not exist, the Department funds services but it does not directly deliver child and family services. Services are provided by provincially delegated First Nations child and family services agencies, tribal councils, First Nation Bands, and the provinces and Yukon in accordance with the legislation and standards of the Province or Territory of residence within the Department program authorities. Pursuant to the 2016 Canadian Human Rights Tribunal ruling, the Government of Canada is working with partners to make immediate and long-term reform to child and family services on reserve. The Department is ensuring the implementation of An Act respecting First Nations, Inuit and Métis children, youth and families by supporting Indigenous communities through distinctions-based governance engagement mechanisms, capacity-building, coordination agreement discussions, and operationalization of Indigenous child and family services models. Definitions. For the purposes of outcomes and indicators relating to First Nations Child and Family Services, the following definitions apply: Child: An individual under 11 years of age; Youth: An individual between 12 years and the age of majority (which differs from one jurisdiction to another); Young adult: An individual from the age of majority (which differs from one jurisdiction to another) up to 25 years old.
Activity Code	BYP08

There are three funding streams in the FNCFS Program as defined by ISC (reproduced from the ISC website) (Figure 2):

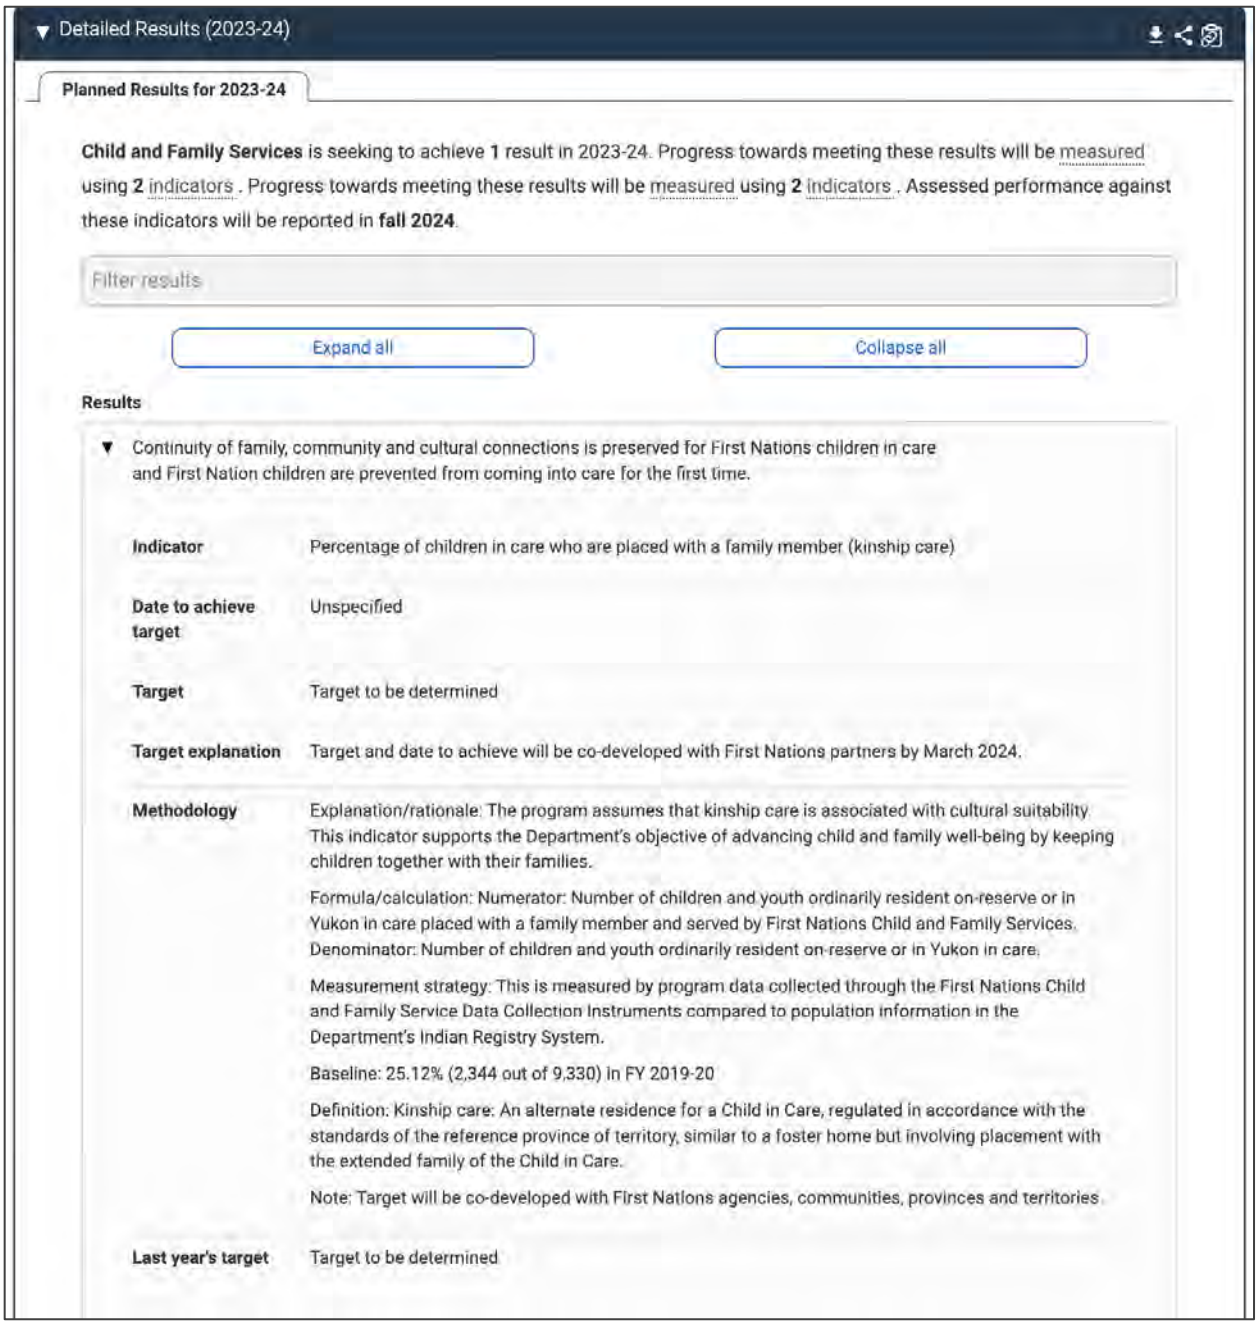
Figure 2

The program provides 3 streams of funding:

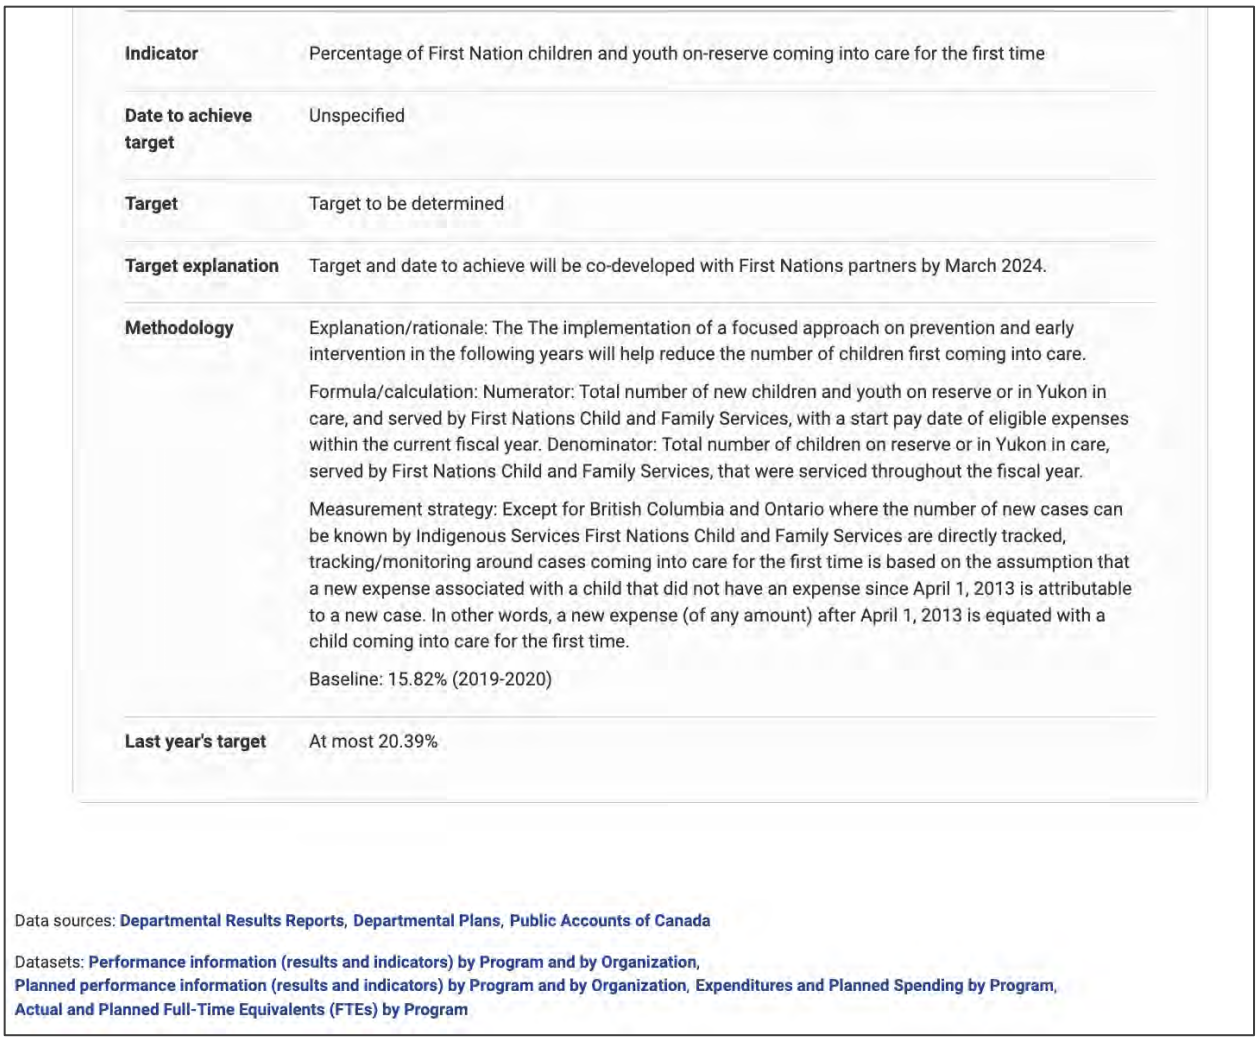
- Operations: core and operational funding for protection services (such as salaries and overhead)
- Prevention: resources for enhanced prevention services
- Maintenance: direct costs of placing First Nations children into temporary or permanent care out of the parental home (such as foster care rates and group home rates)

While the program funds a variety of activities and recipients for child and family services, reporting for the program is focused on two indicators (Figure 3):

Figure 3



Detailed Results (2023-24)
Planned Results for 2023-24
Child and Family Services is seeking to achieve 1 result in 2023-24. Progress towards meeting these results will be measured using 2 indicators . Progress towards meeting these results will be measured using 2 indicators . Assessed performance against these indicators will be reported in fall 2024.
Filter results
Expand all
Collapse all
Results
Continuity of family, community and cultural connections is preserved for First Nations children in care and First Nation children are prevented from coming into care for the first time.
Indicator
Percentage of children in care who are placed with a family member (kinship care)
Date to achieve target
Unspecified
Target
Target to be determined
Target explanation
Target and date to achieve will be co-developed with First Nations partners by March 2024.
Methodology
Explanation/rationale: The program assumes that kinship care is associated with cultural suitability. This indicator supports the Department's objective of advancing child and family well-being by keeping children together with their families.
Formula/calculation: Numerator: Number of children and youth ordinarily resident on-reserve or in Yukon in care placed with a family member and served by First Nations Child and Family Services. Denominator: Number of children and youth ordinarily resident on-reserve or in Yukon in care.
Measurement strategy: This is measured by program data collected through the First Nations Child and Family Service Data Collection Instruments compared to population information in the Department's Indian Registry System.
Baseline: 25.12% (2,344 out of 9,330) in FY 2019-20
Definition: Kinship care: An alternate residence for a Child in Care, regulated in accordance with the standards of the reference province of territory, similar to a foster home but involving placement with the extended family of the Child in Care.
Note: Target will be co-developed with First Nations agencies, communities, provinces and territories.
Last year's target
Target to be determined



Indicator	Percentage of First Nation children and youth on-reserve coming into care for the first time
Date to achieve target	Unspecified
Target	Target to be determined
Target explanation	Target and date to achieve will be co-developed with First Nations partners by March 2024.
Methodology	Explanation/rationale: The The implementation of a focused approach on prevention and early intervention in the following years will help reduce the number of children first coming into care. Formula/calculation: Numerator: Total number of new children and youth on reserve or in Yukon in care, and served by First Nations Child and Family Services, with a start pay date of eligible expenses within the current fiscal year. Denominator: Total number of children on reserve or in Yukon in care, served by First Nations Child and Family Services, that were serviced throughout the fiscal year. Measurement strategy: Except for British Columbia and Ontario where the number of new cases can be known by Indigenous Services First Nations Child and Family Services are directly tracked, tracking/monitoring around cases coming into care for the first time is based on the assumption that a new expense associated with a child that did not have an expense since April 1, 2013 is attributable to a new case. In other words, a new expense (of any amount) after April 1, 2013 is equated with a child coming into care for the first time. Baseline: 15.82% (2019-2020)
Last year's target	At most 20.39%

Data sources: **Departmental Results Reports**, **Departmental Plans**, **Public Accounts of Canada**

Datasets: **Performance information (results and indicators) by Program and by Organization**, **Planned performance information (results and indicators) by Program and by Organization**, **Expenditures and Planned Spending by Program**, **Actual and Planned Full-Time Equivalents (FTEs) by Program**

Both indicators are focused on the safety of children with no consideration of their overall well-being. These indicators do not capture the breadth of activities funded through the FNCFS Program.

The department's 2024-25 departmental plan defines four indicators for the FNCFS Program (Figure 4). These indicators focus on protection, jurisdiction, and child and family service offerings in the First Nation. They do not help understand how the resources flowing through the FNCFS Program are supporting both the safety and well-being of children.

Figure 4

Percentage of First Nations children on-reserve in care	5.95%[3]	Not available[4]	Not available[4]	Maintain or decrease results year over year[1]	March 2025
Percentage of children in care who are placed with a family member (kinship care)	26.98%[5]	Not available[4]	Not available[4]	Maintain or increase results year over year[1]	March 2025
Percentage of First Nations communities offering family support services aimed at keeping families together	Not available[2]	Not available[2]	Not available[2]	Not applicable[6]	Not applicable[6]
Number of First Nations Groups, Communities and Peoples exercising their jurisdiction under the *Act respecting First Nations, Inuit and Métis children, youth and families*	New indicator introduced in 2023-24			18[7]	March 2025

A reformed FNCFS Program must have a clear policy objective that includes safety but extends beyond it, clearly encompassing the importance of a horizontal understanding of wellness for children, families, and communities. With a new policy, funding and measurement approaches should be redefined to align to the priority.

APPENDIX B1
ISC DATA REQUEST

Phase 3 data request
FNCFS and First Nations not served by a FNCFS agency

**Request updated on April 5, 2022, to include a detailed breakdown of the FNCFS program and to provide additional details on why the 'recipient' field is requested*.

NOTE: The "recipient" field is requested as a lens through which to verify how funding is coded. The "recipient type" field and the program activity lens do not always align. For instance, a mainstream agency may receive FNCFS funding. If the "recipient type" is coded as 'agency,' and is the only tag provided, IFSD could not distinguish between FNCFS funding for FNCFS agencies, versus others receiving program funding. The "recipient" field provides additional information to ensure a program activity alignment of expenditures and recipients.

I) Program data

IFSD is seeking detailed program, sub-, and sub-sub-program level expenditure information at the national level. This information will help to produce a current state portrait for the modelling work in First Nations child and family services (FNCFS), as well as for assessing the needs of First Nations not served by a FNCFS agency.

IFSD is requesting the following information in an Excel spreadsheet:

- Fiscal years 2011-12 to 2021-22
- Projected expenditures for fiscal years 2022-23 to 2024
- IFSD has provided a sample spreadsheet with the relevant data fields in the transmittal email, e.g., recipient, recipient type, funding approach, etc.

Health Facilities	
Other Community Infrastructure and Activities	
Other programs as required	

Note: This program list is not considered exhaustive, as it only reflects publicly accessible 'program' level information.

Working with ISC, IFSD would be pleased to develop a detailed list of programs at the most granular level of data available, e.g., sub-sub-program level data.

IFSD notes that CHRT-related expenditures in FNCFS are not separately coded by ISC, but are included in the FNCFS program.

II) Breakdown of the FNCFS program

IFSD is seeking detailed information on the lowest level of granularity of spending through the FNCFS program, e.g., sub-, sub-sub, sub-sub-sub-program, etc. This information is necessary to understand the components that make up the program. IFSD is requesting the following information in an Excel spreadsheet:

- Fiscal years 2017-18 to 2021-2022
- Recipient name
- Recipient type, e.g., First Nation, FNCFS agency, etc.
- Region
- Province
- Amount transferred
- Funding approach (fixed, flexible, block)
- Funding mechanism (grant and contribution, application, etc.)
- Detailed program activity:
    - CWJI
    - FNCFS – agency
    - Prevention funding – actuals
    - Capital funding
    - Etc.

III) Prevention/actuals funding

IFSD is seeking information on the actuals/prevention funding requests and allocations of FNCFS agencies and other eligible recipients mandated by the CHRT. While IFSD understands that ISC's national office may not code actuals/prevention expenditures separately from the FNCFS program, IFSD understands that the regional offices may have such information. IFSD is requesting the following information in an Excel spreadsheet:

- Fiscal years 2017-18 to 2021-2022
- Recipient name
- Recipient type, e.g., First Nation, FNCFS agency, etc.
- Region
- Province
- Amount requested
- Amount transferred
- Funding approach (fixed, flexible, block)
- Funding mechanism (grant and contribution, application, etc.)
- Purpose of request for funds, e.g., capital, prevention programming, etc.

IV) Transfers

IFSD is seeking information on transfers to provinces and territories for First Nations child and family services, and related activities. IFSD is requesting financial and related details for all votes/associated activities defined in the Public Accounts. Using the vote structure from the Public Accounts, e.g., 2020-21, vol. III, section 6 (see the list of transfers in Appendix A), IFSD is requesting the following information in an Excel spreadsheet:

- Fiscal years 2011-12 to 2021-22
- Recipient name
- Recipient type, e.g., province, First Nation, etc.
- Amount transferred
- Contribution approach
- Vote/associated activity

V) Post-majority care

IFSD is seeking information on funding for post-majority care provided to FNCFS agencies or other eligible recipients. The information is necessary to understand current funding practices in post-majority care and identify demand (and changes in demand with the pandemic-induced extension). IFSD is requesting the following information in an Excel spreadsheet:

- Fiscal years 2017-18 to 2021-2022
- Recipient name, e.g., First Nation, FNCFS agency, etc.
- Recipient type, e.g., First Nation, FNCFS agency, etc.
- Number of requests for support, i.e., number of young people supported by the recipient's funding
- Region
- Province
- Amount requested
- Amount transferred
- Funding approach (fixed, flexible, block)
- Funding mechanism (grant and contribution, application, etc.)
- Purpose of request for funds, e.g., program development, individual support, etc.
- Terms and Conditions associated to funding for post-majority care

VI) Band representative services

IFSD is seeking information on funding for band representative services provided to FNCFS agencies or other eligible recipients. The information is necessary to understand current funding practices and associated program activities. IFSD is requesting the following information in an Excel spreadsheet:

- Fiscal years 2011-12 to 2021-2022
- Recipient name, e.g., First Nation, FNCFS agency, etc.
- Recipient type, e.g., First Nation, FNCFS agency, etc.
- Region
- Province
- Amount requested
- Amount transferred
- Funding approach (fixed, flexible, block)
- Funding mechanism (grant and contribution, application, etc.)

Appendix A

Public Accounts of Canada, 2021

Indigenous Services Canada
Department of Indigenous Services

(S) Climate Action Support (Budget Implementation Act, 2019, No.1 - S.C. 2019, c.29

(S) Contributions in connection with First Nations infrastructure (Keeping Canada's Economy and Jobs Growing Act)

(S) Indian Annuities Treaty payments (Indian Act)

(S) Payments for Income Assistance pursuant to the Public Health Events of National Concern Payments Act

(S) Payments to enhance public health measures to COVID-19 in First Nations and Inuit communities pursuant to the Public Health Events of National Concern Payments Act

(S) Payments to support a safe restart in Indigenous communities pursuant to the Public Health Events of National Concern Payments Act

(S) Payments to support Indigenous businesses pursuant to the Public Health Events of National Concern Payments Act

(S) Payments to support Indigenous mental wellness pursuant to the Public Health Events of National Concern Payments Act

(S) Payments to support students and youth impacted by COVID-19 pursuant to the Public Health Events of National Concern Payments Act

(S) Payments to the Family Violence Prevention Program pursuant to the Public Health Events of National Concern Payments Act

(S) Payments to the Indigenous Community Support Fund pursuant to the Public Health Events of National Concern Payments Act

(S) Payments to urban and regional Indigenous organizations pursuant to the Public Health Events of National Concern Payments Act

Contributions for emergency management assistance for activities on reserves

Contributions for First Nations and Inuit Health Infrastructure Support

Contributions for First Nations and Inuit Primary Health Care

Contributions for First Nations and Inuit Supplementary Health Benefits

Contributions for the purpose of consultation and policy development

Contributions to First Nations for the management of contaminated sites

Contributions to improve the safety and security of Indigenous women, children and families

Contributions to increase First Nations and Inuit Youth Participation in Education and Labour Market Opportunities

Contributions to Indian bands for registration administration

Contributions to provide income support to on-reserve residents and Status Indians in the Yukon Territory

Contributions to strengthen the safety and well-being of First Nations children and their families

Contributions to supply public services in Indian Government Support and to build strong governance, administrative and accountability systems

Contributions to support First Nations Elementary and Secondary Educational Advancement

Contributions to support Land Management and Economic Development

Contributions to support the Aboriginal Economic Development Strategic Partnerships Initiative

Contributions to support the construction and maintenance of community infrastructure

Contributions to support the First Nations Post-Secondary Education Strategy

Contributions to support the Inuit Post-Secondary Education Strategy

Contributions to support the Métis Nation Post-Secondary Education Strategy

Contributions to support Urban Programming for Indigenous Peoples

Grant for Band Support Funding

Grant to implement the Framework Agreement on First Nation Land Management

Grant to support the new fiscal relationship for First Nations under the Indian Act

Grant to the Miawpukek Indian Band to support designated programs

Grants for the Operation Return Home claims settlements

Grants to British Columbia Indian bands in lieu of a per capita annuity

Grants to increase First Nations and Inuit Youth Participation in Education and Labour Market Opportunities

Grants to provide income support to on-reserve residents and Status Indians in the Yukon Territory

Grants to support the First Nations Post-Secondary Education Strategy

APPENDIX B2
EXPENDITURE DATA

NOTE: On April 19, 2024, ISC informed IFSD that updates to the planned expenditure data for fiscal years 2022-2023 onward were required. To date (August 30, 2024), IFSD has not received the updated data. For this reason, slides 4 to 8 and 21 to 26 have been removed from this document. IFSD will update the appendix when the information is received from ISC.

Phase 3 – ISC expenditure data analysis

Request 1

February 12, 2024

Departmental expenditures

Notes

- Indigenous Services Canada (ISC) is a federal department accountable for providing resources to First Nations, Inuit, and Métis for program and service delivery.

- The department transfers resources to provinces and territories, and to Indigenous peoples (through contribution approaches).

- The analysis in this section is presented by Parliamentary vote structure, i.e., the way in which Parliament appropriates funds for use by the department and by program.
  - Votes 1 and 10 will be the focus of the analysis.
  - Programs are analyzed as reported by ISC and in IFSD clusters.

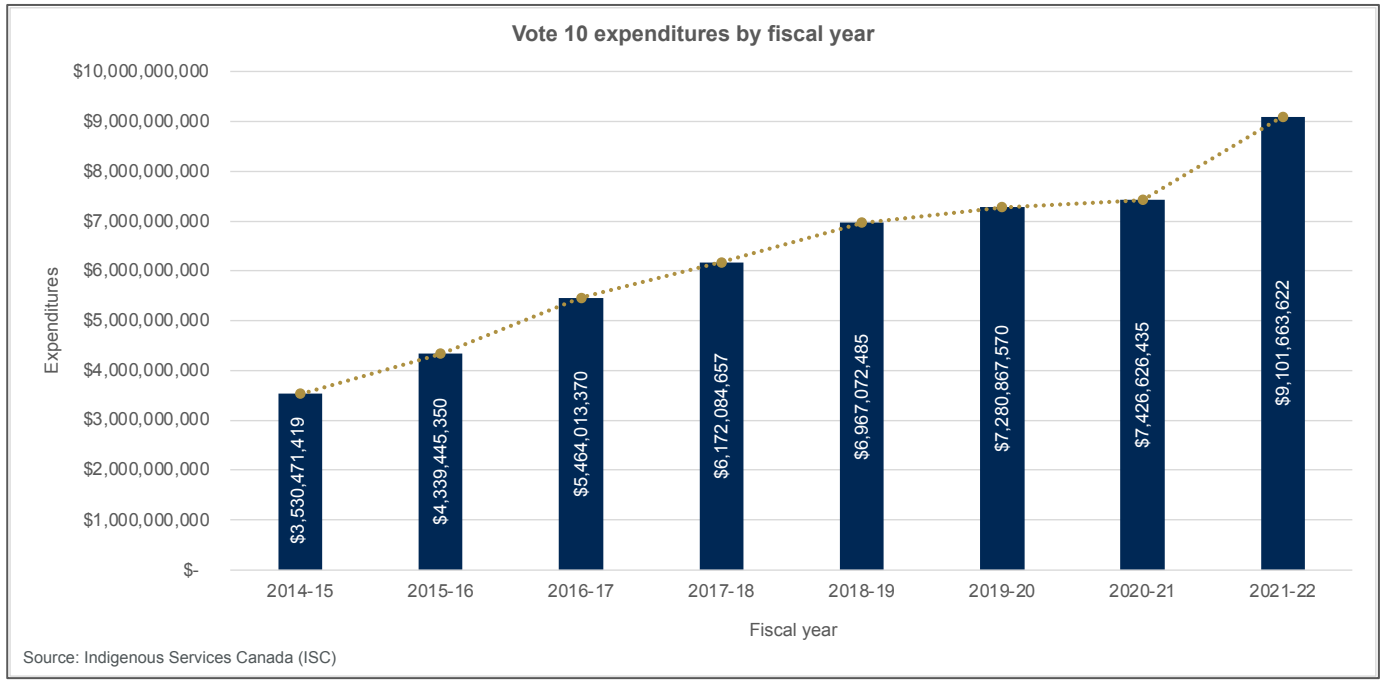
- The data provided to IFSD includes fiscal years 2014-15 to 2021-22, with planned expenditures for fiscal years 2023-24 and 2024-25.

Overview of Parliamentary vote structures

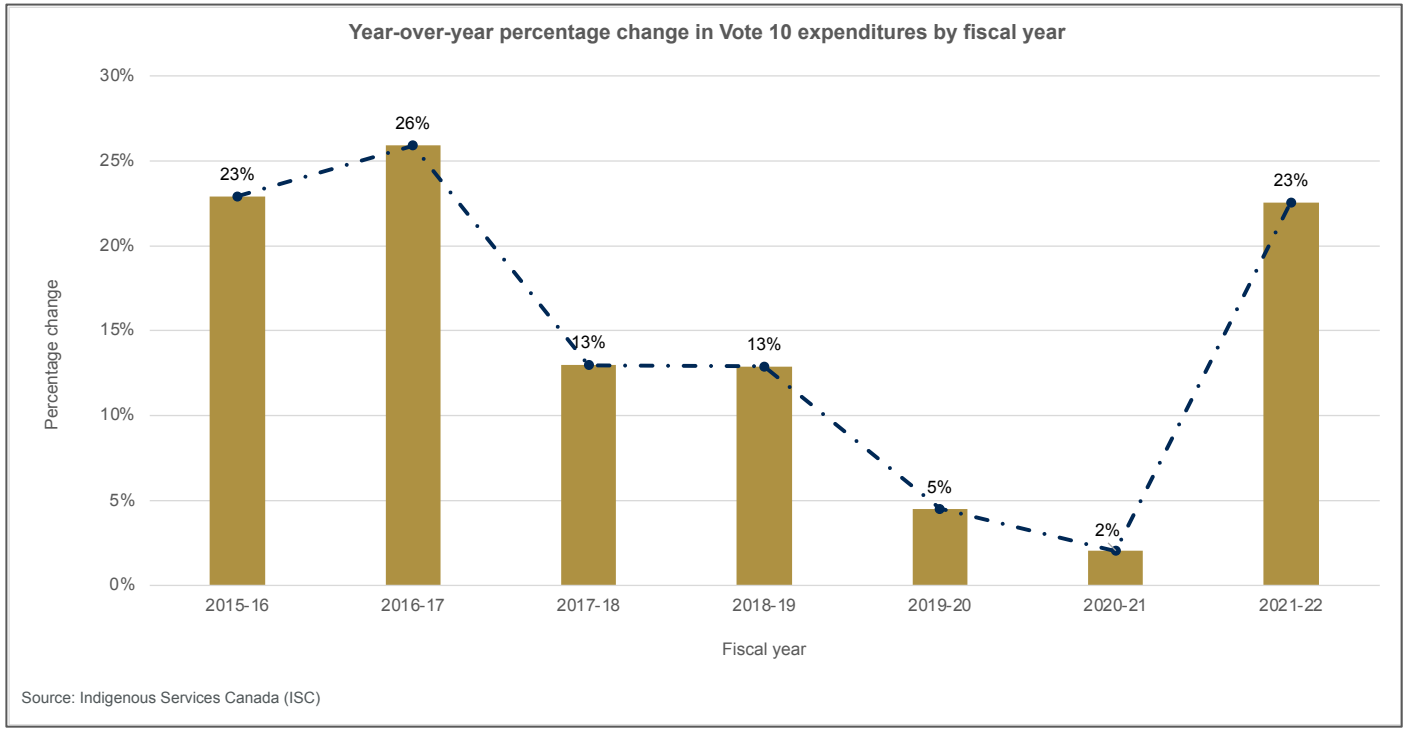
Vote number	Vote 1	Vote 5	Vote 10	N/A
Vote type	**Operating expenses**	**Capital**	**Grants & contributions**	**Statutory**
Definition	Funding for day-to-day items (e.g., salaries, utilities) where where total spending on capital assets or transfer payments is estimated to be above $5 million per year	Funding for capital acquisition or related expenditures, generally for assets exceeding $10,000 in value (e.g., buildings, vehicles)	Grants & contributions to other levels of government and private individuals/organizations (i.e. transfer payments) equal to or above $5 million	Expenditure that Parliament has authorized through pre-existing legislation (e.g., Canada Health Transfers)
Voted on by Parliament each fiscal year	Yes	Yes	Yes	No
Source: Department of Justice, "Quarterly Financial Report for the Quarter Ended June 30, 2018," last modified May 2022, https://www.justice.gc.ca/eng/rp-pr/cp-pm/qfr-rft/2018_q1/index.html; Government of Canada, "Supplementary Estimates (B), 2020-21," last modified November 2023, https://www.canada.ca/en/treasury-board-secretariat/services/planned-government-spending/supplementary-estimates/supplementary-estimates-b-2020-21.html; Pu, Shaowei and Smith, Alex, "The Parliamentary Financial Cycle," Library of Parliament, revised September 2021, https://lop.parl.ca/sites/PublicWebsite/default/en_CA/ResearchPublications/201541E#txt46; Shared Services Canada, "Quarterly Financial Report - For the quarter ended June 30, 2023," last modified October 2023, https://www.canada.ca/en/shared-services/corporate/publications/2023-24/quarterly-financial-report-q1-2023-24.html				
Note: Appropriations usually apply to a one-year period with the exception of Canada Border Services Agency, Canada Revenue Agency, and Parks Canada Agency which often receive two-year allocations.				

Vote 10 expenditures by fiscal year

- In 2021-22, ISC's Vote 10 expenditures reached a high of $9B.
- Since 2014-15, ISC's Vote 10 expenditures have increased, with variance in the year-over-year percentage increases.



Source: Indigenous Services Canada (ISC)

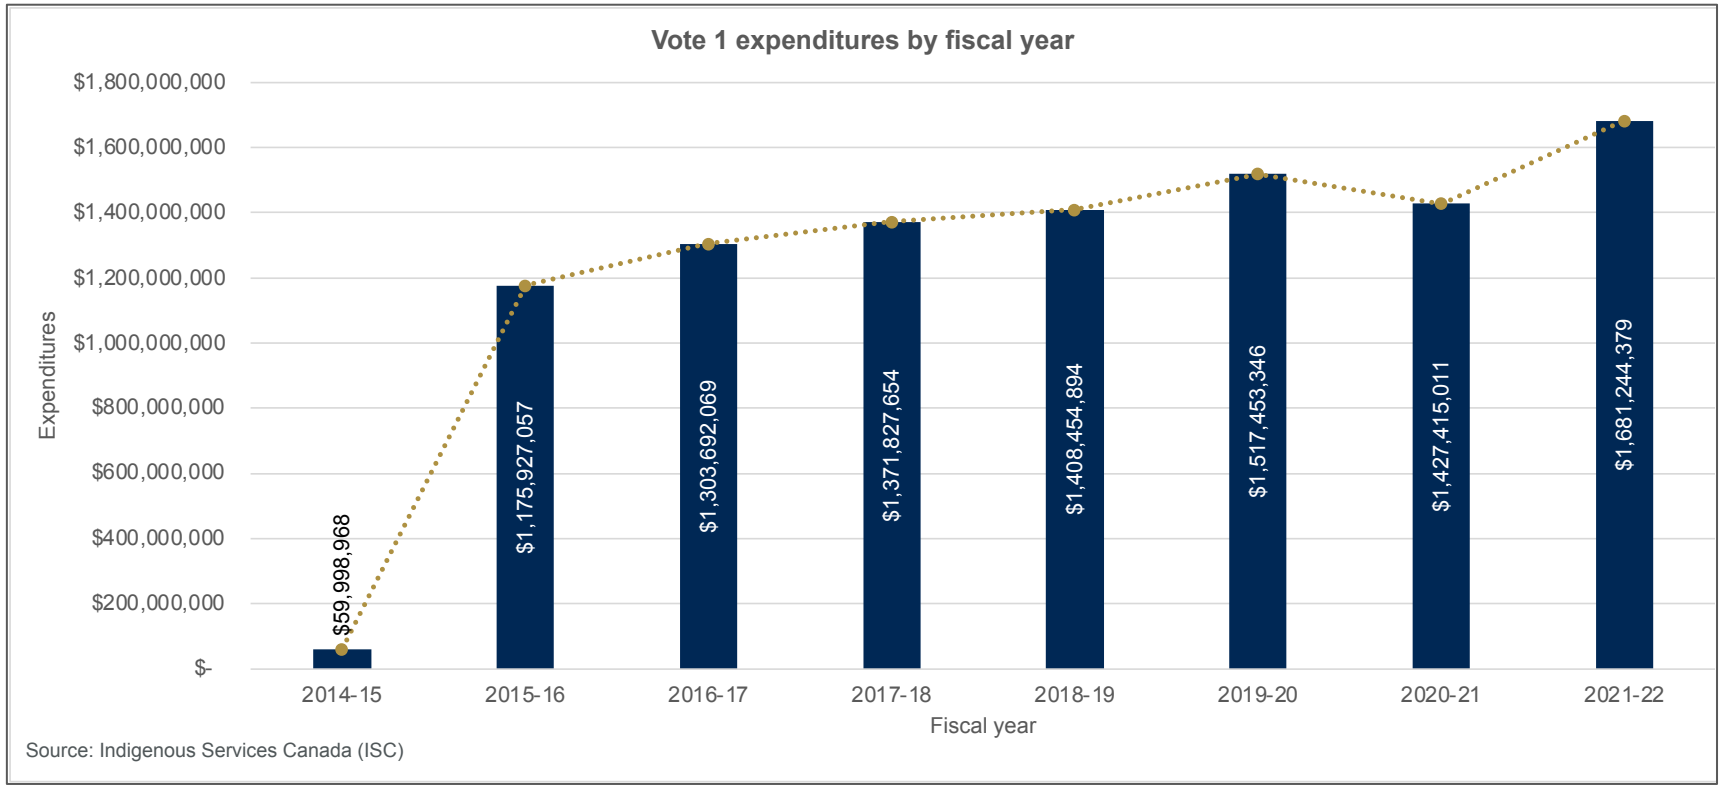


Source: Indigenous Services Canada (ISC)

IFSD
IFPD

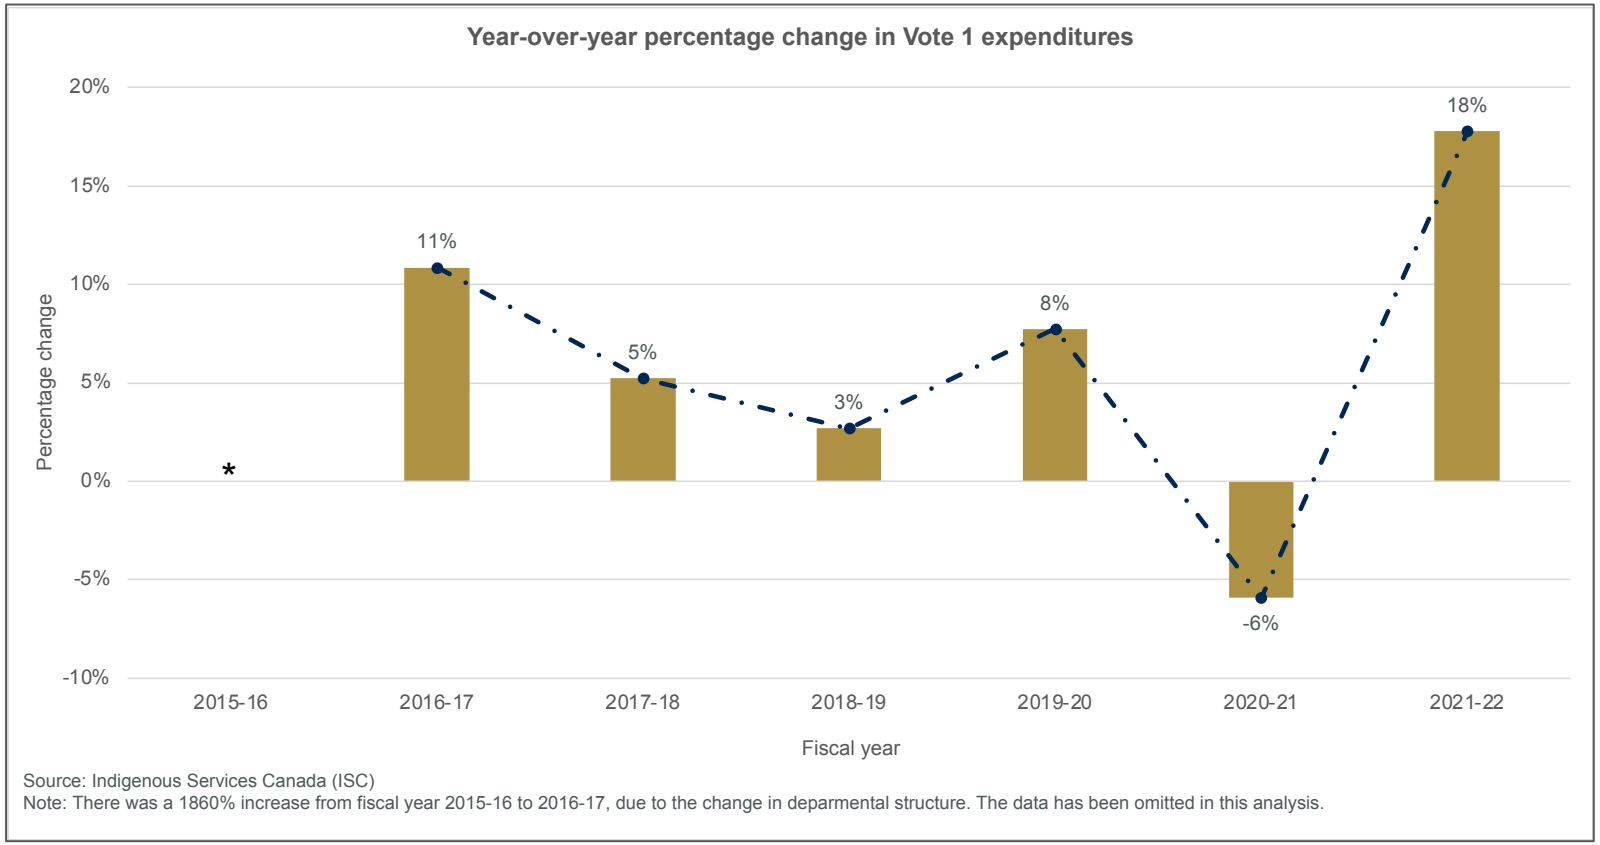
Vote 1 expenditures by fiscal year

- ISC's Vote 1 expenditures have generally increased across fiscal years, reaching a high of $1.6B in fiscal year 2021-22.



Source: Indigenous Services Canada (ISC)

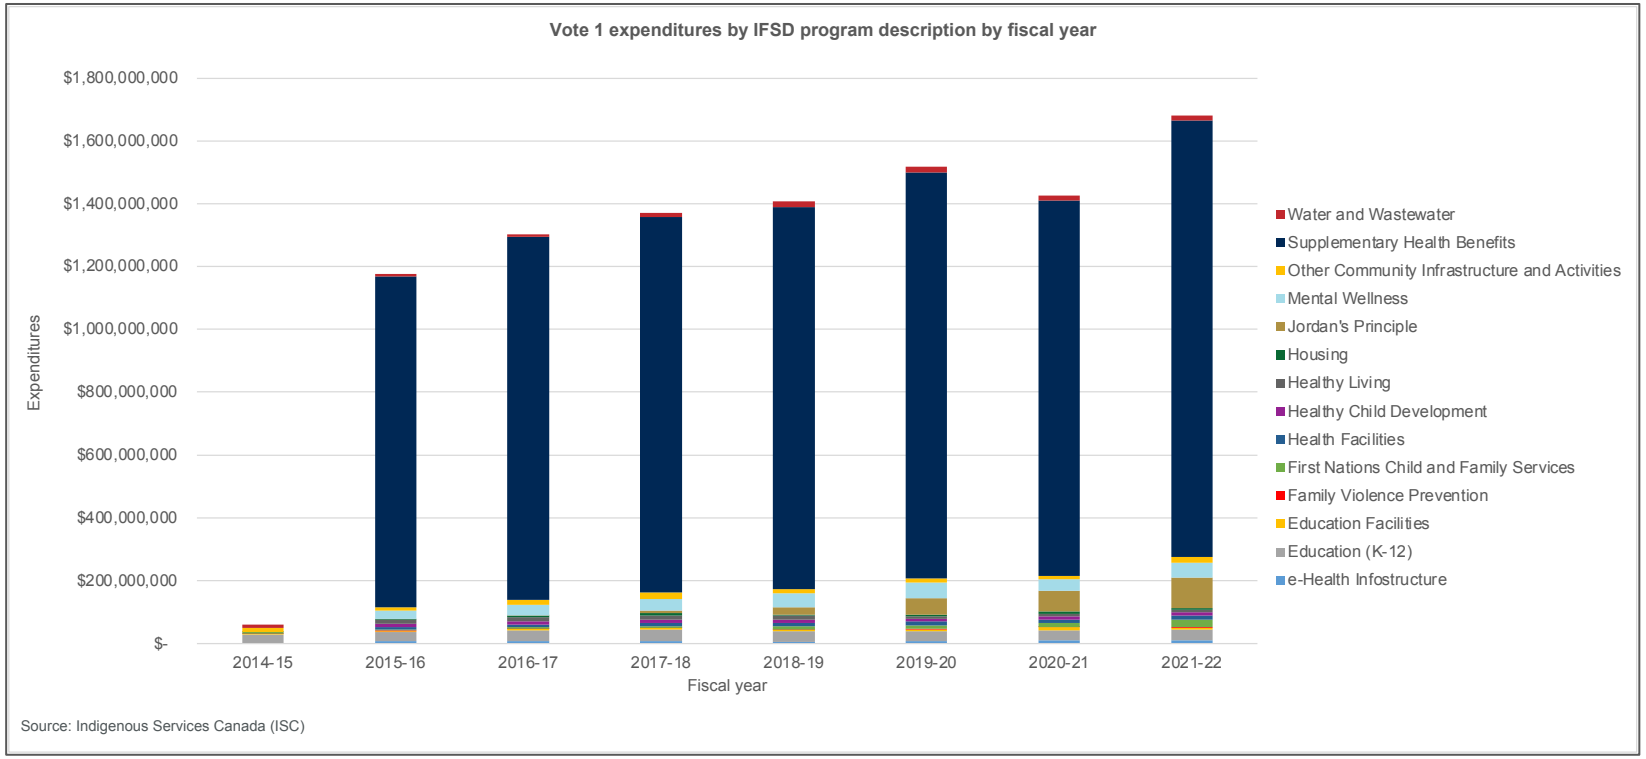
Year-over-year percentage change in Vote 1 expenditures



Source: Indigenous Services Canada (ISC)
Note: There was a 1860% increase from fiscal year 2015-16 to 2016-17, due to the change in deparmental structure. The data has been omitted in this analysis.

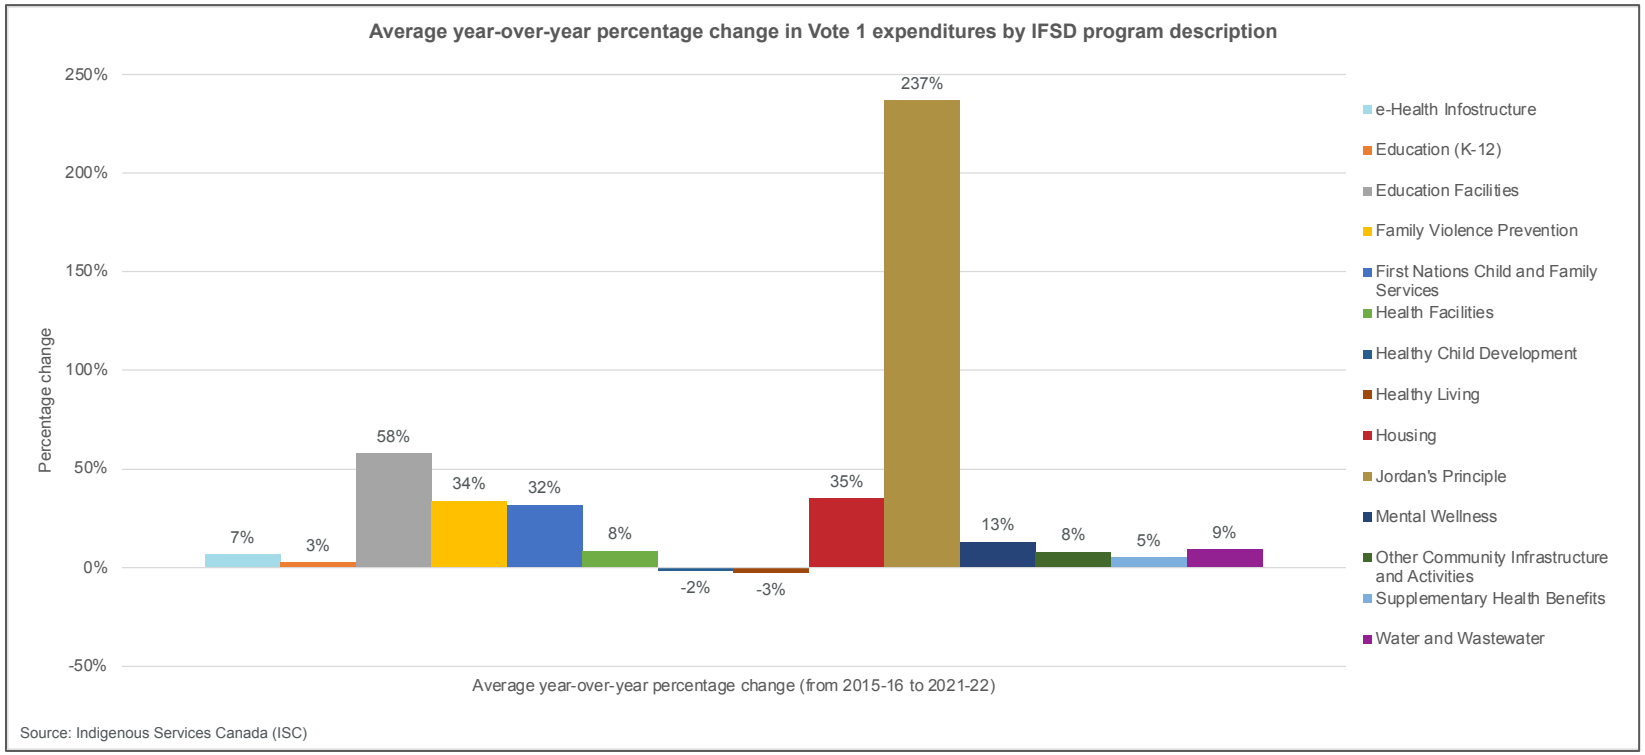
Vote 1 expenditures by IFSD program description

- The significant majority of Vote 1 expenditures are allocated to supplementary health benefits.



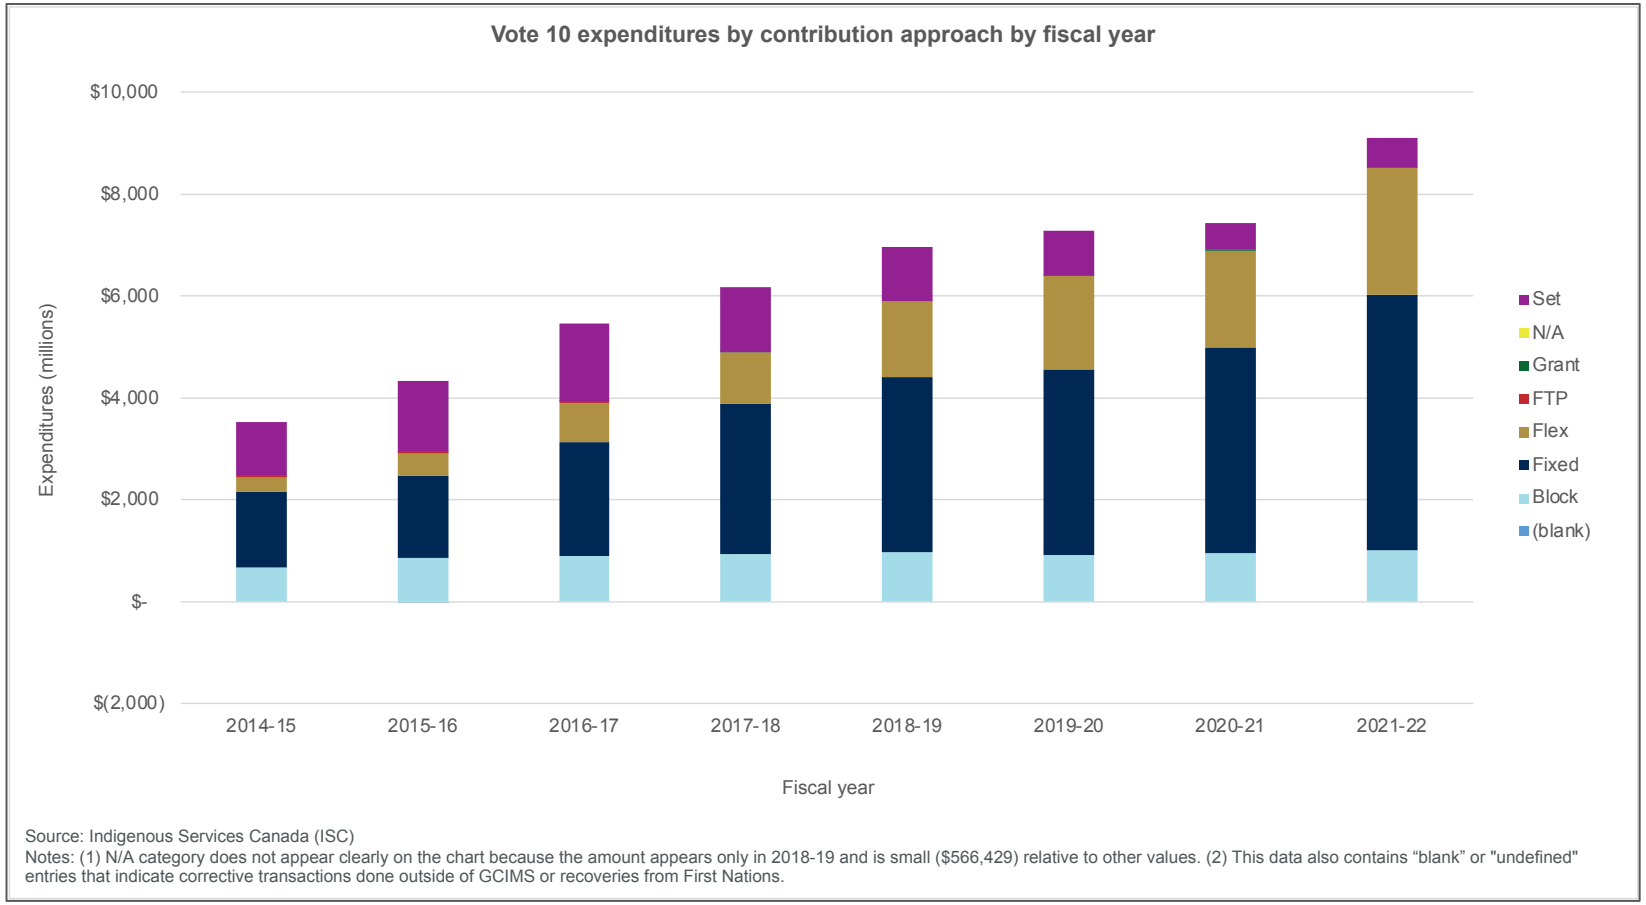
Average year-over-year percentage changes in Vote 1 expenditures

- On average, Jordan's Principle Vote 1 expenditures increased most at 237%, followed by education facilities at an average of 58%.
- Healthy child development and healthy living had average decreases.



Vote 10 expenditures by contribution approach

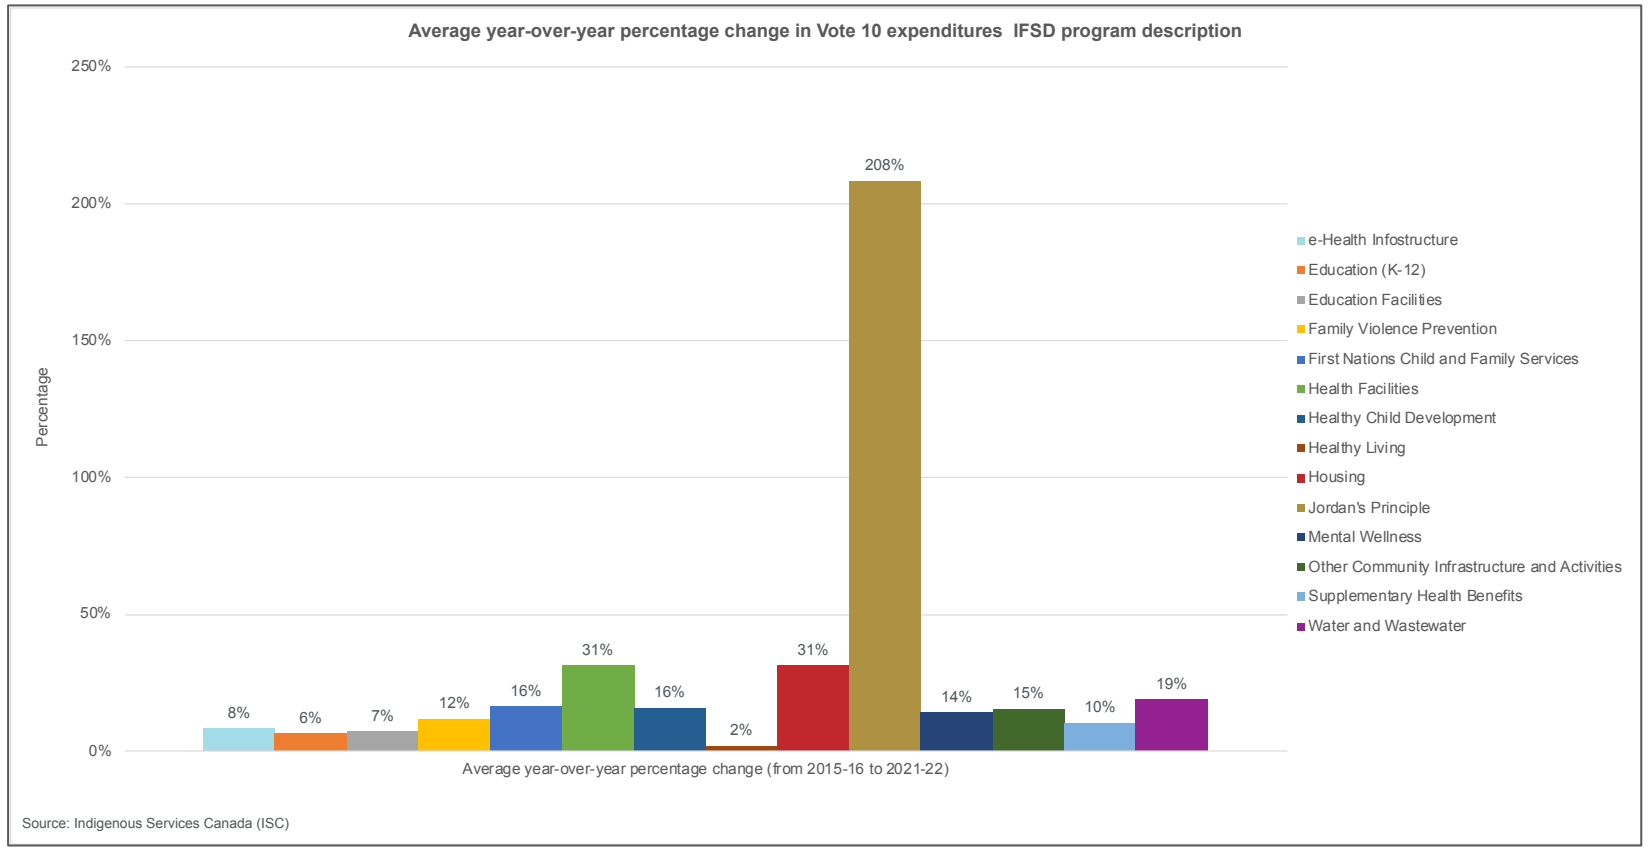
- Most grant and contribution funding (Vote 10) is fixed. The fixed allocation increases across fiscal years, as does the flexible allocation.



Source: Indigenous Services Canada (ISC)
Notes: (1) N/A category does not appear clearly on the chart because the amount appears only in 2018-19 and is small ($566,429) relative to other values. (2) This data also contains “blank” or "undefined" entries that indicate corrective transactions done outside of GCIMS or recoveries from First Nations.

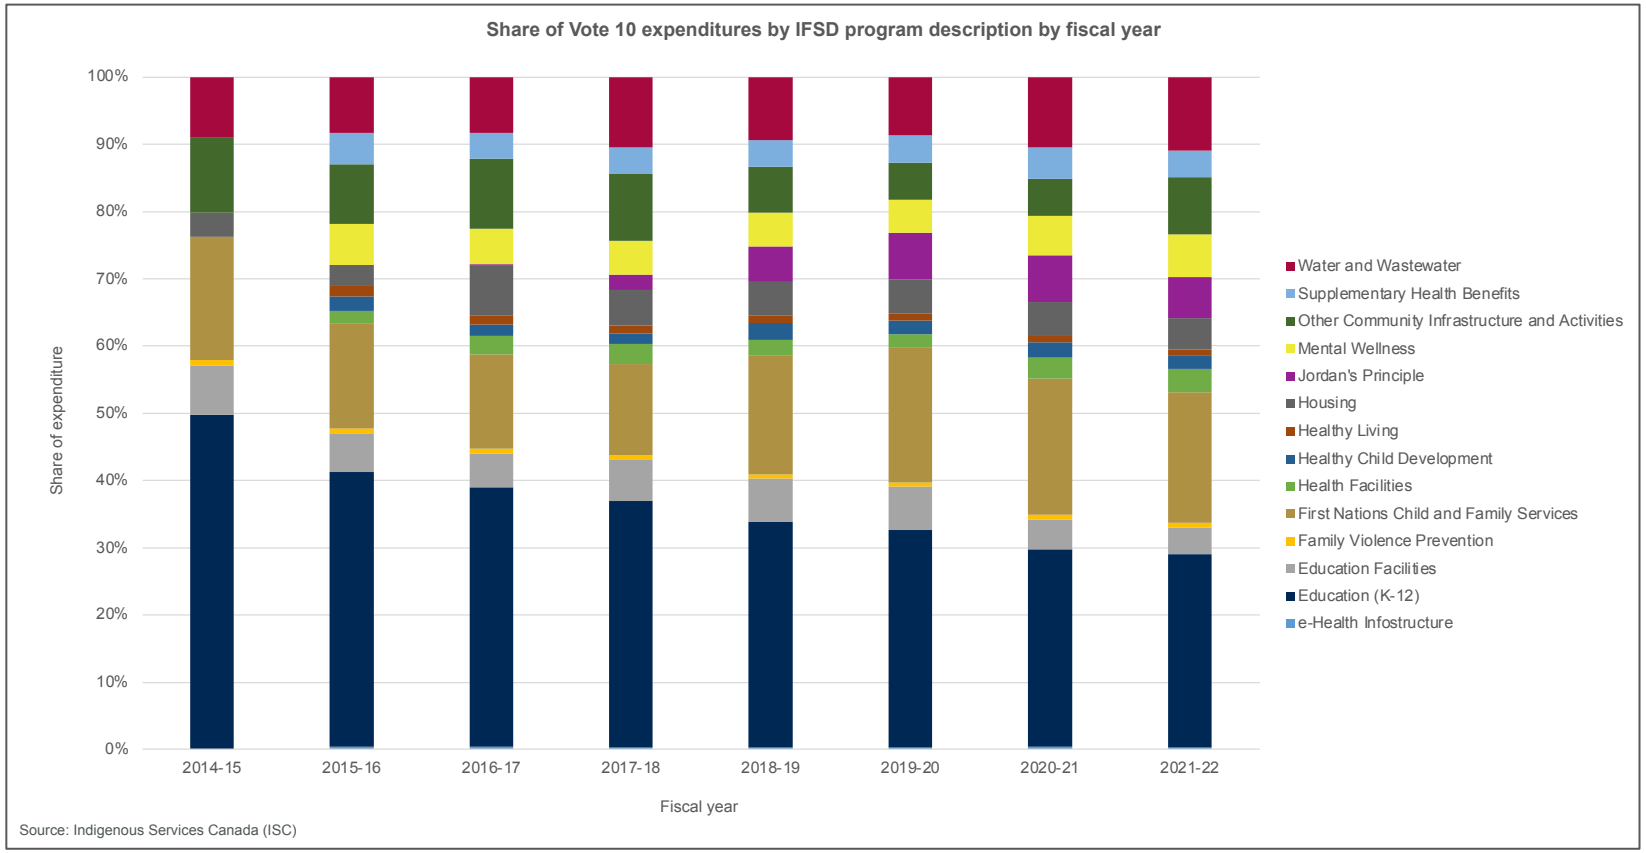
Average year-over-year percentage changes in Vote 10 expenditures

- Across fiscal years 2014-15, the average year-over-year percentage change in Vote 10 expenditures was most significant for Jordan's Principle with an average increase of 208% per year.
- Health facilities and housing at an average 31% increase have the second highest average increases.



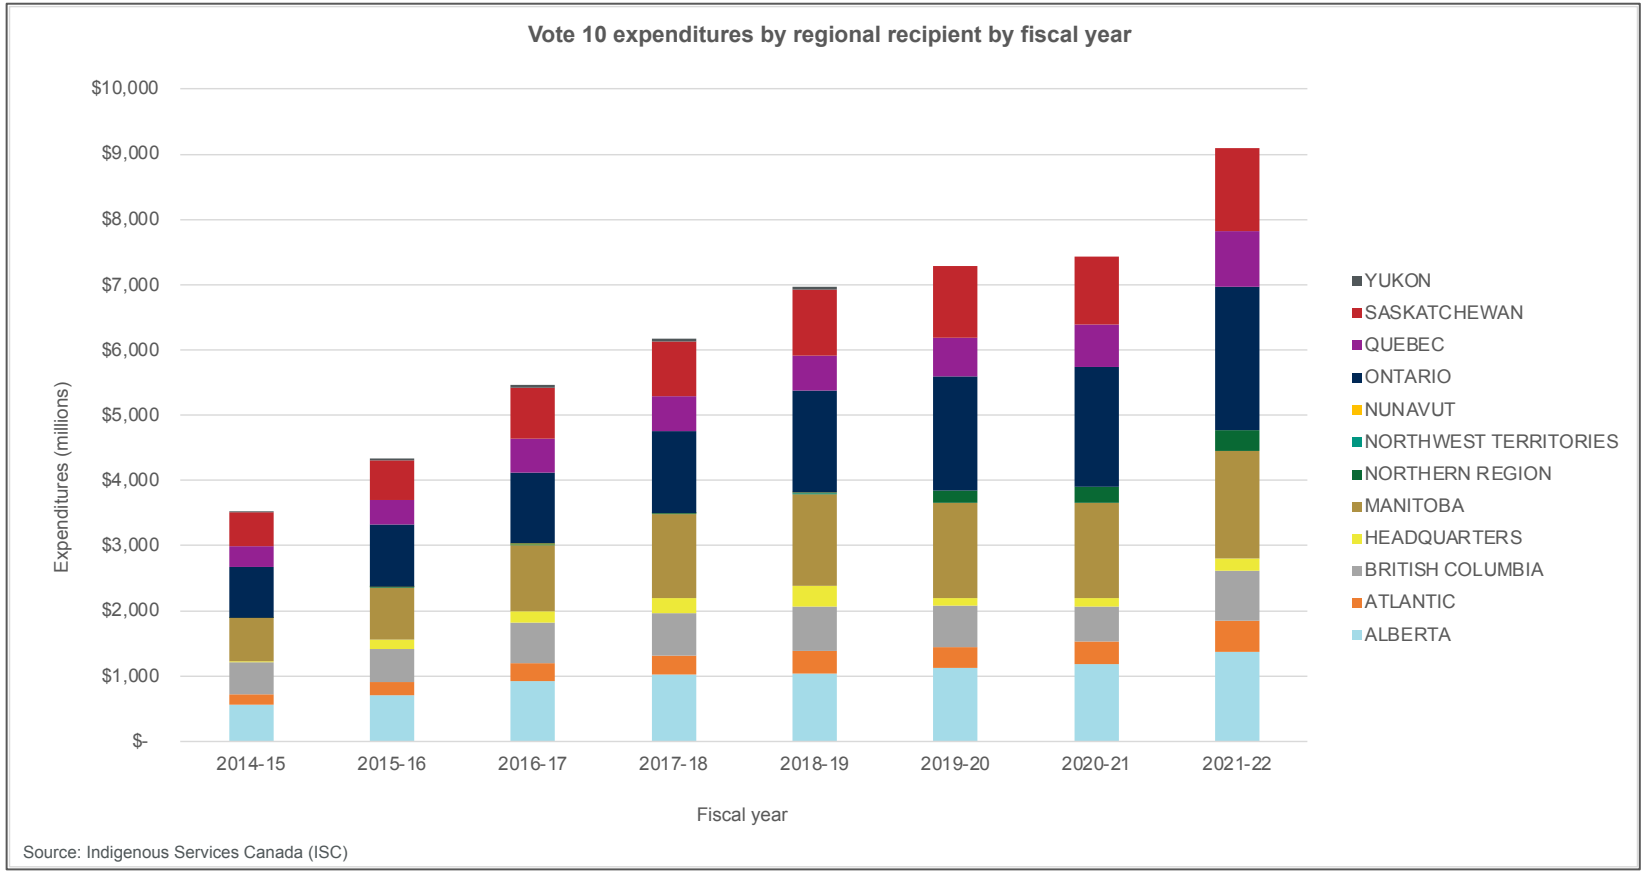
Vote 10 expenditures by IFSD program description

- Most Vote 10 expenditures are allocated to Education (K-12) and FNCFS.
- Note “IFSD program description” was a data field defined by ISC.



Vote 10 expenditures by regional recipient

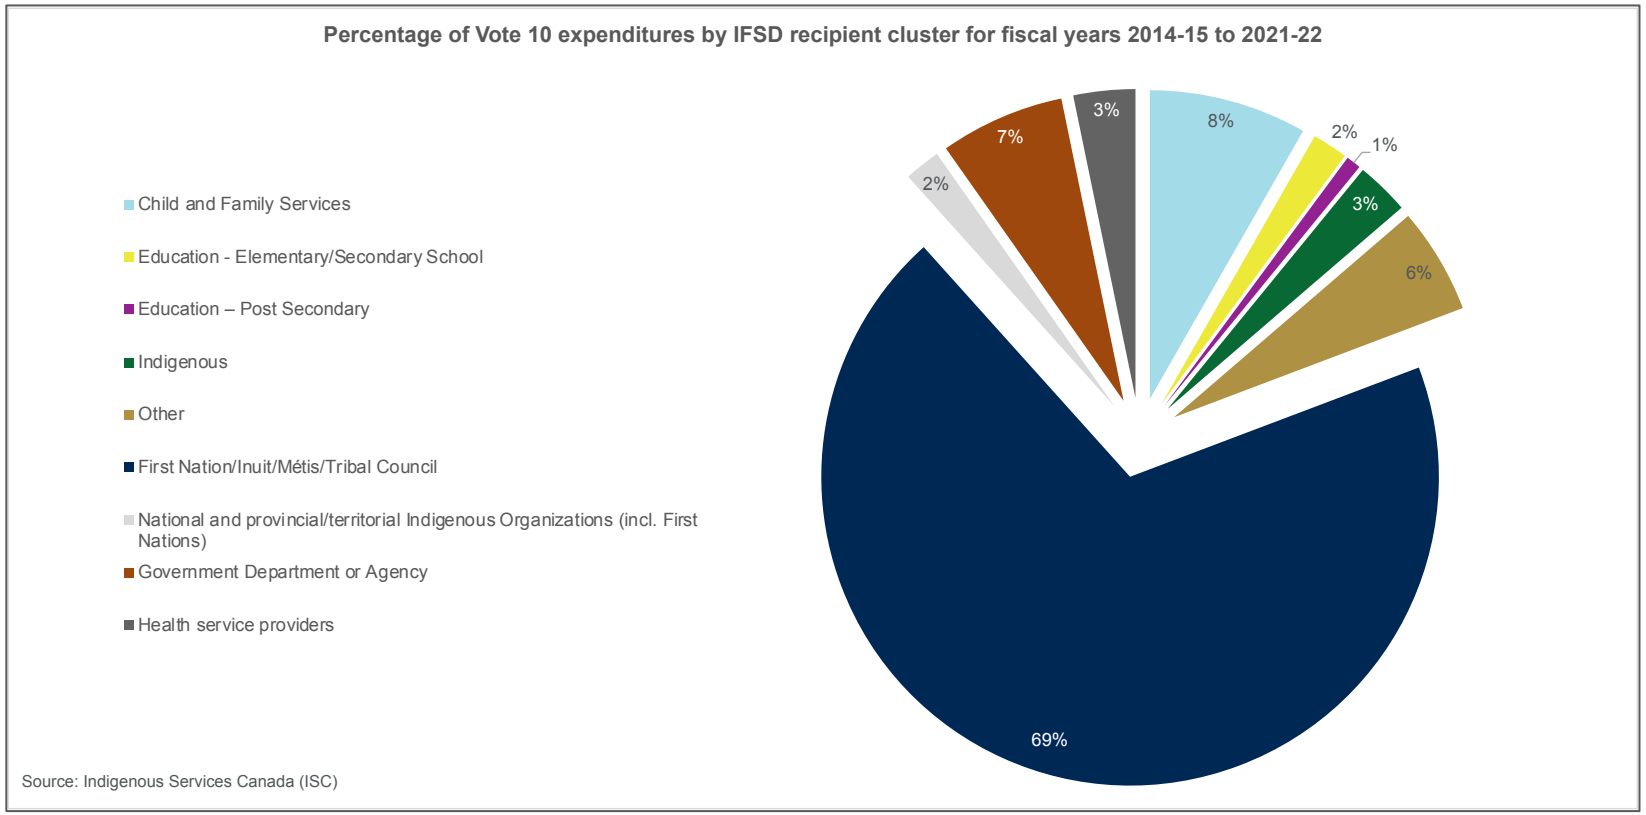
- Across fiscal years, recipients in Ontario followed by Manitoba receive most of the Vote 10 expenditures.



Source: Indigenous Services Canada (ISC)

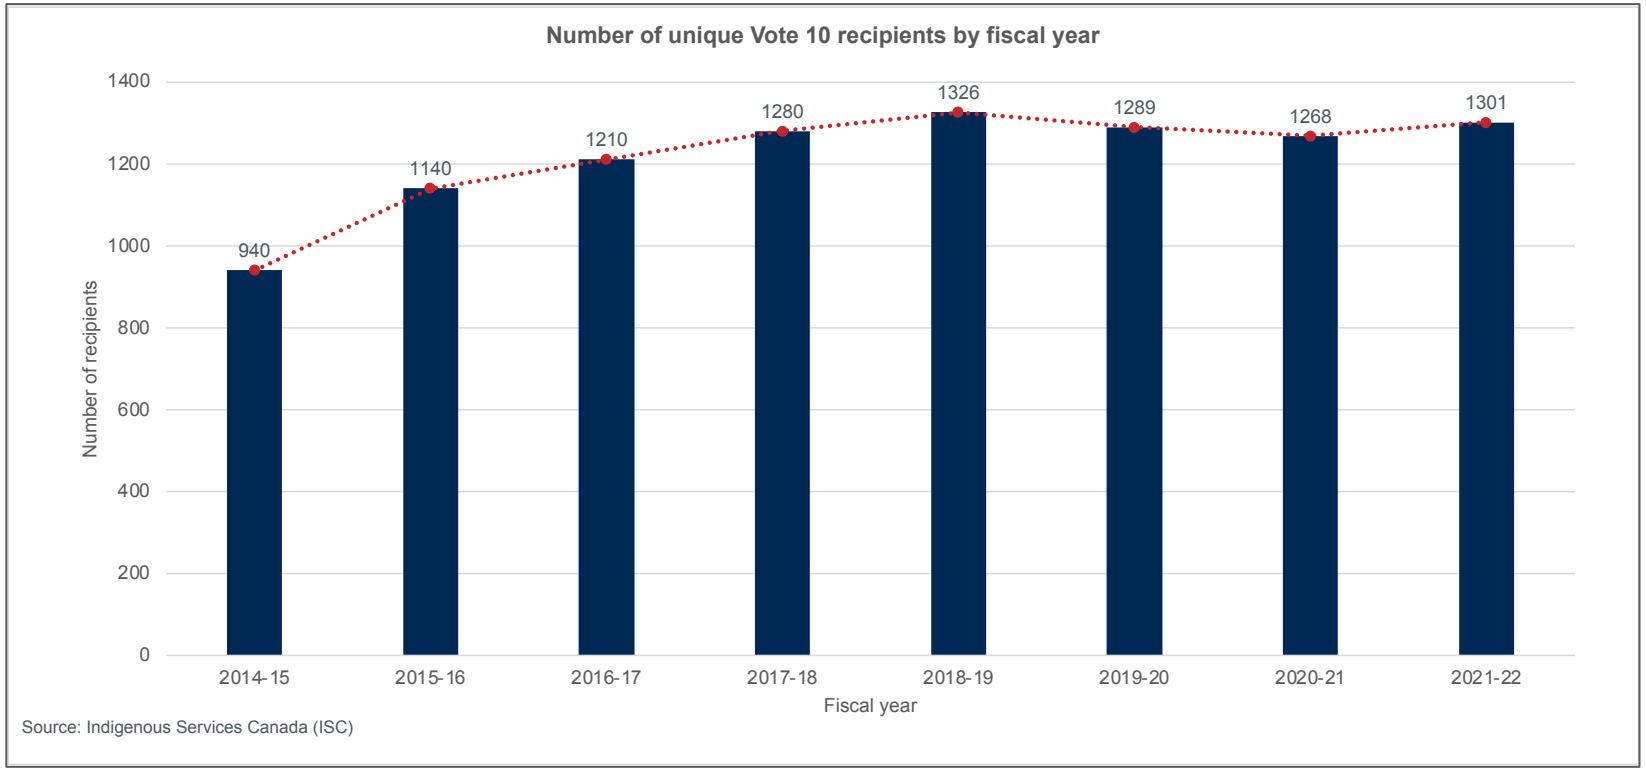
Vote 10 expenditure recipients

- Across fiscal years, approximately 70% of grant and contribution (Vote 10) recipients are First Nations, Tribal Councils, Inuit, or Métis.



Numbers of unique Vote 10 recipients

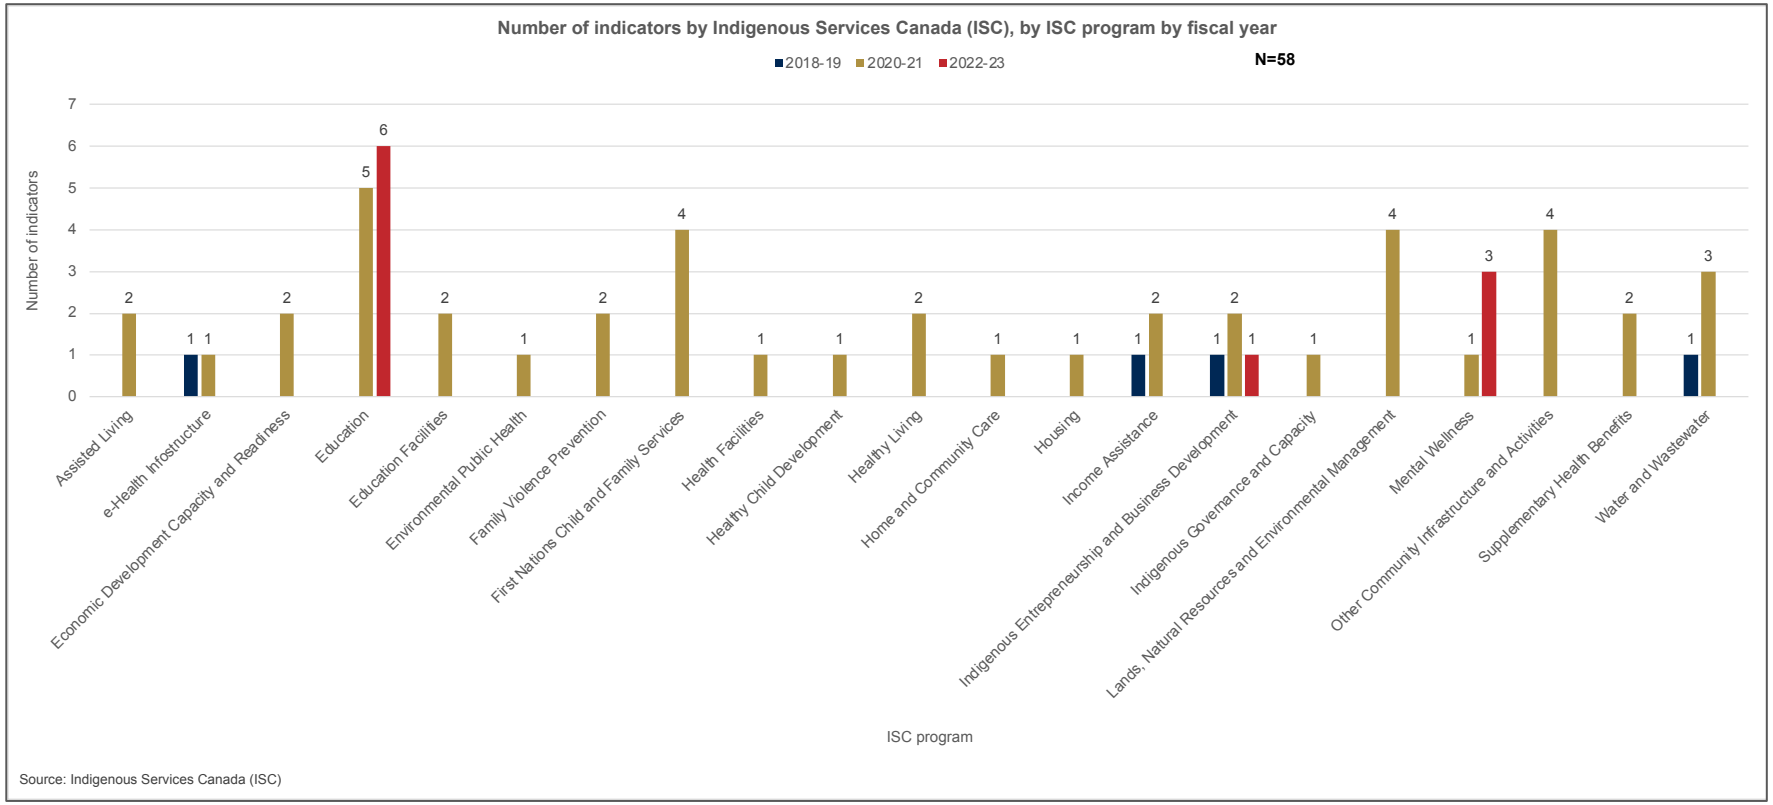
- There are approximately 1,000 **unique** recipients of grants and contributions (Vote 10) by fiscal year.
- The total number of funding recipients (i.e., multiples are included) ranges by fiscal year from approximately 7,200 to 12,400.



Planned spending

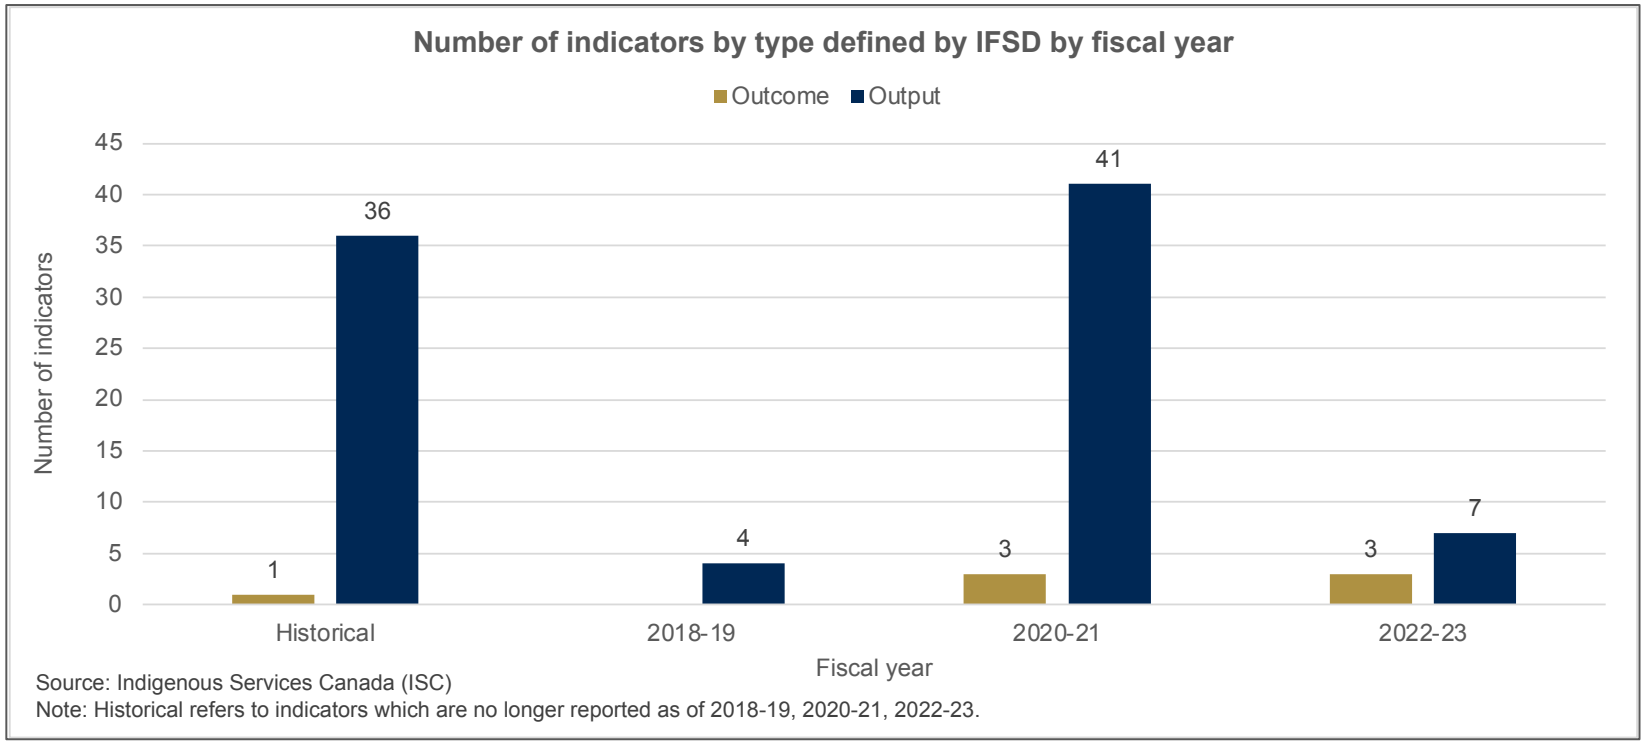
Indicators by program

- ISC defined indicators by program across fiscal years.
- Not all indicators have available data.



Indicator classification

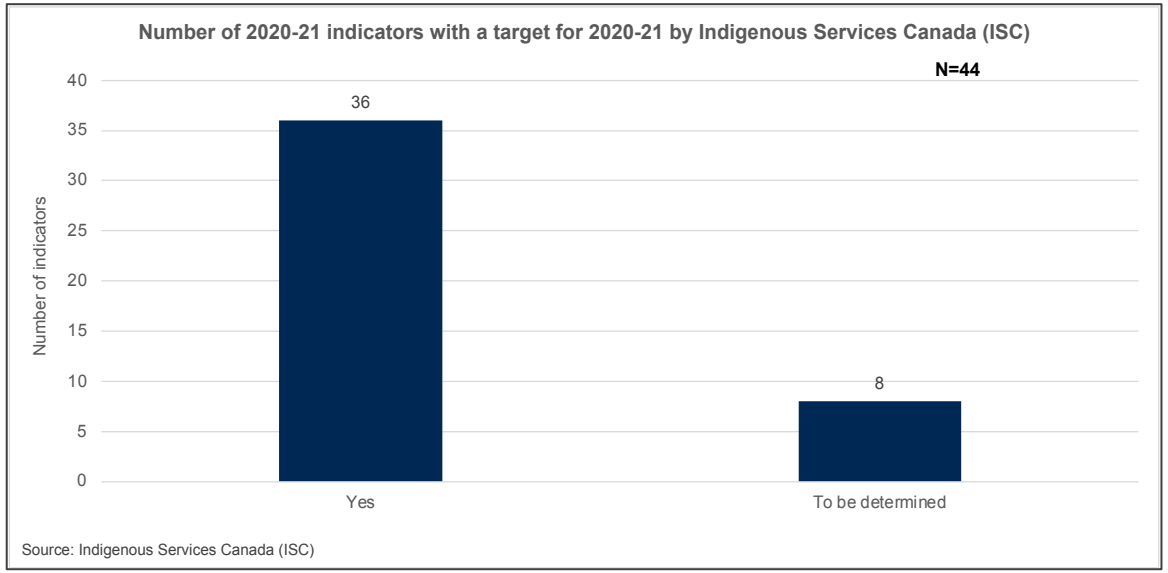
- IFSD classified the majority of ISC's indicators as outputs (rather than outcomes).

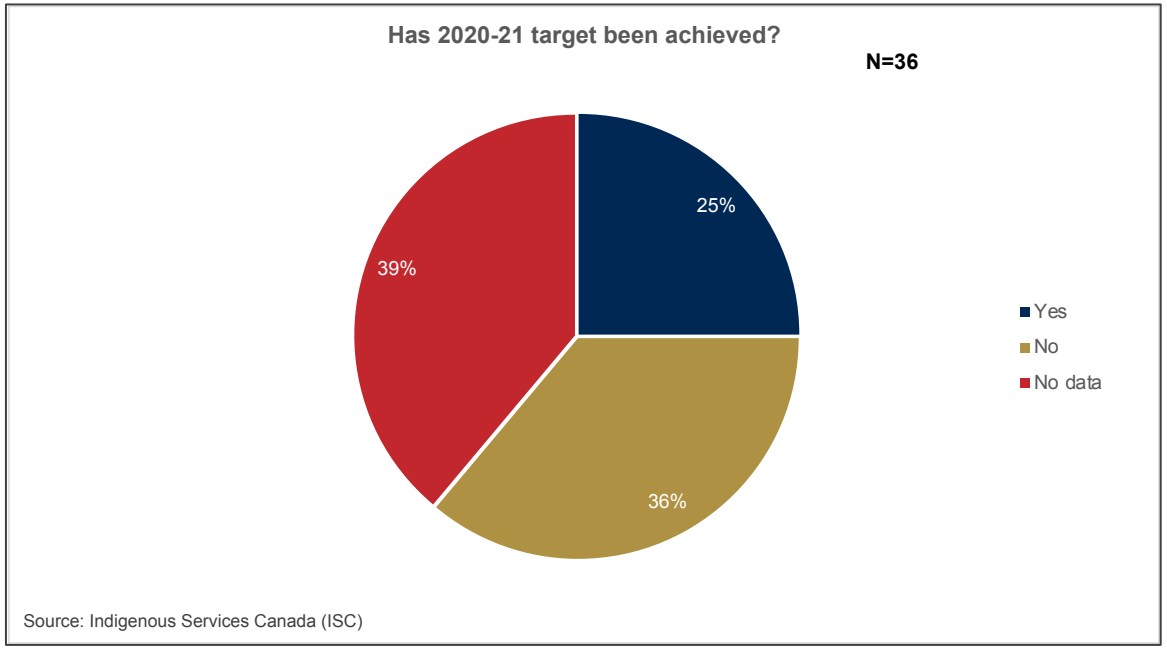


Source: Indigenous Services Canada (ISC)
Note: Historical refers to indicators which are no longer reported as of 2018-19, 2020-21, 2022-23.

Performance indicators

- For fiscal year 2020-2021, 36/44 indicators had defined targets.
- For roughly 40% of indicators, no data was available to assess whether targets were achieved.





FNCFS Program expenditures

Notes

- The description of the FNCFS Program through InfoBase (the Government of Canada's public facing reporting on its programs) includes *supporting safety and well-being for First Nations children ordinarily resident on-reserve*.

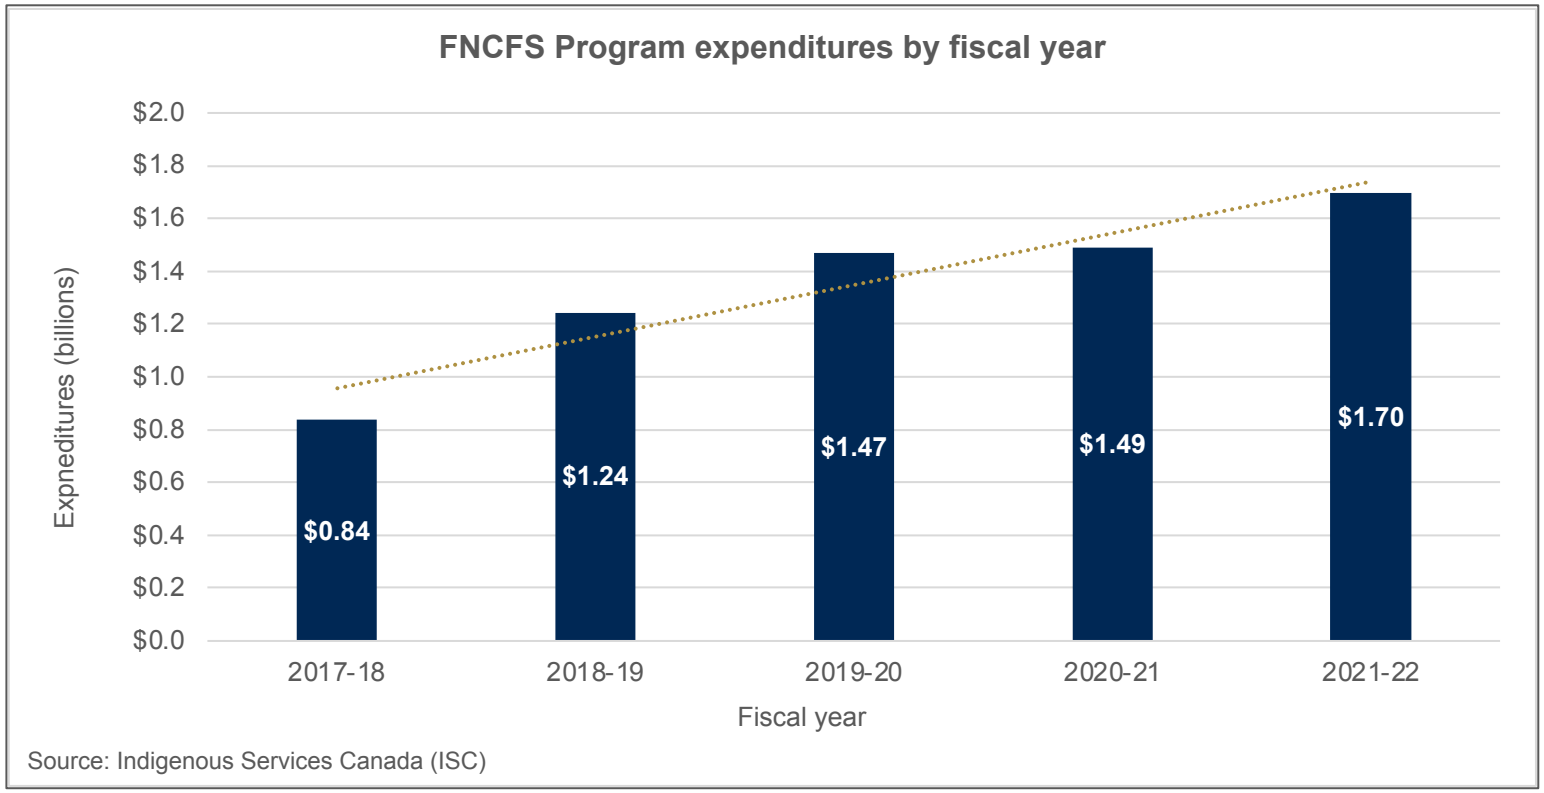
- Funds through the program are allocated to FNCFS agencies, provinces delivering services, First Nations Bands, and Tribal Councils. This means that the FNCFS Program is funding FNCFS agencies, First Nations, transfers to provinces, and jurisdiction.

- IFSD was provided disaggregated data on the FNCFS Program's expenditures for fiscal years 2017-18 to 2021-22.

- This analysis includes all funding recipients of the FNCFS Program, e.g., FNCFS agencies, First Nations served by agencies, First Nations not affiliated to FNCFS agencies, etc.

Total FNCFS Program expenditures

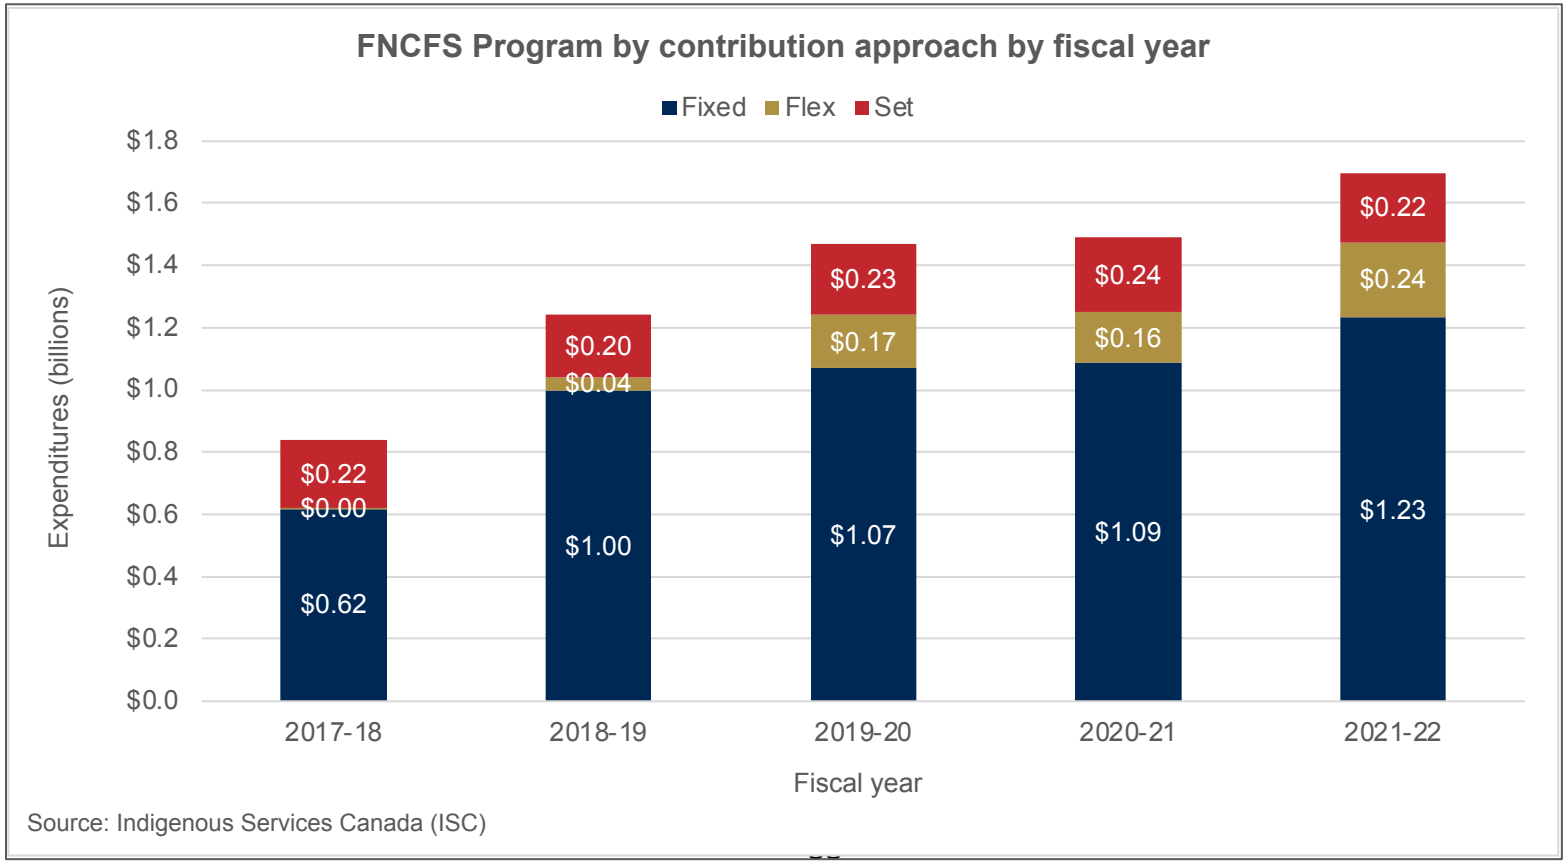
- Expenditures for the FNCFS Program have increased across fiscal years.



Source: Indigenous Services Canada (ISC)

FNCFS Program funding by contribution approach

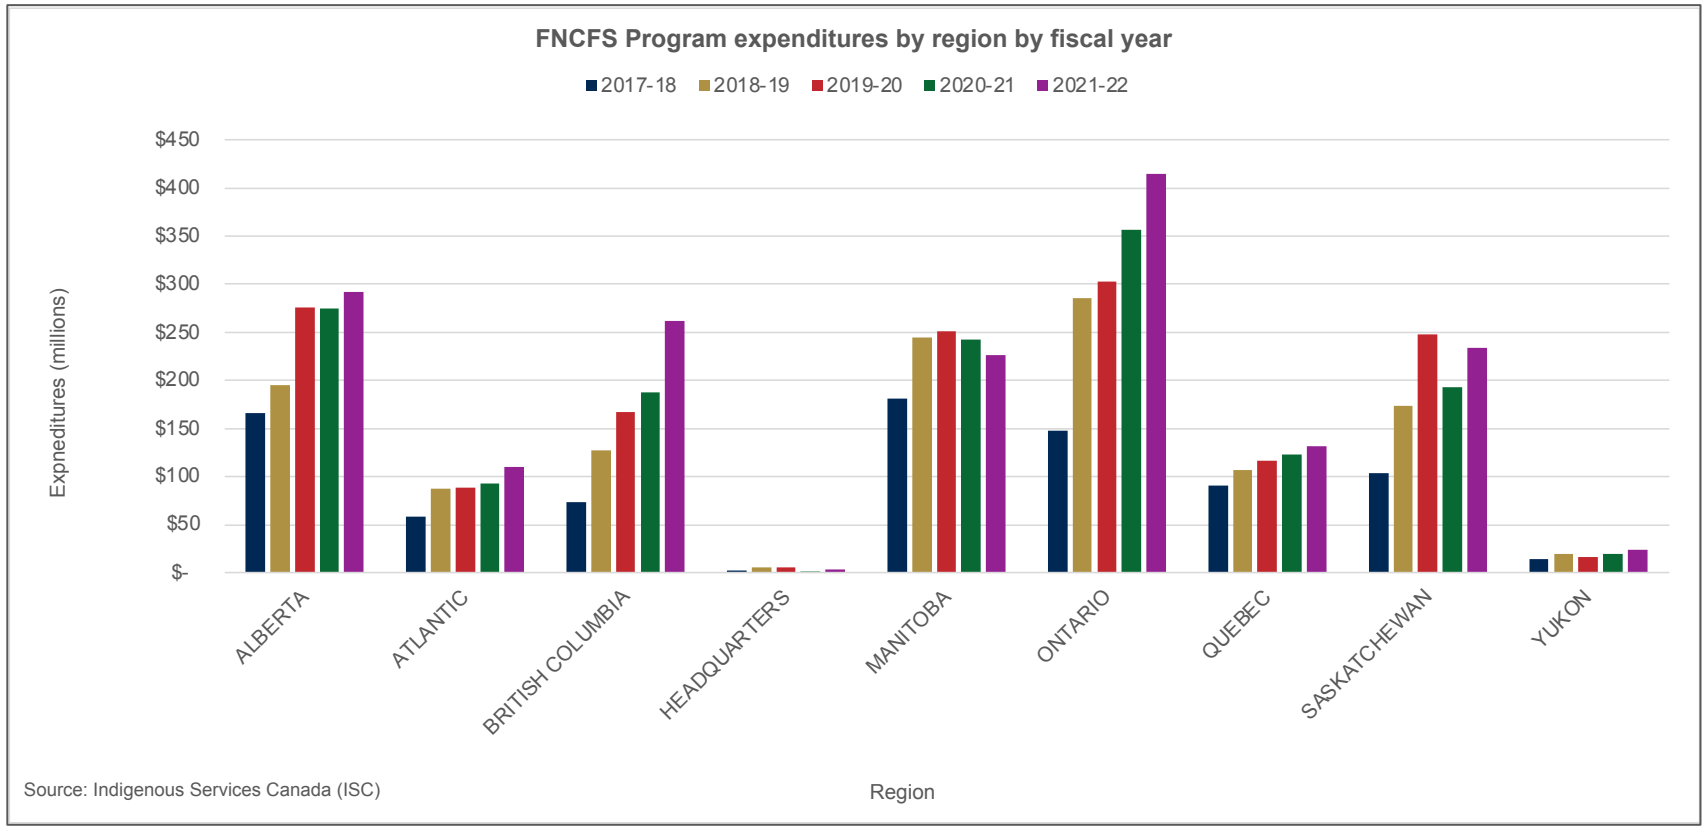
- Most of the FNCFS Program expenditures are fixed, i.e., funds have a defined purpose and total expenditures are defined annually.



Source: Indigenous Services Canada (ISC)

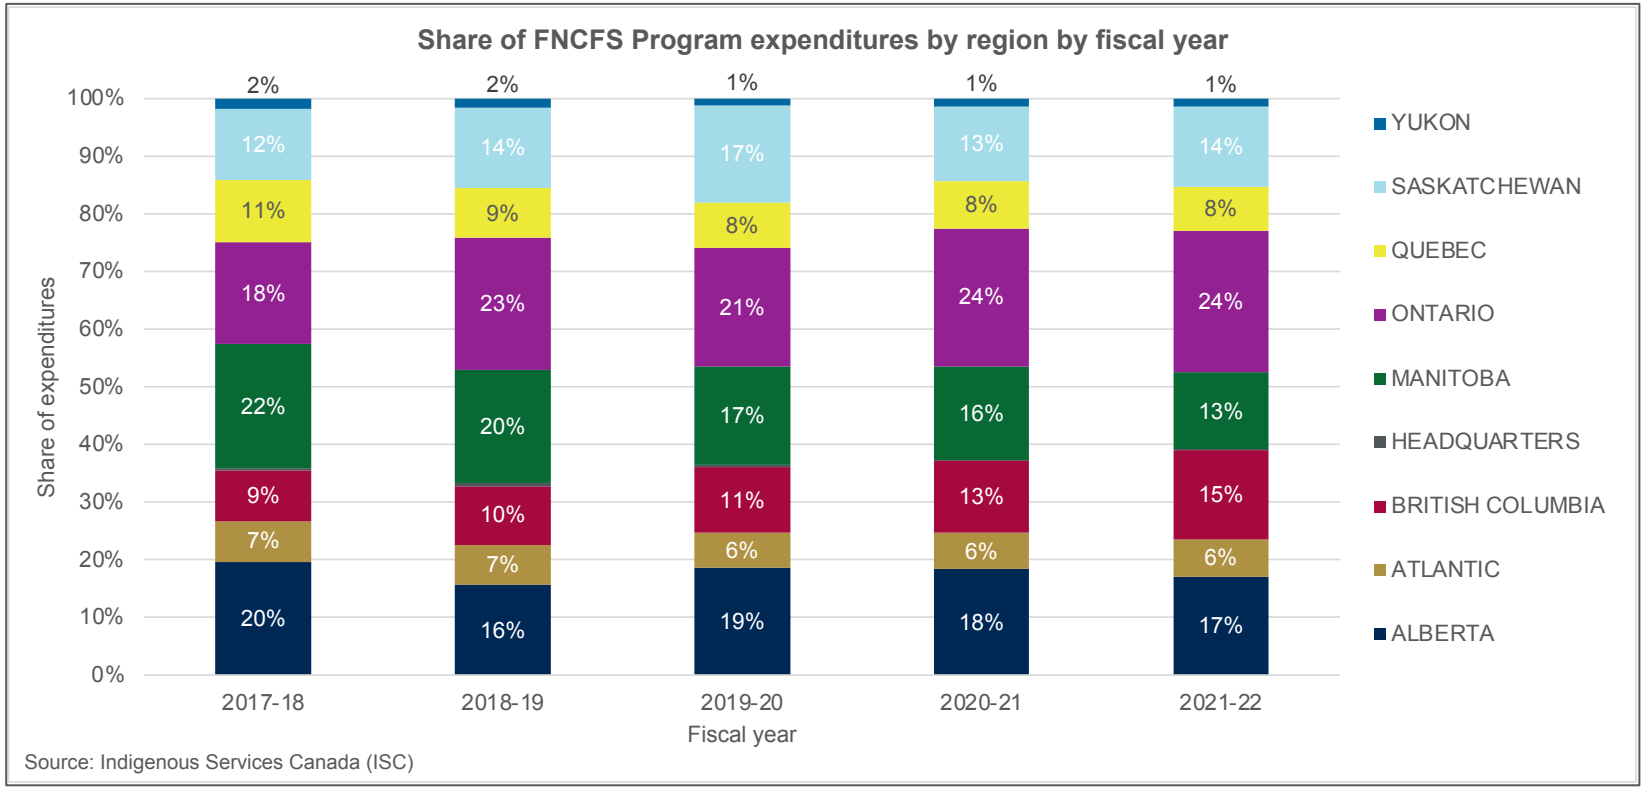
FNCFS Program funding by region

- Funding across regions generally increases across fiscal years. Ontario receives most expenditures, followed by Alberta.
- Headquarters includes funding for various national Indigenous organizations.



Source: Indigenous Services Canada (ISC)

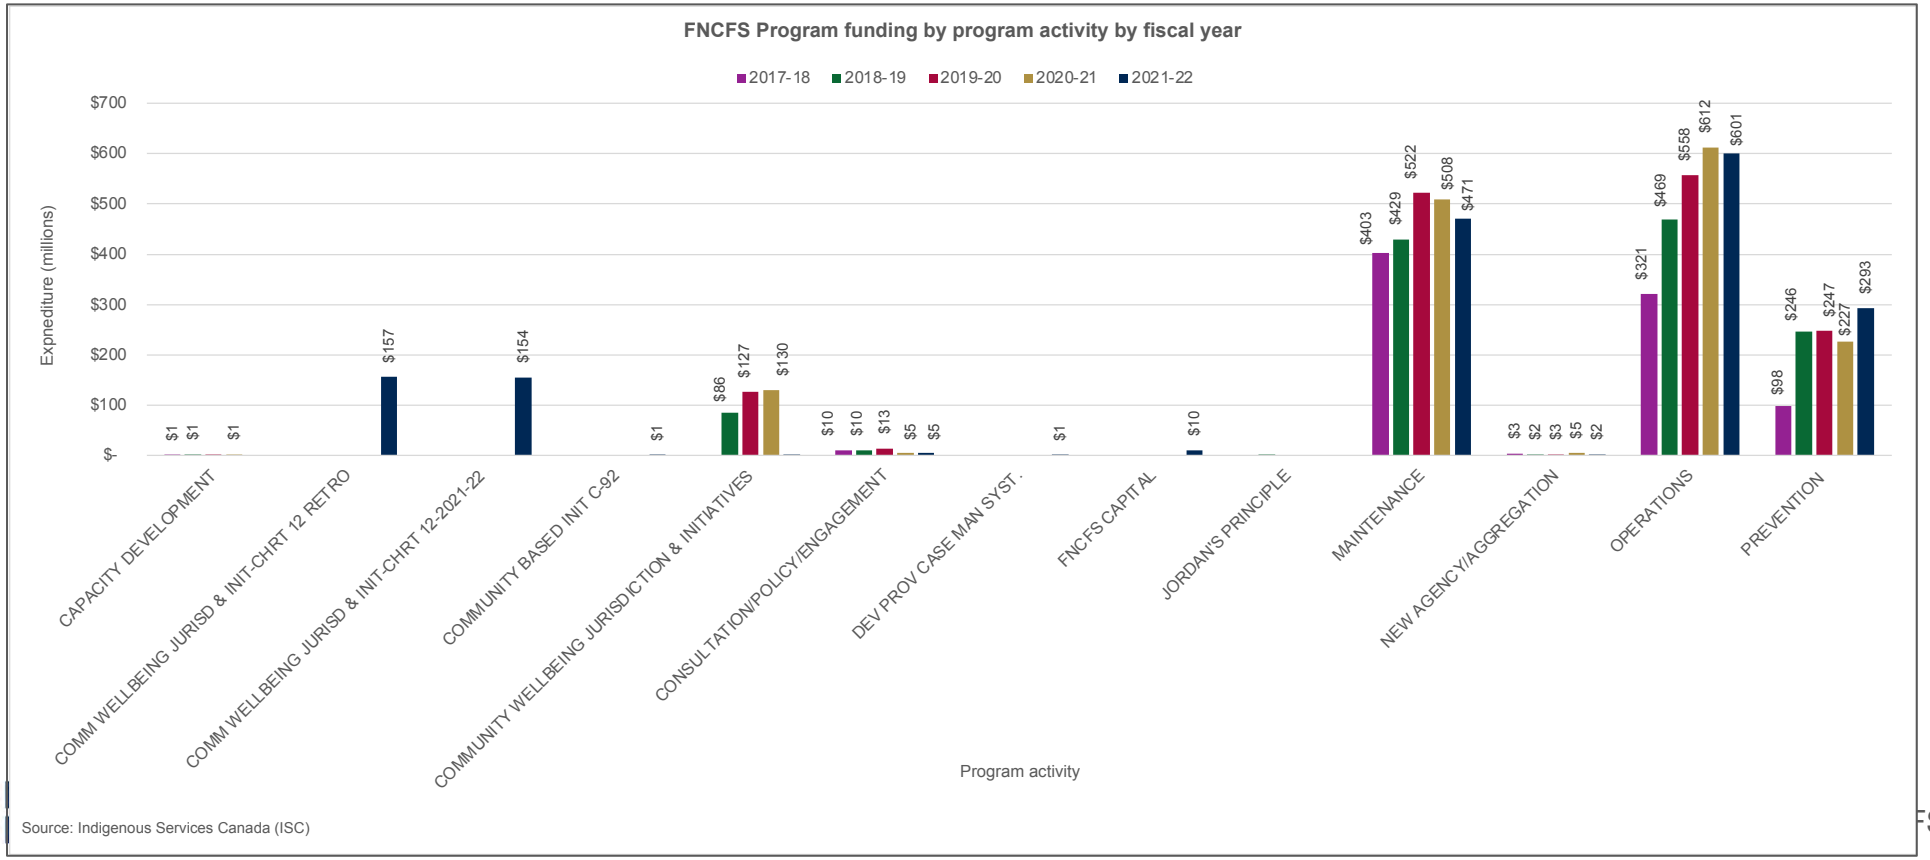
Share of FNCFS Program funding by region



Source: Indigenous Services Canada (ISC)

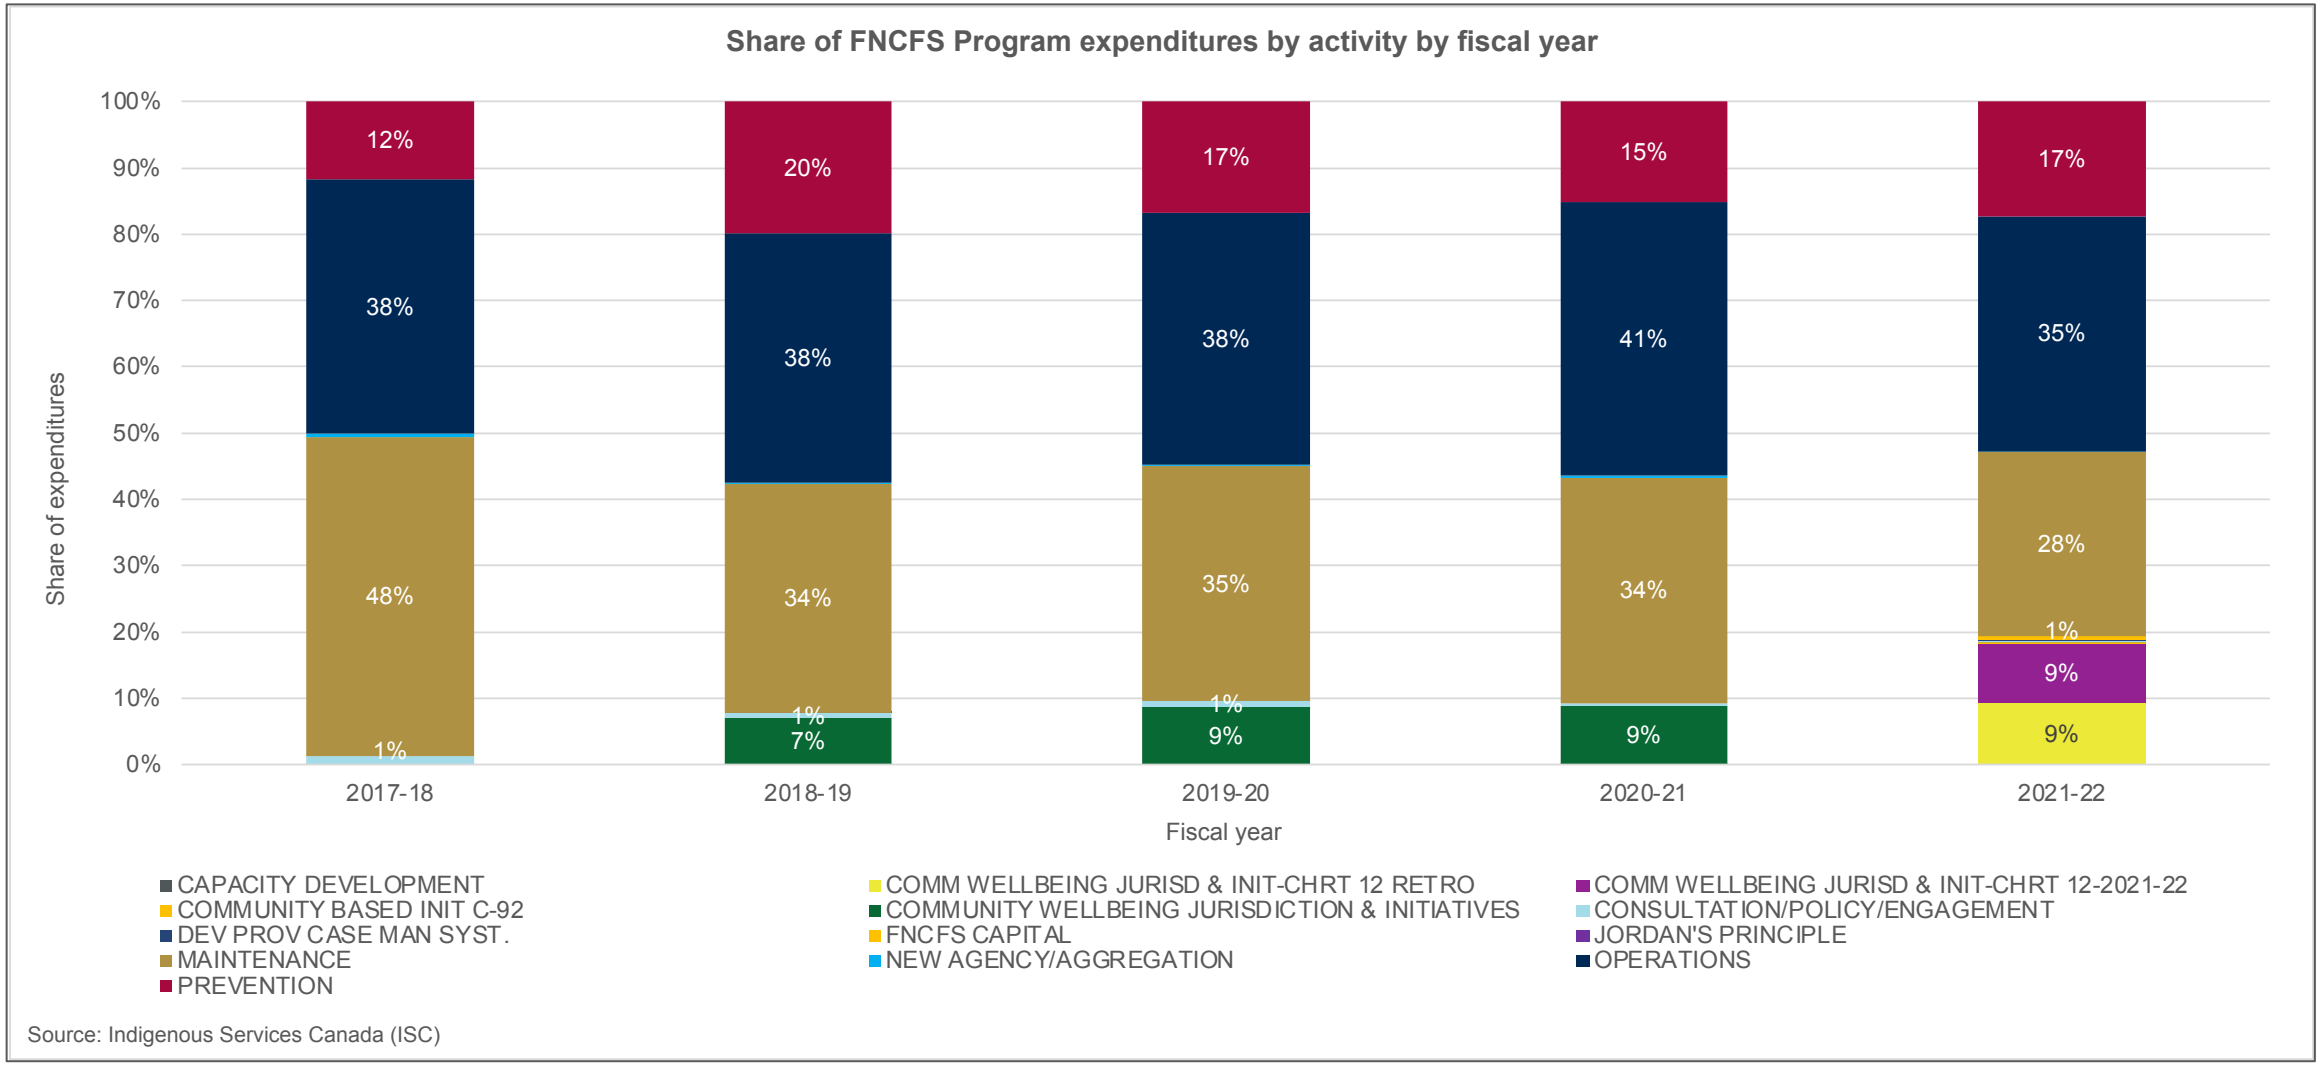
FNCFS Program activity expenditures

- Maintenance, operations, and prevention activities represent the largest expenditures by activity in the FNCFS Program.



Source: Indigenous Services Canada (ISC)

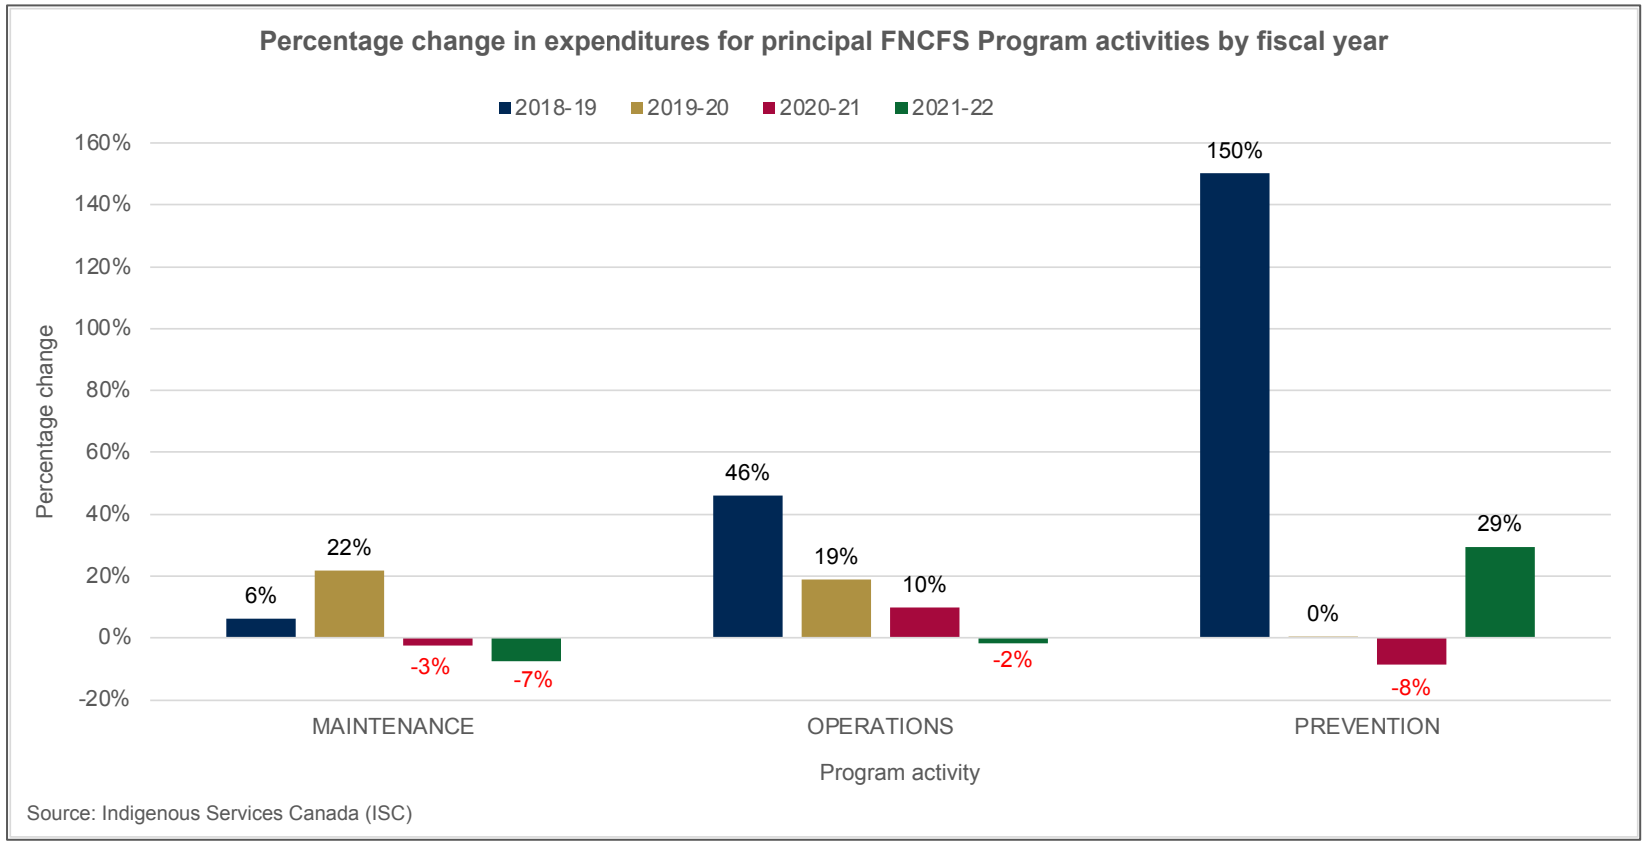
FNCFS Program activity expenditures by percentage



Source: Indigenous Services Canada (ISC)

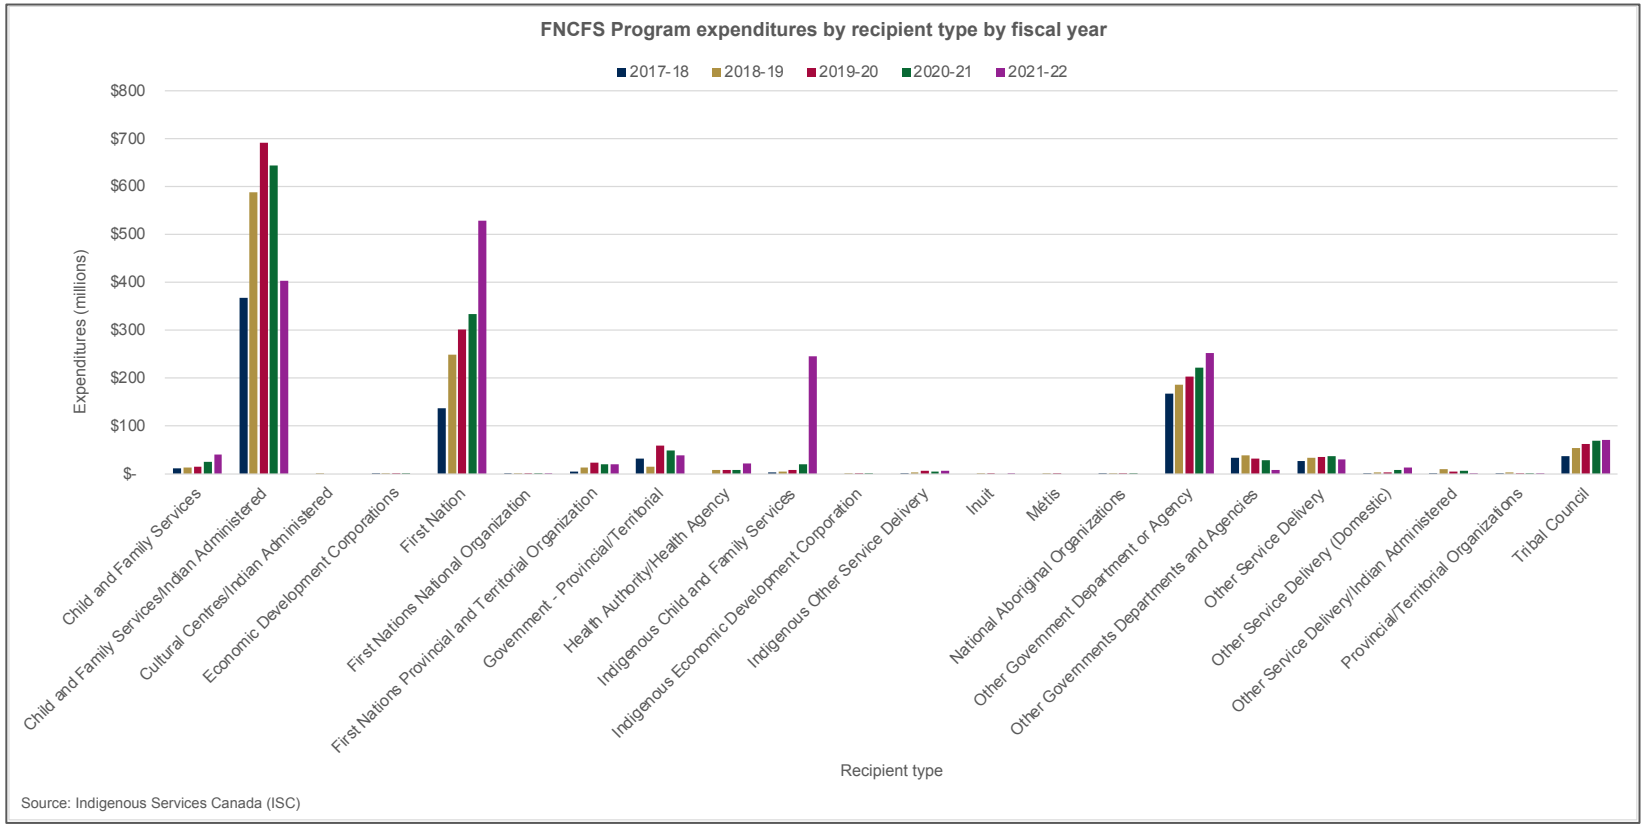
Percentage change in main FNCFS Program activity areas

- In the main FNCFS Program activity areas, i.e., maintenance, operations, and prevention, there has been the most change in prevention expenditures.



FNCFS Program by recipient type

- Most FNCFS Program funding is allocated to services providers, i.e., FNCFS agencies, tagged as Child and Family Services/Indian Administered in ISC's data set, followed by First Nations.

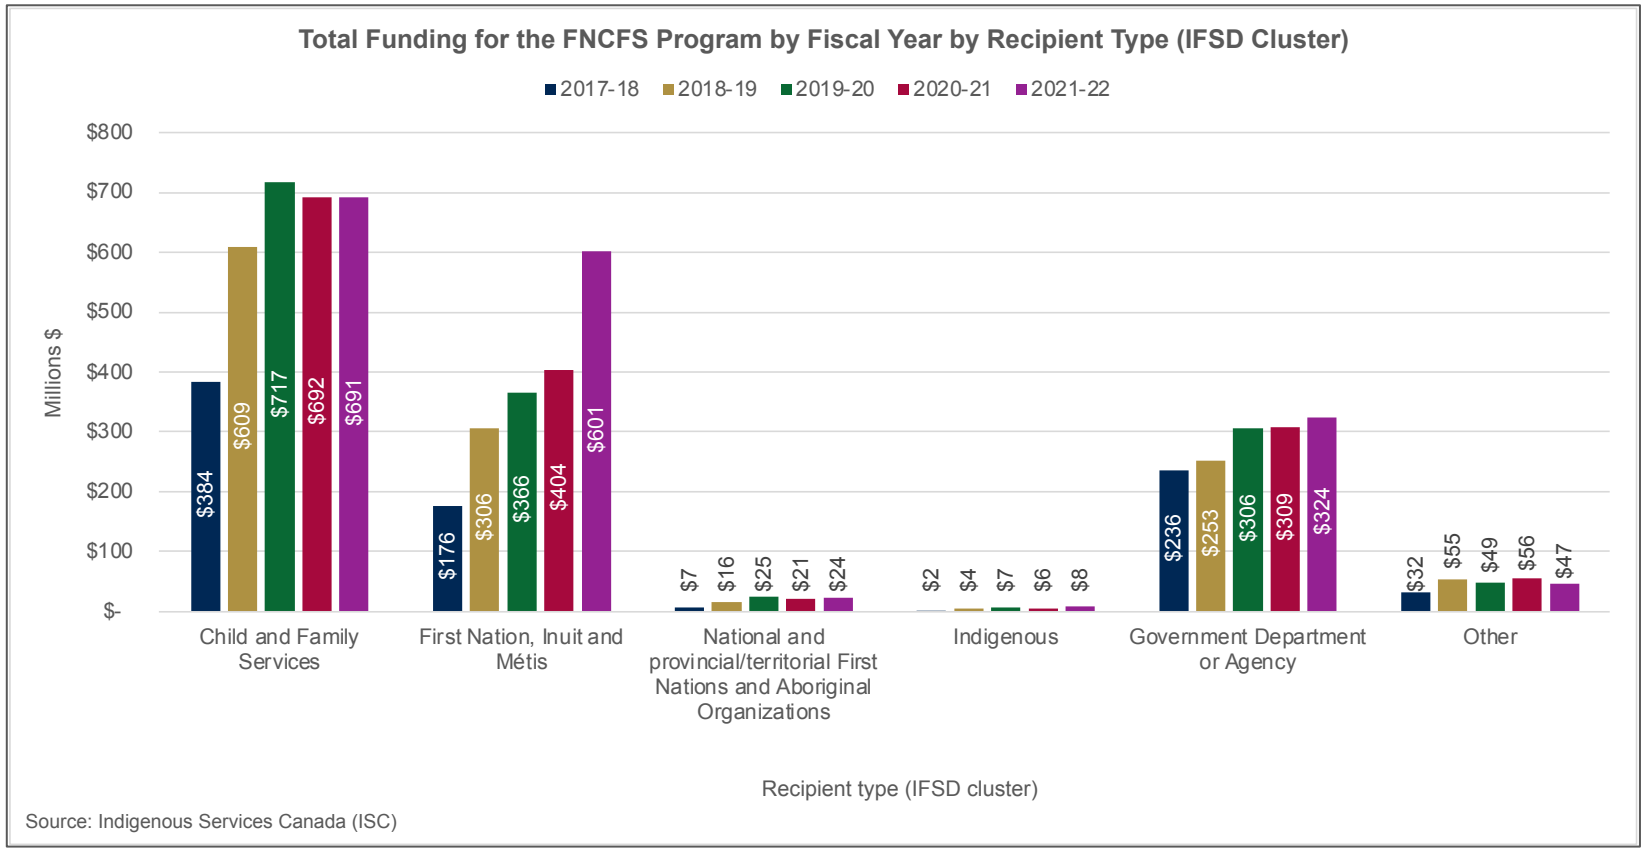


IFSD recipient type clusters

Recipient Type	IFSD Cluster
Child and Family Services	Child and Family Services
Child and Family Services/Indian Administered	Child and Family Services
Indigenous Child and Family Services	Child and Family Services
First Nation	First Nation and Inuit
Inuit	First Nation and Inuit
Tribal Council	First Nation and Inuit
First Nations National Organization	National and provincial/territorial First Nations and Aboriginal Organizations
First Nations Provincial and Territorial Organization	National and provincial/territorial First Nations and Aboriginal Organizations
National Aboriginal Organizations	National and provincial/territorial First Nations and Aboriginal Organizations
Indigenous Economic Development Corporation	Indigenous
Indigenous Other Service Delivery	Indigenous
Health Authority/Health Agency	Government Department or Agency
Government - Provincial/Territorial	Government Department or Agency
Other Government Department or Agency	Government Department or Agency
Other Governments Departments and Agencies	Government Department or Agency
Other Service Delivery	Other
Other Service Delivery (Domestic)	Other
Other Service Delivery/Indian Administered	Other
Cultural Centres/Indian Administered	Other
Economic Development Corporations	Other
Provincial/Territorial Organizations	Other

FNCFS Program by recipient type, IFSD cluster

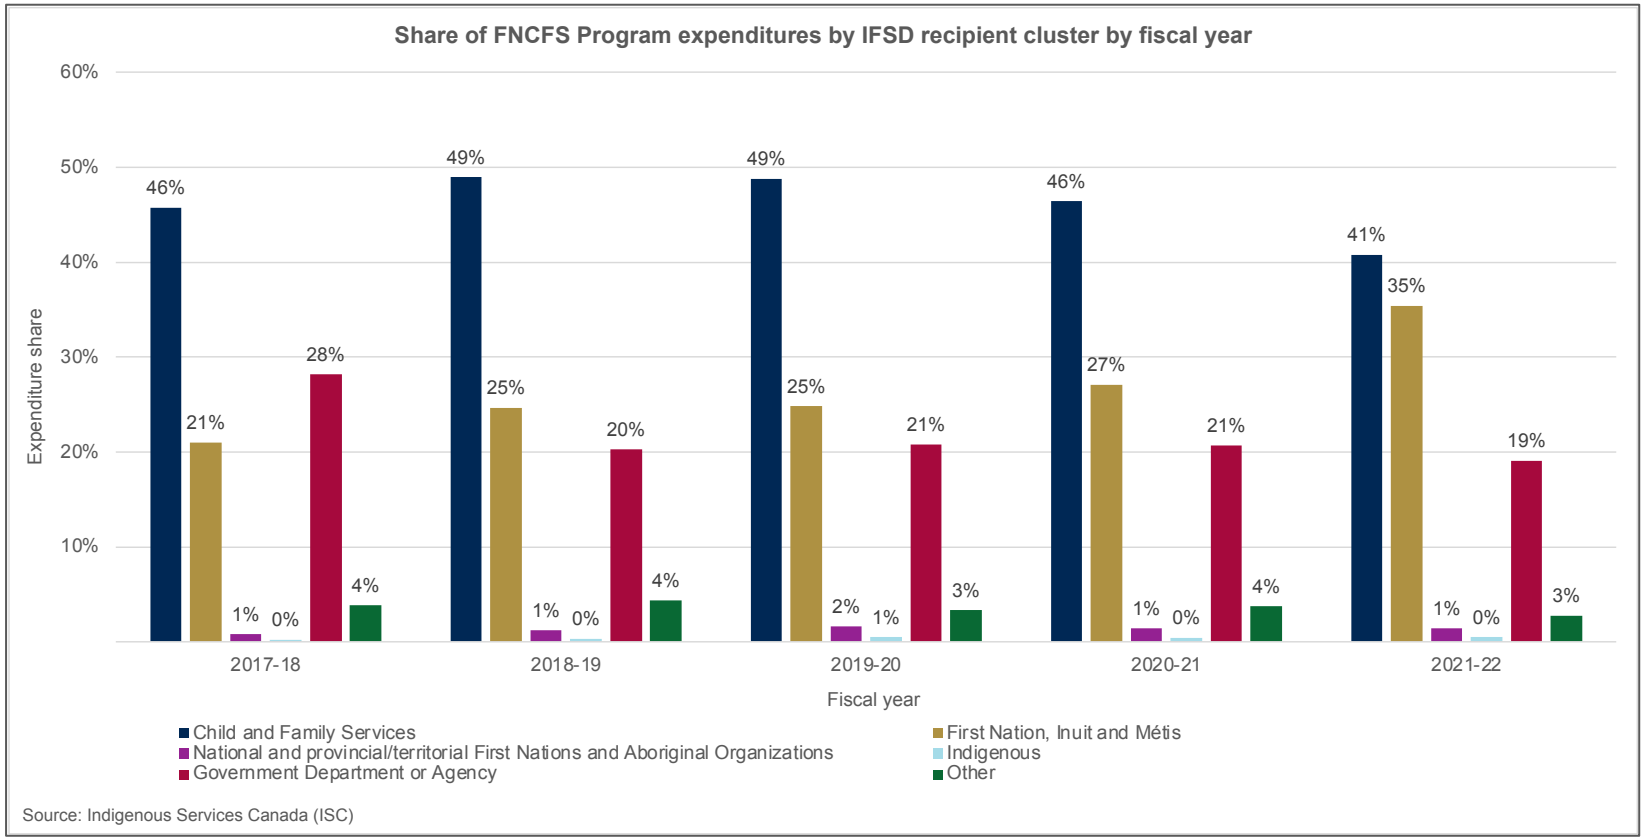
- For clarity, IFSD clustered recipient types. Child and family services includes FNCFS agencies.
- Funding for all recipient types generally increases. There was a notable increase for First Nations, Inuit, and Métis in fiscal year 2021-22.



Source: Indigenous Services Canada (ISC)

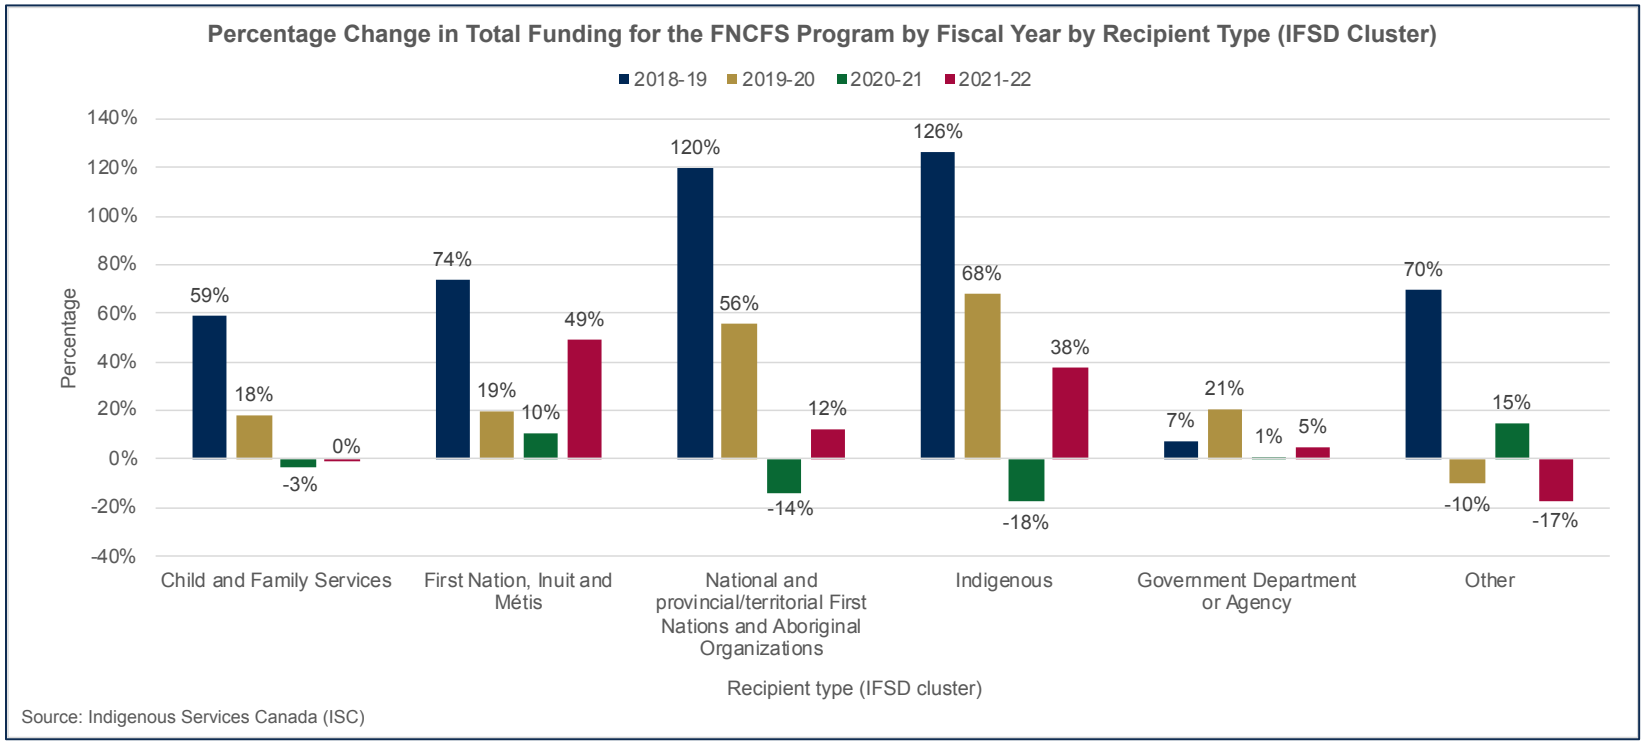
Share of FNCFS Program expenditures by IFSD recipient type

- FNCFS agencies and similar service providers receive most of the FNCFS Program funding, although their share is trending slightly downward. The share of funding for First Nations, Inuit, and Métis increases across fiscal years. Funding for other governments remains relatively constant around 20%.



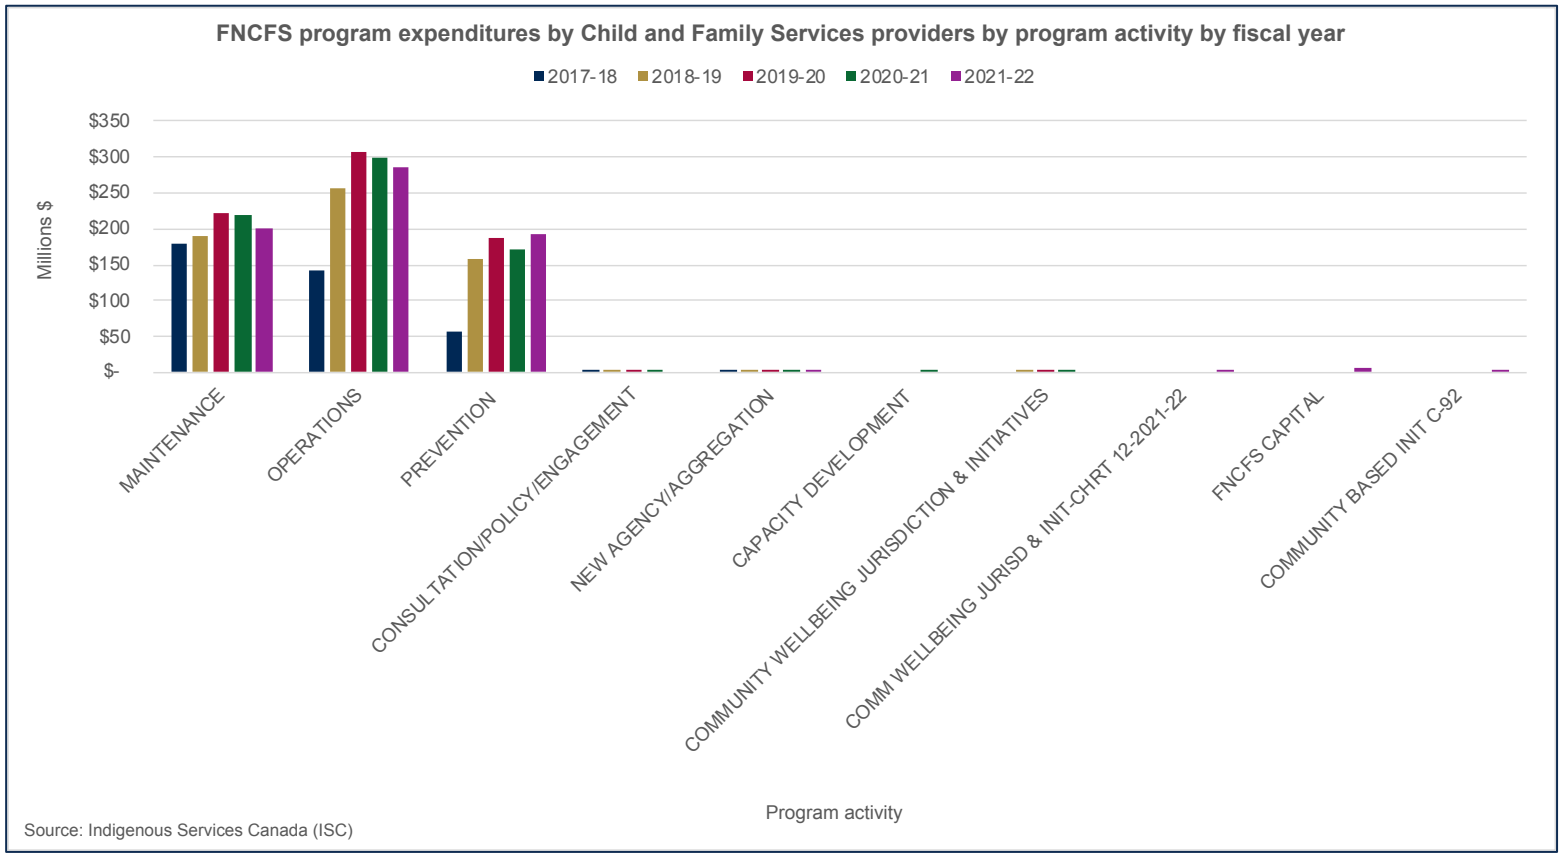
Percentage change in FNCFS Program expenditures by IFSD recipient type

- Percentage changes in recipients' shares of expenditures are consistent with changes in their share of expenditures.



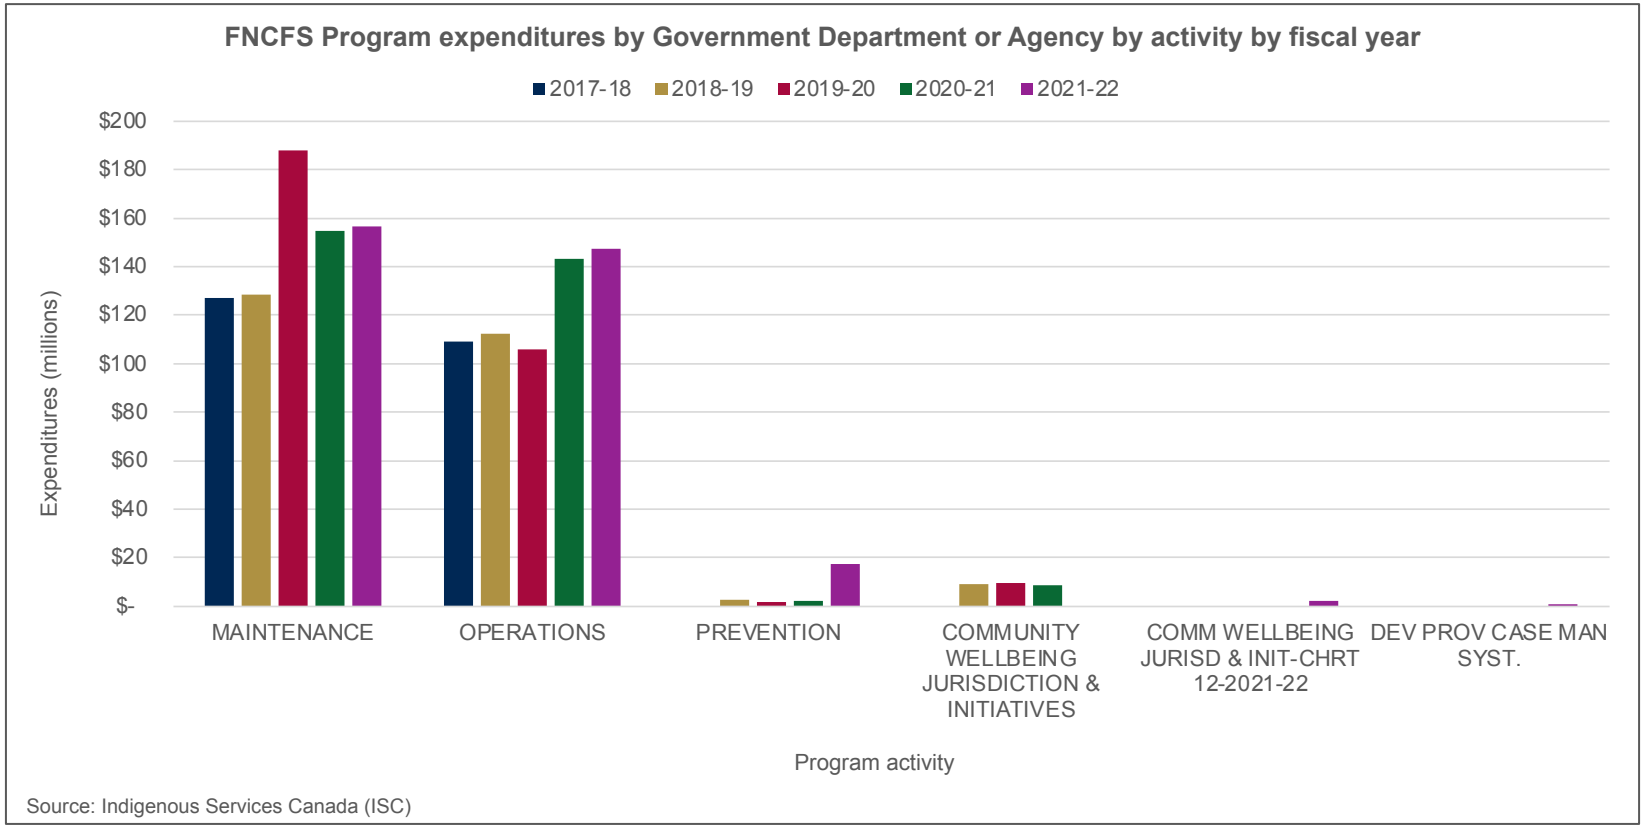
Child and Family Services providers expenditures by activity

- Child and Family Services providers' resources are associated mainly to operations, followed by maintenance and protection, across fiscal years.



Government department or agency expenditures by activity

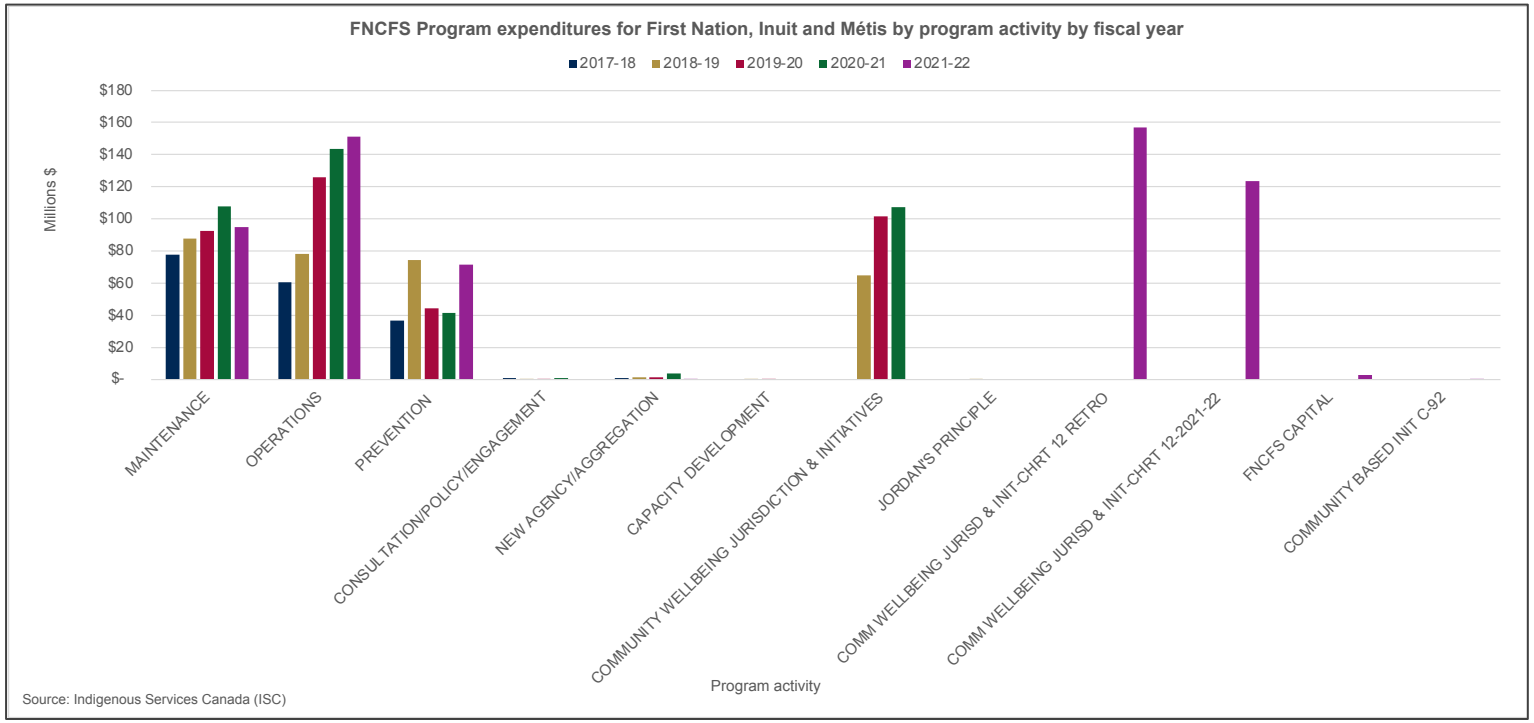
- Government department or agency expenditures by activity are mainly associated to maintenance, followed by operations. There are minimal expenditures associated to prevention.



Source: Indigenous Services Canada (ISC)

First Nation, Inuit and Métis expenditures by activity

- First Nations, Inuit and Métis receive FNCFS Program funding across several activity areas, notably in fiscal year 2020-21. While most expenditures are associated to operations, followed by maintenance and prevention, there are relevant expenditures for Community Wellbeing and Jurisdiction Initiative (CWJI), as well as for Canadian Human Rights Tribunal (CHRT) ordered payments in 2020-21.



APPENDIX B3

FIRST NATIONS REPRESENTATIVE SERVICES (FNRS)

First Nations Representative Services

January 29, 2024

First Nations Representative Services (FNRS)

- First Nations Representative Services (FNRS) were funded by Canada (by order of the CHRT) at $283 per person on-reserve and in the Yukon (https://www.sac-isc.gc.ca/eng/1644518166138/1644518227229)

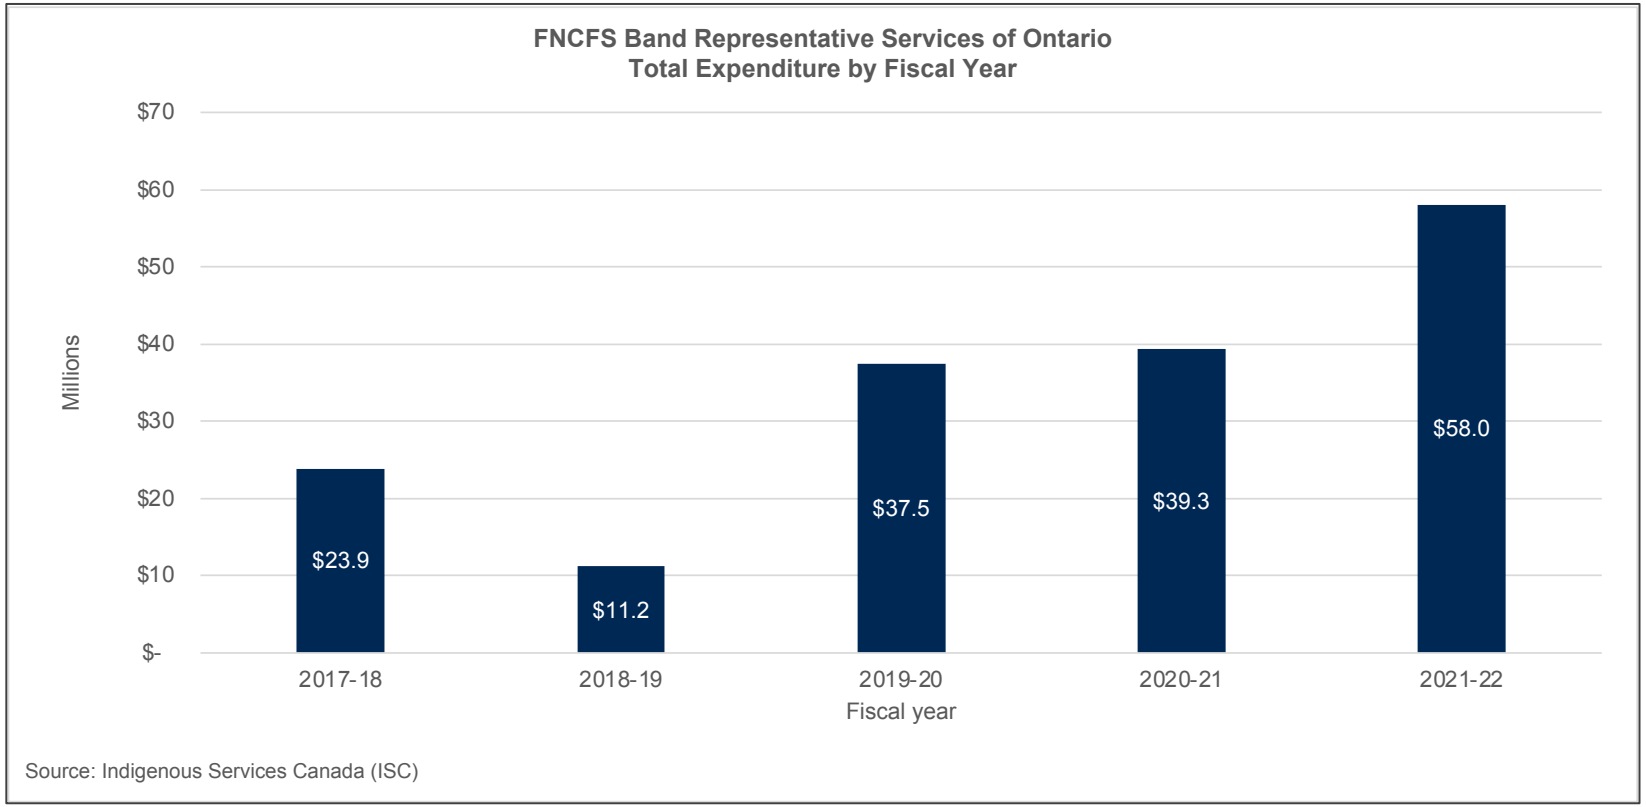
- NAC requested additional information on the source of the $283 per person.

- IFSD understands from ISC that the per capita allocation is derived from Ontario's per capita expenditures over a five-year period for "Band Representative Services," now FNRS.

In October 2022, IFSD asked ISC how it developed its internal estimates for the First Nations Representative Services (then Band Representative Services). ISC responded indicating that "[…] Canada created a national estimate based on Ontario per capita expenditures over a 5 years [sic] period."

Expenditure by fiscal year, Band Representative Service

- Funding for the Band Representative Service (BRS) increased (with exception to 2018-19) from fiscal year 2017-18 to 2021-22.

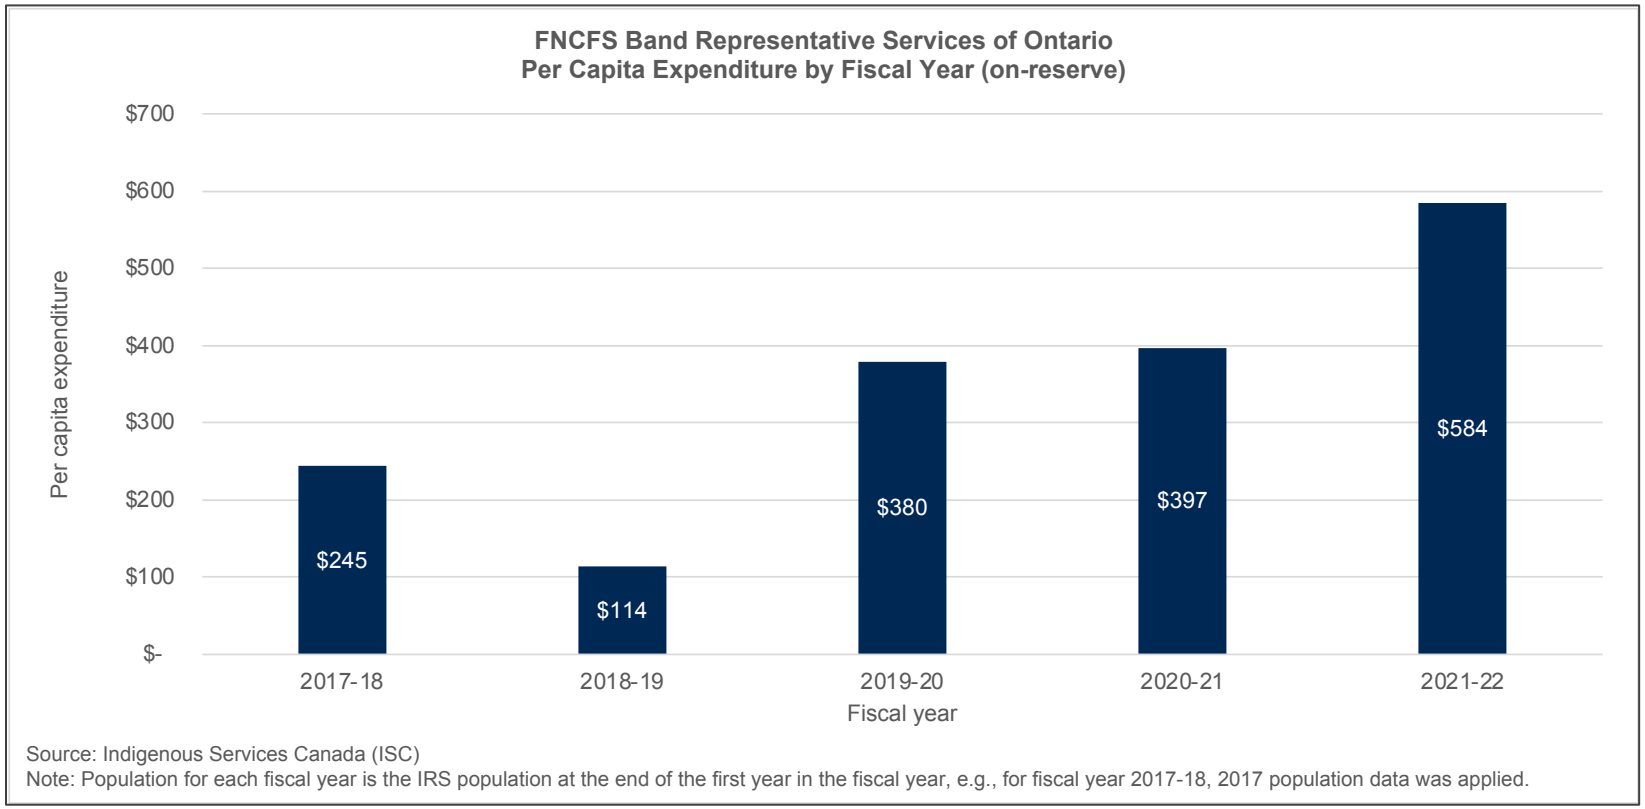


Estimated per capita expenditure, by fiscal year

- IRS population data for Ontario (both on-reserve and off-reserve) were used to estimate the per capita allocations for BRS by fiscal year.
- Neither the on-reserve nor total (on- and off-reserve) populations produce the $283/person allocation defined by ISC.
- NAC may wish to clarify the source of ISC's estimate.

Per capita estimate, on-reserve

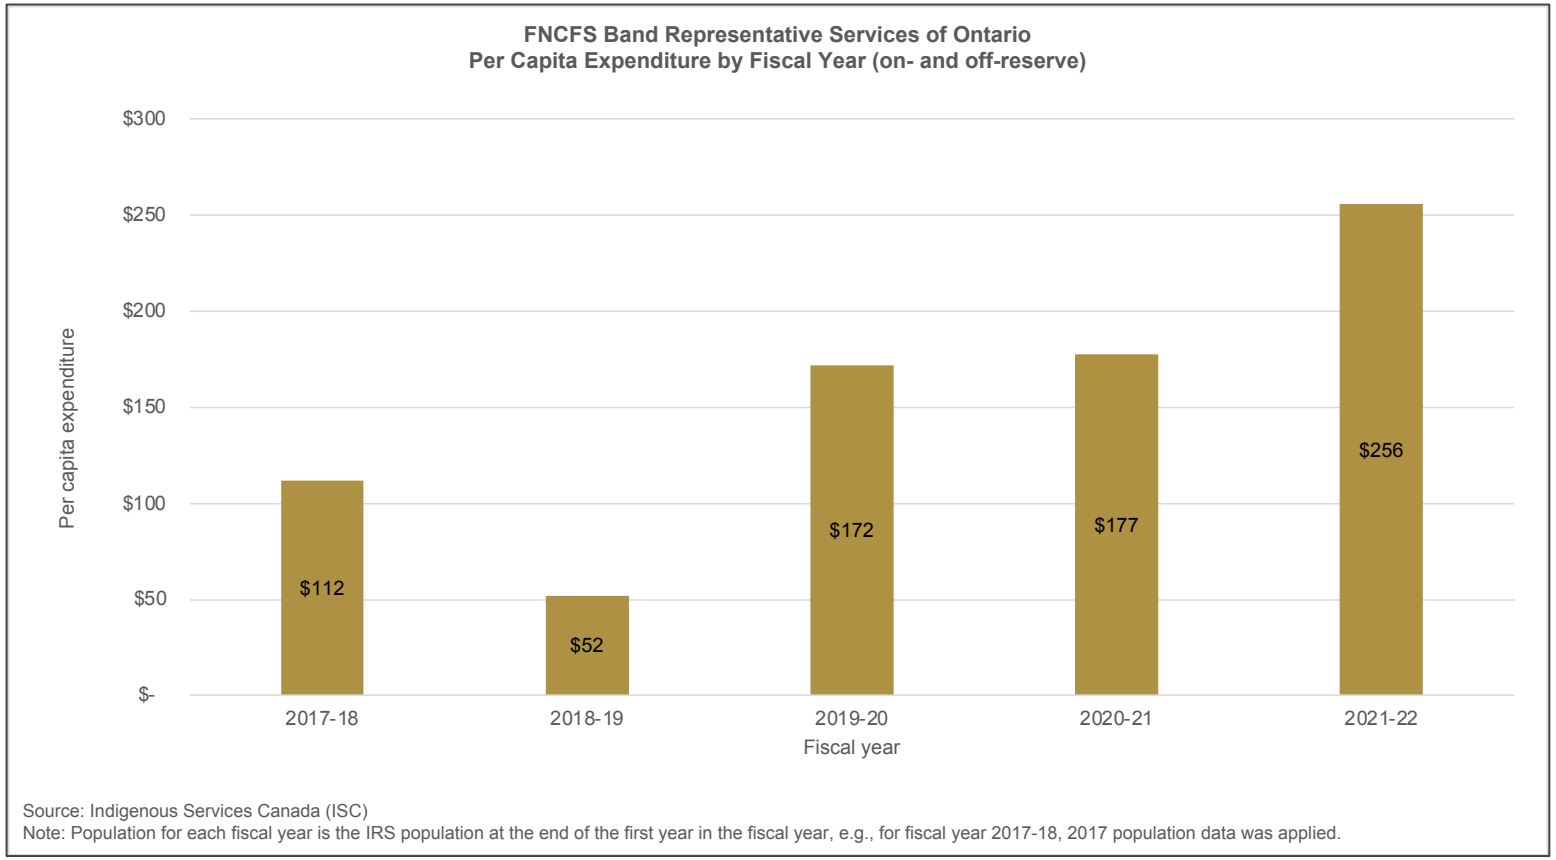
- On-reserve, per capita allocations of BRS range from a low of $114 to a high of $584.



Source: Indigenous Services Canada (ISC)
Note: Population for each fiscal year is the IRS population at the end of the first year in the fiscal year, e.g., for fiscal year 2017-18, 2017 population data was applied.

Per capita estimate, total population (on- and off-reserve)

- Total (on- and off-reserve) per capita allocations of BRS range from a low of $112 to a high of $256.



Source: Indigenous Services Canada (ISC)
Note: Population for each fiscal year is the IRS population at the end of the first year in the fiscal year, e.g., for fiscal year 2017-18, 2017 population data was applied.

APPENDIX C

POST-MAJORITY SUPPORT SERVICES (PMSS)

Monthly Update – FNCFS agencies and First Nations exercising/contemplating jurisdiction

Post-Majority Support Services (PMSS)

October 2023

Current funding for post-majority supports and services

- ISC is funding post-majority supports and services (PMSS) via FNCFS agencies and First Nations at actual costs
- First Nations authorized service providers can submit claims to ISC for the reimbursement of costs related to PMSS
- Claims can be submitted through the existing FNCFS claims process
- The FNCFS Program Terms and Conditions provides a non-exhaustive list of eligible expenditures
- Eligible expenditures could include:
  - Financial support
  - Educational support
  - Housing support
  - Support for physical, mental, and social wellness

How can we estimate the costs of post-majority supports?

- Post-majority supports and services is a relatively new *funded* area of activity for the FNCFS Program

- Estimating cost requires an understanding of the age-out rate, the recipient uptake rate, the program activities, and actual expenditures
  - Data from FNCFS agencies was sought, but variability in the program activities of existing service providers (e.g., some offer custom supports and services, others a predefined program), and their relative newness made cost estimation impractical

- Some provinces, however, offer post-majority supports and have done so for several years with publicly accessible data

- IFSD is using provincial data to develop interim cost estimates on post-majority supports and services, related to a specific set of activities (not necessarily culturally or contextually specific for First Nations youth)

- *The cost analysis for post-majority supports and services in FNCFS should be reviewed and updated once service providers have had approximately five years to operate their programs*

Cost estimation: PMSS

- Following a review of provincial post-majority supports and services, IFSD identified data of varying detail from Alberta, British Columbia, New Brunswick, and Quebec

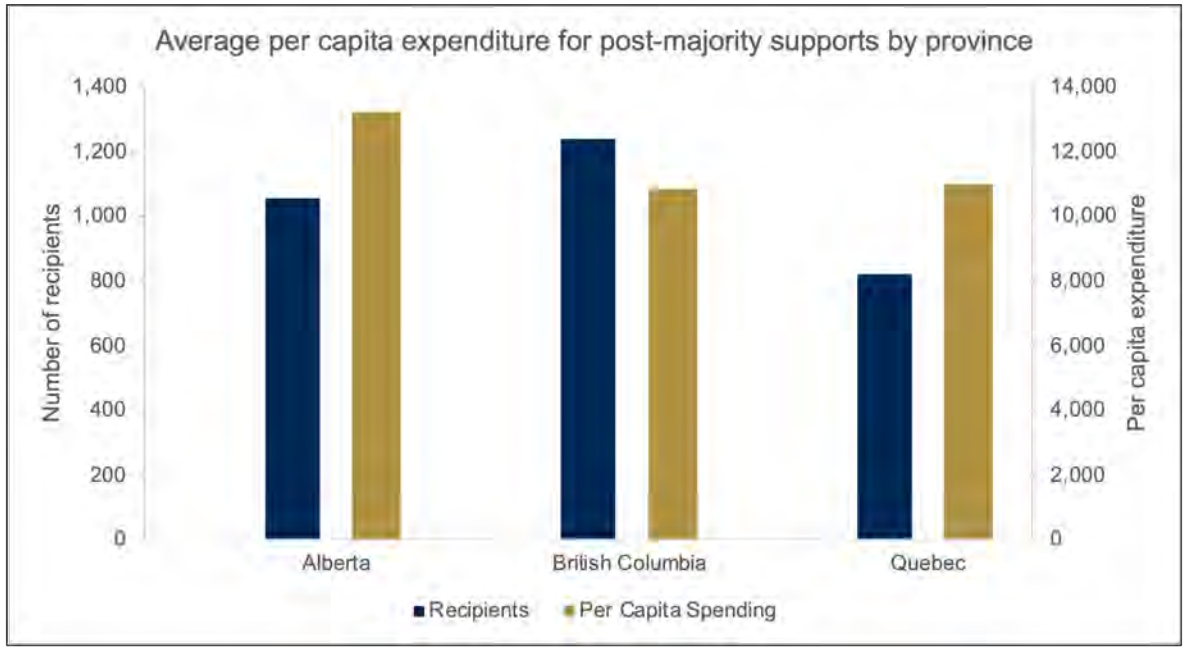
- IFSD reviewed the data against the criteria of:
  1. availability (publicly accessible),
  2. recency (within the last two fiscal years),
  3. and detail (information on uptake),

- Only British Columbia met all three of the above criteria, while Alberta and Quebec met the first two, and New Brunswick, only the first

- The provincial programs with data include a variety of automatic support (e.g., support is a result of a fixed rule) and action-dependent support (e.g., recipients may need to apply), with all offering support to those youth pursuing post-secondary education and training

Cost estimation: PMSS (cont.)

- For comparative purposes, IFSD reviewed the per capita allocations for post-majority supports in Alberta, British Columbia, and Quebec
  - The per capita allocations for British Columbia and Quebec (both FY 2021-2022) are very close at roughly $11,000 each, Alberta (FY 2022-2023) is higher at approximately $13,000
  - The closeness in per capita spending and recipient rates suggest the British Columbia data is representative when compared to Alberta and Quebec data.



Cost estimation: PMSS (cont.)

- The provincial data can be used as a starting point for estimating the costs of specific supports and services
- As approaches, needs, and cost analysis for First Nations youth are better captured and assessed, the estimates can be improved
- Capturing information about activities, costs, uptake, and needs will be crucial to improving our understanding of post-majority supports and services

APPENDIX D1

FNCFS BOTTOM-UP CAPITAL METHODOLOGY

Abbreviations:

SF – square foot

FTE – full-time equivalent

INFC – Infrastructure Canada

ISC – Indigenous Services Canada

PSPC – Public Services and Procurement Canada

FNCFS – First Nations child and family services

CAF – Cost Adjustment Factor

CAPEX – capital expenditure

OPEX – operating expenditure

TBS – Treasury Board of Canada Secretariat

Background

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios.

Figure 1 provides an overview of the bottom-up model's design and assumptions. Appendix A provides a summary of each asset type included in the model.

Figure 1: Individual bottom-up capital costing model design

Individual bottom-up capital costing model design

Model benefits:

- The individual bottom-up capital costing model provides cost estimates for a standard set of asset types common to FNCFS service providers.
- It converts program requirements (e.g., number of FTEs/clinicians) to capital requirements, providing an intuitive way for service providers with limited experience in capital planning to identify their organization's capital needs.

Model inputs:

- Collaborators provide program requirements (i.e., number of FTEs), which serve as the model's inputs for costing fixed assets.[1]
- The model requires collaborators to specify their movable asset requirements (i.e., vehicles) on a per-unit basis.

Model assumptions:

- The model employs SF assumptions based on a building's use and capacity (i.e., office space for 25 FTEs) to determine the gross area required for fixed assets (i.e., buildings).
- It costs moveable assets (i.e., vehicles) on a per-unit basis.
- The model then uses unit cost assumptions (i.e., SF costs, price per vehicle) to estimate investment costs for the collaborator's specified asset portfolio.
- The model assumes a phased 5-year investment period for fixed assets, where a percentage of the overall fixed asset portfolio is acquired each year.
- The model assumes a 5-year useful life for movable assets. As such, the model assumes service providers acquire all movable assets in year one, and replace these in year six.
- The model applies a 25% contingency factor to the total investment requirement, aligned with INFC and PSPC guidelines (see Appendix B: Contingency Benchmarks for Capital Budgeting, and adjusts for inflation using Budget 2024 projections.[2]
- The model applies a 2% annual recapitalization/renewal rate to the inflation-adjusted sum of all fixed assets acquired in all previous periods. This aligns with TBS guidelines.[3]

Model outputs:

- The model produces low, medium, and high 10-year capital expenditure schedules for collaborators, based on their defined program and/or capital requirements. Cost scenarios are based on the per SF construction cost range specified for each building type.

---

[1] In cases where collaborators had already developed conceptual designs for proposed buildings, the model was reconfigured to use the gross area defined in these plans.

[2] Infrastructure Canada, "Step-by-Step Guide for Applications to the Capital Stream of the Rural Transit Solutions Fund," *Government of Canada*, last updated January 20, 2023, https://www.infrastructure.gc.ca/rural-trans-rural/step-guide-etape-eng.html; Infrastructure Canada, "Step-by-Step Guide for Capital Projects Application Form [for Zero Emission Transit Fund]," *Government of Canada*, last updated September 21, 2021, https://www.infrastructure.gc.ca/zero-emissions-trans-zero-emissions/capital-immo-guide-eng.html; Infrastructure Canada, "Disaster Mitigation and Adaptation Fund: Applicant guide," *Government of Canada*, last updated December 7, 2023, https://www.infrastructure.gc.ca/dmaf-faac/applicant-guide-demandeur-eng.html#_Toc77262360; Public Services and Procurement Canada, *Doing Business with PWGSC: Documentation and Deliverables Manual* (Government of Canada, 2018), 12, https://buyandsell.gc.ca/cds/public/2020/01/28/1309436c314b43a9317acb80ee8fb9b4/ABES.PROD.PW_PWZ.B050.E10977.ATTA001.PDF; Department of Finance Canada, "Annex 1: Details of Economic and Fiscal Projections," *Government of Canada*, April 16, 2024, https://budget.canada.ca/2024/report-rapport/anx1-en.html#a1.

[3] Treasury Board Secretariat, *Guide to the Management of Real Property* (Government of Canada, 2011), https://www.canada.ca/en/treasury-board-secretariat/services/federal-real-property-management/guide-management-real-property.html.

Note: this document is archived on the TBS webpage; however, more recent guidelines do not provide advice on appropriate recapitalization/renewal rates.

- Estimated costs are driven by collaborators' program requirements, publicly available capital requirement benchmarks from Canada and US (e.g., SF per FTE), and unit cost assumption based on industry benchmarks and vendor information (see Table 1).
- The model functions on a cash accounting basis, where all costs occur in the year that cash changes hands. In other words, it does not amortize asset costs over their useful lives.

Model limitations:

- The model is not predictive; it requires service providers to specify their program requirements to estimate their capital needs.
- It cannot estimate how much capital a service provider requires based on variables such as population, number of children/families served, rates of children in care, etc.

The individual bottom-up capital model applies a remoteness CAF to each collaborator's capital estimate. IFSD calculated CAFs for all FNCFS agencies in Canada. The CAF calculation adjusts for remoteness (using Statistics Canada's Index of Remoteness) and whether the First Nations served have year-round road access. As per ISC's requirements, IFSD scaled all CAFs to reflect an average adjustment factor of 15%.[4] For First Nations collaborators, IFSD applied the CAF of to the agency currently serving them (if applicable).

When assigning unit cost assumptions, the model either employs cost standards from recognized sources commonly used for public sector costing (i.e., Altus Group and National Joint Council), or vendor information for specific asset types (see Table 1).

Table 1: unit cost assumption sources

Asset Type	Cost Assumption Source
All buildings, including for land-based camps	Altus Group's 2024 Canadian Cost Guide[5]
Passenger vehicles	National Joint Council corporate fleet services guidelines[6]
15 passenger vans	Vendor information
Mini-buses	Vendor information
Moveable assets and shipping containers (sea cans)	Vendor information

Primary Cost Drivers

The primary cost drivers for the model are collaborator defined program requirements. The model uses publicly available capital requirement benchmarks from Canada and US to convert collaborators' program requirements to capital requirements. For example, the model calculates office space requirements based on the number of FTEs required to deliver CFS, healing centre

[4] Institute of Fiscal Studies and Democracy, "Monthly update – Phase 3 FNCFS Agencies and First Nations Exercising Jurisdiction," April 2023, https://ifsd.ca/web/default/files/Monthly%20Updates/April%2023/2023-04-18_April%202023%20monthly%20update_Phase%203%20FNCFS.pdf.

space requirements on the requisite number of clinicians, and residential treatment centres on the required number of beds. Lastly, the model uses per unit cost assumptions based on industry standards and vendor information to arrive at a capital estimate for each participating collaborator.

An individual collaborator's understanding of their communities' unique needs impacts both their overall capital estimate and its distribution by asset type. The result of cost estimates being driven by individual collaborators' understandings of need is significant heterogeneity in the capital estimates across collaborators. For instance, the majority of one collaborator's capital requirement was for clinical spaces (i.e., residential treatment centres, rehabilitation centres, and healing centres), whereas other collaborators' largest asset type requirement by value was either office space or programming space.

The variability between collaborators' understandings of their own needs underpins IFSD's recommendation that ISC fund FNCFS capital through a national pool. The inability to identify consistency in the cost drivers behind collaborator's capital needs makes extrapolating overall program requirements at the national level difficult. A proposal-based approach to funding capital would allow FNCFS service providers to articulate their capital requirements on a case-by-case basis until a comprehensive understanding of capital needs across the entire FNCFS program is established.

Considerations

1) The bottom-up modelling approach provides a detailed framework for converting programmatic requirements to capital requirements. This makes it a useful tool for assisting FNCFS agencies and First Nations with limited capital planning experience in identifying their capital needs.
2) The modelling approach is based on service providers' needs, as articulated by the service provider. It does not account for variables such as population, rates of children involved with FNCFS, etc. As such, it is not a predictive model that can project service providers' capital needs based on demographic data.
3) The prescribed investment timeline (i.e., 5 years) is illustrative but does not account for local factors such as labour and/or material availability that could impact the deliverability of projects within this timeframe.

Appendix A: Asset Types and Assumptions

Asset Type	Unit Assumptions	Cost Assumptions
Healing centres	1150 square feet (SF) fixed area (includes waiting area/reception, 1 group therapy room, 2 washrooms, and storage) + 125 SF per clinician + 20% gross up for hallways, interior walls, etc. Based on U.S. Department of Veterans Affairs, *Mental Health Outpatient Services Design Guide*.[7] 20% gross-up assumption from Altus Group/CMHC, *The Economics of New Purpose-Built Rental Housing Development in Selected Canadian Markets*.[8]	Cost data from Altus Group *2024 Canadian Cost Guide*.[9]
Rehabilitation centres/halfway houses	369 SF per bed Based on Example 4 in BC HOUSING's *DESIGN GUIDELINES For Women's Safe Homes, Transition Houses, Second Stage Housing, and Long-Term Rental Housing*.[10]	Cost data from Altus Group *2024 Canadian Cost Guide*.[11]
Residential addiction treatment centres	938 SF per bed	Cost data from Altus Group *2024 Canadian Cost Guide*.[13]

	Based on the gross SF per bed in a proposed facility in Nunavut.[12]	
Transition/group homes	369 SF per bed Based on Example 4 in BC HOUSING's *DESIGN GUIDELINES For Women's Safe Homes, Transition Houses, Second Stage Housing, and Long-Term Rental Housing*.[14]	Cost data from Altus Group *2024 Canadian Cost Guide*.[15]
Reunification homes	916 SF per unit + 20% gross up for hallways, interior walls, etc. Based on Statistics Canada *Table: 46-10-0028-01*.[16] 20% gross-up assumption from Altus Group/CMHC, *The Economics of New Purpose-Built Rental Housing Development in Selected Canadian Markets*.[17]	Cost data from Altus Group *2024 Canadian Cost Guide*.[18]
Emergency shelters/ safe house	369 SF per bed Based on Example 4 in BC HOUSING's *DESIGN GUIDELINES For Women's Safe Homes, Transition Houses, Second Stage Housing, and Long-Term Rental Housing*.[19]	Cost data from Altus Group *2024 Canadian Cost Guide*.[20]

[12] This SF per bed estimate assumes a sufficient number of beds to scale appropriately. For reference, the proposed facility in Nunavut is a 32-bed treatment centre. Other treatment centres relevant for benchmarking size include Dilico Anishinabek Family Care's treatment centre (ON) that treats approximately 20 patients at a time; the Mark Amy Treatment Centre (AB) which has 14 beds; the Cree Nations Treatment Haven (SK), which accommodates 22 patients at a time; and the Mawiomi Treatment Center Inc. (QC) which has 7 beds.

Appendix B: Contingency Benchmarks for Capital Budgeting

Based on guidance from Infrastructure Canada (INFC) and Public Services and Procurement Canada (PSPC), **IFSD could reasonably apply a 25% contingency factor to FNCFS Phase 3 capital estimates**. INFC recommends that applicants apply a 21% to 30% contingency factor to Class D estimates (see Table 2) when applying for capital funding through streams such as the Rural Transit Solutions Fund, Zero Emission Transit Fund, and Disaster Mitigation and Adaptation Fund.[49] PSPC allows a design allowance of 20% for Class D construction cost estimates.[50]

Table 2: INFC Contingency Percentages by Estimate Class[51]

Estimate Class	Contingency Guideline
Class A – bids received, evaluated and verified	5% – 10%
Class B – detailed design	11% – 15%
Class C – preliminary design	16% – 20%
Class D – conceptual design	21% – 30%

IFSD consulted other standards for contingency benchmarks as guidance for capital budgeting which include the following:

- The Royal Architectural Institute of Canada (RAIC) suggests that Class D estimates are accurate to ± 20-30%.[52]
- The US Department of Transit (DOT) Federal Transit Administration (FTA) suggests that 40% is a prudent minimum contingency factor for projects "[a]t nominal 15% design level."[53]
- The Treasury Board of Canada Secretariat's (TBS) *Archived - Guideline on Cost Estimation for Capital Asset Acquisitions*, suggests that "expenditures can vary from an un-adjusted rough-order-of-magnitude (ROM) cost estimate by up to 40 per cent, from an un-adjusted indicative estimate by up to 25 per cent, and from an un-adjusted substantive estimate by up to 15 per cent."[54]
- Infrastructure BC suggests that Class D estimates are typically accurate to ±25%.[55]

- Newfoundland and Labrador's Department of Transportation and Infrastructure allows municipal applicants to apply a maximum contingency of 10% to new construction buildings that cost less the $5M, and 8% for those that cost over $5M.[56] **These guidelines do not refer to estimate classes, so may not apply to Class D estimates.**
- The Wisconsin Department of Administration, Division of Facilities Development recommends capital project budgets include a 15% contingency.[57] **These guidelines do not refer to estimate classes, so may not apply to Class D estimates.**

[56] Department of Transportation and Infrastructure, *Municipal Infrastructure Capital Works Contingency Allowance Policy* (Government of Newfoundland, May 2023), Table 1, https://www.gov.nl.ca/ti/files/MI-Policy-Cost-Contingency-Allowance-May-2023.pdf.

Appendix C: Unit Costs for Miscellaneous Asset Types

Some collaborators identified capital requirements beyond those included in the original costing model. Table 3 outlines these asset types, and the unit cost assumptions used to produce cost estimates for these assets.

Table 3

Asset type	Unit Cost	Notes
Smoke house[58]	$1000 (2022)	IFSD inflated this cost to 2024 values in the model.
Playground[59]	**Walker Island Park (2024):** $425,000 budget, cannot exceed 400m^2 ($1,062.50 per m^2) **Nusatum Park (2024):** $275,000 budget cannot exceed 300m^2 ($916.67 per m^2)	IFSD used the average of the unit costs for these two parks in the model.
Horse Paddock[60]	$1 - $10 per SF including footing and fence (2022 USD)	IFSD converted this cost to CAD and inflated it to 2024 values in the model. Costs were estimated using the low, medium, and high unit costs from this range.
Stables[61]	$30-$80 per SF (2020)	The model uses the existing garage unit costs assumptions ($114 - $166 /sf), which are based on the Altus Group *2024 Canadian Cost Guide*. The source suggesting that stables cost $30-$80 per sf is a blog and may be unreliable. The sf price assumption used for garages provides an appropriate buffer to ensure the model does not underestimate the costs of constructing a stable.

Greenhouse[62]	Average cost: $15,000 USD (2024) Highest cost: $25,000 USD (2024) Lowest cost: $2,500 USD (2024)	IFSD converted this cost to CAD and inflated it to 2024 values in the model. The model assumes the average cost for all greenhouses.
Garden[63]	$15 per SF (2021)	IFSD inflated this cost to 2024 values in the model.
Parking lots	Cost data from Altus Group *2024 Canadian Cost Guide*.

APPENDIX D2

FNCFS TOP-DOWN CAPITAL METHODOLOGY

Abbreviations:

FTE – full-time equivalent

INFC – Infrastructure Canada

ISC – Indigenous Services Canada

IRS – Indian Registration System

PSPC – Public Services and Procurement Canada

FNCFS – First Nations child and family services

CAF – Cost Adjustment Factor

CAPEX – capital expenditure

OPEX – operating expenditure

TBS – Treasury Board of Canada Secretariat

Background

Accurately modelling long-term capital asset needs requires detailed and accurate data on both the existing asset base's condition and usage, as well as long-term capital asset requirements, and drivers of demand (see Table 1).

Table 1

Required information	Description
Condition assessment	Assessing current state of infrastructure, e.g., asset type, age, condition, capacity, performance, and maintenance needs of existing stock.
Future demand	Based on projected population growth, socio-economic conditions, and community priorities and aspirations.
Criteria for prioritization	Approach to determining which projects will be selected and in what sequence.
Funding gap and strategy	Determining available resources, needed resources, and the source of resources.

IFSD attempted a detailed, bottom-up estimation of collaborators' capital needs, and found the following:

- Collaborators were able to identify a clearly defined set of asset types to support FNCFS service provision (e.g., offices, vehicles, family visitation units, domestic violence shelters, addiction treatment facilities, etc.).
- Collaborators often had limited information on the current state and value of their owned and leased capital assets.
- Collaborators could not consistently identify the primary drivers of their future capital needs in a reformed FNCFS Program that emphasizes prevention-based activities.
- Collaborators prefer asset ownership over leasing. This appears to be related to perceived budgeting ease and security, as having fewer leaseholds reduces their OPEX funding needs, which is subject to annual allocations from ISC.

Due to these limitations, IFSD adopted a hybrid approach to modelling FNCFS capital needs. This approach is typified by a "top-down" model design to estimate capital needs across a set of asset types, defined through consultations with the twenty collaborators.

Given the foregoing, IFSD recommends a national pool (application-based approach) to fund capital needs in the FNCFS Program.

Modelling Approach

The top-down capital needs model produces 10-year, national-level estimates of capital needs for the FNCFS Program.[1] The model estimates capital needs across four core asset types and three secondary asset types:

Core-Asset Types:

1. Office space
2. Reunification/visitation units
3. Garages
4. Vehicles

Secondary Asset Types

1. Recreation/events centres
2. Domestic violence shelters
3. Residential addiction treatment centres

Core assets are those required to deliver child protection services. Secondary assets are those that support broader preventative services, and may or may not be funded through the FNCFS Program.

Each operational variable within the model has a low, medium, and high assumption. In turn, these settings are used to generate the low, medium, and high overall cost scenarios.

The model operates on a cash accounting basis. This means that costs are recognized when money changes hands. The motivation for this is twofold. First, the current appropriation system for federal transfers to First Nations is on a modified cash accounting basis. Second, cash accounting is more intuitive for laypersons and reflects feedback from stakeholders regarding how they actually budget.

[1] The base population used in the model is the total IRS 2022 on-reserve population for all First Nation currently affiliated to an FNCFS agency (as of August 2023).

Figure 1: Top-Down Capital Costing Model Summary

Model Drivers

- Children in care data from Statistics Canada.
- IRS 2022 on-reserve population estimates.

Common Features and Assumptions

- Consultations with twenty FNCFS service providers informed the costing model's underlying assumptions.
- Includes collaborator-defined core asset types (offices, reunification/visitation units, garages, and vehicles), and secondary asset types (recreation/events centres, residential addiction treatment centres, and domestic violence shelters). Secondary assets are omitted in the core capital estimate, but are included in auxiliary estimates.[2]
- A 25% contingency is included in the 10-year cost estimate.
- A recapitalization rate of 2% per year is applied to all fixed assets acquired in previous periods.
- Total costs include a 15% average CAF to adjust for remoteness.
- All numbers adjusted for inflation using Budget 2024 projections.

The Different Assumptions for Each Scenario[3]

Lower Cost	Medium Cost	Higher Cost
▪ 25 cases per caseworker ▪ 3 caseworkers per vehicle ▪ Low building unit costs from the Altus Group's *2024 Canadian Cost Guide* ▪ $52,700 per vehicle	▪ 20 cases per caseworker ▪ 2 caseworkers per vehicle ▪ Medium building unit costs from the Altus Group's *2024 Canadian Cost Guide* ▪ $52,700 per vehicle	▪ 15 cases per caseworker ▪ 1 caseworker per vehicle ▪ High building unit costs from the Altus Group's *2024 Canadian Cost Guide* ▪ $52,700 per vehicle

Outputs

- 10-year annual capital investment estimates, across three cost scenarios, to meet FNCFS capital requirements at the national level.

Model Limitations

- Forecast based on a point-in-time population estimate and count of children in care, and is subject to change as on-reserve population and rates of children in care evolve.
- The number of children in care drives the office space and vehicle requirements estimates, and may not fully represent the capital needs of service providers who increasingly emphasize prevention-based activities.

Methodological Components

The following section summarizes the data and modelling presented in the First Nations Child and Family Services Capital Excel Workbook.

Demographics Inputs

Population demographics are the key input driver for determining the CAPEX requirements in the model. The model utilizes two different population estimates:

[2] The model utilizing dummy variables (i.e., 1 and 0) to either include or omit these asset types from the total capital estimate.
[3] Altus Group, "2024 Canadian Cost Guide," 2024, https://go.altusgroup.com/2024-canadian-cost-guide; Corporate Fleet Services, *CFS Annual Report – 2024* (Treasury Board of Canada Secretariat, November 2023), https://www.njc-cnm.gc.ca/s3/d896/en.

1. ISC's IRS 2022 population estimates to determine the on-reserve population for communities affiliated to an FNCFS Agency; and
2. Statistics Canada's 2021 estimate of the total number of children in foster care.[4]

The model also uses Statistics Canada's estimate of the percentage of children in care in 2021 who identify as First Nations to estimate the total number of First Nations children in care.[5]

Asset Quantity Assumptions

The costing approach assumes that office space, reunification/visitation units, vehicles, and garages are core FNCFS assets, and recreation/events centres, domestic violence shelters, and residential addiction treatment centres are secondary FNCFS assets. Each costing scenario presented includes the core assets, while secondary assets are only represented in a subset of scenarios.

Core Assets (included in all scenarios):

Office space

Office space requirements are based on the estimated number of children in care and the corresponding case worker complement. The number of caseworkers required to serve the population is calculated based on the number of cases managed by each case worker. Using the total number of caseworkers, the model then calculates the number of administration staff, supervisors, and program managers required to support the caseworker complement.[6]

In addition to caseworkers, administration staff, supervisors, and program managers, the model increases the total number of FTEs required by 15% to account for employees who engage in internal services (e.g., human resources, finance, communications, etc.). The internal services factor reflects the average internal services expenditure for all federal departments and agencies as a percentage of their total expenditures from the 2023 Public Accounts of Canada. IFSD rounded the average internal services expenditure for departments and agencies from 14% to 15%.[7] To review IFSD's calculations, see Appendix B.

The model assumes a standard office space allocation for each FTE which is consistent with Government of Canada guidelines.[8]

Reunification/Visitation Units

The estimate of the total space requirement for reunification/visitation units is based on the number of children in care. It applies a standard assumption about the number of family visitation hours per week per child in care to estimate the total weekly demand for visitation units.[9] The model then applies an assumption regarding the number of visitation hours per week, assuming 8-hour working days and 5-day working weeks, to estimate the total number of reunification/visitation units required.

Consistent with the nature of space requirements expressed by collaborators, the model assumes that apartment-style units are the preferred asset type to support family visitation. It applies a standard apartment size assumption to calculate the overall space requirement for reunification/visitation units.[10]

Vehicles

The estimated cost of vehicles is determined by the estimated number of case workers required for FNCFS service delivery. The model applies standard caseworker-to-vehicle ratios, based on collaborator input, to estimate the total number of vehicles required.

Garages

The space requirement for garages is derived from the estimated number of vehicles required to support FNCFS service delivery. The model applies a standard area per vehicle assumption to estimate the total space requirement.[11]

Secondary Assets (included in auxiliary scenarios only):

Note that secondary assets are not included in the modelling approach for all cost scenarios.

Recreation/Events Centres

The model estimates space requirements for recreational or event-related purposes using the total number of children residing on reserve in communities affiliated to an FNCFS agency. It provides a fixed area allocation per child, consistent with guidelines on high school gymnasium

sizes.[12] High school gymnasiums were deemed a suitable proxy for FNCFS recreation/event spaces, as they provide adequate space for space-intensive activities with smaller groups of children (e.g., sports/games, workshops, etc.), as well as for assembly functions with large groups.

Residential addiction treatment centres

The space requirement estimate for residential addiction treatment centres uses a benchmark number of beds per 1,000 people to estimate the number of beds required to serve the total on-reserve population in communities affiliated to an FNCFS agency.[13] It then applies a standard area per bed assumption, based on a proposed facility in Nunavut, to estimate the total space requirement for residential addiction treatment facilities.[14]

Domestic Violence Shelters

The domestic violence shelter space requirement estimate applies a benchmark rate of beds per 1,000 people, applied to the total on-reserve population in communities affiliated to an FNCFS agency, to estimate the number of beds required.[15] The model then applies a standard area per bed assumption to determine the total shelter area requirement.[16]

Unit Cost Assumptions

The model uses standard unit cost assumptions to estimate the total costs of acquiring included assets. IFSD referenced two industry-standard sources to determine appropriate unit cost ranges:

1. Unit prices for all fixed assets are based on the Altus Group's 2024 Canadian Cost Guide.[17] To account for regional price variation, the model uses the average unit costs across all cities included in the cost guide.
2. Per vehicle cost assumption reflects the average cost of medium crossovers and SUVs, as specified in the National Joint Council's 2024 corporate fleet services guidelines.[18]

Cost Adjustments

Inflation

[18] Corporate Fleet Services, *CFS Annual Report – 2024.*

The costing model accounts for inflation using Budget 2024 projections.[19]

Remoteness

The model applies a 15% CAF to the total estimate the account for the increased labour, transportation, and shipping costs in remote communities.[20]

Contingency

Based on guidance from INFC and PSPC, the model applies a 25% contingency factor to the overall capital estimate.[21] For additional details, see Appendix C.

Recapitalization Rate

The model applies a 2% annual recapitalization rate to the inflation-adjusted sum of the value all fixed assets acquired in all previous periods. This rate aligns with TBS guidelines.[22]

Longer-term capital plan projections

The costing model assumes a normal distribution pattern for the allocation of funding for fixed capital assets. The model has annual fixed asset allocations rise from years one through three, and taper of thereafter until year five. Consistent with the accounting practices of collaborators, the model assumes a 5-year useful life for vehicles.[23] As such, the model assumes service providers acquire all movable assets are year one, and replace these in year six. Cash flow projections beyond three years are uncertain due to several factors, including unpredictable changes in market conditions, events like COVID-19, and execution delays. As such, it is reasonable to

expect a certain amount of variance in the actual timing of annual cash flows on account of the uncertainties noted above.

Appendix A: Summary of Assumptions

Variable	Assumption
Average # of cases/Caseworker	25, 20, and 15 cases per caseworker in low, medium, and high scenarios respectively.[24]
Administration-, supervisor-, and program-manager-to-caseworker ratios	All scenarios include a 1:5 administration-to-caseworker ratio, a 1:5 supervisor-to-caseworker ratio, and a 1:7 program manager-to-caseworker ratio.[25]
Internal Services Resources Requirement (FTE top-up)	15% top-up to FTE allocation This rate is based on the average internal services expenditure for all federal departments and agencies as a percentage of their total expenditures from the 2023 Public Accounts of Canada (see Appendix B).[26]
Office space	18.4 m^2 per FTE[27]
Recreation/Events Centre space	1.11 m^2 per child living on-reserve This assumption is based on guidelines for high school gymnasiums from the Ontario Ministry of Education's *Building Our Schools, Building Our Future, A Report from the Expert Panel on Capital Standards*.[28] This space allocation per child exceeds National Building Code occupant load minimums for assembly use, space with non-fixed seats and tables, suggesting it provides ample space per child for assembly uses.[29]
Residential Addiction Treatment Beds	4.5 beds per 1,000 people[30]
Residential Addiction Treatment Centre area per bed	87.1 m^2 per bed[31]

Caseworker FTEs per vehicle	3:1, 2:1, 1:1 caseworker to vehicle ratio in low, medium, and high scenarios respectively.[32]
Car garage space requirement/Vehicle Sq. Ft.	22.3 m^2 per vehicle[33]
Domestic Violence Shelter Beds per 1,000 persons	1.55 domestic violence shelter beds per 1,000 people This represents the ratio of domestic violence shelter beds per 1,000 people in territories.[34] The territories were used as a proxy for shelter demand in isolated/remote regions.
Shelter area per bed	34.2 m^2 per bed[35]
Working Days in Week	5
Percentage of children in care identifying as First Nations	42.5%[36]
Number of kids in foster care Canada	42,565[37]
Number of family visitation/supervised access hours per week for children in care	1.0, 1.5, and 2.0 hours per week in the low, medium, and high-cost scenarios respectively 2 hours bi-weekly (i.e., 1 hour weekly on average) is the reported norm for supervised access in Ontario. A lack of available visitation centres limits visitation frequency in Ontario.[38] As such, the model assumes 1 visitation hour per week in the low-cost scenario, and increases visitation hours per week in the medium- and high-cost scenarios.
Number of visitation hours per day per reunification/visitation unit	8, 7, and 6 hours per unit per working day in the low, medium, and high-cost scenarios respectively[39]
Reunification/visitation unit area	102.1 m^2 This reflects a weighted average of condominium apartment sizes in Ontario and British Columbia from a Statistics Canada dataset published in 2019.[40]
Contingency Factor	25%[41]

	See Appendix C for additional details.
Average CAF for Remoteness	15%[42]
Buildings Recapitalization Rate	2% This aligns with TBS guidance.[43]
Vehicle Useful Life	5 years This aligns with collaborators' accounting practices.[44]
Inflation	Budget 2024 projections.[45]
Vehicle Costs	$52,700 per vehicle This reflects the average cost of medium crossovers and SUVs included in the National Joint Council's 2024 corporate fleet services guidelines.[46]
Building Costs	All building costs are from the Altus Group's 2024 Canadian Cost Guide. The model uses the average unit costs across all cities included in the cost guide to account for regional variation in costs.[47]
