CHIEFS OF ONTARIO,
AMNESTY INTERNATIONAL and
NISHNAWBE ASKI NATION

Interested Parties

AFFIDAVIT OF CINDY BLACKSTOCK

I, Cindy Blackstock, of the City of Ottawa, in the Province of Ontario, **SOLEMNLY AFFIRM THAT:**

1. I begin by honouring all of the First Nations children and youth, past and present, and the Nations, families and friends who love them including honouring the children of all diversities who stood with First Nations children to call for justice during these proceedings. This is a human rights case that mattered – it has changed countless First Nations children's lives for the better and bended the long arc of discrimination towards the loving justice in this plan.

2. I am Gitxsan, a professor at McGill University's School of Social Work, and the Executive Director of the complainant, the First Nations Child and Family Caring Society of Canada ("**the Caring Society**"). As such, I have personal knowledge of the matters hereinafter deposed to, save and except for those matters stated to be on information and belief and where so stated, I believe them to be true.

3. The Caring Society is a national non-profit organization that works to ensure the safety and well-being of First Nations children, youth and families through reconciliation-based education initiatives, public policy campaigns and providing quality resources to support communities. Through this work, the Caring Society champions culturally based equity for First Nations children and their families so that they can grow up safely at home, be healthy, achieve their dreams, celebrate their language and culture and be proud of who they are. More information about the Caring Society is found on the "About Us" page of our website, at fncaringsociety.ca/about.

Recognition of This Moment

4. First Nations, First Nations youth in and from care, Residential School Survivors, 60's Scoop Survivors and the families of Murdered and Missing Indigenous Women, Girls and LGBTQAI+ persons are united in the purpose of ensuring that this generation of First Nations children and those yet unborn will live free of Canada's discrimination and be given a fair opportunity to build on the multi-generational strength of their ancestors and communities to address the multi-generational harms wrought from Canada's woeful conduct.

5. The late Elder, Elmer Courchene, who appeared before the Tribunal, taught us that when it comes to children, justice is not enough. Every child deserves loving justice – infusing law and policy with love, spirit and humanity. That is why this submission was blessed at a Winter Solstice Ceremony and is wrapped in the phrase "we love you" translated into First Nations languages. National Children's Chiefs Commission Knowledge Holder Judy Wilson worked with Deborah Foxcroft and Elders to craft a Winter Solstice Prayer for Children to honour the children on the occasion of this submission. I personally attended a Winter Solstice Ceremony in Tk'emlúps te Secwepemc Territory to honour the children and the Loving Justice Plan.

My Background

4. I am Gitxsan. I grew up in the bush and small communities primarily in northern British Columbia and have over 40 years of experience in child and family services, including work as a front-line social worker and, since 2002, have been the Caring Society's Executive Director. My work has focused on addressing discriminatory practices against First Nations children, youth, and families by Indigenous Services Canada and its predecessors since 1997.

5. The Caring Society's mission statement is to provide active reconciliation-based education, policy guidance, research, advocacy and support to promote the safety and wellbeing of First Nations children, young people, families, communities and Nations.

6. I have a PhD in social work from the University of Toronto (2009), a Master of Jurisprudence in children's law and policy from Loyola University Chicago (2016), a Master of Management from McGill, and a BA in Psychology from UBC. I have also received over 20 honorary doctorates.

7. In 2023, I received the World Children's Prize for advancing equity and rights for First Nations and Indigenous children globally—a recognition made especially meaningful by millions of children voting worldwide. My collaborative efforts have earned over 90 awards, including the Royal Society of Canada's Indigenous Engagement Prize (2025), the SSHRC Gold Medal (2022), Amnesty International's Ambassador of Conscience Award, the Law Society of Upper Canada's Human Rights Award and admission to the Order of Canada. Most rewarding, however, is seeing children thrive after receiving the support they deserve. I affirm this affidavit in support of the Caring Society's and the Assembly of First Nations' ("AFN") national plan to end discrimination within the FNCFS Program and prevent its recurrence (for First Nations not subject to the Ontario Final Agreement "OFA").

The Loving Justice Plan for Long-Term Reform of First Nations Child and Family Services

8. Since the Tribunal directed the Caring Society and the AFN to develop a national FNCFS long-term reform plan in 2025 CHRT 80, I have been directly involved in the conceptualization, development and refinement of the plan. I am proud to attach the resulting plan, titled the Loving

Justice Plan for Long-Term Reform of First Nations Child and Family Services ("Loving Justice Plan" or "Plan") as **Exhibit 1** to my affidavit.

9. Regrettably, despite repeated invitations to collaboration on a unified plan, Canada refused to do so (other than a brief meeting on December 10, 2025, noted at the end of my affidavit), and indeed repeatedly rejected the value of any discussions with the Complainants and sought to minimize contact with the National Children's Chiefs Commission ("NCCC") to two brief meetings.

10. The Loving Justice Plan centers First Nations perspectives and First Nations rights and their children's rights. It was created in close collaboration with the NCCC, the AFN and numerous First Nations, First Nations child and family service experts, Elders and young people across Canada (excluding Ontario). The incredible efforts of First Nations, Elders, youth, and First Nations' regional experts to conduct engagement sessions over a short period of time to inform the Loving Justice Plan was inspiring and representative of the deep love that First Nations have for their children. Over 100 submissions were received, including 64 submissions by groups numbering up to 91 persons.

11. Canada did not participate in this plan, nor did it provide any funding. The regional engagements relied completely on financial and in kind contributions by the Caring Society, Our Children; Our Way (a non-profit organization representing the 24 First Nations, Inuit and Métis Delegated Aboriginal Agencies in British Columbia, which has been providing secretariat support to the NCCC) and in-kind donations by First Nations, First Nations child and family service experts and allies.

12. The Loving Justice Plan aims to permanently end Canada's systemic discriminatory conduct in First Nations child and family services on-reserve and in the Yukon, while respecting First Nations' right to self-determination, in a manner consistent with Canada's domestic and international human rights commitments. Consistent with the direction by the Tribunal and First Nations, the Plan provides a national foundation of minimum standards and effective mechanisms to ensure Canada's accountability whilst providing for regional variations to meet local needs and realities. Relying on the national engagement submissions arising from 2025 CHRT 80 and the best evidence available, the Plan seeks to demonstrate how its implementation will clearly and

effectively permanently cease the systemic racial discrimination identified by the Tribunal. The Plan sets out the mechanisms, and supporting evidence, underlying the measures that will permanently end Canada's discrimination. These are described narratively throughout the Loving Justice Plan.

13. The Loving Justice Plan intends to be responsive to the individual circumstances of First Nations, including by incorporating distinct regional variations to address distinct community circumstances, culture and language, while addressing Canada's systemic discriminatory conduct recognized by the Tribunal and First Nations. The Loving Justice Plan provides narrative descriptions of First Nations perspectives on FNCFS reforms and refers to evidence from First Nations-led research where applicable.

14. In keeping with the Tribunal's direction in 2025 CHRT 80 to strive for excellence rather than perfection and the First Nations value of humility, the proposed plan is intended to be responsive to the changing needs of children and families and better information, data, and experience. Therefore, the Plan includes First Nations led governance mechanisms that are transparent and accountable to First Nations along with regional and national policy and practice secretariates. Measuring outcomes for children, youth and families is essential to understanding their evolving needs, the efficacy of various interventions, and to detect any recurrence of Canada's discrimination at the earliest possible stage.

15. The Loving Justice Plan is organized into nine themes, presented as chapters, each of which groups a series of proposed measures that are essential elements to remedy Canada's discriminatory conduct. These measures, which include explanations and the rationales that inform the proposed measures, are all intended to reflect the nine non-exhaustive parameters set out in paragraph 113 of 2025 CHRT 80. The measures, and accompanying rationales, rely and build upon the Tribunal's current orders and prior rulings in this matter, where applicable. They also rely on a variety of sources including: direction by First Nations in Assembly via resolutions, the Truth and Reconciliation Commission, Final Report on Murdered and Missing Indigenous Women and Girls, applicable legislation and jurisprudence, domestic and international human rights laws, norms and principles such as the United Nations Declaration on the Rights of Indigenous Peoples, and the United Nations Convention on the Rights of the Child, research and evidence and the views

of Indigenous youth. In keeping with the proportionality principle discussed by the Tribunal in recent rulings, the evidence highlighted in the Loving Justice Plan is kept to the essential points underlying the measures.

16. The Loving Justice Plan also contains detailed deadlines at the outset of many of the measures. The Plan also adopts clear, measurable targets, being the Measuring to Thrive Indicators, included as Appendix J of the Institute of Fiscal Studies and Democracy, First Nations child and family services: Phase 2 Report.

17. Critically, the plan is designed to align with public finance evidence accrued over decades of study and experience.

Process Leading up to the Loving Justice Plan

18. In 2025 CHRT 80, the Panel directed the Caring Society and the AFN to consult with the NCCC to develop an evidence-based, comprehensive National FNCFS long-term reform plan.

19. The NCCC is a non-incorporated association vested with the authority and the mandate to carry out the long-term reform work to end Canada's discrimination on behalf of rights-holding First Nations.

20. The Chiefs-in-Assembly established the NCCC in October 2024 at a Special Chiefs Assembly convened for the purpose of considering the draft Final Agreement on long-term FNCFS reform negotiated by Canada, the AFN, Chiefs of Ontario and Nishnawbe Aski Nation. On October 17, 2025, Chiefs-in-Assembly rejected the draft Final Agreement by overwhelmingly defeating Draft Resolution 01/2024: Our Children, Our Future. Instead, First Nations in Assembly overwhelmingly adopted a new transparent and inclusive approach to ending Canada's discriminatory conduct in AFN Resolution 60/2024: Addressing Long-Term Reform of the First Nations Child and Family Services Program and Jordan's Principle.

21. The vote on Draft Resolution 01/2024, which took place on October 17, 2024, was 147 in favour, 267 opposed and one abstention (I consulted CPAC's archived video "AFN Special Chiefs Assembly: Day 2 – October 17, 2024" from time code 8:57:00 to 8:58:20 to verify the results of the vote). I was present for this vote.

22. The vote on AFN Resolution 60/2024, which took place on October 18, 2024, was 186 in favour, seven opposed and ten abstentions (I consulted CPAC's archived video "AFN Special Chiefs Assembly: Day 3 – October 18, 2024" from time code 2:12:10 to 2:12:25 to verify the results of the vote). I was present when this resolution was adopted.

23. The Chiefs-in-Assembly mandated the NCCC to openly and transparently oversee and provide strategic direction, in accordance with their resolutions, to permanently end Canada's systemic discrimination in First Nations Child and Family Services and Jordan's Principle, including all related negotiations and litigation. At the December 2024 Special Chiefs' Assembly, the Chiefs-in-Assembly passed AFN Resolutions 88/2024, 89/2024, 90/2024. These resolutions affirmed the NCCC's authority and mandate and approved in principle the NCCC's governance structure established in AFN Resolution 60/2024.

24. Chiefs-in-Assembly provided further direction regarding FNCFS long-term reform at the AFN's Annual General Assembly in September 2025. Notably, Draft Resolution 50/2025: Regional First Nations Child and Family Services Reform Agreements, was defeated by a vote of 54 in favour, 153 opposed and 11 abstentions (I consulted CPAC's archived video "AFN 2025 Annual General Assembly: Day 2" from time code 7:03:00 to 7:03:41 to verify the results of the vote). While I was present at the September 2025 Annual General Assembly, I was not present for this vote.

25. The NCCC's Terms of Reference were approved at the Annual General Assembly held from September 3-5 2025, in AFN Resolution 03/2025.

26. First Nations located in all the Provinces and Territories in Canada, outside Ontario, have appointed Commissioners, Alternates, and experts to the NCCC.

27. Currently the NCCC is composed of 23 First Nations' Commissioners and Alternate Commissioners, appointed through self-determined regional First Nations processes. The vast majority of Commissioners also serve as Chiefs of their respective First Nations. Each Commissioner appoints regional child and family service experts who work collectively to uphold the NCCC mandate.

28. In line with the Tribunal's orders in 2025 CHRT 80, the Caring Society, NCCC and AFN have engaged First Nations, First Nations child and family service experts, youth, the prospective interested parties, other stakeholders and drawn on existing expertise to develop the Loving Justice Plan. I adopt the content of the Caring Society's monthly reports regarding activities conducted pursuant to 2025 CHRT 80 and their descriptions of those engagement efforts.

29. In September 2025, the Caring Society also contacted all the proposed interested parties who sought leave to participate in this proceeding, and established plans to engage with the Assembly of Seven Generations to ensure the voices of young people were included.

30. Late in the evening on September 19, 2025, I saw a social media post by the Honourable Mandy Gull-Masty, P.C., M.P., Minister of Indigenous Services, announcing Canada's judicial review of 2025 CHRT 80. Shortly thereafter, I learned that the Caring Society and the AFN were served with the application for judicial review. While Canada's pursuit of further litigation may have diverted time, attention and effort away from the Loving Justice Plan, the Caring Society has remained committed to fulfilling the Tribunal's direction to develop a plan to permanently end Canada's discrimination in First Nations Child and Family Services without delay.

31. Throughout September 2025, I collaborated with the NCCC and AFN to create an engagement guide to support First Nations Leadership, experts and youth to participate in the national engagement to inform the Loving Justice Plan. The engagement guide is composed of nine themes identified from AFN resolutions, the CHRT orders, existing research, a partial review of long-term reform measures by the National Advisory Committee in 2023/24, and the Accountability in our Lifetime report by the Assembly of Seven Generations. The guide also invited participants to name additional themes that they identified as important to permanently ending the discrimination.

32. The NCCC and Caring Society ensured that engagement materials and resources were available in both French and English. Webinars featured simultaneous translation and bilingual NCCC and Caring Society members were available to facilitate participation.

33. Consistent with the direction of First Nations in Assembly in Resolution 60/2024, the NCCC includes First Nations that are not members of the Assembly of First Nations. For example,

First Nations in Alberta, many of whom are not members of AFN, are represented on the National Children's Chiefs Commission and their experts are active participants in the NCCC technical team.

34. In early October 2025, the Caring Society finalized and circulated engagement materials amongst First Nations leadership, regional experts and interested parties, in both English and French, and in several formats (i.e. online, fillable PDF and fillable Word) to accommodate diverse internet access among First Nations. The Caring Society and NCCC distributed these engagement materials via QR codes, handouts, presentations, and briefing notes.

35. Due to the lack of funding, I understand that First Nations and First Nations child and family service experts in the regions supported engagement sessions through existing meetings and online platforms using existing resources. The Caring Society participated in regional sessions hosted in Yukon, British Columbia, Alberta, Manitoba, New Brunswick, and Saskatchewan as well as plenary sessions at the AFN's Annual General Assembly in September 2025 and a plenary at the AFN's Special Chiefs Assembly in December of 2025.

36. On October 24, 2025, the Caring Society hosted a session with legal counsel and client representatives from the First Nations organizations that sought interested party status in this proceeding to provide an update on the regional consultations.

37. That same day, the Caring Society joined a webinar with simultaneous translation hosted by the NCCC, with over 200 attendees, to answer questions about the engagement materials and process.

38. In keeping with Indigenous data sovereignty, the NCCC is the trustee of the submissions received via the regional engagement process.

39. In partnership with the NCCC, the Caring Society worked alongside a research scholar with expertise in research methods, who is affiliated with a major university, to design and implement a data analysis methodology for the national engagement results that accords with best practices and achieves the aims set out in 2025 CHRT 80.

40. Over the course of the consultation and engagement process directed pursuant to 2025 CHRT 80, the Caring Society did not receive any funding support or capacity funding from Canada. Indeed, in its November 4, 2025, update, Canada said it would not fund the Caring Society or AFN's activities in bringing forward the Loving Justice Plan. The lack of funding meant that the Caring Society and others had to contribute their own resources and that First Nations and First Nations child and family service experts had to draw on their resources to participate in the engagement sessions.

41. The NCCC has contributed significant expertise and effort to the national engagement process but, until very recently, had no funding. Their incredible dedication to children spurred delegates at the Loving Justice Conference to launch a crowd funding event that raised approximately $55,000.

42. The lack of funding or in-kind support from Canada meant that there was no funding for dedicated regional engagement sessions. First Nations Leadership and experts in the regions had to rely on their own resources to host engagement sessions and submit their engagement reports. While my technical colleagues at the NCCC and I are proud of the overall participation in the national engagement, there is little doubt that dedicated funding would have yielded higher participation rates, particularly among First Nations with limited financial resources.

Supportive Evidence related to the Loving Justice Plan

43. The Caring Society is committed to evidence based public policy for First Nations children, youth and families. Good quality research, evidence, and outcome data are key to ensuring that remedies to Canada's discrimination benefit First Nations children, youth and families and that outcome data can detect the recurrence of discrimination at its earliest stage. This commitment dates to my personal participation in the Joint National Policy Review on First Nations Child and Family Services (2000) and the Wen:de series of reports in 2005 and the positions adopted by the Caring Society throughout these proceedings. This evidence-based approach is consistent with the direction by First Nations-in-Assembly and the Tribunal's decisions.

44. A commitment to evidence-based public policy is also consistent with the First Nations value of humility. While no solution is ever perfect, evidence, and accountability mechanisms for

Canada, help optimize success for children and to identify and minimize the imperfections and course correct as required.

45. In addition to the regional engagement feedback, the Loving Justice Plan integrates a panorama of sources including the First Nations data from the Canadian Incidence Study on Reported Child Abuse and Neglect (CIS-2019), the Institute for Fiscal Studies and Democracy studies on First Nations child and family services, the Engage First Study on small population First Nations in child and family services, recommendations from the Expert Advisory Committee (EAC) on reforming ISC, recommendations from the Assembly of Seven Generations (an Indigenous youth group), the Truth and Reconciliation Commission and the Final Report of the National Inquiry into Murdered and Missing Indigenous Women and Girls (and LGBTQAI persons).

46. The minimum standards established by the Tribunal's orders and the direction by First Nations-in-Assembly were essential pillars of the plan as well as observance of Canada's domestic and international obligations to First Nations and First Nations children through human rights instruments, norms and legislation including *An Act Respecting First Nations, Metis and Inuit children, Youth and Families*, S.C. 2019, c. 24, the *Indigenous Languages Act*, S.C. 2019, c. 24, the United Nations Declaration on the Rights of Indigenous Peoples (as implemented in Canada via the *United Nations Declaration on the Rights of Indigenous Peoples Act*, S.C. 2021, c. 14), and the United Nations Convention on the Rights of the Child. For ease of reference, the documents referenced in the Loving Justice Plan (aside from statutes and caselaw) are appended to this affidavit. Attached hereto and marked as exhibits are:

Approval of the Loving Justice Plan by the NCCC

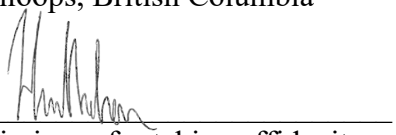
47. On December 22, 2025, I received a letter from Chief Pauline Frost, Chair of the NCCC, confirming the NCCC's support for the Loving Justice Plan. A true copy of Chief Frost's letter is attached to my affidavit as **Exhibit 61**.

Communications with the Minister of Indigenous Services in December 2025

48. In the days leading up to the filing of the Loving Justice Plan, Minister Gull-Masty reached out to discuss the upcoming deadline for filing long-term reform plans. That meeting took place, virtually, on December 10, 2025, including Regional Chief Verreault-Paul, two representatives of the NCCC, and me. Regional Chief Verreault-Paul, Chief Frost and I wrote to Minister Gull-Masty to follow-up on this meeting on December 15, 2025. A true copy of our joint letter to the Minister is attached to my affidavit as **Exhibit 62**.

49. Hours before the deadline for filing the plans ordered in 2025 CHRT 80, Minister Gull-Masty responded. While the letter is dated December 21, 2025, it was received on December 22, 2025. A true copy of the Minister's letter, addressed to Regional Chief Verreault-Paul, Chief Frost and me, is attached to my affidavit as **Exhibit 63**.

AFFIRMED BEFORE ME over video teleconference on this 22nd day of December 2025, in accordance with O. Reg. 431/20, *Administering Oath or Declaration Remotely*. The Commissioner was in Ottawa, Ontario and the affiant was in Kamloops, British Columbia



Commissioner for taking affidavits

Honouring

A. Honouring Statement: the voices of Indigenous youth

"The irony is that discriminating against Indigenous children and youth is an unnecessary expense for Canadians. Underfunding basic needs of Indigenous children and families actually costs governments more money in the long term than investing in the solutions. Canada has ignored the red flags for far too long by ignoring Indigenous voices and in some cases, directly invested in the discrimination against Indigenous children and youth. It is painful for survivors to imagine how their lives could have been if their well-being was honoured and respected but Canadians now have an opportunity to correct the inequalities and invest in bright and beautiful futures of all First Nations children and youth. It is not too late and hope is still alive that First Nations children and youth can not only survive but they can thrive."[1]

B. Honouring Statement from the National Children's Chiefs Commission

In every child lies the promise of a better tomorrow: it is our collective responsibility to breathe life into that promise. This Plan begins with children because the work of ending Canada's discrimination in First Nations Child and Family Services must be guided by the sacred place children hold in First Nations law, knowledge systems, languages, cultures—and in our hearts.

In this moment, we must remember how and why we came to be in this place. First Nations families have endured centuries of deliberate colonial policies designed to eradicate our cultures, languages, and worldviews. In targeting our children, these policies struck at the very heart of our Nations. Children were removed, harmed, and disconnected, while First Nations laws and systems of care were disregarded and displaced. This harm did not end in the past; it continues through ongoing discriminatory colonial child welfare policies that separate children from their families and communities

In First Nations knowledge systems, children are understood to arrive with inherent powers: gifts from the spirit world that bring a purity of vision and knowledge to teach those willing to listen from their souls. The failure to protect these inherent gifts, and the betrayal of trust that follows, is among the deepest traumas a family can endure. When children are

[1] Fayant, Gabrielle, and Ashley Bach, A Follow-up Report of First Nations Youth of First Nations Youth in Care Advisors in Care Advisors, December 2021.

harmed, displaced, or disconnected, it is not only the child who suffers; the strength of families, clans, and Nations is diminished.

Our vision for the future is clear and enduring: that First Nations control our own lives and living conditions, live with dignity, and raise our children within our own laws, languages, and knowledge systems. Healing the wounds inflicted upon families is essential to realizing this vision. We must look to our resilient past and glean guidance from our stories of old, our myths, legends, and our ancestral teachings to forge a beautiful tomorrow. First Nations kinship systems are grounded in sacred responsibilities to teach, to care for one another, and to maintain balance for children and for those not yet born. They have always provided the pathway to well-being.

The spirit of this Plan comes from the children themselves. They have taught us about justice, fairness, forgiveness, and unconditional love. We honour First Nations children by affirming their right, in community with their Nations, to live their cultures, speak their languages, and be raised within their own systems of law, care, and belonging. In doing so, we affirm that protecting children's inherent gifts renews families, strengthens Nations, and upholds the collective responsibilities that carry the promise of generations yet to come.

C. Honouring Statement from Francis Verrault-Paul Regional Chief of the AFNQL and AFN Executive Portfolio Holder - Child and Family Services

This work is about our children and the sacred responsibility we carry as Nations. For generations, decisions were made about our children without us, and those decisions tore apart families, communities, and the threads of our cultures. Today, we stand at a turning point. These reforms are not just technical changes—they are a promise to our children that we will never allow discrimination to define their lives again.

As an Innu child, as an athlete and today as a leader, I have seen the strength and resilience of our families. I have also seen the harm caused when systems fail to recognize our rights, our dignity and humanity. The Canadian Human Rights Tribunal told the truth: Canada's discrimination was not an accident—it was systemic, and it lasted for decades. That truth must guide every step forward. We cannot settle for partial measures or temporary fixes. Our children deserve more than justice—they deserve loving justice, rooted in their languages, cultures, and communities.

Honouring this commitment means listening to the voices of those who have lived through these failures—youth who aged out of care without support, parents who fought to keep

their families together, and Elders who remind us that every child carries the spirit of their Nation. It means building systems that reflect who we are, not who others think we should be. It means funding that is fair, predictable, and based on need—not politics. It means an accountability process that is real, transparent, and enforced.

We must also remember that reconciliation is not a word on paper; it is action—real, positive action—rooted in the lessons of our past, and reaching forward to shape a better future. It is the courage to challenge old mindsets and dismantle structures that perpetuate harm. It is the humility to admit mistakes and the determination to turn forward with purpose to build what must endure. These reforms will only succeed if they are guided by our laws, our knowledge, and our vision for the future—a future where every child grows up safe, loved, and proud of who they are.

To the children: you are the heart of this work. You are not statistics or case files—you are sacred beings with dreams and gifts. We honour you by ensuring that the systems around you reflect your worth and protect your rights. We honour you by demanding that Canada does better—not someday, but now. And we honour you by standing together, as Nations, to make sure that this promise is kept for generations to come.

D. Honouring Statement from An lilxhl Majagalee, Dr. Cindy Blackstock, Executive Director of the First Nations Child and Family Caring Society of Canada

Elder Elmer Courchene said, “children deserve more than justice – they deserve loving justice.” Loving Justice is the full bloom of humility, spirit, love, wisdom, courage, respect, honesty and truth for every First Nations child and youth.

As Panel Chair Marchildon, Member Lustig and the late Member Belanger said in 2016 CHRT 2, “this decision concerns children.” It concerns the children, youth and families who came before and passed on the strength of our ancestors' teachings despite experiencing heartbreaking harms, including death, at the hands of a country that consistently describes itself as a global leader and defender of human rights. When Prime Minister Harper apologized to residential school survivors on behalf of Canada, he said “the burden of this experience has been on your shoulders for far too long, the burden is properly ours as a government and as a country. There is no place for the attitudes that gave rise to residential schools to ever prevail again.”

As Canada fought to continue its discrimination at the beginning of the hearings in 2013 and, despite brief glimmers of progress, continues to fight today, I have always believed that if the forces for Loving Justice prevail and the children win the case—the government wins too. Because, as the diversity of children, youth and caring adults who attended the hearings—along with Spirit Bear—have always known, when First Nations children receive loving justice, the country does too.

Loving Justice has inspired the many, many individuals and groups like the National Children's Chiefs Commission and the Assembly of First Nations who have supported the Caring Society in bringing this complaint to devote thousands of hours in pursuit of the transformational justice that First Nations children have received—and will continue to receive—through this process. Their families have generously supported these efforts by sharing their time and commitment with our children, youth, and families, for which we remain deeply grateful.

Today and every day, caring people work directly with First Nations children, youth and families to love and support them through the perils of colonial trauma. They include cultural workers, social workers, child and youth workers, alternative care providers, prevention workers, band representatives, mental wellness and addictions professionals. We honour and thank you all.

Reconciliation embraces the challenge of learning from the past but finds its full meaning in what we do next. The ancestors have done their work, the children have done their work, and we have done ours. The incredible Elder and National Film Board documentary film maker, Alanis Obomsawin, has seen it all unfold from behind her camera and now longs to tell the end of the story so, what will Canada do next?

In the words of Maaxw Gibuu (Mary Teegee-Gray):

> "Tender is the heart of a child. Their heart doesn't understand politics, policies or prejudices. Their heart isn't aware of decisions made on their behalf, except when it breaks.
>
> Chief Dan George once said, "A child does not question the wrongs of grown ups, he suffers them".
>
> The sacred work of caring for our children is a gift bestowed upon us by our Creator. We honour those who have chosen to use their Creator given talents, tools and gifts to make this world a better place – one tender heart at a time.

We must never forget that we are the ancestors those not yet born will speak of, and for all those who have contributed to this great and important sacred work, they will speak your name in reverence and with love.”

1. A teaching from the Hon. Murray Sinclair[2]

Our children are the ongoing prize in the cultural war that Canada declared against us over 150 years ago. Canada may believe that the war is over, but until the automatic weapons it created as part of that war, have been taken from their hands or altered in fundamental ways, or disabled totally, the war continues of its own momentum.

The Child Welfare System, the Youth Justice System and the Educational System all function from the inherent, fundamental, belief, that we as parents in our own communities do not have the right to birth, raise, educate, discipline and protect our children from Canada's inherent racism.

Canada believes fervently in the benevolence of its policies and fails to accept its own failings, because we are the faces of those failings. They treat us poorly because we are not like them, and they ignore our wounds and the deaths that result from their actions – past and present – because we are not like them.

We are asked to help Canada do better – to be better – and we willingly accept that challenge because Canada must change. But the struggle to create the change that Canada must undergo will be resisted and it will be a constant repetition of "two steps forward, one step back", or sometimes three. It will not be easy.

What our leaders must realize is that we too must change. We must stop playing the victim's role of looking to our abuser for the help we need. We must accept the challenge of standing up and walking on our own two feet. And we must walk to the beat of our own drum.

We must demand that our leaders show the leadership necessary to strengthen our communities.

We must demand that our leaders show the leadership necessary to strengthen our families.

We must demand that our leaders show the leadership necessary to strengthen our children.

We need leaders to fight that ongoing battle with the enemies on the outside of our walls, and we need leaders who will fight the enemies who are inside the walls. Our traditions have taught us that.

[2] Published on Senator Sinclair's website on 28 December 2017. Also published in Macleans Magazine on 11 January 2018.

Our children do not set out in life to fail. They want to be someone. We have to be the someones they want to be.

We have to tell them about those of us who have come from the same ground they stand upon, who have the same kinds of community, parents and history that they have, and who look just like them, who are someone.

We have to make them believe in us and we have to train them how to become someone and we have to let them try.

…then we have to create the blankets with which we can wrap them when they stumble and fall, and we have to love them enough to help them get up and walk again.

No one escapes this world unhurt and unharmed. We will all be bruised at some point. But our traditions have sustained the warrior spirit inside us for thousands of years and they hold the key to our future. We will not survive by being better at the whiteman's game than the white man. We will survive by being the best Anishinaabe we can be. Tell them I said this.

2. Introduction

The Loving Justice Plan is organized according to the engagement themes outlined in the National Engagement Guide, namely: 1) purpose, principles and definitions, 2) governance, 3) enforcement and durability, 4) funding commitments and arrangements, 5) accountability, 6) regional variations, 7) reform of Indigenous Services Canada, 8) research and outcome data, and 9) transitions and readiness. These themes were identified based on the direction of First Nations Rights Holders, Tribunal orders, and the best available evidence dating back nearly 30 years.

The content of each theme is informed by the wisdom of First Nations Elders and Knowledge Keepers, youth, and First Nations child and family service experts who participated in the 105 engagement sessions held across Canada pursuant to 2025 CHRT 80. Sixty-four of the submissions were for groups – of up to 91 participants. The National Children's Chiefs Commission and the First Nations Child and Family Caring Society engaged with First Nations leaders and Rights Holders, Elders, youth and First Nations Child and Family Service (FNCFS) experts to gather their perspectives on the components of this Plan. The "What We Heard" sections that follow provide summaries and illustrative quotations of the feedback shared during those engagements.

Their collective wisdom is critical to enabling regional variations to meet local needs, while building upon a national approach to long-term reform that sets fundamental minimum human rights standards and accountability mechanisms to permanently stop Canada's discrimination in First Nations child and family services.

These reforms, in tandem with regional variations to reflect distinct cultures, languages and realities, will apply to First Nations child and family services excepting First Nations consenting to the application of the Ontario Final Settlement Agreement or its successors. Many First Nations that have affirmed, or are seeking to affirm, their own jurisdiction in child and family services in whole or in part are entitled to the benefits of these reforms as a minimum standard which ought to be upwardly adjusted to reflect the requirements of the respective First Nations law(s).

While recognizing the scope of the complaint, we urge Canada to take measures over and above those contemplated by this plan to extend these reforms and support substantively equitable and culturally appropriate First Nations Child & Family Services to all First Nations children wherever they reside, including off-reserve and in the Northwest Territories.

Throughout its process, the Loving Justice Plan demonstrates the love that First Nations have for their children, youth and families. There was no funding for this process, yet First

Nations governments and their experts joined with the National Children's Chiefs Commission and the Co-Complainants (the Caring Society and the Assembly of First Nations) to ensure the voices of Rights Holders are respected and the rights of their children, youth and families are upheld.

3. Purpose, Principles and Definitions

A. Purpose

Measure: Outlining Purpose, Scope and Interpretation

The Loving Justice Plan presents reforms intended to provide enduring protection for generations of First Nations children, youth, and families against Canada's systemic discrimination in First Nations Child and Family Services (FNCFS)— discrimination that was substantiated in the 2016 CHRT 2 decision and subsequent rulings. These reforms are grounded in a decade's worth of evidence collected since 2016 CHRT 2, as well as numerous earlier studies and recommendations, including the Royal Commission on Aboriginal Peoples, the Joint National Policy Review and the Wen:De reports, all of which were cited by the Tribunal in that landmark ruling. While Jordan's Principle will be managed through a separate process, it will be considered wherever its provisions intersect with child and family services.

In accordance with the principles of intergenerational equity and substantive equality, Canada (Indigenous Services Canada and any successor department) is obligated to ensure that its actions result in effective, needs-based, and culturally appropriate outcomes that prioritize the best interests of First Nations children, youth and families. This includes upholding human rights as minimum standards, complying with relevant legislation and regulations, and supporting the distinct rights of First Nations and their children.

Where a measure in this plan has more than one interpretation, the interpretation most consistent with the spirit of the Tribunal's orders including substantive equality and best interests of the child will prevail.

Rationale:

- CHRT Decisions/Jurisprudence
  - 2016 CHRT 2 at paras 463–465
  - 2018 CHRT 4 at paras 236(2) and 413(2)
  - 2021 CHRT 41 at paras 348 and 545(2)
  - *Ontario v Association of Ontario Midwives*, 2020 ONSC 2839 at para 189
- First Nations-in-Assembly Resolutions
  - 60/2024: *Addressing Long-Term Reform of the First Nations Child and Family Services Program and Jordan's Principle*, clause 3

- 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clauses 1(a) and (c)
- 87/2024: *Ensuring Fair and Equitable Inclusion of the Northwest Territories in the Child Welfare Compensation and Long-Term Reform Final Settlement Agreement*
- National Children's Chiefs Commission Terms of Reference, s. 4(B) (approved in 03/2025: *Approving Terms of Reference for FNCFS and Jordan's Principle Tables*)

B. Principles

What We Heard:

Engagement participants provided broad support for long-term reform principles that include: intergenerational equity, cultural continuity, culturally-based safety and well-being of children. Participants noted that principles should be clearly defined to ensure they are interpreted as intended. Several participants described the holistic and interconnected nature of wellness. This view of physical, emotional, spiritual and cognitive wellness invokes mind, body, spirit and heart, along with connections to community, family, cultural teachings, First Nations languages, and, especially, the land. Long-term reform, and its underlying principles, should reflect this concept of wellness.

> *"A holistic concept rooted in the child's identity, culture, language, and community connections, not limited to safety or welfare in isolation."*

> *"Recognizing the interconnection of physical, emotional, cognitive, and spiritual wellness in the life of a child, family, and community."*

Participants called for clear, plain language definitions of key terms and the principles. Definitions should be developed in consultation with First Nations and should reflect unique First Nations perspectives. Key terms like "safety" "well-being" "family" and "best interests of the child" should not be imposed by Canada and, instead, must be based on the realities, knowledge systems and priorities articulated by First Nations themselves.

> *"They need to be built and written by each Nation, and what the Nation's understanding of these terms may be. Not Canada's understanding."*

> *"Participants stressed that key terms should appear directly within any long-term reform Final Agreement, plan, or order, rather than only being referenced*

elsewhere. Without definitions, participants cautioned, core ideas risk being interpreted inconsistently or diluted in implementation."

How funding is tied to definitions—especially colonial definitions—is a key concern among engagement participants. This plays out most prominently with terms like "on-reserve/off-reserve" or "ordinarily resident on reserve." The on/off-reserve distinction is widely seen as itself rooted in racism and the *Indian Act*, inconsistent with Canada's constitutional obligations towards First Nations, First Nations self-determination and self-governance, and generating additional discrimination wherever it is allowed to stand. Several participants noted that many people would live on-reserve if they could, but lack of housing, services and opportunities has forced them off-reserve. Losing access to substantively equal child and family services as a result of living off-reserve is experienced as deeply unfair.

First Nations children and youth identify with Aboriginal and Treaty Nations. They do not identify with Indian Act definitions about status Indians, or who lives on-reserve and who does not. They assert that their constitutional and statutory rights are not restricted to a reserve, traditional or treaty homeland, but remain with them no matter where they choose to live. This identity goes with them wherever they go or live. They want their nationhood, their clans, their families to come together to reclaim and restore their nation-to-nation relationships. First Nations governance and institutions in the field of family and children's services are the way of the future.

"Families have left reserve for housing, education, and health. These families should still be the responsibility of the Nations in which they are members."

"I would like to see 'normally resident on reserve' include 'eligible to reside on reserve.' We know that there are housing shortages in most, if not all, First Nations communities. Restricting services to children and families who would reside on reserve if housing was available is unfair."

"Because of second generation cut offs, even though they live on reserve they may not have membership with the band. We are still responsible for them.

Participants identified a number of terms and principles requiring careful definitions: "best interests of the child"; "child"; "family"; "kKin"; "cultural continuity"; "culturally based safety"; "intergeneration equity"; "substantive equality"; "well-being"; "structural drivers".

Effective & Durable Remedies

1. All First Nations children, youth and families have the right, individually and collectively, to be free of all forms of discrimination and have access to effective remedies.

Rationale:

- Constitutional provisions
    - *Constitution Act, 1982*, Article 35, being Schedule B to the *Canada Act 1982* (UK), 1982, c 11

2. The order in 2016 CHRT 2 at para 481 that Canada "cease its discriminatory practices and reform the FNCFS Program [...] to reflect the findings in this decision" is a permanent injunction against Canada to cease its discriminatory conduct in First Nations child and family services. The permanent nature of this order upholds intra-generational equity and intergenerational equity and protects First Nations children and families for generations to come.

Rationale:

- Legislation
  - *Department of Indigenous Services Act*, SC 2019, c. 29, s 336 at Preamble, ss. 6(2)(a), 7(a),10(2),13
- CHRT Decisions

CRC/C/GC/26 (2023) at paras. 63–67. While in the environmental context, the UN Committee on the Rights of the Child stated: "While the rights of children who are present on Earth require immediate urgent attention, the children constantly arriving are also entitled to the realization of their human rights to the maximum extent."
- *United Nations Convention on the Rights of the Child*, Article 2
- Government of Canada definitions of Intra- and Intergenerational Equity
    - In the environmental context: **Intergenerational equity:** includes the importance of meeting the needs of the present generation without compromising the ability of future generations to meet their own needs.
    - In the context of Labour Markets, Social Institutions, and the Future of Canada's Children
    - In the context of the Department of Justice's priorities regarding the Implementation of UNDRIP (prevention and mitigation of generational harms caused by the forcible removal of Indigenous children).

Positive Outcomes for First Nations Children, Youth, Young Adults and Families

The Reformed FNCFS will be structured and implemented to achieve the following outcomes for First Nations children.

3. Holistic and culturally based safety and physical, emotional, spiritual and cognitive well-being for First Nations children, youth, young adults, and families, including preserving the child's cultural identity and connections to the language and territory of the First Nations group to which the child belongs;

Rationale:

- CHRT Decisions/Jurisprudence
  - 2016 CHRT 2 at para 106
  - *Varley v Canada (Attorney General)*, 2025 FC 753 at paras 130–134
  - *Fisher River Cree Nation v Canada (Attorney General)*, 2025 FC 561 at para 75
  - *Reference re An Act respecting First Nations, Inuit and Métis children, youth and families*, 2024 SCC 5 at para 113
  - *Reference to the Court of Appeal of Quebec in relation to An Act respecting First Nations, Inuit and Métis children, youth and families*, 2022 QCCA 185 at paras 476-485
  - *Brown v Canada (Attorney General)*, 2017 ONSC 251 at paras 7, 52–53
  - *Kina Gbezhgomi Child and Family Services v M.A.*, 2020 ONCJ 414 at paras 42-43

  - 40/2022: *To Ensure Quality of Life to the First Nations Child and Family Services Program and Jordan's Principle*, clause 1
  - National Children's Chiefs Commission Terms of Reference, ss. 4(A), (F) and (G) (approved in 03/2025: *Approving Terms of Reference for FNCFS and Jordan's Principle Tables*)
- Research and Evidence
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
    - Pp 168 & 169 "Both indicators [of the existing FNCFS program] are focused on the safety of children with no consideration of their overall well-being."
  - Truth and Reconciliation Commission of Canada, "Calls to Action", number#5
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 4, 5, 6,7.

4. Substantive equality, striving for equality in outcomes rather than providing formally equal treatment, in keeping with the following:

i. The rights and distinct needs of a First Nations child impacted by historic and contemporary disadvantage are to be considered to promote the child's ability to live the life they wish to have;

ii. The rights and distinct needs of a First Nations child with a disability are to be considered to promote the child's participation, to the same extent as other children, in the activities of their family or the First Nations group, community, or people to which they belong;

iii. A First Nations child must be able to exercise their rights and benefits, including those conferred under the Reformed FNCFS, including the right to have their views and preferences considered in decisions that affect them, and they must be able to do so without discrimination, including discrimination based on sex or gender identity or expression;

iv. A First Nations child's family member must be able to exercise their rights and benefits, including those conferred under the Reformed FNCFS, including the right to have their views and preferences considered in decisions that affect them, and they must be able to do so without discrimination, including discrimination based on sex or gender identity or expression;

v. The First Nation must be able to exercise without discrimination its rights, including those conferred under the Reformed FNCFS, including the right to have the views and preferences of the First Nation considered in decisions that affect that First Nation.

Rationale:

- Legislation
  - *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, ss. 9(3)(a)–(c)
- CHRT Decisions/Jurisprudence
  - 2016 CHRT 2 at paras 404, 455, 459, 465
- First Nations-in-Assembly Resolutions
  - 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clause 3
- Research and Evidence
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation 5.

- Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A performance budget approach to well-being", (2020)

- First Nations Child and Family Caring Society of Canada, "Wen:de – We are Coming to the Light of Day Reports", (2005)

5. The Best Interests of the First Nation Child are safeguarded, including the following factors to determine the best interests of the child:

i. Primary consideration shall be given to ensuring the funding structure (including Canada's design, management and control of FNCFS and all elements of Canada's decision-making regarding FNCFS funding) protects the child's right to holistic and culturally based safety and well-being.

ii. The child's right to live up to their full potential, in line with their right to grow up with a sense of belonging, a sense of attachment, and access to basic necessities tied to personal dignity, including housing, health, education, and food security;

iii. The child's cultural, linguistic, religious, spiritual knowing and being, and their inherent right be connected to traditional territory and to the land, generally;

Rationale:

- Legislation
  - *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, ss. 9(2)(c), 9(2)(d), 10(3)(a), 11(a)
  - *Convention on the Rights of the Child*, arts. 6, 27, and 30
  - *General Comment 11: United Nations Committee on the Rights of the Child*, sections 30–33: "When State authorities including legislative bodies seek to assess the best interests of an indigenous child, they should consider the cultural rights of the indigenous child and his or her need to exercise such rights collectively with members of their group"
- Research and Evidence
  - Truth and Reconciliation Commission of Canada, "Calls to Action", number 1(ii)

- Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 4,5,6.
- The Rome Declaration on Safeguarding Seven Generations in times of Food, Social, and Ecological Crises (2023), made at the UN Global Indigenous Youth Forum, hosted by the Food and Agriculture Organization of the United Nations in October 2023, at pp 2–3

6. The actual and changing FNCFS-delivery needs of First Nations children, youth, young adults, families, and communities, as First Nations and their child, youth and family service experts define their own needs, are met.

Rationale:

- Legislation
  - *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, s. 10(3)(b)
  - *Indigenous Languages Act*, S.C. 2019, c. 23, Preamble, s. 6
- CHRT Decisions
  - 2016 CHRT 2 at paras 315, 347–348, 389, 422, 425–426, 448, 451–455, 458, 462–465, 482
  - 2016 CHRT 16 at paras 18, 33–34, 38–41, 47, 60
  - 2018 CHRT 4 at paras 63–67, 121, 143, 154, 163, 201, 206, 208, 222, 240, 252, 258, 264, 411, 416–418, 421, 436-437, 449
  - 2022 CHRT 8 at para 34, 76, 109, 145, 149
- First Nations-in-Assembly Resolutions
  - 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clauses 1(h), (j)(ii) and (k)
  - 40/2022: *To Ensure Quality of Life to the First Nations Child and Family Services Program and Jordan's Principle*, clause 1
  - National Children's Chiefs Commission Terms of Reference, ss. 4(B) and (F) (approved in 03/2025: *Approving Terms of Reference for FNCFS and Jordan's Principle Tables*)

7. The actual and evolving FNCFS delivery needs of First Nations children, youth, and families are defined by First Nations and their child, youth, and family service experts in a manner that is sustainable to ensure long-term positive outcomes for First Nations children. These needs take into account the distinct circumstances of First Nations communities, historical and ongoing disadvantage, and the structural drivers of child maltreatment and family crisis—many of which Canada is responsible for—including poverty, substance abuse, inadequate housing, and the loss of language and culture.

Rationale:

- CHRT Decisions
  - 2016 CHRT 2 at paras 344, 388, 455, 462–465
  - 2016 CHRT 16 at paras 18, 33, 38, 160(A)(2)
  - 2018 CHRT 4 at paras 163, 237, 264–265
- First Nations-in-Assembly Resolutions
  - 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clause 1(k)
- Research and Evidence
  - Truth and Reconciliation Commission of Canada, "Calls to Action", numbers 1(i)-(v), 2 and 5
  - Prime Minister Harper's apology on behalf of Canadians for the Indian Residential Schools system (11 June 2008)
    - "The government now recognizes that the consequences of the Indian Residential Schools policy were profoundly negative and that this policy has had a lasting and damaging impact on Aboriginal culture, heritage and language."
    - "The burden of this experience has been on your shoulders for far too long. The burden is properly ours as a Government, and as a country. There is no place in Canada for the attitudes that inspired the Indian Residential Schools system to ever prevail again. You have been working on recovering from this experience for a long time and in a very real sense, we are now joining you on this journey."

8. The child's participation, views and preferences inform FNCFS-delivery, giving due weight to the child's age and maturity, unless they cannot be ascertained.

Rationale:

- Legislation
  - *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, ss.9(3)(b) and 10(3)(e)
  - *United Nations Convention on the Rights of the Child*, Article 12
- Research and Evidence
  - Department of Justice Canada: "Article 12 of the Convention on the Rights of the Child and Children's Participatory Rights in Canada"
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation, p 2, Recommendations 2, 3, 9, 10.

9. Cultural and linguistic continuity are established as essential to the holistic and culturally based safety and well-being of First Nations children, youth, families and communities, including the following:

   i. The restoration and transmission of the languages, cultures, spirituality, practices, customs, traditions, ceremonies, and knowledges of First Nations peoples is integral to cultural continuity;

   ii. A child's best interests are often promoted when the child resides with members of his or her family, the culture of the First Nations group, community, or people to which he or she belongs is respected, and the child is connected to their traditional territory;

   iii. Child and family services provided in relation to a First Nations child are to be provided in a manner that does not contribute to the assimilation of the First Nations group, community or people to which the child belongs or to the destruction of the culture of that Indigenous group, community or people;

   iv. Where a child is in alternative care, supports must be provided to ensure the child's needs are met including connection to culture and language and;

   v. The characteristics and challenges of the region in which a First Nations child, a First Nations family or a First Nations group, community or people is located are to be considered.

Rationale:

- Legislation
  - *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, s 9(2)
  - *United Nations Declaration on the Rights of the Indigenous Peoples Act*, S.C. 2021, c. 14,
    - Preamble
    - Annex, Articles 8(1), 8(2), 12, 13, 14(3), 22
- CHRT Decisions
  - 2016 CHRT 2 at paras 457–465
  - 2018 CHRT 4 at para 21
- Research and Evidence
  - Truth and Reconciliation Commission of Canada, "Calls to Action", numbers 1(ii) and 5

- Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation, Recommendations 4, 6, 8.

Reconciliation and Human Rights

Canada's conduct in the design, management and control, implementation and evaluation of the Reformed FNCFS will recognize a positive obligation and be aligned with the following:

10. Canada's commitments to reconciliation require fundamental changes to FNCFS consistent with the Truth and Reconciliation Commission Final Report and Calls to Action and the National Inquiry into Missing and Murdered Indigenous Women and Girls' Calls for Justice related to the child and family services.

Rationale:

- Legislation
  - *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, Preamble
- CHRT Decisions/Jurisprudence
  - 2018 CHRT 4 at paras 61, 77
  - *Reference re An Act respecting First Nations, Inuit and Métis children, youth and families*, 2024 SCC 5 at paras 21 and 44
- First Nations-in-Assembly Resolutions
  - National Children's Chiefs Commission Terms of Reference, s. 4(H) (approved in 03/2025: *Approving Terms of Reference for FNCFS and Jordan's Principle Tables*)
- Research and Evidence
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation, Recommendations 5, 9, p 8
  - United Nations Committee on Economic, Social and Cultural Rights concluding observations on the sixth periodic report of Canada (23 March 2016) E/C 12/CAN/CO/6, paras 35–36

11. The *United Nations Declaration on the Rights of Indigenous Peoples Act* affirms the Declaration as a universal international human rights instrument with application in Canadian law and provides a framework for the Government of Canada's implementation of the Declaration;

Rationale:

- Legislation
  - *United Nations Declaration on the Rights of Indigenous Peoples Act,* S.C. 2021, c. 14, s. 4
- Jurisprudence
  - *Reference re An Act respecting First Nations, Inuit and Métis children, youth and families*, 2024 SCC 5 at paras 4-5
  - *Gitxaala v British Columbia (Chief Gold Commissioner)*, 2025 BCCA 430 at paras 78, 126-129
- First Nations-in-Assembly Resolutions
  - 89/2024: *Renewing Negotiations Toward Long-Term Reform of First Nations Child and Family Services and Jordan's Principle*, clause 3
  - National Children's Chiefs Commission Terms of Reference, s. 5 (approved in 03/2025: *Approving Terms of Reference for FNCFS and Jordan's Principle Tables*)
- Research and Evidence
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 2, 7, 8.

12. Canada recognizes that the honour of the Crown guides the conduct of the Crown, and is the measure against which that conduct is assessed, in all its dealings with First Nations peoples, including FNCFS reform, giving rise to the duty to consult and the duty of purposive and diligent implementation.

Rationale:

- CHRT Decisions/Jurisprudence
  - 2016 CHRT 2 at paras 104–110
  - 2017 CHRT 14 at paras 116–120
  - *Haida Nation v British Columbia*, 2004 SCC 73 at para 16
  - *Mikisew Cree First Nation v Canada (Minister of Canadian Heritage)*, 2005 SCC 69 at para 33
  - *Mikisew Cree First Nation v. Canada (Governor General in Council)*, 2018 SCC 40 at paras 26, 44-45
  - *Ontario (Attorney General) v Restoule*, 2024 SCC 27 at paras 254–263
  - *Quebec (Attorney General) v Pekuakamiulnuatsh Takuhikan*, 2024 SCC 39 at paras 185–192
  - *Reference re An Act respecting First Nations, Inuit and Métis children, youth and families*, 2024 SCC 5 at paras 63–65

    - *St. Theresa Point First Nation v Canada*, 2025 FC 1926 at paras 125–127
- First Nations-in-Assembly Resolutions
    - 90/2024: *Safeguarding First Nations Children and Holding Canada Accountable for its Canadian Human Rights Tribunal Legal Obligations*, clause 4
    - 88/2024: *Implementing the Chiefs' Direction to End Canada's Discrimination in First Nations Child and Family Services*, clause 3
    - 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clause 5

13. Canada recognizes that all relations with First Nations peoples need to be based on the recognition and implementation of their right to self-determination, including the inherent right of self-government.

Rationale:

- Constitutional Provisions
    - Constitution Act, 1982, s 35, being Schedule B to the *Canada Act 1982 (UK)*, 1982, c 11.
- Legislation
    - *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, ss. 8(a), 18(1)
    - *United Nations Declaration on the Rights of Indigenous Peoples Act*, S.C. 2021 c. 14, Annex, Preamble, articles 3 and 9
        - The right of Indigenous peoples to self-determination under article 3, has a direct impact on many areas that are directly addressed in the Convention of the Rights of the Child ("CRC"). This includes legislation concerning child and family services (Article 20 of the CRC). Indigenous self-determination facilitates the development of child welfare legislation that ensures Indigenous children are not separated from their families and communities except as a last resort (Declaration, Article 22(2)). While the CRC does not explicitly reference self-determination, implementing CRC rights for Indigenous children *requires* respect for Indigenous self-government as outlined in UNDRIP.
- Jurisprudence
    - *Reference re An Act respecting First Nations, Inuit and Métis children, youth and families*, 2024 SCC 5 at paras 4–6, 56–66

- *Kebaowek First Nation v Canadian Nuclear Laboratories*, 2025 FC 319 at para 130
- *Gitxaala v British Columbia (Chief Gold Commissioner)*, 2025 BCCA 430 at para 78, 126–129
- *R v Desautel*, 2021 SCC 17 at para 86

- First Nations-in-Assembly Resolutions
  - 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clause 5
  - 60/2024: *Addressing Long-Term Reform of the First Nations Child and Family Services Program and Jordan's Principle*, clause 3
  - 87/2024: *Ensuring Fair and Equitable Inclusion of the Northwest Territories in the Child Welfare Compensation and Long-Term Reform Final Settlement Agreement*
  - 40/2022: *To Ensure Quality of Life to the First Nations Child and Family Services Program and Jordan's Principle*, clause 2

14. Consistent with the standard of free, prior and informed consent, Canada recognizes that First Nations are in the best position to determine the legal mechanisms, instruments, information, resources and processes to affirm jurisdiction, in whole or in part, over matters relating to their children, youth and families, and require complete and accurate information in order to do so. Canada must recognize and take positive measures to support and affirm the self-determined legal mechanism(s) that First Nations choose to exercise their jurisdiction in relation to child and family services.

Rationale:

- Constitutional Provisions
  - *Constitution Act, 1982* s 35, being Schedule B to the *Canada Act 1982 (UK)*, 1982, c 11.
- Legislation
  - *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, Preamble, ss. 8(a) and 18(1)
  - *Department of Indigenous Services Act*, S.C. 2019, c. 29, s. 336, s 7
- CHRT Decisions/Jurisprudence
  - 2021 CHRT 41 at para 237
  - *Reference re An Act respecting First Nations, Inuit and Métis children, youth and families*, 2024 SCC 5 at paras 23, 50, citing Hon. Seamus O'Regan, P.C.,

M.P., Minister of Indigenous Services in House of Commons debate on third reading of Bill C-92
    - *Kebaowek First Nation v Canadian Nuclear Laboratories*, 2025 FC 319 at paras 92–134
- First Nations-in-Assembly Resolutions
    - 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clause 1(b)
    - National Children's Chiefs Commission Terms of Reference, s. 4(B)(i) (approved in 03/2025: *Approving Terms of Reference for FNCFS and Jordan's Principle Tables*)
- Research and Evidence
    - Expert Advisory Committee, "FSA Recommendations" (15 December 2025), Recommendation #2, p 2
    - Truth and Reconciliation Commission,"Calls to Action", numbers 1(iv)

Accountability & Transparency

15. The starting premise for long-term reform must be accountability, openness and transparency. All negotiations and information relating to implementation of these reforms should be, to the maximum extent possible, transparent. Transparency ensures accountability. Transparency and accountability, together, help end discrimination and prevent its reoccurrence.

Rationale:

- First Nations-in-Assembly Resolutions
    - 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clause 1(a) and (d)
    - 60/2024: *Addressing Long-Term Reform of the First Nations Child and Family Services Program and Jordan's Principle*, clauses 3, 9
- Research and Evidence
    - OHRC, "Chapter 9 – Accountability and monitoring mechanisms: gaps in data management, performance review, and public transparency"
        - For anti-discrimination policies and procedures to make real change, there must be strong accountability mechanisms in place that are used with transparency, which in turn promotes public confidence (in the context of anti-black racism within Ontario's police force).
    - Global Affairs Canada, "Advancing Human Rights" (24 January 2024)

        - Importance placed on transparency and accountability in advancing human rights, as evidenced by GAC's tool for evaluating funding applications for Canadian funding on international development initiatives.
    - OHRC, "Anti-Racism and Organizational Change: A Guide for Employers" (23 October 2023)
        - For "maintaining changes and improvements long-term, a culture of framework and accountability is needed" (in the context of preventing systemic discrimination and racism in the workplace).
    - Assembly of Seven Generations, "Accountability in our Lifetime: A Call to Honour the Rights of Indigenous Children and Youth" (2021).
        - "Accountability mechanisms must lay the groundwork for harm prevention, from domestic abuse to systemic violence, in order to address the structural interventions that are required to move towards the holistic well-being of Indigenous youth."
    - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation 2, 5, 10, p 8
    - Expert Advisory Committee, "FSA Recommendations" (15 December 2025), Recommendation #3, p 2–3

C. Definitions

a. **"Access to Justice"** means positive, public and effective measures to disclose all effective judicial remedies to redress any recurrence of discrimination and access to sufficient quality resources, including funding for legal fees, to give effect to such remedies.

b. **"AFN"** means the Assembly of First Nations.

c. **"Alternative Care"** means a person(s) or entity who has primary responsibility for providing the day-to-day care of an Indigenous child, other than the child's parent, including in accordance with the customs or traditions of the Indigenous group, community or people to which the child belongs.

d. "**Block funding**" means funds provided for child and family service purposes under a contribution agreement or statute to be used by service providers with flexibility to meet needs in communities. Carry forwards are allowed and unexpended funds can be retained. Associated terms and conditions should align to the spirit and intent of the Reformed Funding Approach and uphold

the Orders.

e. **"Canada"** means His Majesty the King in Right of Canada and his successors including as represented by Indigenous Services Canada (ISC) and its successors.

f. **"Capacity"** means the adequate supports, financial and human resources, time, and infrastructure required to ensure a First Nation(s), First Nations child and family service agency or other First Nations authorized FNCFS provider to design and operate FNCFS and related services, interventions and is consistent with the Act and provincial or First Nations child and family services legislation and corollary legislation.

g. "**Capital"** means the long-term investments related to infrastructure that supports the delivery of FNCFS. This includes: construction, maintenance and operation of buildings, acquisition of vehicles and recapitalization (i.e., provision to replace an existing structure at the end of its natural life).

h. **"Caring Society"** means the First Nations Child and Family Caring Society of Canada.

i. "**Child maltreatment**" means all types of physical and/or emotional maltreatment, sexual abuse, neglect, negligence, and commercial and other exploitation, which results in actual or potential harm to the child's safety, including culturally based safety, and well-being, best interests, development, and/or dignity in the context of a relationship of responsibility, trust or power.

j. **"Child Participation**" means (a) a child's rights under *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, including the right to have their views and preferences considered in decisions that affect the child, without discrimination, including discrimination based on sex or gender identity or expression; and (b) consideration of the rights and distinct needs of a child with a disability in order to promote the child's participation, to the same extent as other children, in the activities of the child's family or the Indigenous group, community or people to which the child's belongs.

k. **"Child removal"** means the placement of a child in alternative care pursuant to applicable child and family services legislation including but not limited to children placed in care by court order or through agreements with the child's guardian(s) and the child and family service authority designated

under provincial/territorial or First Nations law.

l. **"Complainants"** means the Caring Society and the AFN.

m. **"Culturally Appropriate"** means reflective and responsive to the distinct First Nation(s) culture, including language, of the child and their family.

n. **"Effective Remedies**" means process and outcomes to stop Canada's discrimination, prevent its recurrence and restore the dignity of those affected including, but not limited to, (a) equal and effective access to justice (b) adequate, effective and prompt reparation for harm related to the discrimination and (c) access to relevant information concerning violations and reparation mechanisms.

o. **"Emergencies"** means a serious event that raises the level of risk to the physical, emotional and psychological safety and well-being of First Nations children, youth and families requiring immediate and effective responses.

p. "**Expert Advisory Committee** (EAC)" means an independent and public committee of multi-disciplinary experts formed by 2022 CHRT 4 and funded by Canada to assess and publicly comment on the causes and conditions of Canada's discriminatory conduct and associated remedies.

q. "**Family**" includes a person whom a child considers to be a close relative or whom the First Nations group, community, or people to which the child belongs considers, in accordance with the customs, traditions or customary adoption practices of that Indigenous group, community or people, to be a close relative of the child.

r. **"First Nations"** means a government authorized by First Nations citizens but excludes First Nations who are subject to the Ontario Final Agreement.

s. **"First Nations Child and Family Services (FNCFS)"** means services to protect First Nations children and youth from maltreatment and to support families to safely care for their children, including primary, secondary and tertiary prevention services, early intervention services, least disruptive measures, child protection, guardianship services, kinship and customary care, alternative care, respite care, post-majority care, reunification, adoption, custom adoption, and dispute resolution that ensure the full enjoyment of the national standards in an *Act Respecting First Nations, Métis, and Inuit children, youth and families*. It also includes services and products required to enable child and family services such as,

but not limited to: (1) development of Indigenous child and family services laws, (2) governance, (3) legal, (4) research (including data collection and analysis), (5) human resources, (6) capital resources (i.e.: buildings, vehicles, information technology), (7) communication technology, office equipment/supplies, (8) standards, and (9) design and evaluation to deliver such services and (10) supports for kinship and customary and alternative care providers.

t. **"First Nations Child and Youth Rights Impact Assessment"** An evaluation carried out by the National FNCFS Technical Table that will review and publicly report on the child and youth rights impacts of all federal proposed legislation, budgets, policy, agreements and conduct related to First Nations child and family services prior to it coming into force except where prohibited by law.

u. "**First Nation not affiliated with a FNCFSA**" means a First Nation that receives statutory child and family services from a province/territory and/or non-Indigenous child and family service provider and is not affiliated with a FNCFSA.

v. "**First Nations child**" means a First Nations person or persons who, under applicable provincial or territorial law, is under the age of which an individual ceases to be a child, and includes the following:

    i. The child is registered or eligible to be registered under the *Indian Act*, as amended from time to time;

    ii. The child has one parent/guardian who is registered or eligible to be registered under the *Indian Act*;

    iii. The child is recognized by their First Nation; or

    iv. The child is ordinarily resident on-reserve.

w. **First Nations Child and Family Service Experts (FNCFS Experts)** means persons, groups or organizations recognized by First Nations as having expertise in child and family service practice and/or policy and/or evaluation and other related areas.

x. "**First Nations Child and Family Service Agency**" (FNCFSA) means an agency authorized by and affiliated with one or more First Nations and delegated or authorized, in whole or in part, pursuant to provincial or other authorities to provide legislated child and family services, and also includes

any service provider, other than a First Nation, that was funded to deliver child and family services (including non-delegated prevention services) by Canada under FNCFS in any of fiscal years 2022-2023, 2023-2024, 2024-2025, or 2025-2026.

y. "**First Nations providing child and family services pursuant to their own laws**" means First Nations providing child and family services, in whole or in part, in accordance with their own laws and the regime implemented under *An Act Respecting First Nations, Métis and Inuit children, youth and families* and/or other mechanisms recognizing their inherent, Aboriginal, Treaty, and/or self-government rights.

z. **"First Nations Representative"** means a person or group that is authorized by a First Nation to make representations on behalf of the First Nation in child and family service matters.

aa. **"First Nations Representative Services"** means the research and development of an inventory of a range of services provided across regions to support First Nations children and families in contact with the child and family services sector, including by providing guidance and advocacy and making representations in civil proceedings in respect of the provision of child and family services to a First Nations child.

bb. "**First Nations young person**" means a person who is between the age of majority as set out in the relevant, First Nations, provincial, or territorial law and 25 years of age (or such older age as may be set out in the applicable First Nations, provincial or territorial law) and includes:

    i. The youth reside on or off reserve or in the Yukon and is registered or eligible to be registered under the Indian Act, R.S.C., 1985, c. I-5, as amended from time to time;

    ii. the youth have one parent or guardian who is registered or eligible to be registered under the Indian Act, R.S.C., 1985, c. I-5;

    iii. the youth reside on or off reserve or in the Yukon and is recognized by their First Nation; or

    iv. the youth is ordinarily resident on-reserve.

cc. "**Fully Reformed Funding Approach**" means a funding approach that adopts the Reformed Funding Approach as a funding base, adjusted

annually for inflation and population, for FNCFSAs, First Nations not affiliated with a FNCFSA, and other service providers, which will also have the capacity to track Measuring to Thrive indicators and adjust funding upwards to address increases in need. The Fully Reformed Funding Approach will adjust to the actual needs and distinct circumstances of First Nations children over time and address any recurrence of discrimination. Implementation of this approach is not currently possible given the lack of child-specific data collection and analysis supports but will be possible if the Reformed Funding Approach is fully implemented and baseline child-specific data is collected, analyzed and published.

dd. **"Funding at Actuals"** means funding that is based on the actual cost of the product, asset or service (also referred to as "actuals").

ee. **"Funding Commitment**" means any resources, including financial resources payable or provided by Canada or its agents to fulfill the Purpose of these reforms.

ff. **"Funding Mechanism"** means any arrangement including associated policies and conduct intended to transfer funding from the Government of Canada or its agents to another entity for the purposes of FNCFS.

gg. "**Inflation**" means a minimum annual adjustment of 2% adjusted upwards to the Consumer Price Index (CPI) where it exceeds 2%.

hh. "**Intergenerational Equity**" means positive duty on Canada to give due regard to the best interests and rights of future generations of First Nations children and the long term implications of its conduct including the rights of future generations to fully enjoy their to grow up as members of their Nation, the enjoyment of their culture and language(s), their rights to land and the minimum standards afforded to them in the United Nations Convention on the Rights of the Child, the United Nations Declaration on the Rights of Indigenous Peoples, the Canadian Human Rights Act and other legal human rights standards and instruments.

ii. **"Least Disruptive Measures"** means statutory secondary and tertiary prevention services required by the Act and/or provincial or First Nations child and family service legislation to address child maltreatment risk factors, including **Structural drivers,** for child(ren) who experience, or are likely to experience, a high risk of child maltreatment and services to children and families to support a child in alternative care's safe

reunification with their family, including extended family.

jj. "**Measuring to Thrive**" means a set of indicators developed by FNCFS experts with the IFSD to define and monitor child and family service outcomes for the well-being of First Nations children, youth, families, and communities.

kk. **"Minimum Base Funding"** means the minimum funding required to deliver First Nations child and family services.

ll. **"National Oversight Council"** means a First Nations-led body, constituted and mandated by rights holders, established to provide ongoing oversight and strategic direction for the implementation, operationalization and governance of the Reformed FNCFS. It will consist of representatives appointed by First Nations from each region through their own self-determined processes, including Elders/knowledge-keepers and youth representatives. A core mandate will be to oversee and guide the design, management, and control of the reformed FNCFS ensuring that the implementation of reform is aligned with the principles and attains long-term positive outcomes for First Nations children.

mm. **"National Secretariat"** means non-political technical secretariat functions to collect regional and national data on First Nations children, youth, and families relevant to First Nations Child and Family Services, conduct and disseminate research, best practices, and professional and public education.

nn. "**National Technical Advisory Committee**" means one or more Technical Expert Advisory Committee(s) on First Nations Child and Family Services approved by the National Oversight Council to provide advice on the design, implementation and evaluation of First Nations child and family services.

oo. "**Non-reallocation**" means pursuant to 2018 CHRT 4 at para. 422 Canada must not reallocate funds from other social programs, especially housing, to fund its obligations pursuant to the Orders and related agreements.

pp. **"Orders"** means decisions and orders made by the Tribunal or Courts respecting First Nations Child and Family Caring Society et al. v. Attorney General of Canada T1340/7008.

qq. **"Ordinarily Resident on-Reserve"** means that the individual or their caregiver:

i. maintains a primary residence on-reserve;

ii. usually lives on-reserve but is temporarily residing off-reserve for purposes related to health, education, poor housing, or to access other services that are not available on-reserve; or

iii. wishes to live on-reserve and is on a waiting list to secure housing on-reserve.

rr. "**Population served**" includes all residents on-reserve (regardless of status) and in the Yukon and persons off-reserve who meet the substantive equality-informed definition of being Ordinarily Resident On-Reserve.

ss. **"Post Majority Services"** means services, supports and products provided to a First Nations Young Person who was in care as of the day they reached the age of majority and are eligible for post majority services.

tt. **"Public Funding Review"** a review to be completed every five years by an independent, non-political expert who is qualified in public finance and has experience working on matters relating to First Nations and First Nations child and family services in order to ensure that the Reformed Funding Approach, and ISC's related conduct, are meeting the needs of First Nations children and is adequate for First Nations service providers to meet statutory child and family services requirements.

uu. "**Reformed Funding Approach**" means evidence-informed, First Nations-led, transparent, multi-year, performance-informed funding structure(s) that shall support and promote the substantive equality and best interest rights of First Nations children, youth, and families receiving, or eligible to receive, child and family services. Funding levels shall be calibrated to achieve substantive equality and shall be determined based on the actual needs of First Nations children, youth, and families, based on the following considerations:

i. Funding shall be culturally appropriate and enable holistic services targeting the structural drivers, focused on prevention and based on the actual needs of First Nations children, youth, and families, taking full account of the unique circumstances of the respective First Nation(s), including their historical, cultural, and geographical needs and circumstances.

ii. Funding shall address, through culturally based child and

family services, the structural drivers and root causes of the over-representation of First Nations children and youth encountering the child and family service system.

iii. Funding shall not be subject to downward adjustments or other adverse conduct by Canada and will be determined pursuant to an evidence-based approach linking a multi-year, performance informed, flexible funding structure (block approach that permits the service-provider to reinforce successes in prevention by re-investing protection savings arising from reduction of the rate of children in care into still greater prevention activities) that permits needs-based and bottom-up budgeting to support well-being, as informed by the Measuring to Thrive framework, which was developed through community-driven evidence-informed research.

iv. Funding shall ensure that outcome data on First Nations children, youth, and families can be collected and analyzed to monitor for the recurrence of discrimination, inform child and family services interventions, and calibrate resources to any increased need.

v. Funding Mechanisms and related policies, practices and mechanisms shall be measured against the Purpose and Principles of the Loving Justice Plan, and Canada's legal obligations.

vv. **"Regional Variations"** mean variations that meet or exceed the Reformed Funding Approach and address variations due to region-specific considerations that require accommodation to address ongoing discrimination

ww. "**Remoteness**" means a variable factor measured on a continuum and describes the lived circumstances of First Nations communities for whom issues of access (by road network, by ice road only, by air only, or otherwise), geography, and context exacerbate challenges faced by all First Nations, including increasing the costs associated with child and family services. Remoteness is generally associated with geographic distance from, and access to, service centres (often defined based on population size and density), which affects the costs of shipping goods as well as costs

related to personnel, including travel, and living costs.

xx. "**Reunification"** means any process to reunite children and youth in alternative care or formerly in alternative care with their family, extended family or First Nation.

yy. "**Retaliation"** Any conduct by Canada or its agents, including economic retaliation and other conduct inconsistent with the *United Nations Declaration on the Right and Responsibility of Individuals, groups, and Organs of Society that seek to protect Universally Protected Human Rights and Fundamental Freedoms* that seeks to frustrate the efforts of peaceful human rights defenders to uphold the human rights of First Nations children, youth, young adults and families set out in these reforms and/or related to First Nations Child and Family Caring Society of Canada et al. v Attorney General of Canada T1340/7008.

zz. "**Special Purpose Allotment**" (SPA) means a specific authority in the Treasury Board Transfer Policy designed to protect funds from departmental internal vote transfers as with authority to carry over funding across fiscal years.

aaa. "**Structural drivers**" mean factors that are largely out of a caregiver or caregivers' control, including factors linked to Canada's conduct, which reinforce, perpetuate or exacerbate disadvantage for First Nations children, youth, and their families and/or which contribute to the overrepresentation of First Nations children and youth in the child and family service system, including:

i. poverty;

ii. poor housing;

iii. exclusion factors like racism, systemic racism, and colonialism; and

iv. multi-generational trauma, manifested as substance misuse and intimate partner violence.

bbb. "**Transition Period**" means the period during which an FNCFS Agency or First Nation undergoes the process of changing from the current state to a desired future state.

ccc. "**Tribunal**" means the Canadian Human Rights Tribunal.

ddd. “**Young Adult”** means a First Nations person aged between the age of majority in the jurisdiction of their residency up to and including age 25 eligible for post-majority services.

4. Governance

What We Heard:

Engagement participants stated very clearly that First Nations Rights Holders are central to decision-making regarding children, youth and families. Rights Holders are responsible for the safety and well-being of children and families and must actively participate in governance processes to ensure that reform reflects First Nation ways. Among Rights Holders, the voices of Elders and youth with lived experience in care deserve particular consideration. Both are seen as providing important perspectives grounded in personal experience and wisdom and should play an advisory role in governance.

> *"A future governance model should be grounded in decision-making authority that flows from Rights Holders."*
>
> *"First Nations Rights Holders must be at the centre of the ongoing governance of long-term reform and the implementation of any final orders from the Tribunal. They play a foundational role."*
>
> *"Create mechanisms that enable rights holders to participate meaningfully in governance processes. Recognize their role as community experts and ensure they have significant influence in the reform decision-making process"*
>
> *"Elders should guide reform as knowledge keepers and moral authorities, grounding system changes in Indigenous law, tradition, and relational accountability."*
>
> *"Youth who have experienced the system firsthand must be meaningful contributors to the governance of reform, not token representatives. Their lived experience provides the most authentic insight into where systems fail and what supports create stability."*

Participants provided clear guidance on the essential role their Chiefs play in governance. As elected and traditional leaders, Chiefs are expected to represent community views and to implement the decision-making authority of Rights Holders in governance processes (e.g., approving mandates and governance structures, establishing strategic priorities).

> *"Chiefs are the recognized political voice of their individual communities and must remain central to governance."*
>
> *"[Chiefs'] inclusion is essential, as they offer important perspectives on the needs of First Nation children, families and communities."*

Participants expressed widespread support for the National Children's Chiefs Commission to play a key role in governance. Some participants cautioned against allowing the NCCC to replace the decision-making authority of Rights Holders. Indeed, the structure of the NCCC (i.e., regionally representative, accountable to communities, focused on child and family well-being) leaves it well-positioned to stand as the main oversight body and to serve as the link between national reform and regional and community realities.[3]

> *"The NCCC should serve as the core accountability, oversight, and reform body responsible for ensuring that Canada meets its legal obligations under CHRT 80 and implements the principle of substantive equality."*
>
> *"The NCCC is dedicated to the best interests of the child and should remain a central partner."*
>
> *"NCCC should lead the role in governance long-term, reporting to the FN rights holders."*
>
> *"The National Children's Chiefs Commission has an important role but it must be understood carefully and respectfully within the broader landscape of self-determination. Their role should not replace or overshadow the authority of individual First Nations Rights Holders. Instead, their responsibility should be to support, amplify, and protect the direction that Nations set for themselves."*

Participants noted that the valuable roles of FNCFS experts and expert tables include gathering, generating and sharing information, as well as in coordination, analysis and interpretation. There is widespread agreement that experts should play an advisory role in governance, without straying into the decision-making roles. The work of the Caring Society, in particular, is valued and respected: the Caring Society is seen as a strong advocate and an excellent source of evidence-based information. There was support for a range of technical tables, including regional technical tables and secretariats and an emphasis on including frontline experts to ensure reform decisions are informed by real operational experience.

> *"Technical tables play a supporting, advisory, and facilitative role in long-term reform, but they must never replace or override the authority of First Nations Rights Holders or Nations themselves."*
>
> *"All existing tables should be able to speak into the process. If they are doing work on behalf of our children we need to hear from them"*

[3] To note: The NCCC does not have an ongoing mandate to participate in governance; however, the NCCC can seek that mandate or serve as a transitional body and as a model for a newly-constituted national oversight body.

"The Caring Society should remain the human rights conscience and research partner of the reform process."

A. Measure: Key Organizations and Actors Overseeing the Reformed FNCFS

Implementation Timeline: Within six months of plan approval

A First Nations-led governance structure will support, guide and oversee the implementation and ongoing functions of long-term reform of FNCFS. The governance structure described in this Chapter 4 will include regional and national bodies working in a fully coordinated manner with a mandate to ensure all First Nations children have access to culturally based and substantively equal child and family services.

National governance bodies will include:

1. The **National Oversight Council** will be created, mandated and guided by First Nations Rights Holders. Subject to the sovereign will of Rights Holders, the National Oversight Council will be comprised as follows:

    a. Representatives appointed by each region through their own self-determined processes;
    b. Elder/knowledge holder and Youth representatives; and
    c. Representatives of the Complainants

    Subject to the sovereign will of Rights Holders, the National Oversight Council's role will notably include:

    d. Ensure Canada's accountability including its obligation to permanently cease all discriminatory conduct in FNCFS;
    e. Oversight of all aspects of the design, management and control of FNCFS or the Reformed Funding Approach (and any successor); and
    f. Consultation with, and reporting to, First Nations through national and regional processes; and
    g. Foster and promote Canada's observance of international and domestic human rights law, instruments and norms including, in particular, the United Nations Declaration on the Rights of Indigenous Peoples, the United Nations

Convention on the Rights of the Child and the Organization of American States, American Declaration on the Rights of Indigenous Peoples.

Canada shall fund the National Oversight Council and upon request of the National Oversight Council, take positive and effective measures to ensure the National Oversight Council can discharge its mandate.

Where there are ongoing legal proceedings related to the Tribunal's orders, the National Oversight Council will collaborate with the Complainants to ensure Canada permanently ceases its discriminatory conduct.

Rationale:

- First Nations-in-Assembly Resolutions
  - 60/2024: *Addressing Long-Term Reform of the First Nations Child and Family Services Program and Jordan's Principle*, clause 3
- Research and Evidence
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation, Recommendation 10.

2. The **National FNCFS Technical Table** will be comprised of the First Nations Child and Family Caring Society of Canada and FNCFS experts appointed by each region, and will:

   a. Coordinate with regional technical tables to provide advice to the National Oversight Council;
   b. Review existing and proposed legislation, budgets, regulations, operational bulletins, policy, agreements and conduct related to FNCFS and provide recommendations to the National Oversight Council;
   c. Develop, implement, disseminate and evaluate the Child and Youth Impact Assessment Tool described in Chapter 5, Measure C
   d. Review data and research from the National Secretariat to inform recommendations to the National Oversight Council;
   e. Support the participation of youth and young adults, including youth and young adults with lived experience in alternative care;
   f. Contract additional expertise as necessary;
   g. Support capacity-building of Regional Technical Tables;

h. Support First Nations pursuing jurisdiction in child and family services upon request; and
i. Other duties required to discharge the purpose and principles.

Canada shall fund, upon request of the National FNCFS Technical Table, positive and effective measures to ensure the National FNCFS Technical Table, can discharge its mandate. The National FNCFS Technical Table will develop models for the National FNCFS Secretariat and mechanisms for coordinating with Regional Secretariats and provide recommendations to the National Oversight Council.

3. The **National FNCFS Secretariat** functions will be fulfilled by one or more apolitical and independent First Nations-led non-profit organization(s) recommended by the National Oversight Council and authorized by Rights Holders outside the Ontario FSA. The National Secretariat will:

    a. Collect, analyze and disseminate non-identifying First Nations child and family services outcome data consistent with Measuring to Thrive;
    b. Be a national convening and knowledge mobilization centre for holistic policy, practice and evaluation of First Nations child and family services, capital, custom adoption, post-majority services and First Nations representative services honouring First Nations languages and publishing in English and French;
    c. Provide secretariat support to the National Oversight Council and the National FNCFS Technical Table;
    d. Support capacity-building of Regional Secretariats;
    e. Support the participation of youth and young adults, including youth and young adults with lived experience in alterative care;
    f. Support Public Funding Review;
    g. Working with the National Oversight Council, foster and promote Canada's observance of international and domestic human rights law, instruments and norms including, in particular, the United Nations Declaration on the Rights of Indigenous Peoples, the United Nations Convention on the Rights of the Child and the Organization of American States, American Declaration on the Rights of Indigenous Peoples;
    h. Support dispute resolution and accountability processes; and
    i. Other duties required to discharge the purpose and principles.

Canada shall fund the National Secretariat, and, upon request of the National Secretariate take positive and effective measures to ensure the National Secretariate can discharge its mandate. Canada shall not, otherwise, interfere in the National Secretariat's governance, operations or decision-making or works, nor use funding or administrative measures to influence or fetter or retaliate against the National Secretariat's governance, operations, work or findings unless otherwise required by law.

Rationale:

- Research and Evidence
    - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
        - An expert roundtable of First Nations child and family services (FNCFS) leaders, practitioners, and academics (First Nation, Indigenous, and non-Indigenous) worked with IFSD to prepare recommendations on a First Nations-led Secretariat in FNCFS. The IFSD report includes:
        - Pages 369–456 provides a paper describing the rationale, mandate, structure and cost of the secretariat.
        - Rationale for measuring to thrive indicators found at pp 350–353
            - Case Studies of use of Measuring to Thrive framework from a pilot project (Figures 47, 49, 50) (pp 139, 142, 144)
    - NAC First Nations Caucus: Draft Phase 3 Recommendation Discussion Guide (March 2024), at p 9
        - The Secretariat should be apolitical.
        - No endorsement of a National Secretariat only, instead endorsement of regional and National Secretariat approach.
    - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 1, 2, 3, 4, 5 and pp 7–8.

Regional governance bodies will include:

1. **Regional Technical Tables** will be comprised of FNCFS experts within each region. Wherever possible, existing regional technical tables will fulfill the regional technical functions–with funding from Canada for additional capacity building as needed. Regional Technical Tables will:

a. Review existing and proposed legislation, budgets, regulations, policy, agreements and conduct related to FNCFS and provide region-specific recommendations to the National FNCFS Technical Table;
b. Review data and research from the applicable Regional Secretariat to inform recommendations;
c. Support the participation of youth and young adults, including youth and young adults with lived experience in alterative care
d. Contract additional expertise as needed;
e. Report to regional First Nations;
f. Meet with regional ISC representatives; and
g. Other duties required to discharge the purpose and principles.

Canada shall fund the Regional Technical Tables and, upon request of the Regional Technical Tables, take positive and effective measures ensure the Regional Technical Table can discharge its mandate. Canada shall not, otherwise, interfere in the Regional Technical Table's governance, operations or decision-making or works, nor use funding or administrative measures to influence or fetter or retaliate against the Regional Technical Table's governance, operations, work or findings unless otherwise required by law.

2. **Regional Secretariats** will be comprised of one or more apolitical and independent First Nations-led non-profit organization(s) authorized by First Nations within each region. Wherever possible, existing regional secretariats (or similar organizations) will fulfill the regional secretariat functions–with funding from Canada for additional capacity and service delivery as needed. Regional Secretariats will:

    a. Support needs assessments related to First Nations child and family services;
    b. Support FNCFS Agencies and First Nations in the design, delivery and evaluation of prevention services to build capacity to deliver service-outcome data consistent with Measuring to Thrive;
    c. Support FNCFS Agencies and, as applicable, First Nations in the design delivery and evaluation of child protection services, including coordination with prevention, to deliver service-outcome data consistent with Measuring to Thrive;

d. Support FNCFS Agencies and, as applicable, First Nations in the design, delivery and evaluation of alternative care placements and arrangements, custom adoption, post majority and band representative services;
e. Support the participation of youth and young adults, including youth and young adults with lived experience in alterative care;
f. Support and coordinate interjurisdictional FNCFS service delivery;
g. Share regional data with the National Secretariat;
h. Be a regional convening and knowledge mobilization centre for holistic policy and practice;
i. Provide secretariat support to the Regional Technical Table; and
j. Other duties required to discharge the purpose and principles.

Canada shall fund the Regional Secretariats and, upon request of the Regional Secretariats, take positive and effective measures ensure the Regional Secretariats can discharge their mandate. Canada shall not, otherwise, interfere in the Regional Secretariats' governance, operations or decision-making or works, nor use funding or administrative measures to influence or fetter or retaliate against the Regional Secretariats' governance, operations, work or findings unless otherwise required by law.

Rationale:

- First Nations-in-Assembly Resolutions
    - 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clauses 1(l)
- Research and Evidence
    - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 1, 2, 3, 4, 5 and pp 7–8.

Canada will recognize and fully cooperate with the governance structure described in this Chapter 4 and will provide adequate and sustained funding to realize and maintain this structure. Canada will support, including by participating and providing information as appropriate, but it shall not interfere in the National and/or Regional Secretariat's operations or decision-making, nor use funding or administrative measures to influence or penalize the Secretariats' work or findings. Canada will consult with the National Oversight Council to establish statutory provisions recognizing the oversight authority of the governance structure.

Youth Engagement: Truth and Reconciliation Commission Call to Action 66

The governance mechanisms noted above will make provision for youth involvement in long-term reform of FNCFS. The public good would, however, be served by providing a means for youth to be directly involved in this work, as recognized by Truth and Reconciliation Commission Call to Action 66. Recognizing the scope of this complaint, Canada is strongly encouraged, above and beyond the measures proposed in this plan, to work with Indigenous youth, including youth in and from alternative care, to fund an Indigenous youth organization and foundation.

- Research and Evidence
    - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 1, 2 and 9.

B. Measure: Oversight of the Design, Management and Control of FNCFS

Implementation Timeline: Within six months of establishment of governance mechanisms

Canada will meaningfully consult with the Complainants and take positive and effective measures to substantively implement the recommendations of the National Oversight Council regarding all aspects of the design, management and control of FNCFS.

This will include all new measures required to reform FNCFS and all existing and proposed legislation, budgets, regulations, policy, operational bulletins, agreements and conduct related to FNCFS. If the National Oversight Council determines that any current measures associated with First Nations Child and Family Services (FNCFS) and Jordan's Principle do not align with the established Principles, and until a formal Jordan's Principle governance structure is in place, Canada is committed to promptly withdrawing those measures. Furthermore, Canada will collaborate with the National Oversight Council to develop new measures that uphold the Principles and reflect meaningful consultation.

Canada must implement recommendations from the National Oversight Council to permanently cease its discriminatory conduct or, in the alternative, within 15 business days provide credible evidence that its current or proposed conduct is fully aligned with the Purpose and Principles. Where Canada's evidence that it is aligned with the Purpose and Principles is in dispute, and/or implementation of recommendations is unduly delayed or recommendations are partially implemented or not implemented, recourse will be had to the Enforcement and Durability measures described in Chapter 5.

C. Measure: Moratorium on, and Redress of Existing and Planned Operational Bulletins and related mechanisms designed and implemented without consultation

Implementation Timeline: Upon plan approval (review with complainants pending implementation of governance mechanisms)

Canada shall cease the design or implementation of policies and conduct including through operational bulletins and funding mechanisms without consultation with the Complainants and National Oversight Council and/or NCCC. Unless otherwise agreed to in writing by the NCCC and Complainants, Canada must withdraw operational bulletins and other policy or conduct related to FNCFS that were developed and/or implemented without consultation with First Nations, pending review by the National Oversight Council and the National FNCFS Technical Table.

Rationale:

- Legislation
    - *United Nations Declaration on the Rights of Indigenous Peoples Act*, SC 2021, c 14, Annex, Articles 15(2) and 19
- CHRT Decisions/Jurisprudence
    - 2018 CHRT 4 at paras 233 and 251
    - *Gitxaala v British Columbia (Chief Gold Commissioner)*, 2025 BCCA 430 at paras 78, 126–129, 160–163
- Research and Evidence
    - Assembly of Seven Generations, “Recommendations for the Long-Term Reform of FNCFS: Literature Scan”, Recommendation 7.

5. Enforcement and Durability

What We Heard:

Engagement participants expressed significant mistrust that Canada will voluntarily end its discrimination or abide by the Tribunal's orders: participants consistently cited Canada's history of non-compliance and emphasized the need for enforceable oversight until discrimination is demonstrably ended.

> *"Any long-term reform plan must include tools to enable the comprehensive oversight of reform implementation. Canada's history of non-compliance with the Tribunal's orders, such as the ongoing failure to address the significant backlog of Jordan's Principle requests, demonstrates the need for strong oversight and accountability mechanisms in relation to reform implementation."*

When asked about enforcement mechanisms, participants expressed support for both continued Tribunal oversight (with clear criteria for ending the Tribunal's jurisdiction) and an alternative dispute resolution mechanism. Participants identified several parameters to ensure the efficacy of any alternative dispute mechanism including: independence and the capacity to make enforceable orders regarding both systemic and specific failures in FNCFS and Jordan's Principle. The alternative dispute resolution mechanism should be grounded in First Nations law and legal traditions and be built on an expert-informed, rights-based design with a built-in non-discrimination assessments and protections from retaliation. Timeliness is important: the alternative dispute resolution mechanism should offer immediate relief in cases of urgent child-specific harms and timely responses in all other cases. The ADR should be responsive to unique circumstances, transparent and accountable, and subject to mandatory period reviews.

> *"The CHRT must play an active and ongoing role in overseeing the implementation of the reform until an independent dispute resolution mechanism is in place. The Tribunal's neutrality is essential to prevent Canada from reinstating discriminatory practices once the Tribunal is no longer involved."*

> *"Canada must comply with CHRT Orders as legally required. This is a Canadian process set up by Canada. If Canada can not comply how does it expect others to respect it."*

> *"If ongoing Tribunal oversight is not possible, accountability should be ensured through Nation-led dispute resolution processes. These processes would be co-*

designed by First Nations, grounded in their laws, languages, and cultural practices, and structured to monitor compliance, limit external discretion, and prevent discrimination. By placing authority and accountability in the hands of the Nations themselves, children, families, and communities are protected, and reforms are implemented in ways that are culturally safe, enforceable, and self-determined."

A. Measure: Effect of the Reforms on Canada's Human Rights Obligations

These reforms do not constitute a limitation or waiver of Canada's human rights obligations including through 2016 CHRT 2.

Rationale:

- CHRT Decisions
  - 2022 CHRT 41 at paras 178–179
  - 2025 CHRT 80 at paras 68–70

B. Measure: Scope of the Continued Jurisdiction of the Tribunal

The Tribunal has authority to retain its jurisdiction until such time as the Reformed FNCFS has been fully complied with, so as to consider and decide any dispute arising from its implementation. In the event that the Tribunal retains jurisdiction, the National Oversight Counsel will collaborate with the Complainants to ensure Canada's discrimination regarding FNCFS permanently ceases and does not recur including through Canada's conduct respecting Jordan's Principle.

In order for the Reformed FNCFS to be fully complied with and the Tribunal to consequently cease its jurisdiction over First Nations Child and Family Services, Canada must:

i. demonstrate to the satisfaction of the Tribunal, based on submissions from the Complainants that are informed by the views of the Expert Advisory Committee and the National Oversight Council, that the discriminatory conduct has stopped;

ii. demonstrate to the satisfaction of the Tribunal, based on submissions from the Complainants that are informed by the views of the Expert Advisory Committee and the National Oversight Council, that the discrimination will not recur;

iii. fully implement the Reformed Funding Approach;

iv. amend provincial/territorial agreements in alignment with the Orders in a manner that ensures full consultation with respective First Nations and/or First Nations service providers;

v. implement and maintain effective quality control measures to detect and effectively remedy the recurrence of discrimination;

vi. implement and maintain effective and accessible complaints and dispute resolution mechanisms that are as effective as or improve upon the Tribunal, has the capacity and authority to address systemic cases and order and enforce effective remedies including those required to prevent and effectively respond to all forms of retaliation.

Rationale:

- CHRT Decisions
  - 2017 CHRT 14 at paras 27–34
  - 2018 CHRT 4 at paras 48–52
- Jurisprudence
  - *McKinnon v Ontario (Ministry of Correctional Services) (No. 3)*, 1998 CanLII 29849 (ON HRT) at para 354
  - *Ontario v McKinnon*, 2002 CanLII 46519 at para 313:
    - I shall remain seized of these matters until such time as this entire series of orders has been implemented and the complainant's remedial right to full compliance with the *Code* in respect of future practices has been satisfied in substantial conformity with the orders as read in the context of the findings, conclusions and reasons found in this decision and in the April 1998 decision of this Board. If the complainants and Canada are unable to agree with respect to any of the matters regarding which their common approval is required, or if there are any other matters relating to the implementation of these orders that are in dispute or appear to require clarification, I am to be contacted without delay so that I may hear and decide such matters [emphasis added].

  - *McKinnon v Ontario (Correctional Services)*, 2007 HRTO 4 at para 551
  - *Walden v Canada (Treasury Board and Human Resources and Skills Development Canada)*, 2016 CHRT 19, 2018 CHRT 20, 2023 CHRT 13 (matters heard by Member Garfield, in the decade following a 2012 Memorandum of Agreement, which itself followed liability (2007 CHRT 56)

and remedy (2009 CHRT 16) decisions by Member Jensen (as she then was), who retained jurisdiction over the complaint).

    - As noted by the Commission on its November 9, 2020 submissions in this matter regarding the Compensation Process (at para 16), in the consent order resolving the *Walden* matter, "the Tribunal retained jurisdiction to deal with any "… dispute or controversy surrounding the meaning or interpretation of the Agreement, or its implementation or fulfillment…" – whether brought by a party, or by a non-complainant individual claiming eligibility." (citing *Walden et al v Attorney General of Canada*, Consent Order dated July 31, 2012 at para 4 (CHRT File Nos. T1111/9205, T1112/9305, T1113/9405).

- Research and Evidence
    - Naiomi Metallic et. al, "Doing Better for Indigenous Children and Families: Jordan's Principle Accountability Mechanisms Report" (31 March 2022), p 40: Discussion of the Tribunal's eventual relinquishing of jurisdiction

Guidance from the Tribunal following a Dispute/Complaint

The Tribunal shall retain jurisdiction over the complaint in relation to FNCFS for a minimum of five (5) years from the date of its FNCFS long-term reform order and thereafter until Canada has demonstrated sustained compliance (that is independently verified) with the National FNCFS Reforms and the risk of recurrence of discrimination has been eliminated. In the event that the complainants and Canada are able to agree to an effective dispute resolution mechanism as part of the FNCFS reforms, the complainants and Canada shall only return to the Tribunal for assistance following the full adjudication of a dispute using that mechanism.

Subject to Canada's compliance with the FNCFS Reforms, following the five (5) year supervision role of the Tribunal, the complainants and Canada shall report to the Tribunal regarding the Initial Five-Year term and seek guidance and direction regarding the Tribunal's ongoing jurisdiction in relation to the FNCFS Reforms. For clarity, the Tribunal's reasons and findings made in all existing orders shall continue and the FNCFS Reforms have no impact on any of the Tribunal's orders in relation to Jordan's Principle.

Rationale:

- Research and Evidence
    - Naiomi Metallic et. al, "Doing Better for Indigenous Children and Families: Jordan's Principle Accountability Mechanisms Report" (31 March 2022), *at* p 40: Discussion of the Tribunal's eventual relinquishing of jurisdiction

C. Measure: Child and Youth Impact Assessment Tool

Implementation Timeline: Within 18 months of plan approval

Before Canada makes any decisions to change the Reformed FNCFS, unless otherwise directed in the Loving Justice Plan, the National FNCFS Technical Table will review and publicly report, via the National Oversight Council, on the child and youth rights impacts of all federal proposed legislation, budgets, policy, agreements and conduct related to First Nations child and family services prior to it coming into force, except where prohibited by law. Canada will have a positive obligation to bring any such decision-making to the National FNCFS Technical Table's attention prior to implementation.

The National FNCFS Technical Table will develop, implement and evaluate the Child and Youth Impact Assessment Tool in collaboration with youth and young adults with lived experience in child and family services and Elders/Knowledge keepers, as well as the Regional Technical Tables, the Complainants and the National Oversight Council.

Rationale:

- Research and Evidence
    - Modified version of existing government tool: Child Impact Assessment
    - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 3, 10
    - *United Nations Convention on the Rights of the Child*, Article 3
    - UNICEF, "What is a Child Rights Impact Assessment?", Canada criteria for child rights impact assessments

D. Measure: Complaint and Dispute Resolution Mechanisms

Implementation Timeline: Within three months of plan approval (subject to agreement by Canada)

To the extent that Canada fails to abide by the reforms, the complainants, the National Oversight Council and funding recipients must have direct and responsive recourse to a process grounded in Indigenous law, First Nations processes and loving justice, that ensures compliance in a manner that accounts for children's safety, physical, emotional, spiritual and cognitive well-being, and best interests and cultural continuity, and is informed by the human-centered aspects of dispute resolution, including love and compassion. At a minimum, this must include an independent, non-complex and effective,

credible, national complaints mechanism.

Consistent with the Tribunal's recognition that it may be acceptable for a decision-maker to encourage parties to engage third party arbitration as part of an attempt to reach agreement on an issue, even where the decision-maker does not have the jurisdiction to order binding arbitration (2021 CHRT 6 at para 130), this plan proposes a Dispute Resolution Mechanism ("DR Mechanism") that reflects the minimum standards of the Tribunal orders and incorporates access to justice, and loving justice principles, for both systemic complaints (brought by the complainants) and individual complaints (brought by funding recipients), including those of an urgent nature. It is recognized that while an effective alternative dispute measure would reduce the need for the complainants and Canada to call on the Tribunal's jurisdiction "in order to resolve a dispute that negotiation fails to resolve" (2021 CHRT 6 at para 130).

However, Canada's cooperation would be required in order to implement such a measure. As a result, this plan provides high-level principles that would be applicable for such a DR Mechanism. The details of any DR Mechanism to support this plan would be developed after Canada's cooperation has been confirmed.

This mechanism must be principled, public, accessible, rooted in First Nations legal traditions and laws, and include the following features:

i. **Enforceable**: The DR process must be transparent, accessible, and enforceable in court with clear, specific and actionable orders.

ii. **Based on the paramountcy of human rights**: The DR must offer First Nations parties and claimants at least the same level of protection as Canadian and International human rights regimes, so as not to treat them as second-class rights bearers as they have been in the past. Canada must not be allowed to "contract out" of human rights in the reforms.

    1. **Primary principles**: Human right norms, the best interests of the First Nations child and the terms of the Fully Reformed Funding Approach, as endorsed by orders of the Tribunal, must prevail in any disputes.

    2. **Protection against retaliation**: Robust protections against retaliation must be available to anyone engaged in the DR process. This includes provisions for injunctive relief, compensation and effective measures to stop retaliation and prevent its recurrence.

iii. **Honourable character and demonstrated impartiality and independence requirement**: Adjudicators, staff, and agents will be selected by the Complainants and Canada based on recommendations from the National Oversight Council and must be honourable with demonstrated experience in adjudicating matters respecting Indigenous children, youth, young adults and families. They have an obligation to carry out their duties with the highest level of independence and integrity.

iv. **Conflict of Interest**: Adjudicators, staff, and agents must not have served in a federal, provincial/territorial, or municipal political capacity in the prior five years and are required to disclose any perceived or actual conflicts of interest to the Complainants and Canada.

v. **Available effective remedies**: The DR mechanism must have the capacity to order Canada to make procedural and substantive decisions, order Canada to take any reasonable effective action (including interim), provide funding or other remedies.

vi. **Limitations**: The DR mechanism would not have the capacity to amend Tribunal orders related to FNCFS reforms, reduce existing funding or funding entitlement of service providers, reduce the overall funding commitment in the FNCFS Reforms, nor implement changes to the funding structure of the FNCFS Reforms.

vii. **Reflect First Nations Perspectives**: The procedure adopted in the DR mechanism would adopt and embody the principles and values of respect, restitution, reconciliation, responsibility and interconnectedness.

viii. **Reflect Youth Perspectives**: The procedure adopted in the DR mechanism would support and welcome the participation, views and expertise of youth, including youth with lived experience of placement in alternative care.

Except for requirements under the *Privacy Act* or the confidentiality provisions of provincial, federal or First Nations child and family services legislation, only a First Nations litigant may request the confidentiality of procedures, hearings, documents or decisions when it is in the best interest of the child.

The decision-maker in the DR Mechanism would be selected by agreement between the complainants and Canada following discussions in collaboration and consultation with the National Oversight Council.

E. Measure: Funding for Judicial Reviews

Implementation Timeline: By the commencement of the Reformed FNCFS Approach

In the event that there is no DR Mechanism, the reformed FNCFS would require Canada to establish an adequate litigation fund to ensure access to justice, under the supervision of the National Oversight Council, to enable FNCFS Agencies and First Nations to review federal decisions made pursuant to these reforms before a court or Tribunal of competent jurisdiction. The amount of funding provided per challenge would be subject to budgetary approval by the National Oversight Council, with the maximum amount of funding available, per challenge, being consistent with the amount available, per challenge, for human rights litigation under the Court Challenges Program as of April 1, 2026.

Rationale:

- Research and Evidence

- Naiomi Metallic et. al, "*Doing Better for Indigenous Children and Families: Jordan's Principle Accountability Mechanisms Report*" (31 March 2022), *at* p 78: Recommendation for funding of legal services for Indigenous Children and Families.

- Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation 10 and pp 7 and 9

6. Funding Commitments and Arrangements

What We Heard:

Engagement participants described numerous funding challenges—both in the funding amount and how the funding flows—that often have a direct impact on services and ultimately on children and their families. Bureaucratic and constantly shifting funding processes and requirements result in service gaps and operational challenges. Some of the key challenges include: significant delays in funding approvals and disbursements; failure to approve work plans or confirmation of funding amounts, and unexpended funds in a timely way or provide clear reasons for not approving workplans in whole or in part. Changes in Canada's policy without notice, that often applies retroactively and burdensome reporting requirements.

> *"Problems with flows and rules: unpredictable approvals, unilateral bulletins and eligibility shifts, thin and confusing templates, uncertainty about surpluses, missing capital envelopes, and limited mechanisms for kinship providers. Fixes: time-bound approvals with clear criteria, stable terms and carry-forward rules, explicit capital with replacement cycles, flexible kinship supports at actuals, and transparent notice whenever terms change."*
>
> *"Delays in ISC payments were described as chronic, leaving agencies to carry costs for extended periods while waiting for reimbursement. Individual First Nations are often forced to front costs for child and family services, which was described as unsustainable. Such funding delays and/or shortfalls repeatedly occur even though an agency has consistently demonstrated the funding need, year after year."*
>
> *"Provide long-term funding guarantees to allow agencies to plan, hire, and deliver services without fear of retroactive denials or program instability."*
>
> *"Some participants described the approval process as opaque and unpredictable — regional ISC staff frequently lack authority to approve expenditures, and requests are escalated to ISC Headquarters with no clear timeline or feedback."*
>
> *"The consequences of these shortfalls are not abstract; they directly affect the well-being and safety of the children and youth we serve."*

Participants described chronic shortfalls in capital funding, with extensive delays and ISC-imposed funding caps leaving First Nations and their agencies without the facilities they need

for programming and service delivery. Lack of housing is a persistent and widespread problem driving families into contact with child protection services.

> *"We have some small renovations that we have the capacity to do quickly, but the eligibility requirements for prevention funds coupled with the lengthy application requirements for capital funds are interfering with our ability to move forward."*
>
> *"Lack of housing is bringing children into care when they have appropriate caregivers in the family they just don't have somewhere to live."*

Prevention funding is well established as a core component of FNCFS but remains inadequate in many cases. The splitting of prevention funding across First Nations and FNCFS Agencies has disrupted the work of many agencies and failed to provide time or resources to build capacity among First Nations. Many First Nations that do have the capacity to deliver prevention services are constrained by a lack of operational funding. The population-based formula for prevention funding can be insufficient in cases such as supporting children with complex needs to remain in the care of their families; or providing addictions treatment to parents to support families staying safely together or reunifying.

> *"The Nation cannot cover staffing & operations with the current prevention funding. Typically, one staff person delivers all prevention service: need to add staffing costs to the per capita allotment of prevention funds."*
>
> *"Addictions is a big expense when it comes to programming, if preventative treatment is needed to ensure family reunification, there should be additional funding available (our smaller First Nations should not be put in a position to have to choose who is attending treatment service)."*

A. Measure: Limiting the Restricting Influence of Other Canadian Legislation

Canada shall not rely on the *Financial Administration Act* or any other federal act as a basis for failure to expend any Funding Commitment or to fail to fully implement the nature, scope, and purpose of the Reformed Funding Approach, ensuring that the Reformed Funding Approach is interpreted and implemented in a manner that reflects the quasi-constitutional nature of the *Canadian Human Rights Act*, and the remedies made thereunder.

Consistent with the Tribunal's orders to safeguard multiple generations of First Nations children from Canada's discrimination and recognizing the rights of First Nations children and the inherent right of self-determination, including self-government, over children and families, the Reformed Funding Approach will not be time limited and will not be dependent on government political decision makers. To uphold the honour of the Crown and permanently cease its discriminatory conduct, Canada must systematically design, administer and evaluate this funding, including funding mechanisms, as a non-discretionary obligation constrained by the inherent rights of First Nations and the constitutional and human rights of First Nations children, youth and families.

First Nations prefer a statutory funding mechanism that is co-developed between First Nations and Canada to achieve the durability and protection required by these reforms to safeguard children and families from Canada's discriminatory conduct in First Nations Child and Family Services.

The Reformed Funding Approach will be the minimum standard for Canada's funding of child and family services and provide the flexibility to improve upon its key components pursuant to the needs identified by First Nations and FNCFS service providers.

No policy, conduct or other mechanism, including funding mechanisms, may be adopted in respect of Funding Commitments for FNCFS which could reasonably result in a lower level of funding or adverse funding structures than contemplated by these reforms.

Rationale:

- CHRT Decisions
    - 2018 CHRT 4 at paras 40–48
    - 2021 CHRT 41 at paras 373–377
    - 2025 CHRT 6 at paras 463–468
- Research and Evidence
    - Expert Advisory Committee, "FSA Recommendations" (15 December 2025), Recommendation #1, at pp 1–2
    - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 3, 4, 5, 6, 7

B. Measure: Protecting FNCFS Funding

Implementation Date: Immediately upon plan approval.

Canada shall not reallocate funding from other First Nations programs (e.g., housing or education), services, claims or initiatives to achieve the Purpose.

Consistent with the Tribunals' non-reallocation order (2018 CHRT 4), Canada must not engage or require First Nations not affiliated to a FNCFS Agency and/or FNCFS Agencies or any other entity to engage in the practice of reallocation. Canada shall not repeat its practice of reallocating funding from other First Nations to address shortfalls in FNCFS.

Child and family services are essential services for First Nations. As recognized by the Court of Appeal of Quebec, responsibility for funding is a crucial issue related to First Nations child and family services, which has not been addressed by the *Act respecting First Nations, Inuit and Métis children, youth and families*. The Reformed Funding Approach requires safeguarded and guaranteed funding allocations through statutory measures. However, it is recognized that the Tribunal does not have the jurisdiction to order Parliament to enact legislation. In the absence of such legislation; however, Canada should be required to place funds related to the implementation of this plan in a Special Purpose Allotment with authority to carry over to future fiscal years to avoid the money being used for other government priorities.

Rationale:

- Jurisprudence
    - 2022 QCCA 185 at paras 165 and 271–279
- Research and Evidence
    - Institute of Fiscal Studies and Democracy, "First Nations not affiliated to a First Nations child and family (FNCFS) services agency: Defining a baseline" (4 April 2024)

Special Purpose Allotment Approach

In the absence of a statutory funding mechanism, Canada shall restrict any and all funding commitments to achieve the Purpose in a Special Purpose Allotment.

Rationale:

- CHRT Decisions
    - 2018 CHRT 4 at para 391

- Research and Evidence
    - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
        - In a fee-for-service model (i.e., ISC pays bill for activity), power rests with ISC: ISC reallocates resources within the department and different priorities because funding is not infinite, nor is it protected (through a SPA) for FNCFS (p 24)

Statutory Approach

- The Reformed Funding Approach calls for, and should be supported by, legislation co-developed by First Nations, and Canada, in consultation with the National Oversight Council, that enshrines effective statutory funding to embed the funding purpose, principles, structures, and levels as minimum standards to be adjusted annually on the basis of population and inflation, as well as funding review mechanisms.

Rationale:

- Research and Evidence
    - NAC First Nations Caucus: Draft Phase 3 Recommendation Discussion Guide (March 2024), p 20: Support for the idea of statutory funding to ensure that discrimination does not recur.
    - Expert Advisory Committee, FSA Recommendations (15 December 2025), Recommendation #1, pp 1-2

C. Measure: Reformed FNCFS Funding

Implementation Timeline: Next fiscal year after plan approval (so long as at least six months' lead-time)

Overview: Capacity-Based Funding Approach

Present State:

FNCFS Agencies have been funded through a variety of funding sources at the federal level since the Decision on the Merits, including Budget 2016 and Budget 2018 funding, actuals-based funding through 2018 CHRT 4, and additional per capita and top-up based funding released in FY 2022-2023 and 2023-2024 (much of which has been shared with First Nations).

There have been no adjustments to the baseline funding model that was implemented in

Budgets 2016 and 2018 to account for the actual cost of providing services based on the actuals claims from 2018/19 through 2024/25.

This funding approach as implemented by ISC is not stable or predictable and is highly dependent on ISC's discretion. While claims on actuals have provided important information regarding the real needs of FNCFS Agencies, a "claims-based" funding mechanism does not fully capture the needs of First Nations and FNCFS Agencies due to ISC operational, reimbursement and cash-flow policies and conduct, which prevent full implementation of needs-based programs and services (i.e., First Nations and FNCFS Agencies do not have the funds they need, when they need them).

Most unaffiliated First Nations have received Community Wellbeing Jurisdiction Initiative funding since Budget 2018, followed by per capita prevention funding following 2021 CHRT 12, as well as percentage-based top-up related funding from FY 2023/24 forward. However, it is unclear how many unaffiliated First Nations were funded under CWJI to do jurisdictional initiatives versus prevention. Moreover, Unaffiliated First Nations do not have access to a First Nations-based protection service provider, and receive protection services via the applicable provincial or territorial government through funding mechanisms with Canada.

All First Nations have received some or all of the per capita prevention funding amount introduced in FY 2022/23 and some or all of the percentage-based top-ups introduced in FY 2023/24.

Funding for First Nations has generally not been accompanied by clarity regarding the range and scope of service delivery, governance or financial responsibilities associated with the funding or time and capacity to develop the services and associated infrastructure and coordinate with the province/territory in the provision of FNCFS services. Such guidelines must be developed in consultation with affected First Nations, in partnership with the National Oversight Council and the Caring Society.

<u>"Future State":</u>

First Nations not served by a delegated FNCFS service provider are required to be funded in accordance with community need and informed by evidence. Such funding must ensure First Nations have adequate time to build capacity, including a culturally informed skilled workforce, to meet the needs of their children, youth, and families.

FNCFS Agencies to operate with block funding pursuant to the IFSD Phase III recommendations adjusted to FY 2024/25 levels, with access to funding at actuals as a backstop for a period of five years, with a funding review in Year 3 to make required adjustments. The actuals backstop recognizes that, across Canada, service providers

have operated on a wide variety of funding mechanisms and, in many cases, have not had access to capacity building funding. It also recognizes that the split in prevention funding levels between two service providers has led to uncertainty regarding the effectiveness of integrated service delivery (see IFSD Phase 3, Figure 13).

Under the "backstop actuals" system, the National Oversight Council must be notified of any requests that are outstanding for more than 30 calendar days. Requests outstanding for more than 30 calendar days will also be eligible for interim funding pending ISC's decision-making. Denials must include ISC's evidence and rationale confirming that denial respects the Purpose and Principles of the FNCFS Reforms.

Some level of actuals-based funding will be required to continue for maintenance in the case of First Nations children coming into care with complex needs that exceed the ordinary cost of maintenance placements (e.g.: Fetal Alcohol Spectrum Disorder, severe mental health needs) as such placements involve per-child costs that are orders of magnitude greater than those for non-complex placements.

Consistent with the honour of the Crown and the developmental process for FNCFS Agencies in Directive 20-1, First Nations to be provided with capacity building funding and time to design and build capacity to enable their prevention delivery model and other services. This will include a clear definition of the prevention services and other services, if applicable, to be provided within that service delivery model, and an understanding of how Least Disruptive Measures (secondary and tertiary prevention) will be funded within the protection service provider's budget and coordinated with the First Nation's service model. Applicable FNCFS services needs will be provided by a First Nations authorized service provider until First Nations capacity is established.

For First Nations that have an existing prevention delivery model and capacity to deliver that model, or once the First Nation's capacity building and evaluation process is complete, per capita prevention funding will follow the service provider, according to the service delivery model adopted by the First Nation, with a clear definition of coverage of Least Disruptive Measures (secondary and tertiary prevention) within the protection service provider's budget.

Rationale:

- Jurisprudence
    - *St. Theresa Point First Nation v Canada*, 2025 FC 1926 at para 171
        - An example of Canada's provisioning of on-reserve housing, with a high degree of federal discretion, and in a manner similar to the "Present State" above.

- Research and Evidence
    - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025), Figure 13 and Appendix H: Maintenance
    - Ontario Association of Children's Aid Societies, "*2025 Pre-Budget Submission*"(24 January 2025) at pp 8–9 (Access to Highly Specialized, Intensive Out-of-Home Care & Live-in Treatment)
    - EngageFirst Management Consultants, "Study of Budget Needs and Funding in the Amended Draft Agreement for Long Term Reform of FNCFS Program: Final Report" (May 2025), at p 50

Baseline Budget

Baseline budget: The budget considered sufficient for the delivery of needs-based child and family services, as defined by the relevant First Nation, in keeping with mandated legislation, including provincial/territorial legislation, the national standards contained in the *Act respecting First Nations, Inuit and Métis children, youth and families* and in any applicable First Nations legislation. Baseline funding will cover the actual costs of core operations related to the child and family service provider in question (prevention, protection, or both). For FNCFS Agencies providing protection services, baseline funding will also provide for protection service costs (e.g., intake, maintenance payments, etc.). This amount will be increased annually to adjust for population growth and inflation.

As noted in the description of the "future state" above, for the first five years of the Reformed Funding Approach FNCFS Agency and First Nation baseline budgeted will be backstopped by a funding at actuals process to provide for sufficient funding to meet community needs in special circumstances (e.g., circumstances, whether anticipated or unanticipated, that cause the cost of required services to exceed the amount of funding provided via the Baseline Budget).

Rationale:

- Research and Evidence
    - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
        - Figures - Five-year national projections estimate the total system cost to be $17.5B with IFSD's recommended scenario (p 41)
            - Baseline budget - Total federal expenditures for the delivery of CFS as reported by FNCFS agencies
        - See Table 9 and Figure 12 (p 36); Table 10 pp 38–39.

- See pp 98 and 104.

Functional Funding Adjustment Factors

Functional Funding Adjustment Factors (referred to as "top ups" in the IFSD reports) are tied to the specific purpose of child and family services and are not intended to remedy community-wide needs in these areas:

i. information technology
ii. results and data collection
iii. poverty fund
iv. capacity development fund
v. emergency fund
vi. maintenance allocation
vii. prevention
viii. geography/remoteness
ix. inflation with a 2% base adjusted annually upwards to the Consumer Price Index
x. population
xi. insurance and liability coverage
xii. cultural continuity

Rationale:

- Legislation
  - *Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, s 9(2)
- CHRT Decisions
  - 2016 CHRT 2 at paras 106, 151
- Research and Evidence
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
    - Prevention - $2,500 per person resident on-reserve, adjusted for population and inflation since fiscal year 2022/23 (p 34)
      - Resources to deliver activities and services to stop or reduce the risk of child maltreatment.
      - Three levels of prevention that are mutually reinforcing:
        - Primary: Public health measures to prevent child maltreatment and public education on how to report child maltreatment

        - Secondary: A child and/or family are at high risk of child maltreatment
        - Tertiary: A child is at risk of child maltreatment or alternatively is in care and efforts to reunify the child with their families are undergo (it is expected that at least secondary and tertiary services are being delivered by FNCFS agencies)
    - See commentary in the overview regarding the capacity-based approach to service delivery
- Information technology (IT) - 5.5% of the baseline budget
    - Allocation for hardware and software, based on not-for-profit industry standards (p 34).
    - NAC First Nations Caucus: Draft Phase 3 Recommendation Discussion Guide (March 2024), p 25: Agreement for 6% of the baseline otherwise.
- Results and data collection – 5% of the baseline budget
    - Allocation to support data collection and analysis. Data is essential for control and improved decision-making, in particular to allow for early warnings or signs of challenges and to highlight successes (p 35).
    - NAC First Nations Caucus: Draft Phase 3 Recommendation Discussion Guide (March 2024), p 27: Consensus is for 5%
- Poverty Fund – 5% of the difference between regionally relevant MBM and total after-tax median household income (p 35)
    - Provides resources to mitigate the impacts of deprivation as a driver of contact with protection.
    - Figure 41, pp 112–113.
    - NAC First Nations Caucus: Draft Phase 3 Recommendation Discussion Guide (March 2024), p 27: Eliminate 3% as a possibility and reconsider 5 and 7%
- Maintenance allocation – 3% of baseline budget (pp 35, 106 and 110)
    - Contingency amount to mitigate changing costs of child maintenance (over and above inflation) within the regular course of business
    - Variability in maintenance expenditures to otherwise be managed by the protection service provider within their block funding, subject to maintenance expenses arising from special

circumstances, which are beyond the usual cost of doing business (e.g.: complex needs, specialized homes, sudden increase in the number of children coming into care), which are to be reimbursed at actuals
        - See analysis in Appendix H "Maintenance" (pp 337-338)
    - Geography/remoteness – 15% scaled average of CAF applied to all FNCFS agencies (p 34)
        - 15% scaled average of Cost Adjusted Factor (CAF). Remoteness can impact FNCFS agency operations and budgets. The remoteness/ geography component should be recognition of the differentiated costs of delivering and acquiring needed services in different geographic contexts (beyond year-round road access alone), acknowledging that some of these costs will already be factored into a service provider's Baseline Budget due to interim funding at actuals in prior fiscal years.
        - Page 256 (Figure 3 – Geographic Zone distribution – i.e. accessibility)
    - Inflation with a 2% base adjusted annually upwards to the Consumer Price Index (p 35)
        - Adjustment to correct for changes in purchasing power, based on Consumer Price Index (CPI) inflation in order to reflect changes in the costs of goods and services.
        - NAC First Nations Caucus: Draft Phase 3 Recommendation Discussion Guide (March 2024), p 33: 2% as the floor with CPI as the adjustor for real time costs.
- EngageFirst Management Consultants, "Study of Budget Needs and Funding in the Amended Draft Agreement for Long Term Reform of FNCFS Program: Final Report" (May 2025), at p 35–36
- Measuring to Thrive Framework (Appendix J to Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A performance budget approach to well-being" (2020), at pp 387–390)
    - Connection to culture and language are essential indicators of well-being for children and families
- Cultural continuity:
    - Determined the impacts Canada's discriminatory practices on First Nations languages and cultures as well as cultural continuity

being a protective factor in the physical, emotional, cognitive and spiritual well-being and best interests of First Nations children. Cultural continuity, and specifically First Nations language knowledge, are associated with dramatic reductions in youth suicide and adverse outcomes.
        - Depending on community readiness, this may be funded as a primary prevention item pending development of a cultural-continuity specific funding adjustment factor developed in the first five years of the Reformed Funding Approach.
    - Chandler, M. J., & Lalonde, C., "Cultural continuity as a hedge against suicide in Canada's First Nations" (1998). Transcultural psychiatry, 35(2), at pp 191–219
        - Cultural continuity is a protective factor against mental health issues. Language is foundational to culture.
    - Douglas Hallett, Michael J. Chandler & Colette E. Lalonde, "Aboriginal Language Knowledge and Youth Suicide" (2007) 22 Cognitive Development 392
    - Michel J Chandler & Christopher Lalonde, "Cultural Continuity as a Protective Factor Against Suicide in First Nations Youth" (2008) 10:1 Horizons (Special Issue: Aboriginal Youth, Hope or Heartbreak: Aboriginal Youth and Canada's Future) 6 First Peoples' Cultural Council, "Costing Models for Language Maintenance, Revitalization and Reclamation in Canada", (May 2018)
    - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation 3, 4,5, 6,10

Population

Following the enactment of *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24, the federal and provincial Crown are bound to act on the basis that First Nations' inherent right to self-government has constitutional status and that, from a jurisdictional standpoint, this right includes the jurisdiction of First Nations in relation to child and family services. There is no geographic limitation to Parliament's statutory affirmation of this right, such that, subject to the terms and adequacy of funding, First Nations and Agencies may provide child and family services to their members wherever they reside (as per minimum standards set out in *An Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24).

In correspondence on September 12, 2025 and October 3, 2025, the Panel addressed the

scope of the complaint regarding First Nations children residing off-reserve being limited to Jordan's Principle and not to First Nations children receiving child and family services more generally. This plan has been prepared in keeping with that direction. However, nothing in this plan is intended to support or permit conduct on Canada's part in implementing Jordan's Principle off-reserve in a way that increases, in any way, the likelihood of First Nations children either coming into contact with the child and family services sector or being brought into care, or that fetters their reunification with their homes, families and communities.

It bears noting that consistent and strong feedback during the regional engagement process following the Tribunal's ruling in 2025 CHRT 80, however, noted that many First Nations individuals do not live off-reserve by choice, but rather face limited ability to remain on-reserve for systemic reasons, including lack of housing and other services (including education, health, mental health, and specialized services for children with complex needs). Indeed, many of the same structural forces that drive contact with the child and family services system drive families away from reserves.

This plan's approach to population served seeks to respect the Panel's October 3, 2025 direction on scope by focusing on a substantive equality-based definition to the population that is "Ordinarily Resident On-Reserve". As the Panel noted in its 2016 Decision on the Merits, FNCFS have always applied to First Nations children and families ordinarily resident on-reserve. In the 2005 National Program Manual, the definition of "ordinarily resident on-reserve" acknowledges that individuals may continue to be ordinarily resident on-reserve where they maintain a primary residence on-reserve "may be absent for a period of time for purposes related to education, health, or other services that are unavailable in the reserve community where the child lives".

This plan proposes a substantive-equality-based definition of "ordinarily resident on-reserve" to include those who wish to live on-reserve and are on a waiting list to secure housing on-reserve. This recognizes the breadth of service gaps that lead First Nations individuals to leave their Nations' territory.

In addition to the above-noted considerations, ISC's Indian Registration System ("IRS") does not capture the entire population served, in particular given members moving on- or off-reserve in ways that are not reflected in the IRS, nor does it reflect anticipated addition of members due to legislative changes related to eligibility for *Indian Act* status. In particular, any approach to population adopted must be responsive to the potential elimination of the second generation cut-off rule in s. 6(2) of the *Indian Act*, which is currently under consideration by Parliament given the repeal of subsections 6(2) and (2.1) of the *Indian Act* by clause 4(5) of Bill S-2: *An Act to amend the Indian Act (new registration*

entitlements), which received Third Reading in the Senate on December 4, 2025 (63 Senators voting in favour, no Senators voting against, and eight Senators abstaining) and received First Reading in the House of Commons on December 10, 2025. If Bill S-2 passes in its current form, as has been called for by the Chiefs in Assembly, many minor children who reside on-reserve and are subject to the second-generation cut-off would be eligible to be added to the IRS.

Funding must not rely solely on the per capita formulas, especially those tied to the IRS. With the guidance of the National Oversight Council and the National FNCFS Reform Technical Table, the complainants and Canada must work towards a population framework within the first three years of the FNCFS Reforms, such as a First Nations-led census, to estimate the actual population served.

Rationale:

- Constitutional Provisions
    - *Constitution Act, 1982*, ss 35, 52(1), being Schedule B to the *Canada Act 1982* (UK), 1982, c 11.
    - *Constitution Act, 1867* (UK), 30 & 31 Vict, c 3, s 91(24), reprinted in RSC 1985, Appendix II, No 5
- Legislation
    - *Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, c. 24
    - *United Nations Declaration on the Rights of Indigenous Peoples Act*, SC 2021, c 14, Annex, Article 32
- CHRT Decisions/Jurisprudence
    - 2016 CHRT 2 at paras 52–58
    - *Dickson v Vuntut Gwitchin First Nation*, 2024 SCC 10 at paras 363 and 368 (per Martin and O'Bonsawin JJ)
    - *Corbiere v Canada (Minister of Indian and Northern Affairs)*, [1999] 2 SCR 203 at para 19
    - *Reference re An Act respecting First Nations, Inuit and Métis children, youth and families,* 2024 SCC 5, at paras 60, 63, 65, 66, 107
- Research and Evidence
    - October 3, 2025 direction from the Panel regarding the scope of the complaint
    - Indian and Northern Affairs Canada, "First Nations Child and Family Services National Program Manual" (May 2005), at p 51

- Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
  - Population - IRS population by Band (p 35)
  - Changes in population size impact service delivery. Population and projections should use the Indian Registry Service (IRS) by Band. See Table 35 (p 116) for projected population growth
- NAC First Nations Caucus: Draft Phase 3 Recommendation Discussion Guide (March 2024), at pp 18–19
  - Non-status children must be included in the population count because they are considered part of the community vis a vis the family living on-reserve (e.g. some family members are eligible for status, and some aren't). First Nations will serve the children in the community regardless of status.
  - Service population extends beyond those who live in community at the moment, e.g. those who have moved away for various reasons but still remain part of the community. This is needed to promote connections.
  - IRS based population creates conditions for discrimination.
- EngageFirst Management Consultants, "Study of Budget Needs and Funding in the Amended Draft Agreement for Long Term Reform of FNCFS Program: Final Report" (May 2025), at pp 27, 35–37

Insurance and Liability Coverage

Canada shall provide sufficient funding to ensure FNCFS service providers including FNCFS Agencies are able to purchase adequate liability insurance.

Canada will be the insurer of last resort for all First Nations Child and Family Services, their employees, agents, and advisors (including Elders, Knowledge Keepers, and youth) when the First Nations Child and Family Services provider is unable to access insurance or access adequate levels of insurance to safeguard against tort actions or other claims arising from good-faith actions or decision making.

Rationale:

- Research and Evidence
  - Alexander Holburn Beaudin & Lang LLP, "Legal Opinion to IFSD" (31 August 2018), at p 6
    - "Notwithstanding a mandatory insurance coverage provision in a

provincial delegation agreement, each of the provinces is subject to the non-delegable duty doctrine, which provides that a party upon whom the law has imposed a strict statutory duty to do a positive act cannot escape liability simply by delegating the work"

- Similar logic applies at the National level

Emergency Plan Funding

Canada shall fund First Nations child and family service providers to develop and execute emergency response plans specific to children, youth, young adults and families in coordination with affected First Nations. These plans will contain measures to prevent emergencies and mitigate harm related to unforeseeable events beyond the service providers control such as:

a. actions of military, naval, or civil authority, the King's or a public enemy, war, revolution, political disturbance, and terrorism;
b. civil disturbance;
c. expropriation, acts of restraints of a governmental body or authority, and failure to obtain a requisite permit or authorization from a governmental authority by reason of any statute, law, or Order-In-Council, or any regulation or order passed or made pursuant thereto or by reason of the order or direction of any administrator, controller, or board, or any governmental department or officer or other authority, or by reason of not being able to obtain any permission or authority required thereby;
d. unusual delay by common carriers;
e. sabotage, rebellion, vandalism, riot, blockade, insurrection, strike, lockout, and explosion;
f. power failure and non-availability of labour, materials service, equipment, goods, or utility
g. epidemic and quarantine including substance misuse;
h. fire;
i. pandemics; and
j. significant class action payments to vulnerable people as a result of Canada's conduct.

Canada shall provide sufficient and additional resources, including funding, to prevent and respond to unforeseeable events.

Rationale:

- Research and Evidence
    - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
        - Emergency Fund – 2% of the baseline budget (p 35)
            - Recommendations summarized on p 335
    - Report of the Auditor General of Canada, "Emergency Management in First Nations Communities, Report 8, (2022)" at paras 8.13, 8.44, 8.47, 8.67, 8.68.
    - Inter-Agency Standing Committee, "With Us and For Us: Working With and For Young People in Humanitarian and Protracted Crises", UNICEF and the Norwegian Refugee Council for the Compact for Young People in Humanitarian Action, (2020) online, at pp 34–39, 100–103

Funding at Actuals or with Actuals as a Backstop

Additional funding will be required in the following areas:

i. capital, maintenance, and capital replacement (actuals)
ii. First Nations representative services (actuals)
iii. post-majority services (including reunification services), supports, and products (actuals, to provide the range of services identified by the National FNCFS Technical Table and Regional Technical Tables, and not the narrower range of services presently approved under ISC Operational Bulletins)
iv. development of new FNCFS Agencies (actuals)
v. regional and national technical secretariats (actuals)
vi. planning funds (to achieve substantive equality for those affected by Directive 20-1 until 2016 or were not receiving FNCFS funding pursuant as of 2016 or later) (actuals as a backstop)
vii. funds for special circumstances (e.g., costs for very high needs of children in care) (actuals as a backstop with limited ISC discretion, as constrained by the purpose and principles of the Loving Justice Plan and CHRT orders)

IFSD's recommended budget framework does not include a funding methodology for post-majority services or First Nations representative services, both of which will be funded at actual costs. The list above similarly includes other expenditures that, due to a lack of reliable data, will be funded at actuals, or for which actuals will be used as a backstop. Any amounts exceeding the percentage of the baseline budget allocated for planning funds

(5% for results and data) and special circumstances (3% for maintenance allocation) will be funded at actuals to account for the uncertainty inherent in governance and predicting the costs required to care for children with complex needs. In addition, the development of new FNCFS agencies will be funded at actuals for a minimum of five years, as explained above, to allow new agencies the time required to build sufficient capacity. The at-actuals funding model will be maintained until the first public review of the reformed FNCFS, to facilitate necessary adjustments.

Rationale:

- Research and Evidence
    - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
        - Capital, maintenance and capital replacement
            - Table 42 (pp 121–122) provides the assumptions of the bottom-up capital calculations; Table 43 discusses asset types (p 122)
            - Full analysis regarding capital funding (pp 233–242)
        - First Nations representative services
            - Appendix B3 (pp 215–220) provides a breakdown of costs for First Nations Representative Services
        - Post-majority services, supports and products
            - Estimations of costs of post-majority supports (pp 225–227)
            - Development of new FNCFS Agencies
            - Directive 20-1 recognized that service providers would require time to be able to take on services (see Directive 20-1, section 6.4: "The expansion of First Nations Child and Family Services (FNCFS) will be gradual as funds become available and First Nations are prepared to negotiate the establishment of new services or the takeover of existing services"). Directive 20-1 contemplated multiple ramp-up phases for a new service provider: pre-planning, planning, and start-up (see Directive 20-1, section 7).
        - Regional and national technical secretariats
            - An expert roundtable of First Nations child and family services (FNCFS) leaders, practitioners, and academics (First Nation, Indigenous, and non-Indigenous) worked with IFSD to prepare recommendations on a First Nations-led Secretariat in FNCFS.

The call for the body has been documented by IFSD in its work since 2018 with FNCFS providers (p 43)

- Pages 366–456 provides a paper describing the rationale, mandate, structure and cost of the secretariat.

- Planning Funds
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025):
    - Results and data collection – 5% of the baseline budget
      - Allocation to support data collection and analysis. Data is essential for control and improved decision-making, in particular to allow for early warnings or signs of challenges and to highlight successes (p 35).
  - NAC First Nations Caucus: Draft Phase 3 Recommendation Discussion Guide (March 2024), at p 27: Consensus is for 5%
- Special Circumstances
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
    - Maintenance allocation – 3% of baseline budget (pp 35, 106 and 110)

- Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 3,4,5,8.

D. Measure: Funding for Regional Organizations, Agencies and Technical Secretariats

Implementation Timeline: Upon plan approval

Canada shall negotiate honourably and in good faith with First Nations outside the Ontario FSA and with First Nations national and regional organizations (including, but not limited to, the **National Oversight Council**, the National FNCFS Technical Table, the National FNCFS Secretariat, Regional Technical Tables, and Regional Secretariats) to adequately, and on an ongoing basis, fund regional technical secretariats and a national apolitical technical secretariat to support the delivery of First Nations child and family services to a

standard that enables First Nations, First Nations child and family service providers to discharge their mandates in keeping with the Principles.

Rationale:

- CHRT Decisions
  - 2018 CHRT 4 at para 265
  - 2025 CHRT 80 at para 110
- First Nations-in-Assembly Resolutions
  - 42/2018: *Data Sovereignty and the Ownership, Control, Access and Possession (OCAP)*
- Research and Evidence
  - Funding National Secretariat
    - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
      - An expert roundtable of First Nations child and family services (FNCFS) leaders, practitioners, and academics (First Nation, Indigenous, and non-Indigenous) worked with IFSD to prepare recommendations on a First Nations-led Secretariat in FNCFS. The call for the body has been documented by IFSD in its work since 2018 with FNCFS providers (p 43)
      - Pages 369–456 provides a paper describing the rationale, mandate, structure and cost of the secretariat.

Regional Organizations

Canada shall establish an annual fund to be allocated to Regional Technical Tables and Regional Secretariats (see Chapter 4, above) in a manner directed by the National Oversight Council to build capacity, establish new organizations where no existing entity can assume the Regional Secretariat role, collect and analyze regional child and family services data and support best practices to deliver child and family services in whole or in part, including by providing training.

Rationale:

- Research and Evidence
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025), Appendix K: First Nation-led Secretariat Analysis

Capacity Development for New Service Providers (Agencies and First Nations)

Canada shall fund the development of First Nations and First Nations Agencies. This funding includes but is not limited to the provision of child and family services by First Nations pursuant to their own laws, the establishment of new First Nations Agencies, and expansion of service provision at existing First Nations and First Nations Agencies to include, among other things, the delegation to provide protection services. This funding is intended to enable and provide the necessary capacity to discharge their responsibilities, including pursuant to the applicable child and family services and related legislation and regulations.

Canada shall fund the development of First Nations and First Nations Agencies in a manner that attains long-term positive outcomes for First Nations children and their families and supports First Nations providing services under their own laws to exercise their legislative authority effectively, consistent with the honour of the Crown and with the Crown's fiduciary relationship with First Nations children.

Canada provided prevention funding to unaffiliated First Nations without providing sufficient funding and time to develop and implement those services. This means that there is wide variation in the capacity of unaffiliated First Nations to deliver or expand prevention services to meet the changing needs of their children, youth and families in a manner consistent with the rights of First Nations children, the honour of the Crown, and *An Act Respecting First Nations, Métis and Inuit children, youth and families* and the Tribunal's orders. Capacity funding is required to enable unaffiliated First Nations and new agencies to develop or expand capacity to consult with their communities and experts to design and implement the range of prevention services they self-determine as necessary to meet their needs. Such capacity funding shall be based on actuals for at least five years.

Rationale:

- Jurisprudence
    - *Reference re An Act respecting First Nations, Inuit and Métis children, youth and families*, 2024 SCC 5, at para 63
- Legislation
    - *Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, s 20(2)(c)
- Research and Evidence
    - Directive 20-1 recognized that service providers would require time to be able to take on services (see Directive 20-1, section 6.4: "The expansion of

First Nations Child and Family Services (FNCFS) will be gradual as funds become available and First Nations are prepared to negotiate the establishment of new services or the takeover of existing services"). Directive 20-1 contemplated multiple ramp-up phases for a new service provider: pre-planning, planning, and start-up (see Directive 20-1, section 7).

- IFSD First Nations not affiliated to a First Nations child and family (FNCFS) services agency: Defining a baseline (4 April 2024)
- EngageFirst Management Consultants, "Study of Budget Needs and Funding in the Amended Draft Agreement for Long Term Reform of FNCFS Program: Final Report" (May 2025), at pp 4, 19, 26, 47 and 50
- Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 4,5,6,7,8.

First Nations Child & Family Wellbeing Research Fund

Canada shall establish a First Nations-led national research fund focused on First Nations child and family wellbeing. The fund will support research capacity to: identify and address the structural drivers of contact with child protection services among First Nations families; distinguish preventable service failures from protection concerns; assess whether long-term reforms address structural drivers; and demonstrate sustained compliance with Tribunal orders.

The research fund will support First Nations-led efforts to ensure policies are supported by adequate evidence and prevent the persistence of discriminatory outcomes. The fund will support First Nations-led efforts to:

1. identify and prioritize research focuses related to child and family well-being;
2. develop First Nations–specific solutions, integrating Indigenous Knowledge and leading research;
3. explore emerging and under-examined areas of inquiry that address First Nations-specific challenges through creative, culturally grounded approaches that centre Indigenous worldviews and responsibly leverage new technologies;
4. develop a First Nation approach to collect data and information about child and family wellbeing; and
5. develop a robust evaluation and accountability framework to ensure discrimination is eliminated and does not re-emerge through policy design, implementation, or system practices.

Rationale:

- CHRT Orders
  - 2016 CHRT 16 at paras 150–152
  - 2018 CHRT 4 at paras 259, 264
  - 2022 CHRT 8 at paras 74–86
- Legislation
  - *Act respecting First Nations, Inuit and Métis children, youth and families*, S.C. 2019, s 20(2)(c)
- Research and Evidence
  - Canada Foundation for Innovation, "*Research in Canada, for Canada: A Value Proposition*" (September 2023)

E. Measure: Transition from Funding at Actuals

Funding at actuals as articulated in Chapter 6, Measure C, will continue for a minimum of three years or until such time as the Public Funding Review recommendations are implemented.

ISC shall reimburse claims for FNCFS Agencies' actual costs for intake and investigations, legal fees, building repairs, child service purchase, and small agency costs incurred in the last fiscal year of funding at actuals that are submitted on or before September 20 of the following fiscal year. Where funding requests are received after September 20, ISC will consider any exceptional circumstances relating to the late submission.

For the Initial Five Years, First Nations, except for First Nations in Ontario, shall have access to reimbursement for their actual costs for First Nation Representative Services equivalent to the actual costs available pursuant to 2018 CHRT 4, including but not limited to:

a. salaries, benefits, workplace safety and costs to support the delivery of child and family services;

b. human resources recruitment, training or professional development;

c. paraprofessional and professional fees;

d. general delivery costs such as non-medical travel costs, accommodations, transportation or meals for First Nations Representatives to support the

delivery of services;

e. delivery costs and family support services including prevention services and services for those involved with the child and family services system; and

f. overhead, administrative costs (office rent, computer, information technology, utilities, insurance to help support FNRS services).

FNCFS service providers must be provided with a model budget of their funding allocation under the Reformed Funding Approach for their assessment and approval and will determine the timing of their transition to the Reformed FNCFS, in consultation with their First Nations, when they are ready. A minimum of 12 months must be provided to ensure adequate time to transition.

Data from the First Nations Canadian Incidence Study on Reported Child Abuse and Neglect (2019) indicate the significant and interdisciplinary needs of First Nations children, youth and families coming to the attention of child and family services. Funding at actuals will ensure these needs are met while creating a costing track record to inform future funding approaches.

The transition to the Reformed Funding FNCFS will take several years and additional resources, requiring Canada to fund and implement transition measures as recommended in IFSD reports on First Nations Child and Family Service Agencies and First Nations not affiliated with a First Nations agency. Transition will take approximately 3–5 years for FNCFS Agencies and 5–10 years for First Nations without existing capacity and new agencies to deliver services.

Rationale:

- CHRT Decisions
  - 2018 CHRT 4 at para 421
- Research and Evidence
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
    - Based on collaborator feedback, existing service providers will be better positioned to implement changes in 2 to 5 years, whereas those without existing services can take 10 to 15 years for operational stability. Service providers are shaped by their contexts and are distinguishable through several characteristics, e.g., remoteness, operational sophistication, size of the population served, etc. (p 56)
    - Challenges to transition described in p 62, Figure 19.

        - Figure 15, gives a chart on the transition readiness of several actors (p 55)
    - NAC First Nations Caucus: Draft Phase 3 Recommendation Discussion Guide (March 2024), at pp 1, 5
        - First Nations in consultation with the Agencies decides if/when they will move to the reformed approach.
        - Consider First Nations and Agencies being provided with budgets with both scenarios to inform decision making.
    - Barbara Fallon, Rachael Lefebvre et al, "First Nations Canadian Incidence Study on Reported Child Abuse and Neglect", (2019)
    - Directive 20-1
        - The Directive recognized that service providers would require time to be able to take on services (see Directive 20-1, section 6.4: "The expansion of First Nations Child and Family Services (FNCFS) will be gradual as funds become available and First Nations are prepared to negotiate the establishment of new services or the takeover of existing services"). Directive 20-1 contemplated multiple ramp-up phases for a new service provider: pre-planning, planning, and start-up (see s. 7).

Post-Majority Supports

Post-majority support services shall continue at their actual cost pursuant to 2022 CHRT 8 until such time that effective evidence informed funding mechanism, based on services needed to ensure substantive equality, is provided by a body appointed by the National Oversight Council and approved by the Tribunal consistent with the Purpose and Principles.

Canada must continue to fund post-majority supports for First Nations young persons from care (including those aging out of care and those reaching the age of majority while subject to youth agreements) from the age of majority up to and including age 25 at actual cost, consistent with 2022 CHRT 8 and Assembly of First Nations Resolution 84/2023.

Post-majority support funding following the Initial Five-Year term shall be determined in accordance with the Public Funding Review but shall not be less than the highest amount received in any given fiscal year. That approach shall align with the principles of needs-based funding, be culturally appropriate and shall recognize the distinct realities of First Nations.

Rationale:

- CHRT Decisions
  - 2022 CHRT 8 at paras 41–60
- Research and Evidence
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025), at pp 225–227
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 5, 8.

Capital Funding

Capital funding and all related requests shall continue at actual cost for a minimum of five years, pursuant to 2021 CHRT 41, until such time as an effective capital funding mechanism, which includes planning, building, operations, and recapitalization is developed based on evidence from First Nations and First Nations-authorized service providers, is reviewed by First Nations capital and service delivery experts, and is approved by the National Oversight Council and by the Tribunal.

Any new capital funding mechanism must be evidence based and consistent with the purpose and principles of this plan, the honour of the Crown, cultural appropriateness, and substantive equality, taking into full account the distinct circumstances of the child's First Nation and community.

The capital funding mechanism cannot create delays, gaps or denials that perpetuate the discrimination that Canada was ordered to stop.

Canada must undertake positive efforts to ensure the prompt completion of projects and shall not unreasonably delay capital projects due to administrative procedures, particularly in rural and remote regions where building supply routes are restricted.

A First Nation or FNCFS Agency's determination of their need shall be presumed valid.

Canada has the burden of proof to demonstrate, with evidence, that the proposed capital project is not needed, or only partially needed, for the delivery of child and family services.

If Canada's position is that it will not fund the full cost of a capital project that a First Nation or FNCFS Agency determined that it needs to deliver child and family services, or if it requires more than thirty business days from the receipt of a request to make a determination, Canada must inform the First Nation or FNCFS Agency in writing why the project is being delayed, deferred, or denied in whole or in part. A request that outstanding

for more than thirty business days will be deemed denied and referred to the National FNCFS Technical Table and the National Oversight Council.

In the event that a DR Mechanism is established as contemplated in Chapter 5, Measure D, any denial of capital funding, in whole or in part, may be referred to the proposed DR Mechanism.

In the event of a dispute regarding capital costs, Canada shall release interim funding to the First Nation and the FNCFS Agency sufficient to ensure that the delivery of child and family services is not interrupted or adversely affected while the dispute is resolved.

Rationale:

- CHRT Decisions
  - 2021 CHRT 41 at paras 142, 174, 184, 213, 294, 475
  - 2025 CHRT 80 at paras 107 and 114
- Research and Evidence
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)

    - Full work up (pp 233–242)
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 4, 5

First Nations Representative Services

Canada shall fund First Nations Representative Services at actual cost until at least 180 days from the time that an effective evidence-based funding mechanism is approved by the body appointed by the National Oversight Council and approved by the Tribunal consistent with the Principles.

Rationale:

- Research and Evidence
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025) at pp 215–220: breakdown of costs for First Nations Representatives
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 3, 10

7. Accountability

What We Heard:

Feedback regarding accountability addressed both Canada's accountability for ending its systemic discrimination in FNCFS, and accountability of First Nations and their FNCFS agencies for prudent management of FNCFS funding. Participants called for an end to Canada's unilateral decision-making—this was a clear and consistent theme. Instead, decisions related to policy and funding (and any aspect of FNCFS) must be made transparently and in consultation with First Nations. All decisions must be clearly communicated to anyone impacted by the decision. After decades of willful and reckless systemic discrimination, there is little trust that Canada will remain accountable. Instead, the view is that Canada will require continuing independent oversight with statutory authority. Suggestions for fulfilling that role included: dispute resolution mechanisms and ombudspersons. Participants also made numerous comments about inter- and intragovernmental accountability and the need for clear mechanisms to prevent jurisdictional and funding gaps.

> *"Staff also noted that accountability requires ISC to communicate clearly and engage First Nations and service providers before developing or implementing policy changes. They emphasized that unilateral decision-making reduces transparency and undermines accountability, and that meaningful engagement must form part of any responsible and accountable funding system."*
>
> *"ISC's history of unilateral decision-making and policy changes without notice has damaged trust and created instability in service delivery. Accountability, they emphasized, cannot rely solely on policy commitments—it must be legally enforceable and transparent."*
>
> *"Participants supported establishing a First Nations-led ombudsperson or commissioner with legal authority to monitor compliance, investigate breaches, and hold Canada accountable."*
>
> *"Accountability must include clear mechanisms that prevent jurisdictional and funding gaps between federal and provincial systems from continuing to harm First Nations families."*

With respect to the accountability of FNCFS funding recipients, participants noted that current reporting requirements are paternalistic, overly burdensome, repetitive, and punitive. The

burden of reporting can divert resources from service-delivery to administrative tasks with little perceived value. This should be replaced with outcomes-based reporting focused on metrics that are useful and relevant to First Nations and their service providers. Some participants suggested narrative reporting supported by independent financial audits. Others focused on reciprocal accountability where funding recipients report on their use of funds and Canada, in turn, must demonstrate that funding flows appropriately and is sufficient to meet the needs of First Nations children and families. Finally, participants emphasized that strong relationships between First Nations leadership and their child and family services agencies are essential for accountability to children and families.

> *"ISC must be held accountable for ensuring that funding for First Nations child and family services is sufficient, timely, and responsive to agency and community needs. They stated that accountability mechanisms should require ISC to operate within an outcomes-based model, in which ISC must demonstrate that funding is flowing appropriately and that the needs of agencies—and therefore the needs of children and families—are being met."*
>
> *"Identify a high level outcomes framework agreed-upon between ISC and First Nations in the region. From this, Nations can adapt individual indicators to suit their priorities, services, and culture."*
>
> *"Reports should highlight progress, challenges, and outcomes, and include the voices of First Nations children, youth, and families."*

A. Measure: ISC's Discretion to be Constrained by the Principles in this Plan

As the primary funder of FNCFS activities outlined within this plan, Canada's capacity to realize the projected outcomes will depend on its exercise of discretionary decision-making authority as described herein (for example, in responding to actuals-based requests, funding capital costs, and providing "special circumstances" funding). The Plan also grants Canada the discretion to implement proposed measures including appointing an Ombudsperson, establishing a dispute resolution mechanism, and allocating implementation funding into a Special Purpose Allotment.

To the extent that Canada retains discretionary powers under the Loving Justice Plan, Canada must exercise its discretion in a manner consistent with the purpose and principles outlined in the Loving Justice Plan, as well as the minimum standards in the

Tribunal's orders and its related legal obligations to First Nations and First Nations children.

Rationale:

- Jurisprudence
  - *Cully v Canada (Attorney General)*, 2025 FC 1132 at paras 5, 35, 55, 84
  - *Powless v Canada (Attorney General)*, 2025 FC 1227 at para 45 (aff'd in 2025 FCA 226 at para 9)
- Research and Evidence
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 3, 10

B. Measure: Review of Material Changes to Funding Arrangements

Any material changes in respect of fiscal arrangements respecting the funding of provision of child and family services must, in collaboration with affected First Nations, be reviewed for adequacy of the quantum and method of funding no fewer than once every three years.

The Minister will in consultation with the National Oversight Council publish an annual report on its compliance with the terms of these reforms and publicly and prominently post the report and any response to the annual report that the National Oversight Council wishes to make.

Rationale:

- See transparency principles in Chapter 3.

C. Measure: Funding Arrangements with Provincial/Territorial Governments Providing Services to Unaffiliated First Nations

There are approximately 172 unaffiliated First Nations located largely, but not exclusively, in British Columbia and the Yukon. These First Nations are united in their love and dedication to their children and very diverse in terms of context, needs and existing capacity to deliver child and family services. Unaffiliated First Nations shall be supported to choose the child and family service delivery model that best suits their needs and context.

There are also partially delegated First Nations child and family service agencies that rely on the provinces for the delivery of certain aspects of child and family services.

Given the inter-relationship between protection and prevention services, unaffiliated First Nations and partially delegated FNCFS Agencies and their affiliated First Nations require detailed and accurate information regarding the protection services being provided by provincial and territorial service providers, the terms and funding on which those services are being provided, and the outcomes to which the federal and provincial/territorial governments have agreed.

Canada must, in consultation with affected First Nations, ensure its agreements with provinces/territories and others to provide child and family services achieve the Purpose and Principles of these reforms. First Nations will be provided resources sufficient to participate in such consultations and will have access to Regional Tables and Regional Secretariats for assistance in performing this work.

Rationale:

- CHRT Decisions
  - 2021 CHRT 12 at para 35
- Research and Evidence

  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendations 3, 10

D. Measure: Public Reporting

Implementation Timeline: Within 30 days of plan approval

To ensure access to information relevant to the violation of rights and remedies, Canada shall publish on a prominent and accessible platform the causes and conditions resulting in Canada's discrimination substantiated in 2016 CHRT 2 and related orders, any remedies Canada has implemented to address the causes and conditions and associated outcomes.

Rationale:

- CHRT Decisions
  - 2017 CHRT 14 at paras 111–112
  - 2018 CHRT 4 at paras 391–394

E. Measure: Data Collection

Canada shall ensure that it provides the National Secretariat and Regional Secretariats with all data collected regarding First Nations child and family services, nationally (to the National Secretariat) and in each region (to the Regional Secretariats), calibrated to the Measuring to Thrive framework to ensure that funding is needs-based. Such data shall be collected in an accountable and ethical manner, in keeping with the principles of Ownership Control, Access, and Possession (OCAP).

Rationale:

- CHRT Decisions
  - 2018 CHRT 4 at para 265
- First Nations-in-Assembly Resolutions
  - 42/2018: *Data Sovereignty and the Ownership, Control, Access and Possession (OCAP)*
- Research and Evidence
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025) at pp 350–353: Rationale for measuring to thrive indicators
    - Case Studies of use of Measuring to Thrive framework from a pilot project (Figures 47, 49, 50) (pp 139, 142, 144)
  - EAC FSA Recommendations (15 December 2025), Recommendation #8, p 5
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation 3, 10

8. Regional Variations

What We Heard:

Engagement participants strongly supported the need for regional variations: long-term reforms must address local and regional realities, including: geography, population size, specific needs, transportation barriers, service availability, and existing capacity and infrastructure—or lack thereof.

The engagement reemphasized the criticality that funding and reform must reflect specific cultural and linguistic needs, and respect diverse First Nations governance and service delivery models.

> "*The unique needs in our region cannot be addressed through standardized funding or reporting templates. Reform must be flexible, Nation-driven, and reflective of the realities of remote communities, ensuring that every child and family no matter where they live has access to culturally safe, consistent, and life-saving supports."*
>
> *"The realities of remoteness and poverty profoundly shape service delivery and the well-being of children and families. These factors increase operational costs, limit access to resources, and constrain the agency's ability to deliver prevention-focused and family-centred services."*
>
> *"Long-term reform must ensure that funding and regional support are scaled for equity, not size, so that every child, regardless of their community's population, receives consistent and culturally grounded care."*

There was also strong support for establishing FNCFS technical hubs that support community accountability, connection-building and coordination. Some participants described existing hubs in their regions. Others remarked on the absence of such organizations in their regions, but they did see value in the potential role to support their capacity and strengthen coordination.

> *"The absence of such a hub means that much of this work is done "off the side of the desk," creating inconsistent capacity and limiting our ability to respond collectively to regional challenges or engage effectively in national reform processes. A First Nations–mandated technical hub would significantly strengthen implementation, accountability, and sovereignty-based decision-making across the region."*

Participants highlighted training; recruitment and retention/workforce development; and increased opportunities for knowledge, information and culturally relevant resource sharing as key areas where regional support would be beneficial.

> *"We need to focus on workforce development by recruiting and retaining a more diverse workforce that reflects the children and families we serve. This includes training and support for professionals who are already in the field, ensuring they have the cultural awareness to understand and address the specific needs of these populations"*

To support negotiation and implementation of federal/provincial/territorial funding arrangements, the engagement identified a number of capacity building and regional support needs. This included specific capacity building funding, technical, legal and negotiation support— with recommendations for regional support for accessing shared services, coordination and consultation assistance.

Furthermore, for successful negotiations for regional variations, the participants highlighted the importance of establishing a federal-provincial coordination mechanism; having a willing, transparent partner at the table; and the need to prevent interruption to service delivery.

> *"First Nations in our region need dedicated negotiation capacity, including legal, financial, and policy expertise that is mandated by and accountable to our Nations—not federal systems."*

A. Measure: Negotiation of Regional Variations

Implementation Timeline: Within six months of plan approval

Canada is required to negotiate, in good faith and in line with the honour of the Crown, regional variations with First Nations and Agencies to identify modifications that meet or exceed the Reformed Funding Approach and to address variations that require accommodation to address ongoing discrimination.

This plan is mindful of the experience of ISC's "jurisdiction-by-jurisdiction" approach with the EPFA, pursued with "ready and willing First Nations and provincial/territorial partners" (2016 CHRT 2 at para 443), which incorporated many of the failings of Directive 20-1 and did not contain measures or mechanisms to address changing circumstances after the EPFA had been implemented. Instead, this plan takes the same approach as

past Tribunal orders in this matter, setting a strong core approach to FNCFS reforms that can be varied to meet distinct regional needs and circumstances.

As a result, these regional variations will be supported by the Purpose and Principles outlined in these reforms, consider inequities due to the prior funding model, be sufficiently responsive to emergencies and ensure measures that are culturally appropriate and respond to the distinct community circumstances of the region.

Unless it has been advised that the relevant First Nation or region wishes to negotiate a new approach Canada must also continue to implement existing regional approaches that are:

(a) Effective;

(b) Supported by the relevant First Nations; and

(c) Consistent with the long-term reform measures in this plan and/or the CHRT orders.

To ensure that negotiations are conducted in good faith, Canada must report, on a monthly basis, to the National Oversight Council on the progress of regional agreement negotiations over the first six months of the Tribunal's FNCFS long-term reform order to ensure that negotiations are conducted in good faith.

In any region for which regional plans are not submitted by Canada to the National Oversight Council by six months following the Tribunal's FNCFS long-term reform order, that region may submit a plan detailing the regional variations required, to be raised by the complainants with the Tribunal as part of the Tribunal's continuing supervision of the first five years of the implementation of this plan.

Rationale:

- CHRT Decisions
  - 2016 CHRT 2 at paras 278–293, 311, 330–331, 386–387, 425, 443, 458, 461, 463
  - 2018 CHRT 4 at paras 236 and 413
  - 2021 CHRT 41 at para 545
  - 2025 CHRT 80 at paras 18, 26, 110, 113
- First Nations-in-Assembly Resolutions
  - 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clauses 1(h) and 1(k)

- Research and Evidence
    - Assembly of Seven Generations, “Recommendations for the Long-Term Reform of FNCFS: Literature Scan”, Recommendation 3,4,5, 6,8,10 and p 7

B. Measure: Canada’s Obligation to Develop Regional Plans

Consistent with UNDRIP, Canada is required to meaningfully support affected First Nations for consultation in the development of federal/provincial agreements and related mechanisms including funding agreements and amendments thereto that affect them and their citizens (see Chapter 7, Measure B). Further, Canada must ensure said agreements ensure that children, youth and families in those nations receive the full enjoyment of *An Act Respecting First Nations, Métis and Inuit children, youth and families* and the Tribunal’s orders.

Consistent with Chapter 7, Measure B (Funding Arrangements with Provincial/Territorial Governments Providing Services to Unaffiliated First Nations), Regional Secretariats shall manage pools of capacity funding to support the development of regional approaches and region-specific capacity building. Regional Technical Tables may assist in developing a capacity building work-plan, while FNCFS Agencies in a region may contribute to the regional pools where sufficient funding is available at the Agency level, and may also become eligible for capacity funding as well depending on regional priorities.

Rationale:

- Legislation
    - *United Nations Declaration on the Rights of Indigenous Peoples Act*, S.C 2021, c. 14, Annex
        - “Recognizing in particular the right of indigenous families and communities to retain shared responsibility for the upbringing, training, education and well-being of their children, consistent with the rights of the child”.
- Jurisprudence
    - *Reference re An Act respecting First Nations, Inuit and Métis children, youth and families*, 2024 SCC 5 at paras 4–5
    - *Gitxaala v British Columbia (Chief Gold Commissioner)*, 2025 BCCA 430 at paras 78, 126–129
- Research and Evidence

- Chart of NCCC Proposals for Resolving Outstanding Issues with the 2024 Draft Final Agreement on FNCFS Long-Term Reform (21 February 2025), Proposal #5

C. Measure: Review of Existing Provincial / Territorial Agreements

Canada must disclose and publish current Provincial/Territorial Agreements on its website within 30 days of implementation of the Reformed FNCFS Approach and publish any amendments or new Provincial/Territorial Agreements within 14 days of being entered into.

Canada shall further ensure that, within 30 days of the Order, affected First Nations are contacted and provided the necessary resources to fully participate in the revisioning of existing Federal-Provincial and Federal-Territorial Agreements, in alignment with the Orders. Where the province will not meet with affected First Nations and Canada to revise existing agreements, Canada shall enter into an agreement with the First Nation to fund services to a standard provided for in the Order.

Canada shall ensure that all Provincial/Territorial Agreements include a provision requiring the provinces/territories to collect and share data with First Nations service providers and the Secretariats on First Nations children, youth, and families calibrated to the Measuring to Thrive framework to ensure that funding is needs-based. Such data shall be collected in an accountable and ethical manner, in keeping with the principles of Ownership Control, Access, and Possession (OCAP).

Such revised agreements must be filed with the Tribunal for its approval and posted publicly.

Rationale:

- First Nations-in-Assembly Resolutions
  - 61/2024: *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*, clauses 1(n)
- Research and Evidence
  - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025): Rationale for measuring to thrive indicators found at pp 350–353
    - Case Studies of use of Measuring to Thrive framework from a pilot project (Figures 47, 49, 50) (pp 139, 142, 144)

9. Reform Indigenous Services Canada

What We Heard:

The feedback from regional engagements indicates that the so-called "old mindset" that created and sustained systemic discrimination remains intact with Indigenous Services Canada.

Participants describe the persistence of top-down, paternalistic approaches that disregard First Nations' expertise and needs. A lack of respect for First Nations cultures, knowledge and ways of being remains prevalent, and ISC makes unilateral decisions, notably around funding and policies, without consideration or accountability of the impact to First Nations.

> *"There is a lack of cultural understanding within ISC that contributes to ineffective interventions, as policies are often applied without considering the unique cultural and community contexts of First Nations"*

> *"The rigidity of ISC's policies often prevents communities from developing community-driven solutions. Indigenous peoples have long advocated for child welfare systems that are rooted in cultural practices and community-led care, but ISC frequently bypasses or undermines this approach"*

Participants noted the lack of accountability measures as a key area of concern. Despite ISC having high expectations for agencies and communities, including extensive administrative and reporting requirements, ISC do not maintain the same level of accountability for itself. Agencies and Nations experience lengthy wait times on applications and responses to correspondence; challenges with ISC staffing and regional structures; miscommunication; and jurisdictional barriers.

> *"Our community has faced persistent challenges working with ISC, rooted in long-standing patterns of inconsistent decision-making, bureaucratic barriers, and a failure to uphold its own stated principles. ISC routinely imposes strict accountability and documentation requirements on First Nations while not holding itself to the same standards"*

> *"ISC also engages in jurisdictional buck-passing, refusing services by claiming another program should fund them, even when no such program is accessible to families in remote communities"*

Instead of reforming the department, some participants argued that ISC should be fully dismantled. Other recommendations focused on the need for oversight. Permanent, independent and legally binding mechanisms were identified as needed to sustain reforms, measure outcomes, and uphold the rights of First Nations children and families.

> *"Real change requires structural reform and enforceable accountability."*

> *"A permanent, independent oversight mechanism is essential to sustain accountability, measure outcomes, and uphold the principles of substantive equality and self-determination in child and family services."*

Participants shared potential indicators of meaningful departmental reform, including: consistent behavioural shifts grounded in respect, transparency, accountability, rights-based and relational approaches. This would require a significant departure from current ways in which ISC engages with First Nations. Participants also indicated that ISC would need to acknowledge their past and ongoing discriminatory practices, including public recognition of the harm caused by systemic racism embedded within policies and operations.

> *"Shift its relationship from compliance oversight to trust-based partnership and shared accountability"*

> *"A shift from resistance to receptivity by encouraging openness to change, active listening, and genuine engagement with First Nations perspectives and solutions"*

Systems-level indications around accountability were also of high importance to participants. Transparent and inclusive decision-making; and meaningful action by ISC to implement recommendations, orders and commitments with public reporting was emphasized as needed. In tandem with this, was the reiteration that funding commitments and structures must be predictable, timely, and based on need; along with the removal of systemic barriers, including challenges with coordination across governments, and the decolonization of policies and procedures.

> *"A reformed ISC would no longer impose top-down decisions from bureaucrats in Ottawa but would instead operate from a model where decisions, priorities, and resource allocations come directly from First Nations communities."*

> *"ISC will only be seen as having corrected its old mindset when its actions—not its statements—demonstrate a fundamental shift away from colonial, paternalistic*

decision-making toward true partnership, accountability, and respect for First Nations sovereignty."

Well-being outcomes for children, youth, family and communities were also largely underscored as the foundation to knowing when reform has been successful and discrimination has ended.

> *"Success will be defined not by compliance or bureaucratic efficiency, but by the well-being of Indigenous children and the strength of their families and Nations."*
>
> *"Safety being seen through the speaking of languages, the dancing, the singing. The ability for youth to feel passionate and inspired… to live out their dreams and their goals…they need to feel inspired to move forward and get the good work done."*

There was also strong support for establishing a child well-being commissioner or ombudsperson role guided by First Nations cultures, laws and teaching and focused on child rights. Participants emphasized the importance of the ombudsperson as an independent body, separate from ISC.

A. Measure: Comprehensive Reform of ISC

Implementation Timeline: Within three months of plan approval

Reform of ISC is required to address systemic discrimination and the "old mindset" identified by the Tribunal in order to prevent the recurrence of discrimination in the provision of FNCFS, as found by the Tribunal.

Pursuant to 2022 CHRT 8, an Expert Advisory Committee (the EAC) has been formed to oversee the implementation of an evidence-informed work plan to prevent the recurrence of discrimination, and that Canada shall undertake reasonable measures to begin implementing the workplan.

Canada shall provide sufficient and sustainable funding for the EAC to discharge its mandate as approved by First Nations.

The EAC shall operate in an independent, public and transparent manner to respond to the reasons and guidance of the Tribunal in 2022 CHRT 8 and previous rulings including 2016 CHRT 2. The EAC shall develop its own Terms of Reference, which shall be public.

The EAC shall be independent and provide reports directly to Chiefs in Assembly and to the Tribunal on its work and views of Canada's risk of recidivism and the sufficiency of

safeguards to detect and address discrimination.

The work of the EAC in reforming ISC and developing accountability measures within ISC must itself be transparent and independent.

Canada shall implement the EAC's recommendations made in its Summary Report for Spring 2022 to Spring 2024 relevant to FNCFS, being to:

> (1) draw on the EAC's expertise on the design and implementation of an independent third-party evaluation, immediate and long-term reform measures for ISC, and "cultural competency" policies, education and training;
>
> (2) shift language from "cultural competency" to "cultural humility" for ISC's employee training;
>
> (3) develop a critical incident reporting and monitoring system for Jordan's Principle;
>
> (4) support the creation of an external Ombudsperson to provide accountability and oversight;
>
> (5) support and endow Indigenous Youth Organizations;
>
> (6) Include Assembly of Seven Generations in the Third-Party Evaluation; and
>
> (7) Implement the EAC's recommendations on the "Honouring our Journey" survey and on ISC's development and implementation of its own Human Resources division.

Canada shall also implement the EAC's recommendations made in its December 2025 Report entitled "FSA Recommendations", being to:

(1) replace annual parliamentary appropriation requirements with guaranteed multi-year statutory funding;
(2) Establish a binding Indigenous-led joint governance body with decision-making authority;
(3) Implement mandatory transparency requirements for all ISC funding decisions;
(4) Remove proposal-based and competitive funding mechanisms;
(5) Resolve structural deficiencies created by layering the 1965 Canada-Ontario Agreement;
(6) Reform prevention funding to align with First Nations-Defined needs and conditions;
(7) Strengthen the Program Assessment Process to close discretionary loopholes;
(8) Embed Indigenous data sovereignty and Indigenous-defined accountability

throughout the FSA;

(9) Remove all clauses allowing ISC to unilaterally revise governance, performance, or accountability appendices;

(10) Recognize and formally include the National Oversight Council in FSA governance; and

(11) Strengthen dispute resolution mechanisms to align with accountability standards.

Rationale:

- CHRT Decisions
  - 2022 CHRT 8 at para 172 (Order #6)
- Research and Evidence
  - OHRC, "Chapter 9 – Accountability and monitoring mechanisms: gaps in data management, performance review, and public transparency"
    - The lack of an independent monitoring/evaluation system for assessing discriminatory behavior indicated "a lack of accountability" (here, in the context of anti-black racism amongst police officers).
  - Global Affairs Canada, "Advancing Human Rights" (24 January 2024)
    - Importance placed on transparency and accountability in advancing human rights, as evidenced by GAC's tool for evaluating funding applications for Canadian funding on international development initiatives.
  - Expert Advisory Committee for the Reform of Indigenous Services Canada, "Summary Report of Activities, Observations and Advice" (Spring 2022 to Spring 2024)
  - Expert Advisory Committee FSA Recommendations (15 December 2025)
  - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation 3, 10

10. Research and Outcome Data

What We Heard:

Participants provided widespread support for data collection and program evaluation to guide system improvement and to ensure that the needs of children, youth, families and communities are met. There is also clear support that this work should be focused on outcomes—particularly on outcomes that matter to First Nations.

While research was identified to be of significant value, participants shared that there is a lack of capacity, tools and funding to collect meaningful outcome data, to effectively evaluate the impact of child and family services, and ultimately to inform policy and funding decisions. Participants described the high cost of data systems, overstretched service-delivery staff and access to information (including at the provincial level) as additional key challenges.

> *"Our region currently has very limited capacity to collect or report non-identifying child outcome data. We do not have a culturally appropriate evaluation framework, dedicated staff time, or the technical systems needed to gather consistent information—especially in remote communities with unreliable internet access."*

> *"We currently have very limited capacity to analyze data at the community or service-provider level. Staff are focused on frontline work, and there is no dedicated analyst, regional data hub, or culturally grounded framework to guide interpretation of information. Because our datasets are inconsistent and often incomplete, we are not able to transform raw information into meaningful insights that could inform policy, practice, or long-term planning."*

To build research and data collection capacity, participants called for dedicated data and evaluation staff, training and mentorship in data literacy, shared regional data systems and First Nations-led structures that align with community priorities and cultural frameworks. The importance of dedicated, sustainable funding for this work—without drawing on funding for service delivery— was also emphasized.

> *"Enhanced collaboration and capacity-building in this area would ensure that evaluation is not seen as a compliance exercise but as a shared learning process that guides service improvement and promotes community-driven accountability."*

> *"Communities would benefit from practical, user-friendly tools and technical support to help measure needs and outcomes in ways that reflect local realities and First Nations worldviews"*.

Participants expressed support for First Nations-led, independent secretariats, to support data collection and analysis— particularly at the regional level. This would include support for accessing resources, training and tools; and assistance with coordination— an area that many shared challenges with.

Participants also shared that it is critical for data collection and analysis processes to be transparent, accountable and First Nations-led, highlighting the need for culturally grounded indicators and frameworks. The importance of respecting data sovereignty and the principles of ownership, control, access, and possession (OCAP) was also raised as a key need which regional and national secretariats could support.

> *"A regional secretariat, led by First Nations, would help gather consistent non-identifying data, identify best practices, and keep governments accountable"*

> *"A regional technical body could assist with developing common indicators, aligning data standards, and strengthening community capacity, while respecting OCAP® principles and community control."*

Limited capacity for (non-identifying) data collection and analysis were also identified as challenges—participants noted the need for specific funding for resources and dedicated positions to support this work; and raised issues around barriers to data collection and the need for inter-jurisdictional coordination. The importance of OCAP-aligned, community owned data system(s) and upholding data sovereignty was also underscored.

A. Measure: Periodic Reviews to Adjust Funding Based on Needs

Implementation Timeline: Within three years of Reformed FNCFS Approach

The Reformed Funding Approach will include a review mechanism that allows FNCFS service providers to adjust their funding, once transitioned, calibrated to need, as defined by First Nations. The review mechanism will allow for adjustments needed in emergency and urgent situations as well as longer term adjustments based on community health and well-being. It will also address any recurrence of discrimination.

Public Funding Reviews are to be completed every five years by an independent, non-political expert who is qualified in public finance and has experience working on matters relating to First Nations and First Nations child and family services, recommended by the

National FNCFS Technical Table and selected by the National Oversight Council. The Public Funding Review will ensure the Reformed Funding Approach, and ISC's related conduct, are meeting the needs of First Nations children and is adequate for First Nations service providers to meet statutory child and family services requirements. ISC will be required to provide aggregate data to the qualified expert for the purposes of conducting this review within 10 days of any data request and will fully cooperate with the review. First Nations and First Nations service providers, including FNCFSA and non-affiliated FNs, will be consulted in the funding review. Data collected through Measuring to Thrive and other evidence will be considered in the Public Funding Review.

The draft report resulting from the Public Funding Review will be provided to First Nations and FNCFS experts, including the National FNCFS Technical Table and Regional Technical Tables, for expert review and comment before being presented to the First Nations in Assembly and First Nations not represented by the AFN in both official languages for approval. Canada will table the report resulting from the Public Funding Review in Parliament and will publicly and specifically respond to any recommendations within 60 days of the final funding report being approved by First Nations in Assembly. Canada will undertake positive measures to implement the recommendations and is obligated to implement recommendations to remediate the recurrence of discrimination.

Rationale:

- Research and Evidence
    - Institute of Fiscal Studies and Democracy, "Funding First Nations child and family services (FNCFS): A blueprint for program reform" (2025)
        - Suggests the Measuring to Thrive Framework to conduct a similar review
            - Best practices suggest the following steps: It starts with a conceptual model of child development and the factors the influence healthy development: the child, the child's family, the child's community, and the investments made to support healthy development. The *Measuring to Thrive* framework provides the groundwork for the measurement model and the accountability framework (p 126)
            - Case Studies of use of Measuring to Thrive framework from a pilot project (Figures 47, 49, 50) (pp 139, 142, 144)
    - NAC First Nations Caucus, "Draft Phase 3 Recommendation Discussion Guide" (March 2024), at p 12
        - Non-identifying aggregate data available on a national level endorsed.

- A baseline on data collection is required – needs to be available at all levels (e.g. community upwards)
- Community-specific well-being indicators.
- Decouple data consistency with the census and bring more in line with other First Nations data projects (indices, language, identifiers).
- Start 5-year review process at year 3 – data is key to supporting true need's based funding.

B. Measure: Oversight of the Public Funding Review Process

Implementation Timeline: Within four months of Public Funding Review Recommendations

The National FNCFS Technical Table shall oversee and recommend an organization to the National Oversight Council to conduct the Public Funding Review. The National Oversight Council shall consider and review the National Technical Advisory Committee's recommendation and seek input from affected First Nations and their experts regarding the selection process for the organization to conduct the Public Funding Review.

The National Technical Advisory Committee shall oversee the organization conducting the Public Funding Review and, on the advice of the National Oversight Council, may provide guidance on matters including, but not restricted to:

a. the design and methods of the Public Funding Review;
b. relevant information, research, reports, and experts; and
c. the participation of First Nations service providers, knowledge holders, and experts in the Public Funding Review process.
d. Indigenous research ethics and data Ownership, Control, Access and Possession (OCAP)

The Public Funding Review will be transparent, inclusive, and accountable including publicly posting the study methods, sample sizes and criteria, findings and recommendations. The organization conducting the Public Funding Review shall seek information from Provincial and Territorial governments providing child and family services for Non-Agency First Nation and First Nations with partially delegated protection service providers and will solicit and consider input from the following groups:

a. First Nations
b. FNCFS Service Agencies and other FNCFS Service Providers;

c. The National FNCFS Technical Table; and
d. Other individuals or groups identified by the National Oversight Council.

Rationale:

- Research and Evidence
    - NAC First Nations Caucus, "Draft Phase 3 Recommendation Discussion Guide" (March 2024), at p 12
        - Non-identifying aggregate data available on a national level endorsed.
        - A baseline on data collection is required – needs to be available at all levels (e.g. community upwards)
        - Community-specific well-being indicators.
        - Decouple data consistency with the census and bring more in line with other First Nations data projects (indices, language, identifiers).
    - Global Affairs Canada, "Advancing Human Rights" (24 January 2024)
        - Demonstrates the Government of Canada's importance placed on transparency and accountability in advancing human rights, as evidenced by GAC's tool for evaluating funding applications for Canadian funding on international development initiatives.
    - Assembly of Seven Generations, "Recommendations for the Long-Term Reform of FNCFS: Literature Scan", Recommendation 3, 10

E. C. Measure: Dispute Resolution in the Funding Review Process

If there is a dispute regarding whether or how any recommendations resulting from the Public Funding Review are to be implemented, that dispute will return to the Tribunal pursuant to its retained jurisdiction unless a DR Mechanism is established as contemplated in Chapter 5, Measure D.

Rationale:

- CHRT Orders
    - 2018 CHRT 4 at para 53
    - 2020 CHRT 20 at para 119
    - 2023 CHRT 44 at paras 6, 215, 225
    - 2025 CHRT 6 at paras 237, 602
    - 2025 CHRT 80 at paras 14, 61, 75–76, 113–114
- Research and Evidence
    - Naiomi Metallic et. al, *Doing Better for Indigenous Children and Families: Jordan's Principle Accountability Mechanisms Report* (31 March 2022), at pp

77–78: Recommendation for a National Indigenous Child and Family Tribunal as a dispute resolution mechanism.

- Assembly of Seven Generations, “Recommendations for the Long-Term Reform of FNCFS: Literature Scan”, Recommendation 3, 10

Dear Sirs/Mesdames:

Re: Legal Opinion regarding First Nations Child and Family Services (FNCFS)

We write to provide IFSD with a legal opinion on matters related to the delegation of Child and Family Services to First Nations agencies as outlined in our letter of July 31, 2018.

OVERVIEW OF OUR OPINION

In Part I, we provide our assessment of the scope of any legal obligation of the provinces to provide insurance coverage for agencies delegated to provide child welfare services within each province. We conclude that none of the provinces in Canada are statutorily required to provide insurance coverage to child welfare agencies. However, it appears that some provinces include provisions in their delegation agreements that require child welfare agencies to carry liability insurance coverage as a condition of performing delegated services to children. Liability insurance issues between those provinces and their respective delegated child welfare agencies are therefore governed by the principles of contract law.

In Part II, we provide an overview of market-based, third-party liability insurance products available to First Nations child welfare agencies in Canada, and the approximate cost of these insurance products. We focus our inquiry on coverage for physical and sexual abuse claims because, based on our review of the jurisprudence, physical and sexual abuse claims tend to form the basis of actions brought against child welfare agencies.

Our overview of market-based insurance products is based on the information provided to us by IFSD and information from brokers used by IFSD's partner organizations. As such, we have not provided an exhaustive overview in this part, but rather, a sample of the type of coverage available to child welfare agencies.

In terms of the cost of third-party liability insurance, we conclude that the premium payable for an insurance product will be influenced by the nature of the work performed by a

particular agency, the risk-management protocols followed by the agency, and the number and type of staff employed by the agency. Generally however, the premiums range from $5000 for a small organization to $100,000 for a larger organization. The average premium in Canada is around $20,000 for $5,000,000 coverage.

In Part III, we provide an overview of the key liability judgments pertaining to children harmed while in the care, custody or control of a federal, provincial or other child welfare organization. We provide a breakdown of the general heads of damages in these cases and an explanation of the compensation principle, which informs the quantum of all damage awards. We also set out the various legal bases on which an agency may be found liable, whether pursuant to the doctrine of vicarious liability, or by way of direct liability for negligence or breach of a fiduciary duty. Lastly, we set out a range of damage awards, in present day values, to assist child welfare agencies with determining how much third-party liability coverage may be necessary for their services.

I. REVIEW OF PROVINCIAL CHILD WELFARE LEGISLATION

Canada has a decentralized child welfare system. Each province has its own child welfare legislation, which applies to all child and family service agencies, both on and off reserve.

We have reviewed the relevant child welfare legislation in each of the ten provinces. None of the provinces are expressly required by their respective statutes to provide liability insurance to child welfare agencies that are delegated to administer child welfare services, either on or off reserve.

A. British Columbia

In British Columbia, the Master Insurance Program offers commercial general liability insurance to foster parents *only* who perform services on behalf of the Province or a delegated Aboriginal agency. Under the Master Insurance Program, foster parents have $2,000,000 liability coverage per occurrence for claims that arise from incidents that occur during the provision of foster care services. This coverage insures foster parents against personal injury, bodily injury and third party property damage.

The third party coverage includes any person outside the foster family, including the foster child. For example, if the foster parent *accidently* injured the foster child or anybody else outside the family, those claims would be covered. Similarly, *property* belonging to other people is covered under this policy if the foster parent accidentally damaged it in carrying out the foster care services.

The Master Insurance Plan does not provide coverage to First Nations child welfare agencies directly; however, agencies may be added to the plan, by agreement, at the sole discretion of the Ministry of Children & Family Development.

B. Saskatchewan

In Saskatchewan, the *Child and Family Services Act*, SS 1989-90, c C-7.2 provides that child welfare service agreements must contain a clause that requires welfare agencies to carry insurance coverage satisfactory to the minister (s. 62.1(1)(f)). We have reviewed the sample agreement IFSD provided for our consideration (the "Agreement").

The Agreement provides as follows:

> Q. INSURANCE, LIABILITY AND INDEMNIFICATION
>
> 1. The purpose and objective:
>
> 1.1 The Parties acknowledge the risks and responsibilities associated with providing services to children and families. While it is the intention to deliver services which are beyond criticism, it is recognized that claims, which are beyond the control of the Parties, may nonetheless be made and that there are potential costs associated with defending such claims and with the imposition of any liability.
>
> 1.2 The Parties further recognize that in some circumstances such as Case Transfers it may be difficult to separate the acts or omissions of the Parties in the event of an assessment of liability.
>
> 1.3 The Parties further acknowledge that the paramount consideration in all matters shall be the best interests of the child and the welfare of the families that they serve.
>
> 1.4 The Parties therefore agree that is prudent that the [the Agency and First Nation] avail themselves of any limits upon liability which may be available to them in law and that they further require insurance to cover those instances when claims may be made against them.
>
> 1.5 Further, the Parties recognize that it is appropriate to agree to indemnify the other Party in those instances when a claim is made against one Party however liability is ultimately assessed against the other Party.

Additionally, the Agreement includes indemnification provisions, whereby the parties agree to indemnify each other, their officers, employees and agents from and against all claims, actions, damages, costs and expenses arising from any act or omission by the other party, its officers, employees and agents, which contravenes Saskatchewan law or which causes injury to any person (including death) or damages or loss to property where that act or omission is related to the performance or purported performance of the Agreement.

The Agreement also expressly provides that the agency is entitled to rely on the immunity protection set out in section 79 of *The Child and Family Services Act* and that the standard of care expected of the agency shall be no greater than that which is found in section 79 of the act. Section 79 currently provides as follows:

> 79(1) No action lies or shall be instituted against the minister, the ministry, a peace officer or any officer or employee of the ministry or agent of the minister, where the minister, ministry, peace officer, officer, employee or agent is acting pursuant to

> the authority of this Act, the regulations or an order made pursuant to this Act, for any loss or damage suffered by a person by reason of anything in good faith done, caused, permitted or authorized to be done, attempted to be done or omitted to be done, by any of them, pursuant to or in exercise of or supposed exercise of any power conferred by this Act or the regulations or in the carrying out or supposed carrying out of any order made pursuant to this Act or any duty imposed by this Act or the regulations.
>
> 79(2) An agency, or any officer or employee of an agency, is entitled to the same protection provided to the minister in subsection (1).

As we explain in Part III below, immunity provisions such as section 79 provide a statutory defence to negligence claims in the sense that, in the absence of a finding of bad faith, actions against officers, agents or employees of the Minister cannot succeed. Section 79 limits liability for negligence to cases where bad faith in the performance of a statutory duty is alleged and established by a plaintiff.

With respect to insurance coverage, the Agreement requires the agency to purchase and maintain throughout the term of the Agreement, public liability, property damage and directors liability insurance against claims for personal injury, death or damage to property, arising out of the operations of the agency under the Agreement, or as a result of any of the acts or omissions of the agency, it's officers, employees or agents.

In particular, the agency is required to carry insurance that:

(a) names Saskatchewan, it's officers, employees and agents as Additional Insureds;

(b) includes a cross-liability clause;

(c) provides coverage for premises and operations, blanket contractual, extended bodily injury, broad form property damage, non-owned automobile, as well as any applicable errors and omissions or professional liability coverage;

(d) provide one million dollars per occurrence minimum limits for third party liability; and

(e) contains a clause which states that the insurers will not cancel, materially alter or cause the policy to lapse without giving 30 days prior notice in writing to Saskatchewan.

Effectively, the Agreement provides that the agency is required to carry its own insurance and, additionally, is required to indemnify the Province of Saskatchewan for liability arising out of its own acts or omissions or the acts of omissions of its employees, agents and officers, not protected by the immunity clause. We have not reviewed any delegation agreements between other provinces and agencies; however, it is likely that similar liability,

insurance, contribution and indemnity and immunity provisions would be included in agreements of the same nature.

C. Delegation Agreements Generally

Notwithstanding a mandatory insurance coverage provision in a provincial delegation agreement, each of the provinces is subject to the non-delegable duty doctrine, which provides that a party upon whom the law has imposed a strict statutory duty to do a positive act cannot escape liability simply by delegating the work: *Lewis (Guardian ad litem of) v. British Columbia*, [1997] 3 SCR 1145. This ensures that the government responsible for performing certain statutory duties will retain its obligation to perform those duties and to ensure the adequate performance of the same. In the case of a breach of non-delegable child welfare duties, the government will be legally liable for damages that flow from the breach even if the duties were delegated as authorized by the statute: *B. (M.) v. British Columbia*, 2003 CSC 53.

When the courts find a government liable to a plaintiff, the Crown proceedings statute of Canada and each of the ten provinces provides for the payment of the judgment to the plaintiff. Pursuant to these statutes, the government must pay the judgment amount. Each statute requires the Treasurer or Minister of Finance, as the case may be, to pay out of the Consolidated Revenue Fund the amount due by the Crown under a court order. In Ontario and in British Columbia, the duty to pay a debt includes out-of-court settlements.[1]

Despite the government's legal liability for non-delegable duties, a child welfare agency may be contractually liable for the judgment debt in cases where a delegation agreement contains an indemnification clause as set out above.

II. AGENCY ABILITY TO ACCESS LIABILITY INSURANCE

A. First Nations Child Welfare Agency Insurance

In Canada, Aon Reed Steenhouse Inc. ("Aon") appears to be the primary broker for liability insurance for First Nations child welfare agencies. We contacted a commercial account executive at Aon in Saskatchewan to discuss insuring agreements for First Nations child welfare agencies generally. He advised us that any First Nations group in Canada can access Aon's program of insurance automatically. The program includes commercial general liability, health care professional service liability and sexual and physical abuse liability; however, not all First Nations groups will qualify for the sexual and physical abuse coverage. To obtain sexual and physical abuse coverage, First Nations groups must establish that they have strict protocols in place to manage the risk of such abuse. A First Nations group that has the requisite protocols can access sexual and physical abuse coverage that extends to circumstances where the group's protocols fail or where abuse is alleged but unproven.

Our contact advised us that the First Nations liability insurance program usually covers employees of the named insured, including registered professionals etc., except where the policy contains exclusions to the contrary. In general, the program will cover the agency

[1] Hogg, Peter W., and Patrick J. Monahan, *Liability of the Crown*, 3rd ed, Scarborough, Ont.: Carswell, 2000, 52-54.

against liability for the acts of others but it does not cover direct liability judgments where there are findings of criminal or intentional wrongdoing. In cases of criminal or intentional wrongdoing, the insurer would agree to defend allegations up to the point that there is a guilty finding, after which it would cease to offer coverage.

As with any insurance product, the premiums payable for the First Nations liability insurance program is largely determined by the specific insurance needs of a particular agency and can vary greatly depending on the nature of the services provided by the agency. For example, the premiums can range from $5000 for a small organization to $100,000 for a larger organization with the average premium being around $20,000. Similarly, the coverage limits in this program range from $5,000,000 to $10,000,000.

B. Professional Liability Coverage offered by Associations

Separate and apart from agency liability insurance, many professional associations, including the Canadian Association of Social Workers, the Canadian Psychological Association and the Canadian Counselling and Psychotherapy Association offer their members professional liability insurance. BMS Canada Risk Services Ltd. ("BMS") appears to the primary broker for these professional liability policies.

Professional regulators in Canada, such as the board of registration for social workers in British Columbia (established by the *Social Workers Act,* SBC 2008, c. 31) and the Council of the College of Social Workers and Social Service Workers in Ontario (established by the *Social Work and Social Service Work Act,* 1998 SO 1998, c. 31) are authorized by statute to require registrants and members to carry professional liability insurance. In British Columbia for example, the *Health Professions Act,* RSBC 1996, c. 183 authorizes the colleges responsible for the regulation of the various health professions, including psychiatry and psychology, to establish requirements respecting professional liability insurance. The effect of these statutes is to require registered professionals to carry professional liability insurance often in addition to the insurance carried by a child welfare agency.

We spoke with a portfolio manager at BMS and were advised that typically, child welfare agencies carry professional liability insurance for the agency. Agency professional liability policies can include coverage for employees, whether registered with a regulatory body or not, depending on the needs of the agency. Our contact at BMS was not able to provide us with a range of premiums for agency professional liability policies because, as with Aon, the premiums vary significantly depending on the number of professionals, number of employees, the nature of the work of the agency, and the type of professionals employed to do the work of the agency. We note that through the Canadian Association of Social Workers (and BMS) social workers can obtain professional liability coverage for $105/year.

C. The Manitoba Policy

To assist us with determining the cost range for liability insurance premiums, ISFD provided us with a Public Entity Casualty Policy issued to a First Nations child welfare agency in Manitoba (the "Manitoba Policy"). The Manitoba Policy provides an example of the policy wording for Children's Aid Society Liability as well as an example of the premiums and coverage limits for physical and sexual abuse policies.

The Manitoba Policy grants $5,000,000 liability coverage for all damages arising out of one accident or occurrence or series of accidents or occurrences from one cause, except in the case of claims containing any allegations of actual or threatened abuse. Abuse claims are limited to $2,000,000 liability coverage.

Abuse is defined in the Manitoba Policy as sexual abuse, physical abuse, psychological or emotional abuse, molestation or harassment including corporal punishment. For clarity, the following definitions are included in the limit of liability:

> **"Physical Abuse"** means wilful and deliberate misconduct;
>
> Causing or permitting another person to suffer unjustifiable pain or suffering, or
>
> Causing or permitting another person to be placed in a situation in which his or her life or limb likely would be endangered or his or her health likely would be impaired.
>
> **"Sexual Abuse"** means any conduct constituting a sexual offence under the Criminal Code of Canada including sexual assault offences resulting from physical contact.

The total premium for the Children's Aid Society Liability is $68,012. We have not reviewed the declarations page for this policy and, therefore, we are unable to provide an overview of who might be covered under this policy. For example, it is unclear whether this policy includes registered health care professionals (i.e. social workers, psychiatrists, psychologists and/or counsellors) and/or support staff such as office and janitorial staff and volunteers. As we were advised by BMS and Aon, the premium payable by an agency will be largely influenced by the extent to which the agency requires coverage for its operations.

In addition to the Manitoba Policy, IFSD provided us with details about various policies held by First Nations child welfare agencies across Canada. The annual premiums range from $58,000 for umbrella liability insurance, to $10,700 for health care professional insurance with $5,000,000 coverage. The premiums appear to be as low as $5000 for general liability; however, as illustrated above, the specific wording of each of these insurance policies, which we have not reviewed, will determine what coverage is available to the agency.

III. LIABILITY JUDGMENTS

A. Damages Generally

When a child welfare agency is liable to a plaintiff for harm caused by the agency, or someone acting on behalf of the agency, the plaintiff is entitled to full compensation for pecuniary losses, both past and future and, with respect to non-pecuniary losses, to compensation that is fair and reasonable in the circumstances: *Andrews v. Grand & Toy Alberta Ltd.* (1978), 83 DLR (3d) 452 (SCC).

(a) Pecuniary Damages

Pecuniary damages are awarded to compensate a plaintiff for losses that have monetary value. For example, they include: (a) special damages such as pre-trial cost of care, pre-

trial loss of working capacity and other pre-trial out-of-pocket expenses; (b) future loss of earning capacity; and (c) future cost of care such as counselling, therapy, medical treatments and prescriptions. Typically, in cases involving harm to children, pecuniary damages can be hard to establish in law, because the plaintiff's losses must be causally related to the conduct at issue in order for the losses to be compensable.

(b) Non-Pecuniary Damages

In addition to pecuniary damages, where liability has been established, the plaintiff will be entitled to compensation that is fair and reasonable for non-pecuniary damages, which are awarded to compensate a plaintiff for losses that cannot be monetarily quantified. Non-pecuniary damages include pain, suffering and loss of enjoyment of life: *Wilhelmson v. Dumma,* 2017 BCSC 616 at para 169.

In Canada, non-pecuniary damages are currently capped at approximately $367,000, an amount that is adjusted for inflation each year. In *Andrews, supra*, the Supreme Court of Canada explained that the cap on non-pecuniary damages is necessary because no amount of money will ever truly compensate a person for the loss of happiness and therefore, full compensation for lost happiness will never be possible.

When assessing the quantum of non-pecuniary damages, courts will look at the plaintiff's individual circumstances to determine the plaintiff's personal need for solace. This will have a major influence on where the award is eventually placed, whether that is inside or outside the customary range for the nature of the plaintiff's specific injuries. The following is a non-exhaustive list of factors used to quantify an award for general damages: (a) age of the plaintiff; (b) nature of the injury; (c) severity and duration of pain; (d) degree of disability; (e) emotional suffering; (f) loss or impairment of life; (g) impairment of family; (h) marital and social relationships; (i) impairment of physical and mental abilities; and (j) loss of lifestyle.

(c) Aggravated and Punitive Damages

Aggravated damages are non-pecuniary in nature and are often awarded in cases where the damage to the plaintiff was aggravated by the manner in which the conduct at issue was committed. Generally, aggravated damages are awarded to compensate a plaintiff for injury to dignity and pride. Punitive damages are also available to a plaintiff in cases where a person's wrongful conduct was intentional, high-handed, arrogant, and where the conduct demonstrates a reckless disregard for the plaintiff's rights, resulting in damage to the plaintiff's pride, self-respect and reputation.

Our review of the case law below includes damages payable for pecuniary losses; however, for the purpose of establishing a range of damages payable by child welfare service providers, we focus primarily on non-pecuniary damages because pecuniary damages require a contextual analysis of the specific factual circumstances of the plaintiff.

(d) Joint and Several Liability

When more than one person or legal entity is found liable to a plaintiff, the law considers each of the liable parties fully responsible to the plaintiff for the full amount of the loss. The plaintiff is therefore generally entitled to pursue payment of the damage award from either or both of the liable parties.

B. Basis for Liability of an Agency

In Canada, child welfare agencies face exposure to liability under the doctrine of vicarious liability, in negligence and for breach of a fiduciary duty.

(a) Vicarious Liability

Under the doctrine of vicarious liability, employers are held liable for the tortious conduct of their employees whether or not the tortious conduct was intentional or based in negligence: *Bazley v. Curry*, [1999] 2 SCR 534.

In *B. (K. L.)*, 2003 SCC 51, the Court explained that vicarious liability, unlike direct liability, is imposed on the theory that the person may properly be held responsible where the risks inherent in his or her enterprise materialize and cause harm, provided that liability is both fair and useful (at para 18). Accordingly, a plaintiff must demonstrate that the relationship between the tortfeasor and the person against whom liability is sought is sufficiently close as to make a claim for vicarious liability appropriate. Second, a plaintiff must demonstrate that the tort is sufficiently connected to the tortfeasor's assigned tasks that the tort can be regarded as a materialization of the risks created by the enterprise.

The concept of liability in the absence of fault was described by the Supreme Court of Canada in *John Doe v. Bennett*, 2004 SCC 1:

> 17 ...The doctrine of vicarious liability imputes liability to the employer or principal of a tortfeasor, not on the basis of the fault of the employer or principal, but on the ground that as the person responsible for the activity or enterprise in question, the employer or principal should be held responsible for loss to third parties that result from the activity or enterprise.

In *Bazley*, the seminal case on vicarious liability, a non-profit organization was held liable for the sexual abuse of one of its employees. The organization operated residential facilities for children and employed individuals to act as substitute parents authorized to do everything a parent would do, from general supervision to bathing children, and tucking children in at bedtime. In assessing the application of vicarious liability to intentional tortious conduct, the Supreme Court of Canada determined that a key determination in child welfare cases will be whether the employer's enterprise increased the opportunity for the employee to commit a wrong, and whether the enterprise fostered power-dependency relationships that materially enhanced the risk of harm.

In *Blackwater v. Plint*, 2005 SCC 58, former students of a residential school claimed damages for sexual abuse and other harm perpetrated by employees of the school, against the federal government and the church that ran the school. At trial, a dormitory supervisor was found liable to six of the plaintiffs for sexual assaults. The federal government was held to be vicariously liable for the assaults, together with the church. Non-pecuniary damages, including aggravated damages, were awarded as follows as against the federal government and the church jointly:

Frederick Leroy Barney	$145,000
R.F.	$85,000
R.J.	$20,000
D.S.	$10,000
M.W. (1)	$125,000
M.W. (2)	$15,000

Similarly, in *W. (D.) v. Canada (Attorney General),* 1999 SKQB 187, a student at a residential school operated by the federal government was sexually assaulted by the administrator of the school. Years after the student left the school, he commenced an action against the administrator and the federal government. He claimed against the government directly on the basis that it had negligently failed to properly evaluate, monitor and investigate the administrator and on the basis that it had breached its fiduciary duty to him by failing to prevent the administrator's conduct. The court found that the government did not have the requisite knowledge of the administrator's conduct to support direct liability or breach of fiduciary duty, but found that it was vicariously liable nonetheless. The court awarded damages against the federal government and the administrator jointly in the amount of $69,500 for pre-trial loss of earning capacity, $65,000 for non-pecuniary damages, and $10,000 for aggravated damages. Additionally, the court awarded punitive damages in the amount of $ 25,000.00 against the administrator.

(b) Intentional Torts

Vicarious liability often arises where the perpetrator of an intentional tort is deceased or impecunious. Intentional torts in the child welfare context can include assault and battery, intentional infliction of mental suffering, false imprisonment and breach of privacy.

(i) Assault and Battery

Assault and battery are typically claimed against the perpetrator of the violence, in addition to the perpetrator's employer and/or the province. Assault and battery are defined as causing another person to apprehend the infliction of immediate harmful or offensive force on her person coupled with the actual infliction of that harmful or offensive force: *M.K. v. M. H.,* [1992] 3 SCR 6 at para 25.

(ii) Intentional Infliction of Mental Suffering

Intentional infliction of mental suffering is often pleaded alongside assault and battery, but can constitute its own claim. For example, if a person is intimidated and sexually harassed through repeated telephone calls or emails, or if a person witnesses violence perpetrated on another person, that person may have a claim for intentional infliction of mental harm: *S. J. v. Clement* (1995), 122 DLR (4^{th}) 449 at 531 and *Boothman v. Canada*, [1993] 3 FC 381.

(iii) False Imprisonment

While less common, claims for false imprisonment can arise in the context of providing care to children. In the case of *Y. (A.D.) v. Y (M.Y.)*, [1994] 5 WWR 623, the son was physically and emotionally abused by his parents. He was often punished by being locked in his

bedroom, meals were passed into him to eat and he was forced to use a hole in the wall to urinate and defecate.

In *Y. (A.D.) v. Y (M.Y.),* the plaintiff recovered $85,000 in non-pecuniary damages, $125,000 for loss of future earning capacity, and $50,000 in punitive damages, for a total of $260,000 for assault, battery, false imprisonment and intentional infliction of mental harm.

(iv) Breach of Privacy

Breach of privacy varies across the provinces according to the relevant statutes. In British Columbia for example, the tort is constrained by the *Privacy Act*, RSBC 1996, c. 373, and there is no common law equivalent of the tort: *Ari v. Insurance Corporation of British Columbia*, 2015 BCCA 468. In Ontario, however, the court has recognized the existence of a common law cause of action for breach of privacy: *Jones v. Tsige*, 2012 ONCA 32. In the child welfare context, breach of privacy can arise, for example, if a person surreptitiously observes or video-records a child while they undress or shower: *L. (T.K.) v. P. (T.M.),* 2016 BCSC 789.

Notably, the government may not be vicariously liable for torts committed by foster parents against foster children in their care because foster parents are generally not, in their daily affairs, acting "on account of" or on behalf of the government: *B. (K. L.) v. British Columbia*, 2003 SCC 51 and *G. (E. D.) v. Hammer*, 2003 SCC 52. Whether vicarious liability will attach in certain circumstances requires a consideration of the relationship at issue and the nature of the duties imposed by the statutory regime at issue.

(c) Negligence

Negligence is the most commonly pleaded cause of action giving rise to direct liability for child welfare agencies. Generally, to make out a claim in negligence, the plaintiff must establish: (a) that the defendant owed the plaintiff a duty of care; (b) that the defendant breached the duty of care; (c) that the plaintiff suffered damages which were a reasonably foreseeable consequence of the breach; and (d) that the defendant's breach caused those damages. In most provinces, the plaintiff must also establish that the defendant acted in bad faith in performing the particular duty of care at issue.

With the exception of Alberta, each province has included a variation of Section 79 of Saskatchewan's *Child and Family Services Act* (the immunity provision discussed above) in its child welfare legislation. For example, in British Columbia, section 101 of the *Child, Family, and Community Service Act*, RSBC 1996, c 46 provides as follows:

> 101 No person is personally liable for anything done or omitted in good faith in the exercise or performance or intended exercise or performance of:
>
> (a) a power, duty or function conferred under this Act, or
>
> (b) a power, duty or function on behalf of or under the direction of a person on whom the power, duty or function is conferred under this Act.

In Ontario, the *Child, Youth and Family Services Act*, 2017, SO 2017, c. 14 provides that:

> 34(6) No Crown liability
>
> No action or other proceeding shall be instituted against the Crown in right of Ontario for any act or omission of a society or its members, officers, employees or agents.
>
> ...
>
> 37. No personal liability
>
> No action shall be instituted against a member of the board of directors or an officer or employee of a society for any act done in good faith in the execution or intended execution of the person's duty or for an alleged neglect or default in good faith in the execution of that duty.

By comparison, in Manitoba, the immunity provision is narrower in that it applies only to directors of the First Nations of Northern Manitoba Child and Family Services Authority; the Southern First Nations Network of Care (formerly the First Nations of Southern Manitoba Child and Family Services Authority); the Metis Child and Family Services Authority; and the General Child and Family Services Authority.

Section 10 of *The Child and Family Services Authorities Act*, SM 2002 c 35 provides:

> 10 No action for damages may be commenced against a director of a board for anything done or not done by that person in good faith while carrying out duties or exercising powers under this or any other Act.

There is no parallel provision in *The Child and Family Services Act*, SM 1985-1986, c 8, which sets out the duties required of the authorities named above.

Subject to the variations in scope between the provinces, these immunity provisions enable the court strike a plaintiff's claim in negligence unless the plaintiff properly pleads that the agency and/or its employee acted in bad faith in the performance of the duty set out in the legislation. In cases where bad faith is pleaded, the agency and/or employee will be entitled to rely on good faith as a statutory defence, such that, if the duty was performed in good faith, the defendant may not be liable to the plaintiff notwithstanding a breach of the duty: *Lowery v. Saskatchewan,* 2008 SKQB 115 at para 57 and *D. (M.L.) v. British Columbia (Ministry of Children and Family Development),* 2014 BCSC 1104 at para 54.

The presence or absence of good faith is an important consideration in determining whether the standard of care has been breached: *M. (B.) (Litigation Guardian of) v. M. (R.),* 2009 BCCA 413 at para 54. In British Columbia, for example, the courts have found that a high degree of negligence can amount to bad faith in certain circumstances: *H. (C.) v. British Columbia,* 2004 BCCA 385.

In negligence, whether a defendant in an action owes the plaintiff a duty of care will be determined by: (a) the common law; (b) the defendant institution's internal codes or policy statements, which articulate the standard of conduct that inform the reasonable expectations of the parties; and, (c) the applicable legislation: *J. (A.) v. D. (W.),* [1999] 11 WWR 82 (Man QB). However, commonly pleaded negligence claims against child welfare service providers (including provincial and federal governments) include a failure to apprehend, a failure to supervise and/or negligent supervision, negligent placement and negligent performance of specific statutory duties.

In *B. (K. L.) v. British Columbia,* 2003 SCC 51, four siblings were placed into two foster homes by the province of British Columbia after they were removed from the care of their biological parents. The siblings were subjected to harsh and arbitrary discipline measures in both foster homes. They alleged that the province was negligent because the social workers failed to visit the home for several months after the placement, they failed to investigate prior concerns with the placement, they placed double the recommended number of children in the home and they failed to investigate the reported unhappiness of the children in the home.

The Supreme Court of Canada held that the province owed the siblings a duty of care to place them in adequate foster homes and to supervise their stay under the *Protection of Children Act.* Finding that it is reasonably foreseeable that some people, if left in charge of children, will use excessive physical and verbal discipline the Court held that the province was liable to the siblings on the basis of direct negligence.

Damages were assessed globally for each of the siblings. In each of the cases, the judge considered the harm the siblings had suffered prior to being placed in the foster homes. She awarded $25,000, $15,000, $10,000 and $13,000 based on the individual experiences of each sibling.

In *K. (K.A.) (Litigation Guardian of) v. British Columbia*, 2011 BCSC 1391, six of eleven children brought a claim against the Province for failing to apprehend them from the care of their parents when it was, or should have been, apparent to the Province that the siblings needed to be removed from the home. At trial, the Province admitted liability. The Court particularized the damage awards as follows.

CHILD 1		**CHILD 2**	
Non-pecuniary damages	$80,000	Non-pecuniary damages	$120,000
Future care costs		Future care costs	
Assisted living	$170,000	Substance abuse treatment	$30,000
Substance abuse treatment	$ 30,000	Psychological treatment	$25,000
Psychological treatment	$ 25,000	Education assistance	$10,000
Employment assistance	$ 8,000	Employment assistance	$ 5,000
Total	$233,000	Total	$70,000
Future loss of earning capacity	$50,000	Future loss of earning capacity	$80,000
Total	**$363,000**	**Total**	**$270,000**

CHILD 3		**CHILD 4**	
Non-pecuniary damages	$95,000	Non-pecuniary damages	$30,000
Future care costs		Future care costs	
Substance abuse treatment	$25,000	Psychological treatment	$10,000
Psychological treatment	$35,000		
Education assistance	$20,000	**Total**	**$40,000**
Employment assistance	$ 5,000		
Total	$85,000		
Future loss of earning capacity	$95,000		
Total	**$275,000**		
CHILD 5		**CHILD 6**	
Non-pecuniary damages	$15,000	Non-pecuniary damages	**$20,000**
Future care costs			
Psychological treatment	$ 5,000		
Total	**$20,000**		

In *M. (K.M.) v. Roman Catholic Episcopal Corp. of the Diocese of London in Ontario*, 2011 ONSC 2143, the plaintiff was sexually assaulted by a priest for a period of time when she was between 7 and 10 years old. The diocese admitted vicarious liability and was also found to be directly liable. The plaintiff recovered $190,000 in general damages.

(d) Breach of Fiduciary Duty

Although the breach of a fiduciary duty is a commonly pleaded claim in child welfare cases, it is much more difficult for a plaintiff to establish. A fiduciary duty is a trust-like duty, involving duties of loyalty and an obligation to act in a disinterested manner that puts the recipient's interest ahead of all other interests: *B. (K.L.) v. British Columbia*, *supra* at para 49. A fiduciary duty has, at its core, an undertaking of loyalty on the part of the fiduciary to act in the best interests of the beneficiary: *Perez v. Galambos,* 2009 SCC 48 at para 69.

In *B. (K.L.),* the Court explained that:

> 38 ...The government, through the Superintendent of Child Welfare, is the legal guardian of children in foster care, with power to direct and supervise their placement. The children are doubly vulnerable, first as children and second because of their difficult pasts and the trauma of being removed from their birth families. The parties agree that, standing in the parents' stead, the Superintendent has considerable power over vulnerable children, and that his placement decisions and monitoring may affect their lives and well-being in fundamental ways.

Concern for the best interests of the child informs the fiduciary relationship of a parent or a person standing in the place of a parent. The duty imposed is to act loyally, and not to put one's own or others' interests ahead of the child's in a manner that abuses the child's trust or exploits their vulnerability.

In *M. (F.S.) v. Clarke*, [1999] B.C.J. No. 1973, the plaintiff brought a claim against his former dormitory supervisor after he was repeatedly sexually assaulted while he was a student residential school operated by the defendant Diocese. The plaintiff had informed the bishop at the Diocese about the abuse, but the Diocese took no action against the supervisor.

The only issue at trial was whether the Diocese was liable to the plaintiff for the supervisor's abuse. Damages were agreed to by the parties. In reaching her conclusion, the judge reiterated the three general characteristics required to establish a fiduciary duty: (a) the fiduciary must have scope for the exercise of some discretion or power; (b) the fiduciary can unilaterally exercise that power or discretion so to affect the beneficiary's legal or practical interests; and (c) the beneficiary must be particularly vulnerable. In applying this test, the judge concluded that the Diocese had breached its fiduciary duty to the plaintiff because it took no action after the plaintiff disclosed the abuse.

SUMMARY OF OUR OPINION

- Provincial child welfare legislation does not expressly require a province to provide insurance coverage to child welfare agencies; however some provinces appear to have included provisions in delegation agreements that require agencies to carry liability insurance coverage as a condition of exercising delegated authority to care for children.

- First Nations child welfare agencies in Canada can access market-based, third-party liability insurance products. We recommend that each child welfare agency seeking insurance coverage consult with an insurance broker to determine which insurance products are best suited to meet the individual needs of the agency.

- Damages for liability in child welfare cases, whether for intentional torts or for negligent conduct, vary depending on the losses established. The range for non-pecuniary damages is a minimal award of $12,500 to the current maximum available at law of $367,000. In addition, our case review shows pecuniary damages ranging from $10,000 to $300,000.

- First Nations child welfare agencies, as employers, are exposed to liability under the doctrine of vicarious liability, as well as liability based in negligence (subject to any relevant statutory immunity provisions), and for breaches of their fiduciary duty to children in their care.

- Depending on the nature of the claim, a First Nations child welfare agency may share liability with the province and/or the federal government from which the authority to provide services is delegated. Ultimately, the specific facts of each case will determine the quantum payable to the particular plaintiff and the degree of liability of each named defendant in the action.

We look forward to discussing any questions you may have at your convenience.

Yours truly,

ALEXANDER HOLBURN BEAUDIN + LANG LLP

ACKNOWLEDGEMENTS

We want to acknowledge that it takes a community to conduct ethical engagement with Indigenous youth. It is important that not only are Indigenous youth engaged in the gathering but that Indigenous youth are also the researchers, writers, note takers, helpers and facilitators of each engagement. Additionally, it is important that Indigenous youth have support from adult allies which speaks to doing things in a holistic and community-driven way.

We would like to acknowledge the First Nations Child & Family Caring Society (Caring Society) and Assembly of Seven Generations (A7G) for leading this work and seeing the importance of listening and hearing Indigenous youth voices.

Thank you to Gabrielle Fayant (A7G), Carrington Christmas for taking the lead on the overall project and Brittany Mathews (Caring Society) for supporting the project.

Thank you to Alyssa Carpenter (Western Arctic Youth Collective), Jessica Bolduc (4Rs Youth Movement) and Larissa Crawford (Ancestors Future) for helping design the gathering and for providing guidance on how to move forward with this work.

"The day that I can see Indigenous youth achieve the standard of living and the quality of life that is enjoyed by the rest of the Canadian society and its youth, is when I will believe reconciliation has been achieved."

— SURVEY RESPONDENT, The Roadmap on the Implementation of TRC Call to Action 66, page 43[1]

Thank you to Madeleine Kelly and Harmonie Eshkawkogan from A7G for being amazing note takers which supported the writing of this report.

Thank you to Tiaré Jung from Drawing Change for breathing life into this report with the beautiful illustration of the gathering which supports visual learners in a way that written reports cannot.

Thank you to our mental health supports, Elaine Kicknosway and Ali McConnell.

And lastly, thank you so much to all the youth that participated in this initial gathering that offered their wisdom and knowledge which guided this report.

ABOUT

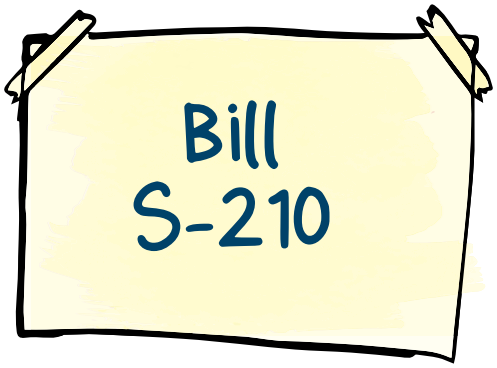
A7G

Assembly of Seven Generations (A7G) is an Indigenous owned and youth-led, non-profit organization focused on cultural support and empowerment programs and policies for Indigenous youth while being led by traditional knowledge and Elder guidance. A7G also holds weekly, seasonally and annual programs and events on Algonquin territory such as a weekly drop-in, language drop-in and annual Round Dances. A7G has also worked on national reports and facilitated gatherings such as the *A Roadmap to the Truth and Reconciliation Commission Call to Action #66* and *A Way Forward in Conducting Research With and by Indigenous Youth*.

Caring Society

The First Nations Child & Family Caring Society of Canada is a national nonprofit organization ensuring that First Nations children and their families have culturally based, and equitable opportunities to grow up safely at home and in their communities, be healthy, get a good education and be proud of who they are and where they come from.

BACKGROUND



For decades, First Nations have called for Canada to respect the sacredness of their children and youth by upholding the best interests of the child, substantive equality and cultural continuity. This call has been echoed in numerous reports including, but not limited to, the Royal Commission on Aboriginal Peoples (1996), the Joint National Policy Review (2000), the Wen: De Reports (2005), the Truth and Reconciliation Commission (2005), *A Roadmap to the Truth and Reconciliation Commission Call to Action #66* (2018) and the National Inquiry into Missing and Murdered Indigenous Women and Girls (2019).

In June 2020, Bill S-217 (now S-210) was introduced by Senator Rosemary Moodie for the creation of an Office of the Commissioner for Children and Youth in Canada. The Bill proposes the establishment of an appointed Commissioner for Children and Youth to promote, monitor and report on the implementation of Canada's obligations under the United Nations Convention on the Rights of the Child.[2] The Bill also proposes the creation of an Assistant Commissioner, which the Commissioner must consider appointing for the purpose of ensuring focus on matters related to First Nations, Metis and Inuit children and youth.

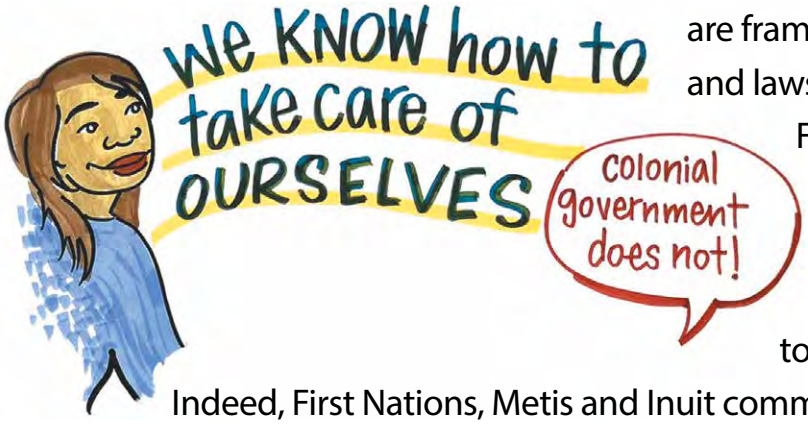
Why and Intentions

It is unclear how and if Bill S-210 contemplates the unique experiences of First Nations, Metis and Inuit children and youth, and how a Bill of this nature would uniquely impact the lives of First Nations, Metis and Inuit children and youth. The Bill does not contemplate Canada's long-standing human rights violations against Indigenous children and youth, as substantiated by the Canadian Human Rights Tribunal (2016 CHRT 2), the Truth and Reconciliation Commission and the National Inquiry into

2 https://www.parl.ca/LegisInfo/BillDetails.aspx?Language=E&billId=10873559

Missing and Murdered Indigenous Women and Girls. The Bill proposes the establishment of a Commissioner, and potentially an Assistant Commissioner, that would collaborate, advocate and promote the rights of First Nations, Metis and Inuit children and youth. However, it is unclear, given Canada's historical and ongoing Indigenous child rights violations, whether a Commissioner or Assistant Commissioner is sufficient in addressing Canada's human rights violations. The Bill also does not consider a mechanism for First Nations, Metis and Inuit peoples to appoint or approve one or more Indigenous Assistant Commissioner(s).

Furthermore, the Bill fails to acknowledge how best interests of children are framed by western experiences and laws. It does not consider how First Nations, Metis and Inuit peoples consider and safeguard the best interests of their children according to their own laws and practices.



Indeed, First Nations, Metis and Inuit communities have actively worked to safeguard their children since time immemorial. The Bill assumes that First Nations, Metis and Inuit children could only "benefit" from Canadian human rights law, when in reality, First Nations, Metis and Inuit communities have actively worked to safeguard their children in the face of serious human rights violations perpetrated by Canada.[3]

In 2018, through researching the implementation of TRC Call to Action 66, Indigenous Youth Voices called on the federal government to begin working closely with Indigenous youth to create a Code of Ethics and Network Panel, as well as develop a Research and Translation team. Unfortunately, these recommendations were never acknowledged, which speaks to Canada's long-standing practice of shelving or ignoring calls for

3 Many of these insights and critiques were formulated and offered by the Caring Society. We acknowledge their work in offering a foundation for this report's intentions.

accountability on behalf of and from Indigenous young people. These are a few recommendations and examples of actions that could be taken to achieve justice for Indigenous youth and children. The functions of these teams would be as follows:[4]

Code of Ethics and Network Panel

A Code of Ethics will be developed as a framework for funding community-based youth organizations more equitably and effectively. This Code of Ethics will encompass the key learnings from our (IYV) research on the current priorities of Indigenous youth and the needs of community-based youth organizations. We will also develop a bank of Indigenous youth leaders across the Indigenous Youth Voices Network who are willing to act as selection committee panel members for funders. These youth would inform the disbursement of any Crown-Indigenous Relations and Northern Affairs Canada funds that implicate Indigenous youth, and the co-development of the Indigenous Youth Voices Government of Canada Fund. Provincial, territorial, and municipal governments, Indigenous governments and organizations, corporations, and foundations could also contact Indigenous Youth Voices to request selection committee members to be involved with their funding delivery processes.

Research and Knowledge Translation

The Indigenous Youth Voices Research Team will focus on collecting, organizing, and disseminating existing research and new research being done related to Indigenous youth needs and priorities. Far too often, Indigenous communities are being researched with little to no control over how that research is being done and what

4 https://static1.squarespace.com/static/599307a5f5e231b361442225/t/5c675b67e79c705013d3a8ae/1550277485617/FINAL+%282%29-+Indigenous+Youth+Voices+-+Roadmap+to+TRC+66+-+Compressed.pdf

it is being used for, and so we see this as being a positive step in having more control and understanding of research processes. This work could include developing a database of reports and literature in these areas to be shared with individuals, community-based organizations, funders, governments, and academia. It will also involve developing and facilitating knowledge translation strategies that can help to ensure that knowledge is making its way to the community level and not being trapped on shelves or only within academic spaces. Similar to the Aboriginal Healing Foundation, the Research Team could also advise on the non-profit Capacity Building work (outlined next), offering insights to community groups on program evaluation techniques that are often a significant barrier to groups accessing sustainable funding.

As stated in the above excerpt from the Roadmap to TRC Call to Action #66, there has been an ongoing need for a code of ethics and a higher standard within the federal government when making decisions on behalf of Indigenous youth and children. The Code of Ethics and Network Panel offers insight into ways that Canada could be accountable for its decision making that has an impact on Indigenous young people. Additionally, there is a need for more appropriate research and transparency from governments when conducting research on Indigenous youth and children. In 2019, Indigenous Youth Voices created a report that lists the requirements, as developed by Indigenous youth, on ethical research with and by Indigenous youth as mentioned in the 2018 Roadmap.[5] The call for the federal government to be more accountable and ethical in their relationships with Indigenous youth and children is ongoing and has not been answered to date.

5 https://fncaringsociety.com/sites/default/files/indigenous_youth_voices-_a_way_forward_in_conducting_research_with_and_by_indigenous_youth.pdf

In keeping with the code of ethics and research requirements, a gathering was held in December 2020 with the intention of hearing from Indigenous youth and grassroots groups across Canada specifically about meaningful accountability for Indigenous children and youth within the Bill and beyond.

Environmental Scan

Children's commissioners have been established in close to 60 countries around the world with broad mandates to promote child rights, raise awareness and monitor progress in children's issues.[6]

An environmental scan was completed to review child and youth frameworks from other countries to support the discussions during the gathering and provide participants with examples of what a Commissioner for Children and Youth could look like within Canada.

National Child Participation Framework, South Africa

Within this framework child participation is a fundamental right of children. Child participation refers to the active involvement of children in the decisions, processes, programmes and policies that affect their lives. The framework is to guide all levels of government, civil society and sectors to promote meaningful participation. Additionally, it advocates that children are entitled to have a voice in decisions that affect their lives such as household and family, school, child protection, courses, health settings, community or local government and national policy. Child participation leads to better protection of children, raises public awareness on the needs of children and builds accountability across both society and governments as a whole.

Getting it Right for Every Child: A National Policy Framework to Promote Children's Well-Being in Scotland

This framework represents a shift from welfare to wellbeing, and aims to improve children's wellbeing via early intervention, universal service provision, and multiagency coordination across organizational boundaries. Focusing on promoting and improving the wellbeing of all children, this framework shifts away from top-down implementation toward the creation of broad policy frameworks administered at the local level and has a requirement for information sharing across organization boundaries enshrined in the statute. The framework acknowledges that there is a lack of consensus around the definition and measurement of child wellbeing, and that there should be a common interpretation practice framework based around it that is used across all agencies.[7]

Child and Youth Wellbeing Strategy, New Zealand

The strategy has nine principles to guide its development and implementation, and to inform the overarching framework for the government and others to align with. Developed with input from 10,000 New Zealanders, including over 6,000 children and youth, the vision for the strategy is that New Zealand is the best place in the world for children and young people. Within the strategy are six high-level and interconnected wellbeing outcomes, that signpost the social, economic and environmental factors needed for child and youth wellbeing. Māori language and culture are woven throughout the strategy's essence, and grounds its principles, outcomes and the wellbeing indicators.[8]

METHODOLOGY

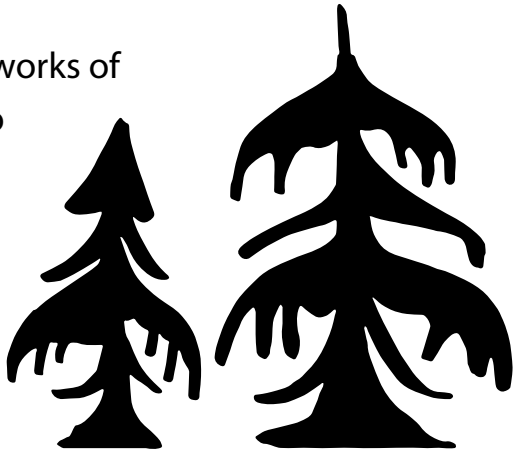
The method used to gather insight from Indigenous youth regarding Bill S-210 follows the requirements and standards created by Indigenous Youth Voices in 2019 entitled *A Way Forward in Conducting Research With and by Indigenous Youth*.

The seven requirements are:

- Accessibility
- Indigenous Youth Leading and Developing Research
- Holistic Approaches
- Indigenous Youth Defined Research Ethics
- Reciprocity
- Culturally-Led and Culturally Specific
- Support the Implementation of TRC Call to Action 66

These requirements were honoured by creating a diverse organizing committee, creating a safe and inclusive space for youth to share, inviting knowledge keepers and adults while centring discussions for youth leadership, creating a community agreement, having mental health supports, offering a respectable honorarium amount for participants and creating opportunities for youth to lead conversations, participate in research and writing of this report.

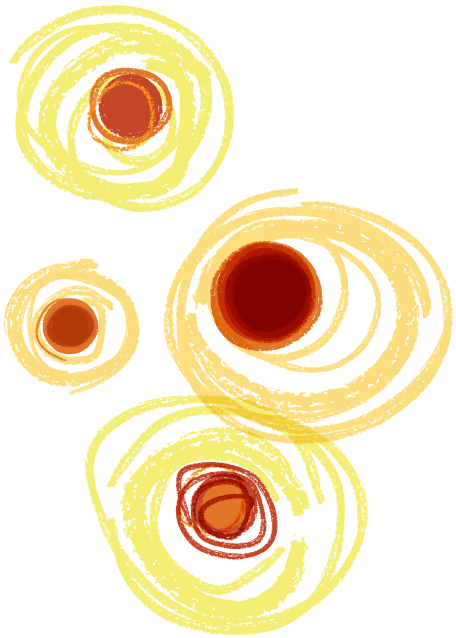
Relying on the expertise of grassroots youth networks of community leaders such as Alyssa Carpenter also ensured that there was a strong representation of Northern youth voices during the gathering. Northern youth indicated that there is a great need for Northern youth and their communities to be included in decision making that ultimately affects their communities.



The initial gathering was planned with the advice and expertise of Indigenous youth and community leaders. The gathering was led and developed by Indigenous youth. Also Indigenous youth led the research and writing of this report because Indigenous youth will be the ones that will either benefit or be disadvantaged from the creation of Bill S-210.

One of the most important parts of working together as a community is creating a standard and ethic for how we will work together. This helps set a tone of respect and understanding for the community that has come together to work on a project. It also creates a standard that the community is accountable to. Below is the Community Agreement that participants created together:

- Accessible Language (plain English, for example)
- Be Truthful
- One Speaker at a Time
- Reciprocity
- Honour Each Others Personal Experiences
- Respect
  - Respect Pronouns
  - Respect Each Other's Idea and Thoughts
  - Respect Confidentiality
- Take Frequent Breaks
- Lead With Kindness
- Acknowledge Each Other When Sharing
- Create Time and Space for Everyone to Share
- Sharing Trauma is not a Requirement
- Practise Consent
- Challenge When Needed
- Ask for Help
- Be Deadly!



Participants were presented with Bill S-210, the Briefing from the Caring Society, literature regarding Indigenous Child and Youth Advocacy as well as International Child and Youth friendly frameworks before continuing on to participate in facilitated breakout rooms.

Consent is a very important part of research and engagement with Indigenous youth. Indigenous youth were invited to participate in this gathering by their peers and from community members who have built relationships of trust. Prior to engaging and gathering any information from Indigenous youth, all participants were asked if they felt comfortable moving forward with the breakout sessions and if they felt that an Indigenous Youth Accountability Mechanism was needed, be that in a commissioner model or another model. All answered with an overwhelming yes, and we proceeded with the consent of all the participants. Mental health supports were also a part of the gathering because even though consent is given, there is a responsibility from the researchers and facilitators to ensure that there are supports especially if the discussions are triggering and/or very personal.

QUESTIONS ASKED

Indigenous youth were invited to participate in three breakout rooms to answer the following questions: Define Accountability, What Does Accountability Look Like? and Application of Accountability. Defining accountability from the perspective of Indigenous youth may look drastically different than defining accountability for non-Indigenous youth due to historical and contemporary injustices perpetrated by the Canadian government itself. After defining accountability, participants were asked to envision what their understandings of accountability could look like in action. Lastly, participants were then asked to think about existing models and best practises of accountability.

INITIAL SUMMARY

All of the participants in the gathering agreed that there is a strong need for an Indigenous Youth Accountability Mechanism. However, it became clear in the gathering that Indigenous youth do not see the values and principles of Indigenous communities reflected in Bill S-210, nor do they believe their needs and rights will be addressed through this Bill. Some initial concerns regarding Bill S-210 that were raised are: Indigenous youth and children seemed to be an afterthought, a lack of understanding of Indigenous rights which have been held by our communities since time immemorial, a lack of authority to hold governments accountable and individuals holding a national child commissioner role which may not support the diversity requirements and needs of Indigenous communities. These concerns, as well as requirements to move forward, will be examined further in this report.

Participants had in-depth conversations about what accountability means to them, how it should look moving forward and types of mechanisms they might want to see. This is the start of many important conversations to be had on the topic of accountability. Youth indicated that they would like to see regional conversations and to establish an ongoing network to share best practises and critical discussions on the topic of accountability.

The following page is an illustrated report of the discussions that took place.

In response to proposed Bill 2S10 - Assembly of Seven Generations Youth Dialogue, Dec 21, 2020

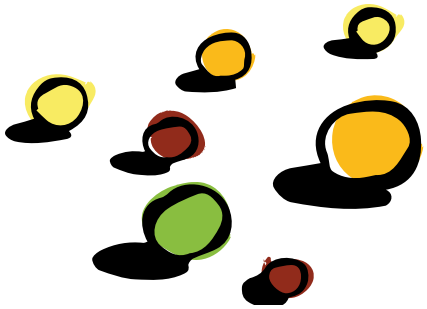
Tiaré Jung | Drawing Change

THEMES

Define Accountability

Indigenous youth defined six determinants of what accountability should look and feel like for them and their communities. These six determinants of accountability are as follows and are further elaborated on in this section.

- Responsibility
- Safety
- Respect
- Reciprocity
- Relational
- Integrity



Indigenous youth have chosen to use accountability rather than "rights promoter," which is listed as one of the mandates of the Child Commissioner. This is because Canada is long overdue in honouring inherent Indigenous rights, as demonstrated by generations and over 150 years of reports and recommendations that Indigenous peoples have provided to Canadians. Indigenous youth and children need action and it is urgent.

Despite Canadian Human Rights Tribunal rulings, Canada continues to discriminate against First Nations children and youth specifically.[9] These human rights violations are founded and it is beyond the point of advocacy, rights promotion and the power to report. There must be accountability for those in positions of power that demonstrate prejudice and racism towards Indigenous peoples as well as accountability for the decades of broken promises on behalf of Canadian governments. The bleak reality is that government inaction and its ongoing violations of the rights of Indigenous youth and children, has resulted in harms and

9 https://fncaringsociety.com/sites/default/files/2020_chrt_36_information_sheet_jr_update.pdf

high mortality rates in Indigenous communities.[10] In 2019, the Canadian Human Rights Tribunal found that Canada continues its "willful and reckless" discrimination against First Nations children in ways that harms First Nations children and families, and contributes to the deaths of some First Nations children.[11]

Responsibility

Being accountable cannot be a gesture or a good idea that will be implemented incrementally. Instead, governments and organizations need to look at accountability as a responsibility. If governments and organizations feel they are responsible for the safety and wellbeing of Indigenous children and youth then preventative measures would be put in place to create safety before harm is even a question.

Safety

While safety and protection is recognized as a basic child right, Indigenous youth and children continue to experience discrimination at the hands of governments and are left without this very basic right to live.[12] During the gathering, safety was an important focus. Indigenous youth and children should feel safe in their everyday lives, this includes access to safe

10 https://www150.statcan.gc.ca/n1/pub/82-003-x/2019012/article/00001-eng.htm

11 https://fncaringsociety.com/publications/victory-first-nations-children-and-families-tribunal-orders-compensation-2019-chrt-39

12 https://www.ohchr.org/EN/ProfessionalInterest/Pages/CRC.aspx

drinking water, safe living conditions, safe food, safe health and mental health services and they should feel safe when speaking out about their concerns.

UN Declaration on the Rights of the Child, Article 6 states:

1 Parties recognize that every child has the inherent right to life.

2 Parties shall ensure to the maximum extent possible the survival and development of the child.[13]

Respect

Indigenous youth and children are the experts of their lives and they wanted to be treated as such. Exploiting and tokenizing Indigenous youth and children is disrespectful. Not allowing Indigenous peoples to speak their traditional languages on their homelands is disrespectful.

Reciprocity

Reciprocity is a foundational philosophical view of many Indigenous nations. This is a land-based philosophical perspective that has lived with many Indigenous nations for thousands of years and it continues to live in Indigenous communities today. Reciprocity means sharing in good faith and giving back when needed. The relationship between Indigenous communities and governments is often extractive.[14] Research and consultations need to be reciprocal.

---

13 https://www.ohchr.org/en/professionalinterest/pages/crc.aspx

14 https://fncaringsociety.com/sites/default/files/indigenous_youth_voices_a_way_forward_in_conducting_research_with_and_by_indigneous_youth.pdf

"Relationship-building and a sense of reciprocity must be the cornerstone of research. Indigenous youth made it clear that researchers must have a sense of responsibility and accountability that extends beyond the limitations of a specific research project. This includes building trusting and meaningful relationships before research begins to ensure that relationships are maintained past the end of the research. Indigenous youth see this as an important mechanism in ensuring that researchers begin to value and define youth for their resilience and successes."

— Ethical Research Engagement with Indigenous Youth: Seven Requirements[15]

Relational

Relationships are vital. The fate and wellbeing of Indigenous children and youth are often subject to whomever is in power. Therefore, the federal government must commit to centring its relationships with Indigenous communities and the wellbeing of Indigenous children and youth over electoral terms and mandates. A part of transforming relationships between Indigenous and non-Indigenous peoples and nations must involve accountability, justice and equity. Indigenous youth and communities have been carrying the weight of reconciliation and repairing the damages done by colonization for decades. Indigenous youth today want to see those that have enabled harm toward their communities meet them at least half way towards their goals.

To build an accountability mechanism, it's important to build relationships. Relationships have to develop past memoranda and contracts, relationships are similar to how one builds a good reputation.

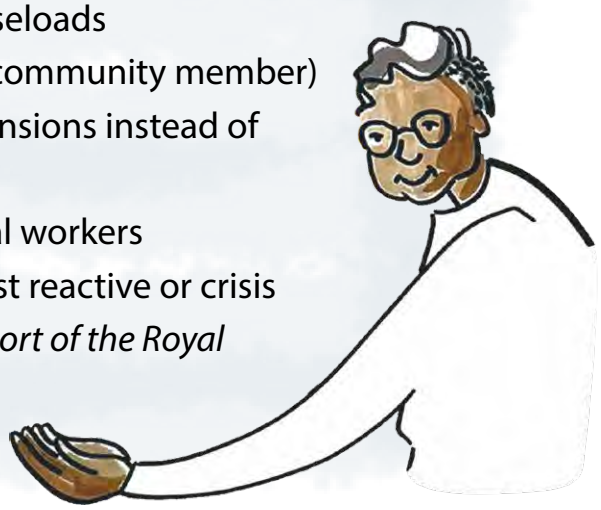
15 https://yellowheadinstitute.org/wp-content/uploads/2020/04/iyv-factsheet-research-with-indigenous-youth-1.pdf

Trust and consistency are very important to maintain good relationships and reputation but these are often disregarded due to the constantly changing government mandates and leadership.

A prime example of this is Indigenous youth who have been impacted by the child welfare system. While Canadians consider reconciliation for the Residential School era, ongoing oppression and violence is happening in the removal of Indigenous children and youth and being institutionalized in the child welfare system. Many of these young people experience a sense of deep loss and disconnection, racism and abuse due to the lack of accountability and justice within the child welfare system.

***A few indicators of justice and accountability, defined by a group of First Nations Youth In Care in a 2019 report entitled* Justice, Equity and Culture: The First-Ever YICC Gathering of First Nations Youth Advisors were:**

- cultural competency of social services and follow-up audits of competency led by Indigenous youth in care
- accountability for foster families who are not treating youth well and liability for abuse experienced by youth in care
- more social workers with smaller caseloads
- a community notary (trusted Elder/community member) to help mediate family issues and tensions instead of restraining orders
- more engagement of youth by social workers
- more preventative measures (not just reactive or crisis management) as detailed in the *Report of the Royal Commission on Aboriginal Peoples*[16]



16 https://www.a7g.ca/uploads/9/9/9/1/99918202/38228_chrt_compensation_report_v5_final.pdf

Integrity

Integrity speaks highly to prevention of harm and abuse. Individuals moving forward with a youth accountability mechanism must have a deep sense of integrity. Integrity is a hard value to gauge, however some suggestions were presented by Indigenous youth to gauge an individual's integrity:

- Centring children and youth
- Centring survivors (residential school survivors, Sixties Scoop survivors, sexual abuse survivors, survivors of child welfare, etc.)
- Indigenous-led
- Community appointed
- Honesty
- Highly recommended by children and youth
- Ability to receive feedback and improve from criticism

These values and attitudes are an ethical standard for a potential accountability mechanism and these ethics must be upheld in a very sensitive way so that Indigenous youth can trust the accountability process.

WHAT DOES ACCOUNTABILITY LOOK LIKE?

Many Indigenous youth and communities feel that they have never seen the federal, provincial or territorial governments being held accountable, despite the generations of reports, legal decisions and human rights findings.[17] The Canadian government is seen doing business as usual despite findings of discrimination against First Nations children.[18] All levels of government have failed to address in any substantive way the Truth and Reconciliation Commission's findings of cultural genocide and calls to transform its relationships with Indigenous peoples.[19] Indigenous peoples have very little faith in existing colonial methods and models of accountability without mechanisms to hold governments responsible. There is a foundation of trust that is needed before a process of accountability can take place.

There have been countless reports, inquiries, recommendations, calls to action, agreements and treaties made between Indigenous peoples and all levels of governments that have been ignored or forgotten. Indigenous youth are concerned that the proposed National Child Commissioner will simply be building upon broken and discriminatory relationships, especially when the Bill does not consider ways that the Commissioner itself and any recommendations it makes would be binding and promote accountability. The way forward is not only focusing on the problems that exist today, but addressing how the problems were created due to a continued lack of accountability within government policies.

18 https://fncaringsociety.com/i-am-witness

19 https://yellowheadinstitute.org/trc/

A few reports that have full lists of reports, recommendations as well as treaties and agreements between the Crown and Indigenous Nations are:

A Roadmap to the Truth and Reconciliation Commission Call to Action #66, Section 3.3, Review of Select Literature, pages 44–47[20]

Land Back: Indigenous Youth Leading the Way in Indigenous Sovereignty, A Timeline of Unhonoured Treaties and Broken Promises, pages 6–11[21]

Accountability for Indigenous youth means a mechanism that accepts the truths of Indigenous youth and holds perpetrators of harmful behaviours accountable. Harm is often caused by a system or person that abuses the power they have over someone or a group of people with little to no recourse. Any accountability mechanism must consider the systemic ways that a person, institution or system holds power over the people it harms. Furthermore, accountability cannot simply "react" after a harm is caused or experienced. Accountability mechanisms must lay the groundwork for harm prevention, from domestic abuse to systemic violence, in order to address the structural interventions that are required to move towards the holistic wellbeing of Indigenous youth.

20 https://static1.squarespace.com/static/599307a5f5e231b361442225/t/5c675b67e79c705013d3a8ae/1550277485617/FINAL+%282%29-+Indigenous+Youth+Voices+-+Roadmap+to+TRC+66+-+Compressed.pdf

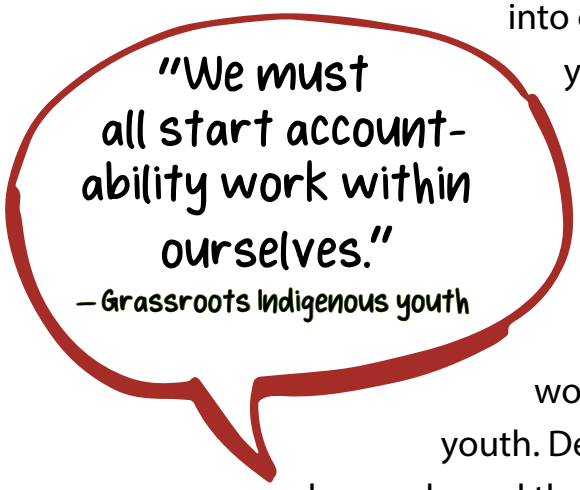
21 https://www.a7g.ca/uploads/9/9/9/1/99918202/reimagine_playbook_0.pdf

Best practices of accountability have to be led by Indigenous communities. Each community is unique, with specific needs, protocols and histories. Accountability must be designed specifically by each community; however, communities should come together to advocate for federal and provincial accountability.

Indigenous youth also spoke to the need to hold their own communities accountable. Many existing political structures are built from a colonial lens and therefore inherently carry many harmful aspects of colonization within themselves. The same standards of accountability have to also be applied to Indigenous communities and organizations.

Application of Accountability

Due to the traumatic histories and current realities of Indigenous youth, grassroots groups do not trust that the Canadian government will take into consideration the barriers of Indigenous youth when developing projects, supports or services. Grassroots Indigenous groups continue to be overburdened and overwhelmed with the real world trauma they encounter in their work and are left understaffed to take on the work of meaningfully supporting Indigenous youth. Despite the amount of reports that have been released that highlight the needs of Indigenous youth and what is required for engagement to be meaningful, the government continues to utilize numbers-based approaches over long-term impacts to define and measure success. Relying on the number of people reached (quantitative data) or how funding is spent to measure the success of a program continues to perpetuate colonial values as the standard for Indigenous peoples. Furthermore, government employees



lack cultural understanding of Indigenous ways of knowing and being, and enter communities for a short period of time for reporting purposes and do not follow up with the community.

So, how can government and organizations be held accountable for measuring success without replicating harmful powerful dynamics? It starts with:

1. **Recognizing that Indigenous youth are more than a number or a price tag.** Measuring success within federal systems requires approaches that move beyond numbers and data towards qualitative methods that measure wellbeing of Indigenous youth in outcomes. This must be integrated into all frameworks, programs and policies. Space needs to be intentionally created for grassroots groups to have equal voices within the development and delivery of every government program, with qualitative measures being community-driven. Representation of Indigenous youth within these systems needs to be not only funded but meaningfully supported. Policies and programs need to decolonize the idea that there is a monetary value for Indigenous youth and look at the quality of life and improvement for them, their families, and communities. In order for Indigenous communities to move beyond "reaction mode," the government must shift from one-time funding opportunities towards funding that supports intergenerational approaches that fosters community wellness.

2. **Grassroots Indigenous-led education and training.** Despite ongoing efforts to educate and train government agencies, organizations and educational institutions, there continues to be

a lack of understanding and follow-up on education and training sessions. Indigenous youth would like to have more control over this training as well as evaluations for agencies, organizations and institutions that undergo cultural sensitivity training or anti-oppression training. Training and education should be led and delivered by Indigenous youth themselves and not rely on National Indigenous Organizations as this is a conflict of interest in many cases.

It is important to acknowledge that Indigenous people feel that we must move beyond education and training. While this is a good first step, action must follow. One example of this is the Youth Services Evaluations[22] that A7G is currently conducting with youth-serving organizations. Evaluations are a way to see how well an agency or organization is doing after they have done training. This is a step towards accountability and evaluating how well an agency or organization is meeting the needs of Indigenous youth and children.

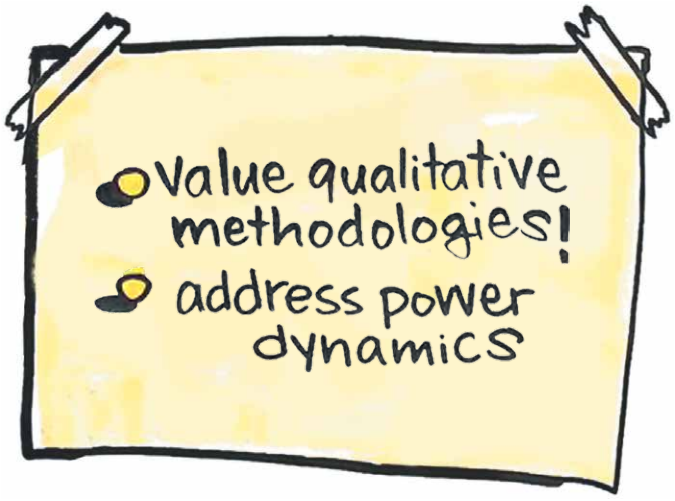
This also brings us back to the requirements from the Roadmap to the TRC Call to Action #66, in particular the Code of Ethics and Network Panel. The Panel is intended to recommend Indigenous youth experts on specific topics, these experts would then be recommended to agencies and organizations to improve their relationships with Indigenous youth and children. This Panel would also be recommended to advise on areas such as policy changes, funding

22 https://www.a7g.ca/uploads/9/9/9/1/99918202/79002_youth_services_eval_overview_v4.pdf

proposals and program development. This gives space and room for Indigenous youth to better guide the work that affects them. Having Indigenous youth work together as a network or collective group eliminates the burden of tokenization and offers better support to youth that might feel uncomfortable in colonial spaces.

If culture and language is valued then the principles and values of Indigenous communities must be the end result of this work.

3. **Indigenizing approaches to community engagement and relationship building.** Evaluations of the success of programs policies, and services must be developed by and for Indigenous communities. Government agencies must ask themselves "what are we doing wrong?" and listen to the feedback from Indigenous youth on changes needed for meaningful engagement that goes beyond checking off a box. Governments and organizations need to list short- and long-term actions items with how the community and youth will be involved in implementing them, and any next steps should be specific and identified with Indigenous youth, with reasonable time frames established. To ensure effective changes are made, active evaluation needs to take place on what is being implemented and if it is working as the needs of Indigenous youth and communities is fluid and ever changing.



4. **Cross collaboration between organizations.** Grassroots groups should lead the work and facilitate future discussions, holding space to bring people together as a living form of accountability that doesn't operate in silos, but spreads across different regions, organizations, and communities. Organizations need to shift from viewing one another as competition and work together more authentically, sharing wise practices on ways to accomplish each other's goals and meet the needs of Indigenous youth.

REQUIREMENTS TO MOVE FORWARD

The message and direction from Indigenous youth during the gathering was clear. A National Children's Commissioner in its current proposed state would not address the concerns or needs of Indigenous children and youth. However, despite the longstanding legacy of broken promises from the Canadian government, Indigenous youth are still hopeful. Indigenous youth are hesitant yet continue to be open to working on repairing relationships. The following are the requirements for moving forward to determine the best model of accountability for Indigenous youth.

- Establish a network of best practises, led by grassroots youth leaders and groups from different regions, in the spirit of TRC Call to Action 66.

  This looks like:
  - Indigenous communities defining and measuring what success means to them.
  - Educating Indigenous youth on their rights as Indigenous young peoples.
  - Ensuring there is space for Indigenous youth to participate in matters that affect them.
  - Decentralizing power and moving towards non-hierarchical leadership.
  - Creating a network that centralizes the safety and wellbeing of Indigenous youth and children.
  - Grassroots youth leading education and training with the Code of Ethics Panel.
  - Research led and developed by Indigenous youth and children in keeping with the Research and Knowledge Translation and the report, *A Way Forward in Conducting Research With and by Indigenous Youth*.
  - Must include Northern and rural youth and children as well as gender-diverse and LGBTQ2S+ youth and children.

- A call to action to Canadian governments (including the Senate) to read, understand and implement existing reports, recommendations, treaties and literature by Indigenous communities and youth.

  This looks like:

  - Addressing existing reports, inquiries before making new ones.
  - More action and movement on existing reports, recommendations, etc. especially those coming directly from community and Indigenous youth and children.
  - Actions directly from recommendations and call to actions from reports listed in this report as well as and follow up from those recommendations and calls to action.
  - Open communication with those implementing actions.

- Accountability and justice from harmful systems and structures.

  This looks like:

  - Legislative changes to address systemic racism and inequities.
  - Halting known problematic systems.
  - Youth wellbeing, best interests and improvement is centered. Limiting the wellbeing of youth based on government financial considerations and budgets is deprioritized.
  - Federal government fully commits to making systemic and lifelong change, not placing a price tag on Indigenous childhoods.
  - Move beyond election mandates (four-year mandates) to measure progress and commit to goals.

- Prior to establishing a National Children's Commissioner, Indigenous youth must be ethically engaged in the decision making process.

  This looks like:
  - Holding regional gatherings with Indigenous youth.
  - Research following the guidelines from A Way Forward: Ethical Engagement with and by Indigenous Youth.
  - Discussions regarding a National Children's Commissioner are not predetermined.
  - Indigenous youth and children need space to determine what the best Youth Accountability Mechanism will look like.

CLOSING WORDS

This is just the beginning of important work that must continue. Indigenous youth and children deserve justice and reparations for the harm that continues to impact daily lives. Indigenous youth deserve accountability and responsibility from the federal government, as well as all levels of government. The federal government has a deep responsibility to meaningfully engage in this accountability work, however it must be led by Indigenous youth and children and their trusted allies. Therefore, it is the intentions of A7G, the Caring Society, and all youth involved in this initial report that we continue building relationships amongst ourselves and ensure that we continue fighting for the rights of Indigenous children and youth to be respected and honoured.

December 17, 2025

Recommendations for the Long-Term Reform of First Nations Child & Family Services: Literature Scan

By: Gabrielle Fayant

Assembly of Seven Generations (A7G), an Ottawa-based Indigenous grassroots youth group, provides the following recommendations based on a literature scan of previous reports on the well-being and rights of First Nations children and young people. These ten recommendations will be instrumental in supporting youth in participating in any long-term reform of the First Nations Child and Family Services (FNCFS), and in ending Canada's discrimination now and forever. We are honoured to contribute to the long-term reform of FNCFS, alongside many other First Nations youth, Elders, knowledge-keepers, leaders, and experts.

We focused on themes of governance, accountability, and post-majority supports, drawing insights from three foundational reports to make recommendations: *Justice, Equity and Culture: The First-Ever YICC Gathering of First Nations Youth Advisors* (2019), *A Follow-up Report of First Nations Youth in Care Advisors* (2021), and *Accountability in Our Lifetime: A Call to Honour the Rights of Indigenous Children and Youth* (2021).

While this initial literature scan provides a framework of existing recommendations, further work is required to ensure grassroots First Nations youth, particularly youth in and from care, can provide further insights. While the recommendations align well with the theme of governance, additional work with youth is needed to ensure they can contribute their expertise to the development of the best possible governance framework for the long-term reform of FNCFS. Furthermore, we welcome the opportunity to bring youth together to form recommendations on the definitions and principles underpinning long-term reform. To that end, A7G developed a youth engagement guide to facilitate further discussions with First Nations young people, should there be an opportunity.

The ten recommendations below are ones that Indigenous youth have called for to ensure we are the last generation of young people who need to fight for accountability, fight to have our rights upheld and honoured, so that we may thrive with cultures and languages.

Literature Scan of A7G Reports

Findings from *Justice, Equity and Culture: The First-Ever YICC Gathering of First Nations Youth Advisors*[1]

Youth in Care Canada, supported by the First Nations Child and Family Caring Society and the Assembly of First Nations, held a gathering on October 25, 2019, on Unceded

[1] Bach, Ashley, and Gabrielle Fayant. *Justice, Equity and Culture: The First-Ever YICC Gathering of First Nations Youth Advisors*. November 2019. a7g.ca/uploads/9/9/9/1/99918202/38228_chrt_competo discuss furthernsation_report_v5_final.pdf.

Algonquin territory, now called Ottawa. Sixteen First Nations youth with lived experience in child welfare systems discussed experiences in child welfare and how the system needs to improve, as well as their preliminary thoughts about the compensation for First Nations children and youth and their families that the Canadian Human Rights Tribunal ordered. Known as Youth Advisors, they discussed child welfare reform and what it would take for Indigenous youth to feel heard and feel important.

1. Recommendation: Form a collective of First Nation Youth Advisors in and from care

This was the first national-level gathering of its kind for First Nations youth in and from care. The Youth Advisors identified a need for time and space to discuss further and understand the long-term reform of child welfare. They recommended that a collective of First Nations Youth Advisors in and from care be established to, at a minimum:

- share best practices;
- share updates;
- continue advocating for reform;
- host more policy round tables across the country; and
- advise on court rulings, contribute to policy development and share testimonies.

The establishment of a collective of First Nation Youth Advisors in and from care is key to the long-term reform of FNCFS and for any implementation.

Findings from *Children Back, Land Back: A Follow-Up Report of First Nations Youth In Care Advisors*[2]

Building on the first Youth in Care Advisors gathering, this report emphasizes the need for ongoing collaboration and communication, as well as for forming a collective of advisors. The report was especially timely given the negotiations stemming from the Canadian Human Rights Tribunal rulings, which ordered Canada to immediately stop its discrimination against First Nations children and youth and prevent it from happening again. The report highlighted the importance of including First Nations youth perspectives in decisions that directly impact their lives.

> "This report will clearly state solutions and recommendations from First Nations children and youth themselves because who else would know the problems and solutions better than those that have experienced child welfare first-hand."[3]

This report recommends the creation of a national network for Indigenous youth currently in care and those who have transitioned out. Originally proposed at the 2019 Gathering of First Nations Youth in Care, this recommendation remains a priority. Youth Advisors from the 2019 and 2021 gatherings emphasized the need to maintain connections, share experiences, and actively engage in decision-making processes that shape child welfare policy, recognizing their lived experience as essential expertise.

[2] Fayant, Gabrielle, and Ashley Bach. A Follow-up Report a Follow-up Report of First Nations Youth of First Nations Youth in Care Advisors in Care Advisors. December 2021. https://www.a7g.ca/uploads/9/9/9/1/99918202/79004_land_back_report_v5f.pdf.
[3] Fayant and Bach, 6.

2. Recommendation: Create a Youth in Care Accountability Mechanism

The relationship between Indigenous youth and Canada is deeply strained due to broken trust and Canada's discriminatory provisions in child welfare systems. To ensure justice and accountability, an Indigenous youth-led mechanism should be established to oversee complaints, support access to Jordan's Principle, review child welfare services, uphold ethical standards, and have the authority to enforce systemic reforms. This mechanism must include all Indigenous youth, not just those under the age of majority. This is consistent with the needs of young people aging out of the child welfare system.

3. Recommendation: Establish an Ethical Indigenous Youth Standard, accompanied by accountability and reviews

There must be an accessible complaints process for Indigenous youth, children, and families to report inappropriate behaviour, abuse, or racism by service providers. Individuals working with Indigenous youth and families, including public servants, social workers, policy makers, police officers, group home staff, and others, must:

- Complete mandatory training on anti-racism, colonial history, contemporary colonialism, child welfare impacts on Indigenous communities, and cultural competency specific to the territory and nations they serve.
- Undergo security screening, including a reliable security clearance and a vulnerable persons check.
- Require regular evaluations of service providers (e.g., foster homes, group homes) conducted by Indigenous youth in or from care.

4. Recommendation: Keep families together by properly funding the basic needs of families

Indigenous youth and children are significantly overrepresented in care systems, primarily due to chronic underfunding of essential family needs. This systemic issue undermines family stability and perpetuates cycles of separation. To address this, Indigenous families must have equitable access to culturally relevant supports and services that strengthen families and prevent unnecessary child removal. This ensures that Indigenous families have the resources and culturally grounded supports necessary to remain together, thrive, and reduce the disproportionate number of children in care.

Key areas of support must include:

- Basic Needs: Safe and proper housing, clean water, food, and clothing.
- Health and Wellness: Mental health services, trauma-informed care, peer-to-peer supports, and addiction counselling.
- Family and Child Support: Kinship care, daycares, nurseries, doulas, and midwives.
- Education and Skills Development: Parent training (including for disabilities), post-secondary education, employment and trades programs, and cooking classes.
- Cultural and Community Connections: Access to land, ceremonies, coping skills, hobbies, and sports.
- Emergency support: prevent evictions, respond to family emergencies, etc.

5. Recommendation: Fair and equitable funding focused on supporting children and youth living with their families and in their communities.

There must be a transition from reactive measures to preventive measures. The report highlighted participants recalling being removed from their families due to poverty while being placed with a non-Indigenous family, who were offered compensation to look after them. If there is funding to cover the removal of Indigenous youth and children from their families, then there is funding to keep families together. Funding models must shift to prioritize the well-being of Indigenous youth and children, focusing on keeping families together rather than institutionalization. Investments should be equitable, culturally relevant, and aimed at enabling Indigenous peoples to thrive—not merely survive.

6. Recommendation: Restoring and preserving access to Indigenous cultures and languages

Community and cultural connections while in care are absolutely integral for the well-being of Indigenous children and young people. Over half of the respondents in the report identified access to culture as a fundamental support. To safeguard access to Indigenous culture and languages, efforts should focus on:

- Maintaining family connections, including traditions and land-based knowledge.
- Providing access to Indigenous youth groups, especially those led by Indigenous youth.
- Ensuring cultural engagement, such as ceremonies, language learning, and mentorship from Elders and knowledge keepers.
- Facilitating community visits and land-based activities on traditional territories.
- Creating safe spaces for cultural learning and community interaction, including areas for living, eating, and socializing.

7. Recommendation: A moratorium and evaluation of discriminatory and problematic programs and policies

Government policy is a key tool for protecting Indigenous children and youth. Programs and policies impacting children and youth must be evaluated to identify and eliminate discriminatory mindsets, policies, and practices. This includes strengthening anti-discrimination laws, adding funding and anti-discrimination clauses to child and family services policies and laws, and implementing preventative measures. Indigenous children and youth should be actively involved in these evaluations.

8. Recommendation: Indigenous youth must have access to family reunification services and supports to transition to adulthood after they age out of child welfare

Indigenous youth must have access to programs to ensure they can successfully reconnect with family and transition into adulthood with stability, cultural identity, and well-being. The report identified two critical supports, family reunification services and post-majority supports, that are either unavailable, inaccessible or underfunded.

Reconnecting with family and community after child welfare should be the youth's choice, but the systems that removed them must take responsibility for facilitating reunification. Reconnecting with family and community should not be at the expense of the youth who were placed in child welfare. There must be supports which fund youth to

visit their communities and traditional territories, (re)connect with their families, and manage the mental impact of this reunification.

The decision to transition into adulthood after child welfare must be made in consultation with the youth, based on their readiness. Comprehensive supports are essential, including a social safety net, access to safe housing, life skills training, financial support, continuous healthcare, education support, and cultural and community reconnection.

9. Recommendation: Youth-led foundation to support youth-led community-based programs and projects

Consistent with Truth and Reconciliation Commission Call to Action 66, Canada must invest in an endowment to establish a foundation led by Indigenous youth in and from care, alongside their allies, with additional funding from public and private donors. The foundation would fund community-based healing and cultural restoration projects and provide emergency financial assistance for youth in urgent situations.

[4]

[4] Fayant and Bach, 34.

Findings from *Accountability in Our Lifetime: A Call to Honour the Rights of Indigenous Children and Youth*[5]

The Assembly of Seven Generations worked with Indigenous young people to discuss what accountability means to them. Indigenous youth chose to use accountability rather than "rights promoter" because Canada is long overdue in honouring inherent Indigenous rights, as demonstrated by generations and over 150 years of reports and recommendations that Indigenous peoples have provided to Canada outlining how to end discrimination and perpetuating harm against Indigenous children and youth.

> "For decades, First Nations have called for Canada to respect the sacredness of their children and youth by upholding the best interests of the child, substantive equality and cultural continuity."[6]

10. Recommendation: Establish an accountability mechanism

An accountability mechanism is urgently needed that includes Indigenous youth, youth-defined values, and reflects Indigenous cultures, languages, and knowledges. Accountability for Indigenous youth means a mechanism that accepts the truths of Indigenous youth and holds perpetrators of harmful behaviours and discrimination accountable. The accountability mechanism must have the authority to issue binding orders against the Canadian government to ensure that discrimination against First Nations children and youth stops and never occurs again.

Indigenous youth defined six determinants of what accountability should look and feel like for them and their communities:

- Responsibility
- Safety
- Respect
- Reciprocity
- Relational
- Integrity

Conclusion

A7G is honoured to contribute to the long-term reform of FNCFS, alongside First Nations youth, Elders, knowledge keepers, leaders and experts, to end Canada's discrimination now and forever. These ten recommendations reflect a shared vision: that this will be the last generation of First Nations youth that will have to fight for accountability and the recognition of their inherent rights.

2022 Reports of the Auditor General of Canada to the Parliament of Canada

Report 8—Emergency Management in First Nations Communities—Indigenous Services Canada

Table of Contents

Introduction

- Background
- Focus of the audit

Findings and Recommendations

- Preparing for and mitigating emergencies
  - Indigenous Services Canada did not meet First Nations' needs in preparing for and mitigating emergencies
    - Highest-risk First Nations communities not identified or prioritized for resources
    - First Nations' structural mitigation needs not met
    - Non-existent or out-of-date departmental emergency management plans
    - First Nations' emergency management coordinator needs not identified
- Responding to emergencies
  - Indigenous Services Canada did not ensure response services met the needs of First Nations communities
    - Not all First Nations communities covered by emergency management service agreements
    - Some evacuation needs not met
    - Lack of knowledge of whether emergency management commitments are being met
    - Impact on marginalized groups not integrated into program delivery

Conclusion

About the Audit

Recommendations and Responses

Exhibits:

- 8.1—The number of emergencies and evacuations in First Nations communities (2009–10 to 2021–22 fiscal years)

- 8.2—Indigenous Services Canada spent 3.5 times more on response and recovery activities than on preparedness and mitigation activities (2018–19 to 2021–22 fiscal years)
- 8.3—As of April 2022, 39% of structural mitigation projects were eligible but waiting for funding
- 8.4—The greatest unmet structural mitigation needs were in British Columbia and Alberta
- 8.5—First Nations homes were damaged while a community waited for funding for a project to address flooding risk
- 8.6—Indigenous Services Canada did not establish emergency management service agreements and standards in all provinces
- 8.7—Between the 2009–10 and 2021–22 fiscal years, 90 evacuations of First Nations communities lasted longer than 3 months
- 8.8—Indigenous Services Canada funded a cost-effective community-driven initiative for evacuations during the COVID-19 pandemic
- 8.9—Performance indicators did not measure progress against the United Nations' Sustainable Development Goals

Introduction

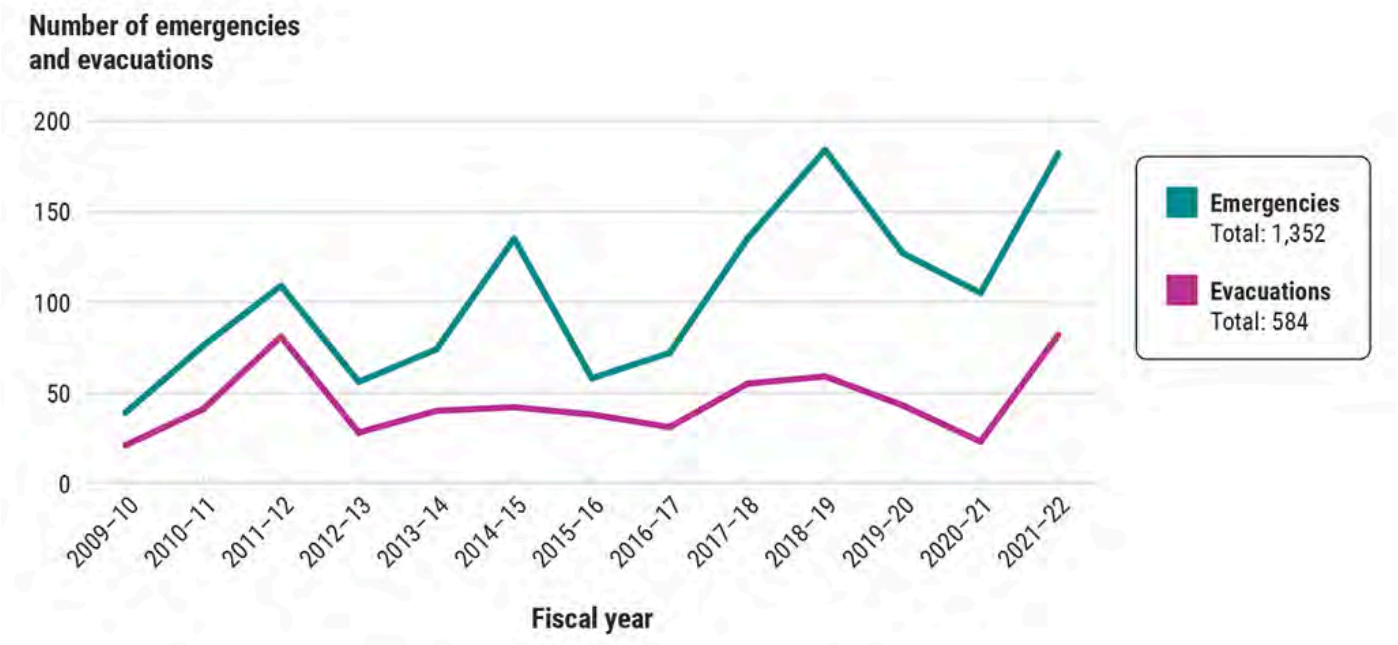
Background

Growing number of emergencies in First Nations communities

8.1 Emergencies such as floods, wildfires, landslides, and severe weather events are happening more often and with greater intensity throughout Canada. These emergencies disproportionately affect First Nations communities—groups of First Nations people living on **reserves** [1]—because of their relative remoteness and socio-economic circumstances. In addition, many First Nations communities were relocated from their traditional lands to flood- and wildfire-prone areas. First Nations communities are also more likely to be evacuated than non-Indigenous communities.

8.2 Over the last 13 years, First Nations communities experienced more than 1,300 emergencies leading to more than 580 evacuations affecting more than 130,000 people. Some of these people were evacuated more than once for different emergencies (Exhibit 8.1).

Exhibit 8.1—The number of emergencies and evacuations in First Nations communities (2009–10 to 2021–22 fiscal years)



Note: The data for emergencies covers floods, wildfires, landslides, and severe weather events.

Source: Indigenous Services Canada's Incident Database

▼ **Exhibit 8.1—text version**

This line graph shows the number of emergencies and evacuations in First Nations communities for the 2009–10 to 2021–22 fiscal years. During this period, there were 1,352 emergencies and 584 evacuations. The number of emergencies and evacuations by fiscal year are as follows.

Fiscal year	Emergencies	Evacuations
2009–10	39	21
2010–11	76	41
2011–12	109	81
2012–13	56	28
2013–14	74	40
2014–15	135	42
2015–16	58	38
2016–17	72	31
2017–18	135	55
2018–19	184	59
2019–20	127	43
2020–21	105	23
2021–22	182	82

8.3 The number of emergencies and evacuations is expected to keep growing across Canada because of the effects of climate change. In An Emergency Management Framework for Canada (2007), the federal government committed to improving its understanding of risk and to taking more actions to help all communities across Canada prepare for and mitigate the impact of emergencies.

Roles and responsibilities

8.4 **First Nations communities.** First Nations communities are responsible for using local resources to prepare for and respond to emergencies. If the situation is beyond the community's capacity to respond, it can ask for help from the federal government, provincial governments, and non-governmental organizations, such as the Canadian Red Cross.

8.5 **Indigenous Services Canada.** The department is responsible for ensuring that First Nations communities receive emergency management services, including emergency planning, flooding prevention (such as sandbagging), and wildfire suppression. During an emergency, the department is also responsible for providing advice and support as requested by the affected First Nation and province.

8.6 The department does not provide direct emergency response services to First Nations communities. The department negotiates emergency management service agreements with provinces or other service providers, such as the Canadian Red Cross, to provide emergency services in First Nations communities. These agreements are intended to clarify roles and responsibilities, support preparedness training and capacity building, and ensure that First Nations receive coordinated emergency response and recovery services.

8.7 Over the last 4 fiscal years (2018–19 to 2021–22), Indigenous Services Canada spent about $828 million on emergency management supports for First Nations communities:

- About $754 million was provided through the Emergency Management Assistance Program, which reimburses First Nations, provinces, and other service providers for the costs of responding to emergencies in First Nations communities. The program also funds First Nations to help them prepare for and mitigate emergencies through activities such as developing community risk assessments and community emergency management plans, flood mapping, and training.
- About $74 million was provided through the First Nation Infrastructure Fund, which funds infrastructure projects in First Nations communities, including mitigation projects, such as building culverts and dikes, to reduce the impact of emergencies.

8.8 The federal government has emphasized the importance of reconciliation and the renewal of a nation-to-nation relationship between Canada and Indigenous communities that is based on the recognition of Indigenous rights, respect, cooperation, and partnership. As part of the reconciliation process that the federal government has begun with Indigenous peoples, Indigenous Services Canada has committed to working in partnership with First Nations to transfer services to them.

Focus of the audit

8.9 This audit focused on whether Indigenous Services Canada provided the emergency management support needed by First Nations communities. We examined the department's activities related to floods, wildfires, landslides, and severe weather events because these are the most prevalent types of emergencies affecting First Nations communities. Our audit looked at First Nations communities in the provinces and not in the territories because almost all on-reserve First Nations communities are located in the provinces.

8.10 This audit is important because emergencies have significant health, environmental, and economic effects on the people affected, ranging from psychosocial trauma to lost economic opportunities. Once emergencies and evacuations are over, their effects continue to be felt by communities because it can take years to fully restore services and infrastructure.

8.11 More details about the audit objective, scope, approach, and criteria are in **About the Audit** at the end of this report.

Findings and Recommendations

Overall message

8.12 Overall, Indigenous Services Canada did not provide the support First Nations communities needed to manage emergencies such as floods and wildfires, which are happening more often and with greater intensity.

8.13 We found that the department's actions were more reactive than preventative, despite First Nations communities identifying many infrastructure projects to mitigate the impact of emergencies. The department had a backlog of 112 of these infrastructure projects that it had determined were eligible but that it had not funded. The department is also spending 3.5 times more money on responding to and recovering from emergencies than on supporting the communities to prevent or prepare for them. Until these projects are completed, First Nations communities are likely to continue to experience emergencies that could be averted by investing in the right infrastructure.

8.14 Many issues have not improved since we first identified them in our 2013 audit of emergency management on reserves. For example, Indigenous Services Canada still had not identified which First Nations communities were the least likely to be able to manage emergencies. Doing so would allow the department to target investments in these communities, such as building culverts and dikes to prevent seasonal floods, and to help avoid some of the costs of responding to and recovering from emergencies.

8.15 The department also did not know whether First Nations received services that were culturally appropriate and comparable to emergency services provided in municipalities of similar size and circumstance because it did not identify or consistently monitor the services or level of services to be provided to First Nations.

Preparing for and mitigating emergencies

Indigenous Services Canada did not meet First Nations' needs in preparing for and mitigating emergencies

What we found

8.16 We found that Indigenous Services Canada spent 3.5 times more on responding to emergencies than on supporting First Nations communities to prepare for them. We also found that the department had not addressed problems with preparedness and mitigation that we identified almost a decade ago, when we audited this topic in 2013. For example, the department did not conduct a risk assessment to identify the First Nations communities most vulnerable to emergencies. The department did not update outdated departmental and regional emergency management plans or develop regional emergency management plans in 3 of its regions.

8.17 We found that funding for structural mitigation projects identified by First Nations did not meet First Nations' needs. The department determined that there were 112 projects eligible for funding, but they were still unfunded. The department told us that it had insufficient funding to cover all eligible structural mitigation projects. First Nations communities are likely to continue to experience emergencies that could be prevented or mitigated by building the infrastructure.

8.18 We also found that capacity needs of First Nations communities were not identified. For example, although the department provided funding to First Nations for about 190 full-time or part-time **emergency management coordinators** [2], it did not know how many more were needed for First Nations to have the capacity to manage emergencies.

8.19 The analysis supporting this finding discusses the following topics:

- Highest-risk First Nations communities not identified or prioritized for resources
- First Nations' structural mitigation needs not met
- Non-existent or out-of-date departmental emergency management plans
- First Nations' emergency management coordinator needs not identified

---

Why this finding matters

8.20 This finding matters because it is likely that Indigenous Services Canada is incurring significant costs to respond to—and help First Nations communities recover from—emergencies that could have been mitigated or avoided. First Nations will continue to be more vulnerable to emergencies if they are not adequately supported to prepare for and mitigate emergencies.

8.21 First Nations are the first line of defence until help can come from provincial or other service providers, and so addressing capacity gaps is critical. Local community members are also well positioned to manage emergencies in their communities because of their familiarity with the land and knowledge of traditional practices. Building local capacity should improve preparedness, reduce the impact of emergencies, and enhance the long-term resilience of communities.

Context

8.22 Preparedness and mitigation activities are proactive actions that can prevent or reduce the impact of emergencies. For example, clearing vegetation by removing branches and trees can prevent or reduce the intensity and spread of wildfires. Studies point to the fact that it is more cost-effective to spend money on mitigation and preparedness efforts than to respond to emergencies when they occur. Indigenous Services Canada supports First Nations in implementing both infrastructure and non-infrastructure mitigation projects.

8.23 Under the *Emergency Management Act* (2007), the Minister of Indigenous Services is responsible for identifying risks that are within or related to the Minister's area of responsibility, including those related to critical infrastructure. Under the act and the 2009 Federal Policy for Emergency Management, ministers are required to prepare emergency management plans with regard to those risks and to maintain, test, and implement the plans.

8.24 To meet this requirement, Indigenous Services Canada developed the 2017 National On-Reserve Emergency Management Plan. This departmental plan requires its regional offices to develop, update, test, and implement regional emergency management plans. According to the department, these regional plans are important for a number of reasons, including because they are intended to reflect regional variations in approaches to emergency management and specific risks related to the type of emergencies in the region.

8.25 Our 2013 audit of emergency management on reserves, and Indigenous Services Canada's 2013 and 2017 internal audits of the Emergency Management Assistance Program, identified problems with how the department manages preparedness and mitigation activities. These audits found that the department's failure to implement a risk-based approach limited its ability to plan and strategically invest in First Nations mitigation and preparedness activities. These earlier audits also found that the department's regional emergency management plans either did not exist or were out of date.

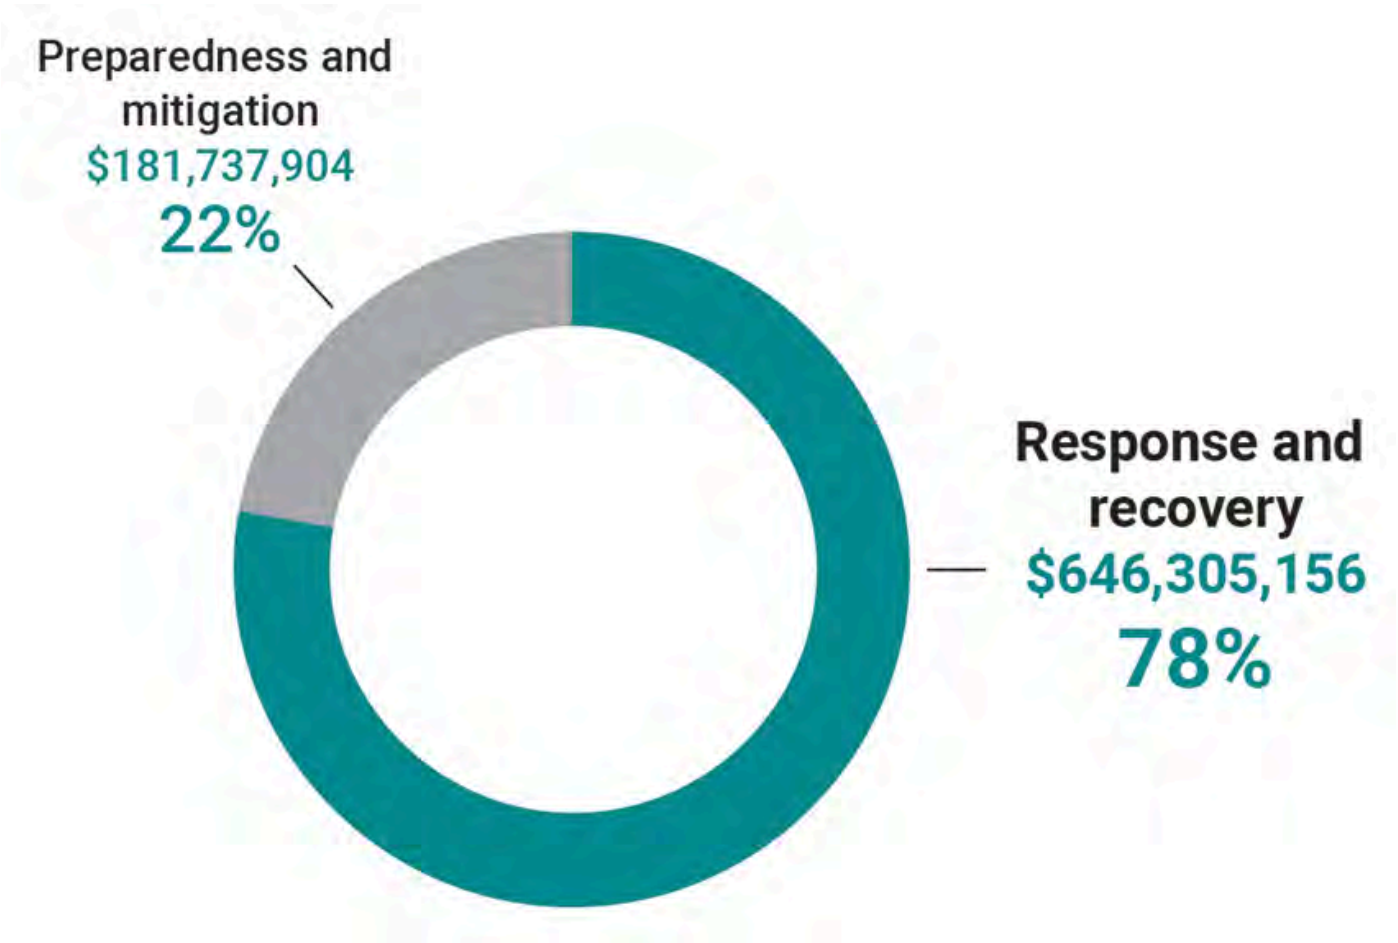
Analysis to support this finding

Highest-risk First Nations communities not identified or prioritized for resources

8.26 According to Public Safety Canada's 2019 Emergency Management Strategy for Canada, for every $1 invested in preparedness and mitigation, $6 can be saved in emergency response and recovery costs. Indigenous Services Canada recognizes that greater investments in preparedness and mitigation initiatives reduce the impact of emergencies for First Nations communities.

8.27 While Indigenous Services Canada's spending on preparedness and mitigation increased from the 2018–19 to 2021–22 fiscal years, we found that its total spending on response and recovery activities in that period ($646 million) was 3.5 times its spending on preparedness and mitigation activities ($182 million) (Exhibit 8.2).

Exhibit 8.2—Indigenous Services Canada spent 3.5 times more on response and recovery activities than on preparedness and mitigation activities (2018–19 to 2021–22 fiscal years)



Source: Based on financial data provided by Indigenous Services Canada

▼ **Exhibit 8.2—text version**

This donut chart shows the amount of money that Indigenous Services Canada spent on response and recovery activities and on preparedness and mitigation activities from the 2018–19 to 2021–22 fiscal years.

During this period, the department spent $646,305,156, or 78%, on response and recovery and $181,737,904, or 22%, on preparedness and mitigation. The department thus spent 3.5 times more money on response and recovery activities than on preparedness and mitigation activities.

8.28 To target funding effectively, Indigenous Services Canada must understand the risks facing First Nations communities. We found that the department did not implement a risk-based approach to manage emergencies as required under the *Emergency Management Act* and the 2009 Federal Policy for Emergency Management. This finding was identified in our 2013 audit and in the department's 2013 and 2017 internal audits. A risk-based approach involves identifying, analyzing, and evaluating risks in First Nations communities, as well as determining the actions needed to address these risks. A comprehensive understanding of risks can help

reduce the likelihood and impact of emergencies by allowing the department to make informed decisions on program planning and where to invest in preparedness and mitigation activities.

8.29 We found that Indigenous Services Canada did not use information about the risks faced by First Nations and the capacity of First Nations to respond to emergencies. The department provides funding for First Nations communities to develop community vulnerability assessments and emergency management plans. These assessments and plans are important because they help First Nations prepare for and mitigate emergencies by identifying risks and outlining how they will be managed. Department officials told us that, in the spirit of supporting First Nations self-governance, they did not require First Nations to provide this information to the department. In our view, this information would allow the department to target its preparedness and mitigation funds to the communities with the greatest need.

8.30 We also found that Indigenous Services Canada did not make use of data or information from other sources to identify First Nations communities at the highest risk of not being able to manage emergencies, such as

- the Indigenous Emergency Management Capability Inventory, led by Public Safety Canada and the Assembly of First Nations
- Crown-Indigenous Relations and Northern Affairs Canada's climate vulnerability assessments

8.31 The department's preparedness and mitigation programs are proposal-based. This approach allows First Nations to identify the activities that they believe are the most impactful. However, this approach does not ensure that First Nations at the highest risk of experiencing emergencies receive funding, since not all First Nations communities have the capacity to apply for funding. For example, between the 2018–19 and 2021–22 fiscal years, 13 First Nations communities were evacuated 3 or more times. We found that 4 of these 13 communities did not apply for funding for non-structural mitigation and preparedness—such as flood mapping and emergency management training. It was unclear to us why these communities did not apply for funding despite being highly affected by emergencies. As a result, the department may not have been funding the communities that needed it the most.

8.32 **Recommendation.** Indigenous Services Canada should work with First Nations to implement a risk-based approach to inform program planning and decisions on where to invest in preparedness and mitigation activities to maximize support to communities at highest risk of being affected by emergencies.

The department's response. Agreed.

See **Recommendations and Responses** at the end of this report for detailed responses.

First Nations' structural mitigation needs not met

8.33 The First Nation Infrastructure Fund has, until March 2024, a dedicated annual budget of $12 million to fund structural mitigation projects. These projects are aimed at preventing or reducing the impact of emergencies, such as by building culverts and dikes to prevent seasonal floods. In addition, the department can use infrastructure funds outside this dedicated budget when these funds are available. We found that from the 2018–19 to 2021–22 fiscal years, Indigenous Services Canada spent $73.9 million on structural mitigation projects in First Nations communities.

8.34 We found that 102 structural mitigation projects were either completed (58) or in progress (44). We also examined the department's database to determine the status of project proposals submitted by First Nations to mitigate the impact of emergencies. We found that the department had a backlog of 72 structural mitigation project proposals that it had not yet reviewed to determine whether they were eligible for funding. The majority (65%, or 47 of the 72) of these unreviewed project proposals were submitted between the 2018–19 and 2021–22 fiscal years.

8.35 Furthermore, the department determined that an additional 112 projects were eligible but did not fund them. As of April 2022, 74 of the 112 eligible projects had been in the department's backlog for more than 5 years, and 4 had been eligible and in the backlog for nearly a decade (Exhibit 8.3 and Exhibit 8.4). The department estimated that these 112 projects had a total cost of at least $291 million. We noted that this was an underestimate because 43 of the 112 projects did not have an associated cost. According to the department, no action was taken on these projects because of funding shortfalls. With the current First Nation Infrastructure Fund annual budget of $12 million, it would take over 24 years for the department to fund these projects—setting aside the projects that had not been costed and any new proposals. As a result, First Nations communities are likely to continue to experience emergencies that could be prevented or mitigated by building the infrastructure. Exhibit 8.5 provides an example of an affected community.

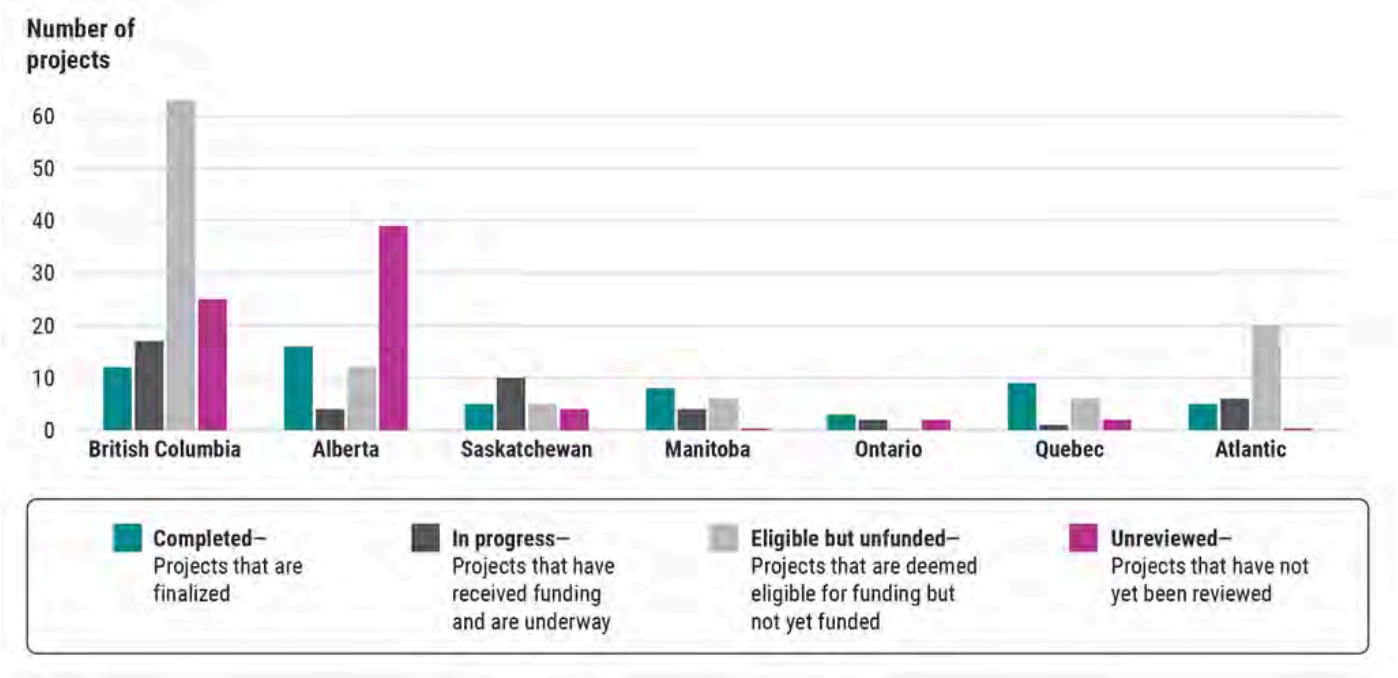
Exhibit 8.3—As of April 2022, 39% of structural mitigation projects were eligible but waiting for funding

Project status	Number (percentage *) of structural mitigation projects
Completed	58 (20%)
In progress	44 (15%)
Eligible but unfunded	**112 (39%)**
Unreviewed	72 (25%)
Total	**286**

* Because of rounding, percentages do not total 100.

Source: Based on information provided by Indigenous Services Canada

Exhibit 8.4—The greatest unmet structural mitigation needs were in British Columbia and Alberta



Source: Based on information provided by Indigenous Services Canada

▼ **Exhibit 8.4—text version**

This bar chart shows the number of structural mitigation projects in each region by status. A project can have one of the following statuses:

- completed, which means projects that are finalized
- in progress, which means projects that have received funding and are underway
- eligible but unfunded, which means projects that are deemed eligible for funding but not yet funded
- unreviewed, which means projects that have not yet been reviewed

The greatest unmet structural mitigation needs were in British Columbia and Alberta.

The number of projects by region and status is as follows.

Region	Completed	In progress	Eligible but unfunded	Unreviewed
British Columbia	12	17	63	25
Alberta	16	4	12	39
Saskatchewan	5	10	5	4
Manitoba	8	4	6	0
Ontario	3	2	0	2
Quebec	9	1	6	2
Atlantic	5	6	20	0

Exhibit 8.5—First Nations homes were damaged while a community waited for funding for a project to address flooding risk

Indian Island First Nation in New Brunswick experienced 9 floods, 2 severe weather events, and 1 wildfire between the 2009–10 and 2021–22 fiscal years.

In 2015, the community submitted a proposal to Indigenous Services Canada to raise 9 homes above flood levels to mitigate the impact of flooding in the community. While Indigenous Services Canada determined that this proposal was eligible for funding in 2015, according to the department, it could not fund the proposal because of funding shortfalls. The department was unable to provide us with the estimated cost of this proposal.

In April 2018, the community experienced flooding that damaged homes and led to a partial evacuation. As a result of this flood, the department estimated it would cost about $1.7 million in recovery funding for the First Nation to repair, rebuild, and raise about 15 homes. According to the department, as of April 2022, the work on these homes was still underway. The damage to people's homes and the disruption to their lives caused by this emergency might have been mitigated or averted had the department funded the community's proposal.

8.36 **Recommendation.** Indigenous Services Canada should work with First Nations communities to address the backlogs of eligible but unfunded structural mitigation projects and of unreviewed structural mitigation projects to effectively allocate resources to reduce the impact of emergencies on First Nations communities.

The department's response. Agreed.

See **Recommendations and Responses** at the end of this report for detailed responses.

Non-existent or out-of-date departmental emergency management plans

8.37 We found that Indigenous Services Canada did not have an updated emergency management plan as required under the *Emergency Management Act*. Public Safety Canada's guidance recommends that departments update their emergency management plans every 2 years or following important changes to mandates or roles and responsibilities. The department's current emergency management plan, finalized in June 2017, had not been updated to reflect the department's current mandate and approach to working with First Nations. Departmental plans are important for clarifying roles and responsibilities and setting the course of action for helping First Nations manage the growing risks related to emergencies.

8.38 The department also requires each of its regions to develop a region-specific emergency management plan and update it at least every 2 to 5 years depending on the region. We found that only 4 of the 7 regions developed regional emergency management plans. Of these 4 regional plans, all were outdated, and none aligned with the department's emergency management plan. Similar findings were identified in our 2013 audit and in the department's 2013 and 2017 internal audits.

8.39 **Recommendation.** Indigenous Services Canada should, on the basis of an assessment of risks, regularly update outdated departmental and regional emergency management plans and take immediate action to develop regional emergency

management plans for the 3 regions that do not have them. These plans should be used to make informed decisions and take concrete actions to assist First Nations communities with managing the risks related to emergencies.

The department's response. Agreed.

See **Recommendations and Responses** at the end of this report for detailed responses.

First Nations' emergency management coordinator needs not identified

8.40 Indigenous Services Canada received $43.6 million over 5 fiscal years (2019–20 to 2023–24) to build emergency management capacity in First Nations and will receive $13 million annually starting in the 2024–25 fiscal year. Since 2019, the Emergency Management Assistance Program has focused on addressing capacity gaps in First Nations communities by providing funding to First Nations to hire emergency management coordinators. The department does not directly hire these individuals. Emergency management coordinators work in First Nations communities, for tribal councils representing several First Nations communities, or for First Nations organizations.

8.41 We found that from the 2019–20 to 2021–22 fiscal years, Indigenous Services Canada provided a total of $26.9 million to First Nations communities and organizations for about 190 full-time or part-time emergency management coordinators. However, the department did not identify how many additional emergency management coordinators were needed by First Nations.

8.42 **Recommendation.** Indigenous Services Canada, in collaboration with First Nations, should determine how many emergency management coordinator positions are required and allocate funding for these positions on the basis of risk and need to ensure that First Nations have sustained capacity to manage emergencies.

The department's response. Agreed.

See **Recommendations and Responses** at the end of this report for detailed responses.

Responding to emergencies

Indigenous Services Canada did not ensure response services met the needs of First Nations communities

What we found

8.43 We found that Indigenous Services Canada did not ensure that emergency services met the needs of First Nations communities. The department did not establish emergency service agreements that covered all First Nations communities. We also found that the department did not know whether First Nations received services that were culturally appropriate and comparable to services provided in municipalities of similar size and circumstance because it did not define or consistently monitor the services or level of services to be provided to First Nations.

In addition, the department had not established multilateral emergency management service agreements between it, First Nations, and provinces or other service providers.

8.44 We also found that the department did not address issues identified after evacuations, including improving access to essential services like mental health supports and health care. The department also did not integrate the impact on marginalized groups, including Indigenous elders, women, and youth, into how emergency services were planned and delivered in First Nations communities.

8.45 The analysis supporting this finding discusses the following topics:

- Not all First Nations communities covered by emergency management service agreements
- Some evacuation needs not met
- Lack of knowledge of whether emergency management commitments are being met
- Impact on marginalized groups not integrated into program delivery

---

Why this finding matters

8.46 This finding matters because the lack of service agreements in provinces increases the risk that some First Nations communities will not receive emergency services when they need them the most. Not having service agreements can also create ambiguity and confusion between the various stakeholders about their roles and responsibilities and can lead to delays in First Nations receiving supports during an emergency. Timely response is critical during emergencies because human lives and infrastructure are at risk.

8.47 Agreements need to clearly identify the services and the level of services to be provided, so that First Nations communities receive emergency services that are comparable to non-Indigenous communities and are culturally appropriate. Evacuees need access to essential services, such as mental health supports, health care, security services, and child and family services, for their safety and well-being.

Context

8.48 Indigenous Services Canada's objective is to ensure that First Nations communities have access to emergency services that are comparable to those available to non-Indigenous communities. The department does this by negotiating emergency management service agreements with provincial governments and other service providers, like the Canadian Red Cross. According to the department, comparable service means comparable to municipalities of similar size and circumstance. In addition, Indigenous Services Canada has committed to providing services in a culturally appropriate manner. Culturally appropriate emergency management services include access to traditional foods, traditional counselling and healing services, and translation services.

8.49 During an emergency, it may become dangerous to stay in the community because of conditions such as rising flood waters or smoke from wildfires. In these situations, the First Nation Chief and Council may decide that it is necessary to evacuate some or all members of the community to protect their health and well-being.

8.50 Evacuations are a critical emergency response service in First Nations communities. According to a 2017 study by Indigenous Services Canada, First Nations communities are about 18 times more likely than non-Indigenous communities to be evacuated during an emergency because of their remoteness, location in fire- and flood-prone areas, aging infrastructure, and challenging socio-economic situations.

8.51 Evacuations involve coordination among a number of parties, including Indigenous Services Canada, provincial or other service providers, First Nations, and the municipalities that often host evacuees. Host communities play an essential role by providing accommodations and services to First Nations evacuees. Evacuees require a range of services, including transportation, food, and health care. Indigenous Services Canada reimburses the costs of evacuations if there is consensus among the department, First Nation, and service provider about the need to evacuate.

Analysis to support this finding

Not all First Nations communities covered by emergency management service agreements

8.52 We found that Indigenous Services Canada did not have service agreements across all jurisdictions with provinces or other service providers to provide emergency services in First Nations communities. The department signed emergency management service agreements in 6 provinces (British Columbia, Alberta, Manitoba, Ontario, Quebec, and Prince Edward Island) and wildfire agreements in 6 provinces (British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, and Quebec). The lack of service agreements in certain provinces increases the risk that some First Nations communities will not receive emergency services when they are most needed. In addition, the lack of agreements can create ambiguity and confusion between the various stakeholders about their roles and responsibilities and lead to delays in First Nations receiving services during an emergency. This issue was identified in our 2013 audit and in the department's 2013 and 2017 internal audits. After almost a decade, many jurisdictions still did not have the emergency management service agreements needed to protect the health and safety of First Nations communities.

8.53 We found that 1 of the 6 wildfire agreements was signed more than 30 years ago and had not been updated since. This agreement may not have reflected changes, such as the increasing costs to deliver services. We also found that 4 of the 6 wildfire agreements did not include all First Nations communities in the relevant province. In some cases, communities were not included in the agreements because of their distance from wildfire suppression resources, such as fire stations. For example, the wildfire agreement between Indigenous Services Canada and Saskatchewan did not include more than half (38 of 70) of the First Nations communities in the province. Consequently, communities that were not included in agreements may not have had access to such services as wildfire suppression.

8.54 We examined the department's progress in establishing multilateral emergency management service agreements. According to Indigenous Services Canada, in recognition of Indigenous peoples' right to self-determination, the department's approach was shifting from bilateral emergency management service agreements between the department and provinces to multilateral agreements that

included First Nations. The intent of these multilateral agreements is to ensure that First Nations are included as full and equal partners in emergency management activities and decisions that affect their communities.

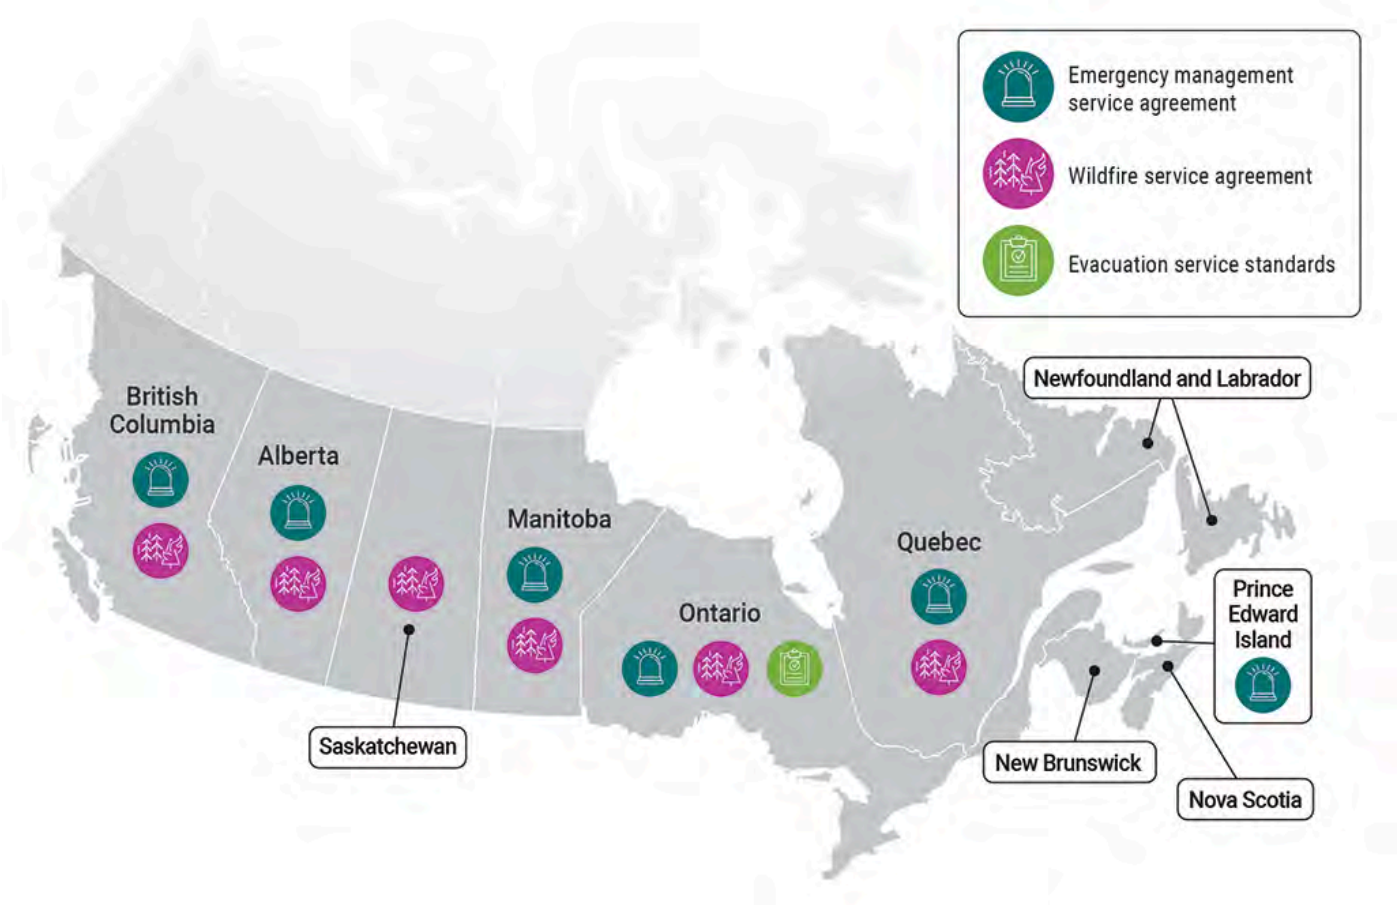
8.55 In Budget 2019, the department was allocated about $1.4 million over 3 years to support First Nations–led engagement on multilateral emergency management service agreements between Indigenous Services Canada, First Nations communities, and provinces or other service providers. As of April 2022, although the department had spent almost $790,000, we found that no multilateral agreements were established. The department told us the lack of progress in establishing these agreements was because the **coronavirus disease (COVID-19)** [3] pandemic made it difficult to engage with First Nations communities, provinces, and other service providers. Our recommendation regarding emergency management service agreements appears at paragraph 8.62.

8.56 While no multilateral emergency service agreements had been established, the department signed 2 arrangements in British Columbia between First Nations, the province, and the department. While these arrangements outlined shared goals and priorities for collaboration, they did not contain provisions for emergency services, which should be in multilateral emergency management service agreements.

Some evacuation needs not met

8.57 We found that Indigenous Services Canada established mutually agreed-upon evacuation service standards with service providers in only 1 province (Exhibit 8.6). These standards provided details not included in the emergency management service agreement between the department and the province. The department and the province of Ontario developed standards for services to First Nations evacuees, including security services, food, child and family services, mental health and health care, emergency clothing, and transportation. The standards also included direction about how to handle specific situations, such as how to evacuate individuals in health-care facilities and long-term care facilities, and the enforcement of court orders.

Exhibit 8.6—Indigenous Services Canada did not establish emergency management service agreements and standards in all provinces



▼ **Exhibit 8.6—text version**

This map of Canada shows in which provinces Indigenous Services Canada established emergency management service agreements, wildfire service agreements, and evacuation service standards.

The department established emergency management service agreements in British Columbia, Alberta, Manitoba, Ontario, Quebec, and Prince Edward Island.

The department established wildfire service agreements in British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, and Quebec.

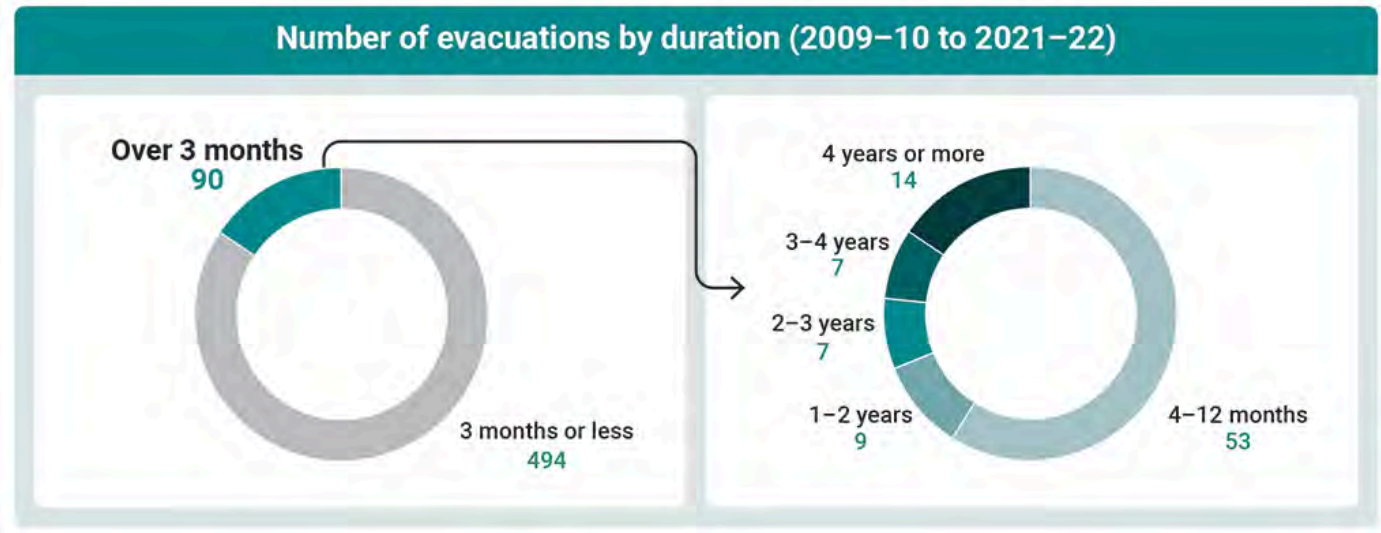
The department established evacuation service standards in Ontario.

8.58 We found that the department did not address issues identified after evacuations, including access during evacuations to essential services, such as mental health, health care, education, and child and family services.

8.59 We found that only 2 of the department's 7 regions had determined the number of evacuees that host communities could accommodate. Not having space available in host communities increases the risk that evacuees will be sent to host communities farther away or in another province, potentially separating families and communities.

8.60 As a result of a number of factors, including the effects of climate change and aging infrastructure, evacuations of First Nations communities are becoming more frequent and longer. We found that between the 2009–10 and 2021–22 fiscal years, 268 communities were evacuated a total of 584 times. While the majority of these evacuations lasted less than a month, about 15% (90) of evacuations were over 3 months long, and some lasted multiple years. Indigenous Services Canada considers an evacuation of more than 3 months to be long-term. The longest evacuation affects members of the Peguis First Nation in Manitoba. In 2011, this community was evacuated because of flooding. Over 10 years later, 86 residents were still unable to return home because of insufficient housing. The longer evacuations lasted, the greater the impact on individuals, families, and the community (Exhibit 8.7).

Exhibit 8.7—Between the 2009–10 and 2021–22 fiscal years, 90 evacuations of First Nations communities lasted longer than 3 months



Note: Indigenous Services Canada considers an evacuation of more than 3 months to be long-term.

Source: Indigenous Services Canada's Incident Database

▼ **Exhibit 8.7—text version**

This donut chart shows the number of evacuations of First Nations communities by duration for the 2009–10 to 2021–22 fiscal years.

During this period, 90 evacuations of First Nations communities lasted for over 3 months, while 494 evacuations lasted for 3 months or less.

Of the 90 evacuations that lasted over 3 months, 53 lasted for 4 to 12 months, 9 lasted for 1 to 2 years, 7 lasted for 2 to 3 years, 7 lasted for 3 to 4 years, and 14 lasted for 4 years or more.

8.61 We found that in April 2020, during the COVID-19 pandemic, Indigenous Services Canada provided Emergency Management Assistance Program funding for First Nations to remain on their land during emergencies rather than evacuate to a host community. This initiative had the dual objective of reducing the negative

impact of evacuations and of reducing potential exposure to the coronavirus. According to the department, funding First Nations to stay on their land is also more cost-effective than evacuating to a host community. This initiative also reduced the need for space in host communities to accommodate evacuees. Exhibit 8.8 provides an example of how a department-funded initiative improved outcomes for members of a community in northern Ontario.

Exhibit 8.8—Indigenous Services Canada funded a cost-effective community-driven initiative for evacuations during the COVID-19 pandemic

Kashechewan First Nation is in northern Ontario on the western coast of James Bay. The on-reserve population in 2019 was 1,825 band members. Kashechewan is a fly-in community without an all-season road. The closest urban community is Timmins, about 460 kilometres away.

Every year since 2012, the community has been evacuated because of flooding or as a precaution because of the risk of spring flooding. Typically, the community was evacuated to host communities in northern Ontario.

In both 2020 and 2021, community members were evacuated because of the risk of flooding. Rather than staying in a host community, the First Nation requested and received funding from Indigenous Services Canada to remain on their land and move to higher ground on their traditional hunting camps. Each of these evacuations lasted about 6 weeks. While they were living on their land, members participated in safe and culturally relevant activities, such as traditional community food harvesting and gathering, intergenerational knowledge sharing, and Indigenous language education.

The cost of the 2 evacuations in 2020 and 2021 was about $140 per person per day compared with about $235 per person per day to evacuate to host communities in 2018 and 2019.

8.62 **Recommendation.** Indigenous Services Canada should, in collaboration with First Nations, provincial governments, and other service providers, ensure that First Nations communities receive the emergency management services they need by

- establishing emergency management service agreements and wildfire agreements in all jurisdictions that include all First Nations
- establishing mutually agreed-upon evacuation service standards in the jurisdictions that lack such standards
- increasing support for First Nations–led approaches to emergency management

The department's response. Agreed.

See **Recommendations and Responses** at the end of this report for detailed responses.

Lack of knowledge of whether emergency management commitments are being met

8.63 One of Indigenous Services Canada's objectives is to ensure that First Nations have access to emergency services comparable to those available in municipalities of similar size and circumstance in their respective province. The department also aims to provide services that are culturally appropriate. We found that, despite these commitments, the department did not define what comparable meant or include provisions for culturally appropriate services in service agreements. As a result, the department did not know whether it was meeting its commitment to ensure that First Nations communities had access to comparable emergency services and culturally appropriate services.

8.64 We also found that the department did not receive reports on the services provided to First Nations communities for 5 of the 12 service agreements. These reports would inform the department about the services provided to First Nations. The department could also monitor performance through lessons-learned exercises conducted following emergencies to identify areas for improvement. We found that lessons-learned exercises were not completed after each emergency. When they were completed, it was not clear how recommendations were addressed to improve service delivery. Completing lessons-learned exercises following emergencies and addressing deficiencies was a long-standing issue identified in our 2013 audit and the department's 2013 and 2017 internal audits.

8.65 In addition, we found that the department could not assess the contribution of its emergency management responsibilities to achieve the United Nations' Sustainable Development Goals (Exhibit 8.9).

Exhibit 8.9—Performance indicators did not measure progress against the United Nations' Sustainable Development Goals

In September 2015, Canada committed to achieving the United Nations' 2030 Agenda for Sustainable Development. We examined the actions of Indigenous Services Canada in support of 5 of the United Nations' Sustainable Development Goals that are relevant to emergency management. Indigenous Services Canada indicated that its emergency management activities were related to or aligned with Sustainable Development Goals 1, 3, 9, 11, and 13:

- Goal 1—End poverty in all its forms everywhere.
- Goal 3—Ensure healthy lives and promote well-being for all at all ages.
- Goal 9—Build resilient infrastructure, promote sustainable industrialization and foster innovation.
- Goal 11—Make cities inclusive, safe, resilient and sustainable.
- Goal 13—Take urgent action to combat climate change and its impacts.

We found that most of the department's performance indicators tracked spending to measure its progress against the goals. (An indicator is a measure that provides information to monitor, track, and report on performance and progress toward targets. An indicator relies on consistent data collection and is used to measure progress over time against benchmarks or baselines.) Spending is not a good measure because it does not mean that results are being achieved. Without better performance indicators, the department could not assess progress in achieving the Sustainable Development Goals

End poverty in all its forms everywhere.

Take urgent action to combat climate change and its impacts.

Source: United Nations

8.66 **Recommendation.** Indigenous Services Canada should develop performance indicators to allow the department to measure progress against the United Nations' Sustainable Development Goals and use these indicators to track and report publicly on progress.

The department's response. Agreed.

See **Recommendations and Responses** at the end of this report for detailed responses.

Impact on marginalized groups not integrated into program delivery

8.67 First Nations communities and populations are often particularly vulnerable to emergencies because of their geographic remoteness, low population density, infrastructure, and socio-economic gaps. Indigenous Services Canada's **gender-based analysis plus** [4] determined that Indigenous elders, women, and youth were even more likely to be negatively affected by emergencies. For example, Indigenous Services Canada identified an increased risk of physical and sexual violence against women during emergencies. We found that the department did not address gender-based analysis plus considerations in how emergency services were planned for and delivered in First Nations communities.

8.68 **Recommendation.** Indigenous Services Canada should, in collaboration with First Nations, provincial governments, and other service providers, ensure that First Nations communities receive the emergency management services they need by

- defining what is meant by comparable services for First Nations in relation to those available to municipalities of similar size and circumstance in each jurisdiction
- monitoring the services provided to First Nations to ensure that they are comparable to services provided to non-Indigenous communities, are culturally appropriate, and address the needs of marginalized groups
- identifying and addressing shortcomings by monitoring emergency management service agreements and conducting lessons-learned exercises

The department's response. Agreed.

See **Recommendations and Responses** at the end of this report for detailed responses.

Conclusion

8.69 We concluded that Indigenous Services Canada did not provide the support First Nations communities needed to manage emergencies such as floods and wildfires. The department did not identify the First Nations communities at the highest risk of not being able to manage emergencies so it could better target funding to build local capacity. It spent 3.5 times more on responding to and recovering from emergencies than on supporting First Nations communities to prevent and prepare for them.

8.70 Indigenous Services Canada did not have service agreements across all jurisdictions with provinces or other service providers to provide emergency services in First Nations communities. Without agreements that cover all First Nations, there is a risk that some communities will not receive the emergency response services they need. In particular, the lack of detailed service standards for evacuations in most provinces increased the risk that essential services, such as mental health supports and health care, were not available during evacuations. Many of our findings were identified almost a decade ago, when we audited this topic in 2013.

About the Audit

This independent assurance report was prepared by the Office of the Auditor General of Canada on the support Indigenous Services Canada provided to First Nations communities to manage emergencies. Our responsibility was to provide objective information, advice, and assurance to assist Parliament in its scrutiny of the government's management of resources and programs, and to conclude on whether Indigenous Services Canada's emergency management support for First Nations communities complied in all significant respects with the applicable criteria.

All work in this audit was performed to a reasonable level of assurance in accordance with the Canadian Standard on Assurance Engagements (CSAE) 3001—Direct Engagements, set out by the Chartered Professional Accountants of Canada (CPA Canada) in the CPA Canada Handbook—Assurance.

The Office of the Auditor General of Canada applies the Canadian Standard on Quality Control 1 and, accordingly, maintains a comprehensive system of quality control, including documented policies and procedures regarding compliance with ethical requirements, professional standards, and applicable legal and regulatory requirements.

In conducting the audit work, we complied with the independence and other ethical requirements of the relevant rules of professional conduct applicable to the practice of public accounting in Canada, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality, and professional behaviour.

In accordance with our regular audit process, we obtained the following from entity management:

- confirmation of management's responsibility for the subject under audit
- acknowledgement of the suitability of the criteria used in the audit
- confirmation that all known information that has been requested, or that could affect the findings or audit conclusion, has been provided
- confirmation that the audit report is factually accurate

Audit objective

The objective of this audit was to determine whether Indigenous Services Canada provided the support First Nations communities needed to manage emergencies.

Scope and approach

This audit examined Indigenous Services Canada's supports to First Nations to manage emergencies related to floods, wildfires, landslides, and severe weather events, as these are the most prevalent types of emergencies affecting First Nations communities. Our audit looked at First Nations communities in the provinces, and not in the territories, because almost all on-reserve First Nations communities are located in the provinces.

The audit focused on Indigenous Services Canada's Emergency Management Assistance Program and the First Nation Infrastructure Fund.

The audit team interviewed responsible Indigenous Services Canada officials at national headquarters and in regional offices and analyzed documents and relevant databases. The audit team met with selected stakeholders, including representatives from First Nations communities and organizations, as well as representatives of provincial governments that act as emergency service providers through agreements with Indigenous Services Canada.

We did not examine the department's supports to help First Nations recover from emergencies through its building back better strategy. As well, we did not examine Indigenous Services Canada's supports to First Nations to manage health emergencies. We also did not audit the performance of non-federal organizations, including provincial governments, First Nations communities and organizations, and non-governmental organizations.

Criteria

We used the following criteria to determine whether Indigenous Services Canada provided the support First Nations communities needed to manage emergencies:

Criteria	Sources

Criteria	Sources
Indigenous Services Canada provides support to First Nations to prepare for and mitigate emergencies affecting First Nations communities.	• *Emergency Management Act* • *Department of Indigenous Services Act* • National On-Reserve Emergency Management Plan, Indigenous and Northern Affairs Canada, 2017 • All Hazards Risk Assessment Methodology Guidelines 2012–2013, Public Safety Canada • Contributions for Emergency Management Assistance for Activities on Reserve, Indigenous Services Canada • Transfer Payment Program Terms and Conditions: Contributions to Support the Construction and Maintenance of Community Infrastructure, Indigenous Services Canada • First Nation Infrastructure Fund Program Guide, Indigenous Services Canada, 2021 • Federal Policy for Emergency Management: Building a Safe and Resilient Canada, Public Safety Canada • Emergency Management Strategy for Canada: Toward a Resilient 2030, Public Safety Canada • Emergency Management Planning Guide 2010–2011, Public Safety Canada • Transforming Our World: The 2030 Agenda for Sustainable Development, United Nations • Canada's Federal Implementation Plan for the 2030 Agenda • *Canadian Gender Budgeting Act* • Guidance for Drafters of Treasury Board Submissions, Treasury Board of Canada Secretariat
Indigenous Services Canada provides support to First Nations communities to build their capacity to manage emergencies.	• *Department of Indigenous Services Act* • National On-Reserve Emergency Management Plan, Indigenous and Northern Affairs Canada • Contributions for Emergency Management Assistance for Activities on Reserve, Indigenous Services Canada • *Canadian Gender Budgeting Act* • Guidance for Drafters of Treasury Board Submissions, Treasury Board of Canada Secretariat

Criteria	Sources
Indigenous Services Canada ensures that First Nations communities have access to emergency services that are comparable to those of non-Indigenous communities.	• *Emergency Management Act* • *Department of Indigenous Services Act* • National On-Reserve Emergency Management Plan, Indigenous and Northern Affairs Canada • Contributions for Emergency Management Assistance for Activities on Reserve, Indigenous Services Canada • Transforming Our World: The 2030 Agenda for Sustainable Development, United Nations • Canada's Federal Implementation Plan for the 2030 Agenda • *Canadian Gender Budgeting Act* • Guidance for Drafters of Treasury Board Submissions, Treasury Board of Canada Secretariat
Indigenous Services Canada has made progress in establishing multilateral emergency management service agreements.	• *Emergency Management Act* • *Department of Indigenous Services Act* • Government of Canada Response to the Standing Committee on Indigenous and Northern Affairs: From the Ashes: Reimagining Fire Safety and Emergency Management in Indigenous Communities • Departmental Plan 2020–21, Indigenous Services Canada • Transforming Our World: The 2030 Agenda for Sustainable Development, United Nations • Canada's Federal Implementation Plan for the 2030 Agenda • *Canadian Gender Budgeting Act* • Guidance for Drafters of Treasury Board Submissions, Treasury Board of Canada Secretariat
Indigenous Services Canada ensures that evacuation services provided to First Nations communities are adequate and that evacuees are returned to their home communities in a timely manner.	• *Department of Indigenous Services Act* • Contributions for Emergency Management Assistance for Activities on Reserve, Indigenous Services Canada • National On-Reserve Emergency Management Plan, Indigenous and Northern Affairs Canada • Building Back Better: Emergency Management Assistance Program Strategy Guide, Indigenous Services Canada • Departmental Plan 2019–20, Indigenous Services Canada • Departmental Plan 2020–21, Indigenous Services Canada • *Canadian Gender Budgeting Act* • Guidance for Drafters of Treasury Board Submissions, Treasury Board of Canada Secretariat

Period covered by the audit

The audit covered the period from 1 April 2018 to 31 March 2022. This is the period to which the audit conclusion applies. However, to gain a more complete understanding of the subject matter of the audit, we also examined certain matters that preceded the start date of this period.

Date of the report

We obtained sufficient and appropriate audit evidence on which to base our conclusion on 30 August 2022, in Ottawa, Canada.

Audit team

This audit was completed by a multidisciplinary team from across the Office of the Auditor General of Canada led by Glenn Wheeler, Principal. The principal has overall responsibility for audit quality, including conducting the audit in accordance with professional standards, applicable legal and regulatory requirements, and the office's policies and system of quality management.

Recommendations and Responses

In the following table, the paragraph number preceding the recommendation indicates the location of the recommendation in the report.

Recommendation	Response
8.32 Indigenous Services Canada should work with First Nations to implement a risk-based approach to inform program planning and decisions on where to invest in preparedness and mitigation activities to maximize support to communities at highest risk of being affected by emergencies.	**The department's response.** Agreed. In collaboration with First Nations, Indigenous Services Canada is committed to implement a risk-based approach to inform funding decisions. Targeted investments by the department will consider, as it has to date, the communities' willingness, readiness and interest in undertaking emergency preparedness activities by empowering First Nations to take the lead in preparing for and managing emergencies. The department is committed to support First Nations in their endeavours to identify their unique communities' level of risk and priorities to seek funding from the department to enhance emergency preparedness.
8.36 Indigenous Services Canada should work with First Nations communities to address the backlogs of eligible but unfunded structural mitigation projects and of unreviewed structural mitigation projects to effectively allocate resources to reduce the impact of emergencies on First Nations communities.	**The department's response.** Agreed. Indigenous Services Canada is currently working with First Nations to identify the infrastructure gap, which includes structural mitigation needs. The department will support First Nations to work toward closing that gap in the long term. In addition, the department is committed to work with First Nations, as well as collaborate with central agencies, other government departments, and all levels of government to leverage partnership opportunities and explore alternate financing options to meet the needs of First Nations in structural mitigation while working toward the transfer of infrastructure services.
8.39 Indigenous Services Canada should, on the basis of an assessment of risks, regularly update outdated departmental and regional emergency management plans and take immediate action to develop regional emergency management plans for the 3 regions that do not have them. These plans should be used to make informed decisions and take concrete actions to assist First Nations communities with managing the risks related to emergencies.	**The department's response.** Agreed. Indigenous Services Canada, in collaboration with First Nations, will proceed to review and update the department's national Emergency Management Plan and regional plans and will develop customized regional emergency management plans based on an assessment of risks.

Recommendation	Response
8.42 Indigenous Services Canada, in collaboration with First Nations, should determine how many emergency management coordinator positions are required and allocate funding for these positions on the basis of risk and need to ensure that First Nations have sustained capacity to manage emergencies.	**The department's response.** Agreed. Indigenous Services Canada is committed to work in partnership with First Nations to build emergency management capacity. The department also agrees that funding for emergency management positions, provided through the Emergency Management Assistance Program's capacity enhancement funding stream, should be expanded. Emergency management coordinators, of which the department currently funds 196 full- or part-time positions across the country, provide First Nations with valuable emergency preparedness and planning capacity. The department is diligently working to secure additional funding to provide more positions to First Nations communities.
8.62 Indigenous Services Canada should, in collaboration with First Nations, provincial governments, and other service providers, ensure that First Nations communities receive the emergency management services they need by • establishing emergency management service agreements and wildfire agreements in all jurisdictions that include all First Nations • establishing mutually agreed-upon evacuation service standards in the jurisdictions that lack such standards • increasing support for First Nations–led approaches to emergency management	**The department's response.** Agreed. Indigenous Services Canada is committed to work in partnership with First Nations and emergency management partners to establish comprehensive emergency management service agreements.
8.66 Indigenous Services Canada should develop performance indicators to allow the department to measure progress against the United Nations' Sustainable Development Goals and use these indicators to track and report publicly on progress.	**The department's response.** Agreed. Indigenous Services Canada agrees that certain performance indicators could be improved to better measure progress against the United Nations' Sustainable Development Goals. Moving forward, the department will ask its programs that use performance indicators related to emergency management to review and consider revising how they measure progress against the Sustainable Development Goals. The review process should involve programs analyzing both the federal and departmental sustainable development strategies as well as the Sustainable Development Goal targets to understand how the programs could best measure progress and to identify which performance indicators should be utilized to do so. The Government of Canada also reports on progress made to achieve the Sustainable Development Goals domestically and uses performance indicators from the Canadian Indicator Framework (see Taking Action Together— Canada's 2021 Annual Report on the 2030 Agenda and the Sustainable Development Goals). The department supports this whole-of-government process by providing information on relevant departmental actions and initiatives that contribute to the Sustainable Development Goals.

Recommendation	Response
8.68 Indigenous Services Canada should, in collaboration with First Nations, provincial governments, and other service providers, ensure that First Nations communities receive the emergency management services they need by • defining what is meant by comparable services for First Nations in relation to those available to municipalities of similar size and circumstance in each jurisdiction • monitoring the services provided to First Nations to ensure that they are comparable to services provided to non-Indigenous communities, are culturally appropriate, and address the needs of marginalized groups • identifying and addressing shortcomings by monitoring emergency management service agreements and conducting lessons-learned exercises	**The department's response.** Agreed. Indigenous Services Canada is committed to work in partnership with First Nations and emergency management partners to establish comprehensive emergency management service agreements that will define comparability of services and monitoring and reporting components to identify and address shortcomings for continuous improvement.

Definitions:

1 **Reserve**—Based on the definition in the *Indian Act*, a tract of land that is vested in His Majesty and has been set apart for the use and benefit of a First Nation.

2 **Emergency management coordinators**—Staff who develop and maintain emergency management plans, manage and coordinate emergency management training, provide support in response and recovery after an incident, and maintain relationships with the community, tribal councils, government agencies, and non-governmental organizations.

3 **Coronavirus disease (COVID-19)**—The disease caused by severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).

4 **Gender-based analysis plus**—An analytical process that provides a rigorous method to assess systemic inequalities, as well as a way to assess how diverse groups of women, men, and gender-diverse people may experience policies, programs, and initiatives. The "plus" acknowledges that gender-based analysis goes beyond biological (sex) and socio-cultural (gender) differences and considers other identity factors, such as race, ethnicity, religion, age, and mental or physical ability.

Acknowledgements

The First Nations/Canadian Incidence Study of Reported Child Abuse and Neglect – 2019 (FN/CIS-2019) is the fourth national study of reported and investigated child maltreatment in Canada. The study was made possible and supported by members of a national First Nations Advisory Committee, researchers, policymakers, and frontline child welfare service providers dedicated to addressing the overrepresentation of First Nations children served by child welfare in Canada and improving the services they receive.

The FN/CIS-2019 was directed by the Assembly of First Nations with core study funding from the Public Health Agency of Canada. The University of Toronto was contracted by the Assembly of First Nations to conduct the study. The Ontario and Quebec Governments provided additional funding for stand alone provincial studies. A separate report of Ontario data from 2018 is available on the Canadian Child Welfare Research Portal (cwrp.ca), and a Quebec report is forthcoming.

The study would not be possible without the in-kind support of the approximately 1,500 participating child welfare workers who attended trainings, completed study instruments, and responded to additional information requests as well as agency managers, administrators, and data specialists. For purposes of confidentiality, the names of participating frontline staff and agencies cannot be released; however, the FN/CIS-2019 Advisory Committee and Research Team would like to extend our deep appreciation to the professionals who participated in this study, both for their participation as well as for the work that they do to serve children.

Several individuals whose contributions were integral to the study's success are listed below.

FN/CIS-2019 Site Researchers

FN/CIS-2019 Site Researchers were responsible for providing presentations and trainings at participating child welfare agencies and for collecting and verifying data collected. Site Researchers for the FN/CIS-2019 are listed below in alphabetical order.

Additional Acknowledgements

Data verification was completed by the FN/CIS-2019 site researchers with additional support from Kate Allan and Laura Best. Joanne Daciuk assisted with data cleaning and database construction. The authors thank the Ontario Child Abuse and Neglect Data System (OCANDS) programmers, Praveen Sawh and Parlin Chan, for their work on creating the web-based data collection tool and FN/CIS dataset. They also thank Sarah Scott from the University of Toronto's Research Services Office for her contractual expertise.

The sampling design and study weights were developed with assistance from Jean-Sébastien Provençal and Yves Morin. Census data tables were produced by Tara Black. The authors are grateful to Vandna Sinha for her leadership on the First Nations component of the CIS-2008 and Andrea Carson for the design of this report and associated materials.

Truth and Reconciliation Calls to Action

The following five Calls to Action pertain to child welfare and are directly quoted from the 94 Calls to Action established in 2015 by the Truth and Reconciliation Commission of Canada:[1]

Child Welfare

1. We call upon the federal, provincial, territorial, and Aboriginal governments to commit to reducing the number of Aboriginal children in care by:

a. Monitoring and assessing neglect investigations.
b. Providing adequate resources to enable Aboriginal communities and child-welfare organizations to keep Aboriginal families together where it is safe to do so, and to keep children in culturally appropriate environments, regardless of where they reside.
c. Ensuring that social workers and others who conduct child-welfare investigations are properly educated and trained about the history and impacts of residential schools.
d. Ensuring that social workers and others who conduct child-welfare investigations are properly educated and trained about the potential for Aboriginal communities and families to provide more appropriate solutions to family healing.
e. Requiring that all child-welfare decision makers consider the impact of the residential school experience on children and their caregivers.

2. We call upon the federal government, in collaboration with the provinces and territories, to prepare and publish annual reports on the number of Aboriginal children (First Nations, Inuit, and Métis) who are in care, compared with non-Aboriginal children, as well as the reasons for apprehension, the total spending on preventive and care services by child-welfare agencies, and the effectiveness of various interventions.

3. We call upon all levels of government to fully implement Jordan's Principle.

4. We call upon the federal government to enact Aboriginal child-welfare legislation that establishes national standards for Aboriginal child apprehension and custody cases and includes principles that:

a. Affirm the right of Aboriginal governments to establish and maintain their own child-welfare agencies.
b. Require all child-welfare agencies and courts to take the residential school legacy into account in their decision making.
c. Establish, as an important priority, a requirement that placements of Aboriginal children into temporary and permanent care be culturally appropriate.

5. We call upon the federal, provincial, territorial, and Aboriginal governments to develop culturally appropriate parenting programs for Aboriginal families.

FN/CIS-2019 Advisory Committee Message to Communities and Readers

For nearly 20 years, First Nations child welfare advocates and university-based researchers have conducted a series of studies documenting child welfare services provided to First Nations and non-First Nations children and families in Canada. With funding and support from the Public Health Agency of Canada, the Assembly of First Nations, provinces and territories and a number of research grants, the 2019 Canadian Incidence Study (CIS) of Reported Child Abuse and Neglect, and the First Nations CIS (FN/CIS), tracked over 44 thousand investigations conducted by a nationally representative sample of child welfare authorities.

It is with profound sadness that we report the 2019 findings of the FN/CIS show nearly identical disparities as in previous studies. As with previous CIS cycles, the FN/CIS-2019 shows that First Nations children are three to four times more likely to be reported for a child maltreatment-related concern. This initial disparity increases further as various investigation decisions are made, with investigations involving First Nations children being seventeen times more likely to lead to placement in formal out-of-home care.

The FN/CIS-2019 provides some of the data called for by the Truth and Reconciliation Commission's (TRC) Calls to Action for child welfare cited at the beginning of this report: monitoring (1) the number of First Nations children investigated because of child neglect and (2) the number of First Nations children placed in out-of-home care compared to non-Indigenous children as well as the reasons for apprehension. The intention of the TRC's Calls to Action was to provide a mechanism for accountability to address the inequities and harm documented by the TRC. The findings from the FN/CIS-2019 show that to date, efforts to reduce child welfare **investigation and placement disparities for First Nations children have been woefully inadequate.**

It should be noted, however, that the FN/CIS-2019 provides only a partial response to the TRC Calls to Action. As a national study, the FN/CIS does not provide information about rates of overrepresentation at the level of most provinces. Furthermore, as a study of child welfare investigations, the FN/CIS does not track service outcomes, such as length of time First Nations children spend away from their homes or whether they ever return home, nor does it track the number of moves First Nations children experience in care. Jurisdictions across Canada have not adequately met the TRC Calls to Action to monitor the most basic information about First Nations children under their care.

As we release this report, thousands of children's remains are being recovered from the sites of former residential schools on lands now known as Canada. For hundreds of years, First Nations communities have reported the horrors that historical and current colonial practices have wrought and we have chosen to look away despite resistance and advocacy efforts of Elders, matriarchs, Knowledge Keepers and community leaders. Over a century ago, Dr. Peter Henderson Bryce demanded that Canadians improve the health and living conditions of Indigenous people, and his Report on the Indian Schools of Manitoba and the Northwest Territories prompted calls to disband the residential school system. While residential schools were eventually closed, First Nations children continue to be separated from their families and communities at alarming rates. Sadly, to date, Canada has not only failed to stem the tide of removal of First Nations children, but the lack of information about these children is tantamount to continuing to bury them in near secrecy.

The TRC estimated that there were approximately 11,000 Indigenous children in residential schools at the height of the residential school system.[2] While we do not know precisely how many First Nations children are currently placed in child welfare care in Canada, we can estimate[3] that two to three times more First Nations children are in out-of-home care now than were in residential schools at the height of the residential school system.

[2] Truth and Reconciliation Commission of Canada, *Canada's Residential Schools: The Legacy. The Final Report of the Truth and Reconciliation Commission of Canada., vol. 5* (McGill-Queen's University Press, 2015).

[3] In 2016 the Census reported that 52.2% of children in foster care were Indigenous. These data only included 28,665 children identified as living in foster care in private homes. The estimated number of Indigenous children in foster care using these data would be 14,970 children. If we use the total of 54,139 children estimated to be in out-of-home care in 2019 and apply the proportion of Indigenous children in foster care from the Census data (52.2% of children in foster care), it could be that the number of Indigenous children in out-of-home care is closer to 28,261. This means that there are drastically more Indigenous children in out-of-home care, today, than at the height of the residential school system.

> "If Canada were fully committed to addressing the long-standing inequities in public services, then frankly it would take monolithic incompetence to achieve such a perfect record of failure. Additionally, a contrite government would logically launch wide-scale internal departmental reform to fix its approach in the wake of past failures. Canada has not. Instead, successive Canadian governments have avoided ending discrimination toward First Nations children through strategies of denial, deflection, deferral and the use of official procedures such as study and consultation to mask inaction."[4]
>
> – Cindy Blackstock, 2021

It is up to every citizen to demand that we irrevocably pay attention to these numbers, and commit to reducing the disparity and the associated harm to children, families and communities. Structural issues, both historic and current, pervade child welfare with themes of multigenerational poverty, alienation, exclusion, and outright racism being as common today as they have been since the study started. The numbers presented in this report represent sacred children and their families who continue to suffer the impact of discriminatory colonial practices and a settler population who often pays lip service to the idea of reconciliation, while accepting the magnitude of these differences with resignation and not outrage and action. While the recently proclaimed *Act respecting First Nations, Inuit and Métis children, youth and families* finally recognizes Indigenous jurisdiction over child and family services, it is the responsibility of every Canadian to demand that sufficient funds and support are put into place to ensure that First Nations communities are equipped to redress the disparities documented in this report.

The FN/CIS-2019 Advisory Committee extends our deep appreciation to everyone who made this study possible. This includes our funder, the Public Health Agency of Canada. The Assembly of First Nations has provided conceptual direction and continued support and advocacy. Participating agencies committed significant time and resources to ensuring the success of the study amid a global pandemic. A group of dedicated researchers has ensured the integrity and scientific merits of the study is maintained throughout this cycle and in previous efforts. Our Project Manager Rachael Lefebvre has acted as a true champion of the study.

Finally, to the workers who contributed their time to complete the data collection instruments, we thank you for your continuing efforts to honour the TRC's Calls to Action. It is only through this commitment that the FN/CIS-2019 was possible.

Executive Summary

The First Nations/Canadian Incidence Study of Reported Child Abuse and Neglect (FN/CIS-2019) is a study of child welfare investigations involving First Nations and non-Indigenous children. It is the fourth national study to provide up-to-date estimates of child welfare investigations across Canada. The study is directed by the Assembly of First Nations with core funding from the Public Health Agency of Canada. Additional funding was provided by provincial governments in Ontario (OIS-2018) and Quebec (FN/EIQ-2019).

This report is a collaborative effort by the FN/CIS research team and the First Nations Advisory Committee to:

1. Continue to monitor national-level data on investigations involving First Nations children compared to non-Indigenous children as intended by the Truth & Reconciliation's Calls to Action, including;

- Investigating the type and severity of maltreatment
- Documenting caregiver, household and child characteristics of families investigated
- Monitoring short-term investigation outcomes such as placement and reunification

2. Ensure the appropriate contextualization of findings.

3. Disseminate research results to First Nations communities.

Methodology

For all jurisdictions except for Quebec, participating child welfare workers completed a standardized data collection instrument (see Appendix A) for new/re-opened investigations that were conducted during a three-month sampling period (October to December 2019). This instrument is broken down into three parts that focus on intake, household, and child information routinely collected during an investigation.

Data from Quebec was extracted from information systems from all agencies able to participate (17 out of 20 agencies) and these administrative data were matched to variables collected in the rest of Canada where possible. In provinces other than Quebec, participating agencies were selected through a multi-stage cluster sampling design.

The first stage involved selecting provincial and territorial mainstream child welfare organizations as well as Indigenous child welfare agencies from a sampling frame including all child welfare agencies. The final sample of agencies from the rest of Canada included 47 mainstream and 16 First Nations agencies. A three-month sampling period (October 1 – December 31, 2019) was then used to select cases within these sites. The final stage involved identifying child-level investigations meeting the study criteria. Complex survey weights were used to derive an estimate of child maltreatment-related investigations conducted in Canada in 2019 from these sampled cases.

The following methodological considerations must be taken into account when interpreting the data:

- The data are limited to maltreatment-related reports investigated by child welfare. This does not include screened-out cases, cases not reported, or cases that were only investigated by the police.
- Information is collected directly from investigative workers and is reflective of their clinical judgement. The information is not independently verified.
- Data from this cycle include data collected in Ontario in 2018 and administrative data from Quebec.
- Given methodological differences with previous cycles, any comparisons must be made with caution.

Historical and Current Context of First Nations Child Welfare

The overrepresentation of First Nations children investigated by Canadian child welfare is a consequence of centuries of policies of assimilation, structural inequities, and discrimination that limit the resources needed for First Nations families and communities to thrive. First Nations child welfare is currently in a state of transition and actions need to be put in place urgently to redress the disparities presented in this study.

Major Findings

The following section provides a brief overview of the key findings presented in this report.

Indigenous Identity of the Child

An estimated 299,217 child maltreatment-related investigations were conducted in Canada in 2019.

Of these investigations, 45,918 involved First Nations children (15% of total investigations) and 241,137 involved non-Indigenous children (81% of total investigations).

In 2019, for every 1,000 First Nations children 15 years of age and under in Canada, there were an estimated 151 child welfare investigations.

First Nations children (aged 0-15 years) in Canada were 3.6 times as likely to be the subject of a child maltreatment-related investigation compared to non-Indigenous children in 2019.

Figure 1: Children's Indigenous Identity in Maltreatment-Related Investigations in Canada in 2019

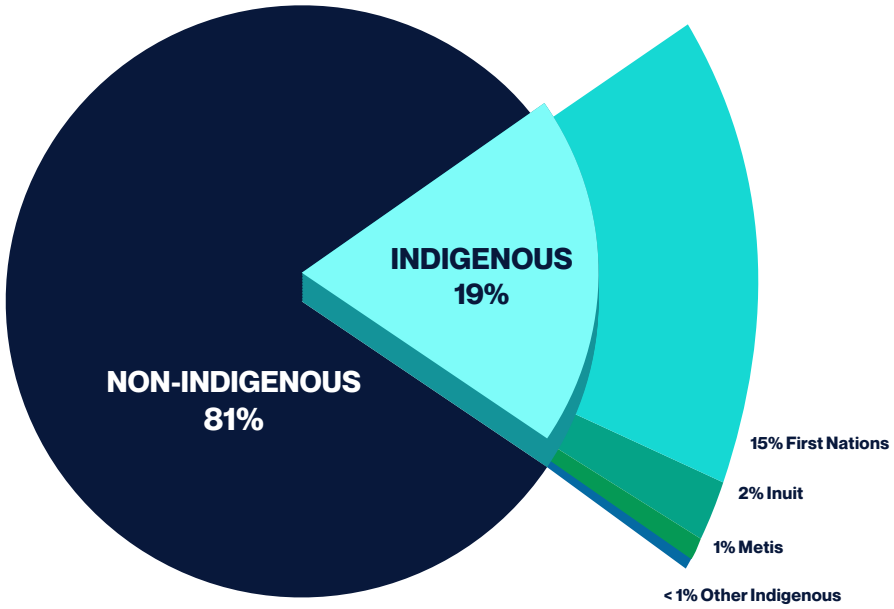

Figure 2: Rates of Maltreatment-Related Investigations Involving First Nations and Non-Indigenous Children in Canada in 2019

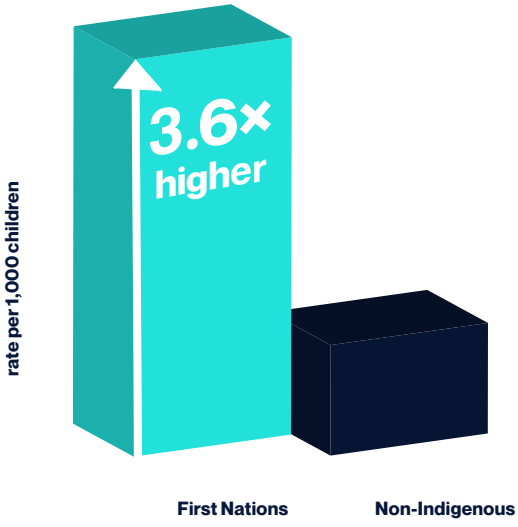
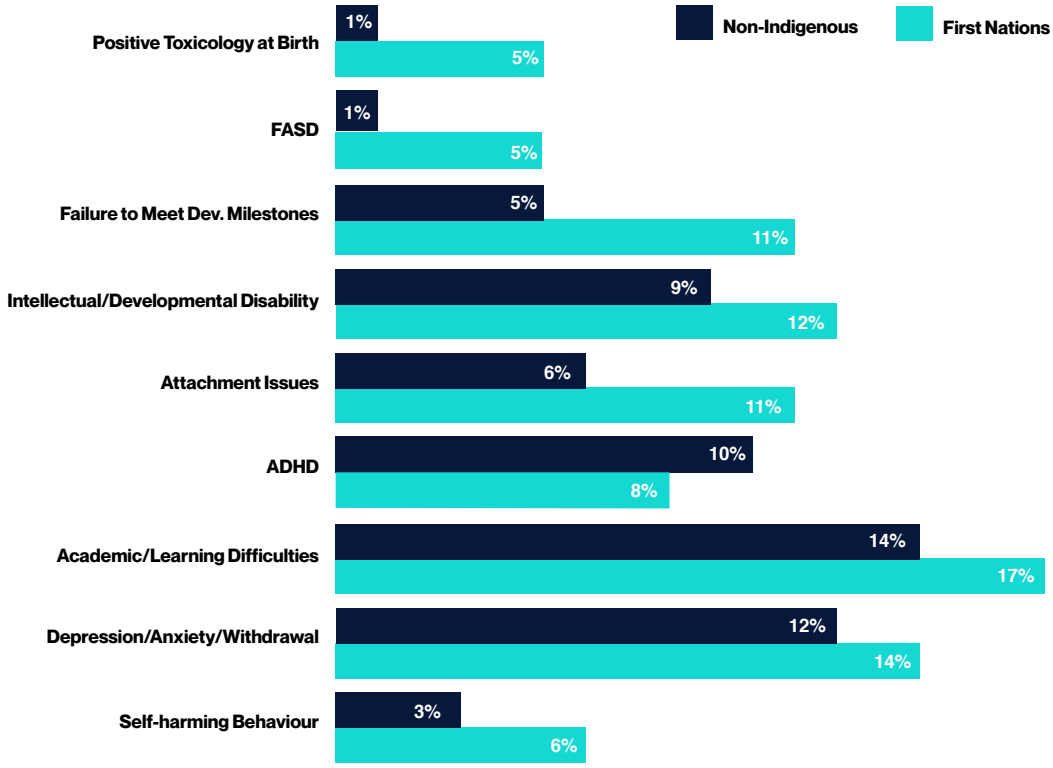


Child Functioning Concerns

Investigating workers were asked if there were any child functioning concerns noted during the investigation.

At least one child functioning concern was identified in 37% of child maltreatment-related investigations involving First Nations children compared to 32% of investigations involving non-Indigenous children.

Figure 3: Child Functioning Concerns in Maltreatment-Related Investigations Involving First Nations and Non-Indigenous Children in Canada in 2019 (Excluding Quebec)



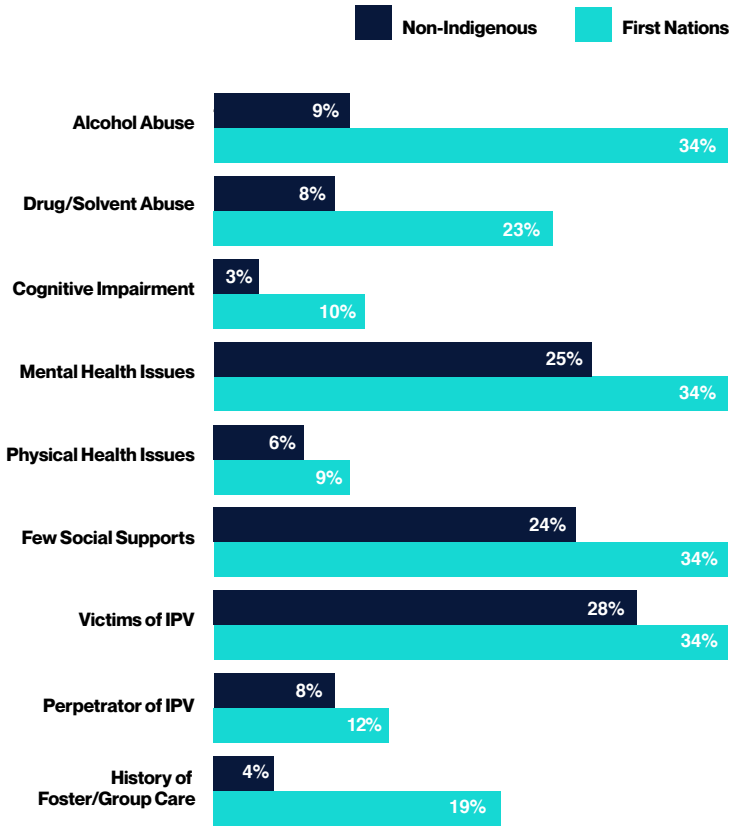
Primary Caregiver Risk Factors

Investigating workers were asked if there were any risk factors concerning the child's primary caregiver during the past six months. All the primary caregiver risk factors analyzed were more likely to be noted in investigations involving First Nations compared to non-Indigenous children.

At least one primary caregiver risk factor was noted in 74% of investigations involving First Nations children compared to 57% of investigations involving non-Indigenous children.

Caregivers in investigations involving First Nations children in 2019 were more likely to be facing complex needs, including having few social supports, experiencing mental health concerns or substance issues compared to caregivers of non-Indigenous children.

Figure 4: Primary Caregiver Risk Factors in Maltreatment-Related Investigations Involving First Nations and Non-Indigenous Children in Canada in 2019 (Excluding Quebec)

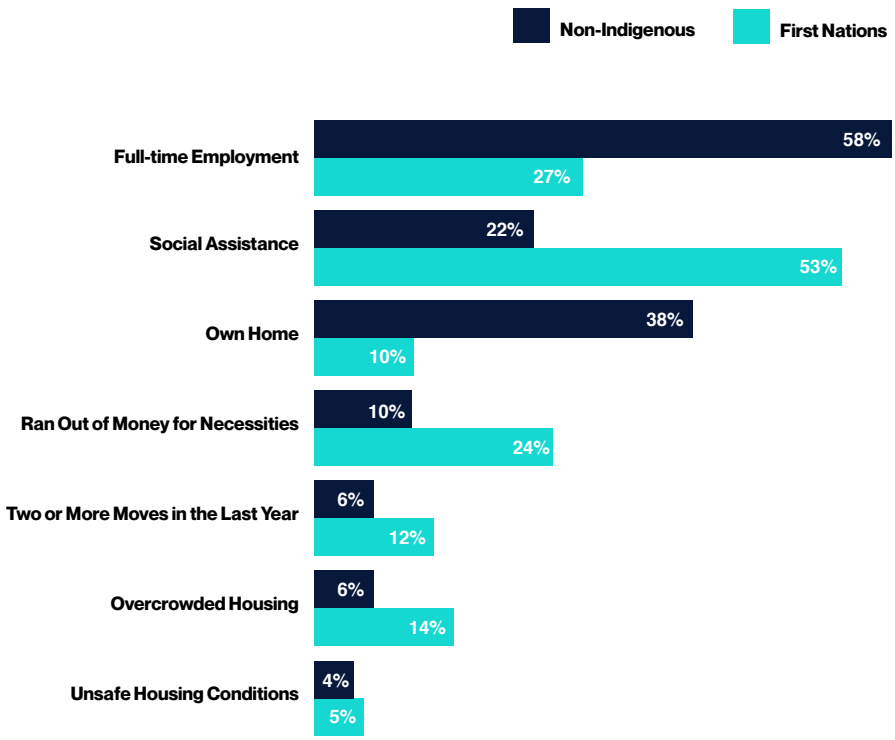


Housing Conditions

Investigating workers were asked about the source of household income and various housing conditions. All household risk factors captured in the FN/CIS-2019 were more likely to be noted in investigations involving First Nations compared to non-Indigenous children.

Investigations involving First Nations children were more likely to involve families facing multiple structural challenges, such as living in unsafe housing conditions, poverty, and overcrowded housing which limit the resources available to them to provide for their children.

Figure 5: Housing Conditions in Maltreatment-Related Investigations Involving First Nations and Non-Indigenous Children in Canada in 2019 (Excluding Quebec)



Type of Investigation and Substantiation Decision

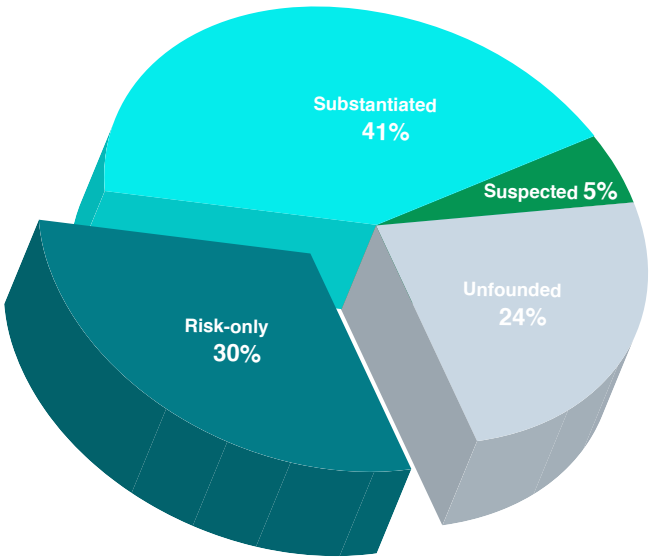
Child maltreatment-related investigations in the study included:

1. Investigations focused on an alleged incident of maltreatment (maltreatment investigations)
2. Investigations in which there was no specific concern of an alleged incident of maltreatment but where assessing the risk of future maltreatment for the child was the primary concern of the investigation (risk-only investigations).

For both First Nations and non-Indigenous children, 70% of investigations were focused on alleged incidents of maltreatment and 30% assessed the risk of future maltreatment.

The rate of substantiated maltreatment investigations was 4.7 times higher for First Nations children compared to non-Indigenous children in Canada in 2019.

Figure 6: Type of Investigation and Level of Substantiation in Maltreatment-Related Investigations Involving First Nations Children in Canada in 2019



Primary Category of Maltreatment

The primary concern in maltreatment investigations involving First Nations children was most often neglect (44%), followed by exposure to intimate partner violence (27%), physical abuse (14%), emotional maltreatment (9%), and sexual abuse (6%).

The rate of substantiated investigations whose primary focus was neglect was 8.5 times as high for investigations involving First Nations children compared to investigations involving non-Indigenous children.

Investigations of neglect drive the overrepresentation of First Nations children in the child welfare system in 2019.

Figure 7: Primary Category of Maltreatment in Maltreatment Investigations Involving First Nations Children in Canada in 2019

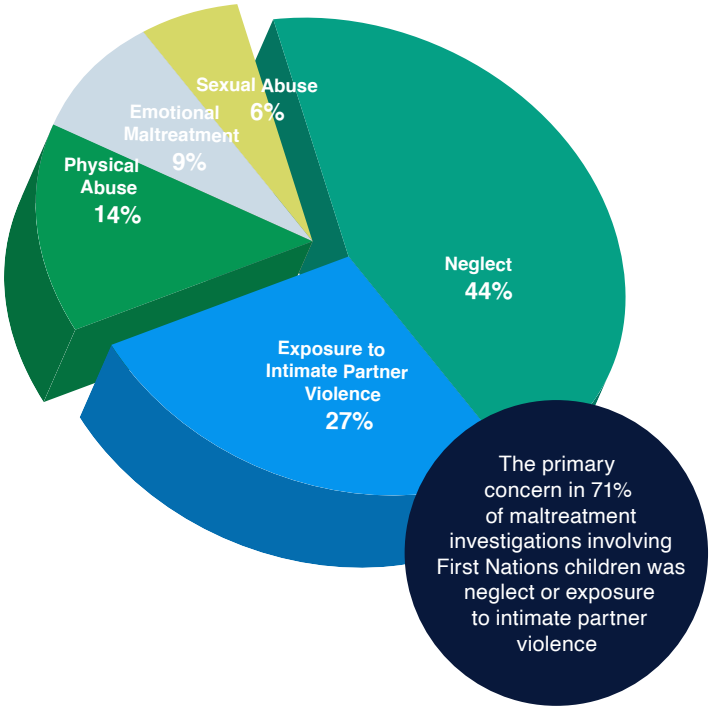


Figure 8: Rates of Substantiated Investigations involving First Nations Children and non-Indigenous Children in Canada in 2019 by Primary Category of Maltreatment

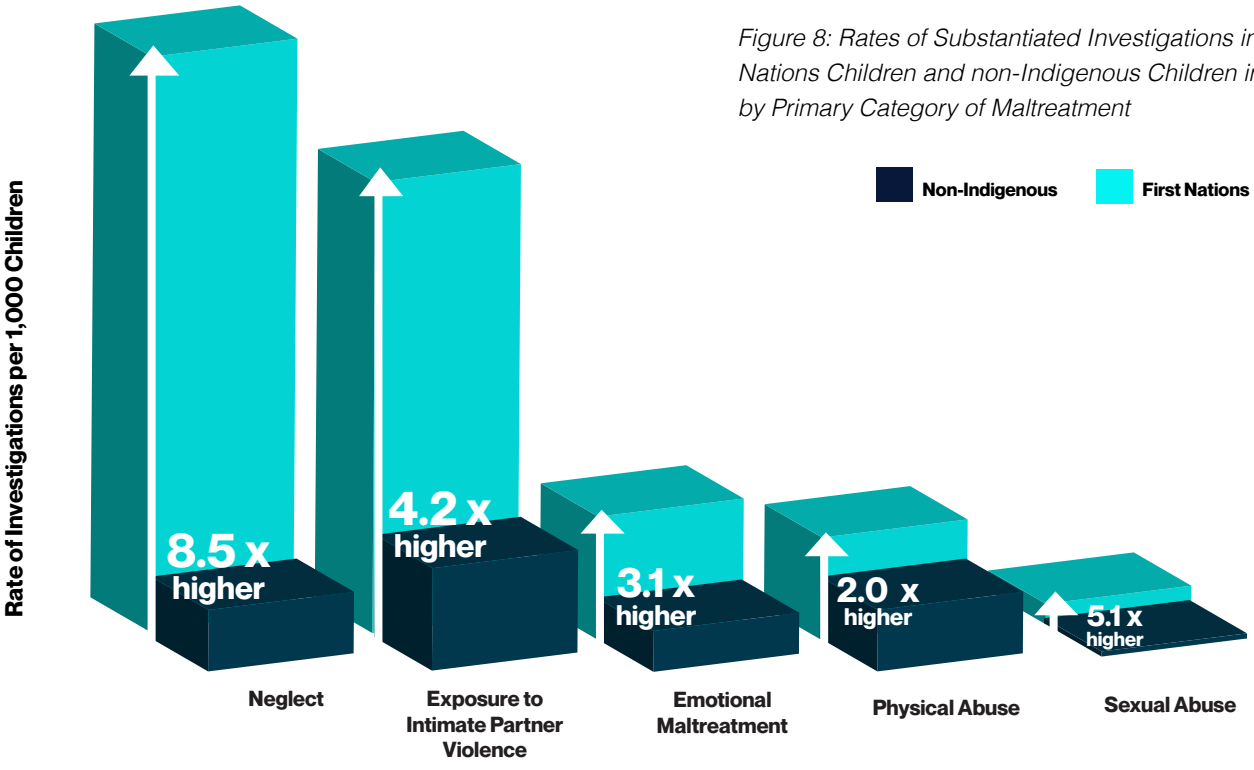
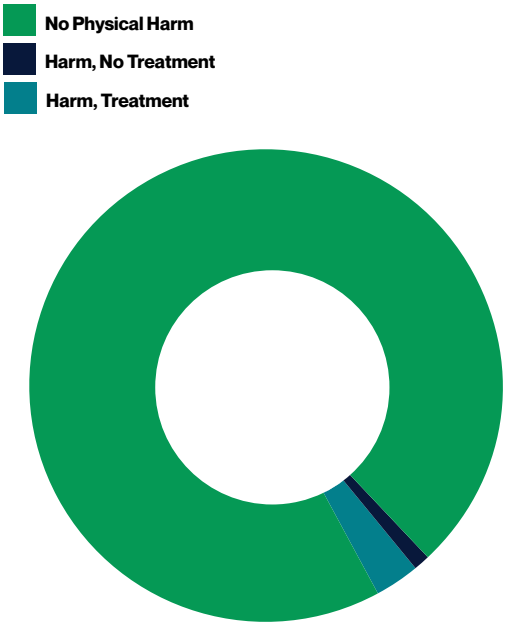


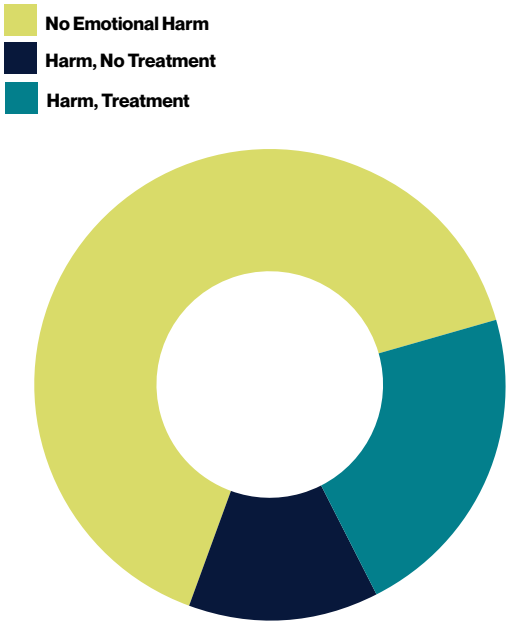
Physical and Emotional Harm

Physical harm was documented in only 4% of substantiated maltreatment investigations involving First Nations children.

Emotional harm was noted in 35% of substantiated investigations involving First Nations children.

Figure 9: Documented Physical and Emotional Harm in Substantiated Maltreatment Investigations Involving First Nations Children in Canada in 2019 (Excluding Quebec)



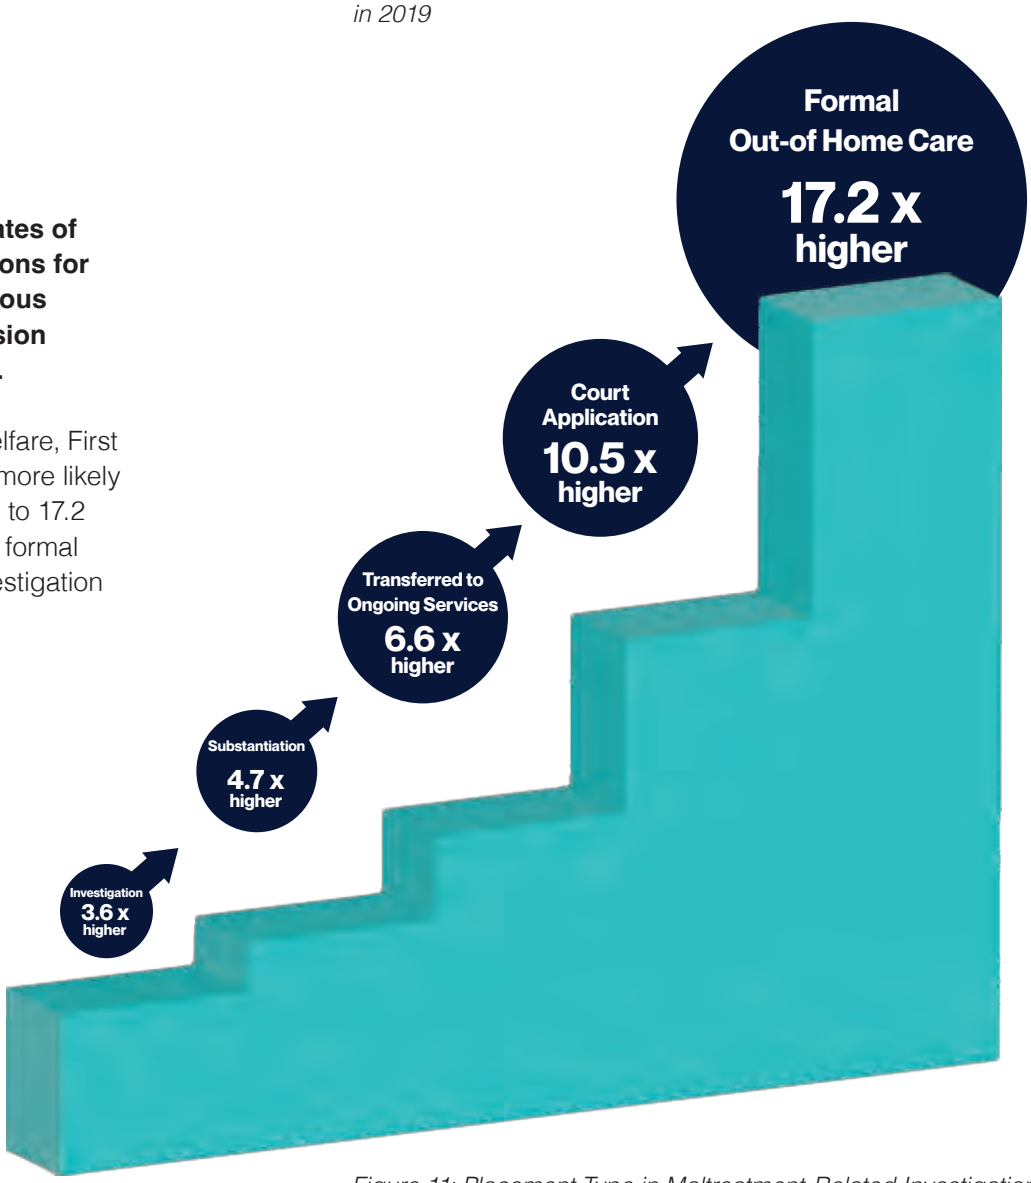


Service Dispositions

In 2019, disparities between rates of child welfare service dispositions for First Nations and non-Indigenous children grew with every decision across the service continuum.

At the point of entry into child welfare, First Nations children were 3.6 times more likely to be investigated. They were up to 17.2 times more likely to be placed in formal out-of-home care during the investigation period.

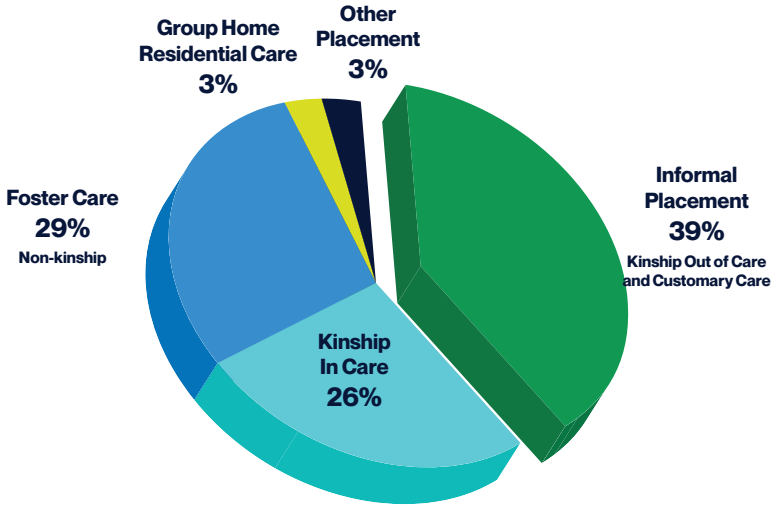
Figure 10: Difference Between Rates of Investigations per 1,000 Involving First Nations and Non-Indigenous Children in Canada in 2019



Thirteen percent of investigations involving First Nations children resulted in an out-of-home placement for the child compared to only four percent of investigations involving non-Indigenous children.

The investigating workers were asked to specify the type of placement that was made when a placement in out-of-home care was noted for the investigated child. Informal placements (including kinship out-of-care), represented the most frequently noted placement type for First Nations children, followed by non-kinship foster care and kinship in care.

Figure 11: Placement Type in Maltreatment-Related Investigations Involving First Nations Children Placed in Canada in 2019



Section One

The **Ongoing Legacy** of Colonialism Discrimination and Poverty

Section 1: The Ongoing Legacy of Colonialism, Discrimination, and Poverty

The ongoing legacy of colonialism, discrimination, and structural inequities experienced by First Nations children, families, and communities are a direct driver behind the disparities observed between child welfare investigations involving First Nations children and non-Indigenous children. This brief overview is intended to remind the reader that the context for the disparities reported is integral to the interpretation of the data and the proposed solutions.

Historical Context

Pre-contact

First Nations populations lived on the lands now known as Canada for thousands of years before European settlers arrived in the 15th century. During this period of pre-contact, there were considerable differences between Nations regarding traditions, social organization, food resources, homes, transportation, and languages.[5] All First Nations cared for their children in ways that honored their communities and the Creator and were consistent with their spiritual beliefs. Beyond differences in customs, First Nations shared a community-based approach to child rearing, with members of the extended family being collectively responsible for the protection and care of children.[6]

The time after contact with European settlers has been marked by policies of assimilation and alienation aimed at obliterating centuries of First Nations cultures and civilization.[7] These policies culminated with the *Indian Act* of 1876.[8] The *Indian Act* and each of its subsequent amendments have attacked First Nations' traditional systems and values, and actively tried to force the assimilation and enfranchisement of First Nations populations into Euro-Canadian society.[9]

Residential Schools

In 1883, the department of Indian Affairs began an official policy of residential schools, establishing 132 residential schools in partnership with institutionalized religions including Catholic, United, Anglican and Presbyterian faiths.[10] The stated goal of residential schools was to separate children from their families and communities and force them to abandon their Nation's language, customs

and values. In 1920 an amendment to the *Indian Act* made residential schools mandatory for all First Nations children between the ages of seven and 15 and gave the state the authority to find and apprehend First Nations children and force them to attend.[11] Parents who tried to oppose the removal of their children were threatened with incarceration - and some had their food rations withheld by the government at a time when famine was ravaging Indigenous communities.[12]

The horrors of residential schools have been recounted by First Nations since their implementation, although they were hidden and discounted by the general population for decades. Children were humiliated and punished for speaking their language and were taught to be ashamed of their culture and traditional practices.[13] Accounts from survivors tell of widespread instances of physical, sexual and emotional abuse and neglect at the hands of the clerics operating the schools.[14] Some were also subjected to cruel experimentations, including being forced to participate in dangerous nutritional and vaccine trials without their consent or knowledge.[15] In 1914, the deputy superintendent of the Department of Indian Affairs, Duncan Campbell Scott, determined that at the start of the residential school system, half of the children who attended residential schools died within them.[16] The staggering number of deaths has been linked to the incredibly poor conditions of the schools and the abusive and negligent treatment of children who were forced to attend.[17] When the last residential school closed in 1996, it is estimated that the residential school system led to the separation of 150,000 Indigenous children from their families. The state-inflicted harms resulting from these mass removals are still being felt to this day.

"Sixties Scoop"

Almost fifty years before the last residential school closed, in the mid 1950s, provincial child welfare authorities began enacting child welfare policies following the addition of Section 88 to the *Indian Act* in 1951, allowing provincial legislation to apply to First Nations on reserves.[18] The lack of understanding and respect for First Nations culture and child-rearing practices, the socio-economic difficulties brought by centuries of colonialism, and the dearth of prevention services available to communities resulted in the placement of thousands of First Nations children outside of their families and communities during the sixties, seventies and through the eighties – a period now known as the "Sixties Scoop."[19]

A significant number of these children were removed without the notification or agreement of their families and communities and were purposefully placed with – and adopted by – white families in Canada, in the United States, and countries across the world.[20] In the province of Saskatchewan, 80 to 91 percent of status First Nations children removed between 1977 and 1981 were placed in non-Indigenous homes.[21] These policies were a continuation of those put in place for residential schools, with a similar aim to assimilate First Nations children into the dominant culture. The children placed during the Sixties Scoop were removed from their cultural heritage, their language, and identities – with several only learning about their ancestry and place of birth as adults.[22] Many adoptees have recounted experiences of abuse, neglect and cruelty whilst placed under the care of their adoptive parents.[23]

By the end of the sixties, "30 to 40 percent of all legal wards of the state in Canada were Aboriginal children, even though they formed less than 4 percent of the national population".[24] The overrepresentation of First Nations children in the child welfare system did not stop at the end of the Sixties Scoop era – rather, it has continued to grow and evolve. Scholars have used the term "Millenium Scoop" to refer to the current and ongoing overrepresentation of First Nations children in the child welfare system.[25]

Current Context

Current Structure of Indigenous Child Welfare

At this time, provincial and territorial child welfare legislation apply to nearly all Indigenous people living on and off reserve. However these vary across jurisdictions, and special considerations are made in many statutes with respect to services to Indigenous children and families. The responsibility for funding services to First Nations children and families living on reserve rests with the federal government under the Indian Act and the Constitution Act.[26] In the 1980's, through the advocacy efforts of Elders, band councils and other community leaders across different jurisdictions, First Nations communities began to provide child welfare services for their own communities. By 2019, there were more than 120 Indigenous child and family service agencies across Canada.

The structure of Indigenous child welfare services is changing rapidly. A growing number of services are being provided either by fully mandated Indigenous agencies or by Indigenous counselling services that work in conjunction with mandated services. The most common types of governance models that are in place for First Nations child and family service agencies include the delegated or mandated model (where responsibility for child welfare services is either fully or partially delegated to First Nations child welfare agencies), integrated models (where both the Indigenous community and the province share authority over child welfare services), and individual bilateral or tripartite agreements with Indigenous agencies.[27]

An Act respecting First Nations, Inuit and Métis children, youth and families (also known as Bill C-92), became law on January 1, 2020 - marking a turning point in Indigenous child welfare.[28] It is the first federal law that acknowledges First Nations, Métis and Inuit populations' jurisdiction over child and family services and establishes mechanisms by which an Indigenous governing body can exercise this jurisdiction. Once enacted, laws put in place by Indigenous groups or communities are given priority over provincial child welfare legislation.[29] The Act also establishes national "minimum standards" in the provision of child and family services to Indigenous children that take into consideration the need to ensure cultural continuity, to prioritize placement of children with family members, and to notify families and communities of measures involving Indigenous children, amongst others.[30]

Despite being an important step forward, the Act has been criticized by Indigenous child welfare experts and organizations across Canada for its significant limitations and many have decried the absence of adequate consultation before implementation.[31] Amongst its shortcomings, the lack of commitment to core funding has been highlighted as being of grave concern.[32] As it stands, the Act states that funding will be determined through individual coordination agreements between the Indigenous community and Canada, which increases the risk for funding to be the subject of jurisdictional disputes, thus repeating historical patterns of discriminatory funding of services to Indigenous populations and directly impacting the capacity for communities to develop the child welfare infrastructure their children and families deserve.[33]

Furthermore, although the Act claims to uphold Indigenous rights to self-governance, it does not fully recognize Indigenous jurisdiction over child welfare law. Not only does it suggest that provincial laws can be applied concurrently if they are not in conflict with Indigenous laws, but, it also states that the best interest of an Indigenous child, as set out by the Act itself, takes precedence over Indigenous laws.[34] In doing so, it imposes barriers on the inherent right of First Nations, Inuit and Métis populations to protect - and care for - their own children.

The Need for Change

Recognizing the Ongoing Impact of Mass Removals: The Truth and Reconciliation Commission

The Government of Canada issued a formal apology for residential schools on June 11, 2008 and acknowledged the devastating impact and cruelty of the residential school system. The apology included the need to account for and address the impact of residential schools through continuing remedies, including the creation of the TRC.

The reports prepared by the TRC brought to light the trauma experienced by Indigenous children as a result of the residential school system and the Sixties Scoop. They also describe how this trauma has been passed on from generation to generation, through the severed connection to culture and traditions, the breakdown of family ties that left generations of Indigenous children without parenting models, and the long-lasting psychological impacts of abuse.[36] This has contributed to the creation of a myriad of complex needs and risk factors that are impacting Indigenous families across Canada to this day and are driving the current overrepresentation of Indigenous children in the child welfare system.

The TRC published 94 Calls to Action upon the release of the final report in 2015.[37] These called upon all levels of government — federal, provincial, territorial and Indigenous — to change programs, policies and structures in order to address the harms of residential schools and ongoing colonial practices. The actions are divided into 42 actions to address the legacy of residential schools and 52 that focus on reconciliation.[38] The beginning of this report opens with those specific to child welfare. They bring forth the need to recognize the intergenerational impacts of the residential schools on Indigenous families in the child welfare system, as well as the critical importance of monitoring the number of - and the reasons why - Indigenous families come into contact with child welfare.

The Yellowhead Institute has been releasing a yearly report that tracks the government’s response to the Calls to Action. The 2020 report highlighted that in that year, only eight of the 94 Calls to Action had been implemented.[39] None of the actions considered to be implemented had to do with child welfare. Notably, the authors of the report highlight the ever-more pressing need to provide “timely and accurate

data" (p. 9) on Indigenous children in care. Access to such data for Indigenous communities across Canada is crucial to support the creation of new models of Indigenous child welfare services and programs that respond to the current realities of their children and families.

Recognizing the Ongoing Inequities Experienced by First Nations Families

Canadian Human Rights Tribunal

Following a complaint made by the First Nations Child and Family Caring Society and the Assembly of First Nations, the Canadian Human Rights Tribunal (CHRT) issued a landmark ruling in January 2016, recognizing that the government of Canada racially discriminated against First Nations children and their families in the provision of child welfare and Jordan's Principle services.[40] Specifically, the Tribunal argued that the federal government provided inequitable and insufficient funding for child and family services in First Nations communities that drastically underfunded prevention services on reserve and incentivised the placement of children outside of their homes. The Tribunal ordered Canada to reform the First Nations Child and Family Services (FNCFS) program and to "cease applying its narrow definition of Jordan's Principle".[41]

Jordan's Principle is a child-first initiative put in place in 2007 in the name of Jordan River Anderson from Norway Cree House Nation in Manitoba, who died at the age of five having never lived outside of a hospital because of jurisdictional disputes over who would pay for his in-home care needs.[42] This initiative was aimed to ensure that First Nations children would no longer suffer from gaps, denials, and delays in accessing essential services, as Jordan had. Until 2016, nearly no First Nations children had received services under this initiative because of the reductive definition and ineffective implementation of the principle by the Government of Canada.[43]

Since then, the CHRT has issued a series of rulings in response to Canada's continued failure to comply with the orders set out by the Tribunal. As a result, Canada has increased funding for FNCFS programs and Jordan's Principle services, agreed to implement a broader definition of Jordan's Principle, and created a Consultation Committee of Child Welfare Reform.[44] To this day, the government of Canada refuses to comply with certain aspects of the CHRT orders.

Current Structural Inequities

Racism and colonialism are an ongoing reality for First Nations children, families and communities that continue to curtail their access to basic human rights across different structures that extend far beyond child welfare. The consequences of these structural inequities on the socio-economic conditions of First Nations are far-reaching.

For example, as many as 51 percent of status First Nations children and 29 percent of non-status First Nations children live in poverty, compared to 18 percent of Canadian children in the general population.[45] In a survey conducted between 2008 and 2018, 48 percent of First Nations households were considered to be food insecure.[46] In 2017, 28 percent of homes on First Nations reserves did not have access to piped water, with 1.5 percent having no water service at all.[47] In 2016, one in four First Nations households were deemed to be overcrowded, compared to one in 20 households in the general population.[48]

The lack of adequate resources available to First Nations parents - brought by the persistent underfunding of essential services - creates additional structural stressors that are beyond First Nations families' control.[49] Given the "tendency to see Aboriginal poverty as a symptom of neglect, rather than as a consequence of failed government policies",[50] this increases the risk for First Nations children to be investigated and eventually apprehended by the child welfare system. Ultimately, structural inequities, racism, and trauma resulting from the forced removal of generations of children, lie at the root of the stark disparities in child welfare presented in the next sections of this report.

Section Two

Study **Objectives** and **Rationale**

Section 2: Study Objectives and Rationale

Objectives

The FN/CIS-2019 is a study of child welfare investigations involving First Nations children and the fourth national study examining the incidence of reported child abuse and neglect in Canada. The primary objective of the FN/CIS-2019 is to provide reliable estimates of the scope and characteristics of child abuse and neglect investigated by child welfare services in Canada in 2019.

Specifically, the FN/CIS-2019 collects information directly from investigating child welfare workers in order to **continue to monitor national-level data on investigations involving First Nations children compared to non-Indigenous children as intended by the TRC's Calls to Action**, including:

- Determining rates of investigated and substantiated physical abuse, sexual abuse, neglect, emotional maltreatment, and exposure to intimate partner violence as well as multiple forms of maltreatment;
- Investigating the severity of maltreatment as measured by form of maltreatment, duration, and physical and emotional harm;
- Examining selected determinants of health that may be associated with maltreatment; and
- Monitoring short-term investigation outcomes, such as substantiation, out-of-home placement, and use of child welfare court.

The Advisory Committee offers guidance and counsel throughout the study and ensures that the study respects Ownership, Control, Access, and Possession (OCAP®) principles. The principles state that First Nations communities: (1) own their information; (2) control all facets of research and data management related to themselves; (3) are able to access information and data about their communities; and (4) possess their data.[51] Important goals of the Advisory Committee included contextualizing the findings of the study in all materials as well as establishing an extensive dissemination plan to First Nations communities.

Data pertaining to a Canadian estimate of child maltreatment-related investigations will be available in the academic literature by end of year 2021 and information sheets will be available on the cwrp.ca portal.

[51] "The First Nations Principles of OCAP®," https://fnigc.ca/ocap-training/.

Rationale

The objectives and design of the FN/CIS-2019 are best understood within the context of the decentralized structure of Canada's child welfare system and with respect to changes over time in mandates and intervention standards. Child welfare legislation and services are organized in Canada at the provincial and territorial levels. Child welfare is a mandatory service, directed by provincial and territorial child welfare statutes. Although all child welfare systems share certain basic characteristics organized around investigating reports of alleged maltreatment, providing various types of services and supervision, and looking after children in out-of-home care, there is considerable variation in the organization of these service delivery systems (see Table 1).[52] Some provinces and territories operate under a centralized, government-run child welfare system, while others have opted for decentralized models run by mandated agencies. Several provinces and territories have recently moved towards regionalized service delivery systems.

Child welfare statutes also vary considerably. Some jurisdictions limit their investigation mandates to children under 16, while others extend their investigations to youth under 19. Provincial and territorial statutes also vary in terms of the specific forms of maltreatment covered, grounds for removal, and timelines for determining permanent wardship. In addition to these legislative differences, there are important differences in regulations and investigation policies. These differences may be further accentuated by the implementation of different structured assessment tools and competency-based training programs. Varying legislation and investigation practices across provinces and territories, as well as changes over time have posed challenges in documenting the annual incidence of reported maltreatment in Canada.

Using a standard set of definitions, the Canadian Incidence Study of Reported Child Abuse and Neglect (CIS)-1998, 2003, 2008 and 2019 provide the best available estimates of the incidence and characteristics of reported child maltreatment across Canada over a twenty-year period. Caution should be used in comparing results across cycles as there have been considerable changes to the methodology and survey design weights.

Ontario and Quebec conducted parallel incidence studies and have produced (Ontario) or will produce (Quebec) reports examining disparities for First Nations children and families. Please see the Ontario report here: Mashkiwenmi-Daa Noojimowin: Let's Have Strong Minds For The Healing: First Nations Ontario Incidence Study Of Reported Child Abuse And Neglect-2018 **https://cwrp.ca/publications/mashkiwenmi-daa-noojimowin-lets-have-strong-minds-healing-first-nations-ontario**

[52] For more detailed descriptions of provincial, territorial and Indigenous services go to the Canadian Child Welfare Research Portal: cwrp.ca

Table 1: Provincial and Territorial Child Welfare Administrations

Province	Administration	Child welfare status	Age Coverage
Alberta	In Alberta child protection rests with the Ministry of Children's Services. Services are delivered by Child and Family Service Offices as well as 17 delegated First Nation Agencies.	Child, Youth and Family Enhancement Act	Under 18
British Columbia	Child Protection is the responsibility of the Director of Child Protection under the Ministry of Children and Family Development. Services are provided through 429 local ministry offices as well as 23 Indigenous agencies which have various degrees of delegation. All service offices are supported by the provincial office of the Child Protection Division.	Child, Family and Community Service Act	Under 19
Manitoba	Child welfare falls to the Child and Family Services System under the Ministry of Families. The system is administered through four Child and Family Services Authorities, three of which serve Indigenous communities. Eighteen agencies are served by these three Indigenous authorities.	Child and Families Services Act, Child and Family Services Authorities Act	Under 18
New Brunswick	Child welfare is the responsibility of the Department of Social Development and child protection services are delivered through eight Social Development Regional Offices. There are eight First Nations Child and Family Services Agencies.	Family Services Act	Under 19
Newfoundland and Labrador	Responsibility for the provision of child welfare programs and services fall to the Department of Children, Seniors and Social Development under the Department of Health and Community Services. Services are provided through four regional integrated health authorities.	Children and Youth Care and Protection Act	Under 18
Northwest Territories	Child protection falls to the Department of Health and Social Services, Child and Family Services and is administered by eight regional health and social services authorities.	Child and Family Services Act	Under 16
Nova Scotia	Child welfare programs and services fall under the Division of Child, Youth and Family Supports under the Department of Community Services. Child Protection Services are provided by four regional district offices and seventeen county and municipal Child Welfare Service Offices. There is one delegated First Nations agency in Nova Scotia.	Children and Family Services Act	Under 19
Nunavut	The Ministry of Family Services is responsible for child protection, and services are provided by 25 local Community, Children and Family Services Offices	Child and Family Services Act	Under 16
Ontario	The Ministry of Children, Community and Social Services funds child welfare services and programs, which are provided by Children's Aid Societies throughout the province. There are 49 such agencies, which are governed by Boards of Directors elected from local communities. Eleven of those agencies are mandated to provide services specifically to Indigenous communities (Indigenous Child and Family Well-Being Agencies)	Child, Youth and Family Services Act	Under 18
Prince Edward Island	Child protection is the responsibility of the Department Child and Family Services under the Ministry of Family and Human Services. Services are provided by six regional centres and twelve Child Protection Teams.	Child Protection Act	Under 18
Quebec	The Ministère de la Santé et des Services Sociaux, Department of Youth Protection is responsible for child protection. Services are provided by 34 integrated health and social service centres. Currently, 21 Indigenous agencies in Quebec have signed bipartite or tripartite agreements allowing them to provide either all or a range of child welfare services.	Youth Protection Act	Under 18
Saskatchewan	Child protection falls to the Ministry of Social Services and services are provided through local Social Services offices. Seventeen First Nations Child and Family Services Agencies serve children and families living on reserve.	Child and Family Services Act	Under 16
Yukon	The Department of Health and Social Services, Family and Children's Services is responsible for the provision of child welfare programs and services and their delivery through Regional Services Offices.	Child and Family Services Act	Under 19

Section Three

Study Methodology

Section 3: Study Methodology

This section of the report describes the methodology of the FN/CIS-2019. As with any sample survey, estimates must be understood within the constraints of the survey instrument, the sampling design, and the estimation procedures used. A full description of the methodology is available upon request. [53]

Sampling

The FN/CIS-2019 captured information about children and their families as they came into contact with child welfare services over a three-month sampling period. Children who were not reported to child welfare services, screened-out reports or new allegations on cases currently open at the time of case selection were not included in the FN/CIS-2019.

Information about sampled cases was collected directly from the investigating worker at the conclusion of their investigation, except for sites in Quebec where information was extracted from the administrative information system. In September 2019, the Quebec Ministry of Health and Social Services decided to postpone the data collection process using online forms filled out by investigating workers for the Quebec component of this study. Because of this, data for child welfare investigations in Quebec were obtained through an administrative data extraction within provincial child welfare data systems. For First Nations communities that used their own data systems, the research team worked with the agencies in question to extract equivalent information. Data from these sampled cases were merged with data from the Ontario Incidence Study of Reported Child Abuse and Neglect – 2018 (OIS-2018)[54] and the rest of Canada in order to derive estimates of the annual rate and characteristics of child investigations in Canada.

The sampling approach was developed in consultation with a statistical expert. The FN/CIS-2019 sample (for all regions excluding Quebec) was drawn in three stages. First, a representative sample of provincial and territorial mainstream child welfare sites and Indigenous child welfare

[53] A more detailed description of the methodology is available on cwrp.ca. If more information is needed, please contact the Study Director, Dr. Barbara Fallon (barbara.fallon@utoronto.ca).

[54] Fallon, Barbara, Rachael Lefebvre, Joanne Filippelli, Nicolette Joh-Carnella, Nico Trocme, Jessica Carradine, and John Fluke. "Major findings from the Ontario Incidence Study of Reported Child Abuse and Neglect 2018." *Child Abuse & Neglect* (2021).

agencies across Canada was selected. The final sample of agencies in Canada (except for Quebec) included 47 mainstream and 16 First Nations agencies. Cases were then sampled over a three-month period within the selected sites, and finally, child investigations that met the study criteria were identified from the sampled cases. Quebec administrative data were extracted for the year 2019 from the information system and, when possible, matched to the variables contained in the data collection instrument used in the rest of Canada.

Stage One: Child Welfare Authority Selection

Child welfare authorities are the Primary Sampling Units (PSU) for the FN/CIS-2019. The term "child welfare authority" describes any organization that has the authority to conduct child protection investigations. A final count of 307 child welfare authorities constituted the sampling frame for the 2019 study.

In all of Canada, except Quebec, child welfare authorities were first stratified by province except for the Atlantic provinces (one stratum) and the territories (one stratum). A separate stratum was developed for all Indigenous child welfare authorities. Child welfare authorities were then further stratified by size within these strata (large and medium/small for mainstream child welfare authorities and very large, large and medium/small for Indigenous child welfare authorities). Child welfare authority size was determined by the service volume of investigations conducted in the year prior to the study. In total, 17 strata provided the sampling structure from which child welfare authorities were selected.

Sites were selected using stratified random sampling within their respective strata with a minimum number of selected child welfare authorities in each stratum determined by the variability in the service population across strata. All sites, including those that were geographically remote, were eligible for inclusion because the survey instrument was completed online by the investigating worker for this cycle of the study.

Stage Two: Case Selection

The second sampling stage involved selecting cases opened in the study sites during the three-month period from October 1, 2019 to December 31, 2019. Three months was considered to be the optimum period to ensure high participation rates and good compliance with study procedures. Consultation with service providers indicated that case activity from October to December was typical of the whole year.

In small to medium-sized sites, all cases opened during the three-month sampling period were selected. In larger agencies that conducted over 1,000 investigations per year, a random sample of 250 cases was selected for inclusion in the study. In Quebec, a modified data collection method was used, whereby case information was extracted from the provincial administrative information system, therefore all investigations conducted in 2019 (January to December) at all agencies were included.

These procedures resulted in the selection of 7,763 family-based cases: 4,054 from Ontario and 3,709 from the rest of Canada (excluding Quebec).

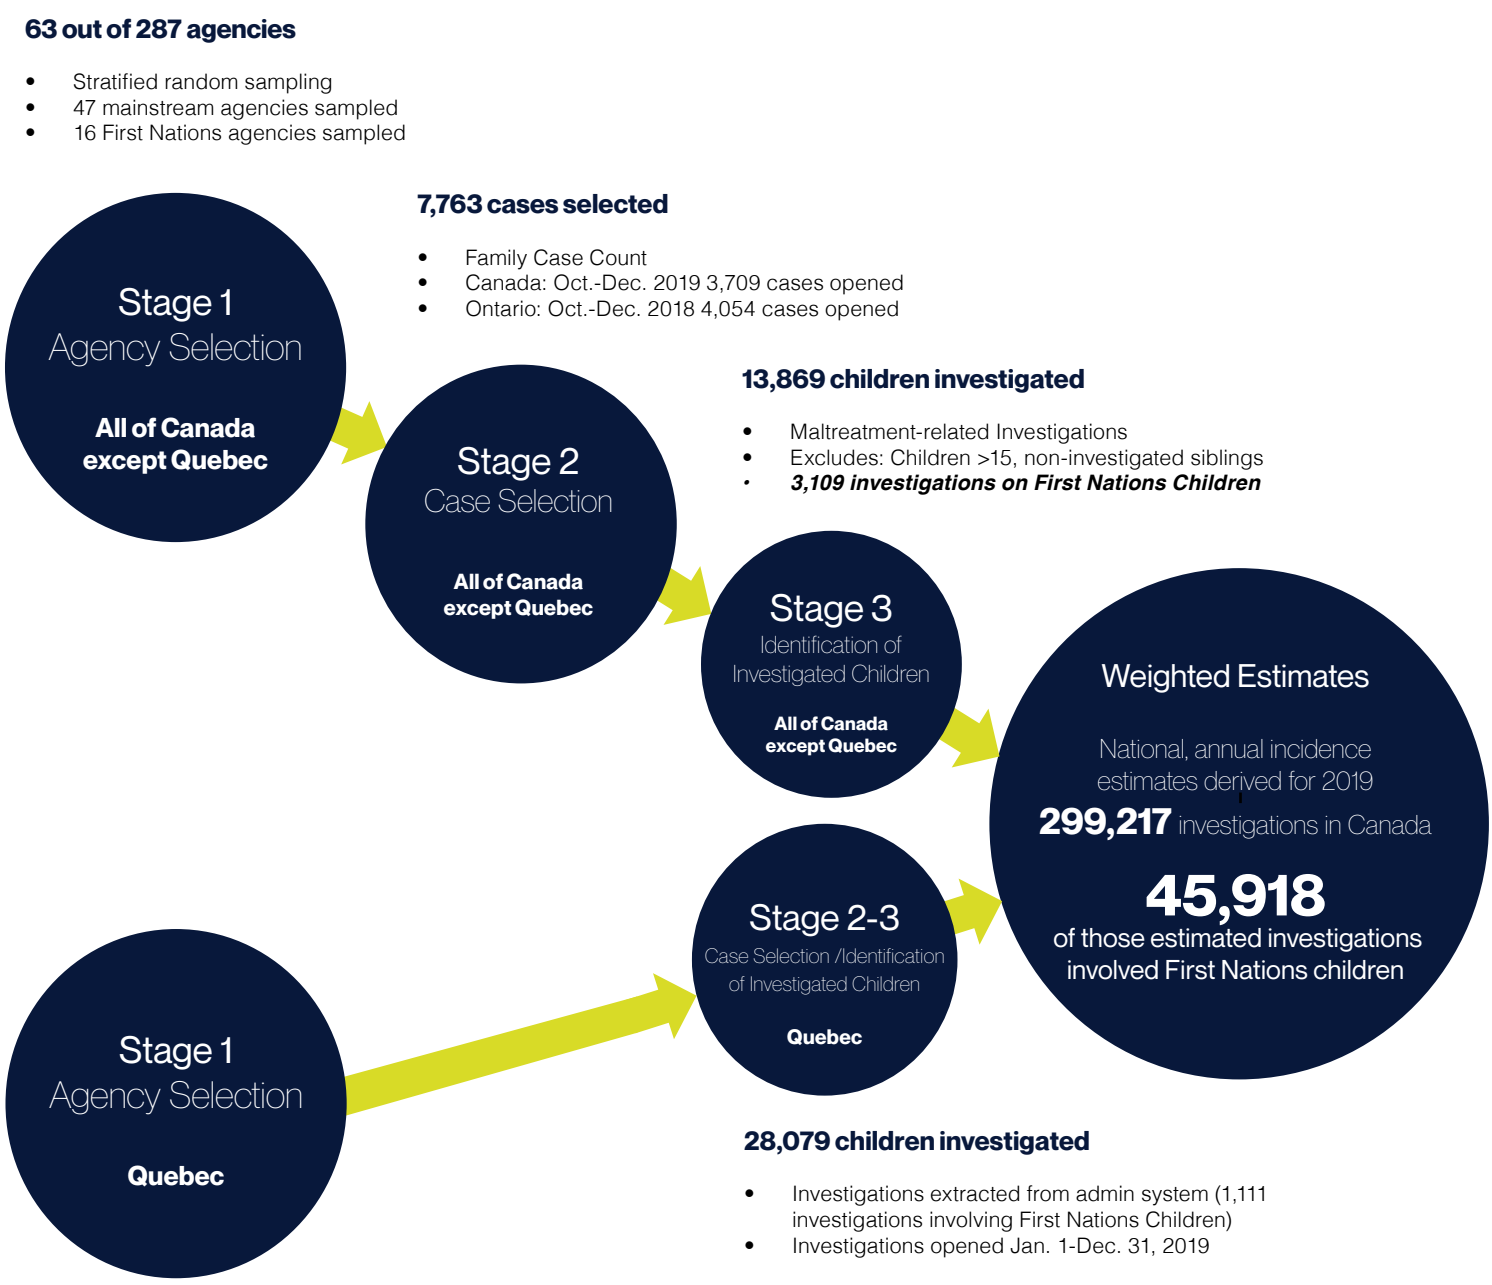
Stage Three: Identification of Investigated Children

The final sampling stage involved identifying children who had been investigated as a result of concerns related to possible maltreatment. As noted above, since in most jurisdictions cases are opened at the level of the family, procedures had to be developed to determine which child(ren) in each family were investigated for maltreatment-related reasons. Furthermore, cases can be opened for reasons that do not involve maltreatment-related concerns. These can include children with behavioural problems, families seeking financial support, or other service requests that do not involve a specific allegation of maltreatment or risk of future maltreatment. Similarly, some jurisdictions classify home studies for prospective adoptive of foster homes as case openings.

In Quebec, there were 28,079 children who were investigated in 2019. In Ontario and the rest of Canada there were 13,869 children who were investigated and identified in a data collection form. When the data were weighted using complex design weights a final estimate of 299,217 child maltreatment-related investigations of children aged 15 and younger was calculated for 2019. Of these investigations, there was an estimated 45,918 involving First Nations children.

Survey Methodolgy

Figure 12: FN/CIS-2019 Sampling Frame



Terms Used in the Report

For a full glossary of terms, please refer to Appendix B. The present section goes over some key definitions.

Maltreatment Investigations vs. Risk of Future Maltreatment Investigations

In jurisdictions outside of Quebec, children eligible for inclusion in the final study sample were identified by having investigating workers complete the Intake Information section of the online FN/CIS-2019 Instrument. The Intake Information section allowed the investigating worker to identify any children who were investigated because of maltreatment-related concerns. These were further classified as either (1) maltreatment investigations, i.e., investigations involving a specific allegation of an incident of maltreatment or (2) risk of future maltreatment investigations, i.e., investigations where there was no specific allegation of a maltreatment incident but where the primary concern was related to the risk of future maltreatment.

Forms of Maltreatment Included in the FN/CIS-2019

The FN/CIS-2019 definition of child maltreatment includes 33 forms of maltreatment, subsumed under five categories of maltreatment: physical abuse, sexual abuse, neglect, emotional maltreatment, and exposure to intimate partner violence. This classification reflects a broad definition of child maltreatment and includes forms of maltreatment that are not specifically indicated in some provincial and territorial child welfare statutes (e.g., exposure to intimate partner violence). The FN/CIS-2019 tracked up to three forms of maltreatment for each investigation.

A source of potential confusion in interpreting child maltreatment statistics lies in inconsistencies in the categories of maltreatment included in different statistics. Most child maltreatment statistics refer to both physical and sexual abuse, but other categories of maltreatment, such as neglect, emotional maltreatment, and exposure to intimate partner violence are not systematically included. There is even less consensus with respect to subtypes or forms of maltreatment.

Investigated Maltreatment vs. Substantiated Maltreatment

Child welfare statutes in most jurisdictions require that professionals working with children and the general public report all situations where they have concerns that a child may have been maltreated or where there is a risk of future maltreatment. The investigation phase is designed to determine whether the child was in fact maltreated or not. Some jurisdictions use a two-tiered substantiation classification system that distinguishes between substantiated and unfounded cases or verified and not verified cases. The FN/CIS-2019 uses a three-tiered classification system for investigated incidents of maltreatment, in which a "suspected" level provides an important clinical distinction in certain cases: those in which there is not enough evidence to substantiate maltreatment, but maltreatment cannot be ruled out.[55]

In reporting and interpreting maltreatment statistics it is important to clearly distinguish between risk of future maltreatment investigations, maltreatment investigations and substantiated cases of maltreatment.

Risk of Harm vs. Harm

Cases of maltreatment that draw public attention usually involve children who have been severely injured or, in the most tragic cases, have died as a result of maltreatment. In practice, child welfare workers investigate and intervene in many situations in which children have not yet been harmed but are at risk of harm. For instance, a toddler who has been repeatedly left unsupervised in a potentially dangerous setting may be considered to have been neglected, even if the child has not yet been harmed.

Provincial and territorial statutes cover children who have suffered demonstrable harm due to abuse or neglect and children at risk of harm. Substantiation standards in all jurisdictions across Canada include situations where children have been harmed as a result of maltreatment as well as situations where there is no evidence of harm but where children are at substantial risk of harm as a result of maltreatment. The FN/CIS-2019 includes both types of situations in its definition of maltreatment. The study also gathers information about physical and emotional harm attributed to substantiated or suspected maltreatment.

There can be confusion around the difference between risk of harm and risk of future maltreatment. A child who has been placed at risk of harm has experienced an event that endangered their physical or emotional health.

[55] For more information on the distinction between these three levels of substantiation, please see: Trocmé, N., Knoke, D., Fallon, B., & MacLaurin, B. (2009). Differentiating between substantiated, suspected, and unsubstantiated maltreatment in Canada. Child Maltreatment, 14(1), 4 – 16.

Placing a child at risk of harm is considered a form of maltreatment. For example, neglect can be substantiated for an unsupervised toddler, regardless of whether or not harm occurs, because the parent is placing the child at substantial risk of harm. In contrast, risk of future maltreatment refers to situations where a specific incident of maltreatment has not yet occurred, but circumstances, for instance parental substance abuse, indicate that there is a significant risk that maltreatment could occur in the future.

Weighting

The data collected for the FN/CIS-2019 were weighted in order to derive national, annual incidence estimates. Design weights were applied to each case selected in sampled agencies during the three-month case selection period. The weighting approach was developed in consultation with a statistical expert. A full description of the weighting procedure will be available on the cwrp.ca website.

Rate per 1,000 Calculations

In this report, a rate per 1,000 calculation was performed for First Nations children and non-Indigenous children (0 to 15 years old) using data from the 2016 Census. Service volume estimates for First Nations children were divided by the census population (i.e., 304,085) and then multiplied by 1,000. Service volume estimates for non-Indigenous children were divided by the census population (5,726,305) and then multiplied by 1,000.

For variables for which data were not available from the Quebec data extraction, the Quebec child population (0 to 15 years old) was subtracted from the total Canadian child population. This resulted in population estimates of 277,720 for First Nations children and 4,182,530 for non-Indigenous children.

The FN/CIS-2019 Instrument

The FN/CIS-2019 Instrument was the main data collection instrument used for the study. This instrument was completed by the primary investigating child welfare worker upon completion of each child welfare investigation (Appendix A). This data collection instrument consists of an Intake Information section, a Household Information section, and a Child Information section.

Intake Information Section

Information about the report or referral as well as partially identifying information about the child(ren) involved was collected on the Intake Information section. This section requested information on: the date of referral; referral source; number of caregivers and children in the home; age and sex of caregivers and children; the reason for referral; which approach to the investigation was used; the relationship between each caregiver and child; whether the child was investigated; whether there were other adults in the home; and whether there were other caregivers outside the home.

Household Information Section

The household was defined as all of the adults living at the address of the investigation. The Household Information section collected detailed information on up to two caregivers living in the home at the time of referral. Descriptive information was requested about the contact with the caregiver, caregiver risk factors, household risk factors, transfers to ongoing services, and referral(s) to other services.

Child Information Section

The Child Information section was completed for each child who was investigated for maltreatment or for risk of future maltreatment. The Child Information section collected information on the type of investigation (a risk investigation or an investigated incident of maltreatment). For maltreatment investigations, it documented up to three different forms of maltreatment and included levels of substantiation, alleged perpetrator(s), and duration of maltreatment. In addition, it collected information on child functioning, physical harm, emotional harm to the child attributable to the alleged maltreatment, previous reports of maltreatment, spanking, child welfare court activity, and out-of-home placement. Workers who conducted investigations of risk of future maltreatment did not answer questions pertaining to substantiation, perpetrators, and duration, but did complete items about child functioning, placement, court involvement, previous reports of maltreatment, and spanking. In both types of investigations, workers were asked whether they were concerned about future maltreatment.

Guidebook

A significant challenge for the study was to overcome the variations in the definitions of maltreatment used in different jurisdictions. Rather than anchor the definitions in specific legal or administrative definitions, a single set of definitions corresponding to standard research classification schemes was used. All items on the FN/CIS-2019 Instrument were defined in an accompanying FN/CIS-2019 Guidebook.

Data Collection and Verification Procedures

Each participating agency was offered a training session conducted by a Site Researcher to introduce participating child welfare workers to the FN/CIS-2019 instrument and procedures. Most agencies opted to receive the training session. In addition, many agency representatives requested one-on-one support for participating child welfare workers completing the FN/CIS-2019 instruments throughout the data collection period. Additional support was built into the FN/CIS-2019 online platform, including direct access to the FN/CIS-2019 Guidebook, containing definitions for all of the items and study procedures; written instructions for each item on the instrument available through a help pop-up; and audio instructions for a selection of items.

Site Researchers were assigned to coordinate data collection activities at each agency participating in the FN/CIS-2019. Site Researchers were trained on the study instruments and procedures and each Site Researcher was assigned between three to six agencies. Prior to travel restrictions required for the COVID-19 pandemic, Site Researchers visited their agencies on a regular basis to provide participating workers with one-on-one support in completing their data collection instruments, respond to questions, and monitor study progress. Since the instrument for this cycle of the study was online for the first time, additional support strategies were developed, and many workers preferred to complete the instruments over the phone with their assigned Site Researcher. This type of one-on-one phone support continued during the pandemic.

In Quebec, the Quebec Incidence Study team, in consultation with the FN/CIS-2019 study team and First Nations partners in Quebec, extracted and matched fields from the Quebec administrative case management system to the items in the FN/CIS-2019 data collection instrument.

Timing of Form Completion

The data collection instrument was completed at the point when workers finished their written report of the investigation. The length of time between the receipt of the referral and the completion of the written assessment differed according to provincial, regional, and site practices, although in most instances some type of report was required within six weeks of the beginning of an investigation. There were many instances where a complex investigation took more time. Additionally, due to the unprecedented situation of child welfare agencies serving children and families during the COVID-19 pandemic, timing of instrument completion was adapted in response to the needs of workers beginning in March 2020.

Estimation Procedures

Design

The study design was implemented for the purpose of point estimation and the estimation of variance. The population of agencies was stratified by size. Agencies were selected from each stratum using systematic random sampling in order to take agency size into consideration. The three months (corresponding to October, November, and December) were assumed to be a random sample of the 12 months comprising the calendar year for each agency selected. In each selected month, cases at large agencies were selected using simple random sampling. Quebec investigations represent a universal sample and are, therefore, self-representing.

Case Duplication

Although cases reported more than once during the three-month case sampling period were unduplicated, the weights used for FN/CIS-2019 annual estimates include an unknown number of "duplicate" cases, i.e., children or families reported and opened for investigation two or more times during the year. Although each investigation represents a new incident of maltreatment, confusion arises if these investigations are taken to represent an unduplicated count of children. To avoid such confusion, the FN/CIS-2019 uses the term "child investigations" rather than "investigated children."

An estimate of how often maltreated children will be counted more than once can be derived from jurisdictions that maintain separate investigation-based and child-based counts. The U.S. National Child Abuse and Neglect Data System (NCANDS), reports that for substantiated cases of child maltreatment, the six-month recurrence rate during 2016 was 5.1 percent.[56] In Quebec, the six-month recurrence rate is estimated to be 2.1 percent. In a 12-month follow-up with 30 Ontario agencies, there was a 15.40 percent recurrence rate after an investigation closed.[57]

[57] Ocands 2013-2014, Http://Www.oacas.org/Wp-Content/Uploads/2016/08/Fact-Sheet-Service-Recurrence-Spi-4-And-5-Final-March-2016.Pdf

Ethics Procedures

The FN/CIS-2019 data collection and data handling protocols and procedures were reviewed and approved by the Health Sciences Research Ethics Board.

The study utilized a case file review methodology. The case files are the property of the Indigenous or mainstream agency. Therefore, the permission of the agency was required in order to access the case files. Confidentiality of case information and participants, including workers and agencies, was maintained throughout the process. No directly identifying information was collected on the data collection instrument. The Intake Information section collected partially identifying information about the children. The Intake Information section also included the file/case number assigned by the agency. This information was used only for verification purposes. Any names on the forms were deleted during verification. The FN/CIS-2019 used a secure, web-based delivery system for data collection.

Indigenous Ethics

The FN/CIS-2019 adhered to the principles of Ownership of, Control over, Access to, and Possession of research (OCAP® principles), which must be negotiated within the context of individual research projects. In the case of the FN/CIS-2019, adherence to OCAP® principles is a shared concern that shapes the collaborative relationship between the FN/CIS-2019 Advisory Committee and the research team. FN/CIS-2019 Advisory Committee members guided the research design and implementation.

Ethno-racial Data Analysis

Any analyses of ethno-racial data will be governed/informed in consultation with applicable ethno-cultural communities and will reflect their perspectives and input.

Study Limitations

Although every effort was made to make the forthcoming FN/CIS-2019 estimates precise and reliable, several limits inherent to the nature of the data collected must be taken into consideration:

The weights used to derive annual estimates include;

- Counts of children investigated more than once during the year; therefore, the unit of analysis for the weighted estimates is a child investigation
- The national counts that will be presented in FN/CIS-2019 reports are weighted estimates. In some instances, sample sizes are too small to derive publishable estimates (please see Appendix C for coefficients of variation for the estimates produced in this report)
- The FN/CIS-2019 tracks information during approximately the first 45 days of case activity; however, there are slight provincial and territorial differences in this length of time. Service outcomes such as out-of-home placements and applications to court included only events that occurred during those first approximately 45 days
- The FN/CIS-2019 only tracks reports investigated by child welfare sites and does not include reports that were screened out, cases that were investigated only by the police, and cases that were never reported
- The study is based on the assessments provided by the investigating child welfare workers and could not be independently verified
- The data used to estimate 2019 Canadian child maltreatment-related investigations include data collected in Ontario in 2018 and annual administrative data from the Quebec information system

Section Four

Major Findings

Section 4: Major Findings

Description of Statistics Presented

This section compares investigations involving First Nations and non-Indigenous children. Data provided include estimates of the numbers of investigations, proportions of investigations and rates per 1,000 children. Proper interpretation of these findings requires distinguishing between investigation percentages and rates per 1,000 children.

Percentages

Percentages presented in the tables below represent the distribution of investigations involving either First Nations or non-Indigenous children in Canada in 2019 across different categories. Percentage estimates provide an overview of proportions of investigations within the child welfare system. Differences in percentages between First Nations and non-Indigenous children reflect differences in the profile of investigations involving these two populations in 2019.

Calculation:

$$\frac{\text{Estimated number of investigations with variable of interest}}{\text{Total number of investigations}} \times 100\%$$

Incidence rates

Incidence rates represent the number of investigations for every 1,000 First Nations or non-Indigenous children within the general population in Canada in 2019. They are used to determine how likely it is for a First Nations child or a non-Indigenous child to experience an event during an investigation in 2019.

Calculation:

$$\frac{\text{Estimated number of investigations with variable of interest}}{\text{Child population In Canada}} \times 1{,}000$$

Disparity

Disparity indices compare incidence rates of investigations involving First Nations and non-Indigenous children. While these are not reported in each table presented, they are referenced throughout the report (e.g., the rate of investigation for First Nations children is 3.6 times as high as the rate of investigation for non-Indigenous children).

Calculation:

$$\frac{\text{Incidence rate for investigations involving First Nations children}}{\text{Incidence rate for investigations involving non-Indigenous children}}$$

Child and Family Characteristics

An estimated 299,217 child maltreatment-related investigations were conducted in Canada in 2019. As shown in Figure 13, 15 percent of these investigations involved First Nations (status and non-status) children.

This report focuses on investigations involving First Nations (status and non-status) children (an estimated 45,918 investigations; a rate of 151.00 per 1,000 First Nations children in Canada), compared to investigations involving non-Indigenous children (an estimated 241,137 investigations; a rate of 42.11 per 1,000 non-Indigenous children in Canada). First Nations children (aged 0-15 years) in Canada were 3.6 times as likely to be the subject of a child maltreatment-related investigation compared to non-Indigenous children in 2019.

Figure 13: Children's Indigenous Identity in Maltreatment-Related Investigations in Canada in 2019

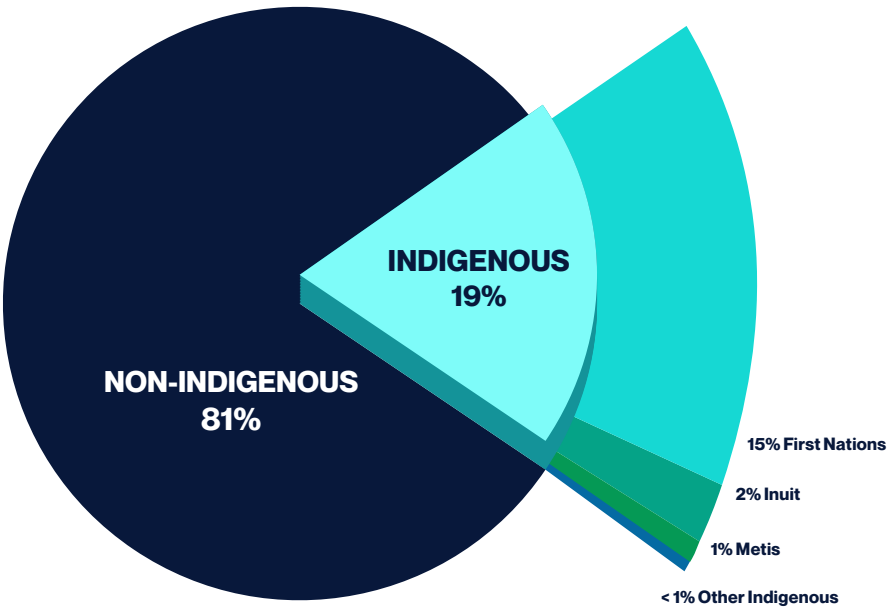

Table 2: Number and Rate of Maltreatment-Related Investigations in Canada in 2019 for First Nations and Non-Indigenous Children

First Nations and Non-Indigenous	#	%	Rate per 1,000 children
First Nations	45,918	16%	151.00
Non-Indigenous	241,137	84%	42.11
Total Investigations Involving First Nations and Non-Indigenous Children	287,055	100%	46.60

Based on a sample of 27,994 cases extracted from the Quebec administrative system in 2019, 7,007 investigations in Ontario in 2018, and 6,384 investigations in the rest of Canada in 2019. The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 3: Age of Children in Maltreatment-Related Investigations in Canada in 2019 for First Nations and Non-Indigenous Children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Child Age	#	Rate per 1,000 children within age group	%	#	Rate per 1,000 children within age group	%
<1 Year	3,944	218.69	9%	13,962	41.05	6%
1-3 Years	9,216	167.26	20%	37,041	35.41	15%
4-7 Years	11,474	143.45	25%	66,613	45.30	28%
8-11 Years	11,125	143.11	24%	67,815	46.64	28%
12-15 Years	10,159	138.74	22%	55,706	39.35	23%
Total Investigations	**45,918**	**151.00**	**100%**	**241,137**	**42.11**	**100%**

Based on a sample of 27,994 cases extracted from the Quebec administrative system in 2019, 7,007 investigations in Ontario in 2018, and 6,384 investigations in the rest of Canada in 2019. The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 3 describes the number and incidence of investigations by child age group.

A greater proportion of investigations involving First Nations children involved younger children, with nine percent of these investigations involving First Nations children under one year of age and 20 percent involving children one to three years old (total of 29 percent of investigations involving children zero to three years old). For non-Indigenous children, investigations involving children zero to three years represented only 21 percent of investigations. The proportions of investigations involving First Nations and non-Indigenous children aged 12 to 15 years old were similar: 22 percent of investigations involving First Nations children compared to 23 percent of investigations involving non-Indigenous children.

First Nations children aged under one (218.69 investigations per 1,000 children) were **5.3 times** as likely to be investigated compared to non-Indigenous children in the same age group (41.05 investigations per 1,000 children). First Nations children aged 12-15 (138.74 investigations per 1,000 children) were **3.5 times** as likely to be investigated compared to non-Indigenous children in the same age group (39.35 investigations per 1,000 children).

Table 4: Child Functioning Concerns in Maltreatment-Related Investigations in Canada in 2019 (Excluding Quebec) for First Nations and Non-Indigenous Children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Child Functioning Concern	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Positive Toxicology at Birth	2,016	7.26	5%	2,147	0.51	1%
FASD	2,415	8.70	5%	1,616	0.39	1%
Failure to Meet Developmental Milestones	4,708	16.95	11%	11,676	2.79	5%
Intellectual/Developmental Disability	5,156	18.57	12%	20,239	4.84	9%
Attachment Issues	4,745	17.09	11%	12,751	3.05	6%
ADHD	3,586	12.91	8%	21,632	5.17	10%
Aggression/Conduct Issues	4,510	16.24	10%	22,373	5.35	10%
Physical Disability	853	3.07	2%	3,028	0.72	1%
Academic/Learning Difficulties	7,679	27.65	17%	29,428	7.04	14%
Depression/Anxiety/Withdrawal	6,140	22.11	14%	25,116	6.00	12%
Self-harming Behaviour	2,482	8.94	6%	7,385	1.77	3%
Suicidal Thoughts	2,180	7.85	5%	7,989	1.91	4%
Suicide Attempts	923	3.32	2%	2,348	0.56	1%
Inappropriate Sexual Behaviour	1,275	4.59	3%	4,398	1.05	2%
Running (Multiple Incidents)	1,667	6.00	4%	3,999	0.96	2%
Alcohol Abuse	1,096	3.95	2%	1,612	0.39	1%
Drug/Solvent Abuse	1,087	3.91	2%	2,699	0.65	1%
Youth Criminal Justice Act Involvement	540	1.94	1%	1,429	0.34	1%
Other Functioning Concern	645	2.32	1%	2,787	0.67	1%
At Least One Child Functioning Concern	16,475	59.32	37%	69,051	16.51	32%
No Child Functioning Concern	27,650	99.56	63%	145,098	34.69	68%
Total Investigations	**44,125**	**158.88**	**100%**	**214,149**	**51.20**	**100%**

Percentages do not add up to 100% because investigating workers could identify more than one child functioning concern.Based on a sample of 7,007 investigations in Ontario in 2018 and 6,384 investigations in the rest of Canada in 2019. Information on child functioning was not available when the case was extracted from the Quebec administrative system.

The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 4 reflects the types of functioning concerns associated with children's physical, emotional and/or cognitive health, or with behaviour-specific concerns that workers may be aware of during their initial investigations. In 37 percent of child maltreatment-related investigations involving First Nations children (an estimated 16,475 First Nations child investigations), at least one child functioning concern was indicated by the investigating worker. At least one child functioning concern was noted in 32 percent of investigations involving non-Indigenous children (representing an estimated 69,051 non-Indigenous child investigations). The incidence rate of investigations involving children with noted child functioning concerns was **3.6 times** as high for First Nations children (59.32 per 1,000 children) compared to non-Indigenous children (16.51 per 1,000 children).

Academic or learning difficulties was the most frequently reported child functioning concern for investigations involving First Nations children as well as for investigations involving non-Indigenous children (17 percent of First Nations child maltreatment-related investigations and 14 percent of non-Indigenous child maltreatment-related investigations). The second most common for both groups was depression/anxiety/withdrawal (14 percent of First Nations child maltreatment-related investigations and 12 percent of non-Indigenous child maltreatment-related investigations). The next three most common child functioning concerns for investigations involving First Nations children were an intellectual/developmental disability (12 percent), attachment issues (11 percent), and failure to meet developmental milestones (11 percent). For investigations involving non-Indigenous children, the next three most commonly noted concerns were aggression/conduct issues (10 percent), ADHD (10 percent), and an intellectual/developmental disability (nine percent).

It is important to note that this data is based on the initial child welfare investigation and do not capture child functioning concerns that may become evident after that time.

Table 5: Primary Caregiver Risk Factors in Maltreatment-Related Investigations in Canada in 2019 (Excluding Quebec) for First Nations and Non-Indigenous Children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Caregiver Risk Factors	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Alcohol Abuse	15,023	54.09	34%	18,290	4.37	9%
Drug/Solvent Abuse	10,213	36.77	23%	17,566	4.20	8%
Cognitive Impairment	4,149	14.94	10%	6,864	1.64	3%
Mental Health Issues	14,780	53.22	34%	53,506	12.79	25%
Physical Health Issues	3,771	13.58	9%	13,509	3.23	6%
Few Social Supports	14,710	52.97	34%	51,234	12.25	24%
Victim of Intimate Partner Violence	14,977	53.93	34%	58,465	13.98	28%
Perpetrator of Domestic Violence	5,027	18.10	12%	16,864	4.03	8%
History of Foster Care/Group Home	8,322	29.97	19%	8,614	2.06	4%
At Least One Primary Caregiver Risk Factor	32,159	115.80	74%	120,954	28.92	57%
No Primary Caregiver Risk Factors	11,507	41.43	26%	90,938	21.74	43%
Total Investigations	**43,666**	**157.23**	**100%**	**211,892**	**50.66**	**100%**

Percentages do not add up to 100% because investigating workers could identify more than one primary caregiver risk factor.

Based on a sample of 6,905 investigations in Ontario in 2018 and 6,354 investigations in the rest of Canada in 2019. Information on caregiver risk factors was not available in situations where the case was opened under a community caregiver, the youth was living independently, or the case was extracted from the Quebec administrative system. A community caregiver is defined as anyone providing care to a child in an out-of-home setting (e.g., institutional setting).

The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 5 presents primary caregiver risk factors that were noted by investigating workers. At least one primary caregiver risk factor was identified in 74 percent of maltreatment-related investigations involving First Nations children (an estimated 32,159 investigations) compared to only 57 percent of investigations involving non-Indigenous children. The incidence rate of investigations involving at least one primary caregiver risk factor was **4.0 times** as high for First Nations children (115.80 per 1,000 children) compared to non-Indigenous children (28.92 per 1,000 children), indicating that primary caregivers in investigations involving First Nations children were more likely to be struggling with multiple complex needs.

The most frequently noted primary caregiver risk factors among investigations involving First Nations children were alcohol abuse, mental health issues, few social supports, and victim of intimate partner violence, which were all noted in 34 percent of investigations. For investigations involving non-Indigenous children, victim of intimate partner violence was noted in 28 percent of investigations, mental health issues in 25 percent of investigations, few social supports in 24 percent of investigations and alcohol abuse in nine percent of investigations.

Table 6: Primary Source of Household Income in Maltreatment-Related Investigations in Canada in 2019 (Excluding Quebec) for First Nations and Non-Indigenous Children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Income Source	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Full-time Employment	11,784	42.43	27%	123,259	29.47	58%
Part-time/Multiple Jobs/ Seasonal Employment	4,266	15.36	10%	18,414	4.40	9%
Benefits/EI/Social Assistance	23,059	83.03	52%	46,881	11.21	22%
Unknown	747	2.69	2%	8,398	2.01	4%
None	4,007	14.43	9%	15,087	3.61	7%
Total Investigations	**43,863**	**157.94**	**100%**	**212,039**	**50.70**	**100%**

Based on a sample of 6,908 investigations in Ontario in 2018 and 6,367 investigations in the rest of Canada in 2019. Information on income source was not available in situations where the case was opened under a community caregiver or the case was extracted from the Quebec administrative system. A community caregiver is defined as anyone providing care to a child in an out-of-home setting (e.g., institutional setting).

The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

The primary source of household income is presented in Table 6. Investigations involving First Nations children were more likely to involve families whose primary source of income was from benefits, employment insurance, or social assistance and less likely to involve families whose primary source of income was from full-time employment. Fifty-two percent of investigations involving First Nations children involved families who relied on benefits/employment insurance/social assistance; for investigations involving non-Indigenous children, this income source was noted in only 22 percent of investigations. In contrast, 58 percent of investigations involving non-Indigenous children involved families with a full-time income while only 27 percent of investigations involving First Nations children involved families who had income from full-time employment.

Table 7: Household Risk Factors in Maltreatment-Related Investigations in Canada in 2019 (Excluding Quebec) for First Nations and Non-Indigenous Children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Household Risk Factors	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Household Ran Out of Money for Basic Necessities	10,413	37.49	24%	20,425	4.88	10%
Overcrowded Housing	6,231	22.44	14%	12,644	3.02	6%
Unsafe Housing Conditions	2,370	8.53	5%	7,783	1.86	4%
2+ Family Moves in Past Year	5,078	18.28	12%	11,892	2.84	6%
Total Investigations	**43,819**	**157.78**	**100%**	**211,959**	**50.68**	**100%**

Percentages do not add up to 100% because investigating workers could identify more than one household risk factor.

Based on a sample of 6,906 investigations in Ontario in 2018 and 6,363 investigations in the rest of Canada in 2019. Information on these risk factors was not available in situations where the case was opened under a community caregiver or the case was extracted from the Quebec administrative system. A community caregiver is defined as anyone providing care to a child in an out-of-home setting (e.g., institutional setting).

The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 7 describes several household risk factors captured in the FN/CIS-2019. Investigating workers were asked to indicate if the household had run out of money for housing, food, utilities, telephone/cell phone, transportation or medical care in the past six months; in 24 percent of investigations involving First Nations children (a rate of 37.49 investigations per 1,000 First Nations children) the household was noted to have run out of money for at least one of these necessities, compared to 10 percent of investigations involving non-Indigenous children (a rate of 4.88 per 1,000 non-Indigenous children). Workers were also asked to indicate the presence of overcrowding and unsafe housing conditions as well as how many moves the family had experienced in the past 12 months.

Investigations involving First Nations children were more likely to involve families facing multiple structural challenges, such as living in unsafe housing conditions, economic hardship, and overcrowded housing that all limit the resources available to them to provide for their children.

Investigation Characteristics and Dispositions

Table 8: Type of Investigation in Maltreatment-Related Investigations Involving First Nations and non-Indigenous Children in Canada in 2019

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Type of Investigation	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Maltreatment Investigations	32,328	106.31	70%	168,570	29.44	70%
Risk-only Investigations	13,590	44.69	30%	72,567	12.67	30%
Total Investigations	**45,918**	**151.00**	**100%**	**241,137**	**42.11**	**100%**

Based on a sample of 27,994 cases extracted from the Quebec administrative system in 2019, 7,007 investigations in Ontario in 2018, and 6,384 investigations in the rest of Canada in 2019. The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

As described in the methods section, maltreatment-related investigations included maltreatment investigations where a specific alleged incident was being investigated as well as risk-only investigations where concerns related only to the risk of future maltreatment. For both First Nations and non-Indigenous children, 70 percent of investigations were focused on alleged incidents of maltreatment and 30 percent assessed the risk of future maltreatment.

Table 9: Level of Substantiation in Maltreatment Investigations in Canada in 2019 for First Nations and Non-Indigenous Children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Level of Substantiation	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Substantiated	19,143	62.95	59%	76,899	13.43	46%
Suspected	2,190	7.20	7%	9,995	1.75	6%
Unfounded	10,950	36.01	34%	81,676	14.26	48%
Total Maltreatment Investigations	**32,283**	**106.16**	**100%**	**168,570**	**29.44**	**100%**

Based on a sample of 23,670 cases extracted from the Quebec administrative system in 2019, 4,422 investigations in Ontario in 2018, and 9,319 investigations in the rest of Canada in 2019. Twenty-eight cases from the Quebec administrative system did not have information about substantiation.

Table does not include information on risk-only investigations.

The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 9 presents the level of substantiation in the estimated 32,283 maltreatment investigations involving First Nations children and 168,570 investigations involving non-Indigenous children. Fifty-nine percent of maltreatment investigations involving First Nations children were substantiated (an estimated 19,143 investigations) compared to 46 percent for non-Indigenous children. The rate of substantiated investigations was **4.7 times** as high for First Nations children (62.95 investigations per 1,000 First Nations children) compared to non-Indigenous children (13.43 investigations per 1,000 non-Indigenous children) in Canada in 2019.

In a further seven percent of maltreatment investigations involving First Nations children there was insufficient evidence to substantiate maltreatment; however, maltreatment remained suspected by the investigating worker at the conclusion of the investigation. Thirty-four percent of investigations involving First Nations children (an estimated 10,950 maltreatment investigations or 36.01 investigations per 1,000 First Nations children) were unfounded, compared to 48 percent of investigations involving non-Indigenous children.

Table 10: Primary Category of Maltreatment in Investigated and Substantiated Maltreatment Investigations in Canada in 2019 for First Nations and Non-Indigenous Children

	Investigated						Substantiated					
	First Nations Child Investigations			Non-Indigenous Child Investigations			First Nations Child Investigations			Non-Indigenous Child Investigations		
Primary Category of Maltreatment	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Physical Abuse	4,491	14.77	14%	52,209	9.12	31%	1,570	5.16	8%	14,459	2.53	19%
Sexual Abuse	1,865	6.13	6%	7,383	1.29	4%	587	1.93	3%	2,108	0.37	3%
Neglect	14,321	47.10	44%	43,860	7.66	26%	8,400	27.62	44%	18,600	3.25	24%
Emotional Maltreatment	2,857	9.40	9%	18,508	3.23	11%	1,780	5.85	9%	10,941	1.91	14%
Exposure to Intimate Partner Violence	8,794	28.92	27%	46,610	8.14	28%	6,806	22.38	36%	30,791	5.38	40%
Total	**32,328**	**106.31**	**100%**	**168,570**	**29.44**	**100%**	**19,143**	**62.95**	**100%**	**76,899**	**13.43**	**100%**

Based on a sample of 23,698 cases (16,867 substantiated cases) extracted from the Quebec administrative system in 2019, 4,422 sampled investigations (1,758 substantiated investigations) in Ontario in 2018, and 4,897 sampled investigations (2,572 substantiated investigations) in the rest of Canada in 2019.

Table does not include information on risk-only investigations.

The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 10 describes the primary category of investigated maltreatment in all maltreatment investigations as well as in substantiated maltreatment investigations. The highest proportion of maltreatment investigations involving First Nations children were focused on neglect (44 percent; or a rate of 47.10 investigations per 1,000 First Nations children), followed by exposure to intimate partner violence (27 percent or a rate of 28.92 investigations per 1,000 First Nations children), physical abuse (14 percent or a rate of 14.77 investigations per 1,000 First Nations children), emotional maltreatment (nine percent or a rate of 9.40 investigations per 1,000 First Nations children), and sexual abuse (six percent or a rate of 6.13 investigations per 1,000 First Nations children).

In investigations involving non-Indigenous children, the largest primary categories of maltreatment typologies at the investigation stage were physical abuse (31 percent of investigations; or 9.12 investigations per 1,000 non-Indigenous children), exposure to intimate partner violence (28 percent of investigations; or 8.14 investigations per 1,000 non-Indigenous children), and neglect (26 percent of investigations; or 7.66 investigations per 1,000 non-Indigenous children). Emotional maltreatment was identified as the primary form of maltreatment in 11 percent of investigations (a rate of 3.23 investigations per 1,000 non-Indigenous children) and sexual abuse was identified as the primary maltreatment form in four percent of investigations (a rate of 1.29 investigations per 1,000 non-Indigenous children).

Table 11: Documented Physical Harm in Substantiated Maltreatment Investigations in Canada in 2019 (Excluding Quebec) for First Nations and Non-Indigenous Children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Documented Physical Harm	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Physical Harm, No Medical Treatment Required	277	1.00	1%	2,253	0.54	4%
Physical Harm, Medical Treatment Required	478	1.72	3%	632	0.15	1%
Subtotal: Any Physical Harm Documented	755	2.72	4%	2,885	0.69	5%
No Physical Harm Documented	17,400	62.65	96%	57,695	13.79	95%
Total Substantiated Investigations	**18,155**	**65.37**	**100%**	**60,580**	**14.50**	**100%**

Based on a sample of 1,758 substantiated investigations in Ontario in 2018 and 2,572 substantiated investigations in the rest of Canada in 2019. Information on physical harm was not available when the case was extracted from the Quebec administrative system.

The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 10 also shows that, while the overall disparity index for substantiated investigations was **4.7** (rate of 62.95 substantiated investigations per 1,000 children and 13.43 substantiated investigations per 1,000 children involving First Nations and non-Indigenous children, respectively), the magnitude of this disparity varied with the typology of substantiated maltreatment. The largest disparity was for substantiated neglect investigations; First Nations children were **8.5 times** as likely to be the subject of substantiated neglect investigations (rate of 27.62 investigations per 1,000 First Nations children) compared to non-Indigenous children (rate of 3.25 investigations per 1,000 nn-Indigenous children).

The FN/CIS-2019 tracked physical harm identified by the investigating worker. Information on physical harm was collected using two measures: one describing severity of harm as measured by medical treatment needed and one describing the nature of harm. As shown in Table 11, in most substantiated maltreatment investigations, no physical harm was noted. Physical harm was identified in four percent of investigations involving First Nations children (an estimated 755 investigations or a rate of 2.72 per 1,000 First Nations children) compared to five percent of investigations involving non-Indigenous children (an estimated 2,885 investigations or 0.69 investigations per 1,000 non-Indigenous children).

In one percent of substantiated investigations involving First Nations children (an estimated 277 substantiated investigations), physical harm was identified but no medical treatment was required, compared to an estimated four percent of substantiated investigations involving non-Indigenous children. In three percent of substantiated investigations involving First Nations children (an estimated 478 substantiated investigations, or 1.72 substantiated investigations per 1,000 First Nations children), and one percent of those involving non-Indigenous children, harm was sufficiently severe to require treatment.

Table 12: Documented Emotional Harm in Substantiated Maltreatment Investigations in Canada in 2019 (Excluding Quebec) for First Nations and Non-Indigenous Children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Documented Emotional Harm	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Emotional Harm, No Treatment Required	2,314	8.33	13%	9,210	2.20	15%
Emotional Harm, Treatment Required	3,980	14.33	22%	12,217	2.92	20%
Subtotal: Any Emotional Harm Documented	6,294	22.66	35%	21,427	5.12	35%
No Emotional Harm Documented	11,861	42.71	65%	39,153	9.36	65%
Total Substantiated Investigations	**18,155**	**65.37**	**100%**	**60,580**	**14.48**	**100%**

Based on a sample of 1,758 substantiated investigations in Ontario in 2018 and 2,572 substantiated investigations in the rest of Canada in 2019. Information on emotional harm was not available when the case was extracted from the Quebec administrative system.

The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Information on emotional harm was collected using a series of questions asking child welfare workers to describe emotional harm that had occurred because of the maltreatment incident(s). If the maltreatment was substantiated or suspected, workers were asked to indicate whether the child was showing signs of mental or emotional harm (e.g., nightmares, bed-wetting, or social withdrawal) following the maltreatment incident(s). To rate the severity of mental/emotional harm, workers indicated whether therapeutic treatment was required to manage the symptoms of mental or emotional harm.

Table 12 presents documented emotional harm identified during substantiated child maltreatment investigations involving First Nations and non-Indigenous children. Emotional harm was noted in 35 percent of all substantiated maltreatment involving First Nations children as well as substantiated investigations involving non-Indigenous children. In 22 percent of substantiated investigations involving First Nations children (an estimated 3,980 investigations or 14.33 investigations per 1,000 First Nations children) symptoms were severe enough to require treatment compared to twenty percent of substantiated investigations involving non-Indigenous children.

Table 13: Service Referrals in Maltreatment-Related Investigations in Canada in 2019 (Excluding Quebec) for First Nations and non-Indigenous children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Service Referrals	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Case Involved a Service Referral for Any Family Member	22,790	82.06	52%	81,539	19.50	38%
Case Did Not Involve Any Service Referrals	21,335	76.82	48%	132,610	31.71	62%
Total Investigations	**44,125**	**158.88**	**100%**	**214,149**	**51.20**	**100%**

Based on a sample of 7,007 investigations in Ontario in 2018 and 6,384 investigations in the rest of Canada in 2019. Information on service referrals was not available when the case was extracted from the Quebec administrative system.

The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 13 presents the number of investigations in which the investigating worker made a service referral for any family member involved in the investigation. In just over half of investigations involving First Nations children (52 percent), a service referral was made (an estimated 22,790 investigations), compared to 38 percent of investigations involving non-Indigenous children in which a service referral was made. The rate of investigations leading to a service referral was **4.2 times** as high for First Nations children (82.06 investigations per 1,000 First Nations children) compared to non-Indigenous children (19.50 investigations per 1,000 non-Indigenous children).

Table 14: Transfers to Ongoing Services in Maltreatment-Related Investigations in Canada in 2019 (Excluding Quebec) for First Nations and non-Indigenous children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Transfers to Ongoing Services	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Case Transferred to Ongoing Services	15,725	56.62	36%	35,941	8.59	17%
Case Closed	28,400	102.26	64%	178,208	42.61	83%
Total Investigations	**44,125**	**158.88**	**100%**	**214,149**	**51.20**	**100%**

Based on a sample of 7,007 investigations in Ontario in 2018 and 6,384 investigations in the rest of Canada in 2019. Information on transfers to ongoing services was not available when the case was extracted from the Quebec administrative system.

The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

The number of cases that remained opened for ongoing services following an initial child welfare investigation is presented in Table 14. Thirty-six percent of investigations involving First Nations children remained open for ongoing services in Canada in 2019, compared to only 17 percent of investigations involving non-Indigenous children. The rate of investigations that remained open for ongoing services was **6.6 times** as high for First Nations children (56.62 investigations per 1,000 First Nations children) compared to non-Indigenous children (8.59 investigations per 1,000 non-Indigenous children).

Table 15: Applications to Child Welfare Court in Maltreatment-Related Investigations in Canada in 2019 for First Nations and Non-Indigenous Children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Child Welfare Court Application	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
No Application to Court	41,831	137.56	91%	233,805	40.83	97%
Application Made	4,087	13.44	9%	7,332	1.28	3%
Total Investigations	**45,918**	**151.00**	**100%**	**241,137**	**42.11**	**100%**

Based on a sample of 27,994 cases extracted from the Quebec administrative system in 2019, 7,007 investigations in Ontario in 2018, and 6,384 investigations in the rest of Canada in 2019. The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 15 describes investigations involving applications to child welfare court in Canada in 2019. An application to court was made in nine percent of investigations involving First Nations children compared to only three percent of investigations involving non-Indigenous children. The rate of investigations with child welfare court applications was **10.5 times** as high for investigations involving First Nations children (rate of 13.44 investigations per 1,000 First Nations children) compared to non-Indigenous children (rate of 1.28 investigations per 1,000 non-Indigenous children).

Table 16: Placement Type in Maltreatment-Related Investigations in Canada in 2019 for First Nations and Non-Indigenous Children

	First Nations Child Investigations			Non-Indigenous Child Investigations		
Placement Type	#	Rate per 1,000 children	%	#	Rate per 1,000 children	%
Informal Placement (Kinship Out of Care and Customary Care)	2,365	7.78	5%	4,798	0.84	2%
Kinship in Care	1,589	5.23	3%	545	0.10	<1%
Foster Care (Non-kinship)	1,775	5.84	4%	2,677	0.47	1%
Group Home/Residential or Secure Treatment	207	0.68	<1%	757	0.13	<1%
Other Placement (e.g. places of safety)	205	0.67	<1%	153	0.03	<1%
Subtotal: Placement Made	**6,141**	**20.20**	**13%**	**8,930**	**1.56**	**4%**
No Placement Made	39,776	130.81	87%	232,207	40.55	96%
Total Investigations	**45,917**	**151.00**	**100%**	**241,137**	**42.11**	**100%**

Based on a sample of 27,994 cases extracted from the Quebec administrative system in 2019, 7,007 investigations in Ontario in 2018, and 6,384 investigations in the rest of Canada in 2019. The differences in rates between First Nations and non-Indigenous child investigations must be understood in the context of the ongoing impact of colonialism, discrimination, and poverty.

Table 16 presents out-of-home placements made in child maltreatment-related investigations in Canada in 2019. Thirteen percent of investigations involving First Nations children resulted in an out-of-home placement for the child (an estimated 6,141 investigations) compared to only four percent of investigations involving non-Indigenous children (an estimated 8,930 investigations). When comparing the rates per 1,000 children, the rate of placement for First Nations children (20.20 investigations per 1,000 First Nations children) is **12.9 times** the rate of placement for non-Indigenous children (1.56 investigations per 1,000 non-Indigenous children). The rate of placement in formal out-of-home care (i.e. excluding informal care) for First Nations children (12.42 investigations per 1,000 First Nations children) is **17.2 times** the rate of placement in formal out-of-home care for non-Indigenous children (0.72 investigations per 1,000 non-Indigenous children).

Investigating workers were asked to specify the type of placement that was made when a placement in out-of-home care was noted for the investigated child. Informal placements represented the most frequently noted placement type for both First Nations and non-Indigenous children (noted in five percent of investigations involving First Nations children and two percent of investigations involving non-Indigenous children). The next most frequently noted placement types in investigations involving First Nations children were non-kinship foster care (noted in four percent of investigations) and kinship in care (noted in three percent of investigations).

Tables 12-16 demonstrate how the disparities between rates of child welfare service dispositions for First Nations and non-Indigenous children build across the service disposition continuum. The initial overrepresentation at the investigation level is represented by a disparity index of 3.6 (see Table 2), the disparity index for referrals to services is 4.2, the disparity index for transfers to ongoing services is 6.6, the disparity index for child welfare court applications is 10.5, and the disparity index for placements in formal out-home care is 17.2.

Future Directions

These are the first preliminary descriptive statistics comparing investigations involving First Nations children and investigations involving non-Indigenous children. While the dramatic differences in rates of maltreatment-related investigations are consistent with findings from previous studies, careful examination of structural factors should always be considered.

Follow-up studies are needed to systematically explore the extent to which seasonal variation in the types of cases referred to child welfare agencies may affect estimates that are based on a three-month sampling period.

To accurately understand and inform, the data must be analyzed with an Indigenous worldview. Consequently, First Nations agencies must be supported in collecting and analyzing their own data. Increasing data collection from First Nations, Métis and Inuit communities can provide evidence to support Indigenous child welfare sovereignty.

A series of information sheets that further examine the disparities between child welfare investigations involving First Nations and non-Indigenous children will supplement this initial report and be published on the Canadian Child Welfare Research Portal (cwrp.ca).

- ☐ Hallucinogens (e.g., acid (LSD), PCP)
- ☐ Solvents/Inhalants (e.g., glues, paint thinner, paint, gasoline, aerosol sprays)
- ☐ Unknown

15. Child custody dispute (i.e., court application made or pending) ○ Yes ○ No ○ Unknown

16. Type of housing ▾

17. Number of moves in past year ▾

18. Home overcrowded ○ Yes ○ No ○ Unknown

19. Are there unsafe housing conditions? ○ Yes ○ No ○ Unknown

20. In the last 6 months, household ran out of money for:

- **a) Food** ○ Yes ○ No ○ Unknown
- **b) Housing** ○ Yes ○ No ○ Unknown
- **c) Utilities** ○ Yes ○ No ○ Unknown
- **d) Telephone/Cell phone** ○ Yes ○ No ○ Unknown
- **e) Transportation** ○ Yes ○ No ○ Unknown
- **f) Medical care (includes dental and mental health)** ○ Yes ○ No ○ Unknown

21. Has this case been previously opened for investigation? ▾

a) How long since the case was closed? ▾

22. Case will stay open for on-going child welfare services ○ Yes ○ No

23. Referral(s) for any family member

a) Referral(s) made for any family member to an internal or external service(s) ○ Yes ○ No

---

If YES, please specify the type of referral(s) made

Check all that apply

- ☐ Parent education or support services
- ☐ Family or parent counselling
- ☐ Drug/alcohol counselling or treatment
- ☐ Psychiatric/mental health services
- ☐ Intimate partner violence services
- ☐ Welfare or social assistance
- ☐ Food bank
- ☐ Shelter services
- ☐ Housing
- ☐ Legal
- ☐ Child victim support services
- ☐ Recreational services
- ☐ Special education placement
- ☐ Medical or dental services
- ☐ Child or day care
- ☐ Speech/language services
- ☐ Cultural services
- ☐ Immigration services
- ☐ Other

If YES, what was specifically done with respect to the referral(s)?

Check all that apply

- ☐ Suggested they should get services
- ☐ Provided them with names and numbers of service providers
- ☐ Assisted them with completing/filing the application
- ☐ Made appointment for them
- ☐ Accompanied them to the appointment
- ☐ Followed-up with family to see if the service was provided
- ☐ Followed-up with internal/external service(s) to confirm if the service was provided

---

If NO, please specify the reason(s)

Check all that apply

- ☐ Already receiving services
- ☐ Service not available in the area
- ☐ Ineligible for service
- ☐ Services could not be financed
- ☐ Service determined not to be needed
- ☐ Refusal of services
- ☐ There is an extensive waitlist for services
- ☐ No culturally appropriate services

24. Gender

25. Age

26. Ethno-racial

27. Indigenous Status

28. Child functioning

Please complete all child functioning issues (a to s)

	Confirmed	Suspected	No	Unknown
a) Positive toxicology at birth				
b) FASD				
c) Failure to meet developmental milestones				
d) Intellectual/developmental disability

k) Self-harming behaviour				
l) Suicidal thoughts				
m) Suicide attempts				
n) Inappropriate sexual behaviour				
o) Running (multiple incidents)				
p) Alcohol abuse				
q) Drug/solvent abuse				

Please select all drug abuse categories that apply

- ☐ Cannabis (e.g., marijuana, hashish, hash oil)
- ☐ Opiates and Opioids and morphine derivatives (e.g., codeine, fentanyl, heroine, morphine, opium, oxycodone)
- ☐ Depressants (e.g., barbiturates, benzodiazepines such as Valium, Ativan)
- ☐ Stimulants (e.g., cocaine, amphetamines, methamphetamines)
- ☐ Hallucinogens (e.g., acid (LSD), PCP)
- ☐ Solvents/Inhalants (e.g., glues, paint thinner, paint, gasoline, aerosol sprays)
- ☐ Unknown

29. TYPE OF INVESTIGATION

○ Investigated incident of maltreatment ○ Risk investigation only

Maltreatment codes

Please use these maltreatment codes to answer Question 30. Questions 30 to 37 apply to the maltreatment of a child.

Physical abuse		Sexual abuse		Neglect		Emotional maltreatment		Exposure to Intimate Partner Violence	
01	Shake, push, grab or throw	02	Hit with hand	03	Punch, kick or bite				
04	Hit with object	05	Choking, poisoning, stabbing	06	Other physical abuse				

30. Maltreatment codes – Enter primary form of maltreatment first

	1st Code	2nd Code	3rd Code
31. Alleged perpetrator			
Primary caregiver	☐	☐	☐
Secondary caregiver	☐	☐	☐
Other perpetrator	☐	☐	☐
a. Relationship	▾		
b. Age	▾		
c. Gender	▾		
32. Substantiation	▾	▾	▾
a) Was the report a fabricated referral? (by referral source)	▾	▾	▾
33. Was maltreatment a form of punishment?	▾	▾	▾
34. Duration of maltreatment	▾	▾	▾
35. Police involvement	▾	▾	▾

36. Is mental or emotional harm evident (as a result of the substantiated or suspected maltreatment)? ○ Yes ○ No

a) Child requires therapeutic treatment ○ Yes ○ No

37. Physical harm

a) Is physical harm evident? ○ Yes ○ No

b) Types of physical harm

Check all that apply

- ☐ Bruises, cuts or scrapes
- ☐ Broken bones
- ☐ Burns and scalds
- ☐ Head trauma
- ☐ Fatal
- ☐ Health condition : Please specify

c) Was medical treatment required? ○ Yes ○ No

38. Is there a significant risk of future maltreatment? ○ Yes ○ No ○ Unknown

39. Previous investigations

a) Child previously investigated by child welfare for alleged maltreatment ○ Yes ○ No ○ Unknown

b) Was the maltreatment substantiated? ○ Yes ○ No ○ Unknown

40. Placement

a) Placement during investigation ○ Yes ○ No ○ Considered

b) Placement type

c) Estimate the time it takes to travel between the child's residence and their placement

d) Did the child reunify during the investigation? ○ Yes ○ No

41. Child welfare court application? ○ Yes ○ No ○ Considered

a) Referral to mediation/alternative response ○ Yes ○ No

42. Caregiver(s) used spanking in the last 6 months

Comments and Other Information (Not Required)

43. **If you are unable to complete an investigation for any child please explain why**

44. **Intake information**

45. **Household information**

46. **Child information**

Appendix B: Glossary of Terms

The following is an explanatory list of terms used throughout the First Nations/Canadian Incidence Study of Reported Child Abuse and Neglect 2019 (FN/CIS-2019) Report.

Age Group: The age range of children included in the FN/CIS-2019 sample. All data are presented for children between newborn and 15 years of age.

Annual Incidence: The number of child maltreatment-related investigations per 1,000 children in a given year.

Case Duplication: Children who are subject of an investigation more than once in a calendar year are counted in most child welfare statistics as separate "cases" or "investigations." As a count of children, these statistics are, therefore, duplicated.

Case Openings: Cases that appear on agency/office statistics as openings. Openings do not include referrals that have been screened-out.

Categories of Maltreatment: The five key classification categories under which the 33 forms of maltreatment were subsumed: physical abuse, sexual abuse, neglect, emotional maltreatment and exposure to intimate partner violence.

Child: The FN/CIS-2019 defined child as age newborn to 15 inclusive.

Child Investigations: Case openings that meet the FN/CIS-2019 inclusion criteria.

Child Welfare Agency: Refers to child protection services and other related services. The focus of the FN/CIS-2019 is on services that address alleged child abuse and neglect. The names designating such services vary by jurisdiction.

Childhood Prevalence: The proportion of people maltreated at any point during their childhood. The FN/CIS-2019 does not measure prevalence of maltreatment.

Community Caregiver: Child welfare agencies in Canada usually open cases under the name of a family (e.g., one or more parent). In certain cases, child welfare agencies do not open cases under the name of a family, but rather the case is opened under the name of a "community caregiver." This occurs when the alleged perpetrator is someone providing care to a child in an out-of-home setting (e.g., institutional caregiver). For instance, if an allegation is made against a caregiver at a day care, school, or group home, the case may be classified as a "community caregiver" investigation. In these investigations, the investigating child welfare worker typically has little contact with the child's family, but rather focuses on the alleged perpetrator who is a community member. For this reason, information on the primary caregivers and the households of children involved in "community caregiver" investigations was not collected.

Definitional Framework: The FN/CIS-2019 provides an estimate of the number of cases of alleged child maltreatment (physical abuse, sexual abuse, neglect, emotional maltreatment, and exposure to intimate partner violence) reported to and investigated by child welfare services in 2019 (screened-out reports are not included). The estimates are broken down by three levels of substantiation (substantiated, suspected, and unfounded). Cases opened more than once during the year are counted as separate investigations.

Differential or Alternate Response Models: A newer model of service delivery in child welfare in which a range of potential response options are customized to meet the diverse needs of families reported to child welfare. Typically involves multiple "streams" or "tracks" of service delivery. Less urgent cases are shifted to a "community" track where the focus of intervention is on coordinating services and resources to meet the short- and long-term needs of families.

First Nations: "First Nations people" refers to Status and non-status "Indian" peoples in Canada. Many communities also use the term "First Nation" in the name of their community. Currently, there are more than 630 First Nation communities, which represent more than 50 nations or cultural groups and 50 Indigenous languages.[58]

.

First Nations Status: An individual recognized by the federal government as being registered under the Indian Act is referred to as having First Nations Status.

Forms of Maltreatment: Specific types of maltreatment (e.g., hit with an object, sexual exploitation, or direct witness to physical violence) that are classified under the five FN/CIS-2019 Categories of Maltreatment. The FN/CIS-2019 captured 33 forms of maltreatment.

Indigenous Peoples: A collective name for the original peoples of North America and their descendants (often 'Aboriginal peoples' is also used). The Canadian constitution recognizes three groups of Indigenous peoples: Indians (commonly referred to as First Nations), Inuit, and Métis. These are three distinct peoples with unique histories, languages, cultural practices, and spiritual beliefs. More

[58] "Indigenous peoples and communities," 2021, https://www.rcaanc-cirnac.gc.ca/eng/1100100013785/1529102490303.

than 1.67 million people in Canada identify themselves as an Indigenous person, according to the 2016 Census National Household Survey.[59]

Inuit: Inuit are the Indigenous people of Arctic Canada. About 64,235 Inuit live in 53 communities in: Nunatsiavut (Labrador); Nunavik (Quebec); Nunavut; and Inuvialuit (Northwest Territories and Yukon).[60]

Level of Identification and Substantiation: There are four key levels in the case identification process: detection, reporting, investigation, and substantiation.

> **Detection** is the first stage in the case identification process. This refers to the process of a professional or community member detecting a maltreatment-related concern for a child. Little is known about the relationship between detected and undetected cases.
>
> **Reporting** suspected child maltreatment is required by law in all Canadian jurisdictions. The FN/CIS-2019 does not document unreported cases.
>
> **Investigated** cases are subject to various screening practices, which vary across agencies. The FN/CIS-2019 did not track screened-out cases, nor did it track new incidents of maltreatment on already opened cases.
>
> **Substantiation** distinguishes between cases where maltreatment is confirmed following an investigation, and cases where maltreatment is not confirmed. The FN/CIS-2019 uses a three-tiered classification system, in which a suspected level provides an important clinical distinction for cases where maltreatment is suspected to have occurred by the investigating worker, but cannot be substantiated.

Maltreatment Investigation: Investigations of situations where there are concerns that a child may have already been abused or neglected.

Maltreatment-related Investigation: Investigations of situations where there are concerns that a child may have already been abused or neglected as well as investigations of situations where the concern is the risk the child will be maltreated in the future.

Métis: A distinctive peoples who, in addition to their mixed ancestry, developed their own customs and recognizable group identity separate from their Indian or Inuit and European forbearers.[61]

Multi-stage Sampling Design: A research design in which several systematic steps are taken in drawing the final sample to be studied. The FN/CIS-2019 sample (for all jurisdictions except Quebec) was drawn in three stages. First, a stratified random sample of child welfare agencies was selected from across Canada. Second, families investigated by child welfare agencies were selected (all cases in small and medium sized agencies, a random sample in large agencies). Finally, investigated children in each family were identified for inclusion in the sample (non-investigated siblings were excluded).

Non-protection Cases: Cases open for child welfare services for reasons other than suspected maltreatment or risk of future maltreatment (e.g., prevention services, services for young pregnant women, etc.).

Reporting Year: The year in which child maltreatment-related cases were opened. The reporting year for the FN/CIS-2019 was 2019 (data from Ontario were collected as part of the Ontario Incidence Study of Reported Child Abuse and Neglect 2018, for which the reporting year was 2018).

Risk of Future Maltreatment: No specific form of maltreatment alleged or suspected. However, based on the circumstances, a child is at risk for maltreatment in the future due to a milieu of risk factors. For example, a child living with a caregiver who abuses substances may be deemed at risk of future maltreatment even if no form of maltreatment has been alleged.

Risk of Harm: Placing a child at risk of harm implies that a specific action (or inaction) occurred that seriously endangered the safety of the child. Placing a child at risk of harm is considered maltreatment.

Screened out: Referrals to child welfare agencies that are not opened for an investigation.

Unit of Analysis: In the case of the FN/CIS-2019, the unit of analysis is a child investigation.

Unit of Service: When a referral is made alleging maltreatment, the child welfare agency will open an investigation if the case is not screened out. Jurisdictions in Canada vary in terms of their units of service, for some, when an investigation is opened, it is opened under an entire family, while for others the investigations are opened under individual children.

Appendix C: Sampling Error Estimation

The following is a description of the method employed to develop the sampling error estimation for the FN/CIS-2019, as well as the variance estimates and confidence intervals for the FN/CIS-2019 estimates. Variance estimates are provided for select tables in this report.

A multi-stage sampling design was used, first to select a representative sample of 63 child welfare agencies across Canada (except Quebec), and then to sample cases within these agencies. In Quebec, 17 of 20 agencies were selected. The FN/CIS-2019 estimates are based on a relatively large sample of 13,869 child maltreatment-related investigations and a self representing sample of 28,079 investigations in Quebec. Sampling error is primarily driven by the variability between the 63 participating agencies who were randomly selected to participate. The size of this sample ensures that estimates for figures such as the overall rate of reported maltreatment, substantiation rate, and major categories of maltreatment have a reasonable margin of error. However, the margin of error increases for estimates involving less frequent events.

Sampling error estimates were calculated to reflect the fact that the survey population had been randomly selected from across the country. Standard error estimates were calculated for select variables at the $p < 0.05$ level. Appendix C tables provide the margin of error for selected estimates. For example, the estimated number of child maltreatment investigations in Canada is 299,217. The lower 95 per cent confidence interval is 294,956 child investigations and the upper confidence interval is 303,479 child investigations. This means that there is a 95 per cent chance that the true number of investigations is between 294,956 and 303,479

Most coefficients of variation were in the acceptable and reliable level. The error estimates do not account for any errors in determining the design and calibration weights, nor do they account for any other non-sampling errors that may occur, such as inconsistency or inadequacies in administrative procedures from agency to agency. The error estimates also cannot account for any variations due to seasonal effects. The accuracy of these annual estimates depends on the extent to which the sampling period is representative of the whole year.

The following are select variance estimates and confidence intervals for FN/CIS-2019 variables of interest. Each table reports the estimate, standard error, coefficient of variation, lower and upper confidence intervals.

Table 17 A: Sampling Error Estimates for Number and Rate of Child Maltreatment Investigations and Risk of Future Maltreatment Investigations in Canada in 2019

	Estimate	Standard Error	Coefficient of Variation	Confidence Interval	
				Lower	Upper
Number of Investigations	299,217	2,174	.72	294,956	303,479
Rate per 1,000 children	48.23	0.35		47.54	48.91

Table 17 B: Sampling Error Estimates for Age of Children in Child Maltreatment Investigations and Risk of Future Maltreatment Investigations in Canada in 2019

Child Age Group	Estimate	Standard Error	Coefficient of Variation	Confidence Interval	
				Lower	Upper
<1 year	19,373	695.91	3.59	18,009	20,737
Rate per 1,000 children	52.60	1.89		48.90	56.31
1-3 years	48,225	1,228.17	2.55	45,817	50,632
Rate per 1,000 children	42.54	1.08		40.41	44.66
4-7 years	81,764	1,368.94	1.67	79,080	84,447
Rate per 1,000 children	51.28	0.86		49.60	52.96
8-11 years	81,885	1,509.85	1.84	78,925	84,844
Rate per 1,000 children	51.96	0.96		50.09	53.84
12-15 years	67,971	1,322.42	1.95	65,379	70,563
Rate per 1,000 children	44.36	0.86		42.67	46.05

Table 17 C: Sampling Error Estimates for Substantiation Decisions in Canada in 2019

Maltreatment and Risk Only Investigations	Estimate	Standard Error	Coefficient of Variation	Confidence Interval	
				Lower	Upper
Substantiated Maltreatment	102,353	2,204	2.15	98,033	106,673
Rate per 1,000 children	16.50	0.36		15.80	17.19
Significant Risk of Future Maltreatment	13,498	877	6.50	11,779	15,217
Rate per 1,000 children	2.18	0.1		1.90	2.45

Table 17 D: Sampling Error Estimates for Referral Source in Child Maltreatment Investigations and Risk of Future Maltreatment Investigations in Canada in 2019

Referral Source	Estimate	Standard Error	Coefficient of Variation	Confidence Interval	
				Lower	Upper
Any Non-Professional	58,463	1,875	3.21	54,789	62,138
Rate per 1,000 children	9.42	0.30		8.83	10.02
Any Professional	200,653	2,577	1.28	195,603	205,703
Rate per 1,000 children	32.34	0.42		31.53	33.15
Other/Anonymous	21,328	1,420	6.66	18,545	24,110
Rate per 1,000 children	3.44	0.23		2.99	3.89

Table 17 E: Sampling Error Estimates for Provision of Ongoing Services Following an Investigation in Child Maltreatment Investigations and Risk of Future Maltreatment Investigations in Canada in 2019

Provision of Ongoing Services	Estimate	Standard Error	Coefficient of Variation	Confidence Interval	
				Lower	Upper
Case to Stay Open for Ongoing Services	54,090	1,637	3.03	50,882	57,298
Rate per 1,000 children	8.72	0.26		8.20	9.24
Case to be Closed	215,515	2,432	1.13	210,749	220,282
Rate per 1,000 children	34.74	0.39		33.97	35.50

Table 17 F: Sampling Error Estimates for Placement in Child Maltreatment Investigations and Risk of Future Maltreatment Investigations in Canada in 2019

Placement Status	Estimate	Standard Error	Coefficient of Variation	Confidence Interval	
				Lower	Upper
Child Remained at Home	283,145	2,227	.79	278,780	287,510
Rate per 1,000 children	45.64	0.36		44.93	46.34
Informal Placement	7,521	1,035	13.76	5,493	9,549
Rate per 1,000 children	1.21	0.17		0.89	1.54
Foster or Kinship Care	7,161	527	7.36	6,128	8,195
Rate per 1,000 children	1.15	0.08		0.99	1.32
Group Home/Residential Secure Treatment	972	193	19.85	594	1,350
Rate per 1,000 children	0.16	0.03		0.10	0.22
Other	418	106	25.33	211	626
Rate per 1,000 children	0.07	0.02		0.03	0.10

Table 17 G: Sampling Error Estimates for History of Previous Investigations in Child Maltreatment Investigations and Risk of Future Maltreatment Investigations in Canada in 2019

Previous Investigations	Estimate	Standard Error	Coefficient of Variation	Confidence Interval	
				Lower	Upper
Child Previously Investigated	142,447	2,295		137,948	146,945
			1.61		
Rate per 1,000 children	22.96	0.37		22.23	23.68
Child Not Previously Investigated	151,484	2,336		146,906	156,062
			1.54		
Rate per 1,000 children	24.42	0.38		23.68	25.15
Unknown	5,287	892		3,539	7,035
			16.87		
Rate per 1,000 children	0.85	0.14		0.57	1.13

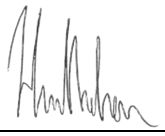
Table 17 H: Sampling Error Estimates for Applications to Child Welfare Court in Child Maltreatment Investigations and Risk of Future Maltreatment Investigations in Canada in 2019

Application to Child Welfare Court	Estimate	Standard Error	Coefficient of Variation	Confidence Interval	
				Lower	Upper
No Court or Court Considered	287,238	2,215		282,896	291,581
			.77		
Rate per 1,000 children	46.30	0.36		45.60	47.00
Application Made	11,979	663		10,679	13,279
			5.54		
Rate per 1,000 children	1.93	0.11		1.72	2.14

Table 17 I: Sampling Error Estimates for Primary Category of Substantiated Maltreatment in Canada in 2019

Primary Category of Maltreatment	Estimate	Standard Error	Coefficient of Variation	Confidence Interval	
				Lower	Upper
Physical Abuse	16,882	757	4.48	15,398	18,366
Rate per 1,000 children	2.72	0.12		2.48	2.96
Sexual Abuse	2,793	236.89	8.48	2,329	3,258
Rate per 1,000 children	0.45	0.04		0.38	0.53
Neglect	28,676	1,354	4.72	26,022	31,330
Rate per 1,000 children	4.62	0.22		4.19	5.05
Emotional Maltreatment	13,459	646	4.80	12,192	14,726
Rate per 1,000 children	2.17	0.10		1.97	2.37
Exposure to Intimate Partner Violence	40,369	1,715	4.25	37,008	43,730
Rate per 1,000 children	6.51	0.28		5.96	7.05

This is Exhibit "8" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.



Commissioner for Taking Affidavits (or as may be)

THE CANADIAN BAR ASSOCIATION
L'ASSOCIATION DU BARREAU CANADIEN

Rights of the Child on Children's Access to Justice and Effective Remedies

The Canadian Bar Association (CBA) brings together thousands of legal professionals from across Canada. This submission was drafted by the CBA's Child and Youth Law Section for consideration by the Committee on the Rights of the Child as it prepares its General Comment on children's access to justice.

Definitions and understandings

The Committee should consider emphasizing the concept of "access to justice" as articulated by the UN High Commissioner for Human Rights in her 2013 Report on the subject:

- **Access to justice is a fundamental right in itself** and an essential prerequisite for the protection and promotion of all other human rights.
- **Access to justice for children requires the legal empowerment of all children** and includes access to information and effective remedies to claim their rights, including through legal and other services, child rights education, counselling or advice and support from knowledgeable adults.

The inclusion of the **legal empowerment** of children is particularly important given the tendency to view the active participation of children in non-criminal proceedings as potentially harmful to them and to be avoided.

The **rule of law** should be a central feature of the General Comment. As stated by the International Association of Youth and Family Judges and Magistrates: "Every justice intervention involving children must be based on the rule of law. Children must be recognized by law as subjects of substantive and procedural rights."[1]

Related to the rule of law, **due process** should be guaranteed for children as it is for adults, including in all judicial, non-judicial and administrative proceedings, and should not be minimized or denied under the pretext of the child's best interests.[2]

The General Comment should address the concepts of **capacity** and **party status** for children; the failure to recognize capacity and the absence of standing presents barriers to the recognition of the legal personality of children.

Access to justice also includes **everyday justice** for children beginning at home and in their schools and communities. Nurturing child participation, autonomy and agency in decision-making in these contexts socializes children to be active community participants and defend their own and others' human rights.

---

1 *Guidelines on Children in Contact with the Justice System* (2017) at 13 [IAYFJM Guidelines].

2 Council of Europe, *Guidelines of the Committee of Ministers of the Council of Europe on child friendly justice* at para. III(A)(2).

Children have said that **voice, neutrality, respect, and trust** matter to them in school discipline decision-making.[3] Children who participated in school-based restorative practices in Ontario left with strengthened relationships among children and staff, and child participants appreciated the time and space to hear all sides.[4]

Interdisciplinarity is essential to ensuring children's access to justice. Thinking critically and across disciplines about how to approach the work of access to justice for children requires adult allies working together to make adult-centric systems accessible and effective for children.

Barriers

Artificial age thresholds

Minimum ages are often influenced by social and cultural norms and beliefs, regardless of evidence supporting children's capacities to participate in decision-making about their lives.

Lack of party status, standing and legal representation

Children are rarely afforded party status or standing in judicial and administrative proceedings. Ontario's child protection legislation provides children standing in limited contexts.[5]

Legal representation is not automatically available to children in family law proceedings. In Canada, it is dependent on the discretion of the court and the jurisdiction in which the child lives.[6]

Inconsistent mechanisms for participation in judicial proceedings

Non-representational methods of placing children's views before the courts, including Voice of the Child reports, expert assessments and judicial interviews, have benefits.[7] However, none assure the child's meaningful participation in the process and no review mechanisms explicitly ensure that children's views appropriately inform outcomes. Similarly, adult-directed models of legal representation, such as guardian *ad litem* and *amicus curiae*, may not adequately support children's legal empowerment.[8]

Lawyers have the same obligations towards children as for adults, and such obligations can and must be carried out consistent with the level of understanding and communication of the child.[9]

Lack of independent representation in family violence and claims of parental alienation

Cases involving allegations of family violence, which often draw counter-allegations of "parental alienation", present significant access to justice barriers for children. Recourse to extreme remedies, including forced "reunification" therapies and transfers of custody, raises significant concerns

regarding child rights violations, including deprivations of liberty from police enforcement of court orders and accompaniment to reunification programs. Independent legal representation for children is a critical procedural safeguard for children.[10]

Insufficient concern for privacy

Children's identities in relation to court proceedings are kept confidential in youth criminal justice and child protection/adoption matters in Canada. Such protections should be extended to all other civil law and administrative proceedings. No information that would reveal or indirectly enable identification of a child should be published or otherwise made public.

Records, documents and contents of hearings containing children's private information should be presumptively confidential and closed to third parties.[11] Similarly, any matters involving children as subjects, witnesses, accused persons or in any other capacity should presumptively be heard *in camera*, i.e. in the absence of the public and the media. When children's records (e.g. counselling records) are being sought in proceedings in which they are not parties, they should receive notice and the opportunity to respond to the application.[12] State-funded legal representation should be provided for this purpose.

Limited judicial interpretation of General Comment 12

In 2018, the British Columbia Court of Appeal upheld an order denying a 17-year-old youth legal representation in a high conflict parenting case.[13] The Court concluded that Article 12 does not go so far as to guarantee children a right to legal representation or to party status.

With respect to General Comment 12, the Court pointed out that the term "representative" in article 12(2) does not explicitly mandate that the child have access to legal representation.

With respect to paragraph 96 of General Comment 14, the Court compared the English and French language versions to adopt a narrow interpretation, stating: "In using the term 'un conseil juridique' … the French version appears to indicate that the level of "representation" contemplated by the commentary is not a full right to counsel, but rather a right to have the benefit of legal advice."

The General Comment should clearly articulate a right to legal representation as a due process right necessary for fair judicial proceedings "whenever the child's interests are at stake".[14]

Lack of state funding for legal representation

Reductions in legal aid funding in many jurisdictions negatively impact children's access to legal support. Children require an equal footing in legal proceedings, especially in family law proceedings, and resources must be allocated in State budgets for this purpose.[15]

Lack of adequate review and appeal mechanisms

15 Tempesta, Legal Representation at 47.

Appeal remedies are often available only to children's parents and guardians. The absence of appeal mechanisms afforded to children in areas that directly affect them can be seen in provincial and territorial education legislation in Canada.[16]

Lack of child-friendly complaint mechanisms

A complaint mechanism is a means through which children who believe their rights have been violated, as individuals or collectively as a group, can seek redress and make the violation stop. The right to a remedy is a fundamental human right and an essential dimension of access to justice for children. We draw the Committee's attention, for example, to the common principles for a child friendly complaints process developed by the Children's Commissioner in England in consultation with children.

Limitations on available remedies

Even when children can access justice processes, remedies may be ill-suited to children's circumstances and non-responsive to children's experiences. For example, Ontario's child welfare legislation sets out the rights of children in care and receiving services from child welfare organizations, as well as the requirement for complaints procedures and independent review boards.[17] Yet, the complaints procedures established by individual agencies are inconsistent and often opaque, and the available outcomes on review are severely limited.

Remedies may also face constitutional hurdles. Legislation in Saskatchewan mandating parental consent before school officials use a child's "gender-related preferred name or gender identity" explicitly states that it operates *notwithstanding* certain rights set out in the *Canadian Charter of Rights and Freedoms*.[18] The legislation enshrines a policy that the courts would otherwise have blocked on an interim basis, *before* a full hearing on its constitutionality.[19]

Lack of child-focused timelines

Delays significantly compromise the effectiveness of available remedies. Moreover, financial compensation awards are commonly held in trust by the State until the child reaches the age of majority, further compromising a meaningful and timely remedy.

Lack of explicit child-rights based approaches

Canadian jurisprudence related to children rarely makes explicit reference to the Convention. Explicit use of the language of children's rights in decisions affecting children helps shape the discourse of children's access to justice.

Lack of knowledge about children's rights and lack of training about child-centered professional practices is a barrier to children's access to justice. Moreover, sustained funding is needed for child-centered access to justice, such as restorative practices in schools, in health care settings and child protection matters, as has been done in the child justice context.

Preliminary results of a study about children's access to justice as human rights defenders in Canada indicate that some institutions appear to adopt narrow definitions of the rights they protect and the

public they serve.[20] If enabling legislation does not explicitly mention children and their rights, structural adult-centrism can lead to uneven access to justice and remedies.

Enabling factors and strategies

Support to regional bodies and institutions

A priority should be given to supporting regional efforts to promote child friendly justice interventions outside of Europe, through the OAS, the African Union and other forums.[21]

Networks for child-friendly justice

A global forum of specialized human rights agencies for children, akin to the European Network of Ombudsman for Children, could coordinate efforts to ensure institutions work intentionally within a child rights framework. States Parties should also support the work of national, regional and global networks.

Building professional capacity

A culture of children's rights requires significant and sustained professional development in all sectors. In British Columbia, the CBA's provincial Child and Youth Law section is collaborating with Access2Justice BC and other civil society organizations to champion legal best practices for hearing children's voices among family court lawyers and judges.

Technologies supporting access to justice

Video conferencing and remote participation of children in legal proceedings may offer protective environments and help children to be active participants in proceedings. Online tools for professionals can promote a culture of children's rights, such as the CBA's Child Rights Toolkit and Justice Canada's guidance and training on the use of child rights impact analyses in federal policymaking.

Indigenous-led child and family services

As part of the journey of reconciliation, federal legislation empowers Indigenous communities to exercise direct jurisdiction over child and family services for their community members, and includes an obligation to consider children's best interests in all judicial matters related to Indigenous children and families.[22] Some provincial child protection legislation includes specific provisions about Indigenous children.[23]

23 See, for example, *CYFSA*, Part IV.

Child rights-based legal supports

In Ontario, the Office of the Children's Lawyer (OCL) and the legal aid services of Justice for Children and Youth are pre-eminent models for specialized and accessible legal representation of children in ways that substantively and effectively advance children's access to justice and effective remedies in that province. The OCL has been described as "fundamental to the proper functioning of the legal system".[24]

Emerging practices in Canada

Examples of emerging rights-respecting practices in Canada include:

- Child and Youth Advocacy Centres provide integrated service delivery to child victims of sexual and physical abuse.
- The pioneering work of the Fondation Dr. Julien in community-based social pediatrics in Quebec is expanding to other parts of Canda.
- Integrated Service Delivery is a philosophy of service integration for children with complex needs across education, health, child protection and justice services in New Brunswick.
- The Canadian Institutes for Health Research fund the development of community-based youth hubs, such as Access Open Minds, where youth can access child rights-informed lifesaving clinical supports.
- Quebec now has a province-wide schools ombudsman supported by a team of regional schools ombudsmen.
- Since 2022 the Child Welfare League of Canada has been promoting the adoption of the *Equitable Standards for Transition to Adulthood for Youth in Care*, informed by lived experience of children in care in Canada.

About the Canada Foundation for Innovation

With a bold, future-looking mandate, the Canada Foundation for Innovation equips researchers to be global leaders in their fields and to respond to emerging challenges. Our investments in state-of-the-art tools, instruments and facilities at universities, colleges, research hospitals and non-profit research institutions underpin both curiosity- and mission-driven research that cuts across disciplines and bridges all sectors. The research infrastructure we fund mobilizes knowledge, spurs innovation and commercialization, and empowers the talented minds of a new generation.

The Canada Foundation for Innovation respectfully recognizes and acknowledges the traditional relationship that the First Nations, Inuit and Métis across Canada have with the land all Canadians share.

"The foundations of a democratic nation and the way it will continue to prosper are the library, the schools, universities and labs. People need the hope that they can build a better future. They need to know that they can participate in the development of their nation through the development of their mind."

— John Kenneth Galbraith[1]

Message

This document is the result of a consultation among research, business and civil society leaders. Its purpose is to highlight the importance and value of the research supported by governments, academic research institutions, and the private and not-for-profit sectors in Canada.

It outlines a value proposition for the sustained federal investment in research in a wide spectrum of disciplines — from health and engineering to the natural sciences and the environment, and from the social sciences to the arts and humanities.

Today the world faces an unprecedented series of crises, including geopolitical instability, severe flooding, fires and pandemics. Each of these challenges requires research to discover solutions. The recent pandemic demonstrated the value of basic and applied research that, together, enabled the creation and production of needed analyses of epidemiological data, vaccines and a ventilator made from universally available parts. Our hopes for the future include long-term prosperity, improved health and social welfare, and safe, vibrant, culturally rich communities in a sustainable environment like that created by the Cree in Oujé-Bougoumou, Quebec.[2]

These challenges, goals and hopes all demand research. This document aims to illustrate the direct and tangible benefits of research to Canadians, to provide a common narrative to communicate its intrinsic and essential value, and to demonstrate that national investment in research is an investment from which every sector and all people will benefit.

We also hope this text will contribute to a broader discussion on the importance and value of federal investment in research.

Roseann O'Reilly Runte
President and CEO
Canada Foundation for Innovation

2 This community was recognized in 2015 by UNESCO with an award for having applied sustainable development principles to designing a community offering a better quality of life.

Introduction

People around the world share the basic human desire and need to discover and understand the unknown. We are motivated by the desire to enhance our quality of life. Improving human health, remediating climate change, making life economically sustainable and ensuring that knowledge and the ability to learn, enjoy and pursue life in a peaceful, supportive community are goals that can be attained through research that combines discovery and innovation.

In this context, Canadian researchers are profoundly aspirational as they represent the very best of our talent and express the creative ambition of our nation to do better. They seek to improve the lives of not just current but future generations. They want to be proud of their country, supporting and enhancing health and the economy and building safe, healthy, creative and inclusive communities where a sense of belonging resides in a shared vision of an ethical and fair society. Canadians support research for the same reasons. As a nation of builders, we are motivated by the desire to improve the conditions of life for ourselves and for generations to come. The possibilities offered by unlocking the secrets of the world around us and of understanding how to extract, transform and use judiciously the resources needed to better the human condition constitute indeed a powerful incentive for support.

The desire to gain knowledge and understanding is a way to affirm our humanity and enable our contributions to people in Canada from coast to coast to coast. Discovery and understanding lead to enlightenment, satisfaction, pride and hope. We need only think of Frederick Banting and the discovery of insulin, the Canadarm or the role researchers in Canada play today in making our industry greener, more efficient and cost effective.

Research inspires youth to pursue their studies and explore new and emerging areas of inquiry, such as genomics, artificial intelligence and quantum computing, which will define their future. It equips them with the skills needed to secure meaningful employment in the businesses they will attract. The new generation of researchers aspires to create not only a world that reflects their image and values, but one built on ethics, knowledge, discovery and the most recent developments in technology.

Climate emergency: the most pressing issue facing humankind

Environmental protection and responding to climate change are essential to survival. In Canada, intense forest fires decimate forests, displacing people, destroying homes and businesses, and affecting air quality across a vast area of North America.

From heat domes associated with intense drought and atmospheric rivers on the West Coast causing flooding, to tornadoes affecting Eastern Canada and hurricanes devastating the Atlantic coast, no region of Canada escapes the effects of human-induced climate change. All aspects of our lives are affected by climate change. Research enables us not only to understand its causes, but also — and most importantly — to develop adaptation and mitigation strategies as well as the products and technologies that will enable us to meet this challenge.

Research builds stronger Canadian communities

The *outputs* of research are the academic results that find their ways into publications and other forums in which they are discussed, debated and critiqued. They are also essential in the training of the next generation of innovative thinkers. Far reaching across all spheres of society, the *impacts* of research take the form of change or benefit to the economy, society, public policy or services, health, the environment, culture or quality of life.[3] Research's tangible and measurable *impacts*[4] have been documented in many studies over the years.[5] Businesses and industry gravitate to regions where there are organizations active in research and the dissemination of knowledge. Researchers fuel the economy, which in turn creates the demand for increased discovery and opportunities for development. It also promotes social change in response to shared goals around caring for an aging population, for example. The region of Estrie in Quebec offers an illustration of the positive effects of investment in the development and production of devices to allow senior citizens to remain independent for a longer time.[6]

Targeting Canada's research dollar

All levels of government depend on and invest in a robust ecosystem of highly qualified researchers working in departments such as agriculture, transportation, fisheries and the National Research Council Canada, as well as in the universities, colleges and hospitals across the country. These investments are leveraged by academic and not-for-profit agencies, academic and research institutions, and the private sector.

How much research can we afford to support is a frequently asked question that presumes the funding for research can be separated from its impact. The question does not fully recognize the strategic importance of research as *both* an essential driver of the economy *and* the means to succeed or to

3 Brian Belcher and Janet Halliwell, "Conceptualizing the Elements of Research Impact: Towards Semantic Standards," *Humanities and Social Sciences Communications*, 8, 183 (2021), https:/doi.org/10.1057/s41599-021-00854-2.

4 Universities Canada and Statistics Canada report that in 2022, universities performed $16 billion in research and development, including $1.2 billion in research for businesses and $1.5 billion in research for not-for-profits. They employed 410,000 people and the various companies they started employed 65,000. Universities, colleges and research hospitals constitute an important part of the economy. Growth in this sector automatically contributes to increased economic growth and contributes to the tax base that supports communities, while bringing new concepts and possibilities for improvement to them.

5 For example, the Saskatoon Regional Economic Development Authority's 2022 "Economic Impact Study" conducted on VIDO, the University of Saskatchewan's Vaccine and Infectious Disease Organization, concluded that operations and construction projects at the facility contributed more than $511 million to the economy in the last decade. This figure did not include commercialized vaccines. SNOLAB, in Sudbury, Ont., operated by a consortium of universities, reports that for every dollar of government investment, the lab generated $3 of economic impact. A study of TRIUMF by HAL Innovation Policy Economics indicates an economic impact of $424.9 million over the last decade. An economic impact study of the Canadian Light Source for the years 2009–10 and 2010–11 showed that it had added $45 million per annum to the Canadian GDP or about $3 for every dollar of operating funding.

6 "Socioeconomic Benefits of Funding for University Research in Quebec's Estrie Region. Final report." Prepared for the Canada Foundation for Innovation, Fonds de recherche du Québec and the Ministère de l'Économie et de l'Innovation by Goss Gilroy Inc. (May 5, 2021).

improve on almost all other areas of public investment, including human lives, healthy communities and societal productivity and well-being. In order to advance in any field and to improve our lives, we need knowledge and research that will spark and test new ideas and offer us the means to succeed. We need researchers like Dr. Jennifer Leason (Pine Creek Band), University of Calgary, whose work focuses on the social determinants of health and Dr. Catherine Girard, Université du Québec à Chicoutimi, who researches ecosystemic health and the microbial contents of food in the Arctic to support the health of the population. We need well-educated researchers in all fields, like Dr. Alan Bernstein, former president and CEO of the Canadian Institute for Advanced Research, who provide necessary advice during crises, as well as researchers like Nobel laureate Dr. Michael Houghton, University of Alberta, whose work to develop a vaccine for hepatitis C will save lives and reduce the expense of treatment.

At the end of the day, it is not an either/or question. We need to dispense with opposing choices and simply draw a circle instead of a straight line. People want to live in a country where the economy is strong and possibilities for meaningful employment exist. We also know that to attract business and employment, one needs a healthy, educated workforce as well as the necessary conditions, regulations and tax regime that will encourage the growth of industry and business. Research is fundamental to our success as a nation and must be sustained in the long term.

We must regard the economy, research, environment, health and communities as parts of a system of systems. Just as the human body has a nervous system and neural networks, a muscular system and a circulatory system, which requires all to function at once, so too can we regard industry, research, economic and human development as fundamental parts of society. They are at once interdependent and mutually supportive.

La recherche en français: an advantage for Canada

Research is a vector of development and prosperity for society and, in the Canadian context, research conducted in French is crucial to the vitality and development of Quebec and of French-speaking minority communities across the country. It ensures training at the graduate and post-graduate levels is available in French and enables the development of a professional vocabulary in French to disseminate knowledge, particularly to the media, business, politicians, public services and young people.

Francophone researchers play a key role in the vitality of their respective communities. They advise community groups, sit on their boards of directors and offer expert advice to governments on policy development. They also train the next generation of researchers in crucial fields such as education, the arts, engineering and health, actively contributing to the development of the population. They create critical and innovative citizens, capable of working in both of Canada's official languages.

** Portrait and challenges of research in French in the minority context in Canada https://www.acfas.ca/sites/default/files/documents_utiles/rapport_francophonie_sommaire_en_final_0.pdf

How research builds Canada

Canadian researchers participate in international science and compete globally. Their work has benefited the country in many ways. However, while our economy has fared quite well over the years, Canada is currently facing a decline in productivity. This can be addressed, in part, through investment in research by business, investors and governments, coupled with an approach that recognizes the contribution of research to all areas of importance to Canadians.

Our natural resources

Despite gains in areas such as sustainable agriculture and fisheries, financial services, aerospace and manufacturing, the most significant sources of revenue for Canada over the years have been based on natural resources. All sectors are bolstered by, and increasingly rely on, scientific research, knowledge transfer and the training of highly skilled employees.[7]

Employment in these sectors and the raw resources exported are of direct and significant value to Canada. Research can help develop the technologies and industrial processes to ensure the environmentally sound extraction of resources and enhance their value prior to export.

A resource-rich country, Canada has many of the minerals required today to support the technologies that will be at the core of tomorrow's economy. There are untold riches buried beneath our feet. We have the opportunity to discover, extract and develop our mineral wealth, increasing its value to the economy, protecting the environment and providing employment for highly skilled workers.

Canada needs to invest in clean energy and green technology as well as in the research that will ensure its continued leadership in the creation and development of new environmental technologies that can become marketable. Research helps add value to Canadian products and exports for world markets. Canada should be known not only as a country with immense natural resources but one with a wealth of ideas and talent — a country that values innovation and ingenuity as essential drivers of our future well-being.

7 Idem. See note 5.

Our human capital

People are our most precious asset. However, Canada's population is aging, relatively small and spread over a large landmass. We need only consider, for example, that the entire population of Canada is approximately that of a single city, like Mumbai, India. While we have begun to rely on immigration as the means of increasing the population on our vast land, this is a long-term project.

Labour costs are also generally higher in Canada than in other parts of the world. Therefore, to ensure its competitive edge, Canada needs to invest in new methods and smart technologies so our smaller population can accomplish work of the highest quality.

Many of today's graduate students work at the cutting edge of science and use evidence-based research as a tool. Many end up in high tech and other technology-intensive industries where they are most valuable because they have the skills to recognize breakthroughs and enable business innovation at the frontier of knowledge. At times, their innovation involves adapting and improving off-the-shelf products and at others, developing new products, services and technologies that can be commercialized around the world.[8]

A perspective from abroad

In a recent article*, the Ambassador of Japan to Canada wrote that Canada is a resource-rich country. Canada has traditionally accounted for approximately 60% of Japan's potassium chloride imports. Due to sanctions on Russia, Japan is experiencing a 30% shortfall and Canada is "the only country that can realistically be expected to supply . . . the shortfall." He notes that this is only one example. "Canada . . . boasts approximately 250% food self-sufficiency on a calorie basis and 190% energy self-sufficiency . . . Japan's food self-sufficiency rate is 38% and its energy self-sufficiency rate is 13%." Touching on critical minerals, he added they "are not just the building blocks of clean technology . . . they are a key ingredient for creating middle class jobs and growing a strong, globally competitive Canadian economy."

* From "Evolution of Japan-Canada Relations into a 'New Chapter': The Increasing Geo-Political Strategic Importance of Our Relationship," *Gaiko Forum*, Vol. 78 (Mar/Apr 2023): 66–71, https://www.ca.emb-japan.go.jp/2023_shared_images/202304-GAIKO-provisional-translation.pdf

8 Nobel laureate Dr. Arthur B. McDonald reports after having surveyed students who worked at the frontiers of science that in physics, for example, 75% go on to careers in high tech, and they report using evidence-based research as a tool. See also *Degrees of Success*, Council of Canadian Academies https://cca-reports.ca/reports/the-labour-market-transition-of-phd-graduates/

Advancing Indigenous research capacity and reconciliation

In 2015, the Truth and Reconciliation Commission of Canada released its report *Honouring the Truth, Reconciling for the Future*, which identified 94 Calls to Action, and highlighted the important role of research to advance understanding and reconciliation.

Strengthening Indigenous self-determination, leadership and capacity in research and research training, and respecting the value of Indigenous Knowledge systems must be our priorities.

Indigenous Research is described as research in any field or discipline that is conducted by, grounded in or engaged with First Nations, Inuit, Métis or other Indigenous communities, societies or individuals, and their wisdom, cultures, experiences or knowledge systems, as expressed in their dynamic forms, past and present. It can also embrace the intellectual, physical, emotional and/or spiritual dimensions of knowledge in creative and interconnected relationships with people, places and the natural environment.*

From finding new cancer treatments, to building a digital record of Canada's residential school history, to creating research spaces that inspire the next generation, Indigenous Knowledge and research practices provide innovative solutions to contemporary issues and lend another way of understanding science, the arts and ourselves.

* Indigenous Research, https://www.sshrc-crsh.gc.ca/society-societe/community-communite/indigenous_research-recherche_autochtone/index-eng.aspx

Our small- and medium-sized businesses and innovation

Small- and medium-sized enterprises (SMEs) make up a very successful sector of the economy that not only provides employment but strengthens and gives back to the community.

Innovation, Science and Economic Development Canada's "Key Statistics Report" shows that "as of 2021, small businesses employed 8.2 million individuals in Canada or 67.7% of the total private labour force. By comparison, medium-sized businesses employed 2.5 million individuals (20.4%) of the private labour force and large businesses employed 1.4 million individuals (11.8%) of the private labour force. They [SMEs] contributed 42.7% of goods exported. They [SMEs] are spread across the country in every province. As of December 2021, there were 1.21 million employer businesses in Canada. Of this number, 97.9% were SMEs with 1-99 employees."[9]

9 "Key Small Business Statistics, 2022," Innovation, Science and Economic Development Canada, Small Business Branch, Research and Analysis Directorate, https://ised-isde.canada.ca/site/sme-research-statistics/en/key-small-business-statistics/key-small-business-statistics-2022.

SMEs include the majority of high-tech companies (mostly small enterprises), many start-ups that are on a strong growth curve, manufacturers, investors, consultants, service providers and specialized service organizations as well as not-for-profits. For example, in 2020, the British Columbia life science business AbCellera Biologics, a small but rapidly growing company, received the Fast Company Innovative Team of the Year Award and was named the best workplace for innovators.

Canada's population is distributed over a very large territory. In regions across the country, communities thrive where people want to reside and work, and offer an environment respecting Indigenous priorities and rights. With flourishing small businesses, schools, and sporting and cultural centres, these communities are themselves sources of employment, wealth and health, and are part of the circular economy.

Numerous publications tout the advantages of small businesses that extend far beyond the tax revenues and employment opportunities to include getting involved in local charities; sponsoring, organizing and hosting local events; innovating and diversifying the local marketplace; and using local products and services.

There are two important roles research plays in this context. First, research is needed to define and understand fully sustainable and successful communities and how they are supported by small business as they interface with the services and educational, cultural and health facilities available. Second, universities and colleges across the country are working with businesses of all sizes, helping them find solutions and develop innovative approaches, processes, services or technologies that can be commercialized in Canada and around the world. Centres like the DMZ at Toronto Metropolitan University, the e@UBCO Accelerator in Kelowna's Innovation Centre and the Centres collégiaux de transfert de technologies et de pratiques innovantes, in Quebec, are among the growing number of facilities that support commercial and industrial development that ranges from wood products in the Chantiers Chibougamau Ltée to a re-engineered kiteboard for Ocean Rodeo, a product now internationally marketed by this B.C. company.

In addition, municipal and regional governments often turn to their local university or college to find solutions to real-life issues such as environmental change, public transportation or water quality. Local

Preserving the fabric of our communities

Small businesses are financially important to the communities where they are located. Joe Minicozzi, an urban planner and principal of Urban3, has demonstrated the value of investment in mixed-use development as opposed to big-box expansion. Forbes magazine reported that, using the city of Asheville, North Carolina as an example, downtown mixed-use development produced a return 1,000% greater on a per-acre basis than that of a sprawling retail centre. SMEs yielded $150,000 more in annual tax revenue to the local government than an acre of strip malls or big-box stores. Minicozzi states that "a strong small business presence — especially one that thrives in the context of a busy, livable, walkable downtown — is what gives a community its character." Big-box stores are usually characterized by windowless facades and the owners are, with the profits, located elsewhere.* Canada's own Chamber of Commerce echoes the link between living and livelihood and sets out "thriving business opportunity, a strong economy and a better life for all" as its goals.**

research institutions are sources of skilled workers that will attract and welcome newcomers to this country. The Université du Québec network, for instance, keeps young people rooted in their regions where they have access to postsecondary education, find meaningful employment in local firms or create innovative businesses and support cultural life. Research in topics like urban and suburban planning, the impact of green spaces and even hospital architecture that promotes healing has contributed to the success of many communities across the country.

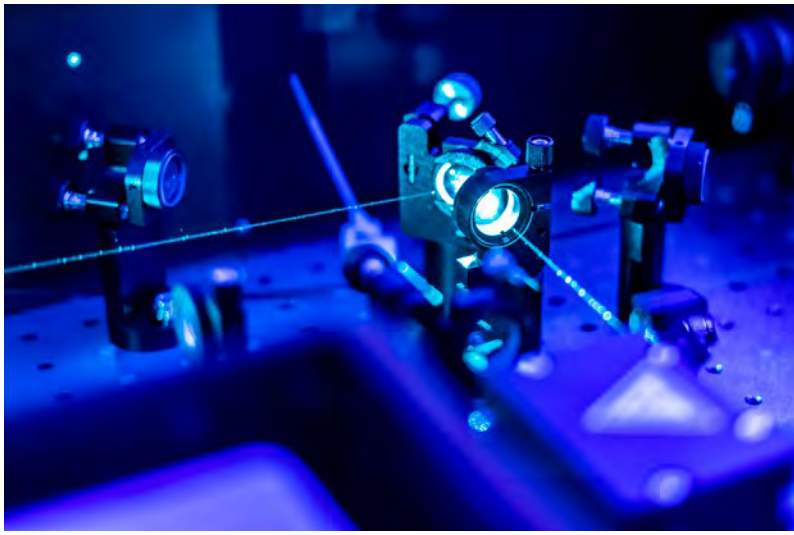
Around the world, countries are investing in regional development, the creation of livable, sustainable communities and employment. All are interrelated and require research to support these efforts, by understanding their unique challenges and inspiring the creative solutions that will ensure their success.

Key conditions underlying successful communities

Vibrant communities offer:

- Access to natural resources and a growing pool of technically trained workers
- Attraction and retention of top notch researchers and their ideas
- Best and broadest education system and state-of-the-art research facilities
- Freedom to discover and innovate in a creative and supportive research and training environment
- Access to international markets, global expertise and networks
- A business- and research-friendly environment that promotes social networking and collaboration
- Commitment to environmental safety, sustainability and protection
- Recognition of cultural and linguistic values
- Respect, equity, diversity, inclusion and ethics
- Good schools, health care, a safe environment, arts and sports facilities, and good transportation

Investing in the next promising areas of science



Just as research and the mining of lithium led to a new generation of batteries that power electric vehicles, the next advances in photonics and quantum technologies or the next treatment for disease may result from the support offered today for our country's best minds.[10]

Advances and technological progress are the result of the creativity of our population and the outstanding training they receive in an atmosphere of free and open inquiry. In a world where competitiveness is defined by a nation's ingenuity and capacity to innovate, a single idea can make Canada a leader. If we do not invest in bold possibilities — moonshot science — we risk losing the potential we have and with it, the people who are developing these ideas.

In the global race for talent, the best people and the brightest minds will go to countries where they are able to pursue their ambitions. It is a bit like a gold rush. If you do not stake a claim, you will never strike it rich and someone else will hire the best prospectors and the geologists who will leave with the gold from that claim. We will never know what we lost.

In addition, with two official languages among the most spoken on the planet and the intellectual diversity they promote, Canada is ideally positioned to attract the best talent.

The potential for economic development in areas such as clean tech, artificial intelligence, quantum computing, precision medicine, physics and advanced manufacturing, to name a few, is significant. These sectors tend to grow by leaps and bounds. A period of new ideas is followed by technical development and then by applications that can be manufactured and commercialized. They require a commitment to innovation and continued, wise investment.

The secret for success is to invest in brilliant research even before we fully understand its true potential. Before the potential of artificial intelligence was recognized, the Canada Foundation for Innovation supported researchers, like Dr. Geoffrey Hinton at the University of Toronto and Dr. Yoshua Bengio at the Université de Montréal, who are today recognized as world leaders in the field and whose work led to the cities of Toronto and Montréal becoming major business hubs in this field.

10 See Dalhousie University's Dr. Jeff Dahn's innovative work on batteries; the University of Ottawa's and NRC's Dr. Paul Corkum's work on photonics as well as the University of Waterloo's Nobel laureate in medical photonics, Dr. Donna Strickland; the quantum research by the Perimeter Institute's Dr. Elie Wolfe or Dr. Roger Melko (also at Waterloo); and the University of Toronto's PRiME Next-Generation Precision Medicine led by co-directors Dr. Carolyn Cummins and Dr. Keith Pardee.

At present, Canada does not have sufficient population to be able to manufacture and market some products solely within our borders. International markets and partnerships must be identified and developed. Competing in global markets requires not only innovative products and clever marketing, but also a higher tolerance for risk. A low-risk portfolio is unlikely to deliver spectacular returns, so the wise investor seeks a balanced portfolio that includes some elements of higher promise, but also higher risk. As a country we need to emulate the wise investor and invest not only in proven ideas but also in the researchers who push back the frontiers of knowledge.

A nation that does not invest in its people and their ideas foregoes the opportunity for greater achievement. In this context, the emerging talents of First Nations, Inuit and Métis researchers must also be recognized and supported. Their success is not only a source of wealth but of inspiration for the next generation. It also offers the potential to unite the country in a way that transcends our geographical expanses and cultural differences. One need only think of Nobel laureates Art McDonald, who hails from Sydney, Cape Breton, and Donna Strickland, who was born and raised in Guelph, Ontario. They share with young Canadians their passion for science and the knowledge that they too can aspire to change the world through their ideas and hard work.

Elements of a roadmap to help address continuing challenges for Canada

- Augment investments to add value to resources extracted
- Increase adoption of technology to address decline in productivity and bolster competitiveness
- Attract and retain talent, preventing a brain drain and its associated loss of expertise and talent
- Encourage the scale-up of homegrown businesses by making risk capital available
- Develop and implement strategies aimed at attracting new ideas and international investment to Canada
- Encourage calculated risk-taking and a desire to win among Canadian businesses

Conclusion

Research is the activity of our most precious asset — our people. There is a global race for talent and Canada must not be left behind as the effect will be felt on all sectors, from the economy to health and the quality of life in communities across the country.

Research depends on the ability of Canadians to take advantage of education and resources, and to thrive freely in a country known for its ethical values and principles of fairness. Research is essential to the health and well-being of the population, a strong economy and vibrant, vital communities that encourage the arts, culture and enlightened discourse. Research enables the development of green technologies and processes that will preserve the environment while supporting the development of natural resources. Research paves the way to new discoveries and understanding of our universe and is a source of pride and inspiration to our diverse, inclusive, ethical and equitable society.

And, if channelled properly, research can also be a fundamental part of our national identity and provide a key driver to Canada's success in the years ahead.

In support of our population, we also need to support communities, SMEs, the arts, sports and environmental programs that will make Canada productive, safe and attractive. In addition to smart and connected cities, it is time to think about sustainable communities to raise our living standards and grow a healthy population that is capable of supporting economic growth.

Canada's investment across all fields of research is essential to respond to crises and to permit the growth of creative and innovative concepts. Ensuring we have the capacity to mobilize many fields of inquiry to respond to new challenges or seize emerging opportunities requires a diverse portfolio of excellent research made possible with federal support. No one can predict where the next breakthrough will occur. This means investing not only in the black swans but in the areas that will serve and sustain all areas of endeavour such as data, digital resources, scholarships and fellowships to support the next generation of researchers, entrepreneurs and innovators, and the equipment and labs that will allow them to thrive.

We must today create the conditions for success in Canada. We are writing our history today. Let us learn from the past and build for the future.

Cultural Continuity as a Hedge Against Suicide in Canada's First Nations

Michael J. Chandler & Christopher Lalonde
The University of British Columbia

Abstract

This research report examines self-continuity and its role as a protective factor against suicide. First, we review the notions of personal and cultural continuity and their relevance to understanding suicide among First Nations youth. The central theoretical idea developed here is that, because it is constitutive of what it means to have or be a self to somehow count oneself as continuous in time, anyone whose identity is undermined by radical personal and cultural change is put at special risk to suicide for the reason that they lose those future commitments that are necessary to guarantee appropriate care and concern for their own well-being. It is for just such reasons that adolescents and young adults—who are living through moments of especially dramatic change—constitute such a high risk group. This generalized period of increased risk during adolescence can be made even more acute within communities that lack a concomitant sense of cultural continuity that might otherwise support the efforts of young persons to develop more adequate self-continuity warranting practices. Next, we present data to demonstrate that, while certain indigenous or First Nations groups do in fact suffer dramatically elevated suicide rates, such rates vary widely across British Columbia's nearly 200 aboriginal groups: some communities show rates 800 times the national average, while in others suicide is essentially unknown. Finally, we demonstrate that these variable incidence rates are strongly associated with the degree to which BC's 196 bands are engaged in community practices that are employed as markers of a collective effort to rehabilitate and vouchsafe the cultural continuity of these groups. Communities that have taken active steps to preserve and rehabilitate their own cultures are shown to be those in which youth suicide rates are dramatically lower.

Cultural Continuity as a Hedge Against Suicide in Canada's First Nations

This research report, which is all about self-continuity and its role as a protective factor against suicide, comes in three parts. One of these, told as a cautionary tale against all loose generalizations about aboriginal society as a whole, works to make the point that, while certain indigenous or First Nations groups do suffer rates of youth suicide that are among the highest of any culturally identifiable group in the world (Kirmayer, 1994), it is also true that the incidence of such suicides varies dramatically across British Columbia's nearly 200 aboriginal groups. Some communities, we demonstrate, show rates some 800 times the national average, while in others suicide is essentially unknown. A second part goes on to demonstrate that these variable incidence rates are strongly associated with the degree to which BC's 196 bands are engaged in community practices that are interpreted here as markers of a collective effort to rehabilitate and vouchsafe the cultural continuity of these groups. The remaining part, and the one with which we begin, reviews our efforts to get clear about the axial notions of personal and cultural continuity, and how our search for some way of understanding youth suicide has come to turn upon them.

PART I

Personal & Cultural Continuity

It is, no doubt, in some measure just because those who are left dead by their own hand are necessarily lost to most other kinds of data collection strategies, that epidemiologists concerned with suicide are typically reduced to trolling through whatever sea of demographic variables dead people ordinarily leave in their wake. As a result, most problem-focused studies aimed at identifying risk factors associated with suicide have tended to be largely atheoretic, data driven enterprises, ordinarily concerned with whatever correlational bits and pieces manage to get caught up in their actuarial nets. In contrast, the research to be reported here is not like that. What we mean to describe instead is the end product of a heavily theory-laden and concept driven program of research into the usual process of adolescent identity development—a project that only gradually and reluctantly backed its way into the troubled waters of risk research. It did so, as we will show, by following a thread that began with a normative study of the self-continuity warranting practices of standard-issue adolescents, and ends, where we stand, awash in the brutal epidemic of suicide among First Nations youth.

Because it is far from obvious why the study of young people's beliefs about personal persistence, or self-continuity, might recommend itself as a vehicle for getting closer to an understanding of how cultural continuity might serve as a protective factor against suicide, the balance of these introductory remarks are given over to linking up these seemingly disparate matters. In miniature, the argument, to be more carefully unfolded in the paragraphs to follow, goes roughly like this. At least as it is taught in standard Euro-American intellectual history (e.g., Cassirer, 1923; Habermas, 1991), any followable conception of self or personhood necessarily presupposes some summing across the inevitable changes that time has in store for each of us. Any account of selfhood that lacked provisions for linking each of us up with the persons we have once been, and are now in the process of becoming, would, consequently, prove fundamentally nonsensical.

However constitutive self-continuity may be for our ordinary adult conceptions of persons, children, it would appear, are not born into the world with their own especially high minded understanding of how such arguments in favor of self-continuity are meant to work. Rather, they tend instead to proceed only gradually and fitfully toward first one and then another increasingly mature way of warranting their own continuous identity. En route toward the construction of some acceptably grown-up way of thinking about personal persistence, children and youth regularly abandon the outgrown skins of their own still earlier ways of finding sameness within change and so, until newly refitted with some next-generation means of connecting the future to the past, are often temporarily left without a proper sense of care

and concern for the person they are otherwise in the process of becoming. Under such transitional circumstances, when self-continuity has temporarily gone missing, suicide newly becomes a "live option" for the reason that the dead person in question would scarcely count as them.

With respect to all of the prospective circumstances that are most likely to aggravate the problem of maintaining a sense of self-continuity, two difficulties, in particular, stand out as especially troublesome. One of these is composed of all those often dramatic adolescent changes that make up the usual transition to adulthood. The other is more circumstantial, and arises whenever one's culture, out of which the particulars of one's identity are necessarily composed, is also thrown into serious disarray. In either case the grounds upon which a coherent sense of self is ordinarily made to rest are cut away, life is made cheap, and the prospect of one's own death becomes a matter of indifference. These, at least, are the expectations that have brought us to the hypothesis that the steps being taken by certain First Nations communities to protect and rehabilitate the continuity of their own culture might be shown to work as protective factors against the current epidemic of suicide among native youth.

At least four things naturally follow from what has been said so far, all of which receive empirical support, either directly from the new data to be reported here, or from the larger program of research of which the present study is a part. One of these is that adolescents and young adults, who are classically understood to be undergoing a degree of personal change that seriously threatens their sense of self-continuity, should evidence a dramatically elevated rate of suicide and suicidal behavior. The second is that individual youth who are otherwise marked by a breakdown in their efforts to achieve a sense of personal continuity should be dramatically over-represented among those known to have made serious attempts on their own lives. Third, First Nations persons, who are generally acknowledged to have suffered a train of crippling assaults upon the continuity of their cultural lives should, as a group, be marked by typically high suicide rates. Finally, if lack of cultural continuity is indeed a risk factor for suicide, then First Nations communities that are actively engaged in preserving and restoring a sense of their own cultural continuity should demonstrate lower rates of youth suicide than do counterpart communities that are not engaged in such rehabilitative measures. The first and third of these propositions (i.e., that suicide rates will be dramatically higher for young persons, and for those whose culture is under siege) have so frequently been demonstrated to be true that they now constitute old news. The remainder (i.e., that suicidal adolescents will prove to be uniquely marked by an inability to sustain a sense of self-continuity; and that First Nations groups characterized by community efforts to achieve a greater sense of cultural continuity will show reduced suicide rates) are largely untested, and form the subject of our own ongoing research efforts.

Before turning to the particulars of these data, however, three matters, already briefly touched upon, require being set out more clearly. First, more needs to be said to clarify what is meant here by the notion of self-continuity. Second, because it is not widely known, the already available evidence linking failures in self-continuity and self-destructive behavior needs to be reviewed. Finally, some better case needs to be made in support of our contention that self and cultural continuity are necessarily bound up together.

What is Self-Continuity?

Wary readers who find something dangerously esoteric about talk of self-continuity are well within their rights. As Harré (1979), Rorty (1976), and a host of other contemporary philosophers (MacIntyre, 1977; Wiggins, 1971) have pointed out, the job of working out how even the simplest of things, let alone impossibly complex human selves, might achieve some kind of enduring identity needs to be counted among the oldest and most intractable of philosophical problems. In light of such confusions, the wiser course might have been to stay as far away from the subject of self-continuity as possible. Or at least this would have been the case if it were not for the generally agreed upon facts: a) that the requirement that persons be seen to

persist in time is an immanent providence at work in all human affairs (Shotter, 1984); b) that the fundamental logic of the identity formation process necessarily understands each of us as self-identical (Haber, 1994); c) that a sense of personal continuity is not an elective "feature" of the self, but a "constitutive condition" of its coming into being (Habermas, 1991), and so stands as one of those things that everyone needs in some measure in order to count as a person at all (Cassirer, 1923); d) that personal persistence stands as a necessary condition over which even the term "self" could reasonably be allowed to operate (Shotter, 1984); e) that any notion of selfhood that was not held to be abiding in this diachronic sense would have no functional value in the operation of any human social order (Hallowell, 1955); and finally, f) that any society that failed to make provisions sufficient to permit the re-identification of persons across time would simply fail to function.

For philosophers, then, and for others officially charged with the task of working up generic accounts of human functioning, it all seems clear enough: any claim to selfhood that does not include some measure of self-continuity is fundamentally nonsensical (Luckman, 1976). What about putative owners of selves like you, like us? If losing track of one's self-continuity is to somehow figure as a reason in any chain of mental events leading to a decision to take one's own life, then it would also need to be experienced, one might suppose, as a personal necessity. Although, as Lifton (1974) points out, self-continuity may not always be an ordinary part of one's moment-by-moment conscious awareness, such convictions do appear to underlie and support the tone and quality of one's self-awareness. This is especially so, it is widely supposed, during times of crisis and transition when threats to one's continuity are most in evidence (Barclay & Smith, 1990). On such occasions—when, for example, we are brought up short by seeing an old photograph of ourselves, or by the recognition that we have just behaved in a way that was once deeply out of character—all of us do evidently feel the need to scramble for some discursive means with which to argumentatively redeem the implicit claim that, through thick and thin, we somehow go on being self-same. That is, all appearances to the contrary aside, we go on being committed to the proposition that the seemingly discontinuous bits that together form the archipelago of our changing selves are somehow either structurally equivalent, or otherwise functionally interchangeable.

If, each of us is under a primary definitional obligation to repeatedly work out some justificatory means of warranting our belief in our own personal persistence, then the prospect is raised that, as young persons develop more workable conceptions of their own identity, their ways of warranting their convictions about self-continuity might also change apace. At least, this has served as a guiding prospect in our search for possible age-graded changes in the ways that children and adolescents ordinarily think about their own and other people's personal persistence. So far, we and our co-workers (Ball & Chandler, 1989; Chandler & Ball, 1989; Chandler, Boyes, Ball & Hala, 1986; Chandler & Lalonde, 1994; Chandler & Lalonde, in press) have taken up such matters with upwards of 200 young persons. While this is not the place for a detailed recounting of the precise methods and procedures followed in these several studies, the broad outlines of our findings are clear enough. When apparent disjunctures in their self-presentations were pointed out, our young subjects of every age quickly came forward with what they took to be good reasons as to why such evident changes could be discounted in ways that left untouched what they judged to be the underpinning continuities of their lives. Middle school children, for example, believed themselves to be self-same because of the simple existence of one or more personal attributes (e.g., same name, same fingerprints, etc.) that were thought to stand apart from time. Older adolescents, by contrast, more often found commonalties either: a) by hypothesizing underpinning genotypic personality characteristics thought to be capable of bridging the merely phenotypic changes they judged to have taken place in their more outward appearances; or b) by seeing functional relations thought to make their own pasts the "causes" of which their present identities were the "effect."

These studies have led us to distinguish a half dozen strongly age-graded ways in which the young subjects of our earlier research commonly reasoned aloud about their own personal persistence through time, and differently defend the conviction that they necessarily extend forward and backward in time in ways that leave them responsible for their own pasts and committed to their own futures. Setting aside the details about how all of these distinctive ways of thinking about self-continuity can be ordered in terms of their formal adequacy, or shown to co-vary with other developmental accomplishments, the essential point is that, with exceptionless regularity, all of these young subjects were committed to the necessary importance of, and found some conceptual means of succeeding at, the task of weaving a continuous thread through the various episodes of their own and others' lives. What makes this otherwise uniform achievement somehow deserving of special attention here is that, with almost the same regularity, adolescents who were also actively suicidal ended up distinguishing themselves by utterly failing in their efforts to find any personally persuasive means of warranting their own self-continuity in time.

What is the Relation Between Failures in Self-Continuity and Self-Destructive Behaviors?

The foregoing account of the changing ways that young persons ordinarily succeed in warranting their own self-continuity could be substantially correct without, at the same time, actually making any real contribution to our understanding of adolescent suicidal behaviors in general, or the extraordinarily high rate of youth suicide in certain First Nations communities in particular. Among the several reasons to suppose otherwise, two in particular stand out as especially relevant here. One of these arises out of the good prospects that problems in self-continuity hold out for making conceptual sense out of the otherwise paradoxical fact that, with all of life's potential sweetness full upon their lips, it is adolescents who, more than any other age group, are quickest to take steps to end their own lives. The other is more straightforwardly empirical, and turns on the existence of a substantial body of new evidence demonstrating that suicidal adolescents are in fact uniquely characterized by a thoroughgoing inability to warrant their own continuity in time.

Why do adolescents show dramatically elevated rates of suicidal behavior?

The general problem of finding some objective way of accounting for the fact that adolescents engage in self-destructive behaviors at rates variously described as some 20 to 200 times greater than any other age group (Hendin, 1982; Petzel & Cline, 1978) is that no one other than another adolescent could ever be persuaded that "the slings and arrows of outrageous fortune" actually do rain down more heavily on teenagers than they do upon the rest of us. What does appear to be the case, however, is that the sharply accelerating rate of developmental change routinely understood to be the fate of adolescents does in fact confront them with more than their fair share of difficulties in repeatedly re-engineering new ways of counting themselves as somehow persistent through time. That is, *if* navigating the usual course of identity development necessarily requires tacking one's way back and forth between one qualitatively different self-continuity warranting strategy and the next, and *if*, while momentarily "between stays," one is at special risk to temporarily going adrift by losing any workable sense of self-continuity, *then* the prospect arises that, adolescents, more than most, will also end up losing all proper care and concern about their own future well-being. It is during these periods of selflessness that the momentary self-destructive impulses, often triggered by life's routine hardships, become emptied of their ordinary personal significance, and that suicide suddenly becomes an actionable possibility.

In view of all that has just been said, our own general explanation for the remarkably elevated rates of suicidal behavior characteristic of the adolescent period is roughly as follows. Momentarily plagued by what we often later judge to be trivial problems, few of us remain entirely free of occasional suicidal thoughts (Ross, 1985; Rubenstein, Heeren, Housman, Rubin & Stechler, 1988). All such transient self-destructive impulses notwithstanding, few of us ever

seriously act on such inclinations, primarily because we understand that the person who would be hurt or lost would be us. Suicide, when it really becomes a live option, does so, we propose, primarily for those who have lost a sense of connectedness to their own future. Finally, it is adolescents, we suggest, who are most repeatedly put at risk to such hazards, all for the reason that the normal course of their identity development naturally serves to careen them from one self-continuity crisis to another. There are several potential merits to this account that are all seen to lie in the facts that it means to succeed: a) by linking suicidal behaviors to hazardous but transitory developmental *processes*, rather than fixed suicidal *traits*, it renders the often ephemeral nature of suicidal behavior more understandable; b) by tying self-destructive urges to often short-lived transitions in the usual course of identity development, it helps to explain the fact that such self-destructive urges are most often acted upon during times of rapid developmental change; and c) by finding a way to understand how it could be that suicidal persons actually succeed in circumventing those usual inhibitions that otherwise operate to block the possibility of self-harm.

An empirical case in point

What is required in order to lift all that has just been said above the rank of mere speculation is some solid demonstration that suicidal adolescents are in fact especially marked by at least a transient inability to successfully count themselves as numerically identical, and thereby continuous with their own past and future selves. The available data in support of this proposition is contained in a series of published reports (Ball & Chandler, 1989; Boyes & Chandler, 1992; Chandler, 1994a; Chandler, 1994b; Chandler & Lalonde, 1994; Chandler & Lalonde, in press; Noam, Chandler & Lalonde, 1995) detailing a series of comparisons between actively suicidal adolescents and their psychiatrically hospitalized and non-hospitalized peers. In each of these publications, data are presented that lend strong support to the theory driven expectation that, in contrast to their <u>non</u>-suicidal age-mates, actively suicidal adolescents are clearly and uniquely marked by their inability to successfully understand themselves as somehow continuous in time. Stripped down to the barest of details, what these studies demonstrate is that psychiatrically hospitalized but non-suicidal adolescents, while less mature in their efforts to warrant their beliefs that they are continuous, were, nevertheless, always able to find good reasons as to why the person they once were, and the person they were en route to becoming, still qualify as related instances of the self-same numerically identical person. In sharp contrast to those still ready to go on living, however, more than 4 out of every 5 (84%) of the approximately 50 actively suicidal adolescents so far tested completely failed in their efforts to find any grounds whatsoever for warranting the necessary conviction that they are numerically identical through time, or in any way connected to their own prospective future. Viewed in relation to a research literature largely devoted to the apparently circular demonstration that suicidal individuals of all ages also feel helpless or depressed, these findings hold out the promise of offering some conceptually coherent means of understanding, not only the self-destructive acts of particular suicidal individuals, but of making sense of the alarmingly high incidence of attempted and completed suicides among adolescents as a group. What is left unaddressed by these comparative data are any of the possible reasons that might explain why, for many groups of First Nations adolescents and young adults the demonstrated suicide rate is several hundred times still higher than that of their already suicide prone non-native age mates.

From Self- to Cultural Continuity

The conceptual account of suicidal behaviors outlined in the preceding pages offers a way of understanding how it is that radical changes to the hardware of one's personal identity (e.g., dramatic changes in physical appearance, personality organization, etc.) can overload existing cognitive mechanisms responsible for the maintenance of a sense of self-continuity, resulting in an image of the future that no longer counts as one's own. On this account adolescents are put in double jeopardy, both because their lives are often a kaleidoscope of radical change, and

because their developing strategies for warranting self-continuity often prove inadequate to the task. While this provides a way to understand the dramatic increase in suicidal behavior known to occur during the adolescent years, there is nothing about this explanatory account that restricts its applicability to those personal changes brought on by the turmoil of the teenage years. Rather, the stuff of which potential continuities and discontinuities are made tends to arrive from any and all quarters, including the cultural quarter.

Like other potential sources of continuity and discontinuity, cultures too appear to be double-edged swords. At least when they tended to outlive the people who populated them, cultures offered a more "mythic" time-frame that could be relied on to lend a certain age to things. Even now, when cultures seemingly wink in and out of existence, they still appear to sometimes work in the service of self-continuity by holding our noses to a grindstone of social responsibilities and cultural promises during our own moments of developmental transition. At least this is possible when they are working well. In other times and places, cultures appear to be more a part of the problem than the solution. Certainly this appears to be the case with the various cultures that make up BC's First Nations. Here, in addition to all those factors that ordinarily work to undermine cultures and promote their "natural" deaths, the massed forces of government have also actively disassembled aboriginal culture as an explicit matter of official policy (Titley, 1986). If simple job or marital instability is enough to heighten one's risk to suicide (Maris, 1981; Sakinofsky & Roberts, 1985), then what are the prospects for self-harm when one's whole culture is officially condemned, one's religion is criminalized, one's language is forbidden, and one's right to rear and educate one's children suspended?

No one seriously doubts that all of these social factors contribute to the fact that, as a group, First Nations people commit suicide at rates that are, by various estimates, some 3 to 5 times greater than that of the non-native population (Cooper, Corrado, Karlberg & Pelletier Adams, 1992; Kirmayer, 1994). Unfortunately, the certainty ends here. What is not at all clear is just how the difficult circumstances of most aboriginal people (inadequate income, education, housing, health care, nutrition, etc.) are converted into the deeply private reasons that lead only some to intentionally take steps to end their own lives. While epidemiological studies are ill-suited to deal with such ultimate questions, they can identify various risk or protective factors that might distinguish First Nations communities that are marked by high and low suicide rates by focusing attention, as we do here, on those variables that address the problem of self-continuity on a cultural level.

To do this we have chosen to proceed in two steps. Part Two of this account, that immediately follows, begins this process by first situating each of BC's 196 First Nations bands along a continuum that differentiates those with low and high rates of youth suicide. Part Three examines a series of cultural factors that, if present, could potentially serve to help insulate the adolescents and young adults within First Nations communities from the risk of suicide, by working to preserve or rebuild in them a more robust sense of cultural continuity.

PART II

Rates of Youth Suicide Among BC's Aboriginal Bands

British Columbia occupies a land mass comparable in size to all of Western Europe. The indigenous peoples living within this highly varied and often geographically isolated pattern of ecosystems have spent upwards of 10,000 years situating themselves with regard to their own local circumstance. Different languages, kinship patterns, religious beliefs, and economic practices (to name but a few) have naturally sprung up, making the whole of this province's First Nations a cultural collective only in the most abstract of statistical senses. While the overall rate of suicide for this population of diverse peoples is some 3 to 5 times higher than that for the country as a whole, such summary figures obviously make no real human sense when applied to any given community of First Nations persons. What is needed instead, as a first step toward any real understanding of suicide in the lives of aboriginal people, is some much more

fine-grained look that begins by examining the rates of suicide that hold for different self-identified cultural groups.

Method

Information on every act of suicide recorded in the province of British Columbia for the years 1987-1992 was provided by The Office of the Chief Coroner of British Columbia, and included: age, gender, date of death, cause of death, means of death, and associated factors (alcohol, drug involvement, etc.). This data also permitted each suicide to be identified as either "Native" or "Non-Native."

Although every attempt was made to ensure the accuracy of these data, two potentially significant sources of error should be acknowledged. First, when there is no clear and compelling reason to regard a given death as suicide, it is typically recorded as accidental, leading to a potential underestimation of the true incidence of suicide. For example, single-occupant motor vehicle accidents have been recorded as accidental deaths even when the driver was known to have been suicidal at the time of death. This fact takes on added significance when it is noted that up to one quarter of all accidental deaths are viewed by some experts as actually being suicides (Health-Canada, 1991). Further, because accidental death rates are substantially higher within the First Nations population, the effects of this under-reporting may be especially magnified.[1] In addition, there are reasons for concern that the general under-reporting of suicide common to all groups may be even more prevalent within certain First Nations communities eager to reject a perception of themselves as especially prone to suicide.

A second source of error arises from the fact that accurate data on whether or not a person is 'Native' or 'non-Native' is difficult to collect. At least three independent sources of such information exist: self-declaration, census declaration or government registration, and band membership. First, (although this is obviously problematic in the case of completed suicide), persons can, under usual circumstances, be asked to identify themselves as being of Native ancestry. While there is some evidence that Native Americans are becoming more likely to identify themselves as "Native" for US census purposes (Nagel, 1995), there is no documentation of a comparable trend in Canada, where First Nations have been known, for political reasons, to refuse to participate in census taking.

Whether or not persons consider themselves Native, however, is somewhat independent of whether the Canadian government counts them as Native in its registry of "Status Indians," entitled to certain federal benefits. Some Native persons—particularly those living off-reserve—reject this system of registration, resulting in a growing number of young Native persons who have never been registered as "Status Indians," and who consequently do not figure into estimates of the "Native" population. Finally, each Native band maintains its own record of band membership which may or may not agree with published population estimates based on other counting strategies. Even when each of these possible data sources are consulted, deciding whether a particular suicide was committed by a "Native" person is rarely a simple matter. To overcome these difficulties, the Office of the Chief Coroner routinely makes use of information provided by the family of the deceased, by social service agencies and police officers involved in the case, as well as data from other provincial government agencies in designating suicides as Native or Non-Native. For present purposes it was these best available, but still problematic designations, provided by the Coroner's Office, that were used to code persons as either Native or Non-Native.

Population Data and Suicide Rates

The population data used to calculate suicide rates in this study were collected from various branches of the federal and provincial government charged with maintaining census informa-

[11] Data provided by the BC Ministry of Health indicates that, for the period under study, deaths by what are termed "external causes" (accidents, suicide, homicide) accounted for 27.6% of all First Nations deaths compared to 7.8% of deaths in the total population.

tion and vital statistics. Basic population data were obtained from Statistics Canada for the Canadian census years 1986 and 1991. The British Columbia Ministry of Health, Division of Vital Statistics provided adjusted provincial population estimates for non-census years. Health and Welfare Canada provided further age-graded Native and Non-Native population figures for British Columbia. Comparative suicide data for the years 1986 to 1990 for the population of British Columbia was provided by The Canadian Centre for Health Information. At our narrowest level of regional analysis, we obtained age-graded population figures concerning First Nation bands and tribal councils using the Indian Registry and Band Governance Database provided by Indian and Northern Affairs Canada.

Each of the governmental agencies responsible for the sources of population data that figure into our analyses also employed their own classification procedures for identifying persons as "Native." Our own attempts to obtain accurate data were aided by the results of a special project undertaken by the BC Ministry of Health, Division of Vital Statistics. This project linked together data held by the BC Medical Services Plan, Health Canada–Medical Services Branch, and Indian and Northern Affairs Canada, in the form of a comprehensive report on aboriginal health that resulted in the most accurate Native population figures to date (Burd, 1994). These data were used wherever possible in our analyses.

Socio-demographic Data

Band & Tribal Council Affiliation

Because some of BC's bands contain too few members to support their being singled out for statistical treatment, as a corrective, we have, for certain of our analyses, followed the common practice of categorizing bands with reference to the particular "tribal council" to which they belong. For the period under study, there existed 29 cultural/political alliances generally known as tribal councils. While some of these councils are historical in character, reflecting a common language and a shared traditional land base, others are more political in nature, aligning bands that, in the past, belonged to different tribal groupings. Each suicide was classified as belonging to not only a particular band, but also to one or another of these tribal councils using data from provincial (BC Ministry of Aboriginal Affairs) and federal sources (Indian and Northern Affairs Canada).

Language Group

In a part of the data analyses to follow, attention is focused on First Nations persons arranged, not by band or band council, but rather by language group. In spite of a long history of government suppression of Native language, the First Nations of British Columbia form a remarkably diverse linguistic community representing 16 distinct language families. Classifying suicides by Native linguistic families and language groups was accomplished using data from Indian and Northern Affairs Canada, with the invaluable assistance of a recognized expert in First Nations languages, Dr. Jay Powell, professor of sociology at the University of British Columbia.

Population Density & Geographic Location

Many of the measures to be reported here are obviously influenced to some extent by the size and geographic location of the community. Sparsely populated communities in remote regions of the province, for example, will rarely be able to sustain permanent health care facilities or resident health care providers. In an effort to control for this possibility, separate youth suicide rates were calculated for communities designated as rural, urban, and remote. Furthermore, measures of population density were derived for each band and tribal council by dividing the number of separate dwelling places by the total community population.

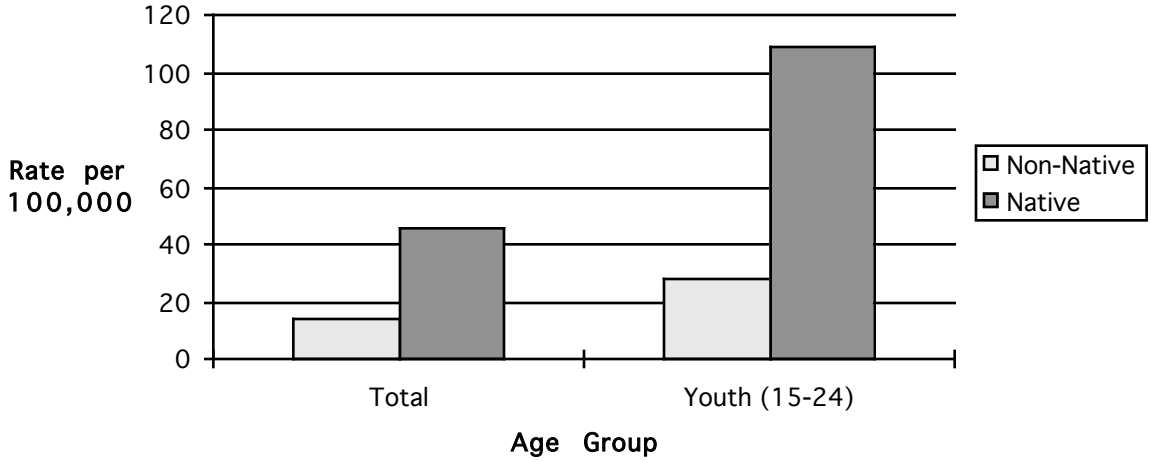
Results

Suicide Rates

In the 5-year period under study, a total of 2,495 deaths were designated by the Office of

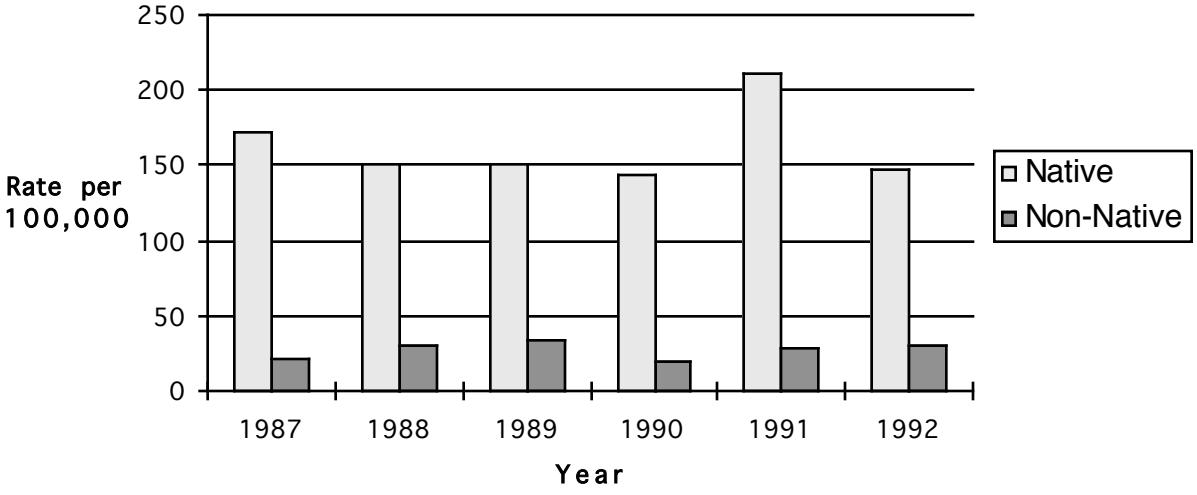
the Chief Coroner as being deaths by suicide. This represents an annual rate of 14.8 suicides per 100,000 persons in the province. A total of 220 suicides during this same period were judged by the Coroner's Office to have been committed by "Native" persons, resulting in an annual rate of 45.2 suicides per 100,000. For all young persons aged 15-24 years, the overall annual suicide rate during this period was 24.0, and for young Native persons the rate was 108.4 per 100,000. These rates are displayed in graphic form below (see Figure 1).

Figure 1: Suicide Rates in British Columbia (1987-1992)



In order to compensate for differences in the relative proportion of young persons within each population, age standardized mortality rates for 15-24-year-olds were calculated separately for the Native and Non-Native groups. Age standardized mortality rates (ASMR) allow for more accurate comparisons between groups with different age structures and reflect what the mortality rates would have been if the population in question had the same proportion of persons in various age groups as does the 'standard' population. In this case, suicide rates for both the Native and Non-Native youth of BC have been standardized to the 1991 Canadian census population. The use of these standardized rates in relation to the Native population is particularly important given that the proportion of Native youth is large in comparison to the proportion of youth in the Non-Native population. These adjusted rates, for the period 1987–1992, are shown in Figure 2.

Figure 2: Native and Non-Native Youth Suicide Rates (ASMR, 1987-1992)

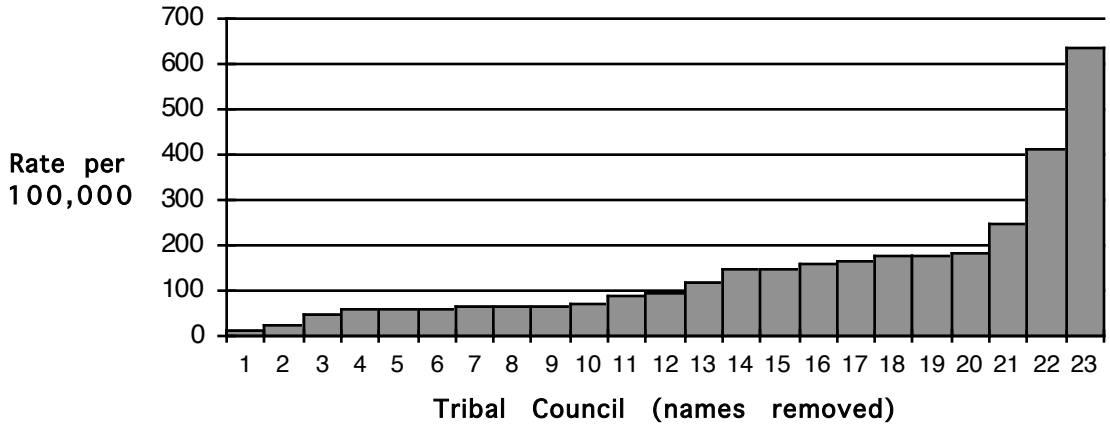


Socio-demographic Data

Political Affiliation

Although it needs to be recognized that raw suicide rates can be misleading when calculated for small populations, youth suicide rates were collected for the 196 individual Native bands under study. The resulting rates varied from 0 to 3636.4 per 100,000. When these communities were collapsed into larger groupings according to their membership in one of the 29 tribal councils within the province, rates varied again from a low of zero (true for 6 tribal councils) to a high of 633 suicides per 100,000. Because the youth population within certain of these separate groups is relatively small, and because such rates can misinform, Figure 3, which displays suicide rate by tribal council, omits the names of these councils out of our own wish to avoid identifying individual communities. The 6 tribal councils without recorded acts of suicide are also omitted from this figure.

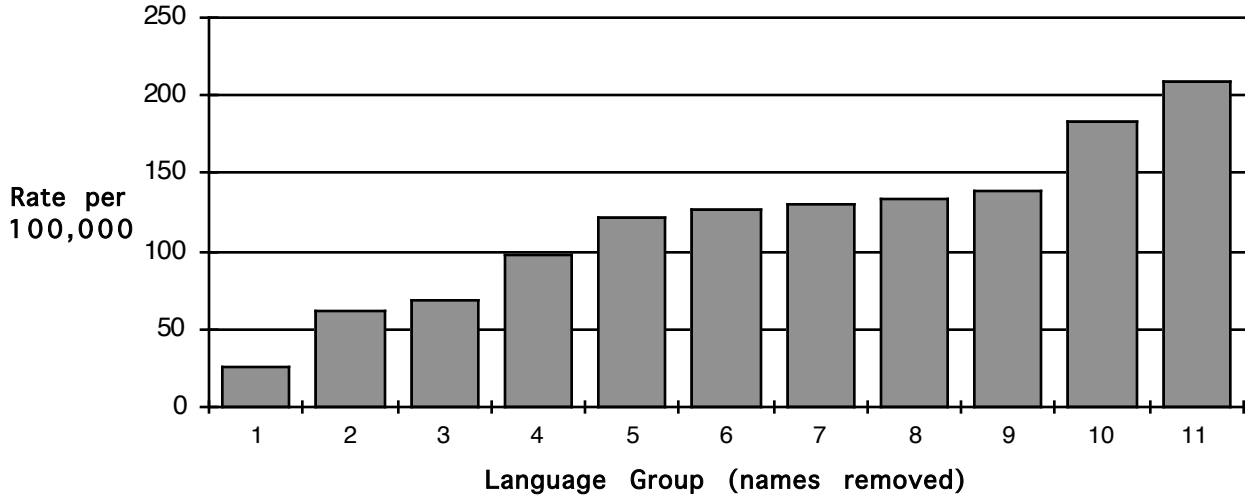
Figure 3: Native Youth Suicide Rate by Tribal Council



Language Group

When bands were classified according to language group, the observed youth suicide rate again varied quite dramatically, ranging from 0 to 208.3 suicides per 100,000. The 11 language groups with rates above zero are arrayed (again by number rather than name) in Figure 4.

Figure 4: Native Youth Suicide Rate by Language Group



Population Density

Our measure of population density resulted in a mean of 3.84 persons per dwelling structure (range=1.25–8.33). The computed correlation between the youth suicide rate and popula-

tion density was essentially zero: $r = -0.05$.

Geographic Location

First Nations youth known to have committed suicide during the study period were classified in terms of whether their band of origin was either "urban," "rural," or "remote" using a categorization scheme developed by Indian and Northern Affairs Canada which combines weighted measures of both population and geography. The categories of urban and rural differ largely with reference to the size of the surrounding population. Remote communities are those which either cannot be accessed by road (but only by air or water), or, when roads exist, where year round access is problematic. The rates of youth suicide for communities of these 3 types were as follows: Urban = 147.4; Rural = 95.1, Remote = 78.2. Because the "urban" category included many communities that are located at the periphery of major metropolitan areas, without literally being an immediate part of a true city-scape, an attempt was made to further distinguish those bands that existed "on the apron" of a city, from those more fully inside a true metropolitan area. Although the data are incomplete, the figures available suggest that the bands located within truly urban communities actually had substantially lower rates of suicide than did those for which the "lights of the city" were only on the horizon.

Discussion

Two things are evident from the data summarized above. The first is that when the suicides of First Nations youth known to have occurred during the study period are arranged in terms of their tribal communities of origin, it becomes startlingly clear that no generalizations about the overall suicide rate of BC's First Nations are possible. For over half of the communities studied (111 of 196) there were no known suicides during the targeted 5-year period, while the remainder contains communities which suffer rates of youth suicide some 500 to 800 times the national average. Obviously, if there is something about the lives of certain First Nations communities that is conducive to, or serves as a protective factor against suicide, it cannot be something that is equally true for all First Nations people.

The second point to be made is really a codicil to be attached to the first. Because many of BC's Native bands are small, even a single suicide can have a dramatic effect upon rates that are commonly calculated as a ratio of incidence to a base of 10,000 or 100,000. The possibility, therefore, exists that the variability in suicide rate by band, in which we are putting so much store, is actually no more than a statistical artifact being driven by the coincidental placement of a real but small number of suicides within a set of particularly small communities. Several things speak against this dismissive interpretation. The categorization of bands in terms of their placement along a dimension of increasing urbanization, for example, similarly counts as a demonstration of intra-band variability, as does the fact that major differences in suicide rates also characterize the 16 different language communities that cut across the provinces' various bands. Finally, collapsing 196 bands into the 29 different tribal councils that serve to federate them similarly has the effect of substantially increasing the size of the populations being considered, yet does so without introducing any appreciable change in the overall picture. On these grounds it was concluded that the dramatically different rates of youth suicide that characterize these First Nations are not artifactual, but represent a real fact in the world that holds out the promise of helping us to better understand what it might be about life in certain Native communities that is conducive to suicide, or serves as protection against it.

PART III

Associations Between Youth Suicide Rates and Measures of Cultural Continuity.

The entire program of research, of which the present epidemiological study is a part, has been driven by the theory-laden assumption that the problem in understanding suicidal behaviors is not one of appreciating why it might occur to people to end their own lives, but rather why it is, given the likelihood that such impulses tend to be commonplace, that most people, most

of the time, end up choosing life. The short answer, we have suggested, is that because it is constitutive of what it means to have or be a self to somehow count oneself as continuous in time, we end up showing appropriate care and concern for our own well-being precisely because we feel a commitment to the future self that we are en route to becoming. By these lights, people end up being at special risk to suicide whenever they are unable, for whatever reason, to successfully count themselves as continuous. Difficulties in warranting one's own self-continuity potentially arise from several quarters. Quite apart from whether they are members of Canada's First Nations, young people are at heightened risk to suicide for the double-barreled reason that they are both: a) still in the process of acquiring the full compliment of ways used by more mature adults to find self-sameness within difference; and b) because many of the fixities of their lives are in the process of being radically altered by the sweeping changes that regularly mark the adolescent period. While, as we have suggested, all this may be sufficient to account for the elevated suicide rates known to characterize adolescents and young adults in general, and to help pick out which particular adolescents are most likely to personally manifest these risks, it does not, without further extension, also explain the additional burden of risk that Part II of this report has shown to be visited upon the young members of certain First Nations bands.

The hypothesis that this third and final part of our report is meant to test is that some First Nations communities, but not others, succeed in providing their members with an otherwise missing measure of cultural continuity, essential to understanding themselves as connected to their own past and building future. If this is true, then it ought to prove possible to identify within such communities various markers of cultural continuity that are missing in other communities that have much higher suicide rates. The balance of this section describes our efforts to identify such potential markers of cultural continuity and to test their efficacy as protective factors against youth suicide.

Method

If one were free to order up in advance some commonly agreed upon measure of cultural continuity, then the task at hand would have been much easier than it proved to be. As it was, two factors in particular complicated our task. One of these was that, rather than starting with purpose-built marker variables of our own design, we were obliged to work with the kinds of information routinely collected by various government agencies, and to jerry-build a set of after-the-fact proxy variables meant as indirect measures of cultural continuity. Second, and as already indicated, the cultural life of the First Nations of BC has been so undermined by government policies and practices explicitly conceived as ways of systematically rooting out all traces of aboriginal culture that much of what remains is not so much continuous cultural life, as an attempt to reconstruct it. As such, our criteria for what could count as continuity needed to be expanded to include evidence of efforts on the part of communities to preserve, rebuild or reconstruct their culture by wrenching its remnants out of the control of federal and provincial government agencies.

In the end, we settled on a small handful of variables that were generally available and that could be reasonably counted as markers of attempted cultural rehabilitation. These included: a) evidence that particular bands had taken steps to secure aboriginal title to their traditional lands; b) evidence of having taken back from government agencies certain rights of self-government; evidence of having secured some degree of community control over c) educational services; d) police and fire protection services; e) and health delivery services; and finally, f) evidence of having established within their communities certain officially recognized "cultural facilities" to help preserve and enrich their cultural lives. Each of these proposed marker variables is further specified below. Our hypothesis was that, to the extent that each of these "protective factors" was present in a given community, some quanta of cultural continuity would be added in place, and some reduction in that communities' overall suicide rate would occur.

Markers of Cultural Continuity

Land Claims

Although a federal-provincial process of lands claims negotiation is currently underway in BC in which all First Nations are meant to participate, bands differ in the extent to which they were involved in pursuing land claims prior to the establishment of this province-wide settlement process. With the assistance of the Federal Treaty Negotiations Office and the BC Treaty Commission, we obtained up-to-date data on the status of land claims negotiations for all Native groups in the province. On the basis of these data, each of BC's First Nations communities were classified as having taken, or not taken, early steps to actively secure title to traditional lands.

Self-Government

The Self-Government classification recognized those few bands that, irrespective of having begun their land claims efforts early or late, were nevertheless especially successful in their negotiations with federal and provincial governments in having further established their right in law to a large measure of economic and political independence within their traditional territory.

Education Services

Communities differed widely in terms of the arrangements made with local and provincial education authorities for the purpose of schooling their children. In the 1980s, changes were made to the various federal and provincial laws concerning the funding of education services to Native children residing on reserves. These changes included provisions that allowed individual bands to exercise some control over education funding through agreements negotiated with local school districts. While the details of these individual agreements were not easily available, one effect of this process could be measured by calculating the percentage of community youth who attended band administered schools. Data derived from Indian and Northern Affairs Canada were used to divide communities into those in which the majority of students either did or did not attend a band school.

Police & Fire Services

Data concerning band control of police and fire protection services were compiled from a number of sources. For smaller Native communities that are located at some considerable distance from major population centers, fire protection services are often controlled by the band. In other instances, the band will have the option of utilizing the services of a fire department located in a nearby non-native community. Control over these services was measured largely in terms of community ownership of fire fighting equipment. Although general policing services outside of large metropolitan areas in British Columbia are provided by the federally controlled Royal Canadian Mounted Police, Native communities in BC have, in varying degrees, adopted local community-based law enforcement programs. Data on these local efforts, provided by Indian and Northern Affairs Canada, permitted bands to be classified as having or not having substantial control over their police and fire protection services.

Health Services

Although efforts are currently underway at the federal level to fully transfer control of health services to individual bands, large differences continue to exist in the extent to which health care services are managed by Native communities. At the time our data were collected, communities could be rough-sorted into those that exercised some direct measure of control (e.g., funding provided for permanent health care providers within the community), and those that had little or no such control (temporary clinics and 'fly-in' care providers, or services rendered outside the community). These data were provided by the BC Ministry of Health and by Indian and Northern Affairs Canada.

Cultural Facilities

Community profile data from Indian and Northern Affairs Canada and information obtained directly from individual band offices was used to calculate the number of communal facilities located in each community. A community was said to contain "cultural facilities" if a single facility was specifically designated for cultural use either in centrally held government records, or, if the existence of such a facility was confirmed by officials contacted within the community.

Summing Across Cultural Factors

A final data reduction step involved simply counting up the number of markers that were present in each community. Each community was then assigned a score from 0 to 6 and a final set of youth suicide rates were calculated for these 6 groupings.

Results

Markers of Cultural Continuity

Self Government

Although 12.3% of all Native youth (2,201 of 17,902) reside in communities that enjoy some measure of self-government, this factor appears to provide the greatest protective value with an estimated 102.8 fewer suicides per 100,000 youth within communities that have attained self-government against those that have not (18.2 vs. 121.0 suicides per 100,000). Comparative suicide rates for this and other cultural factors are shown in Figure 5.

Land Claims

While the majority of youth suicides (50 of 97, or 51.5%), and the majority of the youth population (64.3%) are to be found within communities marked by long standing efforts to exert control over their traditional land base, the rate of suicide within these communities is substantially lower: 86.8 vs. 147.3 suicides per 100,000.

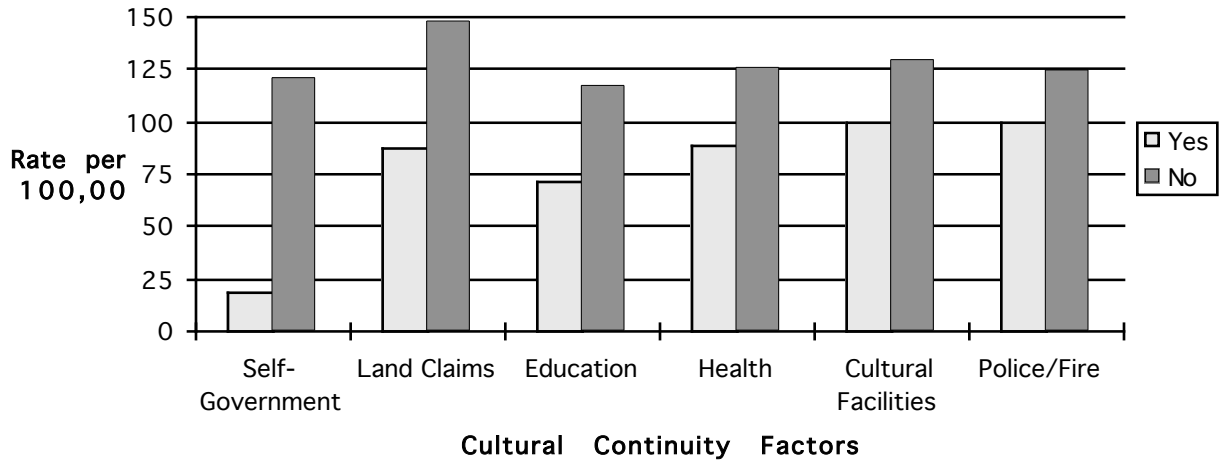
Education

Similarly, while just 21.8% of the youth population live in communities in which a majority of children are known to attend band controlled schools, only 11.3% of all youth suicides occur in such communities, the difference in suicide rates between communities that do and do not have such educational systems in place is substantial: 71.1 vs. 116.2.

Health Services

A slight minority of the youth population (46.4%) live within communities that have some measure of control the provision of health care services and, as expected, an even smaller percentage of youth suicides (38.1) occur in such communities, resulting in comparative rates of 89.0 and 125.1.

Figure 5: Youth Suicide Rates by Cultural Continuity Factors



Cultural Facilities

The percentage of suicides within communities that contain cultural facilities was lower (56.7) than the proportion of the population that reside in such communities (61.7) resulting in lower overall suicide rates: 99.4 vs. 128.7.

Police & Fire Services

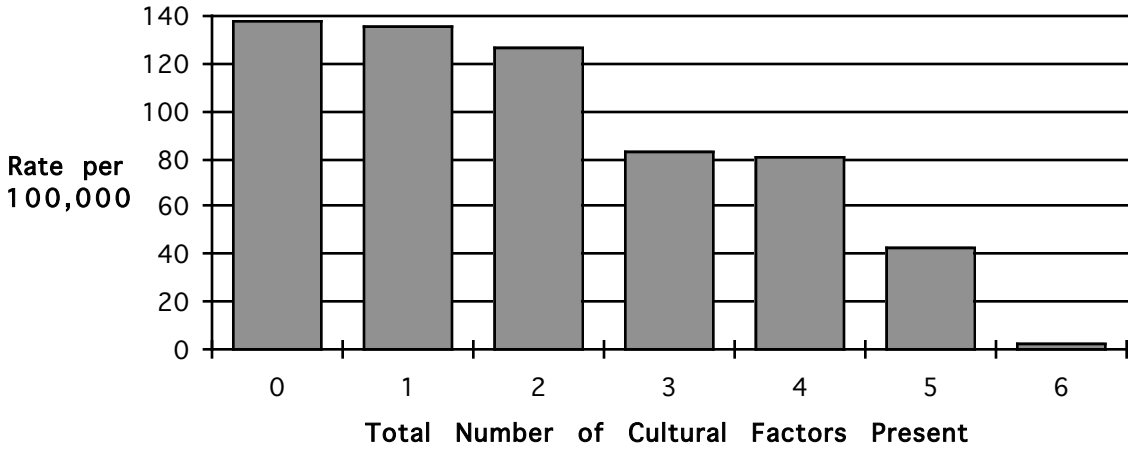
Finally, communities that control police and fire services contain 62.1% of all Native youth, but account for only 56.7% of all youth suicides, resulting in suicide rates of 99.0 and 123.7.

It should be noted that the comparative suicide rates reported above are, in every case, derived from data sets that cover the entire population of Native persons in the province of British Columbia and, therefore, reflect exact population parameters rather than sample estimates of Native youth suicide. Consequently, inferential statistics of the sort often employed as a hedge against the possibility of having drawn non-representative samples are inappropriate. Rather, these comparative rates are best judged by standards of practical or clinical significance, and considered as "cases in point" when viewed in relation to possible comparison groups. As illustrated in Figure 5, the presence of each of the factors was associated with a lower incidence of suicide. These findings were then quantified as a percentage reduction in the relative risk of suicide within the group of communities in which the factor was present. The presence of Self-Government, for example, resulted in an 85% reduction in the relative risk of suicide. For the remaining variables, the percentage reduction in relative risk were: Land Claims 41%; Education 52%; Health 29%; Cultural Facilities 23%; and Police/Fire 20%.

Summing Across Cultural Factors

To assess the overall effect of these markers of cultural continuity, each community was assigned a single point for each factor present and thus a total score varying from 0 to 6. The resulting suicide rates that attach to these scores are displayed in Figure 6, and ranged from a high of 137.5 for communities in which none of the factors were present, to zero (no suicides within the 5-year study window) for communities in which all 6 factors were present. The additive effect of these cultural factors was examined using a chi-square model of linear trends in proportions. The analysis revealed a strong linear relation between suicide risk and the number of factors present ($\chi^2_{[6]} = 10.042$, $p < 0.002$).

Figure 6: Youth Suicide Rates by Number of Factors Present in the Community



Taken together, these results are abundantly clear: First Nations communities vary dramatically in the rates of youth suicide that they evidence, and these differences are strongly and clearly associated with a group of predictor variables or protective factors meant to index the degree to which different bands are engaged in community practices that work to help preserve and restore their Native cultures.

CONCLUSION

Our aim in the present research report has been to demonstrate that the risk of suicide in First Nations youth is strongly associated with the ways in which these young persons undertake to construct and defend a sense of identity that allows them to survive as continuous or numerically identical persons despite often dramatic individual and cultural change. The evidence in favor of this view has unfolded in three steps, which we now briefly retrace by way of conclusion.

We began by focusing attention on what is presently understood about the place of self-continuity in the normal identity formation process and by detailing how young persons ordinarily progress through a common sequence of increasingly adequate self-continuity warranting practices. While we hold out some hope that this normative account of the developmental process, in which children come gradually and by degrees to a mature view upon the matter of self-continuity, might be of interest to developmentalists of almost any persuasion, nothing about this developmental course is directly concerned with the problem of youth suicide. The link that we have worked to forge between self-continuity and suicide hinges on the argument that young persons could, in the usual course of things, find themselves in awkward transitional moments during which they are especially vulnerable to acting upon self-destructive thoughts—a view that finds empirical support in the fact that actively suicidal adolescents are unique in their inability to offer reasons as to how they or anyone else could lay claim to any form of self-continuity whatever (Chandler & Ball, 1989). Leaving aside, at least for the moment, the potential utility of this methodology for singling out those individual young persons who might be at immediate risk of self-harm, such evidence goes some distance toward explaining why it is that young persons, whose lives seem so full of promise, are so tragically and disproportionately prone to acts of self-destruction.

While all young persons can be expected to encounter moments of heightened risk during transitions from one self-continuity warranting practice to the next (Ball & Chandler, 1989; Chandler & Ball, 1989; Boyes & Chandler, 1992), certain groups of young people, our evidence suggests, find the period of adolescence and young adulthood more dangerous than do others. The sharply elevated rates of suicide shown here to characterize some groups of First Na-

tions youth constitute a clear instance of such group differences in relative risk. In our efforts to account for these differences, we worked to navigate around those often circular suggestions that youth suicide is the result of depression, or social isolation, or other personal or interpersonal factors that sometimes accompany (but poorly predict) suicidal behaviors, by searching more directly for possible connections between personal and cultural continuity. In doing so, we struggled to avoid the familiar traps of stereotypy and blame casting by first bringing out the variability in youth suicide rates that characterize different aboriginal communities, and then by working to identify possible protective factors against suicide contained within the various efforts of BC's First Nations communities to preserve and promote a sense of cultural continuity in their members.

The first of these demonstrations served to make clear that the much-publicized fact that youth suicide is more frequent among BC's First Nations is, at best, a statistical generalization that threatens to obscure the real variability in suicide rates between various native communities. In the present study, a total of 111 bands, containing just under half of all BC Native youth, experienced no youth suicides at all in a 5-year period. The simple but sovereign truth to be found in this variability in rates is that suicide among First Nations youth cannot be explained simply by pointing to those factors that serve to distinguish aboriginal from all non-aboriginal people. To be of real value, any candidate explanation of these findings must offer some conceptual means of accounting for both this within- and between-group variability, by presenting followable reasons as to how some First Nations communities have managed to do such a remarkably good job of insulating their members from any increased risk of suicide.

Our second set of findings—meant to demonstrate that some important measure of the variability in suicide rates across Native communities is associated with their different efforts to restore and rebuild a sense of cultural continuity—constitute what we hope is a step in the right direction of searching out variables that not only have some explanatory power, but also admit to some degree of potential for change. Each of the six markers of cultural continuity employed here was found to be associated with a clinically important reduction in the rate of youth suicide. Similarly, an overall index created by summing across these different cultural factors proved to be strongly and significantly associated with reduced suicide rates (e.g., the observed 5-year suicide rate fell to zero when all six of these protective factors were in place in any particular community). Taken together, these findings offer strong support for the contention that such protective factors not only help to define the structural parameters of cultural-continuity, but also constrain the form of all counterpart solutions to the self-continuity problem that must be worked out on a more personal level.

In addition, we have every reason to suspect that our particular collection of marker variables is only a subset of what is undoubtedly a much larger array of such protective factors, the promotion of which may also hold real promise of reducing the epidemic of youth suicide within First Nations communities. What, in our judgment, particularly recommends the set of variables selected for examination in the present study is that each of these protective factors are "plastic" insofar as they represent matters over which the communities in question are capable of exercising some measure of control. Is it of any real actionable benefit for First Nations people to be otherwise told, for example, that the frequency with which their children undertake to kill themselves varies as a direct function of the degree of poverty into which the community has fallen, or the extent to which their living conditions are sub-standard? If there were some immediate road leading out of such desperate circumstances it would have already have been taken. What is obviously required instead is some real handle on the problem of youth suicide that communities can successfully get hold of, and over which they can exercise some real control.

The clear message that is sent by the evidence brought out in this report is that the communities that have taken active steps to preserve and rehabilitate their own cultures are also those communities in which youth suicide rates are dramatically lower. It is possible, of course,

that this close relation between community action and youth suicide is not causal, and that both are somehow due to some third thing, we know not what. The fact remains, however, that every band in BC that has taken all of the protective steps outlined in this report have a youth suicide rate of zero, whereas bands in which all of these community actions are missing have youth suicide rates that are 5 to 100 times the provincial average. Whatever the ultimate causal links, what this research teaches is where those interested in the problem of youth suicide might begin to look for workable solutions.

Where all of this leaves us is with a deep conviction that a better understanding of the problem of suicide in First Nations communities can only be had by focusing attention on the interface between personal and cultural change. Toward that end, we have elected to concentrate our ongoing research efforts on better detailing the process of identity formation in First Nations youth. In brief, we are pursuing three new avenues of research. First, we are working to translate our current measures of self-continuity into other, more culturally sensitive, parallel forms. This has involved an attempt to both modify our existing procedures for measuring young peoples' understanding of their own and others' self-continuity, and to search out recurrent stories drawn from within the oral tradition of the First Nations to replace the Eurocentric narratives currently in use in this measurement approach. Second, we have begun the process of establishing just how it is that markers of cultural continuity, such as land claims litigation or control of health services, could ever work their way into the actual lives of particular adolescents. Here we intend to proceed along two simultaneous fronts: first by gathering new evidence on those actual community based activities that more explicitly match what are ordinarily thought of as "cultural" practices (e.g., language use, Native curriculum, rites of passage, etc.) and then marrying this data with accounts given by adolescents of the place of these cultural efforts within their own experience. Finally, we are also engaged in an effort to reconceptualize the possible meanings of self-continuity as they might differently unfold in the lives of young persons representative of Native and non-native culture. Coming to some better appreciation of these deep-running cultural differences is critical, we suggest, to understanding and hopefully reversing the trend toward steadily increasing suicide rates among First Nations youth.

Outstanding issue	Canada's position in the FSA	NCCC's proposal to resolve outstanding issue	Solvable with Minimal Discussion	Elevated Levels of Discussion Potentially Required
1. Funding commitments	**1.** $47.8 B over 10 years	**1 (a)** The overall funding envlope required to end discrimination in First Nation child and family services and ensure it never happens again is in the ballpark of the $47.8 B Canada proposed.	✔	
		1 (b) Review of funding in draft FSA for governance. Some of these funds can be moved to the front lines.	✔	
		1 (c) Funding commitments that speak to distinct First Nations circumstances, that will include but are not limited to, remoteness issues, capacity building, actual and evience-based needs, start-up funding for new agencies	✔	
	2. Actual costs end	**2 (a)** Capital and post-majority at actuals for another 3 years, subject to review. Recognition that actuals during COVID-19 are not accurate. There are still knowledge gaps on required expenditures which may lead to marginal increases in funding envelope.	✔	
	3. Subject to annual appropriations and other approval processes required by Canada	**3.** Funding provided through guarenteed process such as statutory measures or special purposes allotments (i.e. not subject to annual appropriations or other federal approval processes).	✔	
	4. Canada not required to provide any funding after 10-year term expires	**4.** Clarification that the funding responsibility does not disappear at the 10 year mark. Canada's obligation is to ensure the discrimination is eliminated and does not re-occur.	✔	
	5. The funding methodology does not eliminate the discrimination	**5. (a)** Use of IFSD's measuring-to-thrive framework (see report) as a starting point: needs-based funding approaches that prioritize substantive equality, and which address any adverse effects related to *per capita* funding approaches consistent with the CHRT's funding principles, including substantive equality, best interests of the child, culturally appropriate, distinct community circumstances		✔
		5 (b) Creation of pools of funding for regional approaches and capacity building ·	✔	
		5 (c) First Nations and Agencies can use surpluses for capacity building based on a workplan and they can become eligible for the capacity building fund as well. This will reduce the exposure for Canada and ensure dispensed funds are able to be put to use. Funding must be sufficient to meet the principles of the Agreement and other legislative and regulatory requirements that are consistent with the principles of this Agreement (e.g., the language Act).	✔	
	6. Relied on per capita and Indian Registry System (IRS) population-based funding model, similar to the one deemed discriminatory by the CHRT. Prevention services were capped at an arbitrary amount based on incomplete study : ~$2,500	**6** First Nations and Agencies provide services to children and families wherever they reside (as per C-92 minimum standards). IRS does not capture the entire population served. Funding must not rely solely on the *per capita* formulas, especially those tied to the IRS. Parties must work towards a population framework, such as a First Nations-led census, to estimate the actual population served.	✔	
	7. Does not apply to First Nation children and families off-reserve	**7.** Extension of services at similar levels to those children who are First Nations who have been forced off-reserve due to lack of housing and services. See also 5(a).		
2. CHRT's jurisdiction	CHRT jurisdiction ends, including CHRT orders. Disute Resolution Tribunal does not have jurisdiction to order Canada to fund new components or increase funding for existing ones	Stage I: CHRT baseline orders stay in place and CHRT retains jurisdiction until the later of: (i) 5 years; or (ii) the Dispute Resolution Tribunal is established to monitor implementation of the FSA to ensure discrimination stops and never happens again.	✔	
			✔	
		Stage II: Upon CHRT jurisdiction ending, Dispute Resolution Tribunal has ability to issue legally binding orders that require Canada to take additional measures (including providing additional funding) and make systemic changes if FSA measures are insufficient to end discrimination and ensure it never happens again. First Nations legal orders and laws must be recognized and incorporated into the dispute resolution process.		✔
3. Governance	**1.** No decision-making role for Chiefs	**1.** Collapse all proposed committees in the FSA into a National Body comprised of the chiefs	✔	
	2. Membership in National Secretariat is limited to AFN, COO, and NAN	**2.** National technical secretariat, which includes NAC and EAC, to provide to support to the National Body (many of these entities already exist - these do the actual implementation work)	✔	
	3. Reform Implementation Committee members appointed by parties and required to carry out work in confidential process	**3.** Regional technical secretariats to support work of National technical secretariat	✔	
	4. Continues to rely on ISC to administer program and deliver funds	**4.** This will add to administrative costs. The Nations have existing organizations that can be engaged to support delivery.	✔	
4. Departmental reform	The Expert Advisory Committee is bound by confidentiality and was not sufficiently independent of ISC.	Canada's internal accountablity mechanism needs to be reviewed (accountability framework). The work of the EAC in reforming ISC and developing an accountability framework must be transparent and independent.		✔
4. Accountability measures	**1.** Canada requires FNCFS agencies to co-develop child and community well-being plan with the affiliated First Nation to be submitted to ISC under a deadline and subject to annual updates. There are also provisions that allow ISC to trigger audits, annual reporting, and funding reviews.	**1.** Agreement should respect accountability processes that already exist between First Nations and Agencies and agree to develop an accountability framework including development of planning and measurement provisions that at minimum, ensures the nations are informed of agency activities, promote reciprocal accountability, consistent with the Act.	✔	
	2. Canada has a facultative option to report to First Nations and the Reform Implementation Committee on an agency's compliance with the terms in its funding agreement.	**2 (a)** See 1, above. Accountability measures in Agreement must also recall that ISC, not Agencies, was held liable for discrimination. Reform must ensure that ISC is accountable to rights holders.	✔	
		2 (b) The Honour of the Crown extends to provincial governments as well on this issue. There can be no actual long-term reform without including accountability to Nations from other service providers (ie. provinces and territories for non-delegated Nations)		✔
	3. The Reform Implementation Committee, which is confidential, is the sole entity charged with making recommendations to Canada and is also responsible for overseeing and monitoring the implementation of the reform. It is staffed by ISC.	**4.** National Secretariat/Regional/FNIGC - hold ISC accountable for data collected to ensure compliance. Need solid program evaluation focused on ISC compliance. Governance mechanisms must operate openly and transparently.	✔	
6. Regional variations	Regional variations for Ontario only.	**1.** Agreement must recognize and allow for funding that matches distinct community circumstances.		✔
		2. Cultural appropriateness.		
		3. Allocation for children's needs above IFSD funding.		
		4. Regional Secretariats: ISC will respect regional processes in the governance, administration and delivery of First Nations child and family services as determined by First Nations rights holders, consistent with C92.	✔	
7. C-92, treaty, and self-government	Funding will not be less than what would be provided for services funded under the FSA	**1.** Canada required to recognize the right to jurisdiction, and Crown responsibilities. Canada must ensure that any agreement (C-92, treaty, or self-government agreement) signed with First Nations discharges Canada's obligation to stop the discrimination and ensure it does not reoccur.		
		2. Must recognize different pathways to jurisdiction.		
		3. Canada cannot contract out of its human rights obligation.		
		4. Canada must discharge its Honour of the Crown		
8. Confidentiality	**1.** Information from FSA implementation must be kept confidential. **2.** Confidentiality extends to discussions and communications surrounding negotiations according to the agreement in principle.	**1. AND 2.** The starting premise for long-term reform must be openness and transparency. All negotiations and information relating to implementation of an Agreement should be, to the maximum extent possible, transparent. Transparency ensures accountability. Transarancy and accountability, together, help end discrimination and prevent its reoccurence.	✔	
9. Definitions and Principles	Principles did not include the Honour of the Crown, Intergenerational equity	Add to the Principles and definitions.	✔	
10. Term	Proposal: Canada confirms that the Honour of the Crown applies to the negotiation of long-term reform and the implementation of the ultimate agreement	This should be an evergreen agreement with a statutory basis. It is understood Canada has standard procedures for financial commitments in place: Treaty is by definition not a standard operating procedure.	✔	

This is Exhibit "11" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

Funding Guidelines
Human Rights

(Current as of 1 October 2024)

Table of Contents

1. **Maximum funding** 2
2. **Effective date of funding** 2
3. **Approved budget** 3
4. **Additional funding** 3
5. **Extraordinary funding** 3
6. **Review of funding** 4
7. **Eligible expenses and maximum billable amount** 4
8. **Timelines** 6
9. **Submission of invoices to the CCP** 6
10. **Reporting to the CCP** 6
11. **Holdback amounts** 8

These funding guidelines set out conditions related to funding granted by the Court Challenges Program ("the CCP"). These guidelines form part of the funding agreement between recipients and the CCP and all funding recipients are required to following these guidelines.

1. Maximum funding

1.1. The CCP's Human Rights Expert Panel has established a scale of maximum amounts that may be granted in each funding category:

1.1.1.	**Development of test cases**	$20,000
1.1.2.	**Litigation**	
	Trial	$200,000
	Motion for leave to appeal	$25,000
	Appeal	$60,000
1.1.3.	**Legal interventions**	
	Application for leave to intervene	$10,000
	Intervention	$40,000
1.1.4.	**Accessibility funding**	$5,000

Any request for accessibility funding must be made in writing and must include:

a) A detailed explanation of the request; and

b) A projected budget for the amount of accessibility funding requested.

1.2. If a recipient has received funding to develop their test case and subsequently applies for litigation funding, the amount granted to develop the test case will be deducted from the maximum amount available for litigation. This provision only applies to applications made after December 12, 2019.

1.3. The maximum amounts provided for litigation and legal interventions are applied separately to each level of judicial proceedings. Accordingly, separate applications for funding must be presented at each judicial level. However, interlocutory appeals arising in a litigation case funded at the trial level will not generally be eligible for appeal funding, unless the interlocutory appeal raises a distinct and separate *Charter* issue. Expenses related to interlocutory appeals will usually be eligible for reimbursement from the trial funding envelope.

1.4. In general, a single envelope of litigation – trial funding will be allocated for all levels of administrative proceedings, including first-level judicial review, up to the point at which such proceedings reach a court of appeal.

2. Effective date of funding

2.1. Only expenses incurred following the submission of the funding application will be reimbursed. As such, recipients may only request reimbursement of expenses incurred on or after the date on which the CCP received the funding application.

2.2. Only the expert panel in charge of the funding application has the discretionary power to set another effective date of funding and the following conditions must be met:

a) The Applicant must make a written request for an alternate effective date of funding; and

b) The Applicant must demonstrate that the circumstances require a date of funding other than the date on which the CCP received the funding application.

3. Approved budget

The CCP acknowledges that the approved budget contains an estimate of costs and that actual costs may differ. Funding applicants must disclose all other proposed sources of funding, whether contributions in cash or in kind, including any funding from all levels of government, towards any activity targeted by the applicant that concerns the case funded by the CCP.

4. Additional funding

4.1. In all funding categories, recipients who initially received an amount less than the maximum for the category in question (see section 1, “Maximum funding”) and who, during the course of the project, encounter needs requiring greater financial resources, may apply for additional funding, up to the set maximum in force for that funding category.

4.2. The following conditions must be met when submitting an application for additional funding:

a) The submission must include a detailed explanation of the reasons for the request;

b) The file must be up to date, both with respect to the state of incurred expenses and the obligations under the funding agreement; and

c) A draft budget for the additional amount requested must be attached.

4.3. Any modification to the total amount of funding granted must be approved by the expert panel in charge of the funding application.

5. Extraordinary funding

5.1. In the context of **litigation – trial funding**, recipients who were granted the maximum for that category (see section 1.1.2) and who, during the course of the case, encounter exceptional circumstances requiring greater financial resources, may apply for extraordinary funding, up to a maximum of $50,000.

5.2. Exceptional circumstances in this category of funding refers to extraordinary and unexpected steps in the course of litigation that have become necessary to permit the matter to be pursued for the purposes for which it was funded.

5.3. The following conditions must be met when submitting an application for extraordinary funding:

a) The recipient’s expenses incurred in the file and approved by the CCP must have reached or exceeded $150,000;

b) The file must be up to date, both with respect to the state of incurred expenses and the obligations under the funding agreement;

c) A completed extraordinary funding application form and budget must be submitted to the CCP; and

d) The application must include a detailed explanation of the reasons for the request, including the exceptional circumstances and the need for extraordinary funding to pursue the funded matter.

5.4. Allocations of extraordinary funding must be approved by the Expert Panel, which may, at its discretion, allocate an amount less than the amount requested by the recipient.

5.5. A recipient may apply for and be granted extraordinary funding more than once, where the circumstances justify doing so, up to a limit of $150,000.

6. Review of funding

6.1. CCP staff may request that the expert panel in charge of the funding application review the funding previously granted to a recipient when they are concerned that:

6.1.1. The case no longer meets the eligibility criteria;

6.1.2. The recipient has failed to comply with the funding agreement or the funding guidelines; or

6.1.3. The recipient has failed to comply with the funding conditions imposed by the Expert Panel.

6.2. Should CCP staff request that the Expert Panel review the funding, the following provisions apply:

6.2.1. The CCP staff will notify the recipient of the request for review and the reasons for the request;

6.2.2. The CCP staff will provide the recipient with a reasonable amount of time to respond to the CCP's concerns and the recipient will be invited to do so in writing; and

6.2.3. The recipient's written response will be forwarded to all members of the Expert Panel before they examine the request for review.

6.3. The CCP may freeze the funds and suspend the reimbursement of expenses until the Expert Panel has had the opportunity to review the request for review of funding. In this case, CCP staff will advise the recipient of these steps when providing them with the notification of the request for review.

6.4. Once the Expert Panel has examined the request for review and the recipient's response, they may make a decision in accordance with their Terms of Reference. Their decision may include, but is not limited to, directing the recipient to act in accordance with the conditions related to funding or to remit all unused funds to the CCP.

7. Eligible expenses and maximum billable amount

7.1. For the **development of test cases** that have the potential to assert and clarify rights covered by the CCP, expenses that are eligible for reimbursement include the following:

7.1.1. Costs related to legal research and drafting;

7.1.2. Consultation; and

7.1.3. Evidence development.

7.2. For **litigation** cases that have the potential to assert and clarify rights covered by the CCP, expenses that are eligible for reimbursement include the following:

7.2.1. Legal fees;

7.2.2. Costs related to legal research and drafting; and

7.2.3. Other costs related to presenting the case in court.

7.3. For **legal interventions** that have the potential to assert and clarify rights covered by the CCP, expenses that are eligible for reimbursement include the following:

7.3.1. Legal fees;

7.3.2. Costs related to legal research and drafting;

7.3.3. Consultation; and

7.3.4. Other costs related to presenting arguments in court.

7.4. In the case of **accessibility funding**, the CCP can only reimburse costs related to ensuring equal access to Program-funded activities, which include, for example:

7.4.1. Interpretation or translation, although expenses related to interpretation or translation between Canada's official languages are not considered eligible expenses under this category;

7.4.2. Production of documents in alternate media;

7.4.3. Travel costs for an attendant; and

7.4.4. Childcare costs.

7.5. The following are examples of the types of fees the CCP may reimburse:

7.5.1. **Legal fees**, including legal research, preparation of evidence, communications with the client, other parties, or the CCP, communications with outside consultants or experts, preparation of documents to be filed in court, preparation for court appearances, litigation fees, such as court appearances at trial or hearings, preparation of court orders;

7.5.2. **Disbursements**, including disbursement prescribed by law or regulations, transcription expenses, costs related to the service or filing of documents, interpretation and translation costs, photocopies, mail, courier, and long-distance telephone calls;

7.5.3. **External fees**, including external consultant fees (external legal counsel, strategist, communication, etc.); expert witnesses and expert reports; and

7.5.4. **Administrative fees**, including lawyer or client travel expenses; lawyer or client accommodation expenses; witness expenses.

7.6. The CCP has set the <u>maximum</u> billable amount for which the recipient may apply for reimbursement at $250 an hour before tax, per professional.

7.7. The CCP may only reimburse travel expenses in accordance with its Guidelines on Travel Expenses. The CCP does not pay for lawyers' or consultants' time spent travelling.

7.8. The CCP may pay for the time of recipients or employees of recipients, if the recipient can demonstrate that the funds are essential to the activity for which they have been approved for funding and that the recipient or employee's time has not been paid from another source. No individual or organization may incur a financial benefit from the receipt of CCP funds.

7.9. The CCP does not reimburse any costs associated with the preparation of an application for funding.

7.10. The CCP does not reimburse any costs associated with activities related to public education, community development, lobbying, political advocacy, or media.

7.11. Any other expense will be evaluated on a case-by-case basis.

7.12. All expenses, in order to be eligible for reimbursement from CCP funds, must be reasonable in the context of the funded matter.

8. Timelines

8.1. Development of test cases

Recipients must complete the development of their test case within twelve (12) months of signing the funding agreement, unless an extension of time is granted by the Expert Panel. Any such request for an extension of time must be done in writing to the CCP.

8.2. Litigation

Recipients must ensure that an application with regard to the matter funded by the CCP is formally submitted to the court within twelve (12) months following the signature of the funding agreement, if the case has not already been initiated, unless an extension of time is granted by the Expert Panel. Any such request for an extension of time must be made in writing to the CCP.

9. Submission of invoices to the CCP

9.1. Funds granted by the CCP are deposited in the trust account of the recipient's lawyer and must not be withdrawn until the CCP has expressly authorized the disbursement.

9.2. The CCP will only approve the disbursement of funds from the trust account once it has received the following proof of expenses and accompanying documents:

9.2.1. A completed CCP invoice form, including the categories of eligible expenses; AND

9.2.2. Proof of the expense, which may include:

9.2.2.1. An invoice for services rendered, prepared by the lawyer or a consultant, that must show the types of eligible expenses;

9.2.2.2. A copy of receipts for travel costs in accordance with the Travel Directive of the Treasury Board of Canada (see CCP Guidelines on Travel Expenses); or

9.2.2.3. A copy of the invoice or receipt for any other cost related to presenting the case in court.

10. Reporting to the CCP

10.1. Development of test cases

10.1.1. Progress reports

In the event that a recipient has been granted an extension of time to develop their test case pursuant to section 8.1, a progress report will be due every six (6) months from the date of the Expert Panel's decision to grant an extension of time. Reports must contain a summary of work accomplished since funding was approved or since the last progress

report. Reports must also contain sufficient information to enable the CCP to assess progress made in developing the test case, as well as a timeline for next steps.

10.1.2. Final reports

10.1.2.1. Recipients must submit two final reports to the CCP at the end of the case: the final progress report and the final financial report.

10.1.2.2. The **final progress report** must be completed using the CCP's final report form. It must contain a summary of all work undertaken or completed since the last progress report. It must also specify the outcome of the development of the test case in precise detail, including whether the recipient intends to pursue the matter before the courts. A copy of any document produced using the CCP funds in the context of developing the test case must accompany the report.

10.1.2.3. The **final financial report** must be completed using the CCP's final financial report form. The report indicates the total actual expenses incurred and provides updated information on funds from all other sources, whether contributions in cash or in kind, including any funds from any level of government, towards any activity targeted by the recipient that concerns the case funded by the CCP.

10.1.2.4. The last portion of funding will not be paid or released until the final reports and other documents requested in the final progress report are submitted and approved by the CCP (see section 11, "Holdback amounts").

10.2. Litigation and legal interventions

10.2.1. Progress reports

Progress reports must be submitted by the recipient every twelve (12) months using the CCP progress report form. The first progress report must be submitted within the twelve (12) months of the date on which the recipient signed the funding agreement. Reports must contain a summary of work accomplished since funding was approved or since the last progress report. Reports must also contain sufficient information to enable the CCP to assess progress made in the case.

If a recipient fails to deliver a progress report within these timeframes, the CCP reserves the right to withhold payment of invoices submitted by the recipient until the CCP receives the progress report.

10.2.2. Final reports

10.2.2.1. Recipients must submit two final reports to the CCP at the end of the case: the final progress report and the final financial report.

10.2.2.2. The final progress report must be completed using the CCP's progress report form. It must contain a summary of work accomplished in the case funded since the last progress report. It must also specify the results of the case in precise detail. A copy of every decision rendered by a court, any agreement, and any other final document concerning the case must accompany the report.

10.2.2.3. The final financial report must be completed using the CCP's final financial report form. The report indicates the total actual expenses incurred and provides updated information on funds from all other sources, whether contributions in cash or in kind, including costs awarded and any funds from

any level of government, towards any activity targeted by the recipient that concerns the case funded by the CCP.

10.2.2.4. The last portion of funding will not be paid or released until the final reports and other documents requested in the final progress report are submitted and approved by the CCP (see section 11, “Holdback amounts”).

11. Holdback amounts

11.1. The CCP may withhold part of the funding for a file until it is satisfied that the recipient has observed all the conditions of the funding and has complied with these funding guidelines, in accordance with section 6, “Review of funding”.

11.2. The expert panel in charge of the application may issue, in exceptional circumstances, different holdback amounts where there is a demonstrated need for the recipient to access the funds prior to the completion of the case. Such a decision by the Expert Panel must be provided to the recipient in writing.

11.3. Accessibility funding

The CCP will not hold back any amount of accessibility funding.

11.4. Development of test cases

Until the development of the test case is completed and the final reports have been received and approved by the CCP, 25% of the total amount granted by the CCP will be held back in the trust account.

11.5. Litigation

11.5.1. Until the hearing of the case has concluded or, in the event of an application for leave to appeal, that the leave application has been decided, 25% of the total amount granted by the CCP will be held back in the trust account.

11.5.2. Until the case is completed and the final reports (including the court’s decision or negotiated agreement and any other final document resulting from the case) have been received and approved by the CCP, 5% of the total amount granted by the CCP will be held back in the trust account.

11.6. Legal interventions

11.6.1. Until the hearing of the intervention has concluded or, in the event of a request for leave to intervene, that the leave application has been decided, 25% of the total amount granted by the CCP will be held back in the trust account.

11.6.2. Until the legal intervention is completed and the final reports (including the court’s decision and any other final document resulting from the intervention) have been received and approved by the CCP, 5% of the total amount granted by the CCP will be held back in the trust account.

This is Exhibit "12" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

Article 12 of the Convention on the Rights of the Child and Children's Participatory Rights in Canada

Nicholas Bala[*] & Claire Houston[**]

I. INTRODUCTION: SCOPE OF PAPER

In 1989, the Convention on the Rights of the Child (CRC) was adopted by the United Nations. Canada ratified the CRC two years later, in 1991. Although the CRC has not been fully incorporated into domestic law, its principles guide interpretation of the *Charter of Rights and Freedoms*, legislation and the common law in Canada.[1]

The CRC recognizes that children have civil, political, economic, social, health, and cultural rights. One of the most important rights in the CRC is the "right of participation,"[2] set out in Article 12. Article 12(1) recognizes the right of children capable of forming views to express those views in all matters affecting them, and directs that due weight be accorded those views, depending on the age and maturity of the child as well as the matter at issue. Article 12(2) provides for the right of the child to be heard directly or indirectly through a representative in any administrative or judicial proceeding affecting the child. Article 12 is especially important since it is one of the few provisions of the CRC that children can exercise themselves, and because it provides for children's involvement in decision-making that most directly impacts on their lives.

[1] *Baker v Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817.
[2] The term "participation" is not used in the text of Article 12 but is now generally accepted as one of the Article's principles. See United Nations Committee on the Rights of the Child, *General Comment No. 12 (2009): The right of the child to be heard*, UN Doc. CRC/C/GC/12 at 5.

Canadian courts and legislatures have recognized the CRC, and the rights of children embodied in Article 12 in particular. The importance of children's views has been directly recognized in family law, specifically in the context of child custody and access disputes following parental separation. Children's participation rights have also been recognized in proceedings respecting child protection, health, youth criminal justice, immigration, and education.

Despite the recognition in Canada of rights of children, the United Nations Committee on the Rights of the Child has suggested that steps need to be undertaken to further promote children's participatory rights in this country. In its 2012 Report on Canada, the Committee welcomed the 2010 Yukon Supreme Court decision in *G. (B.J.) v. G. (D.L.)*,[3] which cited and relied upon Article 12 to establish children's participatory rights in disputes between separated parents, a decision discussed more fully below. The Committee, however, also was "concerned that there are inadequate mechanisms for facilitating meaningful and empowered child participation in legal, policy, environmental issues, and administrative procedures that impact children."[4]

This paper provides an overview and comparative analysis of children's participatory rights in Canada.[5] Looking at legislation and case law from across the country, the paper describes and contrasts the way children's views are considered in the different

[3] *G. (B.J.) v. G. (D.L.)*, 2010 YKSC 44.
[4] United Nations Committee on the Rights of the Child, Sixty-first session, 5 October, 2012, CRC/C/CAN/CO/3-4, *Concluding Observations: Canada*, at para. 36.
[5] The focus of this paper is on the law and literature of Canada. There is, however, a large body of writing and case law from other countries that applies Article 12 of the CRC: see e.g. James Munby, "Unheard voices: The involvement of children and vulnerable people in the family justice system," [2015] Fam Law 895; Tali Gal & Benedetta Durmay, eds. *International Perspectives and Empirical Findings on Child Participation: From Social Exclusion to Child-Inclusive Policies* (New York: Oxford University Press, 2015); and Aisling Parks, *Children and International Human Rights Law: The Right of Children to be Heard* (London: Routledge, 2013).

provinces and territories, as well as across legal domains. The paper also considers how Canadian courts have interpreted and applied Article 12. Finally, drawing on recent academic articles, both Canadian and international, the authors offer some suggestions for how legislatures, courts and tribunals could further implement Article 12, thus promoting children's participatory rights in Canada.

A primary focus of this paper is on children's participatory rights in judicial and administrative proceedings. However, the scope of Article 12 is broader: Article 12 also requires that children be consulted in the development of law and policy that affects them. The paper therefore concludes with some suggestions for including children's voices in legislative and policy-making processes.

II. ARTICLE 12 OF THE CONVENTION ON THE RIGHTS OF THE CHILD

Article 12 of the CRC provides:

> 1. States Parties shall assure to the child who is capable of forming his or her own views the right to express those views freely in all matters affecting the child, the views of the child being given due weight in accordance with the age and maturity of the child.
>
> 2. For this purpose, the child shall in particular be provided the opportunity to be heard in any judicial and administrative proceedings affecting the child, either directly, or through a representative or an appropriate body, in a manner consistent with the procedural rules of national law.

Interpreting Article 12

In 2009, the Committee on the Rights of the Child published *General Comment No. 12*: *The right of the child to be heard*, which provides guidance on the interpretation of Article 12.

Article 12 is written in such a way as to place as few restrictions on children's participation as possible. Article 12(1), for example, does not limit the matters on which

children should be consulted. Similarly, while the Article only guarantees the right to be heard to a child "capable of forming his or her views," capacity is to be interpreted broadly: the Committee suggests that states *presume* a child has capacity to form views. Furthermore, capacity is not determined by age, and the Committee discourages states from introducing age limits for children's participation. Capacity does not mean a child must have comprehensive knowledge of all aspects of the matter at issue; instead, sufficient understanding of the matter is enough.

The Committee argues that Article 12 also places obligations on states to ensure that a child's right to participate is realized. It is not enough to allow children to share their views. States must *support* children who have difficulty making their views heard, such as children with disabilities and minority children, as well as *protect* children who express their views, for example child victims who testify in criminal proceedings. The environment in which children express their views matters: venues that are not accessible or child-friendly prevent children's views from being properly heard. Finally, to properly exercise their right, children must be *informed* of the context in which their views are heard, including information about the nature of proceedings and any potential decisions that may result.

Article 12 requires that children's views be heard and considered. The significance accorded to a child's views depends on his or her age *and* maturity. For the purposes of Article 12, maturity refers to the capacity of a child to express views on issues in a reasonable and independent matter. Maturity must also be assessed according to the matter at issue: the greater the impact a decision will have on a child's life, the more relevant the assessment of maturity becomes.

Article 12(2) directs that children be given the opportunity to be heard in "any" proceedings affecting them. The Committee has provided a non-exhaustive list of judicial proceedings where children's views might be heard, including those respecting "separation of parents, custody, care and adoption, children in conflict with the law, child victims of physical or psychological violence, sexual abuse or other crimes, health care, social security, unaccompanied children, asylum-seeking and refugee children, and victims of armed conflict and other emergencies."[6] Examples of administrative proceedings where the views of children could be taken into account include "decisions about children's education, health, environment, living conditions, or protection." [7] However, the Committee has indicated that the "main issues" that require a child to be heard are divorce and separation, separation from parents and alternative care, adoption, child offenders, and the child victim and child witness. The Committee has also noted that children's participation rights extend to mediation and alternative dispute resolution.

Article 12(2) provides that children may be heard directly or indirectly through a representative. The Committee recommends that wherever possible, children be given the opportunity to be heard directly. Where a child is heard indirectly, there must be no conflict of interest on the part of the child's representative.

Finally, it is important to recognize that Article 12 confers a right to express views, not an obligation to do so. Children therefore have a right *not* to exercise their right to be heard. They should not be forced to express views in matters affecting them.

Relationship Between Article 12 and Article 3

General Comment No. 12 of the United Nations Committee on the Rights of the Child also clarifies how the rights in Article 12 relate to other rights in the CRC, including those contained in Article 3. Article 3 provides, in part:

> In all actions concerning children, whether undertaken by public or private social welfare institutions, courts of law, administrative authorities or legislative bodies, the best interests of the child shall be a primary consideration.

Some commentators have suggested that Article 3 can be interpreted in such a way as to trump the rights contained in Article 12. Specifically, it has been argued that hearing the views of children may be contrary to their best interests, as it may draw them into a dispute involving their parents or other caregivers, and accordingly their views and wishes should not be solicited.[8] The Committee rejects this approach and denies that there is tension between the two Articles. It interprets Articles 12 and 3 as mutually reinforcing: the best interests of the child will be promoted where the views of the child are heard and considered. Conversely, denying a child the opportunity to be heard would seem to violate Article 3.

While there are legitimate concerns about how children are involved in legal proceedings, and children should never be pressured to express their views or preferences, there is considerable research that allowing children to share their perspectives promotes their welfare, as well as it being necessary to protect their rights. Hearing from children often provides judges, mediators, lawyers, and parents with vitally important information about their best interests. Research suggests that children generally have better outcomes if they feel that they have a "voice" in the family dispute resolution process. [9]

---

[8] This argument is reviewed in detail, and rejected in Aisling Parks, *Children and International Human Rights Law: The Right of Children to be Heard* (London: Routledge, 2013) at 58.

III. REVIEW OF CHILDREN'S PARTICIPATORY RIGHTS IN CANADA

This section of the paper reviews children's participation rights in Canada in the legal contexts which have most frequently implicated these rights. The right of children to be heard in matters affecting them has been recognized in legislation, and by judicial and administrative decision-makers. This section considers how children's voices are heard in different legal contexts and across Canadian jurisdictions. Special attention is directed to the interpretation and application of Article 12 by decision-makers in the domestic context. This section is divided into legal areas where the importance of children's views has been recognized: family disputes after parental separation, child protection, health, adoption, juvenile justice, child victims and witnesses, immigration and refugee claims, and education proceedings.

A. FAMILY DISPUTES AFTER SEPARATION

One area in which the right of children to be heard has been consistently recognized is in disputes about child custody and access following parental separation.[10] In Canada, legal rules governing the rights of separated parents depend on whether the parents were married. For married parents seeking a divorce, the relevant statute is the federal *Divorce Act*. For unmarried parents, provincial or territorial legislation governs.

"Children's Experiences with Family Justice Professionals In Ontario and Ohio" (2011) 25 Inter. J. L. Pol. & Fam. 398; Rachel Birnbaum & Michael Saini, "A Scoping Review of Qualitative Studies on the Voice of The Child in Child Custody Disputes" (2013) 20 Childhood 260; and Joan B. Kelly & Mary Kay Kisthardt, "Helping Parents Tell Their Children about Separation and Divorce: Social Science Frameworks and the Lawyer's Counseling Responsibility" (2009) 22 J. Am. Acad. Mat. L. 1401.

[10] The federal *Divorce Act* and much provincial and territorial legislation uses the traditional concepts of "custody" and "access" to describe parental "rights" after separation, and that terminology is used in this paper. However, there is much to be said for the adoption of more child-focused terms like "parenting plans," "parenting time" and "parental responsibilities." British Columbia and Alberta have enacted statutes that adopt new concepts; see Nicholas Bala, "Bringing Canada's Divorce Act into the New Millennium: Enacting a Child-Focused Parenting Law"(2015) 40:2 Queen's L. J. 425-482.

The "Best Interests of the Child" Include the Child's "Views and Preferences"

The majority of separating or divorcing parents agree on custody and access arrangements without involvement of a judge, whether by direct informal discussion between the parents, negotiation between lawyers, or through mediation. Whether or not children in such families are consulted on these matters depends on the attitude of the parents, and the approach of professionals, such as lawyers and mediators, who may be assisting them. In cases where a judge is asked to make a custody or access determination, the primary factor – whether under the *Divorce Act* or provincial or territorial legislation – is the "best interests" of the child. Canadian law has long recognized that children's views are relevant to assessing their "best interests." In most provinces and territories, judges are explicitly directed by legislation to consider the child's views and preferences in determining a child's "best interests," on which a custody or access order will be based.[11] For example, s. 37(2)(b) of British Columbia's *Family Law Act* instructs that in determining the best interests of a child for the purposes of a parenting or contact order, the court must consider all the of the child's needs and circumstances, including "the child's views, unless it would be inappropriate to consider them."[12] In a few jurisdictions, legislation is even more directive in requiring courts to consider the child's views and preferences when making an order for custody or access. In Prince Edward Island, for example, s. 8(1) of the *Custody Jurisdiction and Enforcement Act* provides that in any application under the statute, "a

[11] In Quebec, Article 34 of the *Civil Code of Québec* provides that children shall be heard in all proceedings that affect them, not just family proceedings: *Civil Code of Québec*, C.Q.L.R. 1991, c. C-1991, art. 34.

[12] *Family Law Act*, S.B.C. 2011, c. 25, s. 37(2)(b). See also e.g. Ontario *Children's Law Reform Act*, R.S.O. 1990, c. C-12, s. 24(2)(b).

court where possible shall take into consideration the views and preferences of the child to the extent that the child is able to express them."[13]

The *Divorce Act* stands alone in not explicitly providing for a child's views and preferences to be heard in making a custody or access order in a child's best interests. The Act provides, in s. 16(8), that the "best interests" of the child are to be the only consideration in making a custody or access award. Judges have, however, consistently interpreted "best interests" in this provision to include consideration of the child's views and preferences.[14]

Children's Views and Preferences Not Necessarily Determinative

While children's views and preferences are an important factor in determining which custody and access arrangement will be in a child's best interests, they are not the only factor. Nor are they necessarily determinative. The weight accorded to a child's wishes depends on factors such as age, maturity, and motivation.[15] Justice R. James Williams of the Nova Scotia Supreme Court, Family Division, suggests a number of factors judges should consider when assessing the significance of a child's wishes:

> (a) whether both parents are able to provide adequate care [i.e. if there is no real choice about care arrangements, the child's wishes may not be that significant];
>
> (b) how clear and unambivalent the wishes are;
>
> (c) how informed the expression is;
>
> (d) the age of the child;

---

[13] *Custody Jurisdiction and Enforcement Act*, R.S.P.E.I. 1988, c. C-33, s. 8(1).
[14] For a discussion of case law on the views of children in cases under the *Divorce Act* and a proposal for amending the Act to more explicitly comply with Article 12, see Nicholas Bala, "Bringing Canada's Divorce Act into the New Millennium: Enacting a Child-Focused Parenting Law"(2015) 40:2 Queen's L. J. 425-482.
[15] Nicholas Bala, "The Voice of Children in Alberta Family Law Cases" (Paper presented to the Legal Education Society of Alberta for Children's Lawyers in Calgary and Edmonton, April 2005) at 1 [unpublished].

(e) the maturity level;

(f) the strength of the wish;

(g) the length of time the preference has been expressed for;

(h) practicalities;

(i) the influence of the parent(s) on the expressed wish or preference;

(j) the overall context; and

(k) the circumstances of the preference from the child's point of view.[16]

Although custody and access legislation does not place age restrictions on the ability of a child to express his or her wishes, Canadian courts have found it unreasonable to expect a child 5 years of age or younger to articulate views and preferences.[17] As discussed below, courts have also recognized an upper age limit, after which failing to follow a child's wishes may be futile.

The independence of a child's views and preferences is also an issue for judges making custody or access orders. A child may be unduly influenced into rejecting one parent due to the alienating conduct of the other parent. Children may also express views and preferences that conflict with their best interests. In *Jespersen v. Jespersen*,[18] a 12 year-old boy expressed a desire to live with his father. The boy struggled in school and his mother played a key role in making sure he applied himself to school, which caused emotional tension for the boy. The trial judge found that this tension informed the child's stated desire to live with his father, and ordered custody to remain with the mother despite

[16] R.J. Williams, "If Wishes Were Horses Then Beggars Would Ride" (Paper presented at the National Judicial Institute, Family Law Program, Halifax, February 1999).
[17] See e.g. *Houle v. Poulin*, 1998 CarswellOnt 556 (Ont. Prov. Div.).
[18] (1985), 48 R.F.L. (2d) 193 (B.C.C.A.).

the boy's views. For younger children, judges are more likely to disregard a child's wishes if they do not conform to his or her best interests.

Once children reach 12 or 13, they may be more likely to "vote with their feet," and many separated parents will effectively allow children of this age or older to have a significant or determinative role in their living arrangements. Further, judges recognize that it can be difficult to enforce a custody or access order that is contrary to the child's wishes. As observed by the British Columbia Court of Appeal in *O'Connell v. McIndoe*: "In order for custody orders relating to children in their teens to be practical, they must reasonably conform with the wishes of the child."[19] However, in cases where the courts believe that there has been parental alienation or manipulation of a child's views, they may be prepared to make orders for children up to the age of 15 years or older, with the intent of promoting the child's interests and changing the attitude and behaviour of the alienating parent.[20]

Ways of Hearing Children in Custody and Access Proceedings

There are a number of ways a court may receive evidence about the views and preferences of children in custody and access proceedings. Bala and Hebert provide the following list:

- Hearsay evidence, related by a witness, including a parent, social worker or teacher;
- A video-recording or audiotape of an interview with a child;
- Written statements from a child in the form of a letter or affidavit;
- A report or the testimony of a social worker or a mental health professional as part of an assessment of the case;

[19] 1998 CarswellBC 2223 (B.C.C.A.) at para. 13.
[20] See *S.G.B. v. S.J.L.*, [2010] O.J. 3738, 2010 ONCA 578*;* and *Godard v Godard*, 2015 ONCA 568.

- A report from a lawyer, social worker or psychologist who has conducted an interview (or more than one interview) and prepared a *Views of the Child Report*;
- Counsel for a child;
- Testimony by the child in court; and
- A meeting or interview in the judge's chambers.[21]

Some of these methods for introducing children's evidence are provided for by statute, while others have been defined by case law. The following sections of this paper summarize the law on the admission of children's evidence in custody and access proceedings across Canada. Some of these methods – such as judicial interviews – are more controversial than others. While the issues respecting the various methods for introducing children's evidence will be identified, a thorough analysis of each method is beyond the scope of this paper.

Finally, it is important to note that while every jurisdiction in Canada provides for children's views and preferences to be heard in custody and access proceedings, the reality is that children are not always heard. A 2010 study of reported Canadian decisions arising from custody and access litigation found that only 45% mentioned evidence respecting the views and preferences of the children in any form.[22] Further, there are significant issues related to how parents, their lawyers and mediators learn about the views of children in cases that are not resolved by judges.

[21] Nicholas Bala & Patricia Hebert, "Views, Perspectives and Experiences of Children in Family Cases" (Paper presented to the National Judicial Institute Program on Judicial Interviews of Children and the National Family Law Program, July 2014) at 3-4 [unpublished].
[22] Noel Semple, "The Silent Child: A Quantitative Analysis of Children's Evidence in Canadian Custody and Access Cases" (2010) 29 Can. Fam. L.Q. 7.

Assessments

In every Canadian province and territory, a judge hearing a custody and access dispute is empowered to make an order requesting the involvement of an independent third party, typically a social worker or mental health professional, to assess the case and provide a report to the court. In some areas, such as New Brunswick, jurisdiction to order an assessment is found in the provincial or territorial custody and access legislation. In others, authority flows from a separate statute, usually one governing court procedure. The actual legislation under which a judge may order an assessment depends on the level of court. For example, in Manitoba, provincial courts find jurisdiction under the *Family Maintenance Act* whereas superior courts rely the *Court of Queen's Bench Act*. Superior courts may also order assessments pursuant to its inherent *parens patriae* jurisdiction.[23]

Interviews with children and observation of parent-child interactions are an important part of the assessment process. Some statutes specifically identify ascertaining the child's views and preferences as one of the objectives of an assessment. British Columbia's *Family Law Act*, for example, provides that a judge can request an assessor to report on "the views of a child."[24] In Alberta, superior courts may order a "Parenting Assessment" pursuant to Practice Note 8, which can address the wishes of the children.[25] Even in provinces and territories where the legislation is not specific, a child's views and preferences, where ascertainable by the mental health professional, will invariably be included in the assessment report.

---

[23] *Christopher v. Christopher*, [1987] W.D.F.L. No. 146 (Nfld. T.D.)
[24] *Family Law Act*, S.B.C. 2011, c. 25, s. 211(1)(b).
[25] Court of Queen's Bench of Alberta, "Family Law Practice Note 8: Parenting Time/Parenting Responsibilities Assessments," online: Alberta Courts <https://albertacourts.ca/docs/default-source/Court-of-Queen's-Bench/pn8-bi-lateral-assessment---final.pdf?sfvrsn=0>.

Assessments usually include comments by the assessor about the child and the child's views and preferences (assuming the child is old enough to communicate.) Jurisdictions differ, however, on whether assessment reports should contain recommendations on what parenting arrangement would be in the best interests of the child. Section 29(6) of the Northwest Territories' *Children's Law Act* directs that an assessor "shall not make any recommendation as to whom custody or access should be granted."[26] In most provinces, however, whether by legislation or practice, it is common for assessment reports to include recommendations. For example, in Ontario, the *Courts of Justice Act* directs that reports based on "investigations" by a representative of the Office of the Children's Lawyer "may… make recommendations to the court on all matters concerning custody of or access to the child".[27] Similarly, in Alberta, court-appointed assessors – "Parenting Experts" – are expected to "assist[] the Court by providing an objective, impartial recommendation on the parenting and custody arrangement that is in the children's best interest."[28]

Assessments are a common and important way for children's voices to be indirectly heard in custody and access proceedings. However, assessments are expensive, and can delay resolution of proceedings. In some provinces, like Alberta, Manitoba and Ontario, the government may pay for a court-ordered assessment, at least for low income litigants. However, government resources are limited, and only higher income litigants can afford an assessment. In Ontario, the Office of the Children's Lawyer (OCL) does not charge for assessments (called clinical investigations), but for budgetary reasons declines to become

[26] *Children's Law Act*, S.N.W.T. (Nu.) 1997, c. 14, s. 29(6).
[27] *Courts of Justice Act*, R.S.O. 1990, c. C-43, s. 112(1).
[28] *U. (A.J.) v. U. (G.S.)*, 2015 ABQB 6.

involved in a significant portion of the cases in which a court makes an order requesting involvement of the OCL. Thus, in many cases, unless parents are able and willing to pay for an assessment, it is not provided. And the reality is that most parents cannot afford the cost of these reports.

Counsel for the Child

A second method for introducing children's views and preferences into a custody and access proceeding is through the appointment of a lawyer for the child. Authority to appoint child's counsel may flow from provincial or territorial custody and access legislation,[29] or from another statute.[30] Where there is no statutory authority, superior courts can rely on its inherent *parens patriae* power to appoint a lawyer for the child.[31]

A few jurisdictions provide government-funded representation for children in custody and access disputes. In Ontario, which has the most comprehensive program for child representation in Canada, judicial requests for child representation are made to the Office of the Children's Lawyer, which, in custody and access cases, decides whether to assign counsel, undertake a clinical investigation, both or neither. Government-funded counsel for children is also provided for under the Yukon's *Children's Law Act*[32] and in the Northwest Territories. In some provinces, including Alberta and Quebec, it is not uncommon for a lawyer to be appointed for the child and be paid for by Legal Aid.[33] In

other provinces, however, such as Newfoundland and Labrador, Legal Aid will not provide counsel for a child in cases involving separated parents.[34]

Most statutes do not provide guidance as to when counsel for children should be appointed. British Columbia's *Family Law Act* and the Yukon's *Children's Act* are exceptions. British Columbia's Act provides that the court may appoint a lawyer to represent the interests of a child where:

> (a) the degree of conflict between the parties is so severe that it significantly impairs the capacity of the parties to act in the best interests of the child, and
>
> (b) it is necessary to protect the best interests of the child.[35]

In the Yukon, the decision to appoint government-funded counsel for children in custody and access proceedings lies with the Office of the Public Guardian and Trustee.[36] The *Children's Law Act* provides that in determining whether separate representation for children is required, the Public Guardian must consider:

> (i) the ability of the child to comprehend the proceeding,
>
> (ii) whether there exists and if so the nature of any conflict between the interests of the child and the interest of any party to the proceeding, and
>
> (iii) whether the parties to the proceeding will put or are putting before the judge or court the relevant evidence in respect of the interests of the child that can reasonably be adduced.[37]

In jurisdictions where the legislation is silent as to when counsel for a child should be appointed, judges have considered factors similar to those enumerated in British

[36] *Children's Law Act,* R.S.Y. 2002, c. 31, s. 168(2). Section 168(5)(a), however, requires the Office to "consider advice or recommendations from the judge before whom or court in which the proceedings are taking place".
[37] *Children's Law Act,* R.S.Y. 2002, c. 31, s. 168(5)(b).

Columbia's and the Yukon's Acts. Courts have held that child representation should only be ordered where: (1) it is in the child's best interests;[38] (2) the parents cannot adequately represent the child's interests;[39] and (3) the child can instruct counsel.[40] Following these guidelines, appellate courts have determined that child representation should not ordinarily be appointed in custody and access cases, and some decisions suggest that this should be "rare." The Alberta Court of Appeal, for example, has held that in custody and access proceedings the presumption should be against appointing a lawyer for the child. [41]

There is controversy in Canada about the appropriate role of lawyers for children in custody and access disputes. Lawyers may act in the role of a traditional advocate, taking instructions from their child client and advancing the child's position. Counsel may also act as litigation guardian, advocating a position that corresponds to what counsel has determined to be in the child's best interests. Finally, child's counsel may take on the role of *amicus curiae*, taking no position and simply placing evidence of the child's views and preferences before the court. The role of the lawyer varies by jurisdiction. In Quebec, the Court of Appeal has ruled that lawyers are to take on the role of advocate on behalf of children involved in custody and access disputes, provided they can instruct counsel.[42] In Ontario, the Office of the Children's Lawyer has adopted a policy that gives lawyers more discretion: counsel must ensure that the court is made aware of the child's wishes but may advocate a position that advances the interests of the child even if that position is not

consistent with the child's wishes.[43] In practice, many lawyers vary their approach in different cases, taking more account of a child's instructions if a child is older and more mature, and less direction if the child wants an outcome that might harm the child.[44] Further, in practice, lawyers for children often play an important role in trying to encourage parents to settle their disputes without trial, which is often what children most desire.

Lawyers for children are generally responsible for placing children's views and preferences before the court. However, two appellate courts – the Ontario Court of Appeal and the Alberta Court of Appeal – have held that, unless the parties consent, lawyers for children cannot provide "evidence from counsel table" about children's views and preferences.[45] These appellate courts have held that children's views and preferences should be placed before the trial court by a social worker or mental health professional who has interviewed the child and can testify about what was said by the child and under what circumstances, and who can be cross-examined by all of the parties.

Judicial Interviews

Another way in which children are heard in custody and access proceeding is by meeting with the judge, either by coming to the court room or meeting in the judge's chambers.

In Quebec, Article 34 of the *Civil Code of Québec* provides:

> The court shall, in every application brought before it affecting the interest of a child, give the child an opportunity to be heard if his age and power of discernment permit it.[46]

---

[43] Policy of Ontario Office of the Children's Lawyer, April 3, 1995, revised January 18, 2001. For an example of a case where counsel for the child advocated a different position from the express wishes of the child because of concern about manipulation of the child by a parent, see *Boukema v. Boukema*, [1997] O.J. 2903 (Ont. Sup. Ct.).

[46] *Civil Code of Québec*, C.Q.L.R. 1991, c. C-1991, art. 34.

This provision is commonly used to allow children to meet with judges, either in their chambers, or in the court room, invariably without the parents present.[47]

Judicial interviews are expressly provided for in the statutes of New Brunswick,[48] Newfoundland and Labrador,[49] the Northwest Territories,[50] and Ontario. For example, s. 64(2) of Ontario's *Children's Law Reform Act* provides: "The court may interview the child to determine the views and preferences of the child."[51] In other provinces, case law establishes that judges have the discretion to interview children.[52] However, except in Quebec, judicial interviews are not very common in custody and access proceedings.

In a 2004 decision of the Ontario Superior Court of Justice, Justice Quinn suggested that judicial interviews should be used "only as a last resort" to ascertain a child's views and preferences.[53] Other Ontario judges have expressed concern that judicial interviews without parents present might undermine "the appearance of justice" and the traditional due process rights of parents.[54] One of the controversial issues related to judicial interviews is whether and how parents should be provided with a transcript of the meeting with the child. Commentators and some of the reported jurisprudence suggest that judges have the discretion to provide parents with a summary of the child's statements, without

using the child's exact words and sparing the child from potential embarrassment or damaging a child's relationship with a parent.[55]

However, there now seems to be a gradual trend towards growing judicial acceptance of this practice.[56] In 2010, Justice Martinson of the Yukon Territory Supreme Court considered whether to interview a 12 year-old boy for the purposes of ascertaining his views and preferences, despite that jurisdiction not having legislation expressly providing for judicial interviews in custody and access disputes.[57] Citing Article 12 of the CRC, Martinson J. declared:

> Children have legal rights to be heard during all parts of the judicial process, including judicial family case conferences, settlement conferences, and court hearings or trials. An inquiry should be made in each case, and at the start of the process, to determine whether the child is capable of forming his or her own views, and if so, whether the child wishes to participate. If the child does wish to participate then there must be a determination of the method by which the child will participate.[58]

While Martinson J. declined to interview the child in that particular case, she made clear that, in her view, not only do judges have the discretion to interview children, they also have a duty to ensure that children are asked whether they would like to meet with the judge.

Views of the Child Reports

With the cost and delay involved in assessments and appointment of counsel, and the concerns about due process and other issues related to judicial interviews, a growing

practice has been the preparation of non-evaluative Views of the Child Reports (also called Voice of the Child, Wishes of the Child or Hear the Child Reports). These reports, typically prepared by a lawyer or mental health professional, are based on one or more interviews with the child and are meant to provide the court with information about the child's perspective on his or her life and the matters in dispute.[59] Views of the Child reports are much narrower in scope than traditional custody assessments, but much less costly and time consuming to prepare. Although there is variation, it would seem that the most common practice is for professionals preparing these reports to not express views about children's statements, but to offer the child the choice of what statements will be included in the report to their parents and the court.

The reports were first introduced in British Columbia, which has one of the lowest rates of government funding for full custody assessments, and have since been used in Alberta, Saskatchewan, Manitoba, Newfoundland and Labrador, New Brunswick and Nova Scotia. There are a few cases of Views of the Child Reports having been ordered in Ontario, although the practice is still very rare there.

Although none of the provinces or territories in Canada have legislation that specifically provides for the preparation of Views of the Child Reports, courts have ordered these reports under the broader power to order assessments. At least two judges in New Brunswick and one in Nova Scotia have found further authority to order these reports in

[59] Rachel Birnbaum, Nicholas Bala & John Paul Boyd, "The Canadian Experience with Views of the Child Reports: A Valuable Addition to the Toolbox?" International Journal of Policy, Law and the Family [forthcoming in 2016].

Article 12 of the CRC.[60] These decisions recognize that Views of the Child Reports can play an important role in protecting a child's right to be heard.

Other Evidence of Children's Views and Preferences

Other ways of hearing children who are the subject of custody and access disputes include having the child testify in court, admitting written statements from the child, or introducing audio or video-recorded statements by a child. Child testimony in custody and access proceedings is very rare. Judges are concerned about the emotional harm to children that could result from being witnesses in open court, and testifying in the presence of their parents and potentially being subject to cross-examination. Where one parent seeks to have a child testify, as sometime happens in alienation cases, judges have the power to refuse to issue a summons to a child or to prevent the child from testifying if the judge considers that this is necessary to protect the interests of the child.[61]

Because children rarely testify in custody and access cases, judges are more inclined to admit evidence of children's out-of-court statements. Some of this evidence is hearsay, and thus subject to the "necessity and reliability" test set out in *R. v. Khan*.[62] Expert evidence, including the opinions of a custody assessor, even if based on a child's statements, is technically not hearsay. Another exception is evidence of children's wishes, which is admitted to establish the child's "state of mind" rather than establish the truth of the statement. Judges have long used this exception to the hearsay rule to permit adult

[61] This power may be exercised not only by federally appointed superior court judges with an inherent *parens patriae* power to promote the best interests of children, but may also be exercised by provincially appointed judges as part of their jurisdiction to control proceedings: *Dudman v. Dudman*, [1990] O.J. 3246 (Prov. Ct.), per Felstiner J.

[62] [1990] 2 S.C.R. 531. See Part C of this paper for further discussion.

witnesses in custody and access cases to testify about a child's wishes.[63] However, where the adult testifying about the child's wishes is a parent or interested party, judges have refused to admit such evidence or have accorded it very little weight; judges are concerned about the reliability of this type of evidence,[64] and the implications of allowing parents to testify about a child's statements, which may encourage parents to involve children in custody litigation.[65]

Where counsel or a parent seeks to introduce children's evidence to prove a contested fact in a custody and access proceeding, in particular related to allegations of abuse or domestic violence, many judges apply the *Khan* test of necessity and reliability.[66] However, some judges accept that in custody and access proceedings, where the best interests of the child are paramount, the rules of evidence ought to be relaxed even when related to allegations of abuse or violence. In a recent Ontario decision, Justice Price of the Superior Court explained:

> The court's *parens patriae* jurisdiction, when determining issues of temporary care, or custody of and access to children, especially amidst allegations of domestic violence, sexual abuse, or parental alienation, gives it a broad discretion to base its decisions on the best evidence available, and to take a flexible approach to hearsay.[67]

[67] *Ganie v. Ganie*, 2014 ONSC 7500 at para. 144.

In British Columbia, this "flexible" approach to children's hearsay evidence in custody and access cases is prescribed by statute. Section 202 of the *Family Law Act* provides:

> In a proceeding under this Act, a court, having regard to the best interests of a child, may do one or both of the following:
> (a) admit hearsay evidence it considers reliable of a child who is absent;
> (b) give any other direction that it considers appropriate concerning the receipt of a child's evidence.[68]

The provision was interpreted by Regional Senior Provincial Judge Harrison in the 2014 case of *K. (N.N.) v. L (S.F.)*: "The common law test has been modified in *Family Law Act* matters by s. 202 of the Act, which may to some degree reduce the necessity requirement in the best interests of a child who is absent."[69]

B. HAGUE CHILD ABDUCTION CONVENTION PROCEEDINGS

A number of Canadian cases have considered children's participation rights in the context of proceedings respecting the *Hague Convention on the Civil Aspects of International Child Abduction* ["*Hague Convention*"]. The *Hague Convention* is a multilateral treaty that provides for the return of children taken from their country of habitual residence to another member state.[70] The proceedings are typically commenced by one parent (the left behind parent) litigating against the other parent (the taking parent) to obtain an order for the return of the child to the child's jurisdiction of habitual residence after a "wrongful removal," so that any parenting dispute can be resolved by the courts in the jurisdiction of the habitual residence. However, the proceedings directly affect the child, since they may result in a

[68] *Family Law Act*, S.B.C. 2011, c. 25, s. 202.
[69] 2014 BCPC 297 at para. 55.
[70] Can. T.S. 1983, No. 35. For a fuller discussion of the *Hague Convention*, see Nicholas Bala & Mary Jo Maur, "The Hague Convention on Child Abduction: A Canadian Primer" (2014) 33 Can. Fam. L.Q 267.

court order requiring the return of the child, sometimes after the child has spent a considerable period of time settling into life in Canada.

Child's Views and Objections

Article 13 of the *Hague Convention* provides for situations where Canadian courts are not bound to return the child to his or her country of habitual residence, including situations where return would expose the child to a grave risk of "physical or psychological harm or otherwise place the child in an intolerable situation." In some cases, the views and perspectives of the child may be relevant for assessing whether the child faces a risk from return.

Further, Article 13 of the *Hague Convention* allows courts to refuse to return a mature child who "objects," providing:

> The judicial …authority may also refuse to order the return of the child if it finds that the child objects to being returned and has attained an age and degree of maturity at which it is appropriate to take account of its views.

According to the Article 13, the weight to be given a child's objection depends on the age and maturity of the child. Clearly in cases where this provision is invoked, it is important for the child's views to be communicated to the court, and it may often be appropriate for the child to have independent representation.

While Article 13 of the *Hague Convention* appears to give courts fairly wide authority to take into account a child's views, the *Hague Convention* is generally interpreted in a fashion that narrows this exception, to accord with its general intent of discouraging wrongful removal of children from their jurisdiction of habitual residence. The onus is on the parent or child seeking to invoke this exception. The courts recognize that if a child has been taken by one parent and had little or no contact with the left-behind parent for a significant period of time, the child is likely to express a preference for

continuing to reside in the new jurisdiction with the parent who wrongfully removed or retained the child, so a mere preference is not sufficient:[71] there must be an "objection" to return from a "mature child."

The British Columbia Supreme Court in *Beatty v. Schatz* cited Article 12 of the CRC for the proposition that it was important to hear the views of the child when Article 13 of the *Hague Convention* is raised, and ordered a psychologist to interview the child and report to the court. However, the court concluded that the 11 year-old boy was not mature enough to understand all of the subtleties and long-term consequences of what was happening. Furthermore, the father had been exerting subtle but significant influence over the boy, giving him the message that he did not have to return to the jurisdiction of his habitual residence, Ireland, even though the Court said that he had to. The Court was concerned that not returning the boy to Ireland would send the message that it was acceptable to retain a child in another country as long as the child asserted that he or she did not wish to return, and accordingly took a narrow approach to the scope of the child's objection exception in Article 13 of the *Hague Convention*.[72] Justice Martinson held that it was unfair to the child and contrary to the policy intentions of the *Hague Convention* to allow the child to in effect make the decision:

> A was ten when his father placed the responsibility of what should happen on his shoulders. He just turned 11…. Though he is obviously bright and can express what he wants to do and why, he is not mature enough to understand the subtleties of what is happening and their long-term consequences on his well-being.
>
> This is a case where the policy considerations underlying the *Hague Convention* are particularly important. As the [House of Lords] said in *Re M.*, the *Hague Convention* is there not only to secure the prompt return of abducted children, but also to deter abduction in the first place. [73]

[71] See e.g *Den Ouden v. Laframboise*, 2006 ABCA 403.
[72] 2009 BCSC 706, 2009 CarswellBC 1402 (B.C.S.C.). See also e.g. *G.B. v. V.M*, [2012] O.J. No. 5825 (O.C.J.).
[73] 2009 BCSC 706, 2009 CarswellBC 1402 (B.C.S.C.) at para. 55-56.

The Alberta case of *R.M. v J.S.*, also illustrates the high onus of proof for raising a defence under Article 13 of the *Hague Convention* based on the child's objections, and offers some guidance for how evidence about a child's maturity and objections should be introduced. The mother and father were Palestinian Muslims, living in East Jerusalem, and had one child, a son. The parties separated, and were subsequently divorced in the Sharia Court of Jerusalem, with the mother having *de facto* custody. The father immigrated to Calgary, while the mother and son continued to live in Jerusalem on the understanding that the son would spend his summers with the father in Alberta.

When the father failed to return his then 9 year-old son to his mother in Jerusalem after a summer visit, the mother brought an application under the *Hague Convention* for the boy's return. The trial court appointed counsel to represent the interests of the child.[74] Counsel for the child reported that after interviewing the child on two occasions, that the child [then 10 years of age] objected "to being returned [to Jerusalem] and has attained an age and degree of maturity at which it is appropriate to take account of its views" within the meaning of Article 13 of the *Hague Convention*. The child's lawyer concluded that the boy was not subject to undue influence from the father, and was "mature for his age, bright and articulate when it came to describing his concerns about returning to Israel," noting that as a Palestinian youth he often felt unsafe and bullied in Israel. The judge accepted that there had been a wrongful retention, but ruled that the child was "mature" and had understandable objections to return, and accordingly refused the application.[75]

[74] *J.S. v R.M.*, 2012 ABPC 184.
[75] *R.M. v J.S.*, 2012 ABQB 669.

The Alberta Court of Appeal allowed an appeal and directed that the child be returned "forthwith" to the mother in Jerusalem, expressing concern that the trial judge:

> seemed to treat the child's objection as controlling. While he found that the child's objection was not coerced, nor otherwise improperly influenced, the evidence and matters he took into account in coming to that conclusion were also missing from his decision. There is also the concern that, in weighing the elements of the child's objection which spoke to the child's preferences and hopes, the Provincial Court judge fell into forming a conclusion about the child's best interests.... In short, the objects and policy considerations underlying the *Convention* appear to have been overridden without a proper evidentiary basis...[76]

The Court of Appeal decision in *R.M. v J.S.* questioned the conclusions of the trial judge about the maturity of the boy, but actually rested its decision on the fact that the trial judge based his findings about the boy's "objections" on the submissions of counsel for the child.[77] The Court suggested that evidence about the child's wishes and views should be put before the trial court by a social worker, psychologist, or other child-care professional who had interviewed the child. This would allow the clinician to be cross-examined by the other parties, ensuring that the evidence is fairly tested. The Court of Appeal held that in the absence of *express consent* from the other parties, counsel for a child should not tell the court about a child's views and preferences, as counsel cannot occupy the dual role of advocate and witness.

Role of Children in Hague Convention Proceedings

While *Hague Convention* proceedings are intended to be summary and presiding judges are not expected not to directly address the interests of children, children are nevertheless profoundly affected by these proceedings, and courts in a number of countries are

[76] 2013 ABCA 441 at para. 32 and 34. For a critical comment on this decision and its failure to recognize the rights of the child involved, see Nicholas Bala, Max Blitt & Helen Blackburn, "The Hague Convention and the Rights of Children" (July 2014), 7(1) Family Law News (International Bar Association) 11.
[77] 2013 ABCA 441 at para. 24 and 28.

struggling with issues about how to respect the rights of children in *Hague Convention* proceedings. Article 12 of the CRC, as well as instruments like Canada's *Charter of Rights and Freedoms* may give children the right "to be heard" in these proceedings.

The balancing of the wishes and rights of children against the obligations imposed by the *Hague Convention* is most apparent in cases where a child has made a refugee application, as in the 2011 Ontario Court of Appeal decision in *A.M.R.I. v. K.E.R.*[78] The girl in that case was born in Mexico, and after her parents' separation resided with her mother there pursuant to an order made by a Mexican court. In 2009, at the age of 12, she came to Ontario to visit her father. She told her father that the mother had been abusive. The child did not return to Mexico but remained in Ontario with the father and an aunt. In 2010, the child made an application to be accepted as a refugee in Canada due to the abuse by her mother and the failure of the Mexican authorities to adequately protect her. The father, however, had by that time moved to Norway, while the child remained in Ontario with her aunt. After the child had been living in Ontario for about 18 months, the mother brought a *Hague Convention* application for the child's return to Mexico. The hearing proceeded on an uncontested basis, with none of the father, the aunt or the child participating. The application judge held that the child was being wrongfully retained in Ontario and ordered her immediate return to Mexico under the *Hague Convention*, which was effected through the involvement of the police.

Despite the girl's return to Mexico, the father appealed, with the Ontario Children's Lawyer representing the child on the appeal. The Ontario Court of Appeal held that the trial judge had erred in ordering the child's return to Mexico without considering the girl's

[78] 2011 O.J. 2449 (C.A.).

refugee status or giving the child an opportunity to participate in the proceedings. The Court of Appeal held that in this situation, the *Hague Convention* hearing must comply with the child's right to treatment in accordance with the *Charter of Rights and Freedoms* s. 7 "principles of fundamental justice" as there was a threat to her "security of the person." Given the child's age and the nature of her objection, the *Charter* required that she be given notice and an opportunity to participate. In coming to its conclusion, the Court of Appeal cited the CRC*:*

> art. 12(1) of the CRC stipulates that the views of a child are to be given due weight according to the child's age and maturity and that a child has the right "to express those views freely in all matters affecting the child". Article 12(2) of the CRC confirms this right in the context of "judicial and administrative proceedings affecting the child".
>
> At almost 14 years of age, the child in this case was clearly of an age and potential maturity such that her objection to return to Mexico had to be considered…. Given the child's age, the nature of her objection, her status as a Convention refugee, the length of time that she had been in Toronto and the absence of any meaningful current information regarding her actual circumstances in Toronto at the date of the Hearing, her views concerning a return to her mother's care in Mexico were a proper and necessary consideration. [79]

While the Court of Appeal order that there was to be a new hearing with the child participating had no effect in Mexico, shortly after the appellate court ruling the youth had been able to leave Mexico on her own and get to Canada.[80] There was no further hearing and she continued to reside in Canada.

The decisions of the Ontario Court of Appeal in *A.M.R.I. v. K.E.R.*,[81] and the Alberta Court of Appeal in *R.M. v J.S.*[82] raise the issue of how and when children should be involved in *Hague Convention* applications. In these cases, children were made parties

or had counsel appointed to represent their interests in the proceedings.

In deciding whether to appoint counsel or make a child a party, the court should take into account concerns about not wanting to exacerbate hostility between a child and one parent, usually the left-behind parent. However, the Ontario Court of Appeal has suggested that in cases where a child's "liberty or security of the person" may be affected by a return, for example because there is a claim of potential harm due to alleged violence or abuse, s. 7 of the Canadian *Charter of Rights and Freedoms* and Article 12 of the CRC require that a child must be given notice of the proceedings and an opportunity to participate through counsel.[83] The Court of Appeal held that concerns about protection for a child's "liberty and security of the person" should "predominate," which requires affording the child an opportunity to participate and have his or her views heard.

Some of the factors to be considered in deciding whether to grant party status or legal representation to a child include:

- Where the child is older and there is a reasonable prospect that the child has the capacity to instruct counsel and have an independent position;
- Where the child's position may not be adequately represented by the adult parties, for example because of their lack of legal representation;
- Where an expert or therapist involved with the child recommends such involvement;
- Where the child has expressed concerns that return might affect his or her life, liberty or security of the person.[84]

A court making an order appointing counsel may provide some direction or restrictions on the role of counsel for the child. In the absence of such restrictions, counsel for the child should take account of such factors as the age and capacity of the child to

[83] *A.M.R.I. v K.E.R.*,2011 O.J. 2449 (C.A.).
[84] See *Re L.C.*, [2014] UKSC 1 at para. 53, per Wilson L.J.

instruct counsel, the views of the child, and any provincial law society guidelines about the role that counsel is to play. Counsel should normally be taking instructions from a child who is expressing clear and consistent views.[85] Counsel should ensure that the child understands the limited scope of *Hague Convention* proceedings, focusing on whether a child should be returned to the jurisdiction of habitual residence rather than a ruling on custody or access. A grant of party status to a child usually does not mean that the child will attend court to testify.

C. CHILD PROTECTION PROCEEDINGS

Canadian child protection proceedings are another venue in which children's right to be heard has been recognized. Many of the same principles around hearing children who are involved in custody and access disputes apply in the child protection context.[86] Indeed, the right of children to be heard may be even more compelling in child protection cases, where a state-sponsored child welfare agency may be threatening the child's relationship with parents and siblings. A child's right to be heard is granted greater recognition in child protection proceedings than in private custody and access cases, both in legislation and case law, with Canadian judges sometimes citing Article 12 of the CRC to justify this recognition.

The Importance of Hearing Children in Child Protection Proceedings

[85] Nicholas Bala "Child Representation in Alberta: Role and Responsibilities of Counsel for the Child" (2006), 43 Alta. L. Rev. 845.
[86] In some jurisdictions, like New Brunswick, child protection and custody and access proceedings are governed by the same statute.

Like custody and access legislation, child protection statutes establish the best interests of the child as a governing test once a child has been found to be in need of protection, and most Canadian statutes expressly include consideration of a child's views and preferences as a factor in making decisions on behalf of such children. A few child protection statutes go further, underling the importance of hearing from children in these cases. Alberta's *Child, Youth, and Family Enhancement Act* provides that:

> (d) a child who is capable of forming an opinion is *entitled* to an opportunity to express that opinion on matters affecting the child, and the child's opinion should be considered by those making decisions that affect the child;[87]

The Northwest Territories' *Child and Family Services Act*, in addition to directing that the best interests of the child include a consideration of "the child's views and preferences, if they can be reasonably ascertained",[88] also emphasizes the importance of children's participation and the need for their views to be heard and considered:

> 2. This Act shall be administered and interpreted in accordance with the following principles:
>
> …
>
> (h) children, where appropriate, and parents should participate in decisions affecting them;
>
> (i) children, where appropriate, parents, and adult members of the extended family should be given the opportunity to be heard and their opinions should be considered when decisions affecting their own interests are being made;[89]

The *Children and Youth Care and Protection Act* of Newfoundland and Labrador recognizes the importance of hearing children who want to be heard, and provides specific instructions on how this "participation" should be facilitated:

> 53. Where a child who is the subject of a proceeding under this Act requests that his or her views be known at the proceeding, a judge shall

---

[87] *Child, Youth and Family Enhancement Act*, R.S.A. 2000, c. C-12, s. 2(d). Emphasis added.
[88] *Child and Family Services Act*, S.N.W.T. (Nu.) 1997, c. 13, s. 3(i).
[89] *Child and Family Services Act*, S.N.W.T. (Nu.) 1997, c. 13, s. 2.

(a) meet with the child with or without the other parties and their legal counsel;
(b) permit the child to testify at the proceeding;
(c) consider written material submitted by the child; or
(d) allow the child to express his or her views in some other way.[90]

Section 53 adds to s.9 of the Newfoundland and Labrador statute, which provides that decisions under the Act be made in accordance with the best interests of the child, and that determining best interests requires consideration of the child's "opinion."[91]

Children's Views and Preferences Not Determinative

As in custody and access disputes, a child's views and preferences in a child protection proceeding are not necessarily determinative. It is not uncommon for children who have been abused or neglected to express a desire to return to their homes and parental care, so their express preferences must be balanced against other factors. Again, a child's age, maturity, and the reasons for a preference will affect the weight attached to the child's wishes.[92]

Manitoba's *Child and Family Services Act* is the only child protection statute that establishes a presumptive age at which a child's views should be considered.[93] Section 2(2) provides:

> In any proceeding under this Act, a child 12 years of age or more is entitled to be advised of the proceedings and of their possible implications for the child and shall be given an opportunity to make his or her views and preferences known to a judge or master making a decision in the proceedings.[94]

---

[90] *Children and Youth Care and Protection Act*, S.N.L. 2010, c. C-12.2, s. 53.
[91] *Children and Youth Care and Protection Act*, S.N.L. 2010, c. C-12.2, ss. 9(1) and (2)
[92] See e.g. *Child Protection Act*, S.P.E.I. 2000, c. 3 (2nd Sess.). The preamble states: "children are entitled, no less than adults, based on their developmental capacity, to be heard in the course of and to participate in the processes that lead to decisions that affect them".
[93] As discussed below, in a number of jurisdictions, 12 years is the presumptive age of a child receiving notice and being permitted to attend child protection proceedings; in practice if children are permitted to attend, their views are likely to be shared with the court.
[94] *Child and Family Services Act*, C.C.S.M. 1985, c. C-80, s. 2(2).

The views of children under 12 years of age may also be considered, though the court must be satisfied that the child's understanding justifies this, and that the child would not be harmed by having his or her views and preferences considered. Section 2(3) states:

> In any court proceeding under this Act, a judge or master who is satisfied that a child less than 12 years of age is able to understand the nature of the proceedings and is of the opinion that it would not be harmful to the child, may consider the views and preferences of the child.[95]

While children 12 and over have the right to be heard, children under 12 will only be given this opportunity in limited circumstances.

In custody and access proceedings, the wishes of older children are often given more deference, and judges may respect a child's choice of placement even if this placement is not in the child's best interests. While custody and access proceedings in some cases raise concerns about child safety, these concerns are always present in child protection proceedings. Judges in child protection matters still attach greater significance to the views and preferences of older children but will not follow these choices where doing so would place the child at risk of harm.

In *A.C. v. Manitoba (Director of Child and Family Services*),[96] the Supreme Court of Canada explained how judges should weigh the views of older children when making a decision in accordance with their best interests in child protection cases. The case engaged provisions of Manitoba's *Child and Family Services Act* respecting judicial authorization of medical treatment of children against the wishes of both parents and child. The child, a 14 year-old Jehovah's Witness, was admitted to hospital for internal bleeding. Her doctors believed that without a blood transfusion she faced a serious risk to her health, and perhaps

[95] *Child and Family Services Act*, C.C.S.M. 1985, c. C-80, s. 2(3).
[96] 2009 SCC 30.

her life, but the child and her parents refused this treatment on religious grounds. The child was apprehended by the child protection agency, which sought an order authorizing the transfusion. Section 25(8) of the *Child and Family Services Act* provides that a court, after a hearing, may authorize any medical treatment the court considers to be in the best interests of the child. Section 25(9) states that the court shall not order treatment contrary to the wishes of a child over the age of 16, unless the child cannot understand the decision or appreciate its consequences. The judge ordered the transfusion pursuant to s. 25(8). After the transfusion, the child and her parents appealed the order, challenging the constitutionality of s. 25 of the Act. They argued that depriving children under 16 of an opportunity to prove their maturity to direct the course of their medical treatment violated provisions of the *Charter of Rights and Freedoms,* including s. 2 (freedom of religion), s. 7 (deprivation of security of the person not in accordance with principles of fundamental justice), and s. 15 (discrimination based on age).

Justice Abella, writing for a majority of the Court, agreed that there was "no constitutional justification for ignoring the decision-making capacity of children under the age of 16 when they are apprehended by the state,"[97] but did not agree that s. 25 required such an approach. Instead, the "best interests" standard in s. 25(8) could be read as a "sliding scale of scrutiny, with the adolescent's views becoming increasingly determinative depending on his or her ability to exercise mature, independent judgment."[98] The degree of significance attached to a child's views also depended on the decision: "The more serious the nature of the decision, and the more serious its potential impact on the life or

[97] 2009 SCC 30 at para. 29.
[98] 2009 SCC 30 at para. 22.

health of the child, the greater the degree of scrutiny that will be required."[99] Assessing a particular child's views in light of the decision to be made struck a balance between protecting children's autonomy and protecting them from harm. Abella J.'s interpretation of s. 25(8) left open the possibility that in cases involving less serious risk, the treatment wishes of a child under 16 years could be determinative, or that even in a life threatening case the views of an older child might be given greater weight.

Article 12 of the CRC played a role in the majority's analysis. According to Abella J., Canadian law now recognizes that receiving children's input leads to better decision-making on their behalf. This is why children's views have become a factor in the best interests analysis, with these views acquiring more significance as the child matures.[100] Abella J. explained that Article 12 of the CRC, along with other Articles of the CRC, supports this "robust" reading of the best interests standard.[101]

Ways of Hearing Children in Child Protection Proceedings

The views of children in child protection proceedings are heard in similar ways to children in custody and access proceedings. An assessor or child's counsel may introduce children's statements, children may meet directly with the judge or more infrequently testify, or children's out-of-court statements may be put before the court as hearsay exceptions. While the means of introducing children's evidence in the two types of proceedings are similar, different principles and considerations may apply.

Assessments in Child Protection Cases

[99] 2009 SCC 30 at para. 22.
[100] 2009 SCC 30 at para. 92.
[101] 2009 SCC 30 at para. 93.

All jurisdictions provide for court-ordered assessments in child protection proceedings. For example, British Columbia's *Child, Family and Community Service Act* allows the court to order a child or a parent to undergo "a medical, psychiatric or other examination" where such an examination is likely to assist the court "(a) in determining whether the child needs protection, or (b) in making an order relating to the child."[102] The reported case law suggests that the majority of assessments in child protection cases focus on parents to assess their capacity to care for the child. These assessments, however, may include interviews with the child, and the child's statements can be introduced in the child protection proceeding through an assessor's report, which will usually include the assessor's commentary on the child's statements and overall recommendations about the case. However, courts can also order assessments solely to determine the views and preferences of the child. In New Brunswick, for example, judges have ordered Voice of the Child Reports in child protection cases.[103]

Counsel for the Child

Most provinces and territories have statues providing for the appointment of legal representation for children in child protection proceedings. Where the legislation is silent, superior court judges have relied on the court's *parens patriae* power to appoint child's counsel.[104] Again, only some jurisdictions provide state-funded counsel for children.[105]

[102] *Child, Family and Community Service Act*, R.S.B.C. 1996, c. 46, s. 59.
[103] See e.g. *J. (K.M.) v. New Brunswick (Minister of Social Development*), 2011 NBQB 345. But see *New Brunswick (Minister of Social Development) v. C. (V.),* 2014 NBQB 95 at para. 117, where the judge stated that the assessment provision in statute "does not translate in each and every case to a requirement of the formal 'Voice of the Child'. It has been recognized and accepted that a child's voice can be put before the court in differing ways."
[104] See *Re L. (G.),* 2012 SKQB 388.
[105] See above discussion in Part IIIA of this paper.

Unlike custody and access statutes, most child protection statutes provide guidance on the judicial appointment of representation for a child. Some of the enumerated factors are also considered in custody and access cases, including whether the child's interests conflict with the interests of other parties. Others are specific to the child protection context. For example, Manitoba's *Child and Family Services Act* directs that judges consider, *inter alia*, "the nature of the hearing, including the seriousness and complexity of the issues and whether the agency is requesting that the child be removed from the home" in appointing a lawyer to represent the child.[106]

In a few jurisdictions, legislation dealing with separate representation for children in a protection case includes reference to a specific age. New Brunswick's *Family Services Act* directs judges to consider a number of factors when appointing child's counsel, including "whether the child is 12 years of age or older."[107] Prince Edward Island's *Child Protection Act* only allows state-funded child representation where the child is "at least 12 years old and apparently capable of understanding the circumstances."[108] In Nova Scotia, the *Children and Family Services Act* provides that children 16 years of age or older are parties to the proceeding and are entitled to counsel upon request.[109] In the case of a child who is 12 years of age or older, the court may order separate legal representation where it is "desirable to protect the child's interests."[110]

These age provisions are generally tied to a presumption that children of the specified age have the capacity to instruct counsel. For example, Nova Scotia's Act also

---

[106] *Child and Family Services Act*, C.C.S.M. 1985, c. C-80, s. 34(3)(c).
[107] *Family Services Act*, S.N.B. 1980, c. F-2.2, s. 7.1(1)(a).
[108] *Child Protection Act*, S.P.E.I. 2000, c. 3 (2nd Sess.), s. 34(1).
[109] *Child and Family Services Act*, S.N.S. 1990, c. 5, s. 37(1).
[110] *Child and Family Services Act*, S.N.S. 1990, c. 5, s. 37(2).

provides that a guardian *ad litem* may be appointed for any child, including children 12 years of age or older where the child is "not capable of instructing counsel."[111] Similarly, Manitoba's *Child and Family Services Act* directs that where representation is ordered for a child 12 years of age or older, the judge may order that the child has "the right to instruct the legal counsel."[112]

However, in some jurisdictions judges have held that child representation may be important even in child protection cases involving children who clearly cannot instruct counsel.[113] In *Re F. (T.L.),*[114] Justice Ryan-Froslie of the Saskatchewan Court of Queen's Bench ordered separate representation for a seven month-old child, holding that the principal consideration in determining whether independent representation is necessary for the child in child protection proceedings is "whether it is desirable in the interests of justice viewed from the standpoint of the child's welfare."[115] In that case, the parties – the parents, their band, and the child protection agency – all had their own agendas and interests and the judge was concerned that without separate representation evidence and argument about the rights of the child would not be placed before the court. She also described the role that counsel for the young child should play:

> It is clear …that the role of the lawyer in this situation consists of representing the rights of the child and ensuring the court considers all relevant factors which will enable it to make a decision according to the rights and interests of the child. The lawyer does not put forward his or her personal convictions but rather his or her professional conclusions based on the evidence. The nature of the lawyer's

[111] *Child and Family Services Act*, S.N.S. 1990, c. 5, s. 37(3).
[112] *Child and Family Services Act*, C.C.S.M. 1985, c. C-80, s. 34(2).
[113] But see *Children's Aid Society of London and Middlesex v. C. (A.),* 2013 ONSC 1870 at para. 13, where Marsham J. suggested that it is generally not appropriate for courts to order representation for children under the age of 10 years in protection proceedings, and observed: "legal representation is not generally desirable if the child is too young to express his or her views and preferences and otherwise instruct counsel. It is a waste of scarce resources to appoint legal representation to children who cannot adequately give instructions."
[114] 2001 SKQB 271.
[115] 2001 SKQB 271 at para 13.

> mandate would necessarily vary depending on whether the mandate comes from the child or the court.
>
> In the circumstances of the case at bar I believe the best method of representing T.'s interest would be the appointment of independent legal counsel whose mandate it would be to represent the rights of the child and ensure that the court considers all relevant factors which will enable it to make a decision according to the rights and interests of T.[116]

As the state mandated child welfare agency is a party to child protection proceedings, if an order is made for child representation, it must be provided. This is particularly significant in Ontario where in custody and access cases, a judge makes an order requesting the involvement of the Office of the Children's Lawyer, which will then decide whether to provide a lawyer, a clinical assessment, both or neither. If an order is made in a child protection case under s. 38 of the Ontario *Child and Family Services Act*, legal representation "shall" be provided to the child, almost always by the Office of the Children's Lawyer.

Judicial Interviews

In some jurisdictions children may also be given the opportunity to meet one-on-one with judges in child protection proceedings, though this is less common than in disputes between parents as the state's role in child protection cases heightens concerns about due process. Both Newfoundland and Saskatchewan explicitly provide for this option by statute.[117] Judicial interviews may also occur in child protection proceedings in jurisdictions where the legislation is silent. In *W. (M.) v. British Columbia (Director of Child, Family & Community Service*), Dhillon J. of the British Columbia Provincial Court granted the request of a 12 year-old girl for a private interview after the mother and Director consented

[116] 2001 SKQB 271 at para. 31-32.
[117] *Children and Youth Care and Protection Act*, S.N.L. 2010, c. C-12.2, s. 53(a); *Child and Family Services Act*, S.S. 1989-90, c. C-7.2, s. 29(1)(b).

to the interview taking place.[118] The judge observed that the girl had a "clear reluctance to discuss" the reasons that she did not want to live with her mother in her mother's presence, and indicated that the interview would remain confidential, though the parties were provided with a summary of the matters discussed and a sealed transcript was kept in the event of an appeal.

In Newfoundland and Labrador, legislation provides that if a child makes a request, a meeting "shall" be held with the judge or the child's views shall be shared with the court in some other way.[119] In Saskatchewan, judicial interviews are discretionary; they may be ordered if the court considers the interview to be in the best interests of the child.[120] One consideration in ordering an interview pursuant to Saskatchewan's statute is whether the child's views would otherwise be shared with the court. In *Re P. (G.)*, Justice Wilkinson of the Court of Queen's Bench encouraged counsel to consider whether a judicial interview would be appropriate given conflicting evidence before the court about the five children:

> I have been bereft of any evidence regarding the children that has not been filtered through many different, and often irreconcilable, points of view… so long as the Court is the final arbiter of a child's future it must question its ability to fully honour its duty towards children who are both faceless and mute before the Court.[121]

The judgment notes the importance of hearing from children for whom life altering decisions are being made in protection proceedings.

Other Evidence of Children's Views and Preferences

---

[118] 2004 CarswellBC 2908, 2004 BCPC 452.
[119] *Children and Youth Care and Protection Act,* S.N.L. 2010, c. C-12.2, s. 53. See also *Newfoundland and Labrador (Manager of Child, Youth and Family Services Zone J) v. W. (J.),* 2015 NLTD(F) 11 at para. 40.
[120] *Child and Family Services Act,* S.S. 1989-90, c. C-7.2, s. 29(1)(b).
[121] 2003 SKQB 505 at para. 143.

As in custody and access proceedings, the rules for admitting children's out-of-court statements have been relaxed in child protection proceedings compared to criminal cases. While some Canadian courts have applied the *Khan* test to children's out-court-statements in these proceedings,[122] the trend is to move away from the stricter standard of "necessity and reliability." Some child protection statutes make this relaxation of evidentiary standards explicit. For example, s. 67 of British Columbia's *Child, Family and Community Service Act* does not include a "necessity" requirement; children's out-of-court statements need only be "reliable" to be admitted in a child protection proceeding.[123] This provision has been interpreted as intended to protect children's best interests, since the alternative of testifying in the presence of the parents in court has been recognized to carry real risks of emotional harm and trauma to the child.[124] In a similar vein, Saskatchewan's *Child and Family Services Act* directs that, "The court may admit hearsay evidence if, in the opinion of the court, the evidence is credible and trustworthy and it would not be in the best interests of a child for the child to testify."[125]

Additional Participation Rights in Child Protection Proceedings

Children are generally granted greater procedural rights to participate in child protection proceedings than in custody and access proceedings as the state is a party and there is a threat to children's relationships with family. In many jurisdictions, children who are the subject of child protection proceedings may be entitled to notice and may even be parties.

[123] *Child, Family and Community Service Act*, R.S.B.C. 1996, c. 46, s. 67. See also Alberta *Child, Youth and Family Enhancement Act*, S.A. 2004, c. 16, s.108; Newfoundland and Labrador, *Child, Youth and Family Services Act*, S.N. 1998, c. C-12.1, s. 53; Nova Scotia, *Children and Family Services Act*, S.N.S. 1990, c.5, s. 96.
[124] *British Columbia (Director of Child, Family & Community Services) v. J. (P.M.)*, 1999 CarswellBC 1466 at para. 23.
[125] *Child and Family Services Act*, S.S. 1989-90, c. C-7.2, s. 28(3).

In Alberta, all children are parties to child protection proceedings.[126] In Nova Scotia, whether a child is a party depends on the child's age. According to s. 36(1) of the *Children and Family Services Act*, children 16 years of age or older are parties, unless the court orders otherwise. Children 12 years of age or older may be granted party status upon the child's request where the court determines that such status is "desirable to protect the child's interests."[127] Children of any age who are represented by a guardian *ad litem* may also be made a party where necessary to protect their interests. In Saskatchewan, s. 29 of the *Child and Family Services Act* provides that a child of any age can be served with notice of a protection hearing if the court considers it in the best interests of the child, but that the receipt of notice does not make the child a party. However, at least one judge has interpreted this provision as not excluding the possibility that a child could also be made a party to a child protection proceeding in that province, giving the child (or counsel) greater opportunity to participate in the proceeding.[128]

In provinces and territories that provide for notice to children who are the subject of a child protection proceeding, most restrict this requirement to children 12 years of age or older. In some jurisdictions, like Manitoba and Nova Scotia, some form of notice for older children is mandatory. However, in *C. (A.B.) v. Nova Scotia (Minister of Community Services),*[129] Justice Dellapinna of the Nova Scotia Supreme Court considered the effect that being served personally with notice of child protection hearing would have on a 13

[129] 2003 CarswellNS 496 (S.C.).

year-old child with special needs and appointed a litigation guardian to receive documents on the child's behalf.[130]

In Ontario, the right to notice is tied to the right of children to be present at child protection proceedings. For children 12 years of age or older, the *Child and Family Services Act* directs that children receive notice and be allowed to attend "unless the court is satisfied that being present at the hearing would cause the child emotional harm".[131] Children under 12 are not entitled to receive notice or be present unless the court is satisfied that the child "(a) is capable of understanding the hearing; and (b) will not suffer emotional harm by being present at the hearing".[132] In *Jewish Family and Child Services of Greater Toronto v. K. (S.),*[133] the court considered a motion by the child protection agency to exclude a 14 year-old child from the proceedings based on risk of emotional harm. There was evidence before the court that the child had been emotionally affected by the level of conflict among the adults involved in the case and her own interactions with her parents. The child opposed the agency's motion; the parents supported it. Justice Jones of the Ontario Court of Justice refused to exclude the child, finding no medical evidence to support the society's claim that the child's attendance would cause emotional harm. Jones J. was not prepared "to curtail entirely the child's statutory right to attend court" where the potential risk of harm to the child was related to tension between the parties and interactions that had occurred outside the courtroom. The judge did recognize that contact with the parents was potentially unsettling for the child, and so ordered that a protocol was to be

[130] The litigation was also to represent the child during the proceedings. The court directed that a litigation guardian, preferably someone with "therapeutic qualifications" should be appointed to ensure that the child's interests were protected: 2003 CarswellNS 496 (S.C.) at para. 23.

used for the child's attendance to reduce the likelihood of the child having to interact with her parents.[134]

D. ADOPTION PROCEEDINGS

The United Nations Committee on the Rights of the Child recommends that adoption should be an area in which children's participation rights under Article 12 are promoted and protected. In Canada, adoption proceedings are governed by provincial or territorial legislation. About half of Canadian jurisdictions deal with adoption proceedings as part of their broader child protection statutes; the other half has specific adoption statutes. Some provinces and territories also have separate legislation governing inter-country adoption.[135]

Children's Views, Preferences and Wishes

All adoption statutes in Canada provide that a child's views are relevant to adoption determinations. Like custody and access and child protection decisions, each of the adoption statutes either directs that "best interests" is a guiding principle[136] for adoption or that adoption orders must be made according to the child's best interests,[137] and determining the best interests of the child includes consideration of the child's views, preferences or wishes.

---

[134] The protocol included offering a separate, private waiting area for the child, directing that the child enter the courtroom last and leave first, and a prohibition on exposing the child to any discussions among the parties and counsel concerning the case: *Jewish Family and Child Service of Greater Toronto v. K. (S.),* 2013 ONCJ 681 at para. 51.

[137] *Child, Youth and Family Enhancement Act,* R.S.A. 2000, c. C-12, s. 70(1).

In the Northwest Territories, the *Adoption Act* specifies that a child's views and preferences should also be considered before a decision is made about placement of the child for the purposes of potential adoption. Section 7(4) directs that where a pre-placement report is prepared at the request of the Director of Adoptions, the report must include the child's views on the proposed placement and adoption.[138] Similarly, British Columbia's *Adoption Act* requires applicants proposing adoption of a child between 7 and 12 years of age to arrange for an authorized person to meet the child and prepare a report on whether the child understands what adoption means, and if the child has any views on the proposed adoption.[139] This report must be filed with the court before an adoption order is made.[140]

Children's Consent to Adoption

In every province and territory, children above a certain age must consent to their adoption. In most jurisdictions, the age of consent is 12. Ontario has the lowest age of consent for adoption, at 7 years of age.[141] In some places, children under the specified age of consent are still consulted. For example, Newfoundland and Labrador's *Adoption Act* requires that children five years of age or older be counseled on the effect of adoption before being placed.[142] British Columbia's *Adoption Act* has a similar counseling provision for children who are "sufficiently mature."[143] In Manitoba, the *Adoption Act* requires that where a child

[138] *Adoption Act*, S.N.W.T. (Nu.) 1998, c. 9, s. 7(4).
[139] *Adoption Act*, R.S.B.C., c. 5, s. 30(1).
[140] *Adoption Act*, R.S.B.C., c. 5, s. 32(c).
[141] *Child and Family Services Act*, R.S.O. 1990, c. C-11, s. 137(6). This age restriction was described as "arbitrary" by Campbell J in *Re Children's Aid Society of London &* Middlesex, 2010 ONSC 1348 at para. 20. The child involved was 7 years old with ADHD and was suspected of being afflicted with Fetal Alcohol Spectrum Disorder. While the boy indicated that he wanted his placement to be his "forever home," the Office of the Children's Lawyer counsel was not satisfied that the boy fully understood the consequences of the adoption and was not prepared to indicate that the boy gave a "fully informed" consent. The court concluded that the child's basic understanding of a "forever home" was sufficient as a consent to this legal process.
[142] *Adoption Act*, S.N.L. 2013, c. A-3.1, s. 12(1)(c)(i).

is under twelve or unable to consent, the court shall, "where appropriate and feasible, take into account the wishes of the child."[144] In Prince Edward Island, children twelve years of age or older are required to provide consent, and the court may order that consent is required "in any other case," which could result in the involvement of younger children.[145]

Some jurisdictions require or allow children to consult with a lawyer before providing consent to adoption. In Saskatchewan and Ontario, independent legal advice is mandatory before a child can provide consent to an adoption.[146] In Manitoba, children need only be advised of their right to independent legal advice.[147] The Northwest Territories' *Adoption Act* also requires that children be informed of how to obtain legal advice, and where a child requests such advice, aided in finding counsel to provide that advice.[148]

Adoption legislation also provides for dispensing with a child's consent to adoption. In the Northwest Territories and Saskatchewan, the court may dispense with the requirement of a child's consent where it would be in the best interests of the child.[149] In Alberta, which has a lower standard, the court may dispense with the consent of the child "if the Court, for reasons that appear to it to be sufficient, considers it necessary or desirable to do so."[150] Other jurisdictions provide that a child's consent may be dispensed with for

[147] *The Adoption Act*, C.C.S.M., c. A-2, s. 14(b).
[148] *Adoption Act*, S.N.W.T. (Nu.) 1998, c. 9, s. 23(2)(b).
[149] *Adoption Act*, S.N.W.T. (Nu.) 1998, c. 9, s. 25(2); *The Adoption Act*, S.S. 1989-90, c. A-5.1, s. 5(1)(a).
[150] *Child, Youth and Family Enhancement Act*, R.S.A. 2000, c. C-12, s. 68(4)(c).

reasons of incapacity. For example, in Manitoba, the court may dispense with the child's consent where the child is "unable to understand or give consent."[151]

Ontario's *Child and Family Services Act* establishes two situations where the court may dispense with a child's consent where obtaining consent would cause the child emotional harm, or where the child is unable to consent because of a developmental disability.[152] In *C. (A.) v. A. (V.)*, Justice Phillips of the Ontario Court of Justice considered the appropriate standard for dispensing with a child's consent on the basis of emotional harm.[153] In that case, a stepfather moved to dispense with the consent of his 12year-old step-son on the basis that the child did not know that the stepfather was not the child's biological father and that learning this information would cause the child emotional harm. According to Phillips J., to establish risk of emotional harm that would justify dispensing with the consent of a child, an applicant must provide evidence from an expert witness skilled in making that assessment, for example a psychiatrist or psychologist. Lay testimony is not sufficient. Phillips J. justified this high standard on the basis that it was important to consult children on decisions like adoption which carry significant consequences for the child (i.e. "the severing of a prior family connection").[154] In underlining the importance of requiring children's participation, the judge cited and relied on Article 12 of the CRC.

Children's Participation at Adoption Hearings

Some jurisdictions provide for children's attendance and participation at adoption proceedings. Some statutes like the Yukon's *Child and Family Services Act* only provide

[151] *The Adoption Act*, C.C.S.M., c. A-2, s. 20.

[153] 2012 ONCJ 7.
[154] 2012 ONCJ 7 at para. 70.

that a child has a "right to be present."[155] Others statutes are more explicit, providing that a child has a right to be heard. For example, Prince Edward Island's *Adoption Act* says that, "where it is practical to do so, the court shall give the child the opportunity to be heard."[156] Alberta's *Child, Youth and Family Enhancement Act* grants a child old enough to consent to the adoption (i.e. 12 years of age or older) the right to be heard, in person or through counsel.[157]

Ontario's *Child and Family Services Act* also grants children the right to participate in openness proceedings, which determine whether an adoption order will include provision for contact with parents or other relatives, as if the child were a party.[158] Ontario's Act also provides for legal representation for children in openness hearings, which determine whether a child will have continuing post-adoption contact with parents or other relatives. Under s. 153.5(2), the court may, with the consent of the Children's Lawyer, authorize the Children's Lawyer to represent the child where the court determines that legal representation is desirable.[159] Ontario judges have also ordered representation for children in adoption proceedings. In *C. (M.A.) v. K. (M.)*,[160] Justice Cohen of the Ontario Court of Justice relied on rule 4(7) of the *Family Law Rules* and s. 89(3.1) of the *Courts of Justice Act* to appoint counsel for a 5 year-old child who was the subject of an adoption application. While Cohen J. found that representation to ascertain the child's views and preferences would be futile since the child was so young, the judge found that representation could protect the child's best interests. Counsel for the child might be able

to identify broader issues than those raised by the parties themselves, who were closely focused on their own perceptions of the child's best interests.[161]

E. CRIMINAL PROCEEDINGS

Children may be involved in criminal proceedings either as witnesses, often testifying about their victimization, or as alleged offenders. While other provisions of the CRC have frequently been cited in cases dealing with both child victims and offenders, Article 12 has almost never been cited in the context of either type of criminal proceeding (though other provisions of the CRC have been influential in Canada in the development of constitutional protections for young offenders).[162] However, despite the absence of citation of the CRC, over the past three decades there have been very significant changes in Canadian law to allow for more effective participation by children in both of these proceedings. Since Article 12 of the CRC is rarely invoked in this context, the treatment of issues in this paper of issues related to criminal proceedings is relatively brief.

Hearing Child Victims and Witnesses

Until the 1980s, Canadian law was premised on the view that child witnesses were inherently unreliable, and very little effort was made to accommodate children in the criminal courts.[163] The provisions governing the presumed incompetency of child witnesses and the requirements for corroboration of children's testimony made it rare for children under 14 years of age to testify, and many cases involving child victimization were

[161] 2008 ONCJ 212 at para. 11.
[162] See e.g *R v D.(B.)*, 2008 SCC 25.
[163] Nicholas Bala, "Double Victims: Child Sexual Abuse and the Criminal Justice System" (1990), 15 Queen's L.J. 3.

not prosecuted; indeed, many victims of child abuse never reported to the police or even disclosed their abuse.

In the late 1980s, the justice system began to respond to the increased awareness of the nature and extent of child abuse, and to the growing body of psychological research on the reliability of child witnesses.[164] As a result, judges and legislators introduced many substantive, evidentiary, and procedural reforms, which have resulted in many more children testifying in court, starting as young as three years of age. Amendments to the *Canada Evidence Act* in 1988 and 2006 abolished the requirements for corroboration of children's testimony and allow children to testify if they are "able to communicate the evidence." Amendments to the *Criminal Code* allow children to testify by closed circuit television and to have a support person sit close to them while testifying, reducing the stress of this process for children, and allowing more children to come forward to testify about their victimization. Videotapes of police interviews with children and children's hearsay disclosures of abuse may now be admitted into evidence, helping to prove their victimization. Police investigators, prosecutors and judges now have much better education about issues related to child development and communication with children. In many places in Canada there are now victim-witness workers who assist in preparing children for the court process, and providing support for children and their parents.

Lawmakers in Canada continue to struggle with balancing the need to expand the scope for admission of children's evidence and support their involvement in the criminal justice system against protection of the rights of the accused and the right to a fair trial.

[164] Nicholas Bala, Angela D. Evans & Emily Bala, "Hearing the Voices of Children in Canada's Criminal Justice System: Recognizing Capacity and Facilitating Testimony (2010), 22 *Child & Family Law Quarterly* 21.

There continue to be concerns about how victims, including children, are treated in the criminal justice system.[165] While victim-witness workers may serve as informal advocates, there are concerns that too often there is insufficient regard in court to the needs and interests of children, for example, for use of accommodations like closed circuit television. However, the Canadian justice system has reached a better balance, one that more faithfully reflects the growing body of research on child development and the capacities of children, without sacrificing the rights of the accused, and that gives child victims a much greater opportunity to participate in the criminal process.

Participation Rights of Young Offenders

The *Youth Criminal Justice Act* (*YCJA*)[166] came into force in 2003. Although significantly changing some aspects of the law, and resulting in significant decreases in the rates of use of courts and custody for youthful offenders, the *YCJA* largely maintained the due process and participatory rights introduced by the previous law, the *Young Offenders Act.*[167] Reflecting Article 12 of the CRC, the *YCJA* s. 3(1)(d)(i) provides young persons dealt with under the Act "a right to be heard in the course of and to participate in the processes… that lead to decisions that affect them."

In addition to the protections afforded to adults involved in Canada's criminal justice processes under both the *Criminal Code* and the *Charter of Rights and Freedoms*, the *YCJA* provides special and significant legal rights to youths in recognition of their greater vulnerability. The *YCJA*, for example, constrains questioning by the police of young

[165] Sonja Brubacher, Nicholas C. Bala, Kim Roberts & Heather Price, "Investigative Interviewing of Witnesses and Victims in Canada," in David Walsh et al., eds., *International Developments and Practices in Investigative Interviewing and Interrogation, Volume 1: Victims and Witnesses* (London: Routledge Press, forthcoming 2015).

[167] R.S.C. 1985, c. Y-1.

persons suspected of offences. Section 146 of the *YCJA* provides that a statement made by a young person being questioned by the police as a suspect is admissible only if the youth has received an explanation "in language appropriate to his or her age and understanding" that the youth is not obliged to make a statement, and that the youth has the right to have a lawyer or parent present while a statement is made; any waiver of these rights by a youth must be in a signed statement or audio- or video-recorded waiver. The Supreme Court has made clear that it is not sufficient for a police officer to merely "read a youth his rights" from a form, but rather the police must provide an explanation that takes account of the youth's age and language comprehension. In its 2008 decision in *R. v. L.T.H.*, the Supreme Court emphasized the importance of the protections against improper questioning of youth suspects by police. Justice Fish wrote:

> Young persons, even more than adults, are inclined to feel vulnerable when questioned by police officers who suspect them of crime and can influence their fate. Parliament has for that reason provided them by statute with a complementary set of enhanced procedural safeguards in s. 146 of the *Youth Criminal Justice Act* . . . procedural and evidentiary safeguards available to adults do not adequately protect young persons, who are presumed on account of their age and relative unsophistication to be more vulnerable than adults to suggestion, pressure and influence in the hands of police interrogators.[168]

Despite these legal protections, in practice young persons being interrogated by police often fail to appreciate the significance of their legal rights.[169] Most youths who are questioned by the police will make a statement that implicates them in the offence, usually waiving the right to advice from counsel or parents.

In recognition of the vulnerability of youth and the challenges that they face in

---

[168] *R. v. L.T.H.*, [2008] S.C.J. No. 50 at paras. 1-3. Emphasis added.

[169] See e.g. Rona Abramovitch, Michele Peterson-Badali & Meg Rohan, "Young People's Understanding and Assertion of Their Rights to Silence and Legal Counsel" (1995) 37 Can. J. Crim. 1; and Michele Peterson-Badali & Martin Ruck, "Rights Knowledge, Reasoning, and Attitudes" in Roger J.R. Levesque ed., *Encyclopedia of Adolescence* (NewYork: Springer, 2012) 2386.

understanding and participating in the youth court process, the *YCJA* has special provisions to facilitate access to legal representation. Lawyers for youth may provide assistance at the time of questioning by the police, at a pre-trial bail hearing, at trial, and at a sentencing or review hearing.

In proceedings under the *YCJA*, if a youth wants to have a lawyer and is unable to obtain legal representation, s. 25 requires the judge to order that representation is to be provided. While judges can consider parents' financial means when determining whether a youth is "able" to obtain representation, the youth court cannot order parents to pay for a lawyer. Parents may choose to pay for counsel for their child,[170] but many parents are unwilling or unable to pay for a lawyer for their children, and very few youths have their own financial resources to retain counsel. If parents are paying for a lawyer there may be some confusion as to who is instructing the lawyer. Section 25(8) of the *YCJA* provides that a youth justice court judge shall ensure that a youth is "represented by counsel independent" of the parents, if it appears that the interests of the youth and parents conflict or the best interests of the youth require representation by his or her own counsel.

For the most serious cases, youth involved in the court process will always have legal representation, whether through legal aid, their parents' paying for counsel or an order under s. 25 of the *YCJA*. However, the process for making an order for representation varies. Not infrequently there are delays in securing access to counsel, and some youths plead guilty "to get things over with," without having had proper legal advice and representation. Further, there are concerns about the quality of representation provided to

[170] Section 25(10) of the *YCJA* allows a province to establish a program to seek reimbursement from parents of youth for whom an order for representation is made under s. 25 of the *YCJA*; only Manitoba has done so.

youth. There are a few places, such as Calgary and Edmonton, where there are lawyers with training in dealing with adolescent clients and support from social workers at specialized clinics doing youth representation, but in most locales there are concerns that some of the lawyers who do this type of work may lack the training, knowledge and resources to provide effective representation for adolescent offenders.

Likely because the *YCJA* affords significant participatory rights to youth and lawyers, the courts in Canada have had very little need to cite Article 12 of the CRC in dealing with youth offending issues.[171]

F. PROCEEDINGS ABOUT HEALTH CARE

In Canada, children's decision-making about health care issues occurs within a complicated legal framework. First, there is the common law "mature minor" doctrine. Generally, parents are entitled to make treatment decisions on their children's behalf. The mature minor doctrine, however, allows children who are sufficiently mature to make their own treatment decisions. Second, there is provincial and territorial legislation governing consent to medical treatment. These statutes often provide a specific age at which children are presumed competent to consent to treatment. Third, there is child protection legislation.

[171] The only reported youth justice case to cite Article 12 of the CRC is *R. v. C. (G.)*, 2010 ONSC 115, where Molly J. relied on both the *Charter of Rights and Freedoms* and the CRC to conclude that a young person (invariably in this context acting through counsel) has the right to be heard prior to the Crown exercising its discretion under s. 67(6) of the *YCJA* to elect to have a youth facing a murder charge tried by a judge and jury. In a later decision, *R. v. J.S.R.*, [2012] O.J. 4063 (CA), the Ontario Court of Appeal, per Feldman J.A., explained, at para. 131:

> I agree with Molloy J. that s. 67(6) of the YCJA must be read in the context of s. 3 to ensure that young people are treated fairly, and their right to participate in the trial process is respected. However, in my view, the Act does not require the court to read in full administrative law procedural rights in order to achieve fair treatment in the context of s. 67(6), or to avoid a finding of abuse of process based on procedural unfairness.

These provincial and territorial statutes allow a child protection agency to apply to a court to order treatment for a child where either the child or parent is refusing to consent. Finally, there are cases interpreting how these sources of law interact and which rules will ultimately govern health care decision-making for children.

Consent to Treatment Legislation

Most provinces and territories have legislation governing consent to medical treatment. Some of this legislation is "global," applying to both adults and children; some is child-specific.[172]

Jurisdictions vary in how they approach children's consent to treatment. In some jurisdictions, children's consent to treatment is not specifically addressed. In Ontario, Prince Edward Island, and the Yukon, all people – including children – are presumed capable of consenting to treatment.[173] Age is not mentioned in the legislation. This presumption can be rebutted where a child *or an adult* is unable "to understand the information that is relevant to making a decision about treatment."[174] Other jurisdictions provide an age at which a child is *presumed* capable of consenting to treatment. In Manitoba and Newfoundland and Labrador, this age is 16.[175] Children 16 and over are presumed capable of consenting; children under 16 are presumed incapable. This means that children under 16 may consent to treatment where there is evidence to establish capacity.

---

[172] For an excellent review of the law relating to children's health care decision-making, see David C. Day, "The Capable Minor's Healthcare: Who Decides?" (2007), 86 Can. Bar Rev. 379.
[173] *Health Care Consent Act, 1996*, S.O. 1996, c. 2, s. 4(2).
[174] *Consent to Treatment and Health Care Directives Act*, S.P.E.I. 1996, c. 10, s. 7(1); *Care Consent Act*, S.Y. 2003, c. 21, s. 6.
[175] *The Health Care Directives Act*, S.M. 1998, c. 36, C.C.S.M. c. M110, s. 4(2); *Advance Health Care Directives Act*, S.N.L. 1995, c. A-4.1, s. 7(b) and (c).

In *H. (P.) v. Eastern Regional Integrated Health Authority*,[176] Justice LeBlanc of the Newfoundland and Labrador Supreme Court considered whether the court had authority to order a 16 year-old child to undergo treatment where the child had capacity to refuse to consent to such treatment. The case involved an application by the child's mother to determine the capacity of her daughter to refuse to consent to treatment. In Newfoundland and Labrador, children 16 years of age or older are not subject to child protection legislation, so no child protection agency was involved. The issue of overriding a capable child's refusal to consent to treatment ended up being moot after LeBlanc J. determined that the 16 year-old did *not* have capacity, thus rebutting the statutory presumption. However, the judge held that even if the child had been found to have the capacity to refuse to consent to treatment, he would have ordered treatment pursuant to the court's *parens patriae* jurisdiction. Even though the child was not subject to the province's child protection legislation, LeBlanc J. determined that treatment decisions by minors – even mature minors – had to accord with the child's best interests.

New Brunswick's *Medical Consent of Minors Act* provides that the rules governing consent to treatment by adults apply to children who are 16 years of age or older.[177] However, the Act also provides a framework that allows children under 16 to consent in certain circumstances. Section 3(1) states:

> The consent to medical treatment of a minor who has not attained the age of sixteen years is as effective as it would be if he had attained the age of majority where, in the opinion of a legally qualified medical practitioner, dentist, nurse practitioner or nurse attending the minor,
> (a) the minor is capable of understanding the nature and consequences of a medical treatment, and

[176] 2010 NLTD 34.
[177] *Medical Consent of Minors Act*, S.N.B. 1976, c. M-6.1 s. 2.

> (b) the medical treatment and the procedure to be used is in the best interests of the minor and his continuing health and well-being.[178]

Maturity alone is not sufficient to allow a younger child to consent; the treatment must also be in the best interests of the child *in the opinion of a medical practitioner*. A similar statutory framework exists in British Columbia. That province's *Infants Act* does not set an age at which children are presumed capable of consent. Instead, the Act provides that all children may consent to treatment where,

> the health care provider providing the health care
> (a) has explained to the infant and has been satisfied that the infant understands the nature and consequences and the reasonably foreseeable benefits and risks of the health care, and
> (b) has made reasonable efforts to determine and has concluded that the health care is in the infant's best interests.[179]

Again, medical professionals are to determine whether treatment is in the child's best interests and the child has the requisite capacity.

Saskatchewan and Alberta both have legislation defining the age at which a child may provide a health directive. In Saskatchewan, the age is 16;[180] in Alberta, the age is 18. Neither statute provides guidance on medical decision-making by children under those ages. Absent an application by a child protection agency for authorization to make a treatment decision on the child's behalf, the common law "mature minor" rule would likely apply.

Child Protection Legislation

All Canadian jurisdictions have child protection statutes that allow a state agency to make treatment decisions on behalf of a child in certain circumstances. Where a parent refuses to consent to treatment, and this refusal places the child's health or life in danger, child

[178] *Medical Consent of Minors Act*, S.N.B. 1976, c. M-6.1 s. 3(1).
[179] *Infants Act*, R.S.B.C. 1996, c. 223, s. 17(3).
[180] *The Health Care Directives and Substitute Health Care Decision Makers Act,* S.S. 1997, c. H-0.001, s. 3; *Personal Directives Act*, R.S.A. 2000, c. P-6, s. 3(1).

protection agencies are typically authorized to "apprehend" the child and provide the necessary consent in the place of the parent, subject to a process that requires a court order within a relatively short period of the apprehension. Parents must be notified of this process and have a right to participate. As discussed above, there are varying provincial provisions about children's right to notice and participation in the child protection process, though in most jurisdictions older children may be involved.

Where the child is a "mature minor," either according to common law or consent to treatment legislation, and refuses treatment, the situation becomes more complicated. A "mature minor" may still be a "child" under the relevant child protection statute, and thus subject to the state's protection powers.

The leading authority on the interplay between the mature minor doctrine and child protection legislation is the Supreme Court of Canada decision in *Manitoba (Director of Child & Family Services) v. C. (A.)*.[181] The child was a 14 year-old Jehovah's Witness who had been admitted to hospital for internal bleeding; her treating physicians expressed concern that there was a serious risk to her health, and perhaps her life, without a blood transfusion, but both the girl and her parents refused to consent to a blood transfusion. The child protection agency apprehended the child and applied to the court under Manitoba's *Child and Family Services Act* for an order authorizing blood transfusions. Under s. 25(8) of the *Child and Family Services Act*, the court may authorize any medical treatment it considers to be in the best interests of the child. However, s. 25(9) provides that no order can issue with respect to a child 16 years of age or older without the child's consent, unless that child cannot understand the relevant information or appreciate the reasonably

[181] 2009 SCC 30. This case was also discussed above in regard to the rights of children in protection proceedings.

foreseeable consequences of consenting or not consenting to the treatment. The child argued that because she had capacity to make the decision to refuse the transfusion, this decision should have been respected under the mature minor doctrine. At the trial hearing, the court agreed that the child had capacity to consent, but that this was irrelevant as she was under 16 years of age.

This decision was upheld by the Supreme Court of Canada, though the Court adopted a more nuanced approach. Justice Abella, writing for the majority, refused to accept that the mature minor doctrine allows mature children to make *all* decisions related to their medical care. While a mature minor can make decisions about such issues as an abortion, different considerations apply where the child is refusing life-saving treatment. While mature minors have strong claims to autonomy, Abella J. explained, where a child protection agency has brought an application to authorize treatment for a child, the state's interest in protecting children is engaged and the state still has the power to consider whether allowing the child to exercise autonomy accords with the child's best interests.. According to Abella J., the best interests of the child requires that children's views and preferences be weighed in accordance with the child's age and maturity. The more mature the child, the more deference provided to the child's treatment decision. It is possible, Abella J. concluded, that in certain cases the degree of maturity exhibited by the child could be so high that to disregard his or her treatment decision would not be in the child's best interests. The court needs to take account of both the child's maturity and the nature of the medical decision. According to Abella J., this "sliding scale" of scrutiny is consistent with Article 12 of the CRC.[182]

G. IMMIGRATION AND REFUGEE PROCEEDINGS

Immigration and refugee proceedings in Canada are governed by the federal *Immigration and Refugee Protection Act* [*IRPA*],[183] and also affected by the international *Convention Relating to the Status of Refugees,*[184] to which Canada is a signatory. While the *IRPA* governs proceedings involving children, there are few provisions that deal explicitly with children and their participation rights, such as s. 167(2) which addresses child representation. General provisions are assumed to cover child claimants and applicants. For example, s. 170(e), which provides those claiming *Convention* refugee status "a reasonable opportunity to present evidence, question witnesses and make representations"[185] also applies to children. The provisions that mention children require a consideration of the best interests of a child affected by an immigration or refugee decision.

Best Interests of the Child and the Right to Be Heard

A number of provisions direct that the best interests of the child be considered in decisions made pursuant to the *IRPA*. For example, s. 25(1) provides that the Minister may grant an otherwise inadmissible foreign national permanent residency status or exempt the individual from any criteria or obligations under the Act on the basis of humanitarian and compassionate grounds, "taking into account the best interests of a child directly affected."[186]

---

the mature minor doctrine did not oust the province's child protection statute where a 16 year-old child refused life-saving treatment on religious grounds. The Court acknowledged that children's views must be heard and considered in treatment decisions but that these views are not determinative. It cited Article 12 of the CRC in support of this proposition.

[183] S.C. 2001, c. 27.

[184] UNTS, vol. 189, p. 137, CTS 1969/6.

[185] *Immigration and Refugee Protection Act*, S.C. 2001, c. 27, s. 170(e).

[186] *Immigration and Refugee Protection Act*, S.C. 2001, c. 27, s. 25(1).

The importance of considering the best interests of the child in immigration and refugee matters was recognized by the Supreme Court of Canada in *Baker v. Canada (Minister of Citizenship and Immigration).*[187] That case considered the factors to be weighed in an application based on humanitarian and compassionate grounds under the former *Immigration Act*. Justice L'Heureux-Dubé, writing for a majority of the Court, held that "the decision-maker should consider children's best interests as an important factor, give them substantial weight, and be alert, alive and sensitive to them."[188] The majority explained that this interpretation was consistent with Canada's obligations under Articles 3 and 12 of the CRC. In *Legault v. Canada (Minister of Citizenship and Immigration)*[189] the best interests of the child was found to be an "important factor" that must be given "substantial weight," in the decision of whether to remove a parent from Canada. However, the Federal Court of Appeal found that the best interests of the child were not determinative in making that decision.

In *Hawthorne v. Canada (Minister of Citizenship and Immigration),*[190] the Federal Court of Appeal was asked to define the circumstances under which the consideration of the best interests of the child would be satisfied when assessing an application based on humanitarian and compassionate grounds. A majority of the Court ruled that a best interests determination requires the decision-maker to take into account the views of the child in accordance with the child's age and maturity, and that a child's own views about his or her circumstances are to be considered, as required by Article 12 of the CRC. In this case the Court of Appeal held that the Immigration Officer had erred in failing to take account of

the 15 year-old child's strong preference to continue to live in Canada with her mother, who faced deportation, rather than her live with her father, who was a citizen and not facing deportation.

Designated Representatives

Any child who is the subject of proceedings under the *IRPA* must be assigned a "Designated Representative."[191] This Designated Representative is usually the child's parent, but may be a lawyer.[192] According to Guideline 3 of the *Chairperson's Guidelines*, the duties of a Designated Representative are as follows:

- To retain counsel;
- To instruct counsel or to assist the child in instructing counsel;
- To make other decisions with respect to the proceedings or to help the child make those decisions;
- To inform the child about the various stages and proceedings of the claim;
- To assist in obtaining evidence in support of the claim;
- To provide evidence and be a witness in the claim;
- To act in the best interests of the child.[193]

The appointment of a Designated Representative for a child must occur as soon as possible, and the appointment applies for the duration of the proceedings.[194] Courts have held that failure to appoint a Designated Representative for the child in a timely fashion is a ground for judicial review, and may result in the matter being remitted for a rehearing.[195]

[195] *Duale v. Canada (Minister of Citizenship & Immigration)*, 2004 FC 150 at para. 24.

In *Manalang v. Canada (Minister of Public Safety and Emergency Preparedness)*,[196] Justice Heneghan of the Federal Court considered the rights of children under Article 12 of the CRC who have been assigned a Designated Representative pursuant to the *IRPA*. The case involved an application by a mother and her two minor children for judicial review of a decision by the Immigration Appeal Division (IAD) dismissing the applicants' appeals from orders that prevented them from remaining in Canada as immigrants sponsored by the mother's husband, the children's step-father. A significant factor in the exclusion application was that the mother had lied on her application for admission, stating that her husband was the children's father. The applicants raised a number of arguments, including that the IAD failed to give due weight to the interests and wishes of the children as required by Article 12 of the CRC. At an initial hearing before the IAD, there had been no Designated Representative for the children, so that proceeding was terminated and a new IAD panel heard the matter, with the mother's lawyer as the Designated Representative for the children. In upholding the IAD decision to exclude the mother and her children, Heneghan J. held that the children had the benefit of a Designated Representative, whose role it was to "ensure that their interests were fully and adequately disclosed to the panel," and that there was no evidence to suggest that the representative had been barred from performing this role.[197] As a result, the children had exercised their right to be heard under Article 12 of the CRC.

Issues of effective advocacy and participation are especially pressing for the growing numbers of refugee claimants who are "unaccompanied minors," children who

[196] 2007 FC 1368.
[197] 2007 FC 1368 at para. 111.

arrive in Canada without parents or guardians and seek refugee status.[198] While some of these children may have relatives in Canada who can provide some assistance, this is a particularly vulnerable population and it is noteworthy that some lawyers are making special efforts to ensure that there is adequate representation for these children.[199]

H. RIGHTS IN EDUCATION PROCEEDINGS

Most children spend very substantial portions of their time in schools, and educators and school tribunals make very significant decisions about children's lives. The United Nations Committee on the Rights of the Child has recognized that the right of children "to be heard within education is fundamental to the realization of the right of education," which is protected under Article 28 of the CRC.[200] The Committee recommends that children be heard with respect to the development of school policies and codes of behavior, as well as in proceedings that affect their individual education. Too often, however, children are not included in decision-making about their education and schooling.

In Canada, education is governed by provincial or territorial legislation;[201] although there is variation in legislation and curricula across the country, there is are common issues in all jurisdictions. Most decisions about children and their education are made by principals, school boards, and administrative tribunals. While it is clear that the CRC,

including Article 12, apply to these decisions, since relatively few cases result in court applications for judicial review, it is not easy to get a clear picture of how the CRC is being applied in the educational context in Canada.

One of the important proceedings that affects the education and development of children are decision-making processes governing education for children with special needs. These decisions are generally initially made at the school board level, with the possibility of an appeal to an administrative tribunal. In one of the few high visibility education law cases, parents appealed the decision to exclude their 12 year old disabled child from a program that integrated her into the regular school program and place her a special education class all the way to the Supreme Court of Canada. In its 1996 decision in *Eaton v Brant County Board of Education* the Supreme Court stated:

> the decision-making body must further ensure that its determination of the appropriate accommodation for an exceptional child be from a subjective, child-centred perspective, one which attempts to make equality meaningful from the child's point of view as opposed to that of the adults in his or her life. As a means of achieving this aim, it must also determine that the form of accommodation chosen is in the child's best interests… For older children and those who are able to communicate their wishes and needs, their own views will play an important role in the determination of best interests. [202]

Despite this judicial statement about the importance of involving children in decision-making, empirical research suggests that in Canada children with disabilities generally do not participate either directly or indirectly in decisions that affect them in an educational context. [203] While parents have standing in these processes, there may be situations in

[202] [1996] S.C.J. 98, [1997] 1 S.C.R. 241 at para 77.

which parents and children have differing views and interests, and children's perspectives and preferences may not be adequately represented.

There are also concerns about the limited role for children in school disciplinary proceedings that may result in their suspension or expulsion. Although parents have standing in these proceedings, students generally do not. It has been argued that Article 12 requires greater procedural protections for students subject to disciplinary proceedings. Paré, for example, argues that children should be given an opportunity to be heard directly, as opposed to indirectly through their parents, at disciplinary hearings.[204]

Another fundamental concern is that schools in Canada often fail to provide adequate education to children about their rights, and in particular issues related to the CRC are not addressed in most curricula.[205] Although both adults and children have low levels of awareness, a study commissioned by War Child Canada found that adults are more likely than children to have awareness of the CRC (55% versus 33%).[206] Most children reported that they have not heard of any major United Nation's international human rights treaties. Significantly, children born outside of Canada had greater

awareness of the CRC than those born in Canada (43% versus 32%). It would seem that only in Nova Scotia does the provincial curriculum mandate education about the CRC.[207]

Despite the failure to systemically address issues of children's rights, there have been cases in which older adolescents have, through litigation guardians, been able to bring court applications to force schools to recognize their rights. Most notably in Ontario, students have brought successful court actions in regard to school proms, ironically an event that symbolizes the end of their time as students in secondary school.[208]

IV. EXPANDING CHILDREN'S PARTICIPATION RIGHTS IN CANADA

A review of legislation and case law from across the country suggests that Canadian legislatures, judges and policy makers are alert to the participation rights of children, and their responsibilities under Article 12. This is especially true in the area of family law, where children's views and preferences are a guiding factor in making custody, access, child protection, and adoption decisions in children's best interests. However, there is room for improvement. The United Nations Committee on the Rights of the Child has described Canada has having "inadequate mechanisms for facilitating meaningful and empowered child participation in legal, policy, environmental issues, and administrative procedures that impact children."[209]

This concluding part of this paper offers some suggestions on how children's participation rights under Article 12 of the CRC could be enhanced in Canada.

Promoting Children's Participation in Judicial and Administrative Proceedings

This section provides specific suggestions for further promoting children's participation in proceedings addressed in this paper: family proceedings (custody and access, Hague Convention, child protection, and adoption), criminal proceedings, proceedings respecting treatment decisions, and immigration and refugee proceeding. These options are informed by practices that promote children's participation rights in other countries, and some come directly from academic writing on children's participation. It is also important to recognize that there is significant variation across Canada in the extent to which children's participation rights are recognized and promoted, and policy makers in different provinces and territories can learn from experiences in other Canadian jurisdictions.

There is no single "best" way to engage children in legal proceedings, but rather it is important to have a range of ways available to allow children to participate. Although the United Nations Committee on the Rights of the Child generally prefers direct over indirect participation, how children participate in proceedings will depend in some measure on the nature and stage of the case, and the resources available. The Committee has made clear that children should never be forced to express their views. The method used for hearing children should take into account the needs and maturity of children, as well as the need to balance children's participation with the protection of their interests and relationships. Perhaps most importantly, the views of individual children about how they wish to participate at particular stages in particular proceedings should always be taken

into account. That said, certain methods for hearing children ought to be more readily available.

Legal representation of children in custody and access proceedings in Canada is limited, and not available in some jurisdictions. Article 12 may provide an avenue for encouraging a superior court to use its *parens patriae* power to appoint a lawyer for a child involved in a custody and access proceeding.[210] However, legal representation is relatively expensive and may result in children feeling pressure to "take sides" in litigation. Assessments can be an important way for soliciting the views of children, but also relatively expensive with the potential to delay resolution of proceedings. It would certainly be appropriate for lawyers for children and assessors to ask children how they would like to participate, including whether they would like to meet the judge.

Some provincial and territorial statutes have provisions that allow for judicial interviews. Judicial interviews can provide a cost-effective and timely way of hearing directly from children in family law proceedings. Some jurisdictions, including Scotland, New Zealand and most notably Quebec, have already expanded judicial interviewing to allow greater participation by children in family cases. Empirical research establishes that children in family cases always want to be asked if they wish to contribute their views, and, if their family's dispute is being resolved in court, many would like to meet the judge.[211] Interdisciplinary education and training on issues relating to judicial interviewing of children and children's involvement in the family dispute resolution process is also important. It is not expected that judges and lawyers should have the knowledge of mental

[210] See e.g. *B. (A.C.) v. B. (R.),* 2010 ONCA 714.
[211] Rachel Birnbaum & Nicholas Bala, "Judicial Interviews With Children In Custody And Access Cases: Comparing Experiences In Ontario And Ohio" (2010), 24(2) International Journal of Law, Policy and the Family 300.

health professionals who conduct assessments, but education programs can ensure that they should be aware of the importance of engaging children in a sensitive fashion, and prepared to address such issues as confidentiality, recording and Non-evaluative Views of the Child Reports, currently used in some jurisdictions, which can be a relatively inexpensive and expeditious way of allowing children to express their perspectives and preferences, and consideration could be given to expanding their use. However, issues of training, resources and protocols for Views of the Child Reports need to be addressed, including whether children should be asked whether there are matters that they would rather not be disclosed to parents, the court or a mediator, and whether they would like to meet the judge or mediator.

While the focus of this paper has been children's participation in legal proceedings, Article 12 also supports children's participation in non-curial family dispute resolution processes. The Netherlands, for example, requires that children's views be reflected in all parenting plans placed before the court. In *G. (B.J.) v. G. (D.L.)*, Justice Martinson held that Article 12 requires children's views to be considered at all stages of a custody and access case, including attempts to settle using alternative dispute resolution.[212] In England and Wales, the government has committed itself to ensuring that children's views are shared with parents and mediators in every case being resolved by this method of dispute resolution.[213]

---

[212] 2010 YKSC 44 at para. 6.

[213] In England and Wales, the previous government made significant commitments to ensuring that the "voice of the child" is heard in mediation (United Kingdom, Ministry of Justice, 2015). However, it is unclear how the new Conservative government will continue with those commitments. See Government of the United Kingdom, Policy Paper: *Voice of the Child: government response to Dispute Resolution Advisory Group report*, online: <www.gov.uk/government/publications/voice-of-the-child-government-response-to-dispute-resolution-advisory-group-report>.

The *YCJA* recognizes the right of young people accused of a crime to be heard and to participate in processes that lead to decisions that affect them. Yet research on children's experiences in the youth criminal justice system suggests that many children do not feel as if they have been heard or given an opportunity to participate.[214] Professor Myriam Denov suggests that one way to promote children's rights under Article 12 would be to introduce a statutory requirement that children's views be taken into account in predisposition reports and sentencing considerations.[215]

In the health law context, commentators have suggested moving away from presumed capacity to consent to treatment decisions based on age toward presumed capacity to consent for all.[216] This is already the law in Ontario, Prince Edward Island, and the Yukon. Eliminating age presumptions for consent would be consistent with the Committee on the Rights of the Child's interpretation of the requirements of Article 12.

With respect to children's participation in immigration and refugee proceedings, Professor Sonja Grover has suggested that child refugee claimants should be assigned independent, free, and expert legal counsel in order to participate effectively in hearings.[217] Designated Representatives, because they are often family members, are less likely to be independent, raising questions about their ability to safeguard the child's interests.

There is also a need to provide children greater opportunities to participate in processes that involve decision-making in the education and schooling context, both in regard to making decisions about their individual lives and in developing policies, programs and student codes of behaviour. In order to encourage participation of children in various processes and to promote their rights, school curricula also need to address issues of children's rights.

Policy Development and Law Reform

The focus of this paper was on children's participation rights in legal proceedings, but there are other important domains for involving children in civil society. This paper did not address issues related to opportunities to promote children's participation in legislative and policy reform, but in a number of countries significant efforts have been made in this regard.

Some of the approaches that different countries, regional governments and municipalities have developed to engage children include children's clubs, children's councils, and children's parliaments, as well as representation of children and youth on various advisory councils and policy-making bodies.[218] For example, in the American state of Georgia, a children's forum was set up to allow children the opportunity to express their views on the problems facing children and to propose specific solutions. In Sweden, many municipalities have established "influence forums," which allow children to participate in decision-making at the local level on issues that affect them. At the national level, New Zealand has established a prime minister's youth advisory forum. Every year, selected youth from across the country are invited to meet three times with cabinet ministers, including the prime minister, to discuss issues affecting children and other matters

[218] See Aisling Parks, *Children and International Human Rights Law: The Right of the Child to be Heard* (London: Routledge, 2013) at 181-209.

concerning the government. Topics canvassed so far include student loans, bullying in schools, and police treatment of young people.

In Canada, some governments have also developed programs to involve children and youth in policy development and program monitoring. For example, the Ottawa Police Service has established a Youth Advisory Committee with members aged 13 to 24 years to allow for participation in development of policies and programs.[219] This type of Committee both allows children and youth to be more involved in decision-making and provides valuable information to police. In many Canadian jurisdictions there is a provincial or territorial office that has responsibility for advocacy for children and youth, often focusing on investigation of complaints and concerns related to children in the care of government agencies, most often in the care of child welfare or youth justice facilities. Some of these offices have youth advisory committees.[220] However, much more needs to be done to involve children and youth in law reform and policy development, especially in areas where they are directly affected, likely family law and education policy.

Research and Policy Development

A review of statutes and cases across the country suggests that Canadian legislatures, courts and tribunals are alert to the CRC and the participation rights of children contained in Article 12. However, as this paper demonstrates, there is significant variation across jurisdictions and across legal domains in whether and how children are heard in legal proceedings that affect them. The United Nations Committee on the Rights of the Child

[220] See Office of the Provincial Advocate for Children and Youth, Youth Advisory Committee, online: <http://www.provincialadvocate.on.ca/main/en/ihsts/youth-advisory-committee.html>.

has advised that Canada needs to do more to promote and protect children's participation rights. This paper has provided some suggestions for how that could be achieved.

As discussed in this paper, there is some research on children's experiences with participation in legal processes in Canada. It is not a large body of research, and there is a clear need for more research on the experiences of children, parents, judges, lawyers and other professionals with children's participation. Although there is a clear need for further research, enough is known about the needs, rights and interests of children that all of those involved in the implementation of justice should be taking steps to improve children's participation in matters – both legal and policy – that affect them.

Program Directives 20-1

Chapter 5
Social Development

PD 5.1
First Nations Child and Family Services (FNCFS)

1.0 Purpose

This directive states the department's policy regarding the administration of the First Nations Child and Family Services Program.

2.0 Authority

This directive is issued as a follow-up to the Cabinet Decision of July 27, 1989.

3.0 Issuing Authority

This directive is issued under the authority of the Assistant Deputy Minister of Corporate Services.

4.0 Scope

This directive applies to all employees, both at headquarters and in the regions, in the carrying out of the department's functions in regard to the funding and support of child and family services on reserves.

Directives du programme 20-1

Chapitre 5
Développement social

DP 5.1
Services d'aide à l'enfance et à la famille des Premières Nations (SAEFPN)

1.0 Objet

La présente directive décrit la politique du Ministère en matière d'administration du Programme de Services d'aide à l'enfance et à la famille des Premières Nations.

2.0 Autorisation

Cette directive est émise à la suite de la décision du Cabinet du 27 juillet 1989.

3.0 Autorisation de publication

Le présent document est publié sous l'autorité du sous-ministre adjoint des Services ministériels.

4.0 Portée

La directive s'applique aux employés, tant à l'Administration centrale que dans les régions, qui exécutent les fonctions relevant du Ministère quant au financement et à l'appui des services d'aide.

Canada's Disclosure - Part A CAN000273_0001

5.0 Responsibilities

5.1 Except where otherwise indicated, this directive will be implemented by the Regional Director General.

5.2 The responsibility for approving developmental plans and new funding lies with HQ Financial Services in cooperation with the Indian Programming and Funding Allocations Directorate at HQ.

5.3 The Indian Programming and Funding Allocation Directorate is responsible for the interpretation of this directive and for the insertion of any necessary changes.

6.0 Principles

6.1 The department is committed to the expansion of First Nations Child and Family Services on reserve to a level comparable to the services provided off reserve in similar circumstances. This commitment is independent of and without prejudice to any related right which may or may not exist under treaties.

6.2 The department will support the creation of Indian designed, controlled and managed services.

6.3 The department will support the development of Indian standards for those services, and will work with Indian organizations to encourage their adoption by provinces/territory.

5.0 Responsabilités

5.1 Sauf sous indication contraire cette directive sera mise en oeuvre par les directeurs généraux régionaux.

5.2 Les Services financiers en collaboration avec la Direction du finacment et des programmes pour les Indiens, à l'Administration centrale, ont la responsabilité d'approuver les plans de développement ainsi que le financement supplémentaire.

5.3 La Direction du financement et des programmes pour les Indiens détient la responsabilité d'interpréter cette directive et d'y insérer tout changement qui s'avère nécessaire.

6.0 Principes

6.1 Le Ministère s'est engagé à élargir les services d'aide à l'enfance et à la famille des Premières Nations dans les réserves, de manière qu'ils soient comparables aux services offerts hors des réserves dans des circonstances analogues. Cet engagement est indépendant et n'est pas préjudiciable aux droits connexes existants, peut-être ou pas, sous les traités.

6.2 Le Ministère appuiera la création de services conçus, contrôlés et gérés par les Indiens.

6.3 Le Ministère aidera en outre les Indiens à élaborer des normes pour ces services et travaillera conjointement avec les organismes indiens à encourager les provinces/territoire à les adopter.

Canada's Disclosure - Part A CAN000273_0002

6.4 This expansion of First Nations Child and Family Services (FNCFS) will be gradual as funds become available and First Nations are prepared to negotiate the establishment of new services or the take-over of existing services.

6.5 Provincial child and family services legislation is applicable on reserves and will form the basis for this expansion. It is the intention of the department to include the provinces in the process and as party to agreements.

7.0 Developmental Activities

7.1 The department will fund the development of new FNCFS organizations as follows:

(a) *Pre-planning*:

This activity is intended to support community consultation, data collection and information gathering sufficient for the preparation of an initial community proposal and preliminary discussions with the province/territory and DIAND. It should produce a detailed plan (direction and services wanted and how they intend to achieve this), and band council resolutions indicating community support for the development of FNCFS.

(b) *Planning*:

This activity is intended to support all the work leading up to and including a

6.4 Cet élargissement des Services d'aide à l'enfance et à la famille des Premières Nations (SAEFPN) se fera graduellement, à mesure que les fonds sont disponibles et que les Premières Nations sont disposées à négocier la création de nouveaux services ou à assumer les services actuels.

6.5 La législation provinciale sur l'enfance et la famille s'applique aux réserves et sera à la base de cet élargissement. Le Ministère a l'intention d'inclure les provinces dans ce processus et comme signataires des ententes.

7.0 Activités de développement

7.1 Le Ministère financera la création de nouveaux organismes SAEFPN, comme suit:

a) *Pré-conception*:

Cette activité vise à appuyer les consultations communautaires, la collecte de données et l'obtention d'informations qui permettront de rédiger une proposition initiale pour la communauté, ainsi que de tenir des discussions préliminaires avec la province ou territoire et le MAINC. Elle devrait aboutir à un plan détaillé (direction et services désirés et leur intention pour accomplir ceci) et à des résolutions du conseil de bande donnant la preuve que la communauté appuie la création de SAEFPN.

b) *Conception*:

Cette activité vise à appuyer tous les aspects de la création d'un nouvel

formal agreement between the parties (province/territory, DIAND and Indian groups) for the start-up of a new organization. It will include needs assessment, identification of respective roles and responsibilities, description of services and delivery mode, elaboration of personnel policies (i.e. organization chart, job descriptions, etc.) and financial policies (i.e. accounting system, etc.), description of an implementation plan, funding arrangements, etc.

organisme, y compris la préparation et l'entente officielle entre les intéressés (province/ territoire, MAINC et groupements indiens). Cela comprend l'évaluation des besoins, la détermination des rôles et responsabilités de chacun, la description des services et des modes de prestation, l'élaboration de politiques sur le personnel, (par exemple, organigramme, descriptions de tâches, etc.) et le financement de l'organisme (par exemple, système de comptabilité, etc.), la description d'un plan de mise en oeuvre, les modalités de financement, etc.

(c) *Start-up*:

This phase will see the hiring of staff, the establishment of the office(s), purchase of equipment and furniture, the set-up, orientation and training of local committees and board of directors as well as the initial training of staff.

c) *Mise en oeuvre*:

À cette étape, le personnel est engagé, le(s) bureau(x) est(sont) créé(s), on achète l'équipement et les meubles, les comités locaux et conseils d'administration sont établis, orientés et formés, et l'on procède à la formation initiale du personnel.

7.2 A pre-condition for moving from one developmental phase to another, is the completion of the previous phase. This funding will be provided only once for each phase to each group and band. Funding of the pre-planning and planning phases can be incorporated in the Comprehensive Funding Arrangement (CFA) of the band or the tribal council and will be considered as a Flexible Transfer Payment (FTP). The start-up funding will form part of a separate contribution agreement, as well the ongoing operating budget.

7.2 Il ne sera possible de passer d'une étape à une autre qu'à condition que la première soit menée à terme. Ce financement ne sera assuré qu'une seule fois à chaque groupe et bande, pour chaque étape. Le financement des étapes de pré-conception et de conception peut être incorporé à la Formule globale de financement (FGF) de la bande ou du conseil tribal, et sera considéré comme un Paiement de transfert souple (PTS). Le fonds initial fera parti d'une entente de contribution distincte, de même que le budget opérationnel permanent.

Canada's Disclosure - Part A CAN000273_0004

8.0 Funding adjustment for existing organizations

8.1 Existing organizations which are funded at a rate lower than that proposed (for new organizations) in sections 19 and 20, will have their budget increased at the same level and rate as described in section 19 (for new organizations).

8.2 Beginning in fiscal year 1995-1996, existing organizations which are funded at a rate greater than 100% of the operational funding formula (for new organizations) as described in sections 19 and 20 will be reduced to the 100% level of the formula by 1996-1997. In 1995-1996, the funding of these organizations will be reduced by one half the amount above the 100% level, with the other half deducted in 1996-1997.

9.0 Scale of organizations

9.1 Each organization should if possible serve at least 1,000 children (0-18 years of age). It is realized that in certain circumstances this may be impossible and the department is ready to consider exceptions to assist potential organizations that would serve less than 1,000 children.

(a) *Grounds for Exceptions*:

(1) isolation and remoteness: the distance between bands that would otherwise work in

8.0 Rajustement du financement des organismes actuels

8.1 Les organismes établis qui reçoivent un financement inférieur à celui proposé aux sections 19 et 20 (pour de nouveaux organismes), auront droit à une augmentation de leur budget en fonction des taux exprimés à la section 19 (pour de nouveaux organismes).

8.2 À partir de l'exercice financier 1994-1995, les organismes établis bénéficiant d'un financement supérieur à 100% de la formule de financement opérationnel (pour de nouveaux organismes) tel que stipulé aux sections 19 et 20, subiront une réduction pour atteindre le niveau de financement à 100% de la formule de financement d'ici 1996-1997. En 1995-1996, le financement de ces organismes sera réduit de la moitié du montant qui est supérieur au niveau de 100% et l'autre moitié sera déduite en 1996-1997.

9.0 Échelle d'efficacité des organismes

9.1 Si possible, chaque organisme devrait desservir au moins 1 000 enfants âgés de 0 à 18 ans. Conscient que cela se révélera impossible dans certaines situations, le Ministère est disposé à envisager des exceptions pour les organismes qui possiblement auraient moins de 1 000 enfants à desservir.

a) *Raisons d'exceptions*:

1) isolement et éloignement: la distance qui sépare les bandes qui

Canada's Disclosure - Part A CAN000273_0005

cooperation is so great that efficiency would not be achieved by following the guideline;

(2) cultural contrast: extreme cultural differences would not lead to effective working relationships; or

(3) existing groupings: some bands are already cooperating together in the administration and delivery of other programs and it would be essential that the same grouping be acknowledged in order to create an efficient FNCFS organization.

collaboreraient en temps normal est telle qu'on ne gagnerait pas en efficacité si l'on observait les lignes directrices;

2) contraste de cultures: les divergences extrêmes entre les cultures ne favoriseraient pas de bons rapports de travail; ou

3) groupements actuels: certaines bandes administrent et donnent d'autres programmes en collaboration; il est donc essentiel qu'on maintienne les mêmes groupements, en vue d'assurer l'efficacité d'organismes SAEFPN.

10.0 Delivery Options

The funding level proposed in section 19 is for the provision of a full range of child and family services (protection and prevention). When it comes to the delivery of these services, the Indian groups that will be setting up a new organization could decide to deliver only part of the services (i.e. prevention) and decide to have someone else deliver the balance of services (i.e. province, another Indian organization or a private group that has the delegated authority). The group may also decide to start delivering the services on a gradual basis: for example, prevention in the first year, protection in the second year, and adoption in the third year of operation. In this case, the province or one of its agencies would continue to provide the other services until the new ICFS

10.0 Options en matière de prestation

Le financement proposé à la section 19 concerne une gamme complète de services à l'enfance et à la famille (protection et prévention). Pour la prestation de ces services, les groupes autochtones mettant sur pied le nouvel organisme peuvent décider d'offrir qu'une partie des services (par exemple, la prévention) et faire en sorte que le reste des services soient offerts par quelqu'un d'autre (par exemple, la province, un autre organisme indien ou un groupe privé jouissant de pouvoirs délégués). Le groupe peut aussi ne commencer que graduellement à offrir les services: par exemple, la prévention la première année de fonctionnement, la protection la seconde et l'adoption la troisième. Dans ce cas, la province (ou l'une de ses agences) continuerait à

Canada's Disclosure - Part A CAN000273_0006

organization has assumed them, and would be paid from the total allocation. All of these options and other variations are acceptable so long as the agreement clearly indicates who will do what at any given time and all services are provided within the allocated budget (according to the funding formula).

11.0 Evaluation

11.1 The department believes that any new FNCFS organization needs to review its progress as it matures. For this reason, the department will provide a contribution (FTP) of $30,600 to each new organization in its third and sixth year of operation to complete an internal review of its operation in order to identify weaknesses and strengths and to plan any desired improvements to the quality of its services. The report of this review is for the organization's benefit and does not have to be released to the department. Reviews or evaluations after the sixth year of operation will be the financial responsibility of the FNCFS organization. Over and above these internal reviews, an organization may be required to complete an evaluation in relation to its mandate regarding the protection of children from abuse and neglect; provinces/territory would need to address this matter with Indian organizations.

11.2 DIAND evaluations will cover the entire Child Welfare Program rather than specific organizations or agreements. As part of its periodic review of the results being achieved by the total program, DIAND Evaluation Directorate will analyze the information submitted by provinces/territory and organizations, to

assurer les autres services jusqu'à ce que le nouvel organisme SAEFI puisse les assumer, et serait payée à partir du total de l'affectation. Chacune de ces options et d'autres variations sont acceptables, pour autant que l'entente stipule les tâches qui reviennent à chacun dans toute situation donnée, et que les services sont assurés dans les limites du budget (selon la formule de financement).

11.0 Évaluation

11.1 Le Ministère estime que tout nouvel organisme SAEFPN doit évaluer périodiquement les progrès qu'il réalise. Dans ce but, il remettra une contribution (PTS) de 30 600 $ à chaque nouvel organisme à sa troisième et sixième année de fonctionnement, dans le but de mener un examen interne de ses opérations pour en cerner les points forts et points faibles, et de voir aux améliorations qu'il convient d'apporter à la qualité des services. Le rapport dressé dans ce cadre est destiné à l'organisme et n'est pas obligatoirement communiqué au Ministère. Les inspections ou évaluations menées après la sixième année seront à la charge de l'organisme SAEFPN. L'organisme devra peut-être aussi, outre ces inspections internes, évaluer s'il remplit son mandat en matière de protection des enfants contre l'abus et la négligence. Les provinces/territoire devront discuter de cet aspect avec les organismes Indiens.

11.2 Les évaluations du MAINC seront du Programme de bien-être destiné aux enfants indiens dans son ensemble, plutôt que des ententes ou organismes individuels. En plus des analyses périodiques des résultats obtenus du programme dans son ensemble, la Direction de l'évaluation du Ministère

Canada's Disclosure - Part A CAN000273_0007

ensure that objectives are being met and agreements are being fulfilled.

12.0 Agreements

Agreement(s) will be in place reflecting a comprehensive range of child and family services, service delivery mode, respective roles and responsibility of parties (FNCFS organization, DIAND, province/ territory) and will ensure no duplication of services and/or cost. These agreements can be tripartite in nature or complementary bilateral (i.e. DIAND/First Nations and First Nations/Province or Territory).

13.0 Terms and Conditions

Because First Nations Child and Family Services (FNCFS) are developmental services being expanded across Canada, they are excluded at this time from Alternative Funding Arrangements (AFA) with bands and tribal councils. The terms and conditions applicable to Comprehensive Funding Arrangements must be included in FNCFS agreements as contained in the national generic model as amended from time to time (Appendix A). The Cash Management Policy also applies. Specific program terms and conditions (Appendix B) will be kept to a minimum.

14.0 Indian Standards

14.1 In the fiscal years 1990-1991 and 1991-1992, the department funded the development of Indian standards for

étudiera l'information fournie par les provinces/territoire et les organismes pour s'assurer que les objectifs sont atteints et que les ententes soient respectées.

12.0 Ententes

On signera une ou plusieurs ententes, énonçant la gamme complète de services d'aide à l'enfance et à la famille, les modalités de prestation des services, et les rôles et responsabilités respectifs des partis (organisme SAEFPN, MAINC, province ou territoire), qui serviront aussi à éviter les répétitions des services ou des frais; ces ententes peuvent être tripartites ou, de façon complémentaire, bilatérales (par exemple, MAINC/Premières Nations et Premières Nations/Province ou territoire).

13.0 Termes et conditions

Parce que les Services d'aide à l'enfance et à la famille des Premières Nations (SAEFPN) sont des services en voix de développement et d'expansion à travers le Canada, ils sont pour le moment exclus des Modes optionnels de financement (MOF) avec les bandes et conseils tribaux. Les ententes SAEFPN doivent respecter les conditions s'appliquant aux Formules globales de financement telles que décrites dans le modèle national générique qui, sera modifié au fil du temps (Appendice A). De même, la Politique sur la gestion de l'argent s'y applique. On réduira au minimum les conditions précises régissant les programmes (Appendice B).

14.0 Normes indiennes

14.1 Au cours des exercices financiers 1990-1991 et 1991-1992, le Ministère a financé l'élaboration de normes

the delivery of child and family services on reserves. A total of $1.5M was provided to the regions who determined in consultation with Indian groups in their region the best way of achieving this task. These standards, when adopted by the province/territory, can be implemented if they do not imply additional costs for Canada over and above the funding level described in section 18.

14.2 The only condition to this funding was that standards be duly developed and made available to DIAND and any other Indian group in Canada which desires to receive a copy.

14.3 Final reports are expected in the course of fiscal year 1992-1993.

15.0 Tripartite Mechanism

Each region will initiate a regional tripartite panel or committee, composed of representatives of DIAND, FNCFS organizations and the province, to review program objectives, the development of Indian standards, and to be a vehicle for ongoing discussions on issues of regional concern.

16.0 Effective Date

This directive has been implemented as of April 1, 1991.

indiennes pour la prestation de services d'aide à l'enfance et à la famille dans les réserves. Un total de 1,5 million $ a été fourni aux régions qui, en consultation avec les groupes indiens dans leur région ont déterminé la meilleure façon d'y parvenir. Ces normes une fois adoptées par la province ou le territoire peuvent être mises en oeuvre, si elles ne supposent aucune dépense pour le Canada autre que le financement décrit à la section 18.

14.2 La seule condition qui s'attachait à ce financement, c'était que les normes soient effectivement élaborées, et mises à la disposition du MAINC et de tout autre groupe indien au Canada qui en désire une copie.

14.3 Des rapports finals sont attendus au courant de l'année financière 1992-1993.

15.0 Modalités des ententes tripartites

Chaque région mettra sur pied un comité tripartite régional, composé de représentants du MAINC, des organismes SAFEPN et de la province, chargé d'examiner les objectifs du programme et d'élaborer de normes indiennes, et de servir d'intermédiaire dans les discussions sur les questions d'intérêt régional.

16.0 Date d'entrée en vigueur

Cette directive est en vigueur depuis le 1er avril 1991.

17.0 Amendment

Based on input by First Nations and/or provincial/territorial governments, this directive will be amended as required.

18.0 Developmental Activity Funding

18.1 Pre-planning will be funded at a rate of $11,101.06 per group and $1,665.16 per member band.

18.2 Planning will be funded at a rate of $88,808.48 per group and $3,330.32 per member band.

18.3 Start-up will be funded at a flat rate of $185,387.70 per organization plus 25% of first year of operational funding as described in section 19.

18.4 The above-mentioned flat rate of $185,387.70 may be adjusted as described in section 20.1.

19.0 Operational funding

19.1 For the provision of comprehensive child and family services (both prevention and protection), the department will fund new FNCFS organizations as follows:

(a) A fixed amount of $143,158.84 per organization + $10,713.59 per member band + $726.91 per child (0-18 years) + $9235.23 x average remoteness factor + $8,865.90 per member band x average remoteness

17.0 Modifications

Cette directive sera modifiée au besoin, en fonction des renseignements fournis par les Premières Nations ou par les gouvernements provinciaux ou territorial.

18.0 Financement des activités de développement

18.1 La pré-conception sera financée à raison de 11 101,06 $ par groupe et 1 665,16 $ par bande participante.

18.2 La conception sera financée à raison de 88 808,48 $ par groupe et 3 330,32 $ par bande participante.

18.3 L'étape de mise en oeuvre sera financée à raison d'un taux de base de 185 387,70 $ par organisme et 25% de la première année complète de financement des opérations tel que décrit à la section 19.

18.4 Le taux de base de 185 387,70 $ ci-haut mentionné peut être ajusté tel que décrit à la section 20.1.

19.0 Financement opérationnel

19.1 Le Ministère financera les nouveaux organismes SAEFPN comme suit, en vue de la prestation de services globaux à l'enfance et à la famille (prévention et protection):

a) Un montant fixe de 143 158,84 $ par organisme + 10 713,59 $ par bande participante + 726,91 $ par enfant (de 0 à 18 ans) + 9 235,23 $ x moyenne des facteurs d'éloignement

Canada's Disclosure - Part A CAN000273_0010

factor + $73.65 per child x average remoteness factor + actual cost of the per diem rates of foster homes, group homes and institutions established by the province/territory.

+ 8 865,90 $ par bande participante x moyenne des facteurs d'éloignement + 73,65 $ par enfant x moyenne des facteurs d'éloignement + coûts réels des taux quotidiens des foyers nourriciers, foyers de groupe et institutions tel que déterminés par la province ou le territoire.

(b) The above-mentioned fixed amount of $143,158.84 may be adjusted as described in section 20.2.

b) Le montant fixe de 143 158.84 $ ci-haut mentionné peut être ajusté tel que décrit à la section 20.2

(c) In its first year of operation, a new organization will receive 75% of the formula, 85% in its 2nd year, 95% in its 3rd year and 100% in its 4th year. These adjustments will reflect a gradual implementation of the formula over a 4-year period.

c) Au cours de sa première année d'opération un nouvel organisme recevra 75% de la formule, 85% durant la 2e année, 95% durant la 3e année et 100% pour la 4e année d'opération. Ces ajustements reflètent une mise en application graduelle de la formule sur une période de 4 ans.

(d) The remoteness factors are the same as used for band support activities. The child population of 0 to 18 years on reserve is the same as used by Lands and Trust Services. When calculating the funding formula in a given fiscal year, the child population counted in December of the previous year will be used.

d) Les facteurs d'éloignement sont les mêmes qu'utilisés par la Direction du soutien des bandes. La population des enfants âgés entre 0 et 18 ans dans les réserves est la même que celle qu'utilise les Services fonciers et fiduciaires. Lorsqu'on calcule la formule de financement dans une année financière donnée, la population d'enfants telle que recensée en date du mois de décembre de l'année précédente, sera utilisée.

(e) In the Quebec Region, Child and Family Services form part of a network of comprehensive social services. The proposed funding levels are for child and family services only; existing funding for other social services will not

e) Dans la région de Québec, les Services à l'enfance et à la famille sont intégrés à un réseau général de services sociaux. Le financement proposé porte exclusivement sur les services d'aide à l'enfance et à la

Canada's Disclosure - Part A CAN000273_0011

be affected by the introduction of the above funding formula.

(f) Operational funding will be provided through a Comprehensive Funding Arrangement (CFA). The budgets for maintenance will be provided as a contribution in accordance with actual approved expenditures, while the operational budget (including developmental activities) has been authorized as a Flexible Transfer Payment (FTP) where the organization will have full authority to set the priorities to be funded (within the sphere of the Child and Family Services Program) so long as the mandate to protect and prevent children from being abused is met. The province/territory having the responsibility for child protection and having delegated this responsibility to Indian organizations will need to address this matter with Indian organizations.

20.0 Funding adjustment for proposed organizations serving less than 1,000 children:

20.1 Start-up Costs: if the number of children to be served is between 801 and 1,000, no adjustment. If the number of children to be served is between 501 and 800, the flat rate for start-up as described in section 18.3 will be $92,693,85 rather than 185,387,70. If the number of children

famille, et n'affecte en rien le financement des autres services sociaux.

f) Les frais d'exploitation seront incorporés à la Formule globale de financement (FGF). Les budgets pour les frais du maintien d'un enfant en soins seront payés comme une contribution selon les dépenses réelles et approuvées, tandis que le budget opérationnel (incluant les activités de développement) peut être un Paiement de transfert souple (PTS), c'est-à-dire que l'organisme aura le pouvoir de fixer les priorités de financement (à l'intérieur du Programme des Services d'aide à l'enfance et à la famille) à condition de respecter le mandat de protection de l'enfant et de la prévention d'abus. La province ou le territoire ayant la responsabilité de protéger les enfants et ayant délégué cette responsabilité aux organismes indiens devront discuter de cet aspect avec les organismes indiens.

20.0 Rajustement du financement pour les organismes éventuels qui desservent moins de 1 000 enfants:

20.1 Coûts de mise en oeuvre: aucun rajustement si le nombre d'enfants desservis se situe entre 801 et 1 000. Entre 501 et 800, le taux de base décrit à la section 18.3 passera de 185 387,70 $ à 92 693,85 $, et de 185 387,70 $ à 46 346,92 $ si entre 251 et 500 enfants

Canada's Disclosure - Part A CAN000273_0012

to be served is between 251 and 500, the flat rate for start-up will be $46,346,92 rather than $185,387,70. If the number of children to be served is less than 251, the flat rate for start-up will not be available.

sont desservis. Si moins de 251 enfants sont desservis, le taux de base de la mise en oeuvre ne sera pas versé.

20.2 Operational costs: if the number of children to be served is between 801 and 1,000, no adjustment. If the number of children to be served is between 501 and 800, the fixed amount per organization of $143,158,84 as described in section 19.1 will be reduced to $71,579,43; this amount will be further reduced to $35,789,10 for organizations serving between 251 to 500 children. If the number of children to be served is less than 251, the fixed amount will not be available.

20.2 Coûts d'exploitation: aucun rajustement si le nombre d'enfants desservis se situe entre 801 et 1 000. Entre 501 et 800, le montant fixe par organisme de 143 158,84 $, décrit à la section 19.1, sera réduit à 71 579,43 $; ce montant sera de plus réduit à 35 789,10 $ pour les organismes desservant entre 251 à 500 enfants. Si moins de 251 enfants sont desservis, le montant fixe ne sera pas versé.

20.3 All other funding levels and future year adjustments remain as previously described.

20.3 Les niveaux de financement et les rajustements pour les années à venir restent tels que décrits précédemment.

21.0 Administrative Process

Regions are required to submit expansion plans that require additional funding to the Finance Directorate for their approval. This will be accorded on the basis of the policy of this directive being respected, and as long as the progress in the resolution of the off-reserve social services issue generates sufficient dollar offsets to fund these activities.

HQ Financial Services has the responsibility for the budgetary allocations necessary for these activities and regions must live within these budgets.

21.0 Processus administratif

Les régions doivent soumettre tout plan d'expansion qui requiert des fonds additionnels à l'approbation de la Direction des finances. Cette approbation sera donnée pourvu que la politique de la présente directive soit respectée et que les progrès realisés dans la résolution du dossier des services sociaux hors réserve génère suffisament d'économies pour financer ces activités.

Les Services financiers à l'Administration centrale ont la responsabilité d'allouer les fonds nécessaires à ces activités et les régions doivent respecter les limites de ces budgets.

Canada's Disclosure - Part A CAN000273_0013

The contents of the agreements to be negotiated pursuant to this directive should be closely scrutinized by Legal Services to ensure that the respective roles and responsibilities of the parties are clearly spelled out.

22.0 Effective Date

The financial components of the directive will be implemented as funds become available. All monetary amounts reflect 1995-1996 values. These amounts will be increased every year to reflect cost increases provided by Treasury Board.

23.0 Enquiries

23.1 Anyone wishing further information or clarification regarding this directive should contact the Regional Director General or the Director of Indian Programming and Funding Allocations at Headquarters.

23.2 All requests for additional copies of this directive should be addressed to the Manuals and Forms Management Unit, Administration Directorate.

24.0 Appendices

A - General Terms and Conditions Applicable to Comprehensive Funding Arrangements (CFA)

B - Specific Program Terms and Conditions

Le contenu des ententes à négocier dans le cadre de cette directive devrait être examiné de près par les Services juridiques pour s'assurer que les rôles et responsabilités respectifs des parties sont clairement définis.

22.0 Date d'entrée en vigueur

La portion financière de la directive sera mise en vigueur quand les fonds seront disponibles. Tous les montants sont établis en fonction de l'année financière 1995-1996. Ils seront augmentés chaque année en fonction de l'augmentation des coûts et du financement offert par le Conseil du Trésor.

23.0 Demande de renseignements

23.1 Pour de plus amples renseignements ou des explications concernant cette directive, veuillez communiquer avec le directeur général régional ou le directeur du Financement et des programmes pour les Indiens à l'Administration centrale.

23.2 Toutes les demandes de copies supplémentaires de la présente directive doivent être adressées à la Sous-section de la gestion des guides et des formules, Direction de l'administration.

24.0 Appendices

A - Termes et conditions généraux de la Formule globale de financement (FGF)

B - Termes et conditions spécifiques du programme

Appendix A

General Terms and Conditions Applicable to Comprehensive Funding Arrangements (CFA)

The following items must be included in ICFS funding arrangements.

1. Recipient clearly identified
2. Purpose clearly stated
3. Definitions
   - (a) Flexible Transfer Payment
   - (b) Contribution
   - (c) Surplus/Deficit
   - (d) Action Plan/Remedial action
   - (e) Expenditure Plan
   - (f) Indian resident on reserve
   - (g) Maintenance
4. Duration specified
5. Signing date
6. Effective
7. Roles and responsibilities of the department and of the recipient clearly described
8. Surplus/Deficit administration

Appendice A

Termes et conditions généraux de la Formule globale de financement (FGF)

Les points suivants doivent être inclus dans les ententes financières SAEFI.

1. Bénéficiaire clairement identifié
2. But clairement énoncé
3. Définitions
   - a) paiement de transfert souple
   - b) contribution
   - c) surplus/déficit
   - d) plan d'action/action corrective
   - e) plan de dépenses
   - f) Indien demeurant dans la réserve
   - g) Maintien des enfants en soins
4. Durée prévue
5. Date de la signature
6. Date d'entrée en vigueur
7. Rôles et responsabilités du ministère et du bénéficiaire nettement définis
8. Gestion du surplus et/ou du déficit budgétaire

Canada's Disclosure - Part A CAN000273_0016

Appendix A (cont'd)

9. Reporting requirements
   - (a) Audit
   - (b) Financial reports
10. Provisions for amendments and termination of agreement
11. Non performance
    - (a) Request for additional information if required
    - (b) action plan negotiated
    - (c) remedial action if necessary
12. Schedule of funding levels (Appendix C)
13. Expenditure plan/cash flow need
14. Cash disbursement schedule
15. Signature block for financial certification
16. Signature block for the Regional Director General and the Recipient

It is essential that regional practices be followed. Please consult the regional officers responsible for transfer payments for detailed explanation of the above-noted items and for the wording to be used.

Appendice A (suite)

9. Rapports d'activités
   - a) vérification annuelle
   - b) rapports financiers
10. Dispositions concernant les modifications et la résiliation de l'entente
11. Dispositions concernant le non-rendement
    - a) demande d'information additionnelle si requise
    - b) plan d'action négocié
    - c) action corrective si nécessaire
12. Cédule des niveaux de financement (Appendice C)
13. Plan de dépenses/besoins de trésorerie
14. Cédule des paiements
15. Estampe de signature pour la certification financière
16. Estampes de signature du directeur général régional et du bénéficiaire

Il est nécessaire de suivre les pratiques régionales. Veuillez consulter les agents régionaux responsables des paiements de transfert afin d'obtenir une explication détaillée des points ci-hauts énumérés et les termes à utiliser.

Canada's Disclosure - Part A

Appendix B

Specific Program Terms and Conditions

The following items must be included in the ICFS arrangements.

1. Budget

   (a) Operations: (administration and services)

   (b) Maintenance: monthly reimbursement of actual costs (an estimate amount must be stated in the funding arrangements)

2. Definitions

   (a) Indian resident on reserve means:

      (1) currently residing on reserve; or

      (2) in the case of an Indian who leaves a reserve to be admitted into a social service care facility, residing immediately prior thereto

   (b) Maintenance means:

3. List of services to be provided

Appendice B

Termes et conditions spécifiques du programme

Les points suivants doivent être inclus dans les ententes SAEFI.

1. Budget

   a) coûts opérationnels (administration et services)

   b) maintien des enfants en soins: remboursement mensuel des coûts réels (un montant approximatif doit être indiqué dans l'entente de financement)

2. Définitions

   a) Indien demeurant dans la réserve:

      1) qui demeure couramment dans la réserve; ou

      2) dans le cas d'un Indien ayant quitté la réserve pour être placé en soins dans un établissement de service social, y demeurait immédiatement au préalable

   b) Maintien en soins veut dire:

3. Liste des services qui seront fournis

Canada's Disclosure - Part A CAN000273_0018

Appendix B (cont'd)

4. Specific program reporting:

   (a) for operations: twice a year on September 30 and March 31

   (b) for maintenance on a monthly basis

   (c) an annual report

The information required is described in Appendix D.

Appendice B (suite)

4. Rapports particuliers sur les activités du programme:

   a) pour les opérations: deux fois par année soit le 30 septembre et le 31 mars

   b) pour le maintien des enfants en soins: rapport mensuel

   c) un rapport annuel

Les informations requises sont énoncées à l'appendice D.

Canada's Disclosure - Part A

CAN000273_0019

Annual Funding Levels

This arrangement is to provide funding for fiscal year ____ in the amounts described below for the purposes as set out in section __.

1. Flexible Transfer Payments Funding for Operations: (administration and services)

   $_____

2. Contribution Funding for Maintenance

   $_____

3. Total Funding

   $_____

Appendice C

Niveaux de financement annuel

Cette entente stipule le financement pour l'année financière ____ selon les montants inscrits ci-bas pour les buts tels qu'énoncés à la section __.

1. Financement des paiements de transfert souple pour les coûts opérationnels: (administration et services)

   _____$

2. Contribution pour le financement du maintien des enfants en soins

   _____$

3. Financement total

   _____ $

Canada's Disclosure - Part A CAN000273_0020

Appendix D

Specific Program Reporting for First Nations Child and Family Services

The information required falls in two major categories:

Information related to services provided (operations)

Information required for the actual reimbursement of maintenance

1. Operations

(a) prevention services (to prevent children from coming into care)

(1) list of services provided

(2) number of families served (by service)

(3) number of children included in families served (by service)

(4) number of local child and family services' committees

(5) number of elders' committees

Appendice D

Rapports particuliers sur les services d'aide à l'enfance et à la famille des Premières Nations

L'information requise est dans les deux principales catégories suivantes:

l'information au sujet des services offerts (opérations)

l'information requise pour le remboursement des coûts associés au maintien des enfants en soins

1. Opérations

a) services de prévention (afin de prévenir le placement d'enfants)

1) liste des services offerts

2) nombre de familles desservies (par service)

3) nombre d'enfants dans les familles desservies (par service)

4) nombre de comités communautaires de services d'aide à l'enfance et à la famille

5) nombre de comités d'aînés

Appendix D (cont'd)

(6) number of public information/education related sessions/workshops

(b) protection services (for children in care including children under supervision order in their own homes)

(1) list of services provided

(2) number of families served (by service)

(3) number of foster homes

(4) number of adoption homes

2. Maintenance of children in Care

(a) number of children in care at the end of each month by type of placement (foster home, group home, institution)

(b) number of care days, unit cost and total cost for each type of placement

Appendice D (suite)

6) nombre de rencontres d'information publiques, de sessions d'éducation populaire et d'ateliers

b) services de protection (pour les enfants en soins y compris les enfants sous l'ordre de surpervision dans leurs propres familles)

1) liste des services offerts

2) nombre de familles desservies (par service)

3) nombre de familles d'accueil

4) nombre de foyers d'adoption

2. Maintien des enfants en soins

a) nombre d'enfants en soins à la fin de chaque mois dans chaque catégorie de placement (famille d'accueil, centre d'hébergement, institution)

b) nombre de cas jours, coût unitaire et coût total pour chaque catégorie de placement

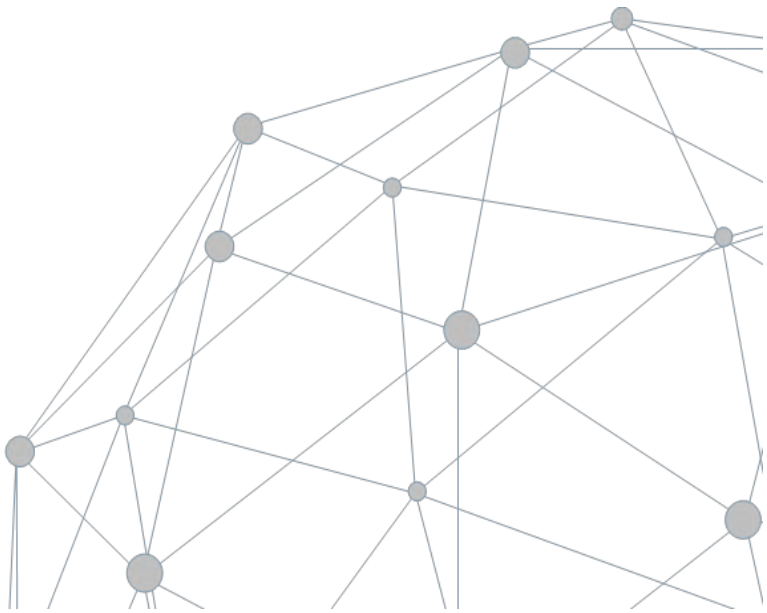
Study of Budget Needs and Funding in the Amended Draft Agreement for Long Term Reform of FNCFS Program

Final Report

May 2025

EngageFirst
Management Consultants



Notice

This report has been produced independently by EngageFirst Management Consultants for the First Nation Child and Family Caring Society (The Caring Society). We relied on data provided by the participating First Nations Child and Family Services (FNCFS) providers and publicly available sources, including government and research data bases. While reasonable care has been taken to ensure the accuracy of the information, we did not perform any independent audit or verification. The information contained in this report is confidential and intended for use by The Caring Society and the participating FNCFS providers. This report or any part thereof may not be reproduced without the express permission of The Caring Society.

About This Report

The report is organized into six chapters starting with Chapter 1, where we provide the objectives and background of this study and a brief introduction of EngageFirst. In Chapter 2, to help set the context of the realities of delivering Child and Family Services in a small First Nation, we create a ground level view of the First Nation communities and the FNCFS providers serving the communities, including a high-level financial analysis. In Chapter 3, we describe a minimum operating model using a hypothetical FNCFS provider serving a hypothetical small and remote First Nation, including the socio-economic and demographic setting. Chapter 4 discusses some of the salient features of the Amended Draft Final Agreement on Long Term Reform of FNCFS Program and the implications for FNCFS providers. Chapter 5 describes our findings from the modeling and analysis of operating budget needs and funding available from the Amended Draft Agreement. Finally, Chapter 6 summarizes the key findings, conclusions and proposed next steps for consideration.

In this report, the term FNCFS provider and organization is used to refer to a Band delivered CFS, Band operated FNCFS provider or stand-alone FNCFS provider serving one or multiple First Nations. In later parts of the report, we use the term FNCFS Agency in reference to a stand-alone FNCFS agency operating under First Nation's CFS laws and jurisdiction.

Executive Summary

In July 2024, the First Nation Child and Family Caring Society (the Caring Society) contracted EngageFirst Management Consultants, a leading consultancy with a background in First Nation's child and family services (FNCFS), to analyze the funding needs of small First Nations and the adequacy of the funding proposed in the Amended Draft Agreement for the Long-term Reform of FNCFS Program (the Draft Agreement). For the purposes of this study, a small First Nation was defined as one with a total population below the median population of all First Nations in Canada, which is 1054 members.

Over a period of nine months, EngageFirst had discussions with five FNCFS providers, researched and conducted data analysis culminating in this report. We would like to thank all the participating FNCFS staff and leadership whose contributions provide invaluable insight into the experiences of FNCFS providers. We researched published works from various sources including Indigenous Services Canada (ISC), Assembly of First Nations (AFN), The Institute of Fiscal Studies and Democracy (IFSD), and The Caring Society.

To answer the questions of interest for this study, the funding needs of FNCFS providers operating with self-jurisdiction and the proposed funding in the Draft Agreement were analyzed using a robust financial model that enabled multivariable analysis.

The study met the objective of conducting an exploratory analysis to better understand the interplay between the variables in the Draft Agreement and the corresponding operational budget needs of small FNCFS providers operating with self-jurisdiction. There were information gaps and challenges in achieving a representative sample, as a result the study is limited by the number of reasoned assumptions and inferences that were made, although in all instances care was taken to mitigate the impact on the findings and conclusions.

Key Findings

1. The holistic, culturally relevant, culturally connected, person-centered, multi-generational, relationship-based approaches that characterize the five FNCFS providers establishes a foundation for organizational success. It could be inferred that the success that we observed in the five FNCFS organizations is due in large part to the overarching approach that is unique to FNCFS providers and a leading practice.

2. Opportunities exist for First Nations and FNCFS providers to incrementally build organizational capacity that supports the skills, competencies, tools and practices of culturally based prevention and protection services. With their connection to the culture and the land as a foundation, the FNCFS providers can also gradually enhance their functional capacity in data and analytics, financial management and leverage technology to optimize CFS delivery to remote and sparse populations.

3. The categorization and separation of prevention and protection services and funding thereof, primarily for the purposes of managing resources and data, is not aligned with the way many FNCFS providers intend to serve their people. A block funding approach for prevention and protection services better conforms to First Nation's traditional world views, where the safety and well-being needs of children, youth, families and communities are interconnected and not separated into arbitrary categories for administrative convenience.

4. The funding for prevention in the Draft Agreement is based on on-reserve population. Members who reside off-reserve would not have access to prevention services from their own First Nation. Given that most First Nations intend to provide services to members living off-reserve, adequate funding to support off-reserve delivery and well-articulated and well understood reciprocal service delivery agreements between Provincial/Territorial governments and FNCFS providers are crucial.

5. The baseline funding as defined in the Draft Agreement would be better structured to incentivize keeping children at home and reducing the number of children in care. As defined in the Draft Agreement, the baseline funding is not actually a baseline. FNCFS providers who can reduce the number of children in care to zero are destined to lose their baseline funding and top-up funding.

6. ISC's rationale for establishing the minimum guarantee of $75,000 adjusted for inflation is not clear in the Draft Agreement, except that it may fund a full- or part-time prevention staff in very small First Nations. This may work for a Band-delivered prevention service for a very small First Nation, however, it does not consider the direct cost of support to families and other realities of staffing, such as backfill and vacancies. It also appears that the minimum guaranteed funding is not available for a First Nation if it is not part of an amalgamated FNCFS agency.

7. The minimum operational model to serve populations up to 175 members with self-jurisdiction is about 6-7 full-time equivalent positions and approximately $1.2m in annual operating budget. Our analysis indicates that the Draft Agreement only supports approximately 45% of the funding needed for a FNCFS agency of this size.

8. There appears to be a pathway to financially sustainable operations for small FNCFS agencies through amalgamation. FNCFS agencies who meet the threshold of 1150-1300 in total population with or without amalgamation, and with 90% on-reserve population, may receive funding that adequately supports their vision of self-jurisdiction.

Proposed Next Steps

This study is not the definitive word on the complex interplay between the variables that affect the operational needs of FNCFS providers and the funding resources available. There are many more questions to be answered regarding the operational needs, challenges and implications of the Draft Agreement on First Nations wanting to deliver CFS with self-jurisdiction. The following next steps are proposed for consideration:

1. Gain further clarity regarding the terms of the Draft Agreement or any future agreement with a more rigorous study and modeling and more participative but focused data gathering.

2. Conduct financial modeling and scenario analysis to determine minimum outcomes and preferred outcomes from any future negotiated agreement with ISC.

3. Conduct a thorough analysis of the Draft Agreement and any future agreements for alignment with all CHRT rulings related to the long-term reform of FNCFS program.

4. Implement strategies to incrementally build consistency and shared standards in gathering, storing, and reporting financial and operational data for the FNCFS sector to ensure the availability of reliable data, and enable reliable analysis on regional and national levels.

5. Implement strategies to enhance the capacity of FNCFS providers for data management, analytics and performance management to position them to meet the expectations and accountabilities stemming from the Draft Agreement, or any other future agreement.

Chapter 1: Introduction and Background

In July 2024, the First Nation Child and Family Caring Society (the Caring Society) contracted EngageFirst Management Consultants to analyze the funding needs of small First Nations delivering CFS with self-jurisdiction, and the adequacy of the funding proposed in the Amended Draft Agreement for the Long-term Reform of First Nations Child and Family Services (FNCFS) program (the Draft Agreement). The Draft Agreement was created by the orders of the Canadian Human Rights Tribunal (CHRT) decision number CHRT-2 that directed the Government of Canada to cease its discriminatory conduct and reform its FNCFS Program and Jordan's Principle. Appendix 2 summarizes the background, timelines and key terms contained in the Draft Agreement. For the purposes of this study, we are defining a small First Nation as one with a total population below the median population of all First Nations in Canada, which is 1054 members. Additionally, EngageFirst studied the business models of a sample of FNCFS providers and documented their practices in governance, service delivery and financial management, noting areas of strength, development and leading practices.

The objectives of the study were:

1. To analyze the cost structure and funding needs of small and remote FNCFS providers operating with self-jurisdiction and compare with Indigenous Services Canada's (ISC) proposed funding in the the Draft Agreement.
2. To study the business models of FNCFS providers, document and analyze their practices in governance, service delivery and financial management.

Over the past nine months, EngageFirst has held discussions with five FNCFS providers, researched and conducted data analysis culminating in this report. We would like to thank all the participating FNCFS staff and leadership who supported and contributed to this study. The sample of the FNCFS providers in this study is not representative of small FNCFS providers or the broader population of FNCFS providers, however, their contributions provide invaluable insight into the experiences of FNCFS providers. There also were noted commonalities. It was clear among the five FNCFS providers in this study that they shared passion, commitment and deep dedication to their organizations and the people they serve. A great deal was learned from hearing their stories, and we now have a much deeper understanding of their organizations, their experiences, and the First Nations they serve.

Research Approach

This study included an analysis of five FNCFS providers from across the country. Participation in the study was voluntary. The purpose of analyzing the sampled FNCFS providers, even though not representative of small providers, was to generally understand the needs, aspirations and challenges of delivering CFS in First Nations communities. The sampled FNCFS providers represented a range of characteristics:

- Two FNCFS providers deliver only prevention services and three deliver prevention and protection services, with full or partial delegation for the latter.
- One FNCFS provider is a Band delivered service and four are incorporated Agencies.
- Three FNCFS providers serve a single First Nation and two serve multiple First Nations as an amalgamated service provider.
- The combined on-reserve population of the First Nations served by each FNCFS provider is between 940 to 1600, and the combined total on- and off- reserve population served by each provider is between 2000 to 5000 members.
- The sample of FNCFS providers also represents service provision from a range of geographic, social and economic landscapes.

The study began with scope refinement based on discussions with The Caring Society resulting in the following key questions to be explored:

1. What are the prevalent models of governance, CFS operations and financial management in the FNCFS organizations included in the sample?
2. What salient characteristics in these models define their relevance or success in a particular setting, i.e. organizational and socio-economic context?
3. Are there characteristics that may be more suitable than others for delivering CFS in small and remote First Nation communities?
4. What are the financial requirements for delivering CFS with First Nation's jurisdiction in small and remote First Nation communities?
5. How does the funding based on ISC's population-based formula compare with the needs of small and remote First Nation communities?

Over the past nine months, we followed a systematic approach to understand, analyze and discover insights from the available data using a variety of methods:

- Gathering quantitative and qualitative data via virtual interviews and review of documents from the five FNCFS providers.
- Reviewing publicly available information related to FNCFS program reform and funding for the reform from organizations such as ISC, Assembly of First Nations (AFN), The Institute of Fiscal Studies and Democracy (IFSD), and The Caring Society.
- Analyzing the quantitative and qualitative data from the five First Nation providers by:
    - analyzing the organizational setup and operation of each FNCFS provider in their own socio-economic and cultural context, and analyzing their financials in relation to their own operations.
    - conducting cross-sectional analysis to compare FNCFS providers with others in the sample and identify similarities and differences in their salient features.
- Developing an aggregate understanding of the five FNCFS providers. Generating observations about their areas of development, strengths, and leading practices.
- Creating a hypothetical First Nation community with characteristics based on our general understanding established through the analysis of the five FNCFS providers.
- Projecting the future operations of a hypothetical FNCFS provider based on research and the general understanding established from the study of the five FNCFS providers.
- Applying the general understanding of First Nation communities and FNCFS providers, as well as other research, to develop a Financial Projection Model (FPM). The FPM creates funding scenarios using the proposed funding model in the Draft Agreement for the delivery of prevention and protection services with self-jurisdiction.
- Running simulations using multivariable analysis to explore the key questions and generate observations and conclusions related to operating budget needs and funding.

Limitations

This study was conducted between July 2024 and March 2025, with data gathering from participating FNCFS providers between October 2024 and February 2025. Due to limitations of scope and budget, we were unable to extend participation to a broader and more diverse sample of FNCFS providers. All the five FNCFS providers serve populations larger than 1054 members, the median population of First Nations in Canada, therefore do not fit our definition of a small FNCFS. There was limited data and information available from the sources to fully address the key questions to be answered by the study. Therefore, the study relied on

inferences and associations informed by the data available from the sample, publicly available sources, and the consultants' knowledge of the subject.

At the time this study was planned and initiated, the Draft Agreement was a work in progress. Subsequently the Draft Agreement was rejected by the First Nations in late 2024. There are several terms in the Draft Agreement that are subject to interpretation, and clarity does not exist among the stakeholders we contacted. We may have interpreted the terms in ways that do not align with the intention of the parties to the Draft Agreement.

Ideally, the analysis would be based on the sampled FNCFS provider's data and information, however, due to the unavailability and reliability of some information, assumptions had to be made for the financial analysis modeling variables. We used publicly available data to inform our assumptions. As the available data was primarily from non-Indigenous sources, there are likely some implications to their applicability.

Overall, due to the information gaps, the study is limited by the number of reasoned assumptions and inferences that were made, although in all instances we took care to mitigate the impact on the findings and conclusions.

About EngageFirst

EngageFirst Management Consultants provides strategic advice, consultation and research to public, not-for-profit and Indigenous organizations working in health, social welfare, and child and family services. We share the values and principles that First Nations espouse, as we focus on supporting First Nations in their journey towards self-jurisdiction. The two principal consultants leading this study have combined experience of over 50 years in CFS, including frontline delivery, management and consultancy. EngageFirst has experience in designing a FNCFS program based on a First Nation's own laws, ensuring that their cultural and traditional practices for family preservation are at the heart of their service delivery. EngageFirst created the Work Assessment Methodology (WAM©) which has been applied in multiple social welfare programs for estimating staffing needs and funding; including by the Institute of Fiscal Studies and Democracy for its report on First Nations Not Affiliated to a FNCFS Agency, June 2024.

Chapter 2: Overview of Five FNCFS Providers

We reviewed information on the five FNCFS providers made available to us through virtual meetings with agency staff, documents submitted by the agencies, and internet search related to these providers. We did not perform any validation of the information given to us. Any observations we have made in this chapter are for constructive purposes and well intentioned. The sections that follow are a general, aggregated, anonymized overview of:

- the demographics, geography, culture, economy, and infrastructure of the communities served by the FNCFS providers; and
- the organizational structure, governance, operations and processes, support functions, and services provided.

The sample includes three FNCFS providers that serve a single First Nation and two that serve multiple First Nations as an amalgamated service provider. The combined on-reserve population of the First Nations served by each FNCFS provider is between 940 to 1600, and the combined total on- and off- reserve population served by each provider is between 2000 to 5000 members.

The communities have diverse age groups however, the migration of young members of the First Nations from reserves is an ongoing social, cultural and economic challenge that results in fewer working-age adults on reserve and the slow erosion of family and community relationships.

Multigenerational households are common in the communities in this sample for various reasons that include traditional family structure, housing shortages, and household income level. In many cases, extended family members take on caregiving roles when someone faces challenges like addiction, mental health or financial instability. Some communities characterize the growing number of grandparents raising grandchildren, sometimes without financial or social support, a crisis. Additionally, certain communities have high numbers of single parent households with very young children.

Recognizing the importance of early childhood development and the youthful population of First Nations in general, several communities have expressed the need for targeted family support programs, particularly for new mothers and young mothers.

Community Characteristics

a. Geography, Remoteness and Access to Services

The five FNCFS providers in this review serve First Nation reserves located in eastern and western Canada. Utilizing the Statistics Canada measure of remoteness, all the communities in the sample are considered remote based on their remoteness index ratings, which range between 0.33 to 0.5, with two agencies having very remote island communities in their service area (Index of Remoteness 2021: Update with 2021 census geographies and populations – Statistics Canada, January 2023). Communities located on isolated islands experience additional challenges with year-round travel due to their dependence on ferries, high transportation costs, and unpredictable weather that often disrupts travel and affects access to services that include, but are not limited to, healthcare, education and the availability of essential supplies. Even for communities that are connected by road, most still face long travel times to urban centers.

For the communities in the sample, the remoteness and corresponding correlation to accessibility to services has implications for the migration of Nation members. In addition to the general migratory trend of people moving from rural locations to more urban locations, many Nation members, particularly young people and young families, leave for better access to employment opportunities, education, housing and/or health care and other services. As mentioned earlier, the migration of members out of reserves has many social, cultural and economic implications that present a risk to the long-term sustainability of the community.

Exacerbating the challenges of remoteness and service accessibility, some of the communities have also experienced natural disasters, such as wildfires and floods. These disasters make life even more difficult for residents, increasing service needs and impacting access to already limited services, particularly specialized health, mental health, child care and addiction services. While people in the sample communities have experience travelling long distances for services, particularly for specialized services, the impact of natural disasters adds to their financial, emotional and access challenges.

Some First Nations are geographically spread out over multiple communities, and in some cases, there are multiple First Nations being served by one provider. This geographic spread makes service delivery more complex, as the provider must coordinate service delivery equitably among the First Nations with unique and different levels of expectations, social and cultural contexts, infrastructure, resource availability and accessibility.

b. Food Security

Access to essential goods and services, especially food, varies widely across communities, and in some communities the lack of access has been exacerbated by natural disasters. Some communities have relatively easy access to grocery stores and convenience stores, while others travel long distances for basic needs. Local businesses, such as gas stations and general stores, help to address some challenges, but accessibility to and cost remain major concerns for First Nations in the most remote areas. FNCFS providers work to alleviate the difficulties for families by providing food along with their other services, with programs that focus on food security, providing food coupons, and providing rides to supermarkets.

Even in the communities that have access to food stores, most foods are brought in from outside the community, resulting in high prices. High food prices and low availability/supply often result in people making food choices under availability constraints, that have corresponding impacts on what they consume.

c. Health Services

Many communities struggle with healthcare access due to factors like remoteness, housing shortages, lack of health infrastructure and a lack of medical professionals. Most of the communities have reasonable (within 1.5 to 2.5 hours travel as expressed by interviewees) to basic health services however, all of the communities have limited access to specialized services such as optometry, obstetrics and gynecology, and dental care, as they are not resident within the communities. To address this, some communities bring in contracted specialists for scheduled visits, which adds to the costs of those services, while in other communities, the residents travel long distances. This is especially concerning for people with special needs, particularly children, who travel several hours to access necessary treatments. Certain communities also reported high rates of developmental conditions, such as autism among children.

In the few instances where general health services are provided through a community health facility, the services are limited and hampered by shortages of qualified staff and a corresponding lack of emergency services and extended care beds. In serious health situations, and even for childbirth, residents must travel to more populated urban centers. This is a significant challenge that is not only costly for expectant mothers and support people who may need to relocate weeks before childbirth, but is also detrimental to the safety, well-being, and cultural continuity for the child, the mother, father, and extended family and friends who are supporting them.

Disasters such as floods, fires and the pandemic have significantly disrupted all services, including healthcare services in some areas, worsening existing problems and increasing the need for other services like mental health support. Only a few communities have been able to establish an in-house team of clinical professionals that provide counselling and other support to families, and those communities face the same ongoing challenge of recruitment and retention of qualified staff.

Substance misuse and drug addiction are serious issues in many communities, and addiction treatment services are lacking. The communities do not have their own rehabilitation facilities and rely on services outside the community. There are a limited number of rehabilitation facilities outside of the community and a limited number of spaces, and many do not offer services for those struggling with the most complex addictions.

d. Education

Educational opportunities vary significantly between communities. Most of the communities offer programs focused on early childhood development and after-school care as well as classes in arts and crafts, food preparation, and life skills supports like, hygiene and healthy living.

Most communities have primary education available within a 2.5-hour travel radius and transportation is available for the children. High school and post-secondary education typically require either longer travel times or even relocation. Accessing post-secondary education and living on the Nation is a challenge as students must travel long distances, including ferry commutes for some, which can make for a challenging daily schedule. Only one of the First Nations has a post-secondary institution within the community. The post-secondary education options available locally are limited to introductory or transferable courses, meaning students typically leave their communities to complete full degree programs.

Most of the educational infrastructure in the communities is very basic, and ongoing maintenance is often difficult due to inadequate budgets and the availability and cost of building/maintenance supplies. Community facilities such as theaters, assembly halls, and gymnasiums are generally not available. This puts extra pressure on other community spaces like school gymnasiums, that serve as multi-purpose venues for education and social events.

e. Culture, Tradition and Language

Cultural and traditional practices form the basis of First Nations CFS models. FNCFS providers incorporate First Nations teachings, culture and language, and community-based practices to ensure children, youth and families stay connected to their cultural heritage. The FNCFS providers in our sample, along with their Band Councils, place a strong emphasis on cultural education and passing on traditional knowledge and values to the next generation. Most communities provide language and culture classes to their members. Agencies prioritize children living with family on reserve and coordinate visits to the reserve for those living off-reserve.

Cultural preservation is a priority in all the five First Nations, but it is challenging to support for the following reasons:

- Migration, especially among younger generations, who are forced to leave their communities to pursue education and job opportunities, many of whom may not return. This may lead to disconnection from their First Nation traditions, language and community practices.
- Children who are in care and placed outside the community are forced into a different culture, with different language, and norms and consequently they are disconnected from their family and cultural heritage.
- Forced displacement due to natural disasters further disrupts the connection to the community, impacts the normal community way of life, and the delivery of cultural services, as people focus predominately on survival.

There are two communities in this review whose members speak their First Nation's language, English and/or French. While trilingual and bilingual staff help bridge service gaps, there are challenges in delivering multi-language services, particularly French-language services to comparable standards, which has led to delays in service and sub-optimal outcomes.

f. Infrastructure Facilities and Housing

The availability of adequate infrastructure and housing has an impact on the well-being and safety needs of the people in the sample communities. The common challenges faced by all these communities are the lack of developable land, funding, and capacity to build new infrastructure and maintain existing infrastructure, such as community housing, offices and spaces for FNCFS and community needs.

While some communities are assessing their capital needs and seeking funding to address infrastructure gaps, most First Nations are challenged in accessing the funding even when it is available, citing excessive red tape, lengthy and inefficient process as barriers. Commercial financing options are very limited, expensive and involve equally complex processes. Financial and bureaucratic barriers, as well as internal challenges were noted as delaying some critical projects, such as youth centers and renovations to rental housing. A few communities operate child and family buildings, limited health service facilities, early childhood development centers, and multipurpose spaces for functions like cultural and community events.

Two of the communities even have dedicated First Nation resource centers that serve as hubs for family support, cultural learning and social gatherings. These spaces help preserve traditional practices and provide opportunities for Elders, youth, and other members to connect and participate in community-based social and cultural activities, including ceremony. Few communities have community gymnasiums or recreational facilities, outside of the school gymnasiums.

Limited availability of land for development is also a challenge in some communities, further increasing the gap between supply and need. Some First Nations need more developed land to accommodate the population growth however, they are restricted by geographic and/or regulatory constraints.

Most First Nation communities are facing a housing crisis, which is leading to other problems like migration, over-crowding of households, poor maintenance of houses, poor living conditions and family disruption. Many primary homes and rental properties require extensive repairs and renovations to make them safe, forcing families to relocate, which disrupts their connection to their family, culture, and community.

g. Transportation

The communities in the sample score between 0.33 and 0.5 on the StatsCan remoteness index, indicating that they are far from any urban center, may have poor road connectivity and challenges in accessibility to services. Island communities face high costs for ferry travel, which is frequently disrupted by weather, and air travel to the mainland or nearest urban center is unaffordable for most residents. Bus services that pass through some of the communities do not meet the needs of the residents because transportation to and from the pick-up and drop-off points is still needed.

Public transportation is either minimal or non-existent in these communities. To partially alleviate this problem, all the communities provide some level of support to residents for transportation to medical appointments, hospital visits, groceries and visits with a child in care.

h. Economy

The economy and economic opportunities vary based on a community's geography and resources. Most of the First Nations rely on natural resources (mining, forestry, fishery), although these are not the main sources of employment or wealth creation in the communities. Some members are employed in tourism, education and government jobs for the First Nation. In some cases, First Nation governments are the largest employers, but overall job opportunities remain scarce and limited to niche industries, leading to migration, particularly among young people. Seasonal and temporary work are the most common opportunities however, this type of intermittent work offers limited financial stability and security for residents.

Some communities are taking proactive steps to expand economic opportunities through construction and infrastructure development, but generally, these only provide short-term employment. Some funding sources exist for job creation and infrastructure projects; however, the lack of internal capacity and slow approval processes create barriers in accessing them.

Organizational Characteristics

We reviewed the mandates, governance, strategic planning and organizational structure of the five FNCFS providers noting the following:

a. Legislative Authorities and Mandates

The sample consists of FNCFS providers that are business units of the Bands as well as those that are independently incorporated as not-for-profit organizations. The Band delivered CFS are relatively small operations providing family support and primary and secondary prevention services. The independently incorporated FNCFS providers are larger operations with a broader scope of services, including some protection services. The common reason for constituting an arm's length agency from the Band and Council operations appears to be the need to delineate political governance from the operations of CFS, as well as for better demarcation of accountability.

The incorporated agencies have enacted bylaws with clear directions in required governance topics like board composition and appointments, roles and responsibilities of Directors, quorum, and more contemporary realities like acceptance of virtual meetings.

All the FNCFS providers implement provincial CFS legislation proclaimed through a delegation agreement, while the funding comes from ISC or the Province, or a combination of the two. The delegation agreements between the provincial governments and the FNCFS providers set clear expectations on performance and operational standards. The delegation agreements set guidelines on specific matters, including information management, audits, practice reviews and administrative reviews, that have a significant impact on how the agencies and their governance are set up and operate. For example, one delegation agreement refers to the Operational and Practice Standards and Indicators (AOPSI), which is a widely accepted set of principles and guidelines for delivering CFS for First Nations.

b. Governance and Board of Directors

All the incorporated FNCFS providers have a Board of Directors established as the governing and direction-setting body. The size and composition of the Boards vary within the sample based on their bylaws and participating stakeholders. The Board membership and appointments

are defined in the bylaws that generally assign a fixed number of appointees for fixed terms. Most of the bylaws require Board appointments to be made by the participating stakeholders, such as the participating First Nation governments, but the appointees do not necessarily have to be councilors. Other Board members may be appointed from among First Nation members and Elders councils. Some agencies also appoint Hereditary Chiefs to the Board. At a minimum, most Boards have a President, Vice-President and Treasurer/Secretary position. The agencies in our sample have Board sizes from between 6-8 Directors, with one member representing each First Nation.

The Boards are responsible for establishing policy, creating strategic plans, enacting bylaws, managing finances, managing risk, and following protocol agreements/board resolutions. It is not clear if the Boards follow a committee model for governance, but some Boards have a finance committee that has the responsibility for providing oversight and direction on financial matters, including audits.

While the level of formalization of Board processes is unclear, we understand that the Boards have established mechanisms for oversight through regular updates and performance reports from agency administration and through regular engagement with the community. The Boards meet, at a minimum, every quarter, and some as often as once a month, and they have set a schedule for public engagement.

The Annual General Body meetings (AGMs) are held in formal settings attended by the Board of Directors, Chiefs of participating Bands, staff and community members. The agenda for the AGMs is set by the Board in consultation with the Executive Director (ED) and includes various topics of accountability, including the ED report, agency achievements, current successes, challenges and future directions. There is an open question and answer session where community members can ask questions of the Board and the CFS executive team.

Our review indicates that the common priorities for the Boards align with community priorities in areas such as strengthening community relationships, developing strategies for implementing and funding An Act Respecting First Nations, Inuit and Metis, Children, Youth and Families (the Act) and development of child welfare laws and policies that support a prevention focus.

Financial management, including funding and reporting to funders, appears to be a significant focus of most Boards and the executive team, as evidenced by the existence of policies that meet the basic expectations of the provincial or federal funding agreements.

Our review did not find evidence of Board orientation, training or performance management, practices that are often associated with Board development and improvement. The CFS that are delivered directly by a Band Council operate under the Band's policies for finance and accounting. This sometimes limits their ability to fulfill their responsibilities, as Band policies, processes and financial systems are not specifically designed for CFS operations. The policies present challenges in financial processing that impact the agency's responsiveness to clients.

c. Strategic Framework

The FNCFS agencies, specifically those that are incorporated, have clearly articulated strategic frameworks consisting of mission, vision and values/principles. These appear prominently in Strategic Plans, Annual Reports, Needs Assessments and other public communications.

We observed several common themes in the expression of mission, vision and values among the agencies. Vision and mission statements focus on keeping children and families safe by providing holistic programming based on culture, language and traditional values. Principles and values are derived from The 7 Sacred Teachings. The agencies take pride in their profound purpose of bringing their children home and reclaiming jurisdiction over child and family services. The vision and aspiration of self-determination and inherent jurisdiction over child and family services is a pervasive theme in the strategic plans, although not all the FNCFS providers are currently working towards it through the Act. First Nations have unique views, needs and capacity to reclaim jurisdiction for the safety and wellbeing needs of their children through the Act. The First Nations in our sample are at various stages of understanding the implications of the Act, readiness, capacity and planning to deliver protection services for their Nation.

The agencies complete various forms of business planning that include strategic plans, annual workplans and short-term operational plans. Long term strategic plans range from 3 to 5 years and include goals, actions and performance measurements and a forecast of financial needs for operations and infrastructure. The agencies share some common goals, including service development, working towards self-jurisdiction, staffing and human resource development and

fulfilling infrastructure needs. These goals generally reflect similar strategic priorities, strengths and challenges among the FNCFS providers.

The strategic and operational plans are informed by a thorough and keen awareness of the needs, challenges and risks facing the communities. These agencies plan and forecast based on serving all members of the Nation who are resident on-reserve and off-reserve, and while all the agencies serve non-status Indigenous people on-reserve, only a few of their plans specifically mention this.

All the agencies report that the main focus of their executive teams and Boards is on existential concerns and the challenges of delivering day-to-day services, like renegotiating service agreements with provinces or annual funding with ISC. These negotiations require extensive time and effort from leadership and pose constraints on their ability to focus on important strategic functions like organizational development, capacity building and strategic initiatives that help to strengthen their organization.

Our review did not find much evidence of robust performance measurement and reporting. Agencies provide verbal updates on annual operations to their stakeholders, and one agency had user-friendly performance data in their public documents. Team and management meetings generally focus on specific case files however, operational performance indicators are not frequently referenced for measurement and organizational improvement.

More broadly, we did not find evidence of robust data management, measurement, analysis and reporting environment, although one agency does have a specific operational role identified for data gathering and statistical analysis. Each agency in our sample defines, collects, interprets and reports financial and operational data differently, which makes comparison a challenge. Programs and services that could be defined as similar are titled differently, and generally, data gathering is inconsistent. Financial and operational data reporting is done to fulfill contractual funding obligations and for accountability to stakeholders. Based on the information available, it appears that most of the FNCFS providers would benefit from more investment in IT and data management infrastructure.

d. Organizational Structure

The FNCFS providers are led by an Executive Director (ED) or Chief Executive Officer (CEO). When organized as an autonomous body, the agency's ED/CEO reports to a CFS Board; when organized as a business unit of the Band, the ED reports to the Band Administrator.

We observed that most agencies are organized using two main functional areas: corporate services and child and family services. In general, depending on the size and scope of their operations, the FNCFS program delivery teams are organized into units like Prevention, Protection, Intake, Case Management and Family Support. In a model that demonstrates stakeholder focus, some agencies serving multiple First Nations have organized their program delivery teams dedicated to a specific First Nation, with corporate services as a shared business unit of the agency. Most often, staff roles are specialized by type of service. For example, staff are assigned to prevention or protection, or intake and case management. However, some roles may be more general, in which staff serve both prevention and protection clients or perform a range of casework duties, including needs assessment / investigations and ongoing case management.

We note that one agency has a clan/community engagement role that is responsible for building trusted community relations, improving awareness of services, improving service utilization, soliciting feedback and leveraging traditional wisdom. The roles of cultural coordinators or cultural case workers are common, reflecting the provider's stated focus on promoting cultural awareness and cultural identity, providing culturally based services and building on community and cultural pride.

Organizational charts are an important management tool for conveying the overall structure of the organization: they outline reporting relationships and help agencies implement effective teams and supervision models. We noted some shortcomings in the tools used for documenting the organizational structures, resulting in charts and visuals that do not clearly reflect the team structure, size, reporting relationship and span of control. It also appears that some supervisors have large team sizes that may constrain effective supervision.

Some key strengths underlying the effectiveness of the providers are the qualifications, dedication, commitment and empathy of staff in client-facing roles and their knowledge of the

challenges that children and families face in their communities. One common challenge facing all the agencies is staff turnover and filling vacant positions. There are many factors contributing to this problem, including the workload on individual staff, which is increased by chronic vacancies, shortage of qualified candidates, shortage of housing and amenities for new employees, and long commuting times.

We reviewed a sample of job descriptions from the agencies. There is variation across the agencies in the level of detail and specificity in describing the responsibilities, performance measures and competencies required for various positions. ED roles usually emphasize responsibilities in operational management, i.e. program delivery, HR, financial management as well as Board related accountabilities, but do not clearly articulate accountabilities for organizational development and strategic outcomes.

We observed that qualifications and competency requirements for service delivery roles are generally kept flexible; we assume this is to help overcome structural barriers and enable hiring in a difficult environment. Experience in similar work and with First Nations is the preferred standard for all roles. Roles that are delegated or with supervisory responsibilities may require a bachelor's degree in Social Work, with some experience; however, generally, a professional certification does not appear to be a requirement for any role. The qualifications for non-delegated frontline roles are even more flexible.

One agency had a well-developed annual performance appraisal system for staff. The agency evaluates the performance of its staff based on well-defined performance indicators and a rating system. The appraisal is conducted collaboratively between the staff and their direct supervisor.

Observations on Programs and Services

a. Strategic Intent

All the FNCFS providers demonstrate alignment between their stated intentions and their delivery of programs and services. First and foremost, they all approach their delivery of programs and services from a rights-based perspective with a clear mandate to serve their own people. As stated through their laws, organizational vision, mission and goals, their reason for being is grounded in their inherent rights, particularly their right and responsibility to care for their own people, especially children. All the providers have a holistic, culturally relevant, culturally connected, person-centered, multi-generational, relationship-based approach for their organizations. They highlight the unique cultural context of the Nations they serve as paramount to their knowing-doing-being approaches, and make similar references to foundational documents or teachings, like the *United Nations Declaration on the Rights of Indigenous People*, Touchstones of Hope, and The 7 Sacred Teachings.

b. Program Delivery

Of the providers reviewed, two of them have a prevention mandate and three of them have both a prevention mandate and a child protection mandate. The child protection mandate is defined by the Act, provincial laws, and the policies of the First Nation where it is located.

The providers that deliver prevention programs and services demonstrate clear alignment with their strategic intent and address the presenting needs of the children, youth, families and communities. There are no federal or provincial laws that directly limit the nature of the preventative services that these providers deliver. The providers that have the sole mandate of prevention use both mainstream and First Nations-specific culturally relevant services, and they offer a more comprehensive range of prevention services as compared to providers in this review that are mandated for both prevention and protection. Holistically, the prevention-focused providers also demonstrated the use of their relationships with community leaders, Elders, agency governors, other providers and community members to determine what type of program they should implement and how their prevention programs should be focused.

For those providers that deliver prevention and protection services, we have less clarity about the alignment of their services with their strategic intent, specifically in their protection services delivery. While the efforts of these providers are commendable, as child protection is currently

within the jurisdiction of the provinces and territories, the structural challenge continues to be how best to embed First Nations determined and culturally relevant FNCFS approaches while operating under provincial and territorial jurisdiction.

c. Types of Services

The types of services, of the providers reviewed, ranged from support for basic necessities (food, clothing, shelter, financial security, physical and emotional health and relationships) to culturally relevant services and intensive mental health and out-of-home services. All the providers prioritized culturally relevant services, whether they were mandated for prevention or protection or both.

For the protection mandated agencies, a substantive portion of their culturally relevant programming was educational and intended to preserve their culture, or to introduce, or reintroduce, children, families and caregivers to their culture and traditions. Transition management, in and out of the western culture, including transitions on and off reserve, are significant challenges for First Nation service delivery.

Observations on Financial Information

The financial data received from the five FNCFS providers in the sample had varying levels of detail and was not similarly categorized, aside from the top-level categories of revenue and expenditures. Consequently, it was necessary to make some reasoned assumptions about the financial information for the purposes of cleaning the data, categorizing the data and creating a level of comparability of the data across the five providers.

We reviewed the financial information to understand the context and significance of each information item. Effort was made to align the data from each FNCFS provider to a common set of defined categories for each revenue and expenditure type. Revenues were categorized by funding source, and then program focus, such as prevention, protection and other programming activities, if identified by the provider. Expenditures were categorized into salaries and wages, direct program costs broken into prevention and protection, and indirect costs such as operations & maintenance, governance and administration, and IT costs.

Because the process of cleaning and organizing the data into comparable categories may not be completely objective, any comparative analysis derived from this data should be viewed with caution and noted as proximate.

As we analyzed the financial data, we noticed some limitations resulting from the small but diverse sample of FNCFS providers and programs. Two early conclusions emerged:

- There were limited comparable patterns in revenues or expenditures across the providers.
- Drawing correlations between the expenditures and program activities or program results within or across the providers would be unreliable.

We also learned about the strengths and challenges related to their financial management and reporting, and note the following:

- All the FNCFS providers separate expenditures into broad program categories, e.g., protection maintenance vs. prevention or direct program costs vs. operational expenses. This creates some clarity on common expenditures, but as noted above, the expenditures are not directly comparable across all of the agencies, as assignment of expenditures into those categories differed among them.

- There are differences between the financial reporting of FNCFS organizations that are agencies/stand alone and those that are a Band delivered service. The latter operate from Band financial policies that sometimes present challenges in capturing and reporting CFS financial data in ways that are reflective of the nature of the program.

- The FNCFS providers do not have a common data dictionary or definitions of common data items for capturing and reporting financial or operational data. In addition, in some cases, the naming of data fields/cost categories may not be reflective of the true nature of the cost. For example, food and clothing costs for prevention reported under materials and supplies.

- Given that the five FNCFS providers are independent, expenditures are not reported consistently across the five of them. The organizations are challenged in addressing the financial reporting expectations of their funders, the community and others. Without any standard, each provider records and consolidates expenditures into categories, which we

assume makes it easier for them from a technology perspective. However, this causes inconsistency in reporting comparable expenditure across the five organizations. For example, in some providers, wages and salaries are reported under operational costs, and in others, wages and salaries related to prevention are reported under direct program costs.

- There were challenges in understanding the true cost of services, since some services overlap within programs. An example of this overlap is when a FNCFS provider has a food and community needs fund for both prevention and protection and reports expenditures for both on one line item, or when a FNCFS provider reports protection/maintenance costs under a prevention program line.

- While some agencies had meaningful analysis of operational performance and also reported them in an easy-to-understand format in their public documents, generally, across agencies, there are differences in terminology used for operational data, and no standard definitions that help delineate nuances for items like counts of ongoing clients (families/individuals) vs. new intakes, and ongoing placements vs. new placements. As noted earlier, this lack of consistency across the agencies presented challenges for us in reporting and developing meaningful performance indicators.

- Overall, it appears that having a primarily operational focus, competing priorities, and lack of funding for capacity building impacts the understanding, the analytics, and the reporting of data in these organizations. In order to continuously improve, it is critical that an organization have the funding and capacity for robust data collection, analytics, reporting and performance management.

Findings from the Analysis of Financial Data

- In our sample of five FNCFS providers, the one serving the smallest and the one serving the largest populations provide only prevention services, and the remaining three FNCFS providers have some level of protection services, although not all of them provide a full range of child protection services.
- The expenditure budgets for the FNCFS providers providing only prevention services are between $2.1-$3.8 million, with on-reserve populations between approximately 950 to 1500. For those providing prevention and protection, the expenditure budgets are between $6.1 - $16.5 million per year, with on reserve populations between 1300 to 1600.

- Comparison in absolute amounts is not meaningful because their communities and operations are very different.

- Some expenditure categories were compared as a percentage of total budget, with the following observations:
    - The FNCFS providers providing only prevention services spend about 50% of their total budget on staffing costs and wages, while the other three FNCFS providers providing prevention and protection services spend about 35% of their total budget on staffing costs and benefits.
    - The FNCFS providers providing only prevention spend about 35% of their total budget on direct program costs (not including salaries), while the three providing both prevention and protection services spend 50-60% of their total budget on direct program costs (not including salaries).
    - Operations costs, which include office space, office supplies, maintenance, utilities and insurance, average about 3-4% of total expenditures in all the FNCFS organizations, regardless of size.
    - The FNCFS providers spend between 1-10% of their total budgets on governance and administration, which includes Board expenses, professional services, office administration and community meetings. Those with smaller budgets (under $5 million) allocate a higher percentage of their total budgets on governance and administration compared to those with larger budgets.

- For the two organizations that provide only prevention services, the total expenditure per population, including on and off-reserve members, is between $760-1050.

- The management to frontline staff ratio is between 1:4 and 1:9, and the population served per employee including management and non-management roles, varies between 1 staff per 40 members for the smaller First Nations to 1 staff per 150 members for the larger First Nations.

CHAPTER 3: Minimum Operating Model (MOM)

The five FNCFS providers participating in this review do not constitute a statistical sample, or a sample that is representative of small FNCFS providers. However, there were similarities in the information about their organizations, their communities, and their experiences as First Nation serving organizations. For this review, we used the information about the communities they serve and the similarities of the five FNCFS providers as the basis for creating a hypothetical small First Nation. The characteristics of the hypothetical small First Nation are described under similar topics as those of the First Nations we examined for the five FNCFS providers in this review. Reasoned inferences were made about the strengths of and challenges faced by the hypothetical First Nation. While the number of characteristics of the hypothetical First Nation that create challenges for a FNCFS provider appears to be substantive, based on the information received from the FNCFS providers in this review, the characteristics of our hypothetical First Nation are not atypical.

For illustrative purposes, the hypothetical First Nation was then used to infer a reasoned minimum for characteristics, structure and costs of a FNCFS agency that would serve this hypothetical First Nation with self-jurisdiction. The hypothetical FNCFS agency we termed as the Minimum Operating Model (MOM). Appendix 1 provides further details on the hypothetical First Nation and the MOM.

The Hypothetical FNCFS Agency

In keeping with a rights based, holistic, culturally relevant, person-centered, prevention approach, as expressed in various ways throughout the aforementioned foundational documents, like the UN Declaration on the Rights of Indigenous Peoples, Touchstones of Hope, and the Canadian Human Rights Tribunal's rulings on First Nations Child Welfare and Jordan's Principle in Canada, as well as the Laws, Vision, Missions, Goals and the feedback received from the FNCFS providers contributing to this review, the following section describes the suggested minimum structural and program characteristics for a small hypothetical FNCFS agency delivering 24/7 safety and well-being services to the hypothetical First Nation.

a. Program Delivery

While First Nations that reclaim jurisdiction for the care of their children under the Act have the same accountability to support the safety and well-being needs of children as the provincial and territorial child welfare systems, they want to serve with a far more profound sense of service and accountability to their own people. In addition to the inherent right of First Nations to care for their own people in their own unique intergenerational and cultural way, First Nations have expressed that they provide holistic (physical, emotional, mental and spiritual), interconnected care for the safety and well-being needs of every child and every family in their communities.

While evidence-based improvements in current provincial and territorial westernized child protection models occur, their focus remains limited, prioritizing the care of the child, sometimes at the expense of the family. In contrast to the western child welfare models, FNCFS providers prioritize relationship based, generationally connected approaches. While the best interests of children is a primary focus, FNCFS providers have a broader and traditional view of who their clients are, and include families and community as integral to better person-centered outcomes. Consequently, if form / structure follows function, and the function of a FNCFS provider is substantively different than the westernized child welfare programs, the form / structure of a FNCFS provider would be different and resourced differently as well.

The services for our hypothetical First Nation focus on the extent of needs, ranging from community development to the basic and developmental needs of children, youth and adults in the FN.

The following are some of the services that may be provided by a FNCFS agency serving the hypothetical First Nation:

- Food and Water security programs: hunting programs, fishing programs, gardening and gathering programs, community gardens and community kitchens, food banks, food purchase cards, food hampers, meals for events and programs, water provision programs, water infrastructure grants and supports
- Clothing and Shelter support programs: Clothing allowances: community consignment, clothing banks, clothing purchase cards, home building, financing for purchase, rent and mortgage assistance, supportive living programs, housing maintenance programs, temporary accommodation programs, transitional housing programs.

- Transportation and Travel programs: payment for plane tickets, community travel cooperatives, agency drivers for ride service programs, child and family visitation programs, vehicle maintenance support.
- Cultural Continuity programs: Elder programs, ceremony supports and cultural awareness programs, language programs, hunting and gathering programs, cultural camps and land-based programs, and other community development programs.
- Health, Mental Health and Addictions: Elders and Traditional healing programs, ceremony supports, infrastructure for healing lodges and supplies, maternal health, pregnancy support, disabilities support, early childhood development programs, fly in counsellors and therapists for counselling, therapy, addictions and mental health, fly out to intensive specialized therapy, addictions and mental health supports.
- Family Preservation support programs: Elder and community visit programs, cultural camps and land-based programs, child and family recreation programs, policing and justice programs, family support programs, homemaking, home visitation, child and youth workers, behavioral supports programs, maternal health programs, general health programs, counselling, therapy, mental health support programs.
- Child Safety programs: Elder programs, ceremony support and cultural awareness programs, cultural camps and land-based programs, family support programs, homemaking, home visitation, child and youth workers, behavioral support programs, counselling, therapy, mental health support, supportive living programs, congregate care programs

b. Organizational Structure

As with any successful organization, a sustainable FNCFS agency would have:

- A clear, transparent and well understood (by the organization and the community) purpose and mandate
- Capable and qualified governance
- Clear, transparent, directional, and well understood organizational governance and operations policy
- Clear, transparent and defined processes, procedures and roles
- Visionary, compassionate, passionate, inspirational, and courageous leadership
- Knowledgeable, skilled, and experienced supervisors, managers and staff
- Core physical, support, business and process infrastructure for areas like:

- facilities
- human resources
- legal
- finance
- policy
- communications
- planning, monitoring and reporting
- information technology

From a refined modeling perspective, we have broadly structured the organization as follows:

The Executive Office:

- Executive Director overseeing all operations and program delivery and responsible for strategic leadership.
- Office Manager / Reception handling general office administration and reception duties.
- Executive Support to provide administrative support to the Executive Director and the Board.

Corporate Services:

- Staff who will manage, support and execute the corporate functions of HR, Finance, IT, Data, Policy, Communications, and Facility Management.

Program Operations:

- Staff consisting of managers, supervisors, and frontline workers, who work directly with the community, families, and children. Including specific cultural coordination and family preservation functions.

CHAPTER 4: Funding for FNCFS in the Draft Agreement

On January 26, 2016, The Canadian Human Rights Tribunal (CHRT) through its decision number CHRT-2 ordered the Government of Canada to cease its discriminatory conduct and reform its FNCFS Program, concluding it was tearing families apart and shattering lives through systemically racist funding practices. The Tribunal also found that the federal government's narrow interpretation and implementation of Jordan's Principle was creating service gaps, delays or denials, and overall adverse impacts on First Nations children and families on-reserve. On January 4, 2022, the Government of Canada announced that two agreements-in-principle had been reached; first, on a global resolution related to compensation for those harmed by discriminatory underfunding of FNCFS; and second, to achieve long-term reform of the FNCFS Program and Jordan's Principle to ensure that no child faces discrimination again.

In July 2024, the Government of Canada announced a draft Final Settlement Agreement (FSA) to achieve long-term reform of the FNCFS Program and Jordan's Principle. The Government of Canada proposed $47.8 billion over ten years to fund the long-term reform of the on-reserve program for CFS. Appendix-2 provides brief descriptions of the key structural components of the Amended Draft Final Agreement on Long Term Reform of FNCFS Program, October 2024 (the Draft Agreement). The Draft Agreement was later rejected by the Assembly of First Nations. (Note: in February 2025 Canada signed a regional agreement for the long-term reform of the FNCFS Program with the First Nations of Ontario.)

We analysed the funding proposed through the Draft Agreement for FNCFS providers operating with jurisdiction, and the following are our observations on the broad implications of some of the key terms contained in it.

Observations on the Draft Agreement

a. Prevention Funding

The Draft Agreement proposes a fixed per capita amount based on the on-reserve population of a First Nation for prevention. Our consultations with FNCFS providers indicate that First Nations intend to provide culturally appropriate prevention outreach to their off-reserve members as well. This is consistent with the vision of substantive equality enshrined in the Act. About 62% of First Nations have more than half their population living off-reserve. Only about 12% of the First

Nations have a substantial majority (over 75%) of their members living on-reserve. It is logical to think that prevention services would be equally needed by families/communities living off reserve that have their children in care. The proposed funding therefore may not be sufficient to provide prevention services to all the members who need it. Our analysis also indicates a strong statistical correlation between the sufficiency of the proposed funding in the Draft Agreement and the percentage of population living on-reserve, implying that a large number of First Nations with high proportion of off-reserve populations will be financially challenged in their outreach.

b. Baseline Funding – a separate funding stream for Protection

According to the Draft Agreement, the baseline funding is intended to pay for the maintenance expenses of children when they are in care of a FNCFS agency. The nomenclature is misleading however, since the baseline funding is not minimum funding for the FNCFS agency; rather, it is funding that is available only as long as children are in the legal care of a FNCFS agency. The initial amount available to the FNCFS agency is based on the funding ISC was providing to the service provider at the time the child's care is transferred to the FNCFS agency, and subsequently, it is based on the actual maintenance cost for the children in care.

As it is labelled, baseline funding is to maintain children in care. The implication is that there is no incentive, from a funding perspective, for a FNCFS provider to reduce the number of children in care to zero. The baseline funding approach may not be aligned with the intent of the Act and the vision of all First Nations, which is to keep children in their families while providing culturally appropriate support for family preservation. However, unintentionally ISC's funding approach incentivizes family separation.

A more logical approach would be to transfer the baseline funding into prevention and family preservation funding as the number of children in care is reduced. This would create a true 'baseline' of funding and create incentives for achieving positive outcomes for children and families overall, and increasingly improved financial outcomes over time for the program. This approach also supports the argument for block funding for prevention and protection, which would provide FNCFS agencies with the flexibility to invest in the right areas of need in their communities. The single block funding approach better aligns with First Nation's traditional world views, where the safety and well-being needs of children, youth, families and communities

are interconnected and not separated into arbitrary categories for the purposes of management and accounting.

The example of Lac Des Mille First Nation in Ontario (note, this First Nation is not one of the five FNCFS in the study sample) is demonstrative of the concerns related to the on-reserve population-based funding and the argument against separate funding streams for prevention and protection. The Lac Des Mille First Nation has a population of 10 on-reserve and 638 off-reserve members (Indigenous Registry System, ISC 2024). We estimate, based on the proportion of the total population, that there may be 12 Lac Des Mille children in care. Based on the proposed ISC funding for 2024, Lac Des Mille First Nation would receive $25,000 for prevention, as the minimum guarantee does not apply to FNCFS providers serving one First Nation. We estimate the actual program costs for prevention to be $66,500, not including the executive team or corporate services. The projected baseline funding for 12 children in care and top-ups will total approximately $740k. The FNCFS agency will therefore qualify to receive about $765,000 in ISC funding through the Draft Agreement for prevention, baseline, top-ups and remoteness adjustment. We have estimated that the minimum budget need for a FNCFS agency providing prevention and protection with self-jurisdiction for this population size and distribution, would be approximately $2.9 million per year. If the prevention funding was based on total population, Lac Des Mille would receive $2.34 million in funding, which is still short of the need, but much more manageable and supportive of the vision for self-jurisdiction.

Because baseline funding is for direct costs of children in care, and prevention funding is based only on the on-reserve population for this First Nation, Lac Des Mille First Nation would be inadequately funded, as their prevention needs are more pronounced off-reserve, where most of their in-care children's families are located.

c. Top-up Funding

The proposed top-up funding is based on the baseline funding which, as explained earlier, is based on the number of children in care. The higher the number of children in care, the higher is the baseline funding, and the higher is the top-up funding. This implies that if the First Nation is successful in reducing the number of children in care, it loses both baseline and top-up funding. As there is no incentive funding that creates a proportional investment into sustainment and prevention work as the number of in-care protection cases goes down, it is not unreasonable to

assume that the most successful First Nations will lose all their baseline and top-up funding, even as they achieve improved outcomes and have no children in care.

A related concern is that top-up funding is tied to baseline funding only. This is inconsistent with First Nation's vision for a prevention focused CFS program. Measuring the impact of prevention services is integral to that vision and therefore the top-up for IT and Results ideally should be based on prevention funding alone, or both prevention and baseline.

d. Minimum Guarantee of $75,000

The Draft Agreement provides a guaranteed funding amount of $75,000 to First Nation affiliated with a FNCFS agency. For First Nations affiliated with a FNCFS agency which serves an amalgamation of more than one First Nation, the First Nation's total per capita prevention funding would be divided between the First Nation and the agency. The agency's share of the prevention funding is equal to the First Nation's per capita funding multiplied by the proportion that the First Nation's population constitutes in the total population of all the First Nations in the amalgamation.

The $75,000 minimum guarantee ensures that First Nation's with a population of less than 30 on-reserve in 2024 participating in an amalgamated FNCFS agency, receives more (max of $75k) than they would receive on a per capita basis if they were not participating in a shared FNCFS agency. Therefore, it appears, the sharing formula between the First Nation and the agency is intended to incentivize small First Nations to collaborate with larger First Nations in the delivery of prevention services. By doing so, the First Nation would receive a portion of its per capita prevention fund, which it could spend on its own priorities, in addition to receiving prevention services from the agency. The First Nation may decide to direct part or all of its share of prevention funding to the agency.

For non-agency First Nations, and when a FNCFS agency serves only one First Nation, the First Nation receives all the prevention funding based on the per capita rate. It appears that the Draft Agreement does not provide a minimum guaranteed funding for a First Nation with an on-reserve population of less than 30 if they are not part of an amalgamated FNCFS agency. The First Nation may decide to direct some or all of its prevention funding to the FNCFS agency.

The Draft Agreement does not provide a rationale for establishing the minimum guaranteed amount at $75,000 adjusted for inflation. Information based on the Draft Agreement between Ontario First Nations and Canada states that it is ISC's belief that, with $75,000, a First Nation would have sufficient funding to dedicate at least part of an employee's time in delivering prevention services. This may be partially true for a Band-delivered prevention service for a very small First Nation with on-reserve population of 30, but it does not consider the direct cost of support to families and other realities of staffing, such as backfill and vacancies.

There are only 10 First Nations with on-reserve population of 30 or less. This raises questions about the net impact of this incentive. If the purpose of the minimum guarantee is to provide stimulus for amalgamation of FNCFS, a population threshold and minimum guarantee that incentivizes more First Nations to amalgamate their CFS would have broader systemic impacts economically.

CHAPTER 5: Analysis of Budget Needs and Proposed Funding in the Draft Agreement for FNCFS Agencies with Jurisdiction

This chapter provides our findings from the analysis of the proposed funding through the Draft Agreement and the budget needs of FNCFS agencies operating with jurisdiction under the Act.

The Financial Projection Model (FPM)

To account for multiple variables and derive an estimate for the operational budget and funding available for a FNCFS agency assuming jurisdiction, a financial projection model was built that in addition to aligning with the hypothetical MOM can also replicate the financial parameters for larger First Nations, and is based on the Draft Agreement. The FPM is capable of estimating the operating budget needs of a FNCFS agency based on the required staffing, programming and indirect expenditures for serving the population, and also the funding that the FNCFS would qualify for under the Draft Agreement with self-jurisdiction. The financial projection model has the following characteristics:

General Parameters

- The FPM is based on the operations of FNCFS agencies delivering family preservation services (prevention and protection) as envisioned by the Act and the Draft Agreement.
- Financial and population data have been indexed to 2026 values using StatsCan and ISC data estimates for inflation and population growth.
- The FPM estimates the budgetary needs and funding for 2026-27, and the main drivers used to estimate the budget needs replicate the drivers described in the Draft Agreement as follows:
    - the on- and off-reserve population of the First Nation,
    - the number of children in care, and
    - the Remoteness Quotient Adjustment Factor (RQAF).
- The FPM does not distinguish between a FNCFS agency delivering service to one First Nation or an amalgamation of multiple First Nations. The model is driven by population, children in care and remoteness factors, regardless of whether the population source is one First Nation or multiple First Nations.

- The FPM models the prevention and protection programs on a stand-alone basis, meaning that they are unaffected by expenditures and funding related to other programs or services like Post Majority Services, Band Representative Services, Tribunal and Dispute Resolution, or Crisis Line.
- The FPM does not include start-up costs for establishing a FNCFS agency, such as the costs of acquiring new infrastructure or assets, and ongoing capital expenditures. These costs are funded by ISC on case-by-case basis, and it is assumed that the FNCFS will have, or will acquire, the necessary infrastructure and assets.
- The budget estimate has these components:
    - Salaries and Benefits
    - Direct Program Costs
    - Indirect Costs

First Nation Population

- First Nation population (on- and off- reserve) was obtained from ISC's Indian Registration System as at December 31, 2024, and their report on Population Registered under the Indian Act by Gender and Residence in 2023.
- Cumulative population growth from 2023 to 2026 was estimated at 12.3% based on StatsCan estimates for First Nations population.

Children in Care

- The FPM uses the count of children in-care, based on total on- and off- reserve population, for estimating baseline funding and protection services expenditures.
- The number of First Nation children (under 19 yrs age) for each First Nation was derived using ISC 2023 population statistics in their report on Population Registered under the Indian Act by Gender and Residence in 2023.
- The percentage of First Nation children in care is based on the April 2020 national data reported by Crown Indigenous Relations and Northern Affair Canada (CIRNAC), which estimated 5.87% of First Nation children are in care. The number of children potentially in care for each First Nation was calculated by applying this percentage to the total number of children under 19 years of age.

Baseline Funding

- The Draft Agreement states that baseline compensation will be calculated based on the current rates that ISC pays to the current service provider. The FPM calculates the baseline amount using the estimated cost from the sample First Nations of $52,907 per child for 2026, multiplied by the estimated number of children in-care.

Prevention Funding

- According to the Draft Agreement, prevention funding would be based on the per capita amount of $2,500 indexed to 2026 per on-reserve population.
- For the FPM, prevention costs are calculated using the assumption that First Nations will provide prevention services to both on- and off-reserve members.

Remoteness Adjustment

- The RQAF for each First Nation was calculated according to the prescribed method in Appendix 12 of the Draft Agreement. A community with a 2021 Remoteness Index less than 0.4 will have a RQAF of 0.
- RQAF for each agency was derived using the same remoteness adjustment formula; however, it is weighted based on the population of each First Nation served by the agency.

Top-up Funding

- In the Draft Agreement, top-up funding for IT, results, and emergency would be calculated as a percentage of baseline funding.
- In the FPM, ISC's Household Support fund of $25.5 million was allocated to each First Nation using a simplified approach to reflect the formula in Appendix 11 of the Draft Agreement.

Analysis using the Financial Projection Model

We conducted an analysis of operational budget needs of a FNCFS agency providing prevention and protection services with self-jurisdiction, and the funding available from ISC based on the Draft Agreement. The FPM is a spreadsheet-based financial projection model capable of generating scenarios of FNCFS agency operations based on the three driving factors, i.e., on- and off- reserve population, children in care, and remoteness adjustment factor. In order to perform these calculations, it applies a variety of assumptions and rules for the cost drivers. These details are explained in Appendix 3 of this report.

Using Monte Carlo simulation, the FPM is programmed to create 620 scenarios by sampling the on- and off-reserve populations from the list of First Nations and generating approximate number of children in-care and approximate RQAF. The sampling of the population may not be unique, but the combination of children in care and RQAF makes each scenario unique. Based on these inputs, the FPM calculates the staffing needed, total operational budget needed, and the total funding the FNCFS provider qualifies for under the Draft Agreement. It is our view that the estimates fairly represent what a FNCFS provider operating with self-jurisdiction would experience. The resulting budget needs and ISC funding for delivering prevention and protection services with self-jurisdiction from the simulation were analyzed statistically. The table below shows some of the key statistics from the simulation and explanation follows.

Key observations from the FPM analysis include:

Table 1 Summary Statistics from Simulation of Estimated Funding from Draft Agreement and Budgetary Need

Stat	*On Res. Popn.*	*Total Popn.*	*RAQF*	*Children*	*Estimate of FTE*	*Budget Need ($)*	*ISC Funding ($)*	*Funding as % of Budget*
Min	12	36	0.14	1	6.7	964,259	138,680	14%
Ave	702	1,498	0.62	22	20.5	5,441,616	3,530,836	57%
Max	7,145	12,051	1.29	179	105.8	35,799,365	32,017,869	107%

Note: the values in each column reflect the range from min to max generated in the simulation for that variable. Values from left to right in a row are independent of each other. For example, a First Nation with an on-reserve population of 12 and total population of 36 may not exist, but the numbers represent the smallest on-reserve and the smallest total population generated in the simulation.

Estimate of Staffing

- Table 1 shows that the minimum staffing required to operate a minimal FNCFS agency is 6-7 full-time equivalent (FTE) positions, including an executive office, corporate services, and program delivery serving on- and off-reserve populations. This would meet the needs of any First Nation with total population less than 166.

- The estimated staffing need for FNCFS agencies with prevention and protection services may be about 94-106 FTE for some of the largest First Nations, with total populations in 10,000 to 12,000 range. For the few FNCFS agencies with even larger populations, the number of staff needed may be up to 155 FTEs.

- Figure 1 shows the distribution of FNCFS agencies based on their estimated staffing need.

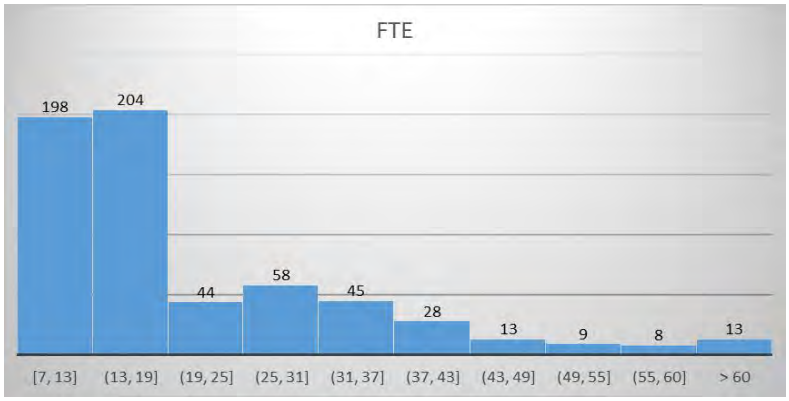

Figure 1 Number of FNCFS grouped by count of FTE Required

- About 72% of the FNCFS agencies will require less than 25 FTEs, 23% require between 25 and 50 FTEs and the remaining 5% will require 50 or more FTEs.

ISC Funding as % of Budgetary Need

- Table 1 indicates that the budgetary need of a FNCFS agency for operating costs may vary between $964k to $35.8 million, depending on population, number of children in care and remoteness. The average FNCFS agency requires about $5.4 million per year to fund annual operating costs.

- The ISC funding available through the Draft Agreement ranges between $138k to $32 million, with the average FNCFS agency qualifying for about $3.5 million per year.

- Table 1 also shows that, on average, the Draft Agreement is funding about 57% of the FNCFS agency's annual budgetary need for operations.

- Figure 2 shows the distribution of FNCFS agencies grouped by the percentage of their annual budgetary need for operations funded by the Draft Agreement.

- Figure 2 also indicates that for about 40% of the FNCFS agencies, the ISC funding based on the Draft Agreement may be less than 50% of their budgetary need.

- For about 50% of the FNCFS agencies, the ISC funding through the Draft Agreement may be 51-80% of their budgetary need, and for the remaining about 10% of the FNCFS agencies, the funding may be more than 80% of their budget.

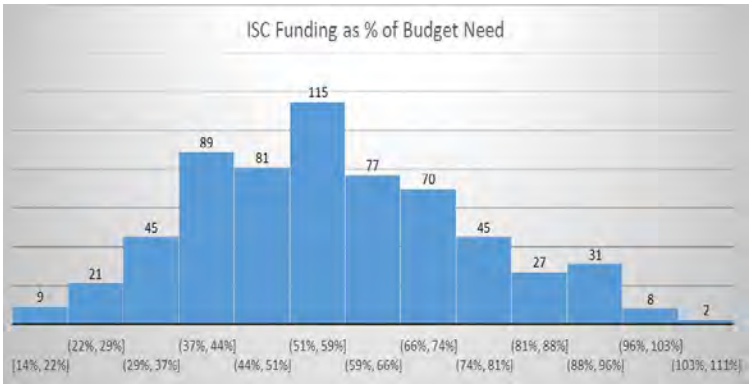

Figure 2 Number of FNCFS grouped by ISC Funding as % of Budgetary Need

- Accounting for the uncertainties in cost estimation and inherent error margins in the simulation, we may expect that about 10% of the FNCFS agencies who receive more than 80% of their budgetary need may be sufficiently supported to achieve their vision through the Draft Agreement. The FNCFS agencies that are funded between 51%-80% may be able to manage but would need to adjust their services/programming downwards to balance with the available funding. The remaining 40% of the FNCFS agencies receiving less than half their expected budget would struggle to deliver their mandate.

- Correlation analysis of the data from the simulation also confirms that the percentage of budget funded by the Draft Agreement is highly correlated (72%) to the percentage of on-reserve population. Therefore, First Nations with higher on-reserve populations will receive more funding compared to another with the same total population, but with a lower proportion living on-reserve.

Special Scenarios

To better understand the funding needs of FNCFS agencies with different demographics and address some of the key questions to be answered by this study, we analyzed the budgetary needs and funding from the Draft Agreement using some special scenarios, as described below.

- What is the operational budget need and funding available for the FNCFS agency serving the smallest population?
    - We analyzed the operational budget needed and funding available for the smallest FNCFS agency in terms of served population reflected in Appendix-1 which describes a hypothetical small First Nation and a minimum operating model for a FNCFS agency. This FNCFS agency serves a total population of 40 members (76% on-reserve), has an RQAF of 0.58 and has 1 child in care. Based on the simulation, the estimated budget needed for this FNCFS agency is $968k, with 6 FTEs in the organization. It would receive funding of $188k based on the Draft Agreement, which is about 20% of its need. A FNCFS agency of this size and composition will struggle to deliver the vision of self-jurisdiction enshrined in the Act, under this Draft Agreement.

- What population size can be served by the smallest FNCFS agency?
    - The simulation model indicates the smallest FNCFS agency needs a staffing level of 6-7 FTEs, with about half in CFS program delivery and the other half in executive office and corporate services. A FNCFS agency with this staff size may be able to support a total population size of up to 175, if it were sustainably funded. However, the simulation indicates that FNCFS agencies serving total populations up to 175 would, at best, receive 45% of their estimated budget need of $1.2 million per year through the Draft Agreement.

- What is the operational budget need and funding available from the Draft Agreement for a FNCFS agency serving the median population of First Nations?
    - Based on the Indian Registry Services population data for 2024, the median population for all First Nations is about 1054 members. Our simulation has a scenario with total population of 1054 members (57% live on reserve), an

RQAF of 0.75 and 18 children in care. The estimated budgetary need of this FNCFS agency is about $4.13 million per year, but based on the Draft Agreement, it would only receive $2.99 million per year. This FNCFS agency would be funded for about 73% of its annual budgetary need.

- What is the budgetary need and funding available from the Draft Agreement for a FNCFS agency serving the median population among small First Nations (total population below 1000 members)?
    - Approximately 53% of First Nations have a total population of less than 1054 members. The median population for these First Nations is 504 members. The FPM generated a few scenarios that are close to the median population of small First Nations. The best scenario from a sustainability perspective is when a First Nation with 504 members has 97% of its population on-reserve, a RQAF of 1.2 and 7 children in care. This FNCFS agency has an estimated budget of $2.2 million per year and would receive $1.9 million (86% of its budget) through the Draft Agreement. It would receive less than its budgetary need but could be sustainable. The worst scenario is when, for the same total population, only 26% of the population lives on reserve, the RQAF is 0.41 and 9 children are in care. The estimated budget need for this FNCFS agency is $2.6 million, but the available funding would be $1.03 million, or 39% of its required budget.

- What is the population size at which the proposed funding in the Draft Agreement is sufficient for a FNCFS agency to sustainably operate with its own mandate and vision of self-jurisdiction?
    - We analyzed the population size for which the funding available from the Draft Agreement meets at least 90% of the budgetary need of the FNCFS agency. The assumption is that a FNCFS agency can manage its mandate with that level of funding. Our analysis indicates that financial sustainability is highly correlated to the proportion of the population living on-reserve, not necessarily to the total size of the population. Data from the simulation indicates that the smallest FNCFS agency, to have at least 90% of its budgetary need funded, has a total population of 1150-1300 with 90% or

more living on-reserve. The budget need for this size of operation is $4-5 million per year. FNCFS with larger populations and similar proportions of on-reserve population would also be sustainably funded. This finding indicates that a target amalgamated population served in this range with the proportion of on-reserve population may be a strategy for sustainability under the Draft Agreement.

CHAPTER 6: Conclusion

The study meets the objective of conducting an exploratory analysis to better understand the interplay between population size, children in care and remoteness as applied to the funding proposed in the Draft Agreement and the corresponding operational budget needs of small FNCFS providers operating with self-jurisdiction. While much was learned from this small sample of FNCFS providers and the associated financial analysis, given the size and complexity of this topic, and the limitations of this study, there are many more questions to be answered regarding the operational needs, challenges and implications of the Draft Agreement on First Nations wanting to deliver CFS with self-jurisdiction.

In summary, our key findings and potential next steps are listed below.

Key Findings

1. The holistic, culturally relevant, culturally connected, person-centered, multi-generational, relationship-based approaches that characterize the five FNCFS providers in our sample establishes a foundation for organizational success. It could be inferred that the success that we observed in the five FNCFS organizations is due in large part to this overarching approach bringing them closer to their communities, enhancing cultural continuity, deepening their relationships, and creating an understanding of the people they serve that is unique to FNCFS providers. This type of compassionate understanding helps these organizations to be flexible, dynamic and focused on using their resources in the most effective ways. This culturally informed, citizen-centered approach is a leading practice that makes these organizations successful and positions them well for the future.

2. Opportunities exist for First Nations and FNCFS providers to incrementally build organizational capacity that supports the skills, competencies, tools and practices of culturally based prevention and protection services. With their connection to the culture and the land as a foundation, the FNCFS organizations can gradually enhance their functional capacity in data and analytics, financial management and leverage technology to optimize CFS delivery to remote and sparse populations.

3. There appear to be structural challenges with the ISC funding approach that do not align with the stated visions of First Nations delivering or wanting to deliver CFS with self-jurisdiction. The categorization and separation of prevention and protection services and funding thereof, primarily for the purposes of managing resources and data, is not aligned with the way in which many FNCFS providers intend to serve their people. The division between prevention and protection funding constrains rights based, holistic, culturally relevant, person-centered prevention approaches and is not aligned with the naturally changing needs of children, youth and families over time. Over the lifetime of their involvement with a CFS agency, a child, youth or family's needs can "fit" into both prevention and protection categories, and often into both categories at the same time. Determining that a child, youth or family only requires prevention services, or only a protection service, fails to recognize that people's needs and developmental paths are multi-dimensional, interconnected and complex. This failure, at its extreme, could result in "force" fitting people into services that may not be optimal. A block funding approach for prevention and protection services better conforms to First Nations' traditional world views, where the safety and well-being needs of children, youth, families and communities are interconnected and not separated into arbitrary categories for administrative convenience.

4. We note that the funding for prevention in the Draft Agreement is based on on-reserve population and appears not to account for the migration of First Nation members. Members who generally reside off-reserve would not have access to prevention services from their own First Nation. This funding approach also does not account for the additional complexity of service delivery to First Nation members living off-reserve. It raises the question of how an off-reserve First Nation member will receive services if their Nation's off-reserve infrastructure is limited and the First Nation member's acceptance into Provincial/Territorial services is limited as well. Given that most First Nations intend to provide services to members living off-reserve, it is crucial to provide adequate funding to support off-reserve delivery and well-articulated and well understood reciprocal service delivery agreements between Provincial/Territorial governments and FNCFS agencies.

5. The baseline funding as defined in the Draft Agreement would be better structured to incentivize keeping children at home and reducing the number of children in care. As defined in the Draft Agreement, FNCFS agencies who are able to reduce the number of children in care to zero are destined to lose their baseline funding and top-up funding.

6. The top-up funding is tied to baseline funding and therefore is bound to decrease when fewer children are in care of the agency. As well, tying the top-up funding to baseline funding only is inconsistent with First Nation's vision for a prevention focused CFS program. Measuring the impact of prevention services is integral to that vision and therefore the top-up for IT and Results ideally should be based on prevention funding alone, or both prevention and baseline.

7. The Draft Agreement does not provide ISC's rationale for establishing the minimum guaranteed amount at $75,000 adjusted for inflation, except that it may fund a full- or part-time prevention staff in very small First Nations. This may be partially correct for a Band-delivered prevention service for a very small First Nation. However, it does not consider the direct cost of support to families and other realities of staffing, such as backfill and vacancies. It also appears that the minimum guaranteed funding is not available for a First Nation if they are not part of an amalgamated FNCFS agency.

8. The minimum operational staffing and funding needed to serve any size of population is about 6-7 FTEs and approximately $1.2m in annual operating budget. This amount of resource may be sufficient to support prevention and protection services for populations up to 175 members, subject to remoteness and the proportion of on-reserve population. Our analysis shows that funding from the Draft Agreement only supports approximately 45% of the required budget.

9. There appears to be a pathway to financially sustainable operations for small FNCFS agencies through amalgamation. FNCFS agencies who are able to attain the threshold, estimated by the financial analysis, for total population and proportion of on-reserve population through amalgamation (1150-1300 in total population with 90% on-reserve), may receive funding that adequately supports their vision of self-jurisdiction.

Potential Next Steps

This study is a small step in a longer journey towards fulfilling the information needs of First Nations planning or contemplating self-jurisdiction in CFS. The following next steps are proposed for consideration:

1. Gain further clarity regarding the terms of the Draft Agreement or any future agreement and validate the implementation of the terms and related assumptions in the Financial Projection Model. A more rigorous study and modeling based on more participative but focused data gathering and consultation with First Nations would add further value and confidence in the findings.

2. Conduct financial modeling and scenario analysis to determine the fallback or minimum outcomes and preferred outcomes that would be acceptable to First Nations from any future negotiated agreement with ISC.

3. Conduct a thorough analysis of the Draft Agreement and any future agreements for alignment and compatibility with all relevant CHRT rulings related to the long-term reform of the FNCFS program.

4. Plan and implement strategies to incrementally build consistency and shared standards in gathering, storing, and reporting financial and operational data across the FNCFS sector to ensure the availability of reliable data, and enable reliable analysis on regional and national levels.

5. Plan and implement strategies to enhance the capacity of FNCFS organizations for data management, analytics and performance management to build on their operational successes and position them to meet the expectations and accountabilities stemming from the Draft Agreement, or any other future funding agreement.

Appendix-1: Hypothetical First Nation & Hypothetical FNCFS Agency - Minimum Operating Model (MOM)

The Hypothetical Community Profile

This hypothetical First Nation is a community located on a remote northern reserve approximately 300 kilometers from the nearest urban center. It has a remoteness index of approximately 0.6, indicating significant geographic isolation. The community is not accessible by year-round roads and relies on seasonal winter roads and air transport for supplies and travel.

The total population of the community is approximately 40 members, with 30 (76%) residing on reserve. The age composition is as follows: approximately 9 (22%) are children aged 0-19 years, including 1 child currently in care; 3 are youth aged 20-24 years (8%), 21 are adults (50%), and 12 are seniors aged 60+ years and older (20%). The community has about 8 families with many facing economic and social challenges. Half of the families (4) are considered at risk and may benefit from prevention services.

Food Security

There is only one convenience store and one produce store on the reserve; both have a small selection of food choices. The community relies heavily on external supplies from supermarkets and discount stores located outside the reserve, which are difficult to access due to the remoteness and seasonal road conditions.

Some members of the community were displaced decades ago due to construction work on water infrastructure which destabilized the local water supply. This resulted in the community being under a boil water advisory for the past 5 to 10 years. This has led to increased health risks and disrupted routine housekeeping in the community.

Health

There is a small nursing station on the reserve, but it provides only basic medical care. Specialized care is unavailable and doctor visits are infrequent. For more complex health issues, including maternity care, residents must travel long distances to urban hospitals (~400

km). To get emergency medical care, community members travel by air. However, weather conditions and the seasonal nature of the roads frequently delay or prevent timely medical evacuations, increasing residents' vulnerability in life-threatening emergencies.

Education

The community has an elementary and middle school on reserve, but there is no high school. High school students must leave the community to attend schools or post-secondary institutions in larger towns or cities, which causes emotional and cultural disconnection. Many students face challenges adjusting to life outside the community; these challenges include limited cultural, financial and emotional support. This leads to high dropout rates that perpetuate low community educational levels, community unemployment, and health and social areas like mental health, addictions, and crime.

Social Development

Many of the older community members are residential school survivors. Intergenerational trauma, substance misuse and mental health issues are legacies of the residential school system. Many families are raising children and relatives without financial support, while some parents are unable to be involved due to addiction and trauma-related challenges. Alcoholism and drug addiction are common, contributing to domestic violence and child neglect in some households, resulting in placements which are outside the community due to lack of caregivers.

Parks and recreational facilities are poorly maintained or nonexistent. Youth have limited access to positive, structured activities, which has resulted in high rates of substance use, antisocial behavior and mental health issues. Community leaders and volunteers attempt to organize sports and cultural activities, but their efforts are constrained by a lack of funding and infrastructure.

Culture and Tradition

Traditional practices like fishing, hunting, and ceremonies are important parts of community life. Regular cultural events are organized and cultural kits are distributed to children to promote Indigenous knowledge and traditions. Efforts to preserve the language are ongoing, but progress is slow due to limited resources and the influence of western education systems.

While there is not a traditional site like a turtle lodge, the community has a shared gathering space supported by the Band Council for cultural events and ceremonies. Elders and knowledge keepers play a key role in passing down traditional knowledge, but the loss of language and cultural practices remains a significant concern.

Community Facilities

The community's facilities are limited and aging. There is lack of traditional gathering places such as a turtle lodge, ceremonial grounds, fire areas, and ceremonial spaces, like a sweat lodge or smudging room. The community gathering space is one of the few well-used facilities that accommodate cultural and community events, but it lacks modern amenities. The Band office, nursing station and community center require renovation and repair.

Housing

Families live in overcrowded homes, since no new housing construction has taken place in the past 5 to 10 years. Rental units are in poor condition, requiring repairs that are usually delayed or left unfinished due to limited funding and bureaucratic barriers.

Transportation

The community is accessible only by air or seasonal winter/ice roads. There is no public transit or taxi service, and personal vehicle ownership is low, primarily due to the high cost of ownership. Transporting supplies and medical emergencies requires expensive charter flights, which are often delayed or canceled due to weather conditions.

Health and Medical Facilities

The nursing station is not equipped to handle complex medical cases. Medications and supplies are limited, while emergency services are scarce. Serious medical issues require evacuation by air, but inconsistent flight schedules and weather-related disruptions often delay care. There are no First Nations midwives in the community, so pregnant women must leave the community weeks before their due dates to access maternity care, adding stress and financial strain on families.

Recreational Facilities

Recreational infrastructure is minimal; it is limited to a few informal outdoor spaces. There is no gym, sports field or dedicated community center for youth activities. Volunteers try to organize sports and events, but inconsistent funding and a lack of resources make it hard to sustain these programs.

Economic Drivers

The Band Council is the main employer, but jobs are limited. Seasonal work in firefighting, construction, and environmental monitoring is available but does not provide long-term stability.

Unemployment is high, especially among youth. Many residents leave the reserve for better economic opportunities, leading to population decline and social instability. Financial struggles are made worse by the lack of childcare and the high cost of transportation and living expenses.

The Hypothetical MOM FNCFS Functional Profile

Governance

1. Board of Directors Governance Administrative Support
2. Community Engagement and Communications

Minimum Suggested Functions or Roles

– Board Governance Support

Rationale – A First Nations Child and Family Service agency will have a governing board or body. For the purposes of this exercise, it is assumed that the governance body is a community-based Policy Board. Given that all Boards have accountability for the direction and the achievement of outcomes for the clients/people they serve, it is reasonable to suggest that all FNCFS providers have adequately resourced and dedicated capacity to support the governance of their organizations. This argument is even more compelling when considering the essence of First Nation's traditional, intergenerational relationship-based governance, where Elders, Chiefs, Band Councilors, and the Nation's citizens are integral, interrelated, and inseparable members of the Nation's decision making, and consequently, play a large role in the support that a child and family would receive. A primary role of a Governance Board Member of a FNCFS agency will be to liaise and connect with this broad and sometimes complex collective of care giving stakeholders and will often be the de facto voice of their respective First Nation community when broad-based community engagement is not possible.

Corporate Services

1. Human Resources
2. Legal
3. Planning, Monitoring, Quality Assurance and Continuous Improvement
4. Finance and Audit
5. Procurement and Contracting
6. Program Development
7. Infrastructure
8. Communications, Promotions and Marketing
9. Policy Development

10. Information Technology
11. Corporate Services Administrative Support

Minimum suggested Functions or Roles

Human Resources

Rationale –The recruitment, retention and support of compatible and qualified staff is foundational for the effective functioning of the organization. In addition to the recruitment, retention and support challenges of a larger, urban organization, a small remote FNCFS agency will have the added challenges of issues like distance and associated travel, the availability of qualified candidates for delivery of Indigenous and non-Indigenous service delivery, housing, and higher salary costs for comparable positions. As FNCFS providers continue to address the historical injustices of past policy and the design of uniquely First Nations delivery of Child and Family Services, having a skilled and qualified Human Resource professional that understands the following is required:

- the historical context and reputation of non-Indigenous Child and Family Services, and today's unique First Nation design of the work;
- the unique community context of the work, and;
- the need to have an equally unique and innovative approach to Human Resources.

A FNCFS agency must have a tailored recruitment, retention and support strategy for leading, managing and supporting their staff. This will help realize the First Nation's vision for self-jurisdiction in CFS.

Legal Services

Rationale – Considering the general litigious nature of historical child protection work, it is reasonable to assume that a FNCFS agency may have a similar experience with their service delivery, albeit with the hope that it will be to a lesser degree. In addition, the ongoing negotiation of organizational agreements with Federal, Provincial and service delivery entities, along with drafting of Nation specific laws and corresponding policy, will require dedicated legal services support.

Financial Services, Audit, Procurement & Contracting, Program Development, Infrastructure

Rationale – All FNCFS providers will require the capacity to effectively manage their finances, regardless of the size of the organization. While the day-to-day management of financial resources will be paramount, having associated specialized functions, such as audit, procurement, contracting and infrastructure support would be value-added additions on a as needed basis. In addition to performing periodic specialized activities, these supplementary resources can also help with the day-to-day transactional activities associated with developing in-house programs, procuring needed infrastructure and program services, drafting contracts and agreements and reviewing those services from a cost-benefit or cost-effective perspective. These functions can assist FNCFS agencies' accountability in meeting their Nation's and funder's expectations regarding transparent disclosure of the resources received, resources allocated and results achieved.

Communications, Promotions, and Marketing

Rationale – The holistic, culturally relevant, multi-generational, relationship-based prevention approach to safety and well-being constitutes the general foundation for FNCFS delivery. That approach is unique and substantially different than the western, colonial, provincially mandated approach to child protection. A FNCFS agency will require a resource to support the Board, Executive Director and staff in dispelling the perception that the FNCFS agency is the same as CFS agencies based on the colonial system, and promoting and marketing the new, Nation specific, design, delivery and outcomes of the FNCFS agency. If a goal is to model a traditional approach of community caregiving to achieve improved safety and well-being outcomes, the community must be engaged and involved in a trusting relationship and be supportive. This requires ongoing engagement, transparency, communications, marketing, and promotion of the context, rationale and strengths of the FNCFS agency and services.

Planning, Monitoring, Quality Assurance and Continuous Improvement

Rationale – Person-centered or citizen-centered organizations have the client or customer at the center of what they do, and they measure whether they are making a difference for their clients or customers. The First Nations establishing FNCFS agencies are resuming the care of their children and families and epitomize a citizen-centered approach to service. Consequently, FNCFS agencies that are accountable to their Nations will want to use their available resources in the most effective and efficient ways possible. They want to know if what they are doing is making a difference for their people. FNCFS agencies require dedicated resources to help plan,

monitor, assess, review and evaluate their services with a capacity for data collection, analysis and reporting to meet their accountabilities to their people, funders and others, as they deem necessary.

Policy Development

Rationale – Historic, colonial child welfare policy has clearly not met the needs of First Nation children, families and communities. The foundational premise of the reformation of First Nations child welfare is a change in policy that recognizes the inherent right of First Nations to care for their children and families and places the responsibility of creating, drafting, communicating and operationalizing Nation-specific child and family services policy on each First Nation. To align a FNCFS agency's policy with the law and operational needs, it is reasonable to suggest that FNCFS agencies have a dedicated policy capacity to effectively support the policy reformation agenda.

Information Technology

Rationale – We are living in an ever-increasing digital world requiring ongoing adaptation to changing technology. While it can be argued that this technology can be both enabling and constraining, there is little debate regarding the pervasiveness of emerging technology and the need for service delivery agencies to have capacity. For remote communities, up-to-date technology is critical; it enables operational efficiency and mitigates some aspects of remoteness and limited access to services.

Administrative Support

Rationale – Administrative professionals provide a division of labor between the specialized functions and the administrative tasks that support those functions. Having enough skilled administrative professionals to assist specialized functions can create efficiencies when there is effective grouping and assignment of administrative tasks. This division of labor allows staff to focus on the tasks that best suit their knowledge, skills and abilities.

Executive Leadership & Management

1. Chief Executive Officer or Executive Director
2. Executive Administrative Support

Executive Director

Rationale – All organizations require administrative leadership and management. Given the proposed policy governance board structure, it is important to have a position that reports to the Board and translates and manages the policy direction into operational activity. This position is critical in developing, leading, managing and supporting the policy direction as established by FNCFS laws when enacted and through the Board, and operationalizing them into relevant services for Nation members.

Executive Support

Rationale – As with previous comments made regarding the division of labor for administrative vs. specialized tasks, having a skilled administrative professional to support executive leadership is value added and efficient when tasks are categorized and assigned effectively. When implemented correctly, executives can focus on the core (strategic and operational) work of their positions vs. the important but more transactional work of administrative professionals.

Operations

1. Cultural Coordinators
2. Early Childhood Development
3. Prevention, Early Intervention, and Well-being
4. Youth Support
5. Family Preservation and Support
6. Child, Youth and Family Safety

Cultural Coordinator

Rationale – As demonstrated by the sample of FNCFS providers in this review, at the core of FNCFS organizations are inherent rights and cultural continuity. The historical damaging experience of First Nations caused by colonial policy and associated child welfare systems has resulted in many losses for First Nations that include cultural identity, language and traditions. To address this, FNCFS providers require dedicated resources that are focused on building and supporting culture and cultural continuity, repairing the damage caused by the colonial systems and assisting the transition to new First Nations driven systems, with reconciliation both internally between the community and Child and Family Services, as well as externally between

Indigenous and non-Indigenous people. Cultural Coordinator positions are a principal strength in delineating between colonial child welfare and the contemporary First Nations-led services.

Minimum Staffing

Rationale – Regardless of the population of any First Nation, to create an effective FNCFS agency, there is a minimum staffing that is needed to operate. Variables like remoteness, operating hours, mandate and programs delivered impact the minimum number.

Having a minimum staff allows for logical and effective resource assignment based on needs. It would support a rotational assignment of staff to after-hours and on-call services to meet the 24/7 requirement of a FNCFS agency. Depending on community needs, it allows for reasonable balancing of emergency response and ongoing case management, as well as reasonable coverage for vacancies due to illness, vacations and training.

This minimum baseline is also contingent on having the other previously listed specialized and support functions available to assist.

Key Physical Infrastructure

- Operational Office Buildings
- Cultural/Community Buildings
- Vehicles
- Information Technology (software, hardware, and support) – Program, Finance, Human Resources, Communications, Quality Assurance
- Communications

Appendix-2: The Amended Draft Agreement

CHRT Decision on Compensation and Reform

- The First Nations Child and Family Caring Society and the Assembly of First Nations filed a human rights complaint at the Canadian Human Rights Commission in 2007 alleging that the Government of Canada is providing less child welfare funding to First Nations children and failing to fully implement Jordan's Principle.
- In January 2016, The Canadian Human Rights Tribunal through its decision CHRT-2 ordered the federal government to cease its discriminatory conduct and reform its First Nations Child and Family Services Program, concluding it was tearing families apart and shattering lives through systemically racist funding practices. The Tribunal also found that the federal government's narrow interpretation and implementation of Jordan's Principle was creating service gaps, delays or denials, and overall adverse impacts on First Nations children and families on-reserve.
- On January 4, 2022, the Government of Canada announced that 2 Agreements-in-Principle had been reached:
    - on a global resolution related to compensation for those harmed by discriminatory underfunding of First Nations Child and Family Services.
    - to achieve long-term reform of the First Nations Child and Family Services Program and Jordan's Principle, to ensure that no child faces discrimination again.
- After the first compensation settlement amount was disapproved by CHRT, a revised compensation settlement worth $23.376 billion was announced in 2023 that included all children victims of the underfunded First Nations child-welfare system.
- The CHRT confirmed on July 26, 2023, that the compensation agreement satisfied all 2019 compensation orders.
- The Federal Court of Canada approved the agreement on October 24, 2023.
- In July 2024 Canada announced a draft Final Settlement Agreement (FSA) negotiated with AFN, Chiefs of Ontario (COO) and Nishnawbe Aski Nation (NAN) for the reform of the FNCFS program. It was presented as a $47.8 billion deal over 10 years.
- Closer scrutiny revealed serious shortfalls, including insecure funding commitments and governance that lacked regional participation, transparency and First Nations decision

making. In October 2024, First Nations voted overwhelmingly to reject the FSA and reset negotiations to allow regional representation.

- On February 10, 2025, Canada, along with COO and NAN released a draft FSA on FNCFS long-term reform that is only for Ontario First Nations.
- On February 26, 2025 –COO and NAN ratified a $8.5 billion Ontario Final Agreement on the Long-Term Reform of the FNCFS Program.

Long Term Reform Funding

The following general terms were proposed for funding under the draft agreement for long-term reform by Canada, which was rejected by the First Nations in late 2024.

Baseline. Starting April 1, 2025, FNCFS agencies will receive operations & maintenance funding as a fixed baseline amount, calculated based on 2022-2023 actual expenditures. This replaces the reimbursement of actual costs for operations and maintenance expenditures, such as intake, investigations, legal fees, building repairs and child service purchases. Baseline funding is subject to adjustments for inflation and population growth based on the Indian Registration System (IRS) population count. For non-agency First Nations, the baseline is calculated based on the amount of maintenance funding ISC provides to the jurisdiction (provincial or territorial) providing protection services less any administrative expenses related to the program for the jurisdiction.

Prevention. Funding at $2,500 ($2603.55 for 2024-25) per registered First Nation on-reserve for culturally relevant, community-based programs and services that address the structural drivers that place children, youth and families at risk. Prevention funding was implemented as part of immediate measures on long-term reform, which began on April 1, 2022. First Nations not served by a FNCFS agency will receive all the prevention funding attributable to the First Nation based on the per capita rate. First Nations served by a FNCFS agency have the option to direct their funding to a service provider. Where a FNCFS agency is affiliated with one or more First Nations, the funding may be divided between the First Nation and the agency based on a proportionate to population formula. At a minimum, each First Nation with or without an affiliated agency will receive $75,000, even if their calculated allocation would fall below this amount. The total prevention funding provided to a First Nation and its agency may not exceed the amount based on the per capita rate for the First Nation's population.

Post-Majority Support Services. Post majority support services would be provided?? for registered or ordinarily resident on-reserve First Nations young adults aging out of care and formerly in care, up to their 26th birthday as they transition to adulthood and independence. Funding would be based on actuals as part of the Immediate Measures (2022 CHRT8) and would transition to a formula-based approach with a new funding methodology for the FNCFS Program.

Poverty. A top-up funding for household support to address challenges associated with poverty, such as basic needs that could result in children coming into care is available to First Nations. The top-up will be a proportionate to the population of the First Nation that is below LIM-AT and the total funding available from ISC ($25.5 million for 2024-25). This funding is provided to the First Nation.

Capital Asset Funding. A top-up percentage of up to 2% of the total value of FNCFS agency's capital assets to support maintenance (e.g. buildings and vehicles) is available to First Nations. A capital asset replacement fund for major capital projects, such as new purchases, builds or extensive renovations, would be determined by Phase 3.

Insurance Premium. First Nation and FNCFS service providers will receive funding for eligible insurance costs.

Adjustments

Inflation. A percentage increase each year to account for the forecasted inflation rate using the Consumer Price Index.

Population. Funds to account for First Nations population growth as a top-up to the baseline budget. The population of the First Nation is to be based on the population on-reserve, on Crown land or in Yukon drawn from the IRS as of September 30th of the previous year. For FNCFS agencies the population is the sum of populations of the First Nation to which it is affiliated.

Geography/Remoteness. A funding top-up to address the increased costs of delivering services in remote First Nations by utilizing the Remoteness Index Score. A remoteness adjustment will apply to those First Nation whose remoteness score is 0.40 or greater based on 2021 index of remoteness.

Top-Up Funding

To be calculated on baseline funding adjusted for population and inflation.

Information Technology (IT). A 6% top-up of the baseline budget for FNCFS agencies information technology needs for the implementation of the reforms.

Results. A 5% top-up on the baseline budget to support the implementation of the performance measurement framework or other results-based indicators.

Emergency Funds. A 2% top-up to the baseline budget for emergency situations that create additional demands on FNCFS agencies such as disasters and unanticipated circumstances. This funding is to be shared equally between the First Nation and with the agency, if served by an agency.

Appendix-3: Financial Projection Model Assumptions and Cost Drivers

Human Resource Needs

The FPM estimates staffing and budget needs based on the premise that a First Nation that decides to assume jurisdiction for CFS will create an organization, business model and systems that support the base functions of any successful business, but also include functions and infrastructure that support their unique First Nation's vision. For example, it will have a Board representing its community, staffing to perform a minimal level of corporate and program functions and systems and physical facilities to support its operations, with particular emphasis on functions, roles or infrastructure that are First Nations specific, like Elder and ceremony supports.

The FPM estimates the FTEs and related costs in salaries and benefits for the minimum staffing required to operate a FNCFS agency providing prevention and protection services with self-jurisdiction. The human resource needs have been grouped into three categories as described below.

The Executive Office consists of:

- Executive Director overseeing all operations and program delivery and responsible for strategic leadership.
- Office Manager / Reception handling general office administration and reception duties.
- Executive Support to provide administrative support to the Executive Director and the Board.

The FPM calculates the FTE needs for each based on assumptions driven by the overall size of the FNCFS organization. The combined size of the Executive office is capped at 4.5 FTEs for large FNCFS.

Corporate Services consists of staff who will manage, support and execute the corporate services functions of HR, Finance, IT, Data, Policy, Communications and Facility Management.

- The manager to staff ratio of 1:6 has been used to determine the number of manager positions in the corporate services function.

- A ratio of 1:8 has been applied to determine the number of administrative support staff.
- The staffing needs for HR, Finance, IT and Maintenance have been calculated by applying industry standards for these functions, along with a minimum base staffing required when the population or total employee count is under a certain threshold.
    - HR generalist positions are calculated based on 1 FTE per 50 employees in the FNCFS agency with a minimum of 0.5 FTE. Accounting and Finance staffing are based on 1 FTE per $3 million in budget but no more than 5 FTEs.
- IT, Data Management and Social Media staffing is minimum of 0.5 FTE for less than 20 total employees, 2 FTEs for less than 100 employees and an additional 1 FTE for every 100 employees in the FNCFS.
- Facility Maintenance and Operations staffing is based on 1 FTE per 1000 population, with a minimum of 0.5 for under 500 people.

Program Operations consist of managers and supervisors, as well as frontline workers who work directly with the community, families and children.

- A fractional Director of Program Operations position is allowed for agencies that have fewer than 8 frontline employees, and an FTE if there are more than 8 employees in frontline positions.
- A ratio of 1:8 has been used for determining direct supervision to frontline social workers, and a ratio of 1:8 has been applied to calculate the number of administrative support staff.
- Cultural Coordinator and Community/Clan relations staffing is based on 1 FTE per 2000 total population, with a minimum of 0.25 FTE.
- Family Preservation Generalists who provide prevention services is calculated on the basis of the proportion of population to be targeted through outreach.
- Family Preservation Specialists who provide protection services are calculated based on a caseload of 8 children per caseworker, with a minimum of 0.5 FTE for any FNCFS.
- The caseload and supervision ratios are based on industry standards, but First Nations may have different requirements depending on factors like community needs, uniqueness of their culturally relevant delivery model, case complexity, availability of resources and travel distances.

Salaries & Benefits

Total expenditures on salaries were estimated based on market averages for similar roles listed on credible internet sources, and benefits were calculated at 30% of the annual salary, consistent with industry standards. A contingency budget has been estimated for the frontline roles at 20% of salaries and benefits to fund back-fill for vacancies, unplanned absence and after-hours work, assuming that factors such as location and availability of temporary staff do not create a barrier for the FNCFS to utilize the contingency.

Direct Program Costs

Direct program costs relate to expenditures incurred in the direct delivery of the prevention and protection services to children, families and the community. They do not include salaries and benefits for program delivery staff, which have been estimated in the salaries and benefits for program operations.

- Direct Program Costs for Contracted Services include the cost for contracted professionals. This amount was calculated by multiplying the population of the First Nation by the per population cost for this service in two of the sample FNCFS. This line includes contracts for:
    - Elders, trainers, teachers, consultants, mental health practitioners, etc., to deliver prevention program-related services that directly benefit children and families as described in the MOM.
- Direct Program Costs for Prevention include direct expenditures related to children and families as part of the prevention initiatives. This amount was calculated by multiplying the population of the First Nation by the per population cost for this service in two of the sample FNCFS providers:
    - direct financial assistance, groceries, clothing, transportation and entertainment supplies, and any other supports based on needs as described in the MOM.
- Direct Program Costs for Protection include direct expenditures related to child protection activities, foster care placements, kinship care and emergency housing. This cost was calculated by multiplying the number of children in care of the FNCFS agency with the maintenance cost per child calculated for a sample FNCFS agency indexed to 2026 dollars. The maintenance cost per child in 2026 is estimated at $52,907, as per the

terms of the Draft Agreement. The baseline maintenance cost per child excludes operating costs, such as staff salary and administration.

Indirect Costs

Indirect costs include the expenditures related to corporate services and other activities that support the social programs but are not direct expenditures to children and families, including:

- Board Honoraria and Expenses include payments and reimbursements for board members' time and expenses related to governance activities. Board members are to be compensated for expenses and provided with an Honoraria based on number of board meetings. The number of board members, typically between three and six, with First Nation who have an on-reserve population of less than 250 would have a three-member Board, and those with an on-reserve population of over 500 would have a six-member Board.
- Volunteer Honoraria include payments or stipends for volunteers like youth, adults and Elders who give their time to support the First Nation's programs and community initiatives. The amount is based on an estimate of 20 hours per year per volunteer and an hourly cost per volunteer.
- Legal, Accounting and Professional Fees include costs for legal fees, financial audits and other professional services. Legal costs were estimated at minimum $10,000 for all First Nations, $30,000 for First Nations with on-reserve population less than 500, $75,000 for on-reserve population less than 1000 and $150,000 for larger First Nations.
- Insurance for employer and employee liability coverage was estimated at $500 per staff.
- Meetings & Gatherings include expenses for organizing community meetings, gatherings and associated costs, and were estimated at $2,000 for every 50 participants.
- Office and Administrative costs, including general administrative costs, such as supplies, office equipment, and communications were estimated at $1000 per employee per year.
- IT, Data Management and Social Media costs include costs related to maintaining IT and phone systems, data storage, software and social media. These were estimated at an average of $3,500 per staff based on industry estimate for medium sized non-profit.
- Facility Maintenance Costs include costs for maintaining physical spaces and transportation, repairs and upkeep. These were estimated at 4% of total budget based on industry estimates.

- Travel and other expenses are costs for staff travel and related expenses and were estimated at $500 per frontline staff per month, to account for geographically dispersed populations and child placements.

ISC Funding Based on the Amended Draft Agreement

To determine the total ISC funding available for family preservation based on the Draft Agreement, we calculated the allowable funding for each line item as below.

- The baseline amount was calculated using the estimated cost of $52,907 per child for 2026, multiplied by the estimated number of children in-care.
    - We note that this amount, which is based on our sample data, is lower than ISC's published data of $56,094 on average per child maintenance cost for 2019-20 for all First Nations ($66,242 in 2026 dollars). The Draft Agreement proposes that baseline compensation will be calculated on specific First Nations per child maintenance costs, or provincial/territorial costs of maintenance for children from the First Nation.
- Prevention funding was based on the per capita amount of $2,705 per on-reserve population in 2026 dollars.
- The Draft Agreement requires the Household Support funding to be calculated using the LIM-AT criteria. We found that the household support funding calculated using the LIM-AT criteria was approximately 1%-2.5% of baseline funding for the five sample First Nations. As a simplification of a more complex LIM-AT based calculation, the FPM calculates the household support as percentage of baseline by multiplying the baseline with a random percent between 1%-2.5%.
- Funding for Capital Asset Maintenance and Insurance were treated as flow through and funded at the amounts of the estimated expenditures.
- Top-up funding for IT, Results and Emergency were calculated as percentages of baseline as stipulated in the Draft Agreement.
- A remoteness adjustment amount was calculated using the RQAF for the agency applied to the sum of top-up funding for IT, results, emergency and household support.

~X~

Analysis of Operating Budget and Funding based on On-reserve Population

(Addendum to "Study of Budget Needs and Funding in the Amended Draft Agreement for Long Term Reform of FNCFS Program" Final Report April 2025)

Introduction

In July 2024, the First Nation Child and Family Caring Society (the Caring Society) contracted EngageFirst Management Consultants, a leading consultancy with a background in First Nation's child and family services (FNCFS), to analyze the funding needs of small First Nations and the adequacy of the funding proposed in the Amended Draft Agreement for the Long-term Reform of FNCFS Program (the Draft Agreement). EngageFirst reported the findings of this study in April 2025. The study was focused on reflecting the needs and aspirations of small First Nations (with total on- and off-reserve population below 1054) delivering or wanting to deliver CFS with their own jurisdiction. Premised on that vision, the analysis reflected the operations and budget needs of FNCFS agencies providing services to families, youth and children living on- and off-reserve.

This addendum, presents the results of the financial analysis based on the premise that FNCFS agencies provide their services only to families, youth and children living on-reserve.

Findings of Analysis

The financial model developed in the original study, was used to generate scenarios of FNCFS agency operations based on three driving factors, i.e., on-reserve population, children in care, and remoteness adjustment factor. In order to perform the calculations, the assumptions and cost drivers for this analysis were reviewed and adjusted to reflect service delivery to on-reserve population only.

The financial model is programmed to create 620 scenarios by sampling the on-reserve populations from the list of First Nations and generating approximate number of children in-care and approximate RQAF. It is our view that the estimates fairly represent what a FNCFS provider operating with self-jurisdiction would experience. The resulting operating budget needs and ISC funding for delivering prevention and protection services with self-jurisdiction from the simulation

were analyzed statistically. The table below shows some of the key statistics from the simulation and explanation follows.

Table 1 Summary Statistics from Simulation of Estimated Funding from Draft Agreement and Budgetary Need

Stat	On Res. Pop.	Total Popn.	RAQF	Children	Estimate of FTE	Budget Need ($)	ISC Funding ($)	Funding as % of Budget
Min	10	36	0.00	-	6.1	791,670	107,502	13%
Ave	884	1,711	0.61	24	15.9	4,336,722	4,038,758	76%
Max	10,320	13,501	1.36	294	107.4	40,993,791	47,098,821	119%

Note: the values in each column reflect the range from min to max generated in the simulation for that variable. Values from left to right in a row are independent of each other. For example, a First Nation with an on-reserve population of 12 and total population of 36 may not exist, but the numbers represent the smallest on-reserve and the smallest total population generated in the simulation.

Estimate of Staffing

- Table 1 shows that the minimum staffing required to operate a minimal FNCFS agency is about 6 full-time equivalent (FTE) positions, including an executive office, corporate services, and program delivery serving on-reserve population. This would meet the needs of any First Nation with on-reserve population less than 175.

- The average staffing requirement among all First Nations for delivering prevention and protection with self-jurisdiction to on-reserve population is about 16 FTE.

- The estimated staffing need for prevention and protection services may be about 52-105 FTE for some of the large First Nations, with on-reserve populations in 4,000 to 10,000 range.

- Figure 1 shows the distribution of FNCFS agencies based on their estimated staffing need.

- About 85% of the FNCFS agencies will require less than 25 FTEs, 12% require between 26 to 50 FTEs and the remaining 3% will require more than 50 FTEs.

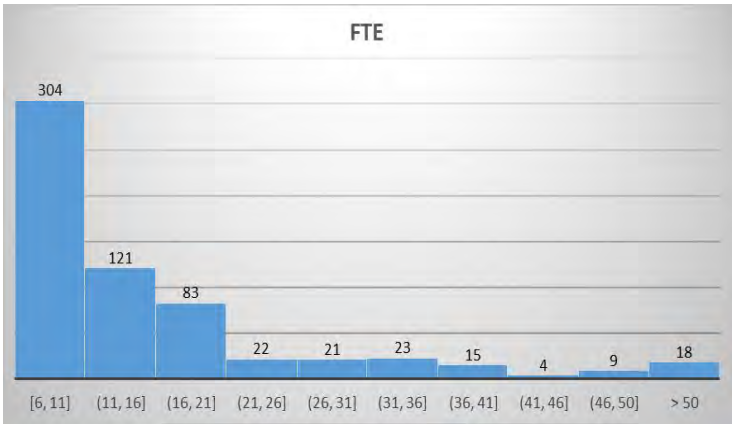

Figure 1 Number of FNCFS grouped by count of FTE Required

ISC Funding as % of Budgetary Need

- Table 1 indicates that the budgetary need of a FNCFS agency for operating costs varies between $791k to $41 million, depending on on-reserve population, number of children in care and remoteness. The average annual operating budget among all FNCFS agencies is about $4.3 million.

- The ISC funding available through the Draft Agreement ranges between $107k to $47 million, with the average funding among all FNCFS agencies of about $4 million per year.

- Table 1 also shows that, on average, the Draft Agreement is funding about 76% of the FNCFS agency's annual budget need for operations.

- Figure 2 shows the distribution of FNCFS agencies grouped by the percentage of their annual operating budget funded by the Draft Agreement.

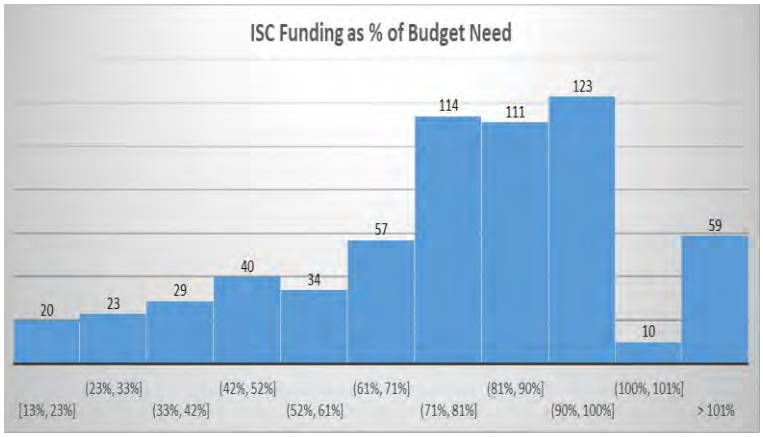

Figure 2 Number of FNCFS grouped by ISC Funding as % of Operating Budget

- Figure 2 indicates that for about 18% of the FNCFS agencies, the ISC funding based on the Draft Agreement may be less than 50% of their budget need.

- For about 33% of the FNCFS agencies, the ISC funding through the Draft Agreement may be 51-80% of their budget need, and for the remaining about 49% of the FNCFS agencies the funding may be more than 80% of their budget. (Note: the overfunding shown in the chart may be due to the difference in the scaling of costs and funding for large FNCFS.)

- Accounting for the uncertainties in cost estimation and inherent error margins in the simulation, we may expect that about 49% of the FNCFS agencies who receive more than 80% of their budgetary need may be sufficiently supported to achieve their vision through the Draft Agreement. The FNCFS agencies that are funded between 51%-80% may be able to manage but would need to adjust their services/programming downwards to balance with

the available funding. The remaining 18% of the FNCFS agencies receiving less than half their expected budget would struggle to deliver their mandate with self-jurisdiction.

- It appears from the analysis that on a net system-wide basis the total ISC funding would balance the combined operating budget needs for prevention and protection services of all the FNCFS agencies.

- Correlation analysis of the data from the simulation also confirms that the percentage of budget funded by the Draft Agreement is highly correlated (72%) to the percentage of on-reserve population. Therefore, First Nations with higher on-reserve populations will receive more funding compared to another with the same total population, but with a lower proportion living on-reserve.

  Special Scenarios

  To better understand the funding needs of FNCFS agencies with different demographics and to address some of the key questions to be answered by this study, we analyzed the budget needs and funding from the Draft Agreement using some special scenarios, as described below.

  - What is the operational budget need and funding available for the FNCFS agency serving the smallest on-reserve population?
    - We analyzed the operational budget need and funding available for a very small FNCFS agency as reflected by the hypothetical small First Nation and the minimum operating model for an FNCFS agency described in Appendix-1 of the final report. This FNCFS agency serves an on-reserve population of 42 members (29% of total population), has an RQAF of 0.75 and has 1 child in care. Based on the simulation, the estimated budget needed for this FNCFS agency is $971k, with 6.7 FTEs in the organization. It would receive funding of $219k based on the Draft Agreement which is about 23% of its need. An FNCFS agency of this size and composition will struggle to deliver the vision of self-jurisdiction enshrined in the Act, under this Draft Agreement.

  - What population size can be served by the smallest FNCFS agency?
    - The simulation model indicates the smallest FNCFS agency needs a staffing level of 6-7 FTEs, with about half in CFS program delivery and the other half

in executive office and corporate services. An FNCFS agency with this staff size may be able to support on-reserve population of up to 175, if it were sustainably funded. However, the simulation indicates that FNCFS agencies serving on-reserve populations up to 175 would, at best, receive 60% of their estimated budget need of $1.3 million per year through the Draft Agreement.

- What is the operational budget need and funding available from the Draft Agreement for an FNCFS agency serving the median on-reserve population of all First Nations?
    - Based on the Indian Registry Services population data for 2024, the median on-reserve population for all First Nations is about 454 members. Our simulation has a few scenarios with on-reserve population of 454 members, RQAF between 0.7-1.0 and between 11-14 children in care. The estimated operating budget need of these FNCFS agencies is between $2.6-$2.8 million per year, and based on the Draft Agreement the ISC funding would be between $2.0-2.3 million per year. These FNCFS agencies would be funded for about 80-90% of their annual operating budget, which may be close to sustainable.

- What is the budgetary need and funding available from the Draft Agreement for an FNCFS agency serving the median population among small First Nations (on reserve population below 454 members)?
    - Half of the First Nations have on-reserve population less than 454 members. The median on-reserve population for the small First Nations is 194. The model generated a few scenarios that are close to the median population of small First Nations. This on-reserve population size is very close to the population that the minimum operating model can serve. The required staffing is estimated at 7.2 FTEs and the operating budget need for the FNCFS agency is about $1.3-$1.5 million per year. However, the funding available from the Draft Agreement would be about $835-975k per year or 62-67% of required budget.

- What is the on-reserve population size at which the proposed funding in the Draft Agreement is sufficient for an FNCFS agency to sustainably operate with its own mandate and vision of self-jurisdiction?

- We analyzed the on-reserve population size for which the funding available from the Draft Agreement meets at least 90% of the operating budget need of the FNCFS agency. The assumption is that a FNCFS agency can manage its mandate with that level of funding. Data from the simulation indicates that the smallest FNCFS agency, to have at least 90% of its budgetary need funded, has an on-reserve population of 820 members. The budget need for this size of operation is $4 million per year. FNCFS with larger on-reserve populations would also be sustainably funded. This finding indicates that a target amalgamated on-reserve population above 820 may be a strategy for sustainability under the Draft Agreement. There are about 198 First Nations (32% of all First Nations) with on-reserve population more than 820 who may be sustainably funded through the draft agreement.

Expert Advisory Committee for the Reform of Indigenous Services Canada

Summary Report of Activities, Observations and Advice

Spring 2022 to Spring 2024

A. Introduction

The Expert Advisory Committee (EAC) was jointly envisioned by the parties to 2016 CHRT 2 and affirmed by a consent order and decision by the Tribunal (2022 CHRT 8) issued in March 2022. The first meeting of the EAC and the parties occurred in late April 2022. The core members include Alanis Obomsawin, Amber DVA Johnson, Carol Hopkins, Kevin Page, Larry Bremner, Naiomi Metallic, Raven Sinclair and Rod McCormick. In January 2024, the EAC welcomed one new youth member, Cedar Iahtail.

The EAC believes that it is important to create reports that not only record our journey but also provide our observations and advice to Canada and the other parties. This report will cover the last two years, but we will endeavour to provide such reports more regularly.

B. Mandate

The wording of the consent order creating the EAC speaks to our role in helping the parties "develop and oversee the implementation of an evidence-informed work plan to prevent the recurrence of discrimination." In the Agreement-in-Principle on Long-Term Reform the parties specifically identified that the EAC would provide advice and guidance on the design and implementation of an independent third-party evaluation to support the reform of ISC.

The decision by the CHRT approving the consent order (2022 CHRT 8) clearly shows that the parties had a variety of perspectives on how the EAC could assist the parties in preventing the recurrence of discrimination (e.g., what would be part of the "work plan") and the Tribunal appears to endorse all of these as reasonable potential functions of the EAC (see paras 87 to 104). Supporting a third-party evaluation was one function identified by the parties (Canada in particular), but it certainly was not the only one.

Based on the CHRT decision, we see our function ultimately as providing advice to the parties on the issues they bring to us about preventing the recurrence of discrimination found by CHRT in 2016 CHRT 2 and subsequent decisions and orders.

C. Summary of Activities

To date, the EAC has participated in twelve formal meetings with ISC and the co-parties including representatives from the First Nations Child & Family Caring Society (Caring Society), Assembly of First Nations (AFN), and interested parties including Chiefs of Ontario (COO) and Nishnawbe Aski Nation (NAN). The main parties with which the EAC has interacted over the last two years have been Canada and the Caring Society.

Early on (May 2022), a subcommittee of EAC members was formed to review and provide commentary on proposed Terms of Reference ("TOR"). Comments were provided, though there were delays in finalizing the TOR and it has yet to be finalized. In the summer of 2023, EAC members suggested changes to the TOR (discussed further below), which are now the subject of some disagreement between some of the parties and the EAC.

For roughly the first 16 months since its inception (until the summer of 2023), the work of the EAC was largely focused on working with consultants from the Universities of Ottawa and Victoria, hired by ISC, to author a report intended as a literature review and context-setting piece to eventually assist and inform the work of the Third-Party evaluators ('the Monograph'). A couple of EAC working groups were struck to assist the consultants in their work.

At various formal EAC meetings with the parties, the EAC also received presentations from ISC staff about different cultural competency and trainings offered to ISC staff. At times, in relation to these presentations, EAC members expressed confusion about the different courses and how the trainings offered fit cohesively together. Concerns were also raised that the content did not sufficiently address the discrimination found by the CHRT or focus on fixing the 'old mindset.' Additional information was sometimes requested by members, but not always forthcoming. The EAC has also suggested the creation of a sub-committee of the EAC to examine and provide advice on ISC's training more systematically.

At times, representatives from the Caring Society raised issues of continuing discrimination in relation to Jordan's Principles and other essential services programming linked to child and family services that needed urgent attention. In response, EAC members would request more information from the parties to better understand these issues in order to provide better informed advice.

In June 2023, on the EAC's prompting, a meeting was held with the EAC and Senior Managers within ISC. The conversation focused on lessons learned from the CHRT ruling, as well as how the EAC could support ISC in preventing the discrimination. It was a positive conversation, though there has been little in the way of follow-up or ongoing discussion with those Senior Managers since.

By the summer of 2023, EAC members became increasingly frustrated with how much time the Monograph was taking, seemingly delaying advancement on the Third-party Evaluation process. Some EAC members also expressed dissatisfaction with the draft Monograph's contents. Members felt there were instances where the consultants had failed to fully consider guidance and advice provided by EAC members.

A further source of frustration was a feeling by many members of being inundated with information (often PowerPoint presentations) at formal meetings with little to no time in advance to digest and consider what information imparted. Further, at times, EAC feedback was being sought by ISC with the expectation that EAC members provide immediate reactions to presentations, without time for the EAC members to discuss and deliberate their collective views on matters. ISC's use of an external facilitator to run meetings was also felt to restrict more fulsome discussion by EAC members.

These feelings of frustration culminated in EAC members meeting together for the first time without the other parties to air their frustration and concerns that we were not being utilized to our full potential. This was when EAC members agreed that it was important (and necessary) for the EAC to caucus both in advance of (and following) formal EAC meetings to discuss our

collective observations and advice on the information presented to us. Since this time, over the last year, the EAC has caucused fifteen times. Often, we have extended invitations to other complainant parties to join us. At various times, representatives from the Caring Society, AFN, and NAN attended our caucus meetings. The Caring Society, in particular, has encouraged us to not see our role as limited only to advising on the Third-Party Evaluation and that our expertise would be welcome on several ongoing issues at ISC related to Jordan's Principles, child and family and related services.

It was at the first EAC caucus meeting in the summer of 2023 that we decided to propose amendments to our Term of Reference (that had still not been fully finalized) to allow for the EAC to function and provide advice to the parties to its full potential. None of the parties objected to this proposal. Generally, our amendments to the TOR sought to do the following:

1. Highlight how 2022 CHRT 8 supports the parties receiving advice from the EAC in a number of areas relating to preventing the recurrence of discrimination;

2. Articulate how the EAC members should work together as a caucus before and after meetings with the parties to reach consensus on their observations, advice and communications with the parties;

3. Suggest mechanisms allowing the EAC to ask for and receive information from the parties to help us obtain a full understanding of programming and developments related to preventing the recurrence of discrimination (this included what we called a 'work plan' setting out a priority list of presentations and subjects that could be focused on at EAC/party meetings); and

4. Remove the requirement of EAC members to sign a confidentiality agreement. EAC members, as experts in their field, already bound by ethical guidelines within their professions, were comfortable with maintaining confidentiality vis-a-vis the media and third parties but felt that signing a confidentiality agreement (the general use of which has come under significant legal scrutiny of late) was unnecessary.

In late summer 2023, we presented our proposed amendments to the parties. At the time, Canada acknowledged there likely were some gaps in the original draft of the TOR relating to how the EAC operates, communicates, and receives information as a group. Edits by Canada to the TOR in the fall made some small changes to the wording but did not challenge the substance of the proposed changes. The Caring Society was supportive of the changes. We did not initially receive feedback from the AFN but were later advised that these changes had been supported through their internal processes.

In the fall, drawing on the amended TOR, the EAC caucus sought to exert greater control over formal EAC meetings, asking for the sharing of materials sooner and for certain issues to be on the agenda, including presentations that would allow the EAC to better understand key issues relating to preventing the discrimination that had been found in the CHRT decisions. In this regard, we had presentations on Jordan's Principle from the Caring Society and were supposed to

hear from ISC staff as well on this (but there was a last-minute cancellation and need to reschedule).

In addition, with the Monograph finished, work towards the hiring of the Third-Party Evaluators began in earnest. A subcommittee of the EAC was formed to advise ISC on the request for proposals and skills matrix for hiring the Third-Party Evaluators.

In mid and late fall, two developments occurred that halted the momentum that had finally started to build. First, Senior Associate Deputy Minister, Valerie Gideon, accepted a new position at Crown-Indigenous Relations. Danielle White came to fill her role as Canada's Co-Chair at formal EAC meetings. Second, in December, the Caring Society brought a non-compliance motion against Canada to the CHRT alleging continuing discrimination in relation to Jordan's Principle. At this time, Danielle White advised that Canada could no longer engage on anything related to Jordan's Principle with the EAC due to the litigation.

Since these two developments, the formal EAC meeting in February 2024, was somewhat strained. ISC continued to maintain it could not speak to anything about Jordan's Principle, and further advised that it sought several changes to the TOR we had proposed back in September, primarily limiting our role to advising on the Third-Party Evaluation and cultural competency training.

A more productive formal EAC meeting occurred in April 2024, where the EAC explained our position on the TOR and our view of how our expertise can be drawn to advise the parties more fulsomely on preventing discrimination. The new Senior Associate Deputy Minister, Michelle Kovacevic, attended this meeting and there was open and productive discussion.

However, shortly following this meeting, we received an email from legal counsel for the AFN, copied to several lawyers within the Department of Justice Canada, sending us a revised TOR that seeks to limit our role advising on the Third-Party Evaluation and cultural competency, as well as require members to sign a confidentiality agreement. An email from Danielle Smith followed this, advising that ISC would no longer compensate the EAC member caucus meetings unless these were approved by the parties in advance. The Caring Society subsequently sent an email disagreeing with the position of both ISC and the AFN, noting that their positions were taken without consultation with, or the consent of, the Caring Society.

D. Observations and Advice

(1) The focus of the EAC role should be on preventing the recurrence of discrimination

The EAC feels the current disagreement over its role and Terms of Reference must be worked out between the parties and, failing that, the parties seek guidance from the CHRT. However, based on our understanding of 2022 CHRT 8, we agree with the Caring Society that the expertise of the EAC advice need not be limited to advising on the Third-Party Evaluation or ISC cultural competency. Currently, the final report of the Third-Party Evaluators is anticipated for Winter 2027–nearly three years from now (past our contracted mandate). Our advice could be sought to

assist the parties in addressing issues of potential discrimination arising in the interim. Further, effective cultural competency alone cannot prevent the recurrence of the discrimination found by the CHRT; there are programming, service, oversight, and accountability issues in relation to ISC services to children and families that the EAC could be lending its expertise to. It must be recalled that the CHRT called the discrimination here "one of the worst possible cases" of racial discrimination and through many non-compliance orders has continued to find problems with Canada's implementation of the main decision (2016 CHRT 2).

The parties ought to be drawing on the expertise of the EAC to provide advice on:

(a) The design and implementation of an independent expert third party evaluation to identify and provide recommendations to redress discrimination identified by the Tribunal;
(b) Immediate, interim and long-term measures that can be taken for the reform of ISC to redress discrimination in ISC programming that impacts on child and family well-being; and
(c) "Cultural competency" policies, education and training, executive obligations to the department, staff performance measures and other reforms that the EAC views as necessary to prevent the recurrence of the discrimination.

(2) There ought to be more of a focus on long-term reform and service delivery

An ongoing frustration of the EAC over the past 2 years has been what we see as an inordinate focus by Canada on the Third-Party Evaluation, which has been significantly drawn out through the Monograph process and the time it is taking to get the RFP out. While important, the Third-Party Evaluation cannot be seen as a cure-all for preventing the recurrence of discrimination. The Caring Society is raising discrimination in Jordan's Principle and other areas happening now, and the advice to the EAC can be harnessed to assist in dealing with this. Said otherwise, the evaluation of the department remains important but in the context of the successful implementation of long-term reforms.

The EAC can offer advice and assistance on the implementation of ISC's Strategic Plan that includes four priorities:

1. Transferring control of services to Indigenous partners*
2. Championing a culturally appropriate and high-quality service approach.
3. Transforming our practices.
4. Nurturing an engaged, respectful and healthy workforce.

*The EAC has not been involved in the discussion or work towards transferring control of services to Indigenous partners. However, we fully support the transition and transfer of control and jurisdiction to Indigenous partners that is fully supported and funded.

(3) Shift from Cultural Competency to Cultural Humility

The success of ISC service delivery depends on appropriate training of executives and employees.

The EAC received numerous presentations focused on Cultural Competency training from ISC representatives. We have verbally made several recommendations that focus specifically on refraining from focusing employee training on the term "cultural competency" to be replaced with the term "cultural humility." It is significant that the term "cultural competency" is deeply embedded in ISC's mandates as well as much of its work on training. By suggesting this change, the EAC notes that this is not only a change in title or language but a shift in a fundamental philosophy in training including curriculum, content and practice.

The EAC found the use of "cultural competency" problematic as it suggests that the trainee will become "competent" in another culture.[1] As Lekas, Pahl and Lewis state in their work "Rethinking cultural competence: Shifting to cultural humility", the use of the term "cultural competence" predisposes that different cultures are "stagnant" and unchanging.[2] They further find that the use of "cultural competence" creates a "static and totalizing view of culture that connotes a set of immutable ideas embraced by all members of a social group" and thus "generates a social stereotype".[3] They also maintain that although "training in cultural competence primarily increases provider knowledge, attitudes and skills", this training does not reflect positively on those they are caring for and does not decrease disparities in care.[4]

Alternatively, the use of "cultural humility" has proven to be more effective for the recipients of care. Cultural humility "means admitting that one does not know" and "is willing to learn from patients about their experiences, while being aware of one's own embeddedness in culture (s)".[5] It is a process of "self-reflection to understand personal and systemic conditioned biases, and to develop and maintain respectful processes and relationships based on mutual trust. Cultural humility involves humbly acknowledging oneself as a lifelong learner when it comes to understanding another's experience. Cultural humility enables cultural safety".[6] Lekas, Pahl and Lewis affirm that "while competence suggests mastery, humility refers to an intrapersonal and interpersonal approach that cultivates person-centered care".[7] Furthermore, cultural humility

training "encourages providers to reflect on their own beliefs, values and biases—explicit and implicit—through introspection thus, revealing their own cultural impact on patients".[8]

(4) ISC should develop a critical incident reporting system for Jordan's Principle

The EAC has noted that the Indigenous Services have based their interactions with First Nations communities based on a crisis driven model rather than placing preventative measures. A lack of funding was discussed as a major cause for failures relating to suicide prevention as well as a lack of First Nations healing centres. It was pointed out that the department responded to crisis situations with short term solutions but has not invested appropriate funding for prevention.

The EAC has discussed among the Caucus and raised at formal EAC meetings when speaking of Jordan's Principle, the concept of creating a critical incident reporting system with monitoring indicators. In the realm of child welfare, there are standards that inform processes of monitoring that include definitions such as a "serious occurrence" intended to elevate further monitoring, investigation, reporting and processes for remedy. In relation to Jordan's Principle, acts of discrimination against First Nations children and their families are worthy of monitoring to understand the facilitators of discrimination by ISC staff (the service provider). We assume that the culprit is a lack of knowledge about First Nations culture, however, this is one potential aspect that cannot be remedied through "cultural competency/humility" training and education. Further, we ask if ISC is actively and systematically monitoring facilitators of discrimination so that these acts can be understood, and steps can be taken to create remedies? The EAC has received no evidence of such monitoring by or of the service provider. It should not take a non-compliance order, or a three-year evaluation to identify and then implement processes of change to address factors that facilitate discrimination when standards and definitions to guide service delivery with a process of monitoring can be developed now.

This would include, first, the EAC advising on the creation of a foundation for a service delivery model including a critical incident reporting system and a process for implementing it. Second, the EAC would continue to give advice and monitor the effectiveness of the service delivery model and critical incident reporting system after it is implemented.

The EAC suggests that a working group could be created to work on this with ISC executives and staff. This is a measure that could be taken now to prevent the recurrence of discrimination instead of waiting for the final evaluation to take place. Further, this measure could be implemented to aid the future evaluation team with their work. This could include the EAC monitoring the critical incident reporting mechanism with quarterly reports.

[8] Lekas, Pahl and Lewis, "Rethinking," 2.

(5) ISC should support the creation of an external Ombudsman to provide accountability and oversight

The EAC received a presentation on "Doing Better for Indigenous Children and Families: A Report on Jordan's Principle Accountability Mechanisms" by Naiomi Metallic (an EAC member), Hadley Friedland & Shelby Thomas. The report presents three interconnected accountability mechanisms (an Ombuds function, a Tribunal and legal supports for Indigenous children and families) safeguarding the needs of Indigenous children and families to prevent the recurrence of discrimination identified in 2016 CHRT 2 and subsequent decisions.

While such mechanisms would be external to ISC, and created by Parliament, the EAC advises that ISC could play a significant and persuasive role in calling for the creation of such bodies through legislation. ISC is a major service provider to children and families. In all the provinces and territories, there are ombuds and child advocates to oversee the provincial and territorial governments' delivery of similar services to non-First Nations children. This is a major gap in oversight and accountability for First Nations children and families, and ISC could play a leading role in calling for this change. This could be happening prior to the final report by the Third-Party Evaluators.

(6) Support and Endow Indigenous Youth Organizations

Another short-term measure ISC and Canada could take that would assist in preventing the recurrence of discrimination is investing more in Indigenous Youth Organizations.

The EAC recently welcomed youth member Cedar Iahtail to the group and finds her perspective to be extremely significant and valuable. Cedar belongs to an Indigenous youth community known as the Assembly of Seven Generations (A7G). The A7G are a small grassroots Indigenous youth group who incorporated in 2015 as a response to limited services and a need for advocacy for Indigenous youth. They are a volunteer-based group who do not receive core funding and do not have full-time staff.

With Cedar's support, the EAC invited Gabrielle Fayant from the A7G to present at the 12th EAC in-person meeting. Gabrielle presented "Considerations for ISC Reform for the Improvement of Social Determinants of Indigenous Youth" to the EAC, the co-parties and ISC representatives. Among other impressive activities, the A7G have developed their own methods to deal with limited services for Indigenous youth. This includes meetings every Friday (364 consecutive Fridays as of March 2024), Round Dances, Camps and Land-based activities and a retail enterprise. They have also created a number of valuable reports on the status of Indigenous youth with recommendations including the creation of an accountability mechanism.[9]

Following this presentation, the EAC members discussed how an endowment to Indigenous youth groups and organizations, including A7G, by the Federal government would encourage

[9] Gabrielle Fayant and Carrington Christmas, "Accountability in our Lifetime: A Call to Honour the Rights of Indigenous Youth & Children" (February 2021), retrieved from https://www.a7g.ca/uploads/9/9/9/1/99918202/accountability_in_our_lifetime.pdf.

their continuing work in the support and care of Indigenous youth including advocacy and traditional activities.

Drawing on the expertise of some of its members, the EAC would be pleased to work with the parties to create a plan for this endowment and access the appropriate contacts to help to bring this forward.

(7) Include A7G in the Third-Party Evaluation

After receiving the presentation from Gabrielle Fayant, the EAC recommends that the A7G who have created their own “Indigenous Youth Services Evaluation” reform measures including the “Seven Requirements for Ethical and Meaningful Engagement with Indigenous Youth” should be incorporated as evaluation advisors with the EAC and assist in advising the future evaluation team. They bring valuable insight and wisdom that can only enrich the advisory role provided by the EAC.

(8) *More work needed on “Honouring our Journey” Survey*

For over the last year, ISC has been working on qualitative and quantitative baseline survey to gather key information on cultural competency within ISC. The goal has been described to us as a survey that can honestly, respectfully, and directly gather information to move ISC forward to a culturally competent organization whose mandate is to provide high quality services to Indigenous peoples and support the transition of services to Indigenous Nations.
Several EAC members have participated in preliminary meetings to discuss the creation of the “Honouring our Journey" survey that is being prepared by ISC. Before this project was introduced, the EAC suggested several questions for ISC employees to consider, including, “What does safety mean for a First Nations child?” and “What would it mean to have emotional and spiritual well-being or to be physically healthy?” EAC members have stated that everything that is being completed in this survey must be tied to the welfare of First Nations children. The “Honouring our Survey" first draft was disseminated to the EAC in April 2024, and we will be working with the survey team to reorient the questions not only to the service to and care of First Nations children, families and communities but also to cover other topics such as substantive equality, discrimination and Jordan’s Principle.

(9) Feedback on ISC’s plans to develop and implement its own Human Resources Division

The EAC supports ISC developing and implementing its own Human Resources division to facilitate and implement its strategic plan.

The EAC met with Sylvain Souligny, ISC Director General of Human Resources as well as Vivian Cousineau, Special Advisor, Indigenous Recruitment, Human Resources Branch during our 12th EAC in-person meeting. Although the EAC was supportive of ISC’s decision to create their own Human Resources branch, the proposed organizational model was found to be problematic. The proposed management triangle and mentions of organizational design including pillars were challenging as they tend to fall into Western organizational models that have proven

ineffective in the past. It is true that pillars as an organization model have been used in Indigenous governance organizational design to great effect. However, an EAC member introduced the concept of the "four doors" as a more effective alternative to create a fundamental change in approach when designing and implementing the new HR branch of ISC to ensure that the department is culturally humble, responsive and oriented on providing exemplary service to First Nations children, families and communities. Using the traditional "four doors" of the Lunaape/Mohican Medicine Wheel, this organizational design presents a "foundational and timeless concept…for the next seven generations."[10]

Bremner and Bowman state that:

"The Eastern door—Be a Good Relative… represents being in good relations within ourselves and with each other. We come rested and ready to do the work and have co-created information from a place of rest and in relation with all things that affect the work we put forward: physical, mental, spiritual, and emotional. The Eastern Door represents community context and diverse ways of thinking and being, and it honors the many Indigenous pathways and experiences of the contributors. It reflects traditional, cultural, and spiritual ways of knowing as a process where we respectfully listen and seek to understand first, and then decide on best pathways together. This may be in the form of origin stories, traditional knowledge, oral history, language, culture, songs, and/or nonverbal examples (e.g., regalia, wampum belts, artwork)."

"Southern Door—Be of Good Mind…is the awakening, rooting, and centring of pre-contact and post-contact Indigenous and community-centred and -created knowledge and practices that are restorative, regenerative, and strength based. They protect the privacy and respect the sovereignty of Indigenous nations related to data, as well as cultural, intellectual, human, and non-human influences on scholarship. This may be in the form of oral agreements, treaty rights, Indigenous theories and frameworks or ethics, nation-to-nation agreements, pre-contact practices, and so on".

"Western Door—Do Good Work…supports the development of culturally specific responsive and regenerative strategies, studies, policies, processes, and work products that align with the need for healthy, reciprocal, respectful, and relevant Indigenous approaches to evaluation. This may be in the form of contemporary applications of traditional knowledge, such as culture and treaties from the Southern and Eastern Doors. It also may include the ways in which western theories, knowledge, or processes have been adapted as successful examples with First Nations, Indigenous peoples, and/or within program and policy contexts of practice that have impact on Indigenous communities. The Western Door also provides a place to share developmental and impactful innovative theories, models, policies, and other strategies being tested and/or utilized by culturally grounded Indigenous scholars, practitioners, and warriors."

"Northern Door—Be on a Good Journey…we use the wisdom of our Ancestors and Elders to be grounded in traditional knowledge as a way to celebrate traditional knowledge and/or to reflect and unpack the learnings we receive from challenges, restarts, and letting go of things not working. These are the Indigenous-evidence-informed and grounded pathways that will help the

[10] Larry Bremner and Nicky Bowman. "Roots and Relations: Celebrating Good Medicine in Indigenous Evaluation." *Canadian Journal of Program Evaluation* 38, 1 (2023): 1-3.

future generations to walk on sacred pathways for innovative and sustainable Indigenous evaluation that inspires and grounds the next seven generations. This may include traditional ways of sense making, analysis, differentiating what "wisdom" is (our Elders) versus simply the production of more knowledge (Western ways). It may also consider how to come full circle to address the other doors, so that the authors and readers make these important connections as part of something bigger than themselves."[11]

E. Conclusion

The EAC recognizes that while ISC and the parties have different advisory bodies (e.g., NAC, JPOC, etc.), we are new and unique in being created by a consent order and decision of the CHRT. There is no past precedent to rely on here, and we are all figuring out the role of the EAC and best ways to interact with the parties and provide meaningful advice to prevent the recurrence of the discrimination. By necessity, there will be some trial and error. We are a group of people deeply concerned about the well-being of First Nations children and families and we want to help. We want our relationship with Canada and the other parties to be fruitful. We do not want to give up on the promise of this expert advisory committee, nor do we want the parties to give up on us.

Expert Advisory Committee (EAC)
Alanis Obomsawin, Amber DVA Johnson, Carol Hopkins, Cedar Iahtail, Kevin Page, Naiomi Metallic, Larry Bremner, Raven Sinclair and Rod McCormick

December 15, 2025

To the Parties Engaged in the Long-Term Reform Process,

Drawing on our collective expertise and analysis, the Expert Advisory Committee (EAC) is pleased to provide the following recommendations for strengthening the Final Settlement Agreement (FSA). These recommendations are informed by our examination of the Ontario Final Agreement on Long-Term Reform, the Draft Final Settlement Agreement, the Affidavit of Dr. Dean Neu, and the *Doing Better for Indigenous Children and Families: Jordan's Principle Accountability Mechanisms Report*[1], along with our ongoing assessment of systemic barriers, structural drivers, and long-standing inequities impacting the First Nations Child and Family Services Program.

Our goal is to ensure that the long-term reform framework eliminates discriminatory structures, prevents recurrence, and establishes a sustainable system grounded in substantive equality, First Nations authority, and child rights–based decision-making. The recommendations below reflect recurrent issues identified in the materials and propose concrete, implementable solutions.

RECOMMENDATIONS

1. Replace Annual Parliamentary Appropriation Requirements with Guaranteed Multi-Year Statutory Funding

Reliance on annual parliamentary appropriations (e.g., clause 297) embeds instability into the very framework intended to secure long-term reform. As a structural agreement, the FSA must establish funding mechanisms that are insulated from political discretion and the historic patterns of underfunding that produced discrimination in the first place. Expert evidence consistently identifies appropriation-based models as incompatible with substantive equality and with the creation of a durable, rights-respecting system.

We therefore recommend that the FSA be amended to remove all provisions that make funding contingent on Parliamentary appropriation:

[1] Naiomi Metallic, Hadley Friedland, and Shelby Thomas. "Doing Better for Indigenous Children and Families: Jordan's Principle Accountability Mechanisms Report." (2022).

- Establishing statutory-style, multi-year guaranteed funding for prevention, capital, remoteness, post-majority, and Representative Services.
- Indexing all funding streams to inflation and population shifts.

This represents a necessary departure from cost-containment frameworks that have historically constrained First Nations agencies and Nations.

2. Establish a Binding Indigenous-Led Joint Governance Body with Decision-Making Authority

The rejected FSA suggested creating a Reform Implementation Committee (RIC)–type structure similar to the one included in Ontario's Agreement (ORIC). However, the proposed national version would have held only recommendatory authority and would have left ISC with unilateral control over core governance, accountability, capital prioritization, and funding adjustments. The EAC does not support including a RIC in a revised FSA. A RIC structure risks reproducing existing power imbalances, reinforcing a dynamic in which ISC maintains final authority over decisions that directly affect First Nations children, youth, families, and communities.

We therefore recommend establishing an Indigenous-led Joint Decision-Making Body with binding authority over:

- Capital prioritization and sequencing.
- Revisions to governance and accountability appendices.
- Approval of performance measurement and reporting frameworks.
- Funding revisions and implementation timelines.
- Ensuring representation from diverse First Nations, including small, remote, northern, and urban communities.

This approach addresses the structural risks identified in both the rejected national FSA and Dr. Neu's evidence, ensuring that reform decisions are grounded in First Nations authority and reflect community-defined needs.

3. Implement Mandatory Transparency Requirements for All ISC Funding Decisions

Systemic opacity within ISC's decision-making processes—whether related to capital allocations, prevention models, remoteness methodologies, or reporting requirements—has long contributed to inequitable outcomes. Transparency is therefore not merely an administrative improvement but a structural necessity within a rights-based governance framework.

We therefore recommend that the FSA require ISC to:

- Disclose all calculations, methodologies, assumptions, and scoring criteria used in assessments across all components of the system.
- Provide written, substantive reasons for any denial, deferment, or modification of requests within fixed timeframes.
- Publicly report all decisions and rationales, including capital priorities, remoteness determinations, and Program Assessment outcomes.

Transparent decision-making is foundational to accountability, trust-building, and the prevention of discriminatory practices.

4. Remove Proposal-Based and Competitive Funding Mechanisms

Proposal-driven and competitive mechanisms create structural inequities within the broader policy framework by requiring First Nations to compete for essential services and capacity supports. These systems privilege larger, well-resourced agencies and systematically disadvantage small, remote, and northern Nations. As raised throughout the reviewed materials, proposal-based models reproduce the very inequities that long-term reform is intended to eliminate.

We therefore recommend that the FSA expressly:

- Remove all proposal-based or competitive mechanisms from its governance and funding architecture, replacing them with predictable, needs-driven formulas that reflect substantive equality.
- Guarantee a minimum capital allocation for small, rural, northern, and remote Nations, ensuring that access to core infrastructure is not determined by proposal-writing capacity.
- Require that all capital and program design standards be co-developed with First Nations, reflecting Indigenous-defined priorities rather than federal administrative templates.

This shift reinforces the FSA's role as a structural reform agreement capable of preventing recurrence, rather than perpetuating historical inequities through administrative processes.

5. Resolve Structural Deficiencies Created by Layering the 1965 Canada–Ontario Agreement

The Ontario materials confirm that overlaying FSA funding on the 1965 Agreement perpetuates inconsistent definitions, oversight duplication, service gaps, and administrative burdens.

We therefore recommend that the FSA:

- Replace the 1965 Agreement as the structural foundation of funding.
- Establish a coherent stand-alone federal funding architecture co-developed with First Nations.
- Require ISC to independently determine eligibility rather than deferring to provincial classifications.

6. Reform Prevention Funding to Align with First Nations–Defined Needs and Conditions

Per-capita formulas risk reproducing rationing and failing to address the structural conditions impacting families.

We therefore recommend that the FSA:

- Develop prevention formulas with First Nations, grounded in cultural, geographic, and community-defined needs.
- Ensure a strong minimum funding floor for all Nations.
- Provide enhanced adjustments for remote and northern communities reflecting real operational costs.

7. Strengthen the Program Assessment Process to Close Discretionary Loopholes

As drafted, the Program Assessment process embeds broad discretionary authority for ISC to accept, modify, or reject recommendations. This structure risks weakening one of the few systemic safeguards intended to prevent recurrence of discrimination. Program Assessment must therefore function as a binding corrective mechanism within the policy framework—not as an optional advisory tool.

We therefore recommend that the FSA require ISC to:

- Implement all Program Assessment recommendations, unless it meets a high, publicly articulated standard of justification.
- Subject any ISC variance or rejection to review by an Indigenous-led independent tribunal, ensuring impartial oversight grounded in First Nations jurisdiction.
- Automatically trigger associated funding and structural adjustments upon acceptance of recommendations.

Program Assessment must serve as a reliable instrument of reform, rather than a discretionary process vulnerable to bureaucratic override.

8. Embed Indigenous Data Sovereignty and Indigenous-Defined Accountability Throughout the FSA

Unilateral ISC reporting requirements reinforce hierarchical oversight and bureaucratic control.

We therefore recommend that the FSA:

- Adopt OCAP® principles and Indigenous data sovereignty as foundational elements of monitoring and reporting.
- Co-develop Indigenous-defined indicators tied to well-being, cultural continuity, and safety.
- Transition from one-directional reporting to reciprocal, community-led accountability systems.

9. Remove All Clauses Allowing ISC to Unilaterally Revise Governance, Performance, or Accountability Appendices

A rights-affirming governance framework cannot be durable if ISC retains unilateral authority to revise core appendices, including governance structures, performance measures, funding templates, and accountability requirements. Such powers embed structural vulnerability into the FSA and risk re-centring federal control over reform.

We therefore recommend that the FSA:

- Remove all clauses that grant ISC unilateral amendment authority over governance, performance, accountability, or funding appendices.
- Require unanimous First Nations consent for any changes to governance-related elements of the Agreement.
- Freeze all templates and methodologies unless they are co-developed and jointly approved by an Indigenous-led Joint Decision-Making Body.

Shared governance is an essential precondition for eliminating discriminatory structures and ensuring that reform is sustained over time.

10. Recognize and Formally Include the National Children's Chiefs Commission (NCCC) in FSA Governance

The NCCC, as the governance authority of the Chiefs of Canada, plays a unique role in safeguarding child rights and guiding structural reform.

We therefore recommend that the FSA provide for the formal inclusion of the NCCC in:

- Governance bodies established under the FSA.
- Program Assessment processes.
- Co-development of future reforms.
- Child rights impact assessments.

11. Strengthen Dispute Resolution Mechanisms to Align with Accountability Standards

As drafted, the dispute resolution provisions in the Final Settlement Agreement (FSA) do not meet the accountability standards set out in *Doing Better for Indigenous Children and Families: Jordan's Principle Accountability Mechanisms Report*[2] (Doing Better Report) and are misaligned with Canadian Human Rights Tribunal (CHRT) jurisprudence. Although the FSA acknowledges the need for dispute resolution, its narrow scope, limited standard of review, and constrained remedial authority are insufficient to address the systemic discrimination identified by the CHRT.

Disputes under the FSA are restricted to an administrative reasonableness standard, excluding review based on substantive equality, human rights obligations, CHRT jurisprudence, UNDRIP, and the Department of Indigenous Services Act. The *Doing Better Report* identifies this limitation as a structural failure, noting that accountability mechanisms must be capable of enforcing substantive equality rather than merely assessing procedural rationality. Limiting review in this way risks reproducing the discretion-driven approaches the CHRT found to be discriminatory. The FSA further fails to empower the Tribunal to order systemic or supervisory remedies. Both the *Doing Better Report* and the CHRT's experience in the Caring Society case demonstrate that enforceable, forward-looking remedies are essential to correcting entrenched discrimination—described by the Tribunal as among the worst in Canadian history. Without such powers, dispute resolution risks becoming procedural rather than corrective.

While external legal avenues remain available, the *Doing Better Report* cautions that fragmented accountability undermines access to justice and places undue burdens on Indigenous children, families, Nations, and agencies. Effective accountability requires integrated mechanisms capable of addressing individual and systemic issues together. Significant accountability gaps also arise from excluding post–ten-year Program Review decisions from dispute resolution and from establishing a time-limited Tribunal, contrary to the Doing Better Report's call for permanent, independent oversight mechanisms. The EAC supports the inclusion of navigators and duties to counsel as necessary access-to-justice supports, but these cannot substitute for substantive jurisdiction or remedial authority.

[2] Naiomi Metallic, Hadley Friedland, and Shelby Thomas. "Doing Better for Indigenous Children and Families: Jordan's Principle Accountability Mechanisms Report." (2022).

We therefore recommend that the FSA:

- Expand dispute grounds to include substantive equality, human rights obligations, CHRT jurisprudence, UNDRIP, and relevant statutory standards.
- Empower the Tribunal to order systemic and supervisory remedies.
- Subject all Program Review outcomes to independent dispute resolution.
- Retain and strengthen navigators and duties to counsel; and
- Replace the time-limited Tribunal with a permanent, legislated accountability body.
- Strengthening the dispute resolution framework in these ways is essential to prevent recurrence of discrimination and ensure the FSA provides a meaningful and durable remedy.

CONCLUSION

These recommendations are offered to support the development of a Final Settlement Agreement that can truly transform the First Nations Child and Family Services Program into a durable, equitable, and rights-affirming system. The issues identified across the materials demonstrate that long-term reform cannot rest on partial adjustments or administrative remedies. It requires a structural framework that eliminates discriminatory practices at their source, prevents recurrence, and firmly embeds First Nations authority, jurisdiction, and decision-making in every aspect of the system.

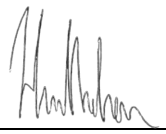
Each recommendation responds directly to the systemic risks, governance gaps, and patterns of inequity identified through our review. Together, they articulate a path toward a reform architecture capable of upholding substantive equality and advancing the well-being of First Nations children, youth, families, and Nations for generations to come. The Expert Advisory Committee remains fully committed to supporting the Parties through further revisions, co-development processes, and any clarification needed as work continues. We stand ready to assist in shaping an Agreement that reflects the highest standards of accountability, shared governance, and child rights protections—and that fulfils the promise of meaningful, lasting systemic change.

With continued dedication,

On behalf of the Expert Advisory Committee (EAC)
Alanis Obomsawin, Amber DVA Johnson, Carol Hopkins, Cedar Iahtail, Kevin Page, Naiomi Metallic, Larry Bremner, Raven Sinclair and Rod McCormick

Amber DVA Johnson, PhD

This is Exhibit "17" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.



Commissioner for Taking Affidavits (or as may be)

HENNA MOHAN

2. Executive Summary

This report details the costs of Indigenous language revitalization at the community level for three different scenarios: ***language maintenance*** (for a high-readiness community with mid/high language vitality), ***language revitalization*** (for a mid/low-readiness community with mid/low language vitality) and ***language reclamation*** (for a low readiness community with low language vitality). For each scenario, costs are outlined in three five-year blocks, totaling a fifteen-year period, representing the time projected for the mid-range model (language revitalization) to develop capacity for costs to stabilize.

Our methodology involved consulting with language educators, language revitalists, and other experts to acquire information about the operational needs of different language revitalization programs and strategies, and then developing frameworks and budgets that reflect the costs of implementing these programs and strategies effectively. The costing models include frameworks for developing capacity to develop and implement programs and strategies for language education, language skills training, community programs, language documentation, and media and arts and are summarized in Tables 1-3 below.

Beyond the three community-based costing models, this report also discusses the types of national and/or regional infrastructure that are needed to support community-based models, types of diversity amongst Indigenous communities that can impact costs, and our recommendations for best practices for conducting this type of research.

Table 1. Projected Costs of Language Maintenance over a 15-year period[1]

Timeline:	Years 1-5	Years 6-10	Years 11-15	TOTALS
Education	23,035,000	12,855,000	13,085,000	**48,975,000**
Language skills training	1,585,000	935,600	594,300	**3,114,900**
Community programs	4,317,900	4,253,900	4,383,900	**12,955,700**
Language documentation	867,600	1,213,820	384,750	**2,466,170**
Media and arts	619,200	3,900,000	3,900,000	**8,419,200**
TOTALS	**30,424,700**	**23,158,320**	**22,347,950**	**75,930,970**
AVERAGE COST PER YEAR	**6,084,940**	**4,631,664**	**4,469,590**	**5,062,065**

Table 2. Projected Costs of Language Revitalization over a 15-year period

Timeline:	Years 1-5	Years 6-10	Years 11-15	TOTALS
Education	12,200,000	7,415,000	9,875,000	**29,490,000**
Adult language skills training	4,269,933	5,471,333	4,622,667	**14,363,933**
Community programming	6,259,467	11,596,000	13,958,000	**31,813,467**
Language documentation	1,524,453	2,240,917	1,438,250	**5,203,620**
Media and arts	945,000	4,375,000	3,913,333	**9,233,333**
TOTALS	**25,198,853**	**31,098,250**	**33,807,250**	**90,104,353**
AVERAGE PER YEAR	**5,039,771**	**6,219,650**	**6,761,450**	**6,006,957**

Table 3. Projected Costs of Language Reclamation over a 15-year period

Timeline:	Years 1-5	Years 6-10	Years 11-15	TOTALS
Education	9,000,000	8,070,000	7,385,000	**24,455,000**
Adult language skills training	832,500	4,430,100	4,274,000	**9,536,600**
Community programming	1,802,000	5,726,000	5,950,000	**13,478,000**
Language documentation	1,411,060	2,747,100	1,861,100	**6,019,260**
Media and arts	0	8,819,000	13,390,000	**22,209,000**
TOTALS	**13,045,560**	**29,792,200**	**32,860,100**	**75,697,860**
AVERAGE PER YEAR	**2,609,112**	**5,958,440**	**6,572,020**	**5,046,524**

[1] All figures are in Canadian dollars (CAD). All budgetary tables included in this report are also available as Excel spreadsheets with formulae for calculating totals and averages.

3. Background & Context

3.1. Situating Ourselves

We come to this work as non-Indigenous researchers working in linguistics at the University of Victoria, with experience in Indigenous linguistics, language documentation, revitalization and language activism. The information presented in this report is influenced by our personal backgrounds, experience, and training, and we recognize the limitations of our research, based on such background and experience. We have undertaken this research at the University of Victoria, and we acknowledge with respect the Lkwungen-speaking peoples on whose traditional territory the university stands and the Songhees, Esquimalt and W̱SÁNEĆ peoples whose historical relationships with the land continue to this day.

Heather Bliss is a Banting Postdoctoral Fellow at the University of Victoria.
Bio: I was born and raised in Mohkinsstsis (Calgary, Alberta) and I am the granddaughter of Scottish and British immigrants. I am a proud alumnus of the University of Calgary (BA Honours, 2003; MA 2005) and the University of British Columbia (PhD, 2013). I have been at the University of Victoria since 2014, first as a SSHRC Postdoctoral Fellow and currently as a Banting Fellow. My research and interest in Indigenous language revitalization stems from long-standing collaborative relationships with members of the Siksika and Kainai Nations; since 2003 we have been working together on Blackfoot linguistic research and language documentation projects. In addition to my affiliation with the University of Victoria, I am an Adjunct Professor at the University of British Columbia and the University of Calgary. I am a Board member of the Canadian Language Museum, and the Editor and Curator of the Blackfoot Online Stories Database.

Myles Creed is a PhD student in Linguistics at the University of Victoria.
Bio: My background is of English, Irish and French heritage, and I was raised in Kotzebue, Alaska on the land of the Qikiqtaġruŋmiut Iñupiat Nation. I have been involved with language revitalization efforts for Iñupiatun, the Iñupiaq language, in Alaska for the last several years, particularly with the Alaska Native Heritage Center's Urban Iñupiatun Language Revitalization Project in Anchorage, Alaska. I have studied Linguistics at the University of Amsterdam in the Netherlands and continue to work on my doctoral degree in Linguistics at the University of Victoria, specifically studying Iñupiatun language documentation and adult immersion education. I am also currently a research assistant for Dr. Lorna Williams, working for Lil'wat Nation's language planning and revitalization project, as well as a research assistant for Dr. Leslie Saxon, assisting with the Research in Indigenous Languages and Linguistics (RILL) group.

This work was carried out over a period extending from February through May 2018, with preliminary budget projections submitted on April 1 and the final report submitted May 31.

3.2. Purpose of the Report

We were tasked by the First Peoples' Cultural Council (FPCC) to conduct research surrounding language revitalization programs and their associated costs to inform the development of national Indigenous language legislation by the Assembly of First Nations (AFN), Inuit Tapiriit Kanatami (ITK), the Métis National Council (MNC), and the Department of Canadian Heritage (DCH). The outcome is three community-based costing models characterized broadly in terms

of language maintenance, language revitalization, and language reclamation. The intended audience for this report is the First Peoples' Cultural Council, policy-makers involved in Indigenous language legislation in Canada and beyond, and Indigenous language revitalists involved in language planning and program development and implementation.

3.3. Limitations of the Research

This report should be considered by the reader as a snapshot of the communities, language programs, and models we surveyed and should not be considered to be a comprehensive look at language revitalization costs across Canada or internationally. Even as a snapshot, our research puts together a conglomeration of many different costs from across the country. It is unlikely that this particular snapshot would be a perfect cost estimation for any particular community.

However, we hope that the research undertaken in this report can serve as a guideline or blueprint for understanding rough estimates around the costs of language revitalization programs in order to determine the costs for language revitalization on a national scale. Research on costs of language revitalization on such a scale has not been undertaken in Canada or elsewhere, as far as we have been able to ascertain.[2]

In this section, we present some of the limitations and challenges in undertaking this research.

Limited Scope

The examples and models used in this report are limited in terms of own levels of knowledge about Indigenous language revitalization, the gaps in our knowledge regarding economic principles and modelling, our connections with experts and their availabilities for consultation, and the timeframe we were granted for conducting this research. We acknowledge that there are many inspiring and noteworthy initiatives across Canada that are not represented in this report due to some of these limitations. Moreover, the vast degree of variation between communities, languages, and initiatives is not adequately reflected in this report, although in section 9, we discuss specific variables involved in language revitalization efforts across Canada.

Three Models

Our costing models are based around three broad characterizations of language programs: language maintenance, language revitalization and language reclamation. In the Canadian context, such categories are lopsided; the majority of languages in Canada likely fall into the language revitalization category, and very few likely fall into the language reclamation category. See the definitions we assume for these three categories below.

Language maintenance: The community continues to have fairly strong to very strong usage of the language in several to all domains.

Language revitalization: The community's use of the language is declining, and/or restricted to a subset of domains. Intergenerational transmission is decreasing or non-existent.

[2] There is, however, research on the paucity of funding for language revitalization within the context of Australian Aboriginal Affairs (e.g. Mahboob et al. 2017) and on the economic benefits of investments in Indigenous languages (e.g., Aleksy-Szucsich 2008; Grin & Vaillancourt 1999; Mühlhäusler & Damania 2004).

Language reclamation: The community currently has no fluent speakers. There may or may not be speakers in other communities.

We developed costing models for language maintenance, revitalization, and reclamation with specific community profiles in mind, because this allowed us to make concrete something that would otherwise be abstract, given the diversity of communities and languages across Canada. It is important to emphasize that this report is in no way an attempt to prescribe language goals or plans for any community. We acknowledge that the best initiatives are community-driven ones; the language plans developed in this report are models, from which communities may or may not develop their own goals and plans.

The choice of structuring our research around these three categories has pros and cons, in that we can address on a macro level the financial resources needed for Indigenous language reclamation, revitalization, and maintenance, but these categories limit our understanding of the diverse and complex situations of Indigenous languages and communities across Canada.

4. Methodology

In order to understand the real costs of community-based language revitalization, we developed profiles of communities that took into account a number of variables. The variables were inspired, in part, by Grenoble & Whaley's (2006, pp. 202-204) checklist for setting up a language revitalization program, and include:

- Geography (size of community, proximity to urban centres and/or other communities speaking the same or similar languages, large geographic areas)
- Population (number of people on- and off-reserve)
- Language vitality (number of L1 speakers, L2 learners, and semi-speakers, language use at home, workplaces, etc.)
- Community readiness (programs in place, initiative to develop programs, state of language documentation, education levels, youth engagement, etc.)
- Potential for sharing resources (degree of cooperation with other communities speaking the same language; degree of similarity to other dialects)

Drawing on data from actual Indigenous communities in Canada, we developed three hypothetical community profiles, one for each category (language maintenance, revitalization, and reclamation). See section 9 for a discussion of these variables across a broader range of community profiles, and how they may impact costs. These hypothetical profiles allowed us to make concrete projections about the real costs associated with language programming.

Our main objective was to ***develop comprehensive budgets and timelines associated with different Indigenous language programs in order to develop financial forecasts that serve as costing models for Indigenous language maintenance, revitalization, and reclamation.***

With this guiding objective, we undertook several tasks, as follows:

1. We developed a comprehensive list of possible strategies and programs, based on our own knowledge of Indigenous language revitalization, as well as consultation with e.g., Hinton 2003, McIvor 2009 and resources available on the First Peoples' Cultural Council website.

2. We partitioned such strategies/programs into five broad categories: (i) Education, (ii) Language Skills Training, (iii) Community Programs, (iv) Language Documentation, and (v) Media and Arts.

3. Based on consultations with experts, literature, and available information on specific costs (e.g., salaries, space rental) we developed frameworks (including timelines and budgets) for each program. In determining how the various programs evolve over time and work together, we particularly considered capacity building (for example, frontloading costs of language planning and community mobilization before establishing programs such as language nests or MAP programs).

4. We attempted to fit these particular frameworks to the three community profiles, with these serving as models of language maintenance, revitalization, and reclamation.

5. For each model, we developed three consecutive five-year budgets, yielding fifteen years of budgets in total.

6. Considering the fact that language revitalization programs are often grossly underfunded and operate on a "shoestring budget," whenever there were discrepancies in cost projections, we made it a determination to always go with the higher number.

In the following section, we discuss each of the five categories, including what programs and strategies are included in each, and specifics of how the frameworks and budgets were developed. Actual frameworks and budgets are included as appendices.

4.1. Costing Language Education

Under the umbrella category of education are costs related to K-12 language immersion, including staff (teachers, educational assistants, support staff), operations, infrastructure, and curriculum and resource development. Not included here or elsewhere in this report are costs associated with K-12 language education programs that are not immersion-based. This is not because non-immersion based programs are *not* beneficial to language revitalization, but decades of research on language revitalization has demonstrated that immersion-based programs are the most successful programs for intervention in shifting language loss (at least in an education-based setting). The most well-known examples of Indigenous language revitalization success stories (e.g. Hawai'ian, Māori, Mohawk) all had the use of immersion teaching and learning (of various forms) as a guiding principle.

Our consultations with Indigenous educators revealed that a number of different pieces need to be in place to support the implementation of K-12 language immersion. Fluent speakers who are also trained educators are essential.[3] Nearly all of the educators and experts we consulted regarded the lack of teacher training as a major concern in Indigenous language programs. From this, we assumed that developing a K-12 immersion program involves building capacity by training community members in the language itself, in pedagogical theory and practice, and in

[3] This point was emphasized by Lisa Crowshoe (p.c., March 2018), who expressed that there would be a keen interest in Blackfoot language immersion in the Piikani community, but a paucity of Blackfoot-speaking teachers is a current barrier. In communities with very few young speakers, fluent Elders may be paired with trained educators to team-teach. As explained by Rob Matthew (p.c., April 2018), this latter model has been championed by Chief Atahm School for Secwepemctsin language immersion.

language immersion principles and practices. See Appendix A for a model that details how to build capacity to introduce K-12 language immersion education. Language skills training towards this objective is detailed in section 4.2.

A second piece involves infrastructure. What is necessary is a safe and suitable space that can support teaching and learning (with classrooms, gymnasium, music room, art space, playground, etc.) and provide an immersive environment for students and teachers.[4] We have included infrastructure as a separate budget line under education, with a total figure of $12,000,000 to support the building of an immersion school. (Figure is taken from the projected costs of building a new immersion school at Six Nations, see the Kawenni:io/Gaweni:yo Private School 2014/15 Annual Report). We assume this space could also house the curriculum development centre (as at the Eskasoni Immersion School), and perhaps adult immersion and/or some community-based programming.

Once capacity and infrastructure are developed and the school opens, staffing, operations, curriculum and resource development, and professional development costs can vary depending on variables such as student population and the school's scope and objectives. See Appendix B for a model budget for K-12 immersion operations, developed based on consultations with educators and administrators at various Indigenous language immersion schools across the country.

4.2. Costing Language Skills Training

This category includes classroom-based adult immersion programs to build fluency amongst potential educators and language revitalists, as well as teacher training specifically geared towards language immersion, and specialized training in Indigenous language revitalization (ILR)[5] and language documentation. See Appendix C for a budget for an adult immersion program; the inventory of expenses was developed based on consultations with Brian Maracle, whose adult immersion program has been successfully creating new Mohawk speakers at Six Nations since 1999 (see Green 2017). The development and implementation of teacher training programs can be done in partnership with local postsecondary institutions. See Appendix D for a framework and budget for establishing a Memorandum of Understanding with a postsecondary institution. Other costs associated with postsecondary training are detailed in the budget justifications for each costing model in sections 5-7 below. Included in the costs are scholarships that compensate students for tuition, books, travel, and living expenses.

---

[4] The importance of a safe and immersive space was emphasized by Amos Key Jr., who commented on the origins of the Kawenni:io/Gaweni:yo School, which operated out of a legion in its earliest days, despite being an unsafe atmosphere for children, and also by Ida Denny, who explained that the Eskasoni Immersion School originally operated as a program within the English-based school, making complete immersion impossible.

[5] Existing programs include the University of Victoria's MILR and CALR programs, Simon Fraser University's Graduate Certificate and MA in the Linguistics of a First Nations language, the University of Alberta's CILLDI program, the University of Saskatchewan's Certificate in Indigenous Languages, Lakehead University's Indigenous Languages Instructor Program, the University of Regina's BA in Indigenous Languages and Literature, Blue Quills University's BA and MA in Cree, and the First Nations University of Canada's BA, post-BA certificate, MA, and teaching certificate programs in Indigenous languages. This list is not comprehensive but represents a range of options across the country. Outside the scope of this report is an assessment of the various advantages and drawbacks to each of these programs. However, we acknowledge the need for targeted and skills-based training in Indigenous language revitalization (see e.g., Bliss & Breaker 2018).

4.3. Costing Community Programs

Our framework for community programs involves establishing a language team comprised of trained staff from the community who can develop and oversee language planning and programming and offer mentorship and support, as well as a language council comprised of Elders, educators, and knowledge holders who can inform decisions about planning and programming. In some cases, the language team and council can support multiple communities who are in close geographic proximity, share the same language, and are interested in cooperation. The budget for the language team and council includes salaries, professional development, travel to communities, meetings, office facilities, supplies, and equipment, etc. See Appendix E for a framework and annual budget.

Under the umbrella of community programs within the scope of the language team and council are the following:

- **Community mobilization**: as a means to evoke community interest in language revitalization and to identify potential language leaders. In the reclamation model, language planning is also included here. (For the Maintenance and Revitalization models, it is subsumed under the budget line for the language team and council.)

- **Language camps**: land-based gatherings in which community members - particularly youth - can connect with Elders and knowledge holders in an immersive context. Camps can also be held in urban contexts. (See, e.g., Blair & Fredeen 2009 on the importance of language camps.)

- **Mentor-Apprentice Programs (MAP):** Mentor-Apprentice Programs, also known as Master-Apprentice Programs, are programs that support motivated learners working one-on-one in an immersive context with fluent speakers. MAP was originally developed in California in the 1990s (Hinton 2001) and has been used as a language learning model in many different communities in Canada in recent decades. This model is particularly essential for language communities with few speakers remaining, and for communities with elderly speaker populations. MAP's goal is to develop fluent second-language speakers, who can potentially become language teachers or future language mentors; recent research also speaks to the role MAP can play in community wellness and healing (Jenni et al. 2017). Because MAP only minimally requires a single speaker who needn't have any specialized training, it is supported early on in our models.

- **Alternative adult language learning programs***:* In addition to formalized adult immersion and MAP, we included a placeholder for alternative community-based adult learning programs. These may take the form of drop-in evening classes, e-learning, immersive language houses, etc. (See e.g., Johnson 2013.)

- **Silent speaker programs / Healing programs**: In many Indigenous communities, there are high numbers of silent speakers, who understand the language but face challenges in speaking it due to language trauma (e.g., Basham & Fatham 2008). This program is designed to promote fluency amongst those people. The program is short-term and designed to roll over into an ongoing speaking circle/healing program, which creates opportunities for new speakers to gather and converse in the language and to develop programs to overcome intergenerational language trauma. For many speakers and learners, overcoming language trauma is essential before broader language revitalization progress can be undertaken.

- **Youth leadership programs:** Youth are critical to language revitalization movements, and youth leadership programs help to foster youth engagement in their language (e.g., Sumida Huaman et al. 2016; McCarty et al. 2006).

- **Language nests:** Language nests are immersive environments where the youngest children (usually ages 0-5 years old) interact with older fluent speakers of the language, often in unstructured and structured play. These programs originated in the 1980s for Māori language revitalization (McClutchie 2007) and there are now examples of language nests being successfully implemented in the Canadian context as well (McIvor 2005; McIvor and Parker 2016).

- **Home immersion programs:** Home immersion programs recognize the importance of bringing back Indigenous languages as the language of the home. Though school programs may be successful in building new speakers, without necessary support to use the language outside the classroom, the language may be seen as restricted to being used in the classroom. See Hinton 2013 for descriptions of different home immersion programs.

- **Public awareness:** Public awareness campaigns can be aimed at both community and non-community members to bring visibility to the language itself, as well as to language revitalization efforts. This may include signage, translation services, and PSAs. Note that street signs in the community itself are also included as a separate budget line under Language Documentation, as are PSAs regarding domain-specific vocabulary, such as medical terms.

- **Off-reserve / urban programming**: For communities with large populations of off-reserve members, we included in that community's budget off-reserve language programming.[6] This varies according to variables of geography and population. For example, our language revitalization model assumes that nearly half the population lives off-reserve, with many residing in a nearby urban centre; for this community we budgeted for urban programs such as language nests and home immersion support. Meanwhile, our language reclamation model assumes that the majority of the very small population lives off-reserve, but not in one centralized area, so for this community we budgeted for distance learning and intensive summer programs that bring language learners to the community. We assume that other community programs would be targeted towards both on- and off-reserve members. In our language maintenance model, most community members live on-reserve; for this community we did not include a budget line for off-reserve programming. For a discussion of supporting other (non-local) Indigenous languages in urban centres, see section 9.2.

- **Optional grant-funded programs:** As the language gains speakers, certain programs (e.g., MAP, silent speaker) are replaced with optional grant-funded programs to give communities flexibility in meeting their ongoing language needs. We did not include a separate category for land-based learning, but instead assumed it could be incorporated here.

We also included a budget line for miscellaneous community program expenses at $100,000 every five years.

[6] We assume that off-reserve programming can also be a means to offering language education and support to children in care. (See John 2017).

Most of the figures associated with these budget lines were taken or adapted from the First Peoples' Cultural Council's "Community Capacity Development Strategy" (henceforth CCDS); this is noted, along with any explanatory notes on adaptations, in the budget justifications in sections 5-7. Exceptions include the following:

- **Language camps**: Not included in the CCDS but priced at $25,000 per camp, as quoted by Aliana Parker (p.c. March 2018).
- **Alternative adult language learning programs***:* We included a placeholder of $250,000 per year for community-initiated programs. This figure is an increase from the $210,000 in funds received to operate the Syilx Language House (Johnson 2018). We assumed a language house would be the one of the costliest options in this category and budgeted accordingly.
- **Language nests**: See Appendix F for a model annual budget.
- **Home immersion programs**: See Appendix G for a model framework and budget.
- **Public awareness**: We followed the Nunavut Culture and Heritage Department's model of awarding grants to businesses and non-profit organizations for language visibility projects, but we increased the figure to $30,000 per grant[7], with the number of grants awarded annually depending on the population, geographic range, and readiness of a community; see budget justifications for details. Figures cover on- and off-reserve public awareness projects.
- **Off-reserve programming**: Based on budgetary figures for on-reserve programming; see budget justifications for details.

4.4. Costing Language Documentation

Similar to the framework developed for community programs, the framework for language documentation also establishes a leadership team to oversee documentation projects. The team is comprised of three full-time staff (community linguist, community archivist, programmer), plus consultants and/or student research assistants hired on a casual basis. The budget for the language team and council includes training and professional development, salaries, meetings, office facilities and equipment, etc. Refer to the budget justifications for details. Budgets to pay casual or contract employees are included on a per-project basis. Some of the work involved in language documentation can draw on the expertise and resources of local postsecondary institutions; Appendix C details the costs of establishing a Memorandum of Understanding (MOU) with a postsecondary institution.

Documentation plans vary depending on the state of existing documentation in the community. For communities with no standard orthography, plans were outlined to develop and implement one.[8] (See Appendix H for a framework and budget for orthography design and spelling reform.) Beyond orthography, we developed individualized plans for documenting oral stories, developing dictionaries and new vocabulary (e.g., for domains such as technology, healthcare, etc.), documenting place names, and digitizing existing materials. These plans include

[7] This figure is based on the cost of the installation of Musqueam signage on the UBC campus ($15,000 + approximately 300 hours labour and consultation). The Nunavut Culture and Heritage grants are smaller ($5000); we adopted the higher figure.

[8] This assumes that communities in fact wish to adopt an orthography to write their language, which is not unilaterally the case for all Indigenous communities in North America (e.g., see Chavez 2017 for discussion of the Keres language in New Mexico). We again emphasize that, while our models can provide guidelines or blueprints for language revitalization planning and costing, decisions about which programs and strategies to include in a language plan rest entirely with communities.

additional strategies for increasing the visibility of the language in the community, such as PSAs with specialized vocabulary (e.g., healthcare vocabulary for use in doctor's offices, etc.), and road signs[9] with place names and the like. See budget justifications for details.

For all communities, we included a budget line for curating a digital archive that can serve as a hub for language materials and resources, including those collected via other documentation projects. In the community models, we do not make any recommendations about centralizing these various hubs regionally or nationally (i.e., for digital security purposes), but see section 8 for some discussion. We also included a budget line for developing language software or apps for use on smartphones and other digital devices.[10]

4.5. Costing Media and Arts

Media and arts can be vehicles for language documentation, but also a way to increase the visibility, viability, and prestige of a language. Under the category of media, we include radio, television, and print (e.g., magazines or newspapers). Arts is divided into two subcategories: verbal arts (e.g., theatre, spoken word, song) and literary arts (e.g., literature, poetry). Much of the funding budgeted for comes in the form of grant programs to promote and support media and art creations. Media grants were costed based on comparative figures for French language media programming in Canada. See budget justifications for details.

5. Language Maintenance Model

This model is based on a hypothetical community with the following profile:

Geography
- One mid-sized reserve (3000 hectares)
- Close proximity to other reserves with the same language
- Close proximity to small urban centre
- Majority of population lives on-reserve

Population
- 5000 community members
- 1500 L1 speakers
- 1000 silent/semi-speakers

Language Use and Vitality
- Aging population of L1 speakers
- Declining rates of intergenerational transmission

---

[9] Locating costs for road signs proved challenging. The following document from the State of Minnesota outlines costs for replacing all signage in urban centres of various sizes: http://www.ceam.org/vertical/Sites/%7BD96B0887-4D81-47D5-AA86-9D2FB8BC0796%7D/uploads/ItsAllAboutSignsPreston.pdf. As we do not have equivalent data from Canada, we went with the figures presented here.

[10] The budget for language apps is $250,000/year for the first five years, and $100,000 per year for the five years following, totaling $1,750,000. This figure is based on the development costs of eastcree.org and its related apps (costs provided by Marie-Odile Junker, p.c. March 2018), as well as estimated development costs of Rosetta Stone software for Inupiaq.

- Few children learning the language from birth
- Percentages of people who speak/understand are much higher for older than younger populations

Community Readiness

- Centralized provincial organization supports communities in language planning, teaching, and revitalization
- Language immersion and other programming (MAP, Headstart)
- Extensive documentation, media, literature, and other art forms, digital resources and archives
- Postsecondary programs

Potential for Resource-Sharing

- High degree of cooperation with ~10 other communities in the same province speaking the same dialect
- One orthography used for all communities in the province
- Dialectal variation is minimal

The costing model presented here follows a fifteen-year timeline broken down into five-year blocks. "Year 1" in the timeline represents the first year of funding. Each five-year block is presented as a subsection, first with a table detailing the costs and followed by a budget justification. A summary of the full fifteen years is also presented below (repeated from the executive summary in section 2).

Table 4. Summary of Language Maintenance Costs

Timeline:	Years 1-5	Years 6-10	Years 11-15	TOTALS
Education	23,035,000	12,855,000	13,085,000	**48,975,000**
Language skills training	1,585,000	935,600	594,300	**3,114,900**
Community programs	4,317,900	4,253,900	4,383,900	**12,955,700**
Language documentation	867,600	1,213,820	384,750	**2,466,170**
Media and arts	619,200	3,900,000	3,900,000	**8,419,200**
TOTALS	**30,424,700**	**23,158,320**	**22,347,950**	**75,930,970**
AVERAGE COST PER YEAR	**6,084,940**	**4,631,664**	**4,469,590**	**5,062,065**

In this model, costs are mostly stable by the end of Year 10. Budget projections in Years 16 and beyond could follow those in Years 6-15.

5.1. Language Maintenance: Years 1-5

Table 5. Language Maintenance Costs Years 1-5

Timeline:	Year 1	Year 2	Year 3	Year 4	Year 5	TOTALS
K-12 immersion (teaching staff, incl. EAs)	850,000	910,000	1,020,000	1,080,000	1,190,000	**5,050,000**
K-12 immersion (support staff + operations)	725,000	725,000	725,000	725,000	725,000	**3,625,000**
Infrastructure	4,000,000	4,000,000	4,000,000	0	0	**12,000,000**
Immersion curriculum and teaching resources	460,000	400,000	400,000	700,000	400,000	**2,360,000**

Education TOTALS	**6,035,000**	**6,035,000**	**6,145,000**	**2,505,000**	**2,315,000**	**23,035,000**
Teacher training	296,000	296,000	296,000	296,000	296,000	**1,480,000**

Digital archive	30,600	99,600	99,600	99,600	99,600	**429,000**
Digitization project	27,500	25,000	25,000	0	0	**77,500**
Oral histories / texts	99,500	95,000	95,000	95,000	95,000	**479,500**
Dictionary	10,440	10,440	10,440	10,440	10,440	**52,200**
Software / Language apps	75,000	75,000	75,000	75,000	75,000	**375,000**
Language documentation TOTALS	**287,740**	**337,740**	**369,540**	**344,540**	**344,540**	**1,684,100**
Media	600,000	600,000	600,000	600,000	600,000	**3,000,000**
Verbal arts	37,500	37,500	37,500	37,500	37,500	**187,500**
Literary arts	37,500	37,500	37,500	37,500	37,500	**150,000**
Media and arts TOTALS	**675,000**	**675,000**	**675,000**	**675,000**	**675,000**	**3,337,500**
TOTALS	**8,004,520**	**8,272,520**	**8,403,320**	**4,738,320**	**4,578,320**	**33,959,500**

Budget Justification

Education

- See Appendix B

- Immersion School currently has K-4; one grade per year will be added starting in Year 1
- Teaching staff increases yearly to meet capacity: Year 1 K-5: ten teachers + five EAs; Year 2 K-6: 11 teachers + 5 EAs; Year 3 K-7: 12 teachers + 6 EAs; Year 4 K-8: 13 teachers + 6 EAs; Year 5 K-9: 14 teachers + 7 EAs.
- Infrastructure costs are to build a new school over a 3-year period. School can operate out of existing facility until Year 4.
- Curriculum renewal in Year 1; Handled by regional language team, with community costs being 30% of total; Equipment renewal in Year 4 (coinciding with new school opening).

Language Skills Training

- Includes teacher training, ILR training, and language documentation/linguistics training. (No postsecondary adult immersion as a significant proportion of adults are fluent.)
- Teacher training: Bachelor of Education with a focus on Indigenous pedagogy (already established at a local university). To build capacity for immersion school, two scholarships awarded each year to cover tuition ($5000), books and supplies ($2000), and a wage subsidy ($30,000[11]), per annum. Total scholarship = $37,000 x 4 years = $148,000.
- ILR training: $5000 per year to support travel and registration for conferences, training workshops, etc. for community language team members; One scholarship awarded in Year 1 for an advanced degree (e.g., MA) in ILR; covers tuition ($5000), books and supplies ($2000), wage subsidy ($30,000), and travel ($3000). Total scholarship = $40,000 x 2 years = $80,000.
- Language documentation training: This training is to build capacity for the language documentation team; see Appendix H. Community's share of costs is 30% based on percentage of total population supported by documentation team. Two scholarships awarded in Year 1 for graduate training in linguistics; covers tuition ($5000), books and supplies ($2000), wage subsidy ($30,000), and travel ($3000). Total scholarship = $40,000 x 2 years = $80,000. Two scholarships awarded in Year 1 for training in archival practices[12]; covers tuition ($3500), travel ($2000), and wage subsidy ($30,000) = $35,500 x 2 years = $71,000.

Community Programs

- Language team and council: See Appendix E. Community's share is 30% based on percentage of total population supported by team and council)
- Alternative adult language learning: $250,000 per year for flexible programming, ongoing.
- Mentor-Apprentice (MAP): 2 teams per year @ $20,000 per team (figure taken from FPCC CCDS) + $10,000 in training and infrastructure.
- Youth Leadership: workshop and internship program, $60,000 is the high-range figure taken from FPCC CCDS. (High-range reflects anticipated large numbers of engaged youth, due to well-established language and culture programs in community schools, etc.)
- Community outreach/celebrations: $25,000 per year for outreach or celebration event(s) that promote language and culture within the community.

[11] Based on minimum wage of $14/hour x 40 hours/week x 52 weeks/year = $29,120, rounded up.
[12] e.g., University of Victoria's Diploma in Cultural Resource Management: https://continuingstudies.uvic.ca/culture-museums-and-indigenous-studies/programs/diploma-in-cultural-resource-management (March 2018)

- Silent speaker program: $25,000 per 10-week program to support 10 speakers (figure taken from FPCC CCDS). Year 1: outreach, recruitment, program development; Years 2-5: two cycles of the 10-week program per year. Each cycle is followed up with a facilitated speaking circle (to create opportunities for developing speakers to converse). Speaking circle consists of biweekly meetings; per-meeting costs: $200 facilitator, $100 space/hospitality, $50 materials = $350 x 25 meetings = $8750 + $1250 annual administration = $10,000).
- Language nest: Year 1: transition from daycare to nest; training and resource development $50,000. Years 2 onwards: See Appendix F for annual budget.
- Home immersion: See Appendix G. Year 1: community mobilization; language team established (no costs in this budget line). Year 2: resources development. Year 3: program commences with five families.
- Public awareness: Two grants per year in Years 1 and 2; increase to three grants per year in Year 3. Community's share is 30% based on percentage of total population supported by team and council.

Language Documentation[13]

- Documentation team: See Appendix H. Community's costs are 30% of total. Year 1: in-training linguist and archivist (see 'language skills training' above) hired as summer interns (12 weeks x 40/hours week x $25/hour = $12,000 each); Programmer hired, equipment purchased. Year 2: repeat of Year 1, without equipment. Years 3 onwards: full capacity)
- Digital archive/hub: Community's costs are 30% of total. Year 1 - Database specialist hired on contract to assist programmer in developing archive infrastructure, based on consultations with relevant stakeholders (community members, those curating existing archives, etc.) Cloud server space = $1000/month = $12,000; Specialist consulting fees = $65,000; community consulting fees = $25,000. Years 2 onwards: cloud server space $12,000/year; consultation for archive maintenance $10,000/year; $310,000 grant program for community projects to contribute to archive ($25,000 per community + $10,000 administration, outreach/advertising).
- Digitization project: Hire two students to locate and digitize language materials held by community members over the course of three summers. Years 1: Salaries: 12 weeks x 40 hours week x $25/hour = $12,000 x 2 = $24,000; equipment purchases $2500[14]; other supplies $1000. Years 2 and 3: Salaries and supplies. Phase out after Year 3.
- Oral histories/texts: Hire two community recorders and provide training for them to record and archive oral histories, myths, folklore, personal stories, etc. told by Elders, knowledge-holders, etc. Year 1: Purchase audio/video recording kits $4500[15] x 2. 12-week training workshop: $16,400 (contract instructor salary $6000 + instructor travel $1000 + materials $1000 + space/hospitality $7200 + Elder honoraria for demos $1200). Recorder salaries: 150 hours recording + 350 hours editing/archiving = 500 hours + 120 hours training = 620 hours x $30/hour = $18,600 x 2. Storytellers'

[13] In the Revitalization and Reclamation models detailed in sections 6 and 7, a budget line is included for establishing an MoU with a local postsecondary institution to assist with documentation projects. In this model, we assume this is not necessary, as postsecondary agreements are already in place. Documentation and media projects are ongoing. Many resources are already developed, including reference materials, digital documentation, archives and learning tools, literature, curricula and teaching materials, road signage, television and radio programming, etc.

[14] https://www.canada.ca/en/conservation-institute/services/conservation-preservation-publications/technical-bulletins/digitization-audio-tapes.html#a14

[15] The equipment kit consists of a video camera (with a tripod), Zoom audio recorder, stereo and lavalier microphones, and headphones. Prices based on recent quotes.

honoraria = 300 hours (150 x 2) x 4 people x $50/hour[16] = $60,000. Years 2-5: Repeat all but equipment purchase.

- Dictionary: Various in-print and digital dictionaries and lexicons already exist. This dictionary maintenance project will ensure that there is agreement across communities on the form and spelling of new words. Community's share of costs is 30%. Two-day neologisms workshops to be held annually (committee formed, with representatives from 12 communities). Committee members compensated for meetings, preparation, travel ($50/hour x 8 hours per day x 4 days = $1600 each x 5 people = $19,200; 200 km (average) round trip x $0.50/km = $100 each x 12 people = $1200.) Total for meetings = $20,400. New word guides printed and distributed (in print and online) to community members ($2400, $200 per community). Spelling contests are organized in schools, at community events, and online to promote new words. Prizes are given out to support this initiative ($12,000, $1000 per community). Total for outreach = $14,400.
- Software/ Language apps: Development begins in Year 1, $250,000/year for the first five years; $100,000/year for the subsequent five years. Community's costs are 30% of total.

Media and Arts

- Media: Establish an annual grant program for media creation and distribution valued at $2,000,000. Community's proportion of costs is 30%. (Figure based on comparable amounts awarded to public radio/television for French language programming, as follows: Canadian federal government granted $448,000,000 to French language radio/TV public broadcasting in 2014[17]; 7,900,000 million speak French at home regularly; this equates to $56/pp. Increase to $70/pp to reflect inflation and a boost to Official Languages support under Trudeau administration[18]. There are approximately 27,000 people of this Indigenous heritage in Canada. 27,000 people x $70 = $1,890,000. Round up to $2,000,000).
- Verbal arts: Establish an annual grant program for verbal arts in the language @ $100,000. Annual verbal artists retreat/festival/celebration: $25,000. Community's proportion of costs is 30%.
- Literary arts: Establish an annual grant program for literary arts in the language @ $100,000. Annual literary artists retreat/festival/celebration: $25,000. Community's share of costs is 30%.

5.2. Language Maintenance: Years 6-10

Table 6. Language Maintenance Costs Years 6-10

Timeline:	Year 6	Year 7	Year 8	Year 9	Year 10	TOTALS
K-12 immersion (teaching staff, incl. EAs)	1,250,000	1,360,000	1,420,000	1,420,000	1,420,000	**6,870,000**
K-12 immersion (support staff, operations)	725,000	725,000	725,000	725,000	725,000	**3,625,000**
Infrastructure	0	0	0	0	0	**0**
immersion curriculum, teaching resources	460,000	400,000	400,000	700,000	400,000	**2,360,000**
Education TOTALS	**2,435,000**	**2,485,000**	**2,545,000**	**2,845,000**	**2,545,000**	**12,855,000**

[16] The figure of 4 people per session at $50/hour each is based on Bliss' methodology for curating a digital story archive (see http://stories.blackfoot.atlas-ling.ca/) Having multiple storytellers in one storytelling session encourages storytellers to share ideas and create natural dialogue.

Budget Justification

Education

- See Appendix B.
- One grade per year is added up to grade 12.
- Teaching staff increases yearly to meet capacity: Year 6 K-10: 15 teachers + seven EAs; Year 7 K-11: 16 teachers + eight EAs; Year 8 and onwards K-12: 17 teachers + eight EAs.
- No infrastructure costs as new school building was completed by Year 3.
- Curriculum renewal in Year 6; handled by regional language team, with community costs being 30% of total; equipment renewal in Year 9.

Language Skills Training

- Teacher training: Scholarship program scaled back in Year 6 to one scholarship per year to cover tuition ($5000), books and supplies ($2000), and a wage subsidy ($30,000), per annum. Total scholarship = $37,000 x 4 years = $148,000.
- ILR training: $5000 per year to support travel and registration for conferences, training workshops, etc. for community language team members; One scholarship awarded every five years for an advanced degree (e.g., MA) in ILR; covers tuition ($5000), books and supplies ($2000), wage subsidy ($30,000), and travel ($3000). Total scholarship = $40,000 x 2 years = $80,000.
- Language documentation training: This training is to build capacity for the language documentation team; see Appendix H. Community's share of costs is 30% based on percentage of total population supported by documentation team. Two scholarships awarded in Year 6 for graduate training in linguistics; covers tuition ($5000), books and supplies ($2000), wage subsidy ($30,000), and travel ($3000). Total scholarship = $40,000 x 2 years = $80,000. Two scholarships awarded in Year 6 for training in archival practices; covers tuition ($3500), travel ($2000), and wage subsidy ($30000) = $35,500 x 2 years = $71,000.

Community Programs

- Language team and council (includes language planning): See Appendix E. Community's share is 30% based on percentage of total population supported by team and council).
- Alternative adult language learning: $250,000 per year for flexible programming, ongoing
- Mentor-Apprentice (MAP): Scale down to 1 team per year @ $20,000 per team (figure taken from FPCC CCDS) + $10,000 in training and infrastructure.
- Youth Leadership: workshop and internship program, $60,000 is the high-range figure taken from FPCC CCDS. (High-range reflects anticipated large numbers of engaged youth, due to well-established language and culture programs in community schools, etc.)
- Community outreach/celebrations: $25,000 per year for outreach or celebration event(s) that promote language and culture within the community.
- Silent speaker program: $25,000 per 10-week program to support 10 speakers (figure taken from FPCC CCDS). Scaled back to one cycle of the 10-week program per year. Facilitated speaking circle doubles to support growing capacity ($10,000 x 2; See Years 1-5 for costs).
- Language nest: See Appendix F.
- Home immersion: See Appendix G. Resource revisions in Year 7.
- Public awareness: Three grants per year. Community's share is 30% based on percentage of total population supported by team and council.

Language Documentation

- Documentation Team: See Appendix H. Equipment purchases in Year 6.
- Digital archive/hub: Community's costs are 30% of total. Cloud server space $12,000/year; consultation for archive maintenance $10,000/year; $310,000 grant program for community projects to contribute to archive ($25,000 per community + $10,000 administration, outreach/advertising).
- Oral histories / texts: Recording phased out after Year 5. Years 6-10 - Hire transcriptionist to create a written record corresponding with audio/video files. Salary $60,000/year; consultation with storytellers (to confirm unclear recordings, etc.) $10,000/year.
- Dictionary: See Years 1-5. Meetings are scaled back, held semi-annually.

- Software/ Language apps: Development begins in Year 1, $250,000/year for the first five years; $100,000/year for the subsequent five years. Community's costs are 30% of total.

Media and Arts

- Media: Continue an annual grant program for media creation and distribution valued at $2,000,000. Community's proportion of costs is 30%. (See Years 1-5 for figure calculation.)
- Verbal arts: Increase an annual grant program for verbal arts in the language to $250,000. Annual verbal artists retreat/festival/celebration: $5,0000. Community's proportion of costs is 30%.
- Literary arts: Increase an annual grant program for literary arts in the language to $250,000. Annual literary artists retreat/festival/celebration: $50,000. Community's proportion of costs is 30%.

5.3. Language Maintenance: Years 11-15

Table 7. Language Maintenance Costs Years 11-15

Timeline:	Year 11	Year 12	Year 13	Year 14	Year 15	TOTALS
K-12 immersion (teaching staff, incl. EAs)	1,420,000	1,420,000	1,420,000	1,420,000	1,420,000	**7,100,000**
K-12 immersion (support staff, operations)	725,000	725,000	725,000	725,000	725,000	**3,625,000**
Immersion curriculum, teaching resources	460,000	400,000	400,000	700,000	400,000	**2,360,000**
Education TOTALS	**2,605,000**	**2,545,000**	**2,545,000**	**2,845,000**	**2,545,000**	**13,085,000**
Teacher training	148,000	0	148,000	0	148,000	**444,000**
ILR Training	85,000	5,000	5,000	5,000	5,000	**105,000**
Language documentation training	45,300	0	0	0	0	**45,300**
Language skills training TOTALS	**278,300**	**5,000**	**153,000**	**5,000**	**153,000**	**594,300**
Language team / council	147,780	147,780	147,780	147,780	147,780	**738,900**
Alternative adult language learning	250,000	250,000	250,000	250,000	250,000	**1,250,000**
Youth leadership	60,000	60,000	60,000	60,000	60,000	**300,000**
Community outreach/celebrations	25,000	25,000	25,000	25,000	25,000	**125,000**
Language Circle	30,000	30,000	30,000	30,000	30,000	**150,000**
Language Nest	243,000	243,000	243,000	243,000	243,000	**1,215,000**

Literary arts	90,000	90,000	90,000	90,000	90,000	**450,000**
Media and arts TOTALS	**780,000**	**780,000**	**780,000**	**780,000**	**780,000**	**3,900,000**
TOTALS	**4,813,180**	**4,462,880**	**4,615,880**	**4,737,880**	**4,615,880**	**22,347,950**

Budget Justification

Education

- See Appendix B.
- Teaching staff for K-12: 17 teachers + eight EAs.
- Curriculum renewal in Year 11; Handled by regional language team, with community costs being 30% of total; Equipment renewal in Year 14.

Language Skills Training

- Teacher training: Scholarship program scaled back in Year 11 to one scholarship every second year to cover tuition ($5000), books and supplies ($2000), and a wage subsidy ($30,000), per annum. Total scholarship = $37,000 x 4 years = $148,000.
- ILR training: $5000 per year to support travel and registration for conferences, training workshops, etc. for community language team members; One scholarship awarded every five years for an advanced degree (e.g., MA) in ILR; covers tuition ($5000), books and supplies ($2000), wage subsidy ($30,000), and travel ($3000). Total scholarship = $40,000 x 2 years = $80,000.
- Language documentation training: This training is to build capacity for the language documentation team; see Appendix H. Community's share of costs is 30% based on percentage of total population supported by documentation team. Scale back to one scholarship awarded in Year 11 for graduate training in linguistics; covers tuition ($5000), books and supplies ($2000), wage subsidy ($30,000), and travel ($3000). Total scholarship = $40,000 x 2 years = $80,000. Scale back to one scholarship awarded in Year 11 for training in archival practices; covers tuition ($3500), travel ($2000), and wage subsidy ($30,000) = $35,500 x 2 years = $71,000.

Community Programs

- Language team and council (includes language planning): See Appendix E. Community's share is 30%, based on percentage of total population supported by team and council
- Alternative adult language learning: $250,000 per year for flexible programming, ongoing. Separate MAP funding is phased out in Year 11 and combined with this program.
- Youth Leadership: workshop and internship program, $60,000 is the high-range figure taken from FPCC CCDS (High-range reflects anticipated large numbers of engaged youth, due to well-established language and culture programs in community schools, etc.)

- Community outreach/celebrations: $25,000 per year for outreach or celebration event(s) that promote language and culture within the community.
- Speaking circle: Phase out silent speaker program; Add a third speaking circle. (3 x $10,000; see Years 1-5 for costs).
- Language nest: See Appendix F.
- Home immersion: See Appendix G. Resource revisions in Year 12.
- Public awareness: Scale down to two grants per year. Community's share is 30% based on percentage of total population supported by team and council.

Language Documentation

- Documentation Team: See Appendix H. Equipment purchases in Year 11.
- Digital archive/hub: Community's costs are 30% of total. Cloud server space $12,000/year; consultation for archive maintenance $10,000/year; Increase grant program to $610,000 to replace phased out projects and encourage innovative contributions to archive ($50,000 per community + $10,000 administration, outreach/advertising).

Media and Arts

- Media: Continue an annual grant program for media creation and distribution valued at $2,000,000. Community's proportion of costs is 30%. (See Years 1-5 for figure calculation.)
- Verbal arts: Continue an annual grant program for verbal arts in the language @ $250,000. Annual verbal artists retreat/festival/celebration: $5,0000. Community's proportion of costs is 30%.
- Literary arts: Continue an annual grant program for literary arts in the language @ $250,000. Annual literary artists retreat/festival/celebration: $50,000. Community's proportion of costs is 30%.

6. Language Revitalization Model

This model is based on a hypothetical community with the following profile:

Geography

- One large reserve (70,000 hectares)
- Close proximity to three other reserves with same language, including one in the USA
- Close proximity to large urban centre
- Over half the population lives off-reserve, many in the nearby urban centre

Population

- 7500 community members
- 1500 L1 speakers
- 500 silent/semi-speakers

Language Use and Vitality

- Very few use the language most often at home or at work
- Large majority of L1 speakers are 50+
- Very low rates of intergenerational transmission
- Children comprise a high percentage of the population, but very few (if any) are learning the language

Community Readiness

- No language team, language council, or language plan
- No language immersion and sparse language programming (including in the urban centre)
- No standard orthography
- Small but growing body of documentation, media, literature, digital resources

Potential for Resource-Sharing

- Interest in cooperation with other communities on issues of e.g., orthography development
- Dialectal variation is under-documented but of great interest to communities

The costing model presented here follows a fifteen-year timeline broken down into five-year blocks. "Year 1" in the timeline represents the first year of funding. Each five-year block is presented as a subsection, first with a table detailing the costs and followed by a budget justification. A summary of the full fifteen years is also presented below (repeated from the executive summary).

Table 8. Summary of Language Revitalization Costs

Timeline:	Years 1-5	Years 6-10	Years 11-15	TOTALS
Education	12,200,000	7,415,000	9,875,000	**29,490,000**
Adult language skills training	4,269,933	5,471,333	4,622,667	**14,363,933**
Community programming	6,259,467	11,596,000	13,958,000	**31,813,467**
Language documentation	1,524,453	2,240,917	1,438,250	**5,203,620**
Media and arts	945,000	4,375,000	3,913,333	**9,233,333**
TOTALS	**25,198,853**	**31,098,250**	**33,807,250**	**90,104,353**
AVERAGE PER YEAR	**5,039,771**	**6,219,650**	**6,761,450**	**6,006,957**

In this model, the block covering Years 11-15 represent a time when the costs stabilize; budget projections following Year 15 could follow those presented in this block.

6.1. Language Revitalization: Years 1-5

Table 9. Language revitalization costs: Years 1-5

Timeline:	Year 1	Year 2	Year 3	Year 4	Year 5	TOTALS
K-12 immersion (staffing/operations)	0	0	0	0	0	**0**
Immersion curriculum/resources	0	0	0	0	200,000	**200,000**

Budget Justification

Education

- See Appendix A for capacity-building and roll-out strategy. See Appendix B for K-12 budget.
- No staffing or operations costs until capacity is built, beginning in Year 6.
- Curriculum developed in Year 5.
- Infrastructure: School building constructed over the course of Years 2-5.

Language Skills Training

- Adult immersion: See Appendix C for annual budget. Year 1 - community mobilization. Year 2 - one teacher and one administrator hired for program development, includes miscellaneous expenses of $15,000. Year 3 - program begins with cohort 1 (reduced costs). Year 4 - two cohorts. Year 5 - full capacity.
- Teacher training (interim): See Appendix A. Year 1: community mobilization and recruitment; establish an MoU with a postsecondary institution to offer cohort-based training (See Appendix D for budget). Years 2 through 5: Three scholarships for BEd per year, covering tuition ($5000), books and supplies ($2000), and a wage subsidy ($30,000[19]), per annum. Total scholarship = $37,000 x 4 years = $148,000.
- Teacher training (long-term): See Appendix A. Years 1 and 2: No costs as interim strategy is in place. Year 3: Establish (/revise) MoU with postsecondary institution (See Appendix D) for long-term teacher training program. Years 4 & 5: Ongoing consultation between community and postsecondary; 2 meetings per year (See Appendix D).
- ILR training: $10,000 per year for community members with language interests to attend conferences, training workshops etc. (part of community mobilization). Years 2-5: Two scholarships awarded annually for ILR training; covers tuition ($5000), books and supplies ($2000), travel ($3000), wage subsidy ($30,000). Total = $40,000 per year x 2 years. Scholarship program costs are shared equally amongst 3 communities.
- Language documentation training: his training is to build capacity for the language documentation team; see Appendix H. Costs are shared equally amongst 3 communities. Year 1: Recruitment (see community mobilization). Two scholarships awarded in Year 2 for undergraduate[20] training in linguistics; covers tuition ($5000), books and supplies ($2000), and wage subsidy ($30,000). Total scholarship = $37,000 x 4 years = $148,000. Two scholarships awarded in Year 2 for training in archival practices; covers tuition ($3500), travel ($2000), and wage subsidy ($30,000) = $35500 x 2 years = $71,000. Same scholarships awarded every two years for 10 years (to build capacity, assuming attrition).

Community Programs

- Community mobilization: FPCC CCDS cites $10,000 as a cost for a community mobilization. This figure is doubled for this community, which is larger than many BC communities in terms of population and geography. In Years 1 and 2, this figure is doubled again to include specific recruitment events for various programs. In Year 3, two events only. Years 4 onwards, smaller recruitment events only.
- Language team/council: See Appendix E. Costs are shared equally amongst 3 communities. Year 1 - general meeting to elect council representatives and recruit

[19] Based on minimum wage of $14/hour x 40 hours/week x 52 weeks/year = $29,120, rounded up.
[20] This differs from the Maintenance model, where scholarships are awarded for graduate training. This is because we assume that there are higher numbers of BA graduates in that community who could transition into a graduate program.

leaders for ILR training and language team. Year 2 - Hire one manager[21], one administrator. Other operating costs as outlined in Appendix E. In-training ILR specialists (see 'language skills training' above) hired as summer interns (12 weeks x 40/hours week x $25/hour = $12,000 each). Year 3: repeat of Year 2. Year 4: Hire second manager, plus summer interns. Year 5: repeat of Year 4.

- Language camp: One camp per year.
- Mentor-Apprentice (MAP): Year 1 - 2 teams @ $20,000 per team (figure taken from FPCC CCDS) + $10,000 in training and infrastructure. Years 2-5 increase by 2 teams each year.
- Alternative adult language learning: $250,000 per year for flexible programming, ongoing.
- Silent speaker program: $25,000 per 10-week program to support 10 speakers (figure taken from FPCC CCDS). Year 1: Outreach, recruitment; Years 2-3: One cycle of the 10-week program per year. Years 4-5: Increase to two cycles per year. Program is followed up with a facilitated speaking circle (to create opportunities for developing speakers to converse). Speaking circle consists of biweekly meetings; per-meeting costs: $200 facilitator, $100 space/hospitality, $50 materials = $350 x 25 meetings = $8750 + $1250 annual administration = $10,000).
- Youth leadership: Years 1 and 2: community mobilization, language team building; $20,000 in Years 3-5 (figure taken from FPCC CCDS, low range for anticipated low participation).
- Language nest: See Appendix F. Year 1 - $5000 parent/baby group outreach; $50,000 training; Year 2 - $5000 parent/baby group outreach; $50,000 training; $50,000 program development. Years 3-5 - 1 nest operational.
- Home immersion: See Appendix G. Year 1 - community mobilization; Year 2 - handbook development.
- Public awareness: One grant per year in Years 1-3; increase two grants per year in Years 4 and 5.
- Urban programs: Parallel programming for community members living in the nearby urban centre. See Years 1-5 for budget justifications. Year 1 - community mobilization and recruitment events ($20,000). Years 2 onwards - hire a language manager for urban programs[22] ($50,000/annum); 2 MAP teams @$20,000 each; summer language intensive including language camp and other land-based/immersive activities, may include travel to reserve ($50,000); alternative adult language learning ($250,000, could include silent speaker); 3 teachers hired for language programming at urban schools (3 x $60,000).

Language Documentation

- MoU: Establish MoU with postsecondary institution in Year 1 so that linguists and students can assist with documentation projects and librarians can assist with archiving; See Appendix D.
- Documentation team: See Appendix H. Documentation is costed out for this community alone, given large populations across all communities and dialect variations. Year 1 - recruitment; see community mobilization. Year 2: hire in-training linguists and archivists as summer interns (12 weeks x 40 hours/week x $25/hour = $12000 x 4

[21] It is assumed that no one in the community has formal specialized training in ILR. This manager could be a grassroots revitalist, who could supplement their lived experiences with training workshops, etc., until capacity is built, and they could take (paid) leave to complete formal training (if desired) and be promoted to coordinator.

[22] This manager is considered a member of the language team and will collaborate with other team members but will work out of a satellite location in the urban centre.

interns) + supplies. Year 3: Hire 4 interns, hire programmer, purchase equipment, + other operating costs. Years 4 and 5: Hire archivist (training is complete) and two linguist interns. Other costs same as Year 3.

- Orthography development: See Appendix I.
- Digital archive/hub: Begins in Year 4, with hiring of programmer. Year 4 - Database specialist hired on contract to assist programmer in developing archive infrastructure, based on consultations with relevant stakeholders (community members, those curating existing archives, etc.) Cloud server space = $1000/month = $12000; Specialist consulting fees = $65,000; community consulting fees = $25,000. Years 5 onwards: cloud server space $12,000/year; consultation for archive maintenance $10,000/year; $35,000 grant program for community projects to contribute to archive (includes $10,000 in administration, outreach/advertising).
- Digitization project: Hire two students to locate and digitize language materials held by community members over the course of three summers. Three-year project begins in Year 2, after language manager is hired and MoU is signed. Year 2: Salaries: 12 weeks x 40 hours week x $25/hour = $12,000 x 2 = $24000; equipment purchases $2500; other supplies $1000. Years 3 and 4: Salaries and supplies. Phase out after Year 4.
- Oral histories/texts: Hire linguistic consultant to record and archive oral histories, myths, folklore, personal stories, etc. told by Elders, knowledge-holders, etc. Year 1: Purchase audio/video recording kit $2000. Consultant salary: 100 hours recording + 300 hours editing/archiving = 400 hours x $50/hour = $20,000. Storytellers' honoraria = 100 hours x 4 people x $50/hour = $20,000. Years 2-3: Repeat all but equipment purchase. Years 4-5: Scale back to half.
- Dictionary: Existing dictionary does not reflect this community's dialect and uses an orthography not widely adopted. Years 1-5 focus is curating/recording community-specific content. Year 1 - purchase 2 recording kits ($1000 each). Years 1-3: Students/interns hired to work with Elders/knowledge-holders to record and transcribe words. Student salaries: 50 hours recording + 200 hours transcription = 250 hours x $25/hour = $6250 x 2 students = $12,500. Elders honoraria: 100 hours x $50/hour x 4 people = $20,000. Travel: 12 trips between reserve & urban centre x 240 km roundtrip x $0.50/km = $1440. Hospitality, space rental = $2000. Total = $35,940. Years 4-5: Scale back by half ($18,000). Migrate digital version of dictionary to digital hub in Year 4 (see above).
- Software/ Language apps: Development begins in Year 2, $250,000/year for the first five years; $100,000/year for the subsequent five years. Costs shared equally amongst three communities.
- Place names/road signs: Land-based project to document/reclaim traditional place names. Years 1,2: team-building. Years 3-5: Hire consultant to travel with knowledge-holders/Elders to locations on the land, document place names and coordinates, and take photographs (Per annum: consultant 50 hours @ $50/hour = $2500; Elders 25 hours @ $50/hour x 2 Elders = $2500; equipment purchases in Year 3 only $5000; travel $1000).

Media and Arts

- Radio: Year 1 - Hire part-time radio host for 2-hour slot in the language ($20,000 for a half-time salary[23]), guest speakers' honoraria (2 guests/week x 50 weeks x $100/guest = $10,000). Years 2-5 - continue radio show.
- Television/Film - Costs shared equally amongst 3 communities. Year 4 - Form agreement with children's television production company to create cartoons in the

[23] https://www.payscale.com/research/CA/Industry=Radio_Broadcasting/Salary (March 2018)

language. ($10,000 in legal fees for agreement). Year 5 - produce season 1 to begin airing in Year 6, as K/1 immersion begins. 5 x 30-minute episodes @ $400,000/episode.

- Print (newspaper/magazine) - No costs until orthography development complete.
- Verbal arts: Establish an annual grant program for verbal arts in the language @ $50,000[24]. Annual verbal artists retreat/festival/celebration: $25,000. Costs are shared equally amongst 3 communities.
- Literary arts: No costs until orthography/spelling is developed.

6.2. Language Revitalization: Years 6-10

Table 10. Language revitalization costs: Years 6-10

Timeline:	Year 6	Year 7	Year 8	Year 9	Year 10	TOTALS
K-12 immersion (teaching staff, including EAs)	170,000	230,000	340,000	400,000	510,000	**1,650,000**

Budget Justification

Education

- See Appendix A for capacity-building and roll-out strategy. See Appendix B for K-12 budget.
- Teaching Staff - Year 6 K-1: Two teachers; one EA; Year 7 K-2: Three teachers, one EA; Year 8 K-3: Four teachers, two EAs; Year 9 K-4: Five teachers, two EAs; Year 10 K-5: Six teachers, three EAs.
- Operations and support staff as per Appendix B.
- Curriculum and resources: Staff introduced gradually (two in Year 6, three in Year 7, four in Year 8, five in Year 9 onwards). (Consulting etc. costs remain static.) Equipment purchases in Year 6. Curriculum renewal in Year 10.
- Infrastructure: No costs; building completed in Year 5.

Language Skills Training

- Adult immersion: See Appendix C for annual budget.
- Teacher training (interim): See Appendix A. Phased out. Scholarships awarded Years 2-5; last cohort expected to graduate Year 8.
- Teacher training (long-term): See Appendix A. 2-year program commences in Year 6, with three scholarships per year that cover tuition ($5000), books and supplies ($2000), and wage subsidy ($30,000) = $37,000 x 2 years = $74,000.
- ILR training: $10,000 per year for community members with language interests to attend conferences, training workshops etc. (part of community mobilization). Years 2-5: Two scholarships awarded annually for ILR training; covers tuition ($5000), books and

supplies ($2000), travel ($3000), wage subsidy ($30,000). Total = $40,000 per year x 2 years. Scholarship program costs are shared equally amongst 3 communities.
- Language documentation training: Costs are shared equally amongst 3 communities. This training is to build capacity for the language documentation team; see Appendix H. Two scholarships awarded in Year 6 for undergraduate training in linguistics; covers tuition ($5000), books and supplies ($2000), and wage subsidy ($30,000). Total scholarship = $37,000 x 4 years = $148,000. Two scholarships awarded in Year 6 for training in archival practices; covers tuition ($3500), travel ($2000), and wage subsidy ($30,000) = $35,500 x 2 years = $71,000. Same scholarships awarded in Years 8 and 10. Two scholarships offered in Years 7 and 9 for graduate training in linguistics, for those who have obtained BA; covers tuition ($5000), books and supplies ($2000), travel ($3000), wage subsidy ($30,000) = $40,000 x 2 years = $80,000.

Community Programs

- Community mobilization: See Years 1-5. Mobilization and recruitment events ongoing.
- Language team/council: See Appendix E. Costs are shared equally amongst 3 communities. Year 6 - Hire language coordinator, third manager, and summer interns (12 weeks x 40/hours week x $25/hour = $12,000 each). Other operating costs as outlined in Appendix E. Year 7 - Repeat of year 6. Year 8 - hire second language coordinator. At capacity year 8 onwards.
- Language camp: Increase to two camps per year.
- Mentor-Apprentice (MAP): @ $20,000 per team (figure taken from FPCC CCDS) + $10,000 in training and infrastructure. Years 6-10: 10 teams per year.
- Alternative adult language learning: $250,000 per year for flexible programming, ongoing.
- Silent speaker program: See Years 1-5 budget justification for costs. Years 6-8: Two cycles of the program, increase to two speaking circles. Years 9-10: Scale back to one cycle of the program, two speaking circles.
- Youth leadership: Years 6-7; increase to $40,000 as interest grows, then Years 8-10 $60,000 (figure taken from FPCC CCDS, mid-range to high-range).
- Language nest: See Appendix F. Year 6: one nest operational, plan for a second nest (parent/baby group outreach $5000; training $50,000; set-up $50,000); Years 7-10: two nests operational (different areas on the reserve).
- Home immersion: See Appendix G. Year 6 - handbook revisions.
- Public awareness: Two grants per year.
- Urban programs: See Years 1-5. Year 6 - all programs continue, plus language coordinator hired ($75,000), language nest and home immersion organized ($5000 parent/baby group outreach; $50,000 training; $50,000 set-up). Years 7 onwards: language nest added to ongoing programs; home immersion for five families.

Language Documentation

- Documentation team: See Appendix H. Team is at full capacity as of Year 6. Budget reflects low salary range for linguist (BA obtained). Equipment purchases in Year 8.
- Orthography development: See Appendix I. Project completed by end of Year 10.
- Digital archive/hub: Ongoing costs = cloud server space $12,000/year; consultation for archive maintenance $10,000/year; $35,000 grant program for community projects to contribute to archive.
- Oral histories/texts: $10,000/year on developing digital and print outputs. (Costs could be for transcription, printing, distribution, etc.). Project phased out by end of Year 10.
- Dictionary: Year 6 - Students hired to “translate” transcribed entries into newly developed orthography (500 hours x $25/hour = $12,500). Year 7 - Dictionary goes to

print[25]; 200 copies printed for community distribution x $50/copy x 40% author discount = $6000. Community event to promote dictionary, includes prizes of free copies $5000. Years 8-10: Orthography committee meets twice/year to review and add content ($9500, see Appendix I). Students hired to record and transcribe new entries (50 hours @ $25/hour = $1250).

- Neologisms / Domains of Use: Creating and standardizing words related to professional domains (health care, legal, etc.) Years 6-7: Bilingual documents created for use in community health (care pamphlets, etc.). Year 8: Bilingual documents created for use in the legal/justice system. Years 9,10: Bilingual documents created for use in other community domains. Each year involves committee meetings to vote on new words. Per year costs: workshop = $9500 (see Appendix I); 100 hours translation @ $50/hour = $5000. Printing/distribution = $5000. After Year 10, this is phased out and absorbed by dictionary maintenance.
- Software/ language apps: Development begins in Year 2, $250,000/year for the first five years; $100,000/year for the subsequent five years. Costs shared equally amongst three communities.
- Place names/road signs: Year 6 - consultant hired to "translate" place names into newly developed orthography (20 hours @ $50/hour = $1000). Bilingual signage (community buildings, commercial properties on the reserve, road signs on the reserve) replaces current English road signs ($420,000). Year 7: pamphlets produced and distributed to community ($10,000); reclamation ceremony ($10,000). Project complete by end of Year 7.

Media and Arts

- Radio: continue radio program.
- Television: Costs shared equally amongst 3 communities. Continue to produce 5 x 30-minute episodes of children's cartoons per year. Year 6 - Form agreement with production company to dub adult programming (e.g., APTN) into the language; legal costs $10,000. Years 7-10 - dub 10 shows per year @$50,000 per episode[26]
- Print media: Establish regular column and crossword puzzle[27] in community's monthly news publication (freelance columnist salary $30/hour[28] x 100 hours = $3000).
- Verbal arts: Increase annual grant program for verbal arts in the language to $100,000. Annual verbal artists retreat/festival/celebration: $50,000. Costs shared equally amongst 3 communities.
- Literary arts: Establish an annual grant program for literary arts in the language @ $50,000. Annual verbal artists retreat/festival/celebration: $25,000. Costs shared equally amongst 3 communities.

6.3. Language Revitalization: Years 11-15

Table 11. Language revitalization costs: Years 11-15

Timeline:	Year 11	Year 12	Year 13	Year 14	Year 15	TOTALS
K-12 immersion (teaching staff)	570,000	680,000	740,000	850,000	910,000	**3,750,000**
K-12 immersion (support staff + operations)	725,000	725,000	725,000	725,000	725,000	**3,625,000**

Budget Justification

Education

- See Appendix A for capacity-building and roll-out strategy. See Appendix B for K-12 budget.
- Teaching Staff - Year 11 K-6: Seven teachers; three EAs; Year 12 K-7: Eight teachers, four EAs; Year 13 K-8: Nine teachers, four EAs; Year 14 K-9: Ten teachers, five EAs; Year 15 K-10: Eleven teachers, five EAs; Full capacity by Year 17.
- Operations and support staff as per Appendix B.
- Curriculum and resources: Equipment purchases in Year 11. Curriculum renewal in Year 15.

Language Skills Training

- Adult immersion: See Appendix C for annual budget.
- Teacher training (long-term): See Appendix A. Scale back to two scholarships per year that cover tuition ($5000), books and supplies ($2000), and wage subsidy ($30,000) = $37,000 x 2 years = $74,000.
- ILR Training: $10,000 per year for community members with language interests to attend conferences, training workshops etc. (part of community mobilization). Years 2-5: Scale back to one scholarship awarded annually for ILR training; covers tuition ($5000), books and supplies ($2000), travel ($3000), wage subsidy ($30,000). Total = $40,000 per year x 2 years. Scholarship program costs are shared equally amongst 3 communities.
- Language documentation training: Costs are shared equally amongst 3 communities. This training is to build capacity for the language documentation team; see Appendix H. Two scholarships awarded in Year 12 for undergraduate training in linguistics; covers tuition ($5000), books and supplies ($2000), and wage subsidy ($30,000). Total scholarship = $37,000 x 4 years = $148,000. Two scholarships awarded in Year 12 for training in archival practices; covers tuition ($3500), travel ($2000), and wage subsidy ($30,000) = $35,500 x 2 years = $71,000. Scale back to offering these same scholarships every five years (i.e., next would be in Year 17). Two scholarships offered in Years 11 for graduate training in linguistics, for those who have obtained BA; covers tuition ($5000), books and supplies ($2000), travel ($3000), wage subsidy ($30,000) = $40,000 x 2 years = $80000. Scale back to offering graduate scholarship every five years (i.e., next one would be Year 16).

Community Programs

- Community mobilization: See Years 1-5. Mobilization and recruitment events ongoing.
- Optional projects (grant-funded): Phase out language camps, MAP, silent speaker, and youth leadership programs in Year 11 and replace with sustainable grant funding for community-initiated and flexible projects.
- Speaking circles: Phase out silent speaker program. Increase to three speaking circles @ $10,000 each. (See Years 1-5 budget justification for costs.)
- Language nest: See Appendix F. Year 11: Two nests operational, plan for a third nest (parent/baby group outreach $5000; training $50,000; set-up $50,000); Years 12-onwards: Three nests operational (different areas on the reserve).
- Home immersion: See Appendix G. Year 11 - handbook revisions.
- Public awareness: Increase to three grants per year.
- Urban programs: See Years 6-10. Ongoing programs: MAP, alternative adult language learning, summer intensive camp, K-12 language classes, language nest, home immersion; oversight by coordinator and manager.

Language Documentation

- Documentation team: See Appendix H. Team is at full capacity. Budget reflects high salary range, assuming linguist obtained MA. Equipment purchases in Year 13.
- Digital archive/hub: Ongoing costs = cloud server space $12,000/year; consultation for archive maintenance $10,000/year; $35,000 grant program for community projects to contribute to archive.
- Dictionary: Years 11, 13, 15: Orthography committee meets twice/year to review and add content ($9500, see Appendix I). Students hired to record and transcribe new entries (50 hours @ $25/hour = $1250). Year 12 - Release new print edition of dictionary and distribute to community members ($6000, see Years 6-10 for costs).
- Software/ Language apps: Development begins in Year 2, $250,000/year for the first five years; $100,000/year for the subsequent five years. Costs shared equally amongst three communities.

Media and Arts

- Radio: continue radio program.
- Television/Film (and other media in general): Establish an annual grant program for media creation and distribution valued at $1,700,000. Costs are shared equally amongst 3 communities. (Figure based on comparable amounts awarded to public radio/television for French language programming, as follows: Canadian federal government granted $448,000,000 to French language radio/TV public broadcasting in 2014[29]; 7,900,000 million speak French at home regularly; this equates to $56/pp. Increase to $70/pp to reflect inflation and a boost to Official Languages support under Trudeau administration[30]. There are approximately 24,000 people of this Indigenous heritage in Canada. 24000 people x $70 = $1,680,000. Round up to $1,700,000).
- Print media: Establish regular column and crossword puzzle in community's monthly news publication (freelance columnist salary $30/hour x 100 hours/month x 12 = $36,000).
- Verbal arts: Increase annual grant program for verbal arts in the language to $250,000. Annual verbal artists retreat/festival/celebration: $50,000. Costs shared equally amongst 3 communities.
- Literary arts: Establish an annual grant program for literary arts in the language @ $100,000. Annual verbal artists retreat/festival/celebration: $50,000. Costs shared equally amongst 3 communities.

7. Language Reclamation Model

This model is based on a hypothetical community with the following profile:

Geography

- One very small reserve (100 hectares)
- Geographically isolated; access to urban centres and other communities is restricted
- Approximately 80% of the population lives off-reserve, spread across many areas

Population

- 200 community members

[29] http://www.cmg.ca/en/wp-content/uploads/2015/05/Report_RadioCanadaFunding_May21-3.pdf
[30] http://www.cbc.ca/news/politics/official-languages-plan-joly-1.4596687

- No L1 speakers of this dialect in the community (approximately 150 speakers of other dialects)
- 5 silent/semi-speakers (approximately 200 semi-speakers of other dialects)

Language Use and Vitality
- No L1 speakers on-reserve, 1 off-reserve
- No children acquiring the language

Community Readiness
- No language team, language council, or language plan
- No language immersion and sparse language programming
- No standard orthography (for the dialect)
- Sparse documentation, media, literature, digital resources (in the dialect)

Potential for Resource-Sharing
- Geographic isolation restricts potential for collaboration
- Dialect is one of many divergent dialects, often considered separate languages

The costing model presented here follows a fifteen-year timeline broken down into five-year blocks. "Year 1" in the timeline represents the first year of funding. Each five-year block is presented as a subsection, first with a table detailing the costs and followed by a budget justification. A summary of the full fifteen years is also presented below (repeated from the executive summary).

Table 12. Summary of Language Revitalization Costs

Timeline:	Years 1-5	Years 6-10	Years 11-15	TOTALS
Education	9,000,000	8,070,000	7,385,000	**24,455,000**
Adult language skills training	832,500	4,430,100	4,274,000	**9,536,600**
Community programming	1,802,000	5,726,000	5,950,000	**13,478,000**
Language documentation	1,411,060	2,747,100	1,861,100	**6,019,260**
Media and arts	0	8,819,000	13,390,000	**22,209,000**
TOTALS	**13,045,560**	**29,792,200**	**32,860,100**	**75,697,860**
AVERAGE PER YEAR	**2,609,112**	**5,958,440**	**6,572,020**	**5,046,524**

In this model, costs are not yet stabilized by Year 15; programs and supports are continuing to develop, and we project that costs will stabilize by Year 20.

7.1. Language Reclamation: Years 1-5

Table 13. Language reclamation costs: Years 1-5

Timeline:	Year1	Year2	Year3	Year4	Year5	TOTALS
K-12 immersion	0	0	0	0	0	**0**

TOTALS	**105,000**	**655,500**	**3,616,420**	**4,241,920**	**4,426,720**	**13,045,560**

Budget Justification

Education

- See Appendix A for capacity-building and roll-out strategy. See Appendix B for K-12 budget.
- No staffing, operations, or curriculum costs until capacity is built, beginning in Year 7.
- Infrastructure: School building constructed over the course of Years 3-6.

Language Skills Training

- Adult immersion: See Appendix C for annual budget. Program development begins in Year 5 (after completion of first MAP cohort, see below) with one teacher and one administrator hired, includes miscellaneous expenses of $15,000.
- Teacher training (interim): See Appendix A. Year 1: community mobilization and recruitment; establish an MoU with a postsecondary institution to offer cohort-based training (See Appendix D for budget). Years 2 through 5: One scholarship for BEd per year, covering tuition ($5000), books and supplies ($2000), and a wage subsidy ($30,000[31]), per annum. Total scholarship = $37,000 x 4 years = $148,000.
- ILR training: $5000 per year for community members with language interests to attend conferences, training workshops etc. (part of community mobilization). Years 2-5: One scholarship awarded every second year for ILR training; covers tuition ($5000), books and supplies ($2000), travel ($3000), wage subsidy ($30,000). Total = $40000 per year x 2 years = $80,000.
- Language documentation training: This training is to build capacity for the language documentation team; see Appendix H. Year 1: Recruitment (see community mobilization). One scholarships awarded in Year 2 for (under/)graduate training in linguistics; covers tuition ($5000), books and supplies ($2000), and wage subsidy ($30,000). Total scholarship = $37,000 x 4 years = $148,000. One scholarship awarded in Year 2 for training in archival practices; covers tuition ($3500), travel ($2000), and wage subsidy ($30,000) = $35,500 x 2 years = $71,000. Given small population, scholarships are offered every five years.

Community Programs

- Community mobilization: FPCC CCDS cites $10,000 as a cost for a community mobilization. This figure is inflated to $80,000/year in Years 1-5 to reflect low-readiness of this particular community and the necessity of solid language planning to reach community language goals. Costs may include consulting fees/salaries for language planning experts plus community outreach and mobilization events.
- Language lead: As per FPCC CCDS, identify a language revitalist in the community (via mobilization strategies). Year 2 onwards: salary, equipment, space, supplies, professional development; see Appendix E for budget.[32]
- Language camp: One camp per year, beginning in Year 2.
- Mentor-Apprentice (MAP): Begins in Year 2 with 2 teams per year @ $20,000 per team (figure taken from FPCC CCDS) + $10,000 in training and infrastructure.
- Alternative adult language learning: Not implemented until Year 6, when there is a number of proficient teachers and learners.
- Silent speaker program: $25,000 per 10-week program to support 10 speakers (figure taken from FPCC CCDS). Years 1-2: Outreach, recruitment; Years 3 onwards: One cycle of the 10-week program per year. Program is followed up with a facilitated speaking circle (to create opportunities for developing speakers to converse). Speaking circle consists of biweekly meetings; per-meeting costs: $200 facilitator, $100 space/hospitality, $50 materials = $350 x 25 meetings = $8750 + $1250 annual administration = $10,000).
- Youth leadership: Years 1 and 2: community mobilization, capacity-building; $20,000 in Years 3-5 (figure taken from FPCC CCDS, low range for anticipated low participation).

[31] Based on minimum wage of $14/hour x 40 hours/week x 52 weeks/year = $29,120, rounded up.
[32] Language lead is in lieu of language team and council proposed for Maintenance and Revitalization models; because this community is geographically isolated and speaks a unique dialect, the team approach is not applicable.

- Language nest: Planning does not begin under Year 5, following completion of first MAP cohort. Year 5 - $5000 parent/baby group outreach; $50,000 training; $50,000 program development.
- Home immersion: See Appendix G. Handbook development in Year 5; program begins in Year 6.
- Public awareness: One grant per year beginning in Year 3.
- Off-reserve programming: Beginning in Year 4: summer language intensive including language camp and other land-based/immersive activities, may include travel to reserve ($50,000).

Language Documentation

- MoU: Establish MoU with postsecondary institution in Year 2 so that linguists and students can assist with documentation projects and librarians can assist with archiving; See Appendix D.
- Documentation Team: See Appendix H. Year 1 - recruitment; see community mobilization. Year 2: hire in-training linguist and archivist as summer interns (12 weeks x 40 hours/week x $25/hour = $12,000 x 2 interns) + supplies. Year 3: Hire 2 interns, hire programmer, purchase equipment, + other operating costs. Years 4 and 5: Hire archivist (training is complete) and linguist intern. Other costs same as Year 3.
- Orthography development: See Appendix I. Program begins in Year 3 after documentation team is hired (i.e., "Year 1" in Appendix I corresponds with Year 3 in this community's model).
- Digital archive/hub: Begins in Year 4, following hiring of programmer. Year 4 - Database specialist hired on contract to assist programmer in developing archive infrastructure, based on consultations with relevant stakeholders (community members, those curating existing archives, etc.) Cloud server space = $1000/month = $12,000; Specialist consulting fees = $65,000; community consulting fees = $25,000. Years 5 onwards: cloud server space $12,000/year; consultation for archive maintenance $10,000/year; $35,000 grant program for community projects to contribute to archive (includes $10,000 in administration, outreach/advertising).
- Digitization project: Hire a student[33] to locate and digitize language materials held by community members over the course of three summers. Three-year project begins in Year 3, after language lead is hired and MoU is signed. Year 3: Salary: 12 weeks x 40 hours week x $25/hour = $12,000; equipment purchases $2500; other supplies $1000. Years 4 and 5: Salary and supplies. Phase out after Year 5.
- Oral histories/texts: Hire linguistic consultant to record and archive oral histories, myths, folklore, personal stories, etc. told by Elders, knowledge-holders, etc. Year 2: Purchase audio/video recording kit $2000. Consultant salary: 50 hours recording + 150 hours editing/archiving = 200 hours x $50/hour = $10,000. Storytellers' honoraria = 50 hours x 2 people x $50/hour = $5000. Years 3-5: Repeat all but equipment purchase.
- Dictionary: Existing dictionaries are for other dialects and are out-of-date or highly condensed. Year 3 - purchase 2 recording kits ($1000 each). Years 3-5: Students/interns hired to work with speakers to record and transcribe words. Student salaries: 50 hours recording + 200 hours transcription = 250 hours x $25/hour = $6250 x 2 students = $12500. Speakers honoraria: 100 hours x $50/hour x 4 people = $20,000. Travel: 2 trips between reserve & urban centre 920 km roundtrip x $0.50/km = $920. Accommodation: 2 trips x 5 nights x 2 people x $200/night = $4000. Hospitality, space rental = $2000. Total = $39,420.

[33] Maintenance and Revitalization models included funding for two students, but given the small population of this community, only one student is required.

- Software/ Language apps: Development begins in Year 4, $250,000/year for the first five years; $100,000/year for the subsequent five years.
- Place names/road signs: No costs in Years 1-5; project begins in Year 6 .

Media and Arts

- No costs in Year 1-5 until capacity is developed.

7.2. Language Reclamation: Years 6-10

Table 14. Language reclamation costs: Years 6-10

Timeline:	Year6	Year7	Year8	Year9	Year10	TOTALS
K-12 immersion (teaching staff)	0	110,000	170,000	170,000	280,000	**730,000**

Budget Justification

Education

- See Appendix A for capacity-building and roll-out strategy. See Appendix B for K-12 budget.
- Small community population means that several grades are combined.
- Teaching Staff - Year 7 K-1: One teacher; one EA; Year 8 K-2: Two teachers, one EA; Year 9 K-3: Two teachers, one EA; Year 10 K-4: Three teachers, two EAs.
- Operations and support staff as per Appendix B.
- Infrastructure: School building constructed over the course of Years 3-6.
- Curriculum development in Year 6. Staff introduced gradually (one in Year 6, two in Year 7, three in Years 8 onwards). (Consulting etc. costs remain static.) Equipment purchases in Year 7.

Language Skills Training

- Adult immersion: See Appendix C for annual budget. Year 6 - program begins with cohort 1 (reduced costs). Year 7 - two cohorts. Years 8 onwards - full capacity.
- Teacher training (interim): See Appendix A. Phased out after Year 8; last cohort expected to graduate Year 11
- Teacher training (long-term): See Appendix A. Year 5: Establish (/revise) MoU with postsecondary institution (See Appendix D) for long-term teacher training program. Years 6 & 7: Ongoing consultation between community and postsecondary; 2 meetings per year (See Appendix D). Year 8: 2-year program commences in Year 6, with two scholarships per year that cover tuition ($5000), books and supplies ($2000), and wage subsidy ($30,000) = $37000 x 2 years = $74,000.
- ILR training: $5000 per year for community members with language interests to attend conferences, training workshops etc. (part of community mobilization). Years 2-5: One scholarship awarded every second year for ILR training; covers tuition ($5000), books and supplies ($2000), travel ($3000), wage subsidy ($30,000). Total = $40,000 per year x 2 years = $80,000.
- Language documentation training: See Years 1-5.

Community Programs

- Community mobilization: FPCC CCDS cites $10,000 as a cost for a community mobilization. This figure is inflated to $50,000/year in Years 6-10 to reflect low-readiness of this particular community (reduced from ($80,000/year in Years 1-5). Costs may include consulting fees/salaries for language planning experts plus community outreach and mobilization events.
- Language lead: see Years 1-5. Language project manager and administrator added in Year 6.
- Language camps: one camp per year.
- Mentor-Apprentice (MAP): 2 teams per year @ $20,000 per team (figure taken from FPCC CCDS) + $10,000 in training and infrastructure.
- Alternative adult language learning: Beginning in Year 6; $250,000 per year for flexible programming, ongoing.
- Silent speaker/speaking circle: See Years 1-5.
- Youth leadership: $20,000 per year (figure taken from FPCC CCDS, low range for anticipated low participation).
- Language nest: See Appendix F. Nest begins operations in Year 6.
- Home immersion: See Appendix G. Program begins in Year 6; given small population the number of families will be less than five but given that many live off the geographically isolated reserve, travel costs may be higher, and support group meetings may need to be virtual. We assume these factors balance out, and the budget is as in Appendix G (for five families per year, ongoing). Handbook revisions in Year 10.
- Public awareness: Increase to two grants per year in Year 6.
- Off-reserve programming: Annual summer language intensive including language camp and other land-based/immersive activities, may include travel to reserve ($50,000); beginning in Year 6: introductory online course offered to 100 users with 1 half-time instructor (see Appendix C for budget; $75,000). Year 8: add an intermediate course with a second instructor.

Language Documentation

- Documentation team: See Appendix H. Year 6 - hire linguist (training is complete). Year 8 - purchase new equipment.
- Orthography development: See Appendix I. “Year 4” in Appendix I corresponds with Year 6 in this model.
- Digital archive/hub: See Years 1-5.
- Oral histories/texts: See Years 1-5; equipment purchases in Year 7.
- Dictionary: See Years 1-5. No scaling back (as with Revitalization model), as the project started “from scratch” to build a dictionary for this particular dialect. Equipment purchases in Year 8.
- Software/ Language apps: Development begins in Year 4, $250,000/year for the first five years; $100,000/year for the subsequent five years.
- Place names: Land-based project to document/reclaim traditional place names. Years 6-8: Hire consultant to travel with knowledge-holders to locations on the land, document place names and coordinates, and take photographs (Per annum: consultant 50 hours @ $50/hour = $2500; knowledge-holders 25 hours @ $50/hour x 2 people = $2500; equipment purchases in Year 6 only $5000; travel and accommodation $5000.) Year 9: Bilingual signage (community buildings, commercial properties on the reserve, road signs on the reserve) replaces current English road signs ($210,000). Year 10: pamphlets produced and distributed to community ($10,000); reclamation ceremony ($10,000). Project complete by end of Year 10.

Media and Arts

- Radio: Years 6 onwards - Hire part-time radio host for weekly 2-hour slot in the language ($20,000 for a half-time salary), guest speakers' honoraria (2 guests/week x 50 weeks x $100/guest = $10,000), travel to and accommodation closest urban centre with a radio station (400 km roundtrip x $0.50/km = $200 + $200 accommodation= $400/week x 50 weeks x 2 = $40,000).
- Television/Film - Year 6 - Form agreement with children's television production company to create cartoons in the language. ($10,000 in legal fees for agreement). Year 7 - produce season 1 to begin airing in Year 8, as K/1 immersion begins. 5 x 30-minute episodes @ $400,000/episode. Years 8-10: Produce 4 more seasons.
- Print media: Year 7 (once orthography is developed) - Establish regular column and crossword puzzle in monthly community news publication (freelance columnist salary $30/hour x 100 hours = $3000).
- Verbal arts[34]: Establish an annual grant program for verbal arts in the language @ $25,000. Annual verbal artists retreat/festival/celebration: $10,000.
- Literary arts: Beginning in Year 7 (following orthography development); Establish an annual grant program for literary arts in the language @ $25,000. Annual literary artists retreat/festival/celebration: $10,000.

7.3. Language Reclamation: Years 11-15

Table 15. Language reclamation costs: Years 11-15

Timeline:	Year11	Year12	Year13	Year14	Year15	TOTALS
K-12 immersion (teaching staff)	280,000	340,000	340,000	450,000	450,000	**1,860,000**
K-12 immersion (support staff + operations)	725,000	725,000	725,000	725,000	725,000	**3,625,000**
Immersion curriculum and resources	480,000	580,000	280,000	280,000	280,000	**1,900,000**
Education TOTALS	**1,485,000**	**1,645,000**	**1,345,000**	**1,455,000**	**1,455,000**	**7,385,000**
Adult immersion classes	700,000	700,000	700,000	700,000	700,000	**3,500,000**
Teacher training	74,000	74,000	74,000	74,000	74,000	**370,000**
ILR Training	5,000	85,000	5,000	85,000	5,000	**185,000**
Language documentation training	0	219,000	0	0	0	**219,000**
Language skills training TOTALS	**779,000**	**1,078,000**	**779,000**	**859,000**	**779,000**	**4,274,000**
Community mobilization/ Language planning	30,000	30,000	30,000	30,000	30,000	**150,000**
Language lead	213,000	213,000	213,000	213,000	213,000	**1,065,000**
Language camps/events	25,000	25,000	25,000	25,000	25,000	**125,000**
MAP	50,000	50,000	50,000	50,000	50,000	**250,000**
Alternative adult language learning	250,000	250,000	250,000	250,000	250,000	**1,250,000**
Silent speaker / Healing programs	35,000	35,000	35,000	35,000	35,000	**175,000**

[34] Smaller amount than that in the Maintenance and Revitalization models due to differences in population and community readiness. (also for literary arts)

Youth leadership	40,000	40,000	40,000	40,000	40,000	**200,000**
Headstart / Language nest	243,000	243,000	243,000	243,000	243,000	**1,215,000**

Budget Justification

Education

- See Appendix A for capacity-building and roll-out strategy. See Appendix B for K-12 budget.
- Small community population means that several grades are combined.
- Teaching Staff - Year 11 K-5: Three teachers, two EAs; Year 12 K-6: Four teachers, two EAs; Year 13 K-7: Four teachers, two EAs; Year 14 K-8: Five teachers, three EAs; Year 15 K-9: Five teachers, three EAs.
- Operations and support staff as per Appendix B.
- Infrastructure: School building constructed over the course of Years 3-6.
- Curriculum renewal in Year 11. Equipment renewal in Year 12. Three staff + consulting, research, supplies.

Language Skills Training

- Adult immersion: See Appendix C for annual budget.
- Teacher training (long-term): See Appendix A. Years 11-15: One scholarships per year that covers tuition ($5000), books and supplies ($2000), and wage subsidy ($30,000) = $37,000 x 2 years = $74,000.
- ILR training: $5000 per year for community members with language interests to attend conferences, training workshops etc. (part of community mobilization). Years 2-5: One scholarship awarded every second year for ILR training; covers tuition ($5000), books

and supplies ($2000), travel ($3000), wage subsidy ($30000). Total = $40,000 per year x 2 years = $80,000
- Language documentation training: See Years 1-5.

Community Programs

- Community mobilization: FPCC CCDS cites $10,000 as a cost for a community mobilization. This figure is inflated to $30,000/year in Years 6-10 to reflect low-readiness of this particular community (reduced from ($50,000/year in Years 6-10). Costs may include consulting fees/salaries for language planning experts plus community outreach and mobilization events.
- Language lead: See years 1-10.
- Language camps: one camp per year.
- Mentor-Apprentice (MAP): 2 teams per year @ $20,000 per team (figure taken from FPCC CCDS) + $10,000 in training and infrastructure.
- Alternative adult language learning: $250,000 per year for flexible programming, ongoing.
- Silent speaker/speaking circle: See Years 1-5.
- Youth leadership: Increase to $40,000 in Year 11 (figure taken from FPCC CCDS, mid-range for anticipated increase in participation).
- Language nest: See Appendix F.
- Home immersion: See Years 6-10. Handbook revisions in Year 15.
- Public awareness: Two grants per year.
- Off-reserve programming: Annual summer language intensive including language camp and other land-based/immersive activities, may include travel to reserve ($50,000); Year 10: add an advanced online course to beginner and intermediate offerings, with a third instructor. (see Appendix C for budget).

Language Documentation

- Documentation team: See Appendix H. Year 13 - purchase new equipment.
- Orthography development: See Appendix I. “Year 10” in Appendix I corresponds with Year 12 in this model.
- Digital archive/hub: See Years 1-5.
- Oral histories/texts: See Years 1-5; double the amount of consulting hours in anticipation of new speakers telling stories. Equipment purchases in Year 12.
- Dictionary: See Years 1-5. No scaling back (as with Revitalization model), as the project started “from scratch” to build a dictionary for this particular dialect. Equipment purchases in Year 13.
- Software/ Language apps: Development begins in Year 4, $250,000/year for the first five years; $100,000/year for the subsequent five years.

Media and Arts

- Radio: See Years 6-10.
- Print media: See Years 6-10.
- Television: Continue to produce 5 x 30-minute episodes of children’s cartoons per year. Year 11 - Form agreement with production company to dub adult programming (e.g., APTN) into the language; legal costs $10,000. Years 11-15 - dub 10 shows per year @$50,000 per episode.
- Verbal arts: Continue an annual grant program for verbal arts in the language @ $25,000. Annual verbal artists retreat/festival/celebration: $10,000.
- Literary arts: Continue an annual grant program for literary arts in the language @ $25,000. Annual literary artists retreat/festival/celebration: $10,000.

8. Additional Infrastructure Costs

The models presented in this report are *community-based*, with costs calculated on a per-community basis. This is consistent with recommendations advanced by Galley et al. (2016) based on national dialogue sessions that national or regional infrastructure supporting Indigenous language revitalization be minimal, with funding going directly to communities. However, some federal and regional networks and support will likely be necessary for any national Indigenous language legislation. Costs associated with regional and national networks are outside the scope of our report. However, we have some recommendations for particular categories of funding, as follows:

National Infrastructure

Given the vast diversity of Indigenous languages and communities across Canada, it is inappropriate to conceive of a national body providing oversight for Indigenous language revitalization programs that are implemented on a community level. Moreover, such a body would draw funding away from where it is needed most: in communities. Consistent with Galley et al.'s (2016) recommendations, we acknowledge that the best way to support Indigenous languages on a national level is for funding to go directly to communities, with few exceptions, as detailed below.

National and/or Regional Meetings and Conferences

Language revitalization programs work best when there are abilities to meet with other communities, brainstorm, collaborate and share resources. Any national Indigenous language legislation should consider the costs of national and regional meetings and conferences.

National and/or Regional Support for Digital Storage and Computation

The costing models outlined in sections 5-7 include a budget line for curating digital archives within each community. Beyond community-based digital archives, we recommend exploring possibilities around national and/or regional technical support for digital archiving. While it is likely not feasible to conceive a single centralized archive for Indigenous language materials (as this may take data control rights from communities and fails to recognize diverse types of data and diverse community needs), there may nevertheless be needs for digital storage, digital security, and computational speed that can be best handled by pooling resources at a national or regional level.

National Media (television, radio, print, video games)

Development of Indigenous language material that can be accessed across the country is recommended. Television networks (such as APTN), film productions, radio stations, print media, video games, and online resources should be developed with the aim of creating content for all Indigenous languages in Canada, and with the aim of having of nationwide audience in mind.

Public Awareness

Public awareness campaigns on Indigenous languages should be implemented. These can be in the form of museum exhibitions (such as the First Voices exhibition at the Royal BC Museum), PSAs, social media campaigns, visibility of language in public spaces (signage, translations, etc.) Governmental translation services should also be considered.

Regional Language Centres

Based on the success of the First Peoples' Cultural Council model in British Columbia, we

recommend funding for regional language centres. However, regional language centres do not necessarily need to subscribe to the FPCC model. For some language communities (for example, those that span over many provinces), provincially-based language centres may not be as feasible as language-based centres. The development and implementation of regional language centres should be carried out in consultation with Indigenous communities across Canada.

9. Accounting for Diversity

The preceding sections detail three costing models based on specific profiles of hypothetical communities. As noted in section 3, however, Indigenous communities across Canada vary in numerous ways, and while these costing models can serve as possible blueprints, they do not take into account all of the different variables that may impact the by-community costs of language revitalization. In this section, we comment on some of the sources of variation between communities, and how these may impact costs. We begin in section 9.1 with a general discussion of variables, highlighting ways in which these variables are known to impact costs. In 9.2 we consider some of the specific challenges in developing costing models for urban centres with a diversity of Indigenous peoples and languages. Then in 9.3 we focus on language reclamation, its various objectives, and the challenges in developing costing models for these endeavors.

9.1. Variables Impacting the Costs of Language Revitalization

Geography

Geographic variables include the land mass of a community, topographical features of the land that may restrict travel, proximity to urban centres and other communities speaking the same language, and whether the broader community spans provincial or international borders.

Geographic variation can shape costs in numerous ways. For example, the costing models in sections 5-7 build in travel expenses (e.g., for the language team to support home immersion, etc., for the language council to meet regularly, etc.). For these types of within-community travel, we assumed vehicle travel with moderate distances, but in some more remote or more spread out communities, other - more costly - means of travel will need to be budgeted for.

Land mass also impacts accessibility to programs. Regardless of a community's population, if it is spread out over a large area, there may need to be multiple locations administering programs (e.g., K-12 immersion, language nests) so that all community members can have access. Moreover, language communities that span international borders will also need to build in funding for international agreements to support collaboration.

Population

The number of people in a community impacts the costs in some ways (e.g., the number of scholarships for language skills training, the number of MAP or home immersion teams), but many of the language revitalization programs and strategies included in the costing models in sections 5-7 require a baseline of funding to operate regardless of the number of participants. Funding models that calculate costs on a per-person basis as opposed to a per-community basis fail to recognize this.

Population factors such as the percentage of people living on- or off-reserve, as well as where the majority of off-reserve members live, are relevant insofar as localized programming needs to be available to community members. For instance, the language revitalization model detailed in section 6 assumes a number of off-reserve members in a nearby urban centre, and budgets just

under $1,000,000 per year for urban programming once fully operational (Years 11-15). Meanwhile, the language maintenance model in section 5 assumes most members to live on-reserve and therefore did not need to include a budget line for off-reserve programming, and the language reclamation model assumes a diaspora-type situation in which off-reserve members are not centralized in one urban area, and diverse strategies such as online networks need to be budgeted for.

In short, although a per-person funding model fails to recognize the baseline funding that all communities require, the specific demographics of a community can shape its language revitalization costs in nuanced ways.

Language Vitality

On a broad scale, variables under the headings of language vitality and community readiness (see below) yield the three different categories we covered in developing the costing models, with language maintenance showing the highest language vitality, followed by language revitalization, and finally language reclamation. Language vitality variables include the number of fluent L1 speakers, the number of semi-fluent and/or silent speakers, and the number of L2 learners, the number (or percentage) of children speaking the language as well as factors such as language use in different social domains, such as in the home, workplaces, and the community.

One of the salient ways in which language vitality impacts costs is in terms of timeline. A community with few fluent speakers will first need to increase its pool of speakers before many programs (such as K-12 immersion, etc.) can be developed and implemented. Concretely, we can compare the timelines for funding in the three costing models in sections 5-. In the language reclamation model, costs are relatively low in Years 1-5 reflecting low capacity to offer programs but more than double by Years 11-15 as capacity is built. In comparison, costs are higher for the language maintenance model in Years 1-5 than in subsequent years, as language vitality is relatively high, and capacity exists for implementing programs immediately.

Community Readiness

Community readiness variables such as language attitudes, wealth of resources, education levels, youth engagement, existing programs and language documentation, and the initiative to develop and implement programs and strategies impact costs in similar ways to language vitality variables - in terms of the timeline. Generally speaking, higher-readiness communities will have higher costs in the earlier years, as they already have the capacity to undertake projects, whereas lower-readiness communities will first need to build capacity.

Lower-readiness communities may also have some additional costs, particularly if the language is not well-documented. For instance, orthography development is listed as a budget line with a total figure of approximately $100,000 in the Revitalization and Reclamation models, but this is missing from the Maintenance model because a standardized orthography is already well-established in that community.

Potential for Resource-Sharing

Depending on socio-political and geographical factors, different communities speaking the same language may be motivated to share resources, and if this potential exists, then this can lower per-community costs. For example, language councils consisting of members from multiple communities may decide collectively on programs and strategies for language revitalization. Documentation such as reference materials, curricula, and the like may be developed for use across multiple communities. However, despite these possibilities for resource-sharing, it is also important to emphasize the need for programming and documentation that is specific to each

individual community's needs. Localized programming is essential, requiring in-community programs, and dialect divisions necessitate documentation involving each community's speakers.

9.2. Challenges with Developing Urban Models

Although the focus of this report is on community-based models, we acknowledge that urban areas, along with reserves and other Indigenous communities, require significant investment in language revitalization (see Galley et al. 2016). In essence, Indigenous people need to have access to their language regardless of where they reside in Canada, and regardless of whether they are away from their home reserve for reasons of education, employment, medical needs, incarceration, etc. According to Galley et al. (2016), there must be "access and opportunity for all Indigenous people to learn their Indigenous homeland language regardless of place of residence." Thus, significant funding is needed to support Indigenous language learning in urban centres and other off-reserve locations.

The models detailed in sections 5-7 included resources for off-reserve community members, but additionally, we recommend there be targeted funds for urban populations. Understanding the costs of urban Indigenous language revitalization is challenging not only because of the current lack of investment, but also because of the diversity of languages, communities, individuals, and needs within and across urban centres. In what follows, we profile the city of Vancouver, BC as a way to highlight some of these challenges.

There are nearly 36,000 First Nations people residing in Vancouver; a small portion of these people reside in one of the nine First Nations reserves in Metro Vancouver, but the large majority are off-reserve. Off-reserve First Nations people comprise approximately 1.35% of the Vancouver's population of 2,400,000.

The 32,444 off-reserve First Nations people living in Vancouver have a diversity of language backgrounds. More than 30 Indigenous languages are represented in the Vancouver Metro area, and more language communities without speakers in Vancouver may be identified. The most populous languages/language families are listed in Table 16.

Table 16. Most populous Indigenous languages/language families in Vancouver[35]

Cree languages	230 speakers[36]
Salish languages	135 speakers
Dene languages	105 speakers
Tsimshian languages	95 speakers
Anishnaabemowin	70 speakers
Wakashan languages	55 speakers
(other	165 speakers)
TOTAL	**855 speakers**

[35] Figures are taken from the Statistics Canada 2016 census.

[36] Cree dialects exist along a dialect continuum, with varying degrees of mutual intelligibility. Included under the umbrella of Cree languages are the following: Plains Cree (40 speakers), Woods Cree (20 speakers), Swampy Cree (15 speakers), Moose Cree (5 speakers) and unspecified Cree (150 speakers).

The figures listed in Table 16 reflect the number of L1 speakers; it is unknown how many second language (L2) speakers and learners and/or semi-speaker or silent speakers of Indigenous languages there are in Vancouver. Moreover, these figures collapse dialect differences between languages.

Language communities in Vancouver may or may not be connected to the language efforts of on-reserve communities, and factors including geographic distance and the availability of digital resources impact these connections. Whether or not there are language programs in individuals' respective First Nations, and whether or not they have access to such community-based programs should they exist, should have no bearing on whether individuals may have access to their own language in Vancouver. All people have a right to learn their language, no matter where they are in Canada.

While some of the First Nations reserves in Vancouver may have individualized languages plans, the City of Vancouver as a whole does not have a centralized language plan or language committee, nor does it necessarily need one. However, strategies and programs to support Indigenous language revitalization within the city are needed. Aside from on-reserve schools and programs, to the best of our knowledge there are no off-reserve Headstart programs, Languages Nests, or K-12 language immersion programs in Vancouver. The Indigenous Focus School does not have immersion programming. Local universities offer some post-secondary Indigenous language programs, but these tend to be focused on the languages of the territory (e.g., Squamish, hən̓q̓əmin̓əm̓), as opposed to the languages represented in Table 16. It is worth pointing out, however, that training in Indigenous language revitalization may be more accessible in Vancouver than in some other areas, with both the University of British Columbia and Simon Fraser University offering relevant programs. The Mentor-Apprentice program is also accessible to language learners, via the First Peoples Cultural Council.

In terms of language documentation and resources, FirstVoices and other online sources can serve as a resource for off-reserve learners, particularly since the internet can be readily and democratically accessed (e.g., via any of the Vancouver Public Library's 22 branches). The University of British Columbia and Simon Fraser University also have reference and other materials that can be accessed.

In sum, although Vancouver is a large urban centre with a diversity of First Nations people, there is a need for programs, strategies, and resources to support language revitalization in all Indigenous languages represented in the population.

9.3. Language Reclamation

Language reclamation refers to a situation in which a language with no first language speakers (typically of any dialect) is reclaimed, often from archival materials. These languages are referred to as ***sleeping languages***, or erroneously as *extinct* languages; the term *sleeping* recognizes the possibility of language reclamation (see, e.g., Leonard 2008). Just as language maintenance, revitalization, and reclamation can be viewed as points along a spectrum, within the category of language reclamation itself, there is potential for variation. Variables include the community population, their interests and objectives, the types and quality of archival materials that exist and the community's abilities to access and digitize them, and similarities to other living languages upon which comparative reconstructions of the sleeping language can be built.

Our language reclamation model is structured around a hypothetical community, whose unique dialect does not have any remaining speakers. Strictly speaking, this community's language is

not a sleeping language, as there are speakers of other dialects. However, we chose this profile for the language reclamation model for the following reasons:

(i) Language reclamation in the strict sense is relatively rare in the current Canadian context.

In the United States, Australia, and various other parts of the world, language reclamation initiatives are either underway or have been successfully carried out (see, e.g., Baldwin et al. 2013, Leonard 2007, 2008 for Myaamia; Baird 2013 for Wampanoag; Warner et al. 2007 for Mutsun; Amery 2016 for Kaurna; Zuckermann & 2012 for Barngarla; Zuckermann & Walsh 2011 for Hebrew). However, in Canada, only a small handful of languages are suitable candidates for language reclamation. Simons and Fennig (2018) list five dormant (or sleeping) languages of Canada in the Ethnologue, namely Chinook Wawa, Seneca, Tagish, Tuscarora, and Wyandot (/Wendat). They do not list any extinct[37] languages, but Beothuk, Laurentian, Tsetsaut, and Pentlatch arguably belong in this category. Of this small handful of languages, few have surviving ancestral populations with interests in language reclamation, and few have adequate documentation to support language reclamation. In short, true language reclamation is a rare scenario in Canada.[38] Given its relatively rarity, we chose to highlight a more widespread phenomenon, one in which a community with no speakers wishes to reclaim its own dialect of language and can draw on resources from other dialects with living speakers.

(ii) For some Canadian communities, language reclamation objectives are primarily emblematic.

The objectives of language reclamation can vary from community to community, and some wish to reclaim token words or phrases for emblematic or ceremonial purposes only, rather than create new generations of speakers. Meeting objectives for emblematic language use would require significantly fewer resources and funding than creating new speakers and, keeping with our general methodology of adopting the relatively higher numbers when faced with costing discrepancies, we chose a "sleeping dialect" as a way of estimating high on the costs of language reclamation.

(iii) *"True" language reclamation methodologies and workflows are largely undefined and constrained by systemic barriers, creating challenges for developing a community-based costing model.*

Lukaniec (2017) notes that the process by which a sleeping language is awakened is not yet well-defined, as at least in the early stages it cannot rely on established language revitalization methods such as MAP, language nests, or immersion programs. She advocates for the need for increased dialogue around language reclamation methodology and uses Wendat as an illustrative example.

The Huron-Wendat community has been engaged in language reclamation initiatives for over a decade (see also Dorais et al. 2011), and to the best of our knowledge, Wendat is the only sleeping language in Canada to have undergone a process of re-awakening. Since 2007, community members and researchers have worked together to locate archival materials, digitize

[37] The EGIDS scale partitions sleeping languages into two categories, ***dormant***, in which the language "serves as a reminder of heritage identity for an ethnic community, but no one has more than symbolic proficiency," and ***extinct***, in which the language "is no longer used and no one retains a sense of ethnic identity associated with the language" (Lewis and Simons 2010).

[38] Megan Lukaniec (p.c., May 2018) suggests that, although currently rare, language reclamation may become more common in Canada as critically endangered languages lose their speakers.

and transcribe them, and reconstruct the vocabulary and grammar of the language based on comparisons with related languages. Each of these steps is enormously time-consuming and costly, and because this work on Wendat continues today alongside new initiatives including teacher training, pedagogical resource development, and language classes, determining the precise costs and timeframes is difficult if not impossible.

Moreover, there are a number of systemic barriers that slow this work down. According to Megan Lukaniec (p.c., May 2018), current policies in place at Federal, other jurisdictional, and institutional levels do not facilitate Indigenous peoples' access to their own community's archived materials. Depending on the institution and the materials, access may be denied, or materials may be viewed only, without repatriation or even duplication for community use. Federal policy should be developed to enforce community access to their own archival materials for purposes of language reclamation. For those materials that can be readily accessed, they are often not digitized and significant human resources must go towards this time-consuming endeavor. Once digitally accessible, materials need to transcribed and analyzed by linguistic experts; as emphasized in other sections of this report, skills-based and targeted training is needed.[39] Overarching all of these steps is a need for sustainable long-term funding to carry out this lengthy and critically important process. There are many funding opportunities for language documentation, particularly of languages with very few speakers (e.g., the National Science Foundation's DEL Program, the Endangered Languages Documentation Project, etc.), but fewer funds are available for using existing documentation for language reclamation.

In short, for language reclamation to be a viable path for Indigenous communities facing a loss of speakers, policies and funding structures must be put in place to support the work. Once these barriers are removed, language reclamation will be a relatively more straightforward endeavor, although many years of "behind the scenes" work in analyzing archival materials and reconstructing the language will be required before language revitalization programs such as those outlined in our costing models can begin.

10. Best Practices in Researching Costs of Indigenous Language Revitalization

By way of concluding this report, we offer our recommendations for best practices in conducting this type of research, as well as research and resources that can build on this report. These recommendations are based on our own reflections about research methods we employed in this work that we consider effective, as well as methods and strategies we were not able to incorporate.

- Developing costing models on a per-community basis (as opposed to, e.g., per-language or per-person basis) reflects the needs and interests of diverse communities to develop their own within-community programming.

- Developing community profiles with population figures, land mass, etc., facilitates concrete estimations of costs in a way that abstract models could not.

[39] Megan Lukaniec (p.c., May 2018) notes that the Breath of Life workshops (http://nationalbreathoflife.org/) are an excellent starting point, but that more in-depth training in working with archival materials is also necessary.

- Consultations with "on-the-ground" language educators, language revitalists, and other experts yields a comprehensive and realistic picture of the costs of developing and implement language revitalization programs and strategies, particularly the sometimes hidden or overlooked costs not considered from an academic or otherwise outside perspective.

- Due to a systemic lack of funding and support for Indigenous language revitalization, existing programs tend to operate on a "shoestring" budget, with underpaid staff, under-developed resources, and inadequate infrastructure. Budgeting appropriately for the necessary costs, and erring on the side of over-estimating, will ensure that programs can operate effectively.

- Restricting the research to three broadly conceived categories (language maintenance, revitalization, and reclamation) obscures many of the nuanced sources of variation between communities. Ideally, this research would expand to include more points along the spectrum of language revitalization, with multiple exemplars from each category.

- Missing from this report is any consideration of language revitalization outside of Canada, such as in New Zealand, Hawai'i, Wales, the United States, Greenland, and Mexico. Future research would benefit from an international comparison between Canada and other places.

- As this area of research is relatively new, the level of detail is relatively high, and the variation between communities is vast, a more expansive timeframe would permit a more in-depth and well-rounded study.

- Should this report be used to estimate costs of Indigenous language revitalization in Canada on a national scale, we recommend that formulae be developed for situating the over 600 First Nations communities in Canada in comparison to the three models developed here, taking into account the variables outlined in section 9. We do not advocate for communities to simply be partitioned into the three categories of language maintenance, revitalization, and reclamation, as this obscures important sources of variation between communities. We trust that an economist will have expertise in developing the appropriate formulae and will consult with Indigenous language experts as needed.

- Beyond its potential to assist with costing Indigenous language revitalization for legislative purposes, this report can be used to develop tools and resources for communities, as it details comprehensive language plans for three stages of language revitalization and develops model frameworks and budgets for specific programs and strategies.

Appendix A. Model for Introducing K-12 Language Immersion Education

Outlined in this document is a 15-year plan for building capacity to staff a K-12 immersion program with educators who are also fluent speakers. Different communities are at different stages along this plan and starting dates can be adjusted accordingly; Year 1 as listed here is for communities in which there are some fluent speakers in the community who could be trained as teachers, but due to their advancing age, will not work for many years before retirement. It is assumed that these communities also have some younger adults who are not fluent speakers but could go through a period of intense language immersion as well as teacher training.

HOW TO READ THIS DOCUMENT: Cohorts are colour-coded. Track a cohort's progression by following the colour from Year 1 through to Year 15. Cohorts in the A(dult) stream can continue on to the T(eacher training) stream. Graduates of the Ti(=Teacher training Interim) or the T(eacher training) stream can continue on to teach in the K-12 immersion school

Years 1-5 Highlights:

- Community mobilization is included as a budget line under community programs and is intended not just for generating interest in K-12 immersion, but also interest in other language revitalization programs

- Infrastructure development is included as its own budget line under education, and includes the cost of building a community-based school

- Adult immersion is conceived of as a full-time postsecondary program, along the lines of the Onkwawenna Kentyohkwa Mohawk immersion program at Six Nations or the Squamish language immersion program at Simon Fraser University. It is assumed that, by the end of Year 3 in this program, students will graduate with advanced fluency.[1] By this point, the long-term teacher training program will be in place and (some) graduates of the immersion program can continue on to teacher training.

- The interim teacher training strategy is designed to provide Bachelor of Education degrees to fluent speakers. A short time window (one year) is budgeted for program development, as this could simply involve entering into an interim agreement with a local accredited institution to offer already-developed education programming to a community.

- The long-term teacher training strategy is designed to offer immersion education certification that is ***customized*** for fluent speakers of a given language and designed to meet the community's language immersion needs. Steam-lined to shorten the path to creating teachers for language immersion, it can be combined with the adult immersion program to form a comprehensive

[1] The estimate of three years to advanced fluency is based on discussions with Brian Maracle, Program Coordinator of the Onkwawenna Kentyohkwa Mohawk immersion program.

degree program. The program may include general as well as community-specific pedagogical training, and may be cohort-based and flexible, with distance learning or off-campus/in-community course offerings. [2]

	Year 1	Year 2	Year 3	Year 4	Year 5
K-12 immersion	Community mobilization	Planning, infrastructure development	Planning, infrastructure development	Infrastructure, Curriculum development	Infrastructure, curriculum development family (/student) recruitment
Adult immersion	Recruitment – staff	Recruit cohort 1A Staff hired for set up, incl. curriculum development	Year 1, cohort 1A Recruit cohort 2A	Year 2, cohort 1A Year 1, cohort 2A Recruit cohort 3A	Year 3, cohort 1A Year 2, cohort 2A Year 1, cohort 3A Recruit cohort 4A
Teacher training – interim strategy	Recruit cohort 1Ti Program development	Year 1, cohort 1Ti Recruit cohort 2Ti	Year 2, cohort 1Ti Year 1, cohort 2Ti Recruit cohort 3Ti	Year 3, cohort 1Ti Year 2, cohort 2Ti Year 1, cohort 3Ti Recruit cohort 4Ti	Year 4, cohort 1Ti Year 3 cohort 2Ti Year 2 cohort 3Ti Year 1 cohort 4Ti
Teacher training development – long term strategy	n/a (interim solution developed, see above)	n/a	Form agreement w/ postsecondary for customized degree (education + fluency)	Community consultation w/ postsecondary	Community consultation w/ postsecondary

[2] This is fashioned after, e.g., the agreement the Tsuu T'ina Nation has with the University of Calgary to offer customized cohort-based education training to Tsuu'tina community members.

Years 6-10 Highlights:

- Graduates of cohort 1Ti (the first year of the interim teacher training strategy) begin teaching in the K-12 immersion program in Year 6, beginning with a K/1 split, and adding a grade each year
- Adult immersion continues
- The interim teacher training strategy is phased out by Year 9 (one year overlap with the long-term strategy)
- The long-term teacher training strategy is implemented; (some) graduates of the adult immersion will transition into this program. The first cohort graduates in Year 8
- The number of students admitted to teacher training programs exceeds the number of required teachers, but this can accommodate e.g., attrition, retirements, changes and/or advancements in career, alternative paths, etc.

	Year 6	Year 7	Year 8	Year 9	Year 10
K-12 immersion	K,1 taught by cohort 1Ti	K,1,2 (cohort 1Ti ,2Ti)	K,1,2,3 (cohort, 1Ti ,2Ti, 3Ti, 1T)	K,1,2,3,4 (cohort 1Ti ,2Ti, 3Ti, 4Ti / 1T / 2T	K,1,2,3,4,5 Cohort 1Ti, 2Ti, 3Ti, 4Ti, 1T / 2T, 3T
adult immersion	Year 3, cohort 2A Year 2, cohort 3A Year 1, cohort 4A	Year 3, cohort 3A Year 2, cohort 4A Year 1, cohort 5A	Year 3, cohort 4A Year 2, cohort 5A Year 1, cohort 6A	Year 3, cohort 5A Year 2, cohort 6A Year 1, cohort 7A	Year 3, cohort 6A Year 2, cohort 7A Year 1, cohort 8A
Teaching training – interim program	Year 4, cohort 2 Year 3, cohort 3 Year 2, cohort 4	Year 4, cohort 3 Year 3, cohort 4	Year 4, cohort 4	n/a (phased out)	n/a (phased out)
Teacher training – long-term strategy	Year 1, cohort 1T	Year 2, cohort 1T Year 1, cohort 2T	Year 2, cohort 2T Year 1, cohort 3T	Year 2, cohort 3T Year 1, cohort 4T	Year 2, cohort 4T Year 1, cohort 5T

Years 11-15 Highlights:

- Continue adding a year of immersion programming each year (grade 10 is reached by Year 15; grade 12 is projected for Year 17)
- All other programs running at full capacity

	Year 11	Year 12	Year 13	Year 14	Year 15
K-12 immersion	K-6 Cohort 1Ti, 2Ti, 3Ti, 4Ti, 1T / 2T, 3T, 4T	K-7 1Ti, 2Ti, 3Ti, 4Ti, 1T / 2T, 3T, 4T, 5T	K-8 1Ti, 2Ti, 3Ti, 4Ti, 1T / 2T, 3T, 4T, 5T, 6T	K-9 1Ti, 2Ti, 3Ti, 4Ti, 1T / 2T, 3T, 4T, 5T, 6T, 7T	K-10 1Ti, 2Ti, 3Ti, 4Ti, 1T / 2T, 3T, 4T, 5T, 6T, 7T, 8T
Adult immersion	Year 3, cohort 7A Year 2, cohort 8A Year 1, cohort 9A	Year 3, cohort 8A Year 2, cohort 9A Year 1, cohort 10A	Year 3, cohort 9A Year 2, cohort 10A Year 1, cohort 11A	Year 3, cohort 10A Year 2, cohort 11A Year 1, cohort 12A	Year 3, cohort 11A Year 2, cohort 12A Year 1, cohort 13A
Teacher training	Year 2, cohort 5T Year 1, cohort 6T	Year 2, cohort 6T Year 1, cohort 7T	Year 2, cohort 7T Year 1, cohort 8T	Year 2, cohort 8T Year 1, cohort 9T	Year 2, cohort 9T Year 1, cohort 10T

Appendix B. Model Budget for K-12 Immersion School

This document provides a sample budget for the personnel, operations, resource costs, and equipment costs for a K-12 immersion school. The budget was compiled based on the following sources:

- 2015 annual report and 2017 audit for Kawenni:io/Gaweni:yo Immersion School
- Additional information about Kawenni:io/Gaweni:yo Immersion School provided by Linda Staats and Amos Key Jr. (p.c., March 2018)
- Simons (2016): Report on Eskasoni Immersion School
- Additional information about Eskasoni Immersion School provided by Ida Denny, Arlene Stevens, Elizabeth Paul, Dianne Friesen, and Terry Lynn Marshall (p.c., March 2018)
- Information about Chief Atahm School provided by Rob Matthew (p.c., April 2018)
- Information about the SENĆOŦEN immersion program at ŁÁU, WELN̲EW̲ Tribal School provided by Tye Swallow (p.c., May 2018)
- Information about the Yup'ik immersion school
- Information about Indigenous language curriculum development provided by Sarah Kell and Blaire Gould (p.c., March 2018)

Operating strategies and budgets can vary widely depending on factors such as student population, teacher-student ratio, school aims and scope, community involvement, etc. Many of those we consulted reported that schools are under-resourced and staff are underpaid.[1] For this budget, we increased staff and resources, and associated salaries and costs according to our consultants' feedback.

Here and in the budgets calculated for each costing model the costs are broken down into the following categories: (i) teaching staff, (ii) support staff and operations, (iii) curriculum and resource development. Each is discussed in turn below.

Teaching staff

The number of teaching staff varies depending on which grades are taught and how many students are in the class. Our consultants emphasized the need for small teacher/student ratios, and for adequate support from Educational Assistants (EAs).

Teaching salaries are calculated as follows: **Teacher salary is $60,000 per annum**, based on the average salary for primary school teachers in Canada ($51,046[2]), with a surplus for language expertise. **EA salary is $50,000 per annum**, based on the average salary for EAs in Canada ($23/hr[3], or $47,000 per year) with a surplus for language expertise.[4]

---

[1] These shortages are based on the fact that the schools need to produce balanced budgets each year. Eskasoni Immersion School and Kawenni:io/Gaweni:yo Immersion School both receive approximately $1.5 million from INAC each year, based on a formula that calculates monies provided on a per-student basis. This income requires that the schools operate under with a $1.5 million budget, a figure that requires sparsely distributed resources and staff paid at below national averages.

[2] http://www.statcan.gc.ca/pub/81-604-x/2016001/t/tbld2.1-eng.htm (Accessed March 2018)

[3] https://ca.indeed.com/salaries/Education-Assistant-Salaries (Accessed March 2018)

[4] Not accounted for in the budget are salary increases over time (e.g., annual merit-based, service-based, or inflation-based raises).

Support staff and operations

The outline of this budget mimics that of the Kawenni:io/Gaweni:yo Immersion School, which is the one full budget we had access to (via the 2017 audit). Salaries have been adjusted to be on par with national averages, and utilities and insurance costs have been increased to reflect infrastructure upgrades (i.e., the building of a new school). Professional development costs have been increased to reflect the necessity of ongoing training in immersion pedagogy, including via global networking with other immersion schools (e.g., in New Zealand, Hawaii, etc.)[5] Family engagement costs have also been increased, based on the Chief Atahm model, which includes take-home materials for language immersion in the home, language lessons for parents, an annual retreat for all staff, parents, and students, and regular celebrations.

Salary - Principal[6]	100,000
Salaries - Other support staff (Receptionist, Operations/Maintenance x 2, Guidance, IT) x $50,000 each, average	250,000
Honoraria – Elders	30,000[7]
Equipment purchases and maintenance	5,000
Family engagement (parent language classes, home resources, etc.)	100,000
Office supplies/expenses	40,000
Operations/maintenance	75,000
Professional development	75,000
Travel/transport	10,000
Utilities	15,000
Insurance	25,000
TOTAL	**$725,000**

Regarding honoraria, Elders play a significant role at Chief Atahm School, not only as support staff, but in team-teaching positions, as some of the teachers themselves are not fluent in the language. In such situations, the cost associated with paying Elders will increase substantially.

Curriculum and resource development

Curriculum framework documents (e.g., IRPs, Integrated Resource Packages) establish the learning objectives and benchmarks for a learning program. Teaching resources such as lesson plans, textbooks, readers, project outlines, and assessment materials are developed to be in line with the curriculum. While teaching resources are continually being developed and adapted, curriculum frameworks do not require continual renewal. Based on consultations with

[5] This was a point advocated by Rob Matthew, who noted that extensive ongoing training for immersion educators is essentially, including networking with other Indigenous language revitalization experts in other parts of the world. Professional development expenses must include travel to support global networking.

[6] https://www.payscale.com/research/CA/Job=Elementary_School_Principal/Salary (March 2018)

[7] This number reflects a situation in which the teachers themselves deliver the course content in the language. In communities with few or no younger speakers, Elders could work alongside teachers and receive salaries for this work. This is the case at Chief Atahm.

curriculum development experts Sarah Kell and Blaire Gould, the budget includes a **K-12 curriculum renewal every five years at the cost of $200,000**.[8]

As for the development of teaching resources, the budget includes **salaries for up to five full-time staff at $60,000 per annum each** (based on a $55,000 per year average salary in Canada[9] plus a surplus for language expertise). The staff may include a combination of educators, content writers, editors, graphic or digital artists, etc.

In addition to the staff, the budget includes an additional **$100,000 per year** for consultation with Elders and other experts, research and production, and supplies. This figure is based roughly on expenses quoted in the Kawenni:io/Gaweni:yo Immersion School 2017 audit.

Finally, the budget also includes **$300,000 every five years for equipment**. Following the Chief Atahm model, there is a budget for in-house materials development, which requires equipment such as a printing press, CD/DVD press, label makers, etc., in addition to the basic computer equipment required for the curriculum development team.

[8] Blaire Gould quoted $87,000 for a K-12 curriculum renewal, and Sarah Kell quoted $150,000 for a 5-12 IRP, including consultation fees, Elders' honoraria, travel and hospitality, and printing costs.
[9] https://www.payscale.com/research/CA/Job=Curriculum_Developer/Salary (March 2018)

Appendix C. Annual Budget for Adult Immersion Program

This budget details the costs of an adult immersion program modelled after the Onkwawenna Kentyohkwa Program operating at Six Nations Grand River Territory. Details of the program and associated costs are based on consultations with Brian Maracle (p.c, March 2018), as well as via the program website (www.onkwawenna.info/).

The actual budget for the Onkwawenna Kentyohkwa Program is much lower than that presented here ($380,000 per annum) because staff and students are underpaid and facility space is smaller than adequate and rented at a reduced cost. The program is designed to take beginners with little or no prior knowledge of the language and create speakers with advanced fluency over the course of three years. A pre-program online course provides an introduction to the grammar and vocabulary of the language and serves as an assessment tool for program admission. Once admitted to the program, students are in class full-time, completing 1000 hours of coursework each year. They are paid a stipend for their time in class. On staff is one teacher for each year of the program, two teaching assistants (TAs) to assist with the three courses, one part-time teacher to manage the online course, and one administrator. Teaching assistants are advanced students of the program, or other students from the community. Classes are taught September-April, and curriculum is developed and revised May-August. Twelve students are admitted to the first year of the program. Given normal rates of attrition, eight students will typically continue on to the second year, and four will continue on to the third year.

Annual Budget

Instructors	3 full-time @ $64,000[1]; 1 half-time @ $32,000	$224,000
Teaching assistants	2 TAs @ $25/hour x 500 hours	$25,000
Student salaries	$14/hour x 1000 hours x 24 students[2]	$336,000
Facility rental	1500 sq. foot classroom + 2 x 1000 sq. foot classroom + 500 sq. foot office = 2500 square feet, $5000 per month[3]	$60,000
Online course hosting	$10000 licensing + $10/user @ 300 users per year[4]	$13,000
Administrator	1 full-time staff member[5]	$35,000
Miscellaneous Costs	Materials, etc.	$7000[6]
TOTAL		**$700,000**

[1] https://www.payscale.com/research/CA/Job=Instructor%2C_Postsecondary_%2F_Higher_Education/Hourly_Rate (Accessed March 2018)
[2] Based on minimum wage in Ontario: https://www.ontario.ca/page/minimum-wage-increase (Accessed March 2018)
[3] Based on survey of commercial real estate spaces available in Brantford, Ontario in March 2018
[4] The current waitlist for the Onkwawenna Kentyohkwa online program is 250 people and growing. An improved course hosting platform will allow waitlisted users to access the course more quickly.
[5] https://www.payscale.com/research/CA/Job=Office_Administrator/Hourly_Rate/1dd19bb4/Entry-Level (Accessed March 2018)
[6] These costs should in fact be much higher, to account for ongoing professional development for staff and equipment purchases and upgrades.

Appendix D. Budget for Establishing an MOU with a Postsecondary Institution

Memoranda of Understanding (or MOUs) with postsecondary institutions – or divisions of postsecondary institutions – may be required to establish agreements surrounding the development and delivery of accreditation programs (e.g., teacher training), the archiving and access of language materials, or the creation of partnerships for purposes of language documentation.

The following document provides a framework for establishing an MOU between a community and a postsecondary institution, and a budget for implementing that framework. The framework and budget are based on the first author's (Heather Bliss) experience in acting as a liaison for establishing similar agreements between the University of Calgary and members of the Siksika Nation (see Bliss & Breaker 2018).

This framework allows for two meetings between representatives from the community and from the postsecondary institution – one discussion meeting and one finalization meeting. Representatives from the community include: one language coordinator, two Elders, and two educators. It is assumed that the meeting will be held in the community, and that postsecondary representatives in attendance will be responsible for their own travel expenses.

Budget

Hospitality	$300 per meeting x 2	$600
Facility rental	$100[1] per meeting x 2	$200
Honoraria for Elders and educators[2]	$400 per meeting x 2	$800
Materials – printing costs	$100 per meeting x2	$200
Miscellaneous	e.g., legal fees to notarize MOU	$700
TOTAL		**$2500**

[1] For example, small board rooms for 8 people are available for rent at Siksika Resource Development Ltd. For $100/day.

[2] It is assumed that attendance at such meetings is included in the language coordinator's job description.

Appendix E. Framework and Budget for Language Team and Council

For many communities, the language is shared with neighbouring communities, and although there may be sociopolitical differences between these communities and/or linguistic differences between the language varieties of each community, there is often a shared interest amongst communities in working together to make decisions about the language and to share language resources.

The current framework for language team and council assumes shared decision-making and resources amongst neighbouring communities that share resources. The budget is also shared amongst the communities, proportionate to their populations.

The language team is comprised of full-time staff that can develop and implement language plans, oversee projects and programs, develop resources, and establish partnerships. These staff will be trained in ILR, and their agenda will be informed by decisions made by the language council. Salaries are budgeted as follows: language program coordinators $75,000[1]; language project managers $50,000[2], administrator $40,000[3]. The number of staff in each position will vary according to the community's population and needs; the budget outlined below is for two coordinators, three managers, and one administrator. In addition to the full-time staff, consultants will be hired periodically for projects. A language documentation team is also included in the costing models; this appears as a separate budget line under Language Documentation. The documentation team can share facilities with the language team.

Office space is calculated at the rate of $2000/month. Supplies are budgeted at $10,000/year. Equipment is budgeted at $20,000 every five years. Team travel to communities is via three vehicles, as follows: Car lease $500/month; insurance $200/month; fuel $800/month = $1500 total; $18,000/year x 3 = $54,000. Professional development costs of $2000 per coordinator/manager allows for travel and registration at conferences, training workshops, etc.

The language council is comprised of 2 representatives from each community (e.g., one Elder, one educator). A semi-annual meeting/conference of educators, Elders, activists, and other stakeholders will, amongst other things, establish council members for a two-year term. Cost = $50,000. An annual meeting of the council and team will allow for discussion and decisions on language-related issues. Cost = $25,600[4].

Annual Budget

Team salaries	$340,000
Office space and supplies	$34,000
Equipment	$4000
Team transportation	$54,000
Professional development	$10,000
Semi-annual meeting (per year cost)	$25,000
Annual team / council meeting	$25,600
TOTAL	**$492,600**

[1] https://www.payscale.com/research/CA/Job=Program_Project_Manager/Salary. (April 2018)
[2] https://www.payscale.com/research/CA/Job=Project_Coordinator%2C_(Unknown_Type_%2F_General)/Salary (April 2018)
[3] https://www.payscale.com/research/CA/Job=Administrative_Assistant/Salary (April 2018)
[4] Costs include space rental and hospitality $10,000 plus per representative costs: Travel 500 km roundtrip x $0.50 = $250 + $200 accommodation (1 night) + honorarium $200 = $650 x 24 = $15600.

Appendix F. Annual Budget for a Language Nest

The document outlines costs associated with operating a language nest, based on consultations with Edo̱sdi Judy Thompson (March, April 2018) regarding language nests in the Tahltan community. The Tahltan community is operating two language nests in different geographic regions, each of which accommodates six children. (In large communities, multiple nests are needed to accommodate community demand.) The budget given below is modelled after the operating budget for one of these nests[1], but accommodates increases in hourly wages for staff and Elders, increases in number of operating weeks (from 30 weeks to 50, with 2 weeks paid vacation for staff), and budget lines for family engagement and professional development, both essential and underfunded according to Dr. Thompson.

Annual Budget

Licensing[2]		$1500[3]
Insurance		$500[4]
Facility rental	$1000/month	$12,000
Staff – coordinator salary	$30/hour[5] x 35 hours/week x 52 weeks	$54,600
Staff – assistant salary	$20/hour[6] x 35 hours/week x 52 weeks	$36,400
Staff - Elders (2) salaries	$25/hour x 35 hours/week x 52 weeks x 2	$91,000
Guests – honoraria	1 guest per week @ 50 weeks x $100)	$5000
Food ($200/week)	$200/week x 50 weeks	$10,000
Materials/resources/supplies		$20,000
Family engagement	$500/month	$6000
Professional development		$6000
TOTAL		**$243,000**

[1] The annual budget for one Tahltan nest is $79,550. The annual budget for the W̱SÁNEĆ language nest pilot project was $88,720 (information provided by Tye Swallow). Both are underfunded, according to the model developed here.

[2] The Tahltan language nests do not have daycare licenses as they are not, strictly speaking, offering childcare.

[3] This is a generous estimate, assuming some variation across provinces. In Ontario, licensing fees are $100/month for a childcare centre with under 25 children. Source: http://www.edu.gov.on.ca/childcare/pdfs/child-care-licensing-manual-en.pdf (April 2018)

[4] Cost estimated based on information provided here: https://fitsmallbusiness.com/daycare-insurance-cost-coverage/ (March 2018)

[5] Salary based on Canadian average of $22.67/hour (https://www.payscale.com/research/CA/Job=Director%2C_Child_Care/Salary), adjusted to $30 for language and culture expertise.

[6] Salary based on Canadian average of $15.85/hour (https://www.payscale.com/research/CA/Job=Early_Childhood_Educator_(ECE)/Hourly_Rate), adjusted to $20 for language and culture expertise.

Appendix G. Framework and Budget for Home Immersion

This framework and budget for home immersion support programs is inspired by Britt Thorburn's (2016) MA thesis on supporting Indigenous language learning in the home. Thorburn describes home immersion programs that have been successfully implemented amongst Indigenous communities in the United States and Canada which modify the Mentor-Apprentice approach to support multigenerational family-based language acquisition. With mentorship and support of a language development team, families can develop goal-based language plans that draw on resources including language lessons for parents, support groups, and assessments.

Under the framework adopted here, a mentor is assigned to supervise and support families undertaking five-year home immersion programs. We assume that this mentorship will be included in the job description of one of the language team members; their salary is included under the budget line for language team and council. (Hiring takes place in Year 1).

In Year 2, a consultant will be hired to develop a handbook for the home immersion program, including vocabulary "cheat sheets," a language planning guide, and a checklist for monthly and annual milestones. We budgeted **$50,000** for the initial development of this handbook (consulting and material fees), and **$25,000** every five years following for handbook revisions.

The program commences in Year 3 with five families (Cohort A). A new cohort begins the program every two years, as diagrammed below.

Year:	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**13**	**14**	**15**
	A	A	A	A	A								
			B	B	B	B	B						
					C	C	C	C	C				
							D	D	D	D	D		
									E	E	E	E	E
											F	F	F
													G
Total # families	5	5	10	10	15	10	15	10	15	10	15	10	15

Families enrolled in the program will receive a resource kit comprised of the handbook, a video camera, and wireless microphones. (Audiovisual equipment will be used to track progress and complete assessments.)

Throughout the program, the mentor will make semi-weekly visits to the families, and parents will take a 12-week language learning course every year. There will also be a biweekly support group for families enrolled in the program.

The annual budget to support five families is presented below.

Annual budget – per 5 families

Mentor travel - semi-monthly visits to families (500 km @ 0.50/km x 12 = $1200)	$1200
Family resource kit (video camera, microphones, handbook = $3000) x 5[1]	$15000
Parent lessons – 12-week course ($6000 for instructor[2]; $1200 for facility rental; $1200 for childcare; $100 materials)	$8500
Support group – semi-weekly @ $100 facility rental + $100 hospitality = $200 x 25	$5000
Other miscellaneous fees	$300
TOTAL	**$30,000**

[1] This estimate is generous, as it assumes families will require replacement equipment every year.
[2] Based on equivalent cost for a postsecondary sessional instructor to teach a 12-week course.

Appendix H. Framework and Budget for Language Documentation Team

The language documentation team is comprised of one or more linguists, one or more archivists, and one or more programmers. Along with the language team and council, the documentation team may be comprised of members of multiple communities who share the same language. Training in linguistics and archival practices is included in the language skills training section. Community members may be employed as interns while undergoing their training (intern salaries are described in the budget justifications).

Salaries are budgeted as follows:

- Linguists: $60,000 - $80,000 per annum[1]
- Archivists: $50,000 per annum[2]
- Programmers: $65,000 per annum[3]

As the documentation team will work closely with the language team, it is assumed that they will share office space. (Office space costs included under language team budget line.) Supplies are budgeted at $10,000 per annum. Professional development is budgeted at $10,000 per annum.

Assuming one BA linguist, one archivist, and one programmer, the annual budget is as follows:

Salaries	175,000 – 195,000
Office space	0
Supplies	10,000
Professional development	10,000
TOTAL	**$195,000 - $215,000**

Equipment costs are **$40,000 every five years** (4 computers @ $2000 each; printer/copier @ $5000; 5 audio recorders w/ microphones @ $1000 each; 5 video recorders w/ microphones and tripods @ $3500 each; 10 hard drives @ $200 each).

The language team will develop and oversee documentation projects and curate a sustainable archive for materials. Consultants will be hired to assist with specific projects, as detailed in the language documentation budget justifications for each model. Specific projects may require specific equipment, as detailed for each project.

[1]Range is based on education ($60,000 for BA obtained; $80,000 for MA obtained). Lower end consistent with FPCC 'Community Capacity Development Strategy' - $60,000 for Language Lead (similar role – gather resources, oversee documentation projects).
[2]https://www.payscale.com/research/CA/Job=Archivist/Salary (April 2018)
[3]https://www.payscale.com/research/CA/Job=Software_Engineer_%2F_Developer_%2F_Programmer/Salary (April 2018)

Appendix I. Framework and Budget for Orthography Development and Spelling Reform

While all Indigenous communities in Canada have long oral traditions, for many, written language is a relatively new innovation. Designing a standardized writing and spelling system can be challenging, as communities need to agree on the best ways to represent the language accurately while also making the writing system easy enough to use. Factors such as dialectal variation can create complications, as communities may need to decide which variant of a particular word to use as the standard. This document outlines a framework and budget for collaboratively developing and implementing a writing and spelling standard.

This framework is inspired by the following:

- Baraby's (2003) paper on Innu orthography development
- Information supplied by Marguerite MacKenzie (p.c., March 2018) about implementing the Innu orthography post-2003
- Spence's (1997) report on the Omushkego Cree Syllabic Project

The framework includes the involvement of a **linguist**, who can act as a consultant to advise on phonetic/phonological issues related to spelling and draft the orthography documents for community review. We assumed a rate of pay of **$50/hour** for the linguist consultant.

The framework also includes a steering committee, consisting of one member from each community. For purposes of budgeting, we assume **4 steering committee members**. (The linguist consultant will also attend all steering committee meetings.) The steering committee meets regularly, as outlined below, and is compensated for their preparation and meeting time at $50/hour, their travel at $0.50/km[1], and their accommodation at $200/night.

Additionally, the steering committee hosts a **conference** to which educators, Elders, and other community members are invited to attend and offer feedback on committee recommendations. For budgeting purposes, we assume 3 members from each of the 4 communities will attend (in addition to the steering committee).

To implement the new orthography once it is developed, **spelling guides** are distributed in print and online to community members **($1000). Spelling contests** are organized in schools, at community events, and online to encourage the use of the new standard. **Prizes** are given out to support this initiative (**$10,000**).

The timeline and budget are as follows:

Year 1: Linguist consultant identifies/documents sources of variation		
Consulting fees	100 hours x $50/hour	$5000
Year 2: Steering committee holds two one-day meetings to review spelling variants and compile list of recommendations		
Consulting fees	8 hours x 4 (2 days meetings + 2 days prep) x $50/hour x 5 people	$8000

[1]For communities spread out over large geographic ranges or in isolated areas, travel costs will be higher, as travel may involve water or air transport, not just vehicle.

Travel	300 km roundtrip x 2 trips x $0.50/km = $300 each x 5 people	$1500
TOTAL		**$9500**
Year 3: Steering committee holds a one-day meeting and hosts a three-day conference; Linguist consultant drafts orthography guidelines based upon decisions reached at conference		
Consulting fees	6 days (4 meetings + 2 prep) x 8 hours x $50/hour x 5 people	$12000
Travel – committee	300 km roundtrip x 2 trips x $0.50/km x 5 people	$1500
Accommodation – others	2 nights accommodation @ $200/night x 5	$2000
Honoraria – others	12 people x 3 days x $100 honoraria	$3600
Travel – others	300 km roundtrip x $0.50/km x 12 people	$1800
Accommodation – others	2 nights accommodation @ $200/night x 12	$4800
Conference costs	space rental ($3000) + hospitality ($3000) + materials ($1000)	$7000
Linguist (draft guide)	4 days x 8 hours x $50/hr	$1600
TOTAL		**$34,300**
Year 4: Spelling guides distributed; spelling contests organized		
Spelling guides		$1000
Spelling contents		$10000
TOTAL		**$11,000**
Year 5, 6, 8, 10: Spelling contests organized		
Spelling contents		**$10,000**

This is Exhibit "18" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

ANNUAL GENERAL ASSEMBLY
July 24, 25 & 26, 2018, VANCOUVER, BC

Resolution no. 42/2018

TITLE:	**Data Sovereignty**
SUBJECT:	Fiscal Relations
MOVED BY:	Chief Maureen Chapman, Skawahlook First Nation, BC
SECONDED BY:	Chief Harvey McLeod, Upper Nicola Indian Band, BC
DECISION:	Carried by Consensus

WHEREAS:

A. The United Nations Declaration on the Rights of Indigenous Peoples (UN Declaration) states:

   i. Article 4: Indigenous peoples, in exercising their right to self-determination, have the right to autonomy or self-government in matters relating to their internal and local affairs, as well as ways and means for financing their autonomous functions.

   ii. Article 34: Indigenous peoples have the right to promote, develop and maintain their institutional structures and their distinctive customs, spirituality, traditions, procedures, practices and, in the cases where they exist, juridical systems or customs, in accordance with international human rights standards

B. As First Nations in Canada, we have asserted self-determination through various forms since time immemorial and we continue today to assert our authority to govern as distinct Nations of Peoples with unique languages and cultures and sacred connections to our traditional homelands.

C. First Nations are at various stages of re-constituting their Nations and developing modern governance structures to achieve their collective vision of healthy, self-determining, and vibrant citizens, families, and communities.

D. The *Royal Commission on Aboriginal Peoples* recognized the need for information: "For Aboriginal People, knowing how political, demographic, social and economic changes will affect their nations and having in place

Certified copy of a resolution adopted on the 26th day of July, 2018 in Vancouver, British Columbia

Perry Bellegarde

PERRY BELLEGARDE, NATIONAL CHIEF

Head Office/Siège Social
Unit 5 — 167 Akwesasne International Rd., Akwesasne, ON K6H 5R7 Telephone: 613-932-0410 Fax: 613-932-0415

data collection vehicles that provide a community and Nation level aggregate picture will be essential to Aboriginal government implementation and planning processes" (Vol, 2, p 349).

E. First Nations are redesigning their institutions and building capacity to carry out the functions of governance, including: leadership, law and policy making, citizenship, community involvement, planning and risk management, human resource management, financial management, basic administration, external relations, and information management and technology.

F. First Nations recognize that timely access to high quality statistical information and data are essential to making informed decisions that affect the social and economic well-being of their citizens and have, through the national Assembly of First Nations process, passed numerous resolutions related to assertion of data governance interests including a request for federal investments.

G. Funding has been allocated in the most recent federal budget to have the national First Nations Information Governance Centre (FNIGC) work with First Nations leadership through their regional organizations to undertake the development of a National Data Governance Strategy, which includes the development of Regional Data Centres to be governed by the Nations.

H. First Nations have been actively engaged in informing the Treasury Board of Canada's Secretariat on Indigenous Open Data.

I. The FNIGC vision is "that every First Nation will achieve data sovereignty in alignment with its distinct worldview."

J. Funding has also been allocated to Statistics Canada to improve the quality of statistical information related to Indigenous Peoples.

THEREFORE BE IT RESOLVED that the Chiefs-in-Assembly:

1. Reassert that First Nations living in Canada maintain ownership and control over data that relates to their identity, their people, language, history, culture, communities and Nations, both historic and contemporary, and that each Nation will establish regulations to govern their data, determining how it will be managed, accessed and shared with other governments, organizations and/or individuals.
2. Call on the First Nations Information Governance Centre (FNIGC) to coordinate (with support from the federal government, Statistics Canada, and the Assembly of First Nations) regional processes to engage First Nation

Certified copy of a resolution adopted on the 26th day of July, 2018 in Vancouver, British Columbia

Perry Bellegarde

PERRY BELLEGARDE, NATIONAL CHIEF

Chiefs and leaders in each province and territory to discuss improving the quality of or access to data or statistical information related to their people and Nation.

3. Call on the Government of Canada to allocate funding to the FNIGC to align engagement processes related to First Nations data, statistics, and information management, and to expedite the development of First Nations' controlled Regional Information Governance Centres as part of the National First Nations Data Governance Strategy.
4. Assert that in the future all federal, provincial, and territorial government investments in First Nations data governance and analysis, information management, statistics, and reporting must align with the objective of each First Nation achieving full data governance, building and maintaining across their government, the capacity to collect, store, protect, analyze, and utilize data in their decision-making and reporting, measuring their own progress towards the outcomes defined in their community development and nation rebuilding plans.

SPECIAL CHIEFS ASSEMBLY
December 6,7,8, 2022, Ottawa, ON

Resolution no. 40/2022

TITLE:	**To Ensure Quality of Life to the First Nations Child and Family Services Program and Jordan's Principle**
SUBJECT:	Child and Family Services
MOVED BY:	Kukpi7 Judy Wilson, Neskonlith Indian Band, BC
SECONDED BY:	Kevin Hart, Proxy, Little Grand Rapids First Nation, MB
DECISION	Carried by consensus

WHEREAS:

A. The First Nations Child and Family Caring Society ('Caring Society') and the Assembly of First Nations (AFN) filed a discrimination claim in 2007 alleging Canada's inequitable funding of First Nations child and family services and its choice not to implement Jordan's Principle were discriminatory, which resulted in harms including the removal of children from their families and communities and those delayed and denied in receiving services.

B. The Canadian Human Rights Tribunal (CHRT) substantiated the discrimination claim in 2016 CHRT 2 and ordered Canada to immediately cease its discriminatory conduct towards First Nations children and families.

C. The CHRT ruling establishes that First Nations children and families are legally entitled to receive prevention services and the least disruptive measures.

D. Between 2016 and 2021, the First Nation parties were required to hold Canada accountable and return to the Tribunal on multiple occasions, resulting in 21 non-compliance orders.

E. In the wake of First Nations and public pressure related to the children in unmarked graves near Residential

Certified copy of a resolution adopted on the 8th day of December, 2022 in Ottawa, Ontario

ROSEANNE ARCHIBALD, NATIONAL CHIEF

Schools and the Federal Court's dismissal of two of Canada's appeals, the federal government finally admitted that the discrimination was ongoing and asked the parties to negotiate a resolution.

F. In fall 2021, the complainants (the Caring Society and AFN), the interested parties (Chiefs of Ontario & Nishnawbe Aski Nation) and Canada entered into negotiations to resolve outstanding discrimination pursuant to the CHRT orders.

G. On December 31, 2021, an Agreement in Principle (AIP) was signed as a framework for the negotiation of a Final Settlement Agreement on First Nations child and family services, Jordan's Principle, and the reform of Indigenous Services Canada.

H. The CHRT issued an order (2022 CHRT 8) by consent of the parties providing funding for prevention, post-majority services, and other measures. This funding, combined with an order on capital (2021 CHRT 41) and other previous CHRT orders, amounts to over 75% of the $19.807 billion over 5 years announced as part of the AIP.

I. Community-driven research to inform long-term funding solutions for child and family services for First Nations with and without agencies is not due to be completed until the Spring of 2023, and dates for a final funding approach on Jordan's Principle are still being defined.

J. The Final Settlement Agreement will have a direct impact of unprecedented magnitude on the lives of First Nations children, their families, and their communities.

THEREFORE BE IT RESOLVED that the First Nations-in-Assembly:

1. Direct Canada to ensure that funding and other mechanisms related to long-term reform measures regarding child and family services enable First Nation Child and Family Services (FNCFS) Agencies and First Nation child and family service providers to deliver services based on substantive equality, best interests of the child, that is culturally appropriate and takes into full account the distinct circumstances of their communities.

2. Direct Canada to ensure that any interim and long-term reform measures, including the Reformed CFS Funding Approach, do not reduce or disrupt current funding levels and are sufficiently flexible to respect First Nations authorized service providers to deliver child and family services at a level that protects and promotes the best

Certified copy of a resolution adopted on the 8th day of December, 2022 in Ottawa, Ontario

ROSEANNE ARCHIBALD, NATIONAL CHIEF

interests of their children in keeping with the principles of sovereignty, inherent jurisdiction, and nation-to-nation building.

3. Direct the Parties to develop evidence-and policy-based options for the long-term reform of Jordan's Principle that will include mechanisms to enable and support self-determination and to return to the First Nations-in-Assembly for review and approval.
4. Call upon Canada to extend the timeframes for signing the Final Settlement Agreement (FSA) on long-term reform. The First Nations-in-Assembly must approve the FSA on long-term reform.
5. Call upon Canada to increase funding commitments above the currently allocated $19.807 billion, over 5 years and beyond, that is needs-based to ensure substantive equality, the best interests of the child, and services that are culturally appropriate and reflective of the distinct needs and circumstances of individual First Nation communities.
6. Direct Canada to fund the Assembly of First Nations National Advisory Committee on First Nations Child and Family Services Program Reform and regional and other technical experts to inform the FSA.
7. Call upon Canada to ensure Chiefs shall be provided with all available options and related supporting financial resources and materials to ensure First Nations can exercise their Free, Prior and Informed Consent on long-term reforms.
8. Ensure that the FSA does not detract from the right of the Parties to the current complaint before the CHRT from seeking orders from the Tribunal to ensure that all First Nations children, youth, and families will be free from discrimination and its recurrence for all generations to come.
9. Call upon Canada to develop legislative protections to ensure that First Nations have sufficient liability coverage over the services they provide.
10. Call upon Canada to continue funding capital at actual costs for First Nations, FNCFS Agencies and First Nation Service Providers, pursuant to 2021 CHRT 41, until otherwise ordered by the Tribunal.

SPECIAL CHIEFS ASSEMBLY
October 16, 17, 18, 2024, Calgary, AB **Resolution no. 60/2024**

TITLE:	**Addressing Long-Term Reform of the First Nations Child and Family Services Program and Jordan's Principle**
MOVED BY:	Khelsilem, Council Chairperson, Squamish Nation, BC
SECONDED BY:	Chief Ira McArthur, Pheasant Rump Nakota First Nation, SK
DECISION	Carried; 7 opposition; 10 abstention

WHEREAS:

A. The *United Nations Declaration on the Rights of Indigenous Peoples* (UN Declaration) states:

- **i.** Article 18: Indigenous peoples have the right to participate in decision-making in matters which would affect their rights, through representatives chosen by themselves in accordance with their own procedures, as well as to maintain and develop their own Indigenous decision-making institutions;
- **ii.** Article 19: States shall consult and cooperate in good faith with the Indigenous peoples concerned through their own representative institutions in order to obtain their free, prior, and informed consent before adopting and implementing legislative or administrative measures that may affect them; and
- **iii.** Article 37: Indigenous peoples have the right to the recognition, observance and enforcement of treaties, agreements and other constructive arrangements concluded with States or their successors and to have States honour and respect such treaties, agreements, and other constructive arrangements.

B. Recognizing the sacredness of First Nations children, youth and families and Jordan's Principle, a child-first legal requirement ensuring substantively equal and culturally appropriate access to products, services and supports for First Nations children, and that the government entity of first contact pays for the support without delay.

C. The First Nations Child and Family Caring Society (Caring Society) and the Assembly of First Nations (AFN) filed a Canadian Human Rights Act complaint in 2007 alleging Canada's inequitable provision of First Nations Child and Family Services (FNCFS) and its choice not to implement Jordan's Principle were discriminatory resulting in serious and irremediable harms.

Certified copy of a resolution adopted on the 18th day of October, 2024 in Calgary, Alberta

Woodhouse.

CINDY WOODHOUSE NEPINAK, NATIONAL CHIEF

D. The parties ("CHRT Parties") to the 2007 Canadian Human Rights Act complaint included:

- **i.** The AFN;
- **ii.** The Chiefs of Ontario;
- **iii.** The Nishnawbe-Aski Nation;
- **iv.** Caring Society;
- **v.** The Canadian Human Rights Commission; and
- **vi.** Amnesty International;

E. The Canadian Human Rights Tribunal (CHRT) substantiated the discrimination claim in 2016 CHRT 2 and ordered Canada to cease its discriminatory conduct immediately.

F. Between 2016 and 2024, the CHRT Parties were required to hold Canada accountable and return to the Tribunal on multiple occasions, resulting in 24 non-compliance and procedural orders.

G. On December 31, 2021, an Agreement in Principle (AIP) was signed as a framework for the negotiations of a Final Settlement Agreement (FSA) on First Nations child and family services, Jordan's Principle, and the reform of Indigenous Services Canada.

H. The Final Settlement Agreement will have a direct impact of unprecedented magnitude on the lives of First Nations children, youth, their families, and their communities for generations to come.

I. The CHRT Parties have agreed to split the FSA negotiations with a child and family services agreement to come first and an agreement on Jordan's Principle to follow.

J. Canada has entered negotiations with some of the CHRT Parties (AFN, Chiefs of Ontario, Nishnawbe-Aski Nation) to complete an FSA on child and family services while other CHRT Parties are not included (Caring Society, the Canadian Human Rights Commission, and Amnesty International).

K. In 2022 CHRT 8, the CHRT ordered the creation of the Expert Advisory Committee (EAC) composed of independent and multidisciplinary experts to develop and oversee the implementation of an evidence-informed workplan to prevent the recurrence of discrimination by ISC.

L. The CHRT ordered the federal government to work with the Parties to completely overhaul the on-reserve child and family services program and fully implement Jordan's Principle.

M. As a result, an agreement was made to re-establish the National Advisory Committee on First Nations Child and Family Services Program Reform (the NAC) to address issues pertaining to child and family services reform, including funding, legislation, immediate relief, Jordan's Principle and other reforms.

N. The NAC was mandated by the First Nations-in-Assembly to provide expert advice on long-term reform of FNCFS.

O. The NAC has not:

- **i.** completed its review of the proposed funding model for First Nations agencies;
- **ii.** begun to review the proposed funding model for First Nations without agencies; or
- **iii.** met since February 8, 2024.

Certified copy of a resolution adopted on the 18th day of October, 2024 in Calgary, Alberta

Woodhouse.

CINDY WOODHOUSE NEPINAK, NATIONAL CHIEF

P. The AFN has not set any further NAC meetings despite requests to do so.

Q. The AFN and Caring Society requested that the Institute of Fiscal Studies and Democracy (IFSD) conduct community-based research to inform the reform of the FNCFS Program and Jordan's Principle.

R. Recalling and reaffirming Resolution 40/2022, *To Ensure Quality of Life to the First Nations Child and Family Services Program and Jordan's Principle*, directing:

- **i.** the Parties to develop evidence-and policy-based options for the long-term reform of Jordan's Principle that will include mechanisms to enable and support self-determination and to return to the First Nations-in-Assembly for review and approval;
- **ii.** Canada to extend the timeframes for signing the FSA on long-term reform. The First Nations-in-Assembly must approve the FSA on long-term reform; and
- **iii.** Canada to fund the AFN National Advisory Committee on First Nations Child and Family Services Program Reform and regional and other technical experts to inform the FSA.

S. In light of these legal proceedings and their outcomes, it is critical to ensure that any long-term reforms of the FNCFS Program and Jordan's Principle are driven by community-led processes that reflect the needs of First Nations children and families, and that any agreements related to the FNCFS Program and Jordan's Principle (the LTR Agreements) shall meet the needs of First Nations children, youth and families.

THEREFORE BE IT RESOLVED that the First Nations-in-Assembly:

Final Settlement Agreement

1. Reject the draft Final Settlement Agreement on Long-Term Reform of the First Nations Child & Family Services Program dated July 11, 2024 and the "Proposed Amendments on the Draft Agreement on Long Term Reform" released on or about October 7, 2024, and call for a new negotiation process for agreements related to the First Nations Child and Family Services (FNCFS) Program and Jordan's Principle (the LTR Agreements) to be developed and approved by the First Nations-in-Assembly based on the spirit and intent of this resolution.

Governance and Transparency of the LTR Agreements for the FNCFS Program and Jordan's Principle

2. Direct the Assembly of First Nations (AFN) Executive Committee to adopt the following approach to the LTR Agreements negotiations:

- **a.** establish a national Children's Chiefs Commission with representation appointed by every region (including regions not represented by the AFN) that will work openly and transparently to provide strategic direction and oversight of the LTR Agreements negotiations, reporting back to the First Nations-in-Assembly;
- **b.** the Children's Chiefs Commission will establish a negotiation team, with regional representation and a new legal team, that will be responsible for carrying out the negotiations for the LTR Agreements under the direction of, and reporting to, the Children's Chiefs Commission;

c. the negotiation team's Terms of Reference for the FNCFS Program will be provided to the First Nations-in-Assembly for approval no later than December 2024 ; and

d. the Children's Chiefs Commission shall report to the First Nations-in-Assembly in December 2024 as to its anticipated timeframes for the completion of the negotiations in relation to the FNCFS Program and on the anticipated timeframes for the Terms of Reference for Jordan's Principle.

3. Direct the AFN Executive Committee and the Children's Chiefs Commission to ensure that governance structures set out in an LTR Agreement shall uphold the sacredness of children, youth, and families, be transparent, open, and accountable to First Nations, preserve First Nations decision-making, and include the guidance of youth, youth in care and formerly in care, and First Nations child and family service experts.

4. Direct the AFN Executive Committee and the Children's Chiefs Commission to develop an open and transparent amendment process for the First Nations-in-Assembly to suggest changes, allow for consideration of those changes, and make changes to the LTR Agreements before being put to a vote, such process to be approved by the First Nations-in-Assembly.

5. Direct the Children's Chiefs Commission to provide a detailed report to the First Nations-in-Assembly on all suggested amendments, the decisions made on each amendment, and the outcomes of negotiations, before the First Nation-in-Assembly proceed with any decision-making on the LTR Agreements.

6. Direct the AFN to refrain in the future from committing to support or otherwise make efforts to procure support from First Nations leadership on an agreement, arrangement, protocol or other similar instrument that has not been approved by First Nations-in-Assembly.

Inclusion and Representation

7. Direct the AFN Executive Committee and the Children's Chiefs Commission to take positive and effective measures throughout the respective LTR Agreement negotiations, review, and approval processes (including at the negotiation tables) to seek out and incorporate the expertise of:

a. First Nations;

b. First Nations child and family service providers;

c. Jordan's Principle experts;

d. Elders and Youth;

e. the National Advisory Committee ("NAC");

f. Jordan's Principle Operations Committee (JPOC), and;

g. Regional experts.

8. Direct the AFN Executive Committee and the Children's Chiefs Commission to review and approve the Terms of Reference for the NAC no later than December 2024.

9. Call upon Canada and direct the AFN Executive Committee to unconditionally include the Caring Society in negotiations of the LTR Agreements on the FNCFS Program and Jordan's Principle, and to conduct those negotiations pursuant to a negotiation protocol developed in collaboration with the Caring Society,

including the requirement that those negotiations be conducted in a manner that is open, transparent, and accountable to First Nations.

10. Call upon Canada to obtain a new negotiation mandate to address the matters in this resolution.

Communication and Feedback

11. Call on Canada to fulfill its obligation to consult with First Nations on any long-term reform approaches of the FNCFS Program and Jordan's Principle in a manner consistent with honour of the Crown.

12. Direct the AFN Executive Committee to postpone any votes on the LTR Agreements or any other agreements until all First Nations have had at least 90 days to review the complete agreement with appendices, available in both official languages.

13. Call on Canada to ensure that First Nations who are not AFN members are given a formal opportunity to express their views on the LTR Agreements, and for Canada, the AFN Executive, and the Children's Chiefs Commission to fully consider and incorporate those perspectives into the LTR Agreements.

Voting

14. Direct the AFN to ensure that First Nations Chiefs and Proxies can vote on the LTR Agreements virtually, in-person, or by another means (via specific accommodation to a Chief or Proxy), to accommodate First Nations leadership who are unable to attend in person due to community circumstances or emergencies.

15. Direct the AFN Executive Committee to support the EAC to conduct its work freely as an independent expert body and invite the EAC Members and NAC Members to present to the First Nations-in-Assembly in December 2024 and prior to any vote on the LTR Agreements.

Support and Resources

16. Call on Canada to provide funding for First Nations to secure independent legal and technical advice, ensuring that all communities can review the LTR Agreements with a full understanding of its implications.

SPECIAL CHIEFS ASSEMBLY
October 16, 17, 18, 2024, Calgary, AB **Resolution no. 61/2024**

TITLE:	**Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services**
MOVED BY:	Proxy, Judy Wilson, Skawahlook First Nation, BC
SECONDED BY:	Chief Carolyn Wahobin, Nekaneet First Nation, SK
DECISION	Carried; 6 opposition; 4 abstention

WHEREAS:

A. The *United Nations Declaration on the Rights of Indigenous Peoples* (UN Declaration) states:

- **i.** Article 18: Indigenous peoples have the right to participate in decision-making in matters which would affect their rights, through representatives chosen by themselves in accordance with their own procedures, as well as to maintain and develop their own Indigenous decision-making institutions;
- **ii.** Article 19: States shall consult and cooperate in good faith with the Indigenous peoples concerned through their own representative institutions in order to obtain their free, prior and informed consent before adopting and implementing legislative or administrative measures that may affect them; and
- **iii.** Article 37: Indigenous peoples have the right to the recognition, observance and enforcement of treaties, agreements and other constructive arrangements concluded with States or their successors and to have States honour and respect such treaties, agreements, and other constructive arrangements.

B. First Nations Chiefs are elected by the citizens of their Nations to make informed decisions on their behalf.

C. The Assembly of First Nations, Chiefs of Ontario, Nishnawbe Aski Nation and Canada have reached a counsel-endorsed draft Final Settlement Agreement on long-term reform of the First Nations Child and Family Services Program (FSA).

D. The draft FSA, if accepted by the First Nations-in-Assembly and the Canadian Human Rights Tribunal, will have a direct impact of unprecedented magnitude on the lives of First Nations children, youth, their families, and their communities for generations to come.

Certified copy of a resolution adopted on the 18th day of October, 2024 in Calgary, Alberta

Woodhouse.

CINDY WOODHOUSE NEPINAK, NATIONAL CHIEF

E. First Nations Chiefs and their advisors need adequate time to review, consider, comment, and give direction to make amendments to the draft FSA.

F. A failure to provide adequate time for Chiefs to review and consider the draft FSA contravenes article 18 of the UN Declaration and impedes Chiefs in discharging their responsibility to make the best, fully-informed decisions possible on behalf of their citizens.

THEREFORE BE IT RESOLVED that the First Nations-in-Assembly:

1. Reject the draft Final Settlement Agreement (FSA) on Long-Term Reform of the First Nations Child and Family Services program dated July 11, 2024 and the "Proposed Amendments on the Draft Agreement on Long-Term Reform" released on or about October 7, 2024, and direct the Children's Chiefs Commission (as defined in Assembly of First Nations (AFN) Draft Resolution 02/2024) to renegotiate the draft FSA in keeping with the directions of First Nations-in-Assembly including but not limited to:

- **a.** Amend the purpose and associated text of the agreement to clarify that the agreement is intended to hold Canada accountable to stop the discrimination and prevent its recurrence;
- **b.** Restore First Nations Chiefs as the key decision-makers on long-term reform;
- **c.** Expand the principles to include honour of the Crown, Canada's responsibility to fully end discrimination and ensure it never happens again, intergenerational equity, transparency, accountability and inclusivity;
- **d.** Make governance of long-term reform transparent and accountable to First Nations Chiefs;
- **e.** Incorporate ongoing and meaningful oversight by, and consultation with, the National Advisory Committee on Long-Term Reform of the First Nations Child and Family Services (FNCFS) Program;
- **f.** Preserve the mandate and independence of the Expert Advisory Committee to reform Indigenous Services Canada (ISC);
- **g.** Expand the scope and strengthen the role of the Dispute Resolution Tribunal and ensure the remedies available to the Canadian Human Rights Tribunal (CHRT) are also available to the Dispute Resolution Tribunal;
- **h.** Strengthen the Regional Modifications provisions to align with the CHRT orders that First Nations children must have access to and receive needs based, substantively equal, culturally appropriate services that account for the distinct circumstances of their communities;
- **i.** Ensure that the definition of "First Nations child" as defined in 2020 CHRT 36 is considered and incorporated into the FSA;
- **j.** Ensure that prevention funding is allocated as follows:
  - **i.** to First Nations to develop and deliver prevention programming in line with their self-determined service delivery model(s); and

ii. to FNCFS agencies to ensure they can deliver prevention in a substantively equitable manner in keeping with legislative requirements to meet the needs of First Nations children and their unique cultural circumstances.

k. Ensure there is an evidence-informed, needs-based funding structure that is responsive to the distinct circumstances and needs of First Nations children and their families and can be upwardly adjusted to address those needs and circumstances on a First Nations, regional or sub-regional basis;

l. Ensure there is a region-specific, independent First Nations-led technical secretariat for each province/territory;

m. Ensure that Canada puts in place sufficient liability coverage and statutory immunity for First Nations and FNCFS Agencies in relation to the services they provide, and ensuring that Canada shall be the insurer of last resort for First Nations and FNCFS Agencies that have exercised good-faith decision-making;

n. Ensure that Canada discloses all federal-provincial-territorial service level agreements during the negotiation process and consults with those affected First Nations throughout the negotiation process; and

o. Ensure the CHRT retains jurisdiction over implementation of any FSA.

2. Call upon Canada to obtain a new negotiation mandate to address the matters in this resolution.

3. Direct Canada to fully implement the funding principle of predictable, stable, sustainable, needs-based funding in the form of an unconditional grant consistent with the principles of substantive equality and cultural continuity in line with the CHRT orders to secure long-term positive outcomes for First Nations children, families and societies.

4. Direct Canada and the AFN to refrain from bringing any motions or seeking direction from the CHRT to set aside existing CHRT orders, including but not limited to 2018 CHRT 4, 2021 CHRT 41 and 2022 CHRT 8, without the prior approval of First Nations-in-Assembly.

5. Direct the Children's Chiefs Commission to ensure that any FSA does not abrogate or derogate from First Nations' title rights, treaty rights or in any way limit or diminish Canada's duty to consult, fiduciary obligations to First Nations or the honour of the Crown.

SPECIAL CHIEFS ASSEMBLY
December 3, 4, 5, 2024, Ottawa, ON **Resolution no. 87/2024**

TITLE:	**Ensuring Fair and Equitable Inclusion of the Northwest Territories in the Child Welfare Compensation and Long-Term Reform Final Settlement Agreement**
SUBJECT:	Children and Families
MOVED BY:	Chief April Martel, K'atl'odeeche First Nation (Hay River Dene Reserve), NT
SECONDED BY:	Chief Phillip Blake, Gwichya Gwich'in Dene First Nation, NT
DECISION	Carried; 1 opposition; 10 abstentions

WHEREAS:

A. The *United Nations Declaration on the Rights of Indigenous Peoples* (UN Declaration) affirms the following rights:

- **i.** Articles 2, 3, 4, 5, 7(2), 11(1), 13(1), 15(2), 18, 19, 22(2), 37(1) and 43 – affirm the rights of Indigenous peoples to self-determination, including self-governance, in relation to children and their families, the right to free, prior and informed consent, and the right to be free from discrimination.
- **ii.** Article 2: Indigenous peoples and individuals are free and equal to all other peoples and individuals and have the right to be free from any kind of discrimination, in the exercise of their rights, in particular that based on their indigenous origin or identity.
- **iii.** Article 18: Indigenous peoples have the right to participate in decision-making in matters which would affect their rights, through representatives chosen by themselves in accordance with their own procedures, as well as to maintain and develop their own indigenous decision-making institutions.

B. The Truth and Reconciliation Commission of Canada (TRC) Calls to Action #1 to #5 call on federal, provincial and territorial governments to take actions to improve First Nations child and family services.

C. The Child Welfare Compensation and Long-Term Reform Final Settlement Agreements were established to provide financial compensation to those Indigenous children and families who were impacted by the child welfare system in Canada.

Certified copy of a resolution adopted on the 4th day of December, 2024 in Ottawa, ON

Woodhouse.

CINDY WOODHOUSE NEPINAK, NATIONAL CHIEF

D. The Northwest Territories has been disproportionately historically impacted by the child welfare system in Canada, resulting in the separation of many Indigenous children from their families and cultural roots.

E. The Northwest Territories has been excluded from the Child Welfare Compensation and Long-Term Reform Final Settlement Agreements, despite being impacted by this system.

F. It is the duty and obligation of the Assembly of First Nations to advocate for the rights and interests of all Indigenous Nations across Canada and ensure that they are all equitably included in any agreements, or nation to nation treaties, or settlements concerning their peoples.

THEREFORE BE IT RESOLVED that the First Nations-in-Assembly:

1. Call upon the Government of Canada to acknowledge and take action to address the historical impact of the child welfare system on Indigenous Children in the Northwest Territories.

2. Direct the Assembly of First Nations to call upon the Government of Canada to fairly and equitably include the Dene Nation First Nations of the Northwest Territories in the Child Welfare Compensation and Long-Term Reform Final Settlement Agreements.

SPECIAL CHIEFS ASSEMBLY
December 3, 4, 5, 2024, Ottawa, ON **Resolution no. 88/2024**

TITLE:	**Implementing the Chiefs' Direction to End Canada's Discrimination in First Nations Child and Family Services**
SUBJECT:	Children and Families
MOVED BY:	Chief Trevor Prince, Sandy Bay Ojibway First Nation, MB
SECONDED BY:	Chief Jason Daniels, Swan Lake First Nation, MB
DECISION	Carried; 70 opposed; 6 abstentions

WHEREAS:

A. First Nations affirm the love we have for our children and our collective goal of ensuring that they grow up proud of who they are, able to speak their languages and free of the multi-generational burden of Canada's discrimination;

B. First Nations honour the Residential School Survivors and the Truth and Reconciliation Commissioners who included child and family services and Jordan's Principle as the top Calls to Action;

C. First Nations honour the Murdered and Missing Women and Girls and Members of the 2SLGBTQAI community who identified child and family services and Jordan's Principle as priorities in the MMIWG Final Report Calls to Justice;

D. Canada's widespread and ongoing discrimination towards First Nations children through Residential Schools, the 60's Scoop and its contemporary underfunding of vital public services for First Nations fuel factors such as multi-generational trauma, addictions, poverty, poor housing and domestic violence that contribute to First Nations children going into care at 19.2 times higher rates than non-Indigenous children and other harms.

E. The *United Nations Declaration on the Rights of Indigenous Peoples* (UN Declaration) states:

i. Article 18: Indigenous peoples have the right to participate in decision-making in matters which would affect their rights, through representatives chosen by themselves in accordance with their own procedures, as well as to maintain and develop their own Indigenous decision-making institutions.

Certified copy of a resolution adopted on the 4th day of December, 2024 in Ottawa, ON

Woodhouse.

CINDY WOODHOUSE NEPINAK, NATIONAL CHIEF

ii. Article 19: States shall consult and cooperate in good faith with the Indigenous peoples concerned through their own representative institutions in order to obtain their free, prior, and informed consent before adopting and implementing legislative or administrative measures that may affect them.

iii. Article 37: Indigenous peoples have the right to the recognition, observance and enforcement of treaties, agreements and other constructive arrangements concluded with States or their successors and to have States honor and respect such treaties, agreements, and other constructive arrangements.

F. In 2016 CHRT 2, the Canadian Human Rights Tribunal (CHRT) substantiated a human rights complaint filed by the First Nations Child and Family Caring Society (Caring Society) and the Assembly of First Nations (AFN) in 2007 regarding Canada's discriminatory and inequitable First Nations Child and Family Services (FNCFS) and its repeated failure to respect and implement Jordan's Principle named after Jordan River Anderson of Norway House Cree Nation. Canada was ordered to immediately cease its discriminatory conduct. Canada failed to do so and over 20 procedural and non-compliance orders have been issued to date.

G. 2016 CHRT 2 and subsequent CHRT orders have confirmed that Canada must take account of the distinct circumstances of the child and family and ensure services are culturally appropriate.

H. The parties (CHRT Parties) to the 2007 Canadian Human Rights Act complaint included:

i. Complainant: AFN;

ii. Complainant: Caring Society;

iii. Commission: Canadian Human Rights Commission; and

iv. Interested Parties: Amnesty International (granted in 2009 to address international human rights law), Chiefs of Ontario (granted in 2009 respecting the 1965 Indian Welfare Agreement), Nishnawbe Aski Nation (NAN): (Granted in 2016 regarding remoteness in NAN territory) and the BC Leadership Council (Granted 2024 respecting Jordan's Principle affecting First Nations in British Columbia).

I. In December of 2023, Canada entered into confidential negotiations with some of the CHRT Parties hereinafter referred to as the FSA Parties: AFN, Chiefs of Ontario, Nishnawbe-Aski Nation to complete an FSA on child and family services while other CHRT Parties are not included (Caring Society, Canadian Human Rights Commission, and Amnesty International).

J. The Caring Society was not a party as Canada had breached the Agreement in Principle (AIP) providing a framework for the negotiations by not complying with Jordan's Principle resulting in tragic harms and deaths of children. The Caring Society filed a non-compliance motion against Canada to address its failure to follow through on CHRT orders on Jordan's Principle – a step that was prohibited under the AIP framework.

K. The negotiations failed to implement the direction of the First Nations-in-Assembly who adopted AFN Resolution 40/2022, *To Ensure Quality of Life to the First Nations Child and Family Services Program and Jordans Principle*, requiring that the CHRT parties retain the right to return to the Tribunal to address

Canada's discrimination, regional experts inform the draft FSA and that the Parties return with options for First Nations Leadership to consider.

L. On July 11, 2024, the FSA Parties released an incomplete draft of the FSA (draft FSA) in English only. The French version followed about a month later. The FSA Parties did not entertain substantive amendments, and the proposed approach had significant flaws in governance, funding durability and security, and ensuring non-discrimination. Paragraph 45 of the draft FSA also provided for regional approaches, but Canada was not obligated to provide additional funding to ensure those regional variations that are essential to taking full account of the distinct circumstances of the child and ensure services are culturally appropriate.

M. Contrary to Canada's obligations under Inherent rights, the UN Declaration and Treaty Rights, the draft FSA also required that First Nations cede their decision making over the reformed funding approach that would directly affect First Nations children to a secret committee.

N. Paragraph 379 of the draft FSA required approval by First Nations Leadership. After conducting due diligence by consulting independent legal and child and family services experts, the First Nations-in-Assembly rejected the draft FSA and voted to reset the negotiation process.

O. The Assembly of First Nations has not yet publicly and clearly agreed to implement the direction in the resolutions adopted by the First Nations-in-Assembly.

THEREFORE BE IT RESOLVED that the First Nations-in-Assembly:

1. Call on Canada and direct the Assembly of First Nations (AFN) to publicly and fully commit to respecting and following the direction of the First Nations-in Assembly arising from the rejection of Draft Resolution 01-2024, and adoption of Resolutions 60-2024 and 61-2024 at the Special Chief's Assembly held on Treaty 7 Territory on October 16-18, 2024.

2. Direct the AFN Executive to adopt an approach that:

- **a.** Ensures that any new proposal for long term reform in First Nations child and family services provide for a national umbrella agreement to ensure non-discrimination with regional agreements that take full account of the distinct circumstances, cultures and the Inherent rights of the children and the First Nations they belong to; and
- **b.** Ensures that such regional agreements are funded in a manner that safeguards First Nations children, youth and families from discrimination now and forever.

3. Urge Canada to discharge its duty to consult and AFN to reject any proposal to supplant and/or adversely affect Canada's duty to consult, Honor of the Crown and other obligations to First Nations.

Safeguarding First Nations rights and approval processes:

4. Direct the AFN to ensure that First Nations Chiefs and Proxies can vote on the Long-Term Reform (LTR) Agreements virtually, in-person, or by another means (via specific accommodation to a Chief or Proxy); to accommodate First Nations Leadership who are unable to attend in person due to community circumstances or emergencies; to ensure that no changes are to be made to the voting procedure, including quorum or approval thresholds; and not to undertake other measures that adversely affect the

direction given by the First Nations-in-Assembly at the meeting on October 16-18, 2024 on Treaty 7 territory.

5. Direct the AFN Executive to support the First Nations Child and Family Caring Society to lead any process to achieve non-discrimination (also known as long term reform) for child and family services and Jordan's Principle in keeping with the Resolutions passed at the Special Chiefs Assembly on October 16-18, 2024.

Respect

6. Call on AFN to withdraw and apologize for any and all public statements that suggested or implied that First Nations Child and Family Service Agencies led the campaign to defeat the draft Final Settlement Agreement (FSA). Such comments are disrespectful of our front-line workers and of the Chiefs who exercised their due diligence to review the text of the draft FSA and rejected it on that basis alone.

7. Require AFN to get approval for any further public statements from the Children's Chief's Commission once established and by a public and majority vote of the Executive in the interim.

Certified copy of a resolution adopted on the 4th day of December, 2024 in Ottawa, ON

Woodhouse.

SPECIAL CHIEFS ASSEMBLY
December 3, 4, 5, 2024, Ottawa, ON **Resolution no. 89/2024**

TITLE:	**Renewing Negotiations Toward Long-Term Reform of First Nations Child and Family Services and Jordan's Principle**
SUBJECT:	Children and Families
MOVED BY:	Khelsilem, Council Chairperson, Squamish Nation, BC
SECONDED BY:	Chief Erica Beaudin, Cowessess First Nation, SK
DECISION	Carried; 74 opposed; 10 abstentions

WHEREAS:

A. The *United Nations Declaration on the Rights of Indigenous Peoples* (UN Declaration) states:

- **i.** Article 18: Indigenous peoples have the right to participate in decision-making in matters which would affect their rights, through representatives chosen by themselves in accordance with their own procedures, as well as to maintain and develop their own indigenous decision-making institutions.
- **ii.** Article 19: States shall consult and cooperate in good faith with the indigenous peoples concerned through their own representative institutions in order to obtain their free, prior and informed consent before adopting and implementing legislative or administrative measures that may affect them.
- **iii.** Article 37: Indigenous peoples have the right to the recognition, observance and enforcement of treaties, agreements and other constructive arrangements concluded with States or their successors and to have States honour and respect such treaties, agreements, and other constructive arrangements.

B. First Nations recognize the sacredness of First Nations children, youth and families and Jordan's Principle, a child-first legal requirement ensuring substantively equal and culturally appropriate access to products, services and supports for First Nations children and that the government entity of first contact pays for the support thereof without delay.

C. The First Nations Child and Family Caring Society (Caring Society) and the Assembly of First Nations (AFN) filed a Canadian Human Rights Act complaint in 2007 alleging Canada's inequitable provision of First

Certified copy of a resolution adopted on the 5th day of December, 2024 in Ottawa, ON

Woodhouse.

CINDY WOODHOUSE NEPINAK, NATIONAL CHIEF

Nations Child and Family Services (FNCFS) and its choice not to implement Jordan's Principle were discriminatory resulting in serious and irremediable harms.

D. The Canadian Human Rights Tribunal (CHRT) substantiated the discrimination claim in 2016 CHRT 2 and ordered Canada to cease its discriminatory conduct immediately.

E. On December 31, 2021, an Agreement in Principle (AIP) was signed as a framework for the negotiations of a Final Settlement Agreement (FSA) on the FNCFS Program, Jordan's Principle, and the reform of Indigenous Services Canada.

F. The CHRT Parties have agreed to split the FSA negotiations with a child and family services agreement to come first and an agreement on Jordan's Principle to follow.

G. Canada, the AFN, Chiefs of Ontario (COO) and Nishnawbe-Aski Nation (NAN) completed a draft Final Settlement Agreement, which was made public on July 11, 2024 in English only and on August 14, 2024 in French, and which was rejected by First Nations-in-Assembly on October 17, 2024.

H. On October 18, 2024, the First Nations-in-Assembly rejected the resolution to adopt the draft FSA and adopted AFN Resolution 60/2024, *Addressing Long-Term Reform of the First Nations Child and Family Services Program and Jordan's Principle* and AFN Resolution 61/2024, *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*.

I. Resolution 60/2024 directs the AFN Executive Committee to adopt the following approach to the negotiation of agreements related to the FNCFS Program and Jordan's Principle (the LTR Agreements):

- **i.** Establish a national Children's Chiefs Commission with representation from all regions to oversee and provide strategic direction in relation to the LTR Agreement negotiations, reporting back to the First Nations-in-Assembly;
- **ii.** The Children's Chiefs Commission will establish a negotiation team, with regional representation and a new legal team, that will be responsible for carrying out the negotiations for the LTR Agreements under the direction of, and reporting to, the Children's Chiefs Commission;
- **iii.** The negotiation team's Terms of Reference for the FNCFS Program will be provided to the First Nations-in-Assembly for approval no later than December 2024; and
- **iv.** The Children's Chiefs Commission will report to the First Nations-in-Assembly in December 2024 as to its anticipated timeframes for the completion of negotiations in relation to the FNCFS Program and on the anticipated timeframes for the Terms of Reference for Jordan's Principle.

J. The 2021 Agreement-in-Principle (AIP) includes provisions that conflict with the negotiation priorities and directives established by the First Nations-in-Assembly, specifically:

- **i.** the AIP's reliance on a population-based funding formula for prevention is inconsistent with the First Nations-in-Assembly's call for a needs-based funding structure to ensure equitable resource allocation;
- **ii.** the AIP's proposed conflict resolution mechanism excludes the unconditional participation of the First Nations Child and Family Caring Society, contrary to the First Nations-in-Assembly's directive to include the Caring Society in all negotiations; and

iii. the AIP's stipulation that, upon signing a Final Settlement Agreement, the Parties will seek to terminate the jurisdiction of the CHRT directly opposes the First Nations-in-Assembly's call for the CHRT to retain jurisdiction to oversee and ensure the effective implementation of any agreement.

K. A draft terms of reference for the Children's Chiefs Commission's has been developed, key elements of which include:

i. **Accountability:** the Children's Chiefs Commission will be accountable to First Nations-in-Assembly, First Nations youth, and to First Nations who are not members of the AFN, through processes that it establishes;

ii. **Objectives:** the draft terms of reference set out certain substantive objectives that must be met through the negotiation of the LTR Agreements to fully eliminate Canada's systemic discrimination in FNCFS and Jordan's Principle and ensure it does not reoccur;

iii. **Guiding principles:** the draft terms of reference set out principles that will guide the Children's Chiefs Commission's work;

iv. **Composition:** the Children's Chiefs Commission will be comprised of: (i) one (1) regional representative, an alternate, and their technician(s) from each of the 11 AFN regions; (ii) one (1) regional representative, an alternate, and their technician(s) for every region not represented by AFN; (iii) an Elder/Knowledge Keeper representative; and (iv) and a youth representative;

v. **Inclusion and representation:** the Children's Chiefs Commission will take positive and effective measures to seek out the input and expertise of: (i) First Nations and their rightsholders; (ii) First Nations child and family service providers; (iii) Elders and Youth; (iv) The National Advisory Committee (NAC) and Expert Advisory Committee (EAC); (v) regional and independent experts, including the Jordan's Principle Operations Committee Caucus; and (vi) non-AFN member First Nations;

vi. **Reporting and accountability:** the Children's Chiefs Commission will regularly report to First Nations-in-Assembly, First Nations not represented by the AFN, and the AFN Executive on its progress in relation to the LTR Agreements;

vii. **Meetings:** the Children's Chiefs Commission will meet monthly or more frequently as and when required;

viii. **Decision-making:** the Children's Chiefs Commission will operate by consensus wherever possible in providing strategic direction and oversight of the LTR Agreements negotiations, respecting traditional First Nations decision-making processes;

ix. **Deliverables:** the Children's Chiefs Commission will present key deliverables to the First Nations-in-Assembly and First Nations who are not members of the AFN for their review, consideration, and approval; and

x. **Funding:** the Children's Chiefs Commission will work with Indigenous Services Canada to secure funding for their work including independent legal and technical assistance, ensuring all First Nations have adequate resources to understand and contribute to the LTR Agreements.

L. A draft terms of reference for the negotiation team has also been developed, key elements of which include:

i. **Accountability:** the negotiation team will operate under the direction of the Children's Chiefs Commission and will be accountable to the First Nations-in-Assembly and First Nations not represented by the AFN;

ii. **Objectives:** the draft terms of reference set out certain substantive objectives that must be met through the negotiation of the LTR Agreements to fully eliminate Canada's systemic discrimination in FNCFS and Jordan's Principle and ensure it does not reoccur;

iii. **Deliverables:** the negotiation team will present key deliverables to the Children's Chiefs Commission for its review and consideration;

iv. **Composition and qualifications:** the draft terms of reference set out required qualifications for persons the Children's Chiefs Commission will appoint to the negotiation team;

v. **Inclusion and representation:** the negotiation team will take positive and effective measures to seek out the input and expertise of: (i) First Nations and their rightsholders; (ii) national and regional FNCFS and Jordan's Principle service providers and experts; (iii) Youth in and from Care; (iv) the National Advisory Committee (NAC) and Expert Advisory Committee (EAC); and (v) non-AFN member First Nations;

vi. **Roles and responsibilities:** the draft terms of reference sets out roles and responsibilities for a lead negotiator, assistant negotiator, legal team, technical experts, support team, and secretarial support;

vii. **Decision-making:** the negotiation team will operate by consensus wherever possible;

viii. **Reporting:** the draft terms of reference set out various reporting requirements and mechanisms for the negotiation team to report to the Children's Chiefs Commission;

ix. **Final draft approval process**: the draft terms of reference set out a process the negotiation team must follow to prepare draft LTR Agreements for review by the First Nations-in-Assembly as well as First Nations not represented by AFN to ensure compliance with Resolutions 60/2024 and 61/2024; and

x. **Conflicts of interest**: the draft terms of reference set out a process for addressing conflicts of interest.

M. A number of AFN regions have appointed their representatives to the Children's Chiefs Commission, but the Commission has not yet met with all representatives present to review and discuss the draft terms of reference for the Children's Chiefs Commission and the negotiation team.

N. The AFN Executive has raised certain legal concerns about the interpretation of Resolution 60/2024 that the First Nations-in-Assembly may wish to clarify.

THEREFORE BE IT RESOLVED that the First Nations-in-Assembly:

1. Reject all sections of the Agreement in Principle (AIP) on Long-Term Reform (LTR) of the First Nations Child and Family Services (FNCFS) Program and Jordan's Principle completed on December 31, 2021 that are in conflict with resolutions passed by the First Nations-in-Assembly as described above.

Certified copy of a resolution adopted on the 5th day of December, 2024 in Ottawa, ON

Woodhouse.

CINDY WOODHOUSE NEPINAK, NATIONAL CHIEF

2. Clarify that, by way Therefore Be It Resolved clause 2 of Resolution 60/2024, the First Nations-in-Assembly called for, and themselves established, the national Children's Chiefs Commission rather than directing the AFN Executive Committee to establish the Commission.

3. Support the Children's Chiefs Commission in establishing a negotiation team, pursuant to Resolution 60/2024, to carry out the negotiations for the LTR Agreements. That negotiation team will work with the following guidelines:

    a. **Accountability**: The negotiation team will report to the Children's Chiefs Commission, First Nations-in-Assembly and represent the interests of all First Nations, and First Nations youth, including those not connected to the AFN; and

    b. **Mandate**: The negotiation team's goal is to eliminate discrimination by Canada and ensure it never happens again, promote fairness, uphold First Nations' rights to self-determination, and respect their jurisdiction over their own affairs. They will ensure their work aligns with international standards affirmed by the *United Nations Declaration on the Rights of Indigenous Peoples* and the *United Nations Convention on the Rights of the Child*, complies with orders from the Canadian Human Rights Tribunal (CHRT), and maintains a clear, open process that meaningfully involves First Nations communities and First Nations youth.

4. Approve, in principle, the draft terms of reference for the Children's Chiefs Commission and the negotiation team, summarized in the Whereas clauses above, and direct the Children's Chiefs Commission to meet as soon as practicable to: (i) immediately commence its work on the LTR Agreements; and (ii) review the terms of reference and thereafter recommend them to the First Nations-in-Assembly for final approval, including any potential amendments.

5. Direct the Children's Chiefs Commission to report to First Nations-in-Assembly at every Assembly until their work is complete.

SPECIAL CHIEFS ASSEMBLY
December 3, 4, 5, 2024, Ottawa, ON **Resolution no. 90/2024**

TITLE:	**Safeguarding First Nations Children and Holding Canada Accountable for its Canadian Human Rights Tribunal Legal Obligations**
SUBJECT:	Child Welfare
MOVED BY:	Chief Vicky Chief, Timiskaming First Nation, QC
SECONDED BY:	Aaron Nicholas, Proxy, Tobique First Nation, NB
DECISION	Carried; 9 opposed; 12 abstentions

WHEREAS:

A. The *United Nations Declaration on the Rights of Indigenous Peoples* (UN Declaration) states:

i. Article 18: Indigenous peoples have the right to participate in decision-making in matters which would affect their rights, through representatives chosen by themselves in accordance with their own procedures, as well as to maintain and develop their own indigenous decision-making institutions.

ii. Article 19: States shall consult and cooperate in good faith with the indigenous peoples concerned through their own representative institutions in order to obtain their free, prior, and informed consent before adopting and implementing legislative or administrative measures that may affect them.

iii. Article 37: Indigenous peoples have the right to the recognition, observance and enforcement of treaties, agreements and other constructive arrangements concluded with States or their successors and to have States honour and respect such treaties, agreements, and other constructive arrangements.

B. The First Nations Child and Family Caring Society (Caring Society) and the Assembly of First Nations (AFN) filed a *Canadian Human Rights Act* complaint in 2007 alleging Canada's inequitable provision of First Nations Child and Family Services (FNCFS) and its choice not to implement Jordan's Principle were discriminatory resulting in serious and irremediable harms.

Certified copy of a resolution adopted on the 5th day of December, 2024 in Ottawa, ON

Woodhouse.

CINDY WOODHOUSE NEPINAK, NATIONAL CHIEF

C. The Canadian Human Rights Tribunal (the Tribunal) substantiated the human rights complaint in 2016 and ordered Canada to cease its discriminatory practices, reform the FNCFS program and immediately implement the full scope of Jordan's Principle.

D. The Tribunal has retained jurisdiction over the human rights complaint and has provided numerous additional orders to guide a dialogic process through which the Parties to the complaint negotiate long-term reform that will end Canada's discrimination and prevent any reoccurrence of the discrimination.

E. Since 2016, the Tribunal has issued 31 procedural and non-compliance orders.

F. On December 12, 2023, the Caring Society filed a non-compliance motion with the Tribunal to address Canada's chronic breaches of existing orders on Jordan's Principle, causing serious harms to First Nations children, youth and families. The matter was heard on September 10-12, 2024.

G. First Nations-in-Assembly voted to reject a draft final settlement agreement (FSA) on long-term reform of the FNCFS program and called for a process to end Canada's discrimination in First Nations child and family services and Jordan's Principle and make sure it does not happen again in AFN Resolutions 60/2024 and 61/2024.

H. On November 21, 2024, the Tribunal issued a letter decision, with reasons to follow, on the Caring Society's non-compliance motion filed in December 2023 regarding the Government of Canada's breaches of existing Tribunal orders on Jordan's Principle.

I. In its November 21, 2024 ruling, the Tribunal affirmed the presumption of substantive equality as a right owed to First Nations children and ordered Canada to, among other measures, immediately address the backlogs in Jordan's Principle cases, set uptriaging for urgent cases, confirm that First Nations who have taken on Jordan's Principle work have the sufficient resources to do so, reimburse approved Jordan's Principle requests in a timely manner, report on its progress in coordinating federal programs and work with the Parties to install an interim and independent national complaints mechanism.

J. The Tribunal also ordered Canada to consult with the Parties on several issues, with the goal of reaching consent order requests, and recognized that it would be beneficial to have all Parties at the table, including First Nations who are not a part of the proceedings.

K. The British Columbia First Nations Leadership Council (FNLC), which was granted interested party status and intervened in the non-compliance motion, can only participate in these consultations with the consent of all Parties. On December 4, 2024, Canada has responded that they do not consent to the FNLC participation in the consultations.

L. The cumulative total of the Tribunal's orders on FNCFS is estimated at $45 billion to fund FNCFS and is the minimum amount to ensure non-discrimination and prevent its recurrence.

M. All First Nations children on and off reserve and living in self-governing First Nations have a right to receive substantively equal and culturally based child and family services and/or Jordan's Principle and live free of Canada's discrimination now and forever.

Certified copy of a resolution adopted on the 5th day of December, 2024 in Ottawa, ON

Woodhouse.

CINDY WOODHOUSE NEPINAK, NATIONAL CHIEF **90 – 2024**

THEREFORE BE IT RESOLVED that the First Nations-in-Assembly:

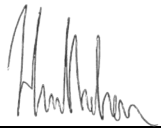
1. Support the November 21, 2024, Canadian Human Rights Tribunal (Tribunal) letter decision on Jordan's Principle to address Canada's non-compliance.
2. Confirm that the $47.8 billion is only the floor for negotiations to achieve long-term reform of First Nations Child and Family Services (FNCFS).
3. Direct Canada to obtain a new negotiation mandate within thirty (30) days of this resolution passing to achieve Long Term Reform of FNCFS and Jordan's Principle in full alignment with Assembly of First Nations (AFN) Resolutions 60/2024 and 61/2024.
4. Support regions, parties and the National Children's Chiefs Commission (NCCC) to undertake any legal action should Canada fail to obtain an adequate new negotiation mandate within thirty (30) days, in which case the First Nations-in-Assembly will deem Canada to be dishonorably in violation of the duty of diligent implementation flowing from the honour of the Crown constitutional principle.
5. Call on Canada to provide adequate funding, including reimbursement of legal fees at actual cost, to an entity(ies) determined by the NCCC to support its work.
6. Call on Canada to not seek judicial review of the November 21, 2024 Tribunal letter decision on Canada's non-compliance on Jordan's Principle.
7. Call on Canada to take immediate and effective measures to fully implement all Tribunal orders including the November 21, 2024 Tribunal letter decision on Jordan's Principle.
8. Support the NCCC participation in further legal proceedings, including before the Tribunal, to ensure First Nations children, youth and families receive the full benefit of existing Tribunal orders and to seek additional remedies as required.
9. Fully and publicly support the British Columbia First Nations Leadership Council (FNLC) participation in the consultations ordered in the November 21, 2024 Tribunal letter decision on Canada's non-compliance on Jordan's Principle, as well as any request, from any other regions, to seek interested party status in this Canadian Human Rights Tribunal case.
10. Call on Canada to retract their opposition, and to support the FNLC participation in the consultations ordered by the Tribunal in the November 21, 2024 letter decision on Jordan's Principle.

Certified copy of a resolution adopted on the 5th day of December, 2024 in Ottawa, ON

Woodhouse.

CINDY WOODHOUSE NEPINAK, NATIONAL CHIEF **90 – 2024**

This is Exhibit "26" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.



Commissioner for Taking Affidavits (or as may be)

HENNA MOHAN
LSO#: 90494W

TERMS OF REFERENCE FOR THE NATIONAL CHILDREN'S CHIEFS COMMISSION

1. PURPOSE

These terms of reference set out the mandate, membership and roles and responsibilities of the National Children's Chiefs Commission (NCCC). The NCCC provides oversight and strategic direction on the negotiations and/or litigation related to the Long-Term Reform (LTR) of First Nations Child and Family Services (FNCFS) and Jordan's Principle, including the ongoing proceedings before the Canadian Human Rights Tribunal (CHRT) in *First Nations Child and Family Caring Society et al v, Attorney General of Canada* (T1340/7008). NCCC operates in an inclusive, transparent and accountable manner that prioritizes the sacredness and rights of First Nations children, youth and families.

2. AUTHORITY

Assembly of First Nations (AFN) Resolution 60/2024, *Addressing Long-Term Reform of the First Nations Child and Family Services Program and Jordan's Principle* mandated the establishment of the NCCC. The NCCC is mandated by First Nations-in-Assembly to oversee and provide strategic direction on LTR including addressing Canada's discriminatory conduct found in *First Nations Child and Family Caring Society et al v. Attorney General of Canada*. Accountable to First Nations rights holders, the NCCC will oversee and provide strategic direction in a manner that prioritizes the sacredness of First Nations children, youth and families, is transparent, open, and accountable to First Nations, preserves First Nations decision-making, and includes the guidance of youth, youth in care and formerly in care, and FNCFS and Jordan's Principle experts.

3. ACCOUNTABILITY

The NCCC is accountable to First Nations-in-Assembly and, through processes established by the NCCC, to First Nations who are not members of AFN. The NCCC is responsible for updating their respective AFN Executive member and First Nations Leadership in their region on the NCCC's priorities and progress. The NCCC will report on progress, at minimum, bi-annually to First Nations-in-Assembly at AFN assemblies and by information bulletin on important urgent matters.

Approved by NCCC January 23, 2025
Approved by First Nations-in-Assembly September 4, 2025

4. **OBJECTIVES:**

The NCCC is tasked with providing oversight and strategic direction on the negotiations and/or litigation related to LTR of FNCFS and Jordan's Principle. The NCCC will act openly and transparently to achieve the following objectives and criteria to ensure a fair, equitable, and transformative agreement:

a. LTR must fully eliminate Canada's systemic discrimination in FNCFS and Jordan's Principle implementation and ensure it does not recur. This includes addressing structural inequities and adhering to all applicable CHRT orders. The CHRT orders establish the foundation for comprehensive FNCFS and Jordan's Principle LTR. LTR must build up from the baseline funding that the CHRT orders provide and prioritize the culturally based safety, wellbeing and holistic development of First Nations children.
b. LTR must overhaul funding principles, definitions, structures, methodologies, policies, conduct and instruments to reflect the actual needs of First Nations children, youth and families, as defined by First Nations. At a minimum, funding must:
    i. be evidence-informed and based on needs as defined by First Nations themselves. First Nations are best positioned to determine the needs of their children, families, and communities;
    ii. not solely rely on per capita formulas, especially those tied to the Indian Registration System;
    iii. ensure positive and effective measures and resources are in place for First Nations and their service providers to develop the necessary capacity to deliver child and family services and/or Jordan's Principle; and
    iv. ensure positive and effective measures and resources are in place for First Nations and their service providers to effectively address the structural drivers of disadvantage for First Nations children, youth and families whilst providing the necessary services, products and supports to meet existing needs arising from the structural drivers.
c. LTR must provide funding and services that advance substantive equality, ensuring First Nations children and families have substantively equitable access to culturally, linguistically, socially, and developmentally appropriate

services, products and supports. LTR must also ensure full implementation of Jordan's Principle to eliminate delays, denials, and barriers to services. Canada must discharge its duty to not discriminate regardless of jurisdictional or service deliver model.

d. LTR must affirm First Nations' inherent jurisdiction and self-determination over FNCFS. This includes recognition of their authority to legislate in these areas, independent of delegated powers under section 91(24) of the Constitution Act, 1867. LTR must also be fully aligned with the principles of UNDRIP. At a minimum, this means that First Nations Chiefs must be restored as the key decision-makers on the implementation of LTR and all LTR governance structures must be transparent and accountable to First Nations Chiefs.
e. LTR should be with the Crown in right of Canada as a whole, ensuring accountability across all federal jurisdictions. It cannot be limited to individual departments, such as Indigenous Services Canada or Crown-Indigenous Relations.
f. LTR must prioritize the rights of First Nations children, including future generations. Reforms must address immediate needs and ensure sustainable, culturally and linguistically relevant supports and services that promote intergenerational equity and incorporate traditional and community-based practices in the care and protection of children. Governance structures set out in LTR must uphold the sacredness of children, youth, and families; be transparent, open, and accountable to First Nations; preserve First Nations decisions-making, and include the guidance of youth, youth in care and formerly in care, and regional and national experts on FNCFS and Jordan's Principle.
g. LTR must support the revitalization and continuity of Indigenous languages and cultures as critical elements of First Nations children's well-being and identity.
h. LTR must be rooted in the principles reconciliatory justice and, correspondingly, that obligations incumbent upon Canada are rooted in the honour of the Crown.
i. LTR must not be Indian Act-centric and must reflect self-determination and First Nations governance structures.

j. LTR must reflect and respect First Nations' self-determined authority over child and family services including, but not limited to, jurisdictional, delegation and direct service models. Where First Nations choose to operate under their own jurisdiction, Canada must respect that jurisdiction is rooted in inherent, Aboriginal and treaty-protected rights and responsibilities, not federal delegation under Canadian law.

k. LTR must establish mechanisms to ensure effective implementation, funding, oversight, outcome measurement, and accountability tailored to the unique needs of each region. These mechanisms must complement CHRT orders and uphold a long-term commitment to eliminating discrimination. Recognizing regional diversity, LTR will necessitate the development of region-specific sub-agreements to address localized priorities and contexts effectively.

l. LTR must include a robust dispute resolution mechanism with powers and remedies that are at least as effective as the CHRT. The CHRT's jurisdiction must also be preserved to ensure accountability, compliance, and enforcement.

m. The NCCC will ensure that all the following principles and requirements are incorporated into the negotiation process and/or any LTR agreements:

    i. Establish and oversee the regionally represented negotiation team that will be responsible for carrying out LTR negotiations and/or directing litigation;

    ii. Develop and oversee an open and transparent amendment process for First Nations to suggest changes, allow for consideration of those changes, and make changes to LTR agreements before being put to a vote. Such process is to be established by the NCCC and approved by First Nations-in-Assembly, and First Nations that are not affiliated with the AFN, to ensure the participations of First Nations that are not members of the AFN;

    iii. Provide detailed reports to First Nations on all suggest amendments, the decision made on each amendment, and the outcomes of negotiations, before any decision making;

    iv. Take positive and effective measures throughout LTR negotiations, to

ensure review, and approval processes include the expertise of First Nations, Jordan's Principle and FNCFS experts and services providers, Elders and youth, regional experts and the National Advisory Committee (NAC);

v. Ensure First Nations have at least 90 days to review a complete LTR agreement with appendices, available in both official languages, before any vote on a LTR Agreement;

vi. Oversee and ensure there is regular feedback and communication shared with First Nations on the progress of LTR;

vii. Ensure that Canada discloses all federal-provincial-territorial service level agreements during the negotiations process;

viii.

ix. Ensure that Canada provides sufficient liability coverage and statutory immunity for First Nations and FNCFS Agencies and ensures that Canada is the insurer of last resort for First Nations and FNCFS Agencies that have acted in good-faith in performing duties;

x. Ensure all resources and materials are available in both French and English;

xi. Ensure findings from comprehensive regional and sub-regional engagements across Canada are incorporated into LTR.

n. Ensure there is no obligation on any party to procure approval of, or speak favourable about, any draft LTR agreement.

For Greater clarity, the NCCC is not permitted to negotiate outside the parameters of this Terms of Reference. The work of the NCCC will respect First Nations-determination, decision making over the wellbeing of their Nation's children and families. Their work will not affect, cancel or supersede any Treaty between Canada and the Imperial Crown and First Nations or any existing agreement between Canada and any other First Nation, including modern Treaties or any other agreement in place.

5. REFERENCES

The following documents, decisions, and declarations will be taken into consideration in the NCCC's work:

- The direction of First Nations-in-Assembly, including through AFN Resolutions 40/2022, *To Ensure Quality of Life to the First Nations Child and Family Services Program and Jordan's Principle,* 60/2024, *Addressing Long-Term Reform of the First Nations Child and Family Services Program and Jordan's Principle* and 61/2024, *Meaningful Consultation on Long-Term Reform of First Nations Child and Family Services*.
- The Canadian Human Rights Tribunal decisions in *First Nations Child and Family Caring Society et al. v Attorney General of Canada* T1340/7008;
- An *Act Respecting First Nations, Inuit and Métis Children, Youth and Families*.
- The United Nations Convention on the Rights of the Child (UNCRC), the United Nations Committee on the Rights of the Child General Comment 11, the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP).
- The Truth and Reconciliation Commission of Canada's (TRC) Calls to Action, the National Inquiry on Murdered and Missing Indigenous Women and Girls (MMIWG) Calls to Justice.
- Respect for evidence, particularly First Nations-based and First Nation regionally developed evidence, to achieve the goals of non-discrimination towards First Nations children, youth, and families and preventing its recurrence.

6. GUIDING PRINCIPLES:

The NCCC shall be committed to conducting themselves with respect, dignity, transparency and accountably, and exemplify the seven guiding principles of love, respect, courage, honesty, wisdom, humility and truth. Further, the NCCC will be guided by the following principles:

1. Truth and Transparency: The NCCC commits to open, honest communication and full disclosure to honour and respect the rights of First Nations and their children.
2. Free Prior and Informed Consent: The United Nations Declaration on the Rights of Indigenous Peoples will be upheld to protect the rights of First Nations.
3. Respect for the Sacredness and Rights of Children and Youth: The rights, dignity,

and cultural identities of children and youth are fundamental. The NCCC shall protect these through meaningful engagement and relationship building.

4. Reconciliation and Healing: The NCCC seeks to address and heal the ongoing impacts of colonial policies on First Nations children, youth, and families.
5. Self-Determination: The NCCC upholds the inherent right of First Nations to guide and govern the well-being of their children and youth according to their laws, customs, and cultural practices.

7. NCCC COMPOSITION

The NCCC shall be persons of good character, committed to human rights and dignity and will conduct themselves personally and professionally in a manner that does not bring the reputation of the NCCC or its mandate into disrepute. Persons who have been convicted of violent crimes or crimes against children are not eligible. The NCCC will consist of members appointed through regional decision-making processes, representing a diverse group of First Nations. The NCCC will consist of:

a. One (1) regional representative, an alternate, and their technician(s) from each of the 11 AFN regions; and
b. One (1) regional representative, an alternate, and their technician(s) for every region not represented by AFN.

The NCCC will endeavour to include Elder and Youth representatives in accordance with NCCC policies.

8. INCLUSION AND REPRESENTATION

The NCCC shall take positive and effective measures to seek out the input and expertise of:

a. First Nations and their rightsholders;
b. First Nations child and family service providers;
c. Elders and Youth;
d. The National Advisory Committee (NAC) and Expert Advisory Committee (EAC)
e. Regional and independent experts, including the Jordan's Principle Operations Committee Caucus;
f. Non-AFN member First Nations and their unique perspectives will be formally included, ensuring their voices are reflected.

9. REPORTING AND ACCOUNTABILITY

The NCCC shall report to their respective AFN Executive member and to First Nations-in-Assembly and through processes established by the NCCC to First Nations not represented by AFN, detailing progress, challenges, and updates summarizing achievements and ongoing initiatives, and recommendations for further actions on FNCFS reform and Jordan's Principle implementation. The NCCC shall facilitate ongoing engagement with First Nations leadership, communities, and families to ensure their voices inform the NCCC's work.

10. MEETINGS

The NCCC will meet monthly, or as needed when determined by the NCCC, with additional meetings as required to address urgent matters. All members must actively participate and contribute to decision-making and demonstrate a commitment to regularly attend meetings or send an alternative.

Notice of meeting dates and location will be provided in a reasonable amount of time. Meetings will normally be virtual. Travel and accommodation for NCCC members to attend in-person meetings will be reimbursed by an entity determined by the NCCC.

Quorum for any meeting of the NCCC will be met when the Regional Representative or Alternate from at least six regions are present. Regional Representatives/Alternates may send their regional experts as proxies when they are not available to attend, and must notify the NCCC that they are sending a proxy before the meeting begins.

NCCC meetings, where possible, will be open to all interested First Nations Chiefs and appointed technical/legal/political representative as observers to the meetings.

11. DECISION MAKING

The NCCC will operate by consensus wherever possible in providing strategic direction and oversight of the LTR Agreements negotiations, respecting traditional First Nations decision-making processes.

12. Deliverables

The NCCC will deliver the following to First Nations-in-Assembly and First Nations

who are not members of AFN:

i. The NCCC will report on progress, challenges and recommendations, at minimum, bi-annually to First Nations-in-Assembly at AFN assemblies and by information bulletin on important urgent matters;
ii. Before First Nations-in-Assembly proceed with any decision making on LTR agreements, any recommendations, amendments, and outcomes of negotiations shall be submitted to the First Nations-in-Assembly and First Nations not affiliated with AFN for review;
iii. Available options and supporting financial resources and materials for LTR;
iv. A draft agreement on FNCFS LTR that meets the criteria identified in this Terms of Reference;
v. Identified issues critical to ending Canada's discrimination and preventing its recurrence that ought to be addressed through further litigation before the CHRT;
vi. Detailed documentation of the negotiation process, decisions, and outcomes;
vii. An open and transparent amendment process for First Nations-in-Assembly to suggest changes, allow for consideration of those changes, and make changes to long-term reform agreements before being put to a vote, such process is to be approved by First Nations;
viii. Ensure that all drafts have a French language translation.

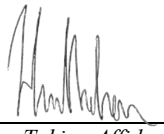
13. RESOURCES

The NCCC will work with the AFN and Indigenous Services Canada to secure funding for their work including independent legal and technical assistance, ensuring all First Nations have adequate resources to understand and contribute to the FNCFS agreements.

14. Amendment to Terms of Reference

These Terms of Reference may by amended by consensus of the NCCC until such the terms are approved by the First Nations-in-Assembly. Subsequently, these terms of references may be amended with the approval of the First Nations-in-Assembly to reflect evolving priorities and circumstances.

This is Exhibit "27" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.



Commissioner for Taking Affidavits (or as may be)

Advancing human rights

What follow are considerations for taking a human rights perspective from analysis, through planning and design, and finally to implementation of an initiative. They are intended as tools to help applicants complete their application form and consider human rights throughout the lifecycle of their initiative.

Each initiative exists in a very specific context, and addressing human rights should take this context into consideration. As such, applicants may find certain questions more relevant than others and are encouraged to use this tool as a guide. Global Affairs Canada does not expect applicants to provide answers to all questions in their application form or associated documentation, but rather the questions are meant to help inform applicants' thinking behind a human rights analysis, and guide the planning, design, and implementation of an initiative in a human rights-sensitive manner.

By considering human rights throughout the lifecycle of an initiative, novel or innovative approaches to particular challenges may emerge that could have significant or even transformative impacts.

Table of Contents

Understanding the broader situation through a human rights analysis

Considering human rights when planning and designing your initiative

Addressing human rights throughout implementation, including monitoring and evaluation

Further resources

Understanding the broader situation through a human rights analysis

What is the current human rights situation?

- What are the significant human rights violations and rights at risk of violation?
- What are the barriers to people's ability to exercise their rights? What are the underlying interests, incentives and institutions that contribute to, or prevent, the realization of rights?
- What are the political, religious, cultural, civil-military cooperation, or other elements favouring the promotion and protection of human rights? How can these be supported or strengthened?
- What tensions could be created by addressing human rights, either explicitly or indirectly?
- To which international human rights instruments is the country party? What reservations have been applied to their ratification, and why?
- Are the country's international human rights obligations (as identified above) also reflected in domestic laws and policies? If so, have these laws and policies been fairly and effectively implemented in practice?

- Are civil society spaces (including rights to freedom of expression, peaceful assembly and association; free and independent media; and access to information - both online and offline) protected by laws? If so, have these laws been fairly and effectively implemented?
- Do local or customary laws or traditions supersede state law, creating a situation where victims do not have recourse against perpetrators?
- Do laws or policies exist that violate human rights, or that could put the success of the initiative at risk?
- Are there tensions between formal rules and informal power relations?
- Are powerful actors (e.g., political executive, the wealthy, military, economic or social elite, party officials, senior bureaucrats, traditional and religious leaders, etc.) constrained by the formal law and/or by informal norms? How?
- To whom are powerful actors accountable, how and why?

What is the core problem, and what are the causes?

Note: Remember to look at the problem in a holistic manner, as many development problems are multi-faceted and require integrated responses.

- What is the core problem(s) your project/initiative is seeking to address?
- In thinking through the problem(s), identify how human rights are not being upheld. Using the key human rights principles of equality, non-discrimination, participation, inclusion, accountability and transparency to guide your analysis, what are the immediate, underlying and structural causes and contributing factors of the problem(s)?
- How do factors, such as religious belief, cultural practices and traditions, social mores, superstition, etc., impact human rights or

cause human rights to be violated or abused?

- Who is most vulnerable to these human rights violations? What are the gender, age and other diversity factors specific to the context under consideration?
- What are the effects of the core problem(s) on women and girls, versus men and boys?
- In relation to the problem(s) under consideration, to what extent is power vested in the hands of specific individuals/groups?
- How do different non-state actors (e.g. responsibility holders like private sector, religious leaders, NGOs, the media) contribute to the problem(s) problem, or seek to influence policy (positively and/or negatively)?
- Do non-state actors have access to decision-makers? Are they meaningfully consulted?
- If the problem(s) relates to service delivery (including justice and security), who are the primary beneficiaries of service-delivery? Are there intermediary groups that could interrupt or interfere with service delivery?
- Are particular groups included or excluded from service delivery? Are women and girls particularly disadvantaged? If so, why?

Who are your stakeholders?

Rights-holders are all people.

- In the context of the initiative in question, whose rights are not being upheld, or are at risk, and who is affected by the human rights problem?

- Among the rights-holders identified, who are **the most** marginalized or most vulnerable, and why? Can you identify how they came to be the most marginalized or most vulnerable?
- How will the most marginalized or most vulnerable rights-holders be included in the initiative?
- What specific barriers exist to their full and meaningful participation, and how will these barriers be addressed?
- What is the situation of women and girls rights-holders?

Duty-bearers are State actors who have legal obligations to respect, protect and fulfill human rights.

- Who is responsible for taking the necessary steps to respect, protect and fulfil human rights, to set up mechanisms for effective remedy, and implement legal and other obligations relating to the human rights issues identified?
- While the State is the ultimate duty-bearer, it is important to differentiate between State-actors. Which organization, ministry, national, provincial or local government entity is responsible for implementation of human rights obligations?
- Identify the most influential duty-bearers, their interests and incentives, and how these shape overall dynamics in the context under consideration.

Responsibility-holders are actors who have, or could have, a positive or negative influence on the human rights issue under consideration, on those responsible for human rights violations, as well as on rights holders' and duty bearers' capacities.

- Which other actors are in a position to observe and/or promote the human rights in question? Responsibility-holders include, but are not limited to: parents, the private sector, religious leaders, educators, community elders, social movements, NGOs, the media, academic institutions, embassies, neighbouring countries, diaspora, donors or international agencies, including the United Nations.
- Are there civil society organizations or other leadership structures that work with, represent, or advocate on behalf of the affected rights-holders?
- Identify the most influential, or potentially influential, responsibility-holders, their interests and incentives, and how these shape overall dynamics in the context under consideration.
- Conversely, consider if these influential responsibility-holders have a stake in the accommodation of rights-holders and how they could potentially seek to further deny human rights or impact safety or security of those pursuing enjoyment of their human rights.

What are the human rights capacity gaps?

Rights-holders: Identify the capacity gaps of the rights-holders that are preventing them from knowing, exercising, claiming and seeking effective remedy for their human rights.

- Do rights-holders have knowledge about (their) human rights as enshrined in domestic and international legal frameworks? Is their level of awareness an obstacle to knowing and claiming these rights?
- Do rights-holders have knowledge of the duty-bearers' obligations?
- Do mechanisms exist for rights-holders to seek effective remedy in instances when their human rights are not upheld? If so, are rights-

holders aware of these mechanisms?

- Do rights-holders have access to impartial mechanisms for remedy and justice when their human rights are not upheld? If not, what barriers exist? Are there barriers specific to women and girls?
- Are there risks associated with developing the human rights-related capacities of the rights-holder? If so, what can be done to mitigate those risks?

Duty-bearers: Identify the capacity gaps preventing the duty-bearers from respecting, protecting and fulfilling human rights obligations and responding to human rights violations.

- Does the duty-bearer have the authority (mandate, power, legitimacy, accountability) to fulfill its human rights obligations? If not, why?
- Does the duty-bearer have the commitment (political will, responsibility, leadership, motivation) to fulfill its human rights obligations? If not, why?
- Does the duty-bearer have the resources (human, economic and organizational) to fulfill its human rights obligations? If not, why?
- Are there mechanisms to respond and provide remedy to the violation or abuse of human rights? If so, what are they? If not, why?
- Is there scope to strengthen the capacity of the duty-bearer with respect to transparency, accountability, effectiveness and responsiveness?
- Are there risks associated with developing the human rights-related capacities of the duty-bearer? If so, what can be done to mitigate those risks?

Responsibility-Holders: Identify the capacity gaps preventing these groups/individuals from observing and promoting human rights.

Note: If the responsibility-holder is the source of the human rights abuse, many of the questions related to the capacity of the duty-bearer could apply.

- Does the responsibility-holder have a positive or negative impact on the specific human rights situation? Do they have knowledge of the potential consequences of their intervention in terms of safety and security of victims and other forms or reprisals and retribution?
- What is the responsibility-holder's relationship with the rights-holder and duty-bearer? How influential is the responsibility-holder with these actors?
- Are there risks associated with developing the human rights-related capacities of the responsibility-holder? If so, what can be done to mitigate those risks?

Applying Key Human Rights Principles

The following questions capture the key human rights principles of equality, non-discrimination, participation, inclusion, accountability and transparency, and are meant to guide the content (©) and the process (*) of a human rights analysis.

Equality and non-discrimination

- Are all persons equal before the law (pay attention to explicit legal inequalities including specific gender-based discrimination, social distinctions and exclusions, and indirect discrimination)? ©
- Which marginalized and/or vulnerable groups experience inequality and discrimination and why?

- Are laws enforced in an equal manner? ©
- Do laws prohibit discrimination on any ground, including for example on the basis of sex, race, ethnicity, national or ethnic origin, colour, religion, language, sexual orientation, gender identity and expression, age, disability? ©
- Are there cultural norms or traditions that reinforce prejudices and cause discrimination? If so, are these addressed by additional special measures? ©
- Are there technological barriers to equal access to social, political and economic participation? For example, are marginalized or vulnerable groups excluded from accessing commonly employed information and communications technologies in their local context? ©
- What steps are taken to ensure the situation analysis undertaken at this stage is not unintentionally discriminatory in its aim, design, conduct and findings? *
- How could considering human rights at the analysis stage lead to innovative approaches or solutions to inequality and discrimination in this context? *
- What steps are taken to ensure that collection and/or presentation of findings of this situation analysis do not risk aggravating any existing discrimination, and fueling or creating new tensions? *

Participation and inclusion

- Is there active and informed participation by the poorest, most marginalized and most vulnerable in the conduct of public affairs? ©

- Are the voices of the poorest, most marginalized and most vulnerable meaningfully included in decision-making processes? If so, how and by whom? ©
- What barriers exist to the full participation of marginalized and vulnerable groups in society? Are there barriers specific to the participation of women and girls? ©
- Is there a commitment by decision-making bodies to accommodate inclusion and participation of the most marginalized and vulnerable? ©
- Are there mechanisms in place at different levels of decision-making in order to overcome the barriers that the poorest, most marginalized and most vulnerable face in their efforts to meaningfully contribute and participate in society? ©
- Do rights-holders, especially the poorest, most marginalized and vulnerable, have the capacity to ensure that their participation is meaningful? ©
- Given that participation is more likely to occur in community-level activities, are decentralized or local Government structures in place? ©
- Is the situation analysis undertaken in a participatory manner by consulting with the poorest, most marginalized and most vulnerable groups? In particular, are efforts made to ensure the equal representation of women, men, girls and boys? *

Transparency and accountability

- Are accountability mechanisms accessible, transparent and effective? ©

- What are the dynamics around responsibility-holders that influence transparency and accountability? Is there civil society and private sector engagement by government? ©
- Are there innovative and non-formal accountability mechanisms that secure the active and informed participation of the poorest, most marginalized and most vulnerable? ©
- Are parliaments or parliamentary committees equipped to play a monitoring role? ©
- Does decentralized and local-level governance enable the poorest, most marginalized and most vulnerable to monitor Government activities? ©
- Is there a legal framework by which civil society can perform an independent monitoring role? If so, is it fairly and effectively implemented? ©
- Do rights-holders have access to effective remedy before a domestic authority in the event that human rights have not been upheld? If so, does the domestic authority have the competence to grant reparation to the victim(s)? ©
- Does access to information legislation exist? If so, is it fairly and effectively implemented? ©
- How, to whom, and by whom will the findings of the situation analysis be disseminated? *
- Is the method of data collection and management ensuring the necessary privacy and protection of stakeholders? Are digital threats considered in the context of digital communications? *
- How is the situation analysis distinguishing between inability and unwillingness of duty-bearers to fulfill human rights obligations? *

Considering human rights when planning and designing your initiative

Which human right(s) is the initiative seeking to advance?

How will human rights-related risks identified in the analysis be mitigated?

Drawing from the situation analysis, identify the expected ultimate and intermediate outcomes from your initiative. Intermediate outcomes will describe changes in behaviour, practice or performance on the part of the rights-holders, duty-bearers, and/or responsibility-holders, and reflect key human rights principles.

- For **rights-holders**, examples of intermediate outcomes include: decreased barriers to access and benefit from programs and/or service delivery for marginalized individuals and groups (equality and non-discrimination); increased participation/engagement in processes and decision-making that affects them by individuals (participation); enhanced advocacy and mobilization efforts by individuals and groups (participation); enhanced voice of stakeholders in public life (inclusion); increased access to information by marginalized individuals or groups (transparency); increased use of formal means of redress by marginalized individuals and groups (accountability).
- For **duty-bearers**, examples of intermediate outcomes include: increased representativeness of State bodies (equality and non-discrimination); improved equal protection of rights-holders before the law by duty-bearers (equality and non-discrimination); enhanced inclusiveness of systems, policies, practices or processes by State actors (inclusion); decreased exclusionary policies, practices or processes by State actors (inclusion); increased use of participatory approaches by

the State (participation); increased transparency by State (transparency); increased engagement in transparent and consultative decision-making by State bodies (transparency); increased anti-corruption measures by State bodies (accountability) increased formulation of legislation by State bodies (accountability); enhanced judicial, administrative or other means to ensure effective remedy for human rights violations/abuses by State actors (accountability).

- For **responsibility-holders**, examples of intermediate outcomes include: strengthened role in enhancing equality and non-discrimination in public systems and processes by non-state actors (equality and non-discrimination); decreased discriminatory policies, practices or processes by non-state actors (equality and non-discrimination); enhanced inclusion of stakeholders' views by non-state actors (inclusion); increased participation/engagement in decision-making by non-state actors (participation); increased use of participatory approaches by non-state actors (participation); enhanced advocacy and mobilization efforts by non-state actors (participation); improved communication and transparency of policies and processes by non-state actors (transparency); strengthened oversight and challenge function performed by non-state actors (accountability); improved accountability to stakeholders, including rights-holders and duty-bearers, by non-state actors (accountability); improved financial transparency and accountability by non-state actors (transparency and accountability).

Once you have identified your expected intermediate outcomes, drawing again from the situation analysis, identify which human rights capacity gaps of rights-holders, duty-bearers and/or responsibility holders it is appropriate for your initiative to address, regardless of the action area

under which it falls, and how it will address those gaps. Changes in capacity will become the expected immediate outcomes of the project while the means to address them will become the planned outputs and activities.

- For **rights-holders**, examples of immediate outcomes include: improved awareness of human rights and of the role of duty-bearers; improved mechanisms for communication and association among rights-holders. Activities could include: civic education; human rights education or training; knowledge transfer; skills development and training, including digital enablement and digital safety training; and working with the media and paralegals.
- For **duty-bearers**, examples of immediate outcomes include: improved awareness of human rights obligations among civil servants; improved oversight mechanisms by State bodies; increased knowledge and skills in developing, ratifying and/or implementing legal instruments by State actors; enhanced abilities of State actors to develop laws, policies and institutions that protect the human rights of particular marginalized group; improved ability to undertake participatory approaches. Activities could include: civic education; human rights education or training; knowledge transfer; skills development and training; and legislative, policy, budgetary technical assistance.
- For **responsibility-holders**, examples of immediate outcomes include: improved awareness of human rights; improved oversight mechanisms and capacity of non-state actors; increased knowledge and skills among non-state actors to advocate for human rights with the State. Activities could include: working with the media and paralegals; technical assistance; knowledge transfer, skills development and training for civil society advocacy groups; and human rights education.

In collaboration and consultation with stakeholders, develop the theory of change for your initiative. At Global Affairs Canada, the theory of change for a specific initiative is represented by the logic model and fully explained in the theory of change narrative.

- Does your theory of change outline the assumptions about the human rights situation and the initiative's proposed impact upon this situation?
- Does your logic model capture improvements to rights-related capacity of rights-holders, duty-bearers and/or responsibility-holders at the **immediate outcome** level? Are indicators available to measure this? Are indicators disaggregated according to sex and age, and, where possible, to recognize other identity factors such as race, ethnicity, national or ethnic origin, colour, religious, language, sexual orientation, gender identity, and/or disability, as well as geographic location?
- Does your logic model capture the changes we are seeking to achieve with each of the key human rights principles of equality, non-discrimination, inclusion, participation, transparency and/or accountability at the **intermediate outcome** level? Are indicators available to measure this? Are indicators disaggregated according to sex and age, and, where possible, to recognize other identity factors such as race, ethnicity, national or ethnic origin, colour, religious, language, sexual orientation, gender identity, and/or disability, as well as geographic location?
- Does your logic model describe the sustained, positive changes in the life, dignity and wellbeing of rights-holders at the **ultimate outcome** level? Are indicators available to measure this? Are indicators disaggregated according to sex and age, and, where possible, to recognize other identity factors such as race, ethnicity, national or

ethnic origin, colour, religious, language, sexual orientation, gender identity, and/or disability, as well as geographic location?

Applying Key Human Rights Principles

The following questions capture the key human rights principles of equality, non-discrimination, participation, inclusion, accountability and transparency. Applicants are not expected to provide responses to these questions; rather, they are meant to guide the planning and design of the initiative, in a human rights-sensitive manner.

Equality and non-discrimination

- How is it being ensured that the planning and design of the initiative is non-discriminatory?
- Is there a meaningful gender balance among the individuals involved in the planning and design?
- Has a Gender-Based Analysis Plus (GBA+) been applied to identify barriers to equality and non-discrimination?
- Among rights-holders, are the most marginalized and most vulnerable groups specifically targeted in the planning and design? How are they identified? What safeguards are in place to ensure their involvement does not lead to increased stigma and discrimination?
- Does the initiative work with and seek to empower rights-holders who are traditionally excluded or discriminated against?
- What are the specific needs for data disaggregation? This should be determined by a participatory approach.

- Is data disaggregated adequately, ideally beyond sex and age, to recognize other identity factors such as race, ethnicity, national or ethnic origin, colour, religious, language, sexual orientation, gender identity or expression, and/or disability, as well as geographic location?
- Are there mechanisms in place to address unconscious bias and unintended consequences arising from this initiative?

Participation and inclusion

- How is the general public participating in the planning and design of the initiative?
- Are the communities of rights-holders especially concerned with the issue in question participating in the planning and design of the initiative? How are their voices meaningfully included?
- Among those especially concerned, are the poorest, most marginalized and vulnerable participating in the planning and design of the initiative? How are their voices meaningfully included? In particular, how are women and girls' voices included?
- Is capacity development needed for rights-holders, especially the poorest, most marginalized and vulnerable, to ensure that their participation is meaningful?
- Are there capacity development activities that can be undertaken to empower the poorest, most marginalized and most vulnerable rights-holders to make their voices heard by the duty-bearer?
- Are there indigenous innovative and informal solutions that can be employed to increase participation and access to public affairs by marginalized and vulnerable communities?

- Will participation by certain individuals/groups impact their safety and security? Is there risk of reprisals for their participation?
- Depending on local context, are methodologies proposed from assuring inclusive processes in reality perpetuating exclusion? For example, engagement and knowledge transfer via internet-based platform excludes individuals without access.
- How is the public included in setting targets and in defining success and failure of the initiative?
- Are the communities of rights-holders especially concerned with the issue in question included in setting targets and in defining success and failure of the initiative?
- Among those especially concerned, are the poorest, most marginalized and vulnerable included in setting targets and in defining success and failure of the initiative?
- In what ways are rights-holders included in determining what data is to be collected, collecting it, analyzing it and feeding back into the initiative?

Transparency and accountability

- How are the processes and authorities (duty-bearers and/or responsibility-holders) responsible for planning and designing the initiative made known to the public? Are women and men equally informed?
- Is there transparency about how the initiative is planned and designed, and on what it intends to do?
- Are all decision-making processes for the initiative transparent and shared with the public? By what means?

- Is information on the initiative available in accessible formats and in minority languages?
- Is the process by which beneficiaries and intermediaries are selected transparent, e.g. involving the community in this process, ensuring an appropriate gender balance, and focusing on the most marginalized groups (with due attention to protecting these groups from potential stigma and discrimination)?
- Is the initiative seeking to strengthen partnerships between duty-bearers and responsibility-holders, including women's groups and other non-governmental, community-based and professional associations, in order to improve accountability of the duty-bearer?
- If working with duty-bearers, is there scope to integrate gender-based budgeting?

Addressing human rights throughout implementation, including monitoring and evaluation

Does the project implementation plan outline how the initiative will advance specific human rights?

Does the project implementation plan outline how the risks identified in the analysis will be monitored and the initiative adjusted so that human rights are advanced and potential tensions are addressed?

Do annual work plans include a specific plan for the achievement of human rights outcomes and the application of key human rights principles?

Do narrative reports capture the human rights results?

During implementation, ensure that planned project activities and outputs, including capacity development activities are leading to the achievement of expected outcomes.

Revise project theory of change and implementation plan as new human rights issues are identified, in order to address emerging concerns.

What challenges are being encountered in advancing the human rights targeted by the initiative? For monitoring and mid-term evaluations, how can some of these challenges be mitigated?

Applying Key Human Rights Principles

The following questions capture the key human rights principles of equality, non-discrimination, participation, inclusion, accountability and transparency. Applicants are not expected to provide responses to these questions; rather, they are meant to guide the implementation (including monitoring and evaluation) of the initiative, in a human rights-sensitive manner.

Equality and non-discrimination

- Is the initiative discriminatory in any way in its implementation? If so, in what setting and by whom?
- How can discrimination in the initiative's implementation be combatted?
- What plans have been made, and what resources allocated, to combat active discrimination?
- Does the initiative consciously set out to rectify any existing discrimination?

- How are power inequalities among the intended beneficiaries and/or intermediaries dealt with?
- How is the initiative ensuring representative input from the poorest, most marginalized and most vulnerable?
- Is the implementation of the initiative fostering gender equality and the empowerment of women?
- Is the implementation of the initiative engaging men and boys and raising awareness about how gender equality benefits all?
- How does the monitoring and evaluation system detect causes, practices and impact of any discriminatory actions that may occur?
- How are claims of discrimination tracked?
- Is data disaggregated appropriately, ideally beyond sex and age, to also include, where possible, income, ethnic, Indigenous, linguistic, religious, disability and sexual orientation, gender identity or expression factors, as well as geographic location.
- What criteria are used to determine to what extent data should be disaggregated, beyond sex and age?
- Has data collection on particularly marginalized or vulnerable groups, including “legally invisible” groups should been made in close partnership or consultation with the group concerned in order to mitigate possible risks?
- Is data published in a format that permits detection of possible multiple intersecting disparities and discrimination?

Participation and inclusion

- How is the public participating in the implementation of the initiative?

- Are the communities of rights-holders especially concerned with the issue in question participating in implementation of the initiative?
- Among those especially concerned, are the poorest, most marginalized and most vulnerable participating in the implementation of the initiative?
- Are the capacities of rights-holders to engage being developed?
- Are rights-holders adequately organized to participate? What support do they need?
- How is it ensured that the poorest, most marginalized and most vulnerable rights-holders are benefitting from the implementation of the initiative?
- How are data collection exercises ensuring free, active and meaningful participation of all stakeholders, including the poorest, most marginalized and vulnerable?

Accountability and transparency

- How is information disseminated throughout the implementation of the initiative?
- How is transparency maintained with respect to the initiative's decision-making processes?
- What methods of remedy are available to those negatively affected by the initiative?
- Who can demand accountability during the implementation of the initiative?
- How is it being ensured that the findings from the initiative's implementation, monitoring and evaluations are made public?

- How are findings from the initiative used to inform changes or adjustments in policy or other interventions?
- Do the findings from the initiative capture lessons-learned from any unintended consequences or externalities of the initiative?
- Are the processes and decisions by which participants for data collection are selected clear and transparent, paying attention to protect groups that may feel uncomfortable or threatened by data collection?
- Is data disseminated as quickly as possible after collection? Is dissemination accessible in language and format, taking into account consideration such as disability, language, literacy level and cultural background? This should be balanced with the rights to privacy and data protection.

Resources

To inform your human rights analysis and your human rights-based approach, you may refer to:

- HRBA Checklist for Partners;
- The OHCHR's Status of Ratification Interactive Dashboard;
- Universal Periodic Review Recommendations;
- NGO reports like those from UPRinfo, Human Rights Watch, Amnesty International, Freedom House, CIVICUS;
- Human rights treaty bodies like the Human Rights Committee for the International Convention on Civil and Political Rights (ICCPR), the Committee on Economic, Social and Cultural Rights for the

International Convention on Economic, Social and Cultural Rights (ICESCR), the Committee on the Elimination of Discrimination against Women and National Country Reports on CEDAW Implementation for the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW), the UN Committee on the Rights of the Child for the Convention on the Rights of the Child (CRC), the Committee on the Elimination of Racial Discrimination for the International Convention on the Elimination of All Forms of Racial Discrimination (ICERD), etc.;

- Regional human rights bodies like the American Convention on Human Rights, the African Charter on Human and Peoples' Rights, the European Convention for the Protection of Human Rights and Fundamental Freedoms;
- Special procedures like special rapporteurs and working groups;
- National human rights institutions, academics and scholars.

Other tools that could help with a contextual understanding of the human rights situation include the following:

- A Political Economy Analysis that considers how and why things work as they do locally, who the key actors are, and what incentivizes them, may be especially helpful to understand the local power dynamics and inequalities.
- Similarly, a Conflict Analysis identifies the relationships between a human rights situation and broader conflict drivers, consequences and dynamics, and can help recognize risks and leverage points.

Child Rights Impact Assessment

Two (2) versions of this tool are available: a print friendly version in PDF format and a web friendly version.

1. **Print friendly in PDF format**: You can use the PDF version if you want to be able to save your progress on your own computer as you go.

   Once you save it on your computer, you can go back to the document as many times as you want to make changes. You can print it later when you are ready.

   You can also print a blank copy of the tool and fill it in by hand.

2. **Web friendly version (on this page below)**: You can use this version if you want to complete the tool on the web page and print it out right away. This web page may also be used by those requiring support from a screen reader.

   Important notes:

   - **You cannot save information in this web page and come back to it later**. The Department of Justice does not collect or keep any of this information.

- **If you close your browser tab or your browser before printing it, your information will be lost.**

Developed by the Department of Justice Canada
July 2023

Part 1: Initial Screening

1. Objective of the initiative

Identify and describe the objective(s) of the initiative and the anticipated outcomes.

- What is the problem or issue the initiative is seeking to solve?
- Do children experience this problem differently from other population groups?

2. Impact of the initiative

What is the impact of the initiative on children?

a. **Identify potential positive OR negative impacts, including indirect impacts, on children and on their rights as recognized in the CRC (Convention on the Rights of the Child)**.

b. **Does the proposed initiative affect different groups of children differently? If yes, please explain briefly**.
(Please note that there may be different benefits or impacts for different groups of children and that the impacts may be compounded based on multiple identity factors.

Groups to consider include, but are not limited to: Indigenous children, minority children (including racial minorities, linguistic minorities and religious minorities), children with disabilities, girls, boys, and children of all genders, 2SLGBTQI+ children, children living in poverty, migrant children, children in care, and children in urban or rural settings.)

c. **Does the initiative reduce inequalities, or does it exacerbate or create new inequalities between children and adults or between different groups of children?** (Note that achieving substantive equality may require treating different groups of children differently and that treating all children the same may in fact exacerbate inequalities.)

If your assessment does not identify any impacts on children or their rights, a full Child Rights Impact Assessment is not required. However, please explain your assessment process and how you reached your conclusion.

Part 2: Full Child Rights Impact Assessment

3. Preliminary rights review

Complete if you identified impacts on children in Part 1 (Initial Screening)

Does the proposed initiative have any impacts (positive or negative) on the rights of children? Check any of the articles of the CRC (Convention on the Rights of the Child) that may be relevant:

Category	Article	Impact?
Guiding principles	Non-discrimination (Art. 2)	○ **Yes** ○ **No**
	Best interests of the child (Art. 3)	○ **Yes** ○ **No**
	Right to life, survival and development (Art. 6)	○ **Yes** ○ **No**
	Respect for the child's views (Art. 12)	○ **Yes** ○ **No**
Protection afforded to children	Special protection for refugee children (Art. 22)	○ **Yes** ○ **No**
	Special care for children with disabilities (Art. 23) (See also the Convention on the Rights of Persons with Disabilities)	○ **Yes** ○ **No**
	Protection against torture or other cruel, inhuman or degrading treatment or punishment, protection of the right to liberty (Art. 37)	○ **Yes** ○ **No**
	Treatment of children in contact with the penal system, taking into account the child's age and promotion of reintegration (Art. 40)	○ **Yes** ○ **No**

Category	Article	Impact?
Children in situations of exploitation, abuse and violence	Protection against physical or mental violence, injury or abuse, neglect or negligent treatment, maltreatment or exploitation, including sexual abuse (Art. 19)	○ **Yes** ○ **No**
	School discipline is administered in a manner consistent with the child's human dignity (Art. 28(2))	○ **Yes** ○ **No**
	Protection against economic exploitation labour rights for children (Art. 32)	○ **Yes** ○ **No**
	Protection from the illicit use of narcotic drugs and psychotropic substances (Art. 33)	○ **Yes** ○ **No**
	Protection from all forms of sexual exploitation and sexual abuse (Art. 34)	○ **Yes** ○ **No**
	Prevention of the abduction of, the sale of or traffic in children (Art. 35)	○ **Yes** ○ **No**
	Protection against all other forms of exploitation prejudicial to any aspects of the child's welfare (Art. 36)	○ **Yes** ○ **No**
	Optional Protocol on the sale of children, child prostitution and child pornography	○ **Yes** ○ **No**

	Freedom of association and assembly (Art. 15)	○ **Yes** ○ **No**
	Privacy and reputation (Art. 16)	○ **Yes** ○ **No**
	Access to information and material from a diversity of national and international sources (Art. 17)	○ **Yes** ○ **No**
	Knowledge of rights (Art. 42)	○ **Yes** ○ **No**

Category	Article	Impact?
Economic, social and cultural rights	Right to the highest attainable standard of health (Art. 24)	○ **Yes** ○ **No**
	Right to social security (Art. 26)	○ **Yes** ○ **No**
	Right to an adequate standard of living, including adequate nutrition and housing (Art. 27)	○ **Yes** ○ **No**
	Right to education: primary education free and compulsory, development of different forms of secondary education, higher education accessible to all etc. (Art. 28)	○ **Yes** ○ **No**
	Education directed towards the development of the child's personality, talents and mental and physical abilities to their fullest potential (Art. 29)	○ **Yes** ○ **No**
	Rights of Indigenous children, including the right to enjoy their culture, religion and language (Art. 30 and UN Declaration on the Rights of Indigenous Peoples).	○ **Yes** ○ **No**
	Rights of minority children to enjoy their culture, profess and practice their religion or use their language (Art. 30)	○ **Yes** ○ **No**
	Right to leisure and play, and to participation in cultural life (Art. 31)	○ **Yes** ○ **No**

4. Information and research

What resources and research were used to inform your CRIA (Child Rights Impact Assessment)? (e.g., qualitative research, quantitative research, stakeholder positions, including Indigenous organizations and marginalized groups, jurisprudence, academic

articles, consultation with substantive and/or legal experts.)

Is there any information missing or still required?

5. Engagement

What, if any, groups (children or stakeholders) were engaged on the proposed initiative? What views were expressed? What were the results of the discussions?

Have the views and experiences of affected groups of children been taken into account? If yes, in what manner? If no, why not? (Please keep in mind the evolving capacities of children and the obligation to give due weight to the views of children in accordance with their age and maturity.)

6. Rights analysis

Based on the information collected, expand your analysis of the rights that are affected (in reference to the rights identified in question #3 of Part 2). In answering this question, please take into account potential compounding impacts based on multiple identity factors. Please consider:

Which articles of the CRC (Convention on the Rights of the Child) are relevant?

Description of positive or negative impacts on rights

What group or groups of children will likely be impacted?

Notes

7. Weighing of positive and negative impacts

What is your overall assessment of the positive and negative impacts of the proposal on children generally and on different groups of children? In answering this question, please consider:

- Given the full range of positive and negative impacts on children, is the proposal a reasonable way to achieve the objective?
- What options could mitigate negative impacts?
- What options could optimize positive impacts?

8. Conclusion

What are your key findings on the impacts of the initiative on children's rights? Please consider:

- Should any recommendations be made?
- Should any further steps be taken?

Principles

5 The following principles shall be considered in the development of sustainable development strategies:

(a) the principle that sustainable development is based on an efficient use of natural, social and economic resources and the need for the Government of Canada to integrate environmental, economic and social factors in the making of all of its decisions;

(a.1) the principle that sustainable development

(i) is a continually evolving concept,

(ii) may be achieved by, among other things, the protection of ecosystems, prevention of pollution, protection of human health, promotion of equity, conservation of cultural heritage, respect for domestic and international obligations relating to sustainable development and recognition of the present generation's responsibility to provide future generations with a healthy and ecologically sound environment, and

(iii) may be advanced by, among other things, taking into account the precautionary principle, the "polluter pays" principle, the principle of internalization of costs and the principle of continuous improvement;

(b) the principle of intergenerational equity, which is the principle that it is important to meet the needs of the present generation without compromising the ability of future generations to meet their own needs;

(c) the principle of openness and transparency, which is the principle that the release of information should be encouraged to support accountability and public engagement;

(d) the principle that it is important to involve Aboriginal peoples because of their traditional knowledge and their unique understanding of, and connection to, Canada's lands and waters;

(e) the principle of collaboration, which is the principle that it is important for stakeholders to collaborate in the pursuit of common objectives; and

(f) the principle that a results and delivery approach — that allows for developing objectives, developing strategies for meeting those objectives, using indicators for reporting on progress towards meeting those objectives and establishing accountability — is key to meeting measurable targets.

Priorities by theme

Previous page | Table of Contents | Next page

Priorities and proposed action plan measures to date are based on engagement undertaken through various fora: virtual bilateral and multilateral sessions, the online submission tool, correspondence, in-person meetings and, primarily, written submissions (Annex B) from Indigenous partners.

Indigenous partners' priorities and proposed measures outlined in this report are organized according to "rights-based clusters" or "Declaration themes", which broadly align with how various rights are grouped in other international human rights instruments, such as civil and political rights under the International Covenant on Civil and Political Rights, and assists with making linkages between the Declaration and other human rights instruments and guidance developed by human rights bodies. The 46 articles of the Declaration are organized into ten categories:

- General Principles (applicable to all of the Declaration)
- Implementation and redress
- Self-determination, self-government and recognition of treaties
- Civil and political rights
- Participation in decision-making and Indigenous institutions
- Lands, territories and resources
- Environment
- Economic and social rights
- Cultural, religious and language rights
- Education, information and media

Just as Indigenous partners have indicated that they understand the Declaration and its 46 articles in ways that do not always fit neatly within each of these categories, Justice Canada too understands that the rights contained within the Declaration are universal, indivisible, interdependent, and interrelated. Therefore, these categories are merely one way in which these priorities and proposed measures can be conveyed as part of the Declaration's implementation and were placed under a given theme after considering a combination of factors, including Declaration articles related to the priority or proposed measure.

While the content of this report will necessarily help inform the Action Plan, the priorities and proposed measures outlined here are intended to reflect a high-level summary of Indigenous partners' views. These views include priorities for draft Action Plan consideration conveyed through "formal" written submissions; priorities previously conveyed about the Declaration (i.e., through publicly available policy reports, annual reports, and committee testimony); and those shared through hundreds of sessions held by Justice Canada since December 2021. This summary is intended to

offer an understanding of First Nations, Inuit, Métis and cross-Indigenous priorities for Declaration implementation, even as work continues with partners to reach specific text for the Action Plan.

General principles (Articles 1, 2, 43, 44, 45)

The articles under this theme are applicable to the entirety of the Declaration and serve as the basis for implementing all of the rights contained in the Declaration. They include the guarantee of full enjoyment of individual and collective rights as recognized in the Charter of the United Nations, the Universal Declaration of Human Rights and in international human rights law; minimum standards for the survival, dignity and well-being of Indigenous peoples; and a guarantee that nothing in the Declaration may be construed as diminishing or extinguishing existing or future rights of Indigenous peoples. This cluster of articles also includes the right to equality and non-discrimination and the right to gender equality. These general principles are integral to the other nine thematic rights-based clusters below.

Implementation and redress (Articles 38, 39, 40, 41, 42, 46)

Indigenous partners conveyed the greatest number of priorities under the Implementation & Redress theme, which include overarching measures to "achieve the ends of the Declaration" and technical and financial assistance to do so, as well as conflict resolution measures to address disputes.

Partners cited several existing federal statutes that in their view would require amendment in order to ensure overall effective implementation of the Declaration. These included, but were not limited to, the *Interpretation*

Act; the *Department of Justice Act;* the *Statutory Instruments Act;* and the *UN (United Nations) Declaration on the Rights of Indigenous Peoples Act* (Annex C). Some partners who called for amending the *Department of Justice Act* and *Statutory Instruments Act* specified the need to require the review of proposed legislation and regulations for consistency with the Declaration, similar to the existing Charter review process. Included in these specifications are public reporting and a standardized process developed in consultation and cooperation with Indigenous peoples. Partners who recommended amendments to the *UN (United Nations) Declaration on the Rights of Indigenous Peoples Act* were seeking to ensure it is interpreted and administered as upholding the rights in the Declaration, to ensure comprehensive Indigenous inclusion in consistency of laws, Action Plan development and implementation, and annual reporting processes; to make the Act self-executing, binding on the Crown in right of Canada, the provinces and territories, and judicially enforceable when rights are infringed; and to fully adopt the Declaration into Canadian law, giving it force of law, stating that it prevails in the event of conflict or inconsistency with other statutes of Canada.

Several partners expressed that the *Constitution Act, 1982,* and section 35 specifically, could be amended to better align with the Declaration. In particular, partners advocated for Declaration compliance, affirmation, non-derogation and non-abrogation measures that would uphold constitutionally protected Aboriginal and treaty rights recognized and affirmed under section 35, in addition to the Indigenous collective and individual rights outlined in the Declaration. Specific legislative measures included adding a non-derogation clause to the *Interpretation Act* that provides for upholding treaty rights and inherent Aboriginal rights, in addition to non-abrogation and non-derogation language. A related priority included ensuring that the entirety of the *Interpretation Act* and the non-

derogation clause are consistent with the Declaration. Other related priorities include amending the *Interpretation Act* to establish an enforceable declaration affirmation clause consistent with both sections 25 and 35 of the *Constitution Act, 1982,* in order to uphold Aboriginal and treaty rights, in addition to the rights in the Declaration.

Partners representing off-reserve and/or urban Indigenous people highlighted the importance of using terminology that is clear, inclusive, reflective of all rights holders and consistent with section 35 of the *Constitution Act, 1982*. Some advocated for the inclusion of a glossary or lexicon in the Action Plan to clarify and ensure a common understanding of the different terms used by and in reference to Indigenous peoples, including in section 35, in the Declaration, and in other acts and legislation.

Partners also noted the importance of fulfilling consultation and cooperation requirements in consistency of laws processes and included several recommendations to ensure Indigenous inclusion and accountability mechanisms. Partners specifically recommended including Indigenous representative institutions and governing bodies, First Nations, Inuit and Métis women, 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, urban Indigenous people, and youth in consistency of laws processes, which could include thematic and geographic joint policy tables, a permanent standing committee, an Indigenous youth advisory committee, or citizens' assembly. They identified a concomitant need for financial and technical assistance and accountability mechanisms to ensure consistency of the laws of Canada with the Declaration. They also noted the importance of upholding free, prior and informed consent (FPIC) in all consistency of laws processes. A specific measure to amend the *Guide to*

Making Federal Acts and Regulations to recognize the Declaration and three systems of law, including customary law of Indigenous peoples, was also proposed.

With respect to measures related to the UN (United Nations) system, international human rights treaties and processes, and treaty body recommendations, partners put forward a variety of measures, including:

- Formalizing rules for full and effective participation of Indigenous peoples in UN (United Nations) processes; ensuring full representation of Indigenous peoples in international affairs and human rights bodies, including Indigenous women in UN (United Nations) international fora to uphold their Declaration rights; and funding Indigenous women's organizations to participate in the Universal Periodic Review and other international fora
- Respecting and implementing all international human rights treaties to which Canada is party
- Implementing special measures as per the *Convention on the Elimination of All Forms of Racial Discrimination*, and the *Convention on the Elimination of All Forms of Discrimination Against Women* to advance the equality of Indigenous women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons
- Implementing domestic reporting mechanisms on how Canada is meeting its obligations as set out in international human rights treaties
- Requiring an outside agency to monitor Canada on Declaration implementation in order to ensure equal and proper representation of Indigenous peoples ensuring that inherent rights, treaty rights and Aboriginal rights are properly recognized and administered as part of external monitoring

With respect to Action Plan preparation and implementation, partners also highlighted the need for committing financial and technical assistance to fulfill the statutory requirement for consultation and cooperation with Indigenous peoples, with accountability mechanisms such as consultation protocols, including further recognizing existing Indigenous protocols on consultation and cooperation. First Nations, Inuit and Métis women partners noted their special need for financial and technical assistance to support their equal participation and access to consultation, cooperation, co-development and FPIC (Free, Prior and Informed Consent) in Action Plan and Declaration implementation. Convening discussion tables – which would reflect the diversity of circumstances of Indigenous peoples across the country – for the implementation of specific Declaration articles, in consultation and cooperation with Indigenous people, was also proposed.

Other partners recommended ensuring actionable and sustained Declaration implementation through reviewing and amending the Action Plan as a living document, using a whole-of-government approach, and an Indigenous-led implementation strategy with specific departmental accountabilities, key deliverables and timelines. An overarching recommendation shared by many Indigenous partners was the need to uphold the duty to consult and to respect FPIC (Free, Prior and Informed Consent) in the Action Plan and all aspects of Declaration implementation. National Indigenous Women's Organizations also noted the need to ensure a distinctions-based and cross-Indigenous, intersectional and GBA plus (Gender-based analysis plus) approach to the co-development of the Action Plan and overall Declaration implementation, in order to respect the spirit and intent of all articles of the Declaration.

A key Action Plan recommendation from partners related to monitoring, oversight, recourse, remedy or other accountability measures included the establishment of an Indigenous and Human Rights Ombudsperson,

Commission, and/or Tribunal. Several partners, including National Indigenous Organizations (e.g., ITK (Inuit Tapiriit Kanatami)) and National Indigenous Women's Organizations, proposed establishing an Indigenous Advisory Council, an independent oversight body, and/or an arms-length Indigenous rights implementation monitoring mechanism that would be empowered to monitor and enforce Canada's compliance and progress in implementing the Declaration and the Act. Regardless of the specific proposed form, scope and purpose, the need for an independent mechanism to ensure effective implementation, including mandated seats for urban Indigenous communities, 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) communities, Indigenous women's organizations, youth, and others to ensure adequate representation and input, was one conveyed by many Indigenous partners.

National Indigenous Women's Organizations in particular noted their need for representation on the Oversight body, to ensure accountability in upholding the gender- and equality-based rights of First Nations, Inuit and Métis women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons. They advocated for the Oversight body to be grounded in Indigenous-led processes, using dispute resolution and complaint processes built on distinctions-based and cross-Indigenous, intersectional and gender-based frameworks. One National Indigenous Women's Organization recommended that the Independent Tribunal would best operate alongside newly developed anti-Indigenous racism legislation, using the British Columbia model as a best practice.

Many partners advocated for a distinctions-based (i.e., First Nations, Inuit, and Métis) approach to implementation, with some favouring a distinctions-based "plus" approach that includes a broad and diverse range

of perspectives. Other partners, however, recommended abandoning a distinctions-based approach altogether, as they deemed it was contrary to Article 2 of the Declaration and section 15 of the *Canadian Charter of Rights and Freedoms*. Furthermore, partners representing off-reserve and/or urban Indigenous people called for the development of a Federal Urban Indigenous Strategy, which would address the need for policy and strategic direction on urban Indigenous issues and promote relationship building with these partners. More specifically, these partners recommended that the strategy include the re-instatement of a national Indigenous Friendship Centre Program that is designed, delivered, and managed by the Friendship Centre Movement.

Proposed measures to address injustices and tackle violence and discrimination included ensuring Indigenous women, Elders, 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, youth, and urban Indigenous people were involved in the Declaration's implementation, using a distinctions-based and cross-Indigenous, intersectional, and gender-based analysis plus (GBA plus) approach. National Indigenous Women's Organizations specifically sought their inclusion in decision-making and participation in all aspects of the Declaration, UNDA (United Nations Declaration on the Rights of Indigenous Peoples Act), and Action Plan implementation, in order to ensure respect and protection of the gender- and equality-based rights of First Nations, Inuit, and Métis women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons.

Many Indigenous partners emphasized the need to engage provinces and territories on the Declaration and Action Plan implementation. While some identified this proposed engagement as a way to address jurisdictional

issues, others prioritized the federal government's responsibilities under the Constitution.

Lastly, proposed measures related to annual reporting included ensuring that First Nations, Inuit and Métis women, 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, youth, and urban Indigenous people were included in annual reporting processes, using a distinctions-based and cross-Indigenous, intersectional and GBA plus (Gender-based analysis plus) approach, with accountability mechanisms. Some partners noted the importance of including modern treaty and self-governing nations in annual reporting, while others wanted to see the written perspectives of Indigenous peoples highlighted in the Annual Report to Parliament, and the report to be proactively distributed. Still others sought a commitment for Canada to report on progress more regularly, with detailed tracking of smaller milestones, using plain language, accessible formats published in mainstream and social media, and translated into Indigenous languages. Many partners recommended using Indigenous-led evaluation and assessment tools to assess and report on progress in implementing the Declaration, included adding an evaluation framework to the reporting framework, in order to measure success through statistical improvements in Indigenous economic, social, health, food security, housing, education, linguistic, and employment indicators.

Self-determination, self-government and recognition of treaties (Articles 3, 4, 37)

The inherent rights to self-determination and self-government are relevant across themes. Indigenous partners focused their priorities on ensuring that Indigenous sovereignty, self-determination, and self-governance are

respected and upheld in all aspects of implementing the Declaration, including respecting the terms of historic and modern treaties.

▶ English version

Proposed legislative amendments focused on ensuring that the *Indian Act* is consistent with the Declaration and upholds self-determination, self-government, and treaty rights, including guarantees that Indigenous registration and membership is determined by Indigenous peoples. Specific recommendations included:

- Amending the *Indian Act* to end residual gender discrimination and uphold Indigenous women's rights, including as they relate to representation, membership, and self-determination
- Developing transition plans on a nation-to-nation basis to replace the *Indian Act* and provide First Nations control of their own membership, citizenship, and election codes
- Dismantling the *Indian Act* through replacement of the Indian Register with a Declaration-compliant framework
- Amending the *Indian Act* to fully recognize and implement enforcement and adjudication of First Nations' laws
- Amending the *Indian Act* to ensure alignment with First Nations' interests in the implementation of the Reserve Land and Environmental

Management Program and the *First Nations Land Management Act*
- Reviewing infrastructure formulas, including for roads, maintenance and operations in order to provide sufficient funding

Other partners recommended co-development of federal legislation recognizing Indigenous self-determination and self-governance, including mechanisms for self-government agreements, which would promote a more meaningful long-term focus and allow Indigenous peoples to move to self-government on an “opt-in” basis when communities are ready. In terms of proposed policy amendments, partners pointed to the Inherent Right Policy as requiring updates to align with the Declaration; the need to ensure that section 35 rights recognition frameworks are fully aligned with the Declaration; and support in rebuilding and reconstituting Indigenous nations.

piskihtasinahikêwin 4 / Article 4 (Plains Cree)

iyiniwak, ka-isi-âpacihtâhk omiyikosiwin ta-âsawi-tipêyimisocik, ayâwak ôma miyikosiwin ta-tipêyimisocik ahpô âsawi-tipêyimisowin pîhci pisiskêyihtamowina kihcinâkwan ohci pîhci mîna tipiyaw nâkatohkêwina, êkwa mîna sâpo-isi kiki-sôniyâwi-wîcihisowin-isi otâsawi-tipêyimisowin.

▶ English version

Partners also noted that the right to self-determination includes upholding and implementing all historic and modern treaty rights, including through review of existing funding arrangements to ensure meaningful treaty implementation. Some partners advocated for transition plans, on a nation-to-nation basis, to support Indigenous self-determination, self-government and sovereignty, and to ensure better legal protection for treaty rights.

Related recommendations included honouring the spirit and intent of rights contained in treaties, including through treaty implementation framework agreements. Overall, treaty partners consistently called for Canada to respect Indigenous understandings of treaty terms and to adopt a treaty-based approach to Declaration implementation.

Some First Nations partners advocated for the recognition of the inherent right to self-determination in Declaration implementation through federal consistency of laws processes. Others sought to uphold self-determination and self-government by ensuring respect and enforcement of laws passed by Indigenous governing bodies, including through community tripartite agreements with law enforcement or through Indigenous prosecution services. Indigenous governing bodies also proposed measures to exercise self-governance in areas ranging from implementation of modern land claim agreements to policing and other areas. Some partners noted that Indigenous-led institutions can assist in overseeing lands management, economic development, financial literacy, and wealth management.

> “With very few exceptions, the federal government’s legal framework currently denies the existence of Aboriginal title, treaty rights, and Aboriginal rights, including the inherent right of self-government. It does this by asserting full jurisdiction and leaving almost no space for Indigenous governance and decision-making.”
> - Lake Babine First Nation, Action Plan Submission, December 6, 2022

Métis Governments sought continued commitment to advance Métis self-government agreements, including negotiating core governance treaties; federal recognition legislation to implement their self-government agreements; measures to establish a Métis section 35 rights recognition framework to determine, recognize and protect the exercise of Métis

section 35 rights; and a mandate for all federal departments to negotiate reconciliation agreements with Indigenous governing bodies in order to create space for recognition of Indigenous jurisdictions and expedite Aboriginal rights recognition. Some self-identified Métis communities claiming not to be represented by existing Métis governments are also seeking federal recognition.

Inuit put forward a number of measures to ensure they are able to exercise and enforce their rights. Prioritizing a co-development approach to both legislative and policy changes, proposed measures include:

- An Indigenous human rights commission and tribunal
- Adequate resources and a new legislative and/or policy framework that affirms the right of self-government and provides for fiscal arrangements to support efficient negotiation of Inuit self-government agreements with Makivvik Corporation, Inuvialuit Regional Corporation, and Nunavut Tunngavik Inc. (this could include partnering with Inuit to update the Government of Canada's Inherent Right and the Negotiation of Aboriginal Self-Government policy)
- Full and effective implementation of the Inuit Nunangat Policy
- Ongoing use of the Inuit-Crown Partnership Committee as an integral mechanism for both implementing the Inuit Nunangat Policy and supporting Inuit self-determination

Inuit women advocated for self-determination through representative institutions of their own choosing, and the need to uphold their right to education and participation in decision-making, through investments in education and economic development targeted to Inuit women.

Indigenous women partners also advocated for the need to uphold inherent rights, including those related to matriarchal modes of governance, with financial and technical assistance and accountability

mechanisms, to ensure self-determination and to address historic grievances and modern treaty implementation issues. Additionally, urban Indigenous partners called for the need to recognize urban Indigenous modes of organizations, such as Friendship Centres.

Civil and political rights (Articles 6, 7, 9, 17, 33, 35, 36)

Indigenous partners conveyed several priorities under the Civil and Political Rights theme, which includes security of the person, the prohibition of genocide, the prohibition against the forcible removal of children, and labour rights.

Partners proposed amendments to existing legislation, as well as new legislative and policy initiatives in order to uphold civil and political rights relating to the security of the person and communities across borders, including:

- Amending the *Immigration and Refugee Protection Act*, to address issues affecting cross-border Indigenous communities, including the re-establishment of communities divided by international borders as well as right of entry provisions and work, residency, and employment permitting processes
- Recognizing Aboriginal rights across interprovincial borders, both at the federal and provincial levels
- Ensuring political and legal recognition with tribes and members in the United States
- Establishing a protocol to ensure appropriate handling of cultural and ceremonial items, including medicinal plants, at the Canada-United States border

Other partners recommended that the *Royal Canadian Mounted Police (RCMP) Act* be reviewed to increase accountability of officers in their dealings with Indigenous peoples and that cross-cultural training be provided for Canada Border Services Agency staff to ensure sensitivity for Indigenous cultures, ceremonial people, and Elders. Other partners recommended new legislation to incorporate the 231 Calls for Justice of the National Inquiry's Final Report into Missing and Murdered Indigenous Women and Girls (MMIWG), the Truth and Reconciliation Commission's 94 Calls to Action, and the recommendations of the Quebec Coroner related to implementing Joyce's Principle.

Several partners recommended that federal legislation be developed to establish a National Oversight body and a violence prevention action plan in order to end violence against Indigenous women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons. Partners also noted the need to improve these vulnerable populations' safety and security through federally-resourced, community-coordinated responses, including supports for victims of human trafficking and domestic abuse, as part of federal legislation. National Indigenous Women's Organizations sought their inclusion and guaranteed representation in the composition of the National Oversight body to end violence against First Nations, Inuit and Métis women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, to ensure a distinctions-based and cross-Indigenous, intersectional and gender-based approach.

Other partners focused on policy measures to address gender-based violence against Indigenous women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, including:

- Combatting the culture of silence around violence through accountability and transparency in how Indigenous homicide, missing persons, and sexual violence investigations are handled and reported on, including through release of autopsy and coroners' reports
- Ensuring police investigations into gender-based violence are done without discrimination and bias
- Creating a system for reporting and investigating sexual and physical assaults, run by Indigenous women
- Financial and technical assistance to address the violence, racism and discrimination that impact Inuit women and their families
- Recognizing, preventing, investigating and punishing violence against Indigenous women, including psychological, physical, sexual, economic, political, spiritual or environmental violence, through respect for the principle of due diligence
- Preventing and combatting all forms of gender-based violence in schools and the workplace by taking the necessary measures to punish those responsible and ensuring reparations to victims

A key recommendation of partners with respect to addressing gender-based violence included using the findings of the National Inquiry into Missing and Murdered Indigenous Women and Girls (MMIWG) to guide the implementation of the Declaration, with financial and technical assistance to support sustained implementation of, and progress reporting on, the 231 Calls for Justice. Some partners specifically called for greater resource dedication, strategic oversight, and monitoring of the federal action plans that already guide the implementation of the federal MMIWG (Missing and Murdered Indigenous Women and Girls) inquiry including the urban Indigenous Action Plan on MMIWG2SLGBTQQIA+ (Missing and murdered indigenous women and girls, Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse).

Many partners saw the MMIWG (Missing and Murdered Indigenous Women and Girls) Calls for Justice as the primary lever to systematically address the ongoing violence against Indigenous women, girls, and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons. Other partners focused on addressing environmental violence, racism and discrimination, and ensuring the physical safety and socio-economic well-being of Indigenous women in the resource extraction industry. One specific measure called for federal regulatory and impact assessment bodies to assess and mitigate the impacts of resource development on marginalized Indigenous groups, including the impacts of sexual violence against Indigenous women and youth.

With respect to Indigenous children's and youths' civil and political rights, some partners recommended developing federal legislation to establish a national Indigenous youth agency and an Indigenous-led Commissioner for Indigenous children and youth in care, with financial and technical assistance and accountability mechanisms. Several partners pointed to *An Act respecting First Nations, Inuit and Métis children, youth and families* as requiring consistency with the Declaration, in order to end discrimination in child and family services and address jurisdictional barriers. Others called for federal action and financial and technical assistance to fully implement *An Act respecting First Nations, Inuit and Métis children, youth and families*, in order to ensure Indigenous governing bodies can exercise their jurisdiction over child and family services. Specific recommendations calling for measures to ensure Indigenous control of child welfare, with accountability mechanisms to ensure Indigenous authority and jurisdiction, included:

- Collaboration between federal and provincial governments to support the transition from provincial child welfare to Indigenous-led child

welfare, using evidence and data from those with lived experiences in the child welfare system

- Financial assistance to support Indigenous communities in developing their own child welfare laws in keeping with community values, in order to prevent and mitigate related generational harms caused by the forcible removal of Indigenous children
- Involving Indigenous women's organizations in Indigenous child welfare policies by:
    - prioritizing prevention over apprehension through the delivery of prevention-focused services
    - focusing on a duty to refer over a duty to report
    - investing in traditional, cultural, and land-based parenting teachings and education
- Appointing a special investigator to address the continued escalating rates of apprehension of Indigenous children, relying on statistics and the actions of all governments
- Developing an independent, Indigenous-led oversight body to monitor and ensure that child welfare agencies across Canada uphold Indigenous children's rights; recognize and honour the rights of the mother; ensure priority placement for Indigenous children with parents, family and community; and improve the collection of identity-based data in collaboration with provinces and territories
- Supports for Indigenous youth aging out of care, and compensation for trauma and abuse suffered under the child welfare system
- Free access by survivors to their child welfare records
- Greater preventative, culture-based investments as a protective measure against child welfare involvement and the importance of moving investments away from enforcement and apprehension

Other partners recommended sustained implementation, with financial and technical assistance, of the Truth and Reconciliation Commission's 94 Calls to Action and included proposals for a National Inquiry into the Sixties Scoop and removal of Indigenous children under Canada's child welfare system.

Access to justice was another key priority of Indigenous partners, who advocated for concrete measures to end discrimination in the justice system and ensure Indigenous access to fair and just procedures, including Indigenous women's and youths' access to justice. Specific recommendations included financial and technical assistance for:

- Indigenous-led policing, justice services, and criminal justice programming, including community justice initiatives, preventative programming, criminal justice diversion programs, and restorative justice programs
- Transition plans for Indigenous nations to assume control of their own criminal justice systems
- Legal aid services for First Nations, Inuit and Métis women and youth that would facilitate access to criminal justice system navigators
- Preventative programming for vulnerable Métis people, ensuring Métis access to fair and just procedures, and ensuring Métis women's access to justice
- Accessible processes for expunging youth criminal records to reduce barriers to education and employment

Several accountability mechanisms were also proposed to ensure Indigenous access to justice and equity and the upholding of civil and political rights, including:

- Establishing Indigenous civilian police oversight bodies for local law enforcement, including the RCMP (Royal Canadian Mounted Police), in

order to take concrete steps to end police brutality against Indigenous people
- Providing cultural sensitivity training to first responders, police, corrections, and conservation officers, prosecutors, Crown lawyers, and judges on Indigenous human rights, the Declaration, the Act, the Action Plan and on Indigenous legal realities and cultures, Indigenous law and on the rights of Indigenous women and girls
- Training police officers in trauma-informed approaches to increase the likelihood of better outcomes of Indigenous-police interactions
- Establishing an Indigenous entity to investigate police complaints
- Reviewing and implementing recommendations and findings of inquiries related to police treatment of Indigenous peoples, including the 2004 Final Report of the Commission of Inquiry into Matters Relating to the Death of Neil Stonechild
- Supporting and launching a National Strategy to address the over-incarceration of Indigenous women
- Improving implementation of Gladue and other judicial decisions addressing Indigenous peoples' overrepresentation in the criminal justice system and incarceration rates; and funding and standardizing Gladue reports for Indigenous offenders
- Amending the Canada Evidence Act and other acts in order to accommodate Indigenous oral history evidence in federal and provincial courts and place it on an equal footing with written historical evidence and testimony

Indigenous partners also made a number of recommendations related to upholding labour rights, including identifying and addressing Indigenous inequalities, racism and discrimination pertaining to human rights, employment and labour, and access to spiritual leave within the *Canada*

Labour Code. In addition, partners are also looking to implementing federal policy requirements for Indigenous hiring and representation in the public and private sectors.

Participation in decision-making and Indigenous institutions (Articles 5, 18, 19, 34)

This theme garnered significant attention from Indigenous partners because of its importance in revitalizing Indigenous institutions and structures and ensuring their participation in decision-making in matters concerning Indigenous rights and interests.

ᐃᓪᓴᖅᑯᑦ 18 / Article 18 (South Baffin)

ᓄᓇᖅᑲᖅᑲᖅᓱᒪᔪᑦ ᐱᔪᓐᓇᐅᑎᖅᑲᖅᑐᑦ ᐃᓕᐅᔪᓐᓇᖅᓴᑎᓂ ᐃᓱᒪᒃᓴᖅᓱᐅᓕᐊᓕᓐᓄᑦ ᐱᕐᔪᑎᖅᑲᖅᑐᑦ ᐃᓗᒥᓄᑦ ᐊᑲᑎᖅᑲᖅᑐᓂ ᐱᔪᓐᓇᖅᓂᖅᑎᑦ, ᑕᐅᒪᓐᓇ ᑭᓱᖏᖅᑐᖅᑕᐅᑎᑦᑎᓗᑎᓂᒃ ᓂᕈᐊᖅᓱᒪᓕᕆᖅᑎᓄᒃ ᒪᓕᓴᓗᑎᒃ ᓇᖕᒥᓄᑦ ᐱᐅᓱᖅᓯᐅᑉᐳᓗᒃᑐᑦ, ᐊᓚᒪᓗ ᐊᑐᐃᑐᓇᖅᑕᒥᔪᑦ ᐱᐅᓱᖅᓯᐅᑉᐳᓗᒃᑐᑦ ᐃᓱᒪᓕᕆᔨᖅᑐᑦ ᐃᓄᐃᑦᑐᑦ ᐊᑐᐃᑐᓇᖅᓂᖅᑎ

parliamentary procedures and processes to ensure that Indigenous nations and governing bodies are meaningfully consulted on federal legislation to ensure compliance with FPIC (Free, Prior and Informed Consent).

> “Consent isn’t one phone call. There is no consent really, they just tell us they are coming to set up shop and we just have to take it. Most of the people don’t even know, we should be able to see these big companies coming years before they set up shop. We don’t even know what we’re dealing with.”
> - Sagkeeng First Nation, Action Plan Written Submission, November 25, 2022

Partners also advocated for decision-making within Canadian institutions and structures to specifically include legislative and policy co-development with Indigenous peoples, including co-development of rights-based programs and policies with Indigenous governing bodies, including distinctions-based programs. Some First Nations partners focused on upholding the duty to consult and accommodate, and the need to consult with First Nations governing bodies on the Declaration’s implementation on a nation-to-nation basis that recognizes the inherent right of each First Nation to self-determination. Some First Nations partners expressed the importance of avoiding an approach that conflates all First Nations, but rather recognizes distinct First Nations and includes their specific priorities. Some partners also called for increasing Indigenous representation on federal boards and panels.

Several partners advocated for financial and technical supports to ensure that the specific needs of Indigenous women and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons were addressed, including the need to have

their rights to consultation, representation, decision-making, and institutions of their own choosing upheld as part of the Declaration's implementation. Some partners also advocated for the establishment of a consultative Indigenous Women's Council to ensure equitable implementation of the Declaration.

Urban Indigenous partners, including urban Indigenous youth, emphasized the importance of upholding the rights of off-reserve and urban Indigenous people to choose their own representatives in accordance with their own procedures, to maintain and develop their own decision-making institutions, and to be consulted with and express their FPIC (Free, Prior and Informed Consent) through their own representative institutions, including with adequate financial and technical support. These partners expressed that existing processes such as, the Permanent Bilateral Mechanisms and existing definitions of Indigenous Governing Bodies, are perceived to exclude off-reserve, non-status, and urban Indigenous people, and should instead be treated flexibly, recognizing that current structures bear the heavy imprint of the legacy of colonialism.

Other proposed measures relating to Indigenous judicial and legal systems, institutions and structures included:

- Incorporating Indigenous traditional and customary laws and processes, and re-establishing and upholding Indigenous inherent rights, laws and legal orders in all aspects of the Declaration's implementation
- Committing financial and technical resources for evaluating, revitalizing, considering and providing greater space for Indigenous laws and orders as a critical part of the Declaration implementation process

- Seeking specific legislative amendments, or omnibus legislation, to allow for Indigenous consent-based decision-making processes
- Re-establishing Indigenous laws through the inclusion and participation of Indigenous economic, political, and social institutions and governing bodies, and through processes for coordinating Indigenous and federal laws

Lands, territories and resources (Articles 10, 26, 27, 28, 30, 32)

This theme is closely related to the Environment theme that follows. Priorities and proposed measures focused on the inherent right to self-determination and self-governance of Indigenous traditional territories. This theme also includes priorities about FPIC (Free, Prior and Informed Consent) over the use, management and development of Indigenous lands and territories, along with enforcement measures and legal protections.

Indigenous partners pointed to several pieces of federal legislation related to lands, territories and resources that would in their view require review or amendment in order to ensure consistency with the Declaration, including but not limited to the *Impact Assessment Act*, *First Nations Land Management Act, Canada Energy Regulator Act, Indian Oil and Gas Act* and *Regulations,* including to enhance First Nations control over oil and gas development and conservation on reserve lands;and *Yukon Environmental and Socio-economic Assessment Act.* A significant amount of attention was paid to amending the *Fisheries Act* to ensure that it upholds the right to a moderate livelihood as framed in the *R v Marshall* decision of the Supreme Court of Canada. Several Indigenous partners pointed to the *Fisheries Act* and the upholding of First Nations' inherent right to self-determination and self-government as it relates to fish, fish habitat, and fisheries, including the

right of FPIC (Free, Prior and Informed Consent); and ensuring inclusion of Indigenous knowledge and science in joint governance and management structures, including coordination agreements under the *Fisheries Act.* Some partners are seeking further amendments to the *Fisheries Act* that would ensure the right to first priority basis to Indigenous peoples and governing bodies for food, social and ceremonial purposes, and for support andsubsistence.

Partners also called for the repudiation of the doctrines of discovery and *terra nullius*, and measures to address the dispossession of Indigenous peoples from their lands, including through restitution. Some First Nations partners called on the government to commit to negotiating redress for historical infringements to First Nations Aboriginal title and rights, including:

- Depriving First Nations of the means of subsistence and development
- Destroying cultural and spiritual sites
- Desecrating ancestral gravesites and remains
- Causing extreme environmental damage, including altering or destroying ecosystems and harvesting areas

These partners also called for a commitment to provide redress for the impacts of construction of hydroelectric dams, mining, forestry, the storage of nuclear waste, and other development, without FPIC (Free, Prior and Informed Consent), and with limited to no economic benefit to First Nations and members.

Other partners focused on the need to provide compensation for exploited land, resources and harvesting rights, including the denial of Aboriginal title. Priorities included co-developing a legislative and policy framework for full recognition and implementation of Aboriginal title, including return of lands, collaborative and/or joint decision-making, and revenue sharing.

Other partners requested express commitments around the implementation of Aboriginal title, and recognition of Indigenous self-governance and jurisdiction over title lands, including in the context of resource development.

With respect to restitution in the form of land back and redress of other outstanding claims, Métis Governments specifically called for a federal policy or process for Métis claims to enable Métis to seek redress for dispossessions of their lands. Métis rights holders are currently excluded from federal claims processes such as the comprehensive claims process or specific claims tribunal by virtue of these forums being limited to First Nations and Inuit. As such, Métis Governments are seeking to resolve their claims, including those relating to the *Manitoba Act*, scrip, and the Treaty 3 Halfbreed Adhesion, among others.

Other land claims-based recommendations included:

- Developing an independent review mechanism to ensure Inuit land claims agreements implementation
- Reviewing and amending the Specific Claims Policy and process to ensure consistency with the Declaration, or alternatively, developing a new claims negotiations policy outside of the Specific Claims process that supports Indigenous peoples in negotiating agreements with the Crown to recognize and resolve rights issues pertaining to Indigenous lands, territories and resources
- Consulting with Indigenous peoples to develop a reconciliation policy based on the Attorney General of Canada's *Directive on Civil Litigation Involving Indigenous People,* in orderto guide and encourage negotiated settlements for Indigenous rights, advance rights recognition and implementation, support Indigenous self-determination, and uphold the honour of the Crown

- Using the Declaration as a friendlier, less combative negotiation tool for land rights assertions and recognition, to facilitate greater partnership and equity among Indigenous nations, government and industry, and strengthened relationships with elected officials and public servants, in order to uphold consultation and accommodation and support revenue sharing and co-ownership models
- Amending the *Federal Courts Act* to exclude limitation periods and to remove maximum compensation amounts for Indigenous land, territories and resource claims from the *Specific Claims Tribunal Act*

Other land and resource development priorities focused on the importance of upholding self-determination, self-governance, the duty to consult and accommodate, and FPIC (Free, Prior and Informed Consent) with respect to all resource development on Indigenous lands. Several partners pointed to the need for meaningful consultation, participation and involvement in resource development decisions, with financial and technical assistance, in order to respect the Declaration and the Act. Some partners requested federal support and participation in good faith, multilateral, nation-to-nation, consensus-based decision-making processes, that could include collaborative project-specific roundtables or regional land-use planning councils.

Partners were consistent in prioritizing the need for clarity on FPIC (Free, Prior and Informed Consent), with some partners recommending the co-development of framework legislation outlining the meaning application of FPIC (Free, Prior and Informed Consent), and mechanisms for monitoring and enforcing FPIC (Free, Prior and Informed Consent), for impact assessments and resource development decisions. Other partners sought to amend the *Impact Assessment Act* to:

- Require that FPIC (Free, Prior and Informed Consent) be obtained for projects on Indigenous territories
- Prevent environmental racism by ensuring Elder and traditional Knowledge Keeper representation in order to meaningfully assess projects for social, health or economic impacts on Indigenous peoples
- Co-develop a regulation enabling the Impact Assessment Agency to enter into collaborative assessments with Indigenous communities that are not parties to modern treaties or do not have treaty settlement lands or reserve lands, but whose territories are nonetheless impacted by proposed projects
- Develop a policy to ensure sustainable funding, including potential proponent funding, for Indigenous governing bodies to meaningfully engage in technically complex impact assessments, with simplified and respectful application and reporting requirements
- Develop a policy confirming that Indigenous Knowledge in impact assessments will be properly valued, sufficiently resourced, subject to principles of ownership, control, access and possession (OCAP), and reconciled with western knowledge in case of discrepancies or inconsistencies

Still other partners recommended developing specific strategies for addressing FPIC (Free, Prior and Informed Consent) in environmental assessments, regulatory decisions, project and land use planning, and in the storage and disposal of hazardous materials affecting Indigenous communities. Indigenous partners are also seeking to develop a mechanism to resolve Indigenous claims with respect to the Natural Resource Transfer Agreement (NRTA) to fulfill treaty obligations with First Nations. Additionally, some partners called for the review and redress of the NRTA to advance project planning, regulation and revenue sharing with Indigenous nations. In relation to the *Guidelines for Federal Officials to Fulfill*

the Duty to Consult, some partners recommended that they be reviewed to ensure consistency with the Declaration, while others requested that they be replaced with a new co-created national framework for consultation on natural resource projects.

Many partners proposed measures to ensure that Indigenous communities could benefit from resource development on Indigenous lands, including through revenue-sharing agreements. Some partners called on the government to co-develop and implement new revenue-sharing and fiscal relationship policy frameworks for federally regulated infrastructure and resource extraction projects on Indigenous lands.

Other partners sought accountability mechanisms to:

- Uphold traditional territorial and treaty rights in resource development
- Respect Indigenous governance over traditional lands and resource management
- Uphold Indigenous knowledge, laws and standards related to lands and resource management
- Ensure the inclusion of First Nations, Inuit and Métis women in decision-making about their lands, territories and resources, including meaningful participation in the management and regulation of their lands and resources
- Include Indigenous data sovereignty over research and data gathered on Indigenous lands

These priorities included ensuring federal regulators and impact assessment bodies undertake cumulative impact assessments that address and mitigate project-specific impacts on the health, social and economic well-being of affected First Nations, Inuit and Métis communities, using distinctions-based, intersectional, and GBA- plus approaches.

Other partners advocated for treaty impact assessments that address inherent and treaty rights impacted by resource development projects, and the development of co-management agreements in areas of federal jurisdiction impacting traditional territories.

Indigenous women and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) priorities included protections from environmental and sexual violence caused by resource development projects and ensuring their participation in environmental impact assessments and in land use and economic opportunities on traditional territories. Several partners noted the need to uphold equality rights of First Nations, Inuit and Métis women in lands and resource development decisions and conservation, and to respect their traditional and ongoing roles as Waterkeepers and protectors of Mother Earth in conversation planning and water conservation efforts.

Other partners called for equitable inclusion in land planning strategies on traditional territories, including allowing Elders to be part of resolution boards to discuss the planning and development of resource extraction projects.

Partners also called for measures to maintain and strengthen spiritual relationships to lands, resources and waters by supporting Indigenous-led initiatives to rehabilitate Indigenous territories impacted and damaged by resource development projects. Related proposed measures called for investments in Indigenous monitoring and mitigation of environmental, mental, and physical impacts caused by past resource development projects, including increased financial and technical assistance to expand the Indigenous Guardians Program.

Other partners noted the importance of upholding Aboriginal harvesting rights, including forestry, trapping, fishing, hunting, and gathering, as well as agricultural activities. Specific recommendations included the need to strengthen Indigenous food security and ensure cultural knowledge transfer derived from land-based teachings. Partners further advocated for measures to support Indigenous control over conservation, management and protection of natural resources, lands, waters, and wildlife.

Related priorities and proposed measures included protection of lands, territories and resources through implementing sustainable emergency management systems, and upholding Indigenous land rights in the exercise of emergency powers. Indigenous partners also emphasized the right to clean water through sustainable protection and management of source water, groundwater, wastewater and sanitation services, and traditional watersheds. A recurring recommendation was to eliminate all long-term drinking water advisories and provide financial and technical assistance to Indigenous communities for water infrastructure and distribution systems. Some partners called upon the federal government to support the development of a First Nations operated water utility as an initial step to advance First Nations water governance.

Environment (Article 29)

While Indigenous partners provided a fewer number of priorities and proposed measures specifically under the environment theme, several other proposed measures contain environmental considerations, particularly those measures related to lands, territories and resources.

Nakataani 29 / Article 29 (Inuinnaqtun)

1. Nunaqaqaqtut inungnut pihimani pilarutit nunguttailini hapumminilu avatigiyauyut havarittiaqnilu pilaqnit nunaktik uvaluniit nunatagauyut piqaqnitlu. ▶ English version

Proposed constitutional and legislative measures under the environment theme included:

- Amending the *Canadian Charter of Rights and Freedoms* to enshrine a right to a healthy natural environment as a universal human right, and to uphold the Indigenous right to maintain and strengthen distinctive spiritual relationship with the land
- Developing national climate legislation to reduce impacts of climate change
- Aligning laws, regulations and policies regulating marine shipping with the Declaration, including ensuring Indigenous nations are involved in decision-making regarding marine shipping

- Amending the *Canadian Navigable Waters Act*, including to provide means to affirmatively protect waters of integral significance to the cultural identity of Indigenous peoples
- Amending relevant federal laws and policies to prevent pollution and toxic substances from affecting Indigenous communities' access to safe and clean water

Some partners, including Yukon First Nations, also pointed to territorial legislation that posed potential barriers to addressing environmental impacts from resource development, including the *Yukon Act*, *Territorial Lands Act*, *Placer Mining Act, Quartz Mining Act,* and *Clean Energy Act*.

Partners also proposed numerous measures regarding Indigenous inclusion, respect and incorporation of Indigenous environmental laws and approaches, and accountability measures to protect the environment, including:

- Incorporating Indigenous concerns and knowledge in federal initiatives to address climate change, and ensuring Indigenous inclusion in the transition to a green economy
- Improving federal emergency management and disaster policies, in order to address Indigenous climate displacement and the inequitable environmental, health, and cultural impacts of climate change experienced by Indigenous peoples
- Supporting capacity for Indigenous nations to transition to retrofit governance buildings to make them more energy efficient and to reduce green house gas emissions
- Supporting Indigenous approaches to climate justice and climate action planning, which could include:
    - Establishing Indigenous environmental sustainability frameworks to address climate change and its impacts on Indigenous peoples

- Establishing a Métis Environmental Sustainability Framework to address Climate Change
- Including Indigenous concerns, knowledge, governance, laws and priorities in climate planning, and supporting Indigenous climate justice and climate action planning
- Incorporating Indigenous-led approaches to environmental protection and stewardship, sustainable harvesting, including species listed on the *Species at Risk Act*, and natural resource conservation, through measures that prioritize Indigenous self-determination and respect for Indigenous laws requiring that lands and resources be protected for future generations
- Involving urban Indigenous youth in environmental processes through strength-based programs and services that reflect their unique circumstances
- Ensuring the documentation and preservation of environmental knowledge held by Elders and traditional knowledge holders
- Empowering Indigenous women to assert rights to have environmental laws and policies that reflect Indigenous ways of knowing and being, are centred on protecting and caring for Mother Earth, and shift colonial paradigms to Indigenous matriarchal paradigms
- Addressing environmental racism by affirming Indigenous sovereignty over Indigenous lands and the relationships that Indigenous peoples have to their lands, territories, and resources

> “Due to historic injustices, Indigenous communities have disproportionately borne the brunt of Canada’s past weather-related disasters and displacement despite having contributed the least to and often defended their land and water against environmentally harmful practices. Repeated forced movement due to overlapping crises has worsened Indigenous health outcomes, led to premature death of Elders and language keepers, increased poverty, and threatened permanent cultural loss through loss of connection to ancestral knowledge, the land, and community.”
> - Kanaka Bar Indian Band, Call for Proposals Funding Submission, February 18, 2022

Additional proposed measures included tackling violence and discrimination by ensuring an intersectional and GBA plus (Gender-based analysis plus) approach to climate change and environmental conservation; and ensuring the inclusion of Indigenous women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons in decision-making related to their natural environment.

Economic and social rights (Articles 20, 21, 22, 23, 24)

The theme of Economic and Social Rights includes economic rights, social rights, and the right to health, as well as protection of marginalized and vulnerable Indigenous populations, including Indigenous women, youth, children, Elders, 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, and persons with disabilities.

Article 23 (Blackfoot)

Okiowaitsitapi iitotohkoikiiya maahk awataototamipotsissa miisti ot sokitsipowaistsi kii otaak ototamipotsipowaistsi maahkoht ototamipotsissa otsitotohkoikiihpowaistsi kii otaak akiipohtopowaistsi. niitsitspiyaonip, okiowaitsitapi iitohkoikiiya maahk iit tsitsinapaissa awakiipohtoohki kii aiyao kakyoopaatoki soksistomssinni, koiskaani kii sstiki niitaokoinaanihkoohsaopi kii nitap aitapiiyaopi ihtsissinnaahpi niittsitapi kii, niitaakohkotsipiowaatoohpi, aahkoht apotsissa miistsi ootowa omaht apaotakihpowaiyi.

▶ English version

With respect to economic rights, Indigenous partners made a number of recommendations focused on improving economic and resource development opportunities, including utilizing the federal spending power and legislative authority to broaden the opportunities available to pursue Indigenous economic priorities. Some partners looked to international agreements, including the Indigenous Peoples Economic and Trade Cooperation Agreement, as a priority area to increase Indigenous peoples' participation in trade and promote economic development, and to eliminate barriers that impede Indigenous participation in resource development. Still other partners recommended implementing incentive-based programs to support economic development opportunities for companies that partner with Indigenous businesses and corporations.

Some partners noted that systemic change is needed that will provide paths for wealth transfer to Indigenous peoples through Indigenous-led processes such as the National Indigenous Economic Strategy, the Financial Management Board's Roadmap Project, and the Assembly of First Nations'

Prosperity Table. Some partners indicated that optional paths to economic development programs are key as not all Indigenous peoples have the same priorities or utilize the same institutions for economic reconciliation, which will require the development and support of optional Indigenous-led institutions, such as the *First Nations Fiscal Management Act.*

As well, partners identified the importance of access to market capital that will allow for participation in equity frameworks in capital projects such as a loan guarantee program or a development bank. Partners also identified other opportunities for economic development that included Canada's Indigenous procurement mandate which can be enhanced by alignment with Indigenous businesses' needs. Additionally, partners identified that economic reconciliation is tied to land management as Indigenous peoples have a central role in natural resource extraction and development projects.

Further, some partners recommended amending the *Financial Administration Act* to co-develop targets and monitoring mechanisms to track Indigenous procurement and set asides in development projects. Additional amendments included the verification of First Nations, Métis, and Inuit people to prevent those who self-identify without credible claims to Indigeneity benefitting from Indigenous set asides in contracting and procurement processes.

Many partners noted the importance of their communities' involvement in profit-sharing and impact benefits agreements, with the shared revenues from industry supporting economic development, employment, Indigenous environmental monitoring, and cultural programming. Indigenous women partners sought to be included in economic opportunities on traditional territories and prioritized financial and technical assistance for vocational and employment training. Additionally, some partners proposed

amendments to the Indigenous Skills and Employment Training Program, such as consistent funding increases to agreements and including cultural support costs as billable program costs. Numerous partners pointed to the long-term employment and career opportunities afforded through the Indigenous Guardians Program, and recommended developing and implementing fully funded, multi-year, widely accessible Indigenous Guardianship Programs. These programs would provide culturally appropriate training, mentorship and long-term employment in monitoring, compliance, enforcement, research and stewardship, with opportunities for Guardians to become fully trained Natural Resource Conservation officers, thereby supporting Indigenous economic security, cultural values and stewardship obligations.

Other partners focused on economic measures related to gaming, with priorities focused on mechanisms to support self-determination in relation to gaming and economic development, and the need to recognize and respect inherent and treaty rights in relation to gaming initiatives. Specific recommendations included working with First Nations leadership to restore the terms of the original video lottery terminal Site-holder Agreements; allow First Nations' governments to make administrative decisions relating to matters of gaming within nations; and prevent provinces from making unilateral decisions affecting First Nations' economic prosperity. Some partners also pointed to section 207 of the *Criminal Code,* related to gaming and betting licenses, as requiring review and consistency with the Declaration.

Proposed legislative measures related to social and health rights included a review of the *Canada Health Act* and the Canada health transfer payments system to ensure consistency with the Declaration, as well as a review of Canada's employment insurance program, *Federal-Provincial Fiscal Arrangements Act, Accessible Canada Act,* and *Medical Assistance in Dying*.

Partners also pointed to the need for Canada to develop economic well-being indices that are consistent with the Declaration and go beyond gross domestic product measurements.

Other partners recommended federal legislation that would allow Indigenous persons with disabilities to exercise their rights under the *Convention on the Rights of Persons with Disabilities*. Métis Governments called for co-developed, distinctions-based Indigenous health legislation that provides access to non-insured health benefits (NIHB) for Métis individuals, while other partners recommended improving and expanding the NIHB (Non-insured health benefits) Program to include all Indigenous peoples, as well as dental and pharmaceutical care. Some partners also requested an assessment of the NIHB (Non-insured health benefits) Program, including participation from Indigenous partners to determine alignment with the Declaration.

Food security was of primary concern, with some partners proposing to introduce legislation and amend federal regulations, policies and procedures for the processing and sale, and expansion of trade of country and traditional foods. Other partners called for specific financial and technical assistance to Inuit communities to ensure access to affordable healthy food, including traditional foods, through bolstering food subsidy programs for large Inuit families; providing financial assistance to Inuit hunters to support access to traditional foods; and developing a national strategy to lower food costs in order to reduce the disproportionate impact on Inuit. Other Indigenous partners, including Métis Governments, called for supports for improving food security and revitalizing traditional Indigenous economies in fishing, trapping, and forestry, among others.

Partners also advocated for measures relating to culturally competent, non-discriminatory services and programming in areas impinging on provincial jurisdiction, including health, housing, social services, policing, corrections, education, employment, harvesting and resource development. Issues of jurisdiction were a recurring concern, and partners recommended undertaking federal-provincial-territorial collaboration to close jurisdictional overlaps, gaps and conflicts in the provision of health and social services to Indigenous peoples, including those who move across territories or provinces.

Several partners called for the mitigation of systemic discrimination in essential services through a review of federal funding arrangements to address issues of chronic underfunding. Many partners specifically called for financial and technical assistance to sustainably support the economic, social and health rights of Indigenous women, girls, children, youth, Elders and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons in all settings (on and off reserve, urban and non-urban settings), through accountability mechanisms to end violence and systemic discrimination in health services, education, employment, housing, and social services. Urban Indigenous partners stressed that off-reserve and urban Indigenous people, who constitute the large majority of Canada's Indigenous population, also have pressing social and economic needs in urban and rural settings.

Other gender-specific measures to end violence and systemic discrimination in the provision of health services identified by partners included ending forced and coerced sterilization of Indigenous women, girls, and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons through its criminalization, with accountability measures for health professionals. Specific measures called for the appointment of an independent and

impartial body mandated to investigate all allegations of forced sterilization and to make recommendations based on Indigenous community input, with a reparation fund to compensate victims and their families, as well as a mechanism to consult with Indigenous women to enable their unrestricted and easy access to ultrasound services to determine whether they have been forcibly sterilized without their knowledge or consent.

A related recommendation included ensuring that Indigenous women, girls, and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons could exercise autonomy over their own health and health care, through financial and technical assistance to support community-based, culturally appropriate midwifery and health training and services, as well as sexual and reproductive health training, on a distinctions and cross-Indigenous basis. Many partners also called for investments in training Indigenous health professionals, particularly Indigenous women and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) doctors, nurses, and midwives. A smaller number of partners also sought to integrate Indigenous approaches to western health, wellness, healing and medicine, through the protection and harvesting of Indigenous traditional medicines.

Some Indigenous partners acknowledged the stigmas and other challenges, including homophobia, facing 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons within Indigenous communities and are seeking supports for creating and improving community support groups and safe spaces to improve quality of life for all community members.

> “The racism Inuit women and children experience in Canada’s healthcare system is well documented. Recommendations to address systemic racism are well-known. Despite this, systemic racism plays a large role in the health outcomes gap for Inuit women and girls, starting long before an Inuk woman seeks pre-natal care, help for her sick child, or goes to an emergency room after suffering a brain trauma from gendered violence”
> - Pauktuutit Inuit Women of Canada, Action Plan Written Submission, November 29, 2022.

Proposed accountability mechanisms related to the provision of and access to health and social services included:

- Establishing and appointing an Indigenous healthcare ombudsperson, or launching a National Strategy to oversee and report on anti-Indigenous racism in the healthcare system
- Implementing a Patient Advocate System to ensure Indigenous patients can provide free, full and informed consent over their health care, and are able to navigate and fully access the medical system
- Developing accurate and relevant health data and ensuring Indigenous data sovereignty and data governance capacity, in order to make evidence-based policy, program and service decisions and address systemic racism and discrimination, specifically working to bridge the data gap between Indigenous populations on and off reserve
- Measuring and tracking Indigenous health disparities in Canada and developing an approach to close gaps in Indigenous health outcomes, including through investments in Indigenous health services and training of Indigenous health professionals

- Establishing regional funding formulas for Indigenous-led initiatives that address food insecurity, housing precariousness, and inadequate access to health care
- Adopting legislative, policy and accountability measures to recognize, end, prevent, criminalize and redress all forms of obstetrical, sexual and gynecological violence, including forced abortions and forced or coerced sterilization of First Nations, Inuit and Métis women, girls, and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons in Canada, by clearly defining requirements for informed consent with regard to sterilization, raising awareness among Indigenous women and medical personnel of that requirement, and by ensuring that all data collected regarding coerced and forced sterilization is distinctions-based and gender-disaggregated
- Challenging health professional associations and sanctioning health personnel for misconduct against Indigenous women and girls, and ensuring effective access to remedies and protection in cases of health rights violations or abuse
- Adopting and implementing Joyce's Principle both within the federal and provincial healthcare systems, and guaranteeing the right to dignity, respect, life and security for all, without discrimination
- Implementing federally mandated, Indigenous cultural competency and humility training for doctors, nurses, social workers, healthcare providers, and all hospital staff on the realities of Indigenous women, systemic racism, the legacy of colonization, and cultural security, and adopting an intersectional, distinctions-based, cross-Indigenous and feminist approach, with training developed and delivered by Indigenous organizations

- Calling a National Inquiry to address the disproportionate number of Indigenous people acquiring and living with human immunodeficiency virus (HIV) and acquired immunodeficiency syndrome (AIDS)
- Ensuring, through financial and technical support, that first responder and emergency response services and infrastructure, such as paramedics and firefighting equipment and personnel, are available 24/7 in every Indigenous community

Partners also made several recommendations pertaining to the right to housing, including:

- Supporting self-governance in administering housing through Indigenous institutions, including transferring federal control of housing to Indigenous nations, and ensuring housing provisions under the *Indian Act* lead to substantive changes that address on-reserve housing challenges, including overcrowding, homes in need of repair, mould and other hazards, and lack of insured homes
- Supporting Indigenous initiatives related to rezoning, housing and shelters, including supporting the ongoing development of safe, affordable and accessible housing and critical infrastructure, using community and culturally sensitive design
- Reviewing the *National Housing Act* to ensure it meets the needs of Indigenous peoples living off reserve, in urban centres, and in remote, rural communities, with particular attention to meeting the current realities of Indigenous women and youth
- Developing a national Urban Indigenous Housing Strategy, including co-developing sufficiently funded housing plans and strategies
- Addressing housing discrimination, committing financial and technical assistance for home ownership programs, and prioritizing a “housing first” social policy approach so that access to safe and affordable

housing contributes to improved outcomes in health, mental health, cultural wellness and economic prosperity
- Investing in safe, stable and affordable housing initiatives for Indigenous women fleeing abusive situations and domestic violence, Indigenous single mothers, and Indigenous youth, and ensuring Canada Mortgage and Housing Corporation includes Indigenous women's organizations as partners in reforming and developing on-reserve, off-reserve and northern housing supports
- Addressing the particular hardships experienced by Inuit women facing gender-based violence across Inuit Nunangat and in urban areas, by committing financial support for shelters and transitional housing, with specific allocation for Inuit women and their families
- Supporting the rights of First Nations, Inuit and Métis women to economic and housing security through vocational and employment training

Respecting Indigenous self-determination and self-governance over children's health was also identified as a key priority. Several partners recommended establishing accountability mechanisms to uphold Indigenous children's health rights and to ensure the provision of physically and culturally safe health services for children on and off reserve, in urban and non-urban settings. Recommendations included:

- Implementing and expanding Jordan's Principle to include non-status Indigenous peoples, and increasing eligibility for and access to services such as mental health, special education, dental, physical therapy, speech therapy, medical equipment, and physiotherapy, without jurisdictional restrictions
- Financial and technical assistance and ongoing engagement mechanisms to ensure culturally competent early learning and childcare programming and services, including in urban Indigenous

communities, with Indigenous representation and remuneration to support Indigenous children and youth through to adulthood
- Investing in Indigenous youth health through Elder and intergenerational knowledge transfer connected to land and culture
- Establishing firmer expectations of provinces and territories when it comes to supporting culturally responsive, Indigenous-led childcare and early learning centres at the community level

Indigenous partners also recommended committing financial and technical assistance to support the Indigenous right to mental health, including sustainable funding for Indigenous-led, culturally relevant mental health and wellness services, suicide prevention and addictions programming, and healing programs for intergenerational trauma survivors, in all settings (on and off reserve).

Related recommendations included strengthening support and funding for Indigenous women rehabilitation centres and establishing on-reserve treatment facilities and recovery beds, employing evidence-based, culturally relevant and safe services to meet the needs of Indigenous peoples, particularly youth. Other recommendations called for financial and technical assistance to support the health needs of Indigenous persons living with HIV (Human immunodeficiency virus)/AIDS (Acquired immunodeficiency syndrome), and measures to address the health, social, economic and accessibility needs of Indigenous persons with disabilities.

Additionally, some partners recommended amending the *Department of Public Safety and Emergency Preparedness Act*, the *Department of Health Act*, and the *Department of Indigenous Services Act* to designate the addictions crisis in Indigenous communities and the intergenerational trauma arising from addictions as an “emergency” pursuant to these laws.

Related measures to uphold Indigenous economic, social and health rights included recommendations pertaining to rights-based digital technologies. Partners called for equitable access to telehealth and online education services by addressing digital technology barriers, telecommunications infrastructure, and connectivity gaps.

Cultural, religious, and linguistic rights (Articles 8, 11, 12, 13, 25, 31)

Indigenous partners conveyed a number of cultural and linguistic priorities and proposed measures under this theme, emphasizing the importance of self-determination and self-governance over Indigenous ways of knowing, doing and being.

Partners proposed a variety of measures to protect Indigenous cultural heritage resources and traditional knowledge related to cultural sites and ceremonial and spiritual practices, as well as measures to ensure FPIC (Free, Prior and Informed Consent) over Indigenous cultural programming and revitalization efforts. Some partners recommended developing and/or reintroducing federal legislation to enable the protection and repatriation of Indigenous burials, human remains, funerary objects, sacred objects, Indigenous cultural artifacts, and objects of cultural patrimony. Distinctions-based Indigenous women's organizations called for national legislation akin to Bill C-391 ("An Act respecting a national strategy for the repatriation of Indigenous human remains and cultural property"), and measures to ensure the "rematriation" of cultural artifacts and human remains, including those of Métis Nation leader Madeleine Dumont.

Others called for amendments to the *Canada National Parks Act*, including to enable self-determination in managing Indigenous archeological and historical sites; to ensure it aligns with Declaration principles, including

FPIC (Free, Prior and Informed Consent) of affected Indigenous nations; and to enhance opportunities for Indigenous co-governance and co-management of parks.

Other legislative measures to protect Indigenous cultures included developing legislation that would protect Indigenous peoples' right to engage in cultural and religious practices and prohibit discrimination based on the exercise of these practices. Legislative measures to preserve and revitalize Indigenous languages included amending the *Indigenous Languages Act* to ensure consistency with the Declaration and legislating Indigenous language revitalization programs with financial assistance to ensure survival of Indigenous languages, including through digitization, and ensuring that the *Official Languages Act* and the *Indigenous Languages Act* are complementary.

Partners also advocated for the protection, maintenance and revitalization of Indigenous cultures, languages, and knowledge transfer through:

- Supporting Indigenous communities in planning, designing, constructing and operating Indigenous cultural spaces, heritage centres, cultural pavilions, and museums that:
    - provide a place to practice tradition, medicine, language and culture
    - return and preserve cultural artifacts and make them more accessible
    - revitalize cultural ceremonies
    - offer role modeling for cultural teachings, language, and ceremonial teachings
- Undertaking Indigenous language-based community needs assessments to ensure the restoration of Indigenous languages, connection to land practices, and transmission of identity and cultural

knowledge, including through supports for early-age Indigenous language development
- Increased support for Inuktitut-specific language policies and programs across Inuit Nunangat
- Increased support for Michif-specific language policies and programs and to negotiate a funding agreement with Métis Governments to plan, develop, and implement a Michif language revitalization strategy
- Access to land-based cultural practices and learning initiatives to advance community empowerment and healing
- Elder-Youth educational opportunities
- Support for Elders and traditional Knowledge Keepers to discuss their oral traditions and practices in their original language and transmit teachings to support ongoing implementation of the Declaration
- Cultural transmission through Elder readings and understandings of the Declaration in Indigenous languages
- Creation of mechanisms to assist Indigenous peoples in the repatriation of their sacred ceremonial belongings being held within and outside of Canada

Urban Indigenous partners emphasized the need to uphold cultural and linguistic rights in urban contexts, where access to land and expanding physical community spaces is challenging. These partners specifically recommended the recognition of Friendship Centres as spaces which make real the possibility of practicing one's culture and realizing one's Indigenous rights in an urban setting.

Some partners sought to protect Indigenous traditional knowledge, cultural heritage, intellectual property, and artists' cultural content by advocating for amendments to federal intellectual property legislation, including the *Copyright Act* and *Trademarks Act.* Related recommendations included calling for a review of all federal legislation pertaining to digital

technologies, digital infrastructure, and intellectual property rights to ensure consistency with the Declaration. Other partners called for measures to support Indigenous-generated data and Indigenous digital content creators in advancing self-determination, cultural connectivity and economic participation through Indigenous data sovereignty and OCAP (Ownership, Control, Access and Possession) over digital infrastructure. Indigenous rights holders and nations as well as urban Indigenous partners specifically noted the importance of ensuring data sovereignty and data governance capacity. Distinctions-based recommendations included legal protections for Métis women concerning intellectual property related to cultural knowledge and traditional medicines; and co-developing with First Nations reforms to Canada's intellectual property laws to consider and protect First Nations' intellectual property.

Education, information and media (Articles 14, 15, 16)

This theme includes measures for public, professional and Indigenous education about the Declaration, as well as Indigenous control of educational systems and institutions. Although there were numerous and varied recommendations under this theme, many Indigenous partners recommended that Canada undertake a mass education campaign about the Declaration and the Act. Partners conveyed that a broad-based, Canada-wide education strategy about the Declaration and the Act was required in order to ensure that:

- All Canadians are sensitized to the universal, individual and collective rights of Indigenous peoples, in order to advance harmonious and cooperative relations based on the principles of justice, democracy, respect for human rights, non-discrimination and good faith

- Professional sectors, including the public service; justice and policing; court workers and judiciary; child welfare; media; resource and conservation; health; education; and social service sectors, are educated on the Declaration and the Act, in conjunction with cultural sensitivity and anti-racism training
- Indigenous peoples understand their rights under the Declaration and can use the Declaration to defend and assert their rights

▶ English version

Specific recommendations for professional and public education about the Declaration and the Act included:

- Developing a national strategy for mandatory and ongoing Indigenous-specific, anti-racism education and cultural safety training for the public service and professional sectors, with accountability standards for racism and discrimination within these institutions
- Establishing an Indigenous-led Education Advisory Council to review, revise, suggest and update educational resources for public sector officials
- Undertaking public sector and professional sector education on:
    - the history, rights and cultures of all Indigenous peoples in Canada, including those with disabilities
    - the impacts of colonization, genocide and cultural genocide, intergenerational trauma, and white privilege and bias
    - Indigenous laws and treaty principles
    - anti-Indigenous racism and discrimination and decolonization
    - the rights and needs of First Nations, Inuit and Métis women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons
    - Indigenous cultural awareness, sensitivity, humility, competency and safety
- Co-designing and co-developing a national public education campaign to raise awareness and increase knowledge about the Declaration and the Act, including through knowledge translation products, tools, and educational fora
- Undertaking educational efforts with municipalities to rename streets named after colonizers; remove statues and other memorials to colonizers; and increase funding for memorial installations for residential school gravesites.

Some Indigenous partners noted that, through their Indigenous-led consultations on the Declaration, there was significant lack of understanding or misunderstanding about the Declaration and the Act, including the purpose of the Act and the individual and collective rights of Indigenous peoples contained in the Declaration. Accordingly, some partners recommended measures to augment Indigenous peoples' understanding in this regard, including:

- Promoting Indigenous awareness and understanding of the Declaration through Indigenous language versions, plain language versions, audio versions in Indigenous languages; and Indigenous teaching methods
- Addressing technological and accessibility barriers to Indigenous education about the Declaration, the Act, and the Action Plan
- Developing awareness and education programs for urban Indigenous youth on the rights contained in the Declaration, and concerning systemic racism, discrimination against Indigenous peoples, and violence prevention/lateral violence
- Undertaking Indigenous education on specific human rights contained in the Declaration, with a focus on gender equality, in order to equip Indigenous women to use the Declaration as a tool in their bundles to navigate colonial systems
- Using the National Centre for Truth and Reconciliation as a hub for sharing information about the Declaration and distributing Declaration knowledge products produced by Indigenous organizations

In addition to Indigenous education about the Declaration and the Act, several partners focused on the education of Indigenous children, and the need to uphold Indigenous self-determination and self-governance over their children's education. A key recommendation of partners included addressing the legacy of Indian residential schools by committing financial

and technical assistance to support sustained implementation of the Truth and Reconciliation Commission's 94 Calls to Action. This recommendation included reporting on progress made in implementing the Calls to Action, in order to provide accountability and redress related to genocide and other forms of systemic repression and injustice, stemming from state involvement in Indigenous children's education. Other recommendations included:

- Financial and technical assistance to ensure Indigenous authority, control and responsibility for education systems and institutions, with accompanying federal education funding policy changes
- Establishing an Indigenous-led education reform committee to assist in transitioning education to Indigenous jurisdiction, with accountability measures
- Financial and technical assistance to support Indigenous children's linguistic and cultural education through Indigenous educational programming, culturally grounded curricula, land-based learning, and Indigenous language learning, with funding parity for Indigenous elementary, middle and high schools
- Undertaking a comprehensive review of the education system to ensure that the system aligns with the Declaration; is built in partnership with Indigenous nations; reflects Indigenous ways of knowing, being and doing; provides a meaningful role for Indigenous peoples in decision-making; and creates real change for Indigenous students and their communities
- Ensuring that all educational institutions accurately convey Indigenous history and have Indigenous representation among teaching faculty, through targeted recruitment in the education and academic sectors
- Ensuring that Indigenous rights, histories and realities are incorporated into primary, secondary and post-secondary education

curricula; and that Indigenous peoples are consulted about incorporating Indigenous-centric relationality education into curricula
- Investing in education pathways and allocating resources towards Indigenous-led post-secondary initiatives, including removing barriers to accessing the Post-Secondary Student Support Program (PSSSP), including by extending eligibility to all Indigenous peoples; ensuring sufficient funding for the PSSSP (Post-Secondary Student Support Program) to meet demand; and increasing transition supports, funding and loans, and return and retention supports for Indigenous post-secondary students
- Collaborating with provinces and territories on a nation-wide education curriculum that includes Indigenous histories, realities, colonization, anti-racism, and anti-oppression

Partners also conveyed several priorities and proposed legislative and policy measures relating to media and information, including:

- Exploring avenues to expand the term “Canadian content” in Canadian broadcasting policy, and establish a framework for monitoring, evaluation, and consultation with Indigenous peoples as a central focus of this expansion
- Mandating the Canadian Radio-television and Telecommunications Commission (CRTC) to provide annual reporting on the total hours of Indigenous-specific content, whether aired on radio and/or television throughout the broadcast year
- Amending the *Canadian Radio-television and Telecommunications Commission Act* to allow the right of Indigenous nations to establish their own radio and television platforms, recognizing them as essential services, and providing core funding
- Revising commercial radio policy to create a framework for centralizing implementation of OCAP (Ownership, Control, Access and Possession)

principles related to Indigenous digital content and art and create percentage requirements on Indigenous content to create greater systemic change across the commercial policy landscape

- Continuing to revise the CRTC (Canadian Radio-television and Telecommunications Commission)'s Native Broadcasting Policy to involve Indigenous youth in policy reform and support youth members of Indigenous communities to become involved in policy decision-making
- Establishing standards, in partnership with Indigenous peoples, that will encourage privately owned media to adequately reflect Indigenous cultural diversity, Indigenous governance and to promote anti-racism programming

Priorities by theme

Previous page | Table of Contents | Next page

Priorities and proposed action plan measures to date are based on engagement undertaken through various fora: virtual bilateral and multilateral sessions, the online submission tool, correspondence, in-person meetings and, primarily, written submissions (Annex B) from Indigenous partners.

Indigenous partners' priorities and proposed measures outlined in this report are organized according to "rights-based clusters" or "Declaration themes", which broadly align with how various rights are grouped in other international human rights instruments, such as civil and political rights under the International Covenant on Civil and Political Rights, and assists with making linkages between the Declaration and other human rights instruments and guidance developed by human rights bodies. The 46 articles of the Declaration are organized into ten categories:

- General Principles (applicable to all of the Declaration)
- Implementation and redress
- Self-determination, self-government and recognition of treaties
- Civil and political rights
- Participation in decision-making and Indigenous institutions
- Lands, territories and resources
- Environment
- Economic and social rights
- Cultural, religious and language rights
- Education, information and media

Just as Indigenous partners have indicated that they understand the Declaration and its 46 articles in ways that do not always fit neatly within each of these categories, Justice Canada too understands that the rights contained within the Declaration are universal, indivisible, interdependent, and interrelated. Therefore, these categories are merely one way in which these priorities and proposed measures can be conveyed as part of the Declaration's implementation and were placed under a given theme after considering a combination of factors, including Declaration articles related to the priority or proposed measure.

While the content of this report will necessarily help inform the Action Plan, the priorities and proposed measures outlined here are intended to reflect a high-level summary of Indigenous partners' views. These views include priorities for draft Action Plan consideration conveyed through "formal" written submissions; priorities previously conveyed about the Declaration (i.e., through publicly available policy reports, annual reports, and committee testimony); and those shared through hundreds of sessions held by Justice Canada since December 2021. This summary is intended to

offer an understanding of First Nations, Inuit, Métis and cross-Indigenous priorities for Declaration implementation, even as work continues with partners to reach specific text for the Action Plan.

General principles (Articles 1, 2, 43, 44, 45)

The articles under this theme are applicable to the entirety of the Declaration and serve as the basis for implementing all of the rights contained in the Declaration. They include the guarantee of full enjoyment of individual and collective rights as recognized in the Charter of the United Nations, the Universal Declaration of Human Rights and in international human rights law; minimum standards for the survival, dignity and well-being of Indigenous peoples; and a guarantee that nothing in the Declaration may be construed as diminishing or extinguishing existing or future rights of Indigenous peoples. This cluster of articles also includes the right to equality and non-discrimination and the right to gender equality. These general principles are integral to the other nine thematic rights-based clusters below.

Implementation and redress (Articles 38, 39, 40, 41, 42, 46)

Indigenous partners conveyed the greatest number of priorities under the Implementation & Redress theme, which include overarching measures to "achieve the ends of the Declaration" and technical and financial assistance to do so, as well as conflict resolution measures to address disputes.

Partners cited several existing federal statutes that in their view would require amendment in order to ensure overall effective implementation of the Declaration. These included, but were not limited to, the *Interpretation*

Act; the *Department of Justice Act;* the *Statutory Instruments Act;* and the *UN (United Nations) Declaration on the Rights of Indigenous Peoples Act* (Annex C). Some partners who called for amending the *Department of Justice Act* and *Statutory Instruments Act* specified the need to require the review of proposed legislation and regulations for consistency with the Declaration, similar to the existing Charter review process. Included in these specifications are public reporting and a standardized process developed in consultation and cooperation with Indigenous peoples. Partners who recommended amendments to the *UN (United Nations) Declaration on the Rights of Indigenous Peoples Act* were seeking to ensure it is interpreted and administered as upholding the rights in the Declaration, to ensure comprehensive Indigenous inclusion in consistency of laws, Action Plan development and implementation, and annual reporting processes; to make the Act self-executing, binding on the Crown in right of Canada, the provinces and territories, and judicially enforceable when rights are infringed; and to fully adopt the Declaration into Canadian law, giving it force of law, stating that it prevails in the event of conflict or inconsistency with other statutes of Canada.

Several partners expressed that the *Constitution Act, 1982,* and section 35 specifically, could be amended to better align with the Declaration. In particular, partners advocated for Declaration compliance, affirmation, non-derogation and non-abrogation measures that would uphold constitutionally protected Aboriginal and treaty rights recognized and affirmed under section 35, in addition to the Indigenous collective and individual rights outlined in the Declaration. Specific legislative measures included adding a non-derogation clause to the *Interpretation Act* that provides for upholding treaty rights and inherent Aboriginal rights, in addition to non-abrogation and non-derogation language. A related priority included ensuring that the entirety of the *Interpretation Act* and the non-

derogation clause are consistent with the Declaration. Other related priorities include amending the *Interpretation Act* to establish an enforceable declaration affirmation clause consistent with both sections 25 and 35 of the *Constitution Act, 1982,* in order to uphold Aboriginal and treaty rights, in addition to the rights in the Declaration.

Partners representing off-reserve and/or urban Indigenous people highlighted the importance of using terminology that is clear, inclusive, reflective of all rights holders and consistent with section 35 of the *Constitution Act, 1982*. Some advocated for the inclusion of a glossary or lexicon in the Action Plan to clarify and ensure a common understanding of the different terms used by and in reference to Indigenous peoples, including in section 35, in the Declaration, and in other acts and legislation.

Partners also noted the importance of fulfilling consultation and cooperation requirements in consistency of laws processes and included several recommendations to ensure Indigenous inclusion and accountability mechanisms. Partners specifically recommended including Indigenous representative institutions and governing bodies, First Nations, Inuit and Métis women, 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, urban Indigenous people, and youth in consistency of laws processes, which could include thematic and geographic joint policy tables, a permanent standing committee, an Indigenous youth advisory committee, or citizens' assembly. They identified a concomitant need for financial and technical assistance and accountability mechanisms to ensure consistency of the laws of Canada with the Declaration. They also noted the importance of upholding free, prior and informed consent (FPIC) in all consistency of laws processes. A specific measure to amend the *Guide to*

Making Federal Acts and Regulations to recognize the Declaration and three systems of law, including customary law of Indigenous peoples, was also proposed.

With respect to measures related to the UN (United Nations) system, international human rights treaties and processes, and treaty body recommendations, partners put forward a variety of measures, including:

- Formalizing rules for full and effective participation of Indigenous peoples in UN (United Nations) processes; ensuring full representation of Indigenous peoples in international affairs and human rights bodies, including Indigenous women in UN (United Nations) international fora to uphold their Declaration rights; and funding Indigenous women's organizations to participate in the Universal Periodic Review and other international fora
- Respecting and implementing all international human rights treaties to which Canada is party
- Implementing special measures as per the *Convention on the Elimination of All Forms of Racial Discrimination*, and the *Convention on the Elimination of All Forms of Discrimination Against Women* to advance the equality of Indigenous women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons
- Implementing domestic reporting mechanisms on how Canada is meeting its obligations as set out in international human rights treaties
- Requiring an outside agency to monitor Canada on Declaration implementation in order to ensure equal and proper representation of Indigenous peoples ensuring that inherent rights, treaty rights and Aboriginal rights are properly recognized and administered as part of external monitoring

With respect to Action Plan preparation and implementation, partners also highlighted the need for committing financial and technical assistance to fulfill the statutory requirement for consultation and cooperation with Indigenous peoples, with accountability mechanisms such as consultation protocols, including further recognizing existing Indigenous protocols on consultation and cooperation. First Nations, Inuit and Métis women partners noted their special need for financial and technical assistance to support their equal participation and access to consultation, cooperation, co-development and FPIC (Free, Prior and Informed Consent) in Action Plan and Declaration implementation. Convening discussion tables – which would reflect the diversity of circumstances of Indigenous peoples across the country – for the implementation of specific Declaration articles, in consultation and cooperation with Indigenous people, was also proposed.

Other partners recommended ensuring actionable and sustained Declaration implementation through reviewing and amending the Action Plan as a living document, using a whole-of-government approach, and an Indigenous-led implementation strategy with specific departmental accountabilities, key deliverables and timelines. An overarching recommendation shared by many Indigenous partners was the need to uphold the duty to consult and to respect FPIC (Free, Prior and Informed Consent) in the Action Plan and all aspects of Declaration implementation. National Indigenous Women's Organizations also noted the need to ensure a distinctions-based and cross-Indigenous, intersectional and GBA plus (Gender-based analysis plus) approach to the co-development of the Action Plan and overall Declaration implementation, in order to respect the spirit and intent of all articles of the Declaration.

A key Action Plan recommendation from partners related to monitoring, oversight, recourse, remedy or other accountability measures included the establishment of an Indigenous and Human Rights Ombudsperson,

Commission, and/or Tribunal. Several partners, including National Indigenous Organizations (e.g., ITK (Inuit Tapiriit Kanatami)) and National Indigenous Women's Organizations, proposed establishing an Indigenous Advisory Council, an independent oversight body, and/or an arms-length Indigenous rights implementation monitoring mechanism that would be empowered to monitor and enforce Canada's compliance and progress in implementing the Declaration and the Act. Regardless of the specific proposed form, scope and purpose, the need for an independent mechanism to ensure effective implementation, including mandated seats for urban Indigenous communities, 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) communities, Indigenous women's organizations, youth, and others to ensure adequate representation and input, was one conveyed by many Indigenous partners.

National Indigenous Women's Organizations in particular noted their need for representation on the Oversight body, to ensure accountability in upholding the gender- and equality-based rights of First Nations, Inuit and Métis women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons. They advocated for the Oversight body to be grounded in Indigenous-led processes, using dispute resolution and complaint processes built on distinctions-based and cross-Indigenous, intersectional and gender-based frameworks. One National Indigenous Women's Organization recommended that the Independent Tribunal would best operate alongside newly developed anti-Indigenous racism legislation, using the British Columbia model as a best practice.

Many partners advocated for a distinctions-based (i.e., First Nations, Inuit, and Métis) approach to implementation, with some favouring a distinctions-based "plus" approach that includes a broad and diverse range

of perspectives. Other partners, however, recommended abandoning a distinctions-based approach altogether, as they deemed it was contrary to Article 2 of the Declaration and section 15 of the *Canadian Charter of Rights and Freedoms*. Furthermore, partners representing off-reserve and/or urban Indigenous people called for the development of a Federal Urban Indigenous Strategy, which would address the need for policy and strategic direction on urban Indigenous issues and promote relationship building with these partners. More specifically, these partners recommended that the strategy include the re-instatement of a national Indigenous Friendship Centre Program that is designed, delivered, and managed by the Friendship Centre Movement.

Proposed measures to address injustices and tackle violence and discrimination included ensuring Indigenous women, Elders, 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, youth, and urban Indigenous people were involved in the Declaration's implementation, using a distinctions-based and cross-Indigenous, intersectional, and gender-based analysis plus (GBA plus) approach. National Indigenous Women's Organizations specifically sought their inclusion in decision-making and participation in all aspects of the Declaration, UNDA (United Nations Declaration on the Rights of Indigenous Peoples Act), and Action Plan implementation, in order to ensure respect and protection of the gender- and equality-based rights of First Nations, Inuit, and Métis women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons.

Many Indigenous partners emphasized the need to engage provinces and territories on the Declaration and Action Plan implementation. While some identified this proposed engagement as a way to address jurisdictional

issues, others prioritized the federal government's responsibilities under the Constitution.

Lastly, proposed measures related to annual reporting included ensuring that First Nations, Inuit and Métis women, 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, youth, and urban Indigenous people were included in annual reporting processes, using a distinctions-based and cross-Indigenous, intersectional and GBA plus (Gender-based analysis plus) approach, with accountability mechanisms. Some partners noted the importance of including modern treaty and self-governing nations in annual reporting, while others wanted to see the written perspectives of Indigenous peoples highlighted in the Annual Report to Parliament, and the report to be proactively distributed. Still others sought a commitment for Canada to report on progress more regularly, with detailed tracking of smaller milestones, using plain language, accessible formats published in mainstream and social media, and translated into Indigenous languages. Many partners recommended using Indigenous-led evaluation and assessment tools to assess and report on progress in implementing the Declaration, included adding an evaluation framework to the reporting framework, in order to measure success through statistical improvements in Indigenous economic, social, health, food security, housing, education, linguistic, and employment indicators.

Self-determination, self-government and recognition of treaties (Articles 3, 4, 37)

The inherent rights to self-determination and self-government are relevant across themes. Indigenous partners focused their priorities on ensuring that Indigenous sovereignty, self-determination, and self-governance are

respected and upheld in all aspects of implementing the Declaration, including respecting the terms of historic and modern treaties.

Aen narchik 3 / Article 3 (Michif)

Lii pramyii nawsyoon moond ayowak ooma lii drway ishi wiiya-ikoo ahkamayihtumowin. L'oneur ouschi aykwawnima lii drway wiyawow voulay chi kii kishkayhtakwunwiyawow lee poulichik pozisyoon akwa voulay nawashwaywin wiyawow manawchischikayhk, aen social akwa ka ishi pimaatishiyaahk oushtawhk.

▶ English version

Proposed legislative amendments focused on ensuring that the *Indian Act* is consistent with the Declaration and upholds self-determination, self-government, and treaty rights, including guarantees that Indigenous registration and membership is determined by Indigenous peoples. Specific recommendations included:

- Amending the *Indian Act* to end residual gender discrimination and uphold Indigenous women's rights, including as they relate to representation, membership, and self-determination
- Developing transition plans on a nation-to-nation basis to replace the *Indian Act* and provide First Nations control of their own membership, citizenship, and election codes
- Dismantling the *Indian Act* through replacement of the Indian Register with a Declaration-compliant framework
- Amending the *Indian Act* to fully recognize and implement enforcement and adjudication of First Nations' laws
- Amending the *Indian Act* to ensure alignment with First Nations' interests in the implementation of the Reserve Land and Environmental

Management Program and the *First Nations Land Management Act*
- Reviewing infrastructure formulas, including for roads, maintenance and operations in order to provide sufficient funding

Other partners recommended co-development of federal legislation recognizing Indigenous self-determination and self-governance, including mechanisms for self-government agreements, which would promote a more meaningful long-term focus and allow Indigenous peoples to move to self-government on an “opt-in” basis when communities are ready. In terms of proposed policy amendments, partners pointed to the Inherent Right Policy as requiring updates to align with the Declaration; the need to ensure that section 35 rights recognition frameworks are fully aligned with the Declaration; and support in rebuilding and reconstituting Indigenous nations.

piskihtasinahikêwin 4 / Article 4 (Plains Cree)

iyiniwak, ka-isi-âpacihtâhk omiyikosiwin ta-âsawi-tipêyimisocik, ayâwak ôma miyikosiwin ta-tipêyimisocik ahpô âsawi-tipêyimisowin pîhci pisiskêyihtamowina kihcinâkwan ohci pîhci mîna tipiyaw nâkatohkêwina, êkwa mîna sâpo-isi kiki-sôniyâwi-wîcihisowin-isi otâsawi-tipêyimisowin.

▶ English version

Partners also noted that the right to self-determination includes upholding and implementing all historic and modern treaty rights, including through review of existing funding arrangements to ensure meaningful treaty implementation. Some partners advocated for transition plans, on a nation-to-nation basis, to support Indigenous self-determination, self-government and sovereignty, and to ensure better legal protection for treaty rights.

Related recommendations included honouring the spirit and intent of rights contained in treaties, including through treaty implementation framework agreements. Overall, treaty partners consistently called for Canada to respect Indigenous understandings of treaty terms and to adopt a treaty-based approach to Declaration implementation.

Some First Nations partners advocated for the recognition of the inherent right to self-determination in Declaration implementation through federal consistency of laws processes. Others sought to uphold self-determination and self-government by ensuring respect and enforcement of laws passed by Indigenous governing bodies, including through community tripartite agreements with law enforcement or through Indigenous prosecution services. Indigenous governing bodies also proposed measures to exercise self-governance in areas ranging from implementation of modern land claim agreements to policing and other areas. Some partners noted that Indigenous-led institutions can assist in overseeing lands management, economic development, financial literacy, and wealth management.

> “With very few exceptions, the federal government’s legal framework currently denies the existence of Aboriginal title, treaty rights, and Aboriginal rights, including the inherent right of self-government. It does this by asserting full jurisdiction and leaving almost no space for Indigenous governance and decision-making.”
> - Lake Babine First Nation, Action Plan Submission, December 6, 2022

Métis Governments sought continued commitment to advance Métis self-government agreements, including negotiating core governance treaties; federal recognition legislation to implement their self-government agreements; measures to establish a Métis section 35 rights recognition framework to determine, recognize and protect the exercise of Métis

section 35 rights; and a mandate for all federal departments to negotiate reconciliation agreements with Indigenous governing bodies in order to create space for recognition of Indigenous jurisdictions and expedite Aboriginal rights recognition. Some self-identified Métis communities claiming not to be represented by existing Métis governments are also seeking federal recognition.

Inuit put forward a number of measures to ensure they are able to exercise and enforce their rights. Prioritizing a co-development approach to both legislative and policy changes, proposed measures include:

- An Indigenous human rights commission and tribunal
- Adequate resources and a new legislative and/or policy framework that affirms the right of self-government and provides for fiscal arrangements to support efficient negotiation of Inuit self-government agreements with Makivvik Corporation, Inuvialuit Regional Corporation, and Nunavut Tunngavik Inc. (this could include partnering with Inuit to update the Government of Canada's Inherent Right and the Negotiation of Aboriginal Self-Government policy)
- Full and effective implementation of the Inuit Nunangat Policy
- Ongoing use of the Inuit-Crown Partnership Committee as an integral mechanism for both implementing the Inuit Nunangat Policy and supporting Inuit self-determination

Inuit women advocated for self-determination through representative institutions of their own choosing, and the need to uphold their right to education and participation in decision-making, through investments in education and economic development targeted to Inuit women.

Indigenous women partners also advocated for the need to uphold inherent rights, including those related to matriarchal modes of governance, with financial and technical assistance and accountability

mechanisms, to ensure self-determination and to address historic grievances and modern treaty implementation issues. Additionally, urban Indigenous partners called for the need to recognize urban Indigenous modes of organizations, such as Friendship Centres.

Civil and political rights (Articles 6, 7, 9, 17, 33, 35, 36)

Indigenous partners conveyed several priorities under the Civil and Political Rights theme, which includes security of the person, the prohibition of genocide, the prohibition against the forcible removal of children, and labour rights.

Partners proposed amendments to existing legislation, as well as new legislative and policy initiatives in order to uphold civil and political rights relating to the security of the person and communities across borders, including:

- Amending the *Immigration and Refugee Protection Act*, to address issues affecting cross-border Indigenous communities, including the re-establishment of communities divided by international borders as well as right of entry provisions and work, residency, and employment permitting processes
- Recognizing Aboriginal rights across interprovincial borders, both at the federal and provincial levels
- Ensuring political and legal recognition with tribes and members in the United States
- Establishing a protocol to ensure appropriate handling of cultural and ceremonial items, including medicinal plants, at the Canada-United States border

Other partners recommended that the *Royal Canadian Mounted Police (RCMP) Act* be reviewed to increase accountability of officers in their dealings with Indigenous peoples and that cross-cultural training be provided for Canada Border Services Agency staff to ensure sensitivity for Indigenous cultures, ceremonial people, and Elders. Other partners recommended new legislation to incorporate the 231 Calls for Justice of the National Inquiry's Final Report into Missing and Murdered Indigenous Women and Girls (MMIWG), the Truth and Reconciliation Commission's 94 Calls to Action, and the recommendations of the Quebec Coroner related to implementing Joyce's Principle.

Several partners recommended that federal legislation be developed to establish a National Oversight body and a violence prevention action plan in order to end violence against Indigenous women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons. Partners also noted the need to improve these vulnerable populations' safety and security through federally-resourced, community-coordinated responses, including supports for victims of human trafficking and domestic abuse, as part of federal legislation. National Indigenous Women's Organizations sought their inclusion and guaranteed representation in the composition of the National Oversight body to end violence against First Nations, Inuit and Métis women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, to ensure a distinctions-based and cross-Indigenous, intersectional and gender-based approach.

Other partners focused on policy measures to address gender-based violence against Indigenous women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, including:

- Combatting the culture of silence around violence through accountability and transparency in how Indigenous homicide, missing persons, and sexual violence investigations are handled and reported on, including through release of autopsy and coroners' reports
- Ensuring police investigations into gender-based violence are done without discrimination and bias
- Creating a system for reporting and investigating sexual and physical assaults, run by Indigenous women
- Financial and technical assistance to address the violence, racism and discrimination that impact Inuit women and their families
- Recognizing, preventing, investigating and punishing violence against Indigenous women, including psychological, physical, sexual, economic, political, spiritual or environmental violence, through respect for the principle of due diligence
- Preventing and combatting all forms of gender-based violence in schools and the workplace by taking the necessary measures to punish those responsible and ensuring reparations to victims

A key recommendation of partners with respect to addressing gender-based violence included using the findings of the National Inquiry into Missing and Murdered Indigenous Women and Girls (MMIWG) to guide the implementation of the Declaration, with financial and technical assistance to support sustained implementation of, and progress reporting on, the 231 Calls for Justice. Some partners specifically called for greater resource dedication, strategic oversight, and monitoring of the federal action plans that already guide the implementation of the federal MMIWG (Missing and Murdered Indigenous Women and Girls) inquiry including the urban Indigenous Action Plan on MMIWG2SLGBTQQIA+ (Missing and murdered indigenous women and girls, Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse).

Many partners saw the MMIWG (Missing and Murdered Indigenous Women and Girls) Calls for Justice as the primary lever to systematically address the ongoing violence against Indigenous women, girls, and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons. Other partners focused on addressing environmental violence, racism and discrimination, and ensuring the physical safety and socio-economic well-being of Indigenous women in the resource extraction industry. One specific measure called for federal regulatory and impact assessment bodies to assess and mitigate the impacts of resource development on marginalized Indigenous groups, including the impacts of sexual violence against Indigenous women and youth.

With respect to Indigenous children's and youths' civil and political rights, some partners recommended developing federal legislation to establish a national Indigenous youth agency and an Indigenous-led Commissioner for Indigenous children and youth in care, with financial and technical assistance and accountability mechanisms. Several partners pointed to *An Act respecting First Nations, Inuit and Métis children, youth and families* as requiring consistency with the Declaration, in order to end discrimination in child and family services and address jurisdictional barriers. Others called for federal action and financial and technical assistance to fully implement *An Act respecting First Nations, Inuit and Métis children, youth and families*, in order to ensure Indigenous governing bodies can exercise their jurisdiction over child and family services. Specific recommendations calling for measures to ensure Indigenous control of child welfare, with accountability mechanisms to ensure Indigenous authority and jurisdiction, included:

- Collaboration between federal and provincial governments to support the transition from provincial child welfare to Indigenous-led child

welfare, using evidence and data from those with lived experiences in the child welfare system

- Financial assistance to support Indigenous communities in developing their own child welfare laws in keeping with community values, in order to prevent and mitigate related generational harms caused by the forcible removal of Indigenous children
- Involving Indigenous women's organizations in Indigenous child welfare policies by:
    - prioritizing prevention over apprehension through the delivery of prevention-focused services
    - focusing on a duty to refer over a duty to report
    - investing in traditional, cultural, and land-based parenting teachings and education
- Appointing a special investigator to address the continued escalating rates of apprehension of Indigenous children, relying on statistics and the actions of all governments
- Developing an independent, Indigenous-led oversight body to monitor and ensure that child welfare agencies across Canada uphold Indigenous children's rights; recognize and honour the rights of the mother; ensure priority placement for Indigenous children with parents, family and community; and improve the collection of identity-based data in collaboration with provinces and territories
- Supports for Indigenous youth aging out of care, and compensation for trauma and abuse suffered under the child welfare system
- Free access by survivors to their child welfare records
- Greater preventative, culture-based investments as a protective measure against child welfare involvement and the importance of moving investments away from enforcement and apprehension

Other partners recommended sustained implementation, with financial and technical assistance, of the Truth and Reconciliation Commission's 94 Calls to Action and included proposals for a National Inquiry into the Sixties Scoop and removal of Indigenous children under Canada's child welfare system.

Access to justice was another key priority of Indigenous partners, who advocated for concrete measures to end discrimination in the justice system and ensure Indigenous access to fair and just procedures, including Indigenous women's and youths' access to justice. Specific recommendations included financial and technical assistance for:

- Indigenous-led policing, justice services, and criminal justice programming, including community justice initiatives, preventative programming, criminal justice diversion programs, and restorative justice programs
- Transition plans for Indigenous nations to assume control of their own criminal justice systems
- Legal aid services for First Nations, Inuit and Métis women and youth that would facilitate access to criminal justice system navigators
- Preventative programming for vulnerable Métis people, ensuring Métis access to fair and just procedures, and ensuring Métis women's access to justice
- Accessible processes for expunging youth criminal records to reduce barriers to education and employment

Several accountability mechanisms were also proposed to ensure Indigenous access to justice and equity and the upholding of civil and political rights, including:

- Establishing Indigenous civilian police oversight bodies for local law enforcement, including the RCMP (Royal Canadian Mounted Police), in

order to take concrete steps to end police brutality against Indigenous people
- Providing cultural sensitivity training to first responders, police, corrections, and conservation officers, prosecutors, Crown lawyers, and judges on Indigenous human rights, the Declaration, the Act, the Action Plan and on Indigenous legal realities and cultures, Indigenous law and on the rights of Indigenous women and girls
- Training police officers in trauma-informed approaches to increase the likelihood of better outcomes of Indigenous-police interactions
- Establishing an Indigenous entity to investigate police complaints
- Reviewing and implementing recommendations and findings of inquiries related to police treatment of Indigenous peoples, including the 2004 Final Report of the Commission of Inquiry into Matters Relating to the Death of Neil Stonechild
- Supporting and launching a National Strategy to address the over-incarceration of Indigenous women
- Improving implementation of Gladue and other judicial decisions addressing Indigenous peoples' overrepresentation in the criminal justice system and incarceration rates; and funding and standardizing Gladue reports for Indigenous offenders
- Amending the Canada Evidence Act and other acts in order to accommodate Indigenous oral history evidence in federal and provincial courts and place it on an equal footing with written historical evidence and testimony

Indigenous partners also made a number of recommendations related to upholding labour rights, including identifying and addressing Indigenous inequalities, racism and discrimination pertaining to human rights, employment and labour, and access to spiritual leave within the *Canada*

Labour Code. In addition, partners are also looking to implementing federal policy requirements for Indigenous hiring and representation in the public and private sectors.

Participation in decision-making and Indigenous institutions (Articles 5, 18, 19, 34)

This theme garnered significant attention from Indigenous partners because of its importance in revitalizing Indigenous institutions and structures and ensuring their participation in decision-making in matters concerning Indigenous rights and interests.

ᐃᓪᓴᖅᑯᑦ 18 / Article 18 (South Baffin)

ᓄᓇᖅᑲᖅᑲᖅᓱᒪᔪᑦ ᐱᔪᓐᓇᐅᑎᖅᑲᖅᑐᑦ ᐃᓕᐅᔪᓐᓇᖅᓴᑎᓂ ᐃᓱᒪᒃᓴᖅᓱᐅᓕᐊᓕᓐᓄᑦ ᐱᕐᔪᑎᖅᑲᖅᑐᑦ ᐃᓗᒥᓄᑦ ᐊᑲᑎᖅᑲᖅᑐᓂ ᐱᔪᓐᓇᖅᓂᖅᑎᑦ, ᑕᐅᒪᓐᓇ ᑭᓱᖏᖅᑐᖅᑕᐅᑎᑦᑎᓗᑎᓂᒃ ᓂᕈᐊᖅᓱᒪᓕᕆᖅᑎᓄᒃ ᒪᓕᓴᓗᑎᒃ ᓇᖕᒥᓄᑦ ᐱᐅᓱᖅᓯᐅᑉᐳᓗᒃᑐᑦ, ᐊᓚᒪᓗ ᐊᑐᐃᑐᓇᖅᑕᒥᔪᑦ ᐱᐅᓱᖅᓯᐅᑉᐳᓗᒃᑐᑦ ᐃᓱᒪᓕᕆᔨᖅᑐᑦ ᐃᓄᐃᑦᑐᑦ ᐊᑐᐃᑐᓇᖅᓂᖅᑎ

parliamentary procedures and processes to ensure that Indigenous nations and governing bodies are meaningfully consulted on federal legislation to ensure compliance with FPIC (Free, Prior and Informed Consent).

> “Consent isn’t one phone call. There is no consent really, they just tell us they are coming to set up shop and we just have to take it. Most of the people don’t even know, we should be able to see these big companies coming years before they set up shop. We don’t even know what we’re dealing with.”
> - Sagkeeng First Nation, Action Plan Written Submission, November 25, 2022

Partners also advocated for decision-making within Canadian institutions and structures to specifically include legislative and policy co-development with Indigenous peoples, including co-development of rights-based programs and policies with Indigenous governing bodies, including distinctions-based programs. Some First Nations partners focused on upholding the duty to consult and accommodate, and the need to consult with First Nations governing bodies on the Declaration’s implementation on a nation-to-nation basis that recognizes the inherent right of each First Nation to self-determination. Some First Nations partners expressed the importance of avoiding an approach that conflates all First Nations, but rather recognizes distinct First Nations and includes their specific priorities. Some partners also called for increasing Indigenous representation on federal boards and panels.

Several partners advocated for financial and technical supports to ensure that the specific needs of Indigenous women and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons were addressed, including the need to have

their rights to consultation, representation, decision-making, and institutions of their own choosing upheld as part of the Declaration's implementation. Some partners also advocated for the establishment of a consultative Indigenous Women's Council to ensure equitable implementation of the Declaration.

Urban Indigenous partners, including urban Indigenous youth, emphasized the importance of upholding the rights of off-reserve and urban Indigenous people to choose their own representatives in accordance with their own procedures, to maintain and develop their own decision-making institutions, and to be consulted with and express their FPIC (Free, Prior and Informed Consent) through their own representative institutions, including with adequate financial and technical support. These partners expressed that existing processes such as, the Permanent Bilateral Mechanisms and existing definitions of Indigenous Governing Bodies, are perceived to exclude off-reserve, non-status, and urban Indigenous people, and should instead be treated flexibly, recognizing that current structures bear the heavy imprint of the legacy of colonialism.

Other proposed measures relating to Indigenous judicial and legal systems, institutions and structures included:

- Incorporating Indigenous traditional and customary laws and processes, and re-establishing and upholding Indigenous inherent rights, laws and legal orders in all aspects of the Declaration's implementation
- Committing financial and technical resources for evaluating, revitalizing, considering and providing greater space for Indigenous laws and orders as a critical part of the Declaration implementation process

- Seeking specific legislative amendments, or omnibus legislation, to allow for Indigenous consent-based decision-making processes
- Re-establishing Indigenous laws through the inclusion and participation of Indigenous economic, political, and social institutions and governing bodies, and through processes for coordinating Indigenous and federal laws

Lands, territories and resources (Articles 10, 26, 27, 28, 30, 32)

This theme is closely related to the Environment theme that follows. Priorities and proposed measures focused on the inherent right to self-determination and self-governance of Indigenous traditional territories. This theme also includes priorities about FPIC (Free, Prior and Informed Consent) over the use, management and development of Indigenous lands and territories, along with enforcement measures and legal protections.

Indigenous partners pointed to several pieces of federal legislation related to lands, territories and resources that would in their view require review or amendment in order to ensure consistency with the Declaration, including but not limited to the *Impact Assessment Act*, *First Nations Land Management Act, Canada Energy Regulator Act, Indian Oil and Gas Act* and *Regulations,* including to enhance First Nations control over oil and gas development and conservation on reserve lands;and *Yukon Environmental and Socio-economic Assessment Act.* A significant amount of attention was paid to amending the *Fisheries Act* to ensure that it upholds the right to a moderate livelihood as framed in the *R v Marshall* decision of the Supreme Court of Canada. Several Indigenous partners pointed to the *Fisheries Act* and the upholding of First Nations' inherent right to self-determination and self-government as it relates to fish, fish habitat, and fisheries, including the

right of FPIC (Free, Prior and Informed Consent); and ensuring inclusion of Indigenous knowledge and science in joint governance and management structures, including coordination agreements under the *Fisheries Act.* Some partners are seeking further amendments to the *Fisheries Act* that would ensure the right to first priority basis to Indigenous peoples and governing bodies for food, social and ceremonial purposes, and for support andsubsistence.

Partners also called for the repudiation of the doctrines of discovery and *terra nullius*, and measures to address the dispossession of Indigenous peoples from their lands, including through restitution. Some First Nations partners called on the government to commit to negotiating redress for historical infringements to First Nations Aboriginal title and rights, including:

- Depriving First Nations of the means of subsistence and development
- Destroying cultural and spiritual sites
- Desecrating ancestral gravesites and remains
- Causing extreme environmental damage, including altering or destroying ecosystems and harvesting areas

These partners also called for a commitment to provide redress for the impacts of construction of hydroelectric dams, mining, forestry, the storage of nuclear waste, and other development, without FPIC (Free, Prior and Informed Consent), and with limited to no economic benefit to First Nations and members.

Other partners focused on the need to provide compensation for exploited land, resources and harvesting rights, including the denial of Aboriginal title. Priorities included co-developing a legislative and policy framework for full recognition and implementation of Aboriginal title, including return of lands, collaborative and/or joint decision-making, and revenue sharing.

Other partners requested express commitments around the implementation of Aboriginal title, and recognition of Indigenous self-governance and jurisdiction over title lands, including in the context of resource development.

With respect to restitution in the form of land back and redress of other outstanding claims, Métis Governments specifically called for a federal policy or process for Métis claims to enable Métis to seek redress for dispossessions of their lands. Métis rights holders are currently excluded from federal claims processes such as the comprehensive claims process or specific claims tribunal by virtue of these forums being limited to First Nations and Inuit. As such, Métis Governments are seeking to resolve their claims, including those relating to the *Manitoba Act*, scrip, and the Treaty 3 Halfbreed Adhesion, among others.

Other land claims-based recommendations included:

- Developing an independent review mechanism to ensure Inuit land claims agreements implementation
- Reviewing and amending the Specific Claims Policy and process to ensure consistency with the Declaration, or alternatively, developing a new claims negotiations policy outside of the Specific Claims process that supports Indigenous peoples in negotiating agreements with the Crown to recognize and resolve rights issues pertaining to Indigenous lands, territories and resources
- Consulting with Indigenous peoples to develop a reconciliation policy based on the Attorney General of Canada's *Directive on Civil Litigation Involving Indigenous People,* in orderto guide and encourage negotiated settlements for Indigenous rights, advance rights recognition and implementation, support Indigenous self-determination, and uphold the honour of the Crown

- Using the Declaration as a friendlier, less combative negotiation tool for land rights assertions and recognition, to facilitate greater partnership and equity among Indigenous nations, government and industry, and strengthened relationships with elected officials and public servants, in order to uphold consultation and accommodation and support revenue sharing and co-ownership models
- Amending the *Federal Courts Act* to exclude limitation periods and to remove maximum compensation amounts for Indigenous land, territories and resource claims from the *Specific Claims Tribunal Act*

Other land and resource development priorities focused on the importance of upholding self-determination, self-governance, the duty to consult and accommodate, and FPIC (Free, Prior and Informed Consent) with respect to all resource development on Indigenous lands. Several partners pointed to the need for meaningful consultation, participation and involvement in resource development decisions, with financial and technical assistance, in order to respect the Declaration and the Act. Some partners requested federal support and participation in good faith, multilateral, nation-to-nation, consensus-based decision-making processes, that could include collaborative project-specific roundtables or regional land-use planning councils.

Partners were consistent in prioritizing the need for clarity on FPIC (Free, Prior and Informed Consent), with some partners recommending the co-development of framework legislation outlining the meaning application of FPIC (Free, Prior and Informed Consent), and mechanisms for monitoring and enforcing FPIC (Free, Prior and Informed Consent), for impact assessments and resource development decisions. Other partners sought to amend the *Impact Assessment Act* to:

- Require that FPIC (Free, Prior and Informed Consent) be obtained for projects on Indigenous territories
- Prevent environmental racism by ensuring Elder and traditional Knowledge Keeper representation in order to meaningfully assess projects for social, health or economic impacts on Indigenous peoples
- Co-develop a regulation enabling the Impact Assessment Agency to enter into collaborative assessments with Indigenous communities that are not parties to modern treaties or do not have treaty settlement lands or reserve lands, but whose territories are nonetheless impacted by proposed projects
- Develop a policy to ensure sustainable funding, including potential proponent funding, for Indigenous governing bodies to meaningfully engage in technically complex impact assessments, with simplified and respectful application and reporting requirements
- Develop a policy confirming that Indigenous Knowledge in impact assessments will be properly valued, sufficiently resourced, subject to principles of ownership, control, access and possession (OCAP), and reconciled with western knowledge in case of discrepancies or inconsistencies

Still other partners recommended developing specific strategies for addressing FPIC (Free, Prior and Informed Consent) in environmental assessments, regulatory decisions, project and land use planning, and in the storage and disposal of hazardous materials affecting Indigenous communities. Indigenous partners are also seeking to develop a mechanism to resolve Indigenous claims with respect to the Natural Resource Transfer Agreement (NRTA) to fulfill treaty obligations with First Nations. Additionally, some partners called for the review and redress of the NRTA to advance project planning, regulation and revenue sharing with Indigenous nations. In relation to the *Guidelines for Federal Officials to Fulfill*

the Duty to Consult, some partners recommended that they be reviewed to ensure consistency with the Declaration, while others requested that they be replaced with a new co-created national framework for consultation on natural resource projects.

Many partners proposed measures to ensure that Indigenous communities could benefit from resource development on Indigenous lands, including through revenue-sharing agreements. Some partners called on the government to co-develop and implement new revenue-sharing and fiscal relationship policy frameworks for federally regulated infrastructure and resource extraction projects on Indigenous lands.

Other partners sought accountability mechanisms to:

- Uphold traditional territorial and treaty rights in resource development
- Respect Indigenous governance over traditional lands and resource management
- Uphold Indigenous knowledge, laws and standards related to lands and resource management
- Ensure the inclusion of First Nations, Inuit and Métis women in decision-making about their lands, territories and resources, including meaningful participation in the management and regulation of their lands and resources
- Include Indigenous data sovereignty over research and data gathered on Indigenous lands

These priorities included ensuring federal regulators and impact assessment bodies undertake cumulative impact assessments that address and mitigate project-specific impacts on the health, social and economic well-being of affected First Nations, Inuit and Métis communities, using distinctions-based, intersectional, and GBA- plus approaches.

Other partners advocated for treaty impact assessments that address inherent and treaty rights impacted by resource development projects, and the development of co-management agreements in areas of federal jurisdiction impacting traditional territories.

Indigenous women and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) priorities included protections from environmental and sexual violence caused by resource development projects and ensuring their participation in environmental impact assessments and in land use and economic opportunities on traditional territories. Several partners noted the need to uphold equality rights of First Nations, Inuit and Métis women in lands and resource development decisions and conservation, and to respect their traditional and ongoing roles as Waterkeepers and protectors of Mother Earth in conversation planning and water conservation efforts.

Other partners called for equitable inclusion in land planning strategies on traditional territories, including allowing Elders to be part of resolution boards to discuss the planning and development of resource extraction projects.

Partners also called for measures to maintain and strengthen spiritual relationships to lands, resources and waters by supporting Indigenous-led initiatives to rehabilitate Indigenous territories impacted and damaged by resource development projects. Related proposed measures called for investments in Indigenous monitoring and mitigation of environmental, mental, and physical impacts caused by past resource development projects, including increased financial and technical assistance to expand the Indigenous Guardians Program.

Other partners noted the importance of upholding Aboriginal harvesting rights, including forestry, trapping, fishing, hunting, and gathering, as well as agricultural activities. Specific recommendations included the need to strengthen Indigenous food security and ensure cultural knowledge transfer derived from land-based teachings. Partners further advocated for measures to support Indigenous control over conservation, management and protection of natural resources, lands, waters, and wildlife.

Related priorities and proposed measures included protection of lands, territories and resources through implementing sustainable emergency management systems, and upholding Indigenous land rights in the exercise of emergency powers. Indigenous partners also emphasized the right to clean water through sustainable protection and management of source water, groundwater, wastewater and sanitation services, and traditional watersheds. A recurring recommendation was to eliminate all long-term drinking water advisories and provide financial and technical assistance to Indigenous communities for water infrastructure and distribution systems. Some partners called upon the federal government to support the development of a First Nations operated water utility as an initial step to advance First Nations water governance.

Environment (Article 29)

While Indigenous partners provided a fewer number of priorities and proposed measures specifically under the environment theme, several other proposed measures contain environmental considerations, particularly those measures related to lands, territories and resources.

Nakataani 29 / Article 29 (Inuinnaqtun)

1. Nunaqaqaqtut inungnut pihimani pilarutit nunguttailini hapumminilu avatigiyauyut havarittiaqnilu pilaqnit nunaktik uvaluniit nunatagauyut piqaqnitlu. ▶ English version

Proposed constitutional and legislative measures under the environment theme included:

- Amending the *Canadian Charter of Rights and Freedoms* to enshrine a right to a healthy natural environment as a universal human right, and to uphold the Indigenous right to maintain and strengthen distinctive spiritual relationship with the land
- Developing national climate legislation to reduce impacts of climate change
- Aligning laws, regulations and policies regulating marine shipping with the Declaration, including ensuring Indigenous nations are involved in decision-making regarding marine shipping

- Amending the *Canadian Navigable Waters Act*, including to provide means to affirmatively protect waters of integral significance to the cultural identity of Indigenous peoples
- Amending relevant federal laws and policies to prevent pollution and toxic substances from affecting Indigenous communities' access to safe and clean water

Some partners, including Yukon First Nations, also pointed to territorial legislation that posed potential barriers to addressing environmental impacts from resource development, including the *Yukon Act*, *Territorial Lands Act*, *Placer Mining Act, Quartz Mining Act,* and *Clean Energy Act*.

Partners also proposed numerous measures regarding Indigenous inclusion, respect and incorporation of Indigenous environmental laws and approaches, and accountability measures to protect the environment, including:

- Incorporating Indigenous concerns and knowledge in federal initiatives to address climate change, and ensuring Indigenous inclusion in the transition to a green economy
- Improving federal emergency management and disaster policies, in order to address Indigenous climate displacement and the inequitable environmental, health, and cultural impacts of climate change experienced by Indigenous peoples
- Supporting capacity for Indigenous nations to transition to retrofit governance buildings to make them more energy efficient and to reduce green house gas emissions
- Supporting Indigenous approaches to climate justice and climate action planning, which could include:
    - Establishing Indigenous environmental sustainability frameworks to address climate change and its impacts on Indigenous peoples

- Establishing a Métis Environmental Sustainability Framework to address Climate Change
- Including Indigenous concerns, knowledge, governance, laws and priorities in climate planning, and supporting Indigenous climate justice and climate action planning
- Incorporating Indigenous-led approaches to environmental protection and stewardship, sustainable harvesting, including species listed on the *Species at Risk Act*, and natural resource conservation, through measures that prioritize Indigenous self-determination and respect for Indigenous laws requiring that lands and resources be protected for future generations
- Involving urban Indigenous youth in environmental processes through strength-based programs and services that reflect their unique circumstances
- Ensuring the documentation and preservation of environmental knowledge held by Elders and traditional knowledge holders
- Empowering Indigenous women to assert rights to have environmental laws and policies that reflect Indigenous ways of knowing and being, are centred on protecting and caring for Mother Earth, and shift colonial paradigms to Indigenous matriarchal paradigms
- Addressing environmental racism by affirming Indigenous sovereignty over Indigenous lands and the relationships that Indigenous peoples have to their lands, territories, and resources

> “Due to historic injustices, Indigenous communities have disproportionately borne the brunt of Canada’s past weather-related disasters and displacement despite having contributed the least to and often defended their land and water against environmentally harmful practices. Repeated forced movement due to overlapping crises has worsened Indigenous health outcomes, led to premature death of Elders and language keepers, increased poverty, and threatened permanent cultural loss through loss of connection to ancestral knowledge, the land, and community.”
> - Kanaka Bar Indian Band, Call for Proposals Funding Submission, February 18, 2022

Additional proposed measures included tackling violence and discrimination by ensuring an intersectional and GBA plus (Gender-based analysis plus) approach to climate change and environmental conservation; and ensuring the inclusion of Indigenous women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons in decision-making related to their natural environment.

Economic and social rights (Articles 20, 21, 22, 23, 24)

The theme of Economic and Social Rights includes economic rights, social rights, and the right to health, as well as protection of marginalized and vulnerable Indigenous populations, including Indigenous women, youth, children, Elders, 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons, and persons with disabilities.

Article 23 (Blackfoot)

▶ English version

With respect to economic rights, Indigenous partners made a number of recommendations focused on improving economic and resource development opportunities, including utilizing the federal spending power and legislative authority to broaden the opportunities available to pursue Indigenous economic priorities. Some partners looked to international agreements, including the Indigenous Peoples Economic and Trade Cooperation Agreement, as a priority area to increase Indigenous peoples' participation in trade and promote economic development, and to eliminate barriers that impede Indigenous participation in resource development. Still other partners recommended implementing incentive-based programs to support economic development opportunities for companies that partner with Indigenous businesses and corporations.

Some partners noted that systemic change is needed that will provide paths for wealth transfer to Indigenous peoples through Indigenous-led processes such as the National Indigenous Economic Strategy, the Financial Management Board's Roadmap Project, and the Assembly of First Nations'

Prosperity Table. Some partners indicated that optional paths to economic development programs are key as not all Indigenous peoples have the same priorities or utilize the same institutions for economic reconciliation, which will require the development and support of optional Indigenous-led institutions, such as the *First Nations Fiscal Management Act.*

As well, partners identified the importance of access to market capital that will allow for participation in equity frameworks in capital projects such as a loan guarantee program or a development bank. Partners also identified other opportunities for economic development that included Canada's Indigenous procurement mandate which can be enhanced by alignment with Indigenous businesses' needs. Additionally, partners identified that economic reconciliation is tied to land management as Indigenous peoples have a central role in natural resource extraction and development projects.

Further, some partners recommended amending the *Financial Administration Act* to co-develop targets and monitoring mechanisms to track Indigenous procurement and set asides in development projects. Additional amendments included the verification of First Nations, Métis, and Inuit people to prevent those who self-identify without credible claims to Indigeneity benefitting from Indigenous set asides in contracting and procurement processes.

Many partners noted the importance of their communities' involvement in profit-sharing and impact benefits agreements, with the shared revenues from industry supporting economic development, employment, Indigenous environmental monitoring, and cultural programming. Indigenous women partners sought to be included in economic opportunities on traditional territories and prioritized financial and technical assistance for vocational and employment training. Additionally, some partners proposed

amendments to the Indigenous Skills and Employment Training Program, such as consistent funding increases to agreements and including cultural support costs as billable program costs. Numerous partners pointed to the long-term employment and career opportunities afforded through the Indigenous Guardians Program, and recommended developing and implementing fully funded, multi-year, widely accessible Indigenous Guardianship Programs. These programs would provide culturally appropriate training, mentorship and long-term employment in monitoring, compliance, enforcement, research and stewardship, with opportunities for Guardians to become fully trained Natural Resource Conservation officers, thereby supporting Indigenous economic security, cultural values and stewardship obligations.

Other partners focused on economic measures related to gaming, with priorities focused on mechanisms to support self-determination in relation to gaming and economic development, and the need to recognize and respect inherent and treaty rights in relation to gaming initiatives. Specific recommendations included working with First Nations leadership to restore the terms of the original video lottery terminal Site-holder Agreements; allow First Nations' governments to make administrative decisions relating to matters of gaming within nations; and prevent provinces from making unilateral decisions affecting First Nations' economic prosperity. Some partners also pointed to section 207 of the *Criminal Code,* related to gaming and betting licenses, as requiring review and consistency with the Declaration.

Proposed legislative measures related to social and health rights included a review of the *Canada Health Act* and the Canada health transfer payments system to ensure consistency with the Declaration, as well as a review of Canada's employment insurance program, *Federal-Provincial Fiscal Arrangements Act, Accessible Canada Act,* and *Medical Assistance in Dying*.

Partners also pointed to the need for Canada to develop economic well-being indices that are consistent with the Declaration and go beyond gross domestic product measurements.

Other partners recommended federal legislation that would allow Indigenous persons with disabilities to exercise their rights under the *Convention on the Rights of Persons with Disabilities*. Métis Governments called for co-developed, distinctions-based Indigenous health legislation that provides access to non-insured health benefits (NIHB) for Métis individuals, while other partners recommended improving and expanding the NIHB (Non-insured health benefits) Program to include all Indigenous peoples, as well as dental and pharmaceutical care. Some partners also requested an assessment of the NIHB (Non-insured health benefits) Program, including participation from Indigenous partners to determine alignment with the Declaration.

Food security was of primary concern, with some partners proposing to introduce legislation and amend federal regulations, policies and procedures for the processing and sale, and expansion of trade of country and traditional foods. Other partners called for specific financial and technical assistance to Inuit communities to ensure access to affordable healthy food, including traditional foods, through bolstering food subsidy programs for large Inuit families; providing financial assistance to Inuit hunters to support access to traditional foods; and developing a national strategy to lower food costs in order to reduce the disproportionate impact on Inuit. Other Indigenous partners, including Métis Governments, called for supports for improving food security and revitalizing traditional Indigenous economies in fishing, trapping, and forestry, among others.

Partners also advocated for measures relating to culturally competent, non-discriminatory services and programming in areas impinging on provincial jurisdiction, including health, housing, social services, policing, corrections, education, employment, harvesting and resource development. Issues of jurisdiction were a recurring concern, and partners recommended undertaking federal-provincial-territorial collaboration to close jurisdictional overlaps, gaps and conflicts in the provision of health and social services to Indigenous peoples, including those who move across territories or provinces.

Several partners called for the mitigation of systemic discrimination in essential services through a review of federal funding arrangements to address issues of chronic underfunding. Many partners specifically called for financial and technical assistance to sustainably support the economic, social and health rights of Indigenous women, girls, children, youth, Elders and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons in all settings (on and off reserve, urban and non-urban settings), through accountability mechanisms to end violence and systemic discrimination in health services, education, employment, housing, and social services. Urban Indigenous partners stressed that off-reserve and urban Indigenous people, who constitute the large majority of Canada's Indigenous population, also have pressing social and economic needs in urban and rural settings.

Other gender-specific measures to end violence and systemic discrimination in the provision of health services identified by partners included ending forced and coerced sterilization of Indigenous women, girls, and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons through its criminalization, with accountability measures for health professionals. Specific measures called for the appointment of an independent and

impartial body mandated to investigate all allegations of forced sterilization and to make recommendations based on Indigenous community input, with a reparation fund to compensate victims and their families, as well as a mechanism to consult with Indigenous women to enable their unrestricted and easy access to ultrasound services to determine whether they have been forcibly sterilized without their knowledge or consent.

A related recommendation included ensuring that Indigenous women, girls, and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons could exercise autonomy over their own health and health care, through financial and technical assistance to support community-based, culturally appropriate midwifery and health training and services, as well as sexual and reproductive health training, on a distinctions and cross-Indigenous basis. Many partners also called for investments in training Indigenous health professionals, particularly Indigenous women and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) doctors, nurses, and midwives. A smaller number of partners also sought to integrate Indigenous approaches to western health, wellness, healing and medicine, through the protection and harvesting of Indigenous traditional medicines.

Some Indigenous partners acknowledged the stigmas and other challenges, including homophobia, facing 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons within Indigenous communities and are seeking supports for creating and improving community support groups and safe spaces to improve quality of life for all community members.

> “The racism Inuit women and children experience in Canada’s healthcare system is well documented. Recommendations to address systemic racism are well-known. Despite this, systemic racism plays a large role in the health outcomes gap for Inuit women and girls, starting long before an Inuk woman seeks pre-natal care, help for her sick child, or goes to an emergency room after suffering a brain trauma from gendered violence”
> - Pauktuutit Inuit Women of Canada, Action Plan Written Submission, November 29, 2022.

Proposed accountability mechanisms related to the provision of and access to health and social services included:

- Establishing and appointing an Indigenous healthcare ombudsperson, or launching a National Strategy to oversee and report on anti-Indigenous racism in the healthcare system
- Implementing a Patient Advocate System to ensure Indigenous patients can provide free, full and informed consent over their health care, and are able to navigate and fully access the medical system
- Developing accurate and relevant health data and ensuring Indigenous data sovereignty and data governance capacity, in order to make evidence-based policy, program and service decisions and address systemic racism and discrimination, specifically working to bridge the data gap between Indigenous populations on and off reserve
- Measuring and tracking Indigenous health disparities in Canada and developing an approach to close gaps in Indigenous health outcomes, including through investments in Indigenous health services and training of Indigenous health professionals

- Establishing regional funding formulas for Indigenous-led initiatives that address food insecurity, housing precariousness, and inadequate access to health care
- Adopting legislative, policy and accountability measures to recognize, end, prevent, criminalize and redress all forms of obstetrical, sexual and gynecological violence, including forced abortions and forced or coerced sterilization of First Nations, Inuit and Métis women, girls, and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons in Canada, by clearly defining requirements for informed consent with regard to sterilization, raising awareness among Indigenous women and medical personnel of that requirement, and by ensuring that all data collected regarding coerced and forced sterilization is distinctions-based and gender-disaggregated
- Challenging health professional associations and sanctioning health personnel for misconduct against Indigenous women and girls, and ensuring effective access to remedies and protection in cases of health rights violations or abuse
- Adopting and implementing Joyce's Principle both within the federal and provincial healthcare systems, and guaranteeing the right to dignity, respect, life and security for all, without discrimination
- Implementing federally mandated, Indigenous cultural competency and humility training for doctors, nurses, social workers, healthcare providers, and all hospital staff on the realities of Indigenous women, systemic racism, the legacy of colonization, and cultural security, and adopting an intersectional, distinctions-based, cross-Indigenous and feminist approach, with training developed and delivered by Indigenous organizations

- Calling a National Inquiry to address the disproportionate number of Indigenous people acquiring and living with human immunodeficiency virus (HIV) and acquired immunodeficiency syndrome (AIDS)
- Ensuring, through financial and technical support, that first responder and emergency response services and infrastructure, such as paramedics and firefighting equipment and personnel, are available 24/7 in every Indigenous community

Partners also made several recommendations pertaining to the right to housing, including:

- Supporting self-governance in administering housing through Indigenous institutions, including transferring federal control of housing to Indigenous nations, and ensuring housing provisions under the *Indian Act* lead to substantive changes that address on-reserve housing challenges, including overcrowding, homes in need of repair, mould and other hazards, and lack of insured homes
- Supporting Indigenous initiatives related to rezoning, housing and shelters, including supporting the ongoing development of safe, affordable and accessible housing and critical infrastructure, using community and culturally sensitive design
- Reviewing the *National Housing Act* to ensure it meets the needs of Indigenous peoples living off reserve, in urban centres, and in remote, rural communities, with particular attention to meeting the current realities of Indigenous women and youth
- Developing a national Urban Indigenous Housing Strategy, including co-developing sufficiently funded housing plans and strategies
- Addressing housing discrimination, committing financial and technical assistance for home ownership programs, and prioritizing a “housing first” social policy approach so that access to safe and affordable

housing contributes to improved outcomes in health, mental health, cultural wellness and economic prosperity
- Investing in safe, stable and affordable housing initiatives for Indigenous women fleeing abusive situations and domestic violence, Indigenous single mothers, and Indigenous youth, and ensuring Canada Mortgage and Housing Corporation includes Indigenous women's organizations as partners in reforming and developing on-reserve, off-reserve and northern housing supports
- Addressing the particular hardships experienced by Inuit women facing gender-based violence across Inuit Nunangat and in urban areas, by committing financial support for shelters and transitional housing, with specific allocation for Inuit women and their families
- Supporting the rights of First Nations, Inuit and Métis women to economic and housing security through vocational and employment training

Respecting Indigenous self-determination and self-governance over children's health was also identified as a key priority. Several partners recommended establishing accountability mechanisms to uphold Indigenous children's health rights and to ensure the provision of physically and culturally safe health services for children on and off reserve, in urban and non-urban settings. Recommendations included:

- Implementing and expanding Jordan's Principle to include non-status Indigenous peoples, and increasing eligibility for and access to services such as mental health, special education, dental, physical therapy, speech therapy, medical equipment, and physiotherapy, without jurisdictional restrictions
- Financial and technical assistance and ongoing engagement mechanisms to ensure culturally competent early learning and childcare programming and services, including in urban Indigenous

communities, with Indigenous representation and remuneration to support Indigenous children and youth through to adulthood
- Investing in Indigenous youth health through Elder and intergenerational knowledge transfer connected to land and culture
- Establishing firmer expectations of provinces and territories when it comes to supporting culturally responsive, Indigenous-led childcare and early learning centres at the community level

Indigenous partners also recommended committing financial and technical assistance to support the Indigenous right to mental health, including sustainable funding for Indigenous-led, culturally relevant mental health and wellness services, suicide prevention and addictions programming, and healing programs for intergenerational trauma survivors, in all settings (on and off reserve).

Related recommendations included strengthening support and funding for Indigenous women rehabilitation centres and establishing on-reserve treatment facilities and recovery beds, employing evidence-based, culturally relevant and safe services to meet the needs of Indigenous peoples, particularly youth. Other recommendations called for financial and technical assistance to support the health needs of Indigenous persons living with HIV (Human immunodeficiency virus)/AIDS (Acquired immunodeficiency syndrome), and measures to address the health, social, economic and accessibility needs of Indigenous persons with disabilities.

Additionally, some partners recommended amending the *Department of Public Safety and Emergency Preparedness Act*, the *Department of Health Act*, and the *Department of Indigenous Services Act* to designate the addictions crisis in Indigenous communities and the intergenerational trauma arising from addictions as an “emergency” pursuant to these laws.

Related measures to uphold Indigenous economic, social and health rights included recommendations pertaining to rights-based digital technologies. Partners called for equitable access to telehealth and online education services by addressing digital technology barriers, telecommunications infrastructure, and connectivity gaps.

Cultural, religious, and linguistic rights (Articles 8, 11, 12, 13, 25, 31)

Indigenous partners conveyed a number of cultural and linguistic priorities and proposed measures under this theme, emphasizing the importance of self-determination and self-governance over Indigenous ways of knowing, doing and being.

Partners proposed a variety of measures to protect Indigenous cultural heritage resources and traditional knowledge related to cultural sites and ceremonial and spiritual practices, as well as measures to ensure FPIC (Free, Prior and Informed Consent) over Indigenous cultural programming and revitalization efforts. Some partners recommended developing and/or reintroducing federal legislation to enable the protection and repatriation of Indigenous burials, human remains, funerary objects, sacred objects, Indigenous cultural artifacts, and objects of cultural patrimony. Distinctions-based Indigenous women's organizations called for national legislation akin to Bill C-391 ("An Act respecting a national strategy for the repatriation of Indigenous human remains and cultural property"), and measures to ensure the "rematriation" of cultural artifacts and human remains, including those of Métis Nation leader Madeleine Dumont.

Others called for amendments to the *Canada National Parks Act*, including to enable self-determination in managing Indigenous archeological and historical sites; to ensure it aligns with Declaration principles, including

FPIC (Free, Prior and Informed Consent) of affected Indigenous nations; and to enhance opportunities for Indigenous co-governance and co-management of parks.

Other legislative measures to protect Indigenous cultures included developing legislation that would protect Indigenous peoples' right to engage in cultural and religious practices and prohibit discrimination based on the exercise of these practices. Legislative measures to preserve and revitalize Indigenous languages included amending the *Indigenous Languages Act* to ensure consistency with the Declaration and legislating Indigenous language revitalization programs with financial assistance to ensure survival of Indigenous languages, including through digitization, and ensuring that the *Official Languages Act* and the *Indigenous Languages Act* are complementary.

Partners also advocated for the protection, maintenance and revitalization of Indigenous cultures, languages, and knowledge transfer through:

- Supporting Indigenous communities in planning, designing, constructing and operating Indigenous cultural spaces, heritage centres, cultural pavilions, and museums that:
    - provide a place to practice tradition, medicine, language and culture
    - return and preserve cultural artifacts and make them more accessible
    - revitalize cultural ceremonies
    - offer role modeling for cultural teachings, language, and ceremonial teachings
- Undertaking Indigenous language-based community needs assessments to ensure the restoration of Indigenous languages, connection to land practices, and transmission of identity and cultural

knowledge, including through supports for early-age Indigenous language development
- Increased support for Inuktitut-specific language policies and programs across Inuit Nunangat
- Increased support for Michif-specific language policies and programs and to negotiate a funding agreement with Métis Governments to plan, develop, and implement a Michif language revitalization strategy
- Access to land-based cultural practices and learning initiatives to advance community empowerment and healing
- Elder-Youth educational opportunities
- Support for Elders and traditional Knowledge Keepers to discuss their oral traditions and practices in their original language and transmit teachings to support ongoing implementation of the Declaration
- Cultural transmission through Elder readings and understandings of the Declaration in Indigenous languages
- Creation of mechanisms to assist Indigenous peoples in the repatriation of their sacred ceremonial belongings being held within and outside of Canada

Urban Indigenous partners emphasized the need to uphold cultural and linguistic rights in urban contexts, where access to land and expanding physical community spaces is challenging. These partners specifically recommended the recognition of Friendship Centres as spaces which make real the possibility of practicing one's culture and realizing one's Indigenous rights in an urban setting.

Some partners sought to protect Indigenous traditional knowledge, cultural heritage, intellectual property, and artists' cultural content by advocating for amendments to federal intellectual property legislation, including the *Copyright Act* and *Trademarks Act.* Related recommendations included calling for a review of all federal legislation pertaining to digital

technologies, digital infrastructure, and intellectual property rights to ensure consistency with the Declaration. Other partners called for measures to support Indigenous-generated data and Indigenous digital content creators in advancing self-determination, cultural connectivity and economic participation through Indigenous data sovereignty and OCAP (Ownership, Control, Access and Possession) over digital infrastructure. Indigenous rights holders and nations as well as urban Indigenous partners specifically noted the importance of ensuring data sovereignty and data governance capacity. Distinctions-based recommendations included legal protections for Métis women concerning intellectual property related to cultural knowledge and traditional medicines; and co-developing with First Nations reforms to Canada's intellectual property laws to consider and protect First Nations' intellectual property.

Education, information and media (Articles 14, 15, 16)

This theme includes measures for public, professional and Indigenous education about the Declaration, as well as Indigenous control of educational systems and institutions. Although there were numerous and varied recommendations under this theme, many Indigenous partners recommended that Canada undertake a mass education campaign about the Declaration and the Act. Partners conveyed that a broad-based, Canada-wide education strategy about the Declaration and the Act was required in order to ensure that:

- All Canadians are sensitized to the universal, individual and collective rights of Indigenous peoples, in order to advance harmonious and cooperative relations based on the principles of justice, democracy, respect for human rights, non-discrimination and good faith

- Professional sectors, including the public service; justice and policing; court workers and judiciary; child welfare; media; resource and conservation; health; education; and social service sectors, are educated on the Declaration and the Act, in conjunction with cultural sensitivity and anti-racism training
- Indigenous peoples understand their rights under the Declaration and can use the Declaration to defend and assert their rights

Mzinigan Mdaaswi-shi-niiwin / Article 14 (Anishnaabemowin)

▶ English version

Specific recommendations for professional and public education about the Declaration and the Act included:

- Developing a national strategy for mandatory and ongoing Indigenous-specific, anti-racism education and cultural safety training for the public service and professional sectors, with accountability standards for racism and discrimination within these institutions
- Establishing an Indigenous-led Education Advisory Council to review, revise, suggest and update educational resources for public sector officials
- Undertaking public sector and professional sector education on:
    - the history, rights and cultures of all Indigenous peoples in Canada, including those with disabilities
    - the impacts of colonization, genocide and cultural genocide, intergenerational trauma, and white privilege and bias
    - Indigenous laws and treaty principles
    - anti-Indigenous racism and discrimination and decolonization
    - the rights and needs of First Nations, Inuit and Métis women, girls and 2SLGBTQI+ (Two-Spirit, lesbian, gay, bisexual, transgender, queer, intersex and additional sexually and gender diverse) persons
    - Indigenous cultural awareness, sensitivity, humility, competency and safety
- Co-designing and co-developing a national public education campaign to raise awareness and increase knowledge about the Declaration and the Act, including through knowledge translation products, tools, and educational fora
- Undertaking educational efforts with municipalities to rename streets named after colonizers; remove statues and other memorials to colonizers; and increase funding for memorial installations for residential school gravesites.

Some Indigenous partners noted that, through their Indigenous-led consultations on the Declaration, there was significant lack of understanding or misunderstanding about the Declaration and the Act, including the purpose of the Act and the individual and collective rights of Indigenous peoples contained in the Declaration. Accordingly, some partners recommended measures to augment Indigenous peoples' understanding in this regard, including:

- Promoting Indigenous awareness and understanding of the Declaration through Indigenous language versions, plain language versions, audio versions in Indigenous languages; and Indigenous teaching methods
- Addressing technological and accessibility barriers to Indigenous education about the Declaration, the Act, and the Action Plan
- Developing awareness and education programs for urban Indigenous youth on the rights contained in the Declaration, and concerning systemic racism, discrimination against Indigenous peoples, and violence prevention/lateral violence
- Undertaking Indigenous education on specific human rights contained in the Declaration, with a focus on gender equality, in order to equip Indigenous women to use the Declaration as a tool in their bundles to navigate colonial systems
- Using the National Centre for Truth and Reconciliation as a hub for sharing information about the Declaration and distributing Declaration knowledge products produced by Indigenous organizations

In addition to Indigenous education about the Declaration and the Act, several partners focused on the education of Indigenous children, and the need to uphold Indigenous self-determination and self-governance over their children's education. A key recommendation of partners included addressing the legacy of Indian residential schools by committing financial

and technical assistance to support sustained implementation of the Truth and Reconciliation Commission's 94 Calls to Action. This recommendation included reporting on progress made in implementing the Calls to Action, in order to provide accountability and redress related to genocide and other forms of systemic repression and injustice, stemming from state involvement in Indigenous children's education. Other recommendations included:

- Financial and technical assistance to ensure Indigenous authority, control and responsibility for education systems and institutions, with accompanying federal education funding policy changes
- Establishing an Indigenous-led education reform committee to assist in transitioning education to Indigenous jurisdiction, with accountability measures
- Financial and technical assistance to support Indigenous children's linguistic and cultural education through Indigenous educational programming, culturally grounded curricula, land-based learning, and Indigenous language learning, with funding parity for Indigenous elementary, middle and high schools
- Undertaking a comprehensive review of the education system to ensure that the system aligns with the Declaration; is built in partnership with Indigenous nations; reflects Indigenous ways of knowing, being and doing; provides a meaningful role for Indigenous peoples in decision-making; and creates real change for Indigenous students and their communities
- Ensuring that all educational institutions accurately convey Indigenous history and have Indigenous representation among teaching faculty, through targeted recruitment in the education and academic sectors
- Ensuring that Indigenous rights, histories and realities are incorporated into primary, secondary and post-secondary education

curricula; and that Indigenous peoples are consulted about incorporating Indigenous-centric relationality education into curricula
- Investing in education pathways and allocating resources towards Indigenous-led post-secondary initiatives, including removing barriers to accessing the Post-Secondary Student Support Program (PSSSP), including by extending eligibility to all Indigenous peoples; ensuring sufficient funding for the PSSSP (Post-Secondary Student Support Program) to meet demand; and increasing transition supports, funding and loans, and return and retention supports for Indigenous post-secondary students
- Collaborating with provinces and territories on a nation-wide education curriculum that includes Indigenous histories, realities, colonization, anti-racism, and anti-oppression

Partners also conveyed several priorities and proposed legislative and policy measures relating to media and information, including:

- Exploring avenues to expand the term “Canadian content” in Canadian broadcasting policy, and establish a framework for monitoring, evaluation, and consultation with Indigenous peoples as a central focus of this expansion
- Mandating the Canadian Radio-television and Telecommunications Commission (CRTC) to provide annual reporting on the total hours of Indigenous-specific content, whether aired on radio and/or television throughout the broadcast year
- Amending the *Canadian Radio-television and Telecommunications Commission Act* to allow the right of Indigenous nations to establish their own radio and television platforms, recognizing them as essential services, and providing core funding
- Revising commercial radio policy to create a framework for centralizing implementation of OCAP (Ownership, Control, Access and Possession)

principles related to Indigenous digital content and art and create percentage requirements on Indigenous content to create greater systemic change across the commercial policy landscape

- Continuing to revise the CRTC (Canadian Radio-television and Telecommunications Commission)'s Native Broadcasting Policy to involve Indigenous youth in policy reform and support youth members of Indigenous communities to become involved in policy decision-making
- Establishing standards, in partnership with Indigenous peoples, that will encourage privately owned media to adequately reflect Indigenous cultural diversity, Indigenous governance and to promote anti-racism programming

Introduction

This Manual is an overview of the First Nations Child and Family Services Program (FNCFS) of Indian and Northern Affairs Canada (INAC) at the time of writing. It reflects the current authorities as outlined in Appendix B and the policy as outlined in Appendix A. The Manual outlines the current Terms and Conditions and FNCFS policy. It is also recognized that the program is in the process of evolving and that changes will be required and are desirable from time to time.

There were a number of recommended changes put forward in the First Nations Child and Family Services Joint National Policy Review of 2000 (NPR). Some of these have received Treasury Board or Departmental approval and are included in this document. The majority of recommendations, however, have not yet been implemented, but may be in future following further developmental work by the National Advisory Committee on First Nations Child and Family Services (NAC). As changes to the current policy and practices are approved, this Manual will be amended accordingly.

First Nations have indicated that, although the services to be provided under the operational formula are clearly outlined in the authorities, there may, in some circumstances, not be enough resources to provide these services. For example, when the formula was conceived in the early 1980s, computers were not used to the same extent as they are today. As well, there was less emphasis on prevention services than there is now. These changes have put increased pressure on Recipients with limited resources to adapt to current trends.

Further, in recognition of First Nations aspirations as expressed in Recommendation 1 of the NPR, the policies presented in this document are considered interim steps in the process of moving toward self-government. Some First Nations groups are already moving in this direction. It is an expression of their desire to regain control over their children and families and to move toward First Nation designed programming.

This Manual presents the program from a national perspective. It outlines the national authorities within which the program is required to operate. The Manual also explains the implications of non-compliance

with these authorities. It is not intended to cover everything. Rather, the Manual presents a framework within which the program must operate in INAC regions (hereafter region or regions).

Because the program is driven by provincial legislation and standards, regional variations exist . While this is a vital component of the program, federal authorities must also be respected.

It is expected that all regions will develop their own manuals and that these manuals should complement this national one. Because this manual focusses primarily on national authorities, it is anticipated that the regional manuals will focus more on the application of the program and the implications of provincial or territorial legislation and standards. The final regional product should provide a clear picture of FNCFS and how the program intends to meet both national INAC authorities and provincial legislation and standards.

Finally, while this manual is a blueprint on how INAC will administer the FNCFS program from a national perspective, it is also intended to be a teaching document for new staff at both INAC Headquarters and Regions. The combination of the national manual and the regional manuals should create a clear picture of INAC's role in FNCFS in Canada.

1 Backgrounder

1.1 History

1.1.1 Traditionally, assistance to Indian children and their families was provided informally, by band custom, within the network of the extended family. Children were maintained, educated and protected by many adults including grandparents, aunts and uncles, as well as by their natural parents. When circumstances required they be separated from their natural parents, children were taken in by relatives to live with them in their homes. These informal patterns of child raising gradually became inadequate as outside pressures began to affect First Nations communities. Children were often removed for long periods of time for educational purposes and families were separated, at least seasonally, when cash income became necessary to sustain the family.

1.1.2 The Joint Committees of the Senate and the House of Commons in 1946-1948 and again in 1959-1961 urged provinces and territories to increase their involvement in providing services to First Nations people. Some provincial and territorial governments at that time began to make preliminary arrangements to extend some child and family services into communities in order to fill the gaps resulting from disruptions to traditional patterns of community care. Other provinces adopted a policy of intervention only in matters of life and death. It was in this climate that INAC, in the mid 1950s, adopted a policy of extending some basic social services on reserve, although not in the area of child and family services.

1.1.3 In 1965, Cabinet authorized Canada's entry into an agreement with the Province of Ontario to enable social services to be extended to First Nations communities on an equal basis to what was provided for other provincial residents. Under the *Memorandum of Agreement Respecting Welfare Programs for Indians,* the Government of Ontario extends services under the *Child and Family Services Act* and INAC reimburses a portion of the costs to Ontario in accordance with the provisions of the Agreement.

1.1.4 Other provinces entered into bilateral agreements whereby INAC would reimburse them for the delivery of child and family services. This practice continued through the 1970s. In some provinces, INAC entered into informal arrangements with bands and tribal councils and

reimbursed caregivers for the placement of children. This practice was, however, without authority.

1.1.5 A child's death in Manitoba in the late 1970s led to a judicial inquiry by Judge Kimmelman. First Nations leadership continued to demand a return of jurisdiction and control to First Nations. This led to the first tripartite process involving the Province of Manitoba, the Manitoba Indian Brotherhood and INAC. Cabinet and Treasury Board authority was obtained. This resulted in the creation of the Manitoba First Nations agencies, managed and operated by First Nations, mandated by the Province of Manitoba and funded by INAC.

1.1.6 First Nations services began to expand into other provinces and territories, mostly in an unregulated manner. As a result, in 1986, a moratorium was placed on the expansion of child and family services agencies. This moratorium remained in place until 1990 when INAC received Cabinet and Treasury Board authority for creating a national First Nations Child and Family Services Program (FNCFS). The authorities received were reflected in the National Program Directive 20-1 Chapter 5. Under these authorities, FNCFS agencies operate and manage child and family services on reserve. Provinces and territories mandate and regulate agencies according to provincial or territorial legislation and standards. INAC provides funding on behalf of First Nations children ordinarily resident on reserve. From 1990 to 2003, FNCFS expanded from 34 agencies in selected regions to 102 agencies in all provinces of Canada. As of 2003, there were no agencies in the territories.

1.1.7 As a result of concerns expressed by First Nations agencies across Canada, that the current policy was out of date and needed to be reviewed, a National Policy Review (NPR) was started in 1999. The Review was a joint venture of INAC and the Assembly of First Nations. The Review was completed with the release of the final report in June 2000. The report provided recommendations advocating significant changes to the current policy and to how FNCFS is funded.

1.1.8 Independent from the NPR, a government-wide policy renewal process slowed progress on the NPR recommendations from 2000 to September 2003. New interim authorities were issued in September 2003. While the new authorities contain some of the NPR recommendations, such as increased flexibility in Maintenance funding, other recommendations require more development before being considered.

1.2 Legal Position

1.2.1 Section 92 of the *Constitution Act* states that provincial governments are responsible for welfare services, which include protection and care of children including children resident on reserve.

1.2.2 Section 91 of the *Constitution Act* empowers Canada to enact legislation in respect to Indians and Indian lands. To date, Canada has chosen not to exercise this discretionary power in respect to legislation governing the protection and care of Indian children.

1.2.3 Section 88 of *The Indian Act* states that laws of general application apply on reserve unless and to the extent that such laws conflict with the *Indian Act* and its treaties. Accordingly, consistent with Section 88, First Nation peoples on reserve fall under the child and family services legislation of the reference province or territory. These are laws of general application. To date, no conflict of laws have been identified.

The above represents INAC's position in law for the delivery of programs and services.

1.3 Program Objective and Principles

1.3.1 Primary responsibility for the care and nurturing of First Nations children rests with the family and community where the child lives.

1.3.2 The primary objective of the FNCFS program is to support culturally appropriate child and family services for Indian children and families resident on reserve or Ordinarily Resident On Reserve, in the best interest of the child, in accordance with the legislation and standards of the reference province.

1.3.3 In recognition of the Inherent Right Policy of 2000 and, as recommended in the final report of the National Policy Review on FNCFS of 2000, the FNCFS policy will be compatible with First Nations aspirations for self-government. The FNCFS policy, as outlined in this manual, reflects the current Treasury Board authorities for the FNCFS program. This policy is an interim step in the process of moving toward self-government.

1.3.4 FNCFS will be managed and operated by provincially mandated First Nations organizations (Recipients), which provide services to First Nations children and families Ordinarily Resident On Reserve. FNCFS

Recipients will manage the program in accordance with provincial or territorial legislation and standards. INAC will provide funding in accordance with its authorities.

1.3.5 The child and family services offered by FNCFS on reserve are to be culturally relevant and comparable, but not necessarily identical, to those offered by the reference province or territory to residents living off reserve in similar circumstances.

1.3.6 Protecting children from neglect and abuse is the main objective of child and family services. FNCFS also provide services that increase the ability and capacity of First Nations families to remain together and to support the needs of First Nations children in their parental homes and communities.

1.3.7 First Nation agencies and other Recipients will ensure that all persons Ordinarily Resident On Reserve and within their Catchment Area receive a full range of child and family services reasonably comparable to those provided off reserve by the reference province or territory. Funding will be provided in accordance with INAC authorities.

1.4 Current Authorities

Process

1.4.1 General policy authorities are obtained from Cabinet through a Memorandum to Cabinet (MC). The Memorandum requests general permission to begin or continue certain practices. It also outlines the broad terms and conditions under which the program will operate. If Cabinet approves the MC, a record of decision will be issued outlining what has been authorized. This then becomes the **policy authority**.

1.4.2 Once agreement has been secured from Cabinet on the general framework of the program, a proposal is submitted to Treasury Board, if required. This submission will be more specific. It will outline how the policy will be implemented in terms of enhanced new programming and the terms and conditions under which the money is to be spent. It will seek new money from Treasury Board to begin or continue programming as approved by Cabinet. If Treasury Board approves, new money will be provided to support the program. If Treasury Board does not approve, authority will remain for that aspect of the program

previously approved by Cabinet, but it may not be implemented. The letter of decision from Treasury Board, then, becomes the **program authority**.

Authorities

1.4.3 The authorities issued by Treasury Board in September 2003, subject to renewal by March 31, 2006, were to be managed within current levels of funding.

1.4.4 INAC is also authorized to reimburse a portion of the Government of Ontario's costs under Ontario's *Child and Family Services Act*, in accordance with the 1965 *Indian Welfare Agreement*. This authority takes precedence over INAC's FNCFS policy as outlined in the Directive and in this manual.

1.4.5 The current authorities obtained from Cabinet and from Treasury Board are reflected in the redrafted and revised Program Directive (see Appendix A). It must be pointed out, however, that it is not the Program Directive that forms the authority. The authorities are contained in the Terms and Conditions (see Appendix B). The Program Directive interprets the authorities and places them into a useable context. The Directive is to be used as a guide along with the current program manual. The Directive is INAC's policy position.

1.5 Roles and Responsibilities

1.5.1 The management of the FNCFS program depends on a clear understanding of roles and responsibilities. Without transparency among the parties (Headquarters, Regions, First Nation Recipients and a province or territory), it would be difficult to maintain the program and to ensure the safety and well-being of children. For this reason, a functional tripartite process is essential to resolve differences and to understand the positions of the other parties.

1.5.2 The role of Headquarters is:

- to provide, through the regions, funding for Recipients on behalf of children and families as authorized by the approved policy and program authorities;
- to lead in the development of FNCFS policy;

- to move forward proposals for change coming from regional representatives and First Nations practitioners;
- to provide oversight on program issues related to the FNCFS policy and to assist regions and First Nations in finding solutions to problems arising in the regions;
- to provide leadership in collecting data and ensure that reporting takes place in an orderly fashion;
- to interpret FNCFS policy and to assist regions in providing policy clarification to Recipients, a province or territory; and
- to provide amendments to the National Program Manual as required and to ensure that regional manuals are consistent with approved policy and program authorities.

1.5.3 The role of INAC Regions is:

- to interact with Recipients, Chiefs and Councils, Headquarters, the reference province or territory (or their legal delegates where they exist);
- to manage the program and funding on behalf of Canada and to ensure that authorities are followed;
- to provide oversight activities, which includes the reconciliation of Maintenance invoices in a timely manner and periodic on-site compliance reviews;
- to assure Headquarters that the program is operating according to authorities and Canada's financial management requirements;
- to be responsible for maintaining an interaction with the reference province or territory and Recipients through tripartite processes;
- to establish, in cooperation with Recipients, a process for dealing with disputes over issues relating to the operation of FNCFS; and
- to keep Headquarters informed about any issues that could potentially affect national policy and advise it regarding changes to provincial or territorial legislation and programs.

1.5.4 The role of Recipients is:

- to deliver the FNCFS program in accordance with provincial legislation and standards while adhering to the terms and conditions of their funding agreements;
- to report in a timely fashion on Maintenance expenses and to adhere to the terms and conditions of tripartite or dual bilateral agreements;
- to maintain records on their operations as required in their agreements and to involve Regions and the reference province or territory on issues as they arise;
- to involve the communities within their respective Catchment Areas so that services are provided as transparently as possible within provincial or territorial legislation and standards;
- to establish, in cooperation with the Region, a process for dealing with disputes over issues relating to the operation of FNCFS; and
- to participate and take a lead in tripartite discussions with INAC and the province or territory.

1.5.5 Child and Family Services falls within provincial jurisdiction. It is the role of the province or territory:

- to mandate Recipients in accordance with provincial or territorial legislation and standards;
- to regulate Recipients in their activities as they relate to the legislation and standards;
- to provide ongoing oversight to Recipients and to take action if the requirements are not being met;
- to participate in tripartite activities; that is, negotiations, tables, dispute resolution and consultations as well as regional tables; and
- to apply the legislation and standards for child and family services equally to all residents of the province or territory, on and off reserve.

2 Program Components

2.1 Development

2.1.1 Before beginning the start-up phase for a new agency (Recipient) or the separation of one or more First Nations from an existing agency (Recipient), there must be agreement by the affected First Nation(s), the affected Recipient, if relevant, the reference province or territory, region and Headquarters to proceed or take action. Band Council Resolutions (BCRs) will be required from the affected First Nations indicating that they intend to pursue creating a new Recipient or realigning First Nations with other Recipients. As well, the reference province or territory must indicate that they are willing to support the process of mandating or continuing to mandate the new First Nation entity. Once this has been accomplished, the parties may then proceed to the first step.

(Recipients with fewer than 801 children in their Catchment Area may be approved at the discretion of the Regional Director General and Headquarters if there are geographic or cultural reasons why they cannot belong to a larger agency. They must, however, be made aware that their funding will be adjusted according to child population (see Section 3.2.a) and that this may place them in a tenuous position. The reference province or territory must also be made aware of the implications of these lower numbers and must agree that they are willing to mandate and create the Recipient despite these considerations.)

2.1.2 Funding for this process will be available only once to each entity. If a First Nation, which is currently a member of an existing Recipient agency, decides to separate and create a new Recipient agency or if a First Nation wishes to leave one Recipient agency and join another, they would not be eligible for startup funding. On the other hand, if a First Nation, which has never belonged to a FNCFS Recipient, wishes to join an existing entity, they would be eligible for the Developmental funding (see the paragraph above).

2.1.3 Once the above steps have been taken and the status of the First Nation group has been agreed upon, the new entity would be eligible to receive funding in the form of a Flexible Transfer Payment for the **pre-planning phase**. This phase could include community consultation and studies to determine whether or not it is feasible for the First

Nations to create a FNCFS Recipient. It could also cover the cost of meeting with the province or territory and the region to discuss the process and steps involved in creating a FNCFS Recipient.

2.1.4 At this point, there should be a clear understanding on the part of the First Nation about the commitments it will be undertaking and the responsibilities it will be expected to fulfill.

2.1.5 When the pre-planning phase has been completed, the Recipient is eligible to receive funding in the form of a Flexible Transfer Payment to begin the **planning phase**. At this point, the region will require a written commitment on the part of the reference province or territory that they are prepared to mandate the new Recipient when discussions about the agreements are finished. Funding for this phase may be used to develop an agreement in conjunction with the province or territory and INAC. These agreements may be dual bilateral or tripartite (see Chapter 4), but must be in place before proceeding to the start-up phase (see Appendix A, Program Directive, for further details).

2.1.6 The **start-up phase** will be funded in the form of a Flexible Transfer Payment and may proceed once the pre-planning and planning phases have been completed. As outlined in APPENDIX A, the start up will include hiring staff, establishing offices, purchasing equipment and furniture and training staff and board members in their roles and responsibilities as a FNCFS Recipient.

2.1.7 The FNCFS Recipient will begin operating on the date specified by the reference province or territory in their mandating of authority documentation. The mandating documentation may be a provincial Order In Council or a letter confirming the provincial mandate to an agency or specified FNCFS worker(s) who are members in good standing of the FNCFS Recipient. **Without a mandate from the reference province or territory, INAC does not have authority to provide funding to a FNCFS Recipient.**

2.1.8 In the Ontario region, the development of new agencies is handled by the Province in consultation with the First Nation(s). The region requires the province to consult in advance with the region. The region would reimburse the Province on the basis of pre-determined costs.

2.2 Operations

2.2.1 The Operations allocation (see Chapter 3) is provided annually to Recipients in the form of a formula-driven Flexible Transfer Payment to deliver services. It covers all aspects of the agency's operations that are not covered under Maintenance or Development.

2.2.2 Components included in and covered under Operations are, but not limited to, the following (see Appendix B):

- salaries and benefits for all staff including protection and prevention staff, which includes salaries for homemakers and all other auxiliary staff;
- all Board of Directors expenses including board meetings, travel, expenses and training;
- all travel and expenses for staff, which includes staff persons accompanying a child to a home visit or an appointment;
- professional development services including staff training, workshops, conferences etc.;
- fee for service including foster home assessment, adoption home assessment, etc.;
- all legal services (including the care and protection of children), which includes legal services related to agency business as well as court costs related to apprehension and custody hearings;
- para-professional, family support and prevention services, which includes in-home services intended to maintain the family and keep children at home;
- recipient administration, including rent and utilities; however, there is no provision for capital expenses in the authorities;
- office expenses including computer hardware and software;
- annual audits and, from time to time, evaluations (except in years 3 and 6 when authorities allow INAC to provide a fixed allocation for evaluations);

- non-medical counseling services not covered by other funding sources, including casework, assessment and monitoring active cases; and

- adoption services where this is one of the services given in the mandate to the Recipient by the reference province or territory.

2.2.3 Although the authorities are clear on what is to be included in the Operations formula, First Nations have expressed a concern that because the formula was developed in the late 1980s, legislation, standards and practices have changed significantly. Although the following items are included under Operations, First Nations have stated that Recipients are under increasing pressure due to changes over time with respect to:

- *Information Technology*: In the late 1980s, use of computers was limited. Today, however, they are vital to operating social programs and services.

- *Prevention (Least Disruptive Measures)*: Recent trends in provincial and territorial legislation have placed a greater emphasis on prevention. Although prevention resources were included in the current formula, the level of funding may not provide enough resources to meet current trends.

- *Liability Insurance*: As with prevention, the Operations formula includes funding for insurance. However, since September 11, 2001 (9/11) insurance costs have increased dramatically.

- *Legal Costs*: Although legal costs are included in the Operations formula, they have become a larger issue than planned for when the formula was developed. A higher incidence of contested cases plus changes in provincial practice requiring cases to be presented by legal representatives rather than social workers has resulted in higher costs. Further, litigation on behalf of injured children can be very expensive, even when adequate liability insurance is carried.

It is anticipated that the review of the Operational formula will address these issues. At the present time, however, the current authorities must be applied.

2.3 Maintenance

2.3.1 Maintenance costs are those that are directly related to maintaining a child in Alternate Care out of the parental home. Costs are reimbursed to Recipients on the basis of actual expenses made in accordance with provincially established rates and as verified by monthly reconciliations conducted by regional offices or according to a FFOM agreement.

2.3.2 Children may come into Alternate Care through an apprehension, which must be sanctioned by the relevant provincial court; a voluntary placement agreement, which is a legal agreement between the Recipient and the custodial parent/guardian; or if sanctioned under provincial or territorial legislation, a private care arrangement between the custodial parent/guardian and a third party. If sanctioned and regulated by the province, these placements may be supported financially by INAC within provincial and territorial rates. In all cases, however, the placements must be licensed and/or regulated within the relevant legislation and standards. Please refer to the regional manual for province or territory-specific details.

2.3.3 In order to be eligible for reimbursement in accordance with provincial rates, foster homes, group homes and institutions, whether on or off reserve, must be licensed or regulated and monitored in accordance with provincial legislation and standards. **Letters of equivalency or letters of recommendation alone will not be accepted.**

2.3.4 Costs that may be billed to INAC under the Maintenance category, on behalf of Eligible Children in Alternate Care out of the parental home, are as follows:

- The provincially or territorially approved per diem rate in foster, group or institutional care for children placed out of the parental home under the FNCFS program. Standard provincial or territorial per diems normally cover food, clothing and shelter. Regional staff need to be aware of the provincial chart of accounts for all categories and know what is covered within the per diem rates.

- An activities allocation is usually included within the per diem, but, where this is not the case, recreational and other activity-related needs for children in care may be reimbursed according to provincial or territorial legislation, policy, practices and rates. Please refer to the regional manual for further details.

- In situations where other items are within INAC authorities and provincial and territorial legislation, but not included under the Chart of Accounts, they may be billed separately, provided they are properly documented.

- Non-medical specialized services to children with behavioural problems and specialized needs may also be covered provided the child has been diagnosed by a qualified professional as having a behavioural problem that is not caused by a medical condition (physical or mental). Examples of services are youth workers, parent aides and additional respite services.

- Psychological services for assessment and evaluation beyond that which is covered through the Health Canada Non-Insured Health Benefits (NIHB) program may also be provided in non-medical circumstances. Provincial standards will apply. This, however, does not include psychiatric services because they are insured services covered by the provinces and territories.

- Provincially or territorially approved purchases on behalf of children in Alternate Care not covered by other funding sources or other federal authorities. The authority for these charges would be provincial standards, although regional approval would be required in advance. An example of these would be school pictures, graduation costs, field trips from school not covered under the education program and counseling services beyond what is covered under the NIHB program.

- Provincial and territorial per diem rates for children in Alternate Care may be established to include professional services not covered through other sources of funding in accordance with provincial legislation and standards.

- Respite care to foster parents where not covered as part of the provincial or territorial per diem rate or not under the mandate of another federal authority. This is for social respite only. Medically oriented respite for children with complex medical problems are not eligible for reimbursement.

- Required non-medical travel for a child to parental visits, court appearances and other purposes not covered by other funding sources and as outlined in the legislation or policy of the reference province or territory. This does not include escorts who are agency staff persons because this is considered staff travel and is covered under Operations. If a foster parent is asked to be an escort in

these situations, these costs may be billed to INAC. Where the province or territory covers the cost of parental travel to visit a child in care, and where it is deemed to be in the best interest of the child to do so, payment is to be based on the actual cost of transportation or gas and should be the most economical or reasonable given the circumstances. Please refer to the regional manual for further details.

- For a child who is a permanent ward and reaches the age of majority as defined by the reference province or territory, a Recipient may continue to provide support beyond the age of majority provided the child is in the midst of an academic or other training program or is engaged in an age of majority plan. Such support may continue in accordance with the legislation and standards of the reference province or territory.

- When a Recipient is planning to return a child in Alternate Care to his or her custodial parents/guardians, the region may reimburse parent aide costs before the date the child is scheduled to return home in accordance with the legislation and standards of the reference province.

- Recipients who are managing the adoption program for permanent wards may continue foster care payments to the adoptive parents up to the date that the adoption becomes final. Payments must cease on that date. If the adoptive parents are on income assistance, the child will be included in their claim for assistance through the Income Assistance program. However, where an adopted child has a special need, support services may be continued in accordance with the legislation and standards of the reference province.

- Parents or guardians who are employed or who have income from sources other than Income Assistance will be expected to contribute to the support of children who have been taken into the care of a Recipient either as an apprehension or voluntary placement. Parental contributions will be in accordance with provincial legislation or regulations.

- Where it is established jointly by the Recipient and INAC that subsidized day care is not available from another federal, provincial or territorial funding source, the subsidy may be reimbursed in accordance with provincial or territorial legislation or standards.

- Expenses approved for special needs and items not included in the provincial Chart of Accounts may be made in accordance with the standards of the reference province or territory. They are to be approved on a case-by-case basis following the policy of the reference province or territory.

2.3.5 The following are not eligible for reimbursement:

- Insured health services, which are under the auspices of the provinces or territories.
- Where the mandate falls within the jurisdiction of another federal department or the provinces or territories, INAC will not be financially responsible. This would include costs related to medical requirements (Health Canada - see Section 2.5) and Young Offenders (Justice Canada and the provinces and territories).
- Costs related to children in the care of a Recipient, but who are incarcerated as a Young Offender.
- Where funding is being provided by another INAC program such as Education.
- Medical devices, or medically required renovations to houses, automobiles or other vehicles.

2.4 Children's Special Allowance

Children's Special Allowance is paid to a Recipient on behalf of a child where the child is in Alternate Care out of the parental home. Practices are different across Canada and in the different regions on how this is handled. Human Resources and Skills Development Canada (HRSDC) and Canada Revenue Agency (CRA) are currently reviewing this situation. A ruling will be communicated to INAC and Recipients in the near future. Adjustments may have to be made in the manner these payments are administered.

2.5 Non-insured Health Benefits (NIHB)

The Health Canada Non-insured Health Benefits (NIHB) program covers all Indians registered under the *Indian Act*, on and off reserve, for specified benefits not covered under provincially or territorially

insured health services. These benefits include dental, glasses, medical transportation, medical supplies and equipment, drugs and crisis intervention counselling. For further details on the NIHB program and coverage, please refer to Health Canada's Web page at http://www.hc-sc.gc.ca/fnihb-dgspni/fnihb/nihb. The NIHB program generally requires that all referrals be made by a medical practitioner, although there may be exceptions in some regions. Health Canada will generally not accept billings directly from Recipients. The correct procedure is for Recipients to refer the child to a medical practitioner who will then deal directly with the NIHB program. Under no circumstances will billings or referrals be accepted from Recipients directly. In situations where there are special circumstances and a proposal is required, these will have to be requested by a medical practitioner as well, not by the Recipient or a caseworker employed by the Recipient. In many cases, plans are rejected not because they are ineligible, but because the proper procedures were not followed.

2.6 Flexible Funding Option for Maintenance

2.6.1 Recipients may apply to enter a Flexible Funding Option provided they can meet the entry requirements as outlined in Annex E of Appendix A. Only those Recipients with a good management history will be eligible. Terms and conditions for entry and ongoing management are outlined in Annex E of Appendix A.

2.6.2 Flexible Funding Option for Maintenance (FFOM) provides increased flexibility in allocating Maintenance funding. While a standard Maintenance agreement is allocated in the form of Contribution funding (reimbursement of actual costs) for those children in Alternate Care out of the parental home, the FFOM is paid as a Flexible Transfer Payment. This allows the agency to reallocate savings in the Maintenance category into preventative services, thereby reducing the need to bring children into care.

2.6.3 Annex E of Appendix A outlines in detail the management regime to be followed in the initiation and ongoing management of FFOMs. It also outlines the procedures for annual adjustments and for renewal of the arrangements at the end of five years.

2.6.4 Agencies under the pilot programs on flexible funding must come under the new policy by April 1, 2005. To enter into an FFOM, the pilot agencies must follow the renewal process as outlined in Annex E of Appendix A.

3 Costing of Components

Note: In case of any discrepancy between this Chapter and the Program Directive 20-1, Chapter 5, Program Directive 20-1, Chapter 5 is to be used.

3.1 Development

3.1.1 PHASE 1: *Pre-planning*

- Funded at the rate of $11,101.06 per Recipient.
- An additional $1,665.16 per member band.

The funds are to be used for the purposes outlined in Section 2.1.3.

3.1.2 PHASE 2: *Planning*

- Funded at the rate of $88,808.48 per Recipient.

Funds are to be used in the manner described in Section 2.1.5.

3.1.3 PHASE 3: *Start-up*

A fixed amount per Recipient will be provided according to the following on reserve 0 - 18 child population reported annually by INAC's Lands Revenues and Trusts:

- Child Pop of 801 + = $185,387.70 per Recipient;
- Child Pop of 501 - 800 = $92,693.85 per Recipient;
- Child Pop of 251 - 500 = $46,346.92 per Recipient; and
- Child Pop of 0 - 250 = $0.

Plus each Recipient will receive 25% of the first year of Operational funding so that they may begin gradually implementing the program.

Funds are to be used in the manner described in Section 2.1.6. Calculation of the start-up amount will be based on the methodology outlined in Section 3.2.

3.2 Operations

The Operational formula is based on the on reserve population of children from 0 - 18 as reported annually by INAC's Lands Revenues and Trusts. These figures come from the statistics reported annually by bands from across Canada. The calculation of the Operational formula is done annually by Headquarters Finance Branch based on the December 31 population data of the year immediately proceeding the year being funded. (e.g. December 31, 2003 data would be used for fiscal 2004-2005 calculations.)

3.2.1 **Calculation of Formula**

An administrative allocation will be provided according to the following child populations:

- Child Pop of 801 + = $143,158.84 per Recipient;
- Child Pop of 501 - 800 = $71,579.43 per Recipient;
- Child Pop of 251 - 500 = $35,789.10 per Recipient; and
- Child Pop of 0 - 250 = $0.

3.2.2 In addition, Recipients will also receive:

- a fixed allocation of $10,713.59 for each member band in its Catchment Area; and
- an allocation of $726.91 for each child 0 - 18, as reflected in the Membership report each year.

3.2.3 An adjustment factor for remoteness is determined based on the same calculation for remoteness that is used for band support funding. The remoteness factor for each member band is averaged and a remoteness factor is arrived at for the Recipient. This is then used to adjust the funding as follows:

- the adjustment factor for remoteness is multiplied by $9,235.23 for each Recipient;
- the remoteness factor is multiplied by $8,865.90 times the number of bands within the Catchment Area; and

- the child population is multiplied by $73.65 times the remoteness factor.

3.2.4 The annual Operational formula, then, is the total made up of the administrative allocation, plus the allocation per member band, plus the allocation per child, plus the adjustments for remoteness outlined in 3.2.3. The Operational allocation covers those expenses outlined in Section 2.2.2.

3.3 Maintenance

3.3.1 There is no formula for paying Maintenance. Maintenance is paid in the form of a Contribution, which for FNCFS means a reimbursement of allowable expenses on a dollar-for-dollar basis. The items, which are permissible expenses under Maintenance, are as outlined in Section 2.3.4. Rates to be paid are those currently authorized by the reference province or territory in their legislation and standards and as reflected in their Chart of Accounts up to the maximum allowed in the Terms and Conditions (Appendix B) which in 2003 was $845.00 per child per day.

3.3.2 Maintenance expenses are to be reported to the regional offices on a monthly basis. Regions, in turn, are expected to conduct a reconciliation of these invoices to ensure that expenses comply with provincial rates and are permissible under current authorities. The reconciliation process will be discussed in greater detail in Chapter 6.

3.3.3 Maintenance is adjustable depending on provincial or territorial rates. If provincial or territorial rates for foster homes, group home and institutions increase, the rates paid by INAC will also be adjusted effective on the date set by the province or territory. Alternately, if provincial or territorial rates decrease, rates will decrease effective on the date set by the by the province or territory.

3.3.4 Expenses over and above the base rate set by the province or territory may be paid provided:

- they fall within the categories outlined in Section 2.3.4.;
- they are permissible under the provincial legislation and standards;
- are within the financial range acceptable to the reference province or territory; and

- are within INAC authorities as set out in Appendix B, SUMMARY OF PREVENTION AND PROTECTION SERVICES — CONTRIBUTION AUTHORITY, otherwise referred to as the Treasury Board approved Terms and Conditions.

3.4 Flexible Funding Option for Maintenance

3.4.1 Appendix A to this document presents the FNCFS Program Directive. Annex E of Appendix A outlines the methodology used to assess the readiness of Recipients to opt for the Flexible Funding Option for Maintenance (FFOM).

3.4.2 The methodology for determining the initial allocations for Recipients entering an FFOM is contained in Annex E of Appendix A, Section 6. It specifies that a compliance review must be done by the Recipient and the region. From this, a projection of year-end requirements will be determined. The allocation for year one will be arrived at by taking the projected year-end requirement and adjusting by the historical growth or reductions over the past three fiscal years. For greater clarity, the base year upon which the compliance review was conducted, is the final year of the three years upon which the calculation will be made. For further detail, refer to the document.

3.4.3 FFOMs will be reviewed annually by the Recipient and the region to determine that the objectives outlined in the initial proposal are being met. When a Recipient has been in an FFOM for five years, a renewal will be required. The renewal process is outlined in Annex E of Appendix A, Section 9. Recipients who have been in Flexible Funding pilot programs will comply with the Policy Directive as contained in Annex E of Appendix A. Recipients who do not comply with the Directive will return to Contribution funding.

4 Agreements

4.1 Requirement for Agreements

4.1 Current authorities require that, before entering into a funding arrangement with a Recipient, an agreement is in place between the province or territory and the Recipient that meets the requirements of INAC's national FNCFS policy. INAC policy requires that a tripartite agreement or a dual bilateral agreement must be in place. Although the preferred option is tripartite, for reasons of transparency and clarity regarding roles and responsibilities, dual bilateral agreements are also an option.

4.2 Tripartite Agreements

4.3.1 Tripartite agreements are to be developed between INAC, the Recipient and the reference province or territory. These agreements will not specify levels of funding, but will outline roles and responsibilities of the parties; items for which INAC is responsible both financially and programmatically; matters for which the reference province or territory is responsible both financially and programmatically; and areas for which the agency accepts responsibility.

4.2.2 Tripartite agreements will also specify the conditions under which funding will be provided by INAC and the province or territory and, wherever possible, the limits on the items that may be funded. Agreements may only be entered into when the reference province or territory has provided evidence that delegation has taken place in accordance with the legislation or standards of the reference province or territory. Agreements must not commit to programs and services that are beyond INAC's authorities to fund or in the manor in which INAC is authorized to fund them. They will demonstrate that professional liability insurance is in place in the amount required by the reference province or territory in its legislation or standards or by the Region in its procedures.

4.2.3 Circumstances may vary from province and territory to province and territory due to variation in provincial or territorial legislation and standards. However, the fundamental INAC authorities, as reflected in the revised Program Directive and the Treasury Board approved Terms and Conditions, must be followed.

4.3 Dual Bilateral Agreements

4.3.1 **Dual bilateral** agreements require that an agreement be in place between the reference province or territory and the Recipient. These agreements will specify the roles and responsibilities for the two parties, the areas for which the province or territory is financially and programmatically responsible and for which the Recipient is responsible. The terms and conditions of the mandate from the province or territory to the Recipient will also be clearly stated. A copy of the bilateral agreement and the mandating documents will be provided to the regional office.

4.3.2 Where dual bilateral is the agreement of choice, it is desirable, but not essential, that a bilateral agreement exist between INAC and the reference province or territory. This agreement should clearly spell out the roles and responsibilities of the reference province or territory and of INAC in the operations of the Recipient. It should also outline the areas within which each is financially responsible. Without a bilateral agreement between the reference province or territory and INAC, it is difficult to maintain transparency and a clear understanding of the roles and responsibilities of the parities.

4.4 Comprehensive Funding Arrangements (CFA)

4.4.1 The Treasury Board Policy on Transfer Payments (see Section 5.7 of this manual) requires that a funding agreement be in place before funding may be moved to a Recipient. In FNCFS, money may be moved from INAC to a Recipient using the Comprehensive Funding Arrangement (CFA). The CFA is a program-budgeted funding agreement that INAC enters into with Recipients for a one-year period. It contains components funded by means of a Contribution, which is a reimbursement of eligible expenses and Flexible Transfer Payments, which are formula funded. Surpluses from the Flexible Transfer Payment may be retained by the Recipient provided the terms and conditions of the CFA have been fulfilled. The FNCFS program expects that all surplus money will be used for FNCFS. It is also expected that Recipients will absorb any deficits. It is under the CFA that the terms and conditions of funding and the required deliverables are to be clearly spelled out.

4.4.2 Where a bilateral agreement exists between the reference province or territory and the Recipient, INAC may enter a CFA with an Recipient as the second part of the dual bilateral arrangement. Because there is no other bilateral agreement in place, roles and responsibilities as well as the funding detail *must* be clearly spelled out. Further, the issue of liability must also be dealt with in a similar manner to that outlined in the section on tripartite agreements.

4.4.3 Where the CFA is being used as a bilateral agreement between INAC and the Recipient, INAC must possess a current copy of the bilateral agreement between the province or territory and the Recipient as a condition of funding.

4.4.4 Where tripartite agreements are in place between INAC, the Recipient and the reference province or territory, a CFA will still be needed because this is the only way money may be moved to a Recipient.

4.4.5 The CFA for FNCFS is divided into two sections. Although all funding for FNCFS is considered Contributions, the Operational portion of funding is paid in the form of a Flexible Transfer Payment (FTP). This allows agencies maximum flexibility within the Operational allocation and allows the Recipient to retain surpluses from the Operational allocation provided terms and conditions have been fulfilled.

4.4.6 The Maintenance portion of funding is in the form of a Contribution. This reimburses the Recipient for eligible costs related to children in Alternate Care out of the parental home for expenses outlined in Section 2.3.4. Recently acquired authority, however, permits INAC to enter agreements with selected Recipients whereby the Maintenance allocation may be allocated in the form of an FTP. The methodology for this authority is outlined in Annex E of Appendix A.

4.4.7 A CFA is a legal document. Therefore, payment against a CFA may not be made until both parties have signed the CFA. Retroactive payments may be made at the discretion of the region when delays in signing are as a result of departmental delays.

4.5 Third-party Delivery

4.5.1 In the majority of cases, the CFA is directly between INAC and the Recipient, which is mandated to provide service. In cases where the Recipient is a chief and council or other organization (Alternate Recipient) and where this Alternate Recipient transfers program

funding to a third party (a mandated service delivery agent), the Alternate Recipient still retains primary responsibility for spending federal funds and performing the obligations under the CFA.

4.5.2 An agreement in writing between the Alternate Recipient and the mandated agency will have to be established. This agreement will set out the responsibilities of the parties and indicate the reporting requirements (see Sub-sections 2.1.1 to 2.1.4 in part C of the CFA to ensure consistency). The Alternate Recipient must ensure that the terms and conditions of the agreement and the INAC policy are met, that the third-party agency complies with provincial legislation and standards and that program and financial reporting is provided in a timely fashion as outlined in the CFA. In cases where Alternate Recipients transfer program responsibilities to a mandated agency, the Alternate Recipient must ensure that 100% of INAC funds provided on behalf of the mandated agency will be transferred to the agency.

4.6 Provincial and Territorial Agreements

4.6.1 In the majority of regions, First Nations coverage is not yet 100%. Where a FNCFS Recipient does not exist, provinces and territories are responsible for providing service to the entire on-reserve population. INAC has agreed to reimburse those items that have been agreed to in a federal-provincial-territorial agreement.

4.6.2 Regardless of any service agreements that may exist between INAC and the reference province or territory, funding arrangements are required to transfer funding to a Recipient. INAC is required to enter into funding arrangements on an annual basis in Ontario, where services are governed by the 1965 *Indian Welfare Agreement* between the Government of Canada and the Province of Ontario and Alberta, where services are governed by the 1991 *Arrangement for the Funding and Administration of Social Services* between the Government of Canada and the Province of Alberta.

4.6.3 The INAC-provincial-territorial funding arrangements will follow provincial or territorial legislation and standards, but also must be within federal authorities provided under the *Financial Administration Act*, the Treasury Board Transfer Payment Policy and the authorities provided to INAC by Cabinet and Treasury Board.

5 Mandatory Financial Requirements

5.1 Introduction

5.1 In addition to the authorities received from Cabinet and Treasury Board, the operation of the FNCFS program is governed by the terms of the *Financial Administration Act* (FAA) and the Transfer Payment Policy (TPP) of Treasury Board. For the purpose of this manual, however, we will deal only with a summary of those aspects of the FAA and the TPP that have a direct impact on managing the FNCFS program. We will also review the requirements under Chapter 5, Section 16 of INAC's Financial Management Manual from Corporate Services to ensure that all financial requirements have been considered. An understanding of these impacts will help users appreciate the need for reporting and compliance mechanisms, which can satisfy these requirements.

5.2 General Overview of Funding Arrangements (Not Specific to FNCFS)

5.2.1 INAC has developed two types of generic funding arrangements to use with First Nations that have not entered into their own self-government agreements: Comprehensive Funding Arrangements (CFA) and Canada/First Nation Funding Agreements (CFNFA). *Any change to the text of the agreements must be approved by Transfer Payments Directorate, Finance Branch, Headquarters.*

5.2.2 All INAC programs are covered together under a single funding arrangement with a First Nation. Individual First Nations will have either one or the other type of arrangement in place.

5.2.3 **Comprehensive Funding Arrangement (CFA)** - This is a program-budgeted funding arrangement that INAC enters into with First Nations for one year. CFAs contain programs funded by:

- **Contribution** is a conditional transfer payment to an individual or organization for a specified purpose pursuant to a Contribution Agreement that is subject to being accounted for and audited. Contributions would also include Alternate Funding Arrangements and Flexible Transfer Payments, which represent types of

Contributions that were developed for INAC to meet its unique program objectives.

- **Flexible Transfer Payments (FTP)** are based on a formula (surpluses can be kept as long as the terms and conditions have been met).

- **Grants** are a transfer payment made to an individual or organization, which is not subject to being accounted for or audited, but for which eligibility and entitlement may be verified or for which the recipient may need to meet pre-conditions. The FNCFS program does not have a Grant authority.

5.2.4 **Canada/First Nation Funding Agreements (CFNFA)** is a block-funded agreement that INAC enters into with a First Nation or Tribal Council for up to five years. It can include funding from other federal departments. This type of agreement is also called an *Alternative Funding Arrangement* or *Financial Transfer Agreement.* The CFNFA agreement contains a common set of funding terms and conditions in the main body of the agreement. The terms and conditions specific to each federal department are attached as schedules to the CFNFA.

5.2.5 The CFNFA is more flexible than the CFA. It provides First Nations with the ability to redesign programs and apply funds according to community needs, as long as certain specified minimum program requirements are met to ensure that a guaranteed level of service is provided.

5.2.6 The CFNFA encourages creative and innovative ways of providing programming because First Nations can use any money saved on other priorities within the community.

5.2.7 It should be noted that FNCFS funding cannot be included in the multi year block section of a CFNFA, although general principles and agreements relating to FNCFS may be included. FNCFS funding must be renewed on an annual basis.

5.3 Funding Authority

5.3.1 A funding *arrangement* is the contractual agreement signed between INAC and the Recipient. A funding authority is the *rules* established by Treasury Board that INAC must follow when funding a program or service.

Eligible Recipients

5.3.2 INAC arranges for the administration of funding for FNCFS services with the chiefs and councils of Indian bands recognized by the Minister of Indian and Northern Affairs Canada. Various funding options are available to chiefs and councils. Bands in the Northwest Territories and Nunavut are not eligible FNCFS program Recipients because there are provisions for these services in the territorial formula financing agreements.

5.3.3 **Third-party Agreements** - In some cases, where services are not administered directly by a band's chief or council, INAC may enter into agreements for service delivery or cost-sharing with other government agencies, private businesses or non-governmental organizations.

5.3.4 **Self-governing First Nations** - First Nations that have included child and family services in their self-government agreements are not eligible recipients for the purpose of this manual.

Flexible Transfer Payment

5.3.5 A Flexible Transfer Payment is based on a fixed amount rather than the reimbursement of eligible expenses. Recipients are expected to manage their agency or program within the fixed amount. As long as Recipients meet the minimum program requirements, Recipients can keep any surpluses. Deficits must be absorbed if there are cost overruns. FNCFS surpluses must be used within the FNCFS program.

5.3.6 The Recipient is accountable for providing the products or services specified in the funding arrangement. Program-specific reports are required during the year and at year-end.

5.4 Allocations to Regions

5.4.1 Program funds are allocated to the regions based on the national methodology. Each region is responsible for managing this budget and prioritizing how funds are allocated. Headquarters maintains a small reserve to fund provincial rate increases, and planned devolution.

Funding Allocations

5.4.2 **Maximum Amounts** - The maximum amounts payable under a CFA are set out in Appendix B, SUMMARY OF PREVENTION AND PROTECTION SERVICES - CONTRIBUTION AUTHORITY, otherwise referred to as the Treasury Board approved Terms and Conditions.

5.4.3 **Due Diligence** - INAC must have procedures and resources in place for ensuring due diligence in:

- approving funding amounts
- verifying eligibility and entitlement
- managing and administering the program.

5.4.4 **Approval** - Authority to sign and amend funding agreements is delegated to directors responsible for these programs.

5.4.5 **Basis and Timing of Payments** - Payments will be made according to Appendix B, SUMMARY OF PREVENTION AND PROTECTION SERVICES - CONTRIBUTION AUTHORITY, otherwise referred to as the Treasury Board approved Terms and Conditions.

5.5 Regional Exceptions

5.5.1 The following areas have unique funding arrangements. Further information will be available in the regional manuals:

5.5.2 **Ontario** - In Ontario, INAC provides funding under the 1965 *Indian Welfare Agreement.* For FNCFS, the Province of Ontario administers the CFS program and determines agency budgets. INAC reimburses the Province based upon the provisions of the 1965 *Indian Welfare Agreement.* Any amendment of the agreement requires INAC to obtain an Order in Council authorizing the Minister of Indian Affairs and Northern Development to sign the amendment on behalf of Canada. INAC may be required to submit a Treasury Board Submission to obtain the Order in Council.

In 2003, the maximum amount of funding for a federal-provincial cost-sharing arrangement to provide services to First Nations in Ontario is $240 million. Ontario invoices INAC for the provincial share following the agreement's provisions. Ontario must provide a cash flow forecast for the coming fiscal year. Once the estimated budget is approved,

INAC pays a one-month cash advance to cover immediate requirements at the beginning of the fiscal year, with monthly installments thereafter. Each advance includes a 10% holdback, which accumulates and is paid out after the annual provincial audit of the program is completed.

5.5.3 **Alberta** - In Alberta, under the 1991 *Arrangement for the Funding and Administration of Social Services*, INAC reimburses the Province for social services that Alberta delivers to First Nations individuals Ordinarily Resident on Reserve. Alberta's Deputy Minister is responsible for signing any amendments to the arrangement.

Alberta must provide a budget of projected expenses before the start of the fiscal year. Payments are made to the Province monthly, based on invoices submitted to INAC and in accordance with the funding provisions in the agreement.

5.5.4 **Yukon** - Yukon and INAC have entered into an agreement over funding of Status and non-Status Indians. INAC funds Status Indians and the Yukon funds non-Status Indians. Also, all residents in the Yukon are considered to be Ordinarily Resident on Reserve.

5.6 The *Financial Administration Act* (FAA)

For the purpose of this manual, the focus will be on Sections 32, 33 and 34 of the *Financial Administration Act* (FAA) because these have the most direct impact on the operation of FNCFS and other social programs. They reinforce the necessity of preforming adequate compliance in a timely fashion.

5.6.1 **Section 32 of the FAA** requires that no contract or arrangement requiring a payment shall be entered into unless it is certified that there is an appropriation from Parliament to which the payment may be charged. Further, that there is a enough unencumbered balance available to cover the expense. A Responsibility Centre Manager (RCM) is designated and has the responsibility to ensure that these conditions are met and that an Approved Authority exists for the activity before a commitment is made to fund a program or service. Once the RCM has signed under Section 32, he or she may be held accountable in the event that enough funds are not available and/or that an authority does not exist.

5.6.2 **Section 34 of the FAA** requires that an expense is not authorized until it has been verification that goods and services have been received. An RCM will be required to sign as confirmation that, in fact, the terms of the agreements have been met and that verification has been done on the reported activities. For FNCFS, this requires that Maintenance invoices, which are reimbursable as a Contribution, have been reconciled and that the expenses being billed are in fact for an eligible child, within Approved Authorities and in line with provincial or territorial rates. For Operations, reports must be received semi-annually and be in good order. When the RCM places his or her signature on the document, he or she is certifying that, in fact, proper verification has been done and that goods and services have been received in accordance with the terms of the funding arrangement.

5.6.3 **Sections 32 and 34**. RCMs may be the same Director or they may be different depending on the organizational structure of the region.

5.6.4 **Section 33** provides for the authorization of payment to the client or client group. The Financial Officer will receive the requisition signed by the RCM(s) under Section 32 and Section 34 verifying that the money is available, the matter is within Approved Authorities and that goods and services have been received. The Financial Officer will then sign the requisition approving the release of funds and send it for payment.

5.6.5 The implications that emerge, particularly from Section 34, must be seriously considered. The only way the requirements of Section 34 can be met for FNCFS Maintenance is if regular compliance is done on a month-to-month basis. This is the only way that receipt of goods and services (reimbursement of expenses that are within INAC authorities) can be verified. Reimbursement simply on the basis of having received an invoice is contrary to Section 34 and could put the RCM, who signs under Section 34, at risk of breaching the FAA.

5.7 Treasury Board Policy on Transfer Payments (PTP)

For the purpose of this manual, the focus of this section will be on Section 7.6 of the Policy on Transfer Payments (PTP), "Cash Management Policy: Installments of Grants and Advance Payments of Contributions" and the Policy on Transfer Payments, Appendix B ii, "Advance payments of contributions"). These are the most relevant sections because they outline the policy on advance payments for Contributions as practised in FNCFS.

5.7.1 CFAs, which include Contributions, are based on Treasury Board-approved terms and conditions for the program and reflect the principle that transfer payment assistance is provided for projects only at the minimum level to help reach the stated program objectives and expected results.

5.7.2 For FNCFS, Contributions are to be paid as a reimbursement of eligible costs incurred as in Maintenance or as an FTP for Operations and Developmental funding. However, where it is essential to the achievement of program objectives and specifically provided for in the agreement, advance payments of the government's share of allowable expenses may be made.

5.7.3 Under the PTP, departments must base any provision for advance payments of a Contribution on sensible cash management principles; that is the amount of each advance should be limited to the immediate cash requirements based on a monthly cash flow forecast from the Recipient that takes into account any outstanding advances.

5.7.4 In order to reduce the risk of over payments, a portion of a Contribution should only be paid following a satisfactory accounting for the Contribution by the Recipient. This would require that the department verify that the expenses were within authorities and the agreements.

5.7.5 Appendix B of the PTP places limits on the amount of funds that may be advanced under Contributions. Section 7.6.3 of the PTP requires departments to reduce the risk of overpayments by withholding a portion of the Contribution until the Recipient has done the final accounting of the Contribution.

5.7.6 INAC has received an exception from Treasury Board for the holdback provisions of Sections 7.6.3 and 7.6.4 of the PTP for the FNCFS program.

5.7.7 These exceptions were granted by Treasury Board on the understanding that Contribution funding would be based on information that had been verified to be within authorities; on behalf of Eligible Children and families; and for eligible expenses. Failure to meet these pre-conditions could place the exception in jeopardy. Should the exception be lost, it would force regions to implement holdbacks on all Contribution funding (including Flexible Transfer Payments). This could result in FNCFS agencies incurring interest charges to cover the expenses represented by the amount of the holdback. This could place some Recipients in a tenuous position because it would restrict their cash flow.

5.8 Corporate Services Financial Management Manual (FMM)

5.8.1 FMM Volume 3, Financial Policies and Procedures Manual, Transfer Payments Chapter 5, Section 16, "Funding Agreements - Management Control Framework for the Receipt of Reporting Requirements" outlines how INAC moves money is to Recipients. This applies to all INAC programs and services including FNCFS. The requirements under the FMM are outlined in the following sections.

5.8.2 For Maintenance, which is funded as a Contribution, a budget is developed at the beginning of a fiscal year based on verified expenses from the previous fiscal year and anticipated expenses for the new fiscal year.

5.8.3 Maintenance funding would then be advanced on a monthly basis taking into consideration the level of expenses claimed in the reports received from the Recipients. Once reports have been verified, in accordance with the FMM, adjustments would be made to the subsequent month's advance to bring the total amount advanced in line with the year to date actual eligible expenses.

5.8.4 For Maintenance, it is a requirement of the FMM that the Recipient submit monthly invoices within 15 calendar days of month end. The region is then required to conduct an initial review of the invoice within 15 calendar days of receiving the invoice from the Recipient.

5.8.5 A final reconciliation is required within 30 calendar days of receiving the invoice. If received on time, this allows a total of 45 calendar days as the period of time within which a final reconciliation of Maintenance invoices will be completed.

5.8.6 For Operations, which is funded as a Flexible Transfer Payment, the cash flow does not require monthly verification because it is funded according to a formula (see Section 3.2). The Recipient is required to provide reports twice per year, effective September 30 and March 31 as outlined in Chapter 6, Section 6.2. These reports should clearly indicate that the terms and conditions of the agreement have been met and that the Recipient continues to provide the service for which it is mandated.

5.9 Implications for Social Services Including FNCFS

5.9.1 The Treasury Board PTP stipulates that in order to process payments, the department must have procedures in place to meet the requirements of Section 34 of the FAA. More specifically, regions must verify that goods and services have been received and that the terms and conditions of a funding agreement have been met before processing a payment.

5.9.2 Programs, including FNCFS, may advance more than one month's funding if it is felt that it is required by a Recipient for purposes related to ongoing programming. This is an exception, however. The failure to provide adequate compliance could place this exception in jeopardy.

5.9.3 The FMM requires that final reconciliation of Maintenance invoices must be done within 30 calendar days of receiving the month-end invoices. If received on time, this means a total of 45 calendar days from month end (see Section 5.6.e). Any required adjustments arising from the reconciliation of invoices from month one must be made on the month three payment. Failure to meet these time frames are a breach of the FMM and cannot meet the requirements of the Policy on Transfer Payments.

6 Reporting and Compliance

6.1 Introduction

As indicated in previous chapters, reporting and compliance is a major component of effective program management. Without measures taken to demonstrate that the terms and conditions of agreements have been met and that INAC is paying for services that are within its authorities, it would be difficult to present a case for ongoing funding. The requirements outlined in this manual, are the minimum requirements. Regions may have other conditions that are regionally specific and essential to the successful operation of the program.

6.1.1 FNCFS Recipients must submit annual financial statements as set out in Chapter 5.17 of the FMM. These statements must be submitted within 120 calendar days of the end of the fiscal year. These financial statements must be conducted by an independent auditor.

6.2 Operations

As indicated in Chapters 2 and 3, the Operations portion of INAC's FNCFS funding is provided in the form of a Flexible Transfer Payment, which allows the Recipient to retain surpluses provided that the terms and conditions of their agreements have been met. It is also expected that Recipients will absorb any deficits.

6.2.1 **Protection Services:** The Recipient shall provide a report on September 30 and March 31, which shall be submitted to a regional office by the 15th day of the following month of each fiscal year. **The report, which will follow the Program Directive, shall contain the information as outlined in the First Nations Reporting Guide.**

6.2.2 It has been suggested that the information requested in the Reporting Guide is outdated and needs to be revised. One of the tasks that may be undertaken by the National Advisory Committee on First Nations Child and Family Services is to recommend revisions to the Directive that would make the information gathered more relevant to FNCFS. Some information that may be considered is:

- a list of services provided;
- the number of families for whom protection services have been provided without having to bring the children into Alternate Care;
- the number of families in which child protection intervention resulted in the placement of children in Alternate Care;
- the number of families in which parent aide services were used for child protection purposes;
- the average length of stay for children in Alternate Care by age;
- reasons for children coming into care (neglect or abuse);
- the current number of trained or approved foster homes;
- the number of children placed in off-reserve resource; and
- the number of approved adoption homes (if relevant in the reference province or territory).

6.2.3 **Prevention Services:** As with Protection Services, the Recipient shall provide a report on September 30 and March 31, which shall be submitted to the respective regional office by the 15th day of the following month in each fiscal year. **Reporting, as is done in Protection Services, shall follow the First Nations Reporting Guide.**

6.2.4 As with Protection Services, the Reporting Guide needs to be reviewed and may be discussed with the National Advisory Committee. Some of the points for inclusion, which may be considered, are:

- a list of services provided;
- legislated or discretionary services;
- the amount being spent on prevention compared to protection;
- number of families receiving service for each of the service areas provided;
- the number of children included in the families served (for each of the services provided);

- the number of community-based child and family services committees currently active;
- the number of Elders committees currently operating;
- the number of public information, education-related sessions and workshops held during the period; and
- the types of workshops held and the number of people attending.

6.3 Maintenance (General Considerations)

6.3.1 As indicated in Chapters 2 and 3, Maintenance is provided as follows:

- for standard Contribution funding, it is a reimbursement of eligible expenses for an Eligible Child taken into Alternate Care whose Custodial Parent is Ordinarily Resident On Reserve;
- for Recipients who are approved for entry into a Flexible Funding Option, it is in the form of a Flexible Transfer Payment, as is the Operational allocation.

6.3.2 For Contribution funding, Recipients are required to submit a monthly invoice for expenses for an Eligible Child in Alternate Care out of the parental home. Regions will then do a reconciliation of these invoices as outlined in Section 6.4. Timely completion of these reconciliations (within 45 calendar days as outlined in Section 5.8.5) will enable regions to accurately forecast their Maintenance requirements and to fulfill the requirements of Section 34 of the FAA.

6.3.3 For Recipients in a Flexible Funding Option (FFOM), the levels of funding are pre-determined in accordance with the methodology outlined in Annex E of Appendix A. There is still a requirement, however, for FFOM Recipients to submit quarterly reports outlining the numbers of children in Alternate Care and the activities funded through reinvestment (see Annex E of Appendix A).

6.3.4 For all Recipients, there is also a requirement for on-site reviews. These reviews must be conducted at least once every three years. If Recipients show large variances in their Maintenance reporting, an on-site review will become essential at more frequent intervals.

6.4 Contribution Funding of Maintenance (In-office Reconciliation)

Recipients whose Maintenance is funded by a Contribution are required to submit monthly invoices within 15 calendar days of the end of the month. These are reimbursed on the basis of allowable expenses for each Eligible Child in Alternate Care out of the parental home. The required components of the process for reconciling Maintenance Contributions is outlined below.

6.4.1 Upon taking a child into Alternate Care out of the parental home, the Recipient will submit to the region a notification of their action in accordance with established regional practice. This notification will identify:

- the child and his or her parents along with the relevant status number(s);
- whether or not the custodial parent/guardian was Ordinarily Resident On Reserve at the time of placement;
- the birth date and gender of the child;
- whether the placement is an apprehension, a voluntary placement or a private placement under provincial or territorial legislation and standards and the level of care which the child is deemed to require; and
- if the rate is above the basic provincial or territorial rate, a statement signed by a qualified social worker in the employ of the Recipient confirming the level and rate required.

The form of notification may vary from region to region. In some regions it may be a copy of the provincial or territorial notification form and in others, it may be a separate form or included in the first month invoice. It may be hard copy or electronic.

6.4.2 Regional staff review the notification and determine whether or not the child in question is a federal responsibility. The child is a federal financial responsibility if:

- the child is registered or eligible to be registered;

- the custodial parent/guardian was Ordinarily Resident On Reserve at the time of coming into care; and
- the child is under the age of majority in the reference province or territory.

6.4.3 The process for reconciliation will differ from region to region, but the basic requirements are:

- The Recipient will submit an invoice to the region by the 15th calendar day following the end of the month. The invoice will be in accordance with the First Nations Reporting Guide.
- The invoice will identify the child for whom the region is being billed and will itemize the charges on behalf of the child.
- Regional staff will verify the child's name with the approved notification forms and verify that the child is a federal financial responsibility.
- If the invoice appears to be in order, the region will, within 15 calendar days of receiving the invoice, advise the Recipient of its acceptance.
- The claim will then be verified. The charges will be examined and, if in line with the provincial or territorial per-diem rates for the level of care for which the child has been assessed, approval will be given.
- Where charges exceed the approved per-diem rate, the Recipient must itemize the additional charges and justify them.
- The region will then determine if these additional costs are in line with INAC authorities for Maintenance (see Chapter 2, Section 2.3).
- If they exceed INAC authorities or are felt by the regional officer to be excessive, the regional officer must reject that portion of the claim that is in dispute and advise the Recipient accordingly, including the reasons for rejection.
- If there are outstanding questions regarding some of the charges, the Recipient may resubmit in future monthly billings.

- Verification is to be completed within 30 calendar days of receiving the invoice or 45 calendar days from the end of the month if the report has been submitted on time (see Section 5.8.5).
- The region will have a process for sign off under Section 34 of the FAA for the approved amount.

6.4.4 For provinces and territories, which are delivering services on reserve, the same process applies. If the provincial or territorial practice is to bill on a monthly basis, the reconciliations must be done monthly. If the province or territory bills on a quarterly basis, the reconciliation would be done quarterly.

6.4.5 For the Province of Ontario, which provides direct funding to FNCFS Recipients, reconciliations are regularly done by the Province. Ontario will share the results of their reconciliation activities with the Ontario regional office.

6.5 Contribution Funding of Maintenance (On-site Reconciliation)

6.5.1 Periodic on-site reviews are an essential component in effective compliance. Although not conducted on a regular basis, each Recipient must be reviewed once every three years to ensure that proper records are being kept and that information contained in the monthly invoices are, in fact, accurate. Wherever possible, joint on-site reviews should be conducted with the province.

6.5.2 For Recipients experiencing difficulties, reviews may be required on a more regular basis. (See Appendix C, Child and Family Services Compliance Review Process and the First Nation National Reporting Guide.)

6.5.3 The purpose of the on-site review is to:

- confirm client eligibility;
- enable INAC to meet its accountability responsibilities to Parliament for spending public funds under Section 34 of the FAA (see chapter 5);
- determine and ensure compliance with provincial rates subject to Treasury Board-approved maximum amounts; and

- provide support to the Recipient and to the region for the effective and efficient operation of FNCFS.

6.5.4 The review team may be composed of INAC employees in partnership with the Recipient and provincial or territorial authorities, a third-party consultant, Consulting and Audit Canada or other suitable persons. The review should try to be inclusive wherever possible to ensure that the Recipient is fully involved. Wherever possible, the reference province or territory should be involved in the process.

6.5.5 The review will ensure consistency in the invoicing process and will involve four distinct activities:

- **Review of case files**: This is to be done by taking (as a minimum) a sample of case files in line with the options outlined in Section 8.2 of Appendix C. The sample must be large enough to give a clear picture of the operation. The list of items that should be included in the case files is outlined in the review process described in Section 8.2 of Appendix C. Likewise, the focus of the case file review and the intended outcomes are included in that section.

- **Review of foster parent files**: The sample should be selected as above. There is also a description in Section 8.2 of Appendix C of the components that should be contained in a foster parent file. The intended focus and outcome of the foster parent file review are outlined.

- An **administrative review** of the office practices of the Recipient and the accounting for payments made on behalf of eligible clients. Section 8.2.c of Appendix C outlines the components to be evaluated in an administrative review. The components may not be all-encompassing and the region may wish to add to this list of requirements.

- A **review of group homes and institutions** to ensure that the facilities are licensed/regulated in accordance with provincial or territorial standards and rates. The outline of items to be evaluated are contained in Section 8.2.d of Appendix C.

Note of clarification: For case and foster parent files, individual provincial practices may vary; however, INAC staff should only require access to those files (or information from them) required to verify the eligibility of the child and or the caregiver for reimbursement following the Treasury Board approved program Terms and Conditions. If INAC staff cannot certify that the child or caregiver are eligible under the

Treasury Board approved Terms and Conditions, INAC will not be able to authorize payment under Section 34 of the *Financial Administration Act*.

6.5.6 Once the review has been completed, there will be an on-site debriefing of the Recipient and chief and council, if appropriate. Where possible, the province or territory should also be included in the debriefing. Written confirmation of the findings will be provided to the Recipient within a reasonable time frame (not to exceed 60 days) following completion. Wherever possible, Recipients will correct the findings immediately.

6.5.7 If the Recipient cannot rectify the findings at time of the on-site review, a plan should be jointly developed to address the issues raised in the review. A second joint review may be required using the same methodology, but covering only the unresolved areas identified in the first review.

6.5.8 In the Province of Ontario, which directly funds FNCFS Recipients, on-site reviews will be done in accordance with the Province's terms and conditions. The results of such reviews will be shared with INAC's Ontario regional office.

6.6 Flexible Funding Option for Maintenance (FFOM)

Recipients, which have been approved for the FFOM option of Maintenance, will be subject to the terms and conditions outlined in Annex E of Appendix A. These Recipients will report quarterly.

FFOM Recipients will continue reporting on the number of children in care each month and the cost for each child. In addition, they will report on the use and the amount of re-investment money; money that has been successfully re-profiled from supporting children in Alternate Care to prevention services.

7 Definitions (Glossary of Terms)

The definitions contained in this glossary apply only to First Nations Child and Family Services

Alternative Funding Authority (AFA): – An authority whereby an Eligible Recipient receives multi-year funding in the form of a fixed allocation. Although FNCFS is excluded from AFA arrangements, it may be included as a targeted, non-core item under an AFA arrangement provided it is renewed annually.

Age of Majority – The age at which a person is considered to be an adult under the law of the relevant province or territory.

Age of Majority Services – Where a child is in the care of a FNCFS Recipient and is engaged in an educational or treatment plan at the time of reaching the age of majority, the child may remain in care until the plan is completed.

Alternate Care – Placement of a child out of the parental home in a foster home, group home, institution or in an independent living arrangement. This does not include children under the Children Out of Parental Home (COPH) program of Income Assistance.

Alternate Recipient– An Eligible Recipient that does not hold the mandate for the delivery of FNCFS, but receives INAC funding for this purpose and subsequently provides the funding to a mandated service deliverer. See Section 4.5.

Approved Authorities– INAC policy authorities received from Cabinet and the funding and program authorities received from Treasury Board as reflected in the revised Program Directive (APPENDIX A).

Band Council Resolution (BCR) – A resolution passed by a quorum of a Council confirming a decision.

Case Plan – A plan developed by a Recipient when a child needs protective services.

Catchment Area – The geographic area for which the reference province or territory grants a mandate to a FNCFS agency or other Eligible Recipient.

Chart of Accounts – The goods and services included in the per diem being charged by a province or territory for providing Maintenance.

Chief and Council – The leadership of a band as defined in the *Indian Act*.

Child at Risk – A child who is deemed to be at risk of neglect and/or abuse in accordance with the legislation and standards of the reference province or territory.

Child in Care – A child taken into care in accordance with provincial or territorial legislation and standards. This includes children in Alternate Care or children in care, but remaining in their own homes.

Children out of the Parental Home (COPH) – A short-term private arrangement between the parent of a child and a third party (usually a relative) for the care of a child. Where the parent does not have the resources to provide support on behalf of the child, an allowance may be paid to the third party out of Income Assistance in order to help pay the child's expenses. COPH is not to be seen as a mechanism to address protection concerns. **COPH falls under the Income Assistance program.**

Compliance Review – A review of the administration, operation and expenses of the FNCFS program administered by the Recipient to ensure that the program is being delivered in accordance with INAC's policies, which reflect Treasury Board and Cabinet authorities.

Contribution Funding – Contribution funding for FNCFS applies to Maintenance billings. These are paid in the form of a Contribution, which means a reimbursement of allowable expenses on a dollar-for-dollar basis.

Comprehensive Funding Arrangement (CFA) – A one-year funding arrangement with an eligible recipient containing programs funded by contributions, flexible transfer payments or grants, where applicable.

Custodial Parent – The mother of a child if she has sole custody. The father of a child if he has sole custody. If the parents have joint custody, the parent with whom the child resides most often.

Dual Bilateral Agreements – These are agreements between INAC and the Eligible Recipient and/or between the Eligible Recipient and the reference province or territory. These agreements outline the roles and responsibilities of the parties and clearly define the services offered.

Eligible Child – A child who is registered in accordance with the *Indian Act* or who is eligible to be registered according to the *Indian Act* and whose custodial parent is Ordinarily Resident On Reserve. In circumstances where the reference province or territory does not pay for Indians on reserve, only the Ordinarily Resident clause will apply.

Eligible Recipient (Recipient) – Organizations that have been mandated by the reference province or territory to provide FNCFS to on-reserve residents. Recipients may include FNCFS agencies, chiefs and councils or other organizations created to deliver mandated FNCFS services. This includes all provinces and the Yukon Territory, except Ontario, which is under the 1965 agreement, and the Northwest Territory and Nunavut, where provisions for these services are included in the territorial financing agreements.

***Financial Administration Act* (FAA)** – Federal legislation covering the financial administration of the Government of Canada, establishment and maintenance of the accounts of Canada, and the control of Crown corporations.

First Nations Child – In terms of the FNCFS program, a First Nations Child refers to an Indian Child. See definition for "Indian".

First Nations Child and Family Services (FNCFS) – The program designed to support culturally appropriate prevention and protection services for Indian children and families resident on reserve, in accordance with the legislation and standards of the province or territory of residence as outlined in the Program Directive (Appendix A) and this manual.

Flexible Funding Option for Maintenance (FFOM)– An option that allows Maintenance to be funded as a Flexible Transfer Payment. The methodology for entry into an FFOM is contained in Annex E of Appendix A.

Flexible Transfer Payment (FTP) – A conditional transfer payment made for a specified purpose where a fixed amount of funds is allocated to a Recipient, usually on the basis of a pre-determined formula. Recipients are expected to manage within the fixed amount. Recipients

may keep unspent balances as long as the program terms and conditions have been fulfilled. Surpluses must be spent in an approved manner. Deficits are the responsibility of the recipient.

Foster Home – An alternate family residence, regulated in accordance with the standards of the reference province or territory, where a First Nations Child may be placed when it is determined he or she needs protection and requires an alternate care arrangement as determined by the Case Plan developed by the Recipient.

Group Home – An alternate residence, regulated in accordance with the standards of the reference province or territory, which may accommodate several children in a setting that is more formal and structured than a foster home and where it is felt the child may need more intensive care as determined by the Case Plan.

Guardian – The guardian of a child as defined under the legislation of the reference province or territory.

Indian – "Indian" means a person who, pursuant to the *Indian Act* (R.S., 1985, c. I-5, s. 2), is registered as an Indian or is entitled to be registered as an Indian.

Institution – An alternate residence, regulated in accordance with the standards of the reference province or territory, which may accommodate larger numbers of children in a setting that is designed to provide more intensive intervention for children who need more intensive care as determined by the Case Plan.

Maintenance Funding – Funding provided to a Recipient either as a reimbursement for the actual costs of children in Alternate Care (Contribution) or in the form of a Flexible Transfer Payment for Recipients who have applied for and been approved to enter into an FFOM. See Section 2.3 on Maintenance.

Mandate – Authority granted by a province or territory for a Recipient to deliver FNCFS services in accordance with the relevant provincial legislation.

Memorandum to Cabinet (MC) – A proposal addressed to Cabinet seeking to obtain or change policy authorities for the operation of programs or services.

National Advisory Committee on FNCFS (NAC) – Following completion of the report of the Joint National Policy Review on FNCFS (NPR) in 2000, a National Advisory Committee, made up of First Nations and INAC representatives, was created to follow up on the NPR recommendations and make recommendations on their implementation.

Operations Funding – Funding provided to a Recipient in the form of an FTP for the purposes of service delivery as outlined in Section 2.2.

Ordinarily Resident on Reserve – Refers to children whose custodial parent/guardian, although they may be absent for a period of time for purposes related to education, health or other services that are unavailable in the reserve community where the child lives, maintain their primary residence on reserve. See Terms and Conditions, Application Requirements (Appendix B) for a full description.

Prevention Services – Services designed to reduce the incidence of family dysfunction and breakdown and to reduce the need to take children into Alternate Care.

Program Directive 20-1 CHAPTER 5 (Program Directive) – The INAC national policy statement on FNCFS (see Appendix A).

Program Authorities – Treasury Board decisions that govern a program. This authority is reflected in the Program Directive (see Appendix A) and in this manual.

Protection Services – Legislated services designed to protect children from neglect and abuse as provided by a provincially mandated FNCFS Recipient.

Reference Province or Territory – The province or territory within which a specified Recipient is located.

Reserve – A tract of land, the legal title to which is vested in Her Majesty, that has been set apart for the use and benefit of a band, as defined in the Indian Act.

Responsibility Centre Manager (RCM) – The manager who has authority delegated by the Minister of the relevant department of the Government of Canada to ensure that the requirements of the *Financial Administration Act* have been met.

Tripartite Agreements – Agreements between INAC, Recipients and the reference province or territory. These agreements outline roles and responsibilities of the parties and clearly define the nature of services to be provided. These agreements may be for a specific term or be open ended provided adequate provision is included for termination with reasonable notice. For a sample, please refer to APPENDIX D (to be added at a later date).

Appendix A: Program Directive Chapter 5 Social Development PD 5.1

First Nations Child and Family Services (FNCFS)

1.0 Purpose

This Directive states Indian and Northern Affairs Canada's (INAC) policy regarding the administration of the First Nations Child and Family Services Program.

2.0 Authority

This Directive is issued as a follow-up to Cabinet and Treasury Board authorities granted in 2003.

3.0 Issuing Authority

This Directive is issued under the authority of the Assistant Deputy Minister of Socio-Economic Programs and Policy.

4.0 Scope

This Directive applies to all employees, both at INAC Headquarters (hereafter, Headquarters) and in the INAC regions (hereafter, region or regions), in the carrying out of the department's functions regarding the funding and support of child and family services on reserves.

5.0 Responsibilities

5.1 Except where otherwise indicated, this Directive will be implemented by the Regional Director General.

5.2 The responsibility for approving developmental plans and new funding lies with Headquarters Finance Branch in cooperation with the Social Policy and Programs Branch at Headquarters.

5.3 The Social Policy and Programs Branch is responsible for interpreting this Directive and for inserting any necessary changes.

6.0 Principles

6.1 The department (INAC) is committed to expanding First Nations Child and Family Services on reserve to a level comparable to the services provided off reserve in similar circumstances. This commitment is independent of and without prejudice to any related right that may or may not exist under treaties.

6.2 INAC will support the creation of First Nations designed, controlled and managed services. It is committed to working toward ensuring that every First Nations person resident on reserve has access to services that are designed, controlled and managed by First Nations.

6.3 INAC is committed to ensuring that this policy will be consistent with First Nations aspirations toward self-government. INAC views this policy as a step toward realizing these aspirations.

6.4 INAC will support the development of First Nation standards for those services. It will work with First Nations organizations to encourage their adoption by provinces and territories.

6.5 This expansion of First Nations Child and Family Services (FNCFS) will be gradual as funds become available and First Nations are prepared to negotiate the establishment of new services or the take-over of existing services

6.6 Provincial child and family services legislation is applicable on reserves and will form the basis for this continued expansion. It is expected that the provinces will be a party to agreements.

6.7 INAC will only fund child and family services service providers that have been mandated by the reference province. INAC will also fund a First Nation recipient that is not mandated by the reference province provided that the First Nation has a service agreement for child and family services with a service provider mandated by the reference province or the province, and transfers 100% of INAC funding for child and family services to the mandated service provider.

7.0 Developmental Activities

7.1 INAC will fund the development of new FNCFS organizations as follows:

(a) *Pre-planning*: This activity will support community consultation, data collection and information gathering enough to prepare an initial community proposal and preliminary discussions with the province or territory and INAC. It should produce a detailed plan (direction and services wanted and how they intend to achieve this), and Band Council Resolutions indicating community support for developing FNCFS.

(b) *Planning*: This activity will support all the work leading up to and including a formal agreement between the parties (province or territory, INAC and First Nations groups) for the start up of a new organization. It will include needs assessment, identification of respective roles and responsibilities, description of services and delivery mode, elaboration of personnel policies (that is, organization chart, job descriptions, etc.) and financial policies (that is, accounting system, etc.), description of an implementation plan, funding arrangements, etc.

(c) *Start-up*: This phase will include hiring staff, establishing the office(s), purchasing equipment and furniture, setting up, orienting and training local committees and board of directors as well as initial staff training.

7.2 *A pre-condition for moving from one developmental phase to another, is completing the previous phase.* This funding will be provided only once for each phase to each group and or band. Funding for the pre-planning and planning phases can be incorporated in the Comprehensive Funding Arrangement (CFA) of the band, the tribal council, or agency and will be considered to be a Flexible Transfer Payment (FTP). The start-up funding will form part of a separate contribution agreement, as well the ongoing operating budget.

8.0 Scale of Organizations

8.1 Each organization should serve at least 1,000 children (0-18 years of age). It is realized that in certain circumstances this may be impossible. INAC is ready to consider exceptions to help potential organizations that would serve less than 1,000 children.

(a) *Grounds for Exceptions*:

(1) *isolation and remoteness*: the distance between bands that would otherwise work in cooperation is so great that efficiency would not be achieved by following the policy;
(2) *cultural contrast*: extreme cultural differences would not lead to effective working relationships; or
(3) *existing groupings*: some bands are already cooperating in administering and delivering other programs. It would be essential to acknowledge the same grouping in order to create an efficient FNCFS organization.

9.0 Delivery Options

The funding level proposed in Section 19 covers providing a full range of child and family services (protection and prevention). When it comes to the delivery of these services, the First Nation groups that will be setting up a new organization could decide to deliver only part of the services (that is, prevention) and decide to have someone else deliver the balance of services (that is, the province, another Indian organization or a private group that has the delegated authority). The group may also decide to start delivering the services on a gradual basis: for example, prevention in the first year, protection in the second year and adoption in the third year of operation. In this case, the province or one of its agencies would continue to provide the other services until the new FNCFS organization has assumed them, and would be paid from the total allocation. All of these options and other variations are acceptable so long as the agreement clearly indicates who will do what at any given time and so long as all services are provided within the allocated budget (according to the funding formula).

10.0 Evaluation

10.1 INAC believes that any new FNCFS organization needs to review its progress as it matures. For this reason, INAC will provide a contribution (FTP) of $30,600 to each new organization in its third and sixth year of operation to complete an internal review of its operation in order to identify weaknesses and strengths and to plan any desired improvements to the quality of its services. The report of this review is for the organization's benefit and does not have to be released to INAC. Reviews or evaluations after the sixth year of operation will be the financial responsibility of the FNCFS organization. Over and above these internal reviews, an organization may be required to complete an evaluation in

relation to its mandate regarding the protection of children from abuse and neglect, the provinces or territory would need to address this matter with the First Nation organization.

10.2 INAC evaluations will cover the entire child welfare program rather than specific organizations or agreements. As part of its periodic review of the results being achieved by the total program, INAC's Audit and Evaluation Directorate will analyze the information submitted by the provinces and territory and organizations, to ensure that objectives are being met and agreements are being fulfilled.

11.0 Agreements in Principle

Agreement(s) will be in place reflecting a comprehensive range of child and family services, service delivery mode, respective roles and responsibility of parties (FNCFS organization, INAC, province or territory). These agreements will follow INAC authorities and will ensure that there is not a duplication of services and/or cost. These agreements, which are agreements in principle, are separate from funding arrangements (see Section 13.0) and can be tripartite in nature or complementary bilateral (that is, INAC-First Nations and First Nations-province or -territory). These agreements may have an open term provided there are provisions for termination on six months notification.

11.1 INAC shall confirm that an agreement is in place between the province or territory and the eligible Recipient, which complies with INAC authorities as outlined in the national FNCFS manual.

11.2 In the case of a FNCFS agency, it must be mandated in accordance with the relevant provincial or territorial legislation and incorporated following provincial, territorial or federal legislation as verified by a copy of their incorporation documents.

11.3 Where it is agreed that INAC will fund a chief and council for FNCFS, the chief and council must demonstrate that they have an agreement in place with a mandated FNCFS agency or the host province or territory. They must use 100% of operational funds provided to purchase FNCFS.

12.0 Contribution Funding Agreements

First Nations Child and Family Services (FNCFS) are excluded from core funding of multi-year agreements with bands and tribal councils. The terms and conditions applicable to Comprehensive Funding Arrangements (CFAs), which may include Flexible Transfer Payments (FTPs), must be included in FNCFS CFA agreements as contained in the national generic model as amended from time to time (Annex A). CFAs must be renewed annually and cannot be multi-year. The Cash Management Policy also applies. Specific program terms and conditions (Annex B) will be kept to a minimum.

13.0 Liability Insurance

Recipients must maintain liability and general insurance as may be required under provincial or territorial legislation or as may be required by INAC for the provision of child and family services. Recipients will provide a copy of such policies when an annual CFA begins.

14.0 First Nations Standards

14.1 First Nation standards may be developed in each region in cooperation with the host province. These standards, when adopted by the province or territory, can be implemented provided they do not imply additional costs for Canada over and above the funding level described in Sections 18 to 20 inclusive.

14.2 Once these standards have been adopted, they should be made available to INAC and any other First Nation group in Canada that asks for a copy.

15.0 Tripartite Mechanism

Each region will initiate a regional tripartite panel or committee, composed of representatives from INAC, FNCFS organizations and the province, to review program objectives, the development of First Nation standards, and to be a vehicle for ongoing discussions on issues of regional concern.

16.0 Effective Date

This Directive has been implemented as of April 1, 2004.

17.0 Amendment

Based on input by First Nations and/or provincial or territorial governments, this Directive will be amended as required.

18.0 Developmental Activity Funding

18.1 Pre-planning will be funded at a rate of $11,101.06 per group and $1,665.16 per member band.

18.2 Planning will be funded at a rate of $88,808.48 per group and $3,330.32 per member band.

18.3 Start-up will be funded at a flat rate of $185,387.70 per organization plus 25% of the first year's operational funding as described in Section 19.

18.4 The above-mentioned flat rate of $185,387.70 may be adjusted as described in Section 20.1.

19.0 Operational Funding

19.1 Funding for Operational Allocations:

For the provision of comprehensive child and family services (both prevention and protection), the Operational allocation is intended to cover, but not be limited to, salaries, travel and benefits for agency staff (for example, agency director, senior management staff, supervisory staff, support staff, protection and prevention workers and resource workers); expenses related to board or committee operations; professional development services; special needs assessment and testing; legal services fees and costs; para-professional services; family support services; and agency administration including non-medical staff travel to accompany children, rent, office expenditures including computer hardware and software, audits, monitoring and evaluation.

Eligible expenditures may also include non-medical services designed to keep families together and children in their own homes (for example, homemaker and parent aid service, mentoring services for children, home management, non-medical counselling not covered by other funding sources, and group and individual activities designed to promote better parenting skills). Payment under this activity will be in the form of a Flexible

Transfer Payment. Operational funding will be provided to FNCFS organizations as follows:

(a) A fixed amount of $143,158.84 per organization + $10,713.59 per member band + $726.91 per child (0-18 years) + $9,235.23 x average remoteness factor + $8,865.90 per member band x average remoteness factor + $73.65 per child x average remoteness factor + actual cost of the per-diem rates of foster homes, group homes and institutions established by the province or territory.

(b) The above-mentioned fixed amount of $143,158.84 may be adjusted as described in Section 19.2.

(c) In its first year of operation, a new organization will receive 75% of the formula, 85% in its second year, 95% in its third year and 100% in its fourth year. These adjustments will reflect a gradual implementation of the formula over a four year period.

(d) The remoteness factors are the same as used for band support activities. The child population of 0 to 18 years on reserve is the same as reported by INAC's Lands and Trust Services. When calculating the funding formula in a given fiscal year, the child population counted in December of the previous year will be used.

(e) In the Quebec Region, Child and Family Services form part of a network of comprehensive social services. The proposed funding levels are for child and family services only. Existing funding for other social services will not be affected by introducing the above funding formula.

(f) The Operational budget (including developmental activities) has been authorized as a Flexible Transfer Payment (FTP) where the organization will have full authority to set the priorities to be funded (within the sphere of the Child and Family Services Program) so long as the mandate to protect children from neglect and abuse is met. The province or territory responsible for child protection that has delegated this responsibility to Indian organizations will need to address this matter with Indian organizations.

19.2 Funding Adjustment for Proposed Organizations Serving less than 1,000 Children:

For agencies with less than the suggested optimum number of children, adjustments will be made as follows:

a) *Start-up Costs*: if the number of children to be served is between 801 and 1,000, no adjustment. If the number of children to be served is between 501 and 800, the flat rate for start-up as described in Section 18.3 will be $92,693,85 rather than $185,387,70. If the number of children to be served is between 251 and 500, the flat rate for start-up will be $46,346,92 rather than $185,387,70. If the number of children to be served is less than 251, the flat rate for start-up will not be available.

b) *Operational Costs*: If the number of children to be served is between 501 and 800, the fixed amount per organization of $143,158,84 as described in Section 19.1 will be reduced to $71,579,43. This amount will be further reduced to $35,789,10 for organizations serving between 251 to 500 children. If the number of children to be served is less than 251, the fixed amount will not be available.

c) All other funding levels and future year adjustments remain as previously described.

20.0 Maintenance Funding

20.1 Standard Contribution Funding:

Maintenance consists of child maintenance in a foster home, group home or institution. Child Maintenance is the actual cost of maintaining First Nation children ordinarily resident on reserve in alternate care out of the parental home. Children must be taken into care in accordance with provincially or territorially approved legislation, standards and rates for foster home, group home and institutional care. This includes non-medical services to children with behavioural problems and specialized needs; non-medical travel for purposes related to court, parental visitations, education; purchases on behalf of children in care and other provincially approved expenses not covered by other funding sources. Foster, group and institutional per-diem costs, as set and approved by the reference province or territory, may include

professional services not covered through other sources of funding where the child has established eligibility. Maintenance payments are a Contribution and reimbursable on the basis of actual expenditures. Further considerations are as follow:

a) Reimbursement on behalf of eligible children will be made only when the foster, group home or institution has been approved or licensed in accordance with the legislation and standards of the reference province or territory. Letters of equivalency will not be accepted in lieu of this process.

b) INAC may reimburse agencies, subject to the legislation and standards of the reference province or territory, for assistance to children above the age of majority until the child has completed a course of education or treatment plan that was underway at the time of attaining majority.

c) Recipients will be required to submit monthly invoices for children in alternate care out of the parental home. Regions will ensure that the reconciliation of these invoices takes place in a timely fashion. The reconciliation of these invoices should never fall more than three months behind.

d) Recipients and regions will ensure that on-site compliance reviews take place at regular intervals. On-site compliance should occur with each Recipient once every three fiscal years following the INAC Child and Family Services Compliance Review Process Directive.

e) Upon bringing a child into alternate care, the Recipient shall, within 30 days, apply for the Children's Special Allowance (CSA).

f) The CSA will be applied against the eligible expenses under the *Children's Special Allowances Act* in accordance with Section 3(2) of the Act. In those cases, the Recipient shall document the use of these funds and shall be prepared to furnish copies to INAC as required.

20.2 Flexible Funding of Maintenance:

Recipients may apply by submitting a proposal or plan to regional offices to start the process for entering into a Flexible Funding Option (FFOM) for child and family services Maintenance. The

arrangement will provide increased flexibility for agencies to reprofile Maintenance funding under a Flexible Transfer Payment in order to provide increased resources for prevention. Following an assessment by the region, final approval of all FFAs must have the agreement of the Recipient in question, the region and Headquarters.

a) Entry into a FFOM is voluntary. A Recipient will not be required to enter such an arrangement.

b) The management regime for FFOMs is attached as Annex E. It will be dealt with in detail in the FNCFS program manual.

c) Funding provided through the FFOM will be used for child and family services as defined under the legislation and standards of the reference province.

21.0 Administrative Process

Regions are required to submit expansion plans (creation of new agencies) requiring additional funding to the Director General of Social Policy and Programs Branch and the Director General of Finance Branch in Headquarters for their approval. Plans will be assessed according to the availability of funding and on the basis of the policy of this Directive being respected.
Headquarters Finance has the responsibility for the budgetary allocations necessary for these activities. Regions must live within these budgets. The contents of the agreements to be negotiated pursuant to this Directive should be closely scrutinized by Legal Services to ensure that the respective roles and responsibilities of the parties are clearly spelled out.

22.0 Effective Date April 1, 2004

The financial components of the Directive will be implemented as funds become available. All monetary amounts reflect 1995-1996 values. These amounts will be increased by 2% every year subject to the availability of resources.

23.0 Enquiries

23.1 Anyone wishing further information or clarification regarding this Directive should contact the Regional Director General or the Director of Social Policy and Programs Branch at Headquarters.

24.0 Annexes

A - General Terms and Conditions Applicable to Comprehensive Funding Arrangements (CFA)

B - Specific Program Terms and Conditions

C - Annual Funding Levels

D - Specific Program Reporting for First Nations Child and Family Services

E - Flexible Funding Option for First Nations Child and Family Services Maintenance - Methodology

Annex A: General Terms and Conditions Applicable to Comprehensive Funding Arrangements (CFA)

The following items must be included in ICFS funding arrangements:

1. Recipient clearly identified
2. Purpose clearly stated
3. Definitions
   (a) Flexible Transfer Payment
   (b) Contribution
   (c) Surplus/Deficit
   (d) Action Plan/Remedial action
   (e) Expenditure Plan
   (f) Indian resident on reserve
   (g) Maintenance
4. Duration specified
5. Signing date
6. Effective
7. Roles and responsibilities of INAC and of the Recipient clearly described
8. Surplus/Deficit administration
9. Reporting requirements
   (a) Audit
   (b) Financial reports

10. Provisions for amendments and termination of agreement

11. Non-performance

    (a) Request for additional information required

    (b) action plan negotiated

    (c) remedial action if necessary

12. Schedule of funding levels (Annex C)

13. Expenditure plan/cash flow need

14. Cash disbursement schedule

15. Signature block for financial certification

16. Signature block for the Regional Director General and the Recipient

It is essential that regional practices are followed. Please consult the INAC regional officers responsible for transfer payments for a detailed explanation of the above-noted items and for the wording to be used.

Annex B: Specific Program Terms and Conditions

The following items must be included in the ICFS arrangements:

1. **Budget**

   (a) Operations:(administration and services)

   (b) Maintenance: monthly reimbursement of actual costs (an estimate amount must be stated in the funding arrangements)

2. **Definitions**

   (a) Indian ordinarily resident on reserve means:

      (1) that the final Recipients usually live at a civic address on reserve, or are children in joint custody who live on reserve most of the time; or

      (2) Students continue to be considered ordinarily resident on reserve if they return to live on reserve with their parents, guardians or maintainers during the year, even if they live elsewhere while attending school. The residence of a child who comes into the care of a mandated child welfare authority is derived from the residency of the child's parent or guardian at the time the child is taken into care. Such children shall be deemed to be ordinarily resident on reserve for as long as such care is required and continues to be unavailable on reserve.

   (b) Maintenance means: the actual cost of maintaining Indian children ordinarily resident on reserve who are taken into care according to provincially approved legislation, standards and placed in a foster home, a group home, or institutional care. This includes non-medical services to children with behavioural problems and specialized needs; purchases on behalf of children in care; and other provincially approved purchases not covered by other funding sources.

3. **List of services to be provided**

4. **Specific program reporting:**

   (a) for operations: twice a year on September 30 and March 31

   (b) for maintenance on a monthly basis

   (c) an annual report

The information required is described in Annex D.

Annex C: Annual Funding Levels

This arrangement is to provide funding for fiscal year _____ In the amounts described below for the purposes as set out in Section ____.

1. Flexible Transfer Payments
   Funding for Operations:
   (administration and services)

   $_____

2. Contribution Funding for Maintenance

   $_____

3. Total Funding

   $_____

Annex D: Specific Program Reporting for First Nations Child and Family Services

The required information falls in two major categories:

Information related to services provided (operations)

Information required for the actual reimbursement of maintenance

1. **Operations**

   (a) prevention services (to prevent children from coming into care)

      (1) list of services provided

      (2) number of families served (by service)

      (3) number of children included in families served (by service)

      (4) number of local child and family services' committees

      (5) number of Elders' committees

      (6) number of public information or education-related sessions or workshop

   (b) protection services (for children in care including children under supervision order in their own homes)

      (1) list of services provided

      (2) number of families served (by service)

      (3) number of foster homes

      (4) number of adoption homes

2. **Maintenance of Children in Care**

   (a) number of children in care at the end of each month by type of placement (foster home, group home, institution)

   (b) number of care days, unit cost and total cost for each type of placement

Annex E: Flexible Funding Option (FFOM) for First Nations Child and Family Services (FNCFS) Maintenance – Methodology

1.0 Current Authority

Agencies may apply by submitting a plan to the INAC regional office to enter into a FFOM for child and family services maintenance. The purpose of this arrangement is to provide increased flexibility for agencies to reprofile Maintenance funding in order to provide increased resources for prevention. Following an assessment by the region, final approval of all Flexible Funding Options must have the agreement of the agency in question, the region and Headquarters.

2.0 Introduction

2.1 This policy statement, because it deals with a new methodology, is viewed as a work in progress. A review of the policy should be undertaken within one year or at the point when a new Operational funding formula becomes operational, whichever occurs first. This policy statement relates to the flexible funding option of FNCFS maintenance only. Any procedures or methodologies outlined in this paper are not transferable to other programs or even to other aspects of the FNCFS program.

2.2 FFOMs are to be viewed as an option for agencies wishing to receive increased flexibility in the way they may use their Maintenance funding. It is intended to enable agencies to reinvest resources, normally available only for children out of the parental home, into alternate services. These alternate services are targeted prevention initiatives focussing on least disruptive measures. Alternate services are to be holistic and preventative in nature and designed to keep families together.

2.3 In his report on Flexible Funding, Dr. Brad McKenzie indicated that; "There are indications— that block funding has been successful in facilitating alternative forms of intervention for children and families. These efforts are consistent with a growing body of evidence that more investment in family support services, including Aboriginal approaches based on the concept of holism, can help to prevent more intrusive and costly forms of intervention."

2.4 FFOMs are to be cost neutral in that they are not intended to provide increased resources but are intended to provide increased flexibility. They are a mechanism an agency may use to provide a better quality of service within current reference levels of funding.

2.5 When the Operational formula is revised, this policy will need to be reviewed in light of a revised formula.

3.0 Alternate Services

3.1 The alternate services, referred to above, may be provided from the savings accumulated by providing alternate responses to protecting children at risk of neglect and abuse. For example, moving children from high-cost placements out of the home and community to their own homes or, at least, less expensive placements in the community. These savings may be reinvested into alternate services designed to keep children at risk, as defined by the reference province in its legislation and standards, and their families together and to reintegrate families that have been separated in the past.

3.2 These reinvestment resources may be applied to a broad range of services in the home or the development of programs and services designed to help children at risk and their families. These alternate services must be for the benefit of children and families and within the overall mandate of FNCFS as defined by the reference province in its legislation and standards.

4.0 Process for Entry into a FFOM

4.1 An agency applies to a regional office to enter into a FFOM by submitting a proposal or business plan outlining how it will manage the allocation and how it will shift focus from children in care to a more preventative approach. It must present a five year plan on how it will change the profile of service from primarily protection to a more prevention-oriented program. The agency will indicate how it plans to evaluate progress on an ongoing basis in order to track the transition process.

4.2 The plan will clearly outline the nature of services currently being offered, including numbers of children out of the home in alternate care and the numbers of children at risk in their communities. Also, agencies will identify the number of high-needs children and the costs related to these.

4.3 In order to ensure that the transition to the FFOM is successful, the First Nations agencies, regions and the provinces must agree with the business plan because provincial delegation and approval in the redesign of services is essential. The best interest of the child, however, must remain the overriding principle.

4.4 The region will advise Headquarters about the intent of a First Nations agency to begin the process leading to the agency entering such an arrangement.

4.5 The agency and the region will ensure that all of the preconditions for entry into such an agreement have been met (see Section 5 on Preconditions). This plan will be shared with Headquarters.

4.6 The agency and the region will then conduct a compliance review of the current fiscal year to verify the Maintenance base. The compliance review will be conducted following the national compliance Directive and as outlined in the FNCFS national manual. The average increase or decrease over the previous three fiscal years will then be determined. This information is to be shared with Headquarters.

4.7 Upon completing the compliance review and agreement on the part of all parties to a mutually acceptable level of authorized Maintenance expenditures, the parties will then develop the entry level allocation for flexible funding based on the methodology outlined in Section 6 on Determining Initial Allocations.

4.8 A Peer Review Committee (PRC) will consist of three First Nations representatives experienced in FNCFS and the concept of Flexible Funding appointed by the National Advisory Committee (NAC) along with the INAC National Manager of First Nations Child and Family Services and a representative from INAC Finance Branch. The PRC will discuss each application as it comes into Headquarters from the region.

4.9 The PRC will provide feedback to the applicant agency and region, suggest changes or improvements to the proposal and make recommendations on whether or not the application should be approved.

4.10 The recommendation will be presented to the Director General of Social Policy and Programs. Once the Director General has given final approval, the agreement will be put into effect.

4.11 Agencies must provide detailed reporting for children out of the parental home in alternate care as well as for reinvestment activities. Reports on children in alternate care will be submitted quarterly to the region along with reports on reinvestment activities. The reporting activities will reflect the proposal or business plan.

4.12 The agreement may be renewed annually for a period of five years at which time program funding levels will be reviewed and the arrangement may be renewed for a further five year period, See Section 9 on Renewals.

4.13 Annual adjustments will be provided in accordance with the methodology outlined in Section 7 on Annual Adjustments.

4.14 If large numbers of children come into care for reasons that cannot be controlled by the agency, or a small number of children result in a dramatic increase in expenditures, the agency may, at its discretion, invoke a special circumstance review. This process is described in the Section 8 on Special Circumstance Review.

5.0 Preconditions for Entry into a FFOM

An assessment of agency readiness will be conducted jointly by the region and the agency. This assessment will take into account the following factors:

5.1 FFOMs are designed for agencies that provide a full range of services and are fully delegated. Agencies that provide prevention services only would not benefit from a FFOM agreement. Delegated agencies that purchase protection services from the host province or another agency would, in their proposals, have to involve the reference province or external agency in the submission because the province has control of children coming into care. The agency and the province would have to provide details about how they plan to reprofile Maintenance dollars in order to change the focus of the service.

5.2 The financial and administrative "track record" of the agency and/or First Nations child and family services organization applying for a FFOM. This will include any surpluses or deficits the agency is experiencing; the consistency of financial records;

the case management records being in good order; and the concurrence of the province that the agency is in fact a good candidate for increased flexibility.

5.3 The degree to which the applicant agency has adequately trained staff and has developed a well-defined tracking and reporting system in line with provincial legislation and standards.

5.4 The capacity of the applicant agency to work collaboratively with and within its host communities, region and the province in establishing a new service direction with a strong preventative focus using an integrated holistic approach.

5.5 The stability of the service delivery system. Agencies with fairly stable caseloads (that is, no extreme fluctuations in children in alternate care out of the parental home) and a good record for protecting children will receive preference.

5.6 Size of the agency. Larger agencies have greater economy of scale and will be better able to benefit from the flexibility offered by a FFOM.

6.0 Method for Determining Initial Allocations

6.1 Results of the compliance review will establish the current Maintenance base and will be an accurate record of INAC reimbursable expenditures within current authorities during the current fiscal year. The percentage increase or decrease over the previous three fiscal years will also be determined.

6.2 The region and the First Nation agency will project a year-end level of spending for Maintenance within the current fiscal year. This will be accomplished by determining current levels of expenditure and adjustment made according to the trends that emerge during the reconciliation process.

6.3 The region and the First Nation agency will determine the allocation by using the year-end forecast as supported by the results of the agency review. The average annual variance over the past three years will provide the basis for an initial adjustment. However, there is no obligation to adjust upward to the full amount if it is determined that the adjustment is not required or supported by the business plan. Likewise, there is no obligation to adjust downward to the minimum if it is determined that the

agency could not manage. The maximum adjustment possible, however, would be the variance over the past three years.

6.4 Once the initial allocation has been determined, the Contribution Arrangement for the new fiscal year will be prepared. Funding will be in the form of a Flexible Transfer Payment for Maintenance as well as for Operations.

6.5 For fiscal year 2004-2005, FFOM arrangements may be entered into at the time when the applicant agency is prepared to begin operating. There will, however, be no retroactivity and the agency will receive flexible funding for only that portion of the fiscal year that they will actually be in a FFOM. Effective April 1, 2005; however, FFOM arrangements will only be entered into effective April 1.

7.0 Annual Adjustment

7.1 Authority for Flexible Funding is not multi-year; therefore, Contribution Arrangements must be renewed annually. For a FFOM, the Operations portion and the Maintenance portion of funding will both be in the form of a Flexible Transfer Payment, but separate entities within the agreement.

7.2 Adjustments are made annually in the Operations allocation based on the formula contained in the national policy. There are, however, no formula-based adjustments to the Maintenance allocation.

7.3 Because rates paid for children in care are driven by provincial rates, adjustments will be made to the Maintenance calculation to accommodate these shifts. Should the provincial rates for children in care rise, the Maintenance allocation will be adjusted effective on the date the adjusted rates become effective.

7.4 If the rates go up for any one of the categories for children in care (institutions, group homes or foster homes), a corresponding increase will be provided for those children in the care of the agency in those categories. The adjustment will use the child in care statistics provided by the agency in the previous fiscal year and will calculate the average cost per child in alternate care in each of the three categories. The percentage increase in the provincial rates will then be added to the average cost per child in alternate care by category and multiplied by the number of children in alternate care.

7.5 Alternately, if provincial rates drop, the same process in reverse will apply. Adjustments will occur effective the dates the rate changes come into effect.

7.6 Should cost of living adjustments be reinstituted for the Operational formula in future, these adjustments would not apply to Maintenance as Maintenance price is driven by provincial rates.

8.0 Special Circumstance Review

8.1 From time to time, circumstances may arise that are beyond the control of agencies and where large numbers of children may have to be brought into care due to breakdowns in a specific community. In other cases, extra ordinarily high costs for one or more children may result in a major increases to the cost of children in care out of the parental home. These situations are usually, but not always, temporary and may require a temporary adjustment.

8.2 When this occurs in an agency that is funded in the traditional fashion (that is, reimbursement of actual costs for children in care), the agency is able to pass the increase on to INAC through their normal Maintenance invoices. However, when this happens to an agency in a FFOM agreement, the impact of this emergency situation could create serious difficulties for the agency.

8.3 It is suggested the following process be adopted as part of the management framework for FFOM agreements:

a) If an agency in a FFOM agreement experiences a crisis in one or more communities that is beyond its control and that requires bringing a large number of children into care or, alternatively, it experiences a serious growth in special needs rates, the agency may, at its discretion, call for a Special Circumstances Review (SCR).

b) If 8% or more children, above forecasted levels, come into care over three months as reflected in the quarterly reports or if there is a surge in high-cost children resulting in a cumulative deficit equivalent to 8% or more of the agency's total annual Maintenance revenues (projected from quarterly reports), INAC will be obliged to call for a Special Circumstances Review (SCR).

c) The region and the agency will then set up a SCR and will advise Headquarters about this circumstance. In preparation for this review, the agency will be expected to produce a statistical summary of activities since entering the FFOM. Further, if the factor that is driving costs higher is high-cost children, the current situation will be compared with the numbers of high-cost children just before entering the FFOM.

d) The agency and the region will determine whether this special circumstance is likely to be of short or long-term duration.

e) If the duration is short, there are two possible options:

   i) it may be agreed by the agency and the region that the agency absorb this increased cost over a short period of time; or

   ii) the region may propose to provide a temporary supplement to the Maintenance allocation, which cannot exceed the shortfall. This temporary measure will never exceed six months. The region would them make this recommendation to Headquarters for final approval.

f) If it is likely to be of longer duration, there are three possible options:

   i) The agency, the region and Headquarters may agree upon a cost-sharing arrangement. This would then become part of the FFOM base until such time as the renewal took place.

   ii) The agency, region and Headquarters may agree that an adjustment to the base is required to cover the total amount of the shortfall. In this circumstance, renewal will be necessary and the business plan will require updating to reflect current realities. This will result in renewing the full agreement.

   iii) The region and the agency may agree that the agency revert to traditional Contribution funding, particularly if the impacts are significant. In such an event, six months would have to be allowed for the transition because a

number of programs and services may be effected. If such an agency wishes to re-enter a FFOM in future, they must reapply under the provisions of Section 4..

8.4 In the event that no agreement is reached in regard to Sections 8.3.e and 8.3.f above, the agency must return to traditional Contribution funding for Maintenance until the situation in the geographic area in which the agency operates stabilizes. In this circumstance, the agency would be subject to the provision in 8.3.f.iii.

8.5 In the event of a special circumstance that is outside INAC's current authorities to resolve, INAC will act to help bring the issue to the attention of the appropriate authority.

9.0 Renewal of the Allocation

9.1 Although the FFOM agreements must be renewed on an annual basis and an annual adjustment factor has been built into the methodology (based upon provincial rate increases), it is essential that, at some point, the levels of funding are reviewed and the agency's Maintenance allocation is renewed. With the anticipated shift from alternate care to in-home care for children at risk, the profile of agency service would change significantly and the considerations applied to new FFOM agreements would no longer apply.

9.2 With the shift in focus comes a significant change in the service profile. To renew without considering the alternate programming, which has been developed, would be counter-productive and would leave the FFOM agencies in an untenable position. On the other hand, it must be understood that the Maintenance base cannot continue to increase without justification and without periodic review.

10.0 Assumptions

10.1 That the shift in focus from taking children into alternate care toward prevention and alternate programming will be a gradual one that will take several years.

10.2 Renewal should only occur once a significant shift has taken place in programming. Therefore, Renewals will occur following five years of operation under a FFOM. In a review of the flexible funding pilot programs, it was found that there was a major shift only after the pilot program agency had been in flexible funding for more than five years.

10.3 The methodology for renewal will be done in a manner which is consistent, measurable and supportable according to existing data and authorities.

10.4 Flexible Funding was conceived as a methodology that would allow children at risk and their families to receive services at home, thereby reducing the need to remove children into alternate care. The Maintenance statistic of measurement, then, will no longer be children in alternate care alone, but a combination of children in alternate care plus children at risk of neglect and abuse being serviced by the agency.

10.5 Flexible Funding was conceived as a methodology to encourage an increased investment in preventative services. Should the Operational formula be redeveloped and additional funding is received for prevention or least disruptive measures, this methodology will have to be revisited.

11.0 Methodology

11.1 As part of the ongoing monitoring of the original proposal or business plan, the agency and region will meet a minimum of once per year to review the progress of the plan in moving from a protection-only agency to an agency that emphasizes prevention and service to children at risk in their own homes. These reviews will track the transition process so that when the renewal takes place, there will be no surprises. Provincial involvement in these periodic reviews should be encouraged wherever possible.

11.2 When a FFOM agency completes five years using the FFOM methodology, the process for renewal is as follows:

a) The region and the agency will set a date for the renewal to begin and will advise Headquarters accordingly. An on-site review will be conducted at the agency's offices. The review will include an assessment of all current year costs related to children in alternate care to ensure they follow current

authorities. The review will also track alternate services expenditures. The results of the review will then be matched against the original proposal or business plan.

b) The region and agency will do a projection of the current year's Maintenance and alternate program spending as supported by agency records. A trend will then be forecast to determine actual costs for the full year.

c) Once the projection is completed and has been verified by regional staff, the agency will advise the region about the number of children being serviced who are at risk of neglect or abuse in accordance with provincial legislation and standards plus the number of children in alternate care out of the parental home, which had already been jointly verified.

d) The number of care days will then be established on the basis of children out of the parental home. The number of non-care days will also be established by determining the number of at risk children being serviced in their own homes. In this way, a per-diem cost is established for children in care by dividing the total cost of in care by the number of care days. Similarly, a unit cost will be determined for non-care by dividing alternate service costs by number of at risk children being serviced by the agency.

e) Although not used in the first renewal, these per-diem costs become a useful tool for future comparisons. During the next renewal, the agency and INAC will be able to track the per-diem costs to determine if they are in line with the expectations of the business plan. If they are not, remedial action will be necessary.

f) Following the first renewal, agencies are to report on these per-diem costs along with the other reporting requirements so that they become a part of the agency profile for FFOMs.

g) Because the current actual base has been established and projected through the renewal process, it is not necessary to adjust for surplus or deficits. Accumulated surpluses may be retained by the agency to use to deliver FNCFS, but, on the other hand, accumulated deficits must be borne by the agency.

h) Having determined the allocation for the renewed agreement, the agency and the region, in consultation with the province, will develop a new business plan, which will become the basis for annual reviews and, subsequently, the standard against which the next five-year renewal will be measured. This renewed business plan will be forwarded to the Peer Review Committee for comment and recommendation. As are new FFOM agreements, final approval will be given by the Director General of Social Policy and Programs.

i) If an agreement cannot be reached on a new plan or level of funding, the agency will revert to Contribution funding. In this event, the same conditions as outlined in Section 8.3.f.iii of Special Circumstances Review would apply.

12.0 Agencies Currently in Flexible Funding Pilot Programs

12.1 Effective April 1, 2004, agencies currently in pilot programs will continue to be funded under current levels of funding and current operational arrangements until a renewal can occur, no later than April 1, 2005. At that time, the agency will be brought in line with the methodology set out in this policy.

12.2 As of April 1, 2005, all agencies currently in flexible funding pilot programs will either be under this policy or obliged to return to Contribution funding.

Appendix B: Summary of Prevention and Protection Services – Contribution Authority

Contributions to support culturally appropriate prevention and protection services for Indian children and families resident on reserve

Objective: To support culturally appropriate prevention and protection services for Indian children and families resident on reserve, in accordance with the legislation and standards of the province or territory of residence. The anticipated result is a reduction in family violence and a more secure and stable family environment for children on-reserve.

Eligible Recipients: Prevention and protection services for children and families on reserve is one of the essential services that is funded by DIAND for reserve communities. In the Northwest Territories and Nunavut, there are provisions for these services in the territorial formula financing agreements. In the rest of the country, DIAND arranges for the administration of funding for these services with the Chiefs and Councils of Indian bands recognized by the Minister of Indian Affairs and Northern Development. Chiefs and Councils may opt to deliver programs directly; share services with other member communities in tribal/district councils or incorporated political/treaty/First Nation organizations; or enter into agreements for service delivery with other provincial or municipal agencies, private businesses or non-governmental organizations.

In these cases, contributions for prevention and protection services for children and families ordinarily resident on reserve may be flowed to Indian organizations designated by Chiefs and Councils (bands/settlements, tribal councils, or political/treaty organizations, child and family services agencies, or family violence prevention shelters for abused mothers and children); or public or private organizations engaged by or on behalf of Indian communities to administer the program of prevention and protection services for Indian children and families (private firms or organizations retained as co-managers or third-party managers designated by DIAND).

In some cases, where services are not administered by Chief and Council of Indian bands, DIAND may opt to enter into agreements for service delivery or cost-sharing with other federal, provincial or municipal agencies, private businesses or non-governmental organizations. With respect to child and family services, because of jurisdictional and liability issues, DIAND will only fund child and family services service providers mandated by the province or territory or the province or territory itself to provide services.

Self-governing First Nations that have included child and family services or family violence in their self-government agreements are not eligible recipients under this contribution authority for those activities included in the self-government agreement.

Stacking Provisions do not generally apply to payments for abuse prevention and protection services, as DIAND usually provides 100% of the abuse prevention and protection services funding. Any other government funding received will serve to reduce DIAND's contribution.

Child and Family Services: Recipients shall account for parental contributions, as specified by the provincial or territorial legislation and standards, and apply these first towards maintenance costs. DIAND's reimbursement of maintenance costs shall be reduced by any parental contributions.

The Children's Special Allowance (CSA) will be applied exclusively against the eligible expenses under the *Children's Special Allowance Act* in accordance with section 3(2) of the *Act*. In those cases, the recipient shall document the diversion of funds and be prepared to furnish copies to DIAND when requesting reimbursement of maintenance costs.

Third Party Delivery: Where the recipient delegates authority or transfers program funding to an agency (i.e., an authority, board, committee or other entity authorized to act on behalf of the recipient), the recipient shall remain liable to the Minister for the performance of its obligations under the funding agreement. Neither the objectives of the programs, nor the expectations of transparent, fair, and equitable service may be compromised by this delegation or transfer of funds.

The recipient shall adhere to the management and accountability regimes outlined in the agreements, and include:

1. clear statements of expectations, roles and responsibilities (including financial roles and responsibilities) for the initial and final recipients;
2. transparent and open decision making processes; demonstration that the eligibility requirements are being met;
3. provision for ongoing assessment by DIAND to ensure that performance is in line with expectations and that the initial and final recipients exercise due diligence;
4. provision for DIAND's right of access to relevant documents and premises of the initial recipient and, where warranted, the final recipient; requirements for compliance and financial audits;
5. provision for DIAND to receive regular financial and performance reports from the initial recipient, certified by an officer of the company, including if appropriate: annual audited financial statements with an external auditor's report and opinion; specification of admissible administrative costs that can be applied to the contribution by the initial recipient based on an accounting of expenses; and any completed evaluations funded in whole or in part by the transfer payment program;
6. provision that DIAND obtains from the initial recipient, or has ready access to, a copy of all signed agreements with final recipients; and
7. a description of the redress provisions for ultimate recipients affected by decisions of the initial recipient; provision for appropriate reviews, program evaluations, and audits.

Application Requirements: Before entering into a funding arrangement, DIAND shall confirm its authorities to enter into an agreement with the recipient and to fund the proposed activities. In most cases, child and family services (including family violence prevention) would be one of several public services to be funded by DIAND for a particular recipient, and there would also be an expectation of an on-going relationship between DIAND and the recipient. The recipient, therefore, shall be required to provide a complete review of its accountability and management processes and systems. This review shall be based on appropriate accountability and management control frameworks.

Following the assessment, DIAND may also work with the recipient to prepare a development plan. Such a plan shall address any gaps identified by the assessment and be appended to the agreement. The development plan shall remain an integral part of all future agreements until all the recommended policies and procedures have been implemented.

Recipients shall comply with the *Conflict of Interest and Post-employment Code for the Public Service* and the *Conflict of Interest and Post-Employment Code for Public Office Holders*. Where a recipient employs or has a major shareholder who is either a current or former (in the last twelve months) public office holder or public servant in the federal government, compliance with the Code(s) must be demonstrated.

Initial recipients are required to demonstrate the eligibility of final recipients for child and family services (including family violence prevention) funding, according to the following criteria. Final recipients must:

a) ordinarily reside on reserve;
b) be in need of child and family services (as defined by provincial legislation and standards and in accordance with provincially mandated child welfare agency needs assessments), and/or family violence prevention support (in accordance with the needs assessment of police, child and family services agency staff, family support staff, health centre staff, or emergency shelter staff);
c) have a demonstrated requirement for child and family services support (including family violence prevention) and no other source of funding to meet such needs.

For the purposes of providing child and family services (including family violence prevention), ordinarily resident means that the final recipients: usually live at a civic address on reserve, or are children in joint custody who live on reserve most of the time.

Students continue to be considered ordinarily resident on reserve if they return to live on reserve with their parents, guardians or maintainers during the year, even if they live elsewhere while attending school . The residence of a child who comes into the care of a mandated child welfare authority is derived from the residency of the child's parent or

guardian at the time the child is taken into care; such children shall be deemed to be ordinarily resident on-reserve for as long as such care is required and continues to be unavailable on-reserve.

For the purpose of providing Child and Family Services and or Family Violence programs and services, residents of the following communities are considered to be ordinarily resident on-reserve: Kitcisakik - Canton de Hamon; Long Point First Nation - Winneway; Pakua Shipi - Saint-Augustin; Kanesatake - Oka; Barriere Lake - MaïganAgik; Aroland; Animbiigoo Zaagi'igan Anishina; Sandpoint; Nibinamik; McDowell Lake; Mathias Colomb Cree Nation - Granville Lake; Mathias Colomb Cree Nation - Marcel Colomb (Lynn Lake); Nisichawayasihk Cree Nation - South Indian Lake; War Lake First Nation - Ilford; Fox Lake First Nation - Gillam; Ocean Man; Athabasca Chipewyan First Nation (ACFN) - Ft. Chipewyan; Mikisew Cree First Nation - Ft. Chipewyan; Little Red River Cree Nation (LRRCN) - Garden River; FT. McKay First Nation; Lubicon Lake Band - Little Buffalo; Tsay Keh Dene First Nation (Ingenika Band); Old Massett Village Council; Lax Kw'alaams; Iskut; Lake Babine; Wet'suwet'en - Bromon Lake; Whe-La-La-U; and all Indian Residents of the Yukon.

Child and Family Services: DIAND shall also confirm that: (1) an agreement is in place between the province or territory and the eligible recipient which meets the requirements of the national First Nations Child and Family Services policy; (2) in the case of a First Nation Child and Family Services Agency, that it is mandated by the relevant province or territory, and that it is incorporated pursuant to provincial or federal legislation (as verified by a copy of their incorporation documents). Where it is agreed that DIAND will fund Chief and Council for Child and Family Services, the Chief and council must demonstrate that they have an agreement in place with a mandated child and family services agency or the relevant province or territory to use 100% of the funds to purchase services. In the case of a non-profit society, a copy of the documentation demonstrating that they are mandated by the province or territory to provide child and family services and copies of current incorporation documents which confirms that they are a society in good standing in their province or territory; (3) the recipient maintains the minimum insurance required under provincial legislation or regulations, or as may be required by DIAND for the provision of child and family services; and, (4) where the province or territory is providing the services, the province or territory

must provide documentation that the services are for an eligible beneficiary.

Subject to the legislation and standards of the province or territory of residence, child and family services agencies may continue to provide services to final recipients who have reached the age of majority until those recipients have completed a course of education or treatment plan that was underway at the time of attaining their majority.

Family Violence: Family Violence Prevention Projects must demonstrate that they promote a reduction in family violence and support a more secure environment for families on-reserve, through the promotion and public awareness, education campaigns, conferences and workshops, stress and anger management seminars, counselling, training, support groups and community needs assessments subject to the availability of funding.

Social Development Program Management Infrastructure Initiative: Eligible recipients will confirm they are Chiefs and Councils of Indian Bands recognized by the Minister of DIAND and/or First Nation organizations with a population catchment of at least 1400. No two entities will be funded for the same purpose for the same population catchment area. In addition, the proposal under this initiative will need to meet the following criteria:

1) integrated delivery of multiple social development programs;
2) show interface/linkages with provincial/territorial and/or federal programs; and,
3) demonstrate the capacity to perform at least one of the following functions:
   - test the effectiveness of sectoral or block funding;
   - support training for community level staff;
   - standardized procedures and support for compliance;
   - integrated and strategic approach to public accountability;
   - establish professional standards or provide professional development services;
   - support policy adaptation and interpretation and program design;
   - support/provide coordinated case-management services;
   - develop conceptual frameworks for indicators or integrated databases to support statistical development;

- modernize information technologies and develop integrated databases;
- develop community based indicators of program performance;
- report on data and analysis, and its importance to communities; or
- data collection and management activities required for program monitoring, planning, reporting and evaluation; maintenance and upgrading of systems.

Eligible Expenditures:

Child and Family Services:

Maintenance - Institutional Maintenance consists of child maintenance in a foster home, group home, or institution. Child Maintenance is the actual cost of maintaining Indian children ordinarily resident on reserve, and/or non Indian children ordinarily resident on reserve that are not receiving protection services from the relevant province or territory, who are taken into care in accordance with provincially approved legislation, standards and rates for foster home, group home and institutional care. This includes non-medical services to children with behavioural problems and specialized needs; purchases on behalf of children in care; and other provincially-approved purchases not covered by other funding sources.

Per diem costs for children in care in foster homes, group homes and institutions may include professional services not covered through other sources of funding where the child may have established eligibility.

Development/Devolution of Indian Child and Family Services agencies – allowances for assessment, community consultations, negotiation of agreements, research and development of service standards, hiring of staff, establishment of agency office, purchasing of equipment and furniture, orientation and initial training of local committees, boards of directors and agency staff. Payments under this activity may be made as a Flexible Transfer Payment.

Indian Child and Family Services Agency Operations – salaries, travel, and benefits for agency staff (e.g.: agency director, senior management staff, supervisory staff, support staff, protection and prevention workers, and resource workers); expenses related to board/committee

operations; professional development services; special needs assessment and testing; legal services fees and costs; paraprofessional services; family support services; agency administration including non-medical travel costs, rent, office expenditures including computer hardware and software, audits, monitoring and evaluation (i.e. costs of preparing agency evaluations). Eligible expenditures may also include non-medical services designed to keep families together and children in their own homes (e.g.: homemaker and parent aid services, mentoring services for children, home management, non-medical counselling services not covered by other funding sources, group and individual activities designed to promote better parenting skills). Payments under this activity may be made as a Flexible Transfer Payment.

Flexible Funding of Maintenance - Eligible recipients may apply by submitting a plan to DIAND to enter into a flexible funding arrangement for child and family services Maintenance. The purpose of this arrangement will be to provide increased flexibility for agencies to re-profile Maintenance funding, under a Flexible Transfer Payment, in order to provide increased resources for prevention. Following an assessment by the region, final approval of all flexible funding arrangements must have the concurrence of the agency in question, DIAND region and Headquarters.

Family Violence Prevention:

Family Violence Prevention - protection and prevention services may include: temporary shelter in First Nation shelters built on- or off-reserve, in commercial accommodation or provincial or private non-profit shelters; counselling for transition back into the community and other intervention activities; prevention activities such as public education and awareness activities; and such other activities and services operated in accordance with relevant provincial/territorial laws and standards.

Family Violence prevention expenses include: operating costs for First Nation family violence prevention shelters, including rental of temporary shelter; salaries and training for professional or para-professional family violence workers and administrators and related office costs; data collection and management activities required for project monitoring, planning, reporting and evaluation; funding to support the National Aboriginal Circle Against Family Violence to

provide and coordinate training, co-ordination of programs and services, seminars, conferences, research projects, and professional networking.

Projects – allowances for community-based family violence prevention initiatives, public awareness, education campaigns, conferences and workshops, training, stress and anger management seminars, support groups and community needs assessments (i.e. costs of books, pamphlets and materials, office expenditures, travel, facilitator per diem, and refreshments).

Shelter Operations – salaries and benefits for shelter professional staff (i.e. shelter director, assistant director, and family violence counsellors); professional development services; management of shelter committees and providing advice to band administrations; paraprofessional services (shelter support workers); agency administration (secretarial staff, travel costs, office expenditures); monitoring and evaluation (i.e. costs of preparing agency evaluations); and, other operational costs of maintaining families or individuals eligible for protection services (i.e. food, shelter, security systems, counselling, psychological services, career planning, referrals to other social agencies, personal items, special needs, emergency clothing, travel, and recreation).

Off Reserve Family Violence Prevention Emergency/Transition /Second Stage Shelter – If it is necessary for the safety of individuals or families to be placed off-reserve, the eligible expenditures are the actual costs of maintaining individuals or families in family violence prevention shelters off reserve, based on provincial/territorial per diem rates and rules (i.e. food, shelter, counselling, psychological services, career planning, referrals to other social agencies, personal items, special needs, emergency clothing, travel, and recreation).

Notes: Rent and maintenance costs for facilities located on reserve are not eligible expenditures under this contribution.

Social Development Program Management Infrastructure Initiative: Eligible recipients will confirm they are Chiefs and Councils of Indian Bands recognized by the Minister of DIAND and/or First Nation organizations with a population catchment of at least 1400. No two entities will be funded for the same purpose for the same population

catchment area. In addition, the proposal under this initiative will need to meet the following criteria:

1) integrated delivery of multiple social development programs;
2) show interface/linkages with provincial/territorial and/or federal programs; and,
3) demonstrate the capacity to perform at least one of the following functions:
   - test the effectiveness of sectoral or block funding;
   - support training for community level staff;
   - standardized procedures and support for compliance;
   - integrated and strategic approach to public accountability;
   - establish professional standards or provide professional development services;
   - support policy adaptation and interpretation and program design;
   - support/provide coordinated case-management services;
   - develop conceptual frameworks for indicators or integrated databases to support statistical development;
   - modernize information technologies and develop integrated databases;
   - develop community based indicators of program performance;
   - report on data and analysis, and its importance to communities; or
   - data collection and management activities required for program

Maximum Amounts Payable: Maximum amounts payable under this contribution program are based on the service standards and rate schedules of the province or territory of residence.

Child and Family Services: In accordance with the current operational formula for the operation of an agency, the maximum payable to a single recipient is $13.8 M per annum. The costs of maintaining eligible children in foster, group home and institutional care are reimbursed on actual costs; actual per diem rates are established by the province or territory, up to $845 per eligible child per day. Maximum payable to province or territory or territories who are delivering services in the absence of FNCFS agencies is $30.0 M per annum. Where eligible recipients have a flexible funding maintenance agreement with DIAND, the maximum allocation is not to exceed $15 M per annum.

For the developmental/devolution costs associated with establishing a new FNCFS agency, a one-time cost for pre-planning of up to $11,101 per group of bands forming an agency, plus $1,665 per member band; a one-time cost for planning of $88,808 per group of bands forming an agency, plus $3,330 per member band, and; a one-time cost for start-up of $185,388 plus 25% of first year operational funding. Unit costs for the development/devolution of FNCFS agencies are based on the elements specified in the national funding formula.

Maximum amounts payable may increase annually by a factor of no more than two percent (2%).

Family Violence Prevention: Maximum amounts payable under this contribution program are based on the service standards and rate schedules of the province or territory of residence.

Family Violence Prevention: The maximum amount payable for a single Family Violence Project is $900,000.00 annually. Unit costs for family violence prevention projects are based on a combination of project proposals and per-capita distribution. In several regions, funding is provided to regional organizations which then distribute project funding to Bands on a per capita basis and/or according to the proposals it has received.

In the remainder, project proposals are submitted directly to DIAND regional offices. All project-based proposals are required to meet specific criteria which are developed by DIAND and the body that administers the program, if applicable.

Violence Shelters – Shelter is $388,000.00 annually.

Off Reserve Family Violence Prevention Emergency/Transition/Second Stage Shelter – up to $132 per person per day to a maximum stay of fourteen weeks, or $12,936 for emergency / transition shelter, and up to $10,950 per year for second stage shelter. Unit costs for emergency family violence prevention shelter services provided off reserve are based on provincial / territorial rate schedules. Emergency/Transition shelter may be provided for up to fourteen weeks; second-stage shelter may be provided for up to one year.

Maximum amounts payable may increase annually by a factor of no more than two percent (2%).

Repayable Contributions: These provisions do not apply because no business will receive contributions which are intended to generate profits or to increase the value of the business.

Due Diligence: DIAND has procedures and resources for ensuring due diligence in approving these contributions, verifying eligibility and entitlement, and for managing and administering the program.

Approval: Authority to sign and amend agreements is delegated to directors responsible for these programs.

Basis and Timing of Payments: Payments are made monthly based on a cash flow forecast from the recipient or by the reimbursement of actual costs. Where advance payments are necessary, they are limited to the immediate cash requirements of the recipient and do not exceed the payment frequency set out in the provisions of the Cash Management Policy.

DIAND is seeking an exemption to the requirements in sections 7.6.3 and 7.6.4 of the Policy on Transfer Payments on holdback provisions, on the basis that contributions for culturally appropriate prevention and protection services to residents of reserves are a major component of an ongoing funding relationship between DIAND and recognized Indian bands. This expectation of an ongoing funding relationship is sufficient incentive for recipients to account fully for all expenditures incurred. It also helps to minimize the risk associated with the recipient not using the funds for the purpose contributed. Contribution Agreements, Comprehensive Funding Agreements, and Flexible Transfer Payments, therefore, do not have explicit holdback provisions. Instead, recipients are advised that "funding otherwise payable under this Arrangement may be withheld by the Minister, if the Audit and reports are not provided by the Council to the Minister as required under this Arrangement or its predecessor.

Any amounts so withheld shall be paid by the Minister to the Council, within sixty (60) days of the submission of the reports."

Funding Level Changes: DIAND is seeking an exemption to the requirements in section 7.3.6 of the Policy on Transfer Payments on provisions in the event that departmental funding levels are changed by Parliament, on the basis that funding agreements already contain a requirement that any payment made is subject to there being an appropriation by Parliament for the fiscal year in which the payment is made. This clause is based on section 40 of the *Financial Administration Act*, which also provides sufficient authority for DIAND to reduce or cancel agreements and payments in the event that Parliament changes departmental funding levels.

Duration: These terms and conditions are in effect to March 31, 2006.

Results-based Management and Accountability Framework and **Risk-Based Audit Framework:** DIAND is seeking an exception to section 8.1.1 (clauses xv and xvi) of the Treasury Board Policy on Transfer Payments, the requirement for the Results-based Management and Accountability Framework (RMAF) and the Risk-Based Audit Framework (RBAF). This request is premised on the fact that DIAND is currently in the process of finalizing a review of all its A-base budget programs and the organizational structure used to manage and administer these programs. The Department's management and accountability structure will change with the creation of a Regional Operations Support Sector. This change will enhance the Department's efforts to ensure that the guiding principles outlined in the Treasury Board's report entitled *Results for Canadians,* the Treasury Board Policy on Transfer Payments as well as Treasury Board's Modern Comptrollership initiative will be fully implemented.

It is anticipated that the results of this A-base review and the departmental re-structuring, will be finalized by late August or early September. At that time, the social development program's RMAF and RBAF reports can be finalized in a manner that facilitates strategic alignment with the department's revised management and accountability structure.

Other: DIAND has the capacity to manage this program, for which the planned direct expenditure in 2003-2004, is $385 million in Vote 15 (Grants and Contributions) in the department's reference level.

Appendix C: Child and Family Services Compliance Review Process

1.0 Purpose

This directive provides national direction to assist the regions and their staff with the conduct of First Nations Child and Family Services (FNCFS) Compliance Reviews.

This directive helps fulfil Indian and Northern Affairs Canada's (INAC/ the department) accountability requirements to Parliament as well as its obligations under the *Financial Administration Act* (FAA). It provides guidance to departmental staff on the expenditure of public monies, an essential managerial responsibility (e.g., section 34, FAA).

The objective of FNCFS Compliance Reviews is to confirm eligibility for funding and determine compliance with Cabinet and Treasury Board Authorities/Terms and Conditions, including the introduction of maximum amounts allowable under maintenance effective September 27, 2001, and with provincial rates for children in alternate care (i.e. foster care, group home care and institution care) as set out in the funding agreements. This includes providing support to all First Nations, Tribal Councils, Third Party or the Province (referred hereinafter as Administering Authorities) who administer FNCFS under a reimbursement of actuals contribution regime, in the effective and efficient operation of FNCFS.

2.0 Scope

This directive applies to all compliance reviews on FNCFS where the funding of FNCFS is based on INAC reimbursing to an Administering Authority the actual costs for maintenance expenditures associated with FNCFS (referred to hereafter as a "reimbursement of actuals contribution regime").

This directive applies to all INAC employees as well as persons under contract to INAC who conduct such compliance reviews, to all Administering Authorities who administer FNCFS under a reimbursement of actuals contribution regime and to all provincial agreements for the provision of FNCFS.

3.0 Authorities and References

The FAA, Cabinet Record of Decision, and Treasury Board regulations set out the Minister's authority with respect to the expenditure of public monies including grants and contributions.

4.0 Issuing authority

This directive is issued under the authority of the Assistant Deputy Minister, Corporate Services.

5.0 Definitions

Alternate Care: Placement outside of the parental home in foster care, group home care or institutional care placements, also referred to as maintenance.

Administering Authority: The body/organization responsible for providing Child and Family Services for Indian children normally resident on reserve. This can include a First Nation, a Tribal Council, or other Third Party acting on behalf of the First Nation, the Province or INAC.

Client: The Indian child normally resident on reserve and placed in alternate care for whom service is being provided under Provincial Legislation and for whom INAC has accepted financial responsibility.

Compliance Review: A review by INAC of the administration and operation of the FNCFS program administered by the Administering Authority to ensure that the program is being delivered in accordance with INAC's policies which reflect Treasury Board and Cabinet authorities.

Eligibility: Describes the requirements a client or recipient must meet in order to be entitled to a service that is provided with funding from the department.

Indian: "Indian" means a person who pursuant to the *Indian Act* (R.S., 1985, c. I-5, s. 2) is registered as an Indian or is entitled to be registered as an Indian.

Funding Agreement: A document containing the terms and conditions by which a transfer payment is made by INAC to an Administering Authority for the delivery of programs and services by the Administering Authority. Types of agreements include Contribution Arrangements (CA), Comprehensive Funding Arrangements (CFA), Financial Transfer Agreements (FTA)/CFNFA-Non-Core Agreements or Provincial Funding Agreements.

Maintenance: For the purposes of INAC funding, per diem costs (excluding any other support costs which are funded through the Operations funding formula) for eligible Indian children normally resident on reserve and placed in alternate care (i.e. Foster, Group, Institutional).

Recipient: The FNCFS administering authority responsible for the delivery of Child and Family services to clients. This can include a First Nation, a Tribal Council, or other third party acting on behalf of the First Nation, the Province or INAC.

Reimbursement of Actuals Contribution Regime: Funding approach by which INAC will reimburse the Administering Authority for all eligible FNCFS maintenance expenditures. Note this does not include any and all payments made by the Administering Authority. It is restricted to eligible payments for eligible clients/recipients based upon the provincial rates for maintenance, subject to Treasury Board approved maximum amounts. This regime also allows for the reimbursement to INAC of advances over the allowable eligible FNCFS maintenance expenditures.

Remedial Action: A series of steps set out in the Funding Arrangements Intervention Policy, and within a funding agreement, that confirm and correct problems which come to exist or are arising, with respect to an Administering Authority meeting its obligations.

Terms and Conditions: The obligations between the parties to a funding agreement or other documents referred to within the funding agreement.

6.0 Policy Statement

The basic principles to be followed in the administration and monitoring of FNCFS are as follows:

a) INAC's responsibility:

- as a matter of policy, INAC has accepted financial responsibility to fund FNCFS (using the Government of Canada funding principles and definitions) under Provincial Child Welfare legislation for Indian Children normally resident on reserve at time of apprehension or placement, or in the case of an agreement with the Province, the Province will be funded as per the administrative agreement in place with the Province;

- is to ensure that the tripartite and dual bilateral agreements with the Administering Authorities are consistent with the departmental authorities;

- is to ensure that all FNCFS funding agreements with the Administering Authorities are consistent with departmental authorities including Treasury Board approved Terms and Conditions for Child and Family Services;

b) Administering Authorities' responsibility:

- provide proof that the child is eligible for funding and to document the level of the financial support required;

- to manage FNCFS in accordance with the applicable provincial laws, regulations and rules and to put in place accountability mechanisms on the management of Child and Family Services;

- ensure compliance with departmental authorities, and National Program Policy 20-1 Chapter 5 with respect to INAC funding of FNCFS;

- adherence to the terms and conditions of Administrating Authorities agreements with INAC and the Provincial Governments with respect to the provision of FNCFS for Indian children normally resident on reserve;

c) As the authority to fund Administering Authorities for maintenance is on a reimbursement of actuals contribution regime and approved provincial rates, subject to Treasury Board approved maximum amounts, as paid to the Foster/Group/Institution, there cannot be a year-end surplus in the maintenance account.

The purpose of conducting compliance reviews is to:

a) confirm client eligibility

b) enable the department to meet its accountability responsibilities to Parliament for the expenditure of public funds under section 34 of the FAA;

c) determine and ensure compliance with provincial rates, subject to Treasury Board approved maximum amounts;

d) provide support to Administering Authorities in the effective and efficient operation of FNCFS.

INAC has no responsibility for services to First Nations members normally living off reserve and compliance reviews are not to be conducted upon these services. However, regions should consult with the Province to ensure that the provision of these services off reserve are not jeopardizing the provision of INAC funded FNCFS on reserve, and advise the Province and First Nations that INAC operations funding is to be utilized for on reserve services only.

6.1 Eligibility Criteria

INAC accepts financial responsibility to fund FNCFS under Provincial Child Welfare legislation for Indian Children normally resident on reserve at time of apprehension or placement, or in the case of an agreement with the Province, the Province will be funded as per the administrative agreement in place with the Province.

The eligibility of the Administering Authority is determined by the funding agreement and delegation agreement with the provincial authority for Child and Family Services.

7.0 Responsibilities

Except where otherwise indicated, the Regional Directors General are responsible for implementing this directive.

This directive represents a standard which regions must implement. There is nothing in the directive which limits regions from exceeding (e.g., more frequent reviews, larger samples, etc.) the requirements of this directive, subject to the terms and conditions of the funding agreement.

The Province is responsible for the monitoring of the "quality of service" of First Nation and Third Party Administering Authorities as the Province delegates the authority only, therefore having the ultimate responsibility for the appropriate application of the program.

The Finance Branch at headquarters is responsible for the interpretation of this directive and for the insertion of any necessary changes.

8.0 Review process

Manuals

A basic requirement of a complete compliance process is the existence of regional manuals or provincial/territorial directives that reflect the applicable provincial/territorial terms and conditions including rates and guidelines, subject to compatibility with federal legislation and INAC's authorities for FNCFS including maximum amounts payable. However, it should be clearly understood that INAC's funding authority is based upon Cabinet and Treasury Board authority and not Provincial definitions.

Manuals Time Frame

a) Regions have ninety (90) days from the date of provincially/territorially announced changes in terms and conditions, including rate changes, to update their manuals and advise the Administering Authorities of the changes.

b) However, to the extent that the provincial/territorial changes are consistent with federal legislation and INAC's authorities, the changes must be put into effect as of the same date as the provincial/territorial changes go into effect. Regions are to ensure that there is a mechanism in place to notify the Administering Authorities immediately of any such changes.

Notification of an on-site review

INAC will provide Administering Authorities at least two (2) weeks in advance (or less if mutually agreed to) with written advance notice of an on-site compliance review to be conducted in the up-coming calendar year and will arrange a mutually agreed upon date to conduct the on-site compliance review. Arrangements are to be made to ensure that the documentation required for the review, as well as the appropriate Administering Authority and representatives, are available to assist in the review. Regions should make every effort to include provincial representation in the conduct of an on-site review or to coordinate the on-site review with the provincial program review.

Review Sample Selection - On-Site and Provincial

A systematic approach should be used in the completion of compliance reviews. Two sampling methodologies are proposed. (Note, in Ontario, if the Province has an approved sampling methodology, then it is to be used in Ontario reviews.)

Option 1:

A random selection of the files to be reviewed could be determined as follows:

	Formula to be used for Case files and Foster files	Caseload Size Example				
		40	80	190	250	320
1	100% of first 25 files	25	25	25	25	25
2	50% up to the next 100 files	8	27	50	50	50
3	25% of files over 100	0	0	23	38	55
	Total Files to Review	33	52	98	113	130

Option 2:

Regions can use the sampling methodology developed by the Corporate Information Management Directorate (CIMD) of INAC as contained in the paper entitled "Program Review for Social Assistance: Sampling Guide" dated October 1995.

Verification
Regions should take reasonable care in verifying client eligibility and level of support. This will include verifying that foster parents are licensed or authorized in accordance with Provincial requirements to provide the necessary level of care.

8.1 In-Office Reviews

Eligibility Review
The in-office review includes on-going verification of client eligibility as per Section 6.1, that the client for whom the department has been billed is an Indian normally resident on reserve and has been placed in alternate care under the provision of provincial child welfare legislation. The information required to establish client eligibility would include but not be limited to: client's name, client's band/family/member number, client's date of birth, date of client's admission into care, client's legal status, and residency of client at time of apprehension, etc.

Where INAC itself is carrying out data sharing procedures between INAC and provincial/other government departments databases, a Memorandum of Understanding (MOU) or some other agreement is required between the region and the Province/other government department.

Verification of Ongoing Claims for Reimbursement
Regions are to ensure that their office procedures include a clearly defined process in the region to verify ongoing claims for reimbursement. This process must also include a notification process to advise the Administering Authority of the reasons why any portion of the claim has not been reimbursed and what corrective action, if any, is required with respect to the refused amounts.

Documentation required to support the amount claimed by the Administering Authority, in addition to the client information under eligibility would include but not be limited to: dates in care, type of care, daily per diems, and any other child specific maintenance charges that are eligible for reimbursement.

Where the supporting documentation is insufficient to substantiate the Administering Authority's claim for reimbursement, regions will not reimburse these Administering Authorities expenditures until the supporting documentation has been received and verified.

8.2 On-Site Reviews

FNCFS Compliance Reviews will be conducted in a respectful, supportive and timely manner involving both the Administering Authority, INAC and where possible, provincial representatives, throughout the process with the endeavour to resolve areas of concern as they are identified, thereby minimizing the number of follow-up items to the greatest extent possible.

The funding agreement terms and conditions require Administrating Authorities to open child care files for compliance reviews for the purpose of confirming eligibility and adherence to established standards and reviewing the quality of data which INAC uses for resourcing, operations, accountability, policy/planning and statutory requirements.

In the **Ontario Region**, FNCFS is administered by the Province of Ontario. Compliance reviews are carried out by the Province under provincial legislation. The Ontario Region is to ensure that the terms and conditions of the 1965 Ontario Indian Welfare Agreement are adhered to and that the reviews of First Nation Child and Family Services Agencies and Non First Nation Child and Family Services Agencies (providing services to First Nations) meet the objectives of this directive.

Region should request from the province a copy of the report outlining the findings of the compliance reviews.

Review Team

The review team can be composed of INAC employees in partnership with the FNCFS and Provincial authorities. Other means to complete the FNCFS compliance reviews are acceptable; these include, but not limited to, a third-party consultant, Consulting and Audit Canada, or other suitable persons or firm.

Components of the Review

The on-site review is to ensure consistency with invoicing to the department. The review is to be composed of, but not limited to, four distinct activities:

a) review of case files;

b) review of foster parent files;

c) an administrative review of the office practices of the First Nations Administering Authority and the associated accounting for payments made on behalf of eligible clients;

d) group/institutional care facilities review. This review would be for financial verification and confirmation that there is documentation that the facility meets the provincial requirements.

File Review

The files selected for review should ensure that the information being reviewed is consistent between the various files for each child in care, (i.e. case files, foster files, etc.) and should reflect the same dates in care, type of care, billing information, etc.

a) A complete case file must include, but not be limited to:

- verification that the child is an Indian normally resident on reserve at time of apprehension or placement or in the case of an agreement with the Province, the Province will be funded as per the administrative agreement in place with the region;
- verification of the legal status under provincial legislation (i.e. courts documents or voluntary care agreements);
- verification of placement type, caregiver and duration of placement;
- verification that maintenance rates and special needs rates for children in alternate care (out of parental home) are consistent with applicable provincial rates and policies and Treasury Board approved maximum amounts;
- verification that provincial regulations for follow-up and reevaluations are adhered to.

b) A complete foster parent file review will include, but not be limited to:

- verification that foster parents have met provincial requirements for approval (training and/or licensing) and have adequate liability insurance included where appropriate;
- verification that foster parents are approved to provide the level of care required for the child in alternate care;
- verification that foster parents' per diem and special rates are consistent with provincial policies and practices and Treasury Board approved maximum amounts.

c) The administrative review is completed to assess the financial and administrative operations of the First Nation and Third Party Administering Authority to ensure that they comply with acceptable office practices. A complete administrative review will include, but not be limited to:

- current delegation of authority under applicable legislation;
- liability insurance consistent with provincial requirements;
- verification that the society/agency remains in good standing within federal or provincial legislation;
- assessment of financial control (process for cheque authorization, signing and reconciliation);
- verification that INAC invoicing is consistent with actual disbursements to care providers;
- verification that INAC is billed in the appropriate category and level of care;
- internal operating procedures are documented, for example, current child welfare policy manuals and other reference manuals, personnel policies, job descriptions and organization charts;
- child welfare files are maintained in a confidential and secure environment;
- follow up on previous program and/or financial reviews.

d) Confirmation that group/institutional care facilities, including confirmation of provincial licensing/approval requirements, care invoicing and adequate liability insurance, are consistent with provincial requirements and that the per diem rate is consistent with the level of services provided and with Treasury Board approved maximum amounts.

Debriefing
Once the on-site review is finished and before leaving the site, Administering Authorities and representatives are to be debriefed on the preliminary findings of the review. Where appropriate, Chiefs and Councils and/or society/agency board member (whoever the funding agreement is with) should also be debriefed on-site. Written confirmation of these findings will be provided to the Administering Authority. If necessary, a follow-up review should be done, using the same procedures as the first but covering only those problem areas identified in the first review.

Resolution of Non-Compliance
The First Nation Administering Authority should be given every opportunity to address and resolve on-site any areas of non-compliance identified. The object is to minimize the number of follow-up items to the extent possible.

8.3 Provincial Reviews

The purpose of the Provincial Review Process is to ensure that INAC payments to the Province are only for those children for which INAC accepts financial responsibility and that INAC is being billed appropriately according to the terms of the provincial agreement and Treasury Board approved maximum amounts.

Review Team
The review team should include representatives from both the Province/Territory and INAC. Other means for INAC representation to complete the FNCFS compliance reviews are acceptable; these include, but not limited to, a third-party consultant, Consulting and Audit Canada, or other suitable persons or firm.

Components of Review
The review process is to be carried out in the manner that most appropriately reflects the operational structure of the region and the agreement between the department and the Province.

File Review
A file review must be carried out to ensure that the directive, funding authorities and/or provincial agreements are being adhered to.

The file review must reconfirm eligibility of the client and all other aspects of the funding formula contained in the provincial agreement.

This process must verify that information observed in the file review was appropriately transferred to the billing and that the appropriate provincial/territorial rate, subject to Treasury Board approved maximum amounts, was charged for the service provided.

Debriefing
Observations and findings must be presented to the review team for initial comment. The final report should include pertinent observations or outstanding differences remaining between the parties.

A copy of the final report, along with proposed actions and recommendations to improve the process, must be provided to the Province/Territory being reviewed.

Resolution of Non-Compliance
The Province should be given every opportunity to address and resolve any areas of non-compliance identified.

8.4 Financial Impact of Compliance Activity

Regions are to implement and maintain a system to capture and report on: the difference between an Administering Authority's claims for reimbursements and actual reimbursements (i.e. impact of in-office review); and amount recovered as a result of on-site reviews (if applicable).

8.5 Dispute Resolution and Records

Where the Administering Authority wishes to dispute decisions made during monthly verifications or on-site compliance reviews, such disputes should use the normal dispute resolution process in the region.

Maintenance of Records
In order to facilitate compliance monitoring and the processing of appeals, the Administering Authorities are required to maintain clients case files for at least three years after payments are made or for a longer period if required by provincial law.

8.6 Refusal of Access

Refusal of a First Nation Administering Authority to permit access to the files so that the on-site review can be completed will result in the immediate application of remedial action as permitted under the terms and conditions of the funding agreement. Such remedial action will continue in effect until the on-site compliance review has been completed.

Refusal of a Province to provide the necessary documentation to audit the provincial billing will result in the immediate application of remedial action as permitted under the terms and conditions of the provincial agreement.

8.7 Remedial Action (for items within INAC funding authority)

a) Where the findings of the review identify items or areas of non-compliance, where appropriate, the Administering Authority is to be given a reasonable period of time to take remedial action to correct these items. The length of time to be provided to the Administering Authority to take corrective action is dependant upon the extent and nature of the non-compliance problem.

b) Depending upon the extent of non-compliance, the Administering Authority can be requested to provide copies of the missing or incomplete documentation for claims where the child was eligible for funding. Alternatively, the region may arrange a follow-up visit to assess the corrective action taken on all the files identified as not being in compliance during the original review.

c) If corrective action has not been taken by the Administering Authority, the region is to initiate recovery of the payments to the Administering Authority for all files not in compliance for the extent of payments which are not in compliance. The recovery period is not limited to a set time period. Recovery actions are to be based upon the time the non-compliance began. Recovery is to be limited to only those files which have been reviewed. If, at any time, the compliance team identifies significant or systematic errors during the review, the sample should be expanded, if necessary to 100 percent, if anomalies warrant such an expansion. The Administering Authority is not to be reimbursed for clients where the file review

for that client indicated non-compliance, until such time as the Administering Authority has demonstrated that the file is in compliance.

d) In cases where there is evidence of a possible criminal act, the region shall consult with or refer such cases to the proper police authorities. Such action in itself does not prove a possible criminal act. It is an action to ensure that the evidence is considered by those mandated under law to consider such information in accordance with due process of law. (Refer to the February 26, 1998, letter from the Transfer Payments Directorate, Finance Branch, headquarters, entitled "Management of Allegations Involving First Nations".)

e) Where cases have been referred to the police, and once the police and crown attorney have indicated that such activities will not jeopardize the police investigation and/or potential prosecution, regions should continue with remedial action as set out in above paragraphs a) to c). Regions should consult with the police authorities on an ongoing basis on cases which have been referred to the police.

8.8 **Frequency**

The departmental compliance methodology is composed of a review and verification of ongoing claims for reimbursement supplemented by periodic on-site reviews of these transactions.

The in-office verification of client eligibility is to be done on an on-going basis along with the billing verification. Detailed confirmation of client eligibility will be done on-site as part of the on-site compliance review process.

In order to minimize any detrimental impact arising from recoveries under Section 8.7 c), on-site compliance reviews of every First Nation funded under a reimbursement of actuals contribution regime are required at least every three years in all regions subject to the risk assessment criteria outlined in Annex A.

Where provinces conduct regular program reviews of FNCFS Agencies, regions should endeavour to conduct on-site reviews at the same time.

The review and verification of ongoing claims for reimbursement are part of an effective compliance regime. This activity may result in the identification of Administering Authorities which should be subjected to further reviews as a result of anomalies in the ongoing claims.

8.9 Reporting

Regions are to report annually on their compliance activity results from the prior fiscal year. This reporting will normally take place in the first quarter of the fiscal year through the performance indicator exercise.

9.0 Enquiries

Enquiries relating to this directive should be addressed to the Director, Resource Management and Reporting Directorate, Finance Branch, Headquarters.

Annex A: Risk Assessment Criteria

First Nations will be identified for program review based upon several criteria. Financial criteria would be based upon Size/Variance.

PRIORITY 1	Cost variance 4% and up	Average caseload 100 and up
PRIORITY 2	Cost variance 4% and up	Average caseload less than 100
PRIORITY 3	Cost variance less than 4%	Average caseload 100 and up
PRIORITY 4	Cost variance less than 4%	Average caseload less than 100

All First Nations CFS programs fitting in priority 1 category MUST be reviewed. Priority 2/3, depending upon financial impact, may require reviews. Priority 4 — unless there are other considerations — is the lowest priority.

Other factors to consider in the risk assessment would include:

- complaints from the Community or the Province;
- changes in management or professional staff turnover;
- changes in social and economic conditions on reserve.

This is Exhibit "33" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

Jordan's Principle: guidance on the best interest of a child

To find out who's covered under Jordan's Principle, visit Who is covered.

This tool provides guidance on the best interests of a child and Canada's implementation of Jordan's Principle. It is intended to help build understanding regarding the term "best interests of a child".

On this page

- Summary
- Background and definition of a right
- Applying the best interests of the child lens
- Process used to consider the best interests of a child

Summary

As part of the Government of Canada's review of Jordan's Principle requests, the best interests of a child must be considered. This means that requests for needed products, services, and supports are not only about ensuring substantive equality, but also making sure that the child's safety and well-being are considered when making decisions.

Background and definition of a right

The United Nations defines human rights as "rights inherent to all human beings, regardless of race, sex, nationality, ethnicity, language, religion or any other status."

As the Government of Canada seeks to achieve reconciliation with Indigenous peoples, a paradigm shift towards recognition of rights, respect, co-operation and partnership is required. The implementation of Jordan's Principle consistent with Canadian Human Rights Tribunal (CHRT) decisions is foundational to this work as it requires the government to work with First Nations in the co-development of a system of supports and services to consider the best interests of a child.

Jordan's Principle is a legal principle designed to address gaps in government-funded services and discrimination that can result in delay, disruption or denial of services to First Nations children. In 2017, the CHRT ruled that when a government-funded service is not necessarily available to all other children or is beyond the normative standard of care, the government department of first contact will evaluate the individual needs of the child to determine if the requested service should be provided to:

- ensure substantive equality
- ensure culturally appropriate services
- safeguard the best interests of the child

Evaluation of requests must also take into account a child's needs stemming from historical disadvantage, inequities and deficiencies in the availability of culturally informed public services.

Jordan's Principle also considers:

- children are significant recipients of public services, (for example, education, health, recreation, child care and other social programs, and

First Nations children have been disproportionately underserved by child welfare, juvenile justice, and youth services. As a result, First Nations children are impacted the most by both the intended and unintended impacts of policies and services

- as a basic principle, First Nations children are entitled to rely on the basic premise that any authority dealing with them would do so with due consideration to their human rights and their best interests
- the historical disadvantages and intergenerational impacts of colonization, such as the impacts of the Indian Residential Schools system and 60's scoop
- the discrimination arising from Canada's inequitable provision or denial of public services
- many other traumatic experiences of First Nations children, families and communities

In applying Jordan's Principle, the government must recall and recognize that many of colonization's historical disadvantages and intergenerational impacts were based on a colonial concept of a child's best interests. For example, Canada's "Regulations relating to the education of Indian children" of 1894 allowed Indian agents to issue warrants to commit First Nations children to residential schools when the Indian agent thought the child's parent was "unfit or unwilling to provide for the child's education" or the child was "not properly cared for".

Similar rationales were used to justify the transformation of residential schools into child welfare institutions, on the basis that some First Nations parents would not be able to assume the responsibility for the care of their children. As the Royal Commission on Aboriginal Peoples noted in 1996, these assessments, "were measured, of course, against non-Aboriginal

norms." Similarly, in the course of the 60's scoop, which wreaked profound and lasting psychological damage on First Nations children and communities, government employees who placed thousands of First Nations children with non-Indigenous families were making decisions they thought were in the best interests of those children.

The implementation of Jordan's Principle helps First Nations children access the products, services and supports they need, when they need them. In order to consider the best interests of the child, Jordan's Principle recognizes that understanding the impact of intergenerational trauma and the role of the child in the family and community is needed to appropriately take all measures to help First Nations children have an equal chance to live up to their full potential, taking full account of their distinct culture.

Applying the best interests of the child lens

The CHRT has ordered Canada to take into account the best interests of the child in the evaluation of requests under Jordan's Principle.

The 1989 *United Nations Convention on the Rights of the Child* (UNCRC) is the main United Nations human rights treaty on the protection of children. It has 4 general principles:

- the best interests of the child will be a primary consideration in all actions affecting children (article 3)
- there will be no discrimination on the grounds of race, colour, sex, language, religion, political or other opinions, national, ethnic or social origin, property, disability, birth or other status (article 2)
- states parties recognize that every child has the inherent right to life and will ensure to the maximum extent possible the survival and development of the child (article 6)

- children will be assured the right to express their views freely in all matters affecting them, their views being given due weight in accordance with the child's age and level of maturity (ariticle 12)

Canada ratified this convention in 1991, which also creates an obligation to consider the best interests of the child as a cornerstone to the application of Jordan's Principle.

The best interests of the child is a key child rights-based principle, enshrined in article 3(1) of the UNCRC providing:

> "In all actions concerning children, whether undertaken by public or private social welfare institutions, courts of law, administrative authorities or legislative bodies, the best interests of the child shall be a primary consideration".

Also relevant in the specific context of Indigenous children, the UNCRC requires in article 30 that the child also:

> "shall not be denied the right, in community with other members of his or her group, to enjoy his or her own culture, to profess and practice his or her own religion or to use his or her own language."

As a substantive right and guiding principle that aims to ensure the enjoyment of all rights in the UNCRC, the best interests of the child speaks to the child's holistic development and requires a rights-based approach that promotes the child's human dignity. As recognized in the United Nations Committee on the Rights of Child General, Comment 11, Indigenous children and their rights under the Convention, Indigenous children, *"require special measures in order to fully enjoy their rights."*

The UNCRC is a binding international human rights treaty ratified by Canada that requires governments to take all appropriate measures to ensure children have the full enjoyment of all rights under the convention. In order to meet its obligations, it is important for the Government of Canada to consider the potential impacts of legislation, budgets, policies, programs and practices on children's rights. When providing services or supports, the Government of Canada is obligated to take all appropriate measures to ensure that a child is protected from discrimination. The best interests of the child right and the non-discrimination right are both "general principles" of the UNCRC and are mutually reinforcing.

Taking into consideration the dehumanizing, colonialist and oppressive legacy faced by First Nations children throughout much of Canada's history, consideration of the best interests of the child is contextual and requires an assessment on a case-by-case basis.

Process used to consider the best interests of a child

Applying the lens of the best interests of a child under Jordan's Principle requires an evaluation of information, considering the specific circumstances of each identified child or group of children, as well as being responsive to each child's particular age, capacity, diagnosis, needs, maturity and circumstance.

Decisions made about the safety and well-being of First Nations children should be guided by the United Nations Declaration on the Rights of Indigenous Peoples and the following principles:

Every First Nations child should:

- have a safe and nurturing environment so they may live up to their full potential
- be loved in ways that bring dignity, support, and meaning to their life
- have their cultural identity and linguistic needs valued and respected
- have access to their traditional land, resources, and teachings
- be free from discrimination or the long-term impacts of disadvantage
- have a safe and nurturing relationship with their family (including siblings and extended family), community and nation
- have available and timely access to supports and services of equivalent quality to those available to non-Indigenous children
- have their necessary needs related to physical, sensory, mental health or intellectual disabilities met to ensure substantive equality
- have their rights upheld in relation to education, health and a safe environment

The term "best interests" broadly describes the well-being of a child, which can be determined by a variety of individual circumstances, such as age, health status, presence or absence of parents, the child's environment, and life experiences.

When Indigenous Services Canada (ISC) receives a request under Jordan's Principle, the department's employees should consider the following factors in order to take into account the best interests of an identified First Nations child:

- First Nations children and their families, caregivers and communities are experts in their own experiences and determine what is in their best interest; they will advocate on behalf of a child to ensure decisions

are in keeping with the protection and enhancement of the child's health and well-being

- consideration for the whole child and their needs, including their physical, emotional, and spiritual well-being in the context of their right to grow up as a member of their cultural group
- consideration is given to the child's circumstances and the potential impact on their well-being and development
- specific attention or care is needed to ensure a child has access to health, social, or educational products, supports, and services to improve outcomes and develop with dignity
- the remedy requested respects and protects the rights of the child as a First Nations person

Other influential factors include:

- the need for timely responses given the health or developmental needs of the child and the impact of any delays in required supports and services on their development
- whether the child has been given the opportunity to be engaged in all matters affecting them according to their developmental capacity and maturity

The following questions guide a holistic best interests of the child approach when assessing a request to the implementation of Jordan's Principle:

1. Has consideration been given to the whole child and their needs, including their physical, emotional, and spiritual well-being in the context of their right to grow up as a member of their cultural group?
2. Has consideration been given to respect and protect the rights of the child as a First Nations person?

3. Will the action preserve a sense of identity, belonging, acceptance, and connection of the child to their community?
4. Do you understand the child's circumstances and the potential impact on their well-being and development?
5. Has consideration been given to protect the safety and integrity of the child's care within their family and community?
6. Have the child's rights relating to education, health, and safety been upheld?
7. Have the child's views been considered and given due weight in accordance with their age and maturity?

ENABLING FIRST NATIONS CHILDREN TO THRIVE

Report to the Assembly of First Nations pursuant to contract no. 19-00505-001

Institute of Fiscal Studies and Democracy
at the University of Ottawa
December 15, 2018

December 15, 2018

Jonathan Thompson
Director, Social Development
Assembly of First Nations
55 Metcalfe Street, Suite 1600
Ottawa, ON K1P 6L5

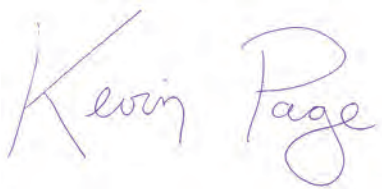
Dear Mr. Thompson,

Pursuant to contract no. 19-00505-001, the Institute of Fiscal Studies and Democracy at the University of Ottawa is pleased to submit the report: *Enabling First Nations Children to Thrive*.

We trust that this report meets the expectations set out in the terms of reference for this project.

We are grateful for the support of the Assembly of First Nations, the National Advisory Committee, and the First Nations Child and Family Caring Society, as well as to our expert panel and reviewers. We especially wish to thank the First Nations child and family services agencies, their leadership and their staff for their exceptional work.

Yours sincerely,



Kevin Page
President & CEO

ENABLING FIRST NATIONS CHILDREN TO THRIVE

Helaina Gaspard, Ph.D.

This report was prepared under the supervision of Kevin Page, President & CEO of the Institute of Fiscal Studies and Democracy (IFSD). The author wishes to acknowledge the contributions of Sahir Khan, Azfar Ali Khan, Janoah Willsie, Taylor Rubens-Augustson, Xin (Vivian) Liu, Salma Mohamed, Eli Dzik, and Stephanie Seiler.

APPENDIX 135

EXECUTIVE SUMMARY

In January 2016, the Canadian Human Rights Tribunal (CHRT) ruled that First Nations children were being discriminated against in the child welfare system. Overrepresented in a system that incentivized the placement of children in care, First Nations children and agencies were deemed to be underfunded relative to their needs. Through subsequent orders in 2018, the CHRT ordered analysis of the complete costs of the First Nations child welfare system based on the needs of First Nations agencies. Canada states that it is committed to implementing these orders.

As the complainants in the case, the Assembly of First Nations (AFN) and the First Nations Child and Family Caring Society of Canada requested that the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa produce a response to CHRT (2018) orders 408, 418, and 421. IFSD engaged with AFN as the project contract holder and with the National Advisory Committee on First Nations Child and Family Services (NAC)[1] for directional and strategic support. Pursuant to the orders, IFSD was asked to:

1. Develop reliable data collection, analysis and reporting methodology for analyzing the needs of First Nations Child and Family Services (FNCFS) agencies, in alignment with the Canadian Human Rights Tribunal (CHRT) rulings on discrimination against First Nations children in care (CIC).

[1] The National Advisory Committee (NAC) is a committee established after the publication of the First Nations Child and Family Services Joint National Policy Review Final Report in 2000 in order to fulfill the recommendations made by the report. The committee consisted of Aboriginal Affairs and Northern Development Canada (AANDC) employees (what today has been divided into Indigenous Services Canada and Crown Indigenous Affairs), First Nations child and family services (FNCFS) agency staff and AFN representatives. After the CHRT decision in January 2016, the NAC was reconvened to monitor the reform of the FNFCS program. NAC's current terms of reference are available here: https://www.afn.ca/wp-content/uploads/2017/05/NAC-Final-Terms-of-Reference.pdf The current NAC is comprised of representatives from the federal government, representatives from the AFN, representatives from the First Nations Child and Family Caring society, regional representatives (generally from a FNCFS agency), a youth representatives and an elder representative. NAC is functionally managed by AFN (i.e. it convenes the meetings and can enter into contracts on behalf of NAC). In the context of this project, NAC served as a board of directors offering perspective and strategic advice (without interfering in the research, analysis and delivery of the project).

2. Provide technical expertise to analyze agency needs, provide strategic advice on how best to monitor and respond to actual agency needs from fiscal and governance perspectives, with an approach informed by understanding, existing research, the contractor's own research and analysis of assessments done by agencies and communities.

3. Analyze the needs assessments completed by agencies and communities, create a baseline definition of agency resource inputs and outputs and identify missing data, complete a cost analysis and prepare a final report.

Analysis and Findings

1. IFSD reviewed existing needs assessments completed by agencies and communities. IFSD's analysis concluded that this information was not collected and completed in a systematic manner and would not support the development of costing and performance assessments (see Appendix A).

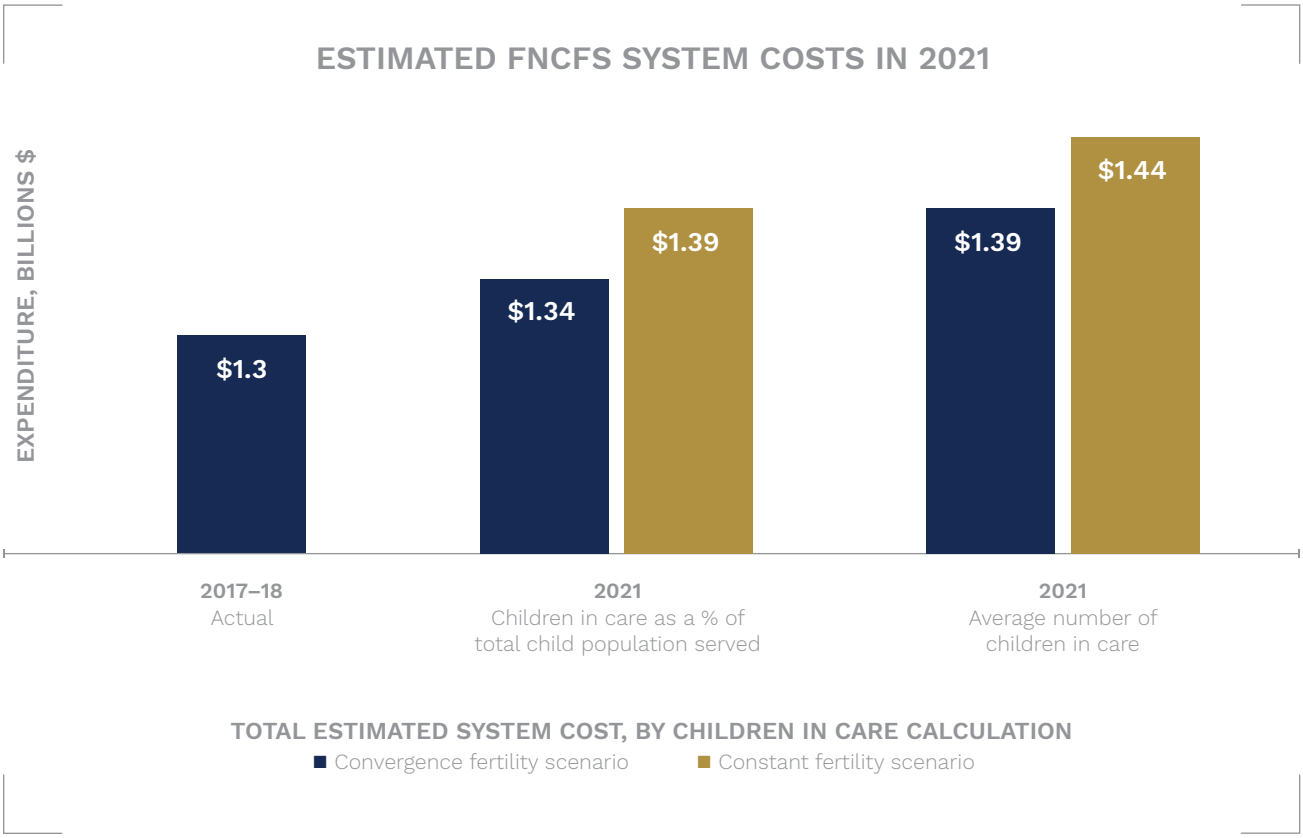
2. IFSD undertook its work, to understand agency needs, through primary data collection from May 2018 to June 2018, with consultations with agency directors and experts throughout the project. The data collection instrument was a 105-question survey covering various details from agency finances to employees to caseloads. IFSD is privileged to have learned from a representative 76% of FNCFS agencies.

3. Key observations and findings from the IFSD FNCFS Survey include:
   - Agency characteristics: These transcend provincial boundaries and funding formulas. An agency serving remote communities in Ontario shares characteristics similar to those serving remote communities in British Columbia.
   - Budgets: While most agencies do not run deficits, they emphasized need for investment in capital and people. Agency budgets are most tightly correlated with children in care (unsurprising, given the structure of the current system).
   - Employees: Most agencies (62%) cannot remunerate their employees at provincial salary levels. Agencies noted the regular over-extension of staff beyond their defined duties.

- Capital and information technology (IT): Nearly 60% of agencies indicated a need for capital repair and investment. Agency IT, funded on average at 1.5%, is severely underfunded when compared to the industry standard of approximately 5–6%.
- Governance and Data Capacity: While some agencies use internal data to improve their planning, programming and decision-making, significant data gaps exist in aligning inputs and outputs to better understand short-, medium-, and long-term outcomes for children and families that interact with the FNCFS system.

4. The most significant cost driver of the current system is the number of children in care, which correlates tightly to agency total budgets.

5. Costing models, based on the average cost of a child in care, suggest that under a no-policy change assumption, inflation and population alone would drive a total system cost increase of between **$40 million to $140 million** by 2021, depending on the population scenario assumptions used, from $1.3 billion in 2017–18.



6. IFSD undertook benchmark analysis to highlight specific gaps related to spending on prevention, capital and IT. These spending gaps would be in addition to baseline adjustments highlighted above for inflation and population which would ensure budgets are appropriately adjusted for demand and price going forward.
   - Prevention: Funded per capita across the total population served, from $800–$2,500 per person, prevention program costs estimates for 2019 range from **$224 million to $708 million**. These costs would be on-going in nature and subject to changes in population and inflation.
   - Capital: A *one-time* capital investment of **$116 million to $175 million**, with a recommended further budgeting of a 2% annual recapitalization rate, for a facility equivalent to the agency's headquarters.
   - IT: *Annual* expenditure of 5–6% of total budget, pursuant to industry standards, with a cost in the range of **$65 million to $78 million** per annum.

7. First Nations communities face systemic issues which add significant case complexity for child welfare workers. These issues include intergenerational trauma related to residential schools, higher incidences of inadequate housing, substance misuse, poverty, among others. Until these issues are addressed through an array of prevention type programs, incidences of child protection for First Nations Peoples will remain above those of non-First Nations. There is a cost to closing these gaps.
   - Median household incomes in 44% of First Nations communities served by FNCFS agencies fall below their provincial poverty line. *Raising those households only* to their respective provincial poverty line would require an **annual expenditure of $205 million**. For comparative purposes, raising the same households to median household incomes of their provinces would require an annual expenditure of about $2.6 billion.

8. Agency workers and independent experts consulted by IFSD have started to map a new system to support children, families and communities. Moving beyond a narrow focus on *protection* of children, to a vision of *enabling children to thrive*, the proposed approach would align results (outcomes) to activities (outputs) and required resources (inputs), across safety, child well-being,

family well-being and community well-being. This vision is focused on changing outcomes for children by empowering agencies, communities and families, and understanding progress through relevant and regular data collection on indicators connected to desired results (see Table A).

Recommendations

The current protection-focused system does not produce adequate results for children and families, fails to recognize the contextual challenges that lead to disadvantaged starting points for many communities, significantly underfunds prevention, has important gaps in capital and IT spending, struggles to remunerate employees relative to provincial levels, and falls short on data collection and analytics required to identify and support wise practices.

In this context, IFSD makes a number of recommendations:

1. It is recommended that block transfers be used to fund the FNCFS program to provide flexibility in allocation and accountability to stakeholders.

2. It is recommended that contextual issues such as poverty, be recognized and addressed through policy, programs and funding.

3. It is recommended that prevention be funded on a per capita basis for the total population served by the agency (not only children) at a rate of $800–$2,500 per person.

4. It is recommended that there be a one-time capital investment, and a benchmark recapitalization rate of a minimum 2% per annum (of asset base) added to agency budgets.

5. It is recommended that IT be funded at a rate of 5%–6% of total annual budgets, consistent with industry practices.

6. It is recommended that:
   - Social workers be remunerated at levels comparable to provincial salary levels.

- A study be undertaken to assess why FNCFS agencies are unable to remunerate their employees at provincial levels.
- A study on case complexity be undertaken, with consideration of differing community contexts when determining reasonable caseload levels.
- FNCFS employees have access to professional support and development, including leave for compassion fatigue.

7. It is recommended that a secretariat dedicated to results-oriented data be established to support FNCFS agencies in their work.

8. It is recommended that a FNCFS resource centre be established as a platform for knowledge sharing and collaboration among FNCFS agencies in support of their common mandates.

Recommendations for Further Research

IFSD has three recommendations with respect to next-steps to further the work undertaken in this study:

1. Establish a performance framework to underpin the FNCFS system across Canada.

2. Develop a range of options with regards to the funding models that would support an enhanced performance framework.

3. Transition to a future state in full consideration of data, human capital and governance requirements.

A Note of Thanks

IFSD wishes to thank the members of NAC for their on-going feedback and support of this work. We are grateful for the support of Dr. Cindy Blackstock and the Caring Society, Jonathan Thompson, Martin Orr and AFN.

We thank Thomas Anderson of Statistics Canada's Social and Aboriginal Statistics for clarifying availability and applicability of data. We thank our

expert reviewers, especially Professors Scott Bennett and John Loxley for their helpful comments in the research and analysis processes, as well as our expert roundtable composed of nationally recognized academic experts in social work, Indigenous health, evaluation, and substance misuse, as well as practitioners and agency leaders, whose knowledge was invaluable in framing performance considerations.

We thank the leadership and staff of FNCFS agencies for the incredible work that they do in saving lives of children in difficult and disadvantaged environments. The strong survey response rate and robustness of results was entirely dependent on the trust, participation, and support of FNCFS agencies and their leadership. IFSD is grateful for their confidence and for the knowledge and insight they shared.

TABLE A
FNCFS FUTURE STATE OVERVIEW

		DESCRIPTION	CURRENT STATE (2018)	FUTURE STATE		
			Protection	Protection	Prevention	Other
PERFORMANCE ATTRIBUTES	INPUTS	**Resources** (financial, human resources, information technology (IT), capital, etc.)	▪ $1.3B system-wide cost ▪ $12M average agency budget ▪ $63K per child in care ▪ Salaries—62% of agencies unable to compensate at provincial levels ▪ IT spending at approx. 1.5% of budget	▪ System-wide costs increasing up to $1.44B by 2021 ▪ By 2036, total system costs are estimated, based on population, to range from $1.6B–$2.8B	▪ Per person prevention spending should range from $800-$2,500 ▪ Total prevention cost estimates range from $224M–$708M in 2019	▪ $205M/year (to provincial poverty lines) ▪ $2.6B/year to provincial median household incomes ▪ IT spending should be 5%–6% of total annual budget, approximately $65M–$78M ▪ One-time capital investment from $116M–$175M, with a 2% annual recapitalization rate
	OUTPUTS	**Program activities**	▪ Activities are overwhelmingly linked to keeping children safe ▪ Funding essentially tied to putting children in care	▪ Status quo activities though with recognition of alternative models (e.g. kinship care)	▪ Services aimed at supporting the child, their family and community	▪ Services aimed at addressing the root causes of child welfare issues (e.g. poverty, intergenerational trauma, addiction) in communities
	OUTCOMES	**Results** (desired and realized)	▪ Safe children	▪ Thriving children		

INTRODUCTION

In January 2016, the Canadian Human Rights Tribunal (CHRT) ruled that First Nations children were being discriminated against in the child welfare system. Overrepresented in a system that incentivized the placement of children in care, First Nations children and agencies were deemed to be underfunded relative to their needs. Through subsequent orders in 2018, the CHRT ordered analysis of the complete costs of the First Nations child welfare system based on the needs of First Nations agencies. Canada states it is committed to implementing these orders.

As the complainants in the case, the Assembly of First Nations (AFN) and the First Nations Child and Family Caring Society of Canada requested that the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa produce a response to CHRT (2018) orders 408, 418, and 421. IFSD engaged with AFN as the project contract holder and with the National Advisory Committee on First Nations Child and Family Services (NAC)[1] for directional and strategic support. Pursuant to the orders, IFSD was asked to:

1. Develop reliable data collection, analysis and reporting methodology for analyzing the needs of First Nations Child and Family Services (FNCFS) agencies, in alignment with the Canadian Human Rights Tribunal (CHRT) rulings on discrimination against First Nations children in care (CIC).

[1] The National Advisory Committee (NAC) is a committee established after the publication of the First Nations Child and Family Services Joint National Policy Review Final Report in 2000 in order to fulfill the recommendations made by the report. The committee consisted of Aboriginal Affairs and Northern Development Canada (AANDC) employees (what today has been divided into Indigenous Services Canada and Crown-Indigenous Relations and Northern Affairs), First Nations child and family services (FNCFS) agency staff and AFN representatives. After the CHRT decision in January 2016, the NAC was reconvened to monitor the reform of the FNFCS program. NAC's current terms of reference are available here: https://www.afn.ca/wp-content/uploads/2017/05/NAC-Final-Terms-of-Reference.pdf The current NAC is comprised of representatives from the federal government, representatives from the AFN, representatives from the First Nations Child and Family Caring society, regional representatives (generally from a FNCFS agency), a youth representative and an elder representative. NAC is functionally managed by AFN (i.e. it convenes the meetings and can enter into contracts on behalf of NAC). In the context of this project, NAC served as a board of directors offering perspective and strategic advice (without interfering in the research, analysis and delivery of the project).

2. Provide technical expertise to analyze agency needs, provide strategic advice on how best to monitor and respond to actual agency needs from fiscal and governance perspectives, with an approach informed by understanding, existing research, the contractor's own research and analysis of assessments done by agencies and communities.

3. Analyze the needs assessments completed by agencies and communities, create a baseline definition of agency resource inputs and outputs and identify missing data, complete a cost analysis and prepare a final report. See Appendix A for the analysis completed in April 2018.

IFSD undertook its work from April 2018 to December 2018 with a focus on understanding agency needs through primary data collection from May 2018–June 2018, with consultations with agency directors and experts throughout the project. IFSD is privileged to have learned from a representative 76% of all FNCFS agencies. This final report offers a complete overview of the project's methodology, findings, and proposed future state based on agency needs.

Draft findings of this report have been presented to NAC since July 2018. The draft findings were subject to feedback from NAC members and agency stakeholders, as well as IFSD's continuing review process.

As a result of this on-going process, in this final version of the report, there are changes to protection (total system costs), prevention, capital, technical and poverty cost estimates. The forecast total system costs are lower than in draft submissions.

Drafts are subject to revisions for three reasons: 1) feedback from NAC and stakeholders; 2) methodological refinements; and 3) on-going quality assurance and independent tests.

The overall narrative of the findings has not changed. The current protection-focused system does not produce results for children and families, prevention is comparatively underfunded, and there are important gaps in information technology (IT) spending. Contextual challenges such as poverty, inadequate housing, lack of access to potable water, broadband internet, intergenerational

trauma, etc. contribute to a disadvantaged starting point for many First Nations communities.

This report has been revised to remove agencies not on Indigenous Services Canada's (ISC) list provided to IFSD in April 2018 at the outset of this project (although some agencies were included in previous versions of analysis). This final report focuses on the self-reported data shared by FNCFS agencies and is supplemented with benchmarks and related data where appropriate.

IFSD wishes to thank the members of NAC for their on-going feedback and support of this work. We are grateful for the support of Dr. Cindy Blackstock and the Caring Society, Jonathan Thompson, Martin Orr and AFN.

We thank Thomas Anderson of Statistics Canada's Social and Aboriginal Statistics for clarifying availability and applicability of data. We thank our expert reviewers, especially Professors Scott Bennett and John Loxley for their helpful comments in the research and analysis processes, as well as our expert roundtable composed of nationally recognized academic experts in social work, Indigenous health, evaluation, and substance misuse, as well as practitioners and agency leaders, whose knowledge was invaluable in framing performance considerations.

We thank the leadership and staff of FNCFS agencies for the incredible work that they do in saving lives of children in difficult and disadvantaged environments. The strong survey response rate and robustness of results was entirely dependent on the trust, participation, and support of FNCFS agencies and their leadership. IFSD is grateful for their confidence and for the knowledge and insight they shared.

CURRENT STATE

Child Welfare

In Canada and around the world, child welfare is an evolving concept in constant flux, protecting the rights of children, while at the same time, upholding the rights of parents and the family. According to the Canadian Child Welfare Research Portal, child welfare is "a set of government and private services designed to protect children and encourage family stability," with a central focus on "safeguard[ing] children from abuse and neglect."[2]

The origins of child welfare in Canada date back to the late 19th century, where the first child protection organization was established in Toronto.[3] This emerged in response to an increasing number of impoverished children, propagated by the rise of industrialization and urbanization. Comprehensive social welfare programs were not yet in place, and Herbert and Albert (2013) describe how "growing numbers of homeless, destitute children in urban centres, greater juvenile crime, and changes in child-labour practices pressured governments to respond to the plight of children."[4] In other words, the establishment of Canada's child welfare system was largely a response to growing issues of child neglect.[5]

In 1893, the first piece of legislation related to child protection was passed in the province of Ontario, which "made the abuse of children an indictable offence…promoted foster care, gave children's aid societies guardianship power, and established the office of the superintendent of neglected children."[6] This was in line with the British doctrine parens

patraie, whereby the government held the authority to care for children who were deemed neglected and unable to care for themselves.[7] This allowed for government intervention in the private home, shifting the relationship between the family and the state. Child welfare organizations began to appear country-wide, often drawing from other jurisdictions' legislative policy to form their own.[8] The child welfare system has evolved over time, with notable legislative changes such as the introduction of mandatory reporting of suspected child abuse and neglect.

Canada's current system for child welfare and family services (for all children living off-reserve) is decentralized, with responsibility falling under provincial and territorial jurisdictions. With the exception of Ontario, Manitoba and Quebec, provincial child welfare services are a program of the provincial department of social services.

In Ontario, child protection is delivered through children's aid societies that are licensed by the province. These agencies receive their funding through transfer payments from the provincial government. In Manitoba, child protection agencies fall under one of four authorities: two First Nations authorities, one Metis authority and one general authority. These authorities oversee and distribute funding to the agencies. In Quebec, child protection is delivered through a network of integrated social services and health and youth centres. These centres deliver a broad range of services to children in their catchment areas.

Although the provinces' provision of child welfare services may slightly differ in organization, they benefit from more integrated systems of care. Constitutionally, provinces are accountable for providing the bulk of social services, e.g. health care, education, child care, etc. to their populations. This existing network of services may facilitate access of children in contact with the protection system to other types of provincial services, and may enable staff to leverage related services. The integration of the child protection service into the broader provincial bureaucracy benefits from the existing state apparatus of the province, through financial and human resources, its broader services, such as

[7] Swift and Callahan, 2002.

[8] Neil Gilbert, Nigel Parton, and Marit Skivenes, "Child Protection Systems: International Trends and Orientations," OUP USA, 2011; Swift and Callahan, 2002.

collective agreements, employee benefit and pension plans and its program offerings, e.g. prevention services.

By contrast, FNCFS agencies are principally funded by the federal government and are meant to mainly serve on-reserve populations. Whether by geography or funding, these agencies report that their ability to access and leverage resources from other sectors is limited.[9] Provincial and First Nations child welfare agencies have different starting points with repercussions for services, especially in often disadvantaged contexts on-reserve.

While direct comparisons between First Nations and provincial agencies may be difficult with their differing points of departure, it is even challenging to accurately compare provincial child welfare services. Given that each province and territory have their own child welfare legislation and different approaches to surveillance and reporting, using data to understand the current state of Canada's most vulnerable children and families has been complex. For example, the definition of a child varies depending on province or territory, ranging from 16 to 19 years of age, as does the definition of maltreatment.[10] Variances in

[9] The voluntary sector (including both people and donations) can supplement agency activities, particularly among non-FNCFS agencies. In Ontario for instance, the Ontario Association of Children's Aid Societies (OACAS) notes that volunteers play a significant role in Ontario child welfare services (Ontario Association of Children's Aid Societies, Volunteering in child welfare: It takes a community to keep kids safe, April 20, 2017). A 2017 survey conducted by the organization recorded volunteer involvement in children's aid societies in the province, finding that the median number of volunteers per agency was 111 (based on data from 28 reporting agencies) (Ontario Association of Children's Aid Societies, "Volunteer Services Program Survey Report, Fiscal Year 2016–2017", June 2018).

These volunteers performed a number of roles from driver, to mentor and tutor, to event and administrative support. In total, these volunteers supported agencies with a median of 20,325 hours of their time (based on data from 14 reporting agencies). To give some meaning to the hours, if these volunteers were paid at the Ontario minimum wage, their contribution would be upwards of $300,000 per agency.

Significant gaps remain in the study of the voluntary sector on-reserve. Cindy Blackstock and Samantha Nadjiwan's 2003 report, "Caring Across the Boundaries, Promoting Access to Voluntary Sector Resources for First Nations Children and Families," found that less than 10% of funds raised on-reserves (outside of government funding) came from philanthropic foundations. A study by the Circle on Philanthropy and Aboriginal Peoples in Canada (2011) found that these trends persist, with only 6% of Canadian grant making foundations giving grants to Aboriginal beneficiaries or causes (see https://pfc.ca/2016/07/partnering-indigenous-communities/). It is challenging to quantify the value of shelters, food banks, etc. to the work of child and family services agencies that receive federal, provincial and philanthropic funding off-reserve.

The reasons for these funding differences and their causes merit closer attention. As FNCFS agencies take on increasing roles as resource and programming centres, the repercussions of a limited or non-existent voluntary sector may be important.

[10] Gilbert, Parton, and Skivenes, 2011.

expenditure reporting, in definitions of what comprises child protection services, and in outcomes measurement make inter-provincial comparisons difficult.

As Fallon and colleagues note, "the lack of comparability of provincial and territorial data has hindered the ability of governments and social service providers to improve policies and programs that address the needs of maltreated children."[11] To address this issue, experts and service providers across the country collaborated to produce the 1998 Canadian Incidence Study of Reported Child Abuse and Neglect (CIS-1998)—the first, national report on child maltreatment incidence. Two additional reports (one in 2003 and 2008) have since been released. While the CIS provide critical insight into the reasons children enter into care, data on the outcomes of children within and exiting the system would provide a better understanding of how the system performs as a whole. For those in the system, metrics such as school performance and meeting standard health and development targets are important indicators of well-being that are not consistently captured. When a child exits the welfare system, their education, job and health indicators would be helpful in assessing outcomes. Rather than capturing outcomes, output metrics such as the number of children in care and the number of kinship placements are measured. The data is useful but is limited in understanding the full picture of child welfare, notably the results for children.

First Nations Child and Family Services

Canada has constitutional obligations for the welfare of First Nations people living on-reserve—a population that is continuing to grow. Changing outcomes for children and families means recognizing and addressing the contextual disparities of these communities.

Collectively, Canada's Indigenous Peoples are worse-off than the non-Indigenous population in health indicators such as life expectancy, infant

[11] Sheila Kamerman, Shelley Phipps, and Asher Ben-Arieh, *From Child Welfare to Child Well-Being: An International Perspective on Knowledge in the Service of Policy Making*, vol. 1 (Springer Science & Business Media, 2009).

mortality, suicide mortality, chronic disease, alcohol and tobacco use,[12] and have lower rates of educational attainment[13] and employment.[14] In many First Nations communities these challenges are related to intergenerational trauma, substance misuse, inadequate housing, access to potable water, and access to broadband internet, impacting populations and their outcomes on-reserve.

One of the most striking repercussions of these contexts—amplified by a funding model that incentivizes the placement of children in care—is the disproportionate number of First Nations children in care. First Nations child welfare services on-reserve are funded—and up until the 1950s were delivered—by the federal government. According to Statistics Canada, First Nations People represent just under 3% of the total Canadian population, yet First Nations children make up 35% of those in care (see Figure 1).[15] These estimates of First Nations children in care may be under estimations, with agencies reporting higher rates of children in care in this analysis (see Figure 2, Figure 3 and Table 6).

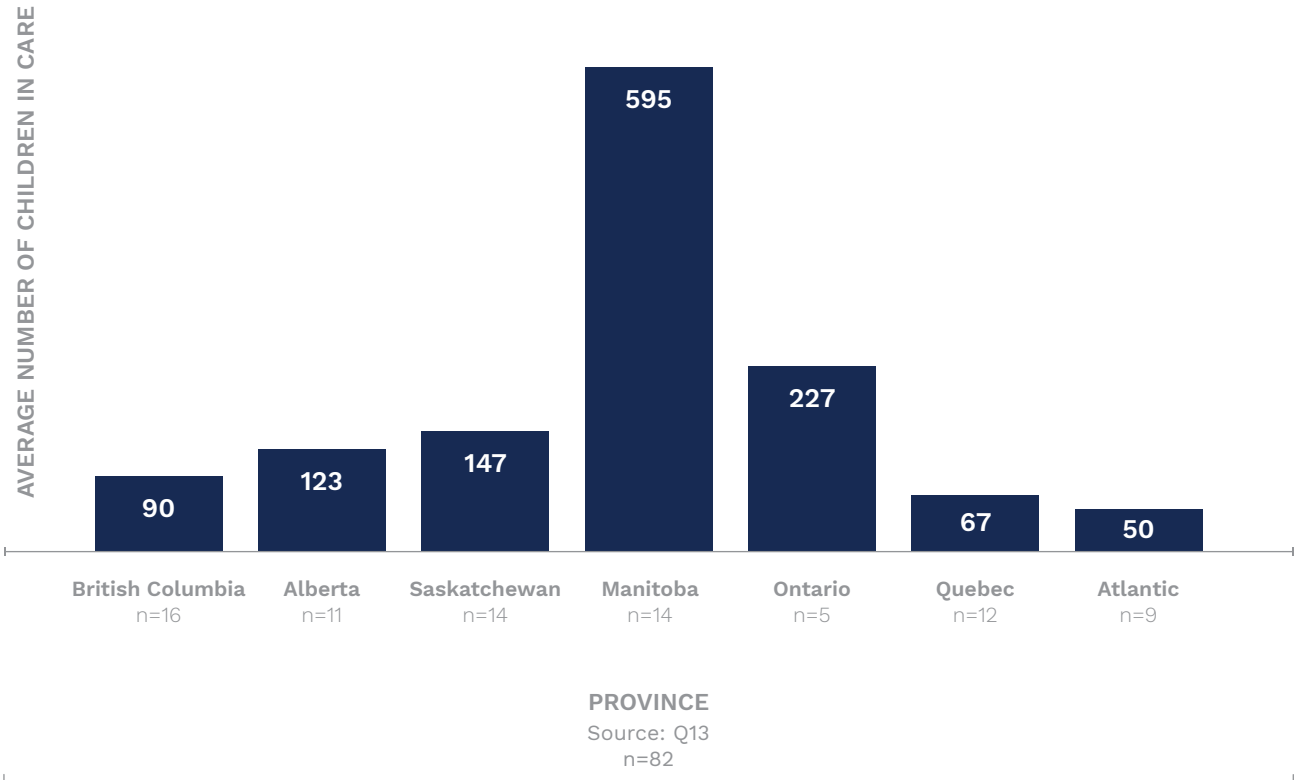

FIGURE 3

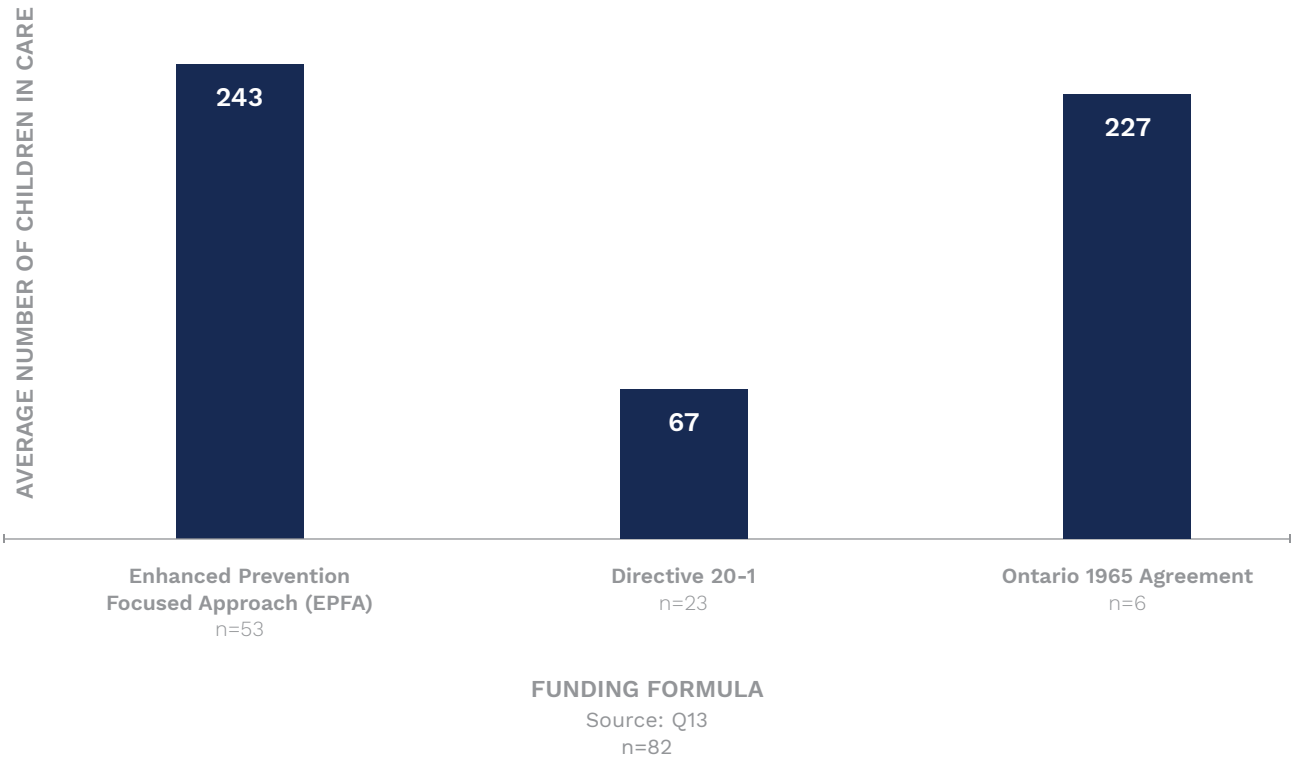
AVERAGE NUMBER OF CHILDREN IN CARE PER AGENCY, BY FUNDING FORMULA



Details and data to support better decision-making in child welfare are sparse at the national level, especially when it comes to First Nations children. For instance, there has been no national study in nearly ten years on why children enter into care. The last CIS that tracked this information was completed in 2008, leaving an important gap in understanding of current trends in child welfare.[16] While another study is expected, no CIS had been released at the time of this report's publication.

FNCFS agencies are often required to deliver more than protection services focused on child safety. These agencies are often the first and/or only point of contact for their communities when it comes to social, health and related services. FNCFS agencies are regularly extended

[16] Public Health Agency of Canada, "Canadian Incidence Study of Reported Child Abuse and Neglect—2008: Major Findings," Ottawa, 2010.

beyond their typical child safety mandates, may serve as a platform for connecting with other services, or they may find ways of providing some of those services themselves.

Important to understanding the emergence of First Nations child welfare services in Canada is the legacy of the Indian Act. First enacted in 1876, the Act gave the federal government authority over status Indians in Canada and the land reserved for Indians.[17] Under the Indian Act, the government forcibly removed generations of First Nations children from their homes to attend government-funded residential schools.[18]

First Nations communities were deeply impacted by the residential school policy. The schools were often located far from children's parents and communities, with little to no child-parent contact allowed.[19] At the schools, children were forbidden to speak their traditional languages and were instructed according to white customs and norms. The experience of residential schools had devastating impacts on First Nations children who returned to their communities. As a FNCFS agency representative from Quebec explains, "those who were forced to attend these schools expressed feelings of alienation, many could no longer speak their native language, family members were not familiar, [Indigenous] traditions and customs were alien to them, and social relationships were lacking."[20]

The removal of children from their families interrupted healthy family development. The abuse and trauma children experienced at residential schools had lasting effects on generations of First Nations communities. Those who survived residential schools, separated from their parents and having suffered trauma at the hands of adults during their formative years, lost the opportunity to grow up with healthy parental role models. Deprived of the right to learn from their own people in their youth and adolescence, many survivors struggled as adults in raising their own

children.[21] As a FNCFS agency representative from British Columbia explains, "there were no services offered to the parents who lacked parental skills as a result of the intergenerational syndrome of the residential schools and the cycle of removal would start over."[22] The repercussions of the residential school system led to an increased need for child welfare services in First Nations communities.

The Sixties Scoop

In the 1950s, an amendment to the Indian Act allowed provincial and territorial governments to begin providing child welfare services on reserves, and the federal government was expected to pay for these services.[23] Government intervention, however, perpetuated a negative cycle of separating First Nations children from their families: "the people did not have a choice but to accept services from a system whose alien concepts and standards frequently conflicted with those of native people," explains a FNCFS agency representative from Ontario, "and this conflict tended to create and perpetuate problems and needs."[24]

Many government social workers had little to no understanding of the systemic discrimination facing First Nations. In many cases, the struggles of First Nations families were perceived as signs of parental negligence and not recognized as the consequences of colonialism.[25] Language barriers, a lack of consideration for Indigenous cultural and social norms, a lack of community consultation in services or procedure, and a lack of focus on prevention characterized the government approach to child welfare services at this time. In some instances, children were removed from homes due to devastating misunderstandings, as one agency representative from British Columbia explains: "Social Workers would walk into a home unannounced and go directly for the kitchen where they would see what food was available. When the social workers did not see any store-bought food, they assumed that the children were being

starved. Most of the families canned, dried, salted and stored their foods in cellars that were not attached to the house."[26] This example illustrates how a lack of understanding of First Nations customs could have serious consequences for families.

Children separated from their families and communities were often placed in the care of non-Indigenous families. Some children were sent to residential schools, which started to be used as substitutes for foster homes.[27] In some tragic cases, children died in government care.[28] The mass removals of children from their communities during this period became known as the "Sixties Scoop", though the practices continued well into the next decade. Child welfare was traumatizing for many First Nations communities.

The Development of FNCFS Agencies

In response to the Sixties Scoop, First Nations began establishing their own child welfare services. From the 1970s onwards, there was an emergence of First Nation agencies whose dedicated focus was child and family welfare (see Figure 4). Having previously existed as prevention and community support groups, agencies began expanding their mandates to include child welfare. Inter-tribal amalgamation and increasing self-determination led to the growth of larger advocacy and governance groups that began taking on more services related to child welfare.[29]

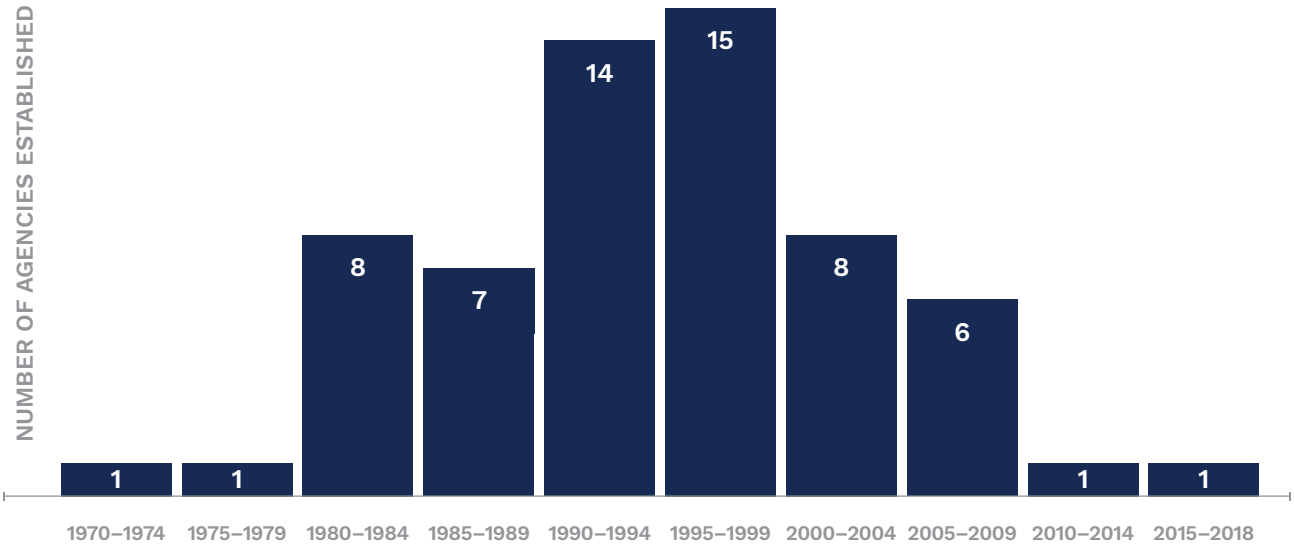
FIGURE 4

NUMBER OF FIRST NATIONS CHILD AND FAMILY SERVICES AGENCIES ESTABLISHED BY FOUR-YEAR INTERVALS



Source: Q18
n=62

In 1988, the federal government put a moratorium on the creation of FNCFS agencies to develop a universal funding formula. Two years later in 1990, Directive 20-1 was established to cover all provinces and territories (except for Ontario, which remained under the Ontario 1965 Agreement).[30] Following the implementation of Directive 20–1, the number of FNCFS agencies continued to expand, but First Nations raised concerns that the funding structure was inadequate for meeting child

[30] Caring Society, n.d. Pre-Tribunal Timeline: History of First Nations Child and Family Services Funding, https://fncaringsociety.com/pre-tribunal-timeline-history-first-nations-child-and-family-services-funding.

In 1965, the first funding agreement for First Nations child and family welfare was established between the Province of Ontario and the federal government as a cost-sharing agreement in which the federal government reimbursed the province for the provision of First Nations child and family welfare services at a rate of 93% of costs. Known as the 1965 Agreement, the Memorandum of *Agreement Respecting Welfare Programs for Indians* is still in effect today.

welfare needs on reserves.[31] The criticism was echoed, notably, in the 2008 report of the Auditor General.[32]

In 2007, the federal government began implementing the Enhanced Prevention Focused Approach (EPFA) in several provinces, which was designed to address the shortcomings of Directive 20–1. It was introduced on a rolling basis in Alberta in 2007-08, Saskatchewan and Nova Scotia in 2008–09, Quebec and Prince Edward Island in 2009–10 and Manitoba in 2010–11.[33] It was expected that British Columbia, New Brunswick, Newfoundland and Labrador and Yukon, would eventually transition to EPFA. Many agencies are still concerned that the amount and structure of EPFA funding are insufficient for meeting their needs.[34] All three formulas however, tend to require that children enter into care in order to unlock funding (see Table 1).[35]

[35] An opinion on liability insurance was requested by NAC to better understand the legal implications of an agency seeking its own jurisdiction in child and family services, i.e. developing its own laws and no longer being subject to provincial laws de facto (because no federal law exists on the matter). Alexander Holburn and Associates, LLP was retained and provided an opinion on the matter (see Appendix B). The firm's review found that not all provincial legislation requires FNCFS agencies to carry liability insurance, although others require it as a condition for delegation. Even though provinces may delegate child protection duties to FNCFS agencies, in the case of a breach, the province remains liable for non-delegated duties. If full responsibility for child welfare services are assumed by a First Nations government, then that government will assume the whole of the legal duty with respect to the delivery of child welfare services. There would be a potential increase in exposure liability, as the First Nation government would no longer be able to rely on the statutory immunity for negligence, and the costs of insuring the operations may increase to reflect the increase in exposure claims. For agencies that are covered, premiums range from $5,000 for a small organization to $100,000 for a larger organization. The average premium in Canada is around $20,000 for $5,000,000 coverage, with Aon Reed Stenhouse as the most common provider.

TABLE 1
EXISTING FNCFS FUNDING ARRANGEMENTS

FUNDING FORMULA	DESCRIPTION
Directive 20–1	A funding arrangement introduced in 1990 to fund First Nations child and family services for on-reserve populations. It includes funding for operational expenses and the maintenance of children in protection. It does not include built-in funding for prevention. It is still the active funding agreement in British Columbia, New Brunswick, Newfoundland and Labrador, and Yukon.
Enhanced Prevention Focused Approach (EPFA)	A funding arrangement introduced in 2007 which includes funding for operations and maintenance, similar to Directive 20-1, as well as funding for prevention programs. It is the active funding agreement in Alberta, Manitoba, Nova Scotia, PEI, Quebec and Saskatchewan.
Ontario 1965 Agreement (The Memorandum of Agreement Respecting Welfare Programs for Indians of 1965)	The funding agreement between the federal and Ontario governments signed in 1965. The agreement establishes a cost-sharing arrangement where ISC reimburses the Ontario government for approximately 93% of the cost of delivering child and family services on-reserve in the province.

FNCFS agencies define their mandates as providers of protection and prevention services for the well-being and safety of children in the community. A majority of the agencies (83%) that participated in the survey were child-protection delegated (Figure 5). In the survey, agencies highlighted their work supporting families by strengthening the family unit and working to keep children with their families in the community. Agencies reported strengthening communities by providing holistic, community-based approaches to child welfare that engage supportive networks of community members and leadership. In their work, agencies emphasized the promotion of cultural approaches to build strong, proud and healthy First Nations communities of children and adults. Approximately 60% of agencies perceive their relationships with their communities positively, although there is variation among provinces (Figure 6).

For First Nations not affiliated with a FNCFS agency, the province provides protection services on-reserve and is reimbursed by the federal government. For instance, in Alberta, the federal and provincial governments established the Arrangement for the Funding and Administration of Social Services, a bilateral agreement signed in 1991 that provides for the reimbursement by the federal government for social services on-reserve. In British Columbia, a similar bilateral agreement called the British Columbia Service Agreement arranges for the federal government to reimburse the province for child welfare services in 72 First Nations communities.[36]

In its rulings, the CHRT found the federal government's FNCFS program to be discriminatory to children on-reserve because of inequitable funding levels for child welfare services. Following the CHRT orders, the federal government began increasing its prevention funding. In Budget 2016, the federal government committed $634.8 million over five years to reform and strengthen the FNCFS program, with ISC reporting $71.1 million for 2016–17.[37] Budget 2018 committed an additional $1.4 billion over six years.[38] With the February 2018 order from the CHRT, the federal government began funding the program at its actual cost. This however, is meant to be an interim solution until the federal government reforms the FNCFS program funding structure.

This report commissioned in response to the CHRT proceeds in two parts. Part 1 defines a baseline financial and program activity understanding of the current FNCFS system from agency-reported data. Part 2 defines a future-state program based on agency need and informed by consultations with agencies and experts.

METHODOLOGY

Approach

RESEARCH ETHICS

The design of the research project and its instruments were developed in collaboration with NAC with input from FNCFS agencies. IFSD had the opportunity to visit agencies to learn from their staff and communities in 2017 (in conjunction with analysis being undertaken by IFSD at the request of NAC on agency operating characteristics). These visits were instrumental in building a better understanding of the current FNCFS system on-reserve, from a front-line perspective. The knowledge shared by agencies and communities during these visits helped to inform IFSD's development of the data collection instrument and thinking on an alternative funding model for FNCFS agencies.
