Internal Service Ratio	**14%**

Appendix C: Contingency Benchmarks for Capital Budgeting

Based on guidance from Infrastructure Canada (INFC) and Public Services and Procurement Canada (PSPC), **IFSD could reasonably apply a 25% contingency factor to FNCFS Phase 3 capital estimates**. INFC recommends that applicants apply a 21% to 30% contingency factor to Class D estimates (see Table 5) when applying for capital funding through streams such as the Rural Transit Solutions Fund, Zero Emission Transit Fund, and Disaster Mitigation and Adaptation Fund.[50] PSPC allows a design allowance of 20% for Class D construction cost estimates.[51]

Table 5: INFC Contingency Percentages by Estimate Class[52]

Estimate Class	Contingency Guideline
Class A – bids received, evaluated and verified	5% – 10%
Class B – detailed design	11% – 15%
Class C – preliminary design	16% – 20%
Class D – conceptual design	21% – 30%

IFSD consulted other standards for contingency benchmarks as guidance for capital budgeting which include the following:

- The Royal Architectural Institute of Canada (RAIC) suggests that Class D estimates are accurate to ± 20-30%.[53]
- The US Department of Transit (DOT) Federal Transit Administration (FTA) suggests that 40% is a prudent minimum contingency factor for projects "[a]t nominal 15% design level."[54]
- The Treasury Board of Canada Secretariat's (TBS) *Archived - Guideline on Cost Estimation for Capital Asset Acquisitions*, suggests that "expenditures can vary from an un-adjusted rough-order-of-magnitude (ROM) cost estimate by up to 40 per cent, from

[50] Infrastructure Canada, "Step-by-Step Guide for Applications to the Capital Stream of the Rural Transit Solutions Fund;" Infrastructure Canada, "Step-by-Step Guide for Capital Projects Application Form;" Infrastructure Canada, "Disaster Mitigation and Adaptation Fund: Applicant Guide."

[54] US DOT Federal Transit Administration, *Oversight Procedure 40 - Risk and Contingency Review* (United States Government, March 2022), M-2, https://www.transit.dot.gov/sites/fta.dot.gov/files/2022-05/OP40-Risk-Contingency-Review-Mar-2022.pdf.

an un-adjusted indicative estimate by up to 25 per cent, and from an un-adjusted substantive estimate by up to 15 per cent."[55]

- Infrastructure BC suggests that Class D estimates are typically accurate to ±25%.[56]
- Newfoundland and Labrador's Department of Transportation and Infrastructure allows municipal applicants to apply a maximum contingency of 10% to new construction buildings that cost less the $5M, and 8% for those that cost over $5M.[57] **These guidelines do not refer to estimate classes, so may not apply to Class D estimates.**
- The Wisconsin Department of Administration, Division of Facilities Development recommends capital project budgets include a 15% contingency.[58] **These guidelines do not refer to estimate classes, so may not apply to Class D estimates.**

APPENDIX E1

FNCFS AGENCY QUESTIONNAIRE

IFSD
IFPD

QUESTIONNAIRE FOR FNCFS AGENCIES

You are invited to complete this questionnaire on behalf of your FNCFS agency, to share information and practices to help inform the long-term reform of the FNCFS program.

Your participation in this questionnaire is voluntary. If at any time you wish to withdraw your participation, contact **helaina.gaspard@ifsd.ca** and your data will be destroyed.

Definitions

Child and family services: programs, resources, tools or supports that support the healthy social development of children and families, with a focus on building resiliency.

Prevention services: programs, resources, tools, or supports that aim to limit exposure or re-exposure to the child protection system.

Protection services: services to promote child safety, often by removing the child and placing them in care.

Child in care: a child of the First Nation that is in protective services, whether they are in care in the First Nation or outside of the community.

Fiscal year 2021–22: the period from April 1, 2021 to March 31, 2022.

First Nations-led secretariat: proposed national organization with regional connections to support data analysis and programming for First Nations by First Nations.

Post-majority supports: programs and services for youth ageing out of the care system.

Customary care and kinship adoptions: placement and/or adoption of children in care with family members.

Full-time equivalent (FTE): the number of employees that work a full-time work schedule.

Part-time equivalent (PTE): the number of employees that work less than a full-time work schedule.

Agency name:

Contact name:

E-mail: Phone:

Communities served

1. How many First Nations does your agency serve?

2. How many people does your agency serve?

3. Approximately what percentage of the people served are:
   a. In community (on-reserve)
   b. Elsewhere (off-reserve)

Programs and services

4. What services does your agency provide? Select all that apply.

- [ ] Protection services
- [ ] Post-majority care services
- [ ] Prevention services
  - [ ] Family violence prevention
  - [ ] Healthy child development
  - [ ] Maternal-child health and development
  - [ ] After school programming and supports
  - [ ] Poverty alleviation
  - [ ] Family preservation
  - [ ] Parenting supports and resources
  - [ ] Healthy eating
  - [ ] Healthy active lifestyle
  - [ ] Land-based programming for children, youth, and families
  - [ ] Safe homes for transition and/or respite
  - [ ] Group homes for youth
  - [ ] Community housing or transition housing
  - [ ] Respite services
  - [ ] Mental health services
  - [ ] Early learning and childhood development

- [ ] Special needs services
- [ ] Other (please specify):

5. Do you offer post-majority care services?

   ○ Yes ○ No

   a. If **yes**, describe your programs and services.

   b. Are there any changes you would like to make? Please specify.

6. Do you have policies or practices in place for customary adoption and kinship care?

   ○ Yes ○ No

   a. If **yes**, describe your policies and practices.

   b. Are there any changes you would like to make? Please specify.

7. Does your agency provide legal services for parents and families?

   ○ Yes ○ No

   a. If **yes**, describe services.

   b. Are there any changes you would like to make? Please specify.

8. Does your agency provide mediation services for parents and families?

   ◯ Yes ◯ No

   a. If **yes**, describe services.

   b. Are there any changes you would like to make? Please specify.

9. Where does your agency provide most of their services:

   ☐ In community (on-reserve)

   ☐ Elsewhere (off-reserve)

   ☐ Other (please specify):

10. If your agency provides protection services, how many children are in-care?

    a. Please specify how many of the children in care are:

       First Nations (on-reserve)

       First Nations (off-reserve)

       Indigenous (on-reserve)

       Indigenous (off-reserve)

Programming considerations

11. How many full-time equivalent staff do you have to deliver services?

    a. What are their titles?

12. How many part-time equivalent staff do you have to deliver services?

    a. What are their titles?

13. Do you have any difficulty attracting qualified staff?

    ◯ Yes ◯ No

    a. If **yes**, what are some reasons why?

14. Do you have any difficulty retaining qualified staff?

    ◯ Yes ◯ No

    a. If **yes**, what are some reasons why?

15. Are there programs or services you would like to offer but cannot?

    ◯ Yes ◯ No

    a. If **yes**, what are the limitations? Select all that apply.

    ☐ Funding
    ☐ Staff
    ☐ Programming space or tools
    ☐ Limited time for planning
    ☐ Funding or authority rests with another department or entity in the First Nation, e.g., education, health
    ☐ Program design
    ☐ Program implementation/delivery
    ☐ Program evaluation
    ☐ Other (please describe):

16. What programs and services would you like to offer?

- [ ] Family violence prevention
- [ ] Healthy child development
- [ ] Maternal-child health and development
- [ ] After school programming and supports
- [ ] Poverty alleviation
- [ ] Family preservation
- [ ] Parenting supports and resources
- [ ] Healthy eating
- [ ] Healthy active lifestyle
- [ ] Land-based programming for children, youth, and families
- [ ] Safe homes for transition and/or respite
- [ ] Group homes for youth
- [ ] Community housing or transition housing
- [ ] Respite services
- [ ] Mental health services
- [ ] Early learning and childhood development
- [ ] Special needs services
- [ ] Other (please specify):

17. Do you have existing sources of support for programming design and delivery, data analysis, operations, etc.?

- ○ Yes ○ No

a. If **yes**, please specify the sources of support, e.g., regional organization, community of practice, etc.

18. How could a national First Nations-led secretariat for FNCFS support your agency's mandate? Select all that apply.

- [ ] Program design and delivery
- [ ] Data collection
- [ ] Data analysis
- [ ] Operational supports
- [ ] Other (please specify):

Financial information

19. What were your FNCFS agency's total expenditures for fiscal year 2021–22?

$

20. What were your FNCFS agency's total revenues for fiscal year 2021–22?

$

21. What were your FNCFS agency's sources of funds for fiscal year 2021–22? Select all that apply.

- [ ] Federal—ISC
- [ ] Federal—Other
- [ ] Provincial—Social services/children
- [ ] Provincial—Other
- [ ] Other (please describe):

22. What is the source of most of your funding? Select one.

- [ ] Federal—ISC
- ◯ Federal—Other
- ◯ Provincial—Social services/children
- ◯ Provincial—Other
- ◯ Other (please specify):

23. Approximately what percentage of your funding comes from each source selected in question #19?

Federal—ISC

Federal—Other

Provincial—Social services/children

Provincial—Other

Other (please describe):

24. Did your agency request CHRT funding (i.e., prevention, actuals) in fiscal year 2021-22? (If no, proceed to question #27).

- ◯ Yes
- ◯ No

25. Why did you request the funding?

- ☐ Capital
- ☐ Prevention services and/or programming
- ☐ Information technology (IT)
- ☐ Cultural programming
- ☐ Salaries and benefits
- ☐ Other (please describe):

26. Were the requested funds received?

- ☐ Yes, all requested funds were received
- ☐ Yes, some requested funds were received
- ☐ No
- ☐ Other (please describe):

27. Did your agency request funding through Jordan's Principle?

- ○ Yes ○ No
  - a. If **yes**, did you receive the requested funds? ☐ Yes ○ No
  - b. Were the funds requested for a: ☐ Individual ○ Group
  - c. Were the funds requested for a child in care? ☐ Yes ○ No

28. If you were to deliver your desired set of services for your First Nation, what would you estimate it would cost for one year? Consider for instance, the costs of personnel (salaries and benefits), program development, capital expenditures, etc. You can think of this as an estimated total budget for one fiscal year.

$

Capital needs

29. Where do you host your programming? Select all that apply.

- ☐ Agency's space (owned)
- ☐ Agency's space (leased)
- ☐ First Nation's community centre
- ☐ First Nation's gymnasium
- ☐ First Nation's school
- ☐ First Nation's health centre
- ☐ First Nation's social services centre
- ☐ Other (please describe):

30. Do you have the space you need to deliver your programming?

- ○ Yes ○ No
  - a. If **no**, what programming space is needed?

31. Do your programming spaces meet applicable building codes (e.g., technical specifications or regulations that help to ensure building safety and accessibility)?

- ○ Yes ○ No

32. Could your programming space be improved?

- ○ Yes ○ No

a. If **yes**, how could the programming space be improved?

33. Do you have the office space you need for your staff?

- ○ Yes ○ No

a. If **no**, what office space is needed?

34. Does your office space meet applicable building codes (e.g., technical specifications or regulations that help to ensure building safety and accessibility)?

- ○ Yes ○ No

35. Could your office space be improved?

- ○ Yes ○ No

a. If **yes**, how could your office space be improved?

36. Do you have the necessary technology to do your work?

- ○ Yes ○ No

a. If **no**, what technologies do you require?

- ☐ Faster internet connection
- ☐ Updated computer
- ☐ Additional software
- ☐ Tablet
- ☐ Mobile phone
- ☐ Data collection tools
- ☐ Data analysis tools
- ☐ Other (please specify):

37. Do you have assets (other than technology)? (An item is considered an asset when it is intended for use on a continued basis and is typically repaired, not replaced when damaged, and typically, has a useful life of more than one year).

◯ Yes ◯ No

a. What assets do you need? Select all that apply.

☐ Vehicles

☐ Cultural and language programming tools

☐ Canoes, kayaks, paddle boards

☐ Other (please specify):

Community well-being

38. How would you express your agency's vision of holistic well-being?

39. Does your agency capture its own information on the well-being of children and families in community?

◯ Yes ◯ No

a. If **yes**, what information is captured?

☐ Number of children in care

☐ Rates of family reunification

☐ Number of children accessing services

☐ Number of families accessing services

☐ Outcomes for children in care

☐ Outcomes for children accessing services

☐ Outcomes for families accessing services

☐ Community health outcomes

☐ Family violence incidents

☐ Languages spoken in First Nations served

☐ Community engagement in agency activities

☐ Community participation in cultural activities

☐ Other (please specify):

40. What data would be required to help advance your mandate?

- [ ] Number of children in care
- [ ] Rates of family reunification
- [ ] Number of children accessing services
- [ ] Number of families accessing services
- [ ] Outcomes for children in care
- [ ] Outcomes for children accessing services
- [ ] Outcomes for families accessing services
- [ ] Community health outcomes
- [ ] Family violence incidents
- [ ] Languages spoken in First Nations served
- [ ] Community engagement in agency activities
- [ ] Community participation in cultural activities
- [ ] Other (please specify):

41. Do you have the capacity to collect data necessary for:

Program design:	○ Yes	○ No
Budgeting:	○ Yes	○ No
Assessing well-being:	○ Yes	○ No
Long-term planning:	○ Yes	○ No

a. If you answered **no**, what are your capacity challenges or needs?

- [ ] Funding
- [ ] Technical expertise to analyze data
- [ ] Data governance policy
- [ ] OCAP policies
- [ ] Other (please specify):

42. Would you like to share examples of initiatives, programs, or tools developed or used in your agency to support First Nations children and families?

43. Are there other considerations about child and family services and prevention that you wish to share with IFSD?

44. May IFSD contact you to follow-up on this questionnaire?

○ Yes ○ No

Thank you for your participation

Completed questionnaires can be sent to **helaina.gaspard@ifsd.ca**

APPENDIX E2
FNCFS QUESTIONNAIRE FINDINGS

First Nations child and family service (FNCFS) agencies: Analysis of questionnaires

December 13, 2022

IFSD's mandate

- Build budgets, operating plans, and capital needs assessments to support/facilitate transition to setup First Nations and FNCFS agencies for success in a reformed FNCFS system.

- Phase 3 will:
  - Close data gaps, e.g., capital needs, baselines
  - Model and test the proposed funding approach
  - Refine the Measuring to Thrive framework
  - Define First Nations-based delivery models
  - Enhance fiscal certainty and planning tools
  - Build confidence among stakeholders

Principal takeaways

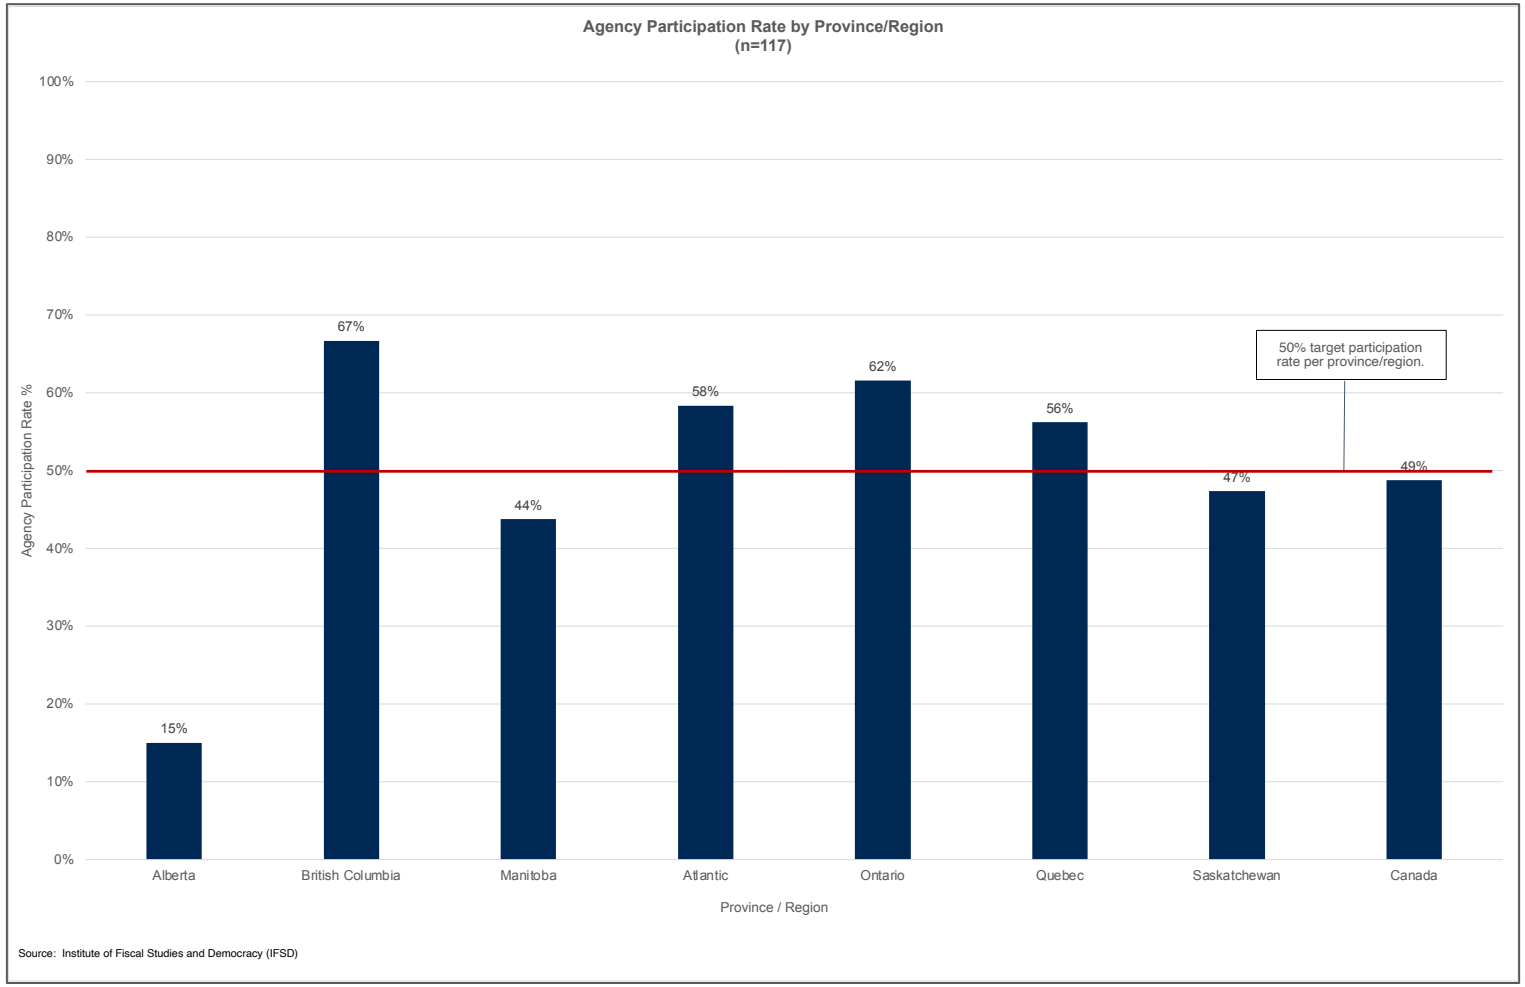
- Average FNCFS agency budgets have increased relative to past exercises.
  - Consistent with funding at actuals and CHRT orders.
- There is a correlation (**but declining**) between total expenditures and revenues and children in care.
  - Hypothesis: Prevention services are being directed to keeping children out of care.
- Correlations between Census 2016 and IRS populations and revenues and expenditures are significant, whereas those correlations with agency-reported population served are much less relevant.
  - Tacit cross-subsidy of federal funding to other supports/services and population residing outside of community is likely.
  - Data suggests that revenues are sought on a smaller population basis than the basis on which expenditures are applied. This could raise issues of budgetary sustainability over the long-run.
- Desired services emphasize housing/lodging with supports, e.g., transition homes, safe homes, etc.
- FNCFS agency revenues=75% federal (ISC) and 20% provincial (ministry of children and families).

Outreach

- All **117 FNCFS agencies** were phoned and emailed.
- Initial contact by phone began the week of April 4, 2022.
  - If contact was made, an email including the project overview and registration for a workshop were sent.
- Outreach continued by phone and email from April to October 2022. **FNCFS agencies were contacted by phone at least 3 different times, and by email, 5 to 7 times.**
- The questionnaire process was closed on **November 4, 2022.**
- FNCFS agencies that did not participate in the questionnaire were contacted the week of November 28, 2022 and invited to respond to five questions (from the questionnaire).
  - The five questions capture basic information on revenues/expenditures for the baseline exercise (see Appendix).

National participation

- We are approaching 50% national participation.
- The outstanding region remains Alberta.
- This analysis **does not include** shortened responses, i.e., five questions, from FNCFS agencies.

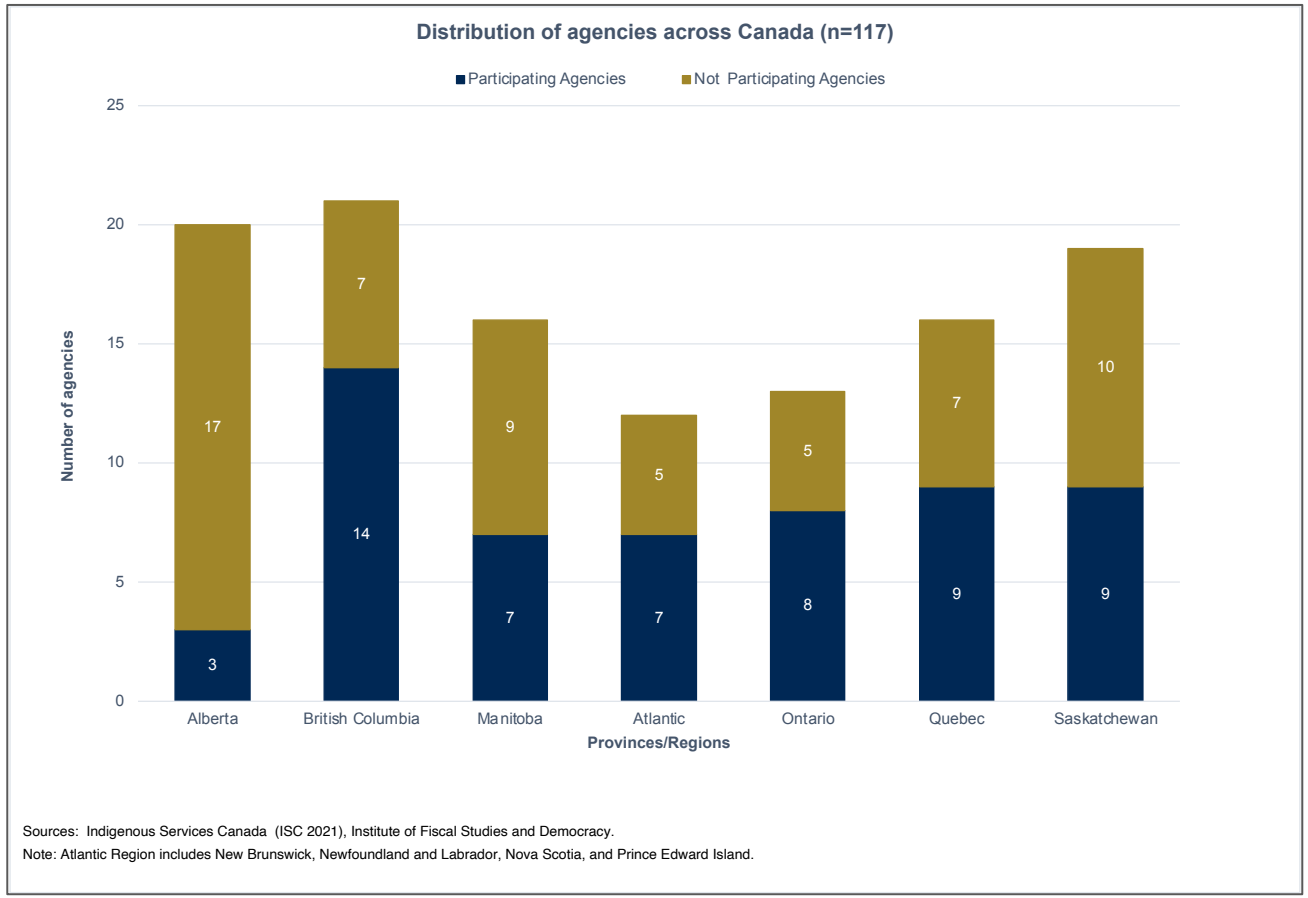


Notes on the analysis

- Descriptive analysis based on questionnaire contributions is presented in this briefing.
- The national participation rate is relevant (49%)
- Note that the response rate (n-value) differs for each question.

Questionnaire participation

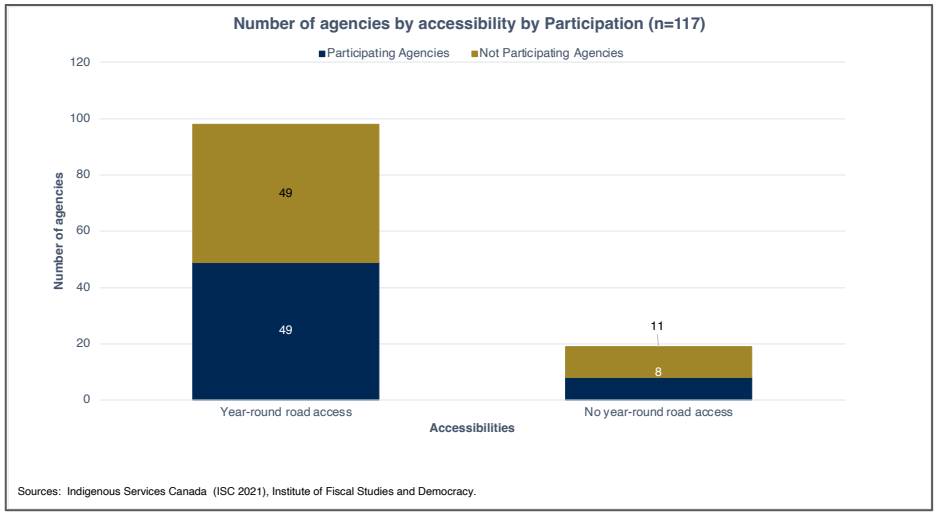
- Other than Alberta, Manitoba, and Saskatchewan, over 50% of FNCFS agencies in provinces/regions participated in the questionnaire.

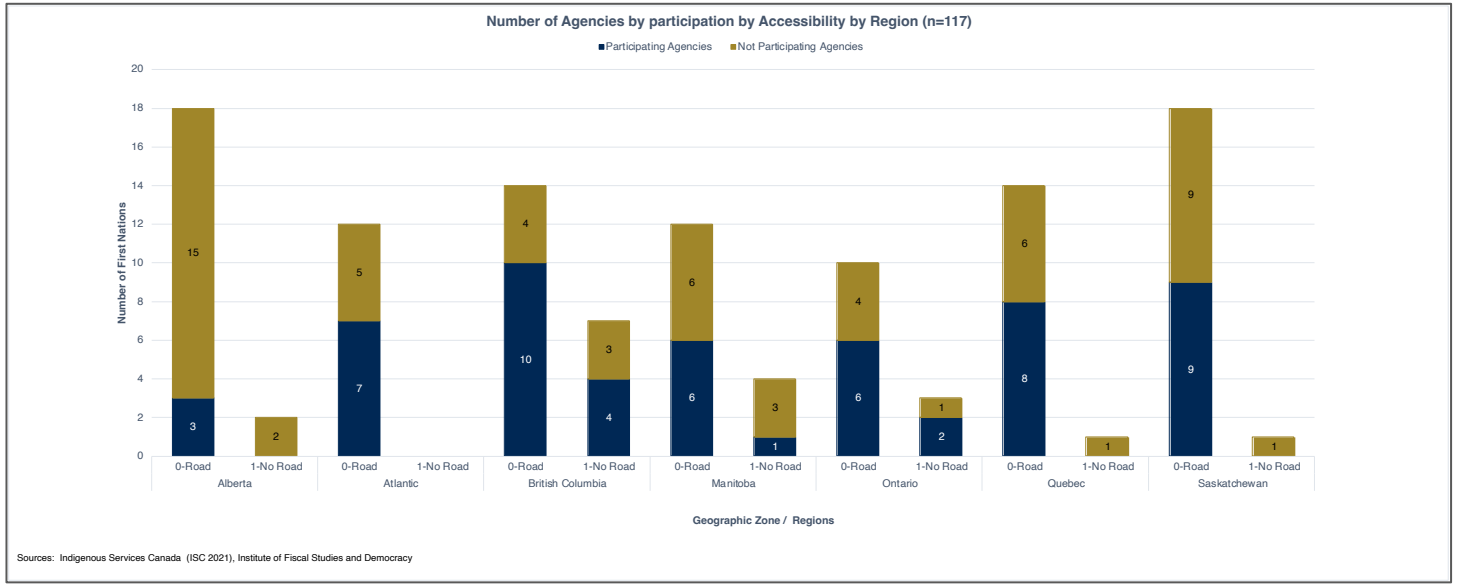


Sources: Indigenous Services Canada (ISC 2021), Institute of Fiscal Studies and Democracy.
Note: Atlantic Region includes New Brunswick, Newfoundland and Labrador, Nova Scotia, and Prince Edward Island.

Participation by road access

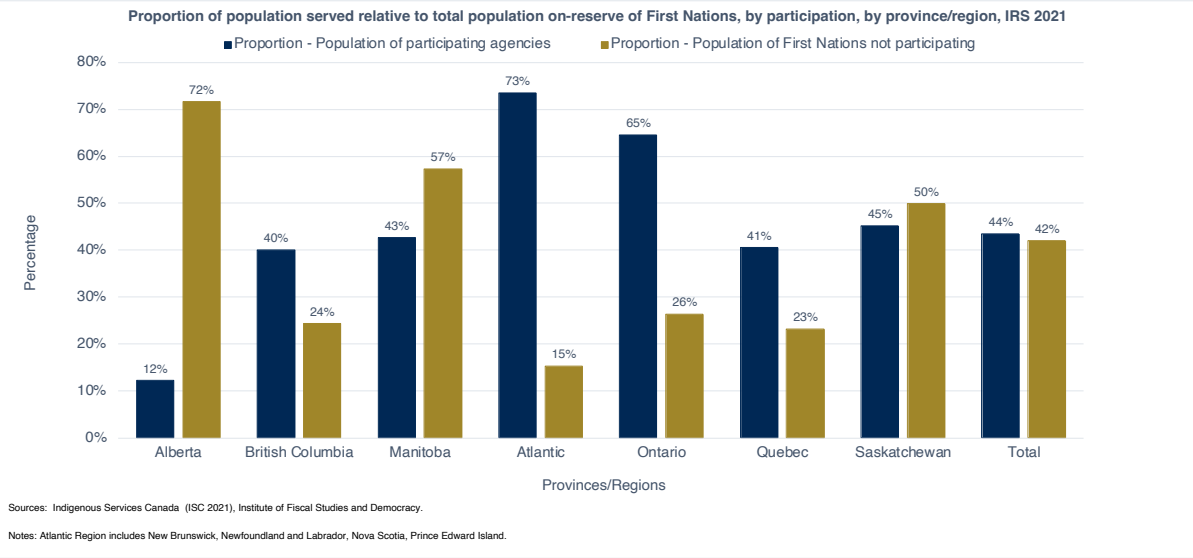
- There is sufficient representation of FNCFS agencies serving First Nations accessible by year-round road both nationally and on a provincial/regional basis. For those not accessible by year-round road, national representation is sufficient, but varies across provinces/regions. This is not a concern, as past exercises indicate consistency of cost behaviour irrespective of provincial borders.





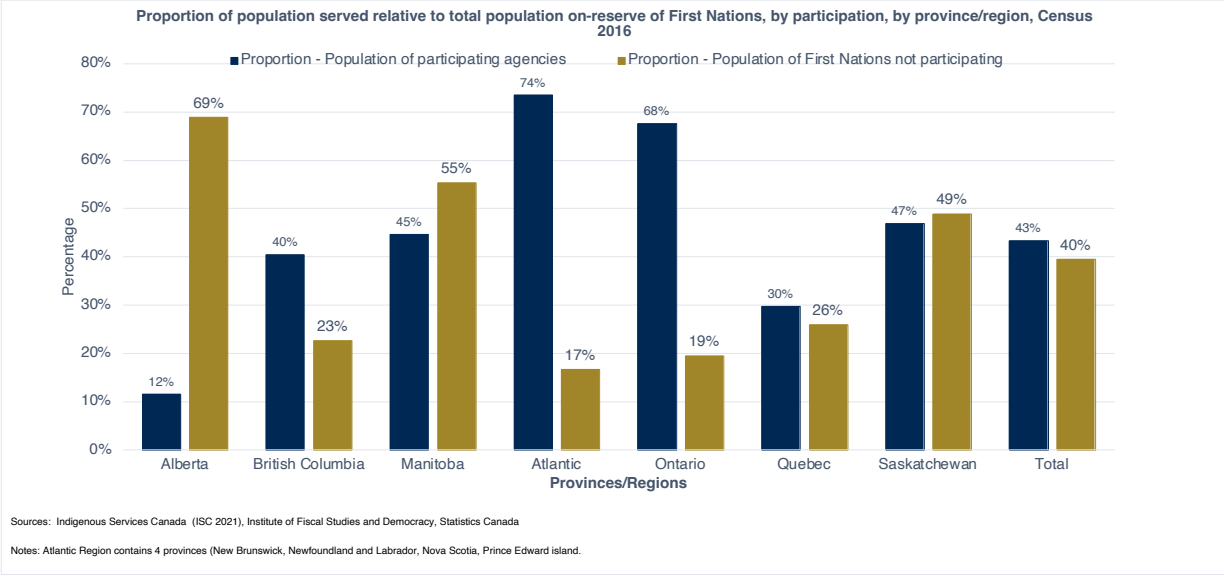
Participation by population served

- With consideration of IRS 2021 and Census 2016 population data, at a national level, most First Nations served by a FNCFS agency are represented through questionnaire participation.
- There is some variance at provincial/regional levels, consistent with overall questionnaire participation.



Sources: Indigenous Services Canada (ISC 2021), Institute of Fiscal Studies and Democracy.

Notes: Atlantic Region includes New Brunswick, Newfoundland and Labrador, Nova Scotia, Prince Edward Island.



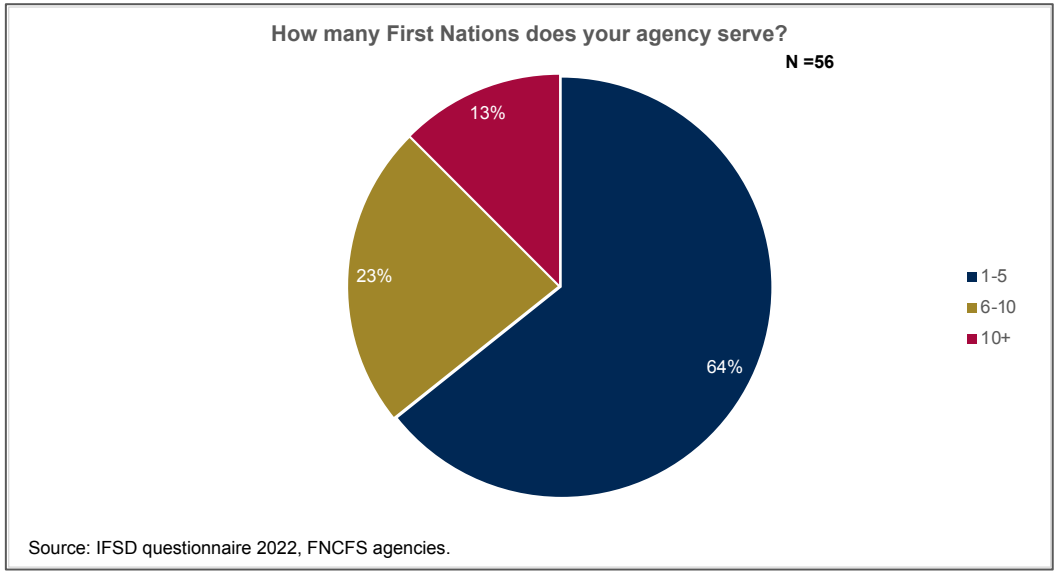
Sources: Indigenous Services Canada (ISC 2021), Institute of Fiscal Studies and Democracy, Statistics Canada

Notes: Atlantic Region contains 4 provinces (New Brunswick, Newfoundland and Labrador, Nova Scotia, Prince Edward island.

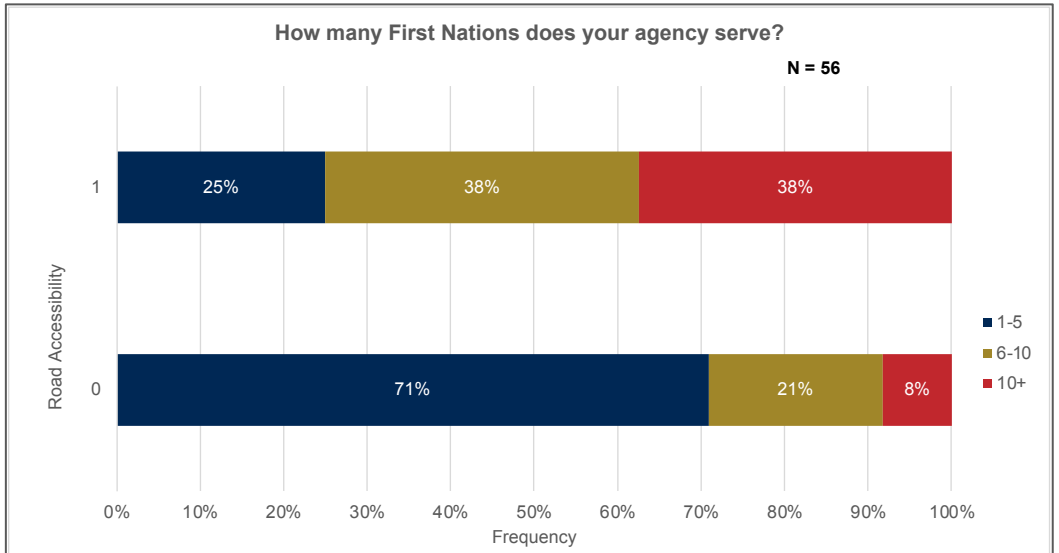
FNCFS agency questionnaire

Number of First Nations served

- Most FNCFS agencies serve 5 First Nations or less.
- FNCFS agencies serving a First Nation without road access are more likely to serve more than 10 First Nations.



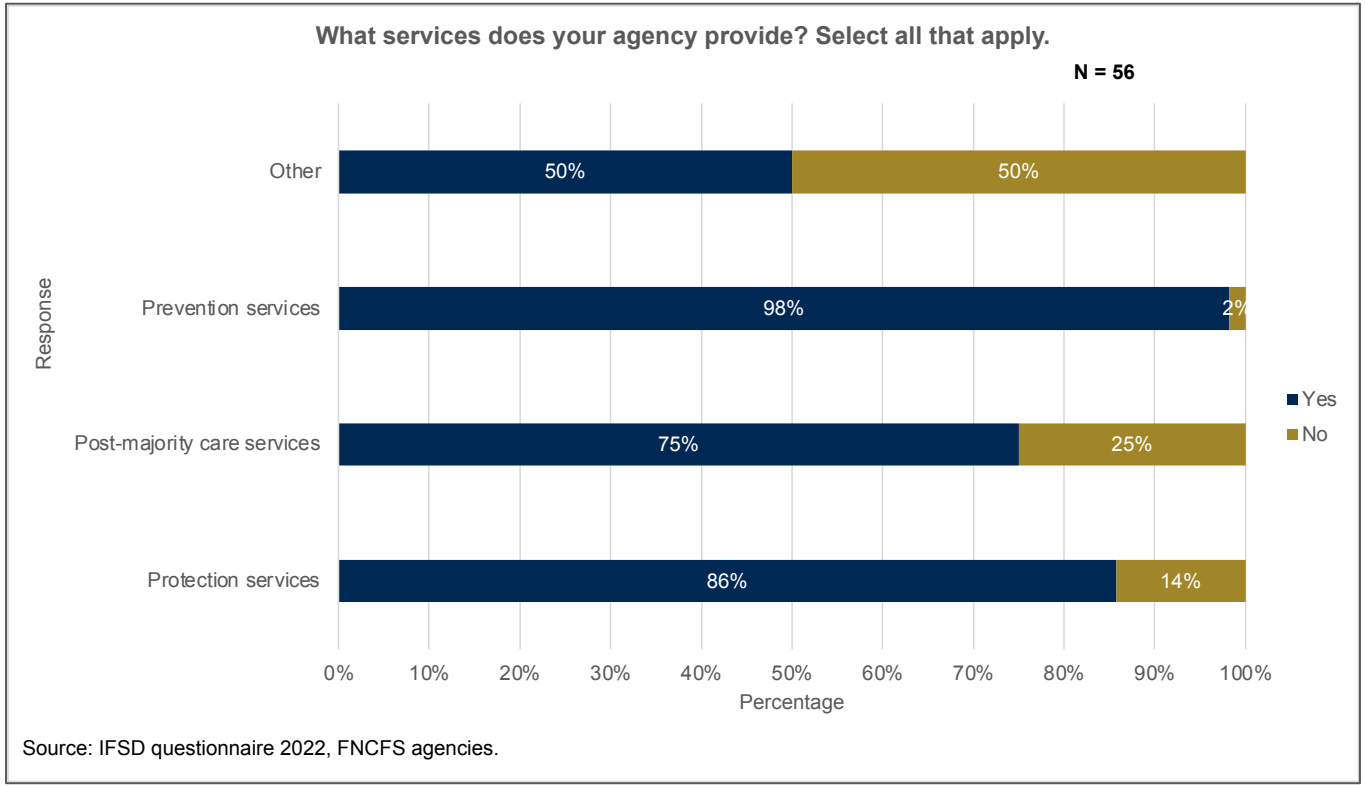
Source: IFSD questionnaire 2022, FNCFS agencies.



Source: IFSD questionnaire 2022, FNCFS agencies.
Note: Road accessibility was designated by a binary code, 0 or 1. If all the First Nations the agency covers have road access (are in geographic zones 1 to 3), they are accessible by road and are designated with the code 0. If an agency covers a First Nation with no road accessibility (located in geographic zone 4), they are not road accessible and are designated with code 1.

Services provided

- Nearly all participating FNCFS agencies report providing prevention services.
- 86% report providing protection services and 75% report offering post-majority care services.

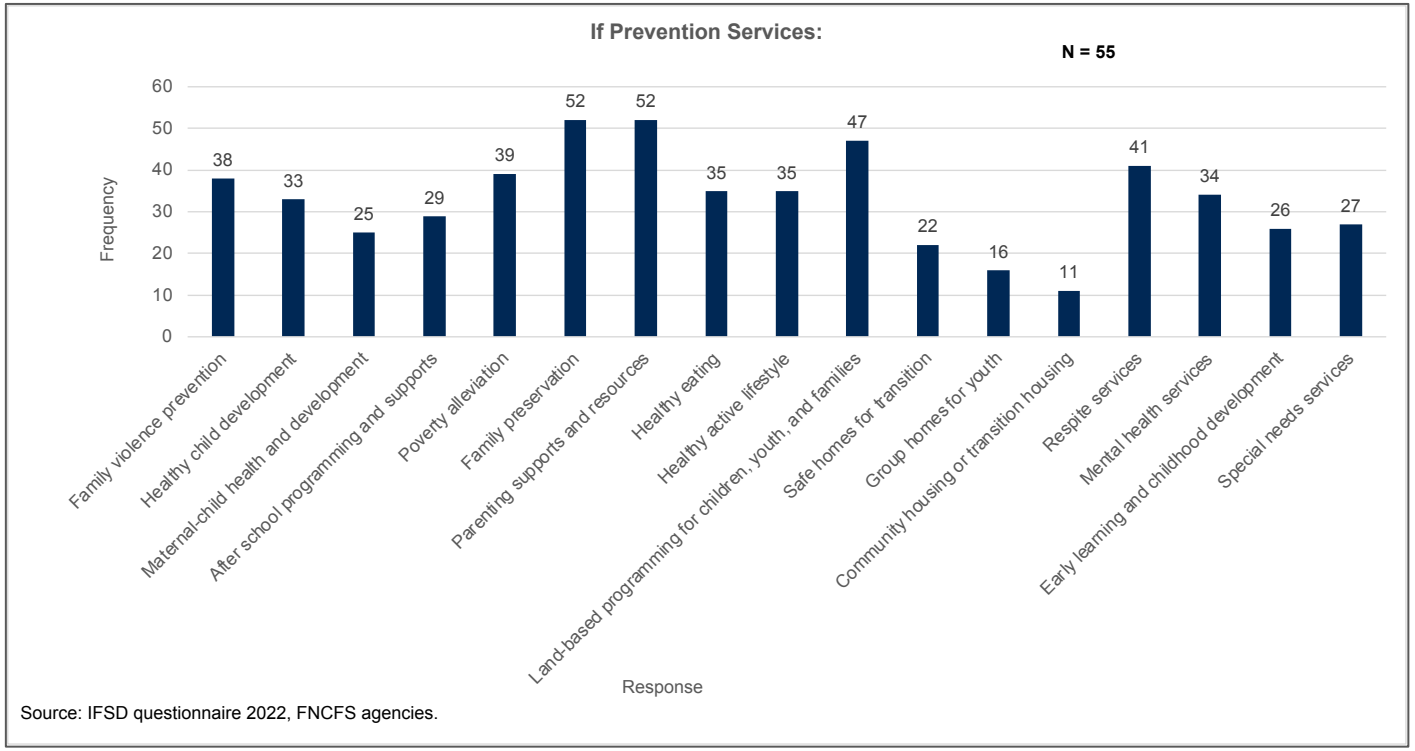


Source: IFSD questionnaire 2022, FNCFS agencies.

Prevention services

- Of those providing prevention services, the majority report providing parenting supports and resources, family preservation, and land-based programming.

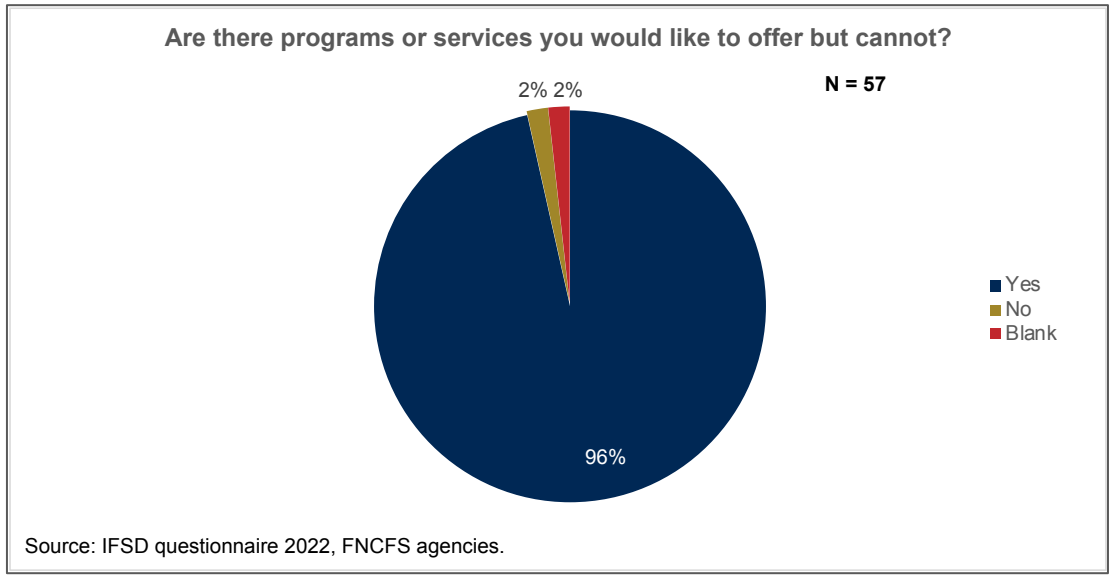
- Hypothesis: the provision of CFS practice-based prevention services may have contributed to the *decline in the correlation* between the number of children in care and the total size of FNCFS agency expenditures and revenues.



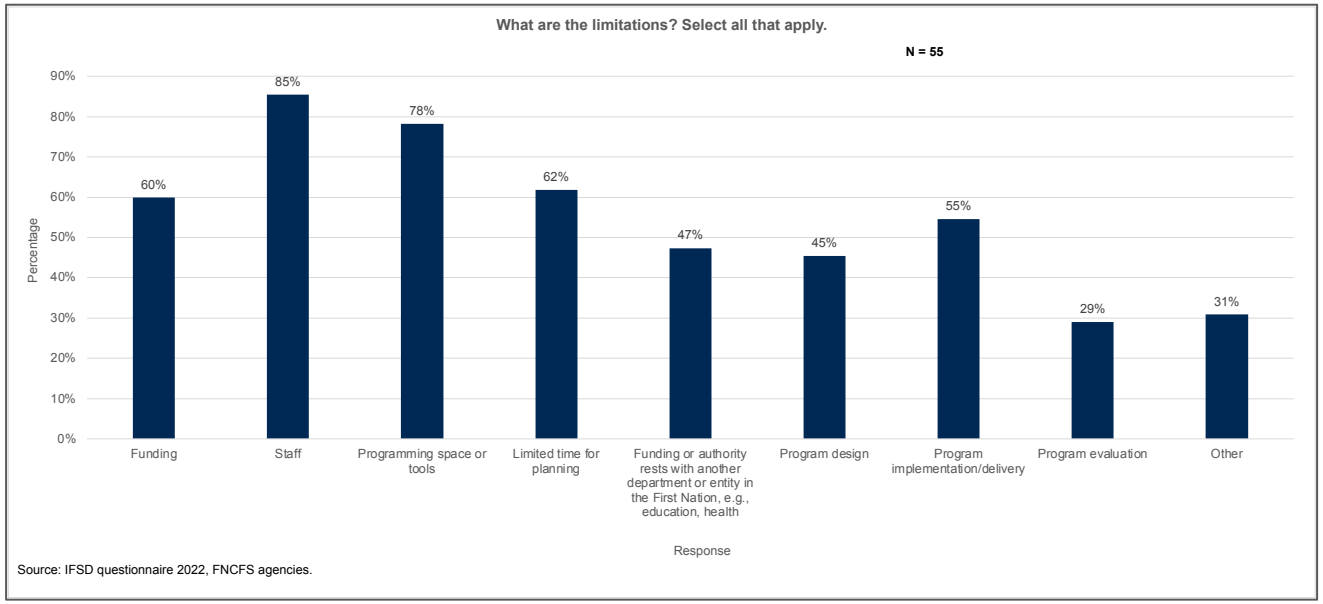
Source: IFSD questionnaire 2022, FNCFS agencies.

Providing desired services

- Nearly all FNCFS agencies reported **not being able to provide desired services** in their communities.
- The most often-cited limitations were staff, programming space or tools, limited time for planning, and funding.



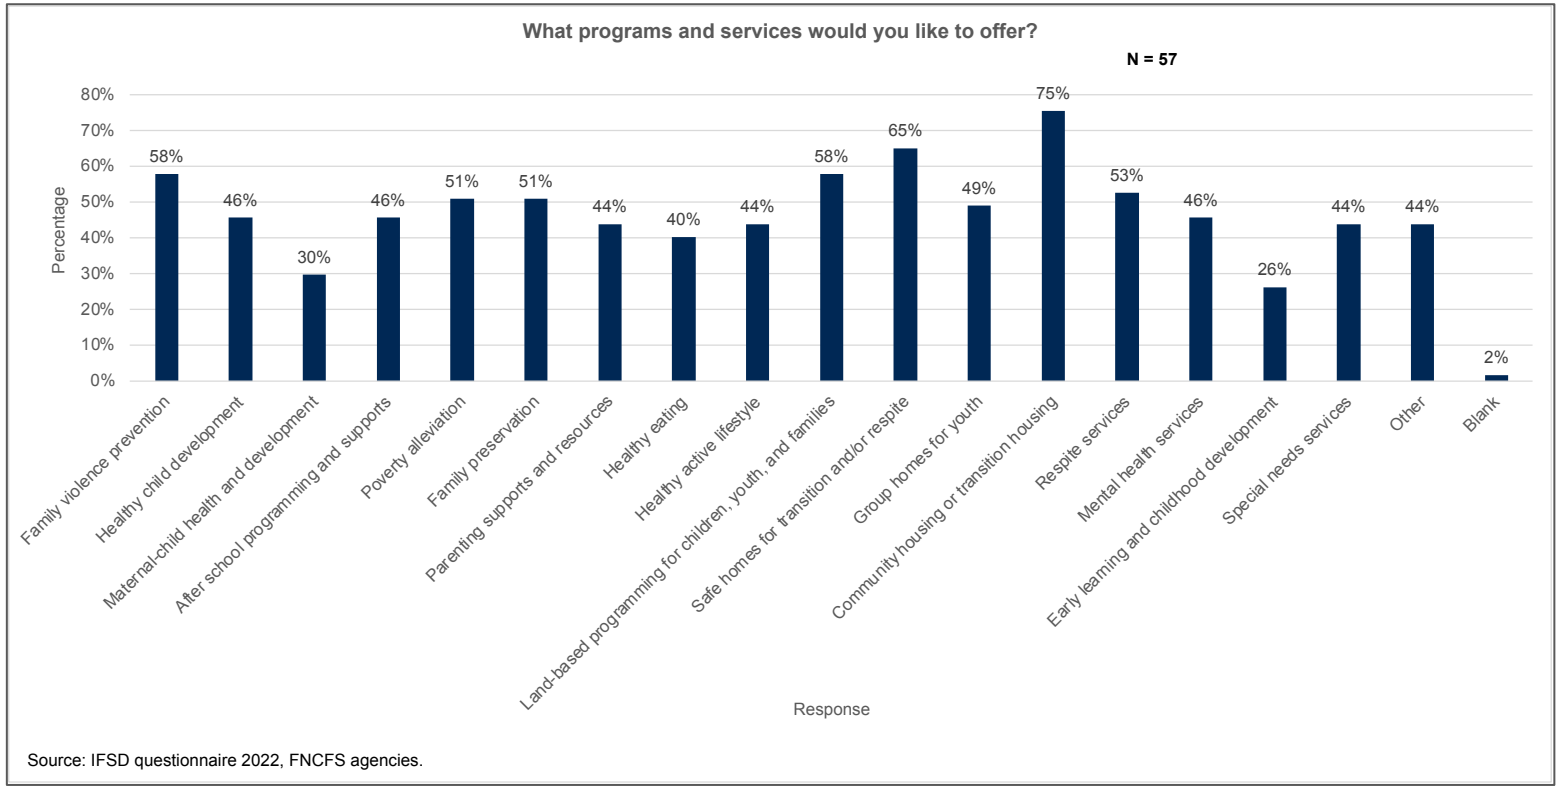
Source: IFSD questionnaire 2022, FNCFS agencies.



Source: IFSD questionnaire 2022, FNCFS agencies.

Desired services

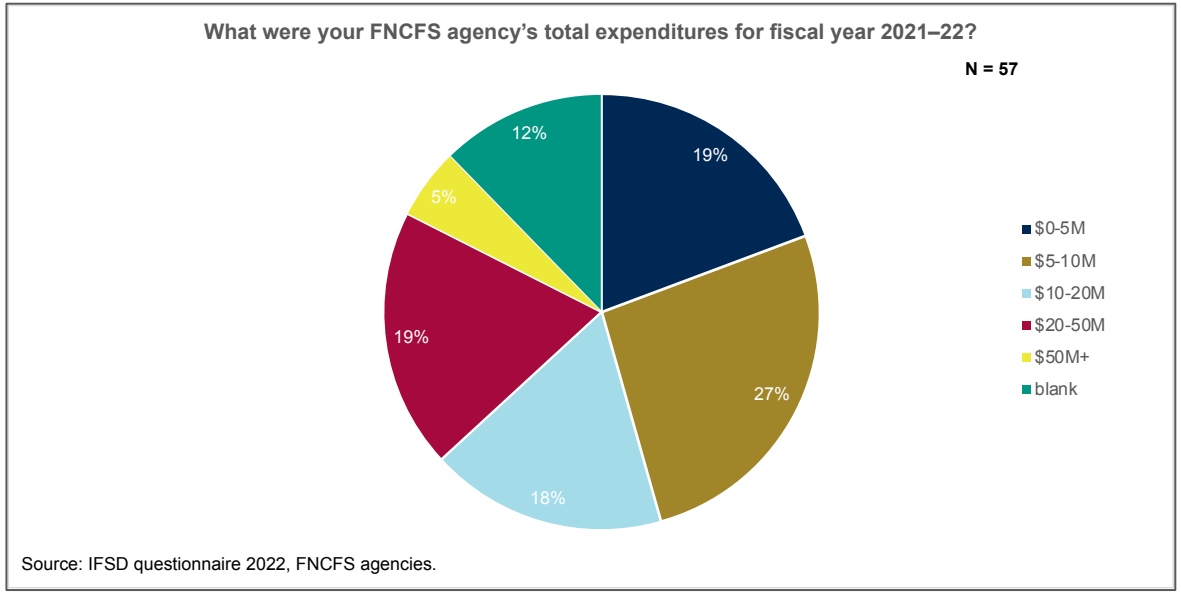
- Specific forms of housing, e.g., community housing or transition housing, and safe homes/respite, stand out among desired services. Family violence prevention and land-based programming also figure prominently.



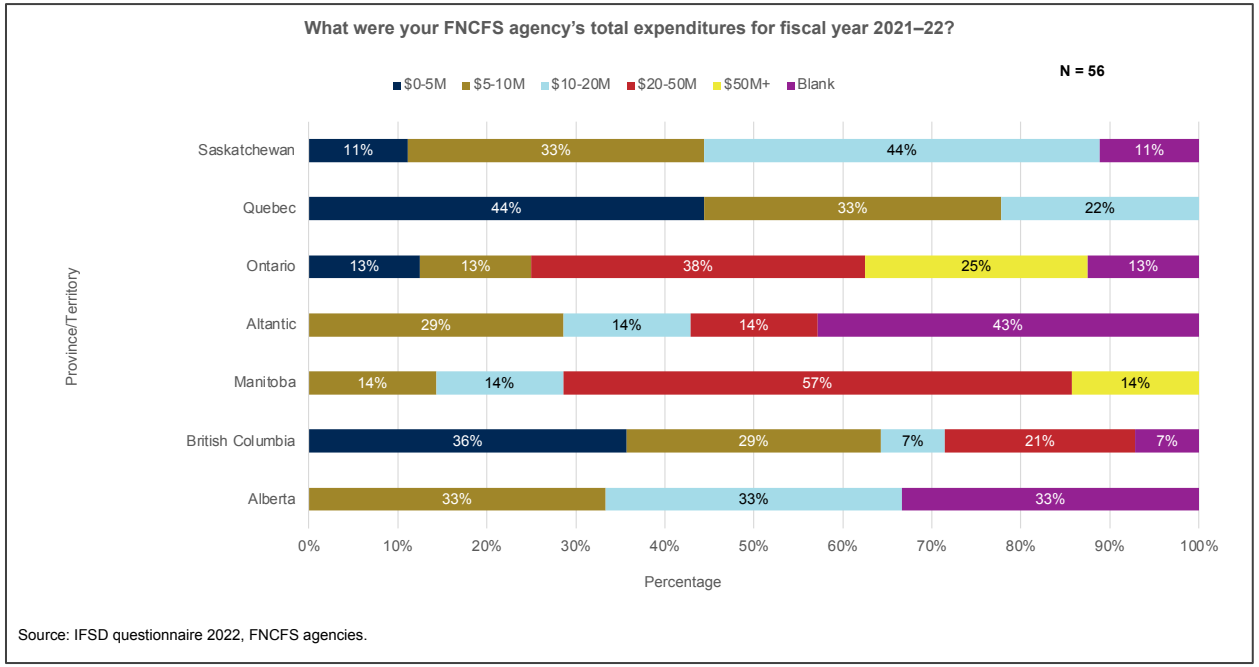
Source: IFSD questionnaire 2022, FNCFS agencies.

Total expenditures

- Most agencies report expenditures (all sources of funds) of up to $10M for fiscal year 2020-21.



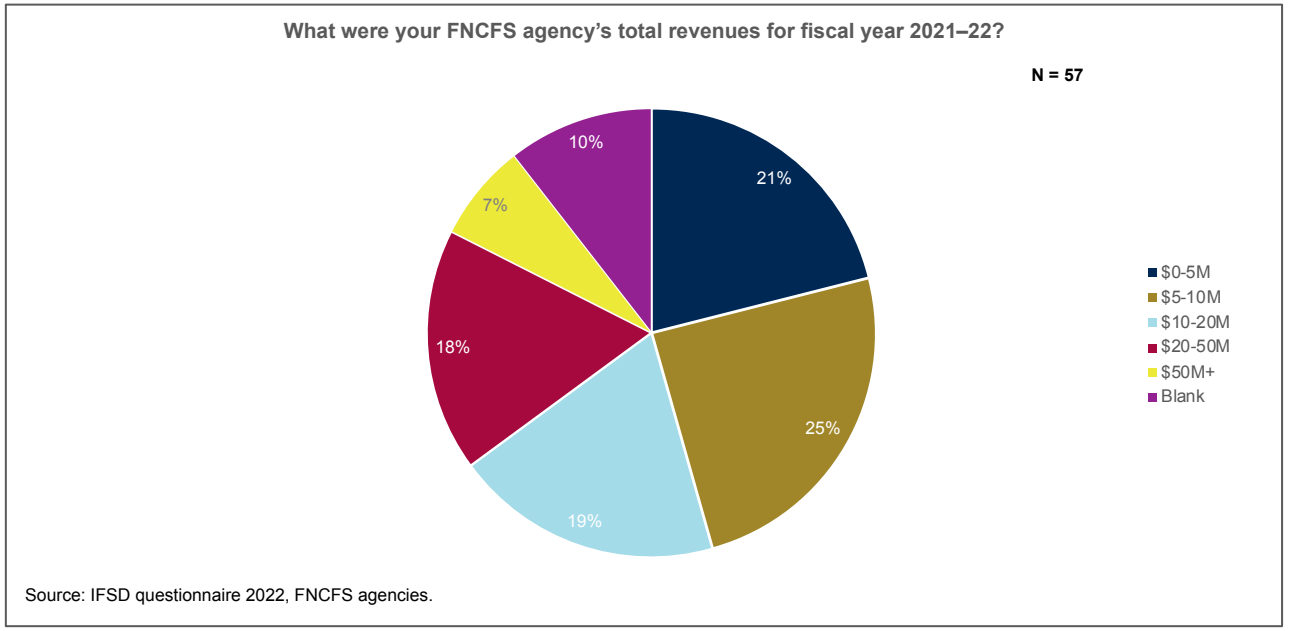
Source: IFSD questionnaire 2022, FNCFS agencies.



Source: IFSD questionnaire 2022, FNCFS agencies.

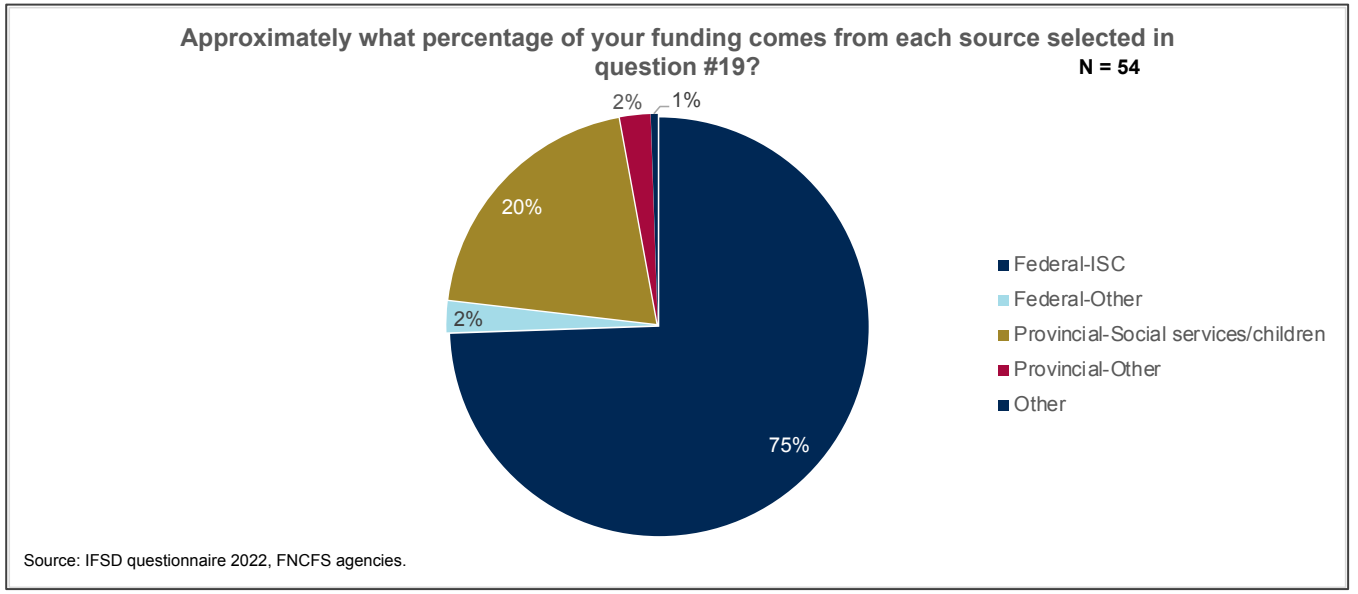
Total revenues

- Nearly half of respondents report revenues below $10M (all sources of funds).



Baselining budgets

- Respondents report **75% of their funding from ISC**.
  - 2% from other federal sources.
- 20% from provincial social services.
  - 2% from other provincial sources.
- 1% from other sources.

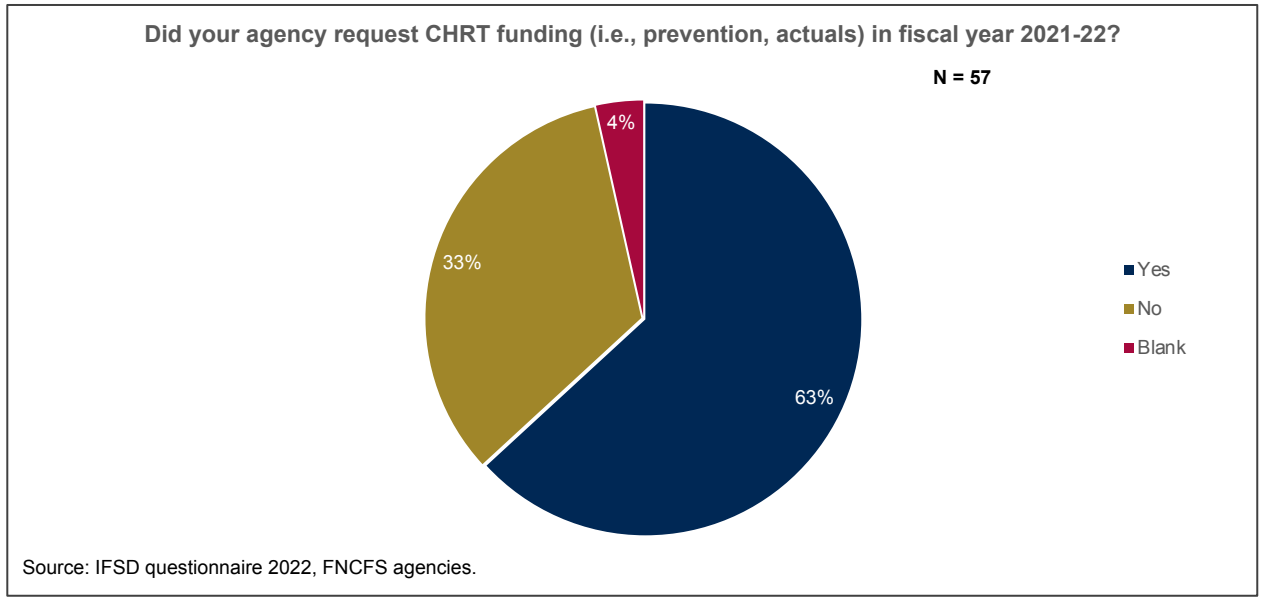


For the updated baseline budget: 75% of total budgets can be considered the "ISC baseline."

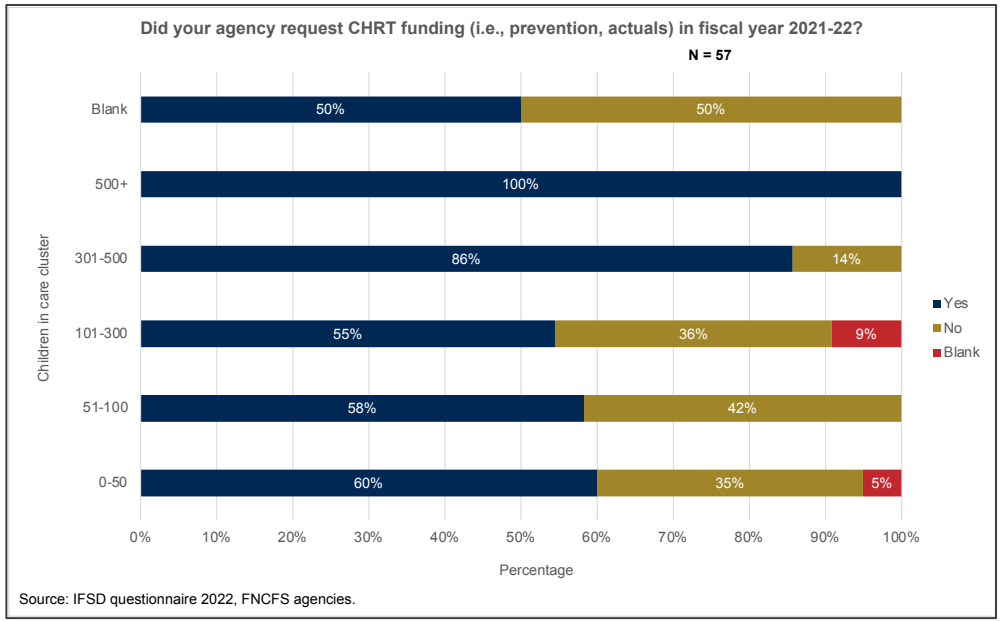
Approx. 80% of total agency budgets come from federal sources.

CHRT funding

- Nearly two-thirds of respondents reported requesting CHRT-mandated funding.



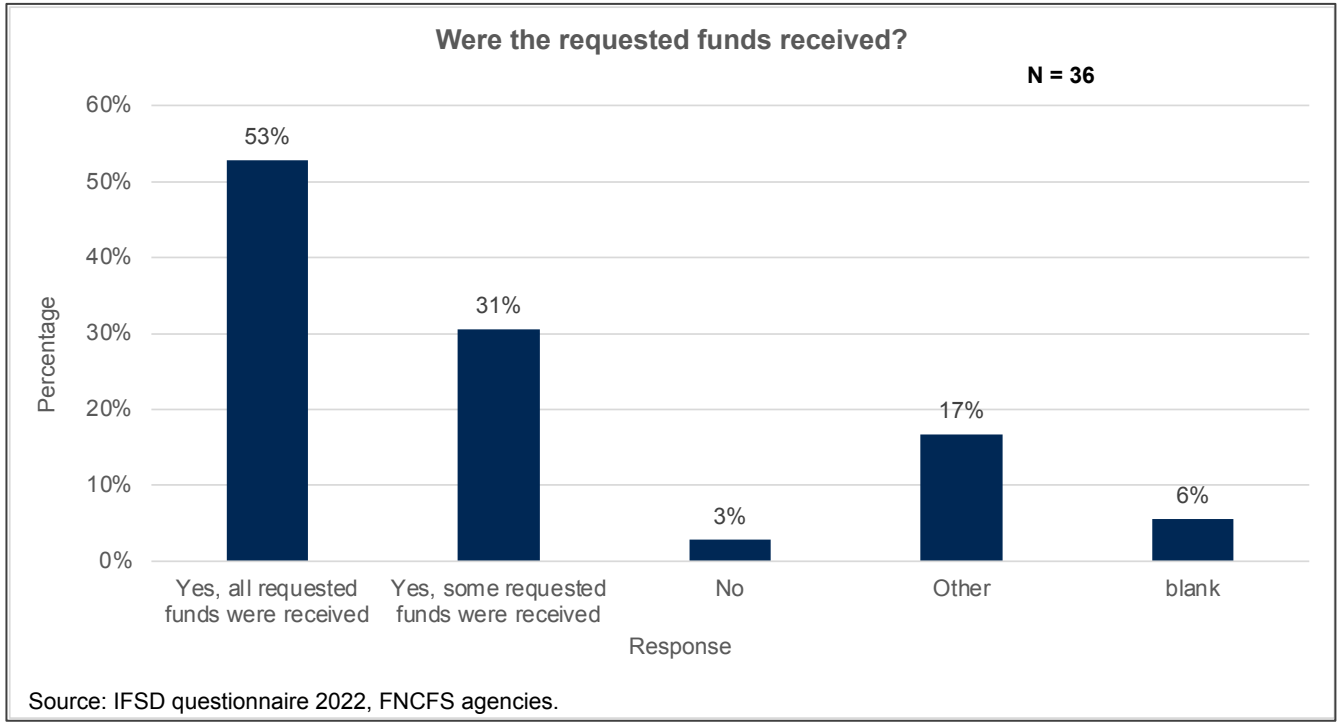
Source: IFSD questionnaire 2022, FNCFS agencies.



Source: IFSD questionnaire 2022, FNCFS agencies.

Receipt of CHRT funding

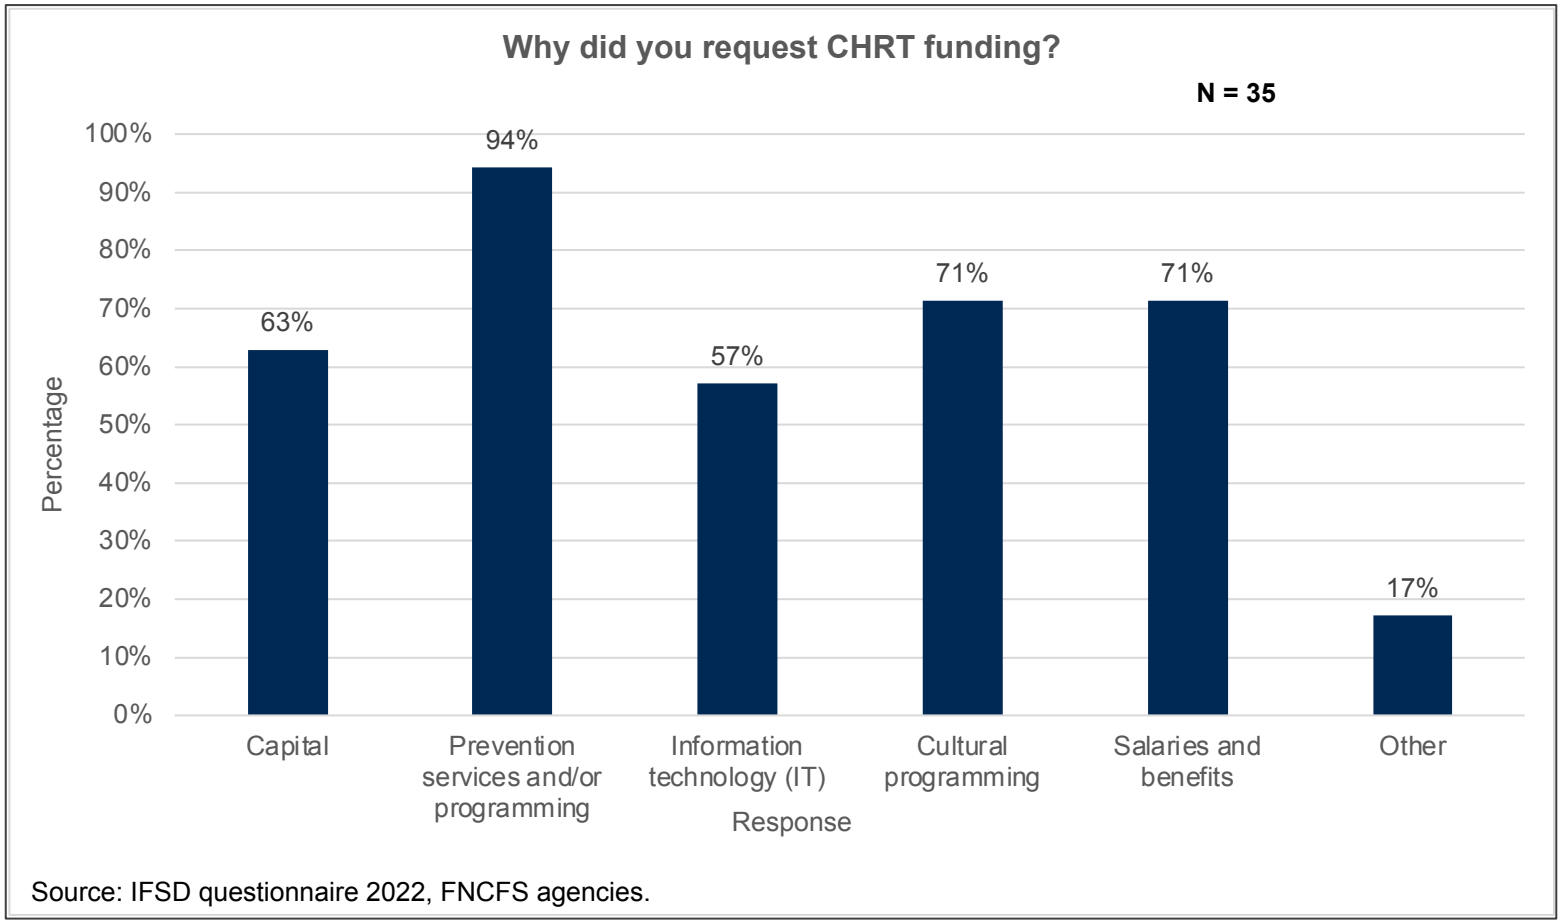
- 84% of respondents receive all or some of their requested CHRT funding.
- There were few reported rejections, but a significant number of non-responses and ‘other’ responses.



Source: IFSD questionnaire 2022, FNCFS agencies.

Use of CHRT funding

- Most CHRT funding was requested for prevention programs/services.
- Cultural programming and salaries and benefits followed with some distance.



Source: IFSD questionnaire 2022, FNCFS agencies.

Correlations

- A correlation denotes the strength of a relationship between two variables.
  - The value of a correlation is between 0 and 1. The closer it is to 1, the stronger the relationship.
  - A positive correlation denotes a linear relationship and a negative correlation denotes an inverse relationship between variables.

- Correlations are run between different variables (independent and dependent) to try to understand if there are explanatory relationships between them.
  - We seek out these types of relationships to help us make sense of data and the organizations/systems they represent.
  - We try to assess if the relationships between the variables can help to explain phenomena or in forecasting/projecting certain trends, e.g., cost behaviour.

Notes on correlations

- Self-reported population served has the lowest correlations with expenditures, revenues, and total staff.
- By contrast, correlations with IRS and Census 2016 population data and expenditures, revenues, and total staff are relevant (above 0.5).
- This may be indicative of the differences between data used for allocating funding v. actual population served. A cross-subsidization of funded v. unfunded populations is occurring.
- There remains a relevant positive correlation between total expenditures (0.72) and total revenues (0.60) and the number of children in care. Relative to Phase 1, however, the strength of the relationship has declined (it was previously 0.91). This suggests that funding is being allocated on different terms (this is consistent with CHRT orders and funding and actuals).
  - Data from this questionnaire suggests that most requests were for prevention programs and services.

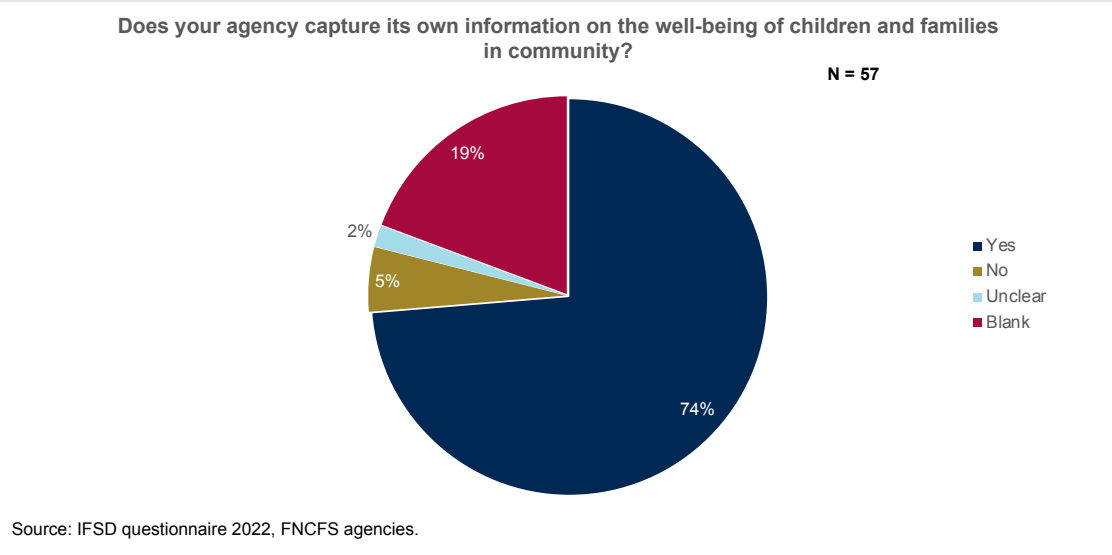
IFSD IFPD

@IFSD_IFPD

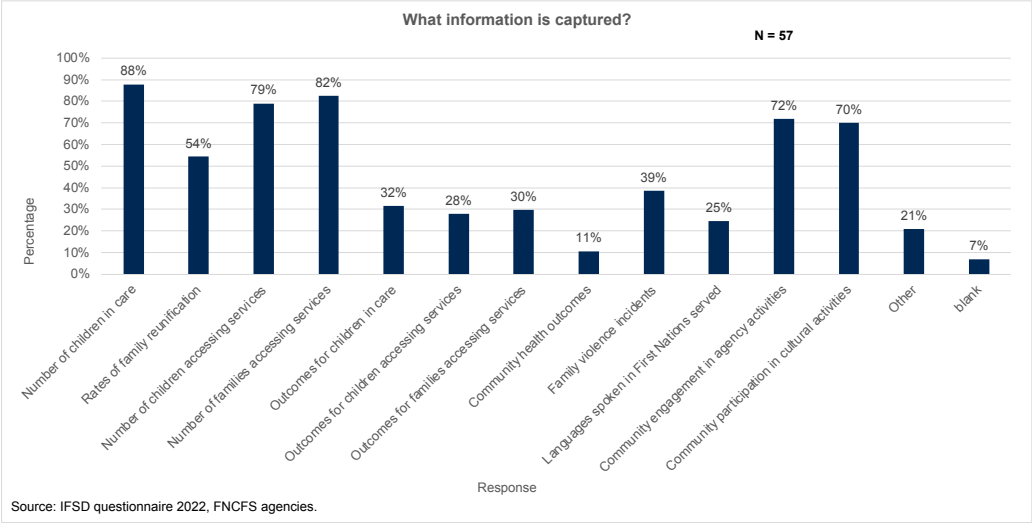
Data collection

- Nearly three-quarters of respondents report collecting their own information on the well-being of children and families.

- However, when asked what type of information is captured, most report ‘input’ type data, e.g., number of children in care, number of families accessing services, etc.



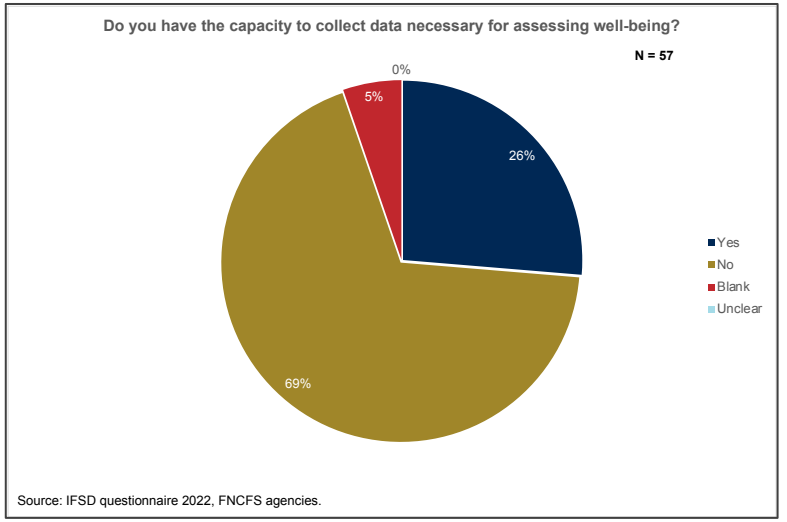
Source: IFSD questionnaire 2022, FNCFS agencies.

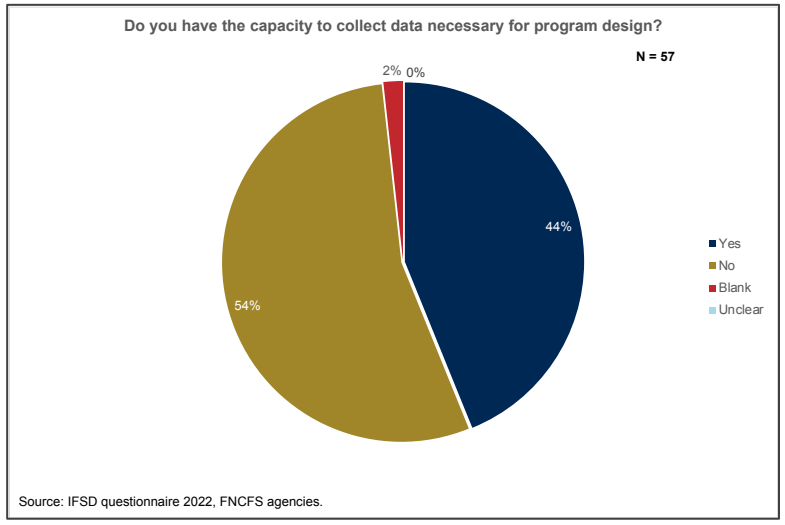


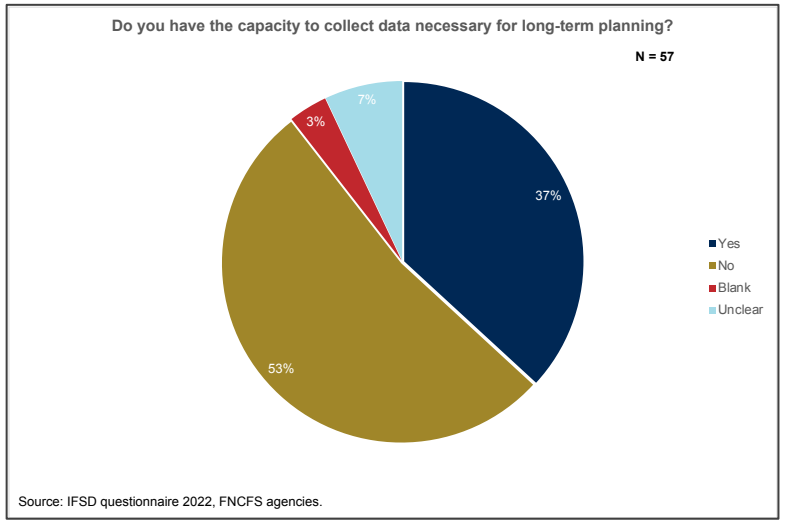
Source: IFSD questionnaire 2022, FNCFS agencies.

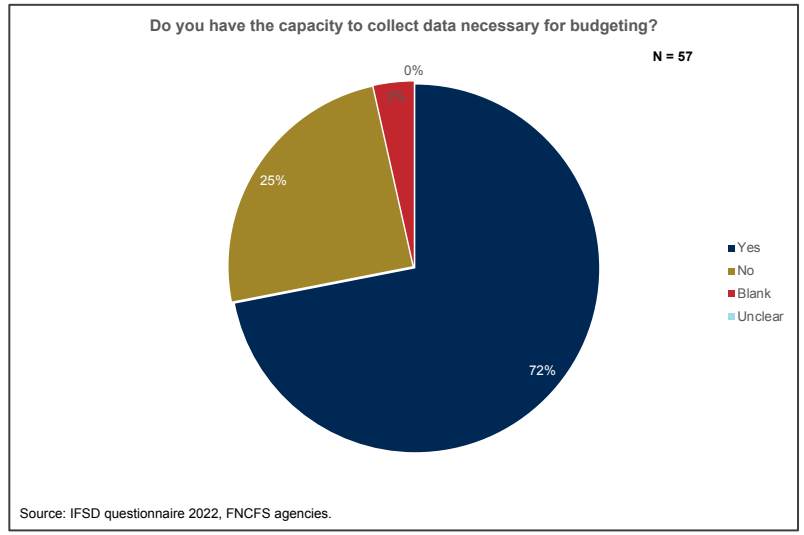
Data collection gaps

- Nearly 70% of respondents report being unable to capture data on well-being. A lack of data for program design and long-term planning was also highlighted.
- Budgeting was the one area in which 72% of respondents reported capacity to collect the necessary information to support the activity.









Challenges in data analysis

- 91% of respondents reported a need for technical expertise to analyze data.
- Data analysis can be a resource-intensive exercise without adequate staff, training, and tools.

APPENDIX F
REMOTENESS

Funding FNCFS: Considerations for remoteness

June 23, 2023

What is IFSD's role in FNCFS?

- The Institute of Fiscal Studies and Democracy (IFSD) is an independent self-funded research consulting firm hosted at the University of Ottawa.

- Since 2018, IFSD has been working at the request of the Assembly of First Nations (AFN) and Caring Society on First Nations child and family services (FNCFS). **IFSD does not work for or take direction from the Government of Canada in this work.**

- IFSD does not have decision-making authority, nor does it sit at the negotiating table.

Funding considerations for the FNCFS program

- Transparency of the funding approach (structure; funding; accountability).
- Funding principles should be nationally applicable.
- Allocations for remoteness should consider all FNCFS agencies.
- Individual funding components are not – on their own – intended to be sufficient to address a challenge, e.g., remoteness, poverty, etc. IFSD's approach is to be understood holistically.
- Funding should be dynamic and needs-based, i.e., changing with the needs of First Nations.

Remoteness approaches

- There are different ways of allocating resources for remoteness. For a national program, the approach should be nationally applicable, be reflective of actual expenditures, and consider the differentiated costs of living and working in places with varying degrees of remoteness.

- An inadequately considered remoteness factor could introduce distortions in the funding approach such that either non-remote or remote service providers could be short-changed, especially, from a fixed funding pot.

- IFSD reviews four approaches to allocate funding for remoteness in Phase 3.

- IFSD remains open to additional models to nurture the reflections of the parties negotiating a final settlement.

	Cost adjusted factor (CAF)	Phase 2 - Scaled factor adjustment	15% CAF adjustment for remoteness index of 0.4 or higher	15% CAF adjustment for all
Description	Cost Adjusted Factor (CAF) calculated based on the remoteness index of a community and whether it has access to roads. Applied to the baseline only.	Factor increase to the baseline budget based on ISC's weighted remoteness quotient (relative basis) (factor of ^1.1, at 0.25%, 0.5% and 1%) based on Statistics Canada's remoteness index. Applied to the baseline only.	15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.	15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Application	Baseline budget	Baseline budget	Baseline budget + top-ups	Baseline budget + top-ups
Source	ISC	IFSD	ISC	ISC with modifications by IFSD
Transparency	Most significant remoteness allocation Applied to all FNCFS agencies	Lowest remoteness allocation Applied to all FNCFS agencies	Slightly lower allocation than 15% CAF (all), but higher than Phase 2 Applied to FNCFS agencies serving First Nations with a Remoteness Index above 0.4	Lower than CAF, but slightly higher than CAF (0.4) Applied to all FNCFS agencies

IFSD's projects on FNCFS

Component	Phase 3 (Contract holder: AFN)	First Nations not affiliated to a FNCFS agency (Contract holder: Caring Society)
Goal/purpose	Test and model the approach from Phase 2, (with refinements), into First Nation and agency specific delivery models, to build tools and setup First Nations and FNCFS agencies for success in transition.	Define the current state and needs in child and family services of First Nations not affiliated to a First Nations child and family services (FNCFS) agency.
IFSD's mandate	– Close data gaps, e.g., capital needs, baselines – Model and test the proposed funding approach – Refine and test the Measuring to Thrive framework – Enhance fiscal certainty and planning tools	– Assess needs for the delivery of prevention and other child and family related services – Quantify a structure and a range of costed approaches for the delivery of child and family services focused activities on-reserve – Consider capital, programming, and operational requirements (e.g., staff, IT, etc.) in the analysis
Approach	Bottom-up; questionnaire (FNCFS agencies); in-depth collaboration (1.5 years) from 20 collaborators (First Nations and FNCFS agencies); research and analysis; expert support	Bottom-up; questionnaire; case study collaborators; research and analysis
Project end	March 2024 (project end); final report to follow *Monthly updates	December 2023 *Monthly updates

Remoteness Q&A

June 19, 2023

1) **Why does remoteness matter in FNCFS?**

The impacts of remoteness can be experienced differently in different places. For instance, a First Nation may be within a commutable distance from an urban centre, but without a vehicle or public transportation, the urban centre and its services can be inaccessible. Without year-round road access, the costs of acquiring goods and services are significantly higher, with additional challenges for mobility.

In child and family services, remoteness impacts access to services, e.g., therapists, psychologists, health care, etc., access to goods, e.g., vehicles, fuel, the ability to attract and retain personnel, and informs the context in which programs and services are being delivered.

In the first cost analysis of FNCFS agency expenditures in 2018, in which 76% of existing FNCFS agencies participated, IFSD found that agencies serving even one First Nation without year-round road access had total budgets twice the size of their peers, had travel costs five times as high, and twice the number of staff. These characteristics are reflective of the higher costs of doing business in remote places and the geography that needs to be covered. Remoteness in child and family services is a characteristic that influences service delivery and needs to be recognized. The question, however, is how to recognize the cost pressures of remoteness.

With current funding at actuals for FNCFS agencies, the increased costs of remoteness are included in their expenditures. This does not, however, mean that the resources are sufficient to address the ongoing impacts of remoteness related to planning and service delivery. In its dynamic funding approach, i.e., an approach that links and responds to changing community contexts, IFSD proposes an allocation to the budget to compensate for remoteness. The remoteness component is an addition to a current baseline that already includes actual expenditures, i.e., includes compensation for remoteness.

A top-up for remoteness on an overall budget is not designed to compensate in full for the different costs of living in remote places but is intended to recognize and offset pressures associated to operating in a remote context, e.g., extra costs of accessing a health professional, wireless connectivity, shipping, etc. Since remoteness can be about more than road access, applying a remoteness top-up on a relative basis for all FNCFS agencies can be useful.

2) **To whom is IFSD's work in Phase 3 applicable?**

IFSD's work in Phase 3 is designed to support First Nations contemplating or exercising jurisdiction, and FNCFS agencies.

The purpose is to test and model the approach from Phase 2, (with refinements), into First Nation and agency specific delivery models, to build tools and setup First Nations and FNCFS agencies for success in transition.

3) What approaches is IFSD reviewing in Phase 3 to allocate resources for remoteness?

In its modelling of the FNCFS funding approach, IFSD has reviewed four approaches to allocating resources for remoteness (see summary in table below).

The factor increase comes from Phase 2, and is a relative scale to increase budgets based on remoteness.

The Cost Adjusted Factor (CAF) and 15%CAF (remoteness >0.4) come from ISC. The 15%CAF applied to all FNCFS agencies uses ISC's approach to allocate funding, but adjusts the application by applying it to all FNCFS agencies based on a population-weighted remoteness index.

There are different ways of allocating resources for remoteness. For a national program, the approach should be nationally applicable, be reflective of actual expenditures, and consider the differentiated costs of living and working in places with varying degrees of remoteness.

Given the gap in a First Nations-specific approach to adjusting for remoteness, a recommendation could be made to develop a bottom-up assessment of the actual costs of remoteness. Similar to the development of the Consumer Price Index, a First Nations-specific index for adjusting for the costs of remoteness could be developed based on actual goods, and updated on a regular basis to compensate for the changing costs of living in remote places.

Component	Description	Options
Geography/remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	1) Factor increase to the baseline budget based on ISC's weighted remoteness quotient (relative basis) (factor of ^1.1, at 0.25%, 0.5% and 1%) based on Statistics Canada's remoteness index. Applied to the baseline only.
		2) Cost Adjusted Factor (CAF) calculated based on the remoteness index of a community and whether it has access to roads. Applied to the baseline only.
		3) 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		4) 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.

4) **What is the impact of remoteness funding for the national negotiations, i.e., if general funding (approx. $23B is fixed), from which sources will you draw to compensate for remoteness?**

An inadequately considered remoteness factor could introduce distortions in the funding approach such that either non-remote or remote service providers could be short-changed, especially, from a fixed funding pot.

When an adjustment factor is applied to a baseline of actual expenditures (that already include significantly higher factor inputs), there is a risk of double counting the necessary adjustments.

The remoteness top-up should be recognition of the additional costs of delivering a different set of needed services. We should not be relying on a top-up to address fundamental gaps in an operating baseline of the service provider. Those gaps should be closed.

5) **What is IFSD's role in Phase 3?**

Since 2018, IFSD has been working at the request of the Assembly of First Nations (AFN) and Caring Society on First Nations child and family services (FNCFS).

This work is intended to support First Nations, First Nations leadership, FNCFS agencies, and the negotiating parties.

As a research consulting firm, IFSD does not have decision-making authority, nor does it sit at the negotiating table.

IFSD relies on and is grateful for the contributions of First Nations and FNCFS agencies that help to shape this work. This would not be possible without your willingness to share information, time, and experiences with IFSD.

IFSD has had the pleasure of discussing interim findings and meeting with First Nations and FNCFS agencies across Canada in a variety of forums, e.g., regional gatherings, one-on-one discussions, workshops, etc.

The findings, analysis, and tools that result from IFSD's work on FNCFS, are intended to support First Nations, First Nations leadership, FNCFS agencies, and the parties negotiating long-term reform.

APPENDIX G
EMERGENCY FUNDING

Emergency levers in FNCFS

February 21, 2024

IFSD's recommendation on emergency funding

- IFSD recommends allocating 2% of the baseline budget to be managed by service providers.
- The resources could be kept in reserve for future use (using the carry-forward provision of the block approach) or expended by the service provider.
- Should a provider be unable within its allocated budget to meet increased demands for protection and prevention services, it may seek recourse with the federal government.
- As the insurer of last resort, and the entity accountable for funding FNCFS on-reserve, should a provider be unable to manage due to exceptional circumstances beyond its control (i.e., not poor financial management), the federal government would be expected to provide resources to mitigate the emergency.
- A clearly defined set of terms and conditions should be defined for access to additional emergency resources.

Definitions

- Emergency circumstance: extenuating factors external to the service provider that require an atypical response from the service provider. An atypical resource is considered one beyond the standard course of business that impacts the delivery of protection and/or secondary and tertiary prevention services.

- Emergency lever: a mechanism to alleviate financial or operational pressures to an emergency circumstance.

The purpose of reform

- Purpose of FNCFS program reform = reduce contact with protection services.

- There's an assumption that prevention and protection together, when adequately funded, structured, and monitored, should provide better services to children and families. Over time, this should improve outcomes for children, families, and communities.

- Should this not be the case, service providers should be able to seek redress:
  - Demonstrate case with own data
  - Substantiate need

Managing the risks of change

- There is no risk-free change. Success is not guaranteed in any system. Success depends on different components of the system working together to deliver results (e.g., funding, people, structure, etc.).

- Reform is meant to:
  - End discrimination
  - Ensure discrimination does not reoccur

- IFSD's proposed approach includes changes in three main areas (with linkages between them to create sustainable change):
  - Structure
  - Funding
  - Accountability

- If one of these three elements is not present or inconsistently reformed, do not proceed with reform.

What safety measures exist in IFSD's proposed approach?

- Increase in resources linked to different contexts (in IFSD's proposed approach, FNCFS providers on average, have a 15% increase to their reported budget).
- Stabilized planning environment with clear resource allocations in a block.
- Service provider control of resource allocation on the ground.
- Emergency funding included in provider-managed funds.

Risks of reform

- Reform the FNCFS program with changes to funding, structure, and accountability to: 1) end discrimination; 2) ensure it does not reoccur.
- Service providers are seeking safety measures to ensure the success of reform.
- Differentiated starting points mean different states of readiness and tools for transition.
- There is no risk-free change.

There is a decision to be made on care and control in delivery and accountability in FNCFS:

Should it rest with First Nations and their delegated service providers or Indigenous Services Canada?

Control and funding approaches

- In a fee-for-service model (i.e., ISC pays bill for activity), power rests with ISC.
  - ISC dictates funding streams and uses
  - ISC determine allowable expenditures
  - ISC reallocates resources within the department and different priorities because funding is not infinite, nor is it protected for FNCFS

- In a block approach, decisions on *how* to spend resources rests with the service provider.
  - Service provider has agreement with a defined funding amount which supports planning
  - Service provider has autonomy in allocation and does not seek approvals or reimbursements from ISC on spending
  - Service provider is accountable for delivering on mandate

Control and funding approaches (cont.)

Consideration	Past	Current	Future (IFSD's approach)
Funding approach	Fee-for-service	Fee-for-service via actuals process	Block (provider controls *how* they spend)
Control of spending	ISC	ISC, with increased flexibility with reimbursement for actual spending	First Nation/delegated service provider
Accountability for results	Service provider	Service provider	Service provider

Options for emergency funding

- IFSD's recommendation: Agency/provider retains emergency allocation and is responsible for managing.

- Other options for emergency funding:

1) Defined amount in a fund, managed by ISC.
   - Fee-for-service
   - Allocated by request/application
   - Should be defined in special purpose allotment, to ensure it cannot be reallocated.

2) Forego structural reform and continue the fee-for-service model.

APPENDIX H
MAINTENANCE

Funding maintenance for children in out-of-home care

As national estimates were prepared for the FNCFS Program (FNCFS agencies only) with the collaboratively developed funding approach, the funding of maintenance for children in out-of-home care remained an outstanding issue.

IFSD requested assistance from FNCFS agency collaborators. To better understand maintenance payment trends, IFSD required expenditure information (see Table 1 below). The expenditure information from the federal and provincial governments, as well as specific maintenance allocations were requested.

Fiscal year	Children in care		Total expenditures		Total child in care expenditures			
	Federal	Provincial	Federal	Provincial	Federal	Federal maintenance expenditures	Provincial	Provincial maintenance expenditures
Period from April 1 to March 31	*Include the number of children in care funded by the federal government at March 31 (of the relevant end of the fiscal year)*	*Include the number of children in care funded by the provincial government at March 31 (of the relevant end of the fiscal year)*	*Agency's total FEDERAL-ONLY expenditures for the fiscal year*	*Agency's total PROVINCIAL-ONLY expenditures for the fiscal year*	*Agency's total expenditures associated exclusively to children in care (i.e., maintenance payments, child special allowance) paid by the federal government (no other expenditures to be included)*	*Agency's maintenance expenditures for federally-funded children, i.e., maintenance paid by the federal government (no other expenditures to be included)*	*Agency's total expenditures associated exclusively to children in care (i.e., maintenance payments, child special allowance) paid by the provincial government (no other expenditures to be included)*	*Agency's maintenance expenditures for provincially-funded children, i.e., paid by the provincial government (no other expenditures to be included)*
2022-2023								
2021-2022								
2020-2021								
2019-2020								
2018-2019								
[...]								

Eight responses were provided from FNCFS agency collaborators (mostly based in Manitoba).

Analysis of **federal expenditure** information indicates:

1) Variability in the ratios of maintenance expenditures to total federal expenditures. For instance, some collaborators have average maintenance expenditures at approximately 20% of their total federal expenditures, while others are greater than 50% across fiscal years.
2) The ratio of maintenance to federal expenditures has been decreasing over time to varying degrees. In general, maintenance expenditures as a proportion of total federal expenditures are decreasing (even though federal expenditures are increasing for most reporting collaborators). This suggests that federal expenditures are targeting other activity areas, e.g., prevention, operations, etc.

Based on the analysis, IFSD proposes the following action for maintenance allocations for out-of-home care:

> *Maintain the block funding approach with allocations (calculated from the baseline budget) for emergency and maintenance expenditures. Any maintenance expenditures for out-of-home care that exceed the FNCFS agency's block funding allocation are to be billed at actual costs to Indigenous Services Canada (ISC). It is suggested that terms and conditions be defined to govern adjudication time, criteria, and payment time.*

There are two possible triggers that require additional funding for maintenance:

1) The FNCFS agency has expended all resources for the fiscal year without considering contingency;
2) The FNCFS agency can justify that a maintenance expense is extraordinary (beyond usual costs of doing business).

For #1, the burden would be on the agency to reallocate and work within their allocated funds. For #2, the request for supplementary resources would have to be substantiated.

IFSD understands from collaborators that one exceptional maintenance circumstance could severely impact a budget. With #2, the FNCFS agency would be positioned to determine whether pursuing supplementary funds is necessary.

With IFSD's proposed funding approach, FNCFS agency budgets increase relative to current expenditures. IFSD's assumption is that for most (if not all) of an agency's annual operations, the allocation should be sufficient in block form.

However, IFSD recognizes that there are extenuating circumstances where maintenance costs, e.g., for complex needs, specialized homes, etc. can extend beyond the available budget. In those circumstances, IFSD proposes that those emergency/anomalous maintenance for out-of-home care expenditures are paid by the federal government at actual costs.

The provinces that provide protection services would operate similarly as the insurer of last resort. If you are an FNCFS agency, your insurer of last resort for on-reserve activities is the federal government.

APPENDIX I

LOW, MEDIUM, HIGH COST ANALYSIS SCENARIOS

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget

Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Five-year national FNCFS agency funding estimates
Remoteness applied to First Nations with remoteness >0.4

CAF_15%_>0.4		Fiscal year

APPENDIX J1

OCTOBER 2023 COLLABORATOR WORKSHOP SUMMARY

Indicators for testing in 2023

The Institute of Fiscal Studies and Democracy (IFSD) is working with the Assembly of First Nations (AFN) and the Caring Society to support the long-term reform of First Nations child and family services (FNCFS). Part of this work is focused on building budgets, understanding capital needs, and testing performance measurement approaches in anticipation of a reformed program, known as Phase 3.

IFSD's work builds on previous work in FNCFS since 2018. Phase 1 was a cost and gap analysis of the FNCFS system. Phase 2 proposed an approach to funding FNCFS based on differentiated needs, including the Measuring to Thrive framework developed with FNCFS agency leadership and other experts (an overview of the framework is on p. 39-116 of the Phase 2 report, Funding First Nations child and family services (FNCFS): A performance budget approach to well-being). Phase 3 leverages these findings and builds on the approaches by putting the ideas and models from Phase 2 into practice.

There are 20 collaborators (a mix of FNCFS agencies, First Nations exercising jurisdiction, and FNCFS agencies exercising jurisdiction with their First Nation) working with IFSD on Phase 3. IFSD is grateful to the community of collaborators for continuing to share their time, knowledge, and experiences to improve FNCFS.

Phase 3 collaborators convened on November 8-9, 2022, in Ottawa to define indicators to pilot in 2023, as well as to identify indicators for Indigenous Services Canada (ISC) to consider in a reformed program. The workshop was attended by 18 of the 20 collaborators for Phase 3, with 44 participants contributing to the discussion.

The workshop had three goals:

1) Build consensus on the Measuring to Thrive indicators to test in the 2023 pilot.
2) Build consensus on the Measuring to Thrive indicators to propose to Indigenous Services Canada (ISC) for a reformed FNCFS program (possibly, same indicators as #1).
3) Learn and exchange among colleagues on practices and lessons in data collection, measurement, and evidence generation.

The collaborators identified 15 potential indicators to pilot with their agency or First Nation in 2023, and proposed 5 indicators for Indigenous Services Canada (ISC) to use to measure performance in a reformed program.

A summary of the proceedings (which followed the Chatham House Rule), as well as the list of selected indicators is included below. The collaborators should be commended for their intensive efforts over two days. They have laid the foundations for the measurement pilot in 2023.

Summary of proceedings
Over two days, 44 participants from 18 collaborating FNCFS agencies and First Nations shared practices, perspectives, and established a starting point to pilot the measure of well-being in 2023.

Working from the 75-indicators in the Measuring to Thrive framework, collaborators worked in small groups to first, assess information availability of different indicators, and second, to identify the indicators they considered most relevant to measuring well-being in FNCFS. Following the small group work, the workshop would convene in plenary to report on findings and prepare for next steps.

The small group discussions were fruitful and highlighted the different starting points of collaborators. From those actively collecting and analyzing data to those working to define their mandate, the deliberations highlighted at once their diversity and commonalities in confronting similar challenges. It was evident that multiple approaches to delivering FNCFS will emerge (are already emerging) in a reformed system.

The plenary discussions were an opportunity to express differences and build consensus. As the discussions proceeded, collaborators worked to identify common areas of measurement relevant to well-being. For some collaborators, the premise of starting from the Measuring to Thrive framework was imperfect. They would have preferred starting from scratch with their First Nations. For example, some collaborators expressed a sense of inadequacy of existing indicators to measure spiritual, cultural, and community-based well-being of their communities. Their position was recognized, and collaborators added spirituality as an indicator to measure well-being. It was highlighted, by collaborators that the measures, albeit imperfect, were developed with contributions from FNCFS agencies and experts, with the goal of broad applicability and use.

With Measuring to Thrive as a starting point, the collaborators identified 15 indicators to pilot with their FNCFS agency or First Nation. Collaborators agreed to select as few or as many indicators as they considered feasible from the 15.

The proposed indicators for ISC were a subset of the 15 indicators. There was debate among collaborators as to what ISC should collect or what information it should be entitled to access. ISC is not the service provider, they are the funder. As funder, they have constitutional obligations to report to Parliament (and through Parliament, Canadians) on the application of public funds and their results. To this end, the indicators selected for ISC emphasize the contextual considerations that shape an environment, e.g., housing, potable water, and access to services, along with child and family services-specific indicators, e.g., family (re)unification, that serve as proxies for the overall well-being of communities.

Measurement, as highlighted by two presentations from collaborators, is not a linear exercise. There is constant learning and reworking of practices to address unexpected

challenges while celebrating unanticipated learnings along the way. This will be a challenging exercise but that is the point. Collaborators generously committed to working in their own contexts and together to learn and support others on the journey to long-term reform.

The purpose of the pilot exercise is to:

1) Learn about the measurement process and share practices, tools, and approaches;
2) Leverage learnings to define a well-being focused approach to measurement with First Nations care and control of delivery.

The list of selected indicators for collaborator testing and those to be proposed to ISC are reviewed below. IFSD will work with the collaborators' selections to prepare draft definitions for operationalization, i.e., define the indicator and explain how to collect information about it. Collaborators recognized that important information may not be available to populate the indicators but nonetheless chose to highlight their relevance for long-term measurement.

In February 2023, collaborators will convene again to review the testing framework, tools, and prepare for the pilot exercise.

The purpose of a monitoring system focused on well-being is to capture if discrimination exists. This is a crucial form of accountability. Measuring well-being through a framework will generate a truth, and one that may run counter to what is held to be true. We should be prepared to learn from the exercise. The data generated from the exercise and evidence produced may run counter to what we know now. That is an expected and accepted part of this exercise. Measurement is about accountability, but it does not make the entity measuring the only one accountable for the result. Environment Canada may measure the weather, but it is not accountable for the forecast.

This is an exciting and challenging opportunity for FNCFS agencies and First Nations to lead in the measurement of well-being.

IFSD is tasked with populating a framework to operationalize the indicators. There are certain indicators, e.g., livable income, for which IFSD will propose a range of potential approaches for measurement. IFSD will prepare the analysis for collaborators to review, refine, and prepare for implementation during the test phase.

Service provider indicators

Indicator	Purpose	Definition for operationalization	Notes/considerations
1) Knowledge of Indigenous language			
2) Connection (access) to land			
3) Community-based activities			
4) Spirituality			
5) Family (re)unification			
6) Placement within community (kin and kith)			
7) Stability (i.e., moves in care)			
8) Family violence			
9) Substance misuse			
10) Access to mental health and specialized services within the community			
11) Livable income			
12) Access to early childhood education			
13) Meeting numeracy and literacy targets a. Elementary b. Secondary			
14) Secondary school completion rate			

15) Access to post-secondary education			

Indicators for ISC

Indicator	Purpose	Definition for operationalization	Notes/considerations
1) Safe and suitable housing			
2) Sufficient and safe water from source to tap			
3) Family reunification			
4) Livable income			
5) Access to mental health and specialized services within the community			

APPENDIX J2

MEASURING TO THRIVE INDICATORS FOR TESTING, COLLABORATOR WORKSHOP SUMMARY

Indicator	Case-level or community-level indicator	Definition	Measure	Data source	Level of aggregation		
					Case level	Provider level	First Nation level
What will be measured	*Point of data collection*	*Why indicator matters to understanding well-being in FNCFS*	*How data will be captured*	*Information source ex. Case file, front-line worker/SW, notes, Census data*	*Data from a case file*	*Data, i.e., case files, aggregated to the level of the service provider, i.e., First Nation or FNCFS agency*	*Data aggregated to the level of the First Nation, typically, for community indicators*
Knowledge of Indigenous language	Case-level	Language is connected to culture. One study found that First Nations who had high levels of language knowledge had significantly lower rates of suicide than those with lower levels and for non-Indigenous youth. Researchers identified language as the strongest cultural continuity factor contributing to this difference.	The child or youth (age 5+) in care engages in learning and/or speaking their Indigenous language through formal education, community/collateral programming, or social exposure (Y/N).	Case file, front line worker/social worker through observation.	A child or youth in care engages in learning and/or speaking their Indigenous language through formal education, community/collateral programming, or social exposure (Y/N).	Percentage of children or youth in care that engaged in learning and/or speaking their Indigenous language.	N/A
Connection (access) to land	Case-level	Connection to land helps support children and youth to be connected to culture, and tradition. In a study examining suicide rates among First Nations youth in British Columbia, researchers found that among communities where cultural continuity was preserved through avenues such as securing land claims, were self-governing, had band-administered education, police, fire and health services as well as cultural facilities within the community had lower suicide rates than communities where these factors were less present.	Child or youth (age 5+) in care reports a sense of connection to the land through visits to traditional lands or First Nation (Y/N).	Case file, front line worker/social worker through observation.	A child or youth in care reports a sense of connection to the land through visits to traditional lands or First Nation (Y/N).	Percentage of children or youth in care that reports a sense of connection to the land through visits to traditional lands or First Nation.	N/A
Community-based activities	Case-level	Participation in social activities is important for developing social competence and skills and is linked with fewer behavioural problems and higher self-esteem.	The child or youth (age 5+) in care took part in an activity and/or cultural activity within their First Nation at least once within the reporting period (Y/N).	Case file, front line worker/social worker through observation.	A child or youth in care took part in an activity within their First Nation at least once within the reporting period (Y/N).	Percentage of children or youth in care who took part in an activity within their First Nation at least once within the reporting period.	N/A
Spirituality	Case-level	Spirituality helps support children and youth to be connected to land, culture, and tradition. Many studies have demonstrated Indigenous spirituality acting as a protective factor against alcohol abuse and suicide.	The child or youth (age 5+) in out of home placement identifies active spiritual practice. They participate in activities to connect them with their belief system and support spiritual experiences and development (Y/N).	Case file, front line worker/social worker through observation.	A child or youth in care identifies active spiritual practice (Y/N).	Percentage of children or youth in care who identify active spiritual practice.	N/A
Reason for entry (e.g., neglect, domestic violence, etc.)	Case-level	Reason for entry, informs why a child entered protective services, which can help evaluate whether the child welfare system is appropriately responding to cases of maltreatment.	The child or youth entered care because of a concern for their welfare due to maltreatment. Select all that apply: 1. Physical abuse 2. Sexual abuse 3. Neglect 4. Emotional maltreatment 5. Exposure to intimate partner violence 6. Parent/caregiver addictions 7. Other (please define)	Case file	Maltreatment reason(s) a child or youth entered care.	Percentage of children or youth who entered care based on reason for entry.	N/A

Stability (i.e., moves in care)	Case-level	Multiple moves in care are associated with various negative outcomes among children. Instability may elicit a toxic stress response, which can result in developmental delays and behaviour problems. In turn, this can propagate a negative cycle of displacement and worsening attachment disorders.	Number of moves in care in the reporting period.	Case file	Number of moves in care in the reporting period.	Average number of days a child spent in care during the reporting period.	N/A
Placement within community (kin and kith)	Case-level	Compared to foster children, children in kinship care have displayed better outcomes with respect to behavioural development and mental health functioning.	A child or youth in care is placed in a home with kin/kith.	Case file	A child or youth in care is placed in a home with kin/kith (Y/N).	Percentage of children or youth in care placed in a home with kin/kith.	N/A
Time to exit	Case-level	Time to exit informs how long a child or youth remains in care, which can help evaluate whether the child welfare system is appropriately responding to cases of maltreatment.	The total number of days spent in care by a child before they leave care (whether or not they were continuous).	Case file	Total number of days spent in care before they leave care.	Average number of days a child or youth spent in care before exit.	N/A
Reason for exit (e.g., adoption, age-out, etc).	Case-level	Reason for exit informs why a child or youth leaves care which can inform children or youth in care's outcomes	A child or youth exits care. Please indicate the reason: 1.age-out 2.permanent placement 3.reunification with family 4.placement with kin/kith 5.runaway 6.death 7.other (please define)	Case file	Reason a child or youth exits care.	Percentage of children or youth who exited care based on indicated reason.	N/A
Family reunification	Case-level	A stable and permanent living situation is essential for healthy development and establishing more secure and strong relationships with caregivers, which in turn impact a child's ability to thrive. Research has demonstrated that in general, a child's family is the best way to deliver this environment.	A child or youth exits care and returns to their family, i.e., returning to the place from which they were originally removed, residing with family, friends, community members.	Case file	A child or youth returns to live with their family (Y/N).	Average rate of family reunification occurrence.	N/A
Substance misuse	Community	Substance misuse can lead to a variety of serious health issues both physical and mental and has drastic negative impacts on outcomes regarding employment, income and general well-being.	Annual percentage of members in the First Nation (on-reserve) that have dependencies or substance misuse challenges.	From community	N/A	N/A	Rate of First Nation members with dependences or substance misuse challenges.
Access to mental health and specialized services within the community	Community	Given the effects of intergenerational trauma on mental health among Indigenous peoples, the availability of mental health and specialized services is important to support Indigenous children and youth.	First Nation delivers or can access the required mental health and specialized services required to support the delivery of child and family services within its community. Such services include, but are not limited to, therapists, psychologists, addictions treatment, post-treatment support, etc. (Y/N).	From community	N/A	N/A	Does the First Nation have mental health and specialized services required to support the delivery of child and family services (Y/N).

Access to early childhood education	Community	Participation in early childhood education is a well-evidenced intervention to enhance school readiness, especially among children from disadvantaged backgrounds. Ensuring that children are better prepared when entering school aims to improve educational achievement – a key factor in social mobility and escaping poverty.	The First Nation delivers early childhood education (on-reserve) that can be accessed by its members (for free or at a cost) (Y/N).	From community	N/A	N/A	Does the First Nation deliver early childhood education (on-reserve) that can be accessed by its members (for free or at a cost) (Y/N).
Meeting numeracy and literacy targets							
a. Elementary		Educational attainment is important for child well-being, particularly in the context of a child's socio-economic trajectory. Literacy and numeracy scores tell us how well the child is performing in school and is a gauge of cognitive functioning.	Percentage of elementary school students in the First Nation (on-reserve) that are meeting provincial-standard numeracy and literacy targets.	From community	N/A	N/A	Rate of elementary school students in the First Nation that met the provincial-standard numeracy and literacy targets.
b. Secondary	Community	Most of the gaps that are seen at age 18 are already present at age five. Gaps tend to widen as opposed to shrink as the child proceeds through formal schooling and are predictive of future school performance and educational attainment.	Percentage of secondary school students in the First Nation (on-reserve) are meeting provincial-standard numeracy and literacy targets.	From community	N/A	N/A	Rate of secondary school students in the First Nation who met the provincial-standard numeracy and literacy targets.
Secondary school completion rate	Community	Failure to complete high school is linked to higher rates of welfare dependency and criminality. Elevated high school graduation rates lead to higher earnings, higher percentages of home ownership, lower rates of welfare assistance, fewer out-of-wedlock births and fewer arrests.	Percentage of high-school aged youth graduated/completed secondary school diploma or equivalency.	Statistics Canada, Census data	N/A	N/A	Rate of high-school aged youth who graduated/completed secondary school diploma or equivalency.
Access to post-secondary education	Community	Children and youth exhibit positive attitudes toward learning and are supported in their educational development. Employment rates are higher for Indigenous peoples with post-secondary credentials	Percentage of members of the First Nation (on-reserve) who are currently accessing post-secondary education (in-person or online)? Is it available? Is it accessible?	From community	N/A	N/A	Rate of members of First Nation who currently access post-secondary education.

Safe and suitable housing	Community	Housing improvements linked with improved health include renovations, relocation, and energy efficiency projects. For children, housing improvements were associated with a decrease in respiratory illnesses and lower rates of school absenteeism. For adults, long-lasting improvements in mental health have been demonstrated.	Percentage of residential dwellings in the First Nation (on-reserve) that are suitable.	Statistics Canada, Census data	N/A	N/A	Rate of residential dwellings in the First Nation (on-reserve) that are suitable.
Sufficient and safe water from source to tap	Community	Access to potable water is widely recognized as a fundamental condition for human health, and the lack of access to safe drinking water and adequate sanitation is one of the greatest threats facing vulnerable populations in the world. Clean, accessible, and sustainable drinking water is a basic necessity of life, and indispensable for meeting national and international standards of health, justice, equality, and responsibility.	Percentage of dwellings that have potable water required for standard daily activities (i.e., not industrial), from source to tap.	From community	N/A	N/A	Rate of dwellings in First Nation community with potable water required for standard daily activities from source to tap.
Livable income	Community	Families in chronic and persistent poverty are especially prone to challenges with self-sufficiency and may require additional support to reach this objective. For many First Nations households, life choices can be severely compromised by high food costs, poor availability of healthy food, low income, and/or high housing and heating costs	Use the Northern MBM (MBM_N), which reflects the cost of living in the North.	Statistics Canada	N/A	N/A	Rate of families in First Nation community who lives below the MBM_N

APPENDIX J3
EVENT-BASED CODES

Event-based measurement

On August 2, 2023, Dr. Fred Wulczyn joined collaborators for a virtual session on organizing the data used to track services received and analyze outcomes in child and family services. IFSD recognizes that not all collaborators will participate in this exercise.

IFSD's hope is that collaborators will share their intended approaches to monitoring as examples for other practitioners engaged in designing and delivering CFS.

First Nations and First Nations child and family services (FNCFS) agencies will design and deliver child and family services in different ways. Whatever the chosen approach, there is a benefit to knowing whether goals are being achieved and the lives of children, families, and communities improved with the allocated resources.

Organizing the data needed to monitor services delivers to monitor change in CFS means tracking what is happening with children and families in need of support, tracking the services received, and incorporating the community context, in the data model.

One approach to organizing the data is to consider the "events" associated to a child (or the person/family with whom interventions are being made). In this approach, information about the person receiving supports is captured by coding the events based on a date and related activity descriptors. The approach is premised on understanding a trajectory from a starting point, with a series of events to assess change.

This approach makes four assumptions:

1) There is a record of the person/persons receiving supports.
2) Events related to the person/persons are relevant and are tracked in chronological order.
3) The First Nation or FNCFS agency would define the events to be tracked, e.g., an assessment, a service received, a change in living arrangement. An assessment might capture facets of cultural identity, language, etc. Events also refer to the steps taken to protect a child.
4) Data is captured and organized for analysis. There is no pre-judgement of outcomes.

In this exercise, IFSD is proposing that case-level data (related to the 15 indicators, a mix of case and community-level information identified by collaborators in November 2022 and refined in the winter and spring of 2023) be used. The approach is suggested because the information is available (or accessible to) most collaborators and presents an opportunity to try the events-based approach with ready data.

Some collaborators highlighted the importance of including an assessment of strengths. An adjustment was made to the event schema to include assessments of strengths. The assessment need not be a formal assessment. The assessment event simply acknowledges what has been learned about some relevant aspect of child and/or family well-being. The reason for capturing the data within the event structure has to do with the fact that the assessed strengths may change over time. For example, language exposure may change as living arrangements change. By capturing these changes within the event structure, it becomes easier to see how the services provided relate to changes in the well-being of the child. This is one of the ways in which First Nation's service providers can monitor the impact their service investments are having.

IFSD recognizes that not all collaborators have case-level data, that some collaborators will not be engaging in protection-related activities, and that they may choose not to participate in this exercise. It is this diversity of approaches that is intended to be captured in this work. IFSD's hope is that collaborators will share their intended approaches to monitoring as examples for other practitioners engaged in designing and delivering CFS.

Data organization structure overview
Measuring to Thrive pilot

Physical structure of file:

Each child has at least one record and may have as many records as needed to capture the event history.

CIN	DOB	Gender	Geographic information (on event location, e.g., placement, exit, etc.) *Note: Geographic information can be coded to a specific First Nation and linked to a separate data sheet with community level information*	Event date	Event type	Event sequence	Event modifier

Information about the child

CIN	Unique child identifier
DOB	Date of birth (D/M/Y)
Gender	

Information about the community

Place	Information about the community at the time the living arrangement changed

Information about the history of service involvement

Event date	The date an event of interest happened (D/M/Y)
Event type	Events types of interest include – changes in living arrangements (specifically entry into and out of out-of-home care, services received, assessments
Event sequence	The event number – keeps a sequential counter of the number of events.
Event modifier	Additional information about the event: reason for placement, reason for discharge, results of assessment, etc.

Event type codes:

Placement events	PHP	Home of parent
	PHM	Parents no longer living at home
	PKC	Kinship home
	PGH	Group home
	POT	Other living arrangement

Leaving care event	XRF	Reunification with parents
	XRL	Placement with kin
	XRM	Reached age of majority
	XRY	Runaway
	XDT	Death
	XOT	Other reasons
	XPW	Permanent wardship
	ZTC	Still in care
Assessment events	AST	Assessment completed

Event modifiers

Placement event modifiers

PA	Physical abuse
SA	Sexual abuse
NGL	Neglect
EMT	Emotional maltreatment
IPV	Intimate partner violence
ADD	Substance misues
OTH	Other

Placement change modifiers

DIS	Service plan complete (i.e., discharge)
CAR	Caretaker unable to provide care
REL	Kin identified

Assessment modifiers

LND	Connection to land reported
LNG	Engagement in learning and/or speaking Indigenous language observed
APA	Active participation in First Nation’s community
ASP	Spiritual practice observed

Sample records

CIN	DOB	Gender	Geographic information on event location	Event date	Event type	Event sequence	Event modifier	Clarification
001	2/17/20	Male	On reserve	4/12/22	PKC	1	ADD	Change in living arrangement for reason of caregiver substance misuse
001	2/17/20	Male	On reserve	9/2/22	POH	2	CAR	Change in living arrangement because caretaker unable to provide care
001	2/17/20	Male	On reserve	2/10/23	AST	3	ALN	Sense of connection to traditional land
001	2/17/20	Male	On reserve	5/15/23	PKC	4	REL	Change in living arrangement - kin identified
001	2/17/20	Male	On reserve	7/17/23	AST	5	APA	Participation in First Nation's activity
001	2/17/20	Male	On reserve	7/31/23	XRF	6	DIS	Service plan complete

APPENDIX J4

MEASURING TO THRIVE WORKSHOP SUMMARY

Workshop Summary: Measuring to Thrive

The Institute of Fiscal Studies and Democracy (IFSD) is working with the Assembly of First Nations (AFN) and the Caring Society to support the long-term reform of First Nations child and family services (FNCFS). Phase 3 of this work is focused on building budgets, understanding capital needs, and testing performance measurement approaches in anticipation of a reformed program.

Developing and controlling your narrative in child and family services as well as demonstrating accountability to your First Nation(s) requires a solid foundation. This includes a strategy for gathering, organizing, and analyzing your own data.

Ongoing deliberations on long-term reform present an opportunity to test understandings of required resources (e.g., money, people, systems, processes, etc.) to effectively develop and maintain data strategies.

A data organization strategy should gather data and build evidence to match the breadth of self-determination and sovereignty.

Overview

On October 24-25, 2023, IFSD convened Phase 3 collaborators in Ottawa to review a data organization strategy for the Measuring to Thrive pilot. The workshop was attended by all 20 collaborators for Phase 3 (a mix of First Nations exercising jurisdiction and FNCFS agencies), with 43 participants contributing to the discussion.

Mary Teegee (Executive Director of Child and Family Services, Carrier Sekani Family Services) set the stage reminding us that *we are the ancestors the next generation of children will remember*. With an emphasis on the power of information to better the lives of communities, Mary focused on the importance of asking how First Nations children are doing and answering that question with data gathered and analyzed by First Nations for First Nations.

Dr. Fred Wulczyn (Chapin Hall, University of Chicago) shared lessons from 40 years of experience in gathering and analyzing child welfare data and linking it to funding. Fred facilitated sessions on data coding and analysis, emphasizing that *knowing is better than not knowing, especially when you hold all of the cards*. License from community members is needed if you choose not to know or not to capture data. As a service provider, your accountability is to the people that you serve and there needs to be a way to report back on progress.

IFSD is grateful to the community of collaborators for continuing to share their time, knowledge, and experiences to improve FNCFS.

The workshop had three goals:

1) Review best practices in data gathering and analysis;
2) Share experiences and lessons in data gathering and analysis;
3) Highlight considerations in data gathering and analysis for other First Nations and FNCFS agencies.

It is recognized that First Nations and FNCFS agencies may have different approaches to data gathering, analysis, and evidence building. The event-based approach reviewed in this pilot is established and has decades of operation across U.S. states.

Leveraging the Measuring to Thrive framework, collaborators identified what needs to be measured to monitor change for children, families, and communities. A data structure/file coding system is required to answer questions. Some First Nations and FNCFS agencies may have their own data systems that enable them to report against the indicators but that was not common for all collaborators.

Collaborators were invited to code up to 100 case files from two fiscal years using the event-based approach. Collaborators with their own coded data sets applied the analytic script to their own information. For those without data, a dummy data set was provided for analysis.

A summary of the proceedings (which followed the Chatham House Rule) is included below.

Summary of proceedings

Collaborators had the opportunity to participate in a data analysis exercise which provided the opportunity to structure data and analyze it. Collaborators highlighted the importance of measurement in child and family services (CFS) to build evidence and evaluate the efficacy of interventions. When information is being tracked and analyzed, it can be used to create a narrative and understand outcomes for children, families, and communities, as well as to support funding asks.

Participants highlighted key challgenges and success across four areas: people, process, strategy, and systems.

People

- *Building Relationships* – Engaging with First Nations to "bring people along" and ensure data reflects community needs.
- *Building Capacity* – Human capacity is a challenge. Collaborators have adopted different strategies, e.g., hiring from nontraditional educational backgrounds, focusing on core positions.

Process

- *Tailoring an Approach* – Collaborators have different priorities and will capture and analyze data differently. The event-based approach can be modified to suit different approaches. Data capture and organization is critical for any approach.
- *Consistency* – Consistent data collection and analysis, aligned with internal standards, is key to building a narrative.

Strategy

- *Evidence* – Analyzing good data to develop evidence is required to justify program changes and decisions, and used as a tool for funding advocacy.
- *Alignment of Data and Evidence with Goals* – Data being collected should align to the mandate. Evidence derived from the data should align with the goals of a service provider. Tools like a data governance strategy, policy framework, data dictionary, are useful supports for an effective data management system. Care must also be taken when developing evidence from data.
- *Transparency* – A culture of information sharing (internally and externally) can help build support and engagement from community members and internal stakeholders on data gathering, analysis and reporting.

Systems

- *Building a Data System* – Collaborators are currently using a variety of data gathering systems. The event-based approach can work across systems by linking mandate and activities to desired outcomes.
- *Structure Over Tool* – Collaborators recognized that it was dedication and coding of the event information rather than the complexity of the tool that is paramount to a well-functioning data system.

Next steps

IFSD will:

1) Develop a framework with standards for data gathering and analysis (i.e., evidence building);
2) Make available a folder where collaborators can share resources and tools for data gathering and analysis;
3) Organize a virtual event where collaborators can share resources and best practices on data gathering and evidence generation;
4) Request information from collaborators on costs, job descriptions, salary ranges, etc., related to data gathering and measurement, and compile the information to be shared back;
5) Prepare a check list for each collaborator on the completion of each component of this project;
6) In spring 2024, share draft documents with collaborators for review; and,
7) Plan a summative event for spring 2024 where collaborators will be invited to share culture and ceremony to close the project in a good way.

IFSD is grateful to its Phase 3 collaborators for their on-going efforts and looks forward to continuing this important work. Should you have any questions or comments, please do not hesitate to get in touch at info@ifsd.ca.

Executive Summary

Context

In 2018, the Canadian Human Rights Tribunal (CHRT) issued orders 408, 418, and 421, directing attention to the discriminatory funding practices affecting First Nations child and family services (FNCFS). The Institute of Fiscal Studies and Democracy (IFSD) was commissioned by the Assembly of First Nations (AFN) and the Caring Society to undertake various cost analyses and program reform analysis. The work undertaken taken with the contributions of FNCFS agencies and First Nations resulted in two public reports and a current phase of work to model implementation. Phase 1: *Enabling First Nations Children to Thrive* dissected the existing funding gaps within the FNCFS system and set the stage for impactful reform. Subsequently, Phase 2: *Funding First Nations Child and Family Services: A Performance Budget Approach to Well-being* (see pages 214-220 with respect to the Secretariat), built upon this foundation by establishing a funding approach and performance measurement framework designed to elevate well-being outcomes across FNCFS.

In the Phase 2 report, stakeholders called for the creation of a First Nations-led Secretariat as a measure to adhere to the CHRT's mandates, tasked with two primary functions: To equip First Nations and FNCFS agencies with essential resources and expertise for service delivery enhancement and to serve as a hub(s) for data collection and analysis. The secretariat will provide internal support and best practice resources to service providers, offering a repository of successful programs and practices for agencies to adapt and implement, fostering collaboration and continuous learning across the FNCFS network. It is charged with the critical task of collecting, analyzing, and reporting on data to illuminate the efficacy of the system and the welfare of First Nations children, families and ultimately, their communities. The Secretariat stands as a guardian of knowledge, discerning trends, identifying areas of progress, and pinpointing where intervention is needed. The importance of such data governance cannot be overstated. Evidence-based reporting on well-being outcomes is essential for a clear understanding of the issues at hand, identifying areas of improvement, recognizing instances of stagnation, and addressing any deteriorating conditions. As established in the Phase 2 report, no organization is currently managing this at the necessary scale in the FNCFS space. The Secretariat is poised to fill this void by adopting a rigorous approach to data handling that is both comprehensive and culturally sensitive.

The establishment of a national First Nations-led Secretariat is a proactive step towards fulfilling the CHRT's directives. Its fundamental purpose is to address the systemic inequalities that have persisted within FNCFS and ensure the non-recurrence of discrimination within FNCFS.

This report proposes and develops five models for fulfilling this purpose and accomplishing these functions. Each come with their own set of strengths and weaknesses, but regardless of the model selected, the Secretariat ensures that be it via national coordination or a decentralized regional approach, the primary objectives are met: to end discrimination, foster equality, and secure the welfare of First Nations children and families.

The report presents a comprehensive framework to evaluate five distinct models for a First Nations-led Secretariat, each designed to address the systemic inequalities in FNCFS as mandated by the CHRT. The models include:

1. **National Approach - New Organization**: Proposes establishing a central entity to unify efforts across Canada.

2. **National Approach - Existing Organization**: Suggests expanding the mandate of an existing body like FNIGC to incorporate secretariat functions.

3. **Regional Approach - New Organizations**: Recommends the creation of new region-specific entities for local management of secretariat duties.

4. **Regional Approach - Existing Organizations**: Advocates for the extension of current regional bodies to take on additional secretariat responsibilities.

5. **Hybrid Approach**: Envisions a blend of national oversight with regional entities for execution within existing organizations.

The report delves into the operational mechanics, governance structures, and strategic implications of each model. It further discusses the pros and cons, the financial considerations, and the impact on service delivery within the FNCFS ecosystem. This report will serve as a pivotal reference for decision-makers as they select the most appropriate model to foster a responsive, equitable, and sustainable FNCFS framework.

TABLE 1: Proposed First Nations-Led Secretariat Models

Option	*Description*	*Cost Forecast*
National Approach – New Organization	This model advocates for a new, centralized Secretariat, establishing a cornerstone for governance and data stewardship in FNCFS. It aspires to unify stakeholders nationwide, providing an array of resources, including program templates, cost models, staffing insights, and expert networks, to bolster service delivery. Its transformative ambition is weighed against the practicalities of setup costs and logistical challenges, but its potential to standardize and elevate FNCFS on a national scale presents a compelling case for consideration.	*High due to the need for new infrastructure, staffing, and systems.*
National Approach – Existing Organization	This method capitalizes on the established presence and operational frameworks of the First Nations Information Governance Centre (FNIGC). By expanding FNIGC's mandate to assimilate the roles of the Secretariat, the aim is to amplify service delivery and enhance data management capabilities without detracting from its existing mission. The seamless adaptability of the existing governance structures bodes well for swift integration, though it's not without its hurdles, specifically the risk of stretching resources thin and potential mission drift, which must be strategically managed to avoid diminishing the impact of FNIGC's current objectives.	*Potentially lower than creating a new organization due to the use of existing resources.*
Regional Approach – New Organizations	Under this scheme, each region would see the creation of its own secretariat, tailored to address the unique cultural and social fabric of local communities. These new entities would champion regional best practices and data management, advocating for governance structures that are both resilient and aligned with cultural values. The model's emphasis on regional autonomy and specificity is ambitious, acknowledging the inherent complexities and financial implications of initiating multiple new operations simultaneously.	*Variable depending on the number of new organizations and the regions they cover. Expected to be most costly option.*

Regional Approach – Existing Organizations	This streamlined approach envisions existing regional bodies expanding their scope to encompass Secretariat tasks. It suggests a more rapid and integrated process, tapping into the established infrastructure and pre-existing community ties. However, it's a delicate balance, as these entities must manage the additional Secretariat duties without sacrificing their original roles, risking the dilution of focus and potential overextension.	*Lower initial cost but may increase if infrastructure upgrades are needed.*
Hybrid Approach	The hybrid model presents an intricate balance of national policymaking with regional implementation, facilitated by existing organizations. The national secretariat sets the strategic agenda and spearheads data analysis, whereas regional secretariats—housed within current institutions—directly engage in rolling out best practice programming. This dual-tiered strategy promotes inter-regional cooperation and builds upon established organizational strengths. While the hybrid model offers a pragmatic resolution to the need for cohesive national strategy and regional flexibility, it also calls for thoughtful integration strategies and vigilant management of operational nuances.	*Mid-range cost, balancing the establishment of new systems with the use of existing structures.*

Recommendation:

Upon consideration of the five proposed models for the First Nations-led Secretariat, we recommend the Hybrid Approach as the most advantageous framework for implementation. This model adeptly merges the benefits of centralized policymaking and oversight with the adaptability and cultural sensitivity of regional execution, making it the most viable and impactful option for addressing the diverse needs of First Nations communities across Canada.

There is a necessity for a national secretariat body that serves a pivotal role in consolidating and reporting on trends across the nation. Such a centralized entity is crucial for synthesizing First Nations-led data, which is instrumental

in informing funding assessments, guiding programmatic reforms, and shaping federal decision-making processes. By harnessing this data, the secretariat not only advocates for the needs and priorities of First Nations communities but also ensures that policy and funding frameworks are responsive to the lived realities and aspirations of these communities. The aggregation of this data by a national secretariat will provide a comprehensive picture of the impact of services, thereby driving evidence-based policy and fostering a more equitable and effective system for First Nations child and family services. The Hybrid Approach provides for such a body but still capitalizes on the established infrastructure, expertise, and relationships of existing organizations, which can significantly expedite the deployment of the Secretariat's functions. By integrating with these organizations, the Secretariat can extend its reach without the need for extensive new infrastructure, thus optimizing resource allocation and reducing setup time. Additionally, this model encourages a collaborative environment where best practices and innovations can be shared across regions, fostering a national standard of excellence while preserving the autonomy and unique cultural contexts of each community.

Furthermore, the Hybrid Approach mitigates the risks associated with a single, centralized or fully dispersed model by providing a strategic balance that can adapt to regional needs without sacrificing the unified strategic vision required to effectively address systemic challenges. It supports the development of a coherent data collection and analysis strategy, ensuring the Secretariat can fulfill its ultimate purpose of ending discrimination and promoting equitable outcomes as outlined by the CHRT.

National Approach – New Organization

Introduction

In the upcoming discussion on the National - New Organization approach, we present an exploration of the proposed organizational design for the Secretariat tasked with elevating FNCFS. The narrative begins with an examination of the Secretariat's mandate, which articulates its central role as a repository for best practices and a facilitator of data governance and analysis across Canada.

Following the mandate, we identify the stakeholders and communities the Secretariat is poised to serve, highlighting the diversity and breadth of its intended reach. We then turn to a critical analysis of various governance structure options, considering the advantages and the unique contributions each brings to the Secretariat's mission.

The discussion moves to weigh the benefits and challenges inherent in establishing a new national body, contemplating the potential for transformative impact against the backdrop of practical constraints. Lastly, we outline key considerations for the Secretariat's implementation, providing a strategic roadmap from inception to full operationalization.

Organizational Design

Mandate

The Secretariat, as a Centre for Best Practices and Data, is established to serve as a pivotal resource for First Nations and FNCFS agencies, providing access to best practices, expertise, and operational support in FNCFS. Its mandate is to facilitate access to a wealth of resources including program templates, cost models, and staffing insights, alongside a network of experts to bolster support across Canada. Agencies can seek operational assistance, ranging from job profiling to staff retention strategies, and engage in comprehensive training programs designed to enhance service delivery.

Additionally, the Secretariat acts as a central repository for data collection and analysis, aggregating information from various FNCFS agencies to track and improve the well-being of children and families. It offers specialized fee-for-service data analysis for localized community assessments and compiles a national report to inform annual updates to support reporting through the FNCFS program managed by Indigenous Services Canada (ISC), contributing to parliamentary reporting requirements.

At its core, the Secretariat aims to rectify systemic inequalities within the First Nations child welfare system by promoting evidence-based approaches that are effective across diverse community settings. It strives to serve as a central connected organization linking the knowledge and practice of service providers in FNCFS. The Secretariat is committed to excellence and the empowerment of the communities it serves, through First Nations leadership of the organization and adherence to the OCAP® principles.

TABLE 2: Organizational values

Element	*Description*	*Proposed Secretariat Response*

Vision	An aspirational description of what the organization wants to achieve in the future.	*The Secretariat aims to become the leading national Centre of Excellence committed exclusively to First Nations child well-being. In doing so, it seeks to uphold respect for First Nations' information autonomy while managing internal resources effectively for long-term impact.*
Mission	Why the organization exists; the purpose underlying its chosen vision.	*The Secretariat is a for-First Nations, by-First Nations organization dedicated to strengthening FNCFS nationwide.*
Objectives	Specific results that an organization aims to achieve within a time frame; a means by which the organization can measure its success.	*Overall, the Secretariat strives to fulfill a critical gap in the FNCFS landscape: connecting disparate organizations and stakeholders to enhance local-level programming, produce new practical insights, and disseminate best practices.* ***Specifically, over the next 18 months, the Secretariat aims to establish a unified mandate, formalize its organizational structure, and introduce itself to the national FNCFS landscape.***
Approach	An approach provides a methodology for executing the strategy.	*Over the long term, the Secretariat plans to succeed by fulfilling an unmet need. To this end, it does not seek to compete directly with any existing organization, but instead cultivate partnerships with established organizations in the space as a centre for best practices in FNCFS, data gathering and analysis.* ***In the near term, as detailed in Section III: Implementation Plan, the Secretariat's approach will emphasize three things: 1) establishing initial alignment between internal stakeholders; 2) generating***

		awareness for its planned activities; and 3) building trust with service providers.
Tactics	Focused initiatives, projects, or programs that allow organizations to execute strategies.	*To be informed by Stakeholders.*

Stakeholders and Communities Served

Stakeholders encompass a wide array of groups with vested interests in the success of the national secretariat. These include First Nations leaders who provide governance and oversight, service providers (both FNCFS agencies and First Nations themselves) who offer frontline services, and community members who are the beneficiaries of these services. Additionally, the secretariat interacts with national organizations like the Assembly of First Nations (AFN), , and the Caring Society, ensuring that policies and initiatives are in alignment with broader objectives for First Nations well-being.

Communities served by the national approach are diverse, spanning urban, rural, and remote areas, each with distinct needs and cultural considerations. The secretariat's programming and initiatives are designed to be flexible and responsive to these varied contexts, ensuring that all First Nations children and families have access to high-quality, culturally sensitive services.

Governance Structure

It has been proposed that the national organization have a board of directors. To oversee its senior director and the fulfillment of the secretariat's mandate. This is not an operational role but one of strategic direction and oversight. Daily operations would be the responsibility of an executive director and their senior staff. The table below outlines three distinct design options for the Board of Directors under the National Approach - New Organization. Each option presents a different configuration of board size, member composition, and operational focus, reflecting varying levels of stakeholder involvement and strategic oversight. These options are crafted to cater to the unique governance needs of the organization, providing a clear comparison to guide the decision-making process for establishing an effective and representative Board of Directors.

TABLE 3: Design options for board of directors

Design Feature		
Option 1	**Option 2**	**Option 3**
A large Board of Directors with expansive regional representation and practitioner involvement 13-16 board members	A small, focused Board of Directors with representatives from core national organizations (ex. AFN Caring Society) *5-7 board members*	A small, streamlined Board of Directors with spaces designated for key skill sets. Directors are supported by an Advisory Board – with regional representation and members from the Caring Society and the AFN. *7 board members* *15 advisory board members*

Option 1:

The first option proposes a large Board of Directors with expansive regional representation and practitioner involvement. This governance model emphasizes inclusivity and a broad base of perspectives, which is particularly compelling for several reasons.

Reflective of Diverse Stakeholder Interests: A large board with extensive regional representation ensures that the diverse interests and unique needs of

First Nations communities are actively included in the decision-making process. This diversity is essential in a country as geographically varied as Canada, where the challenges faced by child and family services differ significantly from one region to another. The inclusion of practitioners provides a direct line to on-the-ground insights, ensuring that strategies and policies are informed by practical experience and the realities of service delivery.

Richness in Deliberation and Problem-Solving: With a larger and more diverse group, the board is may engage in richer, more comprehensive deliberation. This can lead to more creative and effective problem-solving as the varied backgrounds and expertise of board members can catalyze innovative approaches to complex issues. That being said, as the number of voices involved with decision-making grows, so too does the opportunity for disagreement and conflict. Boards that grow too large can become mired in deadlock and inefficiency, as conflicting priorities and excessive diversity in perspectives lead to prolonged deliberations and impede decision-making. Striking the appropriate balance is key to a successful and pragmatic board.

Building Trust Through Representation: A governance structure that mirrors the constituency it serves can build and maintain trust within the communities. When stakeholders see their interests and concerns directly represented, they are more likely to support and engage with the Secretariat's initiatives. This trust is foundational for the effective implementation of policies and programs and for securing the buy-in necessary for transformative change.

Enhanced Accountability and Transparency: A larger board structure promotes accountability and transparency. A variety of voices may lend to decisions being scrutinized from multiple angles, and the presence of practitioners helps ground decisions in practicality and accountability to service delivery. This can lead to more robust governance, as decisions are likely to be closely examined and justified to a range of stakeholders.

The strengths of Option 1 as a governance model for the Secretariat include prioritizing inclusivity, diverse perspectives, and broad-based expertise, which are critical for addressing the complex and varied needs of First Nations child and family services across Canada. While the decision-making process may be more intricate with a larger board, the benefits of enhanced representation, trust-building, comprehensive problem-solving, and accountability may outweigh the challenges. This model underscores a commitment to democratic participation and equity, aligning with the values of transparency and community representation that are vital for the success of the Secretariat.

Option 2

The second option presents a governance structure with a small, focused Board of Directors, comprising 5-7 representatives from core national organizations such as AFN, and the Caring Society. This model offers several advantages:

Streamlined Decision-Making: A smaller board can make decisions more swiftly and efficiently. With fewer members, the board can often come to a consensus more quickly, allowing for rapid responses to emerging issues and timelier implementation of initiatives. This agility is particularly beneficial in dynamic environments where the needs and circumstances of First Nations communities can change rapidly.

High-Level Expertise and Oversight: By including representatives from core national organizations, the board is composed of individuals who possess a macro-level understanding of the systemic issues affecting First Nations child and family services. These members bring a wealth of expertise and institutional knowledge, which can enhance the strategic direction and efficacy of the Secretariat.

Focused Leadership: The condensed structure enables a more focused leadership, which is crucial for maintaining a clear strategic vision and mission. With a smaller group, each member's voice is amplified, and their input can have a more significant impact on the organization's direction.

Reduced Risk of Over-Representation: Option 2 mitigates the risk of over-representation and potential dilution of accountability that can come with larger boards. Each board member's role and responsibilities are clearer, and they can be held more directly accountable for the organization's performance.

Enhanced Cohesion and Unity: A smaller board typically allows for stronger bonds and better working relationships between members. This can lead to a more cohesive governance body that works effectively as a unit, with a shared understanding and commitment to the Secretariat's goals.

Potential for Rapid Issue Response: The model's inherent nimbleness means the board can address and respond to critical issues without the delays that can occur with larger, more cumbersome governance structures. This can be particularly advantageous in crisis situations where immediate action is required.

In summary, Option 2's governance model emphasizes efficiency, strategic oversight, and focused leadership, making it a strong choice for an organization that needs to be responsive and adaptive to the complex needs of First Nations child and family services. The model's streamlined approach

can ensure that the Secretariat remains agile and capable of making high-impact decisions in a timely manner.

Option 3

The third option — a small, streamlined Board of Directors with designated spaces for key skill sets — hinges on the principles of governance efficiency, strategic skill allocation, and inclusive yet decisive decision-making. Each board member shall be a SME in their chosen field. To ensure that regional stakeholders inform the decision-making process, this option provides for the establishment of a regional advisory board that will assist the Board of Directors. Its role is to ensure representation of regional interests and support the board of directors with in-depth analyses and recommendations on critical issues. This collaborative approach will enrich decision-making and uphold the board's commitment to informed, community-responsive governance.

Efficiency in Decision-Making: Option 3 offers a more agile governance structure, which is crucial in organizations that need to respond quickly to changing circumstances and urgent needs of the communities they serve. A smaller board can streamline decision-making processes, reducing the time it takes to reach consensus and implement actions. This efficiency can be especially beneficial when swift responses are required.

Strategic Skill Allocation: Having a board composed of individuals with key skill sets means that each member is chosen for their expertise and ability to contribute to specific strategic areas. This targeted approach ensures that the board is not just a representation of stakeholders but is an assembly of expertise that can offer informed guidance and oversight. For instance, including experts in child welfare, financial management, legal compliance, and community engagement ensures that the board's decisions are well-rounded and consider all facets of the Secretariat's operation.

Balanced Inclusivity and Decisiveness: While expansive regional representation is beneficial for inclusivity, it can sometimes lead to prolonged discussions and slower decision-making. Option 3 strikes a balance between being inclusive and decisive. The support from an Advisory Board with regional representation ensures that diverse regional and practitioner voices are still heard and considered in the decision-making process.

Mitigating Risks: The potential risk of push-back from major stakeholder organizations can be mitigated through transparent communication and by ensuring that the regional Advisory Board plays a significant role in providing input and feedback to the Board of Directors. The Advisory Board can act as a conduit for wider stakeholder concerns, ensuring that the streamlined board

remains connected to on-the-ground realities and the diverse needs of the communities it serves.

Adaptability and Long-Term Strategic Focus: Option 3 facilitates a governance structure that can adapt more readily to long-term strategic changes. With experts in crucial areas, the board can navigate complex issues with a focus on the future, ensuring that the Secretariat remains relevant and effective in the long term.

Option 3 provides a governance model that is efficient, strategically focused, and capable of balancing inclusivity with decisiveness, making it a compelling choice for the Secretariat's Board of Directors. By addressing the potential risk of stakeholder push-back with a robust Advisory Board and clear channels for stakeholder engagement, this option aligns with best practices for modern governance in the fast-paced, complex realm of national child and family services.

Recommendation:

After extensive review of the various governance structures proposed, IFSD recommends that a National-based Secretariat adopt Option 3 for its governance structure. This model provides the necessary conditions for a modern, responsive, and expertly guided organization. The Secretariat's Board of Directors should be composed of individuals with proven expertise in significant areas pertinent to the Secretariat's operations and the communities it serves. The board would benefit from a regional representative advisory group to ensure its decisions consider the realities of practice and needs of First Nations.

Implementation Strategy:

Recruitment of Board Members: Identify and recruit potential board members who possess the expertise in the key areas identified as crucial for the governance of the Secretariat.

Formation of an Advisory Board: Establish an Advisory Board that reflects the regional diversity and includes practitioners from various communities to provide broader perspectives and guidance.

Engagement with ISC: Formalize the involvement of ISC as an observer to ensure that the Secretariat's operations are aligned with national policies and priorities without direct interference in governance.

Communication and Transparency: Develop a communication strategy to transparently convey the rationale behind the adoption of Option 3 to all stakeholders, emphasizing the benefits of this governance structure.

Monitoring and Evaluation: Implement a framework for monitoring and evaluating the effectiveness of the governance structure, with provisions for adjustments based on feedback and evolving needs.

The development of a communication strategy and framework for evaluation is a task that could be undertaken by AFN. Given their existing role in retaining the board's 'secretariat' function for NAC, the AFN is well-positioned to perform this function, possibly with an operating fee for their services. Alternatively, if the First Nations Child & Family Caring Society is willing and equipped to take on this function, it could also be considered a viable option to develop and manage the communication strategy.

Staffing:

The table below outlines the estimated staffing requirements necessary for the operation of the secretariat, detailing positions from the Board of Directors to front-line staff. It provides an overview of the roles and their respective responsibilities, along with the estimated salary ranges, ensuring a clear understanding of the human resources needed for the secretariat's successful function under the National Approach.

TABLE 4: Staffing for National Approach – Existing Organizations

Position	*Details*	*Description*	*Salary Ranges*
Board of Directors	• Varied approach.	*Responsible for overseeing the governance of the organization, providing strategic advice, and keeping the senior executive team accountable*	*Assumed: Pro-Bono Service*
Executive Director	• One (1) experienced First Nations executive with strong subject matter expertise in both program design/delivery and data gathering /governance, and	*Responsible for leading the organization, building strategic relationships, and advocating for its role in*	*Est. $174,802 to $205,650*[1]

[1] Estimate derived from EX4 Assistant Deputy Minister pay range. Source: Government of Canada Privy Council Office, *Salary ranges and maximum performance pay for Governor in Council appointees,* https://www.canada.ca/en/privy-council/programs/appointments/governor-council-appointments/compensation-terms-conditions-employment/salary-ranges-performance-pay.html

	demonstrated experience as a bridge-builder	*the national child welfare landscape*	
Director of Evidence for Child and Family Services	• One (1) expert in data collection and analysis; professional with deep-seated understanding of First Nations information sovereignty and the leading modern practices to promote care and control in data gathering, analysis and reporting.	*Responsible for steering the data services of the organization; this may include training and education services.*	*Est. $121,550 - $142,982*[2]
Director for Operational Supports and Programming	• One (1) expert in child and family services; possesses deep knowledge of FNCFS practice, with a focus on integrated prevention and protection to promote the best interests of the chid in a culturally informed manner.	*Responsible for steering the programming services of the organization; this may include training and education services, or be limited to knowledge generation.*	*Est. $121,550 - $142,982*[3]

[2] Estimate derived from EX1 Director pay range. Source: Ibid.
[3] Estimate derived from EX1 Director pay range. Source: Ibid.

Front-Line Staff	• Nine (9) to fifteen (15) staff spread across three departments, charged with supporting each of the Directors respectively.	*Responsible for advancing data and programming activities, and enabling the overall administrative functioning of the organization*	*Est. $75,000 - $95,000.*[4]

Assessment of Benefits and Challenges

Benefits: A centralized new organization promises a harmonized approach to data collection, evidence generation, and reporting across all provinces and territories, ensuring consistency and standardization crucial for national policymaking and program evaluation. This model could lead to a cohesive strategy and a strong, unified advocacy front for FNCFS, as it unites diverse groups under a single banner with a clear, focused mandate. A new organization also presents the opportunity to create a structure specifically designed for the unique challenges and objectives of the FNCFS, potentially fostering innovative solutions and approaches. It has the potential to serve as a center of excellence, driving the development and distribution of best practices across the nation, which could be transformative for the provision of services to First Nations communities.

Challenges: However, the creation of a new national secretariat is often a complex, time-consuming endeavor. It involves significant start-up costs, from physical infrastructure to staffing, which may strain limited resources. There is also a risk of duplicating efforts, creating redundancies, and competing for funding with existing organizations that serve similar purposes. Several examples of these organizations include First Nations of Northern Manitoba Child and Family Services Authority in Manitoba, Saskatchewan First Nations Family and Community Institute Inc in Saskatchewan or the Indigenous Child and Family Services Directors' Our Children Our Way Society in British Columbia. Establishing credibility and authority across provinces and territories that have diverse needs and existing systems may be challenging. The new entity would have to build relationships from the ground up, which could delay the actual implementation of its programming support and data collection roles.

Considerations for Implementation

[4] Estimate derived from Governor-in-Council appointee pay scale. Source: Ibid.

Inception Phase: The initial 2 to 3 months are dedicated to aligning stakeholders on the core features of the organization's design, including its mandate and key activities. This period is critical for achieving a shared understanding of the trade-offs inherent in various design features. A Memorandum of Understanding (MOU) will be produced, signed by founding stakeholders, that establishes the intent and foundational principles governing the Secretariat's operations.

Codification and Compliance: Over the next 1 to 2 months, the Secretariat's formal establishment is pursued through the appropriate legal channels. This stage involves setting up the necessary banking and expense accounts and communicating developments to ISC to ensure alignment and compliance with governmental requirements. A key deliverable for this phase is securing the articles of incorporation or other relevant governing documents.

Leadership Setting: Spanning 3 to 4 months, this stage involves using the established mandate and design features to identify core members for the Secretariat's governing Board of Directors. Once the Board is established, a thorough search for an inaugural Executive Director commences, targeting a well-regarded First Nations leader with a track record in bridge-building and the requisite expertise. The culmination of this phase is the signing of employment contracts with the initial Board and Senior Leadership Team.

Pre-Launch Planning: In the following 3 to 6 months, a priority list of programming and data activities is developed, alongside identifying early client communities. An inventory of operational requirements will be taken to craft a detailed rollout plan. This phase concludes with the finalization of hiring for front-line and back-office staff across the organization's departments, ensuring a comprehensive strategy is in place for the launch.

Early Awareness Building: Concurrent with pre-launch planning, a 2-to-3-month period is allocated for engagement with service providers and Frist Nations. The goal is to foster an understanding of the Secretariat's mandate and its value proposition, connecting the organization's mission to the two rulings of the CHRT 1) End current discrimination and 2) ensure it does not reoccur. Feedback will be solicited, misconceptions addressed, and the Secretariat's commitment to OCAP® principles and its relationship with FNIGC will be clarified. The Executive Director will be positioned as a credible leader and unifier. An accessible informational resource will be published, detailing the Secretariat's envisioned contributions to the First Nations Child Welfare landscape.

Inaugural Service Provision: Between 3 to 6 months, the Secretariat will roll out targeted services to selected clients or communities. This phase is instrumental for documenting experiences, deriving lessons learned, and

promoting the Secretariat's value-added services to the clients, which will be highlighted in an external-facing document.

Full-Service Operations: As the organization transitions into ongoing operations, maintaining robust information on organizational performance becomes crucial. The data collected will serve to continually refine service delivery, ensuring an ever-growing impact on the community. It is expected that it will take between 9 months and a year and half to become fully operational.

TABLE 5: Implementation timeline: National Approach – New Organization

Phase of Work	Environmental & Operational Requirements	Anticipated Timeline
Inception	▪ Establish stakeholder alignment on core features of organizational design, including mandate and key activities. ▪ Ensure clear-eyed understanding of trade-offs between various design features. ▪ **Deliverable:** Produce MOU, signed by founding stakeholders, establishing intent and purpose of Secretariat, alongside governing operating principles	***2 – 3 Months***
Codification & Compliance	▪ Formalize the creation of the organization through the appropriate legal channel. ▪ Establish required banking and expense accounts. ▪ Communicate developments to ISC. ▪ **Deliverable:** Secure relevant articles of incorporation or other relevant governing documents	***1 – 2 Months***
Leadership Setting	▪ Informed by the chosen mandate and design features, identify core members of the proposed organization's governing Board of Directors ▪ With the Board established, conduct extensive search for inaugural ***Executive Director***, identifying a well-regarded First Nations leader with demonstrated bridge-building experience, and relevant subject matter expertise.	***3 – 4 Months***

	▪ **Deliverable:** Secure signed employment contracts with inaugural Board and Senior Leadership Team	
 Pre-Launch Plan	▪ Develop 'priority' list of programming and data activities, alongside early list of priority client communities. ▪ Take inventory of operational requirements ahead of launch and develop detailed roll-out plan. ▪ Finalize hiring of front-line and back-office staff across each of the three departments. ▪ **Deliverable:** Comprehensive roll-out strategy; signed contracts with front-line staff	***3 – 6 Months***
 Early Awareness Building	▪ In preparation for launch, stage broad-based engagement with stakeholder groups and communities to build understanding on the Secretariat's mandate and value proposition – tying the organization directly to the Agreement-in-Principle and other landmark actions on First Nations Child Welfare ▪ Solicit stakeholder feedback and respond to misconceptions or inquiries about the Secretariat's role. ▪ Clarify the organization's operating principles, its role in upholding OCAP®, and its relationship to FNIGC. ▪ Promote the Executive Director as a credible First Nations leader and reliable convener of disparate stakeholders. ▪ **Deliverable:** Publish an accessible informational resource detailing the Secretariat's proposed contribution to the First Nations Child Welfare and Landscape Nationwide	***2 – 3 Months***

 Inaugural Service Provision	▪ Roll-out a few targeted services to select clients or communities, document experience and lessons learned for internal learning and external promotion. ▪ **Deliverable:** Produce external-facing document highlighting the Secretariat's experience in its inaugural service provision, and the value-added to the client	***3 – 6 Months***
 Full-Service Operations	▪ **Deliverable:** Maintain robust information sets on organizational performance as services mature to improve performance and produce a greater community impact	***Ongoing***

National Approach – Existing Organization

Introduction

In the following sections, we delve into the National Approach that leverages an Existing Organization, specifically the First Nations Information Governance Centre (FNIGC), to assume the role of the secretariat. We will outline the organizational design, starting with the tailored mandate that integrates the secretariat's responsibilities into FNIGC's established framework.

The discourse will then identify the stakeholders and communities that FNIGC, in its enhanced role, aims to serve, emphasizing the synergy between the existing functions and the new secretariat duties. A nuanced discussion on the governance structure will follow, detailing how FNIGC's current system will adapt to its expanded role while maintaining its core governance principles.

We will assess the benefits and challenges of embedding the secretariat within an established entity, scrutinizing how this integration affects service delivery, resource allocation, and data management. The section will conclude with strategic considerations for implementation, ensuring that FNIGC's transition to incorporating the secretariat's activities is both seamless and effective.

Organizational Design

FNIGC is suitably positioned to fulfill the duties and responsibilities of the proposed national secretariat. Established in 2010 under the mandate from the Assembly of First Nations' Chiefs-in-Assembly, FNIGC has since evolved into a robust national organization focused on advancing First Nations health, well-being, and data sovereignty in line with each First Nation's distinct world view.

The FNIGC operates with a regionally appointed national Board of Directors, ensuring that regional representation is an integral part of its governance structure. This board meets regularly to steer the organization, as evidenced by their four meetings in the 2022–2023 fiscal year. Such regional representation ensues that regional perspectives are incorporated into national decision-making processes.

The FNIGC has established operational budgets that account for all projected expenditures, including those for program delivery in various regions, demonstrating its capacity to handle the financial responsibilities that would come with the additional duties of the proposed secretariat. With experience in managing funds from various sources, including those from the federal government and ISC, FNIGC has the fiscal management, practices and protocols in place necessary for the broader scope of work.

Moreover, the FNIGC's First Nations Data Governance Strategy (FNDGS) showcases its capability to develop and implement extensive data governance frameworks. With a federal commitment of $81.5 million to support Indigenous data initiatives, FNIGC has been tasked with establishing a national network of Regional Information Governance Centres (RIGCs) that will provide data and statistical services to all First Nations communities. This aligns directly with the operational objectives of the proposed secretariat, which seeks to enhance data collection and governance at a national level.

The FNIGC's board already demonstrates a diverse geographical representation, with members from Manitoba, the Assembly of First Nations, British Columbia, Saskatchewan, Nova Scotia and Newfoundland, and Yukon, among others. This regional diversity underscores FNIGC's capability to address the needs of First Nations across various territories.

In conclusion, the FNIGC is a well-established, regionally represented organization with a clear mandate from the Assembly of First Nations. Its current operations, financial management capabilities, and ongoing initiatives such as the FNDGS position it as a viable existing national organization capable of assuming the duties and responsibilities envisioned for the proposed secretariat. Its governance structure, which includes regional representation, aligns with the intended direction for the secretariat, further supporting the case for FNIGC's suitability for this role.

Mandate

The mandate of the national approach utilizing an existing organization will mirror that of the national approach that involves creating a new organization. This strategic decision ensures that the core objectives — to centralize expertise, streamline the dissemination of best practices, and enhance data collection and analysis in the field of First Nations child and family services — are consistently pursued.

Stakeholders and Communities Served

Stakeholders encompass a wide array of groups with vested interests in the success of the national secretariat. These include First Nations leaders who provide governance and oversight, practitioners who offer frontline services, and community members who are the beneficiaries of these services. Additionally, the secretariat interacts with national organizations like AFN, ISC, and the Caring Society, ensuring that policies and initiatives are in alignment with broader objectives for First Nations well-being.

Communities served by the national approach are diverse, spanning urban, rural, and remote areas, each with distinct needs and cultural considerations. The secretariat's programming and initiatives are designed to be flexible and responsive to these varied contexts, ensuring that all First Nations children and families have access to high-quality, culturally sensitive services.

Governance Structure

The FNIGC's current governance structure would remain intact to ensure stability and continuity.

To integrate the secretariat's functions, a new division within FNIGC would be established. This division would be specially created to house the secretariat's activities and would be designed to align with the overarching goals and

strategies of FNIGC. The division would be responsible for implementing and managing the suite of services and initiatives associated with the secretariat, such as data collection, analysis, and the dissemination of best practices in First Nations child and family services.

The advantage of creating a new division within an existing structure like FNIGC is the ability to leverage the pre-existing infrastructure, systems, and relationships that FNIGC has already established. The new division would benefit from FNIGC's established reputation, its experience in handling sensitive data, and its established protocols for data governance that adhere to OCAP® principles. This approach would not only expedite the operationalization of the secretariat's activities but would also ensure that they are rooted in proven methodologies and practices.

Furthermore, the existing relationships that FNIGC has with First Nations communities, policymakers, and other stakeholders would provide a solid foundation for the new division. These relationships would facilitate engagement and collaboration, ensuring that the initiatives and services offered by the secretariat are informed by the needs and perspectives of First Nations. The secretariat division could also benefit from FNIGC's existing technological systems, providing a robust platform for data management and analysis without the need for significant additional investments in infrastructure.

The governance of the new division would require careful planning. It would need a dedicated director who reports to the FNIGC's Chief Executive Officer and, ultimately, to its Board of Directors. This governance structure would ensure that while the secretariat division operates with a degree of autonomy necessary to fulfill its specific mandate, it remains integrated within the strategic objectives and operational guidelines of FNIGC. The director of the new division would likely be a senior role, requiring an individual with extensive experience in First Nations child welfare and governance, capable of navigating both the strategic and operational challenges of integrating the secretariat's functions into FNIGC.

The secretariat is envisioned to function akin to an independent centre within a university, much like that of Chaplin Hall Center for Children, a research institute based out of University of Chicago. It would be housed within FNIGC, benefiting from its established infrastructure and networks, yet maintaining its distinct mandate. This arrangement allows the secretariat to operate autonomously, akin to self-funded research centers that, while part of the larger university ecosystem, have distinct operational guidelines. This structure is designed to ensure that while the secretariat resides within FNIGC, it does not interfere with FNIGC's regular operations, instead fostering a mutually beneficial relationship that leverages shared expertise and research capabilities. This integrative approach promises to combine innovation with

experience, positioning the secretariat to make a meaningful impact in the realm of First Nations child and family services.

Assessment of Benefits and Challenges

Benefits: Incorporating the Secretariat within an established organization can leverage existing networks, knowledge, and infrastructure, potentially leading to a more cost-effective and efficient operationalization. An existing organization like FNIGC already has the expertise, which could help avoid the pitfalls of establishing new systems and processes. This option also provides a quicker route to implementation, as it would be building upon a foundation already familiar with the nuances of data governance. It could ensure continuity in service provision, maintaining the established trust and working relationships that an existing organization has cultivated over time.

Challenges: However, existing entities have established cultures and processes that may resist the changes needed to integrate the new Secretariat's functions, which could limit innovation and adaptability. Aligning the Secretariat's objectives with the existing organization's mandate might prove difficult if they do not coincide, leading to potential mission drift or conflicts of interest. There's also a risk that the existing organization's focus could be diluted, compromising its original goals and objectives due to the additional workload and possibly divergent priorities of the Secretariat.

In considering the FNIGC as a potential candidate for the secretariat, it's also important to consider several issues. The willingness of FNIGC to participate is paramount as this is not a forgone conclusion. Identifying the necessary approvals and endorsements required from within their governance structure will be necessary. Should FNIGC or any other existing organization selected to fill this role decide against participating, alternative organizations or strategies may need to be considered. Does the Chiefs-in-Assembly have the authority to mandate FNIGC's involvement? It is a matter that involves not only the legal and operational readiness of FNIGC but also the broader context of First Nations self-determination and governance. These considerations are not just pertinent to FNIGC but extend to any national organization that may be in contemplation for the secretariat role. Such issues do not arise when creating a new organization.

Considerations for Implementation

Inception and Integration: The inception phase focuses on aligning stakeholders with the existing organization's vision and mission, integrating the Secretariat's mandate seamlessly with current operations. Over the course

of 1 to 2 months, AFN, the Caring Society and service providers will establish a shared understanding of the trade-offs between various design features, producing a MOU that enshrines the intent and purpose of the Secretariat alongside governing operational principles.

Codification and Compliance: Following inception, the next 1 to 2 months will be dedicated to the formalization of the expanded organization through the appropriate legal channels.

Leadership Adaptation: With the chosen mandate and design features as a guide, core members of the existing organization's governing Board of Directors will be identified and possibly realigned to include new executive roles necessary for the Secretariat's operations. Within 3 to 4 months, an extensive search for any additional Executive Directors will commence, seeking well-regarded First Nations leaders with proven bridge-building experience and relevant subject matter expertise. Signed employment contracts with the inaugural Board and Senior Leadership Team will mark the completion of this phase.

TABLE 6: Implementation timeline: National Approach – Existing Organization

Phase of Work	Environmental & Operational Requirements	Anticipated Timeline
Inception	▪ Align stakeholder vision with existing organization's mission and services. Integrate Secretariat's mandate with current operations.	***2 – 3 Months***
Codification & Compliance	▪ Amend legal documents to incorporate Secretariat's activities. Align financial structures with new mandates.	***1 – 2 Months***

 Leadership Setting	▪ Realign existing Board of Directors to include Secretariat's mandate. Identify candidates for any additional executive roles required.	***3 – 4 Months***
 Pre-Launch Plan	▪ Integrate Secretariat's activities into the existing program list. Prepare existing staff for new roles and responsibilities.	***3 – 6 Months***
 Early Awareness Building	▪ Communicate the expanded role of the organization to stakeholders. Update operational principles to include Secretariat's activities.	***2 – 3 Months***
 Inaugural Service Provision	▪ Begin offering new services under the Secretariat's mandate to current and new clients.	***3 – 6 Months***

 Full-Service Operations	▪ Review and adapt organizational performance metrics to include Secretariat's contributions.	***Ongoing***

Regional Approach – New Organizations

Introduction:

The ensuing discussion navigates through the Regional Approach, focusing on the creation of New Organizations to serve as regional secretariats across Canada. We'll initiate with an overview of the organizational design, illustrating how each new regional entity will develop its distinct mandate to support First Nations Child and Family Services within its jurisdiction.

We'll identify the stakeholders and the communities served by these nascent regional secretariats, emphasizing the intent to cater to the unique cultural, social, and service needs of diverse First Nations populations. The narrative will then consider the governance structure options, examining how these new organizations can establish robust and culturally attuned governance systems.

The overview will also unpack the potential benefits and challenges, exploring the advantages of regional specificity against the backdrop of establishing new operations from the ground up. Finally, considerations for the successful implementation of these regional secretariats will be defined, aiming to provide a blueprint for their strategic establishment and integration into the broader national framework of First Nations services.

Organizational Design

Mandate

The regional approach, through the creation of new organizations, is dedicated to serving as local centers of excellence for best practices and data management tailored to the unique needs and conditions of First Nations communities within their specific locales. These regional entities will operate in close collaboration, sharing resources and expertise to ensure a cohesive approach to child and family services, yet with the flexibility to address regional disparities and cultural specificities. Each regional organization will provide accessible programming tools, resources, and operational support to First Nations and FNCFS agencies, adapting the offerings based on regional discretion and necessity. Examples may include:

- Customizing program templates and ideas to suit regional conditions, including cost structures, staffing needs, and lessons learned from local experiences.
- Building and leveraging a network of regional experts for additional, localized support.
- Offering operational support catered to the unique challenges of regional service delivery, including recruitment strategies, hiring processes, and staff retention in alignment with local cultural practices.
- Facilitating training programs and capacity-building initiatives that resonate with the regional context, including train-the-trainer modules and identifying local sources for training and development.

As hubs for data collection and analysis, regional organizations will gather and interpret information specific to their communities. They will also offer fee-for-service data collection and analysis to stakeholders for community-level analysis, reporting on regional trends, and contributing to a collective national understanding of First Nations child and family well-being.

These new regional organizations will address systemic inequities in FNCFS by promoting evidence-based, culturally informed responses within communities, recognizing the diversity of economic and social conditions across regions. They will act as crucial links within the broader patchwork of organizations, connecting research and service delivery efforts on the ground and upholding the principles of First Nations leadership, OCAP®, and community autonomy, all while ensuring alignment with regional strategies and priorities.

TABLE 7: Organizational values: Regional Approach – New Organizations

Element	Description	Proposed Secretariat Response
Vision	An aspirational description of what the organization wants to achieve in the future.	*Each Regional Secretariat envisions becoming a pivotal regional partner, driven by First Nations values and priorities, to foster resilient and thriving First Nations children and families. It aims to work within its region to respect and promote information sovereignty and manage resources efficiently for a sustainable and localized impact.*
Mission	Why the organization exists; the purpose underlying its chosen vision.	*Each Regional Secretariat operates as a community-centric, First Nations-led organization tailored to fortifying child welfare and family services within the region, honoring the distinct cultural and social fabric of its communities.*
Objectives	Specific results that an organization aims to achieve within a time frame; a means by which the organization can measure its success.	*The Regional Secretariat seeks to bridge the gap in child welfare services at the local level by connecting community organizations and stakeholders, fostering regional insights, and sharing region-specific best practices.* ***Within the next 18 months, the goal is to establish a regional mandate, set up an organizational framework that resonates with local values, and position itself as an integral part of the region's FNCFS ecosystem**.*
Approach	An approach provides a methodology for executing the strategy.	*Each Regional Secretariat aims to fill a unique niche by complementing and enhancing existing services, not competing with them. It plans to forge partnerships with local organizations to ensure community needs are met effectively.* ***Initially, the focus will be on aligning with regional stakeholders, raising awareness about its role and services,***

		and cultivating trust within the communities it serves.
Tactics	Focused initiatives, projects, or programs that allow organizations to execute strategies.	*Tactics will be collaboratively developed with regional stakeholders, ensuring that initiatives are grounded in local realities and designed to address the specific challenges and opportunities within each region.*

Stakeholders and Communities Served

The table below presents three distinct options for dividing regions in the context of establishing new regional organizations. The division of regions is a crucial factor as it directly influences the number of secretariats required to provide tailored services. Each option offers a different configuration, ranging from a greater number of smaller, more localized secretariats to fewer, broader regional entities. This division will shape the operational scale, reach, and governance of the secretariats, impacting their capacity to serve the communities effectively.

TABLE 8: Regional division options

Model	Number of Secretariats	Regional Coverage	Description
Option 1: Eleven Secretariats	11	Each province and territory (excluding Nunavut and Northwest Territories)	Independent secretariats for each province and territory, focusing on local issues and tailored solutions. Each operates autonomously while collaborating on inter-regional matters.
Option 2: Three Secretariats	3	Western (Yukon, BC, Alberta, Saskatchewan, Manitoba), Central (Ontario, Quebec), Atlantic (NB, NS, PEI, NL)	Larger secretariats covering broader areas for operational efficiency and resource pooling, while acknowledging sub-regional diversity

			within each secretariat's purview.
Option 3: Self-Determined Secretariats	Variable	Determined by stakeholders	Flexible configuration with the number and boundaries of secretariats based on stakeholder consensus, reflecting a commitment to community engagement and self-governance.

Option 1: Eleven Secretariats

For: Adopting eleven regional secretariats affords the opportunity to tailor services closely to the cultural and social fabric of each province and territory, which is vital given the diversity of First Nations communities. This structure can drive a more nuanced and sensitive approach, as local leaders who best understand regional dynamics govern these secretariats. The proximity to the communities they serve can lead to more immediate responsiveness to local issues and facilitate community involvement and empowerment. It also allows for the creation of services that are culturally congruent and regionally relevant, fostering greater community trust and participation. Moreover, this approach presents an opportunity to harness the strengths of existing regional organizations, drawing on their established operations and mandates to enrich FNCFS. By leveraging these pre-existing frameworks, the secretariats can quickly implement culturally resonant and regionally specific services.

Against: However, the primary concern with this model is the potential lack of cohesion and shared strategic direction that a national secretariat typically provides. Without a centralized body to aggregate data and coordinate efforts, there is a risk of creating silos that impede the exchange of information and best practices. This fragmentation may lead to inconsistencies in service quality and hinder the development of a comprehensive national picture of the welfare of First Nations children and families. Additionally, without effective regional collaboration mechanisms, there might be missed opportunities for regions to learn from each other's successes and challenges, which could result in a poorer overall national outcome. Another major concern is the financial burden; without economies of scale, the cost could escalate excessively, especially when multiple organizations need to bolster their infrastructure to meet the new data and service delivery standards.

Option 2: Three Secretariats

For: Consolidating into three regional secretariats provides a middle ground, balancing the desire for regional specificity with the need for a more unified national approach. This model can enhance operational efficiency and resource allocation while still allowing for some degree of regional customization. It offers the potential for more robust data collection and sharing practices within each larger region, improving the ability to make informed decisions and develop comprehensive regional strategies. Moreover, the broader reach of each secretariat could facilitate stronger advocacy and influence at the national level, potentially leading to better policy outcomes for First Nations communities.

Against: The concern with fewer, larger secretariats is that they may not fully capture the local subtleties of smaller, more isolated communities. The amalgamation of regions could dilute the specificity of services and may inadvertently prioritize the needs of more populous areas within the regions. Additionally, there is a risk that a more centralized regional model could become disconnected from grassroots needs, resulting in services that are less aligned with local community values and practices. The potential for reduced direct community engagement and oversight could lead to services that are less accepted and utilized by the communities they aim to serve. Furthermore, without a national administrative body, the ability to synthesize data across all regions into a cohesive national framework may be compromised, potentially weakening the overall national response to First Nations child and family welfare issues. Finally, there is a lack of comparable regional amalgamations in the FNCFS landscape. Creating three large regional bodies for cooperation would be a novel approach.

When considering the first two proposals, the challenge lies in striking the right balance between regional autonomy and the need for a coordinated national approach to data and service provision. Effective regional collaboration and the establishment of mechanisms for data aggregation and sharing are essential to ensure that while regions operate independently, they do not do so in isolation from the broader national landscape. This balance is critical for improving outcomes for First Nations communities at both regional and national levels.

Governance Structure

TABLE 9: Design options for board of directors – Regional Approach – New Organizations

Design Feature		
Option 1	**Option 2**	**Option 3**
A small board with members from key regional organizations. Board members would include leaders from regional First Nations governing bodies, regional branches of national organizations, and regional child welfare experts. An advisory panel consisting of community representatives and service users would support the board, providing ground-level insights and feedback on board initiatives.	A lean board structure with seats designated for regional experts in fields such as data management, programming, child welfare, compliance and legal affairs, and communications. Ensuring the board has the necessary skills to address the complexities of regional service delivery effectively. An advisory panel consisting of community representatives and service users would support the board, providing ground-level insights and feedback on board initiatives.	Each Region determines their own board structure.

Option 1: Compact Core Regional Board

Focused Leadership: A smaller board can streamline decision-making, leading to more agile and responsive governance.

Regional Representation: Having board members from key regional organizations ensures that the board's actions are aligned with regional needs and priorities.

Community Involvement: The advisory panel allows for direct community involvement without overwhelming the board's decision-making process.

Option 2: Streamlined Regional Board with Designated Expertise

Specialized Expertise: Board members are selected for their specific knowledge and skills, which can enhance the quality of strategic decision-making.

Efficient Operations: A lean board with clear roles can operate efficiently, focusing on strategic issues without getting bogged down in operational details.

Strategic Focus: The board's composition ensures a strategic focus on critical areas like healthcare, education, and legal affairs, which are vital for effective service delivery.

Option 3: Regional Customization

Customization: Tailoring governance to regional preferences ensures that structures are culturally relevant and appropriate.

Alignment with Regional Policies: Regional secretariats can ensure that their governance structures are in harmony with local policies, take advantage of pre-existing advisory bodies and facilitate smoother operations.

Recommendation

IFSD recommends adopting Option 2: Streamlined Regional Board with Designated Expertise. This model aligns with the principles of efficient governance and strategic focus, essential for the effective delivery of services to First Nations communities.

The streamlined structure, composed of experts in pertinent fields, ensures that the board is well-equipped to make informed decisions that address the complex realities of regional service delivery. While there are risks of a narrow focus and potential exclusion of broader community voices, these can be mitigated by implementing a comprehensive selection process for board members and establishing strong communication channels with the community.

The inclusion of a Regional Expertise Panel provides an additional layer of strategic guidance, bringing in diverse community advocates and subject matter experts to advise the board. This panel will play a crucial role in ensuring that the board remains connected to community needs and can adapt to changing circumstances.

In recommending Option 2, IFSD underscores the importance of expertise, efficiency, and a strategic approach to governance. This model promises a robust and dynamic governance structure capable of driving the regional secretariats towards achieving their mission and improving outcomes for First Nations children and families.

Implementation Steps will mirror that of those found under the National Approach – New Organization.

Staffing:

The table below outlines the estimated staffing requirements necessary for the operation of regional based secretariats, referencing the options outlined above. It details positions from the Board of Directors to front-line staff. It provides an overview of the roles and their respective responsibilities, along with the estimated salary ranges, ensuring a clear understanding of the human resources needed for the secretariat's successful function under the Regional Approach – New Organizations.

TABLE 10: Staffing for Regional Approach – New Organizations

Position	*Details*	*Description*	*Salary Ranges*
Board of Directors	• Varied approach.	*Responsible for overseeing the governance of the organization, providing strategic advice, and keeping the senior executive team accountable*	*Assumed: Pro-Bono Service*
Executive Directors	• Eleven (11) or three (3) seasoned First Nations executives with strong subject matter expertise and demonstrated experience as a bridge-builder	*Responsible for leading the organization, building strategic relationships, and advocating for its role in the region's child welfare landscape*	*Est. $174,802 to $205,650*[5] *(Option 1 $1,922,822 – $2,262,150)*

[5] Estimate derived from EX4 Assistant Deputy Minister pay range. Source: Government of Canada Privy Council Office, *Salary ranges and maximum performance pay for Governor in Council appointees,* https://www.canada.ca/en/privy-council/programs/appointments/governor-council-appointments/compensation-terms-conditions-employment/salary-ranges-performance-pay.html

			(Option 2 $524,406 – $616,950)
Directors of Evidence for Child and Family Services	• Eleven (11) or three (3) experts in data collection and maintenance; professionals with deep-seated understanding of the historical threats to First Nations information sovereignty and the leading modern practices to overcome those obstacles	*Responsible for steering the programming services of the organization; this may include training and education services or be limited to knowledge generation.*	*Est. $121,550 - $142,982*[6] *(Option 1 $1,337,050 – $1,572,802)* *(Option 2 $364,650 – $428,946)*
Directors for Operational Supports and Programming	• Eleven (11) or three (3) experts in child and family services; each would possess deep knowledge of the institutional failings of the child welfare system, leading practices in prevention and protection care, and the current landscape of service providers	*Responsible for steering the programming services of the organization; this may include training and education services or be limited to knowledge generation.*	*Est. $121,550 - $142,982*[7] *(Option 1 $1,337,050 – $1,572,802)* *(Option 2 $364,650 – $428,946)*

[6] Estimate derived from EX1 Director pay range. Source: Ibid.
[7] Estimate derived from EX1 Director pay range. Source: Ibid.

Front-Line Staff	• Six (6) to ten (10) staff spread across three departments of each regional secretariat, charged with supporting each of the regional Directors respectively.	*Responsible for advancing data and programming activities, and enabling the overall administrative functioning of the organization*	*Est. $75,000 - $95,000.*[8] *(Option 1 $825,000 – $1,045,000)* *(Option 2 $225,000 – $285,000)*

Assessment of Benefits and Challenges

Benefits: Creating new regional secretariats can offer highly tailored services and data collection methods that account for the cultural, geographical, and political nuances of each region. This approach promotes local engagement, ownership, and the development of initiatives that are culturally sensitive and community specific. New regional entities are well-positioned to form strong, direct connections with local communities, providing services that are more closely aligned with their unique needs and fostering an intimate understanding of regional issues, which is often lost in national models.

Challenges: Nevertheless, this approach risks inconsistencies in data collection and program implementation, which could impede the formation of a coherent national picture. The fragmentation of services might lead to inefficiencies and increased costs, as each region sets up its infrastructure and administrative systems. The resource intensity of establishing and maintaining multiple new organizations across the country could be vast, possibly outweighing the benefits of localized service provision.

Considerations for Implementation

Regional Consultation and Establishment: The foundation for new regional organizations will be laid out over 2 to 3 months, requiring extensive consultations with regional stakeholders to define each organization's specific scope and services. Legal setup and registration will follow, ensuring that each entity has the proper structures to operate within their respective jurisdictions.

Regional Board and Leadership Formation: Subsequently, over 3 to 4 months, the focus will shift to establishing regional Boards of Directors and beginning

[8] Estimate derived from low-level Governor-in-Council appointee pay scale. Source: Ibid.

the search for Regional Directors. This phase ensures that the leadership at the regional level is equipped with the knowledge and authority to make decisions that align with the overarching goals of the Secretariat while being responsive to local needs.

Operational Planning and Community Engagement: In the following 3 to 6 months, regional priorities for programs and services will be identified, and a detailed rollout strategy for each region will be developed. A significant part of this phase is raising awareness about the new regional organizations and establishing their presence within the communities they aim to serve.

TABLE 11: Implementation timeline: Regional Approach – New Organizations

Phase of Work	Environmental & Operational Requirements	Anticipated Timeline
Inception	▪ Engage with regional stakeholders to define the scope and services of new organizations.	***2 – 3 Months***
Codification & Compliance	▪ Register each new regional organization. Set up regional financial and operational systems.	***1 – 2 Months***

 Leadership Setting	▪ Select and establish regional Boards of Directors. Begin search for Regional Directors.	***3 – 4 Months***
 Pre-Launch Plan	▪ Identify regional priorities for programs and services. Develop rollout strategies for each region.	***3 – 6 Months***
 Early Awareness Building	▪ Raise awareness about the new regional organizations. Establish regional presence and clarify mandate.	***2 – 3 Months***
 Inaugural Service Provision	▪ Implement targeted services in selected communities to establish a track record.	***3 – 6 Months***

 Full-Service Operations	▪ Gather data on regional operations to refine service delivery and impact.	***Ongoing***

Regional Approach – Existing Organizations

Introduction:

As we turn our attention to the Regional Approach utilizing Existing Organizations, we'll embark on an examination of how current entities can integrate the roles and responsibilities of regional secretariats. The discussion will unfold with an analysis of the organizational design, detailing how existing structures will adapt their mandates to incorporate the additional functions of the secretariat.

Acknowledging the nuanced dynamics of this approach, we will delve into the benefits and challenges, considering the complexities of adding new layers of responsibility to existing organizational mandates. Lastly, we'll outline the crucial factors for implementation, ensuring these organizations are supported as they transition to meet the demands of their new roles.

Organizational Design

Mandate

The mandate of the regional approach using existing organizations will mirror that of the Regional Approach – New Organizations, however, the functions of the new secretariats will be embedded into already established regional bodies. Like the National Approach – Existing Organization, the aim is to utilize the existing infrastructure to deliver services and programming related to First Nations child and family services. While the intention is to streamline processes and use established channels, the risk is that the primary focus of

the secretariat—developing and disseminating best practices and centralizing data collection—may become diluted when merged with the existing mandates of these organizations.

Governance Structure

The governance structure in this model would incorporate the secretariat functions into the existing governance frameworks of regional organizations. This approach could potentially overburden these organizations, as it would require them to significantly expand their scope without necessarily providing corresponding increases in resources. The existing boards would need to take on additional responsibilities, which could detract from their original missions and strain their capacity. These organizations would have two options for incorporating the duties of the secretariat:

Creation of New Divisions:

- Organizations may choose to create new divisions specifically for the secretariat's functions.
- This would involve hiring a new suite of executives and staff members dedicated solely to the secretariat's responsibilities.
- The advantage of this option is a focused approach, with dedicated personnel who have clear mandates and the ability to specialize in the secretariat's areas of expertise, such as data management, program development, and community engagement.
- The new division would work in close alignment with the national secretariat, ensuring that regional initiatives are consistent with national objectives while also addressing unique regional needs.

Expansion of Existing Roles:

- Alternatively, organizations could expand the roles of current executives and staff members to incorporate the duties of the regional secretariat.
- This option would capitalize on the existing knowledge and experience within the organization, providing continuity and leveraging established relationships.
- While this approach may be more cost-effective and quicker to implement, it requires careful planning to ensure existing staff can manage the additional workload without compromising the quality of their current responsibilities.

- It also necessitates comprehensive training and support to enable existing personnel to effectively take on their expanded roles.

The Indigenous Child and Family Services Directors' Our Children Our Way Society (OCOWS) in British Columbia is an example of an existing organization whose framework and objectives align with those of the proposed regional secretariat[9]. The OCOWS represents the 24 First Nation, Inuit and Métis Delegated Aboriginal Agencies in British Columbia. OCOWS already has a secretariat in place to support the work of the organization, offering technical support in planning, policy analysis, engagement, research, communications, and administrative support[10].

OCOWS's commitment to the well-being of Indigenous children, youth, families, and communities, paired with its mission to support Indigenous Nations' visions for jurisdiction and self-government, reflects the proposed secretariat's aim to provide operational support that aligns with local cultural practices. Their secretariat team, which includes policy analysts, elder advisors, and skilled professionals, may be positioned to facilitate the kind of training programs and capacity-building initiatives envisioned under the regional secretariat approach.

With adequate funding and support, the existing secretariat's infrastructure could be enhanced to meet the wider responsibilities outlined by the proposed regional secretariat. This would leverage the organization's existing strengths and ensure a culturally attuned approach to child and family services for First Nations communities in BC.

However, there is a concern regarding the data management and analysis infrastructure within OCOWS. While the organization is engaged in policy analysis and research, it's not explicitly stated that they currently have a robust system for data collection and analysis, which is a key function of the proposed regional organizations. To fulfill the new mandate, OCOWS would need to establish or significantly enhance its capabilities in data management to gather, interpret, and analyze information specific to First Nations communities. This would be crucial for providing fee-for-service data collection and analysis to stakeholders, reporting on regional trends, and contributing to a collective understanding of First Nations child and family well-being.

[9] "Who We Are," Our Children Our Way, https://ourchildrenourway.ca/who-we-are/.
[10] "Secretariat," Our Children Our Way, https://ourchildrenourway.ca/who-we-are/secretariat/.

Assessment of Benefits and Challenges

Benefits: Utilizing existing regional organizations to fulfill the Secretariat's functions can tap into a wealth of regional expertise, resources, and established relationships. This approach can provide immediate infrastructure and systems to support the Secretariat's functions, facilitating a swift transition and immediate commencement of services. It potentially avoids the logistical and financial complexities of setting up new entities, focusing instead on enhancing the capacity of current organizations to meet the additional demands.

Challenges:

Dilution of Purpose: There is a considerable risk that the essential purpose of the secretariat could be diluted when merged with the existing functions of regional organizations. These entities already have established objectives and adding the responsibilities of the secretariat might lead to a lack of focused attention on the specific needs of First Nations child and family services.

Overextension of Regional Organizations: Many regional organizations operate with finite resources and are often already stretched thin in terms of staff and funding. Requiring them to implement a broader array of programs could lead to a decline in the quality of existing services and inhibit their ability to adopt new programming effectively.

Data Storage and Management: Regional organizations may not have the infrastructure necessary for the large-scale data storage and management expected of the secretariat. Building or upgrading such systems would involve significant costs and technical challenges.

Excessive Costs: The financial burden of expanding programming, enhancing data storage capacities, and possibly increasing staffing levels could be substantial. Without adequate additional funding, the expansion could strain the organizations financially, leading to cutbacks in other crucial areas.

Aggregation of National Data: Compiling and analyzing data at a national level from disparate regional organizations, each with its own methods and systems for data collection, could prove to be an insurmountable challenge. This difficulty may result in inconsistencies and gaps in the national data sets, hindering the ability to make informed, evidence-based decisions and policies.

Considering these challenges, the regional model using existing organizations is considered the least favorable option compared to the other proposed

models. It places excessive demands on the existing regional entities and threatens to compromise the effectiveness and clarity of the secretariat's mission. While the intention to leverage existing structures is well-meant, the potential for mission drift, data management issues, and undue financial strain make this approach problematic. The difficulties associated with aggregating data at the national level by these regional organizations would also likely impede the primary function of the secretariat to act as a body for evidence and best practices, undermining its foundational goals. A central entity would be better position to aggregate and analyze national trends. The synthesis of the regional data to provide a nation-wide picture is instrumental in informing funding assessments, guiding pragmatic reforms, and shaping federal decision-making processes.

Considerations for Implementation

Stakeholder Alignment and Amendment: The integration of the Secretariat's activities into existing regional organizations requires a brief but intensive alignment phase, likely lasting 1 to 2 months. This phase involves modifying bylaws and financial structures to accommodate new activities and communicating these changes to all stakeholders.

Leadership Adjustment and Service Integration: Adjusting the leadership within existing regional boards to incorporate the Secretariat's objectives is a critical step that will take approximately 2 to 3 months. Following the leadership adjustment, the existing services will be adapted to include the Secretariat's programs, with current staff being trained for their new roles over the next 2 to 4 months.

Community Engagement and Service Expansion: Efforts to reinforce the existing relationships with the additional Secretariat's mandate will be prioritized, with an aim to expand new services to communities already served by the organizations. This process will likely take another 3 to 4 months to implement effectively.

TABLE 12: Implementation timeline: Regional Approach – Existing Organizations

Phase of Work	Environmental & Operational Requirements	Anticipated Timeline
Inception	▪ Align with regional organizations on incorporating Secretariat's activities.	***2 – 3 Months***
Codification & Compliance	▪ Modify existing organizations' bylaws and operational accounts for new activities.	***1 – 2 Months***
Leadership Setting	▪ Integrate Secretariat's governance structure with existing regional boards.	***3 – 4 Months***

 Pre-Launch Plan	▪ Adapt current service offerings to include Secretariat's programs. Train current staff for new activities.	***3 – 6 Months***
 Early Awareness Building	▪ Reinforce existing relationships with additional Secretariat's mandate.	***2 – 3 Months***
 Inaugural Service Provision	▪ Extend new services to communities served by existing organizations.	***3 – 6 Months***
 Full-Service Operations	▪ Monitor and adapt services to maximize impact based on the Secretariat's objectives.	***Ongoing***

Hybrid Approach

Introduction

In the hybrid approach section, we'll explore the integration of a national secretariat with regional secretariats, focusing on organizational design and mandate. We'll detail how these entities will collaborate to serve stakeholders and communities, each bringing its strengths to the table. Governance structures will be reviewed, highlighting the flexible models that accommodate both centralized direction and regional nuances. Discussions will address the potential benefits of this collaborative model, as well as the challenges and costs involved in meshing different organizational systems. Finally, we'll cover the key considerations necessary for successful implementation, ensuring clear, actionable steps are outlined.

Organizational Design

Mandate

The hybrid governance structure represents a strategic amalgamation of centralized oversight with regional execution, aimed at delivering best practice programming across the spectrum of First Nations child and family services. It parallels the governance structure of the National Approach - New Organization by establishing a national secretariat that sets the strategic framework and ensures consistency in best practices. The innovative facet of the hybrid model lies in its network of satellite or regional secretariats embedded within existing organizations throughout Canada's diverse regions.

In the pursuit of a functional and efficient hybrid model for the Secretariat, we present two design options. These options stem from concerns that existing regional organizations may not have the necessary infrastructure, capacity, or inclination to undertake comprehensive data collection, analysis, and governance functions and may be better suited to delivering on the best practices in programming duties of the secretariat.

Option 1 suggests centralizing both programming and data responsibilities within the national secretariat, with regional organizations functioning as the arms of the national body. This division is designed to ensure that while the national secretariat leads on data and strategic governance, regional entities can dedicate their efforts to localized program delivery, with the national body filling any operational gaps at the regional level. Option 2 proposes that regional organizations focus solely on executing best practice programming

with the national secretariat assuming a comprehensive role in data collection and analysis.

TABLE 13: Design options for operations – Hybrid Approach

Design Feature	
Option 1	**Option 2**
National Secretariat: Acts as the central hub for all programming and data activities. It sets the strategic direction and operational standards, ensuring a unified approach to service delivery and data management across the country. **Regional Collaboration:** Regional organizations provide insights and on-the-ground knowledge to inform national strategies. They function as the arms of the national body, executing programs under national guidance while retaining a voice in shaping those strategies. **Centralization Benefits:** This option maximizes the efficiency of resource use and reduces the complexity of having multiple data management systems. It also simplifies the reporting process, as there is a single national repository for all data, which streamlines the synthesis of insights and policy formation.	**Regional Organizations:** They are tasked with the implementation of best practice programming, leveraging their established community connections and cultural knowledge to deliver services that are tailored to the unique needs of their regions. **National Secretariat:** Assumes a comprehensive role in data collection and analysis. It serves as the backbone for national-level data oversight, ensuring consistency in data handling and quality across regions. This approach allows for regional organizations to concentrate on service delivery without the added burden of complex data management. **Role Separation:** By delineating roles between regional programming and national data functions, this design minimizes the risk of overextending regional organizations' capacities while maintaining a national standard for data integrity and strategic coherence.

Option 1: National Centralization with Regional Input

National Secretariat Coordination: The central national secretariat orchestrates the regional secretariats, underpinning them with a robust best practices framework that encompasses:

- Development and dissemination of best practice guidelines for child and family services, ensuring all regional secretariats adhere to the highest standards.
- Coordination of regional efforts to uphold the integrity of service quality and adherence to national strategic goals.
- Stepping in as a regional secretariat in areas lacking such infrastructure, thus ensuring uniform access to best practice programming.
- Synthesizing regional data to develop evidence-based practices, reporting findings to shape national policies, and sharing successes and learnings.

Regional Secretariat Functions: Regional secretariats, while operational within the national framework, are tailored to suit regional needs and are responsible for:

- Capturing regional data to reflect local nuances, ensuring programming is responsive to the specific cultural and social dynamics of their communities.
- Implementing and refining best practice programs at the regional level, informed by direct community input and localized evidence.
- Contributing regional insights back to the national secretariat, fostering a two-way flow of information that enhances national programming strategies.
- Engaging with local organizations and communities to ensure programming is culturally congruent, effective, and endorsed by those it serves.

Integration with Existing Organizations: The deployment of regional secretariats within pre-existing organizations offers multiple advantages:

- Immediate access to established infrastructures and systems, enabling swift implementation of best practice programming.
- Utilization of existing relationships and regional expertise, fostering programs that are community-approved and trusted.
- Enhanced capacity for existing organizations to extend their service portfolio, incorporating national best practices into their local operations.

Best Practice Programming and Data Reporting: Central to the hybrid model is a commitment to evidence-based, best practice programming, which is facilitated by:

- The establishment of a consistent methodology for program development, implementation, and evaluation across all secretariats.
- The utilization of data analytics to inform and tailor programming, ensuring that interventions are both proactive and reactive to community needs.
- Regular public reporting on the impact and efficacy of programs, fostering a culture of transparency and continuous improvement.

By integrating the best practice programming philosophy into both the national and regional levels, the hybrid model ensures that every First Nations child and family benefits from the highest standards of service, informed by the latest evidence and adapted to their specific regional context. This structure not only encourages excellence and innovation in service delivery but also promotes a collaborative and informed approach to nationwide child welfare.
Option 2: Regional Programming Focus with National Data Oversight

Regional Organizations' Role: Regional organizations are at the forefront of service delivery, applying best practices and programs specifically tailored to the cultural contexts and needs of their communities. These organizations leverage deep-rooted community connections and in-depth cultural knowledge to provide relevant and effective services. Their focus is squarely on the qualitative, front-line engagement with service users, harnessing local insights to shape and refine the delivery of programs. This model acknowledges the invaluable expertise and established trust that these organizations hold, positioning them as essential executors of tailored services.

National Body's Function: The National body operates as the analytical and strategic epicenter for data governance across the FNCFS landscape. It takes on the comprehensive role of data collection, analysis, and quality assurance, underpinning the entire system with a consistent and methodical approach to data management. This centralized body ensures that data practices meet national standards, providing the necessary oversight to maintain data integrity and enable evidence-based policymaking. The Secretariat's role is to serve as a repository for data insights, standardizing data handling procedures and ensuring that the wealth of information collected is translated into actionable strategies.

Role Separation and Synergy: By clearly defining the roles, this option aims to optimize the capacity and strengths of both regional and national entities. Regional organizations can dedicate their resources to the implementation and continuous improvement of service delivery, while the National Secretariat ensures that data-driven insights inform these services. This separation minimizes the risk of overburdening regional bodies with the technical

complexities of data management. Simultaneously, it preserves the integrity and strategic direction of the national data framework, leading to an efficient and effective system that is coherent and aligned with overarching strategic goals.

This model proposes a synergistic relationship where regional expertise in service delivery is supported by national-level data stewardship, creating a harmonious ecosystem that is both locally responsive and strategically unified.

In summary, the primary distinction between the Option 1 and Option 2 lies in the distribution of responsibilities and the locus of operational control.

Option 1:

- The national secretariat acts as the sole command center for both programming and data functions, setting uniform strategic directions and operational standards for the entire country.
- Regional organizations operate as extensions of the national body, executing programs as per the national secretariat's guidance but with the opportunity to contribute regional insights to inform strategies.
- This centralization concentrates efficiency and resource utilization, with a single, cohesive data management system enhancing the simplification of reporting and policy development processes.

Option 2:

- Regional organizations are primarily responsible for implementing best practice programming, using their established community connections and cultural knowledge to deliver services that are region-specific.
- The national secretariat assumes the role of data governance and analysis but does not directly manage programming.
- There is a clear role separation, which allows regional organizations to focus on service delivery without the additional complexity of data management, relying on the national secretariat for overarching data oversight and strategic coherence.

Governance Structure

National Level Governance: At the national level, the governance structure for the hybrid approach remains identical to that outlined in the National Approach - New Organization. This structure ensures a consistent strategic framework across the country, with the national secretariat serving as the central coordinating body. The national secretariat will be responsible for

setting high-level policy, defining standards for data collection and best practices, and overseeing the overall performance of regional secretariats. It will also aggregate and analyze data from across all regions, ensuring that insights and evidence inform the national child welfare strategy.

Regional Level Governance: At the regional level, the Board of Directors of each organization would remain the same. The hybrid approach offers flexibility to existing organizations selected to fulfill the role of the regional secretariat. These organizations have two options:

Creation of New Divisions:

- Organizations may choose to create new divisions specifically for the secretariat's functions.
- This would involve hiring a new suite of executives and staff members dedicated solely to the secretariat's responsibilities.
- The advantage of this option is a focused approach, with dedicated personnel who have clear mandates and the ability to specialize in the secretariat's areas of expertise, such as data management, program development, and community engagement.
- The new division would work in close alignment with the national secretariat, ensuring that regional initiatives are consistent with national objectives while also addressing unique regional needs.

Expansion of Existing Roles:

- Alternatively, organizations could expand the roles of current executives and staff members to incorporate the duties of the regional secretariat.
- This option would capitalize on the existing knowledge and experience within the organization, providing continuity and leveraging established relationships.
- While this approach may be more cost-effective and quicker to implement, it requires careful planning to ensure existing staff can manage the additional workload without compromising the quality of their current responsibilities.
- It also necessitates comprehensive training and support to enable existing personnel to effectively take on their expanded roles.

The governance structure of the hybrid approach to the secretariat represents a nuanced model aimed at enhancing First Nations child and family services across Canada. This approach seeks to balance the advantages of a

centralized, national secretariat with the localized insights and operational flexibility of regional organizations. A critical aspect of this model is the relationship between the national and regional entities, which, due to legal and operational considerations, cannot be structured as direct subsidiaries or legally integrated components of a singular national body. Instead, a sophisticated framework of membership systems and bilateral agreements is envisioned to define the roles, duties, and obligations of each party involved.

Membership System and Bilateral Agreements:

Regardless of which design option is selected, the foundation of the hybrid model's governance structure will be a carefully designed membership system, complemented by bilateral agreements. These agreements will serve several essential purposes:

1. **Establishing Roles and Responsibilities:** They will delineate the specific roles, duties, and obligations of the national secretariat and each regional organization. This clarity is crucial for ensuring that all parties understand their contributions to the overarching goals of improving First Nations child and family services.

2. **Facilitating Collaboration:** Agreements between regional organizations themselves, and between each regional organization and the national secretariat, will establish formal mechanisms for collaboration. These mechanisms will enable resource sharing, joint initiatives, and the seamless exchange of data and best practices.

3. **Ensuring Accountability:** By outlining the expectations for each entity, the agreements will create a structure for accountability. This includes mechanisms for monitoring performance, reporting on activities, and evaluating outcomes to ensure that the collective efforts are effectively advancing the mission.

Implementing this governance structure will require careful consideration of several factors:

- **Legal Independence:** Recognizing that regional organizations will maintain their legal independence is essential. The agreements must respect this autonomy while ensuring that the activities align with the national secretariat's strategic objectives.

- **Cultural and Regional Sensitivity:** The governance model must be flexible enough to accommodate the diverse cultural and regional contexts of First Nations communities across Canada. This includes acknowledging and integrating local practices and knowledge into service delivery.

- **Data Sharing and Privacy:** Establishing protocols for data sharing that respect privacy laws and the data sovereignty of First Nations is critical. The agreements should detail how data will be collected, stored, and used, ensuring transparency and trust among all parties.
- **Resource Allocation:** The agreements must address how resources, both financial and otherwise, will be allocated and managed. This includes funding flows from the national secretariat to regional organizations and how resources will be shared among regional entities.

The hybrid approach's governance structure, through a combination of a membership system and bilateral agreements, offers a flexible yet cohesive framework for enhancing First Nations child and family services. By clearly defining the relationships and expectations among the national secretariat and regional organizations, this model aims to leverage the strengths of both centralized and localized approaches. However, the success of this model will hinge on the careful drafting and implementation of the agreements, ensuring they are tailored to meet the legal, operational, and cultural needs of all parties involved.

Assessment of Benefits and Challenges

Benefits: The hybrid model offers a best-of-both-worlds solution, combining the advantages of national oversight with the adaptability of regional service delivery. The national Secretariat would ensure consistency in standards and quality control, while regional secretariats would handle the localized implementation of programs and initiatives. This approach could offer a resilient and adaptable framework capable of addressing both broad and specific needs, with different levels of the organization providing mutual support.

Challenges: However, this model is inherently complex, potentially leading to cumbersome and unwieldy management structures with multiple layers of administration. Communication gaps and conflicting priorities between the national and regional levels could impede operations. Furthermore, establishing and maintaining a sophisticated coordination mechanism between the different levels of the organization might be challenging and resource-intensive, adding to the operational costs and potentially leading to inefficiency.

The decision on which model to adopt must be made with careful consideration of these arguments, weighing the potential benefits against the challenges and costs associated with each option.

Considerations for Implementation

Strategic and Operational Planning: The hybrid model requires a strategic planning phase to develop a framework that combines national oversight with regional implementation. This initial 2-to-3-month period involves creating legal and operational structures that facilitate both centralized and regional operations.

Leadership Formation and Pilot Programs: Forming a central governing body and identifying regional leaders will take an additional 3 to 4 months. Once leadership is established, operational planning for both national strategies and regional services will take place. Pilot programs will launch in selected regions to refine the hybrid approach, which will take another 3 to 6 months.

Stakeholder Engagement and Full-Service Operations: Concurrently, over 2 to 3 months, broad-based engagement with stakeholder groups will be essential to build understanding and buy-in for the hybrid model. The roll-out of full services will commence as pilot programs conclude, ensuring that the hybrid model delivers cohesive and consistent services across its operations.

TABLE 13: Implementation timeline: Hybrid Approach

Phase of Work	Environmental & Operational Requirements	Anticipated Timeline
Inception	▪ Develop a hybrid strategy that combines national oversight with regional implementation.	***2 – 3 Months***
Codification & Compliance	▪ Establish legal frameworks that allow for both centralized and regional operations.	***1 – 2 Months***

 Leadership Setting	▪ Form a central governing body and identify regional leaders.	***3 – 4 Months***
 Pre-Launch Plan	▪ Create a rollout plan that incorporates both national strategies and regional services.	***3 – 6 Months***
 Early Awareness Building	▪ Educate stakeholders on the hybrid model's structure and benefits.	***2 – 3 Months***
 Inaugural Service Provision	▪ Launch pilot services in selected regions to refine the hybrid approach.	***3 – 6 Months***

 Full-Service Operations	▪ Implement full services, ensuring cohesion and consistency across the hybrid model.	***Ongoing***

Conclusion

1. **Local Responsiveness vs. National Cohesion**: Stakeholders should weigh the ability of each model to provide services that are culturally and regionally specific against the need for a unified national strategy. A model with many regional secretariats may offer tailored services but could lack the cohesion and shared strategic direction provided by a national secretariat.

2. **Data Collection and Analysis**: Any chosen model must have robust data collection and analysis capabilities to effectively monitor and report on the welfare of First Nations children and families. There should be clarity on who is gathering the information and who will report the findings, ensuring discrimination ends and does not recur.

3. **Stakeholder Calls to Action**: The purpose of the Secretariat should be grounded in stakeholder calls to action, which are derived from the collective aspirations and demands of the communities and organizations involved. The chosen model must reflect these calls in its foundational objectives.

4. **Resource Allocation**: Models that propose creating new regional secretariats could lead to significant resource requirements for setting up infrastructure and systems. Conversely, utilizing existing organizations may avoid these complexities but could overextend their current capacities.

5. **Financial Implications**: The costs associated with each model are a crucial factor. New regional secretariats might incur high initial costs, while expanding the roles within existing organizations could lead to financial strain if additional funding is not provided. Stakeholders must assess the financial sustainability of each model.

6. **Economies of Scale**: Considering the financial aspect, stakeholders should also think about the economies of scale. Centralizing certain functions may reduce costs, but it could also risk losing touch with local community needs.

7. **Incorporation into Existing Structures**: The feasibility of integrating the Secretariat's functions into existing regional organizations without diluting its core purpose or overwhelming the current operational capacity is another critical consideration.

8. **Infrastructure for Data Management**: The chosen model must have or be capable of developing the necessary infrastructure for large-scale data storage and management, which is a fundamental component of the Secretariat's mandate.

9. **Adherence to Function and Purpose**: Regardless of whether the model emphasizes national coordination or regional autonomy, it must uphold the Secretariat's fundamental functions and overarching purpose of ending discrimination and preventing its recurrence in FNCFS.

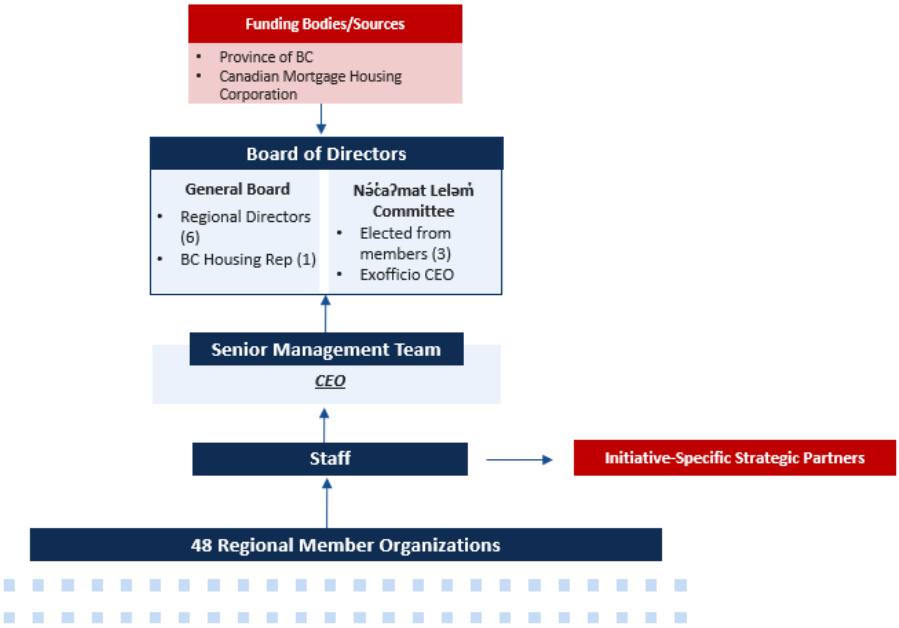
Appendix A: Review of Existing Organizations

Aboriginal Housing Management Association (AHMA – BC)

AHMA

Governance Structure

Est. Staff Complement: 28 FTEs
Est. Total Budget: 46 million
Data Capacity: Medium
Programming Capacity: High



Readiness Scorecard

1. Mandate

- The organization aims to support housing rights for Indigenous people across British Columbia, applying a distinctive cultural lens, led by a team of Indigenous executives.

- This work primarily involves financing new housing units for at-risk persons, but it also includes convening stakeholders, knowledge sharing, and strategic projects with other Indigenous welfare organizations.
    - While not focused exclusively on children and families, the organization recognizes the critical role housing plays in keeping families together.

Notable Child Welfare Programs and Initiatives

- AMHA maintains a strategic partnership with Lii Michif Otipemisiwak Child and Community Services to address child protection issues for the Métis population of Kamloops.
    - The initiative includes support for parents through one-one and group skill-building classes, as well as relationship and outreach programming for youth who have aged out of child welfare system.
- AMHA also has a partnership with the Ki-low-na Friendship Society, to provide supportive housing for new mother at risk of losing their children due to inadequate housing.
    - The Tupa Grandmothers Lodge provides a safe space with many amenities for young families.
- AMHA finances several other initiatives aimed at supporting mothers and children fleeing abuse.

2. Stakeholders and Communities Served

- While the organization has traditionally focused on leading in urban Indigenous housing in BC, it has since expanded its scope to service rural and northern communities as well.
- AMHA supports nearly 8000 finished and in progress housing units across British Columbia.

3. Governance and Organizational Structure

- The AHMA is an umbrella organization comprised of 48 Indigenous housing providers in British Columbia.
- The organization is governed by an independent Board of Directors. The board includes:
    - Six directors each representing a distinct region of the province
    - One director representing BC Housing
    - Nə̓c̓aʔmat Leləm̓ Committee, comprised of three elected directors from member organizations

- There are 28 full-time equivalent staff on hand.

4. Resources and Financial Scope

- The organization has traditionally been funded by the province of British Columbia, however, it has received some contributions from the Canada Mortgage Housing Corporation.
- Revenues in fiscal year 2020-2021 were approximately $46 million.
- AMHA's largest expenditures were its subsidies to its members ($42 million), staff salaries and benefits were the next largest, approximately $2.5 million. The organization has relatively few physical assets.

5. Programming and Data Management Capacity

- As noted, child welfare programming is typically delivered via a strategic partner where AMHA provides funding and supporting housing infrastructure.
- The organization also convenes roundtables of experts across civil society on Indigenous housing-related issues and has a dedicated relationship building capacity.
    - Other organizations frequently engage AMHA team-members for expertise on culturally informed asset management.
- The organization does collect data related to asset management and community housing needs, and has some staff dedicated to this function. Findings are typically disseminated in formal reports.

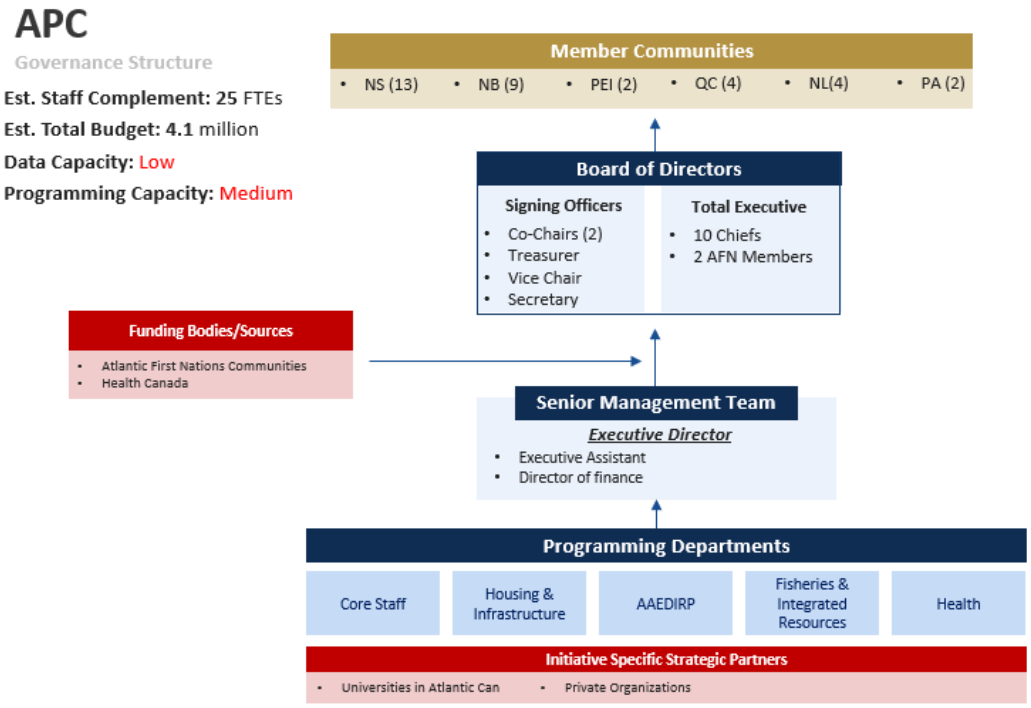
Defining Traits and Conclusion

- AMHA is notable for its ability to disseminate a large amount of funding across the province and for its ability to share its recognized expertise in housing with other welfare-focused organizations.
- AMHA's federated membership structure allows the organization to be relatively lean at the management level, while enabling lower-level regional affiliates to tailor their work to local needs.
    - At the same time, this membership structure gives management a birds-eye view of activities across the province which may enhance learning and lend itself to thought leadership.

Key Design Takeaway

- *For the Secretariat, which aims to be national in scope, a federated membership structure may be appropriate. This design would keep overhead low, while encouraging broad-based collaboration across jurisdictions.*

Atlantic Policy Congress of First Nations Chief Secretariat



Readiness Scorecard

1. Mandate

- The organization seeks to advance the interests of First Nations communities in Atlantic Canada, Quebec, and Maine, through locally led policy research and advocacy.

- The APC presents policy alternatives to communities directly, it also lobbies federal and provincial governments and supports communities in litigating Aboriginal and Treaty rights cases.

Notable Child Welfare Programs and Initiatives

- While the APC has a broad mandate across issues related to Health, Housing and Infrastructure, Water, Fisheries, and Economic Development, these matters often intersect with child welfare.
    - The organization has advocated for increased funding for youth and young family focused programming in its member communities.
    - However, it does not appear to have extensive programming dedicated to early childhood intervention or related issues.

2. Stakeholders and Communities Served

- The organization services 32 communities across the Atlantic region.

3. Governance and Organizational Structure

- The organization is led by the Board of Directors, comprised of eleven executive members, four of whom are designated as signing officers.
    - All Board Directors are Chiefs. Currently, four hail from Nova Scotia, three from New Brunswick, and one each from Quebec, Prince Edward Island, Newfoundland and Labrador, and Passamaquoddy.
- The Board is ultimately accountable to its member communities in the region. It is supported by a senior management team and staff across its five programming departments.
- Staff complement is approximately 25 full time equivalents.

4. Resources and Financial Scope

- The APC has an estimated annual revenue of roughly $4 million.
- Contributions are received from member communities, as well as some grants from the federal government.
- There is limited publicly available information on the organization's expenditures and cost structure.

5. Programming and Data Management Capacity

- The APC regularly convenes policy conferences that include member communities and other First Nations stakeholders. These events typically serve to support knowledge sharing and priority setting across the Atlantic region.
- While the organization does some data collection and management to support its policy publications, this role is fairly limited. The APC does not appear to have robust data sharing or coordination role.

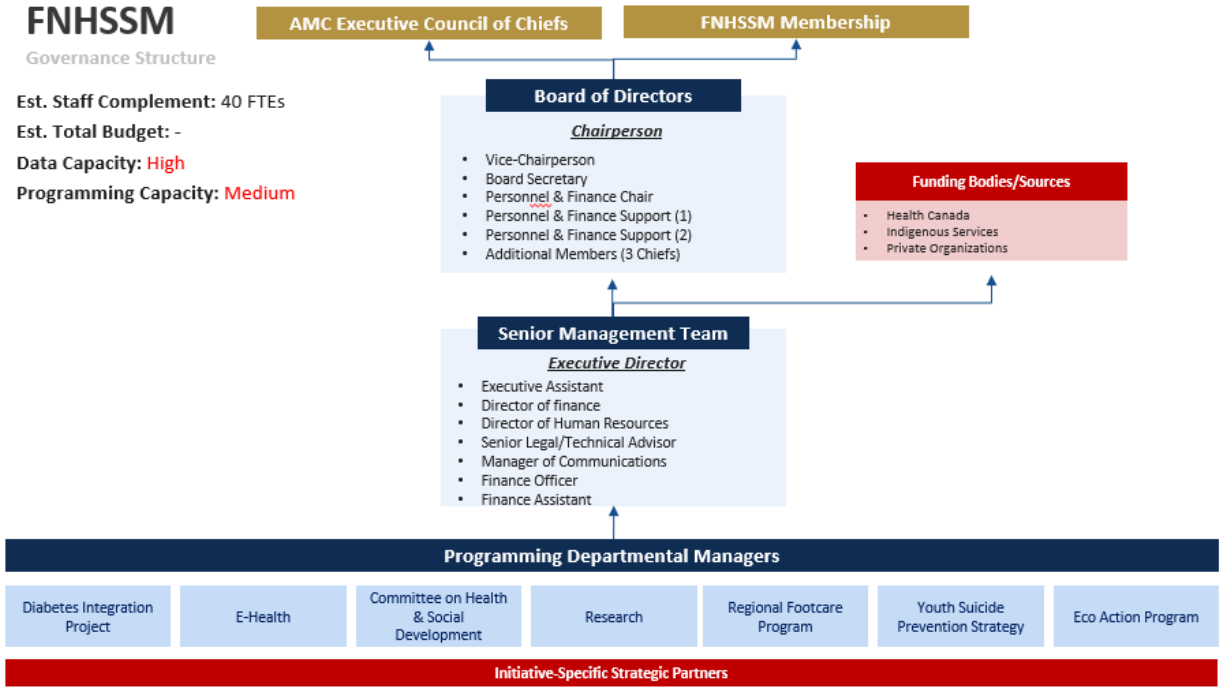
Defining Traits and Conclusion

- The Atlantic Policy Congress is notable for its governance which makes use of existing community leadership in being entirely comprised of local Chiefs. This structure works to ensure that the organization's proposals are reflective of the will of member communities.
    - It may also support continued participation in conferences and other policy making forums.
- From a child welfare perspective, limitations of the APC are its broad mandate and limited data management function.

Key Design Takeaway

- *For the Secretariat, which seeks to be a by First Nations for First Nations organization, imbedding existing community leaders at the Board of Directors level may help to establish trust and legitimacy at the outset.*

First Nations Health and Social Secretariat of Manitoba (FNHSSM)



Readiness Scorecard

1. Mandate

- The FNHSSM works to support Manitoba First Nations communities by increasing opportunities to participate in the planning and development of a Unified Health System in Manitoba; influencing regional and national health policy, and program development in areas including: health consultation, maternal child health, e-Health/Panorama, youth suicide, mental health, inter-governmental health, research, and health governance.

- The organization is a member of the First Nations Information Governance Centre (FNIGC) and contributes to data management and collection efforts.

Notable Child Welfare Programs and Initiatives

- The FNHSSM conducts a regional health survey in conjunction with the FNIGC. The survey captures many indicators of community wellbeing, including parent-child relationships.
- In partnership with the University of Manitoba, Manitoba Health, and other First Nations organizations, FNHSSM organizes a Maternal Child Health Program to study infant mortality in the province as well as indicators of early child health and prepare responding policy options.
- The organization also facilitates a Cree Birthing program to measure indicators of early childhood wellness as they relate to traditional birthing practices.
- FNHSSM has also helped lead the AMC's evaluation of regional implementation of Jordan's Principle.

2. Stakeholders and Communities Served

- The organization works on behalf of all First Nations in Manitoba, including 63 AMC members, 7 tribal councils and the 3 PTOs.

3. Governance and Organizational Structure

- The FNHSSM is overseen by a Board of Directors, comprised of nine Chiefs from different communities across the province.
- The Board is ultimately accountable to the member communities and is mandated to provide regular updates to the AMC Executive Council of Chiefs (ECC).
- An Executive Director heads the Senior Management Team. Managers of each of the organization's departments report to the Executive Director, who in turn reports to the Board.
    - The Executive Director also provides updates to external funding bodies on an ad-hoc basis.
- At the program delivery level, Departmental Managers collaborate directly with outside organizations, including Universities, governments, and other civil society organizations.
- Staff complement is approximately 40 full time equivalents.

4. Resources and Financial Scope

- Financial information supporting FNHSSM's operations is not published in its annual reports, although third party research organizations have estimate that annual revenue is between $1 million and $5 million.

5. Programming and Data Management Capacity

- As part of its role as a regional member of the FNIGC, the FNHSSM manages the Health Information Research and Governance Committee (HIRGC), where it:
    - Acts as the “gatekeeper” of First Nations data at a regional level.
    - Provides guidance to local research efforts performed by First Nations or outside consultants.
    - Acts to ensure that First Nations research is respectful and in accordance with OCAP principles.

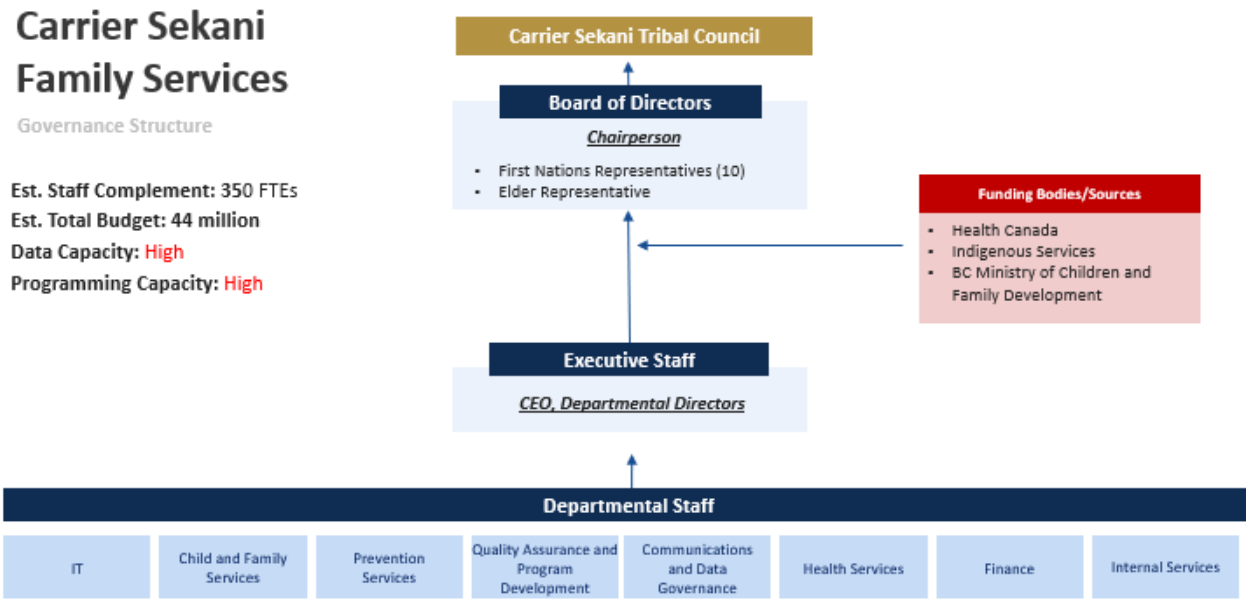
Defining Traits and Conclusion

- The FNHSSM is notable for its built-in accountability, as the organization is mandated to report directly to the communities it serves.
- It is also noteworthy that while it is Indigenous led, FNHSSM regularly conducts collaborative research with non-Indigenous organizations while remaining compliant with OCAP principles.
    - This might be attributed to the use of project-based collaboration at the lower levels of the organizational structure.

Key Design Takeaway

- *The Secretariat may benefit from a similar ad-hoc partnership approach with non-First Nations organizations. In being less focused on multi-year collaborative agreements, the Secretariat may preserve its nimbleness and better promote First Nations data sovereignty.*

Carrier Sekani Family Services



Readiness Scorecard

1. Mandate

- Carrier Sekani Family Services (CSFS) is charged with establishing a "comprehensive infrastructure" for social, health, and legal programs that will eventually be passed on to the regional Tribal Council as part of the community's path to self-government.

Notable Child Welfare Programs and Initiatives

- The CSFS offers guardianship services and resources for its member communities, backed by dedicated staff.

    - The program provides care for children who are under Continuing Custody Order through the management of foster care homes on reserve in member communities.
    - The program also offers continuing supports for youth who age out of the system.
- The organization also provides preventative services, aimed at young parents. This programming includes:
    - Early childhood education programs that seek to build greater cue interpretation skills between parents and children.
    - Family Preservation Outreach that seeks to advocate on behalf of parents in securing housing and other necessities.
    - A Family Empowerment program that allows children in foster care to visit their parents in a supervised environment while providing behaviour management and other skill-building workshops.

2. Stakeholders and Communities Served

- The organization services 22 local bands, over 10,000 persons, in Northern British Columbia.

3. Governance and Organizational Structure

- The organization is led by a Board of Directors consisting of ten member First Nations representatives and one Elder.
- Operational decisions are led by a CEO and departmental directors.
- Staff complement is roughly 350 full time equivalents.
- As the organization has grown rapidly in recent years, the Board of Directors has commissioned a governance review by an independent consultancy.

4. Resources and Financial Scope

- CSFS maintained an operating revenue of roughly $44 million in 2021 and has allocated nearly $50 million for the current fiscal year.
    - The organization is primarily funded by the First Nations Health Authority, Indigenous Services Canada, and the British Columbia Ministry of Children and Family Development.
    - Its largest expenses were salaries and benefits for its large staff complement, as well fostering services for children.
    - It maintains seventeen physical office spaces. Buildings remain its largest asset.

5. Programming and Data Management Capacity

- CSFS maintains a Quality and Innovation department dedicated to tracking the performance of its programming and improving future service delivery.
    - This function is supported by a dedicated Communications and Data Governance department that ensure the organization's tracking of information is modernized and remains consistent with OCAP principles.
- The organization regularly performs service quality audits on its programming. It also seeks validation from the Commission on Accreditation of Rehabilitation Facilities (CARF), an external body.

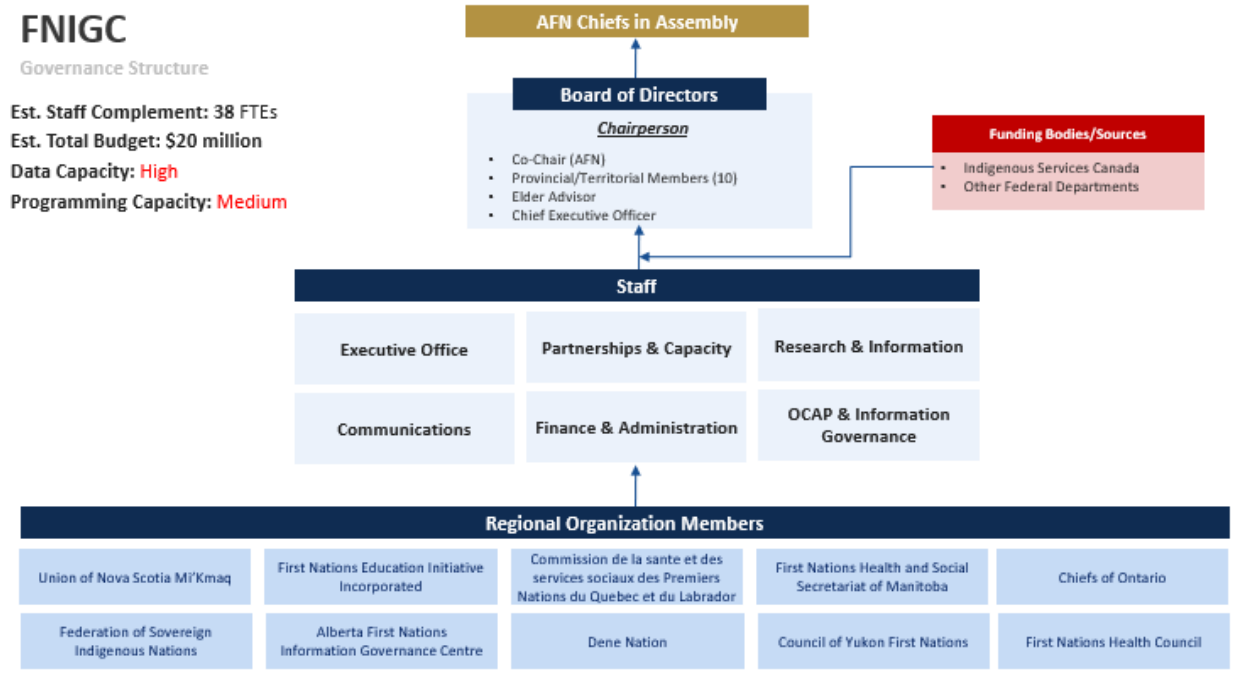
Defining Traits and Conclusion

- As CSFS's aim is to build lasting services, much of its work is performed by the organization itself, with the assistance of some outside consulting services.
    - As such, the organization's operations do not emphasize partnership building.
- Overall, Carrier Sekani Family Services' approach appears to demonstrate a sophisticated capacity to address local child welfare issues. However, there does not seem to be much external collaboration beyond member First Nations.

Key Design Takeaway

- *Any new national Secretariat would likely benefit from incorporating some of CSFS's practices both in its array of available programming and its commitment to tracking and measuring performance.*
- *Importantly, as there are organizations like CSFS which are already quite sophisticated in their programming, the Secretariat might be effective acting as a strategic connector, facilitating knowledge transfer from experts from leading organizations to other First Nations communities.*

First Nations Information Governance Centre (FNIGC)



Readiness Scorecard

1. Mandate

- The First Nations Information Governance Centre aims to support evidence-based decision making in First Nations communities and protect community sovereignty and agency over the collection and stewardship of local data.
- While the organization's primary activities revolve around data gathering initiatives in First Nations communities, it also offers a wide array of other programming – including direct research, training, capacity building and knowledge translation.

Notable Child Welfare Programs and Initiatives

- The FNIGC has been commissioned by the AFN to perform a feasibility assessment of conducting a longitudinal study of First Nations child development and well-being.
    - The initiative included a literature review, direct engagement with subject matter experts, and relied on previous investigations by the AFN.
    - Ultimately the assessment produced a 17-point plan to inform a robust longitudinal study of First Nations children and youth.
- The organization is also performing research work focused on Frist Nations early childhood care and development, in collaboration with the National Centre for Indigenous Health (NCCIH).
- In addition to these specific initiatives many of FNIGC's projects in health and economic development necessarily overlap with child welfare issues.

2. Stakeholders and Communities Served

- The FNIGC conduct its work on behalf of the AFN and the 634 First Nations communities across Canada.

3. Governance and Organizational Structure

- The organization is led by a Board of Directors consisting of representative from each of FNIGC's ten regional partners and an Elder advisor. The board reports directly to AFN chiefs in assembly.
    - Directors are appointed for three-year terms.
- Operational decisions are led by a CEO and departmental directors.

4. Resources and Financial Scope

- FNIGC is primarily financed on a contract-by-contract basis with the federal government, with national surveys, the primary revenue driver, supported by Indigenous Services Canada.
    - FNIGC, in turn, has contribution agreements to support its regional partners.
- Additional revenue is sourced on a fee-for-service basis out of the organization's First Nations Data Centre.
    - Here, FNIGC processes special projects with federal departments, researchers, students, and others.
    - Projects often include data tabulations, storage, and management. The organization performs all of its work in accordance with OCAP principles.
- Finally, FNIGC offers a *Fundamentals of OCAP* online course. The course is available to stakeholders and outside researchers on pay-for-access basis.

5. Programming and Data Management Capacity

- The organization's data management capacity is vast. Not only does FNIGC, and its regional partners, maintain an infrastructure capable of housing national data, the organization also has established strategic partnerships that cement its leading role.
    - Evidence of this position include National Data Governance Strategy, which received ten-year funding from Indigenous Services, and the FNIGC's position as a member of the Canadian Research Data Centre Network (CRDCN).

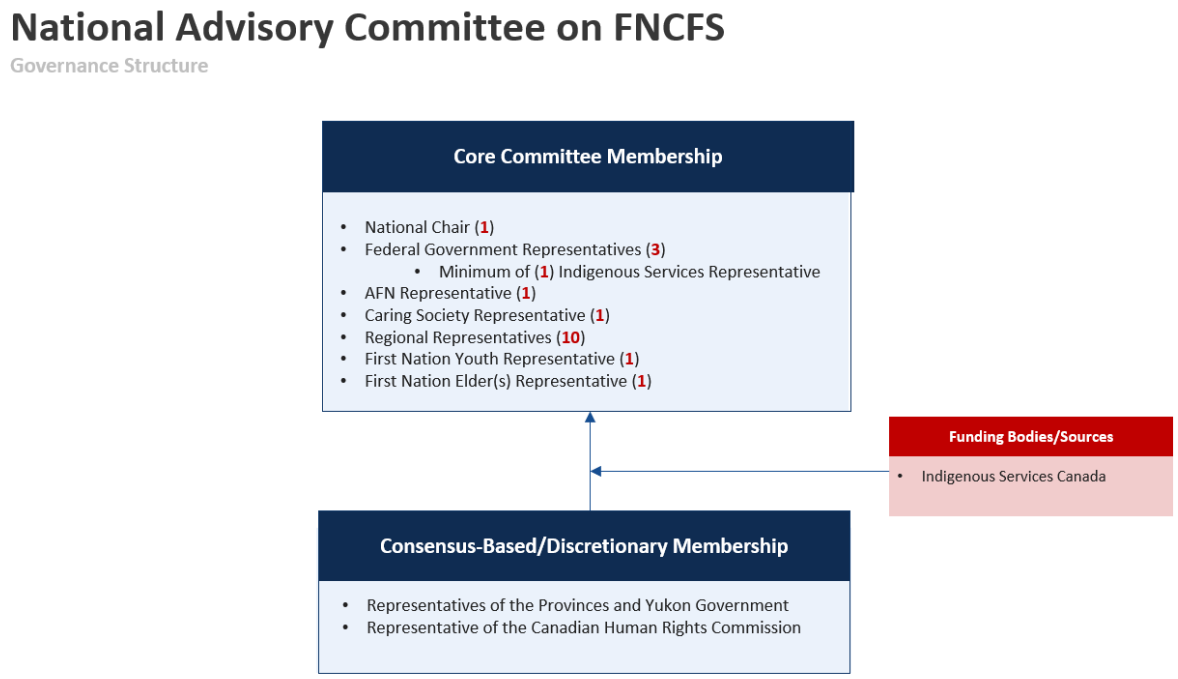
Defining Traits and Conclusion

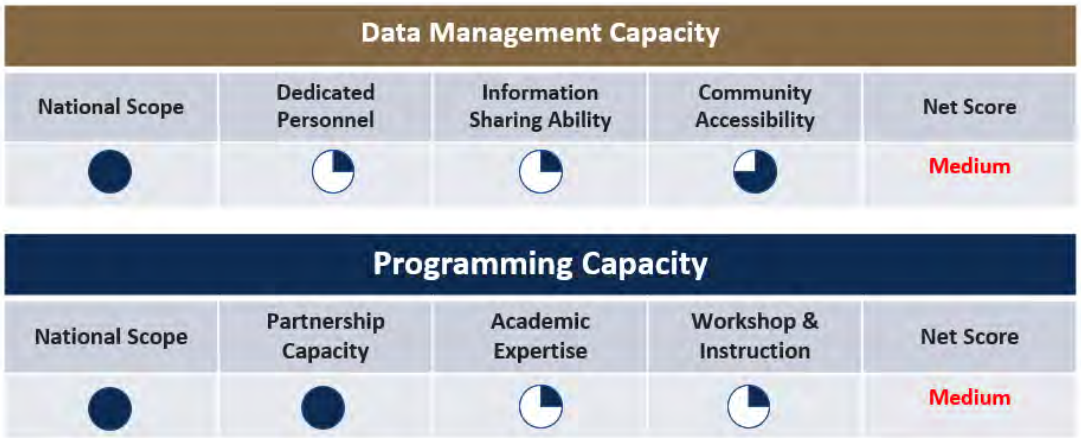
- The defining feature of the FNIGC is the trust it has garnered in communities and among First Nations leadership. The organization has successfully positioned itself as the de-facto leader in the information and data management space.
    - The FNIGC is a first mover in the application of OCAP principles to child-welfare issues and in the provision of related instructional programming.

Key Design Takeaway

- *For the secretariat, this reality likely means that any planned data management activities must be performed in collaboration with, not tangential to, the FNIGC.*

National Advisory Committee (NAC) on First Nations Child and Family Services





Key Design Takeaway

- *For the secretariat, an organization that might derive most of its revenue from Indigenous Services Canada, including ISC representatives on the Board of Directors may be an effective means of engaging Government of Canada officials and ensuring broader institutional support.*

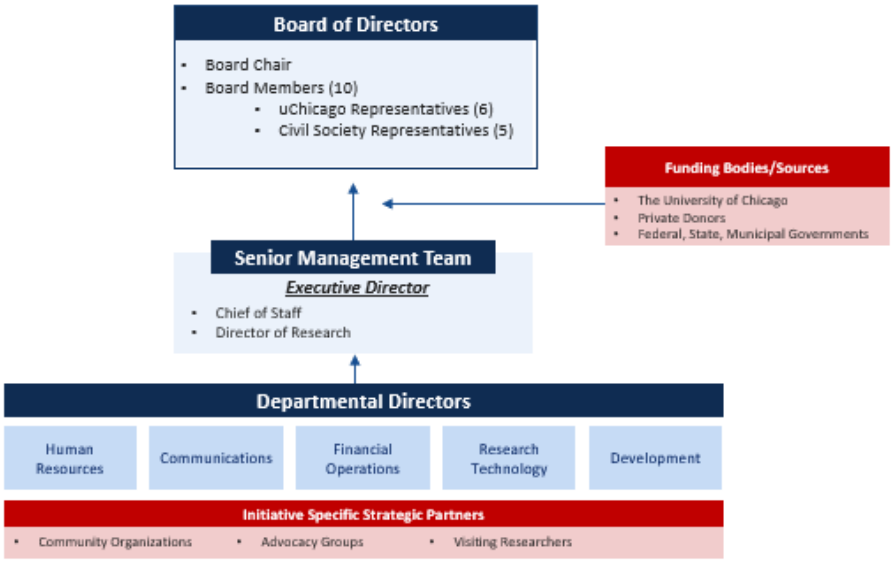
University Affiliation

Chapin Hall – University of Chicago

Chapin Hall

Governance Structure

Est. Staff Complement: 125 FTEs
Est. Total Budget: 29 million
Data Capacity: High
Programming Capacity: High
Notable Traits: Expansive resources and strong fundraising, rigorous research and data stewardship capabilities, high level of university involvement



Key Design Takeaway

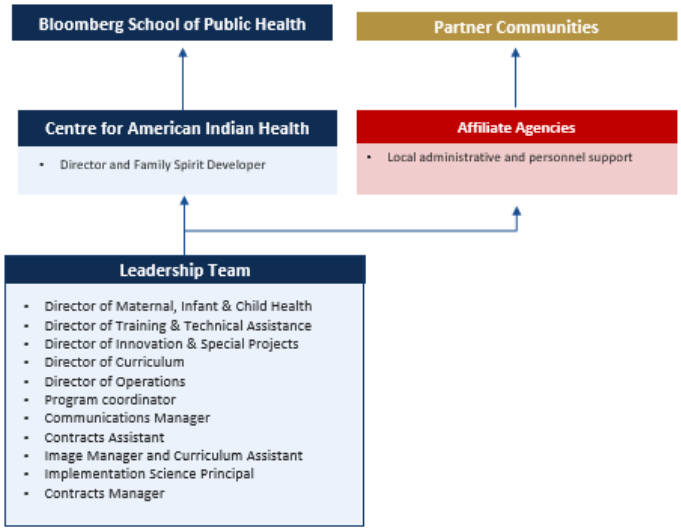
- *For the Secretariat, a university-housed model may help facilitate an array of different funding streams, but it may also necessitate a higher level of non-First Nations administrator involvement.*

Family Spirit – Centre for American Indian Health, Johns Hopkins University

Family Spirit

Governance Structure

Est. Staff Complement: 14 FTEs
Est. Total Budget: -
Data Capacity: Low
Programming Capacity: High
Notable Traits: Lean operating model, nationally dispersed leadership team



Key Design Takeaway

- *For the Secretariat, relying on other affiliate organizations to deliver key programming on an as-needed partnership basis, may reduce overhead and more efficiently deploy key resources.*

Appendix B: Information Technology Approach

This section offers a non-technical view of information technology (IT) costs for a potential Secretariat. It is based on modern best practices, for a small-to-medium enterprise (SME) using a *cloud-first* approach, where **services** are preferred over **capital investments** in on premises infrastructure. This yields greater flexibility for the organization, and while this document is not an exhaustive IT budget, it illustrates major cost components using existing popular services for SMEs. The proposed secretariat will find that privacy, security and access considerations will make IT a key operating feature of the organization. Data will, more often than not, reside in a digital form creating both opportunities and vulnerabilities for the organization. Ensuring appropriate budgeting for a robust IT function will be important in building and maintaining trust with stakeholders. The proposed IT requirements reflect modern management practices including a lean operating model, hybrid work style, mobile workforce and web-centric operations. Further, given that the organizational design considerations for the secretariat are based on existing analogous entities, there is very little, if any, cost associated with "unique" requirements.

Assumptions

The information presented below is based on several key assumptions:

1) The Secretariat will be setup as a not-for-profit organization with the associated status that will allow it to obtain significant not-for-profit discounts on technology-related expenditures.
2) The organization will leverage not-for-profit pricing from Microsoft (https://nonprofit.microsoft.com/), TechSoup Canada (https://www.techsoup.ca/) and other providers.
3) The prices used in this document are in CAD (unless otherwise noted) and are believed to be accurate at the time of preparation but are meant to be illustrative and may be subject to changes. Costs quoted do not include any applicable taxes.
4) The examples used in this document assume a staffing level of **15 full-time** employees.
5) Depreciation of capital assets is not included in this IT budget, but this should be taken into consideration when establishing the overall budget for the organization.
6) Replacement of end-of-life assets (retired laptops, etc.) is not included in the scope of this budget.

Implementation Timeline
For the initial IT setup discussed in this document the organization should anticipate a two-to-three-month timeline. This assumes multiple projects running concurrently (website build, IT infrastructure setup, accounting system, etc.) The timeline will depend on resource and content availability, design choices, as well as timely decision making and support from leadership and other stakeholders.

Budget Overview
Typical IT Spending as a % of Revenue/Budget
While each is unique, generally modern organizations typically spend between 4-6% of their revenue/budget on IT, and this range is recommended by the well regarded IT professional practice publication *CIO Magazine*. Larger organizations tend to have lower percentages as they generate greater economies of scale.

- Small organizations (less than $50 million in revenue) spend 6.9% of their revenue on IT
- Mid-sized organizations (between $50 million – $2 billion) spend 4.1%
- Larger organizations (over $2 billion) spend a relatively small 3.2%

Data from the Deloitte Insights November 2017 CIO Insider report citing "Deloitte 2016-2017 Global CIO Survey" (n=747) echoes these ranges and puts the education and non-profit sector at an average of 5.77% with an average of 3.28% across all sizes and industries. (https://www2.deloitte.com/content/dam/insights/us/articles/4349_CIO-Insider_Tech-budgets/DI_CIO-Insider_Tech-budgets.pdf)

The tenth annual "Non-profit Technology Staffing and Investments Report" published by NTEN in May 2017 focused specifically on technology in non-profits (n=259). NTEN found, across all sizes of non-profits, technology accounted for 5.7% of annual budgets on average. Additionally, they found that smaller non-profits had higher spending as a percentage of their total budget. (https://www.nten.org/wp-content/uploads/2017/05/Staffing_Report2016_v12.pdf)

Summary Table of Expenditures

This document outlines IT costs or considerations for the Secretariat across seven key areas. Within each area costs are differentiated between recurring annual costs versus one-time initial setup project costs. Projects are identified to build the web site, setup IT infrastructure, setup accounting software, train staff, etc. Project costs should be considered placeholder amounts based on relatively straightforward implementations, limited customizations, available content, etc.

Each area is expanded and explained in the sections that follow.

Budget Categories	One Time	Annual
Online Public Presence Setup & Subscriptions	$25,000.00	$97.50
Connectivity & Communication Services	$10,000.00	$38,017.20
Software Setup & Subscriptions	$95,000.00	$9,430.95
Misc Expenses	$0.00	$7,500.00
Measuring to Thrive Cloud Application	$10,000.00	$0.00
IT Hardware	$77,245.00	$0.00
IT Staffing	$0.00	$175,000.00
Totals	**$217,245.00**	**$230,045.65**

Online Public Presence

Web Site

An online public presence will be important for the Secretariat to communicate information to the public and host "non-private" content ranging from job postings to press releases to custom developed content. Numerous solutions exist to host web sites that allow relatively non- technical staff members manage and update content. These services also offer a range of additional functionality as the organization's needs evolve. Popular solutions are provided by Wix, GoDaddy, WordPress and more. TechSoup charges a $15 fee that grants a 70% discount off the $20/month Wix Unlimited Premium plan based on a two-year commitment.

A "one time" 1–2-month project would need to be undertaken to define, setup and build the initial website of the Secretariat. Costs could vary depending on the complexity of the design and availability of content.

Domain Hosting

A core part of the public presence is the domain name(s) of the organization. While the need may exist to register multiple names, this example assumes a single registration. Many providers are available with GoDaddy being one of the most popular. A typical domain registration costs approximately $30/year. GoDaddy offers an "*in-kind product donation program, GoDaddy Shares, providing a one-time donation of one domain name and one shared hosting account from GoDaddy for one year at no charge.*

Following the one-year term of receiving support through our in-kind program, you will receive a discounted rate of 40% for a two-year term. Organizations are eligible for only one donation per organization." (https://forms.benevity.org/87e35df3-1c1c-43ce-a500-7ab3df518124)

Financials – Online Public Presence

Online Public Presence	One Time	Annual
Initial Website Creation	$25,000.00	
Wix Unlimited Premium Web Hosting		$79.50
GoDaddy Canada Domain Name Registration		$18.00
Subtotal	**$25,000.00**	**$97.50**

Connectivity & Communication Services

Modern organizations rely extensively on multiple communication and connectivity services. These cover business-grade Internet service for the office, calling and data plans for employee mobile devices, as well as desktop phone services in many cases. Numerous providers and options exist for each service – the costs shown below are typical from real world examples from major providers but will vary with exact usage, roaming and terms. Additionally, a project is identified to cover installation of network cabling and required hardware. These costs may vary depending in complexity of installation, etc.

Financials - Connectivity & Communication Services

Connectivity & Communication Services	One Time	Annual
Mobile/Cellular (15GB data, unlimited calling - $175/user/mo x15 staff x12 months)		$31,500.00
Business-grade Internet Service		$3,600.00
Installation of Network Wiring/Hardware	$10,000.00	
Microsoft Teams Desktop Phone license with Calling Plan (3000 minutes) ($14.30/user/mo x15 staff x12 months) (Hardware not included)		$2,574.00
Teams Phone with Calling Plan $14.30/mo (3000 minutes) (x2 meeting rooms)		$343.20
Totals	**$10,000.00**	**$38,017.20**

Software Setup & Subscriptions

Employee Productivity

Employee productivity tools are those used to perform basic work functions such as emails, work processing, spreadsheets, presentations, creative/artwork, and such. The most common tools used for these are Microsoft Office and products from Adobe such as Acrobat and Creative Cloud.

The design of IT systems and usage should assume an “anytime, anywhere” approach to productivity, support virtual work and should be based upon a “Zero-trust” approach to security.

The assumptions are based on non-profit Microsoft 365 E5 licenses providing 5TB of personal cloud storage using OneDrive, Outlook, Word, Excel, PowerPoint, Teams, Anti-virus/Anti-malware and more that can be installed on 5 PCs and 5 mobile devices per user, Adobe Acrobat Pro DC licenses (10 staff @13% discount) and 1 Adobe Creative All Apps user (60% off Adobe’s regular rates for the first year and 40% every year after). Also included are the modest licensing requirements/costs for collaboration software in each boardroom/meeting rooms for shared devices.

Employee Software Training

End user training should be provided as appropriate to ensure staff have the necessary technical skills to use their software. Training should also be provided on IT Security and Acceptable Use policies as defined by the organization. A mixture of online/virtual training can be combined with company-specific training as appropriate.

IT Software Services

A robust set of IT infrastructure is critical to the success of an organization. A diverse set of services are required to meet a modern organization’s technology needs. These range from the typical items such as email, document storage, and intranets to advanced enterprise security, threat protection and analytics, internal and external collaboration, device management (including mobile), identity management, business analytics and advanced compliance tools such as records management, eDiscovery, information protection.

The costs associated with properly deploying, managing, and updating the necessary infrastructure with on-premises systems has (in the past) been prohibitive for almost all SMEs. With the mainstream adoption of cloud service offerings such as Microsoft 365 E5 these capabilities are now within reach of most organizations. Importantly, such offerings are now available on exclusively Canadian-based infrastructure to meet data residency and privacy requirements if necessary. Additionally, extensive audits and certifications have validated the use and security of these platforms.

While the features of a Microsoft 365 E5 subscription are extensive, many can be rolled out incrementally as the organization’s needs evolve and become more sophisticated. A “one time” two-month project would be undertaken to define, setup and configure the initial IT infrastructure services of the Secretariat. Additionally, a concurrent project

should define any necessary policies and procedures for IT and staff such as an IT Security Policy.

Business Software

All organizations will require some form of "business operations" software ranging from accounting to HR/payroll to potentially CRM/stakeholder management solutions. While exact details cannot be offered without further analysis of need, there are numerous popular cloud-based subscription services available across most of these categories. Alternatively, such services may be outsourced and thus the rates/terms may vary. Other activities, such as audits may or may not have impacts to technology costs depending on circumstance.

A "one time" project would need to be undertaken to setup and configure the accounting software. Cost estimates may vary based on complexity and requirements.

Data Analysis & Reporting

Data analysis and reporting are essential elements of fact-based decision making, accountability and planning. A wealth of tools exists in this category but the most prevalent is Microsoft Excel. Familiar to most business users, but significantly more powerful in recent versions, it provides the basics of reporting and analysis.

For more advanced analysis, reporting, dashboards and even publishing interactive data-driven graphics to the web, Microsoft offers Power BI Pro. Every user receives a license to these tools (included in their Microsoft 365 E5 license). For even greater capabilities and capacities individual users, such as dedicated data analysts, can be upgraded to Power BI Premium.

Financials – Software Services & Setup

Software Setup & Subscriptions	One Time	Annual
Initial Setup & Configuration of IT Services (Microsoft 365 E5)	$50,000.00	
IT & Security Policy Development	$5,000.00	
Microsoft 365 E5, Enterprise Mobility + Security E5 (15 users @ $22.80/mo x 12)		$4,104.00
Adobe Acrobat Pro DC ($7 admin fee + $16.99/mo x12 months x10 users)		$2,108.80
Adobe Creative All Apps Plan ($7.00 admin fee + Subscription fee - year 1: $311.88 & year 2+: $467.82 (1 user with initial two-year average price used)		$393.35
Teams Rooms Standard license $7.70 license/mo (x2 meeting rooms x12 months)		$184.80
Employee Software & Policy Training ($2,000/employee x 15)	$30,000.00	
Initial Setup & Confuguration of Accounting System	$10,000.00	
QuickBooks Online – Advanced + Payroll) ($160/month + $4/employee)		$2,640.00
Totals	**$95,000.00**	**$9,430.95**

Miscellaneous Expenses

Supplies

Depending on where cost accountability resides, IT costs often include supplies such as toner, printer paper, small cables, accessories, etc.

Repairs

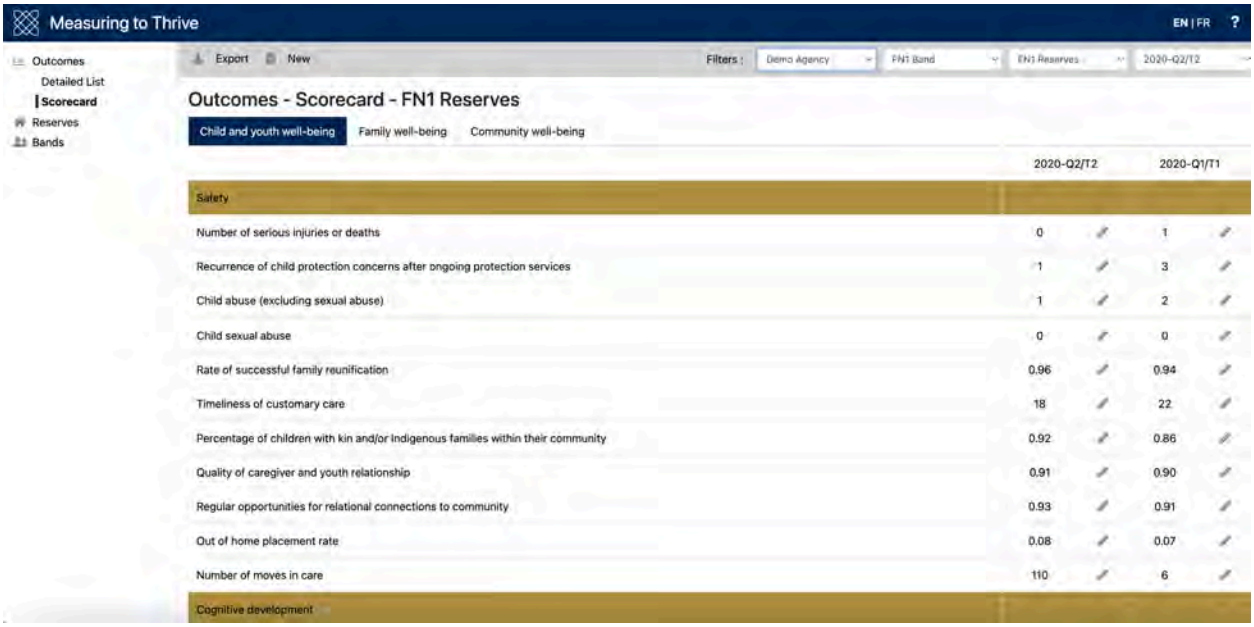
IT budgets will also usually contain a line item for repairs to cover out of warranty costs for occasional repairs or accidental damage.

Financials – Miscellaneous Expenses

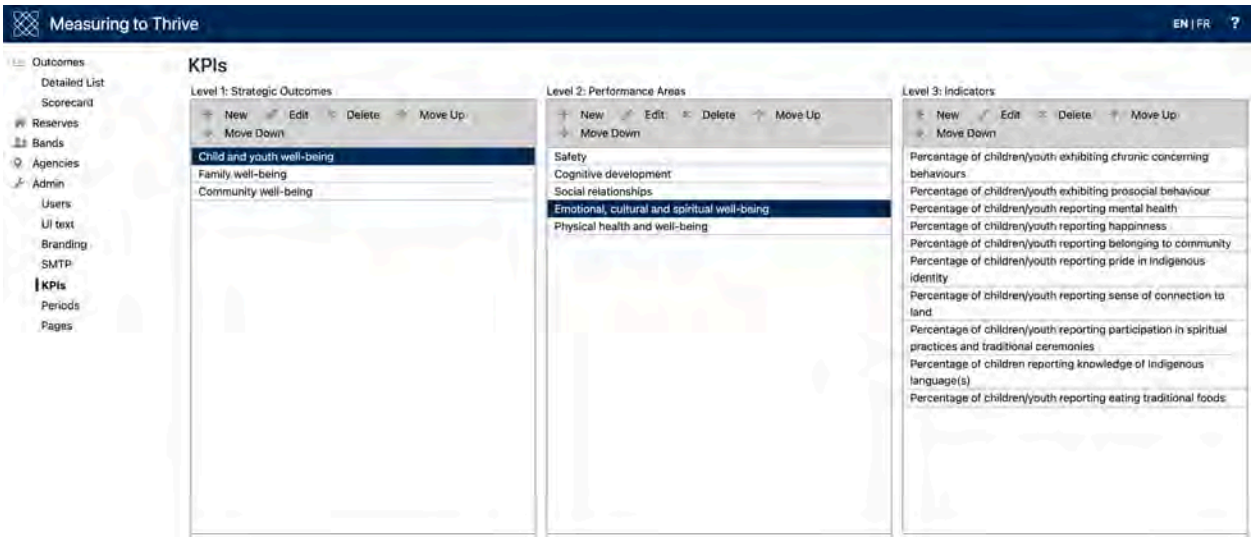
Miscellaneous Expenses	One Time	Annual
Supplies (Toner, Paper, accessory cables, etc.)		$2,500.00
Equipment Repairs		$5,000.00
Totals	$0.00	$7,500.00

Measuring to Thrive Cloud Application
Solution Overview

The Measuring to Thrive cloud application was built by IFSD to provide a location where stakeholders can centrally report anonymized data of KPIs relating to the Measuring to Thrive framework. The system is built using Microsoft Azure cloud services with security and privacy as the core focus. The system is hosted exclusively on Canadian infrastructure and offers end-to-end encryption with fully encrypted data at rest. Data is stored with 6x data redundancy to prevent data loss (3x times in Canada Central region + replication to 3x in Canada East region)

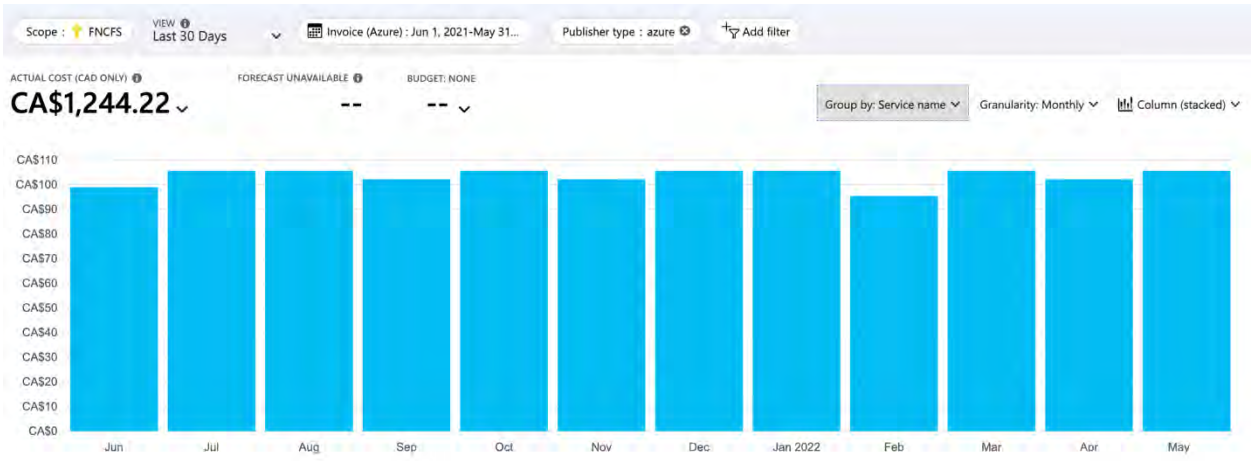


The system supports both English and French and is designed to evolve with the underlying Measuring to Thrive framework. KPIs can be introduced, revised, and retired as required.



Operating Costs

Solutions designed from the beginning to operate on Microsoft Azure or similar platforms can be incredibly efficient to operate as capacity can be adjusted dynamically on an hour-to-hour basis. The Measuring to Thrive cloud application can be configured to almost infinitely scale up or down in line with demand. In the current configuration, it can handle the most of the envisioned loads while only costing approximately $3.41 per day to operate. Operating costs for the past year have totaled $1,244.22.



Initial Development Costs

IFSD bore the development costs create the Measuring to Thrive cloud application. Ownership of the application and its source code will be transferred to the Secretariat at no cost to the Secretariat.

Transfer of Measuring to Thrive to the Secretariat

While IFSD has born the development costs of the application as well as the operating cost to date, the process to transfer the application to a new owner can be a relatively complex task that requires expert skills to accomplish. It is recommended that Microsoft's Consulting Services be engaged on a one-time basis, to managing the migration. A placeholder of $10,000 is included for their fees subject to final agreement between the parties. IFSD will not charge any costs associated with the transfer nor retain any intellectual property rights over the application.

Microsoft Azure Non-Profit Grant

Microsoft offers non-profits a grant for Azure cloud services in the form of a $3,500 (USD) donated Azure services credit annually. (Approximately $4,500 CAD) (Note that unused credit is not refundable hence the zero-dollar total shown in the table below)

Financials - Measuring to Thrive Cloud Application

Measuring to Thrive Cloud Application	One Time	Annual
Measuring to Thrive App Development Costs		$0.00
Measuring to Thrive App Operating Costs		$1,244.22
Transfer of Measuring to Thrive to Secretariat	$10,000.00	$0.00
Microsoft Azure Non-profit Grant (unused credits are non-refundable)		($4,500.00)
Totals	**$10,000.00**	**$0.00**

IT Hardware

Individual Staff Productivity Hardware

This includes one organization owned laptop, smartphone, and large desktop monitor per employee. Also included is a mid-range VoIP desktop phone for each user.

Shared Resources Hardware

Shared resources are IT assets used by multiple staff members rather than assigned to individuals. These would include at least one multifunction colour laser printer/scanner for the office. Additionally, hardware for one boardroom and one meeting room are estimated below subject to further requirements.

Financials - IT Hardware

IT Hardware	One Time	Annual
Business-grade Laptop ($2,000 x15 staff)	$30,000.00	
Smartphone ($1,000 x15 staff)	$15,000.00	
Desktop Computer Monitor ($500 x15 staff)	$7,500.00	
CCX 500 Business Media Desktop Phone, Teams Edition ($475 x15 staff)	$7,125.00	
Lexmark MC3426i Colour Laser All-in-one Multi Function Printer	$820.00	
Board Room Screen (Samsung 75" 4K UHD HDR LED Tizen Smart TV)	$1,600.00	
Meeting Room Screen (Samsung 65" 4K UHD HDR QLED Tizen Smart TV)	$1,200.00	
Teams Room Device/Video Conferencing Equipment ($5,000 x2)	$10,000.00	
Desktop Computer for Meeting Rooms ($2,000 x2)	$4,000.00	
Totals	**$77,245.00**	**$0.00**

IT Staffing

Modern IT operations cover a vast range of services. Each area of specialization can require advanced knowledge for certain tasks. The proposed approach is for an in-house IT generalist supplemented by a modest consulting budget to provide task/project specific assistance on an as needed basis.

Full Time IT Staff

One full time IT employee is envisioned to handle the day-to-day operational needs of the IT, website, and cloud environments. This person should also possess data management and analysis skills and would support the data analysis and reporting needs of the organization. A mid-level position is budgeted with a fully loaded cost of $120,000/year.

Technical IT Training

Technology evolves at a rapid pace in modern business environments. A specific line item is included to maintain and expand the technical skillset of IT staff.

IT Consulting Support

Given the range of responsibilities envisioned for the sole IT staff member, it is almost certain that supplemental support will be required. A line item is provided to cover external consulting support to supplement with specific advanced skills as required.

Financials - IT Staffing

IT Staffing	One Time	Annual
Full Time Staff (1 employee - fully loaded cost)		$120,000.00
Technical IT Training (for 1 IT staff member)		$5,000.00
IT Consulting Support		$50,000.00
Totals	**$0.00**	**$175,000.00**

IT should not be viewed as simply an administrative cost burden. For a data capture and management organization, IT should be properly viewed as foundational to its operating model. A well-funded IT infrastructure would provide the secretariat with a robust platform for security and privacy coupled with the tools for access and transparency for stakeholders.

APPENDIX L
JOB POSTINGS AND DESCRIPTIONS

There are staffing pressures among service providers. Many expressed difficulties finding, attracting, and retaining staff to discharge their mandates. As resources are focused on FNCFS, service providers may find themselves competing for talent in an already restricted pool. Beginning the hiring process early and offering training opportunities will be important for meeting staffing needs.

FNCFS job postings and descriptions were compiled and analyzed to identify common roles in service delivery. The job titles, descriptions, and educational or experience requirements are based on a set of 221 job postings and descriptions collected by IFSD, primarily in April 2024. All reviewed postings were available publicly from FNCFS service providers (typically from the employment/careers section of their websites). The information set contains postings from service providers located in all provinces except for Newfoundland and Labrador and Prince Edward Island.

The information conveyed is representative of the job postings and descriptions included in this information set. Job titles, descriptions, and educational or experience requirements may vary in practice. Service providers must determine the appropriate title, description, and requirements for each role they hire for. They should also consider any regulatory requirements that influence job descriptions and requirements, e.g., for clinical staff, social workers, etc.

Job Type	Job Title	Description	Educational or Experience Requirements
Executive	Executive Director/CEO	Executive directors or CEOs are responsible for leading and managing an organization in alignment with its mandate, objectives and strategic direction. They report to a Board of Directors (or comparable entity).	Executive Directors and CEOs typically have several years of experience and relevant post-secondary training.
	Director	Directors are responsible for leading and managing a specific department or office.	Directors typically have several years of experience and relevant post-secondary training.
Management/ Supervisory	Manager	Managers are responsible for the functioning of specific departments, offices, or programs. They typically report to an executive-level employee (e.g., director, CEO, etc.).	Managers typically have several years of experience and a relevant post-secondary credential.

	Supervisor/ Team Lead	Supervisors and team leads oversee the operation and delivery of specific programs or teams.	Supervisors and Team Leads typically have a relevant post-secondary credential.
Social Workers	Social Worker	Social workers contribute to a variety of programs such as child protection, adoption/ guardianship, prevention, etc. They are often responsible for functions such as case management, assessment, intervention, mediation, counselling, etc.	Social workers must have a Bachelor of Social Work (BSW) or Master of Social Work (MSW).
Protection Staff	Case Aide	Case aides provide support to child protection teams.	Case Aides often have a relevant post-secondary credential.
	Intake Worker	Intake workers are responsible for receiving, assessing and investigating reports of child abuse and neglect.	Intake workers often have a degree in social work or an equivalent/related discipline.
	Foster Care/ Protection Worker	These roles provide a range of protective services such as investigation, assessment, and foster parent recruitment.	Foster Care and Protection Workers often have a degree in social work or an equivalent/related discipline.
Prevention Program Staff (including cultural programming)	Child and Youth Worker	Child and youth workers provide a wide range of supports and services to children and youth.	Child and youth workers often have a relevant post-secondary certificate or diploma.
	Cultural Coordinator/ Connector	Cultural programming roles coordinate and/or deliver a range of culturally relevant programming and supports (i.e., education, ceremonies, guidance, teachings, etc.).	Cultural programming staff often hold a relevant post-secondary credential. The required credential level varies based on the specific position.
	Family Wellness/Well-Being/ Support/	These roles provide preventive supports and programming to promote family well-being and reduce risk to children.	Family wellness, well-being, support and preservation workers often hold a relevant post-secondary credential. The

	Preservation Worker		required credential level varies based on the specific position.
	Community wellness/ resource staff	These roles design and/or deliver community-based programming.	Community wellness/ resource staff may hold a relevant post-secondary credential.
	Prevention Worker	Prevention workers provide preventive supports and programming to clients.	Prevention staff often have a relevant degree (e.g., social work), but education requirements may vary by role and service provider.
	Elder in Residence	Elders in residence provide cultural education and training to staff, community members, external partners, etc.	Elders in residence are recognized by their First Nations, and may hold a relevant post-secondary credential.
Post-Majority Staff	Post-Majority Support/Care Worker	Post-Majority Support or Care Workers provide support and services to youth who age out of care.	Post-Majority Support or Care Workers have often completed post-secondary education in social work or a related field.
First Nation Representative Services Staff	Band Representative /First Nations Representative / Band Designate	First Nations or Tribal Councils typically employ First Nations Representatives. They support children and families involved with CFS, providing guidance and advocacy. They may also be involved in court proceedings.	First Nations Representatives often have relevant post-secondary credentials (e.g. social work).
Clinical Staff	Psychologist	Clinical staff provide a range of clinical services to children and/or families depending on their specific discipline (i.e., assessments, counselling).	Clinical roles typically require a relevant graduate degree (i.e., psychology, social work, counselling), and/or membership in a recognized professional body.[1]
	Psychotherapist		
	Psycho-educator		
	Clinical Counsellor		

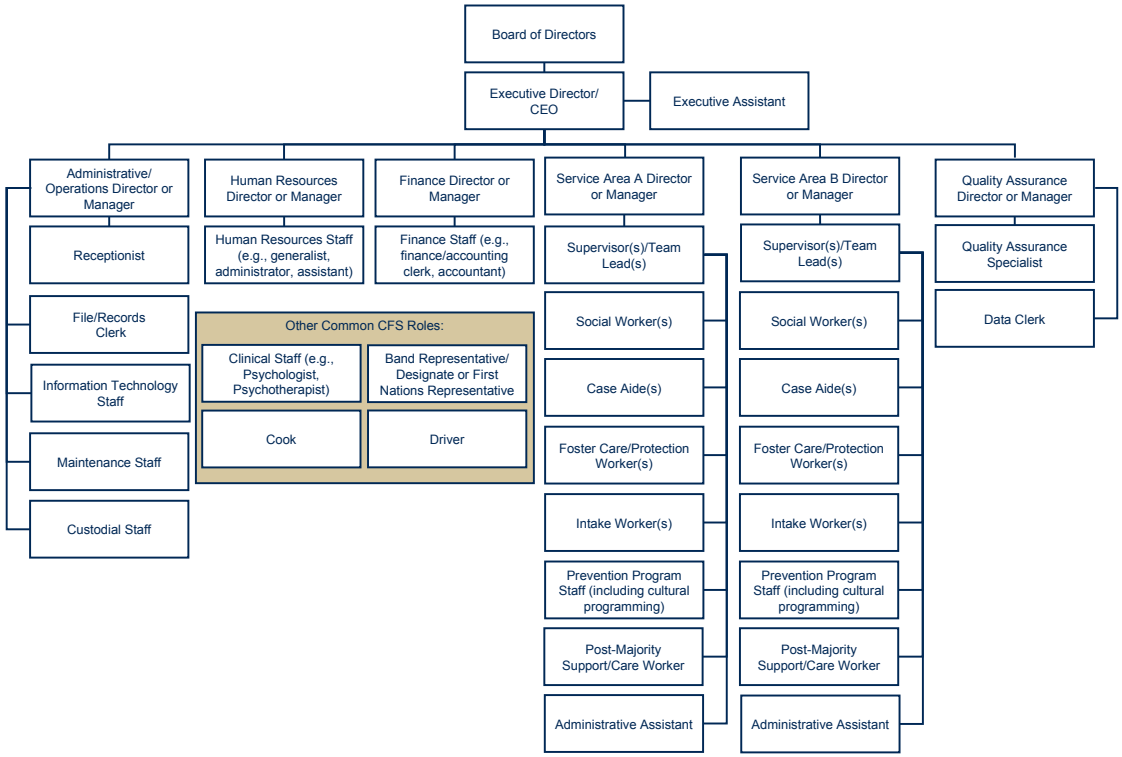
[1] Some Agencies have therapist and/or counsellor roles that do not require graduate degrees, but these roles are not synonymous clinical roles requiring graduate-level clinical training and/or a professional designation.

	Addictions Worker	Addiction workers participate in providing addiction programming to clients. Workers frequently deliver these services at residential facilities.	Addiction workers often have a relevant diploma or degree.
Quality Assurance Staff	Quality Assurance Specialist/ Advisor/Worker, Data Steward, etc.	Quality assurance staff are responsible for reviewing organizational performance to ensure program/service quality and identify areas for improvement. They have responsibilities such as data analysis and reporting, conducting client satisfaction surveys, etc.	Quality Assurance staff often have post-secondary credentials such as a degree in social work or a diploma or degree in a field related to data management.
	Data Clerk	Data clerks are responsible for data entry tasks (i.e., case data, financial data, etc.).	Organizations may not require post-secondary education for these roles.
Information Technology (IT) Staff	IT or Network Administrator/ Coordinator/etc.	These positions are responsible for managing an organization's IT and/or network systems.	IT and network staff often have post-secondary education in computer science or a related field.
Human Resources Staff	Human Resources Generalist	Human resources staff participate in functions such as recruitment, training and orientation, payroll, etc.	Human resources staff typically have a degree, diploma or certificate in Business Administration or Human Resources.
	Human Resources Assistant		
	Recruitment Coordinator		
	Training Coordinator		
Finance Staff	Accountant	Finance staff are typically responsible for implementing an organization's accounting procedures. This includes functions such as accounts payable,	Depending on the level of seniority, finance staff typically have a degree, diploma, or certificate in accounting or business administration.
	Finance/ Accounting Associates		

	Finance/ Accounting Clerks	accounts receivable, financial reporting, and record keeping.	
Administrative Staff	Executive Assistant	Executive assistants provide administrative support to executive-level staff.	Executive Assistants may have some post-secondary education.
	Administrative Assistant	Receptionists and Administrative Assistants provide reception, as well as clerical and administrative support.	Receptionists and Administrative Assistants often have a post-secondary diploma or certificate.
	Receptionist		
	File/Records Clerk	File and records clerks provide a range of administrative support services, including file and record management and data input.	File and records clerk positions may require a post-secondary diploma or certificate.
Other staff	Maintenance Staff	Maintenance staff maintain an organization's facilities.	Maintenance roles may require the completion of post-secondary training or an apprenticeship.
	Custodial Staff	Custodians and cleaners maintain the cleanliness of CFS facilities.	These roles typically do not have educational requirements.
	Driver	Drivers are responsible for transporting clients to appointments, events, etc.	These roles typically do not have educational requirements beyond a valid driver’s license and clean driving record.
	Cook	Cooks prepare food in residential programming centres.	Cooks may have post-secondary culinary training.

Organizational structures should be aligned to mandate and accountability mechanisms. Among existing service providers, organizational structures vary. The figure below outlines a possible organizational structure for FNCFS service delivery organizations. It was developed by cross referencing publicly available organization charts from 11 FNCFS agencies. The sample organization chart represents one way for FNCFS service providers to structure their organization. It is a starting point. Users of this guide may wish to adjust it to suit their unique needs and circumstances. For example, some service providers choose to organize themselves by program area instead of by service area, i.e., separate prevention and protection departments.

Figure 1: Organization Chart - Departments by Service Area



Board of Directors
Executive Director/ CEO
Executive Assistant
Administrative/ Operations Director or Manager
Receptionist
File/Records Clerk
Information Technology Staff
Maintenance Staff
Custodial Staff
Human Resources Director or Manager
Human Resources Staff (e.g., generalist, administrator, assistant)
Finance Director or Manager
Finance Staff (e.g., finance/accounting clerk, accountant)

Quality Assurance Specialist
Data Clerk

APPENDIX M

COLLABORATOR CAPSTONE GATHERING WORKSHOP SUMMARY

IFSD
IFPD

Phase 3: Capstone Gathering Summary

Overview

Phase 3 collaborators (a mix of existing First Nations child and family services (FNCFS) agencies and First Nations contemplating/exercising jurisdiction) gathered in Ottawa to:

1) Share lessons, practices, and considerations for next steps (*what we heard*);
2) Review IFSD's interim recommendations (*collaborator recommendations*); and,
3) Build a framework for typologies (*considerations for other service providers*).

Of the 20 Phase 3 collaborators, 15 participated in the capstone activities in-person and virtually.

What We Heard

Collaborators shared the practices and tools they have developed to enhance their service delivery to children and families. One collaborator presented their prevention tracking platform that leverages the Measuring to Thrive framework. The platform links to genograms for children, with additional tools for promoting cultural and language connections, e.g., language learning app, virtual reality tour of the First Nation with elders sharing knowledge.

Other collaborators noted lessons from provincial practices in CFS. For instance, the importance of engaging in fixed envelope or block funding with updated expenditure data commensurate to mandates to ensure sufficiency (and not underfunding).
Contributions from other collaborators considered the shifting landscape in many First Nations where members are moving off-reserve, migrating between them, or living off-reserve and accessing services in the First Nation. While these members are not counted in the IRS on-reserve population, they are accessing supports and services, that are not included in the provider's funding-related population. The reality of residence and service delivery in CFS will need to be revisited.

As one collaborator noted, if Jordan's Principle can support children recognized by their First Nations, regardless of membership status or residency, why not CFS? Territorial rather than a membership-based understanding of population may be a future consideration.

Collaborators also highlighted concerns and challenges with the current environment:

1) **Ongoing administrative challenges working with ISC, regionally and nationally**
    a. Lack of clarity on funding practices and rules, including challenges on capital.
    b. Inconsistent rules, lack of clarity on decision-making in CFS is administratively burdensome and an impediment to planning. Collaborators shared that ISC has withheld funds, left decisions unresolved, etc. Decisions can appear arbitrary, "based on the whims" of the funding officer. As one collaborator stated, "housing [dollars] flew out the door with limited strings attached," but major capital funding is stalled.
    c. ISC is not consulting or engaging with those designing and delivering services.

d. The inconsistency in ISC's approach has affected service providers, including on their ability to plan and deliver needed services.

2) **Opacity of current negotiations and decision-making processes**
   a. Lack of engagement and consideration of needs on the ground.
   b. Limited information, if any, for First Nations leadership and practitioners.
   c. Limited consideration of how realities on the ground, e.g., limited staff, lack of capital, etc. will impact implementation of any reform.
   d. Decisions are being made without consideration of input or rights-holders.
   e. Engagement happening without national or regional organizations. AFN and the Caring Society may be involved, but not First Nations or service providers themselves.

Collaborator Recommendations
In a discussion of IFSD's interim Phase 3 recommendations, collaborators were clear that more time, resources (human, financial, etc.), and consistent structural change would be required to uphold the CHRT's rulings to end discrimination and ensure it does not reoccur.

Transparency in decision-making and clarity were required immediately for:

1) Monitoring of program performance to ensure accountability of the service delivery provider;
2) Funding amounts, recipients, and activities; and,
3) Governance of resources and reporting on funding.

Essentially, who is getting funding, to deliver what services, and with what obligations, needs to be clarified. These elements are required for planning, service delivery, and reporting.

There was agreement with IFSD's recommendations, but not consensus across all categories. Collaborators indicated that capital estimates were low, especially for those exercising jurisdiction. Prevention resources were also deemed to be too low, especially for agencies in provinces previously covered under Directive 20-1 (which did not include prevention resources), e.g., British Columbia, New Brunswick, etc. Until a steady state of prevention services could be defined, resources, from collaborators' perspectives, should not be limited.

Given the foregoing, collaborators make the following recommendations:

1) Capital funding should be needs-based. It should not be circumscribed by the FNCFS Program, especially for those exercising jurisdiction.
2) Prevention funding should be needs-based.
3) Establish a national pool of funds for emergency needs in CFS to address unexpected or costs of high-needs children.
4) ISC must clarify its funding and policy decisions aligning them to CHRT orders, e.g., capital, housing, etc.
5) Housing resources CFS should be free of political influence and should be administered in collaboration with the CFS service provider.

6) Allocations for First Nation Representative Services should be revisited with a baseline for small First Nations and consideration of provincial/territorial variances in mandates.
7) To support the delivery of CFS, existing gaps in housing, health, and education in First Nations should be defined.
8) Population on-reserve does not represent true population served in First Nations as members may move in and out of community. Until such time that First Nations define their own populations, total population should be used for funding estimates.
9) Provincial and territorial governments should report all CFS-related information, e.g., expenditures, child outcomes, etc., on a distinctions basis, i.e., Inuit, Metis, etc.
10) Those negotiating the reform of the FNCFS Program should be engaging with rights holders and their delegated service providers.

Considerations for Other Service Providers

Collaborators offered insight on developing FNCFS service provider typologies. These typologies are intended to support other First Nations and FNCFS agencies in identifying their characteristics in the Phase 3 contributions.

Guiding principles for service providers, regardless of typology:

1) Communication: Engage effectively with First Nations, stakeholders, service providers, etc.
2) Research to inform policies and define best practices: Develop policies informed by local, regional, national, and global best practices, e.g., Australia and New Zealand.
3) Build trust: Foster trust with community by ensuring consistency, transparency, and regular reporting.
4) Supportive relationships: Walk alongside those you're serving, offering support throughout all phases of the journey, whether that's the journey through healing or jurisdiction.
5) Change is a process: Whether building a new service model with community or exercising jurisdiction, promote a gradual increase in decision-making, recognizing these processes are not binary.

Collaborators identified two general approaches to service delivery:

1) Those exercising jurisdiction or implementing a First Nations law (Figure 1),
2) Those delivering services under the provincial/territorial CFS law (Figure 2).

In each approach, there are considerations across two continuums: whether the provider is operational or in development, and whether the provider is walking alongside (prevention services) or has a deemed intervention (protection and prevention) mandate. Whatever the service delivery model, points of departure shaped by the First Nations served are unique. Recognizing the unique contexts, collaborators shared their experiences to define considerations along the two continuums.

Figure 1: Typology chart for service providers implementing own law

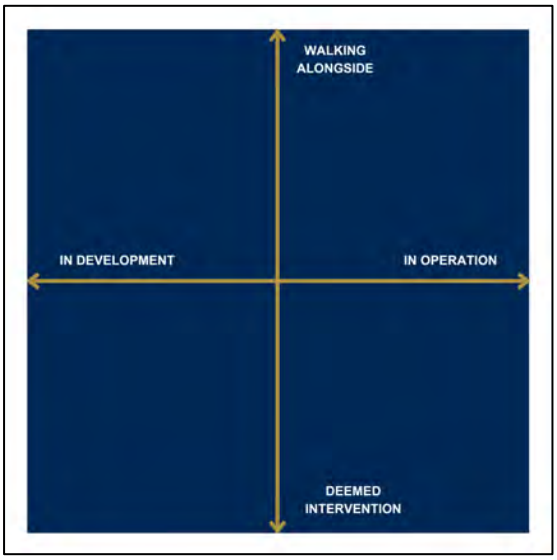

Figure 2: Typology chart for service providers under provincial/territorial law

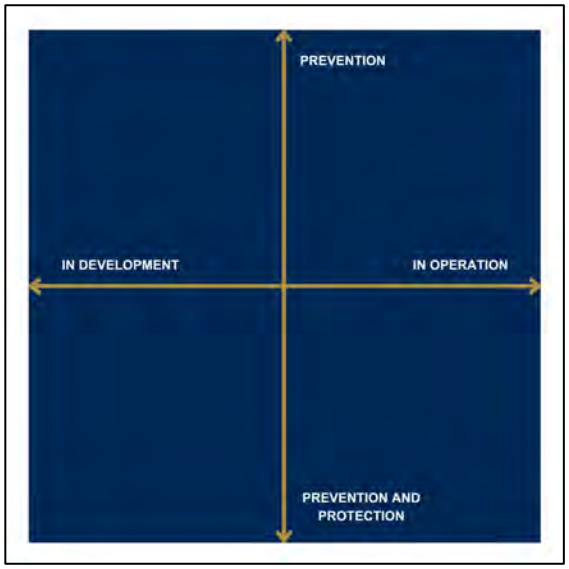

Note: These lists are not exhaustive, nor are they mutually exclusive. Collaborators shared knowledge to help others place themselves in the spectrum of contributions in Phase 3.

Table 1: Characteristics of the continuums.

Term	Activities/characteristics
In Development	A service provider in development may be: ▪ Developing community profiles and engaging with community to understand needs ▪ Identifying practice and policy frameworks ▪ Identifying community values and standards ▪ Gathering available data on CFS and community needs ▪ Confirming community context and needs ▪ Designing a service delivery model ▪ Holding meetings to develop service needs, expectations, and guidelines ▪ Fostering collaborations with other services in the community ▪ Seeking external support on unfamiliar topics, e.g., legal, financial, etc. ▪ Identifying capital and expenditure requirements to operationalize their model ▪ Creating a culturally relevant service delivery plan and policy framework
In Operation	A service provider fully operational may have: ▪ Policies that continue to evolve ▪ Enacted their own law ▪ Prevention protocols ▪ Developed and operational programs ▪ Hired and trained staff ▪ Alternative dispute resolution/mediation practices ▪ Cultural protocols ▪ Nation-based decision-making processes ▪ Standardized practices ▪ Enforcement and appeals processes ▪ Elder and youth committees ▪ Community consultations ▪ Regular meetings with staff and supporting experts, e.g., lawyers, accountants, etc.
Walking Alongside/Prevention	When walking alongside or providing primary prevention, activities are: ▪ Voluntary ▪ Proactive

	▪ Available upon request by families ▪ Least intrusive ▪ Inclusive ▪ Replacing provincial/territorial policies ▪ Supported by comprehensive infrastructure ▪ Focused on building relationships and trust ▪ Redesigning protection services ▪ Based on comprehensive needs assessments ▪ Culturally relevant ▪ Maintaining family connections ▪ Recognizing First Nations law and autonomy
Deemed Intervention/Protection-Prevention	When engaging in a deemed intervention or protection/prevention activities are: ▪ A last resort ▪ Intrusive ▪ For higher-risk situations ▪ Involving out-of-home care or supports in-home with the possible removal of parents ▪ Applied after surpassing a threshold of deemed risk or need for treatment

APPENDIX N
COLLABORATOR BUNDLES

IFSD
IFPD

Kinosao Sipi Minisowin Agency (KSMA)

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Kinosao Sipi Minisowin Agency (KSMA) delivers both protection and prevention services to Norway House Cree Nation and other Indigenous families in provinces west of Manitoba residing in Winnipeg. Table 1 outlines contextual information about Norway House Cree Nation.

Table 1

Collaborator name: Kinosao Sipi Minisowin

First Nation(s) served:	Total population (on-reserve, IRS 2022)	Geographic zone (1-4)	After-tax total median household income (2016)	Difference between after-tax median household income above or below 2022 MBM?
Norway House Cree Nation	6602	2	$46,800.00	Below

Kinosao Sipi Minisowin Agency serves Norway House Cree Nation, a large First Nation in Manitoba with year-round road access to a service centre within 350km. Despite access to elementary and secondary education in the community, low rates of high school (37%) and post-secondary (20%) completion are observed. Nevertheless, while Norway House's median household income lies above the provincial poverty line, the employment rate sits just over 37%. The community has established low-speed internet access widely and just under than 70% of homes are considered suitable. Despite accessibility of health and social services, indicators such as population size, poverty, or diminished employment and educational achievement rates may explain the reports from residents regarding the risk of crime and other social issues in certain areas of the community.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

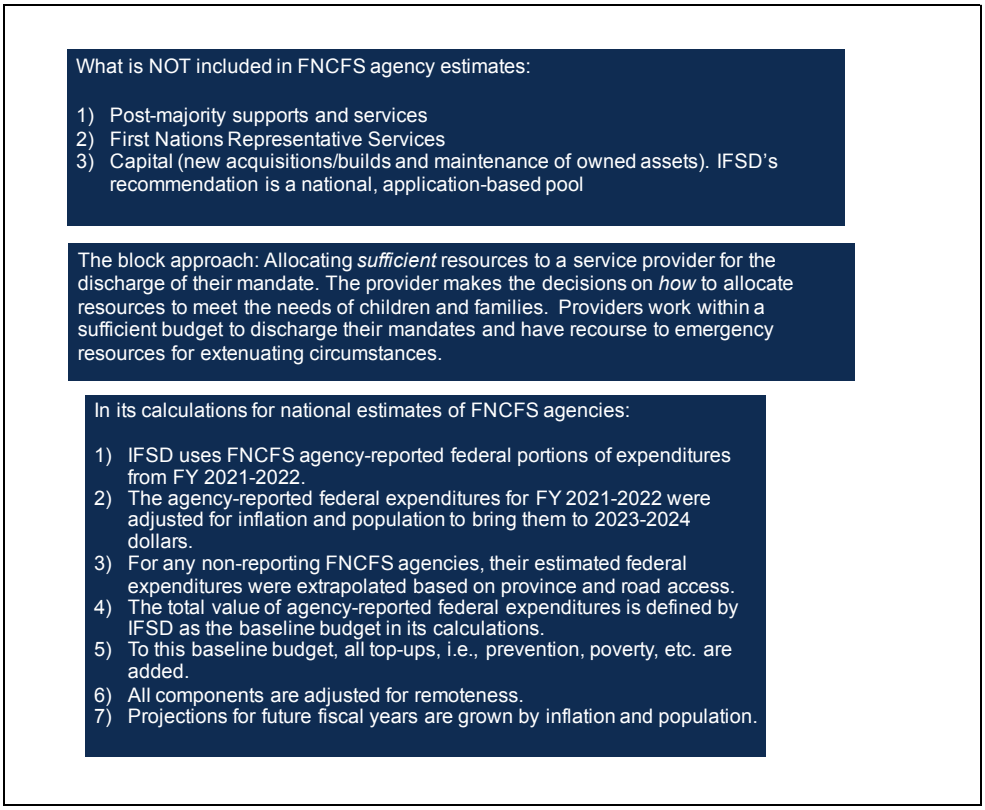

Table 3 outlines three illustrative funding scenarios for KSMA, including adjustments for remoteness, the Northern MBM, and population growth.

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Transition Case Study: Kinosao Sipi Minisowin Agency (KSMA)

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Kinosao Sipi Minisowin Agency (KSMA) serves its community in Norway House and Winnipeg. Transition – until such time their own law applies in both places – will be a two-track process. This means following the funding rules from the province and the federal government for the delivery of child and family services depending on the location of the child.
- KSMA is holding the course of its current practices along with the integration of culturally relevant services until it has a clear path forward on jurisdiction.

Summary Assessment

- It is difficult to separate a plan for transition from the context faced by the community. Structural drivers of children in care continue to affect the agency and its transition path, e.g., housing insecurity in the community.
- Transition time will largely be dictated by programming coming to terms with the context of the community. With a focus on secondary and tertiary services, targeted prevention programming will need to focus on structural drivers of children in care.
- KSMA's transition is critically impacted by two factors: (1) the anticipated reform of the FNCFS Program; and (2), Norway House's decisions on jurisdiction. Key external decisions need to be made before KSMA can fully plan its transition. KSMA could consider the following options to facilitate transition once external decisions are made:
    - *Focusing on organizational flexibility.* KSMA cannot prepare for every eventuality, but it can facilitate a future transition by working towards a nimbler organization. This could include reducing information silos and ensuring all staff are receiving adequate communication about organizational priorities and goals.
    - *Focusing on core activities and services.* Transition will build a solid foundation and starting point. Focusing on core activities and services could help ensure that existing needs for people, processes, and systems are being met.
- KSMA's primary community served, Norway House, is seeking jurisdiction.
- Recruitment is a key challenge given the geography of the community.

Context

Kinosao Sipi Minisowin Agency (KSMA) is an agency that provides a wide range of services to the membership of the Norway House Cree Nation and other Indigenous families from provinces west of Manitoba who are residing in Winnipeg. KSMA's services include:

- Prevention services;
- Protection services;
- Foster care and alternative care;
- Permanent ward unit;
- Land-based therapy;
- Family and individual counselling;

KSMA has offices in Norway House and Winnipeg. The offices work together but may follow different processes and use different systems. It is unclear how implementation of a new law in Norway House would affect operation of the two offices.

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 4

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Notes from collaborator
People	Do you have enough staff to meet your operational needs?	N	Y	Biggest challenge is recruitment. With changing services, it will be challenging to know the number of staff needed.
	Does your compensation match the provincial standard?	Y	Y	Yes - just went through union overhaul. It is becoming more challenging to compete with mainstream agencies who can offer higher compensation than the province. When recruiting new employees, they

				have a high expectation for salary.
	Do you recruit staff from your member community(ies)?	Y	Y	Harder to predict into the future.
	Do you have high retention of employees?	N	Y	Retention is not high in the Southern office, the competition for staff is higher and there are more employment options than in the community. However, in the community, retention is higher, particularly in among management level staff. It is challenging to recruit specialized positions e.g., abuse investigation. This type of position has higher turnover because of the nature of the work.
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	Y	Y	
	Are you attracting the same level of credentialed employees as mainstream organizations?	Y	Y	

	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	Y	Y	Have two certified CPAS on staff. There is not a lot of professional designations within the scope of the current service that are not contracted. Outsourcing to accountants, lawyers, etc., is not challenging to do. Recruiting social workers with professional designations can be more difficult. People in Manitoba without a Bachelor of Social Work can become a registered social worker. KSMA supports social workers to become registered e.g., costs, hours.
Process	Are your current operating baselines meeting needs?	N	N	Funding is block (on the provincial side and is very inadequate. It has been stagnant for a long time) and difficult to move around. Operations could use more funding. Enhance prevention focused funding – 60% (province) and 40% (federal) split, tied to the funding model. There have not been adjustments to the

				funding model in a long time. On the federal side, prevention is being billed at actuals which is helpful.
	Do you have a clear vision of your future state?	N	Y	Working through C-24. Keep agency as standalone but incorporate it through the band. Within 18 months. The tentative timelines are within the calendar year, the Nation will be moving in a position to begin the process of negotiating a coordination agreement for service delivery that supports everything associated with C-24 work. If that is completed within 12 months, then the aim is within three years KSMA will have a clearer vision (which will be outlined in the coordination agreement).
	Are your post-transition activities defined?	N	N	There will be a certain level of consistency. What activities that are included or how it is implemented is uncertain.

	Is your post-transition workflow defined?	N	N	
	Is your post-transition management structure established?	Y	Y	
	Have you fully designed your prevention programming?	N	Y	
	Have you fully designed your protection programming?	N	Y	
Strategy	Is your post-transition mission defined?	N	N	Will need to develop our own CFS law. Need consistent funding through one flow – not many (loss of efficiency). There should not be huge differences since KSMA is an agency that serves 1 community. The mission and goals will not change significantly.
	Is your post-transition strategy defined?	N	N	
	Are your post-transition goals and organizational priorities defined?	N	N	
	Are all of your services or programs developed?	N	N	
	Are all of your necessary	N	N	The relationships will change, expand, and contract in some

	organizational partnerships in place?			areas. Would like to build partnerships and our capacity within the Nation and become less reliant on waiting for other services to support children e.g., emergency services.
Systems	Is your post-transition governance framework defined?	N	Y	18 months for a framework and what that will entail (tied to the coordination agreement and what will be funded). Implementation of the changes will likely take longer.
	Do you have an independent board of directors?	Y	Y	May change in the future.
	Is your post-transition legal framework defined?	N	N	Implementation in 18 months. Plus 6 months for onboarding (same as governance framework above).
	Is an adjudication system in place?	N	N	The internal adjudication system would be under the umbrella of C-24. The agency will not be a single entity under the new law. The child protection component will be more tightly focused on abuse and maltreatment. Prevention will expand, looking at how it can keep

				children safe and how to support families to be healthy, prevent those situations that arise or address them quickly. We will need to establish an education and training program so the law is understood internally and externally. A system is being developed to give people options if they are unhappy with a decision. This will involve a third party who can explain why things are being done a certain way. Currently, there is a local child care committee with representatives from the community (primarily Elders,) who speak with parents and provide guidance to social workers. The aim is to take this concept and flesh it out, so it is legally enforced. Families will still have the option to go through a more formal process through the province

				if they choose to do so.
	Is an adequate data system in place?	Y	N	Taking responsibility for our own data and the information of KSMA members and who they serve will take time. Working on a system conversion – nearly ready for training. It will likely like more than 3 years to develop and implement a data system.
	Is an adequate performance management framework in place?	Y	Y	Strict guidelines on performance that are followed.
	Is an adequate IT system in place?	Y	Y	Outsourced.
	Is an adequate financial system in place?	N	Y	It and financial systems always can be improved.
	Are your post-transition reporting systems in place?	N	N	Reporting may change, but is not clear. This will depend on the coordination agreement.
	Are you developing new criteria for evaluative purposes?	Y	Y	None, but it will have to be done while considering the new law.

Table 5

Question	Response: Yes (Y) or No (N)	Notes from collaborator
Are you currently delivering secondary and tertiary prevention services?	Yes, we provide both.	We provide the full scope of prevention services.
If you are not currently delivering secondary and tertiary prevention services, do you plan to do so?	N/A	
Is the delivery of prevention and protection services integrated at a case or family service level?	Yes	When personalized services are requested or required, the delivery of prevention services are integrated in the case plan/family service plan, but we also provide outreach and community focused services as well.

People

KSMA is experiencing significant issues with recruitment. KSMA is expecting to transition existing staff to fill new roles (e.g., on adjudication and interpretation) following the transition. Currently, KSMA has 14 vacancies out of 85 positions. Several factors drive these challenges:

- *Competitive recruitment environment.* Social workers and supporting staff are in high demand industry-wide. The reputation of CFS also contributes to challenges of recruiting locally.
- *Lack of a collective agreement and salary certainty*. KSMA recently concluded a lengthy collective bargaining process. Until recently, this contributed to difficulties attracting qualified employees.

Process

KSMA's process challenges are impacted by:

- *Operations in different contexts.* KSMA operates in Norway House and in Winnipeg. Activities, services, and processes are different between the two offices.
- *Jurisdiction.* If Norway House implements its own law, it is unclear what effect this will have on both offices and processes in general. KSMA will have to determine whether the offices will be further bifurcated or streamlined to follow similar processes.

- *Funding.* KSMA receives some funding from the province through block funding. The funding is not flexible and is stagnant, causing challenges for KSMA to meet its current operational baselines.

Strategy

KSMA delivers services to one community, it does not expect that its mission will change significantly with the transition. With Norway House exercising jurisdiction, KSMA expects to deliver new services. KSMA is already engaged in transitioning its services towards more culturally appropriate options. It is expected within 18 months Norway House will enter into a coordination agreement, which will outline KSMA's role. In turn, KSMA will need to begin the process of designing and implementing services and activities that are cogent with the new law.

Systems

KSMA's systems will be impacted by Norway House pursuing jurisdiction. It expects it will be able to begin implementing its governance structure, legal framework, and adjudication system following the coordination agreement in 18 months. Developing and implementing a new legal system and a new adjudication system will take significant time, it is expected implementing these processes will take more than three years. KSMA will also need to consider the time and resources necessary to retrain existing staff, or hire new staff, who are comfortable with new systems.

NIL TU, O Child and Family Services Society

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

NIL TU, O Child and Family Services Society (NIL TU, O) delivers a variety of prevention services to seven First Nations in British Columbia. Table 1 outlines contextual information about the First Nations NIL TU, O serves.

Table 1

Collaborator name: NIL TO, O Child and Family Services Society				
First Nation(s) served:	**Total population (on-reserve, IRS 2022)**	**Geographic zone (1-4)**	**After-tax total median household income (2016)**	**Difference between after-tax median household income above or below 2022 MBM?**
1) Beecher Bay First Nation	114	1	Not available	Not available
2) Pauquachin First Nation	262	1	$35,200.00	Below
3) Tsartlip First Nation	672	1	$40,400.00	Below
4) Tsawout First Nation	662	1	$43,600.00	Below
5) Tseycum First Nation	131	1	Not available	Not available
6) Songhees First Nation	396	1	$43,600.00	Below
7) T'Sou-ke First Nation	127	1	Not available	Not available

NIL TU, O Child and Family Services Society provides services to seven South Island Coast Salish Communities. All seven of the communities are within 50 kilometres of a service centre and have year round road access. The indicators for connectivity, suitability of housing, and employment vary between the communities served. Employment rates range from 35% to 53%. Housing suitability is generally high, although some communities have a high percentage of housing requiring major repairs. The variability in contexts between the communities suggests that NIL TU, O's approach to service delivery will differ based on the needs of each community.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Transition Case Study: NIL TU, O Child and Family Services Society

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- NIL TU, O Child and Family Services Society ("NIL TU, O") is an active agency with well-developed programs and partnerships with other organizations.
- Despite their presence and relationships, they are confronting uncertainty given the constant and unpredictable changes in funding from the FNCFS Program, namely, the split of prevention resources. For managing transition, predictability and resources commensurate to mandate are required.

Summary Assessment

- Communication between the agency and member Nations is key to maintaining a strong relationship throughout the transition. Additionally, for First Nations considering exercising jurisdiction, a key for effective service delivery is to consider family situations and socio-economic factors that drive challenges for families.
- Transition is critically impacted by two factors: (1) the anticipated reform of the FNCFS Program; and (2), the decisions on jurisdiction of NIL TU, O's communities.
- NIL TU, O will need to fully develop strategic plans to respond to changes within the communities it serves. NIL TU, O has already made significant efforts to engage with communities for future planning. Progress is slow, but NIL TU, O is aligning service offerings with needs of the communities it serves.
- Despite being near an urban centre, recruitment is a key challenge. NIL TU, O will need to consider how its staffing needs may change with transition and plan accordingly. One option could be to hire staff for general roles, now, with the understanding that roles and responsibilities may change as organizational priorities are developed.
- NIL TU, O does not have full access to prevention dollars due to the funding allocations to First Nations, which means it cannot fully integrate its protection and prevention programming.

Context

NIL TU, O Child and Family Services Society ("NIL TU, O") is an agency that provides a wide range of services to seven communities. NIL TU, O's services include:

- Family Strengthening Programs
    - Support to Families responding to child protection concerns;
    - Groups and workshops;
    - Parenting programs (Indigenous Triple P, Nurturing relationships);
    - Life skills programs;
    - Support to families to enhance family life;
    - Support to youth;
    - Support for young adults;
    - Supported visitation program;
    - Fetal Alcohol Spectrum Disorder (FASD) Support;

- Aboriginal S.M.A.R.T. and H.I.P.P.Y. programs;
- Support to Caregivers Caring for Children from their extended family or community; and
- Support access to counselling services.

- Support Services
  - Guardianship;
  - Voluntary support service;
  - Voluntary or special needs agreements;
  - Extended family program;
  - Youth agreements; and
  - Agreements with young adults.

NIL TU, O serves:

- Beecher Bay/Scianew First Nation
- Pauquachin First Nation
- Tsartlip First Nation
- Songhees First Nation
- Tsawout First Nation
- Tseycum Fist Nation
- T'Sou-Ke First Nation

The impact of Bill C-92 and additional prevention dollars is changing the existing landscape. NIL TU, O aims to recognize the needs in the communities it serves and expand its programs accordingly. Working with each community to accomplish this can be a challenge, particularly due to slow processes for approval (from both ISC and Chief and Council). NIL TU, O also noted the challenges associated with existing trauma among the community members it serves. Many family issues in the communities served, are underscored by existing issues of poverty e.g., housing quality.

NIL TU, O highlighted an additional challenge – the delivery of prevention services. When an agency is not connected to prevention funding there is a strategic risk that program effectiveness will be limited and there will be confusion within the communities as to the lead organization for service delivery. Integration of prevention and protection could mitigate this risk.

First Nations are in early discussions about the prospect of exercising jurisdiction, but NIL TU, O has not been invited to these discussions. NIL TU, O has a clear mission and a future vision, but it does not have control of all the elements needed to get there.

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 4

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Notes from collaborator
People	Do you have enough staff to meet your operational needs?	N	N	
	Does your compensation match the provincial standard?	Y	Y	
	Do you recruit staff from your member community(ies)?	Y	Y	
	Do you have high retention of employees?	Y/N	Y/N	Depends heavily on role. Frontline staff have higher turnover.
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	Y	Y	
	Are you attracting the same level of credentialed employees as mainstream organizations?	N	Y	

	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	N	N	
Process	Are your current operating baselines meeting needs?	N	N	
	Do you have a clear vision of your future state?	Y	Y	
	Are your post-transition activities defined?	N	Y	
	Is your post-transition workflow defined?	Y	Y/N	Will not change until there is more communication from member Nations.
	Is your post-transition management structure established?	Y	Y/N	
	Have you fully designed your prevention programming?	Y	Y/N	
	Have you fully designed your protection programming?	N	Y/N	
Strategy	Is your post-transition mission defined?	Y/N	Y	
	Is your post-transition strategy defined?	N	Y/N	
	Are your post-transition goals and	N	Y/N	

	organizational priorities defined?			
	Are all of your services or programs developed?	N	Y/N	
	Are all of your necessary organizational partnerships in place?	Y	Y	
Systems	Is your post-transition governance framework defined?	Y	Y	Will not change until communities communicate decisions on jurisdiction.
	Do you have an independent board of directors?	Y	Y	
	Is your post-transition legal framework defined?	Y	Y	Unclear what the future is and what communities will decide about developing their own CFS law.
	Is an adjudication system in place?	Y	Y	
	Is an adequate data system in place?	N	Y/N	Hired a data analyst to manage program data. The aim is to develop evidence of program effectiveness.
	Is an adequate performance management framework in place?	Y	Y	
	Is an adequate IT system in place?	Y	Y	Can always be improved.

	Is an adequate financial system in place?	Y	Y	
	Are your post-transition reporting systems in place?	N	Y	
	Are you developing new criteria for evaluative purposes?	Y/N	Y/N	Dependent on results of data analysis.

Table 5

Question	Response: Yes (Y) or No (N)	Notes from collaborator
Are you currently delivering secondary and tertiary prevention services?	Yes	
If you are not currently delivering secondary and tertiary prevention services, do you plan to do so?		
Is the delivery of prevention and protection services integrated at a case or family service level?	Family service level	

People

Recruitment and retention are key challenges. NIL TU, O has 30 employees, there are currently 9 people on leave. Issues in recruitment contributes to deficits in program delivery. Several factors drive these challenges:

- *Competitive recruitment environment.* Social workers and supporting staff are in high-demand industry wide. NIL TU, O has challenges starting new programs due to challenges to recruit staff.
- *High turnover.* There is high turnover amongst younger employees at NIL TU, O.
- *Lack of interest from member First Nations.* NIL TU, O aims to hire members from the First Nation communities it serves. It is challenging to recruit both inside and outside of the communities as people are not willing to relocate.

As problems with recruitment and retention persist, NIL TU, O aims to be a competitive employer. NIL TU, O offers compensation that matches the provincial standards, pension plan, a retention incentive, and internal job mobility through education opportunities. NIL TU, O also uses a variety of methods for recruitment such as advertising in First Nation communities, and media advertising. Despite being competitive and using different recruitment strategies, NIL TU, O continues to have challenges recruiting and retaining staff.

Process

NIL TU, O has clear processes established to meet its current needs. It expects program activities to remain the same post-transition. However, NIL TU, O is unsure of how the changing legislative landscape (e.g., C-92) will affect its future plans. A current process challenge, is:

- *Prevention programming.* With prevention funding going directly to the First Nations communities, NIL TU, O is trying to navigate both its role, and working with the communities it serves to educate on what is involved in delivering prevention programming.

Strategy

NIL TU, O has a clear mission and organizational philosophy. The key strategic challenge for NIL TU, O stems from working with seven different communities, all with unique contexts and needs. Factors influencing strategy include:

- *Engagement with communities.* NIL TU, O recognizes a variety of factors that can contribute to protection concerns, like the state of housing. Determining the best way to work with communities to address these issues is a challenge. NIL TU, O aims to include housing issues in its strategic plan to ensure children and families have access to the resources they need.
- *Changing the narrative.* NIL TU, O is trying to change both how it works with its member Nations – more hands on, as well as shift the perception of the agency in the communities it serves. The member Nations have started to establish new programs with new staff for the purposes of delivering prevention, this has enabled a better line of communication between NIL TU, O and the communities it serves. This is an on-going process that requires reinforcement both with its employees, and in the communities.

Systems

NIL TU, O is moving forward business-as-usual. It has established governance and legal frameworks, with a developed performance management framework, IT system, and financial system. A factor, impacting NIL TU, O's systems is:

- *Data and reporting.* NIL TU, O does not have an adequate data system to generate statistics for reporting or as evidence for program outcomes. It is in the process of getting its data organized and, in a place, where it can generate evidence for the efficacy of programs.

IFSD
IFPD

Collaborator H

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Collaborator H provides both protection and prevention services to one First Nation. In this community, all households have access to at least minimal Internet; however, relatively low completion rates for high school and post-secondary education are an area of concern. The employment rate is also relatively low, and the median household income falls below the provincial poverty line, suggesting a significant prevalence of income-based poverty in the First Nation. While most existing housing stock is considered suitable, nearly 30% requires major repairs.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 1 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 1

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

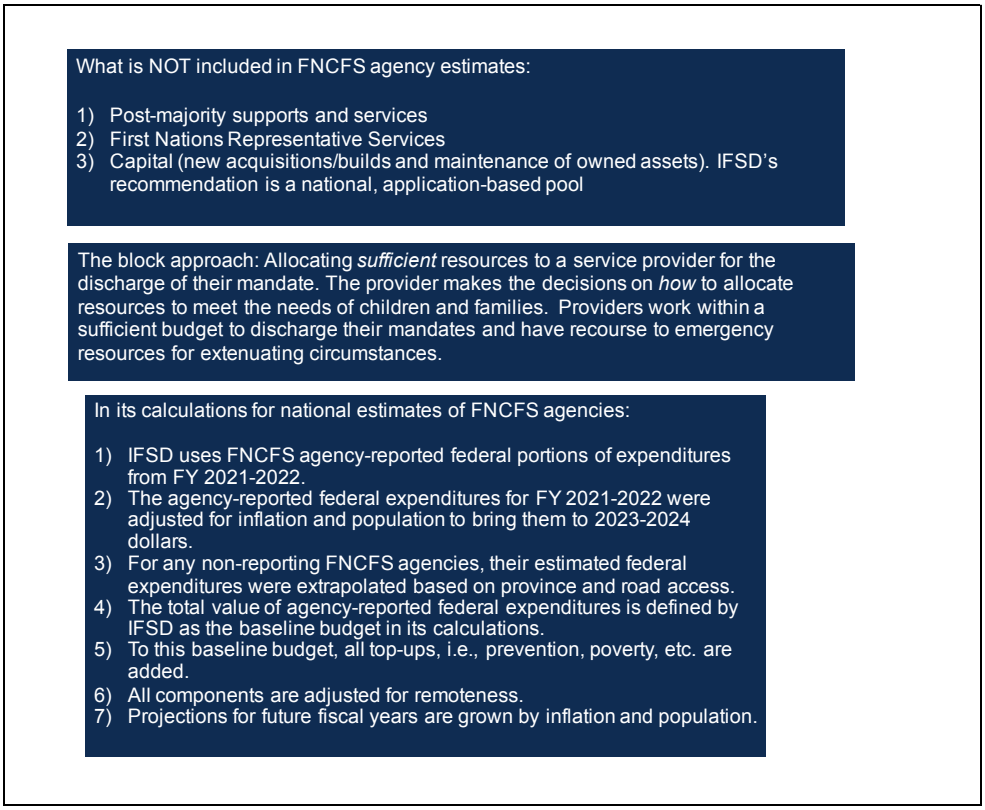

Table 2 outlines three illustrative funding scenarios for Collaborator H, including adjustments for remoteness, the Northern MBM, and excluding prevention funding.

*Identifying data has been suppressed or adjusted to maintain the anonymity of the collaborator.			

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Transitions Case Study: Collaborator H

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Collaborator H is confronting uncertainty in its planning as the First Nation it serves contemplates the pursuit of jurisdiction.
- Administratively, Collaborator H is independent from the First Nation and is externally accredited for its service standards. This means that Collaborator H must maintain certain operational standards to retain the designation. Its independence means it can manage salary levels and employment matters directly with its staff. A change in structure through jurisdiction may mean a loss in accreditation and staff should the same standards and practices not be upheld.
- Given the uncertainty, Collaborator H is only able to plan at most 6 months at a time. This limits long-term program development and delivery and complicates staff retention.

Summary Assessment

- Communication between an agency and a First Nation planning to exercise jurisdiction is critical. Lack of communication can cause downstream problems e.g., agency cannot plan long- or medium-term, First Nation may not be aware of what is required to operate CFS in the community, staff at agency may not wish to work under a new legal framework or for the First Nation.
- Transition is critically impacted by: (1) the anticipated reform of the FNCFS Program, (2) community-related factors (e.g., remoteness, housing, trauma, etc.), and (3) the decision on jurisdiction of Collaborator H's community.
- For Collaborator H, transition is largely on hold until the community makes decisions with respect to its pursuit of jurisdiction.

Context

Collaborator H is an agency that provides a wide range of services to one community. Collaborator H's services include:

- Child protection services;
- Family services;
- Foster care;
- Prevention services;
- Casual/emergency;
- Prevention youth; and
- Family group conferencing.

Collaborator H's transition will be significantly influenced by the decision to exercise jurisdiction by the community it serves. There has been limited communication between Collaborator H and the First Nation regarding the plan to pursue jurisdiction. This creates challenges for Collaborator H to plan for its transition. Collaborator H can only plan 3-6 months into the future,

until its future role with the First Nation is clarified. Collaborator H described this as being in “no mans land.”

Collaborator H highlighted an issue for First Nations pursuing jurisdiction, which is translating the law into practice. It is not only a law that is needed, but also policy manuals, governance structures, and qualified staff. Attracting qualified social workers is challenging industry wide. The majority of Collaborator H’s current staff have noted that they will look for other employment options, or retire, if CFS is taken over by the First Nation.

Until there is more clarity on the plan of the First Nation, Collaborator H is continuing with the status quo. The agency is focused on the impact of CHRT compensation in the community. Many community members have trauma, and it is expected that CHRT compensation delivered without a plan and resources in place, may increase the number of children in care. In response, Collaborator H has been providing education on financial literacy. Additionally, it has purchased multiple properties as emergency housing, and trained its staff as foster parents.

External factors influencing Collaborator H’s transition make it difficult to articulate a future state, and consequently, to provide a gap analysis. Collaborator H is able to compete with mainstream agencies in some areas, but factors outside of Collaborator H’s control complicate transition planning.

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 3

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Notes from collaborator
People	Do you have enough staff to meet your operational needs?	Y	Y	Yes, for current needs. Not enough for future vision.

	Does your compensation match the provincial standard?	N	N	
	Do you recruit staff from your member community(ies)?	Y	Y	Yes, but it is challenging particularly due to remoteness.
	Do you have high retention of employees?	Y	Y	
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	Y	Y	
	Are you attracting the same level of credentialed employees as mainstream organizations?	N	N	
	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	N	N	
Process	Are your current operating baselines meeting needs?	Y	N	Yes, for current needs. Not future vision.
	Do you have a clear vision of your future state?	N	N	Unclear what the future vision will be. Require communication with the First Nation.

	Are your post-transition activities defined?	N	N	
	Is your post-transition workflow defined?	N	N	
	Is your post-transition management structure established?	N	Y	
	Have you fully designed your prevention programming?	N	N	
	Have you fully designed your protection programming?	N	N	
Strategy	Is your post-transition mission defined?	N	N	
	Is your post-transition strategy defined?	N	N	Collaborator H can only plan short term. The future of the agency is not clear.
	Are your post-transition goals and organizational priorities defined?	N	N	
	Are all of your services or programs developed?	N	N	
	Are all of your necessary organizational partnerships in place?	N	N	
Systems	Is your post-transition governance framework defined?	N	N	

	Do you have an independent board of directors?	Y	Y	
	Is your post-transition legal framework defined?	N	N	
	Is an adjudication system in place?	N	N	
	Is an adequate data system in place?	N	N	
	Is an adequate performance management framework in place?	N	N	
	Is an adequate IT system in place?	N	N	
	Is an adequate financial system in place?	N	N	
	Are your post-transition reporting systems in place?	N	N	
	Are you developing new criteria for evaluative purposes?	N	N	

Table 4

Question	Response: Yes (Y) or No (N)	Notes from collaborator
Are you currently delivering secondary and tertiary prevention services?	Y	
If you are not currently delivering secondary and tertiary prevention services, do you plan to do so?		

Is the delivery of prevention and protection services integrated at a case or family service level?	Y	

People

Recruitment is a key challenge. Collaborator H employs 60 staff and has low turnover. The key challenge to recruitment is:

- *Future Vision.* Collaborator H's staff may not wish to continue working under a different legal framework or structure, i.e., work for the First Nation, or work under a different law. Communication between the First Nation and the agency is critical.
- *Remoteness.* Collaborator H is located in a Northern area, where there is limited housing, activities, and availability of services.
- *Housing.* Adequate housing is difficult to obtain in the community, both for community members, and those hired from mainstream organizations.

As problems with recruitment persist, Collaborator H aims to be a competitive employer. It offers comparable compensation to mainstream organizations and a comprehensive benefit plan. However, it is challenging to hire outside of the community due to its remote location and lack of housing.

Process

Collaborator H has defined policies and procedures and will continue with the status quo until the future of Collaborator H and the First Nation is defined.

Strategy

Collaborator H has a clear mission and organizational philosophy. The key strategic challenges for Collaborator H stem directly from two issues: uncertainty and community trauma. Factors influencing strategy include:

- *Community-level politics.* Existing relationships with Chief and Council need to be repaired. These relationships are critical for Collaborator H to effectively deliver services.
- *Exercising jurisdiction.* Collaborator H cannot plan a long-term strategy until the First Nation communicates its plan to pursue jurisdiction. In the meantime, it is planning in 3–6-month increments.

Systems

Collaborator H cannot plan for the future until the community it serves communicates its plan for jurisdiction. In the meantime, Collaborator H is continuing with the status quo, and cannot plan systems for post-transition.

IFSD
IFPD

Yellow Thunderbird Lodge

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Yellow Thunderbird Lodge (YTL) delivers both protection and preventions services to fourteen First Nations in Saskatchewan. Table 1 outlines contextual information about the First Nations YTL serves.

Table 1

Collaborator name: Yellow Thunderbird Lodge

First Nation(s) served:	After-tax total median household income (2016)	Difference between after-tax median household income above or below 2022 MBM?
1) Kahkewistahaw First Nation	$31,200.00	Below
2) Ochapowace Nation	$36,400.00	Below
3) Zagime Anishinabek Nations	$50,000.00	Above
4) White Bear First Nations	$51,200.00	Above
5) Cote First Nation	$22,800.00	Below
6) Keeseekoose First Nation	$29,000.00	Below

Yellow Thunderbird Lodge (YTL) serves 14 First Nations that have year-round road access and are within 350km of a service centre. The majority of First Nation are affected by income-based poverty. Connectivity is quite high among the First Nations, with most households receiving 5mbps or more. Employment, housing, and secondary education vary significantly among the communities. While all communities face housing issues, in one First Nation more than 60% of houses require major repairs. Education rates also vary significantly. The high school graduation rate among youth aged 15-24 in the First Nations ranges from 0% to 65%. The diversity of circumstances suggests that YTL's approach to service delivery will vary depending on the unique circumstances of each First Nation.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

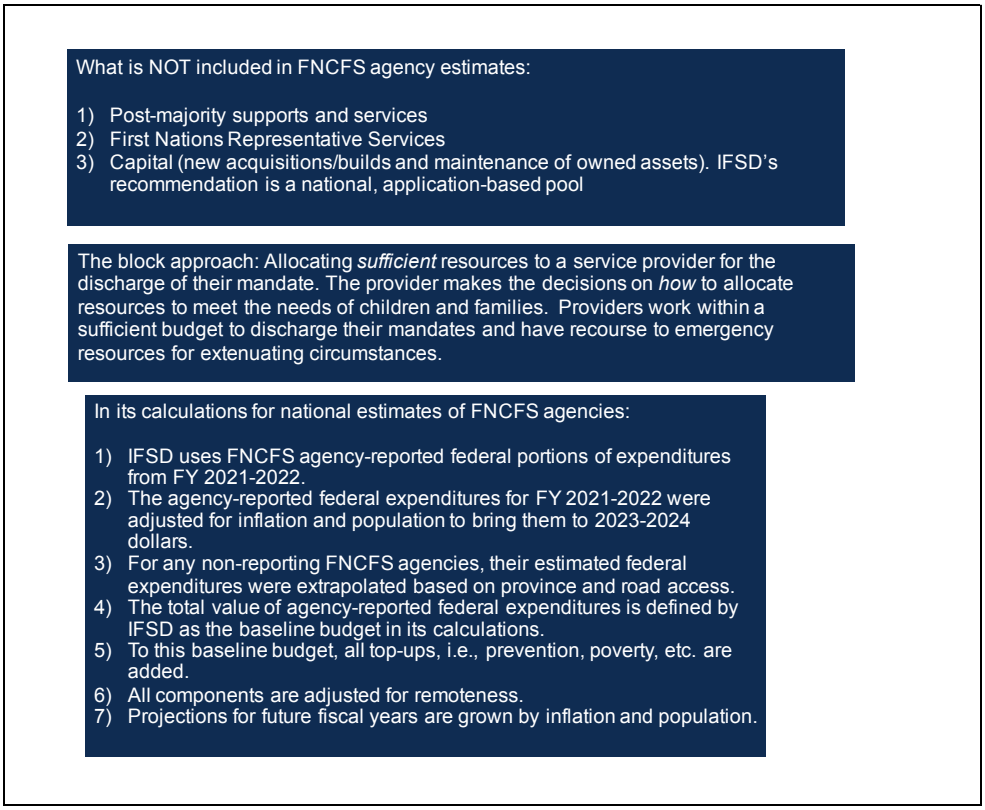

Table 3 outlines four illustrative funding scenarios for YTL, including applying a federal-only baseline, applying a baseline based on the average of actual expenditures, excluding prevention funding, and applying the Northern MBM.

Table 3

Yellow Thunderbird Lodge				
Component	**Scenario 1: Uses the reported federal-only expenditure of 2021-22 as the baseline budget**	**Scenario 2: Using the actual average expenditures over 2018-19 to 2022-23**	**Scenario 3: Scenario 2 excluding prevention funding**	**Scenario 4: Scenario 3 with Northern MBM replacing the provincial MBM as the poverty line**

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Transitions Case Study: Yellow Thunderbird Lodge

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Yellow Thunderbird Lodge (YTL) has adjusted its standards and practices to align to the cultures and traditions of the First Nations it serves.
- The agency has anticipated changes through the FNCFS Program and has been working with First Nations to develop their capacity.
- To plan and manage transition YTL is:
    - Incorporating culture and traditions into service delivery models.
    - Integrating prevention and protection to better serve member communities.
    - Investing in core systems like data gathering to support the generation of evidence for improved decision making and funding requests.

Summary Assessment

- YTL faces significant uncertainty stemming from ISC funding changes within the Nation it serves (i.e., implementing new law, collaboration of services).
- Importantly, YTL is moving forward with modifying and integrating Indigenous approaches to its service delivery models.
- Recruitment and retention are key challenges.
- YTL established Transition Agreements to fully integrate its protection, intervention, and prevention programming. Outlining funding allocations at the tertiary, secondary and primary levels of services to First Nations.

Context

Yellow Thunderbird Lodge (YTL) is an organization that provides services to 14 member Nations. YTL's services include:

- Prevention services;
- Intervention; and,
- Protection services.

YTL serves:

- Cote First Nation;
- Keeseekoose First Nation;
- The Key;
- Kahkewistahaw First Nation;
- Zagime Anishinabek Nations;
- Ochapowace Nation;
- Little Black Bear's Band;
- Ocean Man First Nation;
- Pheasant Rump First Nation;
- White Bear First Nations;

- Peepeekisis Cree Nation;
- Starblanket Cree Nation;
- Nekaneet First Nation; and,
- Muscowpetung Saulteaux Nation

YTL's transition will be impacted by the anticipated reform of the FNCFS Program and the decisions on jurisdiction made by the Nations it serves. Recruitment and retention are currently a significant issue. If services are transitioned to individual Nations, finding qualified staff may be even more difficult (competition may increase, Nations may offer different compensation).

YTL identifies itself as a leader for other FNCFS agencies in Saskatchewan. It is integrating Indigenous approaches to its service delivery models based on positions of the Nation. YTL attributes its success to maintaining stability, particularly with an executive director who is effective at knowledge translation. Additionally, YTL recognizes and respects different political parties, cultural groups, and unique contexts to maintain positive relationships with its member Nations.

YTL has well defined strategies and processes, it is implementing changes to its service delivery throughout its transition agreements. YTL uses both Western and Indigenous approaches to deliver CFS, by integrating culture, identity, and language into service models. Each respective approach is relevant to the cultural group it serves. YTL has developed new guidelines and procedures that outline these approaches.

A legal framework has already been developed, but it remains to be seen how individual Nations will implement the framework into practice. With developed data systems and evaluative criteria, YTL uses data and outcomes as evidence for its approach and for funding asks. Processes for adjudication have yet to be fully designed and implemented.

Individual Nations may evolve to operate differently from each other (with or without support from YTL). External decisions need to be made by the Nations before YTL can fully determine its future vision.

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks, capital and facilities systems).

Table 4

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years?	Notes from collaborator

			Response: Yes (Y) or No (N)	
People	Do you have enough staff to meet your operational needs?	N	N	
	Does your compensation match the provincial standard?	N	N	On-going always behind.
	Do you recruit staff from your member Nations?	Y	Y	Always try to recruit in partnership.
	Do you have high retention of employees?	N	Y	
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	N	Y	
	Are you attracting the same level of credentialed employees as mainstream organizations?	N	Y	
	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	N	N	Hopefully.

Process	Are your current operating baselines meeting needs?	Y	Y	With long term reform funding.
	Do you have a clear vision of your future state?	N	Y	Current funding mechanism is not stable.
	Are your post-transition activities defined?	N	Y	Have better understanding in 3 years. Final Settlement agreement be signed.
	Is your post-transition workflow defined?	N	Y	Have better understanding in 3 years. Final Settlement agreement be signed.
	Is your post-transition management structure established?	N	Y	Have better understanding in 3 years. Final Settlement agreement be signed.
	Have you fully designed your prevention programming?	N	Y	Need to integrate YTL and Nations.
	Have you fully designed your protection programming?	N	Y	Legislation dictates. YTL integrates prevention and intervention.
Strategy	Is your post-transition mission defined?	Y	Y	
	Is your post-transition strategy defined?	Y	Y	

	Are your post-transition goals and organizational priorities defined?	Y	Y	
	Are all of your services or programs developed?	N	Y	On-going development.
	Are all of your necessary organizational partnerships in place?	N	Y	
Systems	Is your post-transition governance framework defined?	N	Y	Beginning stages
	Do you have an independent board of directors?	Y	Y	
	Is your post-transition legal framework defined?	Y	Y	Kinda/sorta.
	Is an adjudication system in place?	N	N	Provincial only.
	Is an adequate data system in place?	N	Y	
	Is an adequate performance management framework in place?	Y	Y	
	Is an adequate IT system in place?	Y	Y	
	Is an adequate financial system in place?	Y	Y	
	Are your post-transition reporting systems in place?	N	Y	

	Are you developing new criteria for evaluative purposes?	Y	Y	

Table 5

Question	Response: Yes (Y) or No (N)	Notes from collaborator
Are you currently delivering secondary and tertiary prevention services?	Y	
If you are not currently delivering secondary and tertiary prevention services, do you plan to do so?	Y	
Is the delivery of prevention and protection services integrated at a case or family service level?	Y	

People

YTL is currently experiencing issues with recruitment and retention. Several factors drive these challenges:

- *Competitive recruitment environment.* Social workers and supporting staff are in high demand industry-wide.
- *High turnover.* Funding uncertainty creates an unstable employment environment. Fully trained staff may depart in search of greater stability at mainstream organizations. Working conditions are also demanding (ex. staff need to be resilient to local political pressures).
- *Limited training.* Staff are expected to hit the ground running and be operation in two weeks from starting. Ideally, YTL would have three months to fully train new staff. YTL would like to develop its own training program for social workers, First Nation Representatives and Nation employees, but is limited due to funding.

Process

YTL's legal framework is clear but is in the early developmental stages in the Nations. YTL has a vision for its future, but is limited by several factors:

- *Funding uncertainty.* YTL cannot be sure it will be able to fund existing programs and services into the future. This limits the ability to plan for transition effectively.
- *Unique community contexts.* YTL works with individual Nation to deliver programs that meet each unique context. But this can be difficult with Nation each approaching a new legal framework differently.
- *Prevention funding.* The disbursement of prevention funding to its member Nations has created a complex situation. YTL works with the Nations it serves without capacity funding to help build capacity and translate knowledge on what prevention programs look like. This has created "organized confusion."

- *Existing mentality.* YTL is pursuing jurisdiction, but due to the mentality of historical trauma of the Nations it serves, it is challenging to communicate the vision and benefits of exercising jurisdiction over CFS with limited knowledge on inherent rights and treaty rights as it pertains to child welfare.

Strategy

YTL's strategy is clear. It uses both Western and Indigenous approaches to delivering CFS, which is defined in its policies, models, and procedures. YTL has developed service delivery models unique to each Nation, which integrate its member Nations culture, identity, and languages. YTL's strategy is continuously evolving.

Systems

YTL is asserting full jurisdiction over their children. It will be a long-term process to develop the systems needed to get to the ideal state of recognition that Nations take care of their own. YTL has systems in place for data and has defined evaluative criteria. As YTL transitions to its future application of First Nation Laws and Acts; it will consider options for an adjudication system and prepare fully operational IT and financial systems.

IFSD
IFPD

Pimicikamak Cree Nation

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Pimicikamak Cree Nation (Pimicikamak) is pursuing jurisdiction and is currently served by an FNCFS agency. Table 1 outlines contextual information about Pimicikamak.

Table 1

Collaborator name: Pimicikamak Cree Nation				
First Nation(s) served:	**Total population (on-reserve, IRS 2022)**	**Geographic zone (1-4)**	**After-tax total median household income (2016)**	**Difference between after-tax median household income above or below 2022 MBM?**
1) Cross Lake Band of Indians	6535	2	$45,600.00	Below
Pimicikamak Cree Nation is located just over 100km north of Norway House, and has year-round road access. Internet connectivity in the community is poor, with no homes on reserve receiving more than 5mbps. The indicators suggest that housing is a pressing issue, with 59% of homes needing major repairs, and only 57% of homes meeting standards of suitability. Employment is low at only 35%, however, the median income is above the poverty line. The high school graduation rate among youth is also low, at 34%. The indicators suggest that Pimicikamak's approach to service delivery could emphasize housing, employment, and educational supports.				

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Transitions Case Study: Pimicikamak Cree Nation

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Pimicikamak Cree Nation's (Pimicikamak) journey in jurisdiction recognizes the value of an independent child and family services organization. Its law will be implemented by Nikan Awasisak Agency (Nikan), its existing FNCFS agency.
- While the agency is in place structurally, transition will focus – even ahead of the enactment of the law – on the realignment of practice to emphasize prevention in a culturally relevant manner with the best interests of the child at its core.

Summary Assessment

- Pimicikamak is served by Nikan. Pimicikamak is developing its own law which will be implemented by Nikan.
- Transition is critically impacted by the anticipated reform of the FNCFS Program.
- Recruitment is a key challenge.
- Nikan benefits from a supportive local political environment. Pimicikamak leadership is attuned to the challenges of providing CFS and recognize that Nikan's governance must have independence as should its practice of child welfare.
- Strong governance is an important element of successful reform of the CFS program. However, much work is required to build the processes, people, and systems to fully implement the program.

Context

Pimicikamak Cree Nation (Pimicikamak) is currently served by Nikan Awasisak Agency (Nikan). This relationship will continue and evolve as Pimicikamak develops and implements its new law. Nikan provides a range of services including:

- Prevention services
- Protection services
- Family counselling
- Alternative care
- Wakotowin (family placements)
- Minor parent, expectant and single parent services
- Land-based/cultural opportunities
- Recreational opportunities for families/children
- Family support services
- Intake/after-hours services
- In-house therapists
- Family enhancement/prevention
- Emergency/short-term support services

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);

- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 4

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Notes from collaborator
People	Do you have enough staff to meet your operational needs?	N	Y	We would love to add more positions but we are short on space.
	Does your compensation match the provincial standard?	N	N	
	Do you recruit staff from your member community(ies)?	Y	Y	
	Do you have high retention of employees?	Y	Y	9% vacancy rates.
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	Y	Y	We hired an in-house trainer.
	Are you attracting the same level of credentialed employees as	N	N	In the cities we do, but locally it is challenging.

	mainstream organizations?			
	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	N	N	Law firms, accountants, etc. are based in Winnipeg and provide work remotely from the city.
Process	Are your current operating baselines meeting needs?	Y/N	Y/N	Challenges mostly with human resources.
	Do you have a clear vision of your future state?	N	Y/N	Not presently, as we wait for the many changes that will be presented in our new CFS law.
	Are your post-transition activities defined?	N	Y	Not clearly. Broad vision. A lot depends on new CFS law.
	Is your post-transition workflow defined?	N	N	Just starting. Will be defined by new CFS law.
	Is your post-transition management structure established?	N	Y	There will be some changes. Iterative process.
	Have you fully designed your prevention programming?	N	Y	Will change with the implementation of the law.
	Have you fully designed your protection programming?	N	Y	
Strategy	Is your post-transition mission defined?	N	N	It may be affected.
	Is your post-transition strategy defined?	N	N	Iterative process.

	Are your post-transition goals and organizational priorities defined?	N	N	It's just the beginning of the process.
	Are all of your services or programs developed?	N	N	After implementation of the new law. Programs will evolve after new law is implemented.
	Are all of your necessary organizational partnerships in place?	N	N	Just starting to talk with organizations.
Systems	Is your post-transition governance framework defined?	N	Y	We have to wait for the new CFS Law
	Do you have an independent board of directors?	Y	Y	
	Is your post-transition legal framework defined?	N	Y	It will change once new law is implemented.
	Is an adjudication system in place?	N	N	It might take longer. Process will begin after law is implemented.
	Is an adequate data system in place?	N	Y/N	Data system is meeting some needs. Could be improved. In the absence of our own system, we have no choice but to continue using the Province's IT system, CFSIS. We must ensure we negotiate funding for the creation of a new data system as part

				of our coordination agreement under the new CFS law.
	Is an adequate performance management framework in place?	N	Y	
	Is an adequate IT system in place?	Y	Y	We are transitioning to having a hybrid service to include an IT position in-house.
	Is an adequate financial system in place?	N	Y	FACTS is less than ideal as it is a DOS system, however there is no other alternative because SAGE, our other finance program, cannot accommodate all of our needs.
	Are your post-transition reporting systems in place?	N	Y	
	Are you developing new criteria for evaluative purposes?	N	N	Maybe in the future.

Table 5

Question	Response: Yes (Y) or No (N)	Notes from collaborator
Are you currently delivering secondary and tertiary prevention services?	Yes	We provide both protection and prevention services. Referrals are also sent to other applicable programs within the community, if they require more specialized support that we cannot offer. Addiction issues are referred to external resources at the Health Department. Family violence issues are immediately addressed by assisting families to safety, either to other familial supports or assist by arranging/providing rides

		to shelter's out of town. We will provide ongoing support services or aftercare services through prevention programs. Supports that we are able to provide are programs and classes to address basic household needs, to address issues through traditional, milieu and cultural/land-based connections. We help to provide awareness and also recreational activities for children, youth, families. We have a child abuse team that receives referrals from our protection teams and cases potentially referred to our child abuse committee.
If you are not currently delivering secondary and tertiary prevention services, do you plan to do so?	Yes	Once our new CFS law comes into effect we will continue to provide services according to the parameters of the new law.
Is the delivery of prevention and protection services integrated at a case or family service level?	Yes	Delivery of prevention & protection is integrated at a family service level. Although we have the prevention team and cases separated from the protection side of child welfare, sometimes their work overlaps or cases flow from one area to the other. We work from a holistic approach and try engaging the entire family system. We also assist children in care and their families on the prevention side by encouraging all families to participate in classes and programming offered. Alternative care is a placement resource in house that assists with the placements of children in care. 93% of our placements are culturally appropriate. 76% are kinship placements.

People

Recruitment, especially of professional staff (i.e., doctors, lawyers) is a key challenge. Vacancy rates are high at 9% but turnover is low. Several factors drive recruitment challenges:

- *Competitive recruitment environment.* Social workers and supporting staff are in high demand industry-wide.
- *Lack of salary parity with mainstream staff.* Staff at Nikan are not compensated in line with provincial child welfare workers. This makes it more difficult to attract qualified staff.

Process

Pimicikamak and Nikan are in the initial stages of planning post-transition processes. Once the new law is fully developed and implemented, Nikan will need to ensure its processes align with the new legal framework.

Strategy

Pimicikamak and Nikan are in the initial stages of planning post-transition strategy. Developing strategy will be an iterative process as the new law is implemented.

Systems

Nikan and Pimicikamak benefit from having an established independent Board of Directors. Key systems (i.e., a post-transition governance framework, adjudication system, and performance management framework) are in the early stages of development.

IFSD
IFPD

Collaborator F

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Collaborator F delivers protection and prevention services to 6+ First Nations. All are located between 50 km and 350 km from Collaborator F's main office. Remoteness and geography may correlate with the relatively small populations that characterize the First Nations Collaborator F serves. The communities vary considerably in terms of internet connectivity, high school or post-secondary school completion rates, and employment rate. Across the communities, there is wide ranging outcomes in labour participation (25-63%) and high school education rates among youth aged 15-25 (0-100%). The high degree of variability among communities highlights the need for Collaborator F to tailor their approach to address the unique circumstances that are likely to impact the well-being of children and families.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 1 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 1

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

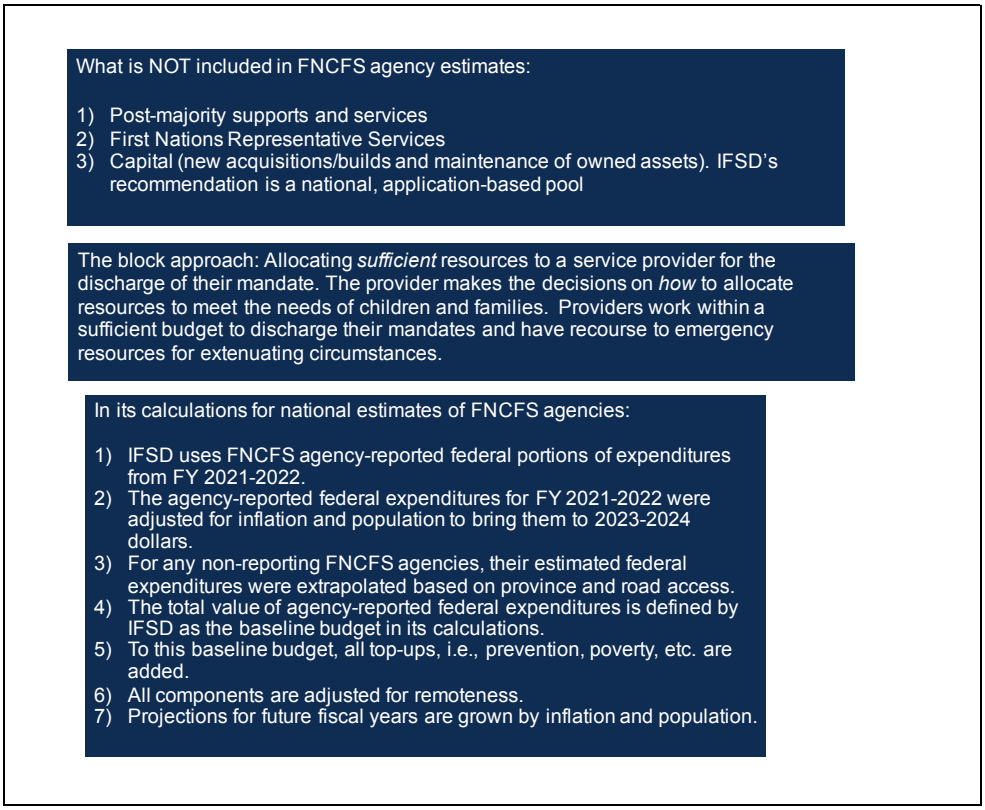

Table 2 outlines three illustrative funding scenarios for Collaborator F, including adjustments for remoteness, exclusion of prevention funding, and the Northern MBM.

Table 2

Collaborator F			
Component	**Scenario 1: With remoteness calculated using ISC's 15%-scaled CAF-for all agencies**	**Scenario 2: prevention funds are excluded**	**Scenario 3: Scenario 2 with Northern MBM replacing Provincial MBM for measuring the poverty gap**

*Identifying data has been suppressed or adjusted to maintain anonymity of collaborator.			

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Transitions Case Study: Collaborator F

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Collaborator F is on a journey to redevelop its organization plan and structure. This involves:
    - Rebuilding relationships with the First Nations it serves in the spirit of collaboration.
    - Making difficult decisions on staffing, reorganizing, and organizational restructuring.
    - Aligning its policies, procedures, and practices to its new approach to service delivery.

Summary Assessment

- Collaborator F is just beginning to redevelop its people, processes, strategies, and systems.
- Transition is critically impacted by two factors: (1) Collaborator F's organizational development; and (2), Collaborator F's ability to build and rebuild relationships with the communities that it serves. Collaborator F is working toward these objectives, but it will take time and resources to get there. Collaborator F will need to:
    - Strengthen and stabilize its organization. This can be tackled through defining and implementing clear strategic objectives with communication, focusing on retaining and aligning leadership staff, and clarifying roles and responsibilities for all staff.
    - Build and rebuild relationships with communities. Collaborator F will need to develop a comprehensive communications strategy with communities that is sustainable for the agency. Developing clear and current policies is a critical consideration as it will help to ensure communities receive consistent services and messaging from Collaborator F.
- Collaborator F does not have full access to prevention dollars due to the funding allocations to First Nations, which means it cannot fully integrate its protection and prevention programming.

Context

Collaborator F is an agency that provides a range of services to 6+ collaborators. Collaborator F's services include:

- Advocacy;
- Customary care/foster care;
- Family Support and prevention services; and,
- Protection services.

Collaborator F's member communities are at early stages of considering pursuing jurisdiction. A hesitation to do so is related to the required insurance and liability associated with CFS. There

are at least two nations pursuing jurisdiction while other smaller communities with small caseloads, will continue to receive services from the agency.

Collaborator F's transition will be influenced by two key factors: (1) Collaborator F's organizational development, and (2) Collaborator F's ability to build and rebuild relationships with the communities that it serves.

Outside of the transition that will occur with the reform of the current FNCFS Program, Collaborator F is undergoing its own organizational transition. It has a new executive director, who is currently leading an organizational reset and tackling numerous issues, stemming from and including:

- A lack of clearly defined roles and responsibilities among staff.
- A two-year vacancy in a key leadership position (Director of Service).
- An incomplete board of representatives.
- A lack of updated policies and procedures.

As one key staff member put it "We've been here for eight years, and it feels like we're in year 1." This organizational reset complicates Collaborator F's future transition under a reformed FNCFS Program.

Building and repairing relationships are key to transition. Communicating with, and finding common ground, with each community is an important barrier the agency will have to overcome in order to transition effectively. This challenge is further complicated by the diverse nature of the communities served, including whether or not communities decide to exercise jurisdiction.

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 3

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Notes from collaborator

People	Do you have enough staff to meet your operational needs?	N	N	Potentially have enough staff but people are not in the right positions. This is both an organizational challenge and a recruitment challenge.
	Does your compensation match the provincial standard?	Y/N	Y/N	Not sure what the provincial compensation is to compare.
	Do you recruit staff from your member community(ies)?	Y	Y	Yes, but this is challenging given community realities (trauma, addictions, conflicts of interest, family ties, leadership and the intersection of that in child welfare).
	Do you have high retention of employees?	N	N	CFS is a revolving door but hope to retain employees throughout the next three years. There is a lot of uncertainty.
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	N	Y	Would like this to be developed and offered within the next three years.
	Are you attracting the same level of credentialed employees as	N	N	No, focusing on building internal capacity by supporting existing employees to get their qualifications

	mainstream organizations?			and achieve their educational goals.
	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	Y	Y	Professional staff are outsourced on as needed basis, e.g., traditional healer, lawyer, therapists.
Process	Are your current operating baselines meeting needs?	N	N	
	Do you have a clear vision of your future state?	N	Y	Understand what the vision is for the next three years, but this needs to be well-understood and articulated to the entire organization to get employees on board.
	Are your post-transition activities defined?	N	Y	Not clearly, but vaguely. A 2014 service model is being revived as it worked well in the past. It is being re-introduced and updated to be relevant to the current context. The hope is because it already exists that it will be functioning within three years.
	Is your post-transition workflow defined?	N	N	
	Is your post-transition management structure established?	Y/N	Y	Management structure is taking shape.

				Two supervisors have been hired.
	Have you fully designed your prevention programming?	N	Y	Reviving 2014 service delivery mode. In three years, the prevention programming should be designed and will continue to evolve.
	Have you fully designed your protection programming?	N	Y	2014 service model is being revitalized which will support the design of protection.
Strategy	Is your post-transition mission defined?	Y/N	Y	Want to make sure that the practices, conversations, thought processes are having the best impact on child and family services. The mission is defined but is not fully understood within the agency – working on communication.
	Is your post-transition strategy defined?	N	Y	The strategy isn't clearly defined, the management level knows what it is, but it hasn't flowed down.
	Are your post-transition goals and organizational priorities defined?	N	Y	Work in progress, it is not clearly defined, but will be in three years.

	Are all of your services or programs developed?	N	Y	The aim is to have them developed in 3 years and they continue to grow.
	Are all of your necessary organizational partnerships in place?	N	N	Organizational partnerships are growing, there are two community organizations that the agency collaborates with to enhance the partnership. Identifying synergies is important. Organizational partnerships are growing, but in place currently.
Systems	Is your post-transition governance framework defined?	N	Y	Yes, in three years.
	Do you have an independent board of directors?	Y/N	Y/N	Some board positions are unfilled. Chiefs are not supposed to be on the board, but one Chief is.
	Is your post-transition legal framework defined?	N	N	The future of the First Nations exercising jurisdiction is not clear.
	Is an adjudication system in place?	N	N	
	Is an adequate data system in place?	N	Y/N	Currently undertaking a 2-year implementation of a

				data management system. In 2.5-3 years, it should be where we need to be.
	Is an adequate performance management framework in place?	N	Y	
	Is an adequate IT system in place?	Y	Y	Currently finalizing cyber security to bring us the next level. This will be in place in the next month.
	Is an adequate financial system in place?	N	Y	Working to get out of a large deficit. Policies, processes, ideologies around money, spending need to shift.
	Are your post-transition reporting systems in place?	N	N	The hope is that through protocol agreements there will be an understanding with First Nations. This is uncertain.
	Are you developing new criteria for evaluative purposes?	N	Y	Evaluation ongoing. Some criteria is not new, but was not being utilized. New criteria might have to be developed if First Nations are delivering their own prevention.

People

Leadership stability and recruitment are key challenges. This creates deficits in program delivery and elevates surpluses in budgets. Several factors drive these challenges:

- *Lack of clear direction and stability in leadership roles.* High turnover and lack of a consistent vision in leadership staff has contributed to organizational instability.
- *Lack of clarity on roles and responsibilities of staff.* Staff are unsure of the parameters of their roles. Staff may act outside of their roles and direct others incorrectly.
- *Difficulty recruiting in served communities.* A lack of trust in communities has made it difficult for the agency to recruit locally. This makes relationship building more challenging.

Collaborator F's new leadership is actively addressing the above issues, including by developing a clear organization chart and HR policies. However, organizational stability will take time to achieve.

Process

Collaborator F does not have well-developed processes, policies, or operating baselines. Leadership is currently overhauling critical policies (e.g., child protection policies) to ensure consistency in operations. This is further complicated by a lack of resources for programs (e.g., staff may be unaware of budget constraints, due to a lack of consistent direction/supervision). Collaborator F would like to shift towards a prevention-focused approach, but it faces several challenges:

- *Aligning the organization with cultural connections.* Leadership is currently clarifying staff roles and titles to generate operational consistency. Cultural connections have different meanings among staff. Organizational alignment is a challenge.
- *Overhaul of policies.* Leadership has implemented some new policies, but it is still in the process of revising others. Staff may have verbal conversations about policies, but official tracking of policy changes has been negligible.
- *Unique community contexts.* Collaborator F works with individual communities to deliver programs that meet each unique context. But this can be difficult under provincial legislation, and with diverse community circumstances or trajectories. Additionally, services that a community asks for may not be fundable under provincial law.

Strategy

Collaborator F is currently defining its long-term vision. It has identified broad goals (e.g., moving toward a prevention-focused approach), but has not yet defined details.

Key strategic challenges include:

- *Defining and communicating a vision and mission.* Collaborator F's staff are operating with different goals and visions. Clearly defining and communicating a vision and mission, with both staff and external stakeholders, will be critical for an effective transition.
- *Developing a clear organizational structure.* Staff and leadership need to be aligned in their understanding of roles.
- *Relationships with communities.* Determining the best way to communicate and work with communities will take significant time. There is no roadmap for this process.

Systems

Collaborator F's key systems challenges are secondary to its other organizational challenges. Building robust systems (including data architecture, performance management, and financial systems) are critical to an effective transition. However, these areas can only be assessed and tackled once people, processes, and strategies are in place.

IFSD

Collaborator A

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach; and
3) Child and family services focused capital needs analysis.

Overview

Collaborator A delivers a variety of services including prevention and protection services to 6+ First Nations. Most of these First Nations have easy year-round access to the nearest service centre, while other Nations are not accessible year-round. Although many communities served by Collaborator A provide health and/or social services, most do not offer primary or secondary education, despite relatively high rates of high school completion. While internet connectivity is generally high, there are notable deficiencies in housing infrastructure, with approximately 20% of housing considered unsuitable in the largest communities.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 1 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 1

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

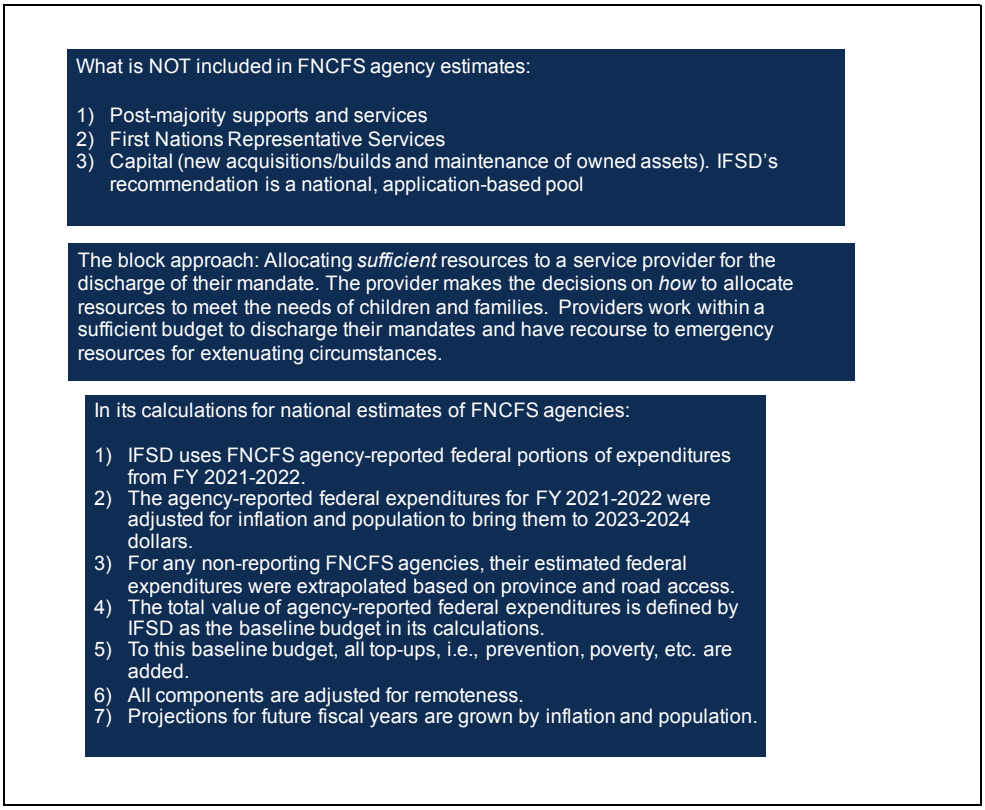

Table 2 outlines three illustrative funding scenarios for Collaborator A, including adjustments for remoteness, the Northern MBM, and increasing the baseline for more staff.

*Identifying data has been suppressed or adjusted to maintain anonymity of the collaborator.			

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

IFSD
IFPD

Carrier Sekani Family Services

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Carrier Sekani Family Services (CSFS) delivers a wide range of services, including prevention and guardianship and voluntary services, to eleven First Nations in northern British Columbia. Table 1 outlines contextual information about the First Nations CSFS serves.

Table 1

Collaborator name: Carrier Sekani Family Services

First Nation(s) served:	Total population (on-reserve, IRS 2022)	Geographic zone (1-4)	After-tax total median household income (2016)	Difference between after-tax median household income above or below MBM? (2016)

Skin Tyee Nation	57	2	Not available	Not available
Lake Babine Nation	1049	2	$36,800	Below

Carrier Sekani Family Services serves 11 First Nations in northern British Columbia with varying populations, most of which have year-round-access to service centers less than 350km away. However, one outlier Nation is not accessible year-round. Employment rates range between 30-60% in the communities, and income levels are below the poverty line in those Nations with available data. Income-based poverty may therefore influence the well-being of children under CSFS care. Notably, all communities report gaps in housing though the range between communities is significant - some communities observe only 30% of dwellings requiring major repairs, while others observe over 45%. Household internet connectivity is also not consistently established across communities, most have universal access to low-speed internet but some communities lack internet entirely.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Summary of Capital Needs Cost Estimate

Overview

1) Table 4 summarizes your capital needs, as understood by IFSD.
2) The capital costing model multiplies the units summarized in Table 4 by a set of unit cost assumptions to produce a capital needs cost estimate. **Your estimated base capital costs are between $94,511,545 and $128,582,920** (see Table 5).
3) Tables 6 through 8 summarize your 10-year capital cost estimate profile, including adjustments for remoteness, contingency, recapitalization and inflation. **Your total estimated capital costs over 10 years are between $165,364,012 and $224,852,737.**

Transitions Case Study: Carrier Sekani Family Services

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Carrier Sekani Family Services (CSFS) is proactively working in collaboration with their Member Nations preparing for jurisdiction by establishing a solid foundation. This includes:
    - Utilizing an organized and structured process for program delivery with each Nation that is responsive to their needs.
    - Ensuring program and service delivery is culturally appropriate and community based.
    - Viewing the process to jurisdiction as a journey and integrating culture into its service delivery model.
    - Investing in both personnel and systems to enhance core functions like data collection and analysis.
    - Recognizing an important aspect of Jurisdiction is the Nation's ability to make the best decisions for each child to reach their full potential.

Summary Assessment

- CSFS is a mature well-organized, well-funded agency in the middle of its transition to a future state.
- It is supporting its communities to navigate exercising jurisdiction and develop capacity and readiness in all dimensions (people, process, strategy, systems).
- CSFS will be working with the Member Nations to co-develop the operational plans and the funding arrangements for the Nation's specific FNCFS and Jordan's Principles CHRT infrastructure projects for holistic child, youth, and family programming.
- CSFS considers trust between itself with its communities as integral to a successful transition. It is currently developing a model to inform how to effectively build trust as a component of the transition process.
- CSFS uses a holistic approach to provide services across the life cycle. Programs collaborate to deliver integrated wraparound supports to the entire family.

Context

Carrier Sekani Family Services (CSFS) is an agency that provides a wide range of services to eleven First Nations, including:

- Prevention
- Delegated Services (Guardianship, Resources)
- Health and Wellness Program (Addictions Recovery, Counselling)
- Employment Services
- Family Preservation
- Early Years Preschool
- Collaborative Practices
- Youth Services

- Community Wellness Committees
- Legal Services
- Housing
- Primary health care
- Substance use and addictions treatment

CSFS's Member Nations are:

- Lake Babine Nation (Child and Family services only)
- Takla Nation
- Nadleh Whut'en
- Stellat'en First Nation
- Saik'uz First Nation
- T'sil Kaz Koh (Burns Lake Band)
- Cheslatta Carrier Nation
- Wet'suwet'en First Nation
- Nee-Tahi-Buhn Band
- Yekooche First Nation
- Skin Tyee First Nation

For over 33 years, CSFS has delivered services both on and off First Nations reserves. The Ministry of Child and Family Development (MCFD) primarily funds child and family services (CFS) delivered off-reserve through a contractual relationship with CSFS.

CSFS did not receive prevention funding prior to the Canadian Human Rights Tribunal (CHRT) ruling. Previously, CSFS leveraged funding through strategic research partnerships, grants, and proposals. Research has enabled CSFS to develop and implement prevention services that are reflective of Carrier and Sekani culture and values. CSFS made a conscious decision to not take on protective service delivery due to inadequate federal and provincial funding for prevention and comprehensive culturally based wrap-around services.

CSFS's mandate includes delivering both health and CFS. This enables the use of funding to compensate for insufficient prevention funding allocated from the FNCFS program and MCFD. For example, Maternal Child Health funding was integrated into the CFS prevention program.

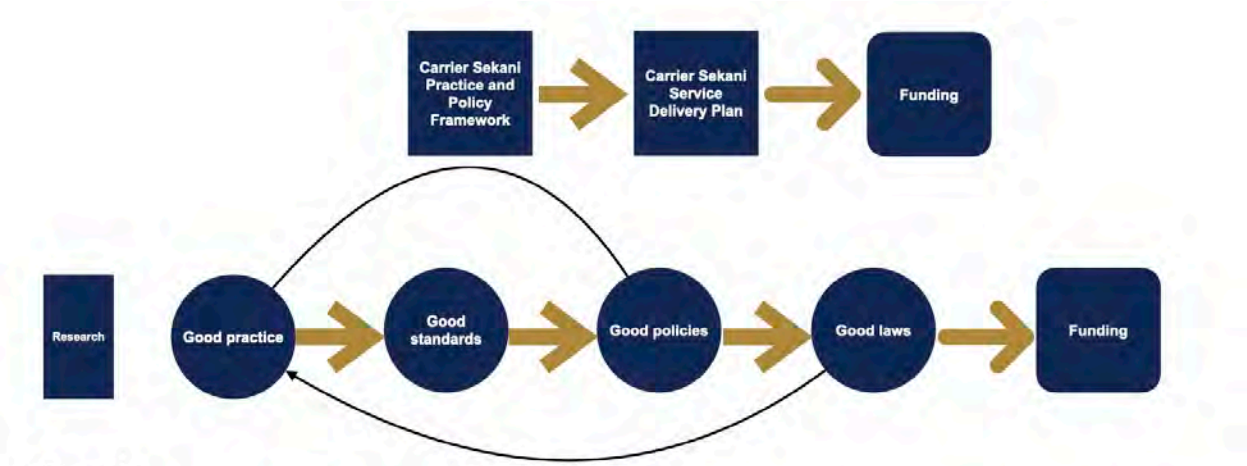
CSFS uses its life cycle approach to implement services that are reflective of holistic and cultural ways of being. Using this approach, CSFS can improve and offer programs to be responsive to its Member Nations needs, through political advocacy and establishing strategic political partnerships. CSFS currently practices under the parameters Aboriginal Operational Practice Standards and Indicators (AOPSI) which was developed in collaboration with BC Indigenous Child & Family Service Agencies (ICFSA) to enhance the quality of social work practice to ensure practice is culturally appropriate. The standards also impacted the funding formula.

CSFS's transition will be significantly influenced by the political trajectories of the communities that it serves. The communities vary by contexts (e.g., population, political environment, organizational maturity, etc.) and their evolutions throughout this transition period will affect CSFS's future state as an organization. CSFS has also ensured their governance structure protects child and family practice decisions.

CSFS is supporting its Member Nations as they navigate the transition to exercising jurisdiction over CFS. CSFS provides a variety of resources in the communities it serves to support the development of capacity and readiness for transition. This is challenging as the communities it serves are at various levels of maturity.

During the transition period, CSFS is developing a practice and policy framework that informs its approach to delivering services and its necessary funding. Good practice (e.g., social workers having strong relationships with communities) informs good standards (e.g., 1:8 caseload ratio), which informs good policies (e.g., minimum number of visits in care). All three (practice, standards, and policies) should be reflected in good laws. Funding is then aligned with law.

Figure 2: CSFS Practice and Policy Framework



The example below highlights the relationships in action for CSFS. Each element builds on the last and is aligned with the next.

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 9

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Notes from collaborator
People	Do you have enough staff to meet your operational needs?	N	Y	
	Does your compensation match the provincial standard?	Y	Y	
	Do you recruit staff from your member community(ies)?	Y	Y	
	Do you have high retention of employees?	Y	Y	
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	Y	Y	
	Are you attracting the same level of credentialed employees as mainstream organizations?	Y	Y	
	Are you able to recruit professional staff, e.g.,	Y	Y	

	social workers, doctors, accountants, lawyers?			
Process	Are your current operating baselines meeting needs?	N	Y	Business plan yet to be fully funded.
	Do you have a clear vision of your future state?	Y	Y	
	Are your post-transition activities defined?	N	Y	
	Is your post-transition workflow defined?	N	Y	
	Is your post-transition management structure established?	Y	Y	
	Have you fully designed your prevention programming?	Y	Y	
	Have you fully designed your protection programming?	N	Y	
Strategy	Is your post-transition mission defined?	Y	Y	
	Is your post-transition strategy defined?	N	Y	
	Are your post-transition goals and organizational priorities defined?	N	Y	
	Are all of your services or programs developed?	N	N	In-progress of developing Child safety department

				and Clan Houses in each Community.
	Are all of your necessary organizational partnerships in place?	Y	Y	
Systems	Is your post-transition governance framework defined?	Y	Y	Framework continues to be developed with Communities to guide the Law.
	Do you have an independent board of directors?	Y	Y	
	Is your post-transition legal framework defined?	Y	Y	
	Is an adjudication system in place?	N	N	
	Is an adequate data system in place?	N	Y	Developing an integrated and streamlined data management system.
	Is an adequate performance management framework in place?	N	Y	Validating indicators of child, family and community well-being.
	Is an adequate IT system in place?	N	Y	Increasing capacity within each community to support data management.
	Is an adequate financial system in place?	Y	Y	

	Are your post-transition reporting systems in place?	N	Y	As new governance structure and framework is finalized, the reporting systems will update.
	Are you developing new criteria for evaluative purposes?	Y	Y	

Table 10

Question	Response: Yes (Y) or No (N)	Notes from collaborator
Are you currently delivering secondary and tertiary prevention services?	Yes	We provide secondary and tertiary services both on and off-reserves. - Secondary services to prevent the onset of child welfare involvement. Services such as: Wrap Around Parent Guidance and Support, Bridging to Employment, Family Preservation, Family Preservation Outreach (Housing), Community Wellness Committee support. - Tertiary services to reduces the impact once child welfare becomes involved. Services such as: Family Preservation safety planning support, financial support to mitigate child protection concerns) Family Preservation Outreach (Housing: rental support, damage deposit), Intensive Family Therapeutic Services (intensive 24/7 in home support to mitigate child protection concerns), Wrap Around Parent Guidance and Support (parenting support once a child has been removed from parent's care).

If you are not currently delivering secondary and tertiary prevention services, do you plan to do so?	No	
Is the delivery of prevention and protection services integrated at a case or family service level?	Yes	Yes, Prevention Service work closely with Guardianship and Resources team. New pilot project will allow both teams to work with families who have children in the temporary care of the child protection ministry.

People

Recruitment and retention are key challenges. CSFS has 426 staff (between child and family, health, justice, housing, and administration). Vacancies are higher in rural and small towns (such as Burns Lake). Several factors drive these challenges:

- *High turnover.* Turnover is high among entry level positions. Often people in these positions are leaving to pursue more education.
- *High vacancies.* Vacancies are higher in smaller and remote communities. CSFS also has challenges in hiring and retaining specialized professionals like child psychologists.

Process

CSFS has well-defined processes and a clear vision for the future. Its prevention programming is evidence-based (e.g. Intensive Family Therapeutic Services), to ensure it delivers effective and relevant services to its communities. CSFS processes continuously evolve and adapt with the current climate. It is currently developing:

- *Practice and policy framework.* CSFS is developing a practice and policy framework, and service delivery plan to ensure that good practice relates to standards, policies, laws, to inform funding.
- *Integrated programming.* CSFS uses a wraparound approach to provide holistic and integrated guardianship, resources, and prevention programming.
- *Building trust.* CSFS considers trust between itself and its communities as integral to a successful transition. It aims to be a responsive and trusted support to provide community members with access to the resources they need.

Strategy

CSFS has a clear mission and organizational philosophy. The key strategic challenge is the varying levels of organizational maturity of the communities it serves. Factors influencing strategy include:

- *Community-level organizational maturity.* The communities CSFS serve have varying levels of organizational maturity. To address this, CSFS has developed resources and programs, including a Community Development Program where CSFS has community service planners available in its communities to assist in their prevention services and supports, including activity and financial reporting.
- *Community-level politics.* Timing is critical. Local elections, which occur on a 2–4-year cycle, can impact progress as new leaders are oriented to the strategy.

Systems

CSFS key systems challenge stems directly from political and legal trajectories of the communities it serves. Currently, CSFS governance and legal framework are clear. As communities develop and implement their own law, CSFS systems will need to adapt to new realities. This could include different adjudication methods for conflicts, new reporting mechanisms for different communities, and new indicators or measurement criteria for evaluative purposes.

Misipawistik Cree Nation (MCN)

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Misipawistik Cree Nation (MCN) is located in Manitoba. It is forming an entirely new law and model for prevention services to deliver child and family services based on traditional values and Cree law. Table 1 outlines contextual information about MCN.

Table 1

Collaborator name: Misipawistik Cree Nation

First Nation(s) served:	Total population (on-reserve, IRS 2022)	Geographic zone (1-4)	After-tax total median household income (2016)	Difference between after-tax median household income above or below 2022 MBM?
1) Misipawistik Cree Nation	1410	2	$39,600.00	Below

Misipawistik Cree Nation currently receives child and family services from Cree Nation Child & Family Caring Agency. Service provision is not localized. The majority of households are below the poverty line, and the employment rate is 27%. Internet connectivity is widely available. 31% of houses require major repairs, and 77% is suitable. The community provides social services, health services, education, and Elder services, as well as gathering spaces (band hall, Powwow grounds, two cultural camp sites, field/skate park). The high school graduation rate amongst youth is 31%.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

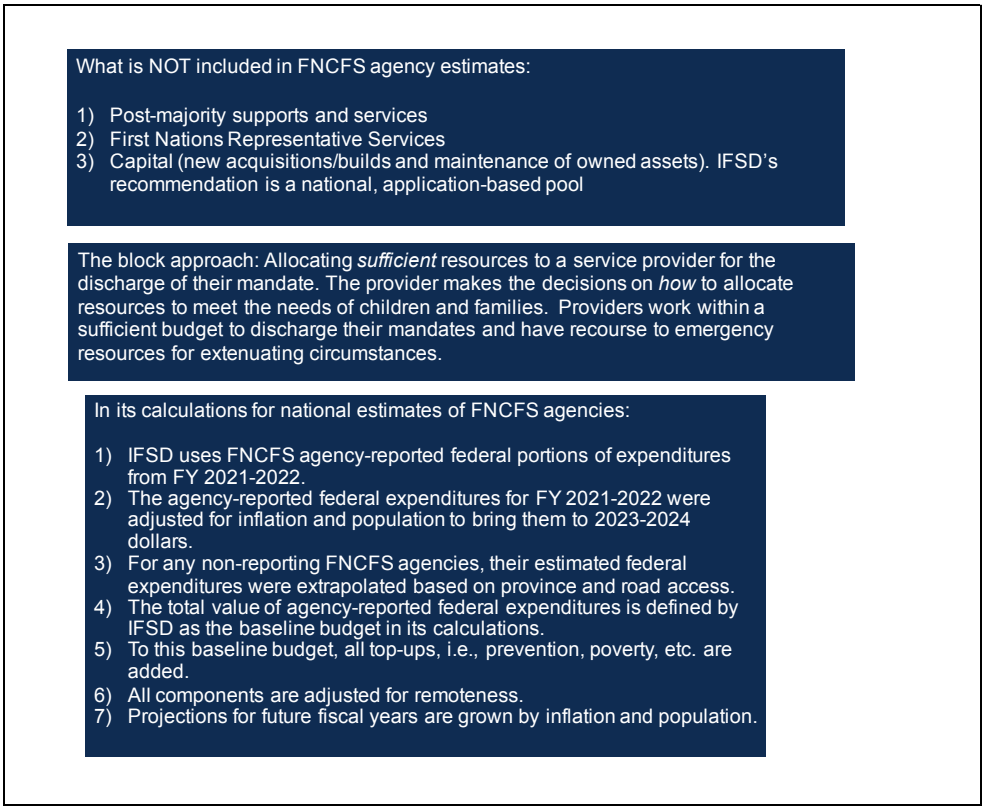


Table 3 outlines four illustrative funding scenarios for MCN, including adjustments for remoteness, increasing prevention amounts, and the Northern MBM.[1]

[1] Note 1: The baseline budget was calculated as the share of the population of MCN multiplied by the budget of the Cree Nation Child and Family Services that provides services to MCN.

Note 2: MCN is pursuing jurisdiction, therefore it is assumed that it will receive the remoteness adjustment poverty top-up, representative services, and prevention top-ups.

Table 3

Misipawistik First Nation				
Component	**Scenario 1: With remoteness calculated using ISC's Full Cost Factor Adjustment Factor model**	**Scenario 2: Scenario 1 with increasing prevention fund by 50%**	**Scenario 3: Scenario 1 with increasing prevention fund by 100%**	**Scenario 4: Scenario 1 with Northern MBM replacing Provincial MBM**
Median after-tax HH Income	39600	39600	39600	39600

2027-28	13,185,290	16,060,186	18,935,082	13,747,741

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Summary of Capital Needs Cost Estimate

Overview

1) Table 4 summarizes your capital needs, as understood by IFSD.
2) The capital costing model multiplies the units summarized in Table 4 by a set of unit cost assumptions to produce a capital needs cost estimate. **Your estimated base capital costs are between $20,729,024 and $28,672,076** (see Table 5).
3) Tables 6 through 8 summarize your 10-year capital cost estimate profile, including adjustments for remoteness, contingency, recapitalization and inflation. **Your total estimated capital costs over 10 years are between $39,641,381 and $54,724,740.**

Table 4: Asset Quantities

Category	Item	Unit type	Units
Clinical	Healing centre	Square Feet (SF)	2,430
	Rehabilitation centre	SF	1,474
	Residential treatment centre	SF	7,500
Residential	Transition homes	SF	4,423
	Reunification homes	SF	2,198
	Staff housing	SF	4,951
	Emergency shelter/safe houses	SF	6,760

Offices	Office Space - based on number of FTEs	SF	12,478
	Office/admin - Jordan's Principle, Headstart, and Daycare	SF	1,043
	Office Space - additional meeting space	SF	153
Programming Space	Recreation/events centre	SF	9,500
	Jordan's Principle Building	SF	1,800
	Daycare	SF	4,176
Storage	Garages/sheds	SF	720
	Garages/sheds	SF	840
	Garages/sheds	SF	824
	Seacans (40')	Seacans	3
Fixed Cultural Assets	Land-based Camp - new washroom	SF	1,248
	Land-based Camp - kitchen renovation	SF	600
	Land-based Camp - kitchen equipment	Kitchens	1
	Land-based Camp - winterize cabins	Cabins	15
Vehicles	Passenger Vehicle	Vehicles	1
	15 pass. Vans	Vans	0
	Mini buses	Mini buses	1
Moveable Cultural Assets	Sweat Lodge Canvases	Canvases	0
	Tipis	Tipis	0
	Canoes	Canoes	0
	Kayaks	Kayaks	0
	Fishing Boats	Boats	0
	ATVs	ATVs	0
	Side-by-Side	Side-by-Sides	0
	Snowmobiles	Snowmobiles	0
	Utility Trailer	Trailers	0
	Cargo Trailer	Trailers	0

Note: cells highlighted orange reflect asset areas specified by the collaborator.

Table 5: Base Estimate of Capital Need

Fixed/Moveable	Asset Type	Cost - Low	Cost - Medium	Cost - High
Fixed	Clinical	$4,227,027	$5,342,636	$6,458,244
	Residential	$4,319,577	$4,996,317	$5,673,057
	Offices	$4,201,005	$5,006,261	$5,811,517
	Programming Space	$6,901,213	$8,165,042	$9,428,871
	Storage	$290,787	$353,040	$415,292
	Fixed Cultural Assets	$579,866	$627,706	$675,546
Moveable	Vehicles	$209,549	$209,549	$209,549
	Moveable Cultural Assets	$0	$0	$0
	Total:	**$20,729,024**	**$24,700,550**	**$28,672,076**

Note: this estimate does not include a contingency factor, remoteness Cost Adjustment Factor (CAF), recapitalization rate, or inflation. These adjustments are reflected in the 10-year cost estimate profile below.

IFSD IFPD

10-year Cost Estimate Profile:

Table 6: Low-Cost Scenario

Option 1 (Low)		5 Year Total	10 Year Total
Fixed Assets	Clinical	$4,404,952	$4,404,952
	Residential	$4,501,397	$4,501,397

Case Study: Misipawistik Cree Nation (MCN)

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Misipawistik Cree Nation (MCN) is forming an entirely new law and model for prevention services based on traditional values and Cree law. MCN's baseline is zero and they are beginning anew, not transitioning.
- MCN is starting from a unique point of departure; which is to revert to precolonial community practices and traditions.
- It could take upwards of 15 years to design and deliver services aligned with its law.

Summary Assessment

- Misipawistik Cree Nation is forming an entirely new law and model for prevention services based on traditional values and Cree law. MCN's baseline is zero and they are beginning anew, not transitioning.
- While many organizations are contemplating an integration of western practices with First Nations teachings and culture, MCN is starting from a unique point of departure; which is to revert to precolonial community practices and traditions.
- It will take significant time and resources to move from where MCN is now, to a desired steady-state in the future. MCN is in the process of finalizing its law. It could take upwards of 15 years to design and deliver services aligned with its law.
- MCN is at the beginning of its journey towards a future steady-state. MCN is at the first stage of considering the required people, processes, strategies, and systems that may be required to realize its vision. This process is iterative, and may evolve alongside the community.

Context

Misipawistik Cree Nation (MCN) will serve a population of roughly 2,500 people. MCN is currently building a cultural centre that includes space for community meetings and staff offices.

MCN has drafted its new law "Mino Opikiyawasowin." The law follows pre-existing Cree law and emphasizes prevention. Under Mino Opikiyawasowin, there is no removal of children from families except in severe incidences requiring intervention from protection services. It emphasizes "harmonious balance," where there is no single authority, but instead, a consensus authority. Mino Opikiyawasowin is in the final stages of development (it is currently being translated into Cree before it can be ratified by the First Nation). MCN's law will have national jurisdiction. By taking over jurisdiction over CFS, MCN is also taking over the responsibility of the healing of its community.

MCN estimates that it will need 75 staff to fully implement Mino Opikiyawasowin. As articulated by MCN, staff within the existing provincial agency will be invited to transition under the Mino Opikiyawasowin jurisdiction. MCN estimates it will have established operations (i.e., implemented Mino Opikiyawasowin) within 3 years of approval of the law. The law will be gradually implemented throughout the 3 years to transition out colonial interference, construct

the necessary operational infrastructure (including the physical cultural/spiritual, intellectual, and emotional aspects of the law). MCN estimates it will take 10-15 years to get to a steady-state, where the law, service provision, and community understanding are aligned.

A key component of implementing this model is communication. MCN will have to regularly communicate with community members about the law to integrate it into the fabric of society. All community workers will be expected to take responsibility to address child and family issues occurring in MCN. Communicating and providing education to community members about the law and expectations of their role will be integral to empowering them to participate.

Throughout this process, MCN is considering how best to record and collect data under Mino Opikiyawasowin, build an adjudication system, and increase economic opportunities. MCN recognizes there is some risk with this approach but highlights the benefit of being able to build something new.

Analysis

After discussions with collaborators, IFSD prepared a framework to assess readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 9

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Notes from collaborator
People	Do you have enough staff to meet your operational needs?	N		The goal is to have this established within the three years. Would like to absorb existing agency staff into our organization, but that won't cover all the

				required staff. It will also take time to re-educate on how to implement our law instead of the provincial law.
	Does your compensation match the provincial standard?	N		Yes
	Do you recruit staff from your member community(ies)?	N		Yes
	Do you have high retention of employees?	N		We hope to, considering the work will be more relational and take on a new approach relevant to our nation and traditions
	Do you offer benefits to your employees e.g., health, dental, etc.?	N		Yes
	Do employees receive adequate on-the-job training?	N		They will
	Are you attracting the same level of credentialed employees as mainstream organizations?	N		No, credentials currently do not speak to the traditional value and knowledge of Indigenous people, history and ways of being
	Are you able to recruit professional staff, e.g.,	N		Yes – here certain credentials will be required.

	social workers, doctors, accountants, lawyers?			Lawyers will not be necessary as part of the operation of our law, where needed they will be retained per service
Process	Are your current operating baselines meeting needs?	N		n/a
	Do you have a clear vision of your future state?	N		Yes
	Are your post-transition activities defined?	N		Yes, within the full implementation of the Opikiyawasowin law and model
	Is your post-transition workflow defined?	N		Tbd
	Is your post-transition management structure established?	N		Yes, though not in a recognizable colonial sense
	Have you fully designed your prevention programming?	N		Yes, though “fully defined” holds variable standards
	Have you fully designed your protection programming?	N		
Strategy	Is your post-transition mission defined?	N		To fully implement Mino Opikiyawasowin with recognized jurisdiction across the land

	Is your post-transition strategy defined?	N		Mostly natural
	Are your post-transition goals and organizational priorities defined?	N		Yes, to fully implement with recognized jurisdiction and serve MCN according to traditional law
	Are all of your services or programs developed?	N		Mostly. Remember, this a nation-driven approach to raising our children, some pieces will not require pen and ink (such as “how does a surrogate grandmother love a child”)
	Are all of your necessary organizational partnerships in place?	N		Being developed through service agreements where necessary
Systems	Is your post-transition governance framework defined?	N		Yes
	Do you have an independent board of directors?	N		Elder council will be an advisory group. The onus is within the nation members
	Is your post-transition legal framework defined?	N		Yes
	Is an adjudication system in place?	N		Yes

	Is an adequate data system in place?	N		No
	Is an adequate performance management framework in place?	N		This is the data struggle we have been having
	Is an adequate IT system in place?	N		No
	Is an adequate financial system in place?	N		No
	Are your post-transition reporting systems in place?	N		No.
	Are you developing new criteria for evaluative purposes?	N		Yes

Table 10

Question	Response: Yes (Y) or No (N)	Notes from collaborator
Are you currently delivering secondary and tertiary prevention services?	Y	We provide guidance to the existing CFS agency on placements. Our direction is to look for placements within the family or those with cultural familiarity to provide our children with cultural continuity.
If you are not currently delivering secondary and tertiary prevention services, do you plan to do so?		
Is the delivery of prevention and protection services integrated at a case or family service level?		Family service level. We also help our families regain custody of their children and return them home.

Mino - Obigiwasin Services Enfance Famille

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Mino – Obigiwasin Services Enfance Famille (Mino) delivers a variety of services, including protection and prevention services to four First Nations in Quebec. Table 1 outlines contextual information about the First Nations Mino serves.

Table 1

Collaborator name: Mino - Obigiwasin Services Enfance Famille

First Nation(s) served:	Total population (on-reserve, IRS 2022)	Geographic zone (1-4)	After-tax total median household income	Difference between after-tax median household income above or below 2022 MBM?
1) Pikogan (Abitibiwinni)	617	1	$47,600.00	Above
2) Communauté anicinape de Kitcisakik	403	2	$32,400.00	Above
3) Nation Anishnabe du Lac Simon	1864	1	$32,800.00	Under
4) Long Point (Winneway)	527	2	Not available	Not available

Mino - Obigiwasin Services Enfance Famille serves four First Nations with varying populations and income levels. They all have year-round road access to a service centre within 350 kilometres. At-home internet connectivity is available in at least three out of the four Nations, as no data are available for Kitcisakik. Three out of the four communities served by Mino - Obigiwasin have median household incomes above the provincial poverty line, while all have housing in need of repair, to varying degrees. Rates of educational attainment, especially high school completion, are very low.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

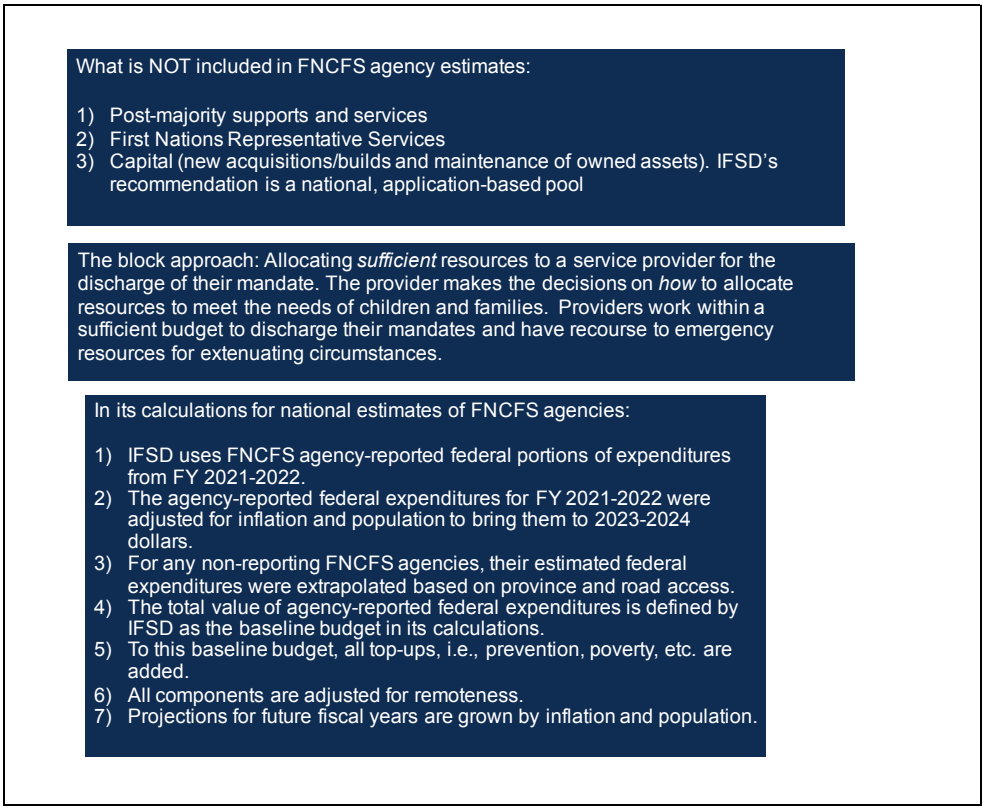

Table 3 outlines six illustrative funding scenarios for Mino, including adjustments for remoteness, the Northern MBM, increased prevention funding, total on- and off-reserve population, increased operating baseline budget, and increased emergency funding.

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Transition Case Study: Mino - Obigiwasin Services Enfance Famille

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Mino – Obigiwasin Services Enfance Famille (Mino) is an agency that is changing and adapting as it prepares to assume control of child and family services, in accordance with forthcoming legislation.
- Although Mino expects this legislation to be finalized by 2025, the transition toward self-governance will be a gradual one to ensure continuous and uninterrupted service delivery to children and families. To achieve this, the agency is following a plan that engages First Nations served by Mino, its staff, and its Board of Directors. Integrated processes, strategies, and systems will be used to manage the hurdles and successes arising from the new models of service delivery.

Summary Assessment

- Mino's transition is critically impacted by two factors: (1) the anticipated reform of the FNCFS Program; and (2), the decisions on jurisdiction of Mino's communities.
- Mino has well-developed processes, strategies, and systems to deliver on its current mission, but will need to develop a clear understanding of how its mission, vision, and goals will change with transition. This is a necessary precursor to developing or adapting processes and systems.
- Recruitment is a key challenge. Mino will need to consider how its staffing needs may change with transition and plan accordingly. One option could be to hire staff for general roles, now, with the understanding that roles and responsibilities may change as organizational priorities are developed.
- The step-by-step approach used by Mino in the transition process is a considerable asset.

Context

Mino – Obigiwasin Services Enfance Famille (Mino) is an agency that provides a wide range of services to four Anicinape communities. Mino's services include:

- Prevention services;
- Protection services;
- Foster care;
- Specialized services;
- Legal services;
- Post-majority support services;
- Cultural services (in 2025, as stipulated in the legislation)[1]

Mino serves:

- Kitcisakik;

[1] Note that, for each of these services, there is a committee in place for legislative consultations.

- Lac Simon;
- Pikogan (Abitibiwinni); and,
- Long Point (Winneway).

Mino's transition will be influenced by the anticipated reform of the FNCFS Program and the decisions on jurisdiction of Mino's communities. It is preparing for these changes with a committee in charge of the transition and improvement process (including complaint management) and service continuity. This committee, made up of representatives of First Nations and Mino, is responsible for developing a complaint resolution and continuous improvement policy and for providing training.

Transition Analysis

After initial discussions with collaborators, IFSD has prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 4

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Collaborator's comments
People	Do you have enough staff to meet your operational needs?	N	N	Jurisdiction and development/implementation of the law will guide staffing decisions. Staff (the majority) want to continue under the new framework (the FN act).
	Does your compensation match	Y	Y	Competitive with the market.

	the provincial standard?			
	Do you recruit staff from your member community(ies)?	Y/N	Y/N	Difficult because of problems in the community (addictions, etc.).
	Do you have high retention of employees?	N	N	Challenging labour market, although retention is currently on the upswing.
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	Y	Y	Agency already has a cultural training centre to guide them in their interactions with the community and the services they provide to children and families. Training budget for various departments and teams (assessment, intervention, culture, etc.). Not perfect, but the current director has a background in training/teaching. Director oversees the training plan for employees and manages interactions. In progress. Training needs determined based on employees' qualifications, annual performance reviews, complaints, cultural awareness needs, observations and more.
	Are you attracting the same level of credentialed employees as	Y	Y	

	mainstream organizations?			
	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	Y/N	Y/N	Hard to recruit First Nations staff members. Hard to hire permanent employees. Contracts tend to be preferred because of the benefits they offer (housing, wages, etc.). Labour shortage. Mino staff members come from outside the community.
Process	Are your current operating baselines meeting needs?	Y/N	Y/N	Yes, but it's not perfect. Internal operations need to be updated.
	Do you have a clear vision of your future state?	N	Y	
	Are your post-transition activities defined?	N	Y	In progress and subject to ongoing development.
	Is your post-transition workflow defined?	N	N	
	Is your post-transition management structure established?	N	Y/N	In progress and subject to ongoing development.
	Have you fully designed your prevention programming?	N	Y/N	In progress and subject to ongoing development.
	Have you fully designed your protection programming?	N	Y/N	In progress and subject to ongoing development.
Strategy	Is your post-transition mission defined?	N	Y	

	Is your post-transition strategy defined?	N	Y	
	Are your post-transition goals and organizational priorities defined?	N	Y/N	In progress and subject to ongoing development.
	Are all of your services or programs developed?	N	Y/N	
	Are all of your necessary organizational partnerships in place?	N	N	
Systems	Is your post-transition governance framework defined?	N	Y	
	Do you have an independent board of directors?	Y	Y	
	Is your post-transition legal framework defined?	N	Y	
	Is an adjudication system in place?	N	N	In (re)development.
	Is an adequate data system in place?	N	Y	
	Is an adequate performance management framework in place?	N	N	Needs to be revisited and aligned with the law, using an approach that focuses on well-being.
	Is an adequate IT system in place?	N	N	Provincial criteria are more complex than the agency's. IT security measures are costly. A formal approach and resources are needed to meet the criteria.

	Is an adequate financial system in place?	N	N	
	Are your post-transition reporting systems in place?	N	N	
	Are you developing new criteria for evaluative purposes?	Y	Y	

Table 5

Question	Response: Yes (Y) or No (N)	Collaborator's comments
Are you currently delivering secondary and tertiary prevention services?	No, unless we take front-line cases.	Yes, but only for foster care payments. This service will be provided through Mino once C-92 is implemented.
If you are not currently delivering secondary and tertiary prevention services, do you plan to do so?	The question will be discussed as part of the C-92 process that we are currently drafting.	Yes
Is the delivery of prevention and protection services integrated at a case or family service level?		Yes

People

Mino employs 110 staff and has difficulty recruiting and retaining staff across functions (e.g., social workers, lawyers, accountants). Mino expects to double or triple the size of its staff over the next two to three years. Mino faces several key challenges relating to people:

- *Competitive recruitment environment.* Social workers and supporting staff are in high demand industry-wide.
- *Difficulty recruiting locally.* The impacts of intergenerational trauma are evident in the communities Mino serves. Problems like addictions are severe and lower the number of suitable candidates.
- *Language requirements.* Mino's staff are often trilingual (English, French, and Anicinabe), and many roles require knowledge of the three languages to operate effectively. This reduces the qualified candidate pool significantly.

Process

Mino has well established baselines for its current state, and is in the process of developing new processes that will be implemented with the transition. Key process challenges are:

- *Defining operating procedures for new services.* Mino is adding new services (e.g., family circles, complaints processes, and mediation). These services are still being formalized.
- *Implementing new law.* Adapting services to a new law will require retraining of staff to align with new legal principles. This will take time and may impact current staff's ability to meet established needs.

Strategy

Mino is currently drafting an action plan for next steps and estimates this work will take two or more years to complete. Mino has a clear mission and organizational philosophy for its current state. The key strategic challenge for Mino stems from implementation of a new law. Exercising jurisdiction is extremely complex. Determining organizational priorities under a new legal framework will take significant time.

Systems

Mino's key systems challenges arise directly from the implementation of a new legal framework. Adapting governance and adjudication systems will take significant time and knowledge translation efforts. Further, Mino's data architecture system is currently fractured (i.e., some data is captured through communities while other data is captured through the provincial program). Transitioning this system will require additional resources and time.

IFSD
IFPD

Nogdawindamin Family & Community Services

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Nogdawindamin Family & Community Services (Nogdawindamin) delivers both protection and prevention services to seven First Nations of the North Shore in Ontario. Table 1 outlines contextual information about the First Nations Nogdawindamin serves.

Table 1

Collaborator name: Nogdawindamin Family & Community Services

First Nation(s) served:	Total population (on-reserve, IRS 2022)	Geographic zone (1-4)	After-tax total median household income (2016)	Difference between after-tax median household income above or below 2022 MBM?
1) Sagamok Anishnawbek	1628	2	$34,800.00	Below
2) Batchewana First Nation	817	1	Not available	Not available
3) Garden River First Nation	1343	1	$40,400.00	Below
4) Mississauga	392	2	$40,400.00	Below
5) Serpent River	394	2	$39,600.00	Below
6) Thessalon	117	2	Not available	Not available
7) Atikameksheng Anishnawbek	443	1	$53,600.00	Above

Nogdawindamin serves the Seven First Nations of the North Shore. All seven communities have year-round road access and are within 350 kilometres of a service centre (Sault Ste. Marie). There is variability among the communities when it comes to indicators for housing quality, connectivity, and employment. Rates of at-home internet connectivity vary from 58% to 99%, while employment rates range from 35% to 51%. The indicators suggest that while housing repairs and suitability affect the communities, the rates do not suggest as severe of an issue as employment issues. The indicators suggest that Nogdawindamin's approach to service delivery could emphasize addressing income-based and employment-based poverty.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

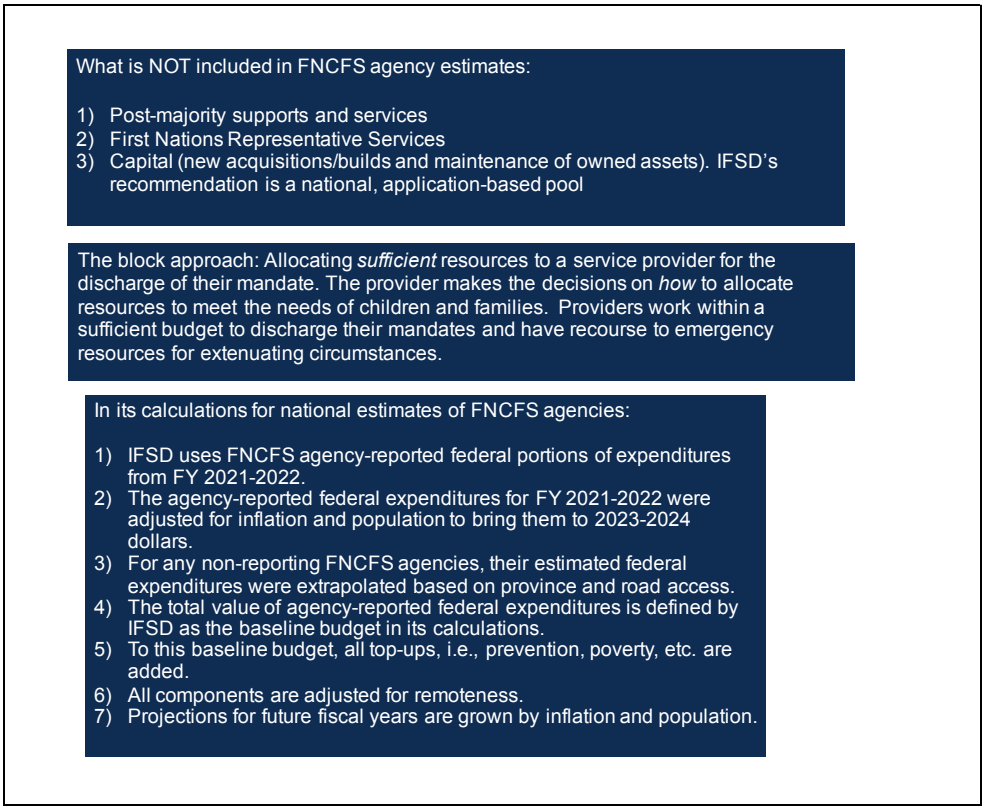

Table 3 outlines five illustrative funding scenarios for Nogdawindamin, including adjustments for remoteness, the Northern MBM, reported population, total on- and off-reserve population, and the exclusion of prevention funding.

Table 3

Nogdawindamin Family & Community Services					
Component	**Scenario 1: With remoteness calculated using ISC's 15%-scaled CAF model-All agencies**	**Scenario 2: Scenario 1 adjusted for Northern MBM**	**Scenario 3: Reported population was used instead of on-reserve population**	**Scenario 4: Total registered poulation was used instead of on-reserve population.**	**Scenario 5: Prevention funding is excluded**

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Transition Case Study: Nogdawindamin Family & Community Services

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Nogdawindamin Family and Community Services ("Nogdawindamin") is a mature high-functioning organization that actively plans for the communities it serves. This involves:
    - Investing in its employees through training opportunities to increase capacity.
    - Supporting First Nations in their pursuit of jurisdiction based on their unique needs.
    - Leveraging its own data for evidence-based decisions to align programs to desired outcomes.

Summary Assessment

- Nogdawindamin faces significant uncertainty stemming from changes within the communities it serves (i.e., implementing new law, devolution of services).
- Recruitment and retention are key challenges.
- Nogdawindamin could consider focusing on core staff positions to maintain the greater flexibility and adaptability to changing political circumstances. Once key external decisions have been made, Nogdawindamin could expand staffing and program offerings to suit new realities.
- Nogdawindamin does not have full access to prevention dollars due to the funding allocations to First Nations, which means it cannot fully integrate its protection and prevention programming.

Context

Nogdawindamin Family and Community Services ("Nogdawindamin") is a mature agency with well-developed processes, strategies, and systems to deliver on its mission. It provides a wide range of services to the Seven First Nations of the North Shore. Nogdawindamin's services include:

- Prevention services;
- Protection services;
- Neonatal services;
- Family well-being;
- Family treatment;
- Cultural services;
- Children and adult mental health; and,
- Behavioural therapy.

Nogdawindamin serves seven First Nation communities:

- Atikameksheng Anishnawbek;
- Batchewana First Nation;
- Garden River First Nation;

- Mississauga First Nation;
- Sagamok Anishnawbek;
- Serpent River First Nation; and,
- Thessalon First Nation.

Nogdawindamin's transition will be heavily influenced by the political trajectories of the communities that it serves. The communities vary substantively in context (e.g., population, political environment, organizational maturity, etc.) and their evolutions throughout this transition period will necessarily affect Nogdawindamin's future state as an organization.

Atikameksheng Anishnawbek, Batchewana First Nation, Garden River First Nation, Serpent River First Nation, and Thessalon First Nation are contemplating jurisdiction and future devolution. Mississauga First Nation is active within a process of expanding First Nation delivered prevention services. Sagamok Anishnawbek has recently opened a conversation concerning jurisdiction and service devolution.

Nogdawindamin has been mandated by its board to look at devolving prevention services to each of the communities it serves. Nogdawindamin has pursued devolution of services but has not experienced steady uptake from the communities. Each First Nation has a specific approach to devolution, and each carries community specific histories of strengths and barriers (e.g., geographic access to specialized services). A unified roadmap for devolution is not possible, due to varied timelines and needs.

The external factors influencing Nogdawindamin's transition make it difficult to articulate a future state, and, consequently, to provide a gap analysis. Nogdawindamin does have a clear vision for its future, but it does not have control over all the elements needed to get there.

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 4

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years?	Notes from collaborator

			Response: Yes (Y) or No (N)	
People	Do you have enough staff to meet your operational needs?	N	Y/N	Some areas have a full complement while others are short. At any given time, we are 50 staff short of a full complement.
	Does your compensation match the provincial standard?	Y	Y	
	Do you recruit staff from your member community(ies)?	Y	Y	
	Do you have high retention of employees?	N	N	
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	Extensive.
	Do employees receive adequate on-the-job training?	Y	Y	Efficacy of some training modules requires review. Content of some training requires revision.
	Are you attracting the same level of credentialed employees as mainstream organizations?	Y	Y	Professional designations, see below.
	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	N	N	More difficulty recruiting some professional staff, e.g., doctors.

Process	Are your current operating baselines meeting needs?	Y	Y	
	Do you have a clear vision of your future state?	Y	Y	Yes, but strategic plan is not aligned with frontline realities. Broadly defined future vision (devolution of services).
	Are your post-transition activities defined?	N	N	
	Is your post-transition workflow defined?	N	N	
	Is your post-transition management structure established?	N	N	A transitional manager is in place. Management size will shrink.
	Have you fully designed your prevention programming?	N	N	It could look very different in three years.
	Have you fully designed your protection programming?	Y	Y	
Strategy	Is your post-transition mission defined?	N	N	
	Is your post-transition strategy defined?	N	N	
	Are your post-transition goals and organizational priorities defined?	N	N	
	Are all of your services or programs developed?	N	N	Process is always ongoing and iterative.

	Are all of your necessary organizational partnerships in place?	N	Y	Further work is required with pillars of North Shore Tribal Council (e.g., Health).
Systems	Is your post-transition governance framework defined?	Y	Y	
	Do you have an independent board of directors?	Y	Y	Independent board, appointed by local leadership. Some board positions are application based (elder, youth, etc.)
	Is your post-transition legal framework defined?	N	N	Only one community has formally started. Tribal council is also 3 years into a 5-year plan.
	Is an adjudication system in place?	Y	Y	Yes, but it could be improved to align with mission.
	Is an adequate data system in place?	Y	Y	Work is being completed to review the longevity and stability of existing case management solutions.
	Is an adequate performance management framework in place?	Y	Y	
	Is an adequate IT system in place?	Y	Y	Work continues to displace reporting from production environment.

	Is an adequate financial system in place?	Y	Y	
	Are your post-transition reporting systems in place?	N	N	
	Are you developing new criteria for evaluative purposes?	Y	Y	

Table 5

Question	Response: Yes (Y) or No (N)	Notes from collaborator
Are you currently delivering secondary and tertiary prevention services?	Yes	The agency provides Neonatal Caring Services (expecting and new parents up to 18 months) and Family Well-Being (in-home mentoring and practice) as well as a number of group programming interventions.
If you are not currently delivering secondary and tertiary prevention services, do you plan to do so?	N/A	The agency intends to continue to deliver secondary and tertiary prevention services according to need and purview within service devolution.
Is the delivery of prevention and protection services integrated at a case or family service level?	Yes, family service.	Prevention service and child welfare workers are equal members of the circle of care, sharing responsibility to assist children, caregivers, and families. Prevention service and child welfare case recordings are segregated.

People

Recruitment and retention are key challenges. 65 positions out of a total of 427 are currently vacant and the organization averages 60-65 vacant positions monthly. This creates deficits in program delivery and elevates surpluses in budgets. Several factors drive these challenges:

- *Competitive recruitment environment.* Social workers and supporting staff are in high demand industry wide.
- *Lack of a collective agreement and salary certainty.* Nogdawindamin is not able to provide permanency or salary certainty for many staff. Due to funding uncertainty, staff rates of pay are determined quarterly. Nogdawindamin is unable to provide staff with long-term certainty around pay, despite offering competitive salaries.

- *High turnover.* Nogdawindamin provides new recruits and existing staff with substantial training opportunities. Fully trained staff regularly depart in search of greater stability at mainstream organizations.

As problems of recruitment and retention persist, Nogdawindamin develops a narrative about who they are as an organization. New recruits are wary of joining an organization that cannot promise permanency or stability, despite being competitive on salary, culture, and training.

Process

Legislative constraints are a key process challenge. Nogdawindamin has a vision for the types of activities it would like to implement (i.e., youth treatment, family treatment, and aftercare) but is hemmed in by several factors, including:

- *Training requirements.* Provincial legislation has imposed new and extensive training requirements for staff. Nogdawindamin received no extra funding to bring staff in line with these requirements.
- *Unique community contexts.* Nogdawindamin works with individual communities to deliver programs that meet each unique context. But this can be difficult under provincial legislation. Services that a community asks for may not be fundable under provincial law. Nogdawindamin engages in an exercise of knowledge translation to deliver a program or service that meets provincial criteria and community needs. While this approach narrows the gap between services requested and delivered, Nogdawindamin is not able to operate as it sees best.

Strategy

Nogdawindamin is a mature organization with a clear mission and organizational philosophy. The key strategic challenge for Nogdawindamin stems from working with seven different communities, all with unique contexts, needs, and stages of organizational maturity. Nogdawindamin cannot adjust its strategy until communities provide guidance on how they are moving forward. Factors influencing strategy include:

- *Knowledge translation.* Determining the best way to communicate with communities took significant time and is an ongoing challenge. There is no roadmap for devolving services or translating knowledge to seven unique communities. Nogdawindamin is at the forefront of this challenge and often proceeds using trial and error. Several attempts to engage with communities on devolution have led to little uptake.
- *Community capacity.* With each First Nation on a unique timeline, devolution will represent a patchwork process – unified with service considerations specific to each First Nation, knit together. Different levels and availability of specialized capacity entail individual approaches to devolution. In some cases, professional supports required by youth with complex needs must be grown.
- *Community-level politics.* Timing is critical. Local elections, which occur frequently, can derail months of communication and planning. Even if the leadership are re-elected, the election cycle can cause delays of 4-6 months.

Systems

Nogdawindamin's key systems challenge stems directly from political and legal trajectories of the communities it serves. Currently, Nogdawindamin's governance and legal framework are clear. As communities develop and implement their own law, Nogdawindamin's systems will need to adapt to new realities. This could include different adjudication methods for conflicts,

new reporting mechanisms for different communities, and new indicators or measurement criteria for evaluative purposes.

Secwépemc Child and Family Services Agency

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Secwépemc Child and Family Services Agency (Secwépemc) delivers a wide range of services, including both protection and prevention services to seven First Nations in British Columbia. Table 1 outlines contextual information about the First Nations Secwépemc serves.

Table 1

Collaborator name: Secwépemc Child and Family Services Agency

First Nation(s) served:	Total population (on-reserve, IRS 2022)	Geographic zone (1-4)	After-tax total median household income (2016)	Difference between after-tax median household income above or below 2022 MBM?
1) Cstélen (Adams Lake)	430	2	$53,600.00	Above
2) St'uxwtews (Bonaparte)	198	2	Not available	Not available
3) Skeetchestn (Skítsesten)	250	2	$31,200.00	Below
4) Tk'emlúps te Secwépemc	661	1	$67,000.00	Above
5) Sk'atsin (Neskonlith)	321	2	$52,800.00	Above
6) Simpcw First Nation	230	2	Not available	Not available
7) Pellt'iq't (Whispering Pines/Clinton)	47	2	Not available	Not available

Secwépemc serves seven small First Nations in British Columbia, each with year-round access to a service centre within 350 kilometres. Household incomes vary significantly, but most have relatively high rates of employment (ranging from 34% to 56%) and educational attainment (post-secondary completion ranging from 33% to 67%). Communities served by Secwépemc also have relatively high-quality housing infrastructure, with at least 80% of homes considered suitable in all but one of the seven First Nations. The wide range of community-based capacities implies the need for Secwépemc to use diverse approaches to child and family services driven by need.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

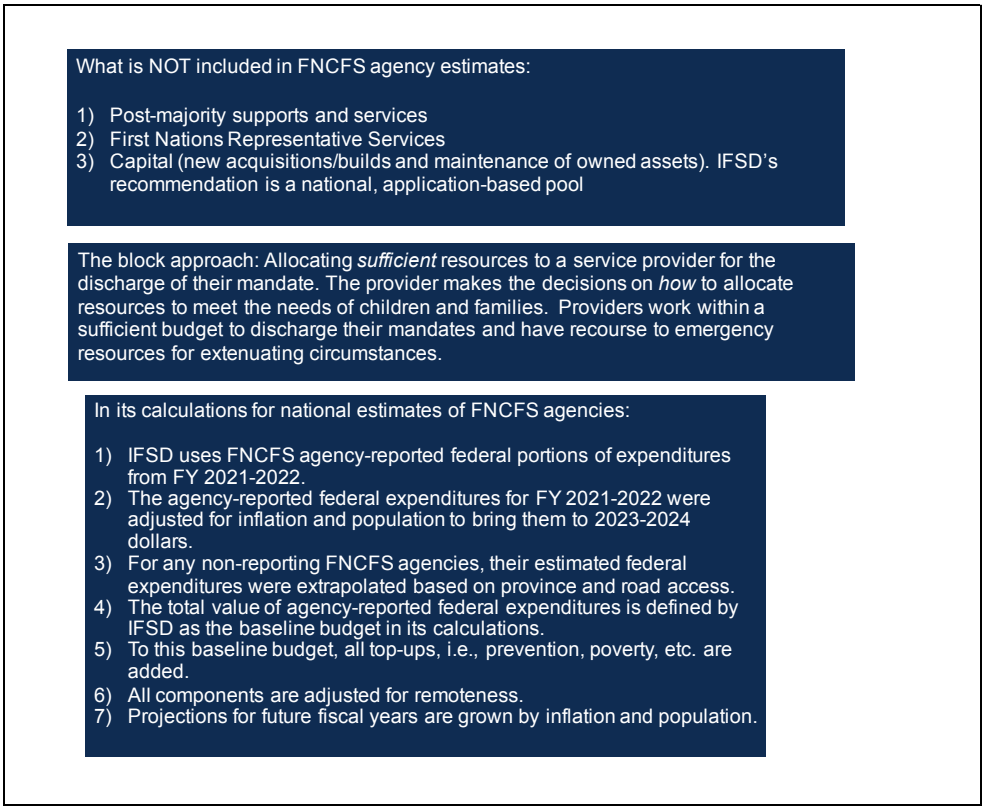

Table 3 outlines two illustrative funding scenarios for Secwépemc, including adjustments for remoteness and the Northern MBM.

Table 3

Secwépemc Child and Family Services Agency		
Component	**Scenario 1: With remoteness calculated using ISC's 15% scaled model for all agencies**	**Scenario 2: Scenario 1 adjusted for Northern MBM**

2026-27	34,261,195	35,357,346
2027-28	35,952,412	37,102,672

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Transitions Case Study: Secwépemc Child and Family Services Agency

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Secwépemc Child and Family Services Agency's ("Secwépemc") approach to child and family services is rooted in regular communication to build trust with the seven First Nations it serves. Transition factors remain fluid as First Nations make their decisions on inherent jurisdiction. To support them, Secwépemc:
    - Views the process of jurisdiction as a journey, continually refining its prevention-focused and culturally appropriate service delivery model to better serve member Communities.
    - Builds and fosters positive and long-term relationships with member Communities through open communication, receptive listening, and adaptability to change.
    - Invests in processes and systems, such as a Research and Development Team, to effectively navigate the shifting legislative landscape effectively.

Summary Assessment

- Communication between agency and Communities is key. Secwépemc has had success using open and regular communication to build trust with the seven First Nations Communities it serves.
- Secwépemc has well-developed people, processes, strategies, and systems to deliver on its mission, but faces possible changes in relationship stemming from certain Communities' decisions to engage with inherent jurisdiction.
- Transition for the agency is dependent on how each of the seven Communities decide to engage with inherent jurisdiction.
- Secwépemc integrates culture within design and delivery of its services. In the context of Child and Family Service work, the Story of Porcupine, a Secwépemc story, emphasizes the significance of collaboration and sharing wisdom.

Context

Secwépemc Child and Family Services Agency ("Secwépemc") is an agency that provides a wide range of services to seven First Nations Communities. Prevention programming is embedded in the agency's work. Secwépemc is a fully delegated Agency (C3-Voluntary Services, C4-Guardianship Services, C6- Child Protection Services). Secwépemc's services include:

- Youth Teams
    - Youth Transition
    - Youth Intensive
- Family Preservation
    - Intensive Family Preservation

- Family Empowerment
- Cultural Integration/Resource/Kinship Program
  - Elders
  - Cultural Workers
  - Roots Worker
  - Family Circle Facilitator
  - Kinship Workers
- Wellness
  - Mental Health
  - CYMH
  - Wellness Coordinator
  - Early Years
  - Community Wellness
  - Infant Development
  - Parental Outreach
  - Wellness Family Support
  - Family Enrichment Workers

The seven First Nations Communities Secwépemc serves include:

- Cstélen (Adams Lake)
- Pellt'iq't (Whispering Pines/Clinton)
- Simpcw
- Sk'atsin (Neskonlith)
- Skeetchestn (Skítsesten)
- St'uxwtews (Bonaparte)
- Tk'emlúps te Secwépemc

Secwépemc's transition will be influenced by the legal trajectory of the seven Communities it serves. The Communities are at various stages of discussions about pursuing inherent jurisdiction, which requires that Secwépemc remains responsive in its future planning. Secwépemc continues to work with provincial government partners under the CFCSA and federal government partners under *An Act respecting First Nations, Inuit and Métis children, youth and families,* to deliver its mandate that integrates the Aboriginal Operational Practice Standards and Indicators (AOPSI) and Aboriginal Policy and Practice Framework (APPF). Secwépemc follows the "Signs of Safety" framework to promote its mandate to provide culturally safe and culturally appropriate CFS to the seven First Nations Communities it serves, and a significant number of urban, Away from Home First Nations and Inuit children, youth, and families who live in the Secwépemc territory.

At the core of Secwépemc's service delivery is culture. Promoting cultural continuity is interwoven in both the Agency's mandate and throughout the seven Communities it serves. Secwépemc's design and delivery of its services is embedded in culture and the land. In the context of child and family services work, the Story of Porcupine (see Appendix A), a Secwépemc story emphasizes collaboration and sharing wisdom. Secwépemc has a culture team that promotes culture and organizes a variety of events both for the Agency staff and the children, youth and families it serves. Each week there are drumming circles, Elders on-site,

and a variety of cultural craft opportunities at the main office, in the local urban area, as well as in Community.

A key factor driving success for Secwépemc is open communication, listening to feedback, and being open to change. Secwépemc recognizes the uniqueness of each of the seven Communities it serves and offers support while following their leadership. The Agency has worked hard to build trust with its Communities through communication and relationship building. Communication flows between the seven Communities and Secwépemc through Band Representatives, the Executive Director, and the Agency's Board of Directors that is comprised of members of each of the seven Communities.

Secwépemc has a clear mission, vision, and mandate, with well-developed programs and services. It continues to strategically plan and is prepared to adapt to changes that occur due to the current climate of government decisions and the legislative landscape. If Secwépemc's seven Communities engage with inherent jurisdiction, the Agency envisions maintaining strong continuing relationships and will remain a supportive ally through the changes.

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 4

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Notes from collaborator
People	Do you have enough staff to meet your operational needs?	Y	Y	
	Does your compensation match	Y	Y	

	the provincial standard?			
	Do you recruit staff from your member community(ies)?	Y	Y	
	Do you have high retention of employees?	N	N	Turnover is similar to mainstream organizations; social workers are challenging to attract.
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	Y	Y	Staff on-boarding is available and integrates culture within the training.
	Are you attracting the same level of credentialed employees as mainstream organizations?	Y	Y	
	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	Y	Y	Professional staff e.g., doctors, accountants, and lawyers typically contracted and are part of the Agency's practice circle.
Process	Are your current operating baselines meeting needs?	Y	Y	
	Do you have a clear vision of your future state?	Y	Y	The Agency will be refreshing its five-year strategic plan in July 2024 and anticipates there will

				be shifts to its future state visioning.
	Are your post-transition activities defined?	N/A	N/A	The Agency expects that it will continuously evolve and adapt. Transition is an on-going conversation.
	Is your post-transition workflow defined?	N/A	N/A	The Agency expects that it will continuously evolve and adapt. Transition is an on-going conversation.
	Is your post-transition management structure established?	N/A	N/A	The Agency expects that it will continuously evolve and adapt. Transition is an on-going conversation.
	Have you fully designed your prevention programming?	N	Y	A team is working with the seven Communities to develop prevention services for each of the seven Communities.
	Have you fully designed your protection programming?	Y	Y	
Strategy	Is your post-transition mission defined?	N/A	N/A	We are currently in the last year of a five-year strategic plan – the post-transition mission will be revised accordingly as a new Executive Director is expected

				to join the Agency in the coming weeks.
	Is your post-transition strategy defined?	N	N	The legal trajectory of the seven Communities is not clear, planning for the future can present challenges and new opportunities.
	Are your post-transition goals and organizational priorities defined?	N	N	The Agency expects that it will continuously evolve and adapt. Transition is an on-going conversation.
	Are all of your services or programs developed?	N/A	N/A	The Agency provides a variety of services and has teams to deliver wellness, family preservation, kinship, resource team, and foundational sources e.g., finance, administrative support, custodians. The Agency is also embarking on a new service delivery model, which includes becoming a housing provider and so programs and services will have to be developed accordingly.
	Are all of your necessary	N/A	N/A	Partnered with Community Living BC to be able to deliver strengthened

	organizational partnerships in place?			services through the Agency for adults living with a disability. The Agency continues to pursue relationships with universities and other organizations and will continue to build organizational relationships as it expands its service delivery model to include housing.
Systems	Is your post-transition governance framework defined?	N/A	N/A	Depends on the legal trajectory of First Nations and the seven Communities served by the Agency vary in their progress toward inherent Jurisdiction
	Do you have an independent board of directors?	Y	Y	
	Is your post-transition legal framework defined?	N/A	N/A	
	Is an adjudication system in place?	Y	Y	
	Is an adequate data system in place?	Y	Y	Currently using two systems used by the provincial government to collect data. Best practices are being phased out and new ones introduced.

	Is an adequate performance management framework in place?	Y	Y	
	Is an adequate IT system in place?	Y	Y	
	Is an adequate financial system in place?	Y	Y	
	Are your post-transition reporting systems in place?	N/A	N/A	This will depend greatly on whether current funding models remain the same or not.
	Are you developing new criteria for evaluative purposes?	Y	Y	The Agency currently has mechanisms in place, for example a three-year audit system for delegated work, financial audits, complaint process outlined by the Province, Ombudsperson as well as internal practice 'checks and balances.' Should the funding structure change, as an example, the Agency will accordingly develop criteria for evaluative purposes.

People

Recruitment and retention are key challenges, despite Secwépemc being viewed as a good place to work, with flexibility and creativity. Several factors drive these challenges:

- *Competitive recruitment environment.* Social workers and support staff are in high demand industry-wide.

Process

Secwépemc has clear processes established to meet its current needs. However, Secwépemc is investing in resources (such as a new and forthcoming Research and Development Team) to ensure the Agency is informed and can navigate a changing legislative landscape (e.g., C-92) alongside the seven Communities it serves. It is also working to anticipate how its role may evolve as the urban, Away from Home Indigenous population continues to grow at a high rate. Current process challenges, are:

- *Supporting children, youth, and families to navigate services.* Secwépemc's Communities and urban, Away from Home Indigenous population confront barriers to accessing services and resources e.g., internet, cell service, transportation. Secwépemc aims to support children, youth, and families engaged with CFS to navigate everyday resources, services, and skills.
- *CHRT prevention dollars.* Secwépemc embeds prevention into its service delivery model. It is a challenge for the Agency to maintain its level of prevention services without adequate funding. Through strong partnerships, Secwépemc is working with the seven Communities to help them plan and deliver prevention services.

Strategy

Secwépemc has a clear mission, vision, mandate, and organizational structure. The key strategic challenge for Secwépemc stems from a changing legislative landscape, i.e. which requires navigating complex court settlements, and supporting the seven Communities it serves, all with unique contexts, and diverse needs and challenges. Secwépemc's teams that work within the seven Communities as well as with a significant urban, Away from Home Indigenous population provide a range of voluntary, guardianship and child protection services, and will continue to offer support throughout the changing legislative landscape. This will help strengthen the relationship between the Agency and the Communities. Secwépemc has a strategic plan in place until 2025 and will continue to plan and adapt to changes. Factors influencing strategy include:

- *Unique community contexts.* Secwépemc works with individual Communities to deliver programs that meet each unique context. It can be challenging with diverse community circumstances. Secwépemc's member Communities cover a large geographic region. Secwépemc acknowledges the importance of recognizing the context and unique challenges in each community to ensure they deliver the appropriate services. The Agency meets people where they are, including those urban, Away from Home, to provide access to the services they need, and in consideration of their unique context e.g., internet connectivity, transportation, infrastructure, etc.
- *Drafting a new strategic plan.* Secwépemc will be drafting their next five-year strategic plan in the summer of 2024 that emphasizes a prevention-based, holistic service delivery model to address service gaps like housing. Recognizing the importance of adequate housing to support children and families, Secwépemc is developing a service delivery mandate as a housing service provider. In turn, it is developing two housing projects: one for rapid response housing and another for transitional housing.

Systems

Secwépemc's key systems challenge stems directly from a changing legislative landscape that may influence the political and legal trajectories of the Communities it serves. Currently, Secwépemc has a well-developed adjudication system in place. Throughout the journey towards inherent jurisdiction, Secwépemc will remain committed to support the seven Communities it serves and will adapt its systems throughout the process. The Agency is an ally to the Communities and is committed to work with them to support them on their individual journeys and processes.

Appendix A - Re Sku7pecen re Stseptékwlls (The Story of the Porcupine)

IFSD wishes to recognize those who assisted to translate the Story of the Porcupine from Secwepemctsín to English.

Re Sku7pecen re Stseptékwlls (The Story of Porcupine)

This stseptékwll was told to James Teit by Secwepemc storyteller Sexwélecken in 1900, unfortunately only rendered in English as re-told by Teit in his own prose.
The Skeetchestn elders re-translated the story into Secwepemctsin.

Kukwstsétsemc to Daniel Calhoun, Leona Calhoun, Amy Slater, Christine Simon, Garlene Dodson, Doris Gage, Marianne Ignace, Ron Ignace, Julienne Ignace

Cw7it te qelmúcw tsyem-ekwe ne neḱúl̓ecw te tmicw.
A large number of people lived together in one place, so they say.

Re speqmíc ri7 re kúkwpi7s-ekwe.
Swan was their chief, they say.

Ne kekéw te t̓ecwllúl̓ecw, te neḱwésq̓t-ekwe me7 re scwesét-kt, te tekenu7s re sḱwelkwélt, tsyemes-ekwe te t̓icwell te qelmucw te sts7émet.stem te Tśí7emc.
In another far away place, one day's journey away, beyond the snowy mountains lived another group of people, they were called the Deer People.

Yi7éne te tmescécen lu7 re tśi7, re teniye, re selcwéyecen, re sxwet̓éy, re yigelécken ell re s7i7llcw.
These people included deer, moose, caribou, mountain goat, mountain sheep and some others.

Re tcetś-ekwe lu7 re kúkwpi7s.
They say that their chief was Elk.

Ye-ekwe yirí7 k scmentwécws te tsqwétsten te m-sq̓7es.
For a long time they had been enemies.

Kwemtús re sḱelcmentwécws, t̓ri7 yem wel re kweḱwiyúsem re s7elḱwstsíllens
They were interfering in each other's business all the time, that's why they had a hard time putting away food.

Tect̓icwell re stḱwenm7íple7s, ell re tsutsúwet.s.
They each had a different kind of government and different ways of doing things.

Neḱúsem relralt re sw7ecs, ḱemell neḱusem ta7 t̓ri7 k sle7s, t̓ri7 yem wel kwemtús re skweḱwiyusems.
What one group did well the other group did poorly, that is why all of them they always suffered.

Re spipyuy7e tit̓éýpens re tmescécen ell re tmescécen tit̓éýpens re spipyuy7e t̓ri7 wel qwenqwént re xwexwéytes.
The birds were acting like four-legged animals, and the four-legged animals acted like birds, that is why they were all pitiful.

Re speqmíc qwenmíns es texwentés tkenhé7e re lele7stw7écws, es ta7es cuýtsem re sḱelcmentwécws.
Swan wanted to fix how they could be good to each other, so that they wouldṅt interfere in one anotheŕs affairs any more.

Re speqmíc necwentés es pálpelt.s re tsqwétsten, ṫri7 yem wel w7ec re yewsentwécwes.
The swan believed that the people were stubborn that is why they were troublesome and were being a nuisance to one another.

Neḱu7 te sitq̓t te m-ístkmes, le gaṫtes re swucwt ne skwelḱwélt, m-melḱwilcmens re ḱwséltktens re speqmic.
One day in winter when the snow was deep in the mountains, Swan gathered his people together.

Neri7 m-lexéýect.s stemi re sptínesems, m-yews re sulltimt.s swéti7 me7 nes es tsxlitens re tcetś, swéti7 ṫri7 re sxilems me7 éyentem cw7it te sxíxlem.
And he told them what he had thought, and then asked who would go to invite Elk to come, and whoever would do that would be paid lots of dentalium.

Tsúntem te sḱelép, "Re ntsétswe7 me7 néns-ken." M-yews re sllecwentés re s7ícenst.s te stemstíteṁt.s, tskerniý te silltśu7úẃi, ell xwexwéyt re sxixlems ell re mémles.
Coyote said, "I will go." Then he put on his fancy clothes, his embroidered moccassins, all his dentalia and his necklaces.

Le estḱlucwes m-qwetséts re sḱelép, ḱémell ta7ks qwenens es ḱwétems ne xgaṫt te swucwt. Ṫri7 yem m-tentyénmens re c7istkten wel tskwteḱ re skéḱw7es le xqilltes re ḱwséltktens.
Coyote left at sundown, but he did not want to walk in the deep snow. Thaṫs why he kept circling the underground house until sunrise when his relatives woke up.

M-séwentem te speqmic, "kénem me7e ta7 ke7 sqwetséts ey?"
Swan asked him, "How come you have not left yet?"

M-éytsentem te sḱelép, "m-etsxmimen ṫucw ens cwiwselc, ṫri7 wel ta7 ey ken sqwetséts te sqeltus. E r7ales me7 qwetséts-wen.
Coyote answered, "I was practicing running, thaṫs why I haveṅt left for the mountains yet. I will leave tonight.

M-r7ales tspíqwstem le qwetsétses te ḱwséltktens wel re m-legúp.
In the evening the relatives watched him until he was out of sight.

Ta7 k sq̓7es m-xpqenwéńses k sgaṫt7uys re swucwt, cwelpilc m-tspelq̓ilcwes, m-stsilcwes ne ḱwellḱémts re xnicw ne cḱemqíns re c7istkten .

It was not long until he found the snow too deep, so he turned around and went back, and he lay down under the ladder on the roof of the underground house.

Le xqilltes re qelmucw m-wiktem te xexe7 re s7itcs re sḱelép, m-xúq̓leqses. M-séwentmes te speqmic, "kénem mé7e ta7 ke7 sqwetséts ey?"
When the people woke up they saw that coyote was fast asleep and snoring. Swan asked him, "why didn̓t you leave yet?"

M-tsúntem te sḱelép, "m-etsxmímen ens cwiwselc, t̓ri7 yem wel cetsétsus-ken." E r7áleses me7 qwetséts-wen.
Coyote told him, "I was practicing running, and that̓s why I got tired. I will leave tonight.

Re speqmic m-séwens re ḱwseltkens sweti7 me7 exték es qwetséts.s. Xwexwéyt re stsetsut, yiri7 re sku7pecen tikwemtus re skuḱuwétems ne skwelḱwelt, ne gat̓t te swucwt, t̓ri7 yem me7 exték es qwetséts.s.
Swan asked his relatives who would be the fittest one to go. They all said that the porcupine always walked in the snowy mountains in the deep snow, that̓s why he would be the fittest one.

T̓ri7 yem m-twinél̓esmentem re sku7pecen es qwetséts.
Thus, they depended on Porcupine to go.

t̓qwentés re silltsu7uẃis ne sitest wel re m-cwéńwen, m-yews re syexs te qwets.
He sewed his moccassins

Le-tseḱul̓ecwes re tmicw m-qwetsétses.
He left at the break of dawn.

M-wiktmes te sḱelép m-tulíl̓mentem, tsuntmes, "yumell re ntsétswe7 ta7 ks xenwéẃen ens qwetséts, tkenhé7e me7 xillt.s yi7ene te qwenqwént, te kenkint, te ctsetsscécen te ḱwséltkten-kt es t̓7eks ne gat̓t te swucwt?
When Coyote saw him, he laughed at him and said, "If even I could not make it, how can this pitiful, slow and shortlegged relative of ours make through the deep snow?"

E r7aleses m-kitsc re sku7pecen re tcets̓ re tsitcws, xexé7 re stleĺ̓s, stsmuxmux-ekwe te scúyent ell te swucwt.
In the evening, Porcupine arrived at Elḱs house, he was very exhausted and covered in ice and snow.

Le qw7étses re skú7pecen, m-kectés re tcets̓ te stél̓tsnems re speqmic es tsxlitens re tcets̓ met re ḱwséltkens. M-yews re sulltimcwes te stiteńc ell te t̓éq̓ceń es t̓qwentés re silltsú7uẃis.
After Porcupine had warmed himself, he gave Elk the message from Swan and asked for sinew and an awl to sew his moccasins.

Le-wi7es re steltsneḿs, m-tsuntem te tcetś, "Pexyéwt me7 tégwentp-kucw re ntsétswe7 met ren ḱwseseltkten ne tmicw-emp."
When he was finished delivered, Elk told him, "tomorrow me and my people will visit you in your country.

M-pelq̓ilc re sku7pecen ne tmicws, m-lexéy̓ect.ses re speqmic steḿi lu7 re stél̓tsneḿs re tcetś.
Porcupine returned to his country, and then he told Swan what Elḱs message was.

Le yigapes re tcetś met re ḱwséltktens m-tsecwmintem, m-yews re smetéms.
When Elk and his relatives arrived they were warmly greeted and feasted.

Le wi7es re s7illens m-xit̓elc well re speqmic met re ḱwséltktens ne sxetéqs re tcetś.
After they finished eating, Swan and his relatives knelt before Elk.

Re speqmic m-tslexemcit.s xwexwéyt re stem re stslexméms, ell m-lexéy̓ect.s tkenhe7e m-tsetśeclementwécwes, T́ri7 yem m-kectéses re tcetś xwexwéyt re texpqenwéllens ell re m-tḱwenm7iplemenses.
Swan shared his wisdom with them and told them how they could fix one another.
This is how he gave Elk all his knowledge and his advice.

M-yews re tcetś met re ḱwseltktens m-xit̓elc ne sxetéqs re speqmíc ell re tcetś m-kectés xwexwéyt re sptinesems ell re tḱwenm7ipe7s.
yiri7 re sxepqenwellentwécws ell t̓qwews p̓7ecws re sle7s re sxenwéllens es tsetséts.s es yucwmentwecws.
Then Elk and his relatives knelt before Swan and Elk shared all his thoughts and his advice.
And this is how they learned from one another, and they were able to look after one another.

M-yews re p̓7ecws re sle7s re sw7ecs, m- le7stwécw wel me7 yews, m-ta7es cuy̓tsem re stśniqentwécws.
Then they lived much better, they were good to one another from then on, and they stopped fighting.

Yiri7 re tkwenm7íplemeńtwecwes wel me7 tekwemíte7.
These are the laws they gave to one another.

Re skú7pecen m-kwenwéńses te cwesqlew̓ te sxixlem. M-yews re skucwsentem te sḱelép.
And Porcupine became rich with dentalia and was much envied by Coyote.

Yiri7 re stsecwtéps!
This is the end.

IFSD
IFPD

Piikani Child and Family Services

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Piikani Child and Family Services (Piikani) delivers both protection and prevention services to Piikani First Nation in Alberta. Table 1 outlines contextual information about Piikani First Nation.

Table 1

Collaborator name: Piikani Child and Family Services

First Nation(s) served:	Total population (on-reserve, IRS 2022)	Geographic zone (1-4)	After-tax total median household income (2016)	Difference between after-tax median household income above or below 2022 MBM?
1) Piikani First Nation	2447	1	$38,400.00	Below

Piikani First Nation has an on-reserve population of nearly 2500. Located in Brocket, Alberta, this rural community has year-round road access. Basic household internet connectivity has been established widely within the community which may partially explain the relatively high rate of post-secondary education completion. With that said, high school completion is relatively low. Further, considerable gaps in community housing infrastructure are observed, with only 80% of dwellings considered suitable and 44% of homes requiring major repairs. Income-based poverty may also warrant concern for Piikani, given the median household income, which lies below the provincial poverty line. These unique set of circumstances present distinct community-based priorities that likely impact children and therefore guide Piikani Child and Family Services' approach.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

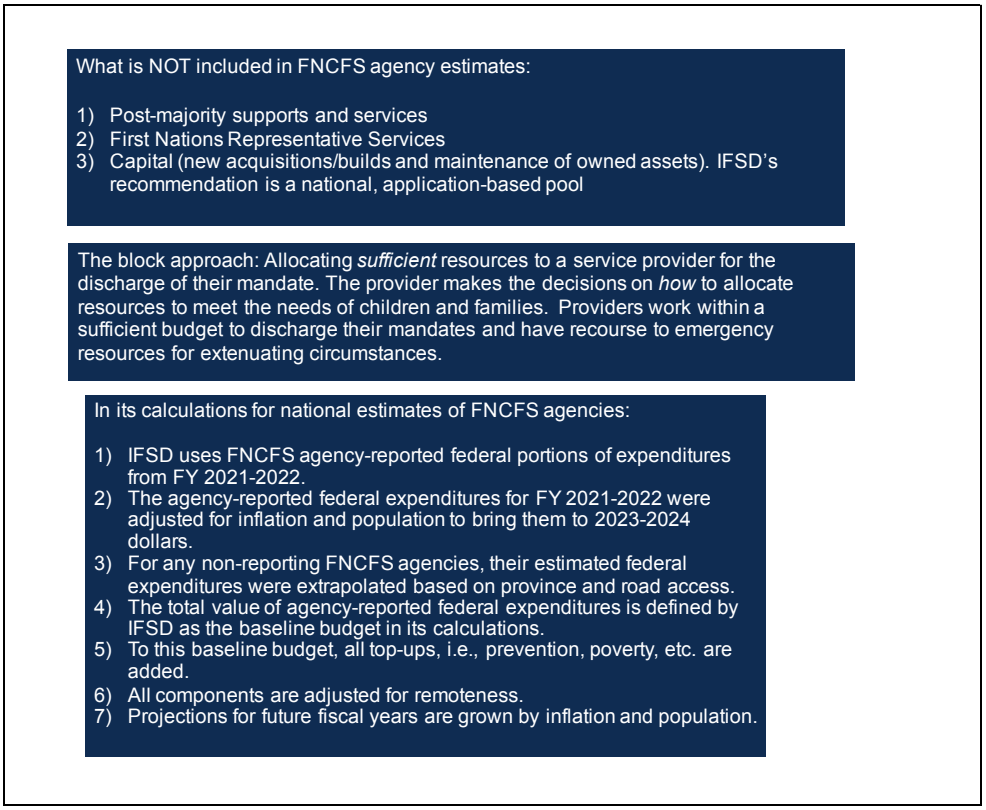

Table 3 outlines two illustrative funding scenarios for Piikani, including adjustments for remoteness and the Northern MBM.

Table 3

Piikani Child and Family Services

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Summary of Capital Needs Cost Estimate

Overview

1) Table 4 summarizes your capital needs, as understood by IFSD.
2) The capital costing model multiplies the units summarized in Table 4 by a set of unit cost assumptions to produce a capital needs cost estimate. **Your estimated base capital costs are between $31,000,111 and $41,688,624** (see Table 5).
3) Tables 6 through 8 summarize your 10-year capital cost estimate profile, including adjustments for remoteness, contingency, recapitalization and inflation. **Your total estimated capital costs over 10 years are between $53,109,826 and $70,902,021.**

Table 4: Asset Quantities

Category	Item	Unit Type	Units
Clinical	Healing centre	Square Feet (SF)	0
	Mental Health Response Team	SF	1,485
	Rehabilitation centre	SF	0
	Residential treatment centre	SF	0

Transition Case Study: Piikani Child and Family Services

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- Piikani Child and Family Services ("Piikani") is strategically planning for jurisdiction by reforming its service delivery model. It is doing this by:
    - Investing in core systems like IT and data, to enable evidence-based decision-making.
    - Implementing a prevention-centred service delivery model by integrating prevention and protection services to reduce children's contact with the protection system.
    - Dedicating resources to enhance training for employees with Piikani values.

Summary Assessment

- Transition is viewed as a long-term, multi-faceted exercise that integrates Western practice with First Nations culture and traditions.
- There is a concerted focus on integrating prevention and protection services at a tactile level to ensure children's contact with protection system is minimized.
- The initial phase of transition focuses on building trust with the community through an in-depth consultation exercise that addresses community needs and root causes of children's contact with the protection system.
- Recruitment and retention are key challenges.
- Piikani is reforming service delivery without waiting for the full implementation of jurisdiction.
- Piikani believes in the use of data gathering and retention as a tool for determining both the preventive and protective needs of the community with a view to determining in a factual manner the protection causative factors and the possible solutions. This led to the development of Piikani's data base that is on-going.

Context

Piikani Child and Family Services ("Piikani") is an agency that provides a wide range of services to one community. Piikani's services include:

- Prevention services;
- Protection services;
- Post Majority Support Services; and
- Band Representative Services.

Piikani serves:

- Piikani First Nation

Piikani's transition will be heavily influenced by the trajectory of Piikani First Nation exercising jurisdiction over child and family services. It is taking the process of developing its child and family services (CFS) law slowly to allow for in-depth consultations, addressing issues of trust between the community and the department, and to allow time to prepare for the transition. Piikani is focused on improving its service delivery by developing its people, process, strategy, and systems in alignment with the development of the law to support the transition to their desired vision.

The external factors influencing Piikani's transition make it difficult to precisely articulate a future state, and consequently, to provide a gap analysis. Piikani has begun defining its vision for the future, but much of it remains undefined as they navigate the landscape of exercising jurisdiction and new funding allocations.

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 9

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Notes from collaborator
People	Do you have enough staff to meet your operational needs?	N	Y	
	Does your compensation match	N	N	

	the provincial standard?			
	Do you recruit staff from your member community(ies)?	Y	Y	
	Do you have high retention of employees?	N	N	High turnover due to the demands of the job.
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	N	Y	Piikani is considering how to augment existing training with Piikani values.
	Are you attracting the same level of credentialed employees as mainstream organizations?	N	N	
	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	N	N	
Process	Are your current operating baselines meeting needs?	Y	Y	
	Do you have a clear vision of your future state?	N	Y	Piikani's vision continues to adapt and evolve with the changing climate. This will likely become clearer

				with the finalized CFS law.
	Are your post-transition activities defined?	N	N	
	Is your post-transition workflow defined?	N	N	
	Is your post-transition management structure established?	N	N	Expanding the management structure and moving away from provincial practices. Separating prevention and protection departments and building mechanisms to support employees to work collectively.
	Have you fully designed your prevention programming?	Y	Y	
	Have you fully designed your protection programming?	Y	Y	
Strategy	Is your post-transition mission defined?	N	Y	Piikani's law is still in development and its strategy continues to evolve with the process.
	Is your post-transition strategy defined?	N	Y	
	Are your post-transition goals and	N	Y	

	organizational priorities defined?			
	Are all of your services or programs developed?	N	Y	
	Are all of your necessary organizational partnerships in place?	Y/N	Y/N	
Systems	Is your post-transition governance framework defined?	N	N	Planning for this is in early stages – will be moving away from provincial policies once law is developed.
	Do you have an independent board of directors?	Y	Y	
	Is your post-transition legal framework defined?	N	Y	In early stages of developing Piikani's own CFS law.
	Is an adjudication system in place?	N	N	Considering options for adjudication while developing the CFS law.
	Is an adequate data system in place?	N	Y	No – but is in development and should be ready this year.
	Is an adequate performance management framework in place?	N	N	

	Is an adequate IT system in place?	N	Y	It is in development and should be ready this year.
	Is an adequate financial system in place?	N	N	
	Are your post-transition reporting systems in place?	N	N	
	Are you developing new criteria for evaluative purposes?	Y	Y	Alongside development of data and IT systems, Piikani is considering what information to track. This is likely to evolve with jurisdiction.

Table 10

Question	Response: Yes (Y) or No (N)	Notes from collaborator
Are you currently delivering secondary and tertiary prevention services?	Y	PCFS have been involved in the provision of primary, secondary and tertiary prevention services. The primary services include after hour and crisis help lines as well as outreach services.
If you are not currently delivering secondary and tertiary prevention services, do you plan to do so?	Y	As stated above, PCFS is currently providing both secondary and tertiary prevention services such Direct Intervention services in the areas of accommodation, home items, family counselling, cultural immersion among others. We plan to have a mental health crisis team that would help in providing both preventive and responsive services. This is expected to kick off from the next fiscal year

Is the delivery of prevention and protection services integrated at a case or family service level?	Y	The integration starts at the point of admission and delivery of services. Prevention funds have been used to support family beyond the threshold of Protection funding provision.

People

Retention and recruitment are key challenges. Piikani employs 33 people, turnover has increased in the past two years. This creates deficits in program delivery. Several factors drive these challenges:

- *High turnover.* Piikani has recently had high turnover due to staff retiring, passing away, or burning out. Piikani First Nation has frequent deaths in the community which can affect an employee's ability to work.
- *Skillset.* Piikani seeks recruits who are not only qualified with the relevant educational background, but individuals who are able to effectively work with families in the community and provide the required supports. This makes it challenging to recruit people who will be successful in the positions.
- *Conflict of interest.* Recruiting members from the community can cause a conflict of interest when they engage with family members. This can put employees in difficult positions.
- *Location and remoteness.* The Piikani community is remote to the concentration of skillful and qualified candidates with relevant educational background. The dearth of livable accommodation for staff within the community is also a contributory factor to employees living far away from office location with employees needing to cover thousands of kilometers in travels and this leads to employees being burnt out.

Process

Piikani's processes regularly evolve, and it is working towards better defining its processes. Factors influencing process include:

- *Pursuing jurisdiction.* Piikani's processes depend on the development of its CFS law. Vision for the future, post transition activities, and post-transition management structure will be developed alongside the law.
- *Expansion of prevention services.* Piikani is moving towards a prevention-centred service delivery approach. It has already developed a prevention department that continues to grow. Building trust and expanding services will be integral to meeting community needs.
- *Meeting of the needs of children who have aged out.* Through the Post Majority Support Services.

Strategy

Piikani has a clear mission and organizational philosophy. The key strategic challenge for Piikani stems from the uncertainty of the future. Factors influencing strategy include:

- *Availability of funding.* Piikani maintains a surplus budget because the future of funding is unclear. There is only a five-year plan which offers no guarantees in the future. This impacts the ability to plan long-term.
- *Expanding services.* As the only agency in Piikani First Nation, Piikani supports other program areas that affect families like health and housing. Piikani would like to expand the resources it provides community members through prevention. Piikani is incorporating a rapid response team into its operational structure for medical emergencies in the area of addiction and mental health while also strategizing for the care of children who have aged out of care in line with the Post Majority Support Services of the Federal Government of Canada.
- *Developing new priorities.* As a growing agency, Piikani recognizes the importance of language and culture in the connection of the Piikani people to their community and these would be embedded into its strategy. There is a high level of death and trauma in the community. Addressing community needs through language and culture is a priority for Piikani.

Systems

Piikani is in the early stages of developing its systems. Its financial system is well-developed while key systems such as data and IT are in development and are expected to be rolled-out this year. Other systems such as a governance framework, legal framework, and adjudication will depend on the development of the CFS law. Piikani expects the legal framework to be drafted within the next 2-3 years.

IFSD
IFPD

Awasis Agency of Northern Manitoba

Purpose of Collaboration

The purpose of this research project is to build-on, and translate previous phases of work into discrete First Nation-based delivery models that transform organizational strategy, people, process, and systems. This work, informed by contributions from twenty collaborators, including a mix of FNCFS agencies and First Nations exercising jurisdiction, is intended to build capacity and an enhanced bottom-up planning framework for agencies and First Nations, while also building confidence among stakeholders. The study is designed to support the long-term reform of the FNCFS system, as well as the on-going negotiations of the historic Agreement-in-Principle that was signed by the Parties to the Canadian Human Rights Tribunal (CHRT) proceedings.

The outcomes of the collaboration with IFSD are outlined as follows:

1) Overview of the FNCFS agency and/or First Nation;
2) Illustrative allocations based on IFSD's funding approach;
3) Child and family services focused capital needs analysis; and
4) Transition case study.

Overview

Awasis Agency of Northern Manitoba (Awasis) delivers both protection and prevention services to eleven First Nations in Manitoba. Table 1 outlines contextual information about the First Nations Awasis serves.

Table 1

Collaborator name: Awasis Agency of Northern Manitoba

First Nation(s) served:	Total population (on-reserve, IRS 2022)	Geographic zone (1-4)	After-tax total median household income (2016)	Difference between after-tax median household income above or below 2022 MBM?
1) Barren Land First Nation	537	4	$28,400	Below
2) Fox Lake First Nation	223	2	Not available	Not available
3) Manto Sipi Cree Nation	837	4	$32,400	Below
4) Sayisi Dene First Nation	318	4	$26,400	Below
5) Tataskewyak Cree Nation	2474	2	$61,200	Above
6) York Factory Cree Nation	445	4	$41,200	Below
7) Bunibonibee Cree Nation	2724	4	$37,200	Below
8) God's Lake Narrows First Nation	1482	4	$29,600	Below
9) Northlands Denesuline First Nation	1002	4	$34,000	Below
10) Shamattawa First Nation	1448	4	$48,000	Above
11) War Lake First Nation	131	4	Not available	Not available

Awasis serves First Nations with varying populations, geographic zones, income levels, and internet connectivity. There is variability among the First Nations served when it comes to certain indicators, e.g., suitability of homes, internet connectivity. While all First Nations have housing in need of repair, some have needs across more than 50% of the stock, while others are lower. At-home internet connectivity varies considerably with some First Nations with at home access and others with none. Income-based poverty impacts a majority of First Nations. The variability in existing services and access to services suggests that Awasis' approach to service delivery will differ based on the unique contexts of the First Nations served.

Illustrative Allocations based on IFSD's Funding Approach

IFSD prepared illustrative funding allocations based on its funding approach for each collaborator. Refer to Table 2 and Figure 1 for details on the approach, definitions, and additional considerations.

Table 2

Component	Description	Options
Baseline budget	Existing FNCFS agency budget, considered sufficient for protection and related activities.	Federal-only portion of FNCFS agency reported expenditures
Information technology (IT)	Allocation for hardware and software, based on not-for-profit industry standards.	LOW: 5% of the baseline budget
		MED: 5.5% of the baseline budget
		HIGH: 6% of the baseline budget
Results	Allocation to support data collection and analysis.	LOW: 1% of the baseline budget
		MED: 3% of the baseline budget
		HIGH: 5% of the baseline budget
Poverty	Allocation to mitigate some impacts of poverty and its contact with protection services. Not meant to alleviate or solve poverty in a First Nation. Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For each agency, we used the population-weighted average of the after-tax median income of the First Nations for which we have data to extrapolate the missing data.	LOW: 3% of the difference
		MED: 5% of the difference
		HIGH: 7% of the difference
Emergency fund	Support responses to unanticipated circumstances related to CFS that affect demand for core services.	LOW: 0.5% of the baseline budget
		MED: 1% of the baseline budget
		HIGH: 2% of the baseline budget
Maintenance allocation	Support to mitigate the changing costs of child maintenance (over and above inflation).	LOW: 1% of the baseline budget
		MED: 2% of the baseline budget
		HIGH: 3% of the baseline budget
Prevention	Resources to design and deliver programming to reduce child contact with protective services and keep families unified.	Per capita allocation: $2,500
Geography/Remoteness	Resources to recognize the different costs of serving children and families in different geographic environments.	Option 1: 15% CAF for First Nations above a Remoteness Index of 0.4, and weighted based on population to apply to agency funding. Applied to the baseline + top-ups.
		Option 2: 15% CAF applied to all FNCFS agencies' population-weighted remoteness index and road access. Applied to the baseline + top-ups.
Inflation	Pegged to the Consumer Price Index (CPI).	Variable; adjusted for the previous year's average inflation rate.
Population	IRS population data by Band.	IRS 2022

Figure 1

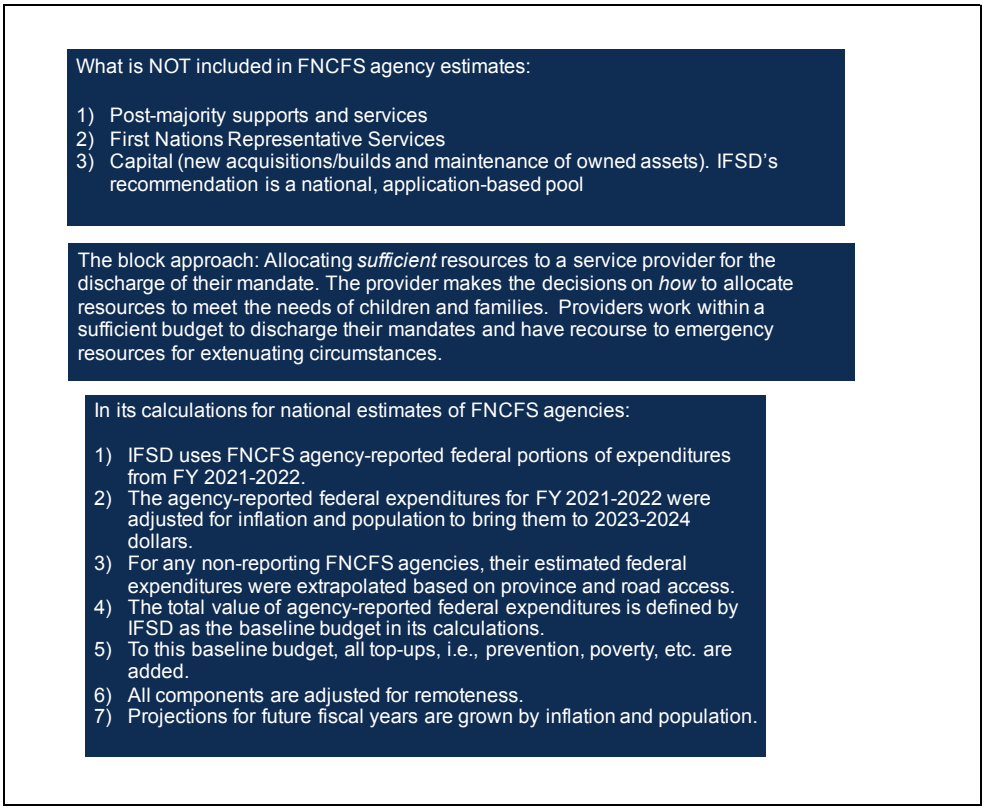

Table 3 outlines two illustrative funding scenarios for Awasis, including adjustments for remoteness and the Northern MBM.

Capital Needs Analysis

At IFSD's Phase 3 capstone event, many collaborators indicated that the top-down capital estimate seemed too low when broken down to the level of their First Nation or agency. **In response, IFSD prepared a framework to generate a second estimate for collaborators.**

For the second set of estimates, participating collaborators defined their own capital needs, and IFSD costed them accordingly. These estimates illustrate the differences in the perceived capital needs for delivering CFS in collaborators' respective First Nation(s) relative to both one another and the top-down national model.

Modelling Approach

The bottom-up capital model uses collaborator-provided program requirements (e.g., number of FTEs/clinicians) to provide capital expenditure estimates across eight asset categories:

1) Clinical,
2) Residential,
3) Offices,
4) Programming space,
5) Storage,
6) Fixed cultural assets,
7) Vehicles, and
8) Moveable cultural assets.

The output of the model is a 10-year capital expenditure schedule, tailored to collaborators' articulated needs. The model includes low, medium, and high per SF construction cost assumptions for each building type. As such, each schedule of expenditures includes low, medium, and high-cost scenarios. For the bottom-up capital estimate, refer to Appendix E1, and for the top-down capital estimate, refer to Appendix E2.

Summary of Capital Needs Cost Estimate

Overview

1) Table 4 summarizes your capital needs, as understood by IFSD.
2) The capital costing model multiplies the units summarized in Table 4 by a set of unit cost assumptions to produce a capital needs cost estimate. **Your estimated base capital costs are between $377,087,946 and $557,849,936** (see Table 5).
3) Tables 6 through 8 summarize your 10-year capital cost estimate profile, including adjustments for remoteness, contingency, recapitalization and inflation. **Your total estimated capital costs over 10 years are between $778,382,662 and $1,145,991,584.**

Table 4: Asset Quantities

Category	Item	Unit type	Units
Clinical	Healing centre	Square Feet (SF)	24,030
	Rehabilitation centre	SF	67,083
	Residential treatment centre	SF	618,750
Residential	Transition homes	SF	40,176
	Reunification homes	SF	23,083

	Reunification homes (4+ beds)	SF	24,757
	Staff housing	SF	18,568
	Emergency shelter/safe houses	SF	39,611
Offices	Office Space - based on number of FTEs	SF	20,202
	Office Space - additional meeting space	SF	-
Programming Space	Recreation/events centre	SF	104,500
	Daycare	SF	36,835
Storage	Garages/sheds	SF	7,920
	Seacans (40')	Seacans	0
Fixed Cultural Assets	Land-based Camp	SF	0
Vehicles	Passenger Vehicle	Vehicles	0
	15 pass. Vans	Vans	15
	Mini buses	Mini buses	4
Moveable Cultural Assets	Sweat Lodge Canvases	Canvases	15
	Tipis	Tipis	15
	Canoes	Canoes	334
	Kayaks	Kayaks	334
	Fishing Boats	Boats	55
	ATVs	ATVs	55
	Side-by-Side	Side-by-Sides	0
	Snowmobiles	Snowmobiles	55
	Utility Trailer	Trailers	55
	Cargo Trailer	Trailers	2

Note: cells highlighted orange reflect asset areas specified by the collaborator.

Table 5: Base Estimate of Capital Need

Fixed/Moveable	Asset Type	Cost - Low	Cost - Medium	Cost - High
Fixed	Clinical	$266,169,537	$337,352,365	$408,535,193
	Residential	$30,077,263	$35,558,419	$41,039,575
	Offices	$6,206,413	$7,396,069	$8,585,726
	Programming Space	$65,637,166	$77,957,720	$90,278,274
	Storage	$902,000	$1,108,800	$1,315,600
	Fixed Cultural Assets	$0	$0	$0
Moveable	Vehicles	$1,285,693	$1,285,693	$1,285,693
	Moveable Cultural Assets	$6,809,875	$6,809,875	$6,809,875
	Total:	**$377,087,946**	**$467,468,941**	**$557,849,936**

Note: this estimate does not include a contingency factor, remoteness Cost Adjustment Factor (CAF), recapitalization rate, or inflation. These adjustments are reflected in the 10-year cost estimate profile below.

10-year Cost Estimate Profile:

Table 6: Low-Cost Scenario

Option 1 (Low)		5 Year Total	10 Year Total
Fixed Assets	Clinical	$277,373,171	$277,373,171

Transitions Case Study: Awasis Agency of Northern Manitoba

Transition is understood as the process of changing from the current state (where are you now?), to a desired future state (where do you want to be?). First Nations and FNCFS agencies have diverse starting points, desired future states, and may be at different stages of the transition process. Transition will look different for every community and agency. Consideration of strategy, systems, processes, and people are useful for analyzing transition.

Key Messages

- As for many existing agencies, Awasis Agency of Northern Manitoba's ("Awasis") transition will be impacted by both the reform of the FNCFS Program and the decisions on jurisdiction of the First Nations served.
- Clarity around its mission, quality of its data gathering and analysis, and its commitment to knowledge sharing with communities will support Awasis in navigating uncertain circumstances.

Summary Assessment

- Like a number of agencies, Awasis may have to operate under multiple legal frameworks simultaneously. This presents additional process challenges (i.e., ensuring services are delivered appropriately), and may present an additional burden on staff. Clarifying the scope of services to be delivered, and under what legal framework, will be critical in assessing transition readiness.
- Transition is critically impacted by two factors: (1) the anticipated reform of the FNCFS program; and (2), the decisions on jurisdiction of Awasis's communities.
- Recruitment and retention are key challenges.
- Careful consideration may have to be made for service delivery organizations that will operate, simultaneously under provincial and multiple First Nations laws. This has significant implications for operation, adjudication, and practice.

Context

Awasis Agency of Northern Manitoba ("Awasis") is an agency that provides a wide range of services to eleven communities. Awasis's services include:

- Prevention services;
- Promotional services; and
- Protection services.

Awasis serves:

- Barrens Land First Nation
- Bunibonibee Cree Nation
- Fox Lake First Nation
- Manto Sipi Cree Nation
- Sayisi Dene First Nation
- Tataskweyak Cree Nation
- York Factory Cree Nation
- God's Lake Narrows First Nation
- Northlands Denesuline First Nation
- Shamattawa First Nation

- War Lake First Nation

Awasis's transition will be significantly influenced by the legal trajectories of the communities that it serves. The communities widely vary in context (e.g., population, political environment, organizational maturity, etc.) and their evolutions throughout this transition period will affect Awasis's future state as an organization.

In the future, Awasis anticipates it will be delivering more than one First Nations child and family services law. It will be a challenge if it has to deliver more than 3 different laws, while protecting its own mandate as agency. While the progress on the development of laws is slow, Awasis remains prepared to make the transition.

The external factors influencing Awasis's transition make it difficult to articulate a future state, and consequently, to provide a gap analysis. Awasis does have a clear mandate, but it does not have control over all of the elements needed to get there.

Transition Analysis

After discussions with collaborators, IFSD prepared a framework to assess transition readiness and associated timelines. This framework is the direct result of conversations with collaborators and the issues they highlighted. The approach segments issues into four categories:

- People (e.g., staffing, recruitment, retention, training);
- Process (e.g., program activities, workflow design, organizational structure);
- Strategy (e.g., mission, priorities, goals, and culture); and,
- Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks).

Table 9

Transition element	Question	Response: Yes (Y) or No (N)	Will you have this established within three years? Response: Yes (Y) or No (N)	Notes from collaborator
People	Do you have enough staff to meet your operational needs?	N	N	
	Does your compensation match the provincial standard?	N	N	
	Do you recruit staff from your member community(ies)?	Y	Y	

	Do you have high retention of employees?	N	N	
	Do you offer benefits to your employees e.g., health, dental, etc.?	Y	Y	
	Do employees receive adequate on-the-job training?	N	N	
	Are you attracting the same level of credentialed employees as mainstream organizations?	N	N	
	Are you able to recruit professional staff, e.g., social workers, doctors, accountants, lawyers?	N	N	
Process	Are your current operating baselines meeting needs?	N	N	
	Do you have a clear vision of your future state?	N	N	
	Are your post-transition activities defined?	N	N	
	Is your post-transition workflow defined?	N	N	
	Is your post-transition management structure established?	N	N	
	Have you fully designed your prevention programming?	N	N	
	Have you fully designed your protection programming?	N	N	
Strategy	Is your post-transition mission defined?	N	N	
	Is your post-transition strategy defined?	N	N	
	Are your post-transition goals and	N	N	

	organizational priorities defined?			
	Are all of your services or programs developed?	N	N	
	Are all of your necessary organizational partnerships in place?	N	N	
Systems	Is your post-transition governance framework defined?	N	N	
	Do you have an independent board of directors?	N	N	
	Is your post-transition legal framework defined?	N	N	
	Is an adjudication system in place?	N	N	
	Is an adequate data system in place?	N	Y	
	Is an adequate performance management framework in place?	N	Y

People

Recruitment is a key challenge. Vacant positions contribute to deficits in program delivery. Several factors drive these challenges:

- *Competitive recruitment environment.* Social workers and supporting staff are in high demand industry-wide.
- *Reputation.* Awasis's reputation is poor in the communities it serves, which can impact recruitment of community members.

- *Demanding work.* Awasis serves many remote communities, where housing is not available for employees. In turn, employees have to fly-in to communities and stay overnight in the agency offices.

Process

[NTD: to be discussed with Awasis]

Strategy

Awasis has a clear mission and organizational philosophy. The key strategic challenge for Awasis stems from working with eleven different communities, all with unique contexts, needs, and stages of organizational maturity. Awasis cannot adjust its strategy until communities provide guidance on how they are moving forward. Factors influencing strategy include:

- *Community-level organizational maturity.* Many of the communities Awasis serves could not deliver services on its own. Eight of the eleven communities have signed onto a singular legislation that Awasis will follow to deliver services.
- *Unique communities.* The eleven communities Awasis serves are unique and have different cultures and religions. Awasis has to deliver services differently in each of the communities it serves.

Systems

Awasis's key systems challenge stems directly from the legal trajectories of the communities it serves. Currently, Awasis's governance and legal framework are clear. Of the eleven communities Awasis serves, eight are signed onto the same law, and one dene nation will write their own law. This means Awasis will be delivering services based on different laws. As communities develop and implement their own law, Awasis's systems will need to adapt to new realities. This could include different adjudication methods for conflicts, new reporting mechanisms for different communities, and new indicators or measurement criteria for evaluative purposes.

APPENDIX O
REMOTENESS QUOTIENT ESTIMATES

FNCFS agencies

IFSD re-estimated ISC's Cost Adjustment Factor model (CAF) and used it to estimate remoteness quotients for FNCFS agencies. CAF uses Statistic Canada's remoteness index and considers whether a community has access to roads. To estimate the CAF for the agencies, IFSD first estimated a remoteness index for each agency by population weighting Statistics Canada's remoteness index of the First Nations that are served by that agency, and then used the agency's remoteness index in the CAF model. ISC has recommended that CAF-based quotients be scaled down such that the average quotients be 15 percent. To scale down to 15 percent, the CAF estimate for each agency is multiplied by 0.15 and then divided by the average of the estimated CAF of all the agencies.

FNCFS agency	Agency remoteness index - weighted by IRS population	Agency remoteness quotient - scaled to 15%	Province

First Nations affiliated to an FNCFS agency

IFSD re-estimated ISC's Cost Adjustment Factor model (CAF) and used it to estimate remoteness quotients for First Nations affiliated to an FNCFS agency. CAF uses Statistic Canada's remoteness index and considers whether a community has access to roads. ISC has recommended that CAF-based quotients be scaled down such that the average quotients be 15 percent. To scale down to 15 percent, the CAF estimate for each First Nation is multiplied by 0.15 and then divided by the average of the estimated CAF of all the First Nations affiliated to an FNCFS agency.

First Nations not affiliated to an FNCFS agency

IFSD re-estimated ISC's Cost Adjustment Factor model (CAF) and used it to estimate remoteness quotients for First Nations not affiliated to an FNCFS agency. CAF uses Statistic Canada's remoteness index and considers whether a community has access to roads. ISC has recommended that CAF-based quotients be scaled down such that the average quotients be 15 percent. To scale down to 15 percent, the CAF estimate for each First Nation is multiplied by 0.15 and then divided by the average of the estimated CAF of all the First Nations not affiliated to an FNCFS agency.

Band number	First Nation not affiliated to an FNCFS agency	Statistics Canada's 2021 remoteness index	Remoteness quotient (scaled to 15%)	Province/Territory

APPENDIX P
ADDITIONAL COST CONSIDERATIONS

Consideration	Cost Estimate
Office Space *Costs associated with the purchase, rental, or fit-up of office space.*	$_____
Repairs, Maintenance *Costs associated with the upkeep of capital goods or assets (e.g., the cost of repairing plumbing.*	$_____
Office Supplies *Costs associated with the purchase of administrative supplies, e.g., pens and notebooks.*	$_____
Vehicles *Costs associated with the purchase or rental of transportation equipment, e.g., the purchase of a vehicle for employee travel between communities.*	$_____
Technology, Software *Costs associated with the purchase or development of technology or software, e.g., the purchase of a case management software, the purchase of cloud storage.*	$_____
Website Development *Costs associated with designing, building, and maintaining a public facing website for service delivery.*	$_____
Insurance *Costs associated with the purchase of insurance, e.g., liability insurance for service provision, directors' and officers' insurance, etc.*	$_____
Permitting, Licensing *Costs associated with obtaining relevant licenses or permits for operating facilities or services, e.g., childcare license.*	$_____
Legal Fees *Costs associated with corporate set-up, litigation, etc., e.g., costs associated with incorporation.*	$_____
Accounting *Fees for accounting services, e.g., tax filing, audits, etc.*	$_____
Other Professional Services *Costs for retaining consultants or other professional services, e.g., the cost of contracting an organization for community consultations related to jurisdiction.*	$_____
Training *Costs for developing, delivering, or funding employee training, e.g., Indigenous language training.*	$_____
Salaries, Benefits *Costs associated with compensating employees (e.g., hiring and paying an administrative assistant, social worker, etc. and their related benefits, e.g., health care, fitness club, etc.*	$_____

APPENDIX Q
PREVENTION PROGRAMS

The goal of prevention programs is to prevent an incidence of child maltreatment or other emotional and social harm to a child.[1] There are three types of prevention programs and services:[2]

1) Primary: Directed to the community as a whole, designed to educate and prevent child maltreatment.
2) Secondary: Aimed to support a child who may be at risk of harm or maltreatment, e.g., home visit programs for parents, addictions treatment for parents, etc.
3) Tertiary: Used when a child has been identified as at risk of harm of child maltreatment e.g., immediate crisis intervention.

In 2016, Canadian Human Rights Tribunal ordered the federal government to "cease its discriminatory practices and reform the FNCFS Program and *1965 Agreement.*"[3] The funding for prevention programming has evolved since 2016. Most recently, Indigenous Services Canada (ISC) allocated "$2,500 [annually] per registered First Nation person resident on reserves and in the Yukon, based on the total registered population of a First Nation drawn from the Indian Registry System."[4]

There have been a series of CHRT orders regarding funding for prevention programming. These include:

- In 2018, CHRT 4 ordered ISC to pay for prevention programs at actuals.[5]

- In 2021, the CHRT published a Letter-Decision that orders the Government of Canada to fund capital assets at actuals for the delivery of prevention programs including band representatives.[6]
- In 2022, CHRT 8 amended 2018 CHRT 4, ordering, starting April 2022, prevention services be funded at "$2500 per person resident on reserve and in the Yukon in total prevention funding in advance of the complete reform of the FNCFS Program funding formulas, policies, procedures and agreements."[7]

Table 1 summarizes common prevention programs categorized by level (primary, secondary, tertiary) offered by FNCFS service providers, serving as a prevention program inventory for those exploring options to deliver to the First Nations they serve. This table was compiled by reviewing a total of 188 prevention programs across 30 First Nations and 16 FNCFS agencies, representing all regions, geographic zones, and service delivery provider type (served by an FNCFS agency, exercising jurisdiction, or are not affiliated to an FNCFS agency).

Table 1

Program	Description	Examples
Primary		
Healthy Eating and Life Skills	Services that teach parents how to take care of their children (e.g., cooking classes) and youth life skills (e.g., financial literacy).	1. Nutrition Services (Neqotuk Health Center, Tobique First Nation)[8] 2. Life Skills Program (Xyólheméylh [Fraser Valley Aboriginal Children and Family Services Society])[9] 3. Family Support and Case Aid Program (Mi'kmaw Child and Family Services)[10]

Maternal and Infant Health	Nursing services for pregnant people and their babies that strengthen the caregiver-child bond such as breastfeeding support, parenting classes, and home visits.	1. Maternal Child Health Program (Little Red River Cree Nation)[11] 2. Maternal Child Health Program (Abegweit First Nation)[12] 3. Prenatal, Infancy and Early Years Programs (Tikinagan Child and Family Services)[13]
Youth Programming and Recreation	Wellness and healing programs for youth such as sports or cultural activities (e.g. traditional dance), drop-in services, mentorships, substance abuse prevention, services for 2SLGBTQ+ youth, residential treatment facilities etc.	1. Community Sector, Recreation Department (Montagnais de Unamen Shipu)[14] 2. Recreation Department (Beaver Lake Cree Nation)[15]
Land-Based Programming	Outdoor facilities that serve as sites for family, youth, and adult wellness programming.	1. Reclaiming Our Voices (West Region Child and Family Services)[16] 2. Traditional Land Based Program (Peguis Child and Family Services)[17] 3. Land-based and Traditional Training, Youth Programs (Tikinagan Child and Family Services)[18]
Child Health	Pediatric services that also offer parenting classes or other supports for parents.	1. Hwialusmutul' Community Health Team (Cowichan Tribes)[19]

		2. Paq̓mi Nuq̓yuk (Early Years) (Ktunaxa/Kinbasket Child and Family Services Society.[29]
Grandparent Programs	Provides assistance to grandparents to equip them to offer supports to their families.	1. Grandparent Mentorship Program (Peguis First Nation)[30] 2. Grandparents Group (Ktunaxa / Kinbasket Child and Family Services Society)[31]
Gendered Programming	Separate programs for men and women such as traditional parenting roles, healing from trauma, land-based activities, or youth programs.	1. Niigannish Komwadd Ikwewag - Women Leading, Father Traditional Program (Peguis First Nation)[32] 2. LUM-STAM'SH Prevention (Cowichan Tribes)[33]
Secondary		
Family Enhancement	Services and programs that aim to support families confronting challenges and to address existing risk factors to prevent children from entering care. This can be through counselling, sharing circles, or wraparound supports.	1. Family Enhancement Wraparound (West Region Child and Family Services)[34] 2. Family Enhancement (Dakota Ojibway Child and Family Services)[35]
Mental Health and Addictions Treatment	Services for parents or youth struggling with mental illness or addictions such as counselling, in-patient or out-patient services (potentially at a healing center),	1. Addictions Services, Mental Health/Holistic Health Services, Black Lake Denesuline Health Centre/Nursing Station (Black Lake First Nation)[36]

	(Some First Nations and agencies offer Brighter Futures[43] and Nobody's Perfect[44]).	
Urban Families[48] (Not commonly offered)	Supports for families making the transition from on-reserve to off-reserve, such as service provision and gathering places.	1. Urban Families Team (Cowichan Tribes)[49]
Tertiary		
Intensive Family Preservation	Supports families in a crisis with the intention to keep them together. This can include counselling, crisis intervention, and supports from clinicians.	1. Family Preservation Department (Xyólheméylh [Fraser Valley Aboriginal Children and Family Services Society])[50] 2. Family Preservation (Carrier Sekani Family Services)[51]
Removal of Parents Program	When intervention is required to protect a child, removing parents from the home rather than child, is an alternative placement option.	1. Removal of Parent Program (Nisichawayashik Cree Nation Family and Community Wellness Centre)[52]
Family Violence Treatment	Healing supports to families after a family violence incident such as a safe house, counselling, advocacy/assistance planning for the future and residential treatment.	1. Mi'kmaw Family Healing Program (Mi'kmaw Child and Family Services)[53]

		2. Sexual Abuse Intervention Program (Xyólheméylh [Fraser Valley Aboriginal Children and Family Services Society])[54]

FNCFS service providers use varying names to describe their protection programming but will typically provide services that fulfill each function in the typology (Table 2). The typology was developed using an information set that describes the protection programs of 15 different FNCFS agencies. The 15 reviewed FNCFS agencies include two agencies each from British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Quebec, and New Brunswick; one agency from Nova Scotia; and zero from Newfoundland and Labrador, Prince Edward Island. Program descriptions for each FNCFS agency were extracted from agency websites and/or annual reports. After assembling information on the 15 agencies' protection programming, IFSD developed the typology to help categorize programs by common functions.

Table 2

Program type	Description	Examples
Intake and investigation	During the intake process, service providers review reported abuse/neglect concerns to determine if they meet the threshold for investigation. If the report meets the threshold for investigation, the service provider will perform an investigation to determine if the child is at risk and requires removal or if less intrusive interventions could address the concern.	1. Centralized Intake Services (Dilico Anishinabek Family Care)[55] 2. Child Abuse Investigation Program (Peguis Child & Family Services)[56]

Apprehension	Service providers must remove the at-risk children who cannot remain in their home and take them into care.	1. Intervention (Mino Obigiwasin)[57] 2. Investigations & apprehensions (KTC Child & Family Services)[58]
Family group conferencing	Service providers engage a child's extended family and community in the decision-making process for developing a plan of care. This allows the family to work collaboratively with the service provider to ensure the safety and well-being of the child.	1. Wikimanej Kikmanaq Family Group Conference Program (Mi'kmaw Family & Children's Services)[59] 2. Family Group Conferencing/Immediate Response Conferencing (Mi'gmaq Child and Family Services of New Brunswick)[60]
Placement	Service providers use a variety of placement types for children in care, such as: 1) **Short-term placements:** where service providers place children in out-of-home care for a short period while providing supports to the family with the goal of reunification. 2) **Foster care/alternative care:** where service providers place children in a family environment. 3) **Customary care and kinship care:** where service providers	1. Institute of Fiscal Studies and Democracy

HELAINA GASPARD, PH.D.

This report was prepared under the supervision of Kevin Page, President & CEO of the Institute of Fiscal Studies and Democracy (IFSD) at the University of Ottawa.

With contributions by Dr. Mostafa Askari, Sahir Khan, Aimeric Atsin, Vivian Liu, and Eli Dzik. The author wishes to acknowledge the contributions of IFSD's analysts: Tianna Tischbein, Clara Geddes, and Kreg Lonneberg, with administrative support from Kim Paquet.

IFSD is grateful to the 75+ First Nations who shared their time, information, and expertise on child and family services. Their generous and honest contributions during national gatherings, regional workshops, a questionnaire, and in-depth analyses made this work possible.

This report was prepared at the request of the First Nations Child and Family Caring Society (Caring Society).

The views expressed here are those of the author and do not necessarily represent the views of the Caring Society.

EXECUTIVE SUMMARY

There are 172 First Nations not affiliated to a First Nations child and family services (FNCFS) agency that typically receive protection services from their respective province/territory. Prevention services (primary, secondary, and tertiary) may come from the province/territory or the First Nation. The service landscape is complex with multiple actors and limited information from provinces/territories on the integration of service delivery with First Nations.

Implementing reforms to the FNCFS Program for First Nations not affiliated to an FNCFS agency will require the integration of:

- Provincial/territorial service delivery and funding with First Nations receiving services (protection and/or prevention);
- Federal government funding (to the provinces/territories and to First Nations); and,
- First Nations not affiliated to an FNCFS agency's delivery of prevention services (primary, secondary, tertiary) and their integration with protection services.

To ensure First Nations children can thrive, gaps in the integration of services and funding among these actors must be overcome to define and implement a service delivery approach, funding model, and performance reporting framework. This means working consistently across jurisdictions to define common understandings of service delivery and ensuring that in practice, protection and prevention services (primary, secondary, tertiary) are integrated among multiple actors. This will be a significant undertaking.

In November 2021, at the request of the First Nations Child and Family Caring Society (Caring Society), with the support of the Assembly of First Nations (AFN), IFSD was contracted to undertake a child and family services (CFS) needs assessment regarding First Nations not affiliated to an FNCFS agency. The purpose of this project was to assess needs in First Nations not affiliated to an FNCFS agency for the delivery of prevention and other CFS-related services. The data gathered for this project was intended to define a range of approaches and costs for the delivery of CFS in First Nations not affiliated to an FNCFS agency. First Nations not affiliated to an FNCFS agency were invited to participate through regional and national gatherings, a questionnaire, and in-depth collaboration.

46% national participation in a questionnaire (2022); 9 regional workshops (75 First Nations); 2 national gatherings (65+ First Nations); and 5 in-depth analyses.

IFSD is grateful to the First Nations who shared their time, information, and expertise on CFS. This work would not have been possible without their honest and generous contributions.

IFSD worked with First Nations to build the information analyzed and discussed in this report that considers current funding, needs, and

options for a way forward. First Nations were invited to contribute and collaborate in this work in different ways:

1. National questionnaire;
2. Regional workshops;
3. Case study collaborations; and,
4. National gatherings to review findings.

At its launch, the project was expected to be completed by December 2022. However, it took significantly more time than planned to work with First Nations to gather data and to access data from the Government of Canada. More time was needed to ensure First Nations had a meaningful opportunity to participate given spare capacity in First Nations on CFS is limited, mandates for CFS vary, and starting points are different. Unlike existing FNCFS agencies and provincial/territorial service providers, there is limited history of practice or of peer networks. The regional workshops and national gatherings represented for many First Nations not affiliated to an FNCFS agency, the first time they gathered with other peers.

In addition, agreements on FNCFS between federal and provincial/territorial governments are not publicly accessible. This limits understanding of service requirements and associated resources for the province/territory. For First Nations not affiliated to an FNCFS agency, this means a gap in information that impedes their ability to harmonize protection and prevention (primary, secondary, tertiary) in the best interests of the child, with least disruptive measures, and with a culturally informed approach.

The variability in starting points and service delivery models in First Nations not affiliated to an FNCFS agency meant that no single approach could be defined. This circumstance is distinct from that of FNCFS agencies which have a common set of services and consistency in their delivery. With the commonality of services in FNCFS agencies, a national funding approach could be defined and modelled. Given the heterogeneity in starting points of First Nations not affiliated to an FNCFS agency, differentiation in needs, activities, and services should be expected.

Despite challenges associated with heterogeneity, IFSD defined options for a funding structure, i.e., the way money moves to First Nations and the associated conditions, and funding amounts, i.e., national estimates for prevention (primary, secondary, tertiary) service delivery in First Nations not affiliated to an FNCFS agency.

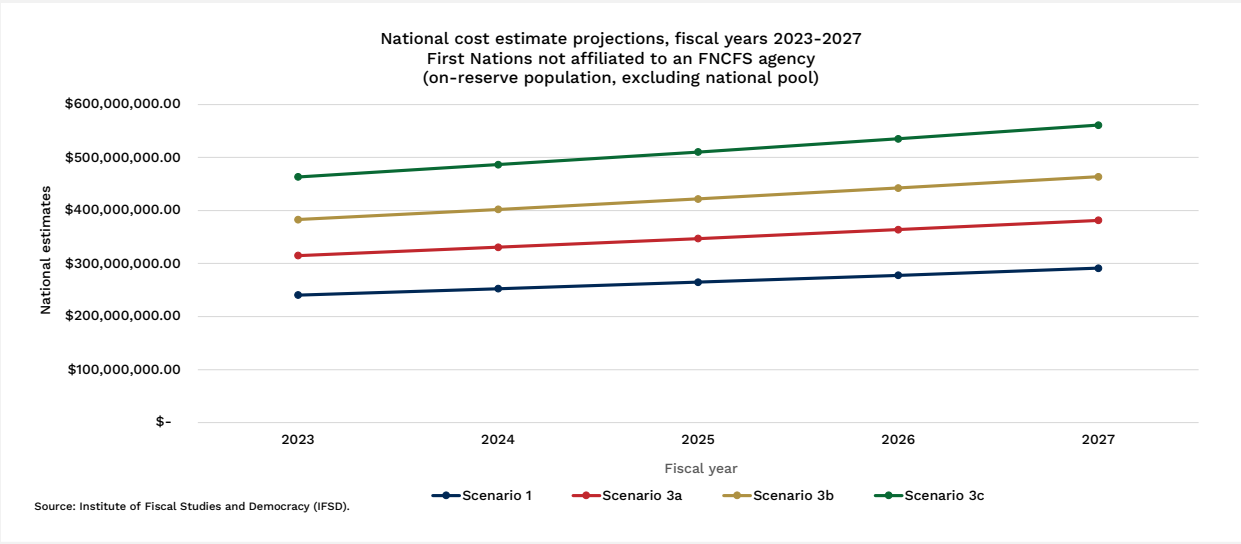
The three structures include status quo, a regional support model, and a needs assessment model (Table A).

TABLE A

OPTION	DESCRIPTION	CHANGE FROM CURRENT STATE
1. Status quo	Fixed contribution approach.	None. Likely revision to terms and conditions.
1 a. Status quo plus	Apply block contribution approach.	First Nations have greater flexibility in how funds are used for CFS in communities. Must work with a fixed amount of funding.
2. Regional support model	Trusted regional organizations would serve as the funding allocator and capacity support provider for First Nations not affiliated to an FNCFS agency.	Variation in regional allocation models. Localized capacity support for CFS.
3. First National needs assessments	Funding held in trust by regional organizations until a First Nation is prepared to accept the funding for use (within approx. 1-5 years), following consultation with community on their own timeline.	Resources accessed based on readiness of First Nation.

To estimate funding amounts, IFSD developed a series of scenarios. There are three scenarios (scenarios 3a, 3b, 3c), in addition to the base scenario (scenario 1), that are reviewed in the integral report (all other scenarios are included in Appendix G). These scenarios use different per capita allocations to define a baseline and include top-ups for service-related activities, e.g., information technology. Over the five-year period, estimates range from $1.3B in scenario 1 to $2.6B in scenario 3c (Figure A).

FIGURE A



The proposed structures and funding amounts represent a starting point. These changes do not represent a reformed approach to CFS delivery in First Nations not affiliated to an FNCFS agency. Without a consistent history of practice and prevention service delivery (primary, secondary, tertiary), it is not possible to define a baseline for operations. This means that any funding decisions implicating prevention service delivery in First Nations not affiliated to an FNCFS agency must recognize the need for time and effort to support the development and growth of consistent operations. This is about getting First Nations not affiliated to an FNCFS agency to a starting point. It will take time to clarify activities and their resource requirements, given the limited history of consistent service delivery.

Based on the report's findings, IFSD makes the following recommendations:

1. Clarify the prevention services (primary, secondary, tertiary) that First Nations are being asked to deliver with FNCFS resources.
    - Define federal reporting requirements for the funding.
    - Define service delivery expectations with their respective provincial/territorial FNCFS service providers, e.g., province/territory.
2. Publish agreements between the federal and provincial/territorial governments on FNCFS.
3. Require provincial/territorial governments to report to the First Nations they serve on the types of protection and prevention services (primary, secondary, tertiary) being offered, and their results.
4. First Nations and provincial/territorial governments should work in partnership to define memoranda of understanding to integrate protection and prevention (primary, secondary, tertiary) in service delivery.
5. On a regional/territorial basis, First Nations should define the funding approach that best suits their needs. This means that First Nations in different places may have different funding structures, e.g., regional organization managing allocation, separate bilateral agreements between First Nations and the federal government.
6. First Nations not affiliated to an FNCFS agency are only beginning to develop their approaches to the delivery of prevention services (primary, secondary, tertiary) with a limited history of practice. It will take time to clarify required activities and their resource requirements. Funding approaches should reflect that reality and should not be considered final until a consistent and stable set of activities are defined.
7. Ensure a review of the five-year approach at year three of funding and structure, relative to actual and desired activities in First Nations not affiliated to an FNCFS agency. Funding structure and resources should be adjusted based on findings.

INTRODUCTION

In 2016, the Canadian Human Rights Tribunal (CHRT) found Canada's funding of First Nations child and family services (FNCFS) and Jordan's Principle to be discriminatory. The Tribunal ordered Canada to end the discrimination and ensure it does not reoccur. Efforts are underway to reform the FNCFS Program and Jordan's Principle. Upholding CHRT rulings in child and family services (CFS) involves various actors and systems.

CFS promotes child safety and well-being through the delivery of protection and prevention services (Table 1). Structural drivers of contact with the protection system include poverty, inadequate housing, the effects of intergenerational trauma, substance misuse, etc. Prevention services exist to stop a child's interaction with protective services by providing supports and services to the child and their family. Prevention services may continue even after the protection concern has ended.

TABLE 1

PROTECTION[1]	Services for child safety to ensure children are free from harm, abuse, and neglect.
PREVENTION[2]	Activities and services to stop or reduce child maltreatment. 3 types of prevention: **Primary:** Directed to the community as a whole, designed to educate and prevent child maltreatment. **Secondary:** Aimed to support a child who may be at risk of harm or maltreatment, e.g., home visit programs for parents, addictions treatment for parents, etc. **Tertiary:** Used when a child has been identified as at risk of harm of child maltreatment, e.g., immediate crisis intervention.

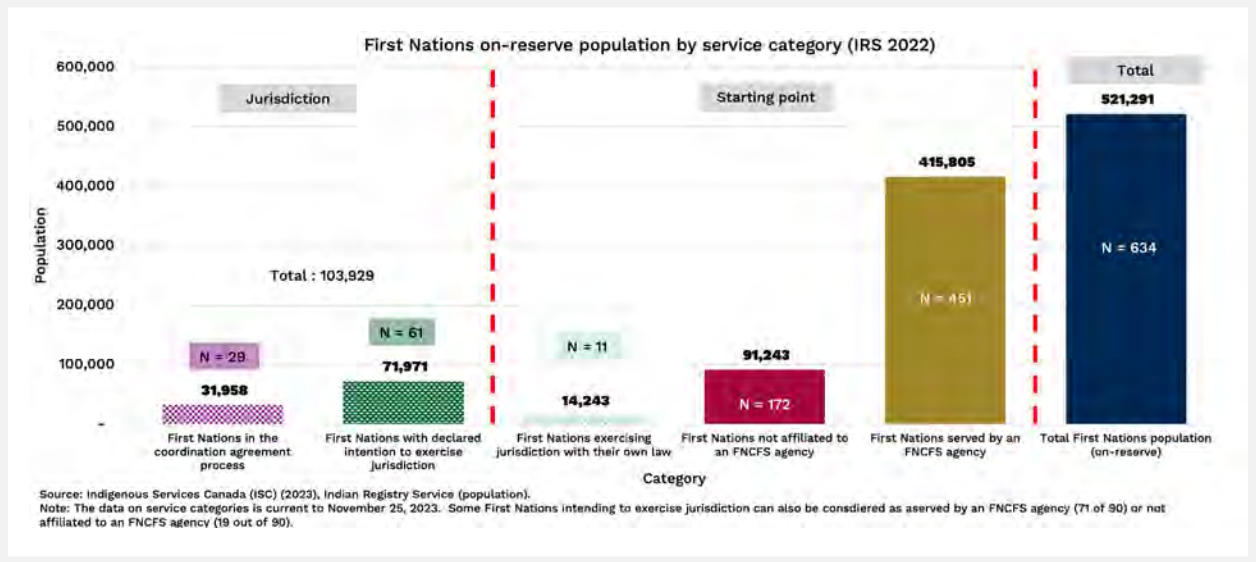
First Nations in Canada deliver and access CFS in different ways. There are 634[3] First Nations in Canada, among which 451 are served by an FNCFS agency[4], 172 are not affiliated to an FNCFS agency, and 11 have enacted their own laws to exercise jurisdiction (this means that their funding arrangements may have terms and conditions different than those being funded through the FNCFS Program) (Figure 1).[5] Based on total population on-reserve, the vast majority of First Nations are served by an FNCFS agency (80%), with the majority of those remaining not affiliated to an FNCFS agency (17.5%) (even though some from both groups may be in a coordination agreement process or have declared their intent to exercise jurisdiction). Only 3% of the First Nations population is served by a First Nation exercising jurisdiction. Note that the numbers are current to November 25, 2023, with changes to jurisdiction captured by Indigenous Services Canada (ISC) on their website.[6]

FIGURE 1



3 The count of 634 First Nations includes registry groups. Otherwise, there are 620 First Nations.

4 A First Nations Child and Family Service agency (FNCFS agency) operates pursuant to provincial legal delegation and/or in some cases First Nations legal delegation to deliver child welfare services to First Nations children, youth, and families. These agencies are funded by the Federal Government in whole or in part, with most providing a full range of statutory protection and prevention services and others known as partially delegated or partially mandated agencies providing a more limited range typically guardianship of children in care and prevention.

5 The 27 First Nations in the Northwest Territories are not affected by the CHRT orders of CFS.

6 Indigenous Services Canada, "Notices and requests related to An Act respecting First Nations, Inuit and Métis children, youth and families," Government of Canada, accessed November 25, 2023, https://www.sac-isc.gc.ca/eng/1608565826510/1608565862367.

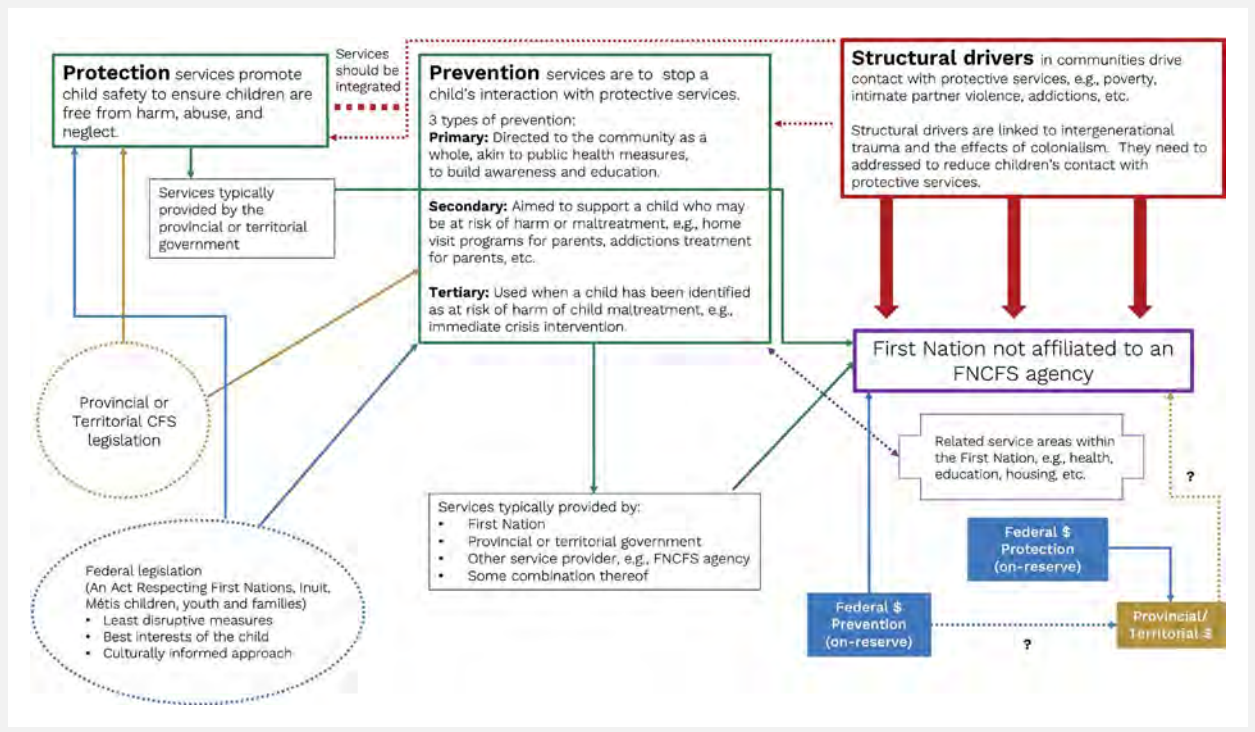
While there has been a great deal of emphasis on the exercise of jurisdiction in CFS and on FNCFS agencies, First Nations not affiliated to an FNCFS agency have been largely left unconsidered in the reform of FNCFS. Service provision in CFS engages several actors and considerations for First Nations not affiliated to an FNCFS agency (Figure 2). Where a First Nation served by an agency may work with their service provider, it is the provider that typically ensures coordination of protection and prevention services. For First Nations not affiliated to an FNCFS agency, the service landscape is more complex.

FIGURE 2: Service Landscape for First Nations Not Affiliated to an FNCFS Agency

The provision of child and family services in First Nations not affiliated to an FNCFS agency includes several actors. Their coordination is necessary to ensure that protection and prevention services are integrated and working in tandem to keep children out of care. Structural drivers are at the root of contact with protective services and need to be addressed.

Possible disconnects:

- Integration of protection and prevention services
- Interaction of and integration between protection and prevention service providers to ensure needs of children and families are being met
- Protocols, agreements, relationships between province and First Nation



Structural drivers that promote contact with protective services exist across communities. Addressing or mitigating the effects of those structural drivers can be done through an integrated combination of protection and prevention. For First Nations not affiliated to an FNCFS agency, protection services are typically provided by the province/territory, with funding from the federal government for services on-reserve. Prevention services may be offered by the province/territory, the First Nation, a nearby delegated agency, or other service providers. Provincial/territorial, and now federal, legislation influences the delivery of protection services, and secondary and tertiary prevention services. Ensuring the coordination of protection and prevention services is essential for keeping children out of care. Such coordination requires protocols, agreements, and working relationships between the First Nation, provincial, and federal governments, as well as with service providers (including those within the First Nation).

There are several questions that arise from this service delivery space. What are the provinces spending in CFS on-reserve? Are they focused on protection or is prevention (with consideration of the bests interests of the child, a culturally informed approach, and least disruptive measures) engaged? Are protection and prevention services aligned? Who is managing that alignment, and how? What federal funding is being allocated to for these activities and to whom? What are the relationships of First Nations with funders and other service providers in CFS? While the answers to these questions will differ by province/territory and First Nation, how the questions are managed merits consideration as they impact how children receive CFS.

In November 2021, at the request of the First Nations Child and Family Caring Society (Caring Society), with the support of the Assembly of First Nations (AFN), IFSD was contracted to undertake a CFS needs assessment regarding First Nations not affiliated to an FNCFS agency. The purpose of this project was to assess needs in First Nations not affiliated to an FNCFS agency for the delivery of prevention and other CFS-related services. The data gathered for this project was intended to define a range of approaches and costs for the delivery of CFS in First Nations not affiliated to an FNCFS agency. First Nations not affiliated to an FNCFS agency were invited to participate through regional and national gatherings, a questionnaire, and in-depth collaboration.

46% national participation in a questionnaire (2022); 9 regional workshops (75 First Nations); 2 national gatherings (65+ First Nations); and 5 in-depth analyses.

At its launch, the project was expected to be completed by December 2022. However, it took significantly more time than planned to work with First Nations to gather data, and to access data from the Government of Canada. More time was needed to ensure First Nations had a meaningful opportunity to participate given

spare capacity in First Nations on CFS is limited, mandates for CFS vary, and starting points are different. The variability in starting points and service delivery models in First Nations not affiliated to an FNCFS agency meant that no single approach could be defined.

IFSD is grateful to the First Nations who shared their time, information, and expertise on CFS. This work would not have been possible without their generous contributions.

This report proceeds by:

1. Reviewing current context of First Nations not affiliated to an FNCFS agency;
2. Discussing the project's data gathering tools and analysis;
3. Reviewing approaches to service delivery in First Nations not affiliated to an FNCFS agency;
4. Defining scenarios and related cost estimates;
5. Concluding with recommendations and considerations for next steps.

COMMON TERMS	DEFINITIONS
First Nations not affiliated to an FNCFS agency	A First Nation that receives protection services from the province/territory or another service provider. They are not associated to an FNCFS agency accountable for delivering protection and/or prevention services.
FNCFS agency	An organization mandated by one or more First Nations to provide protection and/or prevention services, following provincial/territorial law, and *An Act respecting First Nations, Inuit and Métis children, youth and families*.[7]
Protection	Services for child safety to ensure children are free from harm, abuse, and neglect.
Prevention	Activities and services to stop or reduce child maltreatment. 3 types of prevention: **Primary:** Directed to the community as a whole, designed to educate and prevent child maltreatment. **Secondary:** Aimed to support a child who may be at risk of harm or maltreatment, e.g., home visit programs for parents, addictions treatment for parents, etc. **Tertiary:** Used when a child has been identified as at risk of harm of child maltreatment, e.g., immediate crisis intervention.
Funding approach	A series of principles and rules that determine the amount of resources that flow to a recipient for a defined purpose, how the resources are flowed, when, and with what terms and condition for use and performance.
Fiscal year	The period from April 1 to March 31.
FNCFS Program	The federal program that funds First Nations child and family services (FNCFS) related activities, e.g., FNCFS agencies, prevention funding for First Nations not affiliated to an FNCFS agency, etc.
C-92	House of Commons Government Bill, sponsored by the Minister of Indigenous Services, which received royal assent on June 21, 2019. It is at times used to refer to the Act respecting First Nations, Inuit and Metis children, youth and families (the Act).
the Act	*An Act respecting First Nations, Inuit and Métis children, youth and families* that affirms inherent right to self-government in child and family services and defines principles for the provision of CFS to Indigenous children.
Starting point/point of departure	The current social, economic, and geographic context of a First Nation.

7 See Reference re *An Act respecting First Nations, Inuit and Métis children, youth and families*, 2024 SCC 5 (CanLII), at para 67, accessed February 22, 2024, https://canlii.ca/t/k2qhn.

PART I: CURRENT CONTEXT AND FUNDING PRACTICES

The 172 First Nations not affiliated to an FNCFS agency (145 First Nations, when those in the Northwest Territories which are not affected by the CHRT orders of CFS are excluded) are concentrated (by number of communities) in British Columbia with 82 communities (Figure 3).

Total population (on-reserve and off-reserve) is highest in British Columbia, although the largest on-reserve populations among First Nations not affiliated to an FNCFS agency are in Quebec (Figure 4).

FIGURE 3

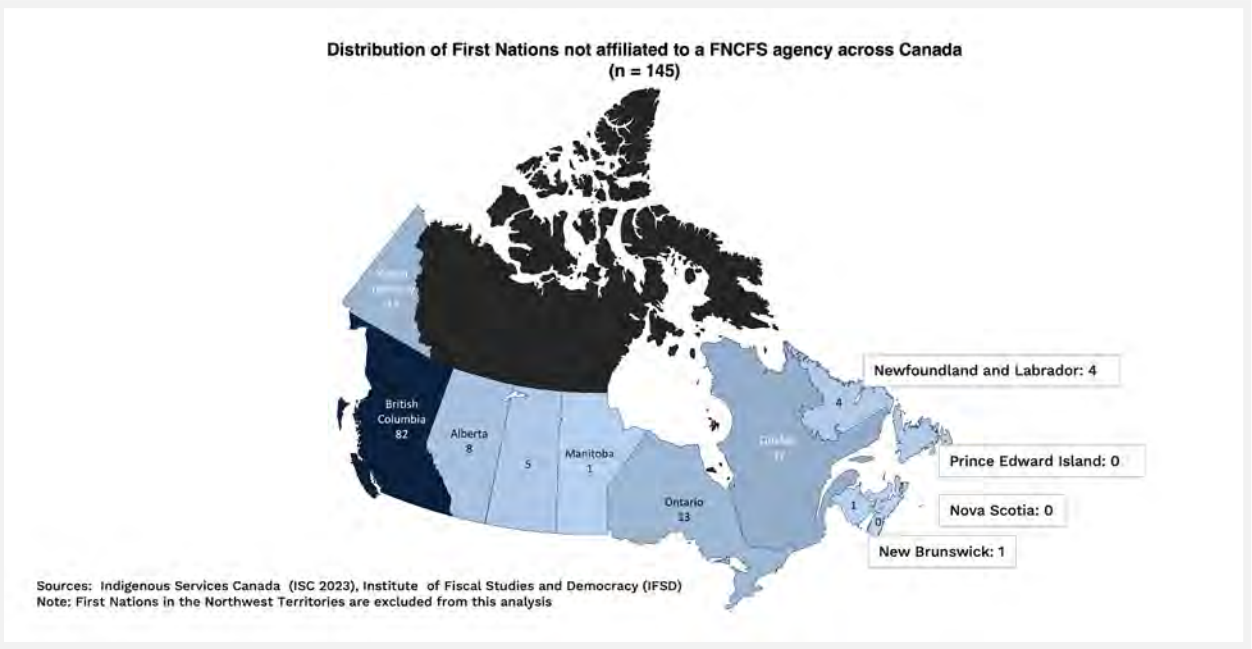


FIGURE 4

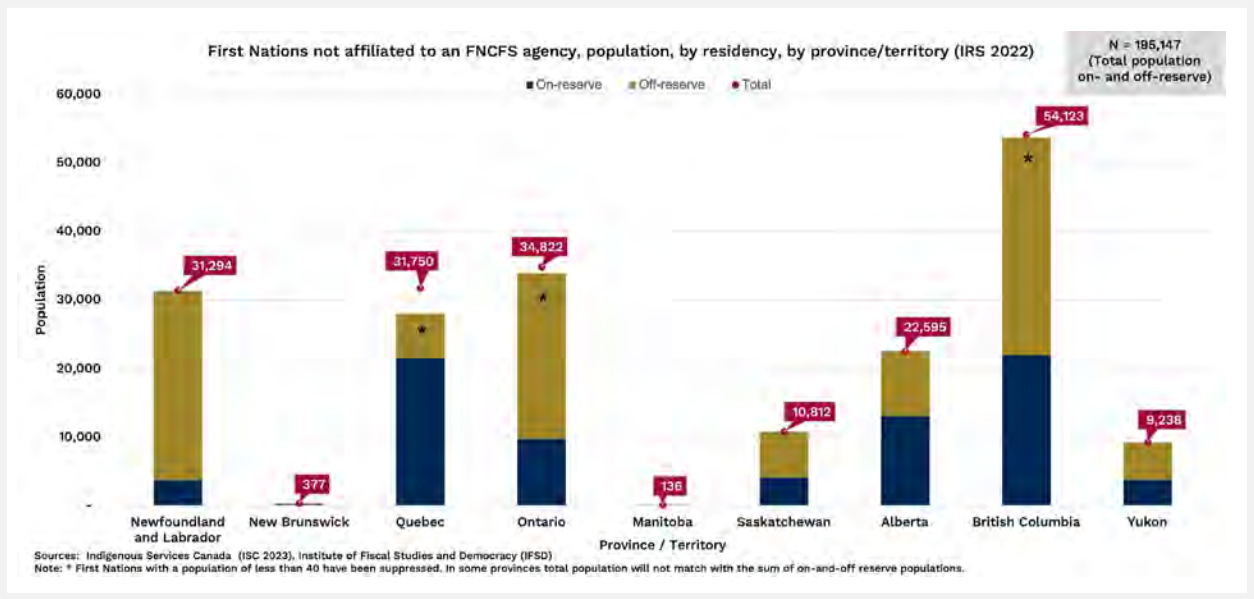

Since 2018, funding has increased for First Nations not affiliated to an FNCFS agency for CFS through the FNCFS Program. From a low of $7M in 2017-2018, total federal expenditures increased to $171M in 2021-2022 for these First Nations (Figure 5). Changes in funding were a function of Canadian Human Rights Tribunal (CHRT) orders and the now ended Community Well-being and Jurisdiction Initiative (CWJI).

Most of this federal funding is flowed through the fixed contribution approach and has become increasingly so across fiscal years, i.e., must be used for specific purposes within a specific period (Figure 6) (see contribution approach definitions in Table 10). On a regional basis, as of fiscal year 2018-19, nearly 30% of funding was allocated to British Columbia per fiscal year, with Ontario following closely behind (Figure 7). In fiscal years 2018-2019 to 2020-2021, most funding to First Nations not affiliated to an FNCFS agency was associated to CWJI. In 2021-2022, most funding was for a combination of CWJI and CHRT-mandated retroactive payments (Figure 8).

FIGURE 5

FIGURE 6

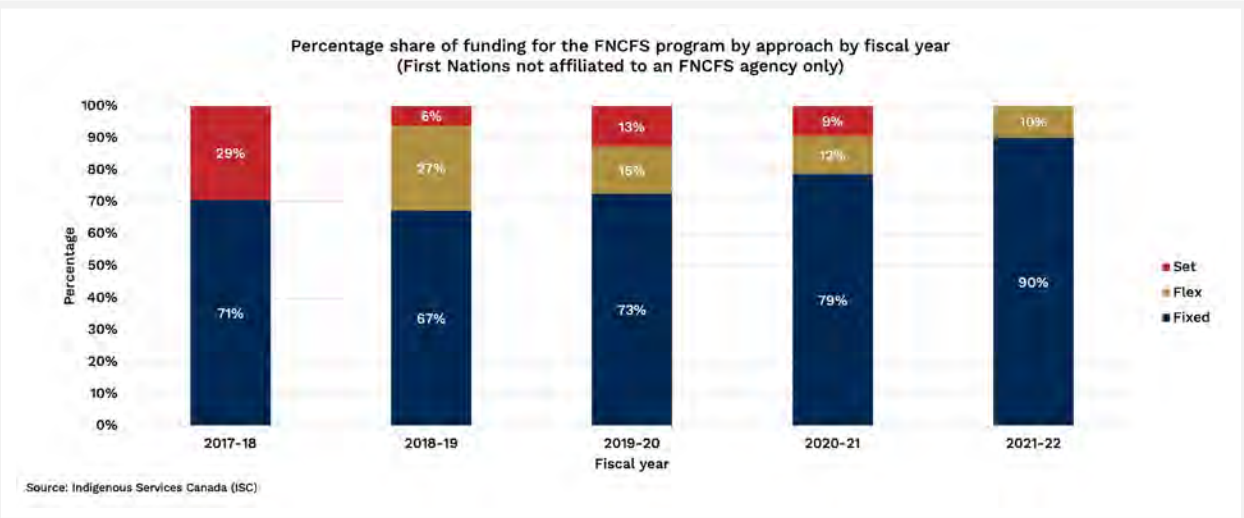

FIGURE 7

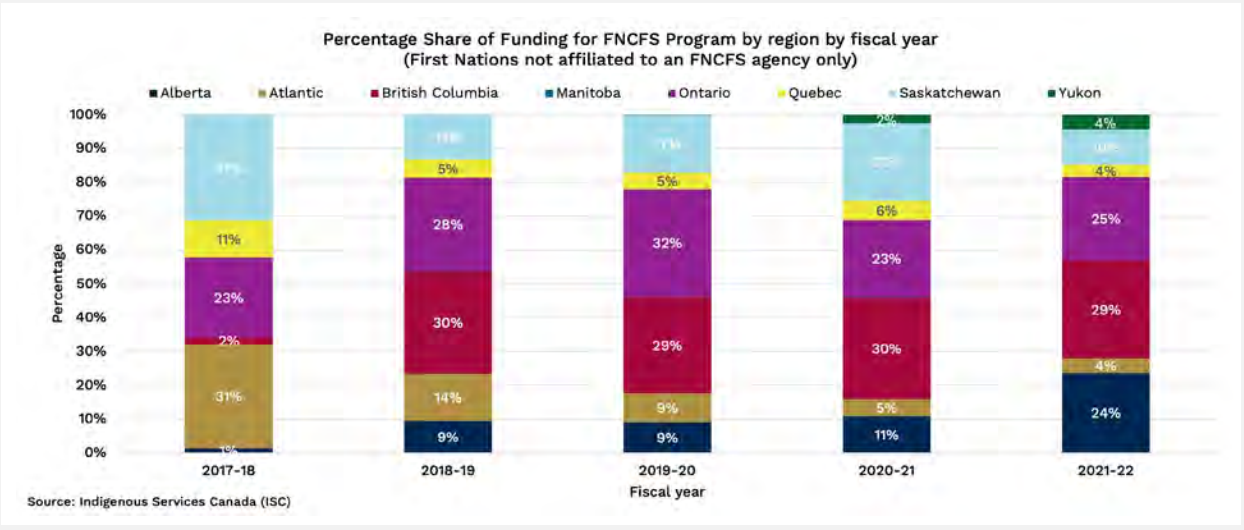

FIGURE 8

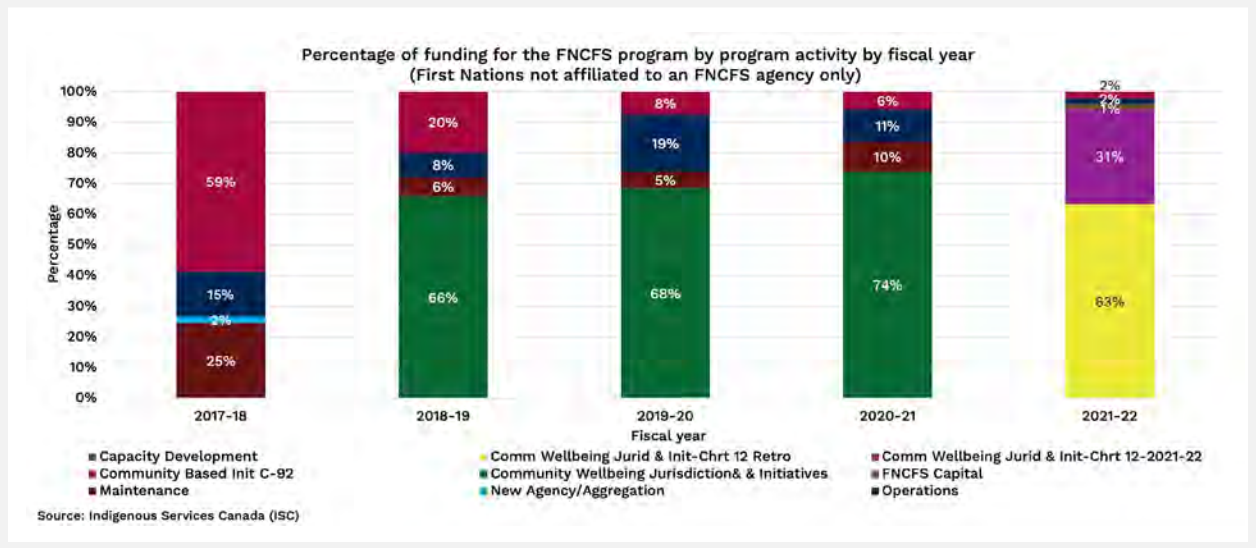
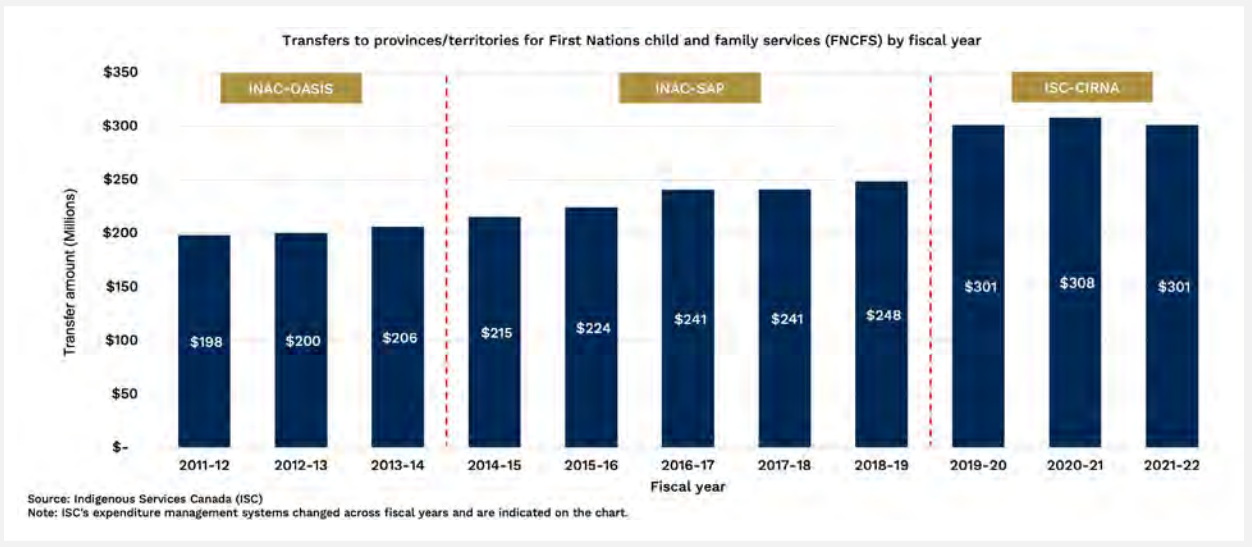


Provinces and territories are accountable for delivering protection services to First Nations not affiliated to an FNCFS agency (provincial/territorial legislation and service delivery differs).

For CFS provided on-reserve (an area of federal responsibility), the federal government provides financial resources to the province/territory delivering the services.

FIGURE 9



Federal transfer data indicates an increase in the amount transferred to provinces/territories for FNCFS between 2011-12 and 2021-22, from a total of $198M to $301M (Figure 9). The composition of those resources, e.g., portions for maintenance, prevention, protection, operations, are not identifiable from the transfer data obtained by IFSD.

On a provincial/territorial basis, annual transfers generally increase, although there is variability between fiscal years (Figure 10).

Ontario receives the largest transfer amount, followed distantly by Alberta and British Columbia.

FIGURE 10

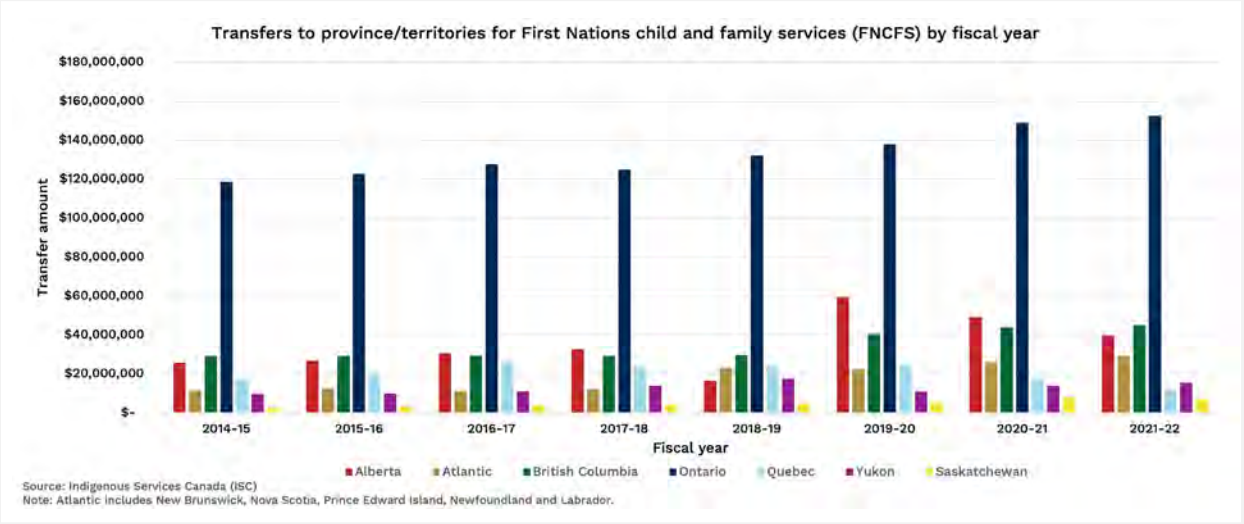


TABLE 2

FIRST NATIONS CHILD AND FAMILY SERVICES TRANSFER ENTITY	PROVINCE / TERRITORY	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22
Department/ Agency of Provincial/ Territorial Government	Alberta	$ 25,826,851	$ 26,976,918	$ 30,775,341	$ 32,749,248	$ 16,660,394	$ 59,369,484	$ 49,223,086	$ 39,600,001
	Atlantic	$ 11,503,465	$ 12,534,580	$ 11,362,967	$ 12,301,038	$ 23,199,458	$ 22,618,817	$ 26,332,079	$ 29,402,392
	British Columbia	$ —	$ —	$ 29,400,000	$ 29,100,000	$ 29,624,713	$ 40,620,717	$ 43,986,001	$ 45,100,000

	Yukon	$ 9,919,816	$ 10,000,000	$ 11,136,669	$ 13,913,571	$ 17,803,578	$ 11,102,301	$ 13,822,336	$ 15,594,554
	Saskatchewan	$ 2,652,285	$ 3,191,612	$ 4,044,141	$ 4,440,000	$ 4,750,000	$ 5,000,000	$ 7,995,996	$ 7,000,000

Resources transferred from the federal government to a province/territory for FNCFS are transferred to a specific department (for service delivery) or to the province/territory generally. As indicated in Table 2, transfers to Alberta, the Atlantic provinces (New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland and Labrador), Ontario, Quebec, and British Columbia (as of fiscal year 2016-17) are made to a specific department or agency of the

provincial government (presumably accountable for delivering FNCFS). Transfers to Saskatchewan and Yukon, as well as British Columbia in fiscal years 2014-15 and 2015-16, are made to the province/territory generally. This means that the resources would flow to their consolidated revenue fund without necessarily being allocated to a department/agency delivering FNCFS.

While resources are transferred from the federal government to provinces and territories for specific activities related to the delivery of FNCFS, there is no guarantee that the precise amount of funding is fully dedicated to the discharge of the obligation. For instance, if a province receives $40M for FNCFS, there is no way of knowing how the amount was determined, tracking how the funds were used and what results were generated, other than through provincial/territorial reporting.

Provinces/territories are not required to report to the federal government on their use of funds transferred for FNCFS. Given the lack of reporting requirements of provinces and territories, it is not clear if current services align with CHRT orders and applicable legislation.

Provinces as funding recipients operate under different policies than First Nations recipients.[8]

8 Various acts of parliament regulate government spending. Foremost among the acts is the Financial Administration Act (FAA) which establishes principles for how government spending is authorized and allocated (Financial Administration Act (R.S.C., 1985, c. F-11), https://laws-lois.justice.gc.ca/eng/acts/f-11/). The FAA establishes the Treasury Board, a Cabinet committee (of which the Minister of Finance is a member) that directs government financial management. The FAA does not exhaustively outline government financial management policy, but rather gives this authority to the Treasury Board. Through a series of control gates for public spending, the FAA is designed to foster increased accountability in spending.

Regulations established by the FAA and other relevant acts (such as the Federal-Provincial Fiscal Arrangements Act (R.S.C., 1985, c. F-8), https://laws-lois.justice.gc.ca/eng/acts/f-8/.) have resulted in a system that facilitates government expenditures to institutions and organizations with a high degree of organizational capacity. The Treasury Board, working under the relevant acts, has established a policy and directive on transfer payments that sets clear requirements the recipient must meet to qualify for government transfers. A transfer payment, according to the Policy on Transfers (Treasury Board of Canada Secretariat, "Policy on Transfer Payments," Government of Canada, last modified April 4, 2022, https://www.tbs-sct.canada.ca/pol/doc-eng.aspx?id=13525.) is:

> **transfer payment** (*paiement de transfert*)
> A monetary payment, or a transfer of goods, services or assets made, on the basis of an appropriation, to a third party, including a Crown corporation, that does not result in the acquisition by the Government of Canada of any goods, services or assets. Transfer payments are categorized as grants, contributions and other transfer payments. Transfer payments do not include investments, loans or loan guarantees.

The Policy on Transfers notes the reporting requirements related to different types of transfers:

> **contribution** (*contribution*)
>
> A transfer payment subject to performance conditions specified in a funding agreement. A contribution is to be accounted for and is subject to audit.
>
> **grant** (*subvention*)
>
> A transfer payment subject to pre-established eligibility and other entitlement criteria. A grant is not subject to being accounted for by a recipient nor normally subject to audit by the department. The recipient may be required to report on results achieved.

Requirements vary based on the type of recipient. Provincial governments have inherent organizational capacity. Federal requirements for receiving transfer payments (i.e., for accountability, program management, and financial capacity) are readily met by provinces. For example, Ontario has an organizational structure that closely mirrors the federal government. Ontario has a legislature, and Auditor General, and its own Financial Administration Act that sets out its responsibilities vis-à-vis public expenditures. Conversely, First Nations may or may not possess similar capacity (at a scale suitable to their populations) relative to provinces which may influence

Provincial governments have inherent organizational capacity requirements. Federal requirements for receiving transfer payments (i.e., for accountability, program management, and financial capacity) are readily met by provinces. For example, Ontario has an organizational structure that closely mirrors the federal government. Ontario has a legislature, and Auditor General, and its own Financial Administration Act that sets out its responsibilities vis-à-vis public expenditures. Conversely, First Nations may or may not possess similar capacity (at a scale suitable to their populations) relative to provinces which may influence the nature of financial transfers. For this reason, transfers to First Nations are different and defined as contribution approaches (set, fixed, flexible, block) or through grant funding.

Reporting is not typically required for federal transfers to provinces. There is an assumption that the mirroring of financial and legislative controls in the provinces provide sufficient oversight for the use of funds. In some instances, however, there are requirements to uphold certain standards, e.g., those of the Canada Health Act with funding through the Canada Health Transfer. In rarer instances, reporting against indicators is required for federal transfers to provinces. Consider the supplementary health funding announced in February 2023 through bilateral agreements between the provinces and federal government.[9] As a condition of the supplementary transfers, reporting on depersonalized health indicators is required, with consideration of four shared priorities.[10] Provinces agreed to the reporting requirements as a condition of the transfers. There may be incentives for committing to the reporting in exchange for the additional health resources for broad population and political benefits. The same political calculations may not be true for FNCFS.

---

the nature of financial transfers. Indigenous Recipients have their own set of funding approaches defined in the Directive on Transfer Payments (Appendix K) (Treasury Board of Canada Secretariat, "Directive on Transfer Payments" last modified April 1, 2022, https://www.tbs-sct.canada.ca/pol/doc-eng.aspx?id=14208.). Indigenous Recipients have their own set of funding approaches defined in the Directive on Transfer Payments (Appendix K) (Treasury Board of Canada Secretariat, "Policy on Transfer Payments" last modified April 1, 2022, https://www.tbs-sct.canada.ca/pol/doc-eng.aspx?id=14208.). Indigenous Recipients have three contribution funding agreements: fixed, flexible, and block, as well as the grant approach. Grants have greater latitude on the use of funds with reporting on outcomes. Contribution approaches have performance provisions and specific criteria for eligibility and purpose. Flexible and block contributions are reserved for recipients with "demonstrated capacity to manage transfer payments." Such demonstrated capacity should consider, governance structure, program management organization, financial and administrative experience, accountability mechanisms for transparency, disclosure, responsibility and redress, and financial position.

9 Health Canada, "Working together to improve health care for Canadians," Government of Canada, February 7, 2023, https://www.canada.ca/en/health-canada/news/2023/02/working-together-to-improve-health-care-for-canadians.html.

10 See Health Canada, "Working together to improve health care for Canadians," Government of Canada, February 7, 2023, https://www.canada.ca/en/health-canada/news/2023/02/working-together-to-improve-health-care-for-canadians.html#a2.

Priorities include:

- expanding access to family health services, including in rural and remote areas;
- supporting our health workers and reducing backlogs;
- improving access to quality mental health and substance use services; and
- modernizing the health care system with standardized health data and digital tools.

In its Merit Decision (2016 CHRT 2), the CHRT found the federal FNCFS Program to be discriminatory and underfunded. The agreements between the federal and provincial/territorial governments were identified as part of the problem. The agreements and lack of service coordination led to adverse impacts for children. As explained in 2021 CHRT 12 (at par. 35):[11]

As noted in 2018 CHRT 4 at paragraph 40,

> "[t]he Tribunal made extensive findings in [the Merit Decision] and provided very detailed reasons as to how it arrived at its findings." As noted in the Merit Decision, "[t]hose findings demonstrate that "AANDC's design, management and control of the FNCFS Program, along with its corresponding funding formulas and the other related provincial/territorial agreements have resulted in denials of services and created various adverse impacts for many First Nations children and families living on reserves" (Merit Decision at para. 458, emphasis added). Moreover, "[t]he Tribunal also found that "[t]he failure to coordinate the FNCFS Program and other related provincial/territorial agreements with other federal departments and government programs and services for First Nations on reserve, resulting in service gaps, delays and denials for First Nations children and families" (2016 CHRT 2 at para. 458, emphasis added).

Reforming federal agreements with provincial/territorial governments to align to the CHRT's rulings (to end discrimination and ensure it does not reoccur) would be an important step to ensuring First Nations children are receiving necessary supports and services. Reporting requirements on services and integration with First Nations could be part of the reformed agreements.

Reporting requirements for provinces in FNCFS are most likely to be voluntary unless they were imposed in agreements with the federal government. Some provinces could choose to report on the funds received for FNCFS through federal transfers and on their uses in First Nations. Yukon, for instance, has shared its agreement on FNCFS with First Nations in the territory. Reporting on results, however, is less common. Provinces/territories may report on the number of children in care and even outcomes in their own reporting, but the alignment of expenditure data to specific activities (to ensure resource sufficiency and track results) is lacking. Even in British Columbia where there have been declared commitments to upholding the principles of the United Nations Declaration on Indigenous Peoples (UNDRIP), the province cannot align expenditures to Indigenous children in care or their well-being.[12]

Given the roles of provinces and territories in the provision of FNCFS, they should be report-

11 2021 CHRT 12 at para. 35: https://decisions.chrt-tcdp.gc.ca/chrt-tcdp/decisions/en/item/495594/index.do?q=chrt+2021+chrt+12.

12 Helaina Gaspard, Resource analysis in the provision of Indigenous and non-Indigenous child and family services in British Columbia, Institute of Fiscal Studies and Democracy (IFSD), November 2021, in Representative for Children and Youth, At a Crossroads: The roadmap from fiscal discrimination to equity in Indigenous child welfare, March 2022, https://rcybc.ca/wp-content/uploads/2022/03/RCY_At-a-Crossroads_Mar2022_FINAL.pdf.

ing to First Nations not affiliated to an FNCFS agency on the allocation of resources, coordination of service delivery, and results of First Nations children in contact with their services. The province/territory as the service provider should coordinate with the First Nation not affiliated to an FNCFS agency to ensure integrated service delivery. These actions, while valuable, would be voluntary on the part of the province/territory.

ALLOCATIONS IN FNCFS TO FIRST NATIONS NOT AFFILIATED TO AN FNCFS AGENCY

The CHRT ordered in 2021 that First Nations not affiliated to an FNCFS agency receive funding for CFS (retroactive to January 2016). The retroactive payments were to cover the period from January 2016 to April 2021, at $947 per capita (see 2021 CHRT 12 at par. 42).

Consultation was ordered to:

> [...] ensure the funding meets the First Nations needs until long-term reform is implemented. Funding would ensure substantive equality, the best interests of the child, and ensure inflation, population growth, remoteness and governance capacity are accounted for. The interim funding model would apply until one of the following occurs: a Nation-to-Nation agreement respecting self-government encompassing child and family services is established; a Nation specific agreement is reached that is more advantageous to the First Nation; program reform is completed in accordance with best practices; or unforeseen circumstances require other adjustments (2018 CHRT 4 at para. 413). There will be a needs assessment to support long-term reform (2021 CHRT 12 at para. 15).[13]

Prior to the order for retroactive payments and other funding, the Community Well-being and Jurisdiction Initiative (CWJI) was announced in 2018. Eligible First Nations, including those recognized as Bands in Yukon, and First Nations with self-government agreements who have not exercised jurisdiction over CFS were eligible for the prevention funding.[14]

The CWJI was intended to provide First Nations (whether or not they were served by an FNCFS agency)[15] with support for prevention (primary, secondary, tertiary) funding for culturally appropriate prevention programs in keeping with the best interests of the child, and supported First Nations capacity in child and family well-being. Among other eligible activities, CWJI enabled projects to support the development and

13 2021 CHRT 12 at par. 15, https://decisions.chrt-tcdp.gc.ca/chrt-tcdp/decisions/en/item/495594/index.do?q=chrt+2021+chrt+12.

14 This can include, authorities, boards, agencies, or other entities created by the First Nation. Indigenous Services Canada, "Community Well-Being and Jurisdiction Initiatives Program," Government of Canada, last modifiedJuly 12, 2023, https://www.sac-isc.gc.ca/eng/1638565024162/1638566154510.

15 See for example, cross-examination of Nathalie Nepton, January 8, 2021. https://fncaringsociety.com/sites/default/files/transcript_of_cross-examination_of_nathalie_nepton_jan_8_2021.pdf.

implementation of jurisdictional models, e.g., upholding the principles in the Act, research, development, and consultation on jurisdictional models, support for meetings with federal and/or provincial governments, etc.[16] The funding did not include developmental phases (similar to those of Directive 20-1) to ensure First Nations had the capacity to deliver the range of prevention services they chose.

In 2023, CWJI ended as Canada funded prevention (at $2,500 per person registered with the Indian Act resident on reserve) and Band Representative Services ($283 per person). Funding at $2,500 "per person resident on reserve" was ordered by the CHRT in 2022 (see 2022 CHRT 8 at para 172 (7)(8)).[17] The CHRT required flexibility on implementation for First Nations (or FNCFS agencies) that were not ready on the start date, due to exceptional circumstances. This included the provision of a carry-forward for unused funds.

FNCFS transitional terms and conditions (adopted in 2022 and remaining in effect) inform prevention program activities through the FNCFS program. Eligible recipients include First Nations, FNCFS agencies, and non-delegated FNCFS service providers (if authorized by the First Nation).[18] Prevention services in the terms and conditions are categorized as primary, secondary, and tertiary:[19]

16 Indigenous Services Canada, "Contributions to support Community Well-Being and Jurisdiction Initiatives for children and families," Government of Canada, last modified July 11, 2023, https://www.sac-isc.gc.ca/eng/1635435393871/1635435617423.

17 2022 CHRT 8 (para 172 (7)(8)) https://decisions.chrt-tcdp.gc.ca/chrt-tcdp/decisions/en/item/520915/index-do?q=chrt+2022+chrt+8:

(7) "Pursuant to paragraph 413(3) of 2018 CHRT 4, adding the following paragraph to the Tribunal's order in 2018 CHRT 4

> [421.1]: In amendment to paragraphs 410, 411, 420 and 421 Canada shall, as of April 1, 2022, fund prevention/least disruptive measures at $2500 per person resident on reserve and in the Yukon in total prevention funding in advance of the complete reform of the FNCFS Program funding formulas, policies, procedures and agreements. Canada shall fund the $2500 on an ongoing basis adjusted annually based on inflation and population until the reformed FNCFS Program is fully implemented. This amount will provide a baseline for the prevention element in the reformed FNCFS Program pursuant to paragraph 1 of the Consent Order. Flexibility will be provided on the implementation for First Nations governments and FNCFS agencies not ready on the start date, which will require more time due to exceptional circumstances that will be further defined with the parties. Funds will be directed to the First Nations and/or First Nations child and family service providers(s) responsible for the delivery of prevention services. These funds shall be eligible to be carried forward by the First Nation and/or First Nations child and family service providers(s)."

(8) "Pursuant to 2021 CHRT 12 at paragraph 42(5), adding the following paragraph to the Tribunal's order in 2021 CHRT 12:

> [42.1] In amendment to paragraph 42(1), Canada shall, as of April 1, 2022, fund prevention/least disruptive measures for non-Agency First Nations (as defined in 2021 CHRT 12) at $2500 per person resident on reserve and in the Yukon, on the same terms as outlined in 2018 CHRT 4 at paragraph 421.1 with respect to FNCFS Agencies."

18 Indigenous Services Canada, "FNCFS Transitional Terms and Conditions: Contributions to provide children, youth, young adults, families, and communities, with prevention and protection services," Government of Canada, last modified April 1, 2022, https://www.sac-isc.gc.ca/eng/1648577221890/1648577242550#chp5-3.

19 Indigenous Services Canada, "FNCFS Transitional Terms and Conditions."

- Primary prevention is directed at the community as a whole e.g., public awareness and education, crisis help line, coordination with other departments, etc.
- Secondary prevention can support a child who may be at risk of harm or maltreatment e.g., home visit programs for parents, family counseling, addictions treatment for parents, etc.
- Tertiary prevention, is used when a child has been identified as at risk of harm of child maltreatment e.g., immediate crisis interventions, domestic violence interventions, mental health or addictions treatment for families or youth, etc.

Eligible expenditures for prevention include: salary and benefits for the delivery of prevention services, court related costs, costs that support governance and administration, and program costs to support families at risk.[20]

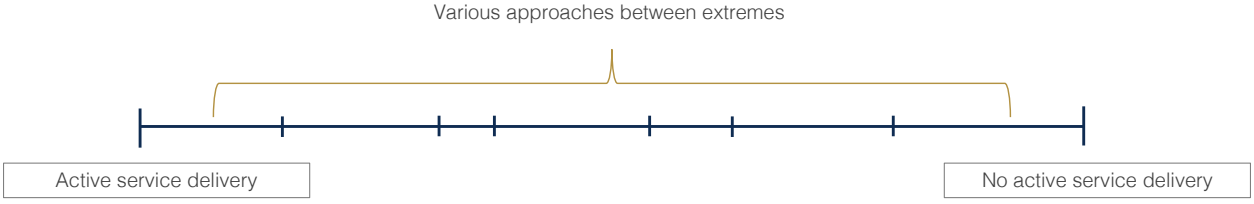
The delivery of prevention services, especially secondary and tertiary prevention may heighten liability risk. Providers of prevention services should consult their insurers and legal counsel for information specific to their circumstances. For general information, IFSD requested a liability opinion for First Nations delivering prevention services (and not under their own law/the exercise of jurisdiction). The full opinion is available in Appendix A.

PART II: APPROACH AND DATA GATHERING TOOLS

There is significant variability among First Nations not affiliated to an FNCFS agency operationally, financially, and organizationally. Unlike delegated agencies, not all First Nations have a designated staff for CFS. There is a spectrum of service delivery: First Nations offering a variety of services in CFS and related areas at one end, and at the other, First Nations without active service delivery.

Most First Nations fall in the middle of the range, offering some services, but not the full complement that would meet their community's needs.

Publicly accessible information on the starting points and needs of First Nations not affiliated to an FNCFS agency from a national perspective is not available. IFSD worked with First Nations to build the information analyzed and discussed in this report that considers current



20 Indigenous Services Canada, "FNCFS Transitional Terms and Conditions."

funding, needs, and options for a way forward. First Nations were invited to contribute and collaborate in this work in different ways:

1. National questionnaire;
2. Regional workshops;
3. Case study collaboration; and,
4. National gatherings to review findings.

It is important to note that the size of the First Nations not affiliated to an FNCFS agency population is variable. The questionnaire analysis was undertaken with a population size of 133 First Nations[21] (or 160 First Nations when the Northwest Territories are included).

In the balance of the report, the population size at November 25, 2023 is used: 145 (and 172 when the Northwest Territories are included). These variances include adjustments for service and funding approaches, and the exercise of jurisdiction. The changes in population do not impact the applicability of the questionnaire findings.

QUESTIONNAIRE

Beginning in April 2022, IFSD reached out to First Nations not affiliated to an FNCFS agency. First Nations were invited to join a regional workshop to complete the questionnaire or to complete it on their own. A call to First Nations to participate in more in-depth collaborations/case studies was made during the initial outreach to explore more specific questions. See Appendix B for the outreach materials, including the questionnaire.

The outreach approach to contact First Nations not affiliated to an FNCFS agency involved both calling and emailing 169 relevant First Nations. Nine First Nations were removed from the sample (totaling 160 when the Northwest Territories are included) because they were not covered by the existing FNCFS Program. Initial calls were made the week of April 4, 2022. If contact was made with the relevant person, an email including the project overview and registration for the workshop were sent.

Following the initial contact, outreach continued by phone and email from April to the end of June 2022. On average, each First Nation was contacted by phone at least three different times, and by email five to seven times.

A follow-up question was shared with First Nations not affiliated to an FNCFS agency that submitted a questionnaire on November 28, 2022, to supplement the limited financial information shared in the questionnaire:

"What is the annual budget for which you are responsible, i.e., the funds you have to work with, for services to children and families?"

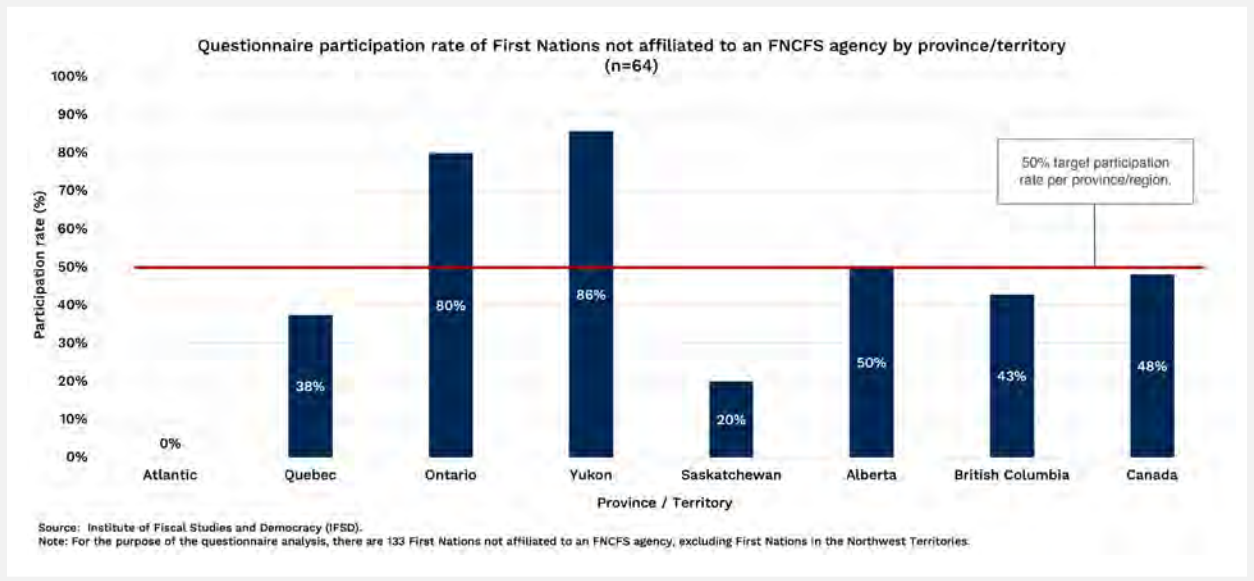
A total of 9 responses were received by December 15, 2022 (a follow-up had been sent on December 5, 2022). After December 15, 2022, no additional responses to the questionnaire were accepted.

21 In January 2022, IFSD requested lists of First Nations by type of service provision in CFS from Indigenous Services Canada. These lists were updated with subsequent analysis from IFSD, resulting in a change in the base population number in 2023.

The outreach process took significantly more time than expected. There were issues identifying the contact or relevant personnel in CFS at several First Nations. Some First Nations were unfamiliar with IFSD which limited engagement. Many First Nations indicated they were extremely busy addressing pressing community needs and did not have the capacity to complete the questionnaire.

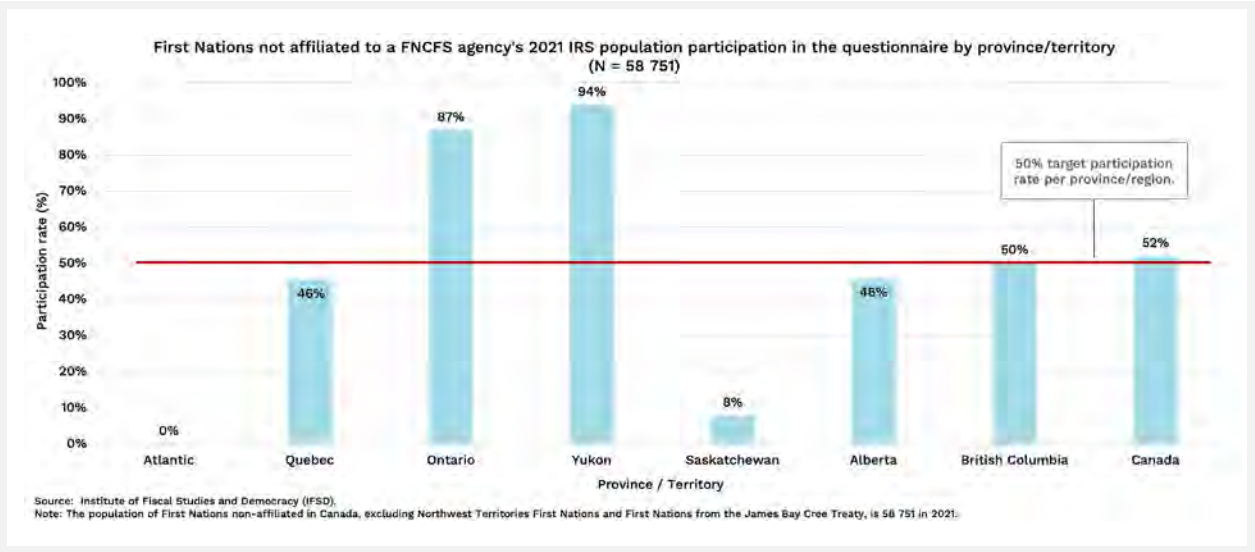
IFSD addressed the results from the initial outreach in different ways. Working with regional groups, IFSD redoubled efforts to connect with First Nations through trusted regional or representative organizations. All First Nations not affiliated to an FNCFS agency that submitted a questionnaire were offered a $300 gift card in recognition and appreciation of their time and efforts.[22]

FIGURE 11



22 Most persons completing a questionnaire for a First Nation self-identified as being either the director of CFS, executive administrator, director of health and social services, or a family centre coordinator.

FIGURE 12



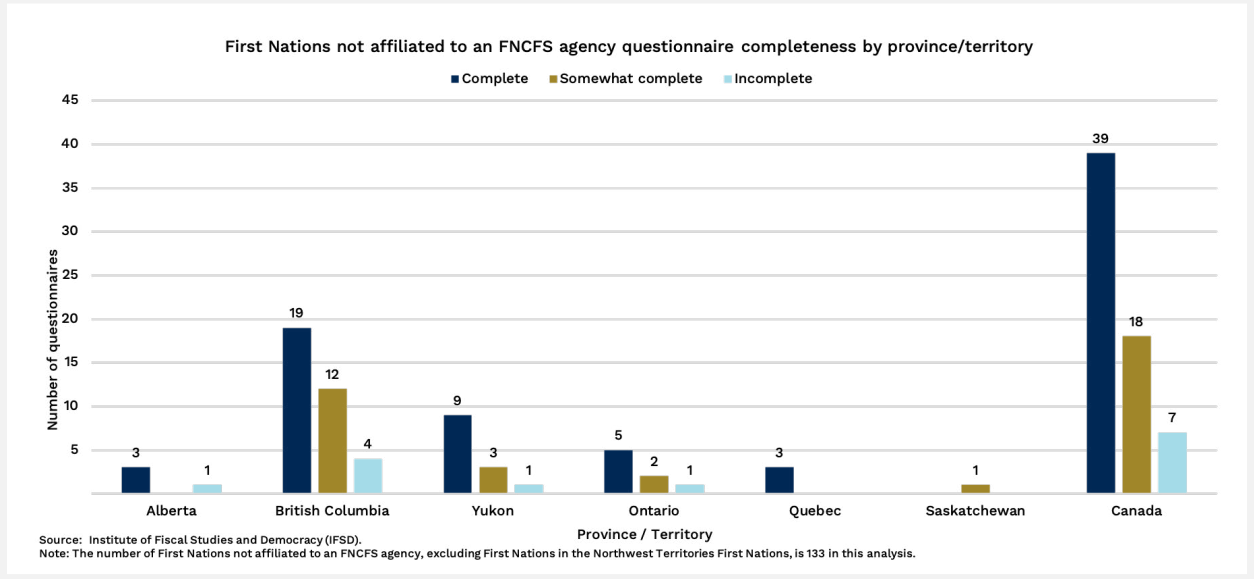
The questionnaire (see Appendix B) was completed by 64 First Nations representing 48% of First Nations not affiliated to an FNCFS agency (64/133) (Figure 11). On the basis of population, nationally, 52% of the First Nations population not affiliated to an FNCFS agency contributed to the questionnaire (Figure 12). Nationally, the response rate for an attempted census of population is reasonable. There was, however, no representation from Atlantic provinces (in which there are four First Nations not affiliated to an FNCFS agency).

The results from the questionnaire illustrated the variability in starting points and the inconsistency in funding among First Nations not affiliated to an FNCFS agency. No relevant correlations or cost-driving relationships were observable from the questionnaire data. Due to significant gaps in budgets and overall financial portraits, IFSD's ability to produce cost analysis from the questionnaire data is limited.

Questionnaire information on expenditures and available financial resources were limited. This may suggest that those delivering services do not control or influence their budgets but rather, may be provided budgets by their First Nation. It is also possible that they did not wish to share the information.

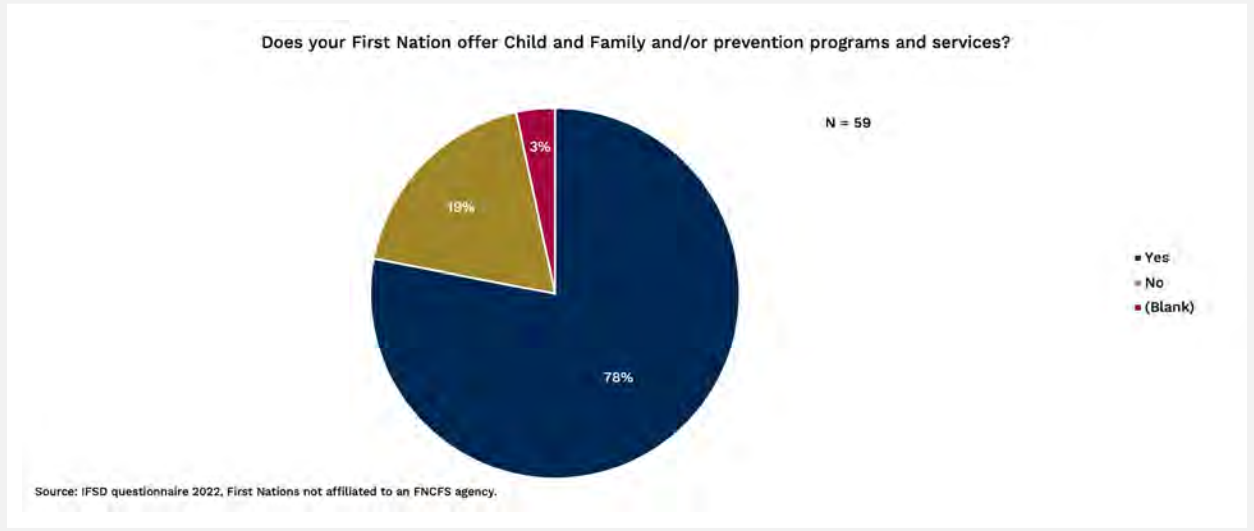
Questionnaire completeness varied. Not all questions were answered, and some responses were incoherent or contradictory. Of submitted questionnaires, nearly 60% were complete, 28% somewhat complete, and 14% were incomplete (Figure 13). In the questionnaire analysis, the n-value (i.e., number of responses included in the analysis) will vary by theme or question. While 37% of First Nations from the Northwest Territories completed a questionnaire, their responses were assessed separately (as they are not affected by the CHRT orders on CFS, and thus, are not included in the national analysis).

FIGURE 13



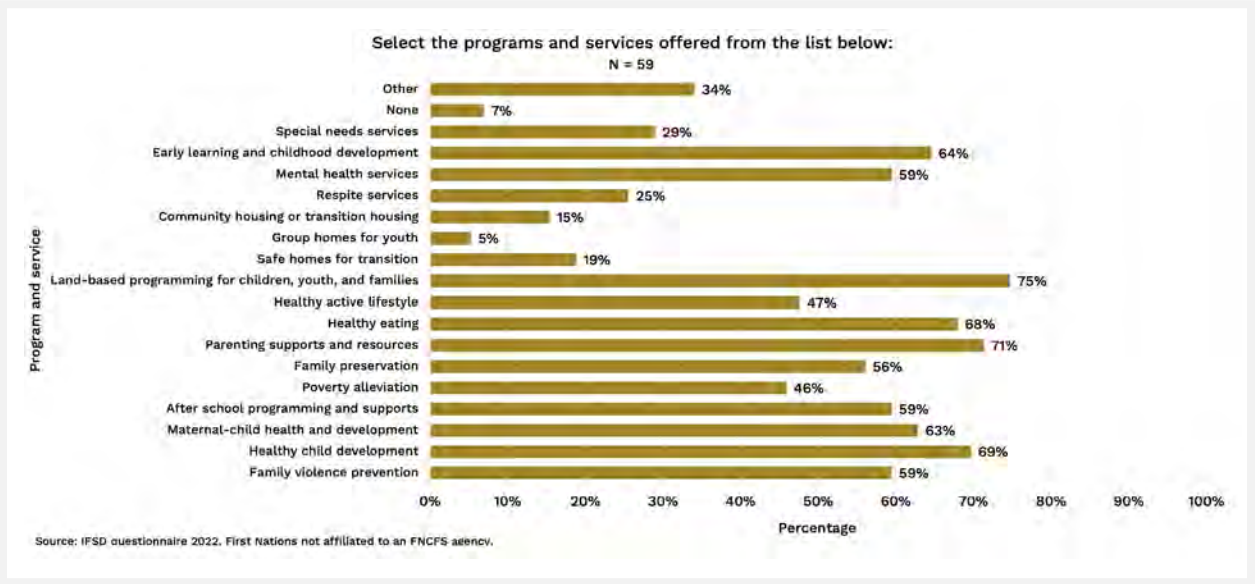
Nearly 80% of respondents reported offering some child and family services and/or prevention programs and services in their communities, while nearly 20% did not (Figure 14).

FIGURE 14



When asked to select the types of CFS and/or prevention programs that were being offered (multiple responses were possible), First Nations reported focusing offerings on land-based programming for children, youth, and families (75%), parenting supports and resources (71%), and healthy child development (69%), among several other activity areas that tend to emphasize physical and mental health (Figure 15). Most reported services/programs appear to be voluntary forms of primary prevention services.

FIGURE 15



Despite the variety of programs and services reported by respondents, 80% of respondents reported not being able to provide the child and family and prevention services their First Nation wants and needs (Figure 16). When asked about factors limiting their ability to deliver the programs and services they wished to offer, respondents most often cited insufficient staff (93%) and programming spaces and tools (86%) (Figure 17).

FIGURE 16

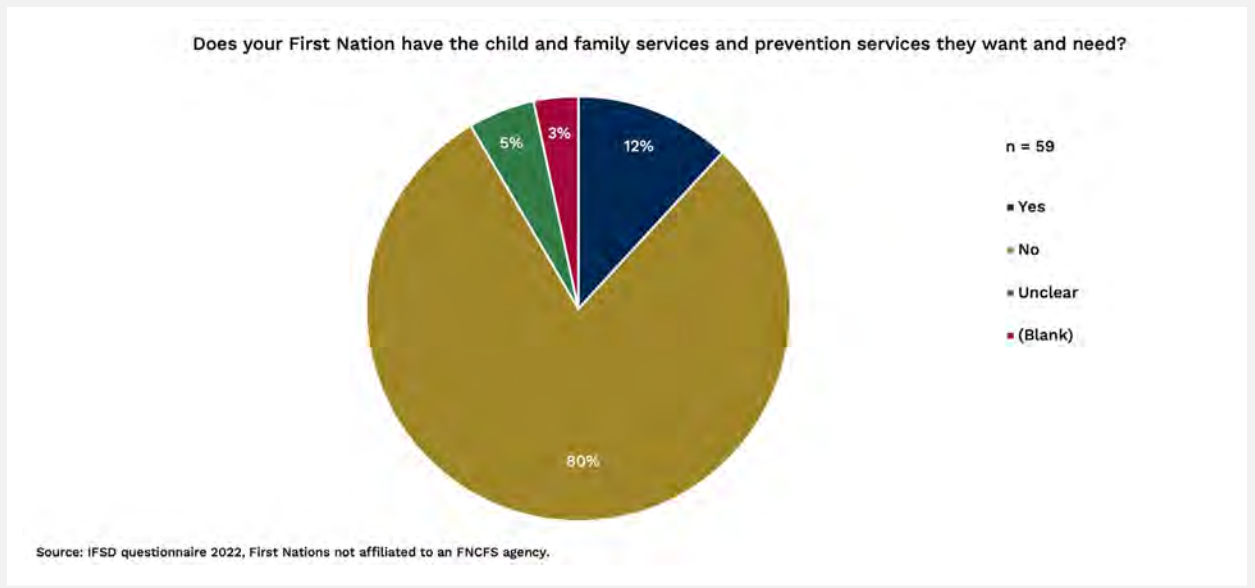


FIGURE 17

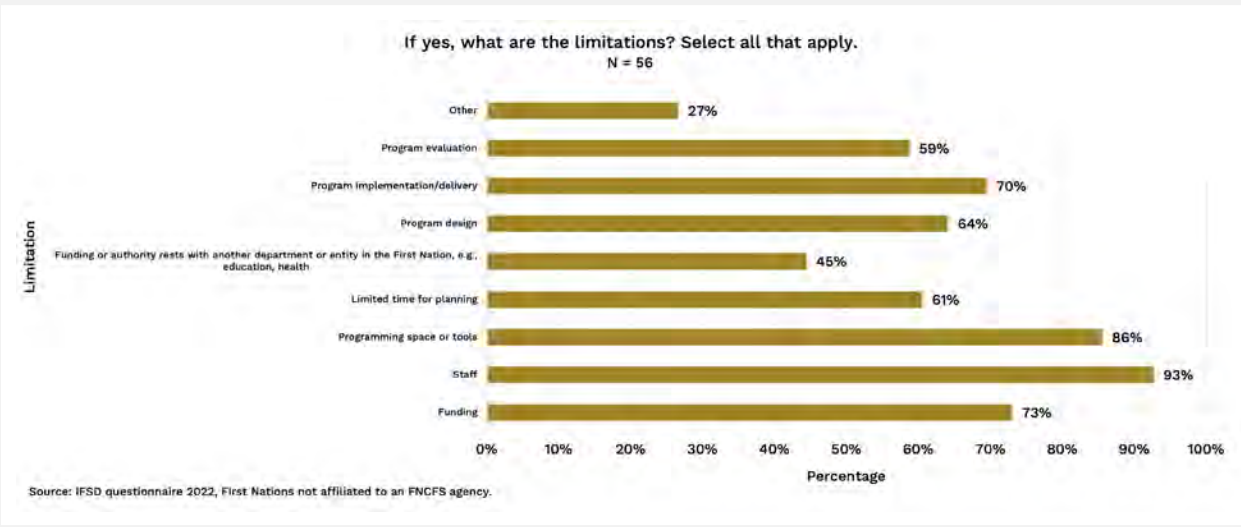

While a significant majority of First Nations report having children in care (Figure 18), supports and services related to post-majority and customary care are provided in less than 40% of responding First Nations. Less than 40% of First Nations report offering post-majority supports and services to youth exiting protective services (Figure 19). Similar proportions of First Nations report having policies in place for customary adoption and kinship care (Figure 20).

FIGURE 18

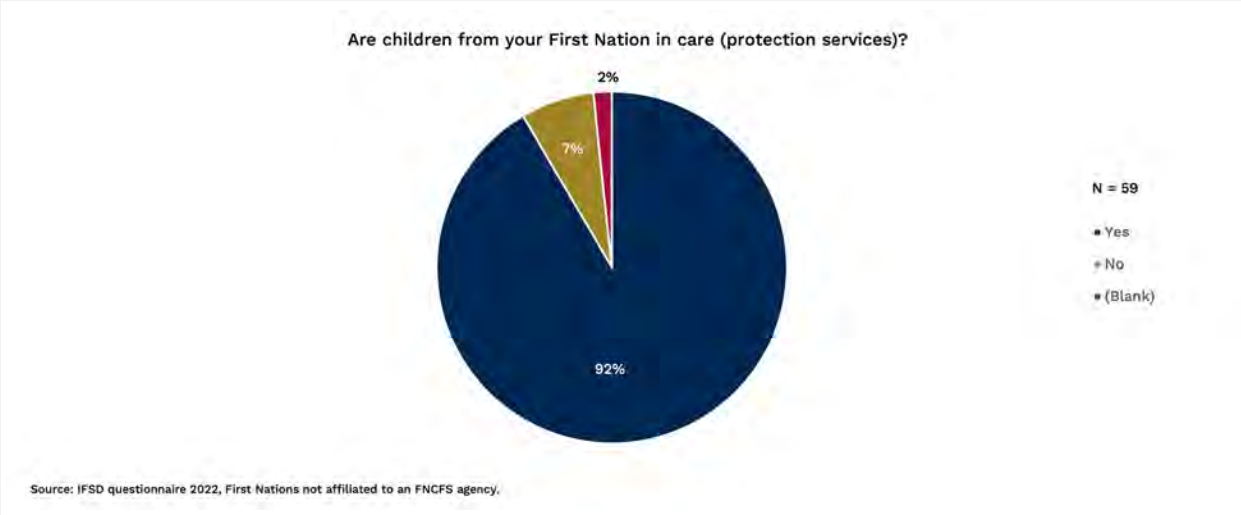

FIGURE 19

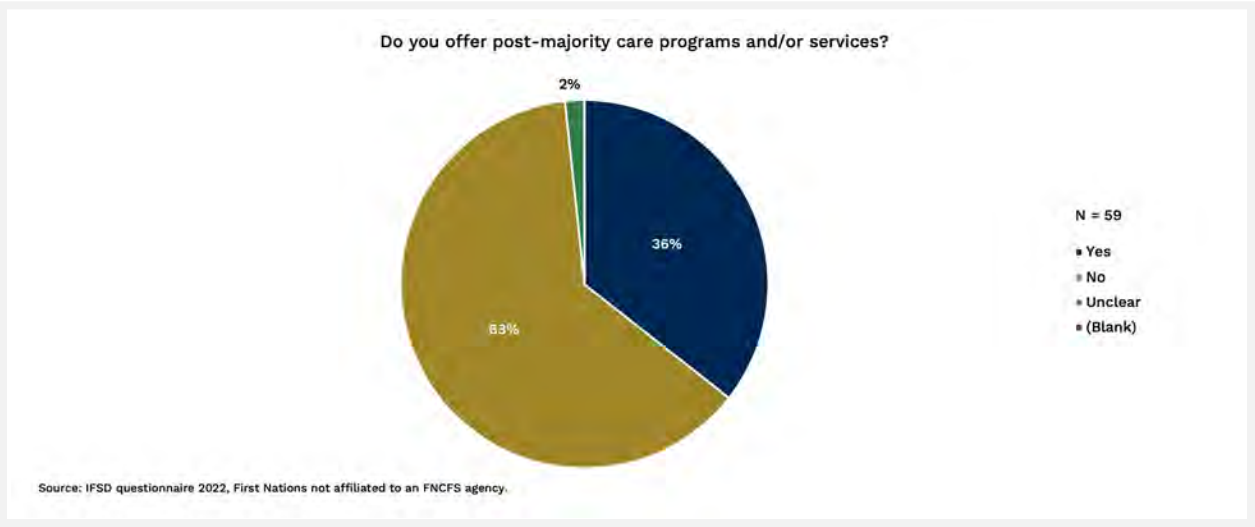

FIGURE 20

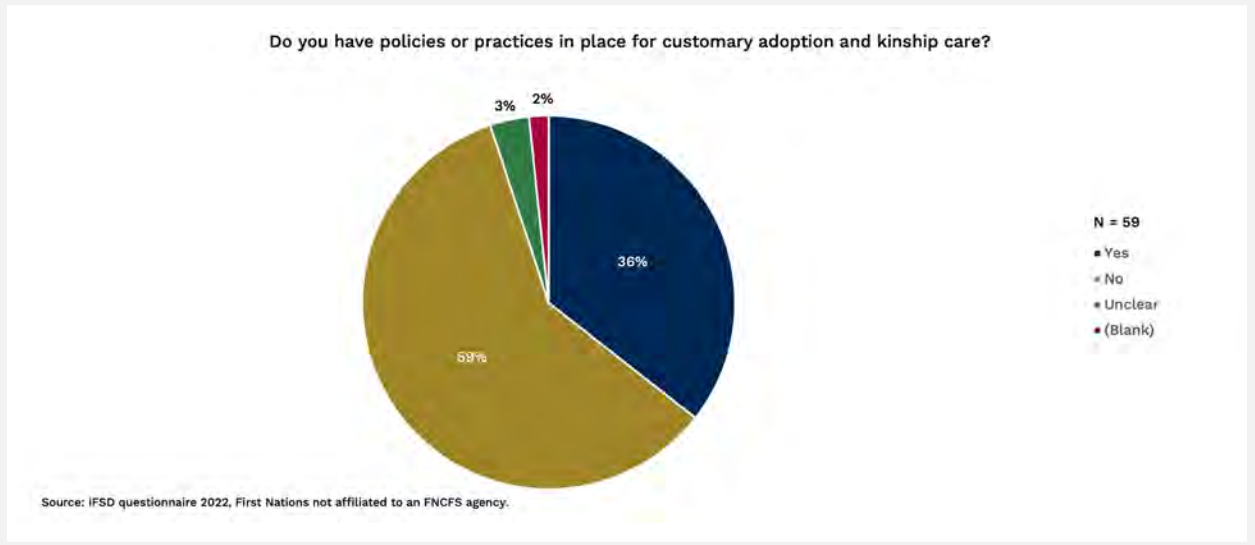
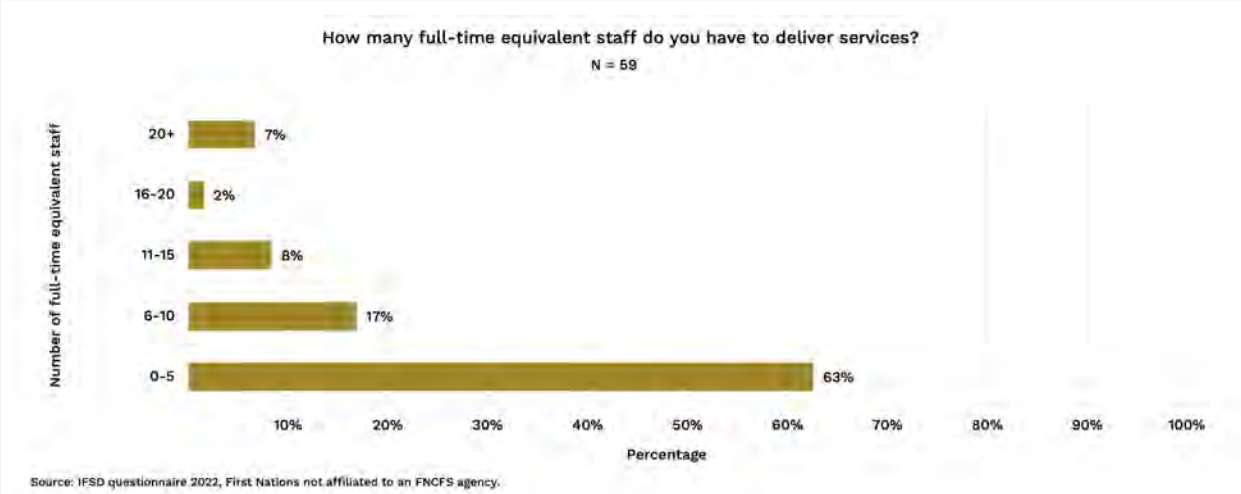


Staff teams were reported to be between 0-5 full-time equivalents for 63% of respondents (Figure 21).

FIGURE 21



Challenges attracting qualified staff were reported by nearly 70% of respondents (Figure 22). Retaining staff was also reported to be challenging (Figure 23).

FIGURE 22

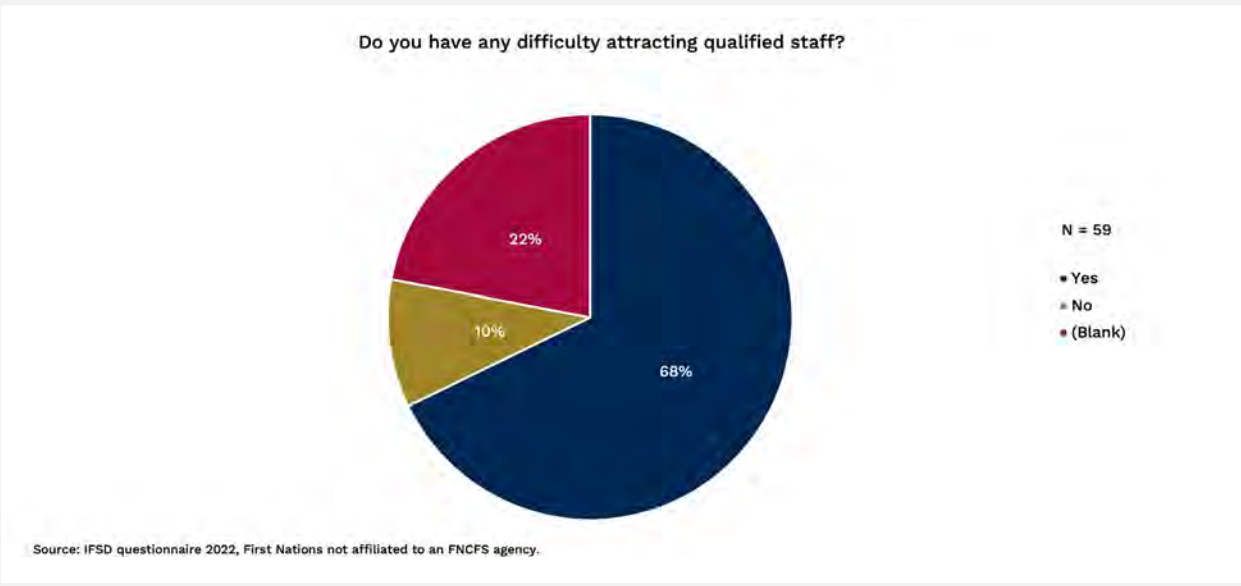


FIGURE 23

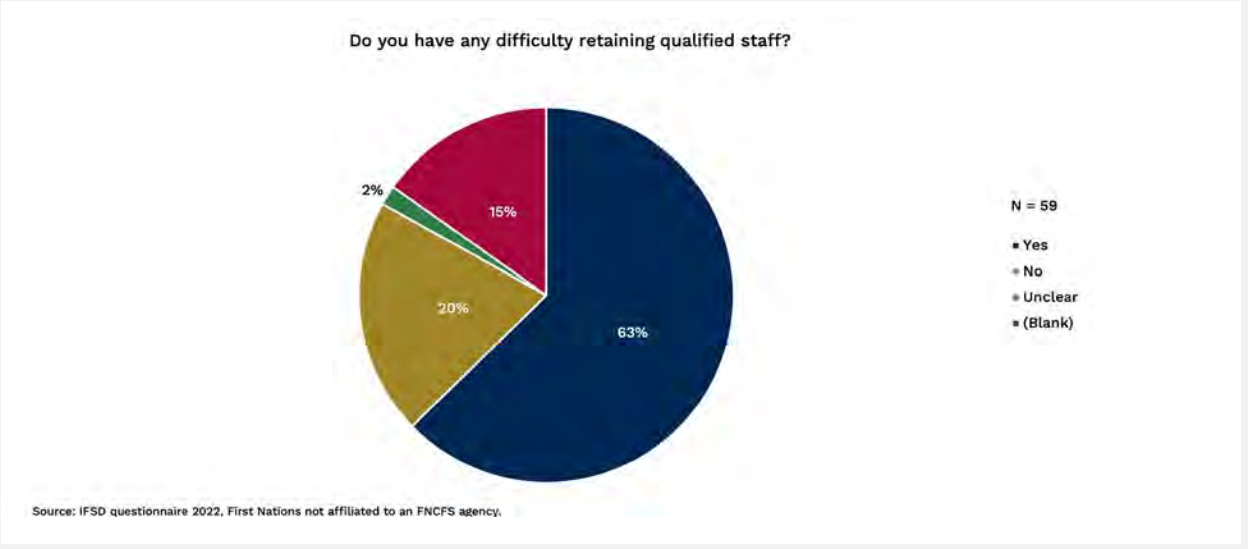

Just over 60% of respondents provided expenditure information through the questionnaire. However, 40% of respondents could not or did not provide expenditure information in the questionnaire (Figure 24). When broken down, ranges of expenditures appear relatively low (relative to reported program activities) with 30% of those responding reporting budgets of less than $500,000 (Figure 25).

When asked to estimate the cost of desired services, just over 30% of respondents reported they would require a budget under $1M (Figure 26). Given that several budgets were less than $500,000, it is reasonable that they fall in the estimated range.

FIGURE 24

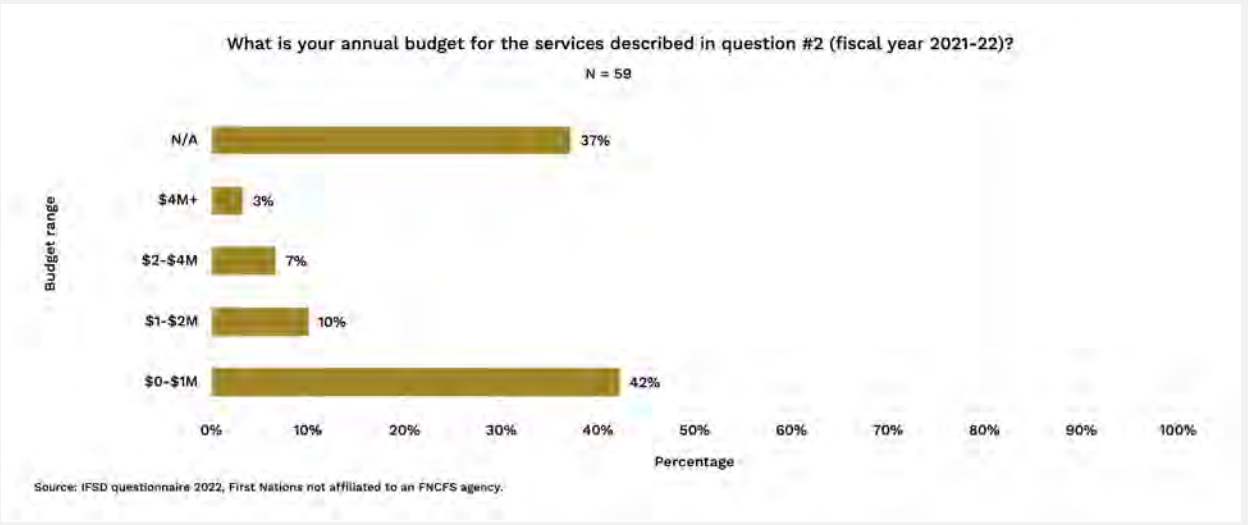

FIGURE 25

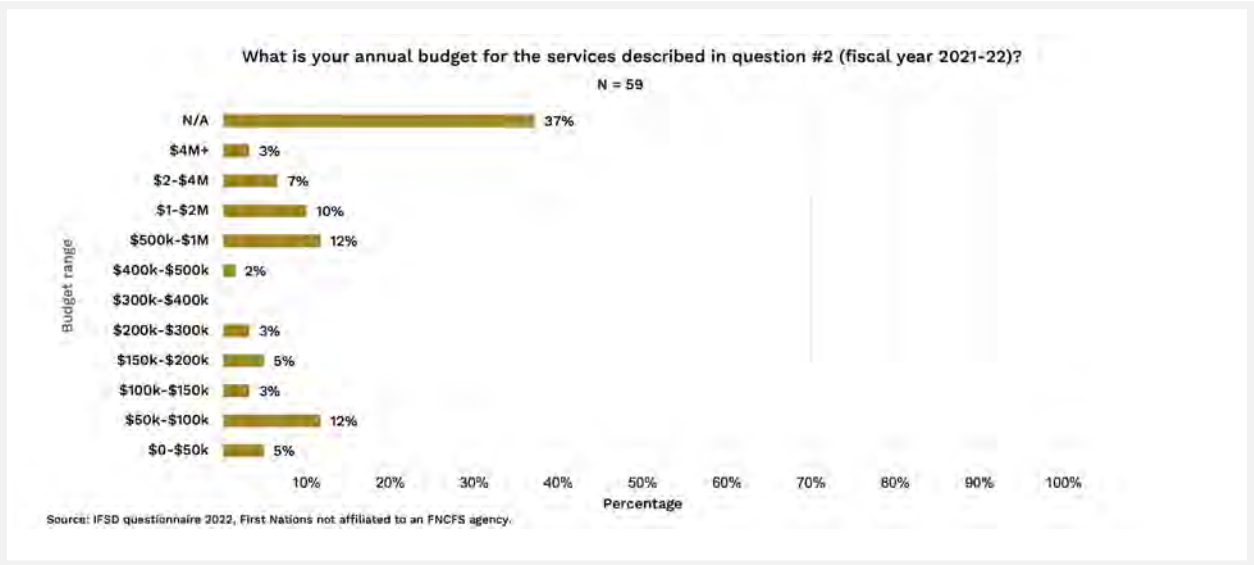

FIGURE 26

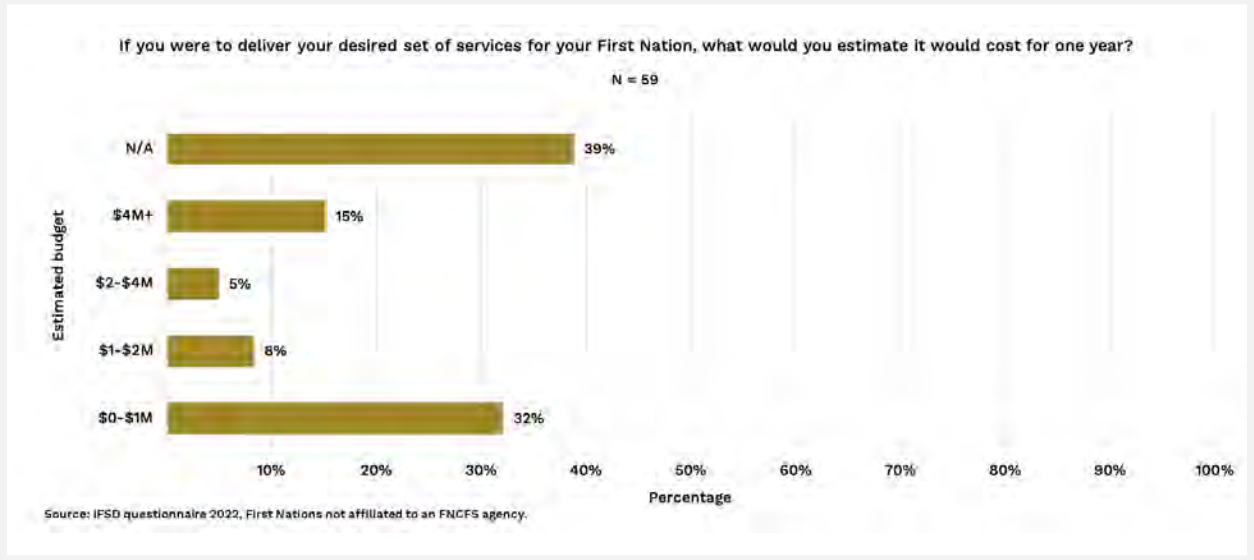

Nearly 80% of respondents reported not having the space required to deliver their programming (Figure 27). Just over 70% reported needing more space for their staff (Figure 28). Improvements were needed, according to respondents, for both programming and staff spaces.

FIGURE 27

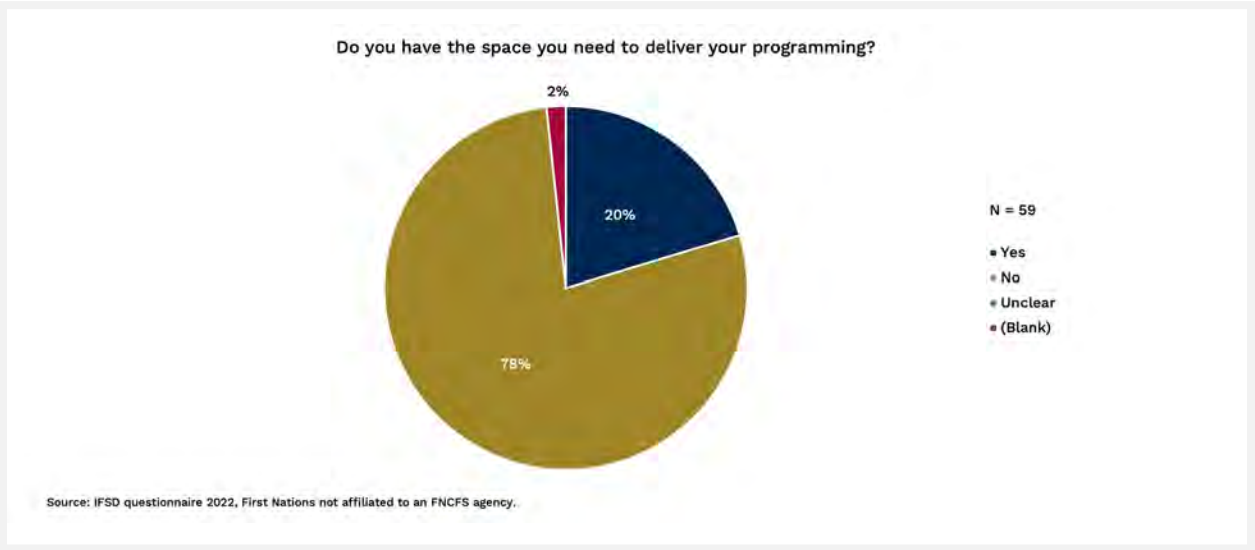

FIGURE 28

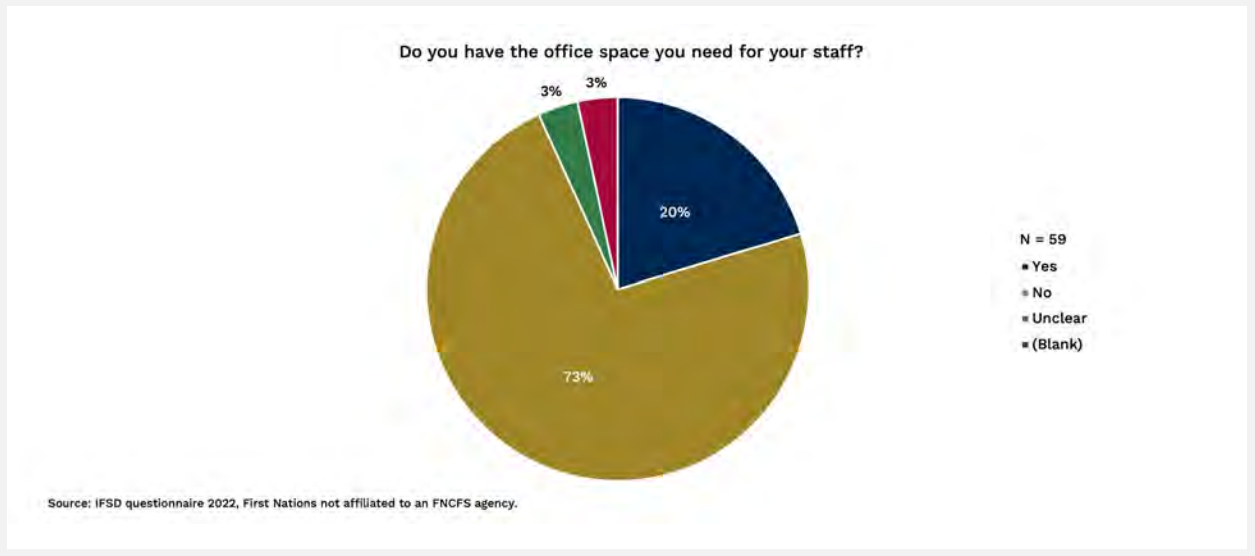

Just over half of respondents reported not having the necessary technology to do their work (Figure 29). Respondents reported gaps in tools for data collection and analysis, software, hardware, and internet connectivity, among others (Figure 30). These limitations have implications for service delivery, including access to services outside of the community (requiring internet), monitoring for planning, and needs assessments.

FIGURE 29

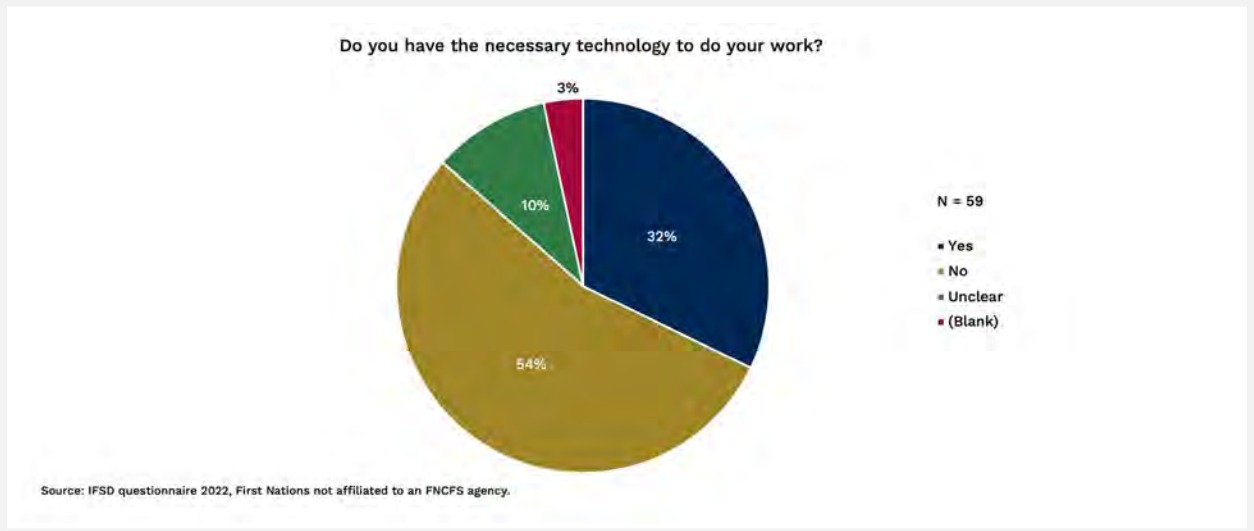

FIGURE 30

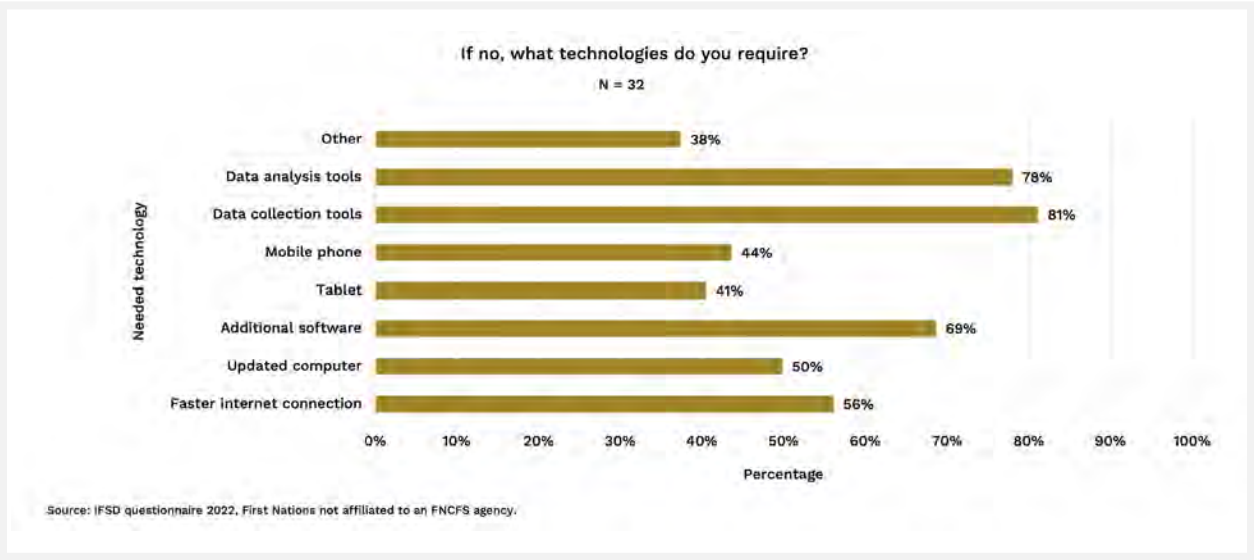
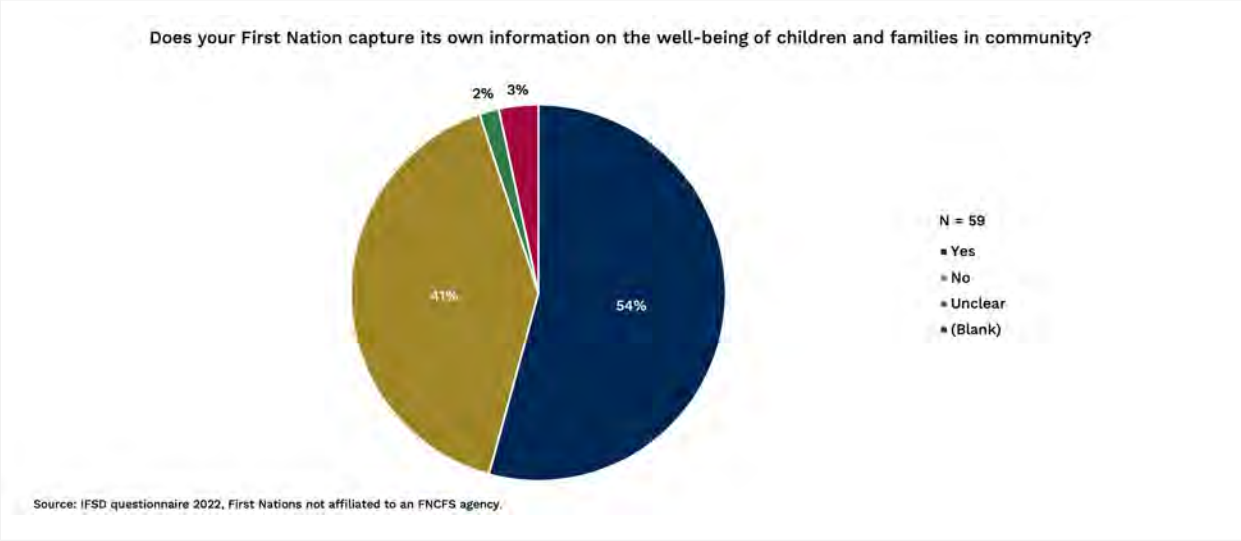


Over half of respondents reported gathering information on the well-being of children and families in their communities (Figure 31). However, when asked about the type of data collected (Figure 32), the information was input focused, e.g., number of children in care, number of families accessing services, number of people participating in activities. Outcome related information would include data on the structural drivers of contact with protective services, rates of family reunification, information on child well-being, etc.

The Canadian Incidence Study on Reported Child Abuse and Neglect[23] studies have emphasized consideration of structural factors, e.g., inadequate housing, poverty, the legacy of colonialism, when comparing rates of maltreatment-related investigations between First Nations children and non-Indigenous children. The information is helpful for monitoring, i.e., telling us what is happening, such as an increase or decrease in children in care. Developing a more complete understanding of wellness, pursuant to the Measuring to Thrive[24] framework or similar set of indicators, would require consideration of broader community factors and trends.

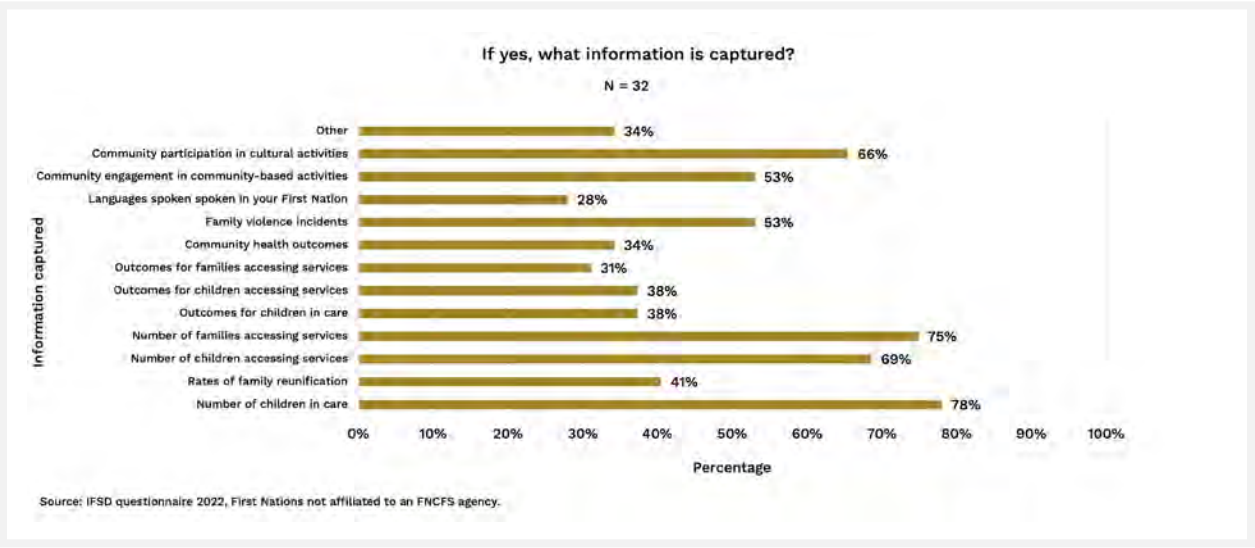
FIGURE 31



23 B. Fallon et al., Denouncing the continued overrepresentation of First Nations children in Canadian child welfare: Findings from the First Nations/Canadian Incidence Study of Reported Child Abuse and Neglect-2019, Ontario: Assembly of First Nations, 2021, https://cwrp.ca/sites/default/files/publications/FNCIS-2019%20-%20Denouncing%20the%20Continued%20Overrepresentation%20of%20First%20Nations%20Children%20in%20Canadian%20Child%20Welfare%20-%20Final_1%20%282%29.pdf.

24 Measuring to Thrive is a set of indicators first developed by FNCFS agency directors intended to measure changes in communities, families, and children. Community-level indicators reflect structural drivers of contact with protective services, e.g., housing, poverty, addictions, etc. *See Helaina Gaspard, Funding First Nations child and family services (FNCFS): A performance budget approach to well-being, Institute of Fiscal Studies and Democracy (IFSD), 2020, p. 39-116.*

FIGURE 32



Questionnaire findings provide an understanding of the current state of First Nations not affiliated to an FNCFS agency. There is commitment to providing needed programming but limitations in staff, technology, and space to deliver on the necessary activities. In addition, expenditure data was limited, reflecting the challenges in accessing consistent and sustainable funding.

REGIONAL WORKSHOPS

Between May and June 2022, IFSD hosted nine regional workshops with over 125 participants from over 70 First Nations (bands/self-governing First Nations). Regional workshops were attended by representatives of First Nations including practitioners and elected leadership, e.g., Chiefs and Members of Council. The in-person workshops were hosted in Vancouver (2), Prince George, Whitehorse, Yellowknife, Edmonton, and Ottawa, with one virtual session also offered.

The workshops were opportunities to gather to share experiences, practices, and considerations for assessing and meeting needs in CFS.

Participants were also invited to complete the questionnaire during the workshops. The main takeaways of each of the workshops were captured in separate discussion summaries (see Appendix C).

There are similar findings from the workshops. There is a common commitment to the well-being of children among First Nations and their service providers.

For those delivering services in First Nations, excitement and hope at the prospect of change have been expressed, along with concern and uncertainty. National-level decision-making has not always reflected local realities. First Nations not affiliated to an FNCFS agency are grappling with various issues including capacity challenges, politics, and serving members on- and off-reserve, with inadequate facilities to offer services. Additional resources are welcome, but their use will not come quickly or easily because of capacity challenges (people, infrastructure, systems, processes). Practitioners,

i.e., those delivering CFS in First Nations, may have considerations that are different than those expressed by leadership.

While it is understood that long-term reform of CFS is being pursued, what that will ultimately look like and how it will be sustained and is still evolving. That lack of certainty in what happens in the next fiscal year makes planning a challenge.

CASE STUDY COLLABORATION

At the outset of the project, IFSD sought the collaboration of 10 First Nations not affiliated to an FNCFS agency to participate in case studies. The intent was to develop in-depth profiles of experiences and practices to share on CFS. Case studies are important sources of detailed information and perspective on how funding, programming, and political actions manifest in communities. Profiles that represent a range of experiences and contexts are essential for perspective on the higher-level national data from the questionnaire.

While there were 11 First Nations that expressed interest, five First Nations from four provinces/territories reflecting different contexts, participated in the case study process. Each of the profiles highlight a lesson and considerations for future policy, funding, and operational considerations in CFS.

PART III: SERVICE DELIVERY IN FIRST NATIONS NOT AFFILIATED TO AN FNCFS AGENCY

The First Nation analyses presented in this section were reviewed and approved by the collaborating First Nations. IFSD wishes to recognize the gifts of knowledge shared by the First Nations. Their honesty in sharing successes and challenges is a tribute to their commitment to improving the lives of children and families.

The analyses present different starting points, approaches to service delivery, and factors that influence the discharge of mandates. Each one highlights a lesson for consideration in planning, developing, and delivering programs and services. First Nation D breaks down funding silos in program and service delivery to meet their community's needs. As a regional hub, the Council of Yukon First Nations (CYFN) shares a lesson in capacity development and programming support for First Nations in urban areas. For First Nation C, the importance of stable and supportive governance is emphasized for program and service delivery, even with experienced staff. First Nation B highlights the importance of building or accessing capacity to support community needs. First Nation A shares the importance of sequencing steps to pursue jurisdiction and the time it takes to journey through them. Chal-

lenges and successes were shared with frankness and honesty. Despite the obstacles,the analyses emphasize the commitment of First Nations to supporting children and families.

IFSD is grateful to the First Nations that shared their expertise, time, and practices to develop these profiles and provide added perspective on their realities.

FIRST NATION D

FLEXIBILITY: THE KEY TO MEETING EVOLVING NEEDS OF COMMUNITY

The integrated approach to health and social services delivery in First Nation D is built on collaboration to meet community needs. First Nation D is dedicated to serving the community by breaking down the artificial silos imposed by government funders.

"We're all there for the people."

The integrated approach includes aligning objectives, vision, and sharing and leveraging resources. This work happens behind the scenes to ensure members seeking services can get the support they need seamlessly.

When it comes to child and family services (CFS), First Nation D is focused exclusively on prevention services with the province delivering protection services. Their activities are dedicated to reducing contact with protective services, and often integrate health and wellness as part of their integrated approach to service delivery. Building trusted relationships with the members of their community is central to their approach. Sometimes, this means inviting them to formal programming, and other times, informal interactions.

First Nation D considers their community's context when designing their wellness services. This means considering demographics, employment, etc., as they make plans for the short-, medium-, and long-terms.

The lesson First Nation D shares is the benefit of breaking down funding silos to meet the evolving needs of their community. **Flexibility is key.**

LEADING AN INTEGRATED APPROACH TO SERVICE DELIVERY

First Nation D has a population of 350 people on-reserve with another 500 members nearby that seek services from their community. With a nearby paper mill, members are employed and have financial resources, which contributes to the community's overall wellness. Changes in employment at the mill impacts community mental health, which can be challenging.

*"If that mill shuts down, we will be living in crisis."*Demographics, however, are changing. Much of the population is in their 40s and birth rates are low (relative to other First Nations). This has required the health and social services team to reconsider their priorities to meet the changing needs of the First Nation.

"I want to say, we have a good model. But I caution that the model is not necessarily copy and paste because their [another First Nation's] needs may be different than ours."

The director of health and social services is well-respected. A member of First Nation D, one of the conditions of his employment was that he be provided independence from political interference to deliver on the mandate. The director's leadership is credited by staff as having created an integrated and collaborative approach to service delivery. There is no micro-managing. Staff are encouraged to work together, share resources, and solve problems to address the needs of the community.

"This is how we do it. You don't work in your own department and stay there. We are all in this together for the benefit of our clients. You help and you support across the board. That's expected."

For instance, a social pediatrics approach (i.e., a focus on early years and supportive programming) has been introduced unofficially with staff working together to improve outcomes for children. Soon, it will be formalized in a framework that defines the roles and functions for education, nutrition, health, etc. The approach is different than the way funding flows to the First Nation. They made a decision to work collaboratively rather than in program driven silos.

PREVENTION IN CFS

First Nation D has no desire at this point to take on protection. A high probability of political interference reinforce the importance of a "strong and mature" governance structure with separation between politics and protection to ensure people have space to do their jobs. In a small First Nation where everyone is related or connected, this is a challenge.

The focus in First Nation D is on building relationships, promoting positive interactions through prevention, and reducing the

need for child and protection. With the full community from elders to children involved in programming, First Nation D can build relationships and trusted spaces where people can be supported to avoid crisis.

Working 'upstream' with a focus on prevention, means serving children and families in a culturally informed way by meeting their needs. Rather than waiting for a crisis, First Nation D can be supportive by addressing the root causes of contact with protection services. Sometimes, the issues are related to deprivation, other times, related to supports for parents and caregivers. When a family is in need, the full complement of health and social services supports can be mobilized to address it together.

There is a shortage of social workers in the area. First Nation D benefits from low staff turnover which is attributed to their positive working environment and near parity with provincial salary levels.

FUNDING MATTERS

Annually, the director of health and social services in First Nation D shares a report. This is used at once to 'satisfy the funders' reporting needs,' and is destined for the community served. The reports discuss the community's context, programming, achievements, and challenges. Resource allocation follows First Nation D's integrated approach to service delivery: solve the problem in a culturally informed way. Often, this means working around existing funding arrangements.

"Don't bog us down with minor details like how many pens we buy. Give us flexibility to adjust and get out of these fixed contribution agreements. Flexibility is about control. We are continuing to pursue better control."

Community control means defining and addressing challenges on your own terms. First Nation D gathers information about its community to support better planning. The health and social services team promote survey and data collection to better understand needs. To achieve this, trusted people are needed to create space to share information. There are two band members to support data collection efforts, supplemented with online options. With the support of a regional body for data management and analysis, First Nation D is exploring longitudinal trends on what health means in the community, what diseases are prevalent, and the medications used by members, etc. The gathering and analysis of the information is integral to First Nation D's approach to planning and service delivery. The evidence supports the team in continuously evolving to meet the needs of their community.

When it comes to health and social services, First Nation D considers themselves to be adequately funded to deliver on their mandate. Jordan's Principle was highlighted as an

especially helpful resource to ensure First Nations children (individuals and groups) are getting support they would have otherwise never received.

Most funding comes from the federal government. There are 10 full-time staff that are dedicated primarily to CFS, and supported by the broader team in health and social services. Including Jordan's Principle funding, First Nation D expended roughly $1.6M in fiscal year 2021-2022 across the total population served. On a per capita basis, this represents nearly $4,600 per person residing on-reserve, or $3,200 per person across the entire membership.

The integrated approach to health and social services delivery in First Nation D is built on collaboration to meet community needs. First Nation D is dedicated to serving the community by breaking down the artificial program specific silos imposed by government funders to promote health and wellness.

COUNCIL OF YUKON FIRST NATIONS (CYFN) FAMILY PRESERVATION SERVICES

LESSONS LEARNED

The ability to design and deliver programs and services for children and families is different across First Nations. Regional organizations can help to support First Nations with capacity development and programming support by leveraging economies of scale and serving as a resource hub. One such example is Family Preservation Services, through the Council of Yukon First Nations (CYFN).

While not all Yukon First Nations are formal members of CYFN, the organization has been working as a de facto provider of child and family services (CFS) for urban Indigenous clients as well as a Jordan's Principle service coordinator.

CYFN's Family Preservation program is an example of a growing and evolving Indigenous led regional organization that can support First Nations in service delivery, both as a provider and as a centre of resources.

The lesson CYFN shares is the need to consider a regional hub for capacity development and programming support for First Nations in CFS in urban areas.

The Council of Yukon First Nations (CYFN) was established in 1973, and acted as a key negotiating body in Yukon First Nations land claims. Today, the organization advocates for First Nations in Yukon and delivers front line services. On CFS, CYFN's Family Preservation program serves principally Yukon First Nations (75%) and other First Nations (25%). *Connection to community and culture are essential to good outcomes for children. The best way to do that is to have our own people raising our children and keeping them in community.*

CYFN's operations are not funded to provide CFS-related supports. Instead, the organization relies on grants and project-based funding to sustain its operations and services. At a time when resources are flowing, the capacity gaps are increasingly visible. Not all First Nations can absorb the prevention funding to deliver programs and services. This is where Family Preservation can provide support. From convening First Nations to offering program models, the organization is trying to build-out its support services to fill a need it perceives in many communities.

"Working for your own people, with your own people in management, and your own people in decision-making makes a difference. I don't know how to quantify that."

All but three of the 28 staff working in CFS at Family Preservation Services are Indigenous. Working with people with different skill and degree backgrounds is important to the organization. From CYFN's perspective, it helps draw people to the organization and gets them to contribute to the design and delivery of culturally appropriate supports and services.

CYFN is funding its Family Preservation programs through a $2.2M Jordan's Principle group request. As a resource, Jordan's Principle is covering CFS-related matters in the territory from housing supports, e.g., rent, to baby items. There are limited administrative fees from this allocation, which leaves the organization to find administrative dollars from other programs to cover staff. In addition to its role as a service coordinator, CYFN receives funding through contracts for service delivery from the territorial government. This includes Cultural Connections, a five-year pilot project which aims to safeguard connection to culture for children and youth in out-of-home care.

Family Preservation receives most of its service referrals from the Yukon Government, since the territory's role is to focus on protection. Others seeking services can walk in or are referred by their First Nation.

"There is no pot of funding for not-for-profit urban Indigenous organizations."

From hosting cultural services, programming (i.e., pre-natal support circles, on-the-land camps), to coordinating housing supports and navigating the child welfare

system, Family Preservation is providing wraparound support services. CYFN wants Yukon First Nations to have a say in what happens to their children. With over 90% of children in care in the territory being First Nations, CYFN wants to continue to provide services in an urban environment while supporting First Nations to deliver their own services.

FIRST NATION C

THE IMPORTANCE OF STABLE AND SUPPORTIVE GOVERNANCE AND PROGRAMMING PRACTICES FOR JURISDICTION

In a tenuous political environment, service design and delivery can be challenging, especially in an area as sensitive as child and family services (CFS). For First Nation C, the combination of political uncertainty with crisis-response style programming has complicated their intent to pursue jurisdiction.

Existing services in First Nation C are delivered by a team of trained social workers and others with decades of experience in mainstream and on-reserve CFS. With their ongoing work, they are developing a vision defining the good life for their First Nation. The structure or approach that will deliver that vision remains a work in-progress. Community support is needed; political support is needed. This work is happening as First Nation C is on its own healing journey.

The lesson First Nation C shares is the importance of stable and supportive governance and programming practices for jurisdiction.

COMPLEXITIES OF CONTEXT

It is a time of healing for First Nation C. Many members are residential school survivors who are struggling, along with their descendants, with the long-time tensions of Christian views and Indigenous beliefs, practices, language, and culture. For instance, there are concerns about submitting invoices for traditional healers to the finance department out of fear of being denied. The tension within the community extends to its leadership.

Elections every two years of Chief and Council and the reorganization and reprioritization that ensues puts strain on various

departments and services, including CFS. Following the latest election, for instance, CFS mandate and efforts on jurisdiction were frozen until a new mandate was confirmed. The constant change, internal disagreement, and administrative manoeuvring within Chief and Council means departments spend time working around the system rather than with it.

The political system in the First Nation is creating challenges for progress.

EXISTING CFS SERVICES

First Nation C is a large community and roughly half of the population reside in the community (on-reserve).

Solutions up to now have been bandages; there are limited resources and opportunities to address the root causes of need, e.g., housing, groceries, infrastructure, etc. This reality is perpetuating a cycle of need and ongoing pressure in families taking care of children in care.

Today, an experienced team with decades of experience in the mainstream and on-reserve CFS system are delivering prevention and protection-related supports in First Nation C.

"We are carrying the weight of our community and the damage the child welfare system has done. We have to focus on our own healing; we have to heal ourselves."

Technically, their mandate is to provide prevention and some limited intervention for children, youth, and families. This should take the form of family support work, traditional customary care work, and Band Representative tasks, e.g., attending for investigations, doing visits with provincial protection workers related to protection concerns, protection case management, etc. The

Healing and wellness of staff

Staff are working in challenging environments. Working with colleagues that are healing from their own trauma means that interactions between managers and staff and between staff can require tact and understanding.

First Nation C has retained Indigenous counsellors to support staff in their healing journeys. This is an ongoing need. When staff are working in their own community, working in CFS can be more triggering.

mandate, however, does not mean much as staff are reacting to problems.

The organization considers itself short staffed: *"people are not even recognizing what they're doing"* and *"this doesn't even include what [provincial protection workers] are asking front-line workers to do, even though it's not their job."* From the perspective of staff, children in care are being "offloaded" to the First Nation by being placed in customary care without the same resources that a provincial foster home would have. This lack of financial support puts a strain on the family and the First Nation who become responsible and liable for services. On the front-line in the First Nation, not all staff have the same credentials or consistent resources as those in the mainstream agency to hire expert staff or to provide ongoing support to families. This reality adds an additional burden for service delivery, liability, and feeling that the First Nations is being set up to fail.

In pursuing jurisdiction, CFS managers have implemented a more structured approach to the delivery of CFS with set protocols and practices. For some staff that are unaccustomed to the compliance-focused approach, the changes are stressful. They are taking leave or considering leaving the First Nation. CFS managers have gone back to basic training to reinforce the importance of workplace culture, data gathering, and protocols. As the First Nation takes on roles in secondary and tertiary prevention, additional training, credentials, and supports are required to manage the complex needs and liability.

In general, there is a shortage of CFS-related staff. With the shortage and pressures in First Nation C, the CFS team sought adjusted salaries for parity with the province. After a great deal of effort with the Band Council (which had fixed all salaries), CFS salaries were adjusted with supplements from Canadian Human Rights Tribunal (CHRT)-related funding. The increase did not reach parity with provincial salaries and created grief and tension with other departments in the First Nation. This is a common challenge expressed by CFS delivery departments and agencies aiming for salary parity with provincial levels. Without adequate salary levels, CFS delivery organization may struggle to attract and retain staff (as they compete with the province). Parity with provincial salary levels, however, may not align with the salaries of the Band Council.

The millions of dollars through prevention funding coming to First Nation C are a challenge to absorb. Due to the internal disruption in administrative support, CFS staff do not have the appropriate time to plan while managing constant crises due to a lack of staff. Complicating matters are pressures from the Band Council wanting to use funds for other purposes that they think best, rather than relying on the technical,

front-line, and evidence-informed expertise of their CFS managers. This makes it a constant struggle to manage the funds for CFS. There have been efforts from CFS to work across the First Nation, e.g., with the school, for language revitalization, etc. to apply funds for the broader purpose of wellness across the community.

FUTURE VISION

Spirit-centred and heart-centred work with language is at the core of the vision for a good life. Efforts are underway to work toward developing their own law. The initial steps are focused on increasing staff and working with the existing provincial organization, as the community is eventually engaged and consulted on the vision.

With all the hope and commitment to change in CFS, there remains a soberness. The CFS team was clear that you "can't ram transition through the community [...] you have to work at the pace of your community and your staff." The team is continuing to work extensively alongside the provincial staff but remains adamant that they do not want an agency.

However the First Nation decides to pursue jurisdiction, it will take several years to envision, define, and implement. With the recognition of First Nation C's complex starting point, there was an underlying suspicion of federal and provincial government intentions with jurisdiction.

"They're setting us up for failure. They know we have a lot of dysfunction. They know we don't have the human capacity or the structure in place...they created this situation and now they want us to fix it [the problems governments created through CFS]. The government will claw back money as soon as the photo-ops are done and no one thinks we can do it anymore."

As the jurisdiction process gets underway, there are still needs that need to be met and work to be done.

FIRST NATION B

SUPPORTING COMMUNITY THROUGH INTERNAL CAPACITY

First Nation B has the advantages of self-government and economic prospects. Those factors alone, however, are insufficient to ensure well-being for children and families in their community. The challenges of intergenerational trauma and a lack of qualified staff for support create an environment in which issues persist and risk becoming engrained.

The lesson First Nation B shares is the importance of building or accessing internal capacity to support community needs.

THE REALITIES OF SMALL FIRST NATIONS

In a small population (approximately 400 people on community territory) there is no separation between politics and family. Connections (and feuds) can run deep and colour politics and decision-making. At times, the lateral violence limits progress for the First Nation.

In a small community, it can be a challenge to share personal matters with another person that you might know. As deeper and more complex issues emerge, support from outside of the First Nation would be helpful. Community members themselves are not all well. There is trauma from residential schools and compounding trauma from grief.

As a new project may bring economic development opportunities to the First Nation, there are concerns about compounding addictions challenges, environmental impacts, and increased risks with more traffic and activity in the area. The First Nation has an excellent working relationship with the adjacent village notably on infrastructure, e.g., sewers, subdivision planning, etc. and good employment prospects, but that is insufficient for wellness.

OPERATIONAL MATTERS

A self-governing First Nation, the community will provide services to their members wherever they reside. In this case, anywhere from one third to one half live in an urban centre over 50km away. The First Nation, however, is not funded to provide such services for any member that does not reside on the settlement territory. This is creating increasing concern as migration between the territory and the urban centre continues.

Protection services are provided by the territorial government. Any CFS related programs, focused on prevention and wellness, are offered through the health and social department. Despite their best efforts, the vision for CFS is not articulated.

There appears to be a lack of understanding in vision, mission, and goals of the department. Staff can clearly express needs, e.g., evening youth worker and programming, but struggle to define basic activities aligned to wellness in CFS.

The expressed need for hybrid practice that links Western and traditional approaches was clear. To paraphrase staff, *you can't make parkas and alleviate trauma; people have deep issues that require complex interventions and support*. To make progress in healing trauma, staff need to meet people where they are. That means using phone, virtual platforms, and ways of accessing services without feeling like they are community spectacles being watched by others.

Economy of scale in service delivery is a challenge for small First Nations. Per capita funding allocations do not meet needs. There are fixed costs of doing business that are greater in rural places and across a small population. The same amount of funding per person in such places does not have the same impact as in other places.

Staff turnover is high which makes planning and execution challenging. First Nation B cannot find the qualified staff they need. Several positions in health and services remain unfilled. There is a perceivednewness or inexperience among staff, with challenges in delivering basic programming for skills development, e.g., cooking classes.

A WAY FORWARD

Getting to a better place will require community-based needs assessments in the First Nation and the urban centre. Having members define their needs and vision for CFS and related services will help to focus the First Nation's efforts and map a plan forward.

FIRST NATION A

SEQUENCING THE STEPS OF JURISDICTION

Jurisdiction in child and family services is about making decisions in the best interests of children and families in their own culture and on their land. From the perspective of First Nation A, this means:

The development of thriving, safe, and happy children that are engaged in the cultural life of their community with supportive and unified families. This will be done by recognizing and leveraging the strengths of families to take action in the best interest of the child and family in a culturally informed way.

To give meaning to their vision of jurisdiction, First Nation A set out to define their resource needs. The exercise highlighted the need to answer crucial questions to guide their next steps. Before any discussion of required resources (e.g., money, people, buildings), the First Nation had to define what they were trying to achieve, how they would achieve it, and how they would monitor their progress. With the support of First Nation A, this case study defines a basic framework that others can use to ground their first steps on the path to jurisdiction.

The lesson First Nation A shares is the value of sequencing the steps to jurisdiction and being mindful of the time it takes to journey through them.

A small First Nation (less than 500 registered members, with fewer than half living on-reserve), has decided to pursue jurisdiction in child and family services (CFS).

Community consultations were undertaken. While the First Nations is

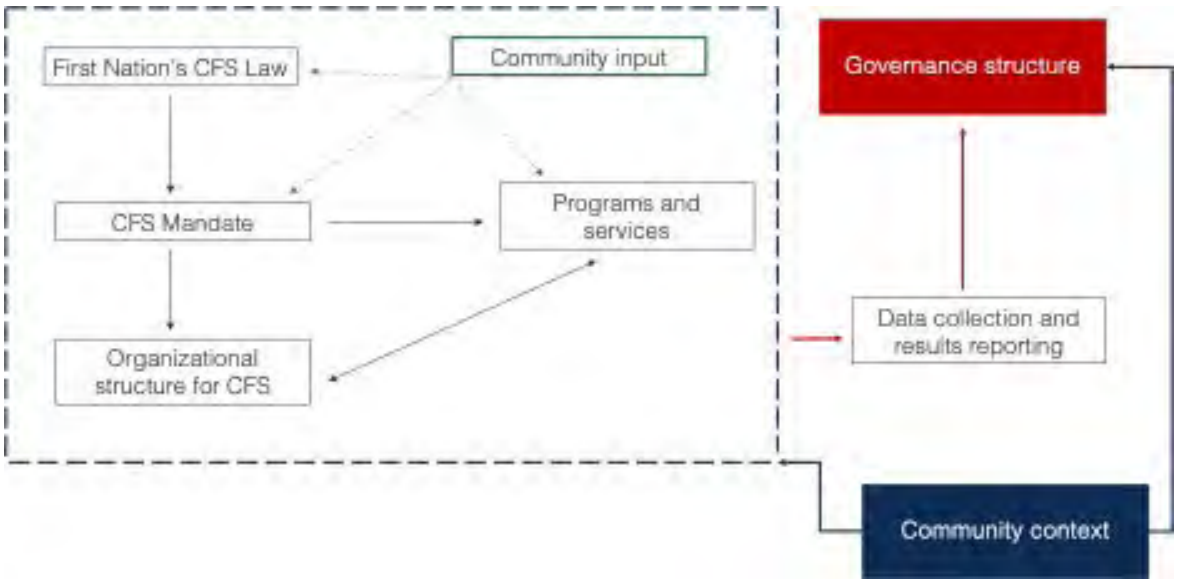
Outstanding questions:

- Who is accountable for overseeing the development of the approach for CFS?
- What is the process for developing options for CFS?
  - Review other legislation and approaches for ideas
  - Structure and governance, e.g., independent organization and board; band council department, etc.
  - Mandate, e.g., goal and purpose
- Who will be accountable for reviewing/adjudicating options for CFS?
- Who will be accountable for making the decision on the final approach for CFS?
- Who will be accountable for implementing the chosen approach to CFS?

supportive of taking on jurisdiction in CFS, there are outstanding questions that should be answered to shape plans, laws, and oversight of the development process. Defining an accountability framework for the design and implementation of jurisdiction is crucial. The support and guidance of the community is essential, but clarity around responsibility is necessary to move the process forward.

The decision to take back jurisdiction can be exciting. Moving forward requires a clear understanding of the starting point (i.e., community context), the goal/purpose of jurisdiction (i.e., mandate), and the legal and governance frameworks for jurisdiction (reflected in an eventual law).Once those decisions are in place and the law established, there are a series of steps for implementation (Figure 33). For instance, programs and services should be designed based on the CFS mandate emanating from the law (and its adjudication structure). An organizational structure need to be defined consistent with the mandate and informed by service delivery. The entire approach will be monitored by a governance and accountability structure. An essential source of information will be the data gathered and results reporting on progress. The evidence generated should help to inform decisions and adjust the approach to meet the goals of the law. These activities are shaped by the community's context. The community's context, e.g., housing needs, water access, capacity, size, etc., must be defined and considered from the start to ensure they are being built into the approach.

FIGURE 33



To explore their path to jurisdiction, the First Nation collaborated to define guiding questions and considerations designed to organize and initial approach and help to identify gaps. The information from the exercise can be used to plan and establish frameworks for laws and resource needs. The guiding questions are designed to organize an initial approach and help to identify gaps. As an example, the First Nation shared their available responses and considerations in (Table 3). These initial questions were expanded with the support of the First Nation to assist others as they explore jurisdiction (Table 4).

TABLE 3

GUIDING QUESTION	RESPONSES/CONSIDERATIONS	
What's the problem you're trying to solve?	The development of thriving, safe, and happy children that are engaged in the cultural life of their community with supportive and unified families. This will be done by recognizing and leveraging the strengths of families to take action in the best interest of the child and family in a culturally informed way.	
What will you do to solve the problem?	• Programs and services for children and families • Capacity building for community members/staff	
What do you need to solve the problem?	Law	• Guiding structure • Essential to align the operating plan to the legal framework
	Structure/ organization	• Accountability mechanism • Mandate and approach to CFS
	People	• Align to mandate and service delivery • Consider training/capacity development
	Money	• Cost estimate approach to CFS; use proxies, e.g., from Band Council or from other sources, e.g., IFSD's work
	Capital	• Needs assessment • Engage with other departments in the First Nations on need
	Time	• 2026 target to begin implementation? What's needed to get there?
	Data	• Approach to data gathering and evidence generation • System, tools, and practices for data collection and applications
	Services (expert services)	• Various, e.g., psychologist, counsellors, etc. • Identify sources, or approaches to sharing resources
	Education (ongoing development)	• Explore training and development approaches to building community skills in CFS, e.g., partnering with colleges and universities

TABLE 4

GUIDING QUESTION	CONSIDERATIONS	
What is your vision?	• What is the vision of a healthy child and family in your community?	
What's the problem you're trying to solve?	• Define the purpose and goals of designing and delivering services	
What will you do the solve the problem?	• Identifying the activities you will take to deliver on goals • What are the root causes/spurces of the problem? • What are options and tools at hand to address the problem?	
What do you need to solve the problem?	• Define the inputs, e.g., tools, resources, services, necessary to take action on your goal. Examples include, people, money capital, and data, etc.	
	Structure/ organization	• Accountability mechanism • Mandate and approach to CFS
	People	• Align to mandate and service delivery • Consider training/capacity development • Human resources, e.g., salaries and benefits, staff wellness supports and services, etc.
	Money	• Cost estimate approach to CFS; use proxies, e.g., expenditure information from Band Council or from other sources, • e.g., IFSD, regional organizations, service providers, etc.
	Time	• When do you plan to begin inplementation? • What's needed to get to the starting line? How will your needs change along the way? • Consider the different phases of planning, implementation, evaluation, etc., while ensuring children and families receive services while the approach is being developed and is ready to be delivered
	Data	• Approach to data gathering and evidence generation to measure change to ensure your program and services have the desired impacts • System, tools, and practices for data collection and applications
	Services (expert services)	• Various, e.g., addictions services (especially, for children and youth), psychologist, counsellors, etc. • Identify sources, or approaches to sharing resources • Coordinated approach for families receiving both protection and prevention services • Coordinated approach for families moving on- and off-reserve (moving between services and systems)
	Capital	• Needs assessment • Engage with other departments in the First Nations. Are there common areas of need? Opportunities to leverage resources?
	Education (ongoing development)	• Explore training and development approaches to building community skills in CFS, e.g., partnering with colleges and universities, engagin with Elders • Opportunities for training for leadership, and otehr internal and external stakeholders, and service providers on the vision and service delivery approach

NATIONAL GATHERING

Before drafting its final report, IFSD gathered with First Nations not affiliated to an FNCFS agency for a one-day gathering on November 2, 2023, in Ottawa.

The gathering was an opportunity to confirm the context and experiences of First Nations not affiliated to an FNCFS agency were captured appropriately; to define the range of options and tools for supporting the design and delivery of CFS; and to capture anticipated challenges moving forward.

The working session was attended by over 65 First Nations who gathered in person or joined virtually via Zoom. The significant participation was representative of different geographies, regions, approaches to service delivery, and populations sizes.

At the conclusion of the workshop, participants defined seven recommendations related to their work in CFS:

1. Access to shared resources in CFS for strategic planning, programming, and staff supports are needed.
2. There must be a respect for the time and space needed to reflect, engage with, and support children and families. This does not happen quickly or easily.
3. Total membership (irrespective of residency) should be modelled in all cost modelling and analysis.
4. Remoteness should be considered in all cost analysis.
5. Funding must be clear, sustainable, and on-going. Block and multi-year approaches to funding should be explored.
6. Account for the different starting points for First Nations not affiliated to an FNCFS agency that will impact their transition to future/desired states.
7. A call for another in-person gathering to spend more time exchanging and sharing ideas over two full days. *(Note: IFSD responded to this call by hosting a second national gathering in Vancouver on February 12, 2024)*.

The discussion among the assembled participants was helpful in confirming challenges and realities in First Nations, as well as approaches for cost estimation modelling. The message in 2023 is consistent with that of spring 2022: change takes time and cannot be done without a plan or capacity for execution. The findings from the workshop are included in Appendix D.

WHAT WE LEARNED TOGETHER

The questionnaire, regional gatherings, case studies, and national gathering sketch the current state for First Nations not affiliated to an FNCFS agency. There are differences in capacity and community realities, and there are common challenges they are confronting from staff shortages to governance matters to communities in crisis. While First Nations have cultural, linguistic, and contextual differences, they share common desires and challenges.

The starting point is different for each First Nation not affiliated to an FNCFS agency. Most,

however, have staff shortages, are seeking supports to enhance their program and planning, and would benefit from consistent and reliable funding to deliver on their mandates. As changes in funding continue to emerge, there should be careful attention paid to calls for increased time to plan for change and absorb resources. Assuming First Nations not affiliated to an FNCFS agency would all be similarly equipped to manage change is attributable only to a lack of understanding and consideration of their varied realities.

The Government of Canada's decision-making on CFS has been disconnected from the realities of First Nations not affiliated to an FNCFS agency. While financial resources have been committed and allocated, there was no consideration of different starting points (i.e., existing child and family service capacity, needs, context, etc.), the needed time and resources for community consultation and planning, or for service delivery, design, and staffing.

Political cycles and sound implementation of decisions may not always align. In this instance, the government's attempt to move quickly yielded a short-sighted goal of releasing prevention funds without ensuring First Nations were set up for success or coordinating these activities with the provinces/Yukon. By not paying attention to the implementation of the prevention funding, Canada lost sight of its obligation to end the discrimination towards First Nations children and families. Yes, financial resources are needed, but how much at each stage of development? To whom? To achieve what objectives? On what timelines? The government is following their timelines with limited consideration of the requirements for service delivery in First Nations or the goal of eliminating the discrimination toward children.

There is hope and excitement in First Nations communities and a clear commitment to provide good quality services. However, this excitement is tempered by the ongoing challenges of dealing with the consequences of residential schools and other colonial harms (from trauma to housing), limited staffing, and politics and governance, as reflected in collaborator case studies. CFS is a work in progress. The initial excitement of new resources is quickly moderated by limited capacity for execution. Paraphrasing a First Nation representative from the November 2023 gathering: ***Money alone does not solve all problems. Without people and plans, you cannot execute no matter how much money you have.***

First Nations not affiliated to an FNCFS agency have expressed feeling like they are in crisis response mode: constantly addressing problems as they emerge. The reality is attributable to a variety of factors including communities in crisis, staff shortages, and complex community needs. As resources are allocated to First Nations not affiliated to an FNCFS agency, some may wish to assess their current state and capacity to manage change. In collaboration with a First Nation, IFSD developed elements of the framework below (sections 2 and 4). With their permission, these components have been expanded and shared in this report (henceforth the 'Framework').

The Framework provides general considerations for First Nations not affiliated to an FNCFS agency for planning and delivering CFS. It is not intended as a complete guide, nor is it necessarily appropriate for all communities and contexts. Rather, the Framework is a tool that First Nations can choose to use as part of their planning approach.

The Framework uses a four-stage approach:

1. *Current State*
   - Articulating the current state (i.e., where are you now?)
2. *Future Vision*
   - Determining and articulating a future-state vision (i.e., where do you want to be?)
3. *Gap Analysis*
   - Identifying differences between the current state and the future state (i.e., what are the gaps?)
4. *Transition Planning*
   - Preparing plans and timelines for addressing the gaps (i.e., how do you get there?)

At each stage, IFSD proposes segmenting issues into four categories:

1. People (e.g., staffing, recruitment, retention, training)
2. Process (e.g., program activities, workflow design, organizational structure)
3. Strategy (e.g., mission, priorities, goals, and culture)
4. Systems (e.g., financial systems, IT systems, data systems, legal and governance frameworks)

SECTION 1 — CURRENT STATE

IFSD has prepared a set of guiding questions to help First Nations define their unique starting points (Table 5). Users may wish to reflect on the prompts below to begin outlining their current state. Consider whether you have the people, processes, strategy, and systems you need.

With these questions and themes, you may wish to consider what responses and actions are within the control of CFS in the First Nation and which it cannot control. The participation and collaboration of other departments, organizations, services, may be required. For instance, where the province/territory is providing protection services to a First Nation, it would be necessary to understand their role, mandate, and how their services intersect or connect with those of the First Nation. What is the role of the province/territory in CFS? What protection (and possibly, prevention) services are being provided? Does the First Nation collaborate with the province/territory? If so, how? If not, why not? Building a full portrait of the current state means defining the starting point for services, environment, and needs, including other service providers, like the province/territory.

TABLE 5

CATEGORY	GUIDING QUESTIONS	CONSIDERATIONS	YES, NO, N/A
People	Do you have requisite staff?	• Consider what staff your community currently has. • Do you already have CFS staff? • Are there staff in adjacent departments (e.g., health) that could provide insight or expertise? • What roles are critical to delivering needed services in your community?	
	Are your staff qualified to meet the specialized needs of the children you serve?		
	Do you offer educational supports, job training and/or skill development?		
	Do you have staff dedicated to CFS? What are their roles?		
	Do you have difficulty attracting staff?		
	Do you have difficulty retaining staff?		
	What salary or compensation scales do you follow?		
Process	Can you describe the CFS needs of the children, youth, and families in your First Nation?	• Consider what your community currently delivers to members. • Who delivers services? • What organizational structures are in place already?	
	How is information on needs used to develop or refine service offerings?		
	How do you define success and CFS? How do you evaluate it?		
	What programs and services do you deliver?		
	Do you gather information from your community to help inform planning?		
	What is your management structure?		
Strategy	Are you delivering the programs and services in CFS that your First Nation wants and needs?	• Consider your goals and priorities. • What are the needs of your community?	
	What is your mandate?		
	What are your goals and organizational priorities?		
Systems	How is CFS governed, ex., department within the Band, independent organization, etc.?	• Consider existing resources in your community. • Are there already systems in place, or will new ones have to be built?	
	Do you have a protocol with the province/territory?		
	Do you have a protocol with the First Nation and other service providers?		
	Do you have regular/reliable revenues and expenditures?		
	Do you have adequate IT systems?		
	Do you have adequate financial systems?		
	Is your legal framework defined?		

SECTION 2 — FUTURE VISION

IFSD has prepared a table of guiding questions and considerations to help First Nations determine their unique future vision (Table 6). Users may wish to reflect on the prompts below to begin outlining their future vision.

TABLE 6

GUIDING QUESTIONS	CONSIDERATIONS
What is your vision?	• What is the vision of a healthy child and family in your community?
What are the current CFS needs of the children and family you serve?	• What are the issues that lead children to be at risk of maltreatment?
What's the problem you're trying to solve?	• Define the purpose and goals of designing and delivering services, with consideration of the existing needs of children and families. • What is the ultimate goal of your service delivery?
What will you do to solve the problem?	• Identify the activities you will take to deliver on goals • What are the root causes/sources of the problem? • What are options and tools at hand to address the problem?

SECTION 3 — GAP ANALYSIS

Users may wish to reflect on their responses to the questions and prompts provided in sections 1 and 2 of the Framework (Current State and Future Vision). Users might consider where their current state does not align with their future vision, i.e., our mission is not yet defined, our governance framework is not in place, our IT system is inadequate (Table 7).

TABLE 7

CATEGORY	CONSIDERATIONS	YES, NO, N/A
People	Do you have enough staff to operationalize your vision?	
	Is your compensation competitive?	
	Do you recruit staff from your First Nation? From other First Nations?	
	Do you have high retention of employees?	
	Do you offer benefits to your employees e.g., health, dental, etc.?	
	Do employees receive adequate on-the-job training?	
	Are you attracting adequately credentialed staff?	
Process	Have needs in CFS been defined?	
	Are your current operating baselines meeting needs?	
	Do you have a clear vision of your future state?	
	Are your activities defined?	
	Is your workflow defined?	
	Is your management structure established?	
Strategy	Is your mission defined?	
	Is your mandate defined?	
	Is your strategy defined?	
	Are your goals and organizational priorities defined?	
	Are all of your services or programs developed?	
Systems	Are all of your necessary organizational partnerships in place?	
	Is your governance framework defined?	
	Is your legal framework defined?	
	Is an adequate data system in place?	
	Is an adequate performance management framework in place?	
	Is an adequate IT system in place?	
	Is an adequate financial system in place?	
	Is an adequate reporting system in place?	

FIGURE 34

Staffing needs analysis

First Nations not affiliated to an FNCFS agency expressed challenges attracting and retaining staff for their program and service delivery. To provide a general assessment of staffing requirements for prevention services (primary and secondary), post-majority supports and services, supervision, and administration, IFSD retained Engage First Management Consultants Inc., at the recommendation of a First Nation that had previously used their services to plan for their CFS staffing needs. The full analysis prepared by the firm is available in Appendix E. The table below is a summary of staffing needs by activity area based on total population. **Note: These estimates are illustrative and are not necessarily reflective of the distinct needs of First Nations.**

FULL TIME EQUIVALENT	SMALL FIRST NATION (FTE)	MEDIUM FIRST NATION	LARGE FIRST NATION
Prevention Caseworker	4.9	7.0	24.6
PMSS Case Worker	1.0	2.3	9.9
Supervision	1.0	1.5	6.0
Admin. Support	1.0	1.5	6.0
Total (FTE)	**7.9**	**12.3**	**46.5**

SECTION 4 — TRANSITION PLANNING

The guiding questions and considerations below are designed to help First Nations assess and address gaps identified in section 3 (Gap Analysis). Users may wish to reflect on the prompts to begin outlining their transition plan (Table 8).

TABLE 8

GUIDING QUESTIONS	CONSIDERATIONS	
What do you need to solve the problem?	• Define the inputs, e.g., tools, resources, services, necessary to take action to deliver on your goal. Examples include, people, money capital, and data, etc.	
	Structure/ organization	• Accountability mechanism • Mandate and approach to CFS
	People	• Align to mandate and service delivery • Consider training/capacity development • Human resources, e.g., salaries and benefits, staff wellness supports and services, etc.
	Money	• Cost estimate approach to CFS; use proxies, e.g., expenditure information from Band Council or from other sources, • e.g., IFSD, regional organizations, service providers, etc.
	Time	• When do you plan to begin implementation? • What's needed to get to the starting line? How will your needs change along the way? • Consider the different phases of planning, implementation, evaluation, etc., while ensuring children and families. receive services while the approach is being developed and is ready to be delivered
	Data	• Approach to data gathering and evidence generation to measure change to ensure your program and services have the desired impacts • System, tools, and practices for data collection and applications
	Services (expert services)	• Various, e.g., addictions services (especially, for children and youth), psychologist, counsellors, etc. • Identify sources, or approaches to sharing resources • Coordinated approach for families receiving both protection and prevention services • Coordinated approach for families moving on- and off-reserve (moving between services and systems)
	Capital	• Needs assessment • Engage with other departments in the First Nations. Are there common areas of need? Opportunities to leverage resources?
	Education (ongoing development)	• Explore training and development approaches to building community skills in CFS, e.g., partnering with colleges and universities, engaging with Elders • Opportunities for training for leadership, and other internal and external stakeholders, and service providers on the vision and service delivery approach

PART IV: COST ESTIMATION ANALYSIS

Past funding for First Nations not affiliated to an FNCFS agency has varied through the CWJI and now, per capita prevention allocations. When self-reported expenditures were assessed in the questionnaire, no cost driving relationships emerged from analysis of the data. With the variability in services and activities, starting points, and limitations in expenditure data, the CFS system cost for First Nations not affiliated to an FNCFS agency could not be defined. To address the limitations in information and differences in practice, IFSD developed cost estimation scenarios using different baselines and top-ups.

During the national gathering of First Nations not affiliated to an FNCFS agency, several of the final recommendations made by participants related to funding. The importance of support and time for planning, sustainable and predictable funding, were included with calls to include remoteness adjustments and full membership in funding allocations. Based on this feedback, questionnaire findings, and collaborations with First Nations, IFSD developed the cost-estimation scenarios for consideration.

Unlike FNCFS agencies that have years, and in many cases decades, of service delivery experience, established operating and programming baselines, as well as existing staff, most First Nations not affiliated to an FNCFS agency do not. The variability in activities meant limited consistency in expenditures and cost driving relationships for modeling. A baseline could not be defined, other than through per capita allocations (either reported through the questionnaire or inferred through ISC's current committed per capita expenditures). Given the different needs and starting points, funding for First Nations not affiliated to an FNCFS agency would ideally align to their needs, current capacities and grow with them. This way, First Nations that are delivering complex programming can continue their trajectory while those that are starting out can access resources on their timelines.

DEFINING A NEW APPROACH FOR PREVENTION FUNDING

The following options on funding amounts and approaches are intended to support First Nations not affiliated to an FNCFS agency in taking care of their children and families. **There is a presumption that there will be no provincial/territorial service disruptions**.

The CHRT found that federal agreements with provincial/territorial governments to have contributed to service disruptions and a lack of service integration for First Nations children on-reserve.[25] These agreements should be revisited in alignment with the CHRT's rulings. In addition, with the Supreme Court of Canada's ruling on *An Act respecting First Nations, Inuit*

25 2021 CHRT 12 at par. 35, https://decisions.chrt-tcdp.gc.ca/chrt-tcdp/decisions/en/item/495594/index.do?q=chrt+2021+chrt+12.

and Métis children, youth and families, there is clarity on the Act's binding national standards on provincial governments and the work of their public servants.[26] These national standards should be part of federal agreements on FNCFS with the provincial/territorial governments.

The way forward in CFS among First Nations not affiliated to an FNCFS agency with an understanding of different starting points should consider structure, funding, accountability (Figure 35). The approach is intended to resource the design and delivery of prevention services (primary, secondary, and tertiary). While additional financial resources can address discriminatory practices of underfunding, adequate structure and accountability are necessary to monitor and ensure discrimination does not reoccur (Table 9). The three interrelated elements should be revised to align to the intent of supporting the well-being of First Nations children, families, and communities.

FIGURE 35

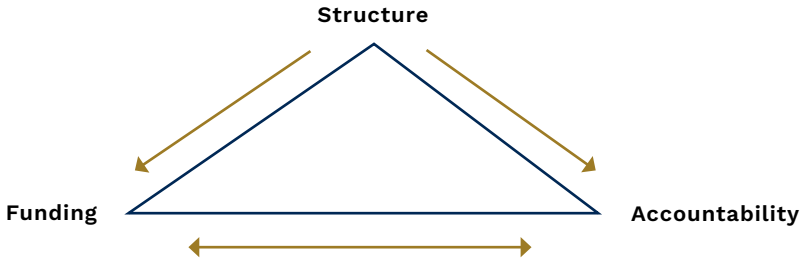


TABLE 9

COMPONENT	DESCRIPTION
Structure	Structure is composed of the objectives and rules that define the purpose and operation of the FNCFS Program. The Program's objectives, the rules associated to the flow of funds (contribution approach), and the terms and conditions associated to the use of funds make-up the structure. These rules are important as they can enable and constrain the decision-making of those in communities working with children and families.
Funding	Funding is the amount of money allocated to the recipient for activities associated to program and service delivery. Consider for instance, planning, program and service delivery, assessment, and evaluation. Funding should be commensurate to mandate and should be based on principles linked to the differentiated contexts of recipients and those they serve.
Accountability	Accountability ensures that the system is delivering its intended objectives for children and families. Gathering relevant data, measuring change, and monitoring outcomes are essential for ensuring accountability to First Nations communities, funders, as well as to support planning and advocacy efforts.

26 Reference re An Act respecting First Nations, Inuit and Métis children, youth and families, 2024 SCC 5 (CanLII), accessed February 22, 2022, https://canlii.ca/t/k2qhn.

At the time of writing, there are discussions to change the funding allocation to First Nations not affiliated to an FNCFS agency for the delivery of CFS. *Changes, i.e., increases, to funding allocations alone will not resolve longstanding challenges in communities, nor will they ensure the sustainable development of services to support children and families*. As expressed by a participant in a collaboration session, "sending out the money is not the victory." Creating sustainable change connected to the different cultures and starting points of First Nations will take time. Sustainable change will also require remediation of the drivers of the overrepresentation of First Nations children in care, i.e., poverty, poor housing, mental health, addictions, and family violence. A national baseline of starting points and needs is but a first step. There will be significant work to be undertaken by First Nations to plan, develop, evaluate, and sustain their initiatives to meet the changing needs of their communities.

"Sending out the money is not the victory."

As the federal program that funds First Nations and FNCFS agencies for services to children, families, and communities (on-reserve), the Program's structure, funding, and accountability mechanisms should align to support the best interests of those being served. Improving outcomes for children and families, requires predictability and sustainability of funding for First Nations to plan services and deliver them over a number of years. For instance, funding announcements close to the start and end of fiscal years limit time for planning and meaningful engagement and risk disrupting service delivery to children and families.

First Nations not affiliated to an FNCFS agency have been clear that their starting points are different, the challenges facing their communities are complex, and that the way forward must include sustainable and clear funding. Those defined priorities are consistent with existing federal funding options and the Act respecting First Nations, Inuit, Métis children and youth. Discussions about FNCFS Program funding for First Nations not affiliated to an FNCFS agency need to move beyond amounts and consider the structure and accountability mechanisms to support well-being.

At the time of writing, negotiations on the long-term reform of the FNCFS Program are ongoing. It will be for First Nations and their leadership to define a way forward and negotiate the relevant structure, funding, and accountability to support it.

Whatever the way forward will be, there need to be clear purpose and objectives for CFS in First Nations, viewed in tandem with services provided by the province/territory, with an emphasis on flexible implementation to achieve the objectives by First Nations based on their cultures and circumstances.

As First Nations not affiliated to an FNCFS agency assess needs, plan, and execute their chosen approach to service provision in CFS, children will still require support and care. It is imperative that as First Nations ramp up their service delivery capacity, that services are available to meet the immediate needs of children. Some First Nations may already offer services, others may be collaborating with the province/territory, and others may purchase services

from other providers, e.g., nearby FNCFS agency. What is most important is that children are provided with integrated protection and prevention services to reduce contact with protective services.

Based on the preceding analysis of data shared by First Nations not affiliated to an FNCFS agency, three possible paths forward have been defined.

TABLE 10

FUNDING[27] APPROACH	DESCRIPTION
	Grant[28]
Regular Grants	• Transfer payment based on agreement. • Must report on results, but not required to account for spending. • Recipient must meet "eligibility and other entitlement" criteria. • Duration is flexible.
10-year Grant	• Subject to more stringent eligibility requirements co-developed with the Assembly of First Nations. • Flexible to design services and allocate and use funds suited to local needs. • Can retain unspent funds. • Annual escalator based on population growth and inflation. • No compliance-based reporting requirement.
	Contribution[29]
Set	• Funds used for a defined purpose and subject to performance conditions. • Any unused funds must be returned at the end of the fiscal year (no carry forward option). • The use of this approach has been limited since April 1, 2018, and is used only as needed, e.g., risk management.
Fixed	• Total expenditure is fixed with annual transfers estimated using a formula. • Carry forwards are possible; cost-overruns are the responsibility of the recipient. • Approach applied to a defined purpose or program and must be (re)issued annually.
Flexible	• Funds are for programs for a minimum of two-year duration. • Requisite capacity and relationship with the department are required. • Funds can be reallocated between cost categories within a program.
Block	• Funds are moveable between a block of programs (so long as objectives are achieved). Unspent funds can be kept and used within the same program block. • Recipient must meet "readiness assessment criteria" for this approach.

OPTION 1: STATUS QUO

Funding to First Nations not affiliated to an FNCFS agency will continue, likely at higher levels. The structure of the funding will remain the same as the current state. It will largely be flowed under a "fixed" contribution approach, i.e., the uses are predefined (see Table 10). Terms and conditions may be revised, but First Nations will be operating under the same enabling and constraining factors that existed previously, e.g., siloed funding, inconsistent funding, etc. The only difference would be the amount of money available.

For some First Nations, this change in resources will be sufficient. They will leverage the resources to expand existing programs and services, hire more staff, and engage in regular planning. For most First Nations not affiliated to an FNCFS agency, however, the funding change will mean more resources with limited capacity to absorb funding and translate into programming. Increasing available resources without considering community engagement and needs definition, plans to define activity areas, and hiring the staff needed to execute, cannot be expected to alone change outcomes for children.

OPTION 1A: STATUS QUO PLUS

To improve the status quo option, an alternative contribution approach, such as a block approach, could be available to First Nations ready and willing to accept it. For some First Nations with established program and service offerings, the block approach is a mechanism to promote flexibility in the application and use of resources in community. In the block approach, funding is transferred to the recipient for use to achieve a program objective (rather than for specific activity areas). With a block contribution approach, funds can be used for all activities associated to the delivery of CFS interchangeably, without tying them to specific activities, such as operations, prevention, etc. Recipients, however, must work within the predefined allocation of the block.

Relative to the fixed approach, the block has flexibility to solve problems and address the changing needs in communities. With the block, the recipient reports on overall outcomes, rather than the discreet application of resources to specific activities. The block is consistent with the horizontality of challenges confronted by First Nations by enabling a whole of community approach to problem solving, instead of the false silos of other funding mechanisms.

OPTION 2: REGIONAL SUPPORT MODEL

Participants in the November 2023 gathering called for strategic planning, programming, and staff supports. Consistent with this recommendation and principle of First Nations care and control in delivery, a regionally focused model for funding and support could be adopted.[30] In this model, trusted regional organizations (many of which already exist), would serve as the funding

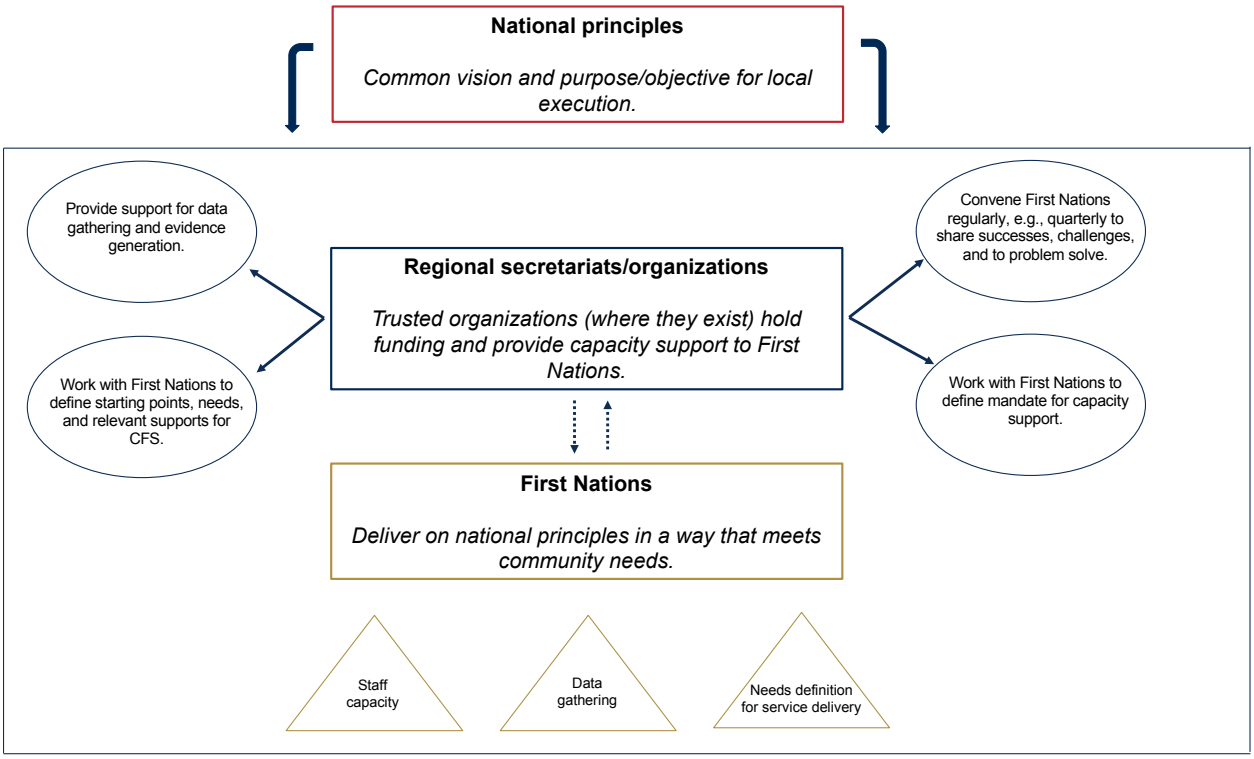
30 With thanks to Dr. Margo Greenwood, see Joint First Nations/Inuit/Federal Child care Working Group, "Considerations and Recommendations for the First Nations/Inuit Child Care Program and Funding Framework," 1995 as cited in Margo Greenwood and Shawna Perry, Appropriateness of Outcome-Based Framework for Aboriginal Child Care, Human Resources Development Canada, May 2002, https://files.eric.ed.gov/fulltext/ED468507.pdf.

allocator and capacity support provider for First Nations not affiliated to an FNCFS agency. Regional organizations would be funded to undertake this work, rather than the federal government. Funding and support would be guided by First Nations for First Nations. An overhead fee of 12% could be applied to support the existing organization's supplementary activities. This rate is consistent with Global Affairs Canada's overhead compensation for contribution agreements in international development.[31]

Most (47%) First Nations not affiliated to an FNCFS agency are in British Columbia, Yukon, Ontario, and Quebec, where regional organizations already exist and could be engaged on this approach. Existing FNCFS agencies (in regions other than Yukon, as they do not exist) could also be sources of technical support.

Guided by national principles and objectives of a reformed FNCFS Program, the regional organizations would work with First Nations on local execution. The regional organizations would

FIGURE 36



31 Global Affairs Canada, "Overhead Compensation Policy for Non-Repayable Contribution Agreements with Canadian Organizations under the International Development Assistance Program," Government of Canada, last modified April 26, 2022, https://www.international.gc.ca/development-developpement/partners-partenaires/bt-oa/overhead-compensation_amendment.aspx?lang=eng.

have three activity areas: 1) funding; 2) convening; 3) capacity building, including technical CFS support (see Figure 36). As funders of FNCFS, regional organizations would work with First Nations not affiliated to an FNCFS agency and their leadership to determine regionally relevant funding allocation models or approaches. Funding allocation by the regional organizations could be through a regional funding approach, an application basis, a per capita allocation, or some combination of thereof.

The organizations would serve as conveners to host quarterly meetings with First Nations not affiliated to an FNCFS agency and practitioners to share successes, challenges, and to problem solve. Best practices and lessons learned by First Nations and FNCFS agencies can be leveraged by others to address similar challenges. The peer-to-peer engagement for operational support and problem solving was a recommendation of First Nations not affiliated to an FNCFS agency during the November 2023 gathering. Participants called for more regular meetings to share practices, challenges, and solutions.

As a capacity building resource, the regional organizations would work with First Nations not affiliated to an FNCFS agency to determine an annual or multi-year workplan. Guided by the needs of First Nations in the region, the regional organization could focus on staff capacity development, program planning resources, data gathering and analysis, and other areas of activity as needs and priorities dictate.

Established regional organizations will likely already have contribution agreements with ISC, which should facilitate the flow of funds for regional allocation. The regional allocation model by non-government bodies already exists, e.g., British Columbia's Aboriginal Child Care Society (BCACCS) for early learning and child care.[32] A regional organization with the consent of First Nations not affiliated to an FNCFS agency to manage the allocation of funds, serve as a convener, and support capacity development, could better meet local needs reducing the space between funding decisions and community execution.

With a regional model, a phased approach to funding allocation could be integrated. A regional body would hold resources for First Nations, moving them from the federal government's balance sheet. This phased approach could be possible with option 1, but would require resources be set aside within ISC in a Special Purpose Allotment (SPA) for a defined period of time to ensure that they are not reallocated to other purposes within the department. The SPA would ensure defined resources for First Nations not affiliated to an FNCFS agency through the FNCFS Program would be available to them as they move through the developmental phases.

As resources are provided from the federal government to the regional body, the regional body could work directly with First Nations to support them in their readiness assessments. While there were noted challenges with the Directive 20-1 that informed the establishment

32 BC Aboriginal Child Care Society, Moving Forward Together The BC Aboriginal Child Care Society (BCACCS) Annual Report for 2021/2022, BC Aboriginal Child Care Society, n.d., https://www.acc-society.bc.ca/wp-content/uploads/2023/12/BCACCS-Annual-Report-2021-to-2022-DRAFT-8-DEC14-2023-1.pdf.

and funding of FNCFS agencies, there was also a helpful step-based approach to resources and organizational development. In section 7 of the Corporate Manual of Directive 20-1[33], three steps are defined:

1. Pre-planning: support for community consultation and engagement to assess needs and prepare a proposal.
2. Planning: development of organizational plans and agreements to prepare for execution.
3. Start-up: execution of the plan with staff hiring, office setup, governance arrangements, etc.

Funding was provided at each stage as recipients worked through prior stages to achieve full operations. Working with a trusted regional body, First Nations may find the readiness assessment and step-based approach useful. Working through these or other steps would provide the time, space, and opportunity to engage with community, and develop internal support and capacity before moving to service delivery.

The step-based approach to funding is considered reasonable in a regional allocation context where a First Nation is working with a trusted First Nations organization to access resources and assess readiness. The step-based approach may not be viable if the federal government is the arbiter of readiness. With the regional model, federal resources are transferred to the regional organization. The regional organization is then accountable for their allocation. The regionally devolved approach means that the resources are insulated from federal political timelines, e.g., change in government, and afford First Nations the opportunity to focus on regional or local priorities with the support of a trusted organization.

Not all First Nations, however, may trust or wish to work with a regional organization. Should a regional model be adopted, there should be a requirement for a region to not unreasonably withhold funding to a First Nation. Some First Nations may wish to receive the funding directly, only seeking out additional support, e.g., for grant writing, from a regional organization. From this perspective, First Nations should continue to receive funding directly from the federal government, with the regional organization serving only as a source of technical support.

Such a regional model with a phased approach to implementation and flexible use of funding is consistent with a proposal presented for other social policy areas, such as early learning and childcare. In an assessment in the mid-1990s, Dr. Margo Greenwood and the Joint First Nations/Inuit/Federal Child Care Working Group proposed an approach with three crucial components for funding early learning and childcare. First, flexibility of funding was deemed essential. Flexibility was needed to promote the local control of resources to solve problems in communities. Second, a phased approach for change was proposed. In the initial phase, federal and First Nation and Inuit groups would collaborate to plan for management and allocation of funding. In the following phase, regions were engaged to prepare to take on the role. The phased approach recognized that priorities

33 Directive 20-1, Corporate Manuals System, Amend./Modf. 23 95-04-01.

and needs in regions differed and that timing for implementation would be impacted. Third, a regional model to allocate funding (where a relevant body exists) to support the differentiated needs. With a regional body responsible for allocating funds, regional priorities and needs could be targeted and funded in a sustained manner (rather than defaulting to a single national approach).[34]

The same three issues of regional support for differentiation, flexible application of funds, and time for implementation were reflected over 25 years later with First Nations not affiliated to an FNCFS agency. The principles and approaches proposed in this report are not new. They have been considered and recommended in different areas of social policy. This question remains why such approaches that promote First Nations control and care in delivery have not been implemented.

OPTION 3: BUILDING TOWARD PREVENTION SERVICE DELIVERY

First Nations not affiliated to an FNCFS agency that are seeking to develop a complete needs assessment should be afforded the necessary time. Rather than working on the current federal timetable with hastened funding announcements that require immediate reactions, those First Nations not affiliated to an FNCFS agency wishing to prepare should be supported in that choice. Leveraging the regional organizational model (defined in option 2), funding could be held in trust by the trusted regional bodies until the First Nation is prepared to accept the funding for use. This would provide ISC with a mechanism to flow the funds to a recipient, i.e., the regional organization, (ensuring resources have been allocated and are moved off the federal government's balance sheet.).

In this model, First Nations not affiliated to an FNCFS agency could take one to five years to engage with their communities, to plan their programs and services, hire and train staff, and prepare for data gathering. The regional organization would play a role in supporting their efforts. Supporting implementation for sustainable program and service delivery requires time to define a baseline, assess needs, and develop a plan. In the status quo approach, First Nations would be absorbing new funding without the time to work with their communities. While financial resources are needed and welcome, they will not solve challenges in communities alone. People and infrastructure are needed to translate dollars into the culturally relevant interventions communities wish to offer.

Making the most of financial resources means being able to apply them to solve problems, meet needs, and deliver results for communities. That requires a combination of people, plans, and execution capacity that may not exist across communities. To make the most of this significant financial allocation, First Nations should be in control of their timetable, rather than responding to the arbitrary one imposed by the federal government.

34 Joint First Nations/Inuit/Federal Child Care Working Group, "Considerations and recommendations for the First Nations/Inuit Child Care Program and Funding Framework," technical report, 1995.

SECOND NATIONAL GATHERING

During the second national gathering of First Nations not affiliated to an FNCFS agency (February 2024, Vancouver, British Columbia), IFSD's proposed funding approaches were reviewed with assembled participants (see Appendix F for the complete summary). There was support for a regionally/territorially focused funding approach where First Nations in their territories define an approach that best suits them. Others preferred continued bilateral agreements between the First Nation and the federal government. A national pool of funds was proposed to ensure First Nations not affiliated to an FNCFS agency could access additional funds for different activities, e.g., community engagement and consultation, during this period. Irrespective of the funding approach, participants indicated that a steady state for service delivery has not yet been defined and that funding levels and approaches were subject to change.

The assembled participants emphasized that any decisions related to funding and structure are a starting point. These changes do not represent a reformed approach to CFS delivery in First Nations not affiliated to an FNCFS agency. It will take time to clarify required activities and their resource requirements.

Principal takeaways and recommendations from the second national gathering of First Nations not affiliated to an FNCFS agency:

1. First Nations view CFS as a sacred duty. No one asked about their readiness for prevention service delivery (primary, secondary, tertiary), but they will do it.
2. First Nations not affiliated to an FNCFS agency have not had the opportunity to consistently plan or design their prevention service delivery approach. This means that activities are in development and will evolve. Funding is only a starting point. Funding needs are expected to change as service provision stabilizes.
3. Funding approach options defined during the gathering included:
    a. Maintaining separate bilateral agreements between First Nations and the federal government (no national approach)
    b. First Nations work together regionally/territorially to define the funding approach that best suits their needs
    c. Maintaining a national pool to access funding for supplemental activities (outside of service provision), e.g., community engagement
4. A call for more gatherings:
    a. Resources for local and regional gatherings to consider approaches
    b. National gatherings to share experiences, practices, and knowledge

It is imperative to clarify required activities in prevention (which includes primary, secondary, and tertiary services). There is limited (if any) information available from the provinces, inconsistency in the starting points of First Nations, and no history of service delivery with sustained funding. First Nations not affiliated to an FNCFS agency are only beginning to develop their approaches to the delivery of prevention services. Funding approaches should reflect that reality.

FUNDING ESTIMATES

First Nations not affiliated to an FNCFS agency have emphasized the importance of considering their total membership (irrespective of residency) in their service population count. To model the impacts of population, IFSD presents all scenarios twice: 1) with only the on-reserve population (IRS 2022) and 2) total membership (IRS 2022).[35]

At November 25, 2023, there were two funding amounts confirmed for First Nations not affiliated to an FNCFS agency (pursuant to the CHRT's rulings):

1. $283/person on-reserve for the First Nations Representative Service;
2. $2,500/person on-reserve for prevention services.

The two funding amounts are for fiscal year 2024-25. Future funding amounts and structures are subject to the ongoing negotiations on FNCFS Program reform. The options presented in this report are intended to support consistent funding to build capacity and sustainability in the delivery of CFS. Funding for service delivery in First Nations not affiliated to an FNCFS agency have been inconsistent in the past. This is an opportunity to leverage resources to assess needs, plan, and execute an approach to service delivery.

These funding options should not be considered final. They are works in progress that will need to be reviewed and reassessed as capacity is developed, mandates are defined, and services provided. As part of a First Nation, the design and delivery of CFS is not happening in a vacuum. There are existing services, people, and resources that should be leveraged to move forward in CFS.

Determining which of the funding scenarios and structures best meets the needs of a First Nation requires consideration of current mandate and capacity for execution. With each funding scenario, there are differences in the principles to generate the allocations and their total amounts. For the different approaches to structure, there are trade-offs in flexibility in the use of funds, the source of funding allocation, and the prioritization of regional v. national approaches. Any decision on approaches and their implementation will be subject to the results of the negotiation.

In its national estimates and projections, IFSD applies the following assumptions to all scenarios for First Nations not affiliated to an FNCFS agency (Table 11):

35 First Nations in the Northwest Territories do not receive prevention or other CFS funding and are excluded from the national estimates.

TABLE 11

COMPONENT	DESCRIPTION
Population	• Base population is from the IRS 2022 (on-reserve and total membership) • Population growth is from projections provided by ISC based on 2020 population data
Inflation	• Consumer Price Index (CPI) is Canada's rate of inflation (based on the previous year's prices) • Inflation is variable and adjusted for the previous year's average inflation rate • The Bank of Canada's five-year inflation target ranges between 1% and 3% (based on the CPI) • IFSD proposes using 3% inflation in the projections, based on the upper end of the Bank of Canada's inflation target (as inflation tends to run higher in many First Nations relative to the general population)
Prevention	• Resources to design and deliver programming to reduce child contact with protective services and keep families unified • $2,500 per capita
First Nations Representative Service	• Support to ensure First Nations represent the best interests of their children and families in a culturally relevant manner • $283 per capita

Remoteness	• The Cost Adjustment Factor (CAF) scaled to an average of 15% across all First Nations not affiliated to an FNCFS agency. The CAF is calculated based on the remoteness index of a First Nation and whether it has access to roads
	  • The allocation can be made to all First Nations based on their remoteness index.
	  • The allocation can be made to First Nations with a remoteness index of 0.4 or higher.
	• Applied to the baseline and top-ups

Poverty	• Allocation to mitigate some impacts of poverty and its triggers associated with contact with protection services. Not meant to alleviate or solve poverty in a First Nation • Difference between Market Basket Measure (MBM) by province/region for populations <30,000 people and after-tax median household income on-reserve (Census 2016 data). Data is not available for household median income and the number of households for all First Nations. For First Nations without data, the average median income of those First Nations with data in the same province and geographic zone was applied • 7% of value of difference
Information technology (IT)	• Allocation for hardware, software, and relevant services, based on not-for-profit industry standards • Applied to the baseline budget • 6% of baseline
Results	• Allocation to support data collection and analysis • Applied to the baseline budget • 5% of baseline
Average per capita expenditure (questionnaire)	• Per capita expenditure as reported in the First Nations not affiliated questionnaire based on total expenditures for CFS from federal sources (fiscal year 2021-2022) • Calculated by dividing total budget by IRS (on-reserve population, 2021) per response. An average per capita allocation was calculated based on all questionnaire contributions.
Average per capita expenditure (integrated service providers)	• Some Quebec First Nations integrate the delivery of their health and social services. This model represents an integrated approach to service delivery. • The per capita allocation for integrated service providers was calculated by dividing the total budget by IRS (on-reserve population, 2021). An average per capita budget was calculated based on contributions from First Nations in Quebec providing integrated services.

IFSD modelled the following scenarios based on feedback from First Nations not affiliated to an FNCFS agency, existing approaches to service delivery, and elements of a funding model developed with FNCFS agencies (as there are some consistent needs across program activity areas).

The funding scenarios reviewed in this section generate amounts of funding for service delivery. Different starting points of First Nations not affiliated to an FNCFS agency should be considered in the mechanism for resource transfer. The mechanism and its terms will impact how a First Nation not affiliated to an FNCFS can access and use the funds based on associated terms and conditions.

It is the funding mechanism through which resources are transferred to recipients, i.e., options 1-3 above, that should be considered in relation to existing service delivery. For instance, First Nations not affiliated to an FNCFS agency that can take on additional resources and expand their program and service delivery may be most comfortable with the status quo option. If, however, a First Nation not affiliated to an FNCFS agency is at the beginning of its service design and delivery, the regional model with phased steps or the application-based model may be preferable.

There are 11 scenarios (Table 12):

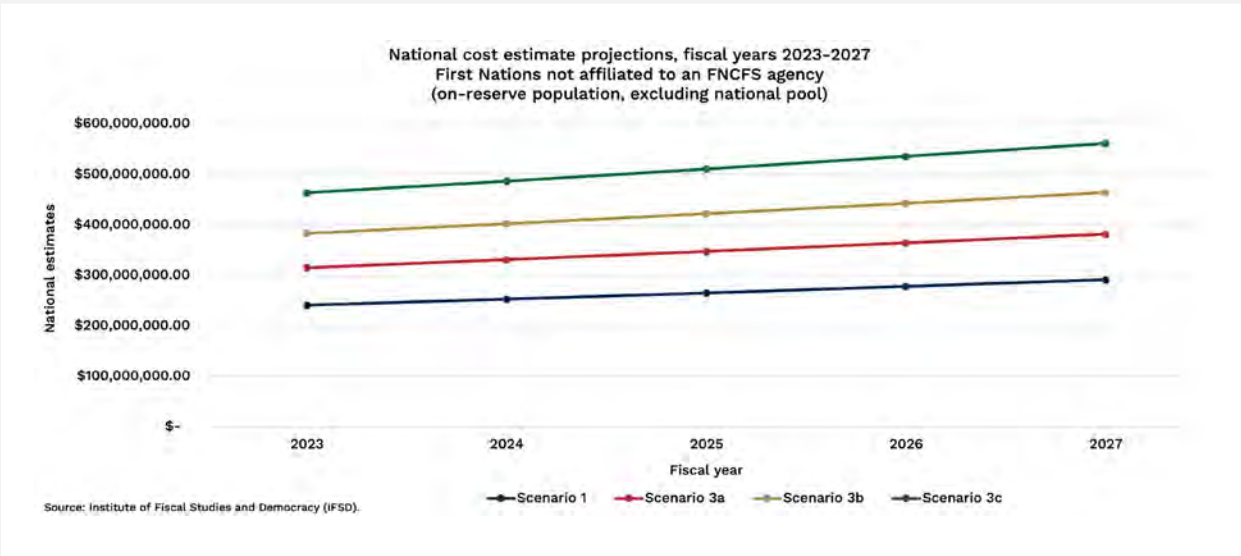
TABLE 12

SCENARIO	DESCRIPTION
1. Base scenario	• Per capita allocations of $2,500 and $283 • Projections grown by population + inflation
2A. Base scenario + remoteness applied to all First Nations	• Per capita allocations of $2,500 and $283 • Remoteness (baseline and top-ups) **(applied to all First Nations)** • Projections grown by population + inflation
2B. Base scenario + remoteness for remoteness index of 0.4 or higher	• Per capita allocations of $2,500 and $283 • Remoteness **(applied to First Nations with a remoteness index of 0.4 or higher)** • Projections grown by population + inflation
3A. Base scenario ($2,500+ $283) + some FNCFS agency funding approach top-ups	• Per capita allocations of $2,500 and $283 • Remoteness (baseline and top-ups) (applied to all First Nations) • Poverty 7% (of difference) • Results 5% (baseline) • IT 6% (baseline) • Projections grown by population + inflation
3B. Base scenario ($3,123 questionnaire) + some FNCFS agency funding approach top-ups	• Per capita allocations of $3,123 (average per capita expenditure from questionnaire data) • Band Representative Service, $283 per capita • Remoteness (baseline and top-ups) (applied to all First Nations) • Poverty 7% (of difference) • Results 5% (baseline) • IT 6% (baseline) • Projections grown by population + inflation

3C. Base scenario ($3,859 integrated provider) + some FNCFS agency funding approach top-ups	• Per capita allocations of $3,859 (average per capita expenditure of integrated service providers in Quebec from questionnaire data) • Band Representative Service, $283 per capita • Remoteness (baseline and top-ups) **(applied to all First Nations)** • Poverty 7% (of difference) • Results 5% (baseline) • IT 6% (baseline) • Projections grown by population + inflation
4. Per capita expenditure (from questionnaire)	• Per capita allocations of $3,123 (average per capita expenditure from questionnaire data) + $283 • Remoteness (baseline and top-ups) **(applied to all First Nations)** • Projections grown by population + inflation
5. Per capita expenditure of integrated health and social services model (from questionnaire)	• Per capita allocations of $3,859 (average per capita expenditure of integrated service providers in Quebec from questionnaire data) + $283 • Remoteness (baseline and top-ups) **(applied to all First Nations)** • Projections grown by population + inflation
6. Base scenario + application supplement	• Per capita allocations of $2,500 and $283 • Per capita allocations of $3,123 (average per capita expenditure from questionnaire data) allocated to a fund for application-based access to resources • Projections grown by population + inflation
7. Per capita expenditure (from questionnaire) + base scenario	• Per capita allocations of $3,123 (average per capita expenditure from questionnaire data) • Per capita allocations of $2,500 and $283 • Projections grown by population + inflation
8. Per capita expenditure (from questionnaire) + base scenario + remoteness	• Per capita allocations of $3,123 (average per capita expenditure from questionnaire data) • Per capita allocations of $2,500 and $283 • Remoteness (baseline and top-ups) **(applied to all First Nations)** • Projections grown by population + inflation
9. Per capita expenditure (from questionnaire) + base scenario + some FNCFS agency funding approach top-ups	• Per capita allocations of $3,123 (average per capita expenditure from questionnaire data) • Per capita allocations of $2,500 and $283 • Remoteness (baseline and top-ups) **(applied to all First Nations)** • Poverty 7% (of difference) • Results 5% (baseline) • IT 6% (baseline) • Projections grown by population + inflation
10. Per capita expenditure of integrated health and social services model (from questionnaire) + base scenario + remoteness	• Per capita allocations of $3,859 (average per capita expenditure of integrated service providers in Quebec from questionnaire data) • Per capita allocations of $2,500 and $283 • Remoteness (baseline and top-ups) **(applied to all First Nations)** • Projections grown by population + inflation
11. Prevention + doubled First Nations Representative Service + remoteness	• Per capita allocations of $2,500 and $566 (i.e., 2 x $283) • Remoteness (baseline and top-ups) **(applied to all First Nations)** • Projections grown by population + inflation

The national estimates for each of the scenarios is reviewed in Appendix G. Scenario 1 produces the lowest national estimate over five years for the population on-reserve ($1.3B) and Scenario 9 produces the highest ($3.45B). The discussion in the integral report will focus on scenarios 3a, b, c. In Figure 37 below, the three scenarios are compared to Scenario 1 (per capita allocations of $2,500 + $283 for the on-reserve population). The three scenarios augment a baseline with one or more top-ups that are linked to different contexts and the costs of service delivery. Scenario 3a is the lowest and 3c provides the highest allocation relative to the selected options, as its per capita allocation is the highest.

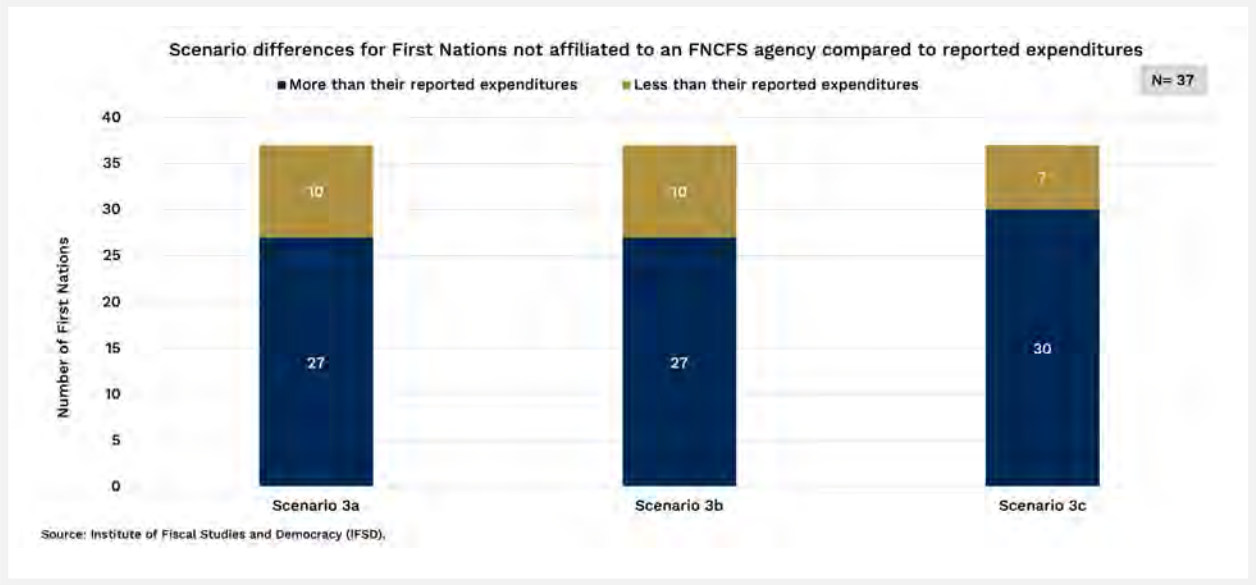
FIGURE 37



The scenarios are presented with population on-reserve and total membership. There are significant increases in the estimates when total membership numbers are applied. The scenarios using total membership were modelled based on feedback from First Nations not affiliated to an FNCFS agency during the national gathering in November 2023. It should be noted that **the existing federal program and mandate for this analysis is for First Nations on-reserve only**.

Relative to responses in the questionnaire, most of the First Nations would be allocated more resources than their current reported expenditures with scenarios 3a, 3b, or 3c. There are, however, some First Nations who would see reduced allocations in each of these scenarios (Figure 38).

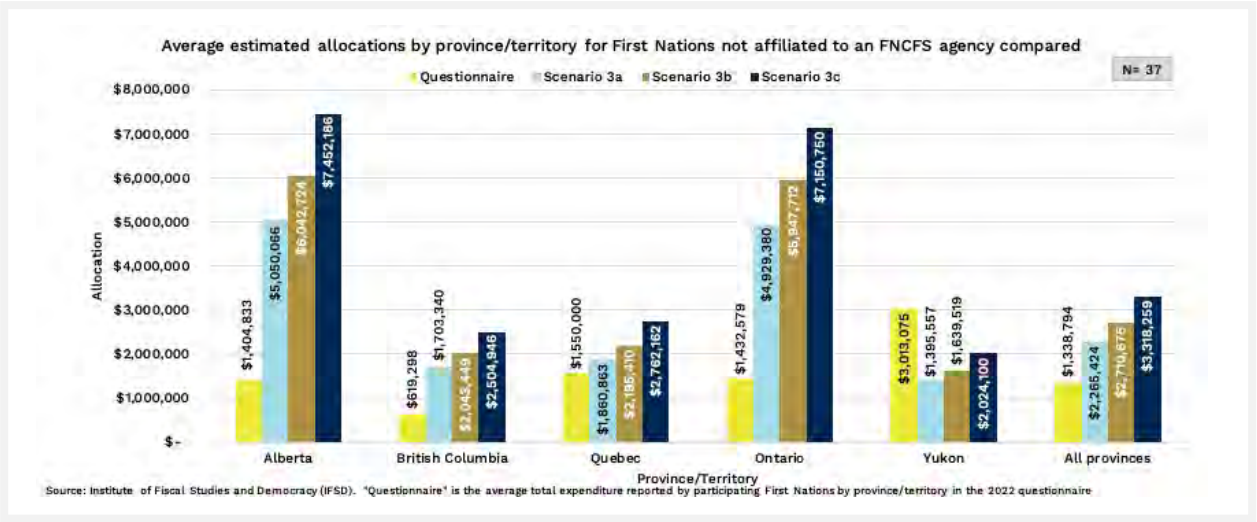
FIGURE 38



At a provincial/territorial level, when compared to the 37 questionnaire responses on total expenditures, only First Nations in the Yukon would see a reduction in territorial allocations with scenarios 3a, 3b, or 3c (Figure 39). All others would gain resources with the three scenarios. There could be various explanations for the divergence due to higher average per capita reported expenditures in Yukon relative to other provinces. In the questionnaire, expenditures beyond FNCFS may have been reported, or expenditures may be greater in Yukon as they are building capacity (not having been previously resourced).[36] The matter should be clarified with First Nations in Yukon prior to confirming a funding approach.

36 Office of the Auditor General, "2014 February Report of the Auditor General of Canada," Government of Canada, 2014, at par. 16, https://www.oag-bvg.gc.ca/internet/English/yuk_201402_e_39081.html.

FIGURE 39



The national pool (next section) would be a resource through which to supplement higher funding requirements. Alternatively, ISC could work with First Nations to develop their distinct budgets. For instance, another option is to use the First Nation's current CFS budget as the baseline and add the top-ups, or use one of the estimated baselines instead, with the top-ups.

NATIONAL POOL

IFSD is recommending a national pool, in addition to the First Nation allocations, be established for those First Nations that require or are transitioning to a model providing higher levels of services. The value of this pool is proposed to be 5% or 10% of the five-year allocation. Applications to the fund would be developed with the input of practitioners, e.g., the National Advisory Committee (NAC), on matters such as workplan, program proposal. For the first three to five years, it may be practical to have ISC manage applications and funding allocations. In the future, should a regional model (with devolution of resources to a trusted regional organization for management) be adopted, it would be preferable to have the application-based national pool (should it continue to exist) managed by a trusted regional organization. This would encourage regional relevance and decision-making.

The main scenarios with the national pool at 5% and 10% are presented with the on-reserve population (Table 13, Figure 40 and Table 15, Figure 42) and total population (Table 14, Figure 41 and Table 16, Figure 43). National estimates for total population with the national pool are much higher than the estimates for the on-reserve population only. For the on-reserve population only, national scenarios (including the 5% national pool) range from approximately $1.4B to $2.7B over five years. Using the total population, that range increases to $3.4B to $6.5B over five years. With a 10% national pool, on-reserve national estimates range from $1.5B to $2.8B, and those with the total population from $3.6B to $6.8B. The national funding pool would be accessible to all First Nations not affiliated to an FNCFS agency. There could be a regional allocation of funding, based on population size.

TABLE 13

5-YEAR ESTIMATE + 5% NATIONAL POOL (ON-RESERVE POPULATION)

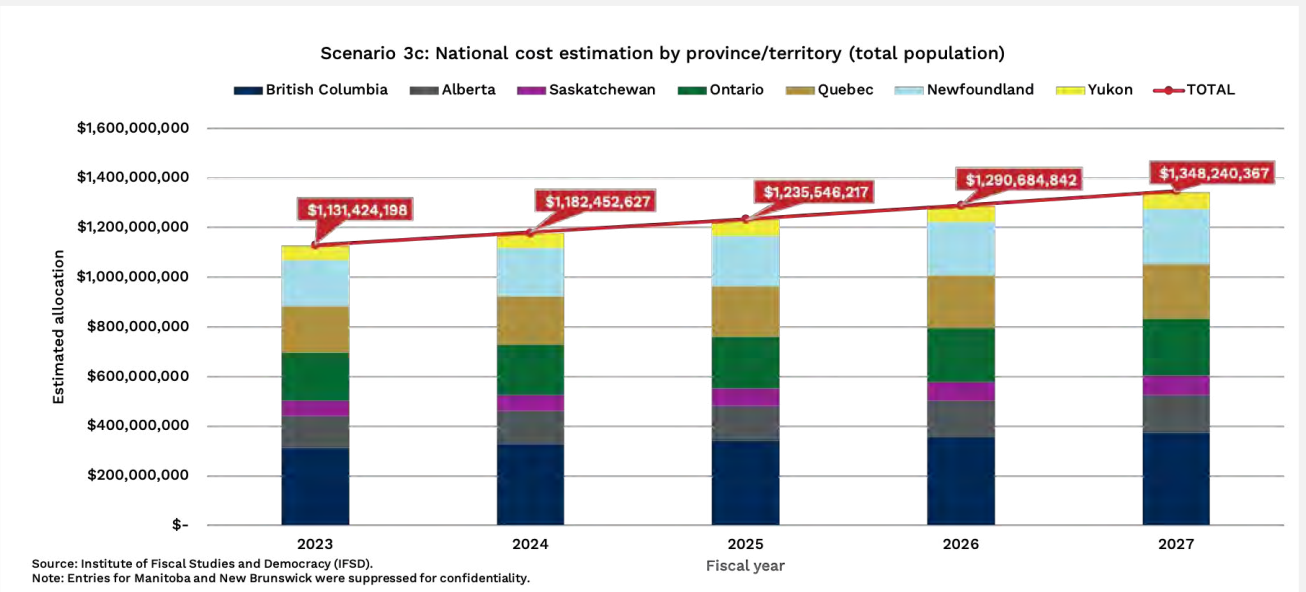
FIGURE 49



It is recommended that this five-year approach be reviewed and revised as required at year three. It is expected that First Nations not affiliated to an FNCFS agency will continue to build capacity through staffing, assessment of community needs, and operational sophistication with consistent funding.

CONCLUSION AND RECOMMENDATIONS

First Nations not affiliated to an FNCFS agency are delivering different services, many of which are primary prevention. Changes to the service delivery model and CFS activities, especially, for the delivery of secondary and tertiary services will require people, resources, and time. It is unrealistic and unfair to assume that First Nations can undertake the community consultation, service design, planning, and operation of services without adequate time and capacity to meet community needs.

There are outstanding issues that should be addressed as First Nations not affiliated to an FNCFS agency continue to assess needs, establish approaches, and deliver services. These issues include:

1. Provincial/territorial prevention services. What services are provinces/territories providing? What are their results?
2. Internal assessment. Are First Nations equipped to define prevention needs for secondary and tertiary services for coordination with other service providers?
3. Provincial coordination. Are provinces coordinating and integrating protection and prevention activities? Are provinces coordinating with First Nations not affiliated to an FNCFS agency on the integration of their services that are being offered or are in development?

This needs assessment leveraged contributions from First Nations not affiliated to an FNCFS agency through a questionnaire, regional and national gatherings, and in-depth analyses. An attempt to define a national baseline, the findings indicate that a diversity of starting points are a reality. Any forward strategy must account for these differences, while recognizing the common commitment to building First Nations-led prevention services for children and families.

IFSD MAKES THE FOLLOWING RECOMMENDATIONS:

1. Clarify the prevention services (primary, secondary, tertiary) that First Nations are being asked to deliver with FNCFS resources.
    - Define federal reporting requirements for the funding.
    - Define service delivery expectations with their respective provincial/territorial FNCFS service providers, e.g., province/territory.
2. Publish agreements between the federal and provincial/territorial governments on FNCFS.
3. Require provincial/territorial governments to report to the First Nations they serve on the types of protection and prevention services (primary, secondary, tertiary) being offered, and their results.

4. First Nations and provincial/territorial governments should work in partnership to define memoranda of understanding to integrate protection and prevention (primary, secondary, tertiary) in service delivery.
5. On a regional/territorial basis, First Nations should define the funding approach that best suits their needs. This means that First Nations in different places may have different funding structures, e.g., regional organization managing allocation, separate bilateral agreements between First Nations and the federal government.
6. First Nations not affiliated to an FNCFS agency are only beginning to develop their approaches to the delivery of prevention services (primary, secondary, tertiary) with a limited history of practice. It will take time to clarify required activities and their resource requirements. Funding approaches should reflect that reality and should not be considered final until a consistent and stable set of activities are defined.
7. Ensure a review of the five-year approach at year three of funding and structure, relative to actual and desired activities in First Nations not affiliated to an FNCFS agency. Funding structure and resources should be adjusted based on findings.

The forward strategies proposed in this report consider different funding approaches and structures to address different needs and starting points. As future paths are defined, financial resources and structures will need to be linked to outcomes for children. The integration of protection and prevention service delivery among all actors will be essential to ensuring First Nations children thrive. Programs and services will need to be adapted to changing circumstances and redefined over time. This is a start. There is more to be done.

Dear Sirs/Mesdames:

Re: Legal Opinion regarding potential Liability in Tort and Human Rights Law for First Nations providing Prevention Services

We write to provide IFSD with a legal opinion on potential liability concerns in the areas of tort and human rights for First Nations who take on prevention funding directly as part of Canada's reformed funding model for the First Nation Child and Family Service Program ("FNCFS Program"). We also provide further information regarding the applicability to First Nations of immunity in tort law for core policy decisions. Based on your instructions, these issues are considered only in respect of First Nations who have not exercised jurisdiction over child and family services either under *An Act respecting First Nations, Inuit and Métis children, youth and families* (the "Act") or under s. 35 of the *Constitution Act, 1982* ("C-92").

EXECUTIVE SUMMARY

In **Part I**, we provide a summary of our understanding regarding prevention services and the assumptions we have been asked to make regarding the ways in which First Nations may take on prevention funding and provide services within their communities.

In **Part II**, we provide a summary of the law of negligence, with a focus on principles and case law that have applicability to the child and family services context and to the common law duties owed by public authorities. We focus particularly on duty of care, given that in our view there is some uncertainty as to whether First Nations and their employees providing prevention services would owe a common law duty of care, and if such a duty is owed, to whom it would be owed. The other aspects of the negligence analysis (standard of care, causation, and damages) depend more on the facts of particular cases – the specific conduct of the defendant, the role it played in the plaintiff's injury, and we provide only general comments regarding the law on these elements.

We also provide a summary of the law of vicarious liability, and consider the statutory context and potential applicability of statutory immunity provisions in provincial and territorial child and family services legislation to First Nations and their employees.

In **Part III**, we focus on immunity for core policy decisions. While this was a principal subject of our September 2022 opinion, that opinion was aimed at First Nations who have exercised their jurisdiction under C-92 or pursuant to the right to self-government under s. 35. In this opinion, we opine that First Nations not falling in this category would likely still be considered sufficiently governmental in nature to benefit from core policy immunity. We have also included additional case law to provide further examples and guidance to assist First Nations in identifying core policy decisions and to ensure that such decisions meet the requirements set out by the courts in order for immunity to apply. These include that they be based on social, economic, or political factors; be made in good faith; not be irrational; and involve at least some level of consideration/deliberation.

We also consider whether a statutory duty impacts the availability of core policy immunity. The law is somewhat unsettled in this area, but provincial and territorial child and family services legislation likely does not fall within the category of statutes where policy defences may be unavailable. Further, there are in any event very limited duties under child and family services legislation that in our view would apply to First Nations providing prevention services other than under an agreement with the applicable province or territory.

In **Part IV**, we provide our analysis regarding whether a First Nation may owe a common law duty of care, and particularly whether the requirement of proximity is met, in the direct provision of prevention services, as well as with respect to decisions regarding how prevention funding should be used. This is a novel question, as First Nations providing prevention services other than under provincial/territorial legislation do not owe the same statutory duties as agencies and their employees who work under this scheme and have been found to owe a duty to children. However, in our view, a court would likely find sufficient proximity to support a duty of care owed to children in respect of the provision of secondary and tertiary prevention services. As with child protection, the purpose of providing these services to families is to reduce risk to children who are or may be at risk of harm, and secondary and tertiary prevention services are provided on an individual basis involving close interactions with families. However, it is less clear that there would be any positive duty to provide specific services, as opposed to as a duty to provide services in a non-negligent way.

It is unlikely the First Nation would owe a duty of care to parents or other family members, for the same reasons as social workers have been found not to owe a duty to anyone other than the child in the child protection context. While the potential for conflict between the interests of parents and children may be less likely at the prevention stage, courts may find that prevention is not significantly different than protection and that the rationale underlying the existing case law should also apply to prevention.

If the First Nation is providing only primary prevention services, it is difficult to see how a duty of care could be owed, as these services are being provided at the community level, or to particular groups, and not targeted at individuals. It is unlikely that this could place the First Nation into a sufficiently close and direct relationship with individual parents, children, or families to justify imposing a private law duty of care.

We also provide some comments on the standard of care that would apply to First Nations and their employees providing prevention services. If these employees are not trained social workers, the standard of care expected of them would likely be reduced at least somewhat.

In **Part V**, we provide our opinion regarding the potential liability of First Nations in human rights law regarding the direct provision of prevention services and decisions regarding how prevention funding should be used. In our view, a First Nation will be considered to be providing a "service" to the "public" within the meaning of s. 5 of the *Canadian Human Rights Act* ("*CHRA*") where it is directly providing prevention services, and likely also if it is making decisions regarding which prevention services will be provided and/or to whom, even if those services are ultimately being delivered by an agency. However, making very high-level and general decisions – for example, how much funding will be available for each of primary, secondary, and tertiary prevention – is less likely to constitute a "service" offered to the "public".

If a complainant has established *prima facie* discrimination in the provision of prevention services, undue hardship based on cost may be established. However, in our view, it will not be sufficient for the First Nation to simply decline to provide a service because the funding from Canada is too low. The Nation will likely be expected to have considered reasonable alternative services as well as whether funding can be obtained from elsewhere.

I. PREVENTION SERVICES AND FIRST NATIONS' USE OF PREVENTION FUNDING

You have asked us to assume that there are three potential models by which the prevention funding provided by Canada will be taken on and spent: 1) the First Nation spends all of the prevention funding and delivers prevention services itself; 2) the First Nation directs all of the prevention funding to an agency, which delivers the prevention services; and 3) a hybrid model where the First Nation keeps some of the prevention funding and delivers some prevention services, and directs the remainder to an agency who also delivers some prevention services. We understand that under the previous funding model, to the extent prevention was being done at all, it was being done through agencies, not by the First Nations themselves. Some prevention services can be provided by agreement – for example, a parent would be asked to agree to participate in addictions treatment in order for the child to remain in the home.

The three levels of prevention are described by the FNCFS Transitional Terms and Conditions[1] as follows:

(a) Primary prevention

Primary prevention services are aimed at the community as a whole. A community centered approach to prevention programming could include the ongoing promotion, public awareness and education of traditional child caring approaches, healthy families and child development. Activities could include those that enhance protective factors at a community-level, and help to create the network that supports

[1] FNCFS Transitional Terms and Conditions: Contributions to provide children, youth, young adults, families and communities, with prevention and protection services (sac-isc.gc.ca)

family retention and healing, cultural engagement, connection, and a sense of belonging.

(b) Secondary prevention

Secondary prevention services are activated when a child may be at risk of harm or child maltreatment and where intervention could enhance protective factors and remediate the risk.

Secondary prevention programming could include services that establish and build on secure and responsive social relationships between children and caregivers, and support parents in meeting their family's developmental, health, educational, social, cultural, and spiritual needs.

(c) Tertiary prevention

Tertiary prevention services target specific families when a child has been identified as at risk of harm or child maltreatment. Tertiary prevention attempts to mitigate the risks of separating a child from their family and end the crisis. Targeted, least disruptive interventions and measures refer to the most appropriate level of service needed by a family whose child(ren) is/are at risk of harm or maltreatment or where maltreatment has taken place.

Tertiary prevention programming could include services that provide increased support and/or targeted services with the intention that intervention will enhance protective factors and promote positive outcomes.

From the lists of examples provided in this document, it appears there is some overlap between secondary and tertiary prevention. Some key differences appear to be the level of risk identified to the child ("may be at risk of harm or maltreatment" vs "at risk…"), the inclusion of mental health treatment under tertiary prevention, the more targeted nature of tertiary prevention, and the stage at which it is employed (e.g., the point of crisis where violence, addictions, or other serious issues are impacting or could imminently impact children in the home may have already been reached).

We have been asked to provide an opinion regarding the potential liability concerns should First Nations choose to use some or all of the prevention funding to deliver prevention services through employees who have little to no training regarding the delivery of child and family services. We have been asked to address both the liability of the First Nation and the personal liability of its employees.

II. LAW OF NEGLIGENCE

In this section, we provide a summary of the law of negligence, in order to provide a general understanding of the basis for tort claims and to assist in informing the discussion below as to the possible tort liability of First Nations delivering prevention services.

To succeed in a negligence action, a plaintiff must show that: 1) the defendant owed the plaintiff a duty of care; 2) the defendant's behaviour breached the standard of care; 3) the plaintiff sustained damage; and 4) the damage was caused, in fact and law, by the defendant's breach: *Deloitte & Touche v. Livent Inc. (Receiver of)*, 2017 SCC 63 at para. 77 ("*Livent*").

1. Duty of Care

The duty of care analysis is grounded in the "neighbour principle": a person must take reasonable care to avoid acts or omissions which may cause foreseeable injury to their "neighbour". The neighbour principle is reflected, in modern case law, in the concept of "proximity", which is a close and direct relationship between the parties that justifies the imposition of a duty of care on the defendant: *R. v. Imperial Tobacco Canada Ltd.*, 2011 SCC 42 at paras. 40–41 ("*Imperial Tobacco*").

The existence of a duty of care is determined in accordance with the two-stage *Anns/Cooper* test:

1. Is the harm suffered by the plaintiff a foreseeable consequence of the defendant's acts or omissions, and is there a sufficient relationship of proximity between the parties that it is just and fair to impose a duty of care?

2. If step one is met, are there residual policy considerations outside of the relationship between the parties that may negate the imposition of a duty of care?

If the plaintiff's claim falls within a clearly established or analogous category in which a duty of care has been recognized in prior case law (e.g., duty owed by a provincial government to maintain highways, duty owed by child protection worker to children in need of protection), a *prima facie* duty of care will be established and no analysis at the first stage of *Anns/Cooper* is necessary. The inquiry then moves to the second stage to determine if there are policy reasons that ought to negate the duty of care in the specific factual circumstances.

If there is not a sufficiently analogous precedent that definitively establishes the existence of a *prima facie* duty of care in the relevant circumstances, the court must undertake a full *Anns/Cooper* analysis.

(a) First stage of the *Anns/Cooper* test: foreseeability and proximity

The foreseeability inquiry asks whether the risk of the type of damage that occurred was a reasonably foreseeable result of the defendant's negligent conduct to the class of plaintiff that was injured: *Rankin (Rankin's Garage & Sales) v. J.J.*, 2018 SCC 19 at para. 24. It is an objective inquiry – the defendant need not have actually foreseen the risk, but, rather, it must have been foreseeable by a reasonable person in the defendant's circumstances.

The proximity inquiry asks whether the relationship between the plaintiff and defendant is sufficiently close and direct that the defendant should be expected to have the plaintiff in their contemplation as someone who could be injured by their negligent acts or omissions. The relationship is not limited to physical proximity. Factors that allow the court to evaluate the closeness of the relationship include expectations of the parties, representations made by the defendant, reliance by the plaintiff, and the property or other interests involved. However, the factors which may satisfy the requirement of proximity are diverse and depend on the circumstances of the case – there is no single unifying characteristic: *Cooper v. Hobart*, 2001 SCC 79 at paras. 34-35.

(b) Duty of care involving a public authority

There are special considerations in the proximity analysis where the defendant is a public authority. This is because, in the exercise of its functions, a government typically owes *public* duties – special circumstances will be required before it will be found to owe a *private* law duty to an individual or group that can ground a civil action. There are three ways in which sufficient proximity between a plaintiff and a governmental authority can be found: 1) through the applicable statutory scheme; 2) through interactions between the authority and the plaintiff; and 3) through a combination of the statutory scheme and interactions with the plaintiff: *Imperial Tobacco*.

It is difficult to establish a duty of care through a statutory scheme only, as most statutes confer public powers and duties on public authorities, which are often inconsistent with the establishment of a private law duty to individuals. Factors that will be relevant to whether proximity can be established through a statutory scheme include: whether the asserted duty would conflict with other duties owed by the governmental actor (more will be said about this in the next section); whether the purpose of the statute is to protect the interests of an identifiable class of individuals of whom the plaintiff is a member; whether the statutory powers at issue involve the provision of a service as opposed to the reduction of a risk through regulation; the vulnerability of the plaintiff class to the risk of harm that materialized; and whether the defendant had specific knowledge of the plaintiff's vulnerability: Karen Horsman & Gareth Morley, *Government Liability: Law and Practice*, Looseleaf (Toronto: Thompson Reuters, 2022) at § 6:16 ("Horsman & Morley").

Where a relationship of proximity is alleged to arise out of the interaction between a plaintiff and the government body, the question is whether there are factual allegations that distinguish the relationship between the plaintiff and regulator from other members of the public. The case law is not entirely settled as to whether the specific interactions that may ground a duty of care must consist of direct interactions between the plaintiff and the government defendant: Horsman & Morley at § 6:17.

The funding and administration of programs at a high level is very likely insufficient to establish proximity, even if there are interactions between government employees and the plaintiff. In *Mitchell Estate*, 2004 CarswellOnt 3017 (Ont. Sup. Ct. Jus.), the plaintiffs alleged inadequate medical treatment for their infant daughter, which they claimed was due to insufficient funding for hospitals that resulted in overcrowding. The Court found that the legislative framework gave the Minister the power to act in the public interest, and in exercising her powers, she was required to balance a myriad of competing interests. Although the Province provided funding for hospitals, it had no role in their day-to-day supervision. Proximity was not met for these reasons.

In *Wareham v. Ontario*, 2008 CarswellOnt 176 (Ont. Sup. Ct. Jus.), the plaintiffs' claim related to delays in processing their applications for benefits under the Ontario Disability Support Program (ODSP). They argued that the Province was negligent in creating and maintaining a system that failed to provide income to eligible persons in a timely manner – essentially, the system was inefficient and too complex. The Court found that more than systemic allegations regarding the ODSP were required to satisfy the proximity requirement, and that interactions between Crown employees (who were exercising an adjudicative function in their administration of the program) and benefits applicants were not sufficient to constitute proximity.

In *Leroux v. Ontario*, 2021 ONSC 2269, the claim was similar to *Wareham* but involved the provision of specific benefits for developmentally disabled adults. The plaintiffs had received similar benefits as children, but "aged out" when they turned 18. The claim alleged that Ontario acted negligently in administering these programs, which led to wasted money, inadequate targeting of resources, and long waitlists. The Court found that proximity was not met:

> [71] The governmental decision to fund or not to fund a particular program and the governmental decision as to how resources within a program should be allocated are also not the proper subject matter of judicial scrutiny - see *Cirillo v. Ontario*…Put differently, the determination of how a government decides to allocate resources does not establish a duty of care because the relationship lacks proximity.
>
> [Emphasis added.]

Cirillo v. Ontario, 2019 ONSC 3066, related to the bail system in Ontario. The court found that it was in essence a challenge to the government's executive authority to determine the allocation and adequacy of resources devoted to the criminal justice system. It argued that Ontario did not appropriately manage and otherwise resource the bail system to minimize delay caused by volume, staffing, and other funding-related shortages. This included challenging the failure to build new courthouses, the availability of interpreters, and the allocation of court time to bail. The court cited *Mitchell Estate* and *Phaneuf* (a case involving a challenge to government funding for forensic psychiatric hospital beds, discussed further below), noting that "courts have held that funding and resource allocations do not establish a duty of care, as the relationship that they engage lacks sufficient proximity" (at para. 25).

(c) Second stage of the *Anns/Cooper* test: policy considerations

The policy considerations at the second stage of the test are concerned with the effect of recognizing a duty of care on other legal obligations, the legal system, and society more generally: *Cooper v. Hobart*, 2001 SCC 79 at para. 37. They include such considerations as whether the recognition of the duty of care creates indeterminate liability ("the spectre of unlimited liability to an unlimited class": *Livent* at para. 40), and, where the defendant is a public authority, whether the impugned decision is a core policy decision, and whether recognizing a private law duty of care would conflict with a public duty owed by the authority. This latter consideration is discussed in the next section.

(d) Potential for conflict in the child protection context and whether a duty of care could be owed to parents/families

Where an alleged duty of care is found to conflict with an overarching statutory or public duty owed by a public authority, this may constitute a compelling policy reason for refusing to find proximity. Such a conflict exists where the imposition of the proposed duty of care would prevent the defendant from effectively discharging its statutory duties: see, for example, *D.(B.) v. Children's Aid Society of Halton (Region)*, 2007 SCC 38 ("*Syl Apps*"). In *Syl Apps*, the Supreme Court found that, because of the potential for conflict with the duty owed to an apprehended child, no duty of care was owed by a treatment centre and one of its social workers to the family of the child, who was treated at the centre and subsequently decided not to return to her family.

The family had alleged proximity on the basis of expectations and reliance on the defendants, given that the legislation (at that time, the Ontario *Child and Family Service Act*, R.S.O. 1990, c. C-11) included a recognition of the importance of the family and of the integrity of the family unit. The Court considered the sections of the *CFSA* that set out its purpose, noting that the references to parents and family were not stand-alone principles, but fell under the overarching umbrella of the best interests of the child. They could therefore not be relied upon to find a relationship of sufficient proximity with the parents. Justice Abella, for the Court, said:

> [41] The deciding factor for me…is the potential for conflicting duties: imposing a duty of care on the relationship between the family of a child in care and that child's court-ordered service providers, creates a genuine potential for "serious and significant" conflict with the service providers' transcendent statutory duty to promote the best interests, protection and well-being of the children in their care.

She observed that the statutory mandate of child protection workers is to treat the child's interests as “paramount”, and they must be free to execute this mandate to the fullest extent possible.

Some earlier Ontario cases did not interpret *Syl Apps* as foreclosing any duty of care owed by child protection workers and agencies to parents, particularly at the investigation stage before the child was deemed to be in need of protection: for example, *Durakovic v. Guzman*, 2013 ONSC 958 (Sup. Ct. Jus.), and *T.(D.) v. Highland Shores Children’s Aid*, 2016 ONSC 1432 (Sup. Ct. Jus.). In these cases, the judges were of the view that it was “less clear” that the conflict identified in *Syl Apps* “in the context of the medical treatment of a child in care” arose at the investigation stage of a child protection matter, before the child was found to be in need of protection (*T.(D.)* at para. 37).

However, this issue was put to rest by the Ontario Court of Appeal in *J.B. v. Ontario (Child and Youth Services)*, 2020 ONCA 198. The Court rejected a distinction between “the child welfare investigation stage and proceeding stage (i.e., pre- and post-apprehension stage)”, finding that *Syl Apps* was clear that “the duty at all stages is to the child” (at para. 41). It noted that the Ontario *CFSA* required the CAS to investigate allegations that children may be in need of protection, and to protect children where necessary, which also made clear that the duty was to the child.

In BC, this issue is similarly settled. In *Quinn v. British Columbia*, 2018 BCCA 320, the Court of Appeal held that a claim brought under the *Charter*, which it found in substance amounted to a tort claim of negligent investigation by a social worker, should be struck on the basis of insufficient proximity. Justice D. Smith for the Court agreed with the Province that “these types of allegations have no reasonable prospect of success in light of the reasoning in [*Syl Apps*]” (at para. 64).

Whether the lack of a duty of care to anyone other than a child in the child protection context would be determinative of whether a duty of care could by owed to parents in the provision of prevention services is not clear. We discuss this below.

(e) Duty of care where in respect of a positive duty to act

Where the duty alleged is to take positive steps (rather than a duty to avoid the doing of an overt negligent act), there must be a special relationship of proximity between the parties that imposes on the defendant a duty to take positive action – "[d]uties to take positive action in the face of risk or danger are not free-standing": *Childs v. Desormeaux*, 2006 SCC 18 at para. 31. In such cases, the nature of the relationship must be examined to determine where there is a sufficient nexus between the parties. The reason for requiring this special relationship is because "the common law is a jealous guardian of individual autonomy" (at para. 31).

Childs identifies three situations in which a special relationship of proximity has been recognized in respect of a positive common law duty. The first is where the defendant intentionally attracts and invites third parties to an inherent and obvious risk that they have created or control. The second concerns paternalistic relationships of supervision and control, such as parent-child or teacher-student. The third involves defendants who either exercise a public function or engage in a commercial enterprise (such as the owner of a bar) that includes implied responsibilities to the public at large: *Childs* at paras. 35–37. The Court emphasized the common element, and explained how the analysis might apply in each case, as follows:

> [38] Running through all of these situations is the defendant's material implication in the creation of risk or his or her control of a risk to which others have been invited. The operator of a dangerous sporting competition creates or enhances the risk by inviting and enabling people to participate in an inherently risky activity. It follows that the operator must take special steps to protect against the risk materializing. In the example of the parent or teacher who has assumed control of a vulnerable person, the vulnerability of the person and its subjection to the control of the defendant creates a situation where the latter has an enhanced responsibility to safeguard against risk. The public provider of services undertakes a public service, and must do so in a way that appropriately minimizes associated risks to the public.

The Court emphasized that these are not strict legal categories, but, rather, illustrations of the types of factors that may give rise to a positive duty to act.

John Doe (G.E.B. #25) v. The Roman Catholic Episcopal Corporation of St. John's, 2020 NLCA 27, was a claim by former residents of the Mount Cashel orphanage for damages resulting from sexual abuse by several brothers of a lay religious order of teachers. The Newfoundland Court of Appeal upheld the trial judge's finding of vicarious liability on the part of the Archdiocese for the abuse by the brothers, as it had provided them "with the power, environment and tools to carry out their wrongdoing virtually undetected". It also considered whether a duty of care was owed by the school chaplain, who did not himself commit any abuse, but to whom some of the boys reported the abuse. The plaintiffs claimed that the chaplain did nothing in response to the reports of abuse.

The Court of Appeal referenced *Childs*, and specifically the second situation identified as finding a positive duty to act: paternalistic relationships of supervision and control. It rejected the trial judge's finding that the chaplain needed to be in a position of authority over the children, and perhaps the brothers, for any knowledge to have triggered a duty of care.

It found that although he was not involved in the day-to-day governance of Mount Cashel, he did have responsibilities for the boys' overall well-being. Further, the Court found that the specific context of the interactions with the boys and the disclosures of abuse they made to him was significant in the analysis of whether sufficient proximity was created. In all the circumstances, proximity was established.

In contrast, in another case involving an orphanage (*Broome v. Prince Edward Island*, 2010 SCC 11), the Province was found not to owe a duty of care to the children living there in relation to abuse committed against them. The home was privately run, and the Province was not involved in its administration. The Supreme Court reviewed the statutory child welfare scheme at the time, noting that there were two streams – public (run by children's aid societies, and subject to statutory standards and obligations) and private – and that the home in question was part of the latter. The province did provide some funding to the home, but the Court found that this could not establish the requisite proximity, as the funding was given with no restrictions or accountability requirements. It also found the statutory scheme was clearly insufficient to create proximity as the province owed no statutory duty to residents of the home.

2. Standard of Care

To avoid liability, a defendant must "exercise the standard of care expected that would be of an ordinary, reasonable and prudent person in the same circumstances" (*Ryan v. Victoria (City)*, [1999] 1 S.C.R. 201 at para. 28 ("*Ryan*"). Relevant factors include whether the risk of injury was reasonably foreseeable, the likelihood of damage, and the availability and cost of preventative measures. A reasonable person "takes precautions against risks which are reasonably likely to happen": *Nelson (City) v. Marchi*, 2021 SCC 41 ("*Marchi*") at para. 91.

In measuring what is reasonable, the court may also look to external indicators of reasonable conduct, such as industry practice, guidelines, or more formal statutory or regulatory standards: *Ryan* at para. 28. However, external standards of conduct, even those reflected in legislation (such as a statutory duty), are relevant to the standard of care but are not determinative – there is no tort of statutory breach: *Saskatchewan Wheat Pool v. Canada*, [1983] 1 S.C.R. 205 ("*Wheat Pool*"). For example, provincial and territorial child and family services legislation sets out a number of statutory duties owed by different categories of persons. While breach of these may attract a criminal penalty or administrative review by the courts, there is no automatic civil liability. However, breach of a statutory duty will generally serve as evidence of breach of the common law standard of care: *Wheat Pool*.

The standard of care expected of professionals is elevated compared to a member of the public, as members of a profession undertake to carry out their professional duties with a reasonable degree of care and skill. The standard of care expected of a professional is the degree of skill displayed by other reasonably competent members of that profession. The standard of care for a social worker is generally that of a reasonable social worker in similar circumstances. However, when a child is removed from the custody of his or her parent(s), the standard of care is elevated to that of a "careful parent", which imposes a "heightened degree of attentiveness" on social workers. More specifically, "the careful parent test imposes the standard of a prudent parent solicitous for the welfare of his or her child": *J.P. v. British Columbia (Children and Family Development)*, 2017 BCCA 308 ("*J.P.*") at para. 364.

The extent of the discretion exercised by professionals in carrying out their duties is an important consideration in assessing whether the standard of care has been breached. In *Hill v. Hamilton-Wentworth (Regional Municipality) Police Services Board,* 2007 SCC 41, the Supreme Court of Canada stated the following in relation to the standard of care expected of police officers:

> [73]…The standard is not perfection, or even the optimum, judged from the vantage of hindsight. It is that of a reasonable officer, judged in the circumstances prevailing at the time the decision was made – circumstances that may include urgency and deficiencies of information. The law of negligence does not require perfection of professionals; nor does it guarantee desired results. Rather, it accepts that police officers, like other professionals, may make minor errors or errors in judgment which cause unfortunate results, without breaching the standard of care…

These comments were cited in *J.P.* in the child protection context. The Court of Appeal also quoted from one of its prior decisions, *D.(B.) v. British Columbia* (1997), 30 B.C.L.R. (3d) 201 (B.C.C.A.), as follows:

> [40] ...Decisions have to be made about care when the outcome is unpredictable. It is too easy to say when things turn out badly that it was the fault of the person who made the judgment. Social workers should not be so afraid of making a mistake that they cannot do their job properly.

Similarly, in *M.(B.) (Litigation guardian of) v. M.(R.)*, 2009 BCCA 413, the Court referred to the "difficult, sensitive and conflicting task of a social worker" and noted that the degree of professional discretion in a particular case, and the opportunity for genuine disagreement on the wisdom of any particular course of action, will be important in determining the standard of care (at para. 57).

While there will be some leeway given to professionals in the exercise of discretion in the carrying out of their powers and duties, particularly in exigent circumstances, the standard of care expected of a reasonably competent social worker will not be satisfied merely because the social worker acted in good faith. The presence or absence of good faith may, however, be relevant to whether the standard of care has been breached: *J.P.* at para. 365.

In contexts where a non-professional is performing tasks that a professional would or might normally perform, the standard of care may be lower. For example, the courts have found that volunteer firefighters are not subject to the same standard of care as trained, full-time, paid firefighters. In *Killip's Television Service Ltd. v. Stony Plain (Town)*, 2000 ABQB 79, the Alberta Court of Queen's bench found that the standard of care expected of volunteer firefighters was that of a reasonable volunteer fire department in like circumstances with like resources, and that the firefighters need only have "done their best" to put out the fire provided it is not a substantial departure from the basic principles of firefighting. The Court cited a prior decision of the Newfoundland Court of Appeal in *Hammond v. Wabana (Town)*, 1998 CarswellNfld 331, in which it was considered that a volunteer firefighter is unpaid and is acting outside his or her normal area of work, training, or experience, and that volunteer fire departments provide an ongoing source of assurance for residents of the community. The Court said:

> …[O]ne must keep in mind, not just the fact they are volunteers, but also the difference in circumstances, conditions and resources available. The standard of care must be expressed in terms that make it appropriate to volunteer firefighters who have very little training, experience, and [are] obliged to rely on imperfect equipment and a dubious water supply.
>
> …
>
> It is a standard of care that for reasons of "weightier competing policies,"…may tolerate a measure of subjectivity. Policy considerations dictate that the standard of care for volunteer firefighters be that they "do their best to put the fire out," employing as far as possible, the acknowledged principles and techniques of firefighting while trusting their own judgment, reason and common sense, it being accepted that safety will always be a primary consideration. In this case the "competing policy" is the public interest of ensuring the survival and continuation of an intelligent, dedicated and conscientious group of citizens, prepared to accept the often thankless and risky task of volunteer firefighter. The standard of care must not be such that its demands and accountability jeopardize the department's existence.

As will be further discussed below, similar policy considerations may have application in a case where a First Nation employs members of its community to deliver some prevention services, and those employees are not social workers and do not have similar training.

3. Causation

A defendant is not liable in negligence unless their breach of the standard of care caused the loss. The causation analysis involves two aspects: factual and legal causation. Factual causation is generally determined in accordance with the “but for” test; that is, the plaintiff must prove on a balance of probabilities that the harm would not have occurred but for the defendant’s negligent act: *Marchi* at para. 96; *Clements v. Clements*, 2012 SCC 32 at paras. 8 and 13. The defendant’s breach must also be a legal cause of the plaintiff’s loss, in that the loss is not too remote. The remoteness inquiry asks whether the specific injury suffered by the plaintiff was a reasonably foreseeable consequence of the defendant’s breach, such that the defendant may be fairly held responsible for it: *Marchi* at paras. 97–99.

Mustapha v. Culligan of Canada Ltd., 2008 SCC 27, is an example of the distinction between factual and legal causation. The plaintiff saw a fly in a water bottle and subsequently developed a significant psychiatric disorder. There was no question that factual causation was met, as it was accepted that the plaintiff would not have been suffering from the disorder had he not seen the fly. However, the Supreme Court held that it was not foreseeable on an objective analysis that a customer of ordinary fortitude would develop such a disorder from seeing a fly in a bottle. The loss was thus too remote to hold the defendant liable.

4. Damages

The basic principle is that damages must seek to put the plaintiff in the position he or she would have been in but for the tort committed by the defendant: *Blackwater v. Plint*, 2005 SCC 58 (“*Blackwater*”). Even though there may be several tortious and non-tortious causes

of injury, so long as the defendant's act is a cause of the plaintiff's damage, the defendant is fully liable for that damage. The rules of damages then consider what the original position of the plaintiff would have been, as the defendant need not put the plaintiff in a better position than his original position and should not compensate the plaintiff for any damages he would have suffered anyway: *Athey v. Leonati*, [1996] 3 S.C.R. 458.

In *Blackwater*, the Supreme Court upheld the trial judge's reduction in damage to take into consideration that the plaintiff Mr. Barney had experienced significant disadvantage and violence in his home prior to being sexually abused at the Alberni Indian Residential School ("AIRS"). The judge found that these earlier experiences (as well as physical assaults at AIRS which could not be compensated as they were time-barred) had themselves caused psychological injury and limited his vocational opportunities, which Mr. Barney would have suffered even in the absence of the sexual assaults. He was awarded $165,000 in compensation for the sexual assaults. The awards made to the other five claimants ranged between $12,000 and $150,000. With inflation, these awards correspond to approximately $19,000 to $260,000 in present dollars.

Non-pecuniary damages will be significant in cases of serious physical or psychological injury, but are capped at approximately $430,000 in present dollars (this cap increases with inflation). Awards at or near that level are generally reserved for the most severe cases (typically quadriplegia or a severe brain injury). In these types of cases, the award for cost of future care will also be high, as the plaintiff will often need some level of assistance with daily living (and in particularly severe cases, 24-hour care). Future care awards of this nature are in the millions.

If the plaintiff's injuries render them unable to work (or reduce their ability to work and/or limit the types of employment available to them), awards for loss of earning capacity may also be very significant. This depends on the age of the plaintiff (higher awards will be awarded where the plaintiff is younger and has more years of their working life remaining), as well as whether there are other factors which might have been expected to limit the plaintiff's career options and/or earnings even if the injuries had not occurred. For example, in *Blackwater*, the court found the plaintiff Mr. Barney was disabled from work largely for other reasons.

For these reasons, awards associated with serious physical or psychological injury can be very high.

5. Vicarious Liability

Corporations and other organizations act through their employees. Employees may be held personally liable for negligence in relation to their employment, but the employer is usually held vicariously liable for tortious acts or omissions committed by employees in their employment. Vicarious liability refers to situations in which the law holds one person, who themselves has not committed fault, responsible for the fault of another (*Nova Scotia (Attorney General) v. G. (B.M.)*, 2007 CarswellNS 552 (N.S.C.A.), at paragraph 57). For example, a person who drives a vehicle for their employment may be found personally liable for negligent conduct causing an accident, but the employer will usually be vicariously liable and in practice will be the one paying any damages.

Organizations can also be held directly liable to third parties in negligence where, for example, they negligently implement policies (such as inspection systems or practice

guidelines), fail to properly train their employees, have knowledge (or ought to have been aware) that an employee is not qualified to perform the job, etc.

The question of whether vicarious liability will be imposed is approached in three steps:

1. First, the court determines whether the issue has been unambiguously determined by prior cases.

2. If not, a further two-part analysis is used to determine if vicarious liability should be imposed in light of its broader policy rationales. At this stage, the plaintiff must show:

    - that the relationship between the tortfeasor and the person against whom liability is sought is sufficiently close; and

    - that the wrongful act is sufficiently connected to the conduct authorized by the party against whom liability is sought.

The object of the analysis is to determine whether imposition of vicarious liability in a particular case will serve the goals of doing so: imposing liability for risks which the enterprise creates or to which it contributes, encouraging reduction of risk, and providing fair and effective compensation: *Fullowka v. Royal Oak Ventures Inc.*, 2010 SCC 5 at para. 142.

Vicarious liability is generally appropriate where there is a significant connection between the party who creates or contributes to a risk and the wrong that flows from it: *Broome v. Prince Edward Island*, 2010 SCC 11. The Supreme Court in *Broome* noted that legislative authority is "of course" not enough to impose vicarious liability – if it were, a government would be vicariously liable for every act committed within a field within its legislative authority.

Where an employee has been negligent in the course and scope of his or her employment but has acted in good faith, the issue is usually not controversial – the employer will generally be vicariously liable. Where the employee acts outside the scope of their employment, and particularly if they commit intentional acts (such as a teacher sexually assaulting a student), vicarious liability is less likely to be imposed on the employer. The court will consider the relationship between the employee and the employer and whether the employer's enterprise created the risk of harm by the employee. For example, cases have found no vicarious liability on a school board where a teacher has used their position to strike up a relationship with a student that they then pursued off school property, as the teacher's employment with the school board is not sufficiently connected to the wrongful conduct. On the other hand, where the opportunity for abuse has been created by the administrators of a school (as in *John Doe (G.E.B. #25)* discussed above), vicarious liability is much more likely to be imposed.

In the child and family services context in BC, the Crown will generally be vicariously liable for the negligent actions of social workers employed by MCFD: *M.(B.) (Litigation guardian of) v. M. (R.)*, 2009 BCSC 214 at para. 49. Similarly, in Ontario, children's aid societies will generally be vicariously liable for the negligence of their employees. We are not aware of any cases that have considered vicarious liability of the government or an agency in the child and family services context where the conduct of the employee was in bad faith. Given the wide range of conduct that appears to plausibly lead to a finding of bad faith (this will be

discussed further in the next section), it seems unlikely that the line for vicarious liability is drawn between good faith and bad faith. The question would likely require an analysis of the employee's conduct and surrounding circumstances on a case-by-case basis.

6. Immunity for Good Faith Conduct in the Exercise of Powers and Duties under Child and Family Services Legislation

Most provincial and territorial child and family services legislation contains a general immunity provision stating that no proceeding may be brought against, and/or no liability may be imposed on, a person acting in good faith. We will provide a separate memo attached to this opinion that contains each of these provisions along with hyperlinks to the legislation for ease of reference.

The wording of each of these provisions differs somewhat, and it is necessary to review them carefully to determine who they apply to and in what circumstances. Generally, they apply to:

- A "person";
- Acts or omissions that are done in good faith (or with an absence of bad faith – the precise language differs by statute); and
- Exercise of, or intended exercise of, powers under the legislation, and performance or intended performance of duties under the legislation

In some cases, the persons to whom the immunity applies are listed in more detail: e.g., social workers, directors, ministers, a "service provider", or any other person.

Not all provinces have this type of general immunity provision. Manitoba, for example, has provisions dealing with certain more specific conduct by various persons (e.g., giving access to records).

In all provinces and territories except Saskatchewan, the immunity provisions do not include the Crown. Two provinces (Ontario and BC) make the lack of immunity available to the Crown even clearer, by expressly stating that the immunity provision does not absolve the Crown of liability to which it would otherwise be subject – i.e.: vicarious liability at common law.

The BC legislation – the *Child, Family and Community Service Act* ("*CFCSA*") – has recently been amended in response to C-92. This includes amendment to its immunity provision – s. 101 – to include that immunity will not be extended to Indigenous governing bodies:

> Immunity from legal proceedings
>
> 101 (1) Subject to subsection (2), no legal proceeding for damages lies or may be commenced or maintained against a person because of anything done or omitted
>
> (a)in the exercise or intended exercise of a power under this Act, or
>
> (b)in the performance or intended performance of a duty under this Act.

> (2) Subsection (1) does not apply to a person referred to in that subsection in relation to anything done or omitted in bad faith.
>
> (3) Subsection (1) does not absolve the government or an Indigenous governing body from vicarious liability arising out of anything done or omitted by a person referred to in that subsection for which the government or the Indigenous governing body would be vicariously liable if this section were not in force.
>
> [Emphasis added.]

"Indigenous governing body" is given the same definition as in C-92 – "a council, government or other entity that is authorized to act on behalf of an Indigenous group, community or people that holds rights recognized and affirmed by section 35 of the *Constitution Act, 1982*." This definition does not relate specifically to the exercise of jurisdiction or the provision of services in relation to child and family services.

The following definitions are also relevant:

> "Indigenous authority" means a body or entity, including an Indigenous governing body, that is authorized by an Indigenous governing body to provide Indigenous child and family services under Indigenous law";
>
> "Indigenous child and family services" means services provided by an Indigenous authority to support Indigenous children and families, including prevention services, early intervention services and child protection services;
>
> "Indigenous law" means a law in relation to Indigenous child and family services that is made in respect of Indigenous children and families by an Indigenous governing body in accordance with the law-making authority of the Indigenous governing body;

The reference to "Indigenous law" in the definition of "Indigenous authority" indicates that the latter definition applies to an authority providing child and family services in First Nations where a law made by the First Nation is in place. It does not appear that First Nations who simply take on prevention funding and deliver prevention services other than under a law made by the First Nation will be considered to be "providing Indigenous child and family services under Indigenous law". In that case, they would not be an "Indigenous authority". However, given the more general definition of "Indigenous governing body", these First Nations would likely fall within that definition. This is important because, as discussed, the immunity provision is expressly inapplicable to an "Indigenous governing body".

At this time, only BC has amended its statutory immunity provision to expressly exclude its applicability to Indigenous governing bodies.

(a) When will conduct be found to be in "good faith"?

As set out above in *M.(B.) (Litigation guardian of) v. M.(R.)*, the "difficult, sensitive and conflicting task of a social worker" will be relevant to whether the good faith requirement is met in this context. However, to meet the requirement of good faith (or an absence of bad faith) is not sufficient that a child protection worker have acted without malice, or even that they had an honest belief as to the appropriateness of their actions. In general, courts have

held that the concept of bad faith not only encompasses intentional fault, but should be given a broader meaning that encompasses "serious carelessness or recklessness": *Finney v. Barreau du Quebec*, [2004] 2 S.C.R. 217 at para. 39.

In many cases, the court does not make a determination as to whether a child protection worker acted in bad faith, as the employee is often not named as a defendant and the Crown will likely be vicariously liable for their conduct whether done in good faith or not. However, in *H.(C.) v. British Columbia*, 2004 BCCA 385, a social worker was found to have acted in bad faith by placing a child with her biological father (after having apprehended her from her mother's care) and then withdrawn from the protection proceeding without explanation and without any supervision in place. The child brought a claim for damages suffered from physical and sexual abuse by the father. The Court found that the social worker failed to apprise herself of the information necessary to determine whether it was safe for the Ministry to withdraw, and that there was "ample evidence" that placing the child with her father might be unsuitable. She was aware of several potential problems with the child residing with the father, and did not sufficiently inform herself of the information necessary to make an honest, good faith decision as to the suitability of the placement. In upholding the trial judge's decision, the Court of Appeal noted that "[t]he finding of an absence of good faith was not about [the social worker] being wrong, but about her not properly turning her mind to a question she had a duty to answer" (at para. 49).

Another case in which bad faith was found was *B.(D.) v. Children's Aid Society of Durham (Region)*, 1996 CarswellOnt 2351 (Ont. C.A.), in which the social worker had approached her statutory duties toward the children's father with a biased attitude toward him – she had immediately formed an opinion that he was guilty of sexual abuse, and had closed her mind to any other possibility. She filed a false and misleading affidavit in support of the application for an interim protection order, ensured that the father was not notified of the proceeding, and refrained from properly following up with the policy or the family doctor, among other things. The Court found that the investigation was tainted by bias and lack of good faith culminating in a course of conduct akin to malicious prosecution.

(b) Relevance of powers or duties under child and family services legislation

The immunity provisions in child and family services legislation generally contain language stating that the immunity will apply to good faith conduct done or not done in the performance of the person's duties or in the exercise of their powers and/or functions under the statute, or a specific Part or section(s) of the statute. For example, PEI's statute, the *Child Protection Act*, RSPEI 2000, c. C-5.1 (s. 57), states that the immunity applies to persons "acting under the authority" of the Act, while Yukon's refers to a power, function, or duty "conferred by or under" its Act (the *Child and Family Services Act*, S.Y. 2008, c. 1, s. 181).

In order to benefit from the statutory immunity, then, a person or service provider must be acting in furtherance of a duty, power, or function set out in the legislation – they must be authorized or required by the legislation to do the things they are doing. In the absence of an agreement between the First Nation and the applicable province/territory, employees acting under the direction of a First Nation to deliver prevention services would likely not be exercising powers, duties, or functions under the legislation for the purposes of most of their activities. With the exception of the duty to report a child in need of protection, the BC

CFCSA requires, and authorizes, "the director" (or a person to whom the director delegates their powers, duties, or functions, under s. 92) to do a number of things. Alberta's legislation similarly confers powers and duties on a director and the Minister, Saskatchewan's on the director or an agency, Ontario's on a service provider or an agency (which are defined terms) or the Minister, etc. The legislation does not impose these duties on, or grant these powers or functions to, anyone other than the categories of persons or service providers expressly set out therein.

One exception to this may be conduct in relation to reporting a child in need of protection. The duty to report is, in some provinces, a duty imposed on all persons, not only those who work with children as part of their employment. Persons who report are protected by specific immunities from civil liability for reporting, provided they did not knowingly make a false report (e.g., BC *CFCSA*, s. 14(5)). However, where they do not report and, as a result, a child is harmed, this type of immunity would not apply and they would be left to try to rely on the general immunity provision if found to have been negligent. The general immunity would likely apply to any person, including members of the general public who are not engaging in the delivery of child and family services under the Act, provided the failure to report was in good faith.

However, as noted, the BC immunity expressly excludes vicarious liability of Indigenous governing bodies. If a First Nation directs employees to provide prevention services, and the employees are negligent in failing to report, given the general nature of the definition of Indigenous governing body, they could be vicariously liable for the employees' conduct even though they are not providing child and family services under Indigenous law.

III. CORE POLICY IMMUNITY

As set out in our September 2022 opinion, the Supreme Court has defined "core policy decision" as follows: "decisions as to a course or principle of action that are based on public policy considerations, such as economic, social and political factors, provided they are neither irrational nor taken in bad faith". They set out four factors that inform the analysis of whether a decision qualifies as core policy: 1) the level of responsibility of the decision-maker; 2) the process by which the decision was made; 3) the nature and extent of budgetary considerations; and 4) the extent to which the decision was based on objective criteria. Decisions that fall closer to the core competencies of the legislative or executive branch, where the decision-maker is more closely related to a democratically-accountable official, and where the decision is based on the balancing of public policy considerations including budgetary constraints and the making of value judgments, are more likely to be found to be core policy decisions.

In our September 2022 opinion, we opined that a high-level decision made in respect of how to allocate funds between programs, groups, or similar would almost certainly be considered a "core policy decision" that will confer immunity in negligence claims to Indigenous governing bodies who have assumed jurisdiction over child and family services either under C-92 or under s. 35. There are three parts to our present opinion on this issue. First, we consider whether a First Nation who is not assuming jurisdiction but is simply taking on funding and delivering some or all prevention services would likely receive the benefit of immunity to negligence claims involving core policy decisions. Second, we provide additional comments and case law regarding the distinction between core policy decisions and other types of decisions that will not confer immunity. Third, we consider

whether a core policy defence may be raised where the impugned conduct is the subject of a statutory duty.

1. Extension of Core Policy Immunity to First Nations not Exercising Jurisdiction

Policy immunity is available only to government bodies/public authorities. In our view, it is likely that core policy immunity would be extended to negligence claims against First Nations not exercising their jurisdiction over child and family services under C-92 or s. 35. This opinion is based on some of our comments in our September 2022 opinion: first, the reasoning of the Quebec Court of Appeal in *Renvoi à la Cour d'appel du Québec relatif à la Loi concernant les enfants, les jeunes et les familles des Premières Nations, des Inuits et des Métis*, 2022 QCCA 185 ("*QCCA Reference*"); second, the rationale for core policy immunity; and third, the decision of the BC Supreme Court in *Blueberry River First Nation v. Laird*, 2020 BCSC 1615.

(a) Comments of Quebec Court of Appeal in *QCCA Reference*

In the *QCCA Reference*, the Court found that Indigenous peoples have a right of self-governance protected by s. 35. This right of self-governance extended to child and family services, but was clearly broader than this. Thus, whether a First Nation has expressly assumed jurisdiction under C-92 or s. 35, if they are delivering child and family services themselves, or making decisions as to how funding should be allocated to an agency who is delivering the services, they are likely to be considered a governmental entity or public authority for the purposes of a negligence claim.

Further, as discussed, the definition of Indigenous governing body in the BC legislation (which is the definition in C-92) is not limited to a body that is exercising jurisdiction over child and family services – rather, it requires only that the body be representing s. 35 rights-holders and be acting according to the authority of those rights-holders. The use of the term "Indigenous governing body" also suggests an intention on the part of Canada (and BC, which adopted the term and its definition) to recognize that an entity that meets this definition is for all intents and purposes a government.

(b) The Rationale for Core Policy Immunity

In our September 2022 opinion, we referred to the rationale for core policy immunity as set out by the Supreme Court *Marchi*, which is to maintain the separation of powers. The courts should not be second-guessing the decisions of democratically-elected government officials and substituting their own opinions.

We opined that this rationale supported extending core policy immunity to First Nations exercising their jurisdiction over child and family services under C-92 or s. 35. First, the type of broad decisions made in relation to child and family services authorized by C-92 are not the types of decisions on which courts should be weighing in. Second, the same concern regarding the possibility of a chilling effect that is relevant to claims against public authorities would apply if Indigenous governing bodies had to worry about the possibility of negligence claims when making funding and other policy decisions.

In our view, these same concerns apply to a First Nation that is not exercising its jurisdiction but is simply taking on funding to deliver prevention services directly. The Nation will be determining how to distribute the funding, which involves making decisions regarding the

use of funds and how they can best serve the needs of their members, as well as priorities for action within their communities.

(c) Blueberry River First Nation v. Laird

In *Blueberry River First Nation v. Laird*, 2020 BCSC 1615, the court considered a claim for negligent governance brought by several members of a First Nation against former members of its band council relating to the alleged mismanagement of funds. Although the court did not expressly consider whether the management of the funds was a core policy decision, it found no duty of care on other grounds. The judge observed that the defendants were "elected members of a government", and that there could be no duty of care owed as they were members of a governing body exercising public law duties, which were distinct from a private law duty of care relevant to a negligence claim. The court stated that the Council's exercise of balancing priorities and needs was at the core of its public law duty to the Band, as the governing body, and did not give rise to a private law duty of care.

The court also relied on another of the residual policy considerations that can negate a *prima facie* duty of care – indeterminate liability – reasoning that if a private duty of care was recognized as between chief and council and a band generally, band councils across Canada would be subject to potential liability for every decision they make. The judge noted that the remedies for disagreements between band councils and their members "are the same as for any other government in Canada – judicial review of specific decisions is sometimes available, but more often the appropriate remedy is the ballot box" (at para. 286).

This case is an example of a First Nation being treated analogously to any other government in the context of a negligence claim. It is particularly helpful in the context of the current opinion as it does not involve the right to exercise jurisdiction over child and family services under either C-92 or s. 35. Rather, it deals with governance by a First Nation generally.

(d) Conclusion regarding extension of policy immunity to First Nations not exercising jurisdiction over child and family services under Act or s. 35

For the above reasons, it is our opinion that the courts would likely consider a First Nation who has taken on funding from Canada and is providing prevention services directly, or is deciding on how funding should be distributed to an agency who will provide the services, to be sufficiently governmental in nature that core policy immunity would be extended to them in a tort claim.

2. Good Faith and Rationality Requirements and the Need for Consideration/Deliberation in making Policy Decisions

As also indicated in our September 2022 opinion, bad faith and irrationality in the context of policy decisions are not limited only to subjective bad faith on the part of an individual public official. Rather, it has been held to include inaction for no reason, inaction for an improper reason, or where the decision is so irrational or unreasonable that it constitutes an improper exercise of government discretion: *Nielsen v. Kamloops (City)*, [1984] 2 S.C.R. 2 at p. 24, *Brown v. British Columbia (Minister of Transportation and Highways)*, [1994] 1 S.C.R. 420 at para. 23. *Nielsen* is an example of a case where non-action was found not to be in good faith. In that case, the City decided not to enforce a stop-work order on the construction of a

home that was not being built to code, which the Court inferred was likely because the father of the property owner was an alderman. The decision was found to have been for an improper purpose, as it was based on not proper policy considerations but on the relationship of the property owner to the alderman.

Importantly, there must also be some consideration and deliberation by the decision-maker in arriving at the policy decision. Absent this, the good faith and/or rationality requirement may not be met, or, alternatively, the decision may simply not be considered a core policy decision because it does not bear the hallmarks of such a decision – e.g., it does not involve the prioritization and balancing of social, economic, and/or political considerations.

In *Marchi*, there was no allegation of bad faith or irrationality, but the Court found that the policy immunity defence failed on the basis of a lack of consideration. The City of Nelson had a written policy regarding snow removal, under which it had priority routes for plowing and sanding. However, it also prioritized the clearing certain parking spaces in the downtown core. This created a large snowbank, which the City did not remove until after all streets were plowed. The plaintiff stepped into the snowbank and was injured. The evidence was that the City had never really considered the decision to plow the parking spaces and not remove the snowbank right away and whether there might be an alternative, such as clearing a pathway in the snowbank. The court found that there was no suggestion that the "policy" resulted from a deliberative decision involving any balancing of competing objectives and policy goals; rather, it had simply always been done that way.

Factors that a court would likely consider relevant in the context of a First Nation's decision-making as to funding allocation for prevention include: perceived need for specific levels of prevention services (primary vs secondary vs tertiary), and/or specific types of programs/services; expectation of benefit (for example, if there is research that a particular type of prevention program is effective at reducing the number of children in need of protection and/or research that other types of programs have no benefit or may be harmful, or if research is not available, what community leaders/members or agencies have conveyed regarding the types of programs that they feel would make a difference in the community); equity in distribution of services and not favouring certain individuals or groups over others for improper reasons (for example, if one of the Band Council members owns a hockey school, and the decision to provide enrollment in the school for at-risk children in the community is based on creating business for the school, rather than any particular expected benefit to the children); and, clearly, the amount of funding available.

We have also been asked to consider whether, assuming a First Nation decided on an initial funding allocation for prevention programming, there would be any legal obligation on it to re-evaluate this based on outcomes. For example, if the First Nation decided to spend all of its prevention funding on primary prevention, with the result that no secondary or tertiary prevention services were being delivered and more children were being taken into care as a result, or if children were experiencing greater harm in the home because such services were not delivered, would the First Nation lose the benefit of core policy immunity if they failed to reconsider their funding approach?

In such a circumstance, core policy immunity may be found not to apply in the first place because it seems questionable whether the requirement of rationality (and possibly also the good faith and consideration requirements) would have been met. Assuming it was found to apply to the initial decision, we are not aware of any case law where a service provider was

expected to re-evaluate an initial policy and make changes based on outcomes. However, in our view it is possible that it would be considered to be bad faith or irrational to fail to make a policy change in the face of known adverse outcomes associated with the present policy, or the consideration requirement may be found to be lacking.

3. Case Law regarding Core Policy Immunity

In order to assist First Nations in determining whether a particular type of decision will likely be considered a core policy decision, we have provided some additional case examples. These involve a variety of factual circumstances, including several decisions involving challenges to government social programs on the basis that they are inadequately funded or that resources are otherwise insufficient.

(a) General case law

The first decision of the Supreme Court of Canada where the policy/operational distinction was considered in detail was *Just v. British Columbia*, [1989] 2 S.C.R. 1228, in which a rock came loose from the slopes above Highway 99 and hit the plaintiff's car, injuring him and killing his daughter. The plaintiff challenged the province's system of inspection of the rock cuts on the highway, including the frequency or infrequency and how and when the trees above the rock cut in question should have been inspected, and the manner in which cutting and scaling operations should have been carried out. The Court concluded that these were not policy decisions, but, rather, "the product of administrative direction, expert or professional opinion, technical standards or general standards of reasonableness" (at para. 31).

In our view, the application of the law to the facts in *Just* is not particularly helpful as there is little information as to the reasons for the establishment of the particular inspection system used (and particularly the role of any budgetary constraints), or what precisely the plaintiff complained about in relation to the carrying out of the inspection. However, the Court does provide some helpful hypothetical examples of core policy decisions:

> [22] For example, at a high level there may be a policy decision made concerning the inspection of lighthouses. If the policy decision is made that there is such a pressing need to maintain air safety by the construction of additional airport facilities with the result that no funds can be made available for lighthouse inspection, then this would constitute a bona fide exercise of discretion that would be unassailable. Should then a lighthouse beacon be extinguished as a result of the lack of inspection and a shipwreck ensue, no liability can be placed upon the government agency. The result would be the same if a policy decision were made to increase the funds for job retraining and reduce the funds for lighthouse inspection so that a beacon could only be inspected every second year and as a result the light was extinguished. Once again, this would constitute a bona fide exercise of discretion. Thus a decision either not to inspect at all or to reduce the number of inspections may be an unassailable policy decision. This is so provided it constitutes a reasonable exercise of bona fide discretion based, for example, upon the availability of funds.
>
> [24] At a lower level, government aircraft inspectors checking on the quality of manufactured aircraft parts at a factory may make a policy decision to

> make a spot check of manufactured items throughout the day as opposed to checking every item manufactured in the course of one hour of the day. Such a choice as to how the inspection was to be undertaken could well be necessitated by the lack of both trained personnel and funds to provide such inspection personnel. In those circumstances the policy decision that a spot check inspection would be made could not be attacked…

In *Brown v. British Columbia (Minister of Transportation & Highways)*, [1994] 1 S.C.R. 420, the plaintiff lost control of his car on ice on a highway near Gold River, a small village on Vancouver Island, on a Friday morning in November. Three accidents had already occurred that morning on the same stretch of highway, and police had called for a sanding truck. The highway department was still on its summer maintenance schedule, which was an on-call system from Friday to Sunday, and only one shift the other days. The winter schedule, which had three shifts per day, was set to begin the following week. The timing of the winter schedule was for budgetary reasons, and could not be easily implemented earlier than planned because the collective agreement between the department and its employees required that the winter schedule would be posted two weeks in advance so that employees would have the opportunity to bid on shifts. The on-call employee went out with a sanding truck, but reached the location of the plaintiff's accident after it had already occurred.

The Supreme Court found that the decision to maintain a summer schedule was a policy decision involving classic policy considerations of financial resources, personnel, and union negotiations. It concluded that it "was truly a governmental decision involving social, political and economic factors". It also found that the Gold River detachment was not required to operate in the same manner as the nearby Campbell River detachment, which served a larger region and had a worker in the office every day rather than an on-call system.

In *Swinamer v. Nova Scotia (Attorney General)*, [1994] 1 S.C.R. 445, the plaintiff was seriously injured when a dead tree at the side of the road fell on his vehicle. The tree appeared to be in good health. However, the department had received other complaints about dead trees along the sides of roads. The divisional engineer did not have funds in his maintenance budget to remove them – to do so would have required cuts to other highway maintenance activities. Instead, he assigned a foreman (who had some experience with trees but was not a forestry expert) and a survey technician to identify and count the trees that were dead and an obvious hazard. They counted over 200 trees. On the basis of their report, the divisional engineer made a funding request for the removal of the trees. Funding was approved approximately three months later to remove only 66 of the trees. Further funding was requested and approved in subsequent years.

The court found that the choice of a limited policy to identify obviously dead and dangerous trees in order to apply for funds to remove them was a classic example of a policy decision, as the divisional engineer was setting priorities for the allocation of available funds. The Court rejected the trial judge's finding that money could have been found or that the needed inspection could be made at little cost, noting that the fact that budgetary considerations were questions of policy "is not changed by the fact that the cost of the measures sought may be small".

George v. Newfoundland, 2016 NLCA 24, involved a class action on behalf of persons either injured or killed in motor vehicle accidents involving collisions with moose. Moose-vehicle collisions (MVCs) were a significant problem in Newfoundland due to the "hyper-

abundant" moose population. After conducting research as to possible solutions, the province invested approximately $5 million in a series of initiatives, including pilot projects involving fencing in specific areas, detection systems, increasing the number of moose-hunting licenses along the Trans-Canada Highway, the enhancement of ongoing brush clearing, and public awareness efforts. Among these, the "philosophy" was that moose awareness was the best method for mitigating. The research had also shown that fencing to prevent the movement of moose was ineffective.

The plaintiff argued that the province ought to have done more to mitigate against MVCs, and in particular ought to have installed a significant amount of additional fencing. To do would have cost well in excess of $75 million. At the time, the Province's financial situation was "dire", running budget deficits in the range of $600-$900 million, and it was "focused on playing catch-up to maintain the safety and integrity of bridges, crossing structures…and other general road conditions". In concluding that the province's decisions as to how to attempt to minimize MVCs were core policy decisions, the majority stated, "[t]o those who would have this Court direct government to expend more money on moose fencing, it should be noted that the money spent on further risk mitigation will be money not available for health care, education and other areas of governmental responsibility" (at para. 107).

(b) Case law challenging government funding of social programs

The first four cases in this section were discussed above in the section on proximity. In *Mitchell Estate*, the plaintiffs claimed that their infant daughter did not receive proper treatment quickly enough, due to reductions in hospital funding and restructuring decisions implemented by a prior provincial government. Even if proximity had been met, the Court also concluded that the decisions were core policy decisions. The court noted that Ontario did not make decisions with respect to the operation of hospitals, and that, rather, in matters concerning health care funding and hospital restructuring, the Minister and government must make complex and difficult policy decisions based on a variety of considerations.

In *Wareham*, the Court found that even if proximity were established, the duty of care would be negatived as what was challenged were core policy decisions. It noted that decisions with respect to the design of the ODSP, and the resources that were to be allocated to its operation were matters of policy. It was not the role of the court to adjudicate on the wisdom or adequacy of governmental measures that reflect complex and difficult policy decisions based on a variety of considerations. This was particularly the case where the details of the ODSP were contained in legislation.

In *Leroux*, the majority of the Court found that the choice to provide different benefits programs aimed at children and adults, and the allocation of scarce resources among competing eligible developmentally disabled adults, were policy choices: "devising, implementing and administering a benefits program is a core policy decision of government". It found that the government owed no private law duty of competent public administration to individual benefits claimants; rather, its responsibility was to voters.

Cirillo involved a challenge to the adequacy and allocation of resources in respect of Ontario's bail system. The Court held that the government's decisions in this regard were "wide-ranging" policy decisions that were non-justiciable.

Phaneuf v. Ontario, 2009 CarswellOnt 9308 (Div. Ct.), involved a claim that individuals were unlawfully held in detention centres pending psychiatric assessments ordered under the

Criminal Code. The plaintiff claimed that a bed in one of the 11 hospitals in the province that performed these assessments was required to be immediately made available once the assessment was ordered by the court. Essentially, the claim was that the number of such forensic beds was insufficient. The court found that the provision of forensic beds was a policy decision, noting that the decision on how to generally best provide mental health services is complex and involves prioritization and the weighing of many factors.

Bowman v. Ontario, 2022 ONCA 477, involved a challenge to the Ontario government's decision to terminate a three-year basic or minimum income pilot program prior to the end of the three years. The decision to cancel the program was found to be a core policy decision. It was made by democratically-accountable persons with a high level of authority (the provincial cabinet) concerned budgetary allotments for government departments, and involved fundamental, value-judgment-infused public policy choices about the means by which to provide social assistance benefits to a large group of persons, which were hallmarks of a core policy decision. The Court noted that immunity from liability in respect of core policy decisions made by public authorities recognizes that such decisions may cause harm to private parties, but that the principle of protecting the legislative and executive branch's core institutional roles and competencies meant the remedies for these decisions must be through the ballot box instead of the courts.

An example of a case where the decisions at issue were found not to be core policy decisions was *Francis v. Ontario*, in which the plaintiffs challenged the system of administrative segregation in Ontario's correctional institutions. The Court noted that the decision to permit administrative segregation was a policy decision, but that the way it had been implemented by prison superintendents, including its use for mentally ill inmates and for long periods of time, involved operational decisions.

Another example of a case involving an operational decision, in the context of child and family services, was *Yelle v. Children's Aid Society of Ottawa-Carleton*, 2002 CarswellOnt 2848 (Sup. Ct. Jus.), in which the neighbour of a foster parent claimed against the CAS and the foster parent for damages resulting from arson committed by a minor residing in the foster parent's home. The claim alleged that the CAS was negligent in placing the minor in the foster home with no psychiatric treatment available to him despite having previously made significant gains in a residential treatment setting, and a history of significant behavioural problems, including "pyromaniac tendencies", in several foster homes after being discharged from the treatment centre. The new foster parent was a new applicant for foster parenting who had not taken the basic courses provided by the Society, and she had not been told anything about his prior behavioural problems. The CAS also knew that he required a supervised and structured environment. The Court said the following in finding that the Society's impugned decisions were operational, rather than policy:

> [74]…There is no suggestion in this case that the Society's decision to place Martin in the foster home of the defendant Della Robillard and to provide absolutely no psychiatric or psychological counseling or treatment to Martin for a full year prior to the subject occurrence, had anything to do with "financial, economic, social or political factors or constraints"… The decision to place Martin in the Robillard home and the failure to provide him with professional counseling and treatment was…"action or inaction that is merely the product of administrative direction, expert or professional opinion, technical standards or general standards of care"…[T]hey were not decisions

> that could be designated as policy decisions rather they were manifestations of the implementation of the functions assigned to the Society by the Act.

As can be seen from these cases, where the decision relates to funding at a high level, it will be considered a core policy decision provided it is not irrational or made in bad faith, and it is arrived at through some level of consideration and deliberation. In some of these cases, the court also found that there was insufficient proximity to satisfy the first stage of the duty of care analysis, particularly where the government was making decisions with respect to the funding of health and social programs.

One difference between many of these cases and the FNCFS context is that in the latter, the highest-level funding decision is being made not by the First Nations, but by Canada. The decisions made by First Nations will be limited to how the funding provided should be allocated as between aspects of the FNCFS program. However, these decisions still involve balancing of interests, prioritization, and the consideration of social and economic factors, and in our view are not unlike a government department making decisions as to how the funds in its budget should be best used. Consequently, provided they meet the criteria of good faith, rationality, and consideration (and, of course, that the funding dedicated to the FNCFS program is being used for child and family services and not for other purposes), they will almost certainly be considered policy decisions.

In contrast, if the First Nation itself is doing more than making funding allocation decisions, and is directly providing the services, or directing/supervising an agency's provision of the services, the decisions it makes as to how the services are being provided are less likely to be considered core policy decisions. It will depend on the specific decision and to what degree the indicia set out by the Supreme Court in *Marchi* are present.

4. Is Core Policy Immunity Available where a Statutory Duty is Owed?

Horsman & Morley state that "[a]lthough the law is somewhat unsettled in this respect, some courts have suggested that a policy defence is not available in the face of a positive statutory duty."

The leading case on this issue, at least in Ontario, is the decision of the Ontario Court of Appeal in *Kennedy v. Waterloo County Board of Education* (1999), 174 D.L.R. (4th) 106, in which a high school student was seriously injured when he lost control of his motorcycle and hit his head on a bollard on school property. The school had erected 22 bollards as a barrier to stop vehicles from driving on the school track and other property. They had been joined with chains, but the chains were removed when a student was injured on one of them.

The claim was brought on under the Ontario *Occupiers' Liability Act*. The Court found that a core policy defence was not available where the relevant statute imposed both a statutory duty and civil liability for breach of that duty. It distinguished this from a statute that provides either a criminal penalty or no specific consequence for breach of the statutory duty in question, where a policy defence would remain available. This is because where the statute does not provide for civil liability, there is, as discussed above, no tort of statutory breach; rather, the breach will be treated as evidence of negligence.

The Court found that the *Occupiers' Liability Act* imposed both a duty and civil liability for breach of that duty. Section 2 stated that an occupier "owes a duty to take such care as in

all the circumstances of the case is reasonable" to ensure that persons are reasonably safe while on the premises, while s. 3 provided that the Act "applies in place of the rules of the common law that determine the care that the occupier of premises at common law is required to show for the purpose of determining the occupier's liability in law". The Court thus found that the School Board could not have made a policy decision which would either oblige or allow it to avoid compliance with its statutory obligation to take reasonable care for the safety of persons on its premises. The Court did not consider the failure to remove the bollards to have been a policy decision in any event, but that even if it was, it could not immunize the Board against liability.

Kennedy has been cited in other Ontario cases, most of which are also brought under the *Occupiers' Liability Act*. It has been distinguished and, to some degree, questioned, by a series of BC decisions. One of these, *Josephson v. Merritt (City)*, 2003 BCSC 1505, distinguished between statutes that impose specific positive duties on the entities they govern, and statute which embody and may extend common law principles, suggesting that the reason in *Kennedy* should not apply in the latter circumstance. In the Court's view, the BC *Occupiers Liability Act* was an example of the latter type of statute. However, it is not clear that the defendant in that case claimed core policy immunity, and the judge appears to have decided the case on the basis that the defendant met the requisite standard of care.

Fox v. Vancouver (City), 2003 BCSC 1492, distinguished *Kennedy* on the basis that there was evidence before the Court on which it could be concluded that the decision at issue was a policy decision; that is, there was evidence that it was a *bona fide* exercise of discretion based upon social, political, and economic factors. In our view, this is a questionable basis on which to distinguish *Kennedy*. However, at least one BC judge in a subsequent case (*Knodell v. New Westminster*, 2005 BCSC 1316) felt bound to follow *Fox*, due to the principle of horizontal *stare decisis*.

In contrast, the Yukon Territory Supreme Court followed *Kennedy* in *Fuller v. Schaff*, 2009 YKSC 22, with the judge expressly disagreeing with the BC decisions that there was any basis to distinguish it.

In *Marchi*, the Supreme Court stated that the City had suggested in argument that its duty of care was grounded in the BC *Occupiers Liability Act*, and no submissions were made as to whether the plaintiff's fall had occurred on a public road or public highway, which were exempted from the application of that legislation. The Court noted that the trial judge had noted that it made no practical difference whether the legislation applied, and for the purposes of its reasons, assumed it did not. It stated that "[b]oth parties agreed that core policy immunity must be addressed in any event". Consequently, while the Supreme Court did not consider the issue and did not cite *Kennedy*, it is arguable that its comments could be viewed as accepting that policy immunity was presumptively available even where occupiers' liability legislation applied.

Consequently, the law is somewhat unsettled with respect to whether a policy defence will not be available in the case of a statutory duty where the statute also provides for civil liability for breach of the duty. However, in our view, this does not apply to provincial/territorial child and family services legislation. In some cases, these statutes provide for criminal penalties. However, they do not include provisions imposing civil liability for a breach of duties thereunder. In contrast, most of the statutes contain immunity provisions preventing proceedings from being brought, or liability being found, against a

person who in good faith exercises a power or performs a duty under the act. While certain statutes expressly state that the immunity provisions do not absolve the Crown (or in BC, the "government or an Indigenous governing body") of liability (or in BC, "vicarious liability") they would have in the absence of the statutory immunity, in our view this would not be considered to be a provision for civil liability. In contrast, it simply indicates that the statute does not provide immunity against liability which may be found under the common law.

Consequently, in our view, if a First Nation has not exercised jurisdiction over child and family services under s. 35 or C-92 and provincial legislation continues to apply, the core policy defence will presumptively be available to it. This being said, as discussed above, there are very limited statutory duties that would apply to a First Nation providing prevention services outside of an agreement with a province or territory, so this issue would likely have limited application.

IV. APPLICATION OF NEGLIGENCE ANALYSIS TO THE PROVISION OF PREVENTION SERVICES BY FIRST NATIONS

In this section, we provide an analysis of whether a First Nation is likely to owe a duty of care in the direct provision of prevention services, as well as in respect of funding decisions for prevention services. We also provide a brief discussion of standard of care and ways in which First Nations can minimize the liability risk if they decide to provide prevention services directly.

1. Direct provision of Prevention Services

In considering whether a duty of care would likely be owed by First Nations and their employees in providing prevention services, it is important to consider the types of potential claims that could be brought and who would bring them. We anticipate the claims could be brought on behalf of children, as well as by parents, and that they could be in two general areas: the provision of prevention services (either that services were provided negligently, were not provided at all when they should have been), or that in their role in providing prevention services, the employee breached their statutory duty to report a child in need of protection. For example, a parent might claim that if they had been provided with an alcohol treatment program, their child would likely not have been apprehended. The child could bring a similar claim. Or one parent might bring a claim on their own behalf and/or on behalf of the child that concerns regarding the behaviour of the other parent should have been reported, and if they had been, the child would have avoided injury or other maltreatment caused by the parent.

As discussed, social workers providing child and family services pursuant to provincial or territorial legislative schemes owe a duty of care to children who are or may be in need of protection. This is well-established in the case law and so it is not necessary to conduct an *Anns/Cooper* analysis. If it was necessary to conduct such an analysis, proximity would likely be found to be based on some combination of the statutory duties of these workers and agencies, as well as their interactions with children and families. The statutory scheme would likely be of predominant importance, as the duty of care clearly arises before any interactions have actually occurred, once a social worker receives a report about a child possibly in need of protection. Importantly, there is no conflict between social workers' statutory duties and recognizing a common law duty of care to children – rather, they are entirely consistent with each other.

The matter of First Nations and their employees owing a duty of care (and to whom it is owed) is less clear, given that, in the absence of an agreement with a province or territory, they would not be exercising powers or performing duties under the legislation (other than the duty to report). This being said, at least some of the services being provided, particularly tertiary (and possibly to a lesser extent, secondary) prevention services, are essentially the same services that are provided by social workers employed by an agency or the province, or, at least, could be provided under the legislation. For example, under the Ontario *Child, Youth and Family Service Act, 2017*, S.O. 2017, c. 14, "service" is defined as including "a service for a child or the child's family that is in the nature of support or prevention and that is provided in the community". Under the BC *CFCSA*, s. 93 gives the director the power to provide preventive and support services for families to promote the purposes of the Act. The main difference between these prevention services provided under the legislation and similar services provided by a First Nation would appear to be that they are being provided on a voluntary basis (both from the perspective of the family and the First Nation), rather than pursuant to an agreement made with the family under the legislation. To the extent a First Nation attempted to enter into such an agreement with a family, it would likely be found to be without authority.

Even without the statutory scheme being directly applicable to the actions of First Nations providing prevention services, some of the factors relevant to the finding of a duty of care through a statutory scheme may be relevant here. As set out above, these include: whether the purpose of the statute is to protect the interests of an identifiable class of individuals of whom the plaintiff is a member; whether the statutory powers at issue involve the provision of a service as opposed to the reduction of a risk through regulation; the vulnerability of the plaintiff class to the risk of harm that materialized; and whether the defendant had specific knowledge of the plaintiff's vulnerability. The statutory scheme, which includes prevention services, clearly has a purpose of protecting children, who are a vulnerable group. Provision of a service is also more likely to ground a private law duty of care in the context of a governmental authority, as compared to an alleged failure to regulate.

In our view, a court would likely find sufficient proximity to support a duty of care owed to children in respect of the provision of secondary and tertiary prevention services. The purpose of providing these services to families is to reduce risk to children who are or may be at risk of harm, and hopefully allow them to remain in the home, recognizing the rationale for the requirement for services provided under the legislation to employ least disruptive measures and the goal of keeping children with their families if it can be done safely. Our understanding of secondary and tertiary prevention services is that they are provided through one-on-one interaction with the family – the employee would obtain information about the family's circumstances and attempt to tailor prevention services to those circumstances. Further, we understand that the line between tertiary prevention services and child protection is not always clear. For these reasons, this is a relationship that may well be found by a court to be sufficiently close and direct as to constitute the type of proximity necessary to ground a duty of care.

On the issue of whether there may also be a duty of care owed to parents, the appellate authorities are settled that the reasoning in *Syl Apps* applies at both the investigation stage and proceeding stage. The Court in *J.B.* emphasized that the statutory duties of a CAS are to investigate allegations that children may be in need of protection, and to protect children where necessary. These duties would not be owed by First Nations providing prevention

services outside provincial and territorial legislation or Indigenous law. Further, if the purpose of providing targeted prevention services is to assist the parents with challenges that could eventually lead to child protection concerns, it could perhaps be said that there is no conflict between the interests of parents and the interests of children at that stage. However, the better view may be that the ultimate purpose of prevention services is to keep the family together because that is what is best for the child, not to satisfy the wishes of the parents, and that, as a result, no duty should be owed to parents even before any child protection concerns arise.

Once child protection concerns arise, in our view there is little doubt that a duty would not be owed to parents, as the reporting duty is incompatible with such a duty. However, as indicated, the failure to report could potentially result in a claim by a child.

It is also not clear whether a First Nation and their employees providing prevention services would owe a duty of care in respect of both acts (providing a prevention service in a negligent manner) and omissions (failing to provide a prevention service). As discussed, it is more difficult to establish a positive duty to act. A plaintiff might bring a claim alleging that a First Nation is liable for failing to provide a service where the family or child would or might benefit from it in the sense that the child's risk of needing protection is reduced, and thus their ability to remain with their family is increased. The circumstances could potentially fall under either of the second or third categories identified by the Supreme Court in *Childs* – a paternalistic relationship of supervision or control, or exercising a public function that includes implied responsibilities to the public at large. However, these categories, particularly the third, are not well-developed in the case law.

The rationale underlying the finding of a positive duty is also arguably not present in this case, as the First Nation and its employees providing prevention services do not create or control the risk to the plaintiff. Rather, they are trying to remedy risk caused by external factors. On the other hand, if a First Nation decides to use the prevention funding to provide services directly rather than direct it to an agency, they may arguably be found to have undertaken to provide such services at least to some degree, which could create reasonable expectations on recipients that services will be provided and thus support a duty of care.

As this is a novel context, it is unfortunately not possible to provide a more definitive opinion on this issue. However, we would rely most heavily on the well-established duty of care owed by child protection workers to children as being at least somewhat analogous to the provision of secondary and tertiary prevention services, as this could be found to be a sufficiently analogous category such that an *Anns/Cooper* analysis of foreseeability and proximity would not be required. First Nations should be aware of the risk that by providing these services they may owe a duty of care to children and potentially also to their parents/families, depending on the circumstances and the precise nature of the claim.

If the First Nation is providing only primary prevention services, it is difficult to see how a duty of care could be owed, as these services are being provided at the community level, or to particular groups, and not targeted at individuals. It is unlikely that providing programs such as parenting information sessions or activities for children could place the First Nation or its employees into a sufficiently close and direct relationship with individual parents, children, or families to justify imposing a private law duty of care.

2. Funding Decisions regarding Prevention Services

If the First Nation's only role with respect to prevention services is directing the funding provided by Canada to an agency who provides the services, or deciding how much money should be used to fund different types or levels of prevention, it is very unlikely it would owe a private law duty of care. There is almost certainly insufficient proximity, and it would also be found to be a core policy decision, provided the requirements for such a decision are met (based on social, economic, or political factors; made in good faith; not irrational; appropriate factors were considered in deciding on amounts to be spent and services to be provided – e.g., perceived need, expected benefit, etc).

For example, a decision to fund only primary prevention may be considered irrational, particularly if there were a documented need for other forms of prevention and there were some evidence these would be effective at reducing the number of children in need of care. Similarly, a policy to train or direct employees providing prevention services not to report child protection concerns in order to avoid children being taken into care would also be irrational and in bad faith, as it is contrary to the statutory duty to report and does not prioritize the best interests of the child which is the overarching goal of providing child and family services. On the other hand, core policy immunity would likely apply to a decision not to provide a specific high-cost prevention service such as residential alcohol or drug treatment programs due to insufficient funding, a need to prioritize other programs, etc.

Even if the law were clear that a policy defence is not available in the case of a statutory duty, for the reasons discussed above, any duties owed by First Nations who have not entered into agreements with a province or territory under child and family services legislation would be those owed by any member of the public (or person working with children, depending on the province), which are limited – namely, reporting a child in need of protection. It is difficult to conceive of a rational, good faith policy defence to a failure to report.

3. Standard of Care

As discussed above, where a First Nation employs members of its community to deliver prevention services, and those employees are not trained social workers, in devising a standard of care the court may take this into consideration. Relevant factors would likely include whether the First Nation was unable to find trained social workers to do the work, that the work would or may not be done if not by the First Nation itself, the availability of training and other resources for the employees, and the benefit of the community of the services provided. They would likely not apply the standard of care expected of a trained social worker.

This being said, there will be some expectations placed on prevention services workers in the carrying out of their role. At a minimum, they would be expected to be able to identify at least obvious child protection concerns, as this is a duty placed on the general public in some provinces, or, at least, those who work with children – one is not required to be a social worker. We also expect they would be required to understand the importance of identifying these concerns and acting on them to ensure children's safety. Without experience in the provision of child and family services, it is difficult for us to opine on what other training they might be expected to have, or other key expectations that would constitute reasonable care in this context. However, a court would likely expect that the

employees would have received training that the First Nation could reasonably deliver in the circumstances, keeping in mind factors such as employees' aptitude and the resources (human and otherwise) available to the First Nation.

Further, given that the line between tertiary prevention services and child protection is not always clear, there may be an expectation for First Nations providing prevention services to work collaboratively with an agency providing child protection services in the community. For example, there might be a policy setting out specific circumstances where the First Nations employee would be expected to involve a social worker.

As discussed above, the First Nation will be vicariously liable for an employee's negligence where the employee's conduct was either authorized by, or sufficiently connected to conduct authorized by, the First Nation. The First Nation could also be found directly negligent for conduct such as failing to properly train its employees or implementing inappropriate policies.

Employees themselves will have immunity under most provincial and territorial child and family services statutes where they are performing a duty or function, or exercising a power, conferred by the statute and act in good faith. However, as discussed, the statutory immunity provisions would provided limited benefits to First Nations voluntarily providing prevention services. Further, the immunity may not apply to First Nations in BC at all, given the express exclusion of Indigenous governing bodies.

V. POTENTIAL LIABILITY OF FIRST NATIONS IN HUMAN RIGHTS LAW

You have requested an opinion regarding the potential liability of First Nations under human rights law, as core policy immunity does not apply in this context. You would like to us to address in particular the possibility of liability where the First Nation is not able to provide a particular service because of insufficient funding from Canada, and whether the First Nation would be considered the service provider and be liable for the failure to provide the service.

1. Test for Discrimination in the Provision of a Service

Section 5 of the *Canadian Human Rights Act*, R.S.C., 1985, c. H-6 ("*CHRA*"), provides:

> 5. It is a discriminatory practice in the provision of goods, services, facilities or accommodation customarily available to the general public
>
> (a) to deny, or to deny access to, any such good, service, facility or accommodation to any individual, or
>
> (b) to differentiate adversely in relation to any individual,
>
> on a prohibited ground of discrimination.

The complainant must demonstrate that 1) they have one or more characteristics protected from discrimination listed in s. 3 of the *CHRA*; 2) they are denied services, or adversely impacted by the provision of services by the service provider; and 3) the protected characteristic(s) are a factor in the adverse impact or denial (*Moore v. British Columbia (Education)*, 2012 SCC 61 at para. 33; *First Nations Child and Family Caring Society of Canada et al. v. Attorney General of Canada (for the Minister of Indian and Northern Affairs Canada)*, 2016 CHRT 2 ("*Caring Society 2016*") at para. 22).

If the complainant meets this burden of establishing *prima facie* discrimination, the burden shifts to the respondent to establish that there is a *bona fide* justification for the denial or differentiation: *CHRA* s. 15(1)(g). To be a *bona fide* justification, the respondent must establish that it could not have accommodated the complainant in the provision of the service without undue hardship, considering specifically health, safety, and cost: s. 15(2).

2. <u>Is the provision of Prevention Services, and/or the Allocation of Funding in relation to Prevention Services, by First Nations a "Service" held out to the "Public"?</u>

(a) "Service"

The Tribunal must first determine whether it is dealing with a "service" within the meaning of the *CHRA* – it must define and analyze the very substance of the act, action, or activity being challenged. A "service" is something advantageous or of benefit that is offered or made available to the public: *Canada (Attorney General) v. Watkin*, 2008 FCA 170 at paras. 31 and 33; *Dominique (on behalf of the members of the Pekuakamiulnuatsh First Nation) v. Public Safety Canada*, 2022 CHRT 4 at paras. 196-197 ("*Pekuakamiulnuatsh*").

In *Caring Society 2016* and in *Pekuakamiulnuatsh*, the Tribunal considered whether the funding of programs by Canada on First Nations reserves (child and family services and policing) could constitute a "service". In both cases, the Tribunal found the answer was yes.

In *Caring Society 2016*, the Tribunal found that Canada's involvement in the provision of child and family services on First Nations reserves was "something more than funding" – the benefit or assistance provided through the FNCFS Program and related provincial/territorial agreements was "to "ensure", "arrange", "support" and/or "make available" child and family services to First Nations children" (at para. 59). The "essential nature" of the FNCFS Program was to "ensure" First Nations families on reserve and in the Yukon received culturally appropriate child and family services that were reasonably comparable to the services provided to other provincial residents in similar circumstances (at para. 60). It also found that AANDC provided policy oversight, working as a partner with the FNCFS Agencies and provinces/territory to deliver child and family services. It was not a "passive player" whereby it only provided funding.

However, the Tribunal rejected the argument that even if its involvement had been limited to funding, it was not sufficient to constitute a "service". It cited two prior cases in support of this proposition: *Bitonti et al. v. College of Physicians & Surgeons of British Columbia et al.*, (1999) 36 CHRR D/263 (BCHRT), and *Kelso v. The Queen*, [1981] 1 S.C.R. 199. In *Bitonti*, the BC Human Rights Tribunal rejected the argument that government funding decisions are immune from review for compliance with human rights legislation. Similarly, in *Kelso*, the Supreme Court concluded that the government's right to allocate resources cannot override a statute such as the *CHRA*.

The Tribunal in *Caring Society 2016* reasoned as follows in rejecting Canada's argument that funding could not constitute a "service":

> [44] …[T]here is no indication in the *CHRA* or otherwise that Parliament intended to exclude funding from scrutiny under the Act, subject of course to the funding being determined to be a service. In line with *Kelso*, where the Government of Canada is

> involved in the provision of a service, including where the service involves the allocation of funding, that service and the way resources are allocated pursuant to that service must respect human rights principles.
>
> [Emphasis added.]

In *Pekuakamiulnuatsh*, a First Nation alleged discrimination by Public Safety Canada resulting from the implementation of the First Nations Policing Program ("FNPP"). It argued that the program was inadequately funded and, as a result, the level of police services that it could offer to the community was subpar. Like the FNCFS Program, funding was provided to the First Nation as part of a tripartite arrangement with the provinces/territories. The evidence was that the Pekuakamiulnuatsh First Nation had for years attempted to provide quality police services, but consistently ran operating deficits and was forced to top up the government contributions in order to be able to hire enough officers. It had attempted to negotiate additional funding, but had been told there was simply no more government money.

In considering whether the FNPP was a "service", the Tribunal found that Public Safety Canada's role "consists largely of funding or the provision of financial contributions", but also included other actions taken by it, such as reporting, negotiating, and providing related assistance. While it was not directly providing police services, all of this together constituted the offering of advantages or benefits to the First Nations who were part of the program. Like in *Caring Society 2016*, it found the funding was "intrinsically linked" to the level of police services the First Nation could provide (at para. 238), and that the funding was based on what was in the funding envelope rather than the real needs of Indigenous communities. If it wanted its own Indigenous police force that provided a service adapted to the needs, customs, and traditions of the community, the Pekuakamiulnuatsh was forced to accept low funding from Canada under the FNPP, which was not a choice that had to be made by the non-Indigenous public. The Tribunal concluded that the FNPP and its implementation perpetuated systemic discrimination against the Pekuakamiulnuatsh and other First Nations.

An obvious difference between *Caring Society 2016* and *Pekuakamiulnuatsh* and other cases is that Canada was the ultimate holder of the purse strings. It determined how much funding should be provided to First Nations for the FNCFS Program and FNPP, and, by extension, the quality of the services that could be provided using the funding. In the case of prevention services, if the First Nation is not providing the services directly through its employees, its role could be administrative in the sense of deciding what services should be provided and how much funding there is available in what it receives from Canada to provide different types of services. Alternatively, there could be some sort of application system where the First Nation considers requests for services on a case-by-case basis to determine whether the requested services will be funded. Or, it may simply be acting as an intermediary for the funds to flow through – simply funneling them to agencies, with the agencies deciding what types of services should be provided and then providing those services. In all of these scenarios, however, they are working with what Canada gives them. Given this, can they be found to be a service provider?

In *MacNutt v. Shubencadie Indian Band* (1995), 29 C.H.R.R. D/114 (C.H.R.T.) and *Polhill v. Keeseekoowenin First Nation*, 2019 CHRT 42, First Nations were found to be providing a

service within the meaning of s. 5 by administering a federal program to residents of reserves. In *MacNutt*, the complainants were non-Indigenous spouses of Band members living on reserve. They argued they were subject to discrimination on the basis of either race or marital status because they were denied federal social assistance benefits. One of the complainants sought such benefits through the Band, which denied them because she was non-Indigenous. The other two complainants had previously been paid such benefits but after some time they were no longer approved by the Band. The Band argued that the "supplier" of the "service" was DIAND, not the Band, as it funded the program. The Tribunal disagreed, noting that the social assistance program on reserve was not statutorily-based but flowed from the terms of an agreement entered into between DIAND and the Band. Under this agreement, responsibility for funding, delivery, and administration of the program was divided or apportioned between the two parties. The supplier was the Band, not DIAND. The Tribunal also found that the limited discretion the Band could exercise in the administration or delivery of the social assistance program did not take away from its characterization as a service customarily available to the public.

Polhill was similarly a claim of discrimination in the provision of social assistance benefits. The Tribunal followed *MacNutt* in finding that the First Nation offered a service within the meaning of s. 5 in administering the on-reserve federal income assistance program.

In our view, it is clear that a First Nation would be a service provider for the purposes of s. 5 of the *CHRA* if it is directly providing any level of prevention services to children and families: primary, secondary, or tertiary. What does providing services mean in this context? In our view, it would include offering the services themselves (for example, having employees of the First Nation run parenting workshops), acting in a facilitation role where they refer children and families for services provided by others or otherwise arrange for the services to be provided, and making decisions on whether to grant requests from families for specific services. In such circumstances, there is little doubt that the First Nation is offering or providing "assistance" or a "benefit" to the general public or a subset thereof.

Whether making decisions solely with respect to funding of prevention services (e.g., how funds will be divided between primary, secondary, and tertiary prevention, how much will or can be spent on specific types of services) constitutes the provision of a service is a more difficult question. The more specific the decisions, the more likely they would be to constitute a "service". If they are very general and high-level in nature, they may not be – for example, if the only decision made by the First Nation were how much of the prevention budget would be spent on each of primary, secondary, and tertiary prevention, and all the decisions as to what services are provided and to whom are made by an agency, it is more difficult to see how this could be considered a "service".

An argument might be made that the First Nation's role in that situation is analogous to Canada's in the Caring Society complaint, in that its decisions as to how much should be allocated even at a high level will affect what services can be provided under each level of prevention. This could also potentially be viewed analogously to the First Nations' administration of Canada's social assistance program on reserve in *MacNutt* and *Polhill*. However, these decisions are highly constrained by the amount of funding provided by Canada, and are at a very high level rather than at a level where it is decided which individuals or groups get certain benefits. We would not rule out entirely a finding that the First Nation could be a service provider in this context, but in our view it is unlikely. Further,

even if it were, it is also difficult to see how a complainant could establish a connection between a decision at such a high level of generality and a protected ground.

If the First Nation is simply acting as an intermediary for the prevention funds and transferring them to agencies without making *any* decisions as to how they are to be used, this is unlikely to constitute provision of a service. Its role would not be analogous to Canada's in *Caring Society 2016* because as noted, Canada was the ultimate holder of the purse strings and determined how much funding should be provided for the FNCFS Program.

(b) "Public"

The service must be one that is customarily available to the "public". The Tribunal must therefore determine whether the service creates a public relationship between the service provider and the service user. The "public" to whom the service is being offered does not need to be the entire public – clients of a particular service could be a very large or small segment of the public: *Caring Society 2016* at para. 31. In our view, there is no question that the direct provision of prevention services by a First Nation, or the making of decisions in respect of those services, would be considered a service that is provided to the "public".

As above, if the only decisions being made were very general decisions as to how the funding should be split as between levels of prevention, there would be less likely to be a public relationship between the First Nation and its members for the provision of prevention services.

3. Test for *Prima Facie* Discrimination

(a) Protected characteristic

The prohibited grounds of discrimination set out in s. 3 of the *CHRA* include race, national or ethnic origin, colour, religion, age, sex, sexual orientation, gender identity or expression, marital status, family status, and disability. It is easy to see how prevention services could be provided in a manner that denies a service or differentiates adversely on a number of these grounds – for example, if parenting courses were only offered to women or were not offered to same-sex couples, respite was only offered to parents of children with physical disabilities and not mental health conditions, treatment for alcohol, but not drug, addiction was provided, or certain families were given preferential services over others because they had a family member on the Band council.

In addition to prohibited grounds that could differ between members of the First Nation such as family status or disability, complaints might also be brought in relation to race or national or ethnic origin – for example, if there were evidence that a particular prevention service was provided off-reserve but not on-reserve, or in a neighbouring First Nation, this could potentially form the basis of a complaint. This would likely be quite difficult to establish, however, given that the particular First Nation would not be providing services off-reserve or to neighbouring Nations – this would more likely be grounds for a claim against Canada that funding continues to be insufficient in at least some Nations to provide services based on need.

A complaint could also be brought simply for adverse impact against an individual on the basis of their status as an Indigenous person, without any evidence of differential treatment

as compared to another Indigenous person or group, or a non-Indigenous person or group. This is because the law is clear that a comparator group need no longer be established by a complainant in a human rights claim. In *R.R. v. Vancouver Aboriginal Child and Family Services Society (No. 6)*, 2022 BCHRT 116 ("*R.R.*"), an afro-Indigenous mother residing in an urban centre brought a complaint against a First Nations child and family services agency that she had been subject to adverse treatment through separation from her children who had been taken into care, and restrictions in her access to them. She claimed that her protected characteristics of race, colour, ancestry, and mental disability were a factor in this adverse impact, in two ways: directly, by the operation of anti-Indigenous stereotype and prejudice, and indirectly, by failing to account for her needs as an Indigenous parent interacting with the child welfare system.

The Tribunal rejected the agency's argument that there was no evidence of any differential treatment towards the complainant compared to any other parent whose child was in care with the society. It stated that "evidence of differential treatment is not necessary because "equality is not about sameness'", citing *Withler v. Canada (Attorney General)*, 2011 SCC 12 at para. 31. In *Withler*, the Supreme Court noted that "[a] formal equality analysis based on mirror comparator groups can be detrimental to the analysis" (at para. 2).

The Federal Court (2012 FC 445 – "*Caring Society FC*") and Federal Court of Appeal (2013 FCA 75) also rejected the need for a comparator group on judicial review of the Tribunal's initial decision striking the Caring Society's complaint on the basis that they could not point to a similarly-situated group, such as another group receiving the same assistance programs from Canada. In *Caring Society 2016*, the Tribunal noted that while comparative evidence may be useful in analyzing a claim of discrimination, "it is not determinative of the issue", and that, as the Court noted in *Withler*, "finding a mirror group may be impossible, as the essence of an individual's or group's equality claim may be that, in light of their distinct needs and circumstances, no one is like them for the purposes of comparison" (at para. 59 of *Withler*, para. 325 of *Caring Society 2016*).

This was echoed in *Pekuakamiulnuatsh*, in which the Tribunal said that it found it "difficult, if not impossible in practice, to compare First Nations with each other or with other groups in Canada because of their unique position in Canada". It noted that the Court in *Caring Society FC* had "recognized this exceptional and incomparable status of First Nations" (at para. 318). In *Caring Society FC*, the Court accepted "the *sui generis* status of First Nations" and recognized "that different approaches to assessing claims may be necessary depending on the social context of the claim" (at para. 340).

(b) Adverse or differential treatment

The complainant must establish that they have been denied services or adversely impacted in the provision of the service at issue: *Caring Society 2016* at para. 24. For the reasons discussed, it is not necessary to point to a comparator group in order to establish that s. 5(1)(b) of the *CHRA* has been satisfied. This element of the test is usually not particularly difficult for a complainant to meet, as the harm or impact will usually be clear. The more difficult question is whether the protected characteristic is a factor in the adverse or differential treatment.

(c) Protected characteristic a factor in the adverse or differential treatment

The complainant is not required to adduce direct evidence of discrimination or prove that the service provider intentionally discriminated against them, because "human rights law rests on an 'effects-based model which critically examines systems, structures, and their impact on disadvantaged groups'" (*R.R.* at para. 299; *Caring Society 2016* at para. 26).

The complainant is also not required to prove that the protected characteristic was the only factor, or even the main factor. It must simply be one factor in the adverse impact suffered: *R.R.* at para. 298.

In *Moore*, discussed in detail below, the complainant's learning disability was clearly a factor in the adverse treatment he experienced, as his school district failed to provide him with the intensive remediation he required to be able to have equal access to the public education system. In *Caring Society 2016* and *Pekuakamiulnuatsh*, the complainants' status as Indigenous persons living on reserve was the reason for the poorer quality of child and family services and policing they experienced due to insufficient funding by Canada for these programs. In *MacNutt*, non-Indigenous spouses of Indigenous persons living on reserve were denied social assistance benefits because of their race and/or ethnic origin.

In *R.R.*, the Tribunal found that the requisite connection was met on the basis that the agency assumed the complainant was not fit to parent because of her trauma, child welfare history, and conflict with social workers, which assumption was based on stereotype and prejudice connected to her mental health and Indigeneity. It is easy to see how this type of assumption could and likely frequently does creep into the interactions between child protection workers and Indigenous parents suffering similar disadvantage and past trauma, even where the service provider is an Indigenous agency with predominantly Indigenous employees, as was the case in *R.R.* The Tribunal indeed concluded that the discrimination faced by R.R. was "the effect of a wider web of laws, policies, and practices which interact to create a system stacked against Indigenous families, especially single mothers living in poverty, with disabilities, and with children with disabilities" (at para. 307).

It rejected the agency's argument that R.R.'s protected characteristics themselves impaired her ability to safely care for the children, finding that the children were not in need of protection. If this were to be established in a different case, however, the Tribunal noted that "a child protection agency acting in good faith to protect a child may justify adverse impacts on the parent so long as it takes all reasonable and practical steps to accommodate their *Code*-related needs" (at para. 302).

In cases where the service provider demonstrates that the conduct leading to the adverse impact was for other reasons entirely unrelated to the protected characteristic, or there is simply no evidence (even a "subtle scent") that the protected characteristic was a factor in the adverse impact, *prima facie* discrimination will not be substantiated.

For example, in *Hasek v. BC Ministry of Health (No. 2)*, 2018 BCHRT 187, the complainant claimed that older age was a factor in the refusal of the Ministry of Health to fund a vaccine for shingles, where it funded a vaccine for chicken pox (which is caused by the same virus) for children. The Tribunal noted that, having decided to provide a publicly-funded immunization program, the Ministry was under an obligation to do so in a non-discriminatory manner. However, it found that age was not a factor in declining to fund the shingles vaccine. Rather, the Ministry considered the issue in detail according to its analytical

framework for assessment of new vaccines, and had decided to fund other vaccines in priority. The reasons for this were that 1) the other vaccines were more effective at preventing the relevant health condition; 2) the health conditions they prevented caused more severe symptoms than shingles, including death; and 3) the conditions they prevented were communicable, whereas shingles was not. The Tribunal also rejected the allegation that there was a disproportionate effect on older people because of the decision to fund the chicken pox vaccine and not the shingles vaccine, as the chicken pox vaccine provides benefits at all ages even though it is received in childhood.

Similarly, in *Hoffman v. British Columbia (Ministry of Social Development)*, 2012 BCHRT 187, the respondent Community Living British Columbia established that differences in supports and services provided to the complainant as compared to others with similar disabilities were due to the fact that the latter group had become eligible for services at an earlier date and had entered into individual support agreements with CLBC, prior to the implementation of a guide regarding resource allocation that had impacted the manner in which persons were assessed for services.

4. ***Bona Fide* Justification/Undue Hardship**

In *Moore*, the Supreme Court noted that at the justification stage, it must be shown that alternative approaches were investigated, and the prima facie discriminatory conduct must also be "reasonably necessary in order to accomplish a broader goal". In other words, an employer or service provider must show "that it could not have done anything else reasonable or practical to avoid the negative impact on the individual" (*Moore* at para. 49; *VIA Rail Canada Inc. v. Canadian Transportation Agenc*y, 2007 SCC 15 at para. 130).

VIA Rail dealt with a complaint that VIA had not appropriately modified used train cars it had purchased. Specifically, they did not accommodate passengers' own wheelchairs. The Supreme Court noted that the concept of undue hardship "implies that there may necessarily be some hardship in accommodating someone's disability" – it is only where it rises to the level of an undue burden, where only unreasonable or impracticable options for accommodation remain, that accommodation will not be required (at paras. 122 and 130). "Undue" was defined as meaning "disproportionate, improper, inordinate, excessive or oppressive, and expresses a notion of seriousness or significance" (at para. 140).

It is clear that as a general proposition, cost will not lightly be found to justify conduct that has been found to be *prima facie* discriminatory. While the majority in *VIA Rail* noted that cost is a legitimate factor to consider, it cautioned that tribunals "must be wary of putting too low a value on accommodating the disabled", and that "it will always seem demonstrably cheaper to maintain the status quo and not eliminate a discriminatory barrier" (at paras. 128 and 225). The majority provided the following guidance for determining when cost may be sufficient to constitute undue hardship:

> [131]…[A]ssessing whether the estimated cost of remedying a discriminatory physical barrier will cause undue hardship falls to be determined on the facts of each case and the guiding principles that emerge from the jurisprudence. A service provider's refusal to spend a small proportion of the total funds available to it in order to remedy a barrier to access will tend to undermine a claim of undue hardship (*Eldridge*, at para. 87). The size of a service provider's enterprise and the economic conditions confronting it are relevant

> (*Chambly*, at p. 546). Substantial interference with a service provider's business enterprise may constitute undue hardship, but some interference is an acceptable price to be paid for the realization of human rights (*Central Okanagan School District No. 23*, at p. 984). A service provider's capacity to shift and recover costs throughout its operation will lessen the likelihood that undue hardship will be established: *Howard v. University of British Columbia* (1993), 18 C.H.R.R. D/353 (B.C. Human Rights Council).
>
> [132] Other relevant factors include the impact and availability of external funding, including tax deductions (*Brock (Litigation Guardian of) v. Tarrant Film Factory Ltd.* (2000), 37 C.H.R.R. D/305 (Ont. Bd. of Inquiry)); the likelihood that bearing the net cost would threaten the survival of the enterprise or alter its essential character (*Quesnel v. London Educational Health Centre* (1995), 28 C.H.R.R. D/474 (Ont. Bd. of Inquiry)); and whether new barriers were erected when affordable, accessibility-enhancing alternatives were available…

On the facts, the Court upheld the finding of the Canadian Transportation Agency that, based on a proper estimate of the cost to modify the cars (which were being substantially refurbished in any event), it was a relatively insignificant sum when viewed in the context of VIA's entire capital expenditure, the fact that it had a substantial contingency fund for unforeseen events, and the fact that it was in the midst of favourable economic conditions. The cost could be shifted throughout VIA's operations, and the impact on its business could also be lessened by planning for the modifications to occur over time.

Moore involved a challenge by the parents of an elementary school student, Jeffrey Moore, who was unable to be accommodated in his local public school due to a severe learning disability. The only way he could receive the intensive remediation he needed was through the District Diagnostic Centre, a program which provided such assistance to students with severe learning disabilities, but which was being closed for cost reasons. As a result, his parents enrolled him in private school.

The District received funding from the Province, under a block funding approach. The Province capped funding for certain categories of disabilities in order to control the increasing number of students qualifying for supplementary funding. As a result, if the number of students requiring the funding was above the cap, a district would be forced to draw on the general provincial allocation to fund the services for these students.

The BC HRT held that the failure of the public school system to give Jeffrey the support he needed to have meaningful access to the educational opportunities offered by the Board amounted to discrimination, which was upheld by the Supreme Court. The Court agreed there was no doubt the District was facing "serious financial constraints" at the relevant time, and that this was a relevant consideration. It stated, "[i]t is undoubtedly difficult for administrators to implement education policy in the face of severe fiscal limitations, but accommodation is not a question of 'mere efficiency'" (at para. 50). However, the Tribunal found that cuts were disproportionately made to special needs programs. For example, the District retained some discretionary programs, such as an "Outdoor School", which had roughly the same operating cost as the Diagnostic Centre. The Court endorsed the view of Justice Rowles in dissent at the Court of Appeal that specialized, discretionary initiatives

"cannot be compared with the accommodations necessary in order to make the core curriculum accessible to severely learning disabled students".

More significant, however, was the fact that the District undertook no assessment, financial or otherwise, of what alternatives could be reasonably available to accommodate special need students if the Diagnostic Centre were closed. The failure to consider financial alternatives "completely undermine[d]" the District's argument that it was justified in providing no meaningful access to an education for Jeffrey because it had no economic choice: "[i]n order to decide that it had no other choice, it had at least to consider what those other choices were" (at para. 52).

The Province, which provided funding to the District, had also been found liable by the Tribunal. The Supreme Court set this finding aside, noting that although the District's budgetary crisis had been created, at least in part, by the Province's funding shortfalls, it was the District which failed to properly consider the consequences of closing the Diagnostic Centre or how to accommodate affected students.

Howard v. University of British Columbia (1993), 18 C.H.R.R. D/353 (B.C. Human Rights Commission), was another case where cost was found to be insufficient to constitute undue hardship. The complainant was a Deaf student who alleged that the University had failed to accommodate him in declining to providing an ASL interpreter. The Commission accepted that to do so was a considerable cost - $40,000 per year (in 1993) for the complainant alone, and there might be other students who would require interpretive services. However, it noted that the University's annual budget was approximately $700,000,000, and that there was no evidence that its operations would be seriously affected if it provided the complainant with an interpreter – there was in fact "no evidence at all about the potential economic impact of the requested accommodation" (at para. 50).

Dunkley v. UBC, 2015 BCHRT 100, was similarly a complaint involving a request for ASL interpretation, this time by a Deaf physician in a dermatology residency program. The University and her employer ("PHC") argued the cost to provide this service over the course of her residency would have been between $2.5 and $3 million, which it claimed was undue hardship. However, the Tribunal found two major problems with the respondents' argument. First, the estimate was unreasonably high as it represented a "worst case scenario" approach (based on a "freelance" rate for interpreters); the respondents had not considered other alternatives such as salaried interpreters. Second, there was no evidence that between UBC and PHC they could not have accommodated the cost. As in *Howard*, UBC had adduced no evidence of the effect on its operations. While PHC had adduced evidence of its budget, neither respondent explored the possibility of cost-sharing between them or with other entities, such as the Ministry of Health (which funded residency positions) and Vancouver Coastal Health, under which PHC operated and which had an annual budget of over $3 billion.

Clearly, not all respondents will have a similar level of resources as universities and health authorities. In *Egurney v. British Columbia Housing Management Commission*, 2006 BCHRT 561, undue hardship was established in a case of a request for ASL interpretation. The respondent was a garden club, which was made up of volunteers. The complainants argued that they were not able to communicate during club meetings due lack of interpretation. The Tribunal found that, with only $220 in the club's bank account, interpretive services were "clearly well outside its budgetary capabilities" (at para. 49).

An example of a case where alternative funding sources were considered was *Ledoux v. Gambler First Nation*, 2018 CHRT 26. Gordon Ledoux used a wheelchair and required a ramp to access his home. His brother, David Ledoux, who was the Chief of the Gambler First Nation, initially built him a makeshift skidoo ramp, but this was not sufficiently functional. He made a request for a proper ramp, but funds were not immediately available as Gambler was in a deficit and new funding would only be available after March 31 when the new fiscal year began. The Tribunal stated:

> It is easy to look at Gambler's financial statements in hindsight and say that there was money available in its budget during the relevant period to fund building the wheelchair ramp. But at the time of the request, building a wheelchair ramp at Gordon's house was unfunded and money needed to be found…

David attempted to secure another funding source, first contacting a CMHC program and ultimately finding some money earmarked for a wheelchair ramp at the band office that he used to construct a ramp at Gordon's home instead. Despite this, Gordon brought a complaint alleging discrimination on the basis that there had been a delay in its construction. The Tribunal found there was a *bona fide* justification for the delay in finding funds, as to have gone into deficit to pay for it earlier would have been undue hardship.

It is obvious from these decisions that a service provider will be expected to incur some hardship in respect of accommodating protected characteristics, including with respect to cost, and that there is an expectation that reasonable alternatives will be considered both in terms of the service itself, as well as methods to pay for it. *Moore* is particularly instructive, as the District administered and managed its programs based on government funding. Although it was experiencing severe financial constraints resulting in part from the level of government funding, its position on undue hardship ultimately failed because it had failed to *consider* any alternative to shutting down the Diagnostic Centre, such as cutting discretionary programs, offering an alternative program for severely learning disabled students, or attempting to find funding elsewhere.

There is a line, however, where the cost to accommodate becomes undue. Where that line lies will be obvious in some cases, but less so in others. Considerations for First Nations providing prevention services will be discussed in the next section.

5. Human Rights Considerations for First Nations providing Prevention Services

(a) Cost

Based on the case law, if a First Nation were to rely on financial hardship as a reason to deny a particular prevention service, the types of things it would likely need to establish include:

- That it had considered whether there was a cheaper alternative to the specific service requested, or whether the service could at least be partially provided;
- There was insufficient prevention funding to fund the service, in light of other priorities for the use of that funding;
- There was insufficient funding elsewhere in the FNCFS program, in light of other priorities for the use of that funding;

- There was insufficient funding elsewhere in its budget, having regard to other community priorities and important public services for its members; and
- It had explored other funding sources, such as the FNCFS Program emergency fund, or, alternatively, other government programs or funding that might be available to it.

If the First Nation sufficiently considered alternative services and funding, and made reasonable efforts to find money to pay for the service but was not successful, the failure to provide it due to legitimate budgetary constraints would likely be considered a *bona fide* justification. It would not be sufficient, in our view, for the First Nation to simply conclude that the funding from Canada was insufficient to pay for the service, without exploring any alternatives.

(b) Other considerations

Depending on the type of complaint, cost may not be the reason for the failure to provide the service (or provide it differentially) and would therefore not be a possible justification. For example, in *R.R.*, the complaint related not to the absence of services, but the manner in which the agency and its social workers treated the complainant in their dealings with her, and their decision to remove her children and restrict her access to them as a result of assumptions based on stereotypes and prejudice. This type of complaint demonstrates the importance for service providers of making decisions in an objective manner based on families' needs and circumstances, and not based on personal characteristics that are not relevant to the parent's ability to care for the child.

The cases also demonstrate the importance of consideration and documentation in making decisions as to whether to provide a service. If a First Nation decides not to provide a certain prevention service, or provide a service to some parents/families but not others, the reasons for this should be objective and based on clear criteria. In addition to cost, these criteria could include things like need, expected effectiveness/benefit of the service, and urgency.

6. Remedies

The remedies available to the CHRT are broad, and include the following:

- cease the discriminatory practice and take measures to prevent the practice from occurring in the future;
- make available to the victim the rights, opportunities or privileges that were denied;
- compensate the victim for any lost wages as a result of the discrimination;
- compensate the victim for the additional costs of obtaining alternative goods, services, facilities or accommodation as a result of the discrimination;
- compensate the victim up to $20,000 for any pain and suffering that the victim experienced as a result of the discrimination;

- compensate the victim up to an additional $20,000 if the discrimination was wilful or reckless; and,

- award interest on an order to pay financial compensation.

These amounts of financial compensation are lower than the usual range of damages in a negligence claim. However, where there are multiple complainants, the total award could be significant.

SUMMARY

Whether First Nations providing prevention services outside of an agreement with provinces/territories owe a duty of care to the recipients of those services is a novel question. They do not owe the same statutory duties as agencies and their employees who are providing services under provincial/territorial legislation, other than the duty to report children in need of protection. However, in our view, a court would likely find sufficient proximity to support a duty of care owed to children, but likely not to parents or other family members, in respect of the provision of secondary and tertiary prevention services. As with child protection, the purpose of providing these services to families is to reduce risk to children who are or may be at risk of harm, and secondary and tertiary prevention services are provided on an individual basis involving close interactions with families. However, it is less clear that there would be a positive duty to provide specific services, as opposed to as a duty to provide services in a non-negligent way.

If the First Nation is providing only primary prevention services, it is difficult to see how a duty of care could be owed, as these services are being provided at the community level, or to particular groups, and not targeted at individuals. It seems unlikely that this could place the First Nation into a sufficiently close and direct relationship with individual parents, children, or families to justify imposing a private law duty of care.

First Nations who have not exercised their jurisdiction over child and family services under C-92 or under s. 35 would likely still be considered sufficiently governmental in nature to benefit from core policy immunity as a defence to a finding of a *prima facie* duty of care. For core policy immunity to apply, the decision must be a considered one that is based on social, economic, or political factors; is made in good faith; and is not irrational.

The standard of care applicable to First Nations employees, without social work training, in the provision of prevention services would likely be lower than that expected of trained social workers in the child protection context. However, if a duty of care has been found and the employee has breached this standard of care, the First Nation will likely be vicariously liable. The employee also likely would not have immunity against personal liability (except potentially with respect to the duty to report) as the statutory immunity applies to the exercise of powers and duties under the legislation.

In respect of a First Nation's liability in human rights law, the Nation will almost certainly be considered to be providing a "service" to the "public" where it is directly providing prevention services, and likely also if it is making decisions regarding which prevention services will be provided and/or to whom, even if those services are ultimately being delivered by an agency. However, making very high-level and general decisions – for example, how much funding will be available for each of primary, secondary, and tertiary prevention – is less likely to constitute a "service" offered to the "public".

If a complainant has established *prima facie* discrimination in the provision of prevention services, undue hardship based on cost may be established. However, the First Nation will likely be expected to have considered reasonable alternative services as well as whether funding can be obtained from elsewhere to pay for the service. To avoid discrimination claims, First Nations should also ensure they are providing prevention services based on objective factors and criteria such as need, urgency, and the expected benefit of the service, rather than in a manner that could be considered arbitrary, based on irrelevant personal characteristics, or based on stereotypes or prejudice.

Thank you for the opportunity to provide this opinion. We look forward to discussing any questions you may have at your convenience.

Yours truly,

ALEXANDER HOLBURN BEAUDIN + LANG LLP

APPENDIX B – OUTREACH MATERIALS AND QUESTIONNAIRE

Information for First Nations not served by a FNCFS agency

The Institute of Fiscal Studies and Democracy (IFSD) is pleased to continue working with the Assembly of First Nations (AFN), the Caring Society (Dr. Cindy Blackstock), and the National Advisory Committee (NAC) to support the long-term reform for First Nations child and family services (FNCFS).

IFSD is grateful and humbled by the commitment, trust, and generosity shown to us by FNCFS agencies and First Nations over the past four years. Together, we proposed a well-being focused vision of child and family services.

In January 2022, the parties to the Canadian Human Rights Tribunal (CHRT) proceedings on FNCFS announced an agreement in principle, which included compensation for past harms of the FNCFS system, and a commitment to long-term reform. *This commitment to long-term reform presents an opportunity to reset the FNCS system with a focus on well-being and the needs of First Nations.*

First Nations take care of their children and families in different ways. First Nations not served by a FNCFS agency will have different resource needs (funding, personnel, capital, etc.) to deliver services to support the well-being of children and families.

First Nations not served by a FNCFS agency have an opportunity to share their vision and needs for service delivery in their communities through this needs-assessment.

Our ask to you
We need First Nations to share their needs, experiences, and visions in child and family services in **one of two ways**:

1) **Complete a questionnaire:**
    a. Complete the questionnaire transmitted with this email.
    b. Return it to helaina.gaspard@ifsd.ca by **June 30, 2022**.
    c. Upon completion, receive one $300 gift certificate to a selected vendor for your First Nation (Amazon, Tim Hortons, Walmart, or Shoppers Drug Mart).

OR

2) **Serve as 1 of 10 First Nations collaborators:**
    a. Invite IFSD to visit your First Nation for 1 to 2 days.
    b. Share time, experiences and more detailed financial data and programming plans, as well as capital needs.
    c. Research collaborators will serve as models in this work and will have profiles developed (for their review and approval) to share their wise practices.

d. If you are interested in serving as a collaborator, contact helaina.gaspard@ifsd.ca | (613) 983-8461.

Why participate?

- This work is about First Nations control and care of delivery.
- Real data and experiences make this work relevant.
- IFSD needs your perspective to cost approaches and identify resource gaps.
- You can share your vision and propose a new approach for supporting child and family services activities in First Nations.

Sharing findings

As is its usual practice, IFSD will update stakeholders monthly on the project's progress. Updates will be released via email and posted to the project website (www.ifsd.ca/fncfs).

IFSD welcomes your ongoing feedback and suggestions (helaina.gaspard@ifsd.ca).

How will shared data be used?

Any data shared will only be used for the purposes of this project. Participants can withdraw at any time and any data they shared will be destroyed.

Any information that is disseminated publicly will be aggregated and/or anonymized to protect the privacy of research collaborators.

All data from questionnaires will be aggregated, and no individual participants will be identifiable in any publicly shared reports, updates, or briefings to stakeholders.

First Nations serving as research collaborators will be asked to review and approve any anonymized profiles built based on their work and experience prior to public dissemination.

How will my data and privacy be respected and protected?

Hosted at the University of Ottawa, IFSD is guided by ethical research guidelines respecting Indigenous Peoples. IFSD requested that FNIGC provide a technical review of its tools and materials.

All data shared by First Nations will be held on password protected cloud-storage system (OneDrive). All servers associated to IFSD's cloud-storage system are resident in Canada. Data shared will be accessible only to IFSD staff directly engaged in the project.

Any locally held data will be stored on IFSD research laptops only. Any physical copies of data or data shared on USB keys will be kept in a locked cabinet in a locked office at IFSD's office.

Research collaborators can withdraw at any time. Any data shared with IFSD will be destroyed.

The research protocols of individual First Nations will be followed.

About IFSD

IFSD is a research institute that uses money as a tool to analyze and solve public policy challenges. It is gratefully located on the traditional territory of the Algonquin People. Led by Canada's first Parliamentary Budget Officer, Kevin Page, IFSD works in Canada and abroad to lend decision-support to governments, the broader public and private sectors. Since 2018, IFSD has been collaborating with First Nations and First Nations child and family services agencies on the costing, design and delivery of child and family services. IFSD is pleased to continue its work in this area, collaborating with and learning from those serving children and families.

Case study overview for research collaborators:
First Nations not served by a FNCFS agency

First Nation research collaborators will be asked to share their needs in child and family services, as well as their existing approaches to service delivery, perceived successes, challenges, and data on programming/services, and related expenditures.

As contributors and partners in this work, First Nations collaborators will be asked to share their insight on the delivery of child and family services, resource allocations, and considerations for the future, including capital needs.

The information shared by First Nations research collaborators will be used to define a baseline of existing services and to capture and cost needs to deliver child and family services in First Nations not served by a First Nations child and family services (FNCFS) agency.

IFSD's standard practice is to anonymize all information shared by research collaborators, unless they wish to be identified by name and provide written permission to do so.

IFSD recognizes the importance of your work and the demands on your time and is committed to working with your availability. ***IFSD depends on your insight and contributions to ensure representation and validity of its work.***

IFSD will work with you to schedule an in-person visit in your community, in accordance with public health guidelines. If a virtual meeting is necessary, IFSD will schedule a session via MS Teams, Zoom, by phone, or using your preferred platform.

Guiding questions and themes for the exchange include:

1) Context:
    a. Tell us about your community and the people you serve.
    b. Tell us about your community's geography/location/remoteness considerations.
    c. Tell us about what child and family services focused services and programming work well and which work less well.
    d. Are there children in your community in care?
    e. What do you think your community needs to be better meet the needs of children and families?
2) Band Council overview:
    a. Tell us about your governance structure.
    b. Are there one or more organizations involved with children and families?
    c. How do organizations work together?

   d. Could coordination between service providers be improved to support holistic care for children and families?
3) Programming overview:
   a. Tell us about the programs and services provided by your community.
   b. Tell us about the child and family services and/or prevention services provided by your community.
   c. How do you align resources (human, financial, infrastructure) to your programming priorities?
   d. Are there program gaps or future directions/considerations for programs and services?
4) Tell us about legal costs associated to child and family services. Do you have sufficient funding to cover them? What are your sources of funding?
5) Tell us about travel expenses. Do you have the resources required for travel expenses? What are the sources?
6) Do you have existing sources for programming design and delivery, data analysis, and operational supports?
   a. Please describe those sources of support, e.g., regional organizations, communities of practice, etc. Can they be improved to better support your needs?
7) Are there functions a First Nations-led child and family services secretariat could fulfill to support you, e.g., programming design and delivery, data analysis, operational supports, etc.?
8) Resources and allocation:
   a. Do you have the resources (human, financial, infrastructure) necessary to provide programming for child and family services?
      i. Tell us about any challenges in attracting or retaining staff, e.g., housing, salary, etc.
   b. Do you have the relevant technology to design and deliver programming, e.g., hardware, software, broadband, etc.?
   c. What is your annual budget for child and family services and/or prevention programming?
      i. What are your budget sources, e.g., federal, provincial, own-source revenues, other?
   d. Has your community requested CHRT-mandated funding for prevention or other programming?
      i. If yes, was it received?
      ii. If not, why?
9) Do you have First Nation or Indigenous social workers or other staff to design and deliver your prevention programming? Do you have wise practices to share on providing culturally-informed training to your staff?
10) Capital needs assessment:
   a. What prevention services do you want/plan to provide in the next 5 years, 10 years, 15 years, and 20 years that you are not providing now?

b. What types of assets will you need to deliver on those services, e.g., building, vehicle, culture supports, etc.?
    i. If applicable, specify any set-up or functional requirements that go above and beyond standard office and meeting space.
c. What assets do you have?
d. What assets are missing/needed?
e. How will the needed assets be used? For how long?

Capital asset attributes
Condition: The actual physical and technical state of the asset.
Capacity: The ability of the asset to accommodate the First Nations children, families, and communities served for protection and/or prevention purposes.
Function: The ability of the asset to meet the needs of protection and/ prevention services.
Cultural: The ability of the asset to respect and meet cultural norms and traditions of First Nations served.

11) Data and performance:
    a. How does your community make programming decisions?
    b. How does your community determine what programming works?
    c. Does your First Nation capture its own information on the well-being of children and families in community, e.g., health, languages spoken, community engagement, and participation in cultural activities, etc.?
12) Other considerations:
    a. Challenges/obstacles faced or overcome by your community.
    b. Wise practices, programs, services to share.

IFSD
IFPD

QUESTIONNAIRE FOR FIRST NATIONS NOT SERVED BY A FNCFS AGENCY

You are invited to complete this questionnaire on behalf of your First Nation. The information and practices you share will help to identify needs and estimate the costs to support the design and delivery of child and family services in First Nations not served by a First Nations child and family services (FNCFS) agency.

Your participation in this questionnaire is voluntary. If at any time you wish to withdraw your participation, contact **helaina.gaspard@ifsd.ca** and your data will be destroyed.

Definitions

Child and family services: programs, resources, tools or supports that support the healthy social development of children and families, with a focus on building resiliency.

Prevention services: programs, resources, tools, or supports that aim to limit exposure or re-exposure to the child protection system.

Protection services: services to promote child safety, often by removing the child and placing them in care.

Child in care: a child of the First Nation that is in protective services, whether they are in care in the First Nation or outside of the community.

Fiscal year 2021–22: the period from April 1, 2021 to March 31, 2022.

First Nations-led secretariat: proposed national organization with regional connections to support data analysis and programming for First Nations by First Nations.

Post-majority supports: programs and services for youth ageing out of the care system.

Customary care and kinship adoptions: placement and/or adoption of children in care with family members.

Full-time equivalent (FTE): the number of employees that work a full-time work schedule.

Part-time equivalent (PTE): the number of employees that work less than a full-time work schedule.

First Nation: Province or territory:

Total population (include all persons residing on First Nation territory):

Geographic zone:

Contact name:

E-mail: Phone:

Existing programs and services provided by your First Nation

1. Does your First Nation offer child and family and/or prevention programs and services?

   ☐ Yes ◯ No

   a. If **yes**, select all that apply:

   ☐ Child and family services

   ☐ Prevention services

   ☐ Other (please specify):

2. Select the programs and services offered from the list below.

   ☐ Family violence prevention

   ☐ Healthy child development

   ☐ Maternal-child health and development

   ☐ After school programming and supports

   ☐ Poverty alleviation

   ☐ Family preservation

   ☐ Parenting supports and resources

   ☐ Healthy eating

   ☐ Healthy active lifestyle

   ☐ Land-based programming for children, youth, and families

   ☐ Safe homes for transition

   ☐ Group homes for youth

   ☐ Community housing or transition housing

   ☐ Respite services

   ☐ Mental health services

   ☐ Early learning and childhood development

   ☐ Special needs services

   ☐ None

   ☐ Other (please describe):

3. Do you offer post-majority care programs and/or services?

   ☐ Yes ☐ No

   a. If **yes**, tell us about your programs and/or services.

   b. Are there any changes or additions you would like to make to this program/service area?

4. Do you have policies or practices in place for customary adoption and kinship care?

   ☐ Yes ☐ No

   a. If **yes**, tell us about your policies or practices.

   b. Are there any changes or additions you would like to make to this program/service area?

5. Would you like to share examples of initiatives, programs, or tools developed or used in your First Nation to support children and families?

6. Are children from your First Nation in care (protection services)?

   ☐ Yes ☐ No

   a. If **yes**, how many children are in care?

Administration and staffing

7. Who is responsible for coordinating your programs and/or services? Select all that apply.

   ☐ Prevention services office or coordinator

   ☐ Child and family services office or coordinator

   ☐ Health services office or coordinator

   ☐ Elementary school administration

   ☐ Other (please specify):

8. How many full-time equivalent staff do you have to deliver services?

   a. What are their titles?

9. How many part-time equivalent staff do you have to deliver services?

   a. What are their titles?

10. Do you have any difficulty attracting qualified staff?

    ☐ Yes ◯ No

    a. If **yes**, what are some reasons why?

11. Do you have any difficulty retaining qualified staff?

    ◯ Yes ◯ No

    a. If **yes**, what are some reasons why?

12. Do you collaborate with other offices or services in the First Nation to deliver programs and services?

    ◯ Yes ◯ No

    a. If **yes**, select all that apply:

    ☐ Prevention services office or coordinator

    ☐ Child and family services office or coordinator

    ☐ Health services office or coordinator

    ☐ Elementary school administration

    ☐ Other (please specify):

Financial information

13. Do you have existing resources for programming design and delivery, data analysis, and operational supports?

- [ ] Yes
- [ ] No

a. If **yes**, please describe those sources of support, e.g., regional organization, community of practice, etc.

14. How could a national First Nations-led secretariat for First Nations child and family services support your First Nation? Select all that apply.

- [ ] Program design and delivery
- [ ] Data collection
- [ ] Data analysis
- [ ] Operational supports
- [ ] Other (please specify):

15. What is your annual budget for the services described in question #2 (fiscal year 2021-22)?

$

16. What is/are the sources of your budget? Select all that apply.

- [ ] Band
- [ ] Treaty First Nation
- [ ] Federal government
- [ ] Provincial government
- [ ] Other (please describe):

Own source revenue

17. What is the source of most of your funding? Select one.

- [ ] Band
- [ ] Federal government
- [ ] Provincial government
- [ ] Own-source revenues
- [ ] Other (please describe):

Capital assets and technology

18. Where do you host your programming? Select all that apply.

- [ ] First Nation's community centre
- [ ] First Nation's gymnasium
- [ ] First Nation's school
- [ ] First Nation's health centre
- [ ] First Nation's social services centre
- [ ] Other (please describe):

19. Do you have the space you need to deliver your programming?

- [ ] Yes
- [ ] No

a. If **no**, what programming space is needed?

20. Do your programming spaces meet applicable building codes (e.g., technical specifications or regulations that help to ensure building safety and accessibility)?

- [ ] Yes
- [ ] No

21. Could your programming space be improved?

- [ ] Yes
- [ ] No

a. If **yes**, how could the programming space be improved?

22. Do you have the office space you need for your staff?

- [ ] Yes
- [ ] No

a. If **no**, what office space is needed?

23. Does your office space meet applicable building codes (e.g., technical specifications or regulations that help to ensure building safety and accessibility)?

- [ ] Yes
- [ ] No

24. Could your office space be improved?

- [ ] Yes
- [ ] No

a. If **yes**, how could your office space be improved?

25. Do you have the necessary technology to do your work?

- [ ] Yes
- [ ] No

a. If **no**, what technologies do you require?

- [ ] Faster internet connection
- [ ] Updated computer
- [ ] Additional software
- [ ] Tablet
- [ ] Mobile phone
- [ ] Data collection tools
- [ ] Data analysis tools
- [ ] Other (please specify):

26. Do you have assets (other than technology)? (An item is considered an asset when it is intended for use on a continued basis and is typically repaired, not replaced when damaged, and typically, has a useful life of more than one year).

- [ ] Yes
- [ ] No

a. If **no**, what assets do you need? Select all that apply.

- [ ] Vehicles
- [ ] Cultural and language programming tools
- [ ] Canoes, kayaks, paddle boards
- [ ] Other (please specify):

Desired services

27. Does your First Nation have the child and family services and prevention services they want and need?

☐ Yes ☐ No

a. If **no**, what is missing or what would you like to see included? Please specify.

28. Are there programs or services you would like to offer but cannot?

☐ Yes ☐ No

a. If **yes**, what are the limitations? Select all that apply.

☐ Funding

☐ Staff

☐ Programming space or tools

☐ Limited time for planning

☐ Funding or authority rests with another department or entity in the First Nation, e.g., education, health

☐ Program design

☐ Program implementation/delivery

☐ Program evaluation

☐ Other (please describe):

29. If you were to deliver your desired set of services for your First Nation, what would you estimate it would cost for one year? Consider for instance, the costs of personnel (salaries and benefits), program development, capital expenditures, etc. You can think of this as an estimated total budget for one fiscal year.

$

Community well-being

30. How would you express your First Nation's vision of holistic well-being?

31. Does your First Nation capture its own information on the well-being of children and families in community?

- [ ] Yes
- [ ] No

a. If **yes**, what information is captured?

- [ ] Number of children in care
- [ ] Rates of family reunification
- [ ] Number of children accessing services
- [ ] Number of families accessing services
- [ ] Outcomes for children in care
- [ ] Outcomes for children accessing services
- [ ] Outcomes for families accessing services
- [ ] Community health outcomes
- [ ] Family violence incidents
- [ ] Languages spoken spoken in your First Nation
- [ ] Community engagement in community-based activities
- [ ] Community participation in cultural activities
- [ ] Other (please specify):

32. What data would be required to help advance your mandate?

33. Do you have the capacity to collect data necessary for:

Program design:	○ Yes	○ No
Budgeting:	○ Yes	○ No
Assessing well-being:	○ Yes	○ No
Long-term planning:	○ Yes	☐ No

a. If you answered **no**, what are your capacity challenges or needs?

- ☐ Funding
- ☐ Technical expertise to analyze data
- ☐ Data governance policy
- ☐ OCAP policies
- ☐ Other (please specify):

34. Are there other considerations about child and family services and/or prevention that you wish to share with IFSD?

35. May IFSD contact you to follow-up on this questionnaire?

○ Yes ○ No

Thank you for your participation

Completed questionnaires can be sent to **helaina.gaspard@ifsd.ca**

APPENDIX C – REGIONAL WORKSHOP SUMMARIES

May 19, 2023

Dear collaborators,

We write to you humbly to share the findings from our collaborative efforts.

IFSD recognizes the contributions of over 75 First Nations not affiliated to a First Nations child and family services (FNCFS) agency that shared their experiences and defined needs in child and family services from May 2022 to November 2022. National participation in the questionnaire (with the population adjustment for Quebec) was 46% (n=160).

We recognize that the data analysis process took significantly longer than initially planned. The varied nature of the data made analysis a much slower process than usual. We are pleased to be able to share our findings with you now.

First Nations not affiliated to a FNCFS agency have significantly different starting points and needs that should be reflected in future funding approaches. The table below summarizes IFSD's mandate and responses from engagement with First Nations and their representatives in this work (this includes both questionnaires and workshop engagement).

IFSD's Mandate and Responses to Questions

Mandate	Responses
Assess needs in First Nations not served by a First Nations child and family services (FNCFS) agency for the delivery of prevention and other child and family related services.	• Diverse and inconsistent starting points among First Nations • A clearly defined starting point and plan are critical to mapping a way forward • There is no baseline understanding of the resources, capacities, and needs of First Nations not affiliated to a FNCFS agency
Quantify a structure and a range of costed approaches for the delivery of child and family services focused activities on-reserve.	• Questionnaire data and collaborative efforts with First Nations yielded highly varied data • Defining one approach to cost analysis was not possible given the range of starting points, e.g., current services offered, no services offered, remote, rural, etc. • Lack of clarity around current budgets may suggest that those delivering services do not control regular funding (it is also possible that participants did not want to share the information)
Consider capital, programming, and operational	• Gaps reported in technology (e.g., hardware and internet connectivity)

requirements (e.g., staff, IT, etc.) in the analysis	• Significant gaps reported for staff and programming spaces • Challenges attracting and retaining staff • Capacity gaps for data collection and evidence generation

IFSD has prepared a national summary of findings, as well as regional portraits. These summaries are appended to the transmittal email.

IFSD's Next Steps

1) Build examples of funding models (with consideration of different starting points) based on findings;
2) Request regional review meetings of the models to ensure they capture different needs;
3) Prepare a final report for December 2023 with a summary of findings.

Should a presentation and discussion of findings be desired, kindly contact Tianna Tischbein – tianna.tischbein@ifsd.ca – by June 9, 2023, to organize a date/time for a regional session.

We are grateful for your time and effort spent collaborating with us to understand the opportunities and challenges before us. We look forward continuing this important work with you.

Sincerely,

Helaina Gaspard, Ph.D.
Director, Governance & Institutions

Funding approach considerations
First Nations not affiliated to a FNCFS agency

DRAFT – FOR DISCUSSION ONLY

May 2023

IFSD's mandate

- Assess needs in First Nations not served by a First Nations child and family services (FNCFS) agency for the delivery of prevention and other child and family related services.
- Quantify a structure and a range of costed approaches for the delivery of child and family services focused activities on-reserve.
- Consider capital, programming, and operational requirements (e.g., staff, IT, etc.) in the analysis.

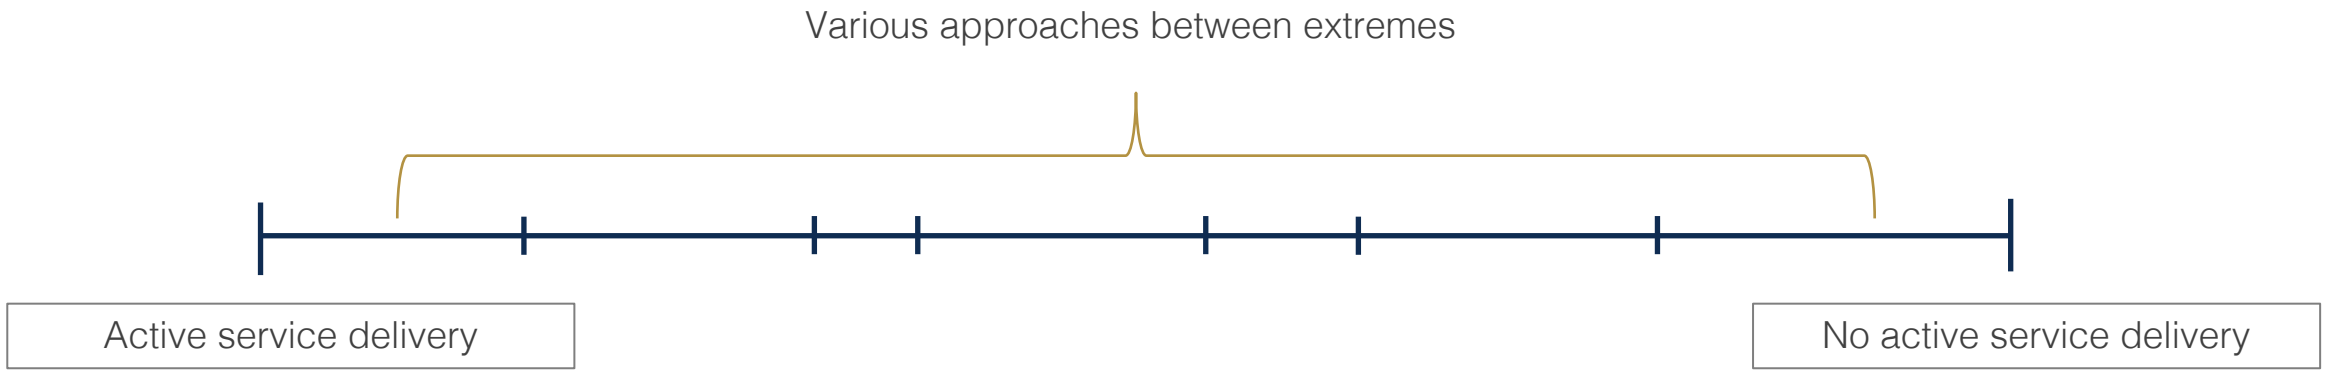
Considerations for a path forward

- There are gaps in cost data and variability in starting points that will require a nuanced approach to building funding models for First Nations not affiliated to a FNCFS agency
  - Questionnaire was released but cost data was limited;
  - 9 workshops hosted with helpful contributions but no consistency in mandate, activities, or starting point
  - 11 collaborator agreements released, only 5 returned, with limited engagement on case study development

- To build funding approaches, the following should be considered:
  - Define four typologies of funding models based on starting point and program/service delivery
    - Develop guiding questions to build differentiated budgets
  - Through regional organizations, engage in outreach to review/revise the approach for regional applicability

Typology analysis

- There is significant variability operationally, financially, and organizationally when it comes to how First Nations are delivering child and family and related services.
- Most First Nations are offering some services, but not the services they would like to offer to meet their communities' needs.
- There are two extremes: there are First Nations offering a variety of services in CFS and related areas at one end, and at the other, First Nations without active service delivery (or, where service delivery is desired).



Funding approach considerations

No single funding approach will be practical for First Nations not affiliated to a FNCFS agency.

- It is anticipated that the result of the analysis will be an approach with five components that can be applied based on context:

  1) Funding principles
  2) Baseline
  3) Program activities
  4) Performance framework
  5) Treasury Board Policy on Transfers

- These are components of a funding approach that First Nations not affiliated to a FNCFS agency can leverage to provide a diagnostic or basic needs assessment to substantiate or support planning.

Component	Definition	Costing considerations
Funding principles	Spirit and intent of funding guiding the structure of the allocation, e.g., consistency, carry-forwards, block or other mechanism.	The dollar amount associated to program design and delivery is the last step of the process. The principles that provide structure and guidance to the approach should be defined and aligned to the goal of the initiative.
Baseline	Starting point of services with consideration of First Nations' context.	Define the starting point, including existing services, staff, funding, capital, that will support future service delivery. If no baseline exists, proxies from other sources, e.g., First Nations, organizations with similar mandates for services delivery, etc.
Program activities	Various activities and services to be provided, e.g., early childhood education, mental wellness supports, etc.	Use data from existing models and programs to build cost estimates of desired programs and services. Sources include, Band Council, other programs, e.g., MFI, existing cost analysis, e.g., IFSD, industry standards, etc.
Performance framework	Vision of child child and family services indicators to track changes in the well-being of children, families, and the community.	The indicators should collect data for evidence generation. Care and control of delivery requires information for First Nations for planning, decision-making, and advocacy. Ensure the funding approach and framework are linked.
Treasury Board Policy on Transfers	Government of Canada requirements for receiving funds and reporting on activities/results.	The terms and conditions for the funding should be consistent with funding principles.

Readiness assessment

- A clearly defined starting point and plan are critical to mapping a way forward.
- There are key questions that a First Nation may wish to consider to plan their path forward on the delivery of child and family services.
- A framework to clarify the starting point is a useful tool before embarking on subsequent activities.

Guiding questions	Considerations	
What is your vision?	- What is the vision of a healthy child and family in your community?	
What's the problem you're trying to solve?	- Define the purpose and goals of designing and delivering services	
What will you do to solve the problem?	- Identify the activities you will take to deliver on goals - What are the root causes/sources of the problem? - What are options and tools at hand to address the problem?	
What do you need to solve the problem?	- Define the inputs, e.g., tools, resources, services, necessary to take action to deliver on your goal. Examples include, people, money capital, and data, etc.	
	Structure/organization	- Accountability mechanism - Mandate and approach to CFS
	People	- Align to mandate and service delivery - Consider training/capacity development - Human resources, e.g., salaries and benefits, staff wellness supports and services, etc.
	Money	- Cost estimate approach to CFS; use proxies, e.g., expenditure information from Band Council or from other sources, - e.g., IFSD, regional organizations, service providers, etc.
	Time	- When do you plan to begin implementation? - What's needed to get to the starting line? How will your needs change along the way? - Consider the different phases of planning, implementation, evaluation, etc., while ensuring children and families. receive services while the approach is being developed and is ready to be delivered
	Data	- Approach to data gathering and evidence generation to measure change to ensure your program and services have the desired impacts - System, tools, and practices for data collection and applications
	Services (expert services)	- Various, e.g., addictions services (especially, for children and youth), psychologist, counsellors, etc. - Identify sources, or approaches to sharing resources - Coordinated approach for families receiving both protection and prevention services - Coordinated approach for families moving on- and off-reserve (moving between services and systems)
	Capital	- Needs assessment - Engage with other departments in the First Nations. Are there common areas of need? Opportunities to leverage resources?
	Education (ongoing development)	- Explore training and development approaches to building community skills in CFS, e.g., partnering with colleges and universities, engaging with Elders - Opportunities for training for leadership, and other internal and external stakeholders, and service providers on the vision and service delivery approach

Questionnaire analysis

Principal takeaways

- First Nations not served by a FNCFS agency encompass a range of typologies, and have a variety of characteristics, e.g., geography, current capacity, program delivery, funding, etc. Their points of departure vary significantly, with some offering child and family services programming, and others unsure of their budgets.

- It will take time to recruit staff, build capacity, design programs, and in certain places, build structures appropriate to desired programs. These are essential considerations for any long-term and sustainable reform, setting up those supporting children and families for success.

- There are significant gaps in budgets and overall financial portraits. This will limit IFSD's ability for bottom-up cost analysis using data from the questionnaire.
  - IFSD is reviewing publicly-accessible financial statements from participating First Nations to try to understand if there are broader financial challenges in defining expenditures in child and family services.

- There are no relevant correlations or cost-driving patterns observable in the questionnaire data. This suggests diverse and inconsistent starting points, e.g., programs, services, staff, etc.

Principal takeaways from questionnaire analysis

- Budgets:
  - Lack of clarity around resources may suggest that those delivering services do not control/shape their budgets, but are rather provided budgets by their First Nation. Another possible explanation is that they did not want to share the information.

- Technology
  - Gaps in hardware and internet connectivity were reported.
  - This has implications for service delivery (incl. access to services outside of the community) and data collection/analysis.

- Building infrastructure
  - Significant gaps in staff and programming spaces were highlighted.
  - Capital needs assessment (national) will be undertaken with collaborators as part of this project.

Principal takeaways from questionnaire analysis

- Staff/capacity
  - Challenges attracting and retaining staff have been expressed nationally.

- Data collection and evidence generation
  - Capacity gaps.
  - Emphasis on input data, with limitations on well-being focused information.

Approach overview

- There is no baseline understanding of the resources, capacities, and needs of First Nations not affiliated to a First Nations child and family services (FNCFS) agency.

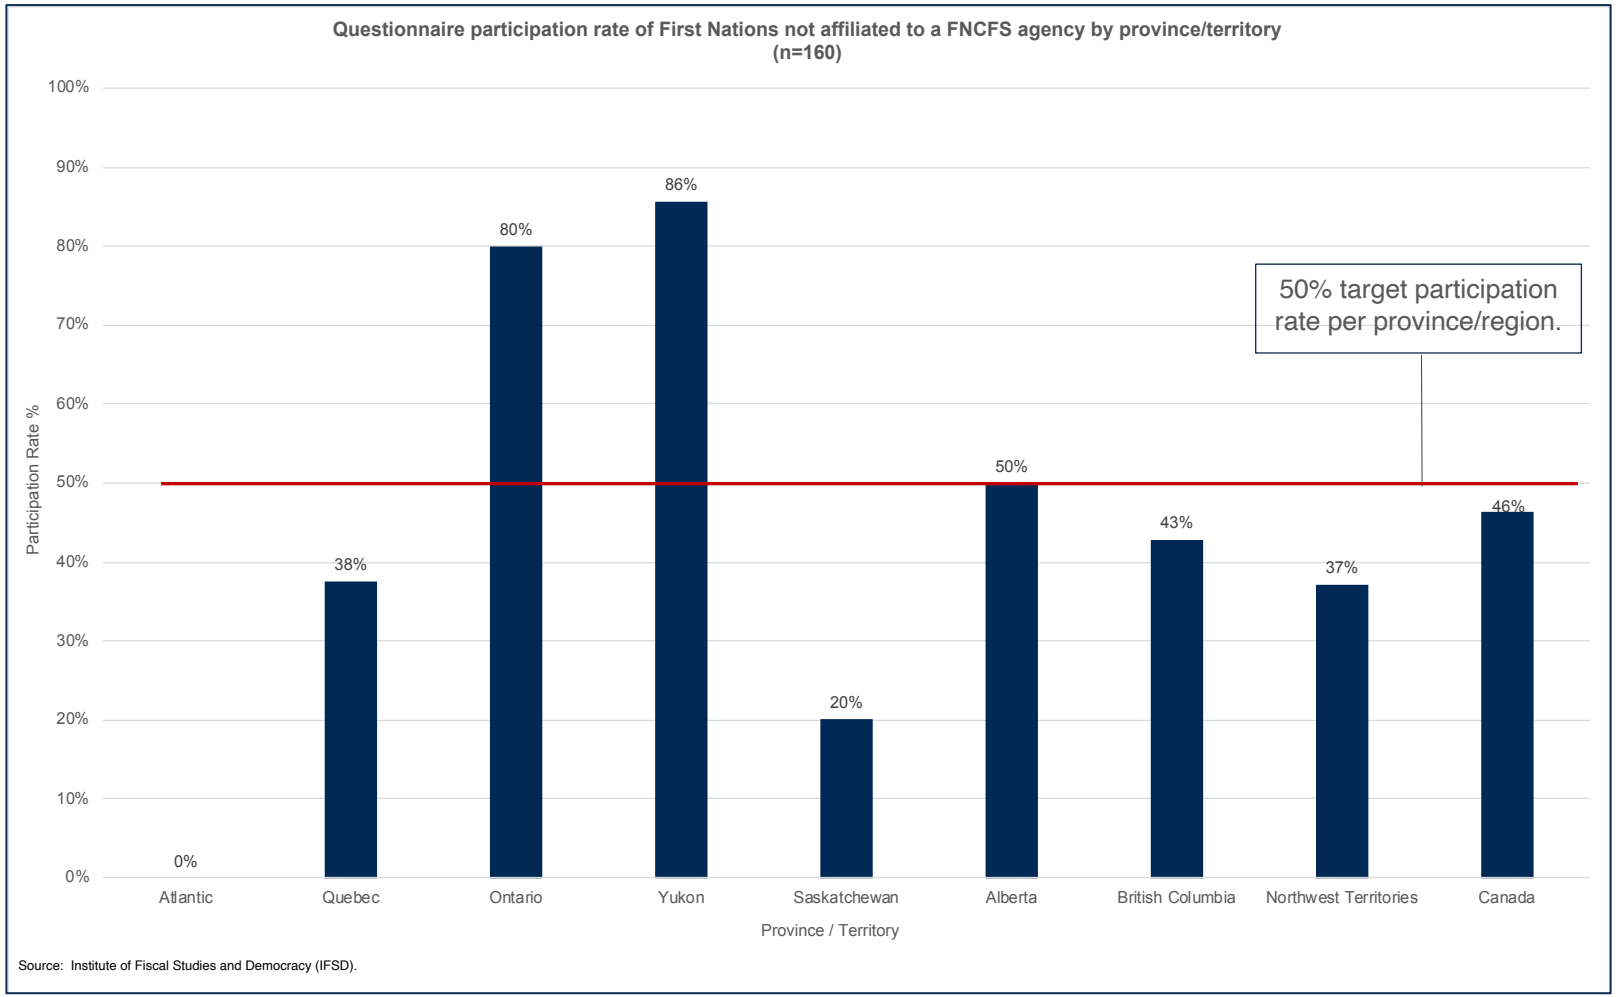
- To develop a baseline, IFSD reached out to First Nations not affiliated to a FNCFS agency requesting participation through:
  - A questionnaire (46% participation rate)
  - In-depth collaboration (5/10 collaborators confirmed; 11 collaboration agreements released)

Workshops across Canada

- In May and June 2022, IFSD hosted **9 workshops** with First Nations not affiliated to a FNCFS agency.
- IFSD heard from representatives (principally, technicians or those managing services, as well as some Band Council representatives) from over **70 First Nations Bands and over 125 participants**.
- Participants were invited to complete a questionnaire during the session and engage in discussion on current state and future needs.
- The different needs and starting points of First Nations not affiliated to a FNCFS agency should inform a future approach.

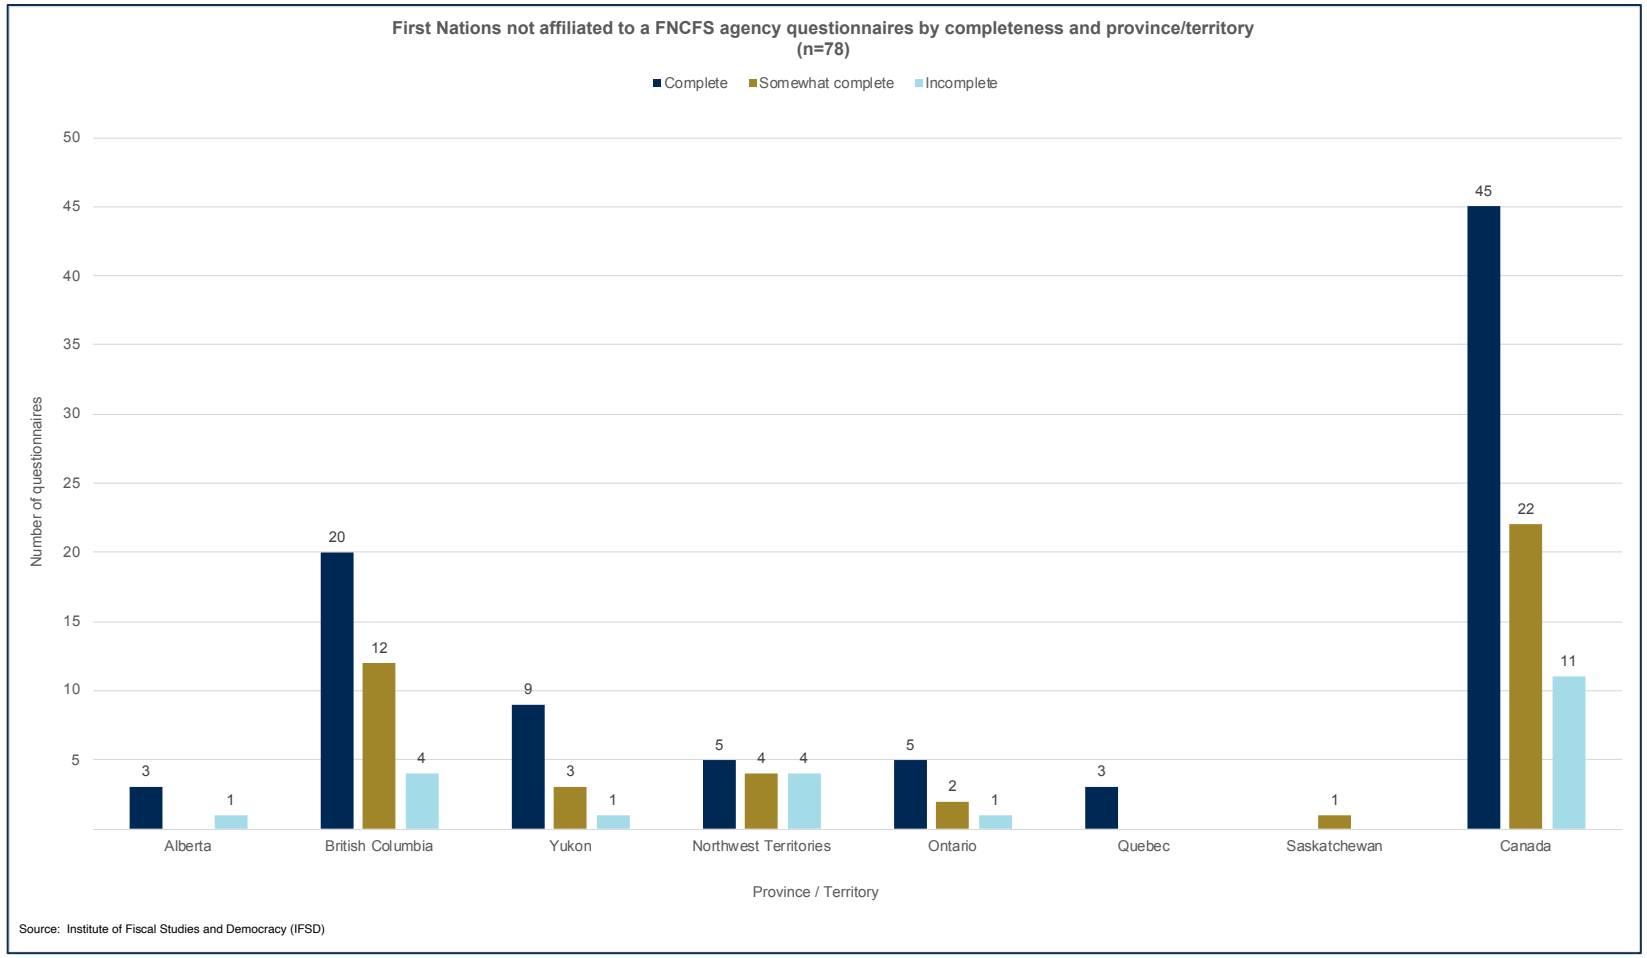
National questionnaire participation

- National participation in the questionnaire (with the population adjustment for Quebec) was 46% (n=160).



Note: Questionnaire completeness

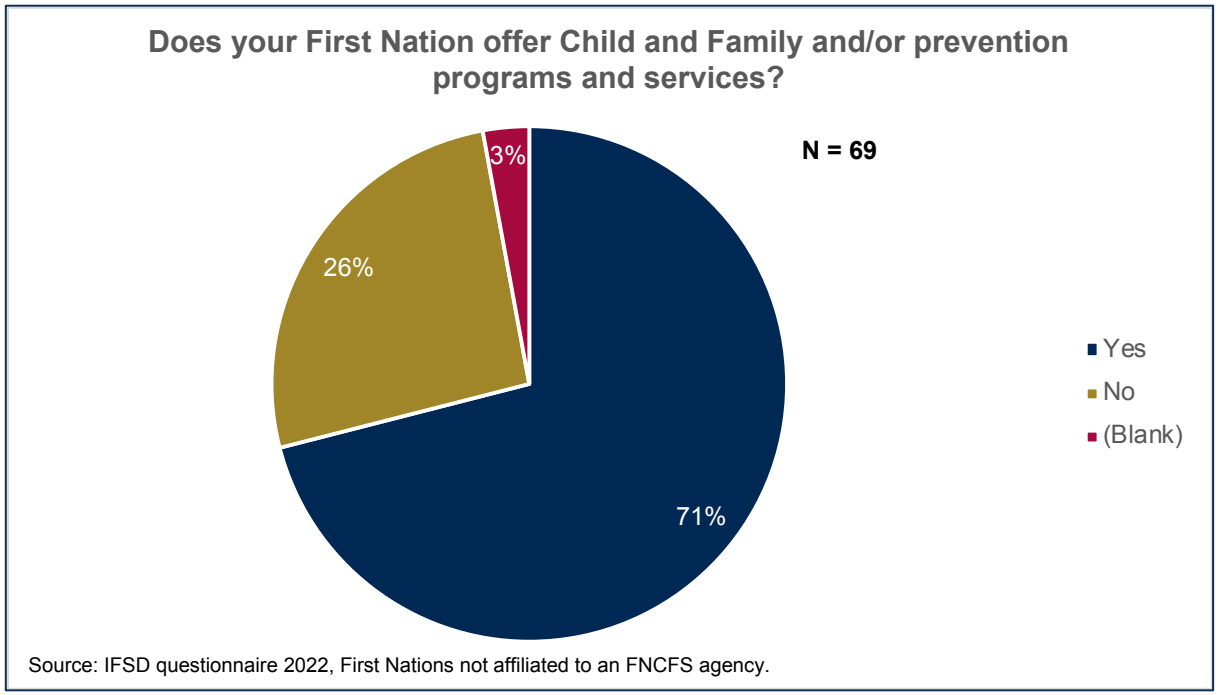
- Questionnaire completeness is variable.
- Not all questions were answered; some responses were incoherent or contradictory.
- Nearly 60% of submitted questionnaires were complete, 28% somewhat complete, and 14% incomplete/unusable.
- The Northwest Territories proportionally had the most incomplete questionnaires.



Source: Institute of Fiscal Studies and Democracy (IFSD)

Service provision

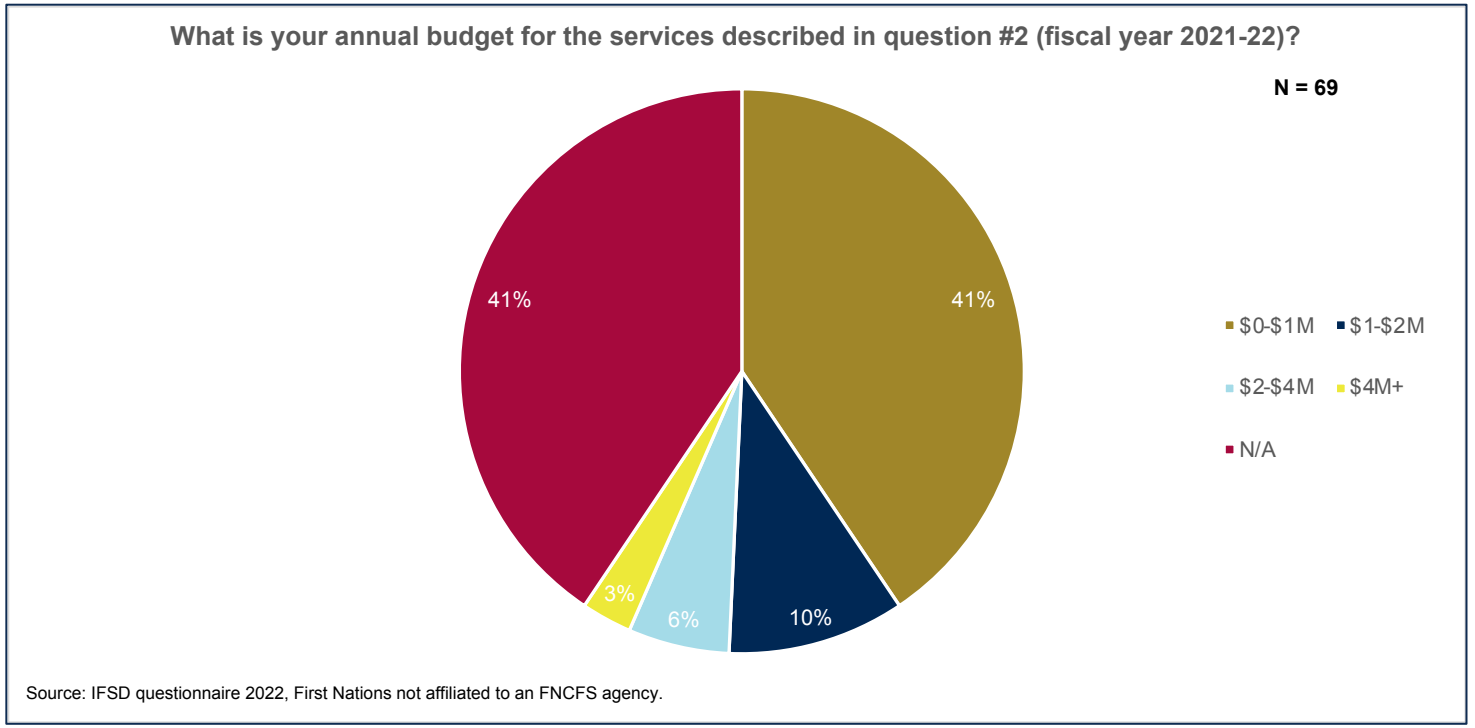
- Most First Nations reported delivering child and family services and/or prevention programs and services.
- Over a quarter of respondents reported not delivering such services (or did not respond).



Source: IFSD questionnaire 2022, First Nations not affiliated to an FNCFS agency.

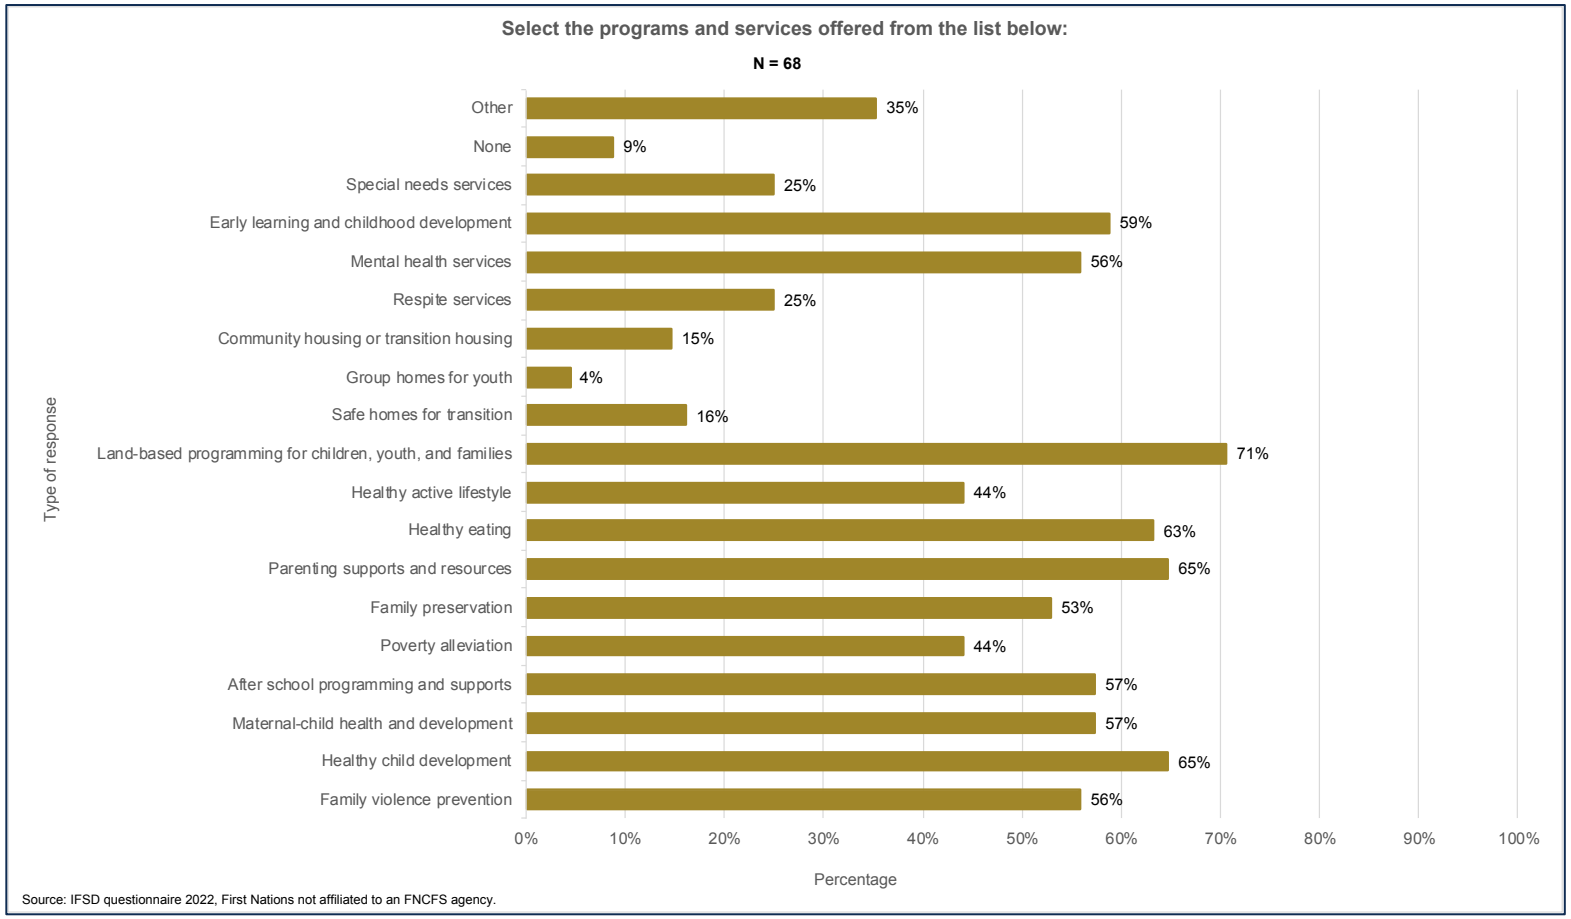
Expenditure information

- Limited expenditure data was provided by participating First Nations.
- Approximately 40% of respondents did not report a budget.
- Approximately 40% of respondents reported under $1M annual budget.



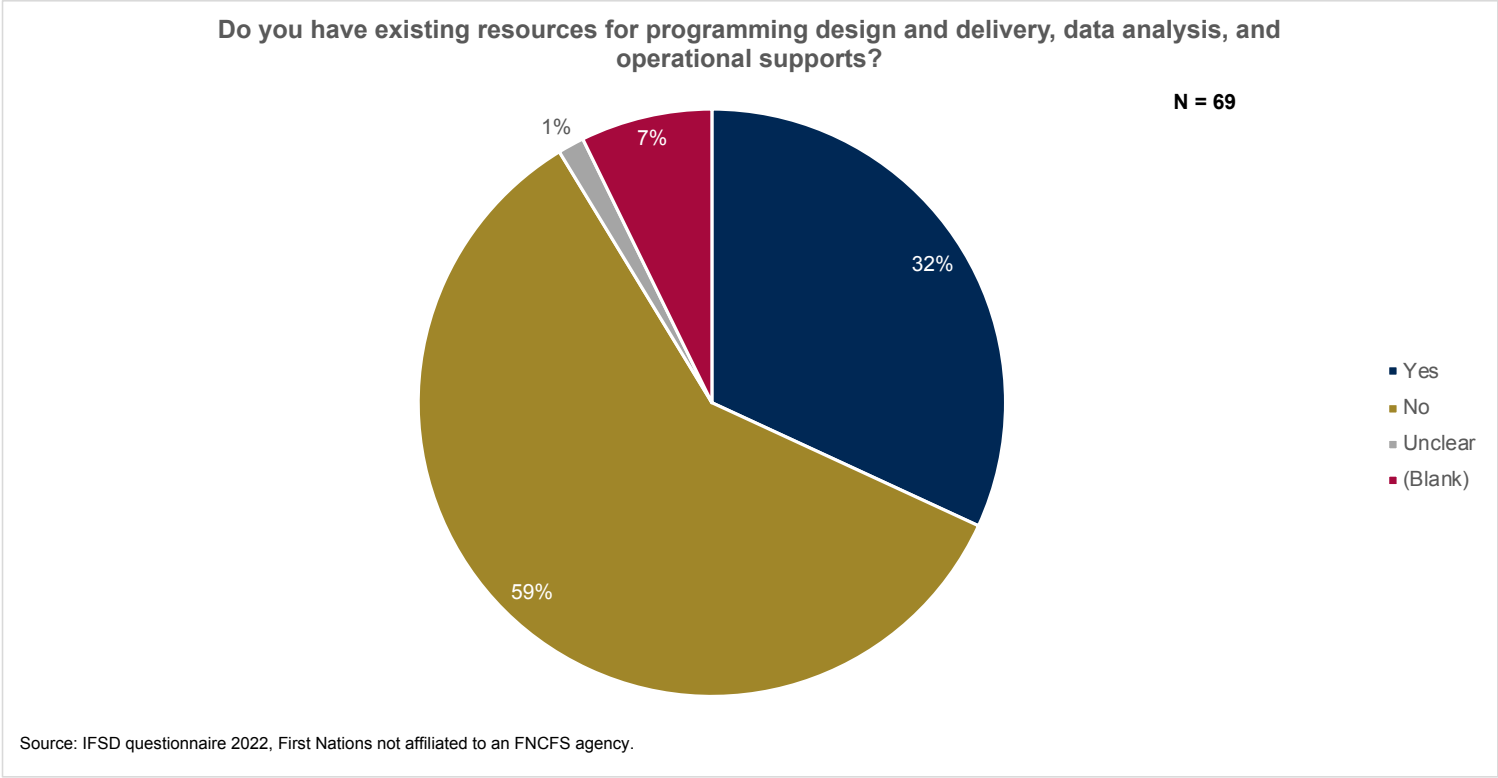
Current programs and services

- Outside of land-based programs, many programs offered by First Nations emphasize physical and mental health.



Resources for program and service delivery

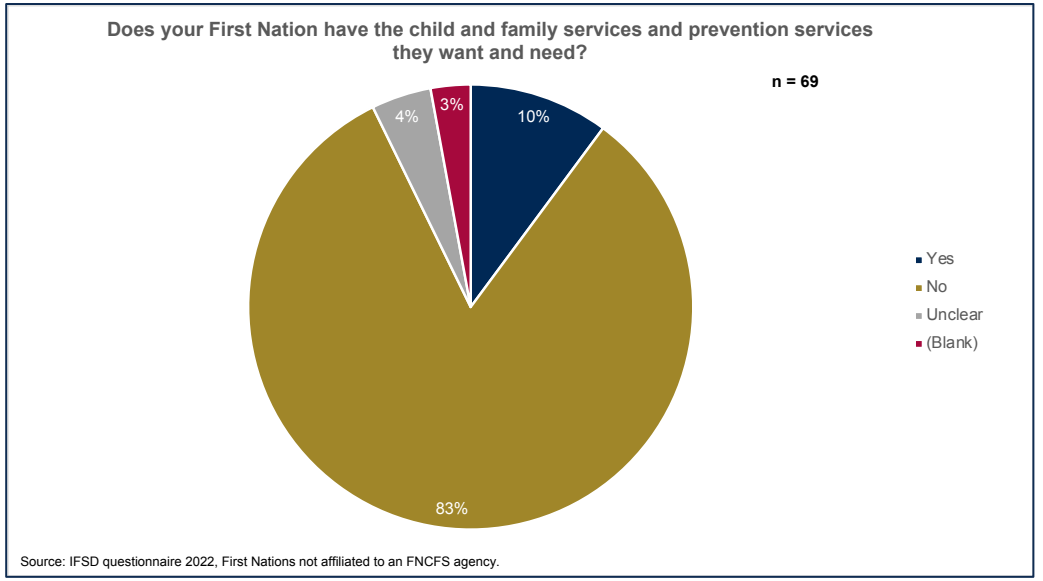
- Most First Nations do not have the resources and supports required for program and service delivery.



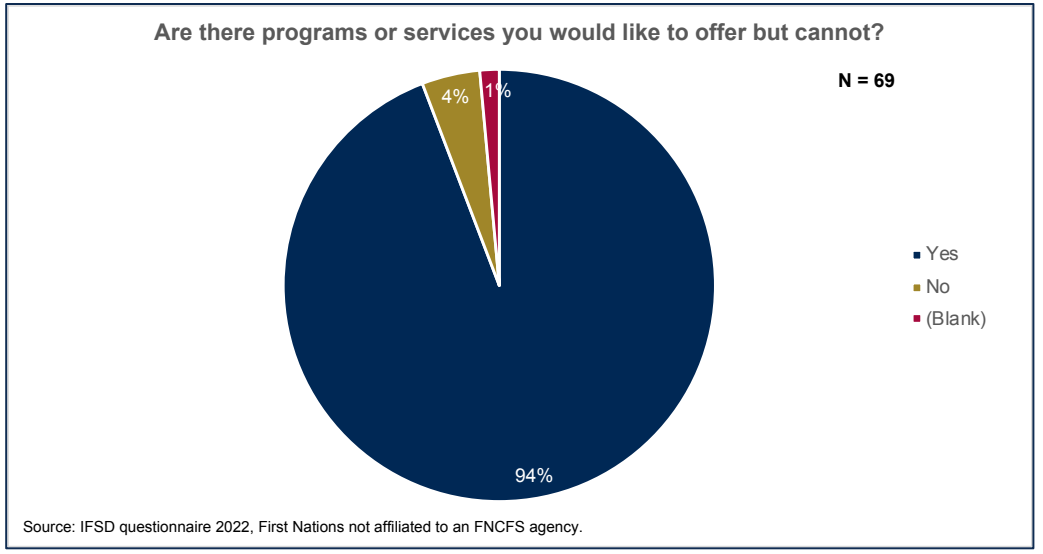
Source: IFSD questionnaire 2022, First Nations not affiliated to an FNCFS agency.

Capacity for program and service delivery

- Approximately 80% of respondents report that their First Nations are not offering the child and family services they want and need.

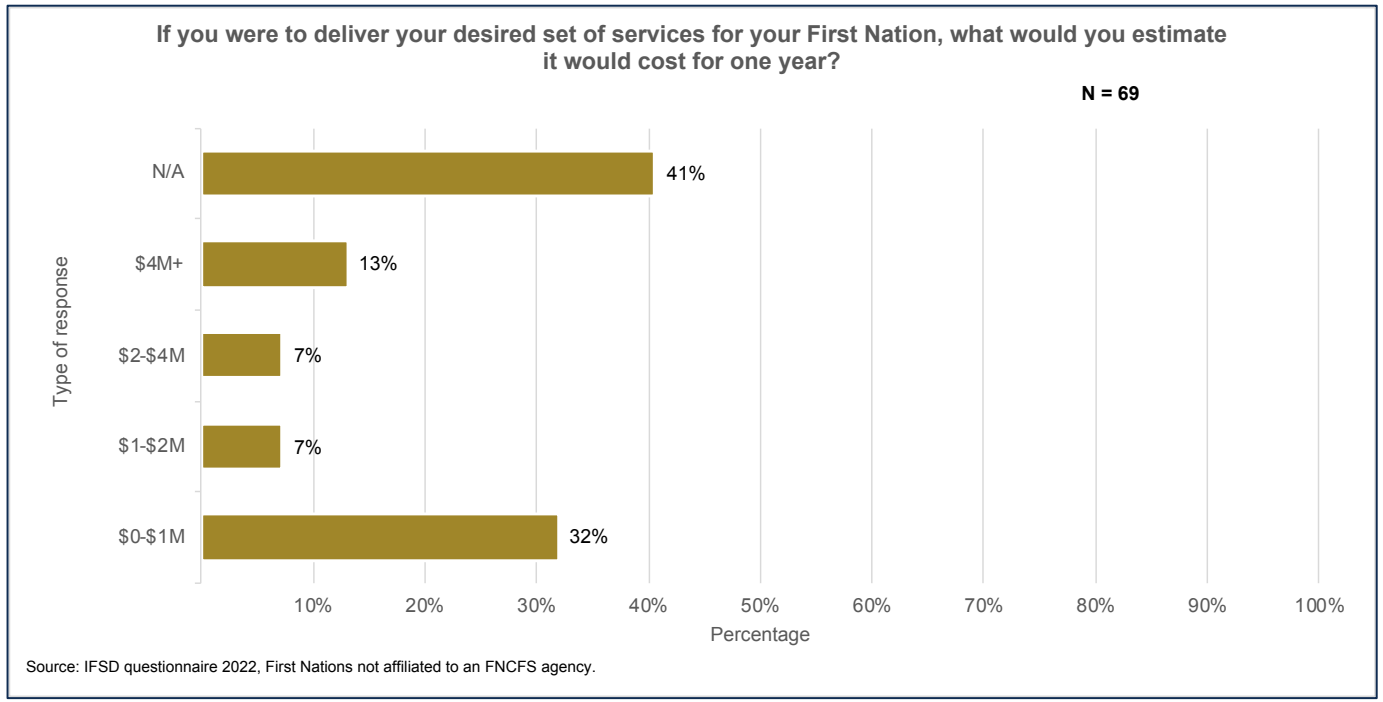


- Over 90% of respondents report not being able to offer the programs and services they would like.



Delivering desired services

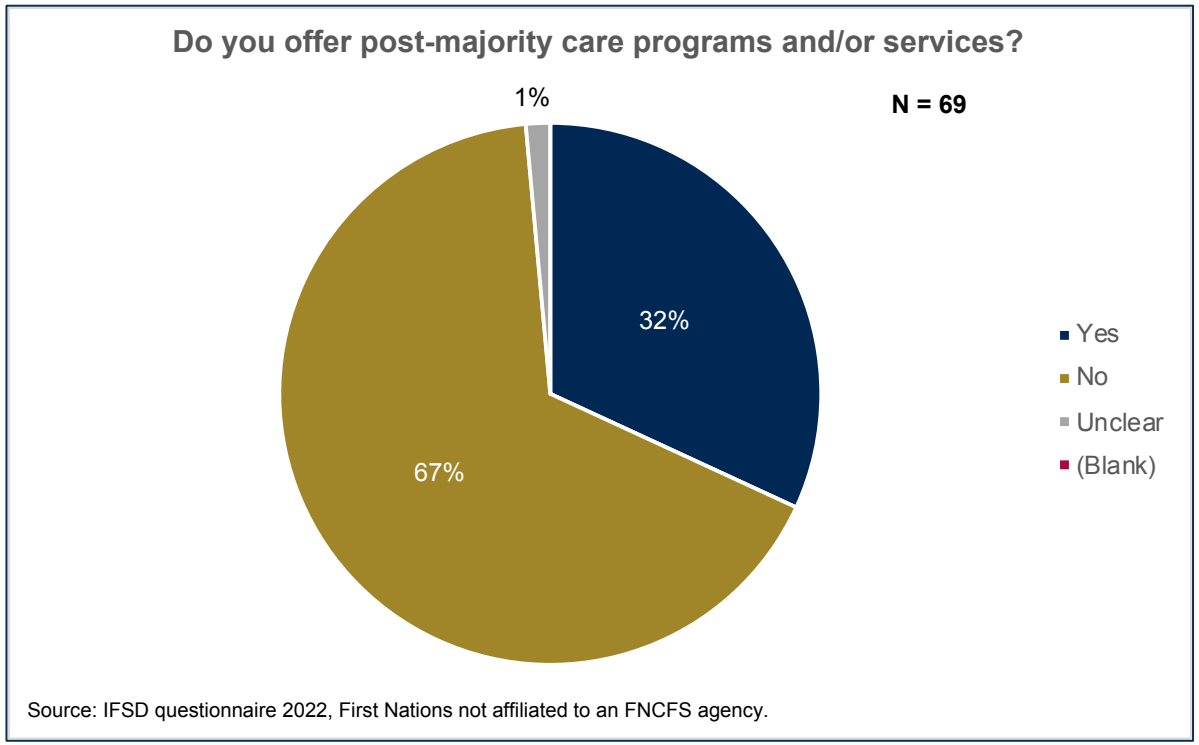
- When asked to estimate the cost of delivering desired services, 59% could provide an answer.
- Most of those responding, suggested that desired services would be under $1M (the same as the most frequently reported annual budget in the questionnaire).
- This could suggest a lack of planning opportunity or limited engagement with budget, i.e., it is provided by the First Nation rather than developed with service coordinators/providers.



Source: IFSD questionnaire 2022, First Nations not affiliated to an FNCFS agency.

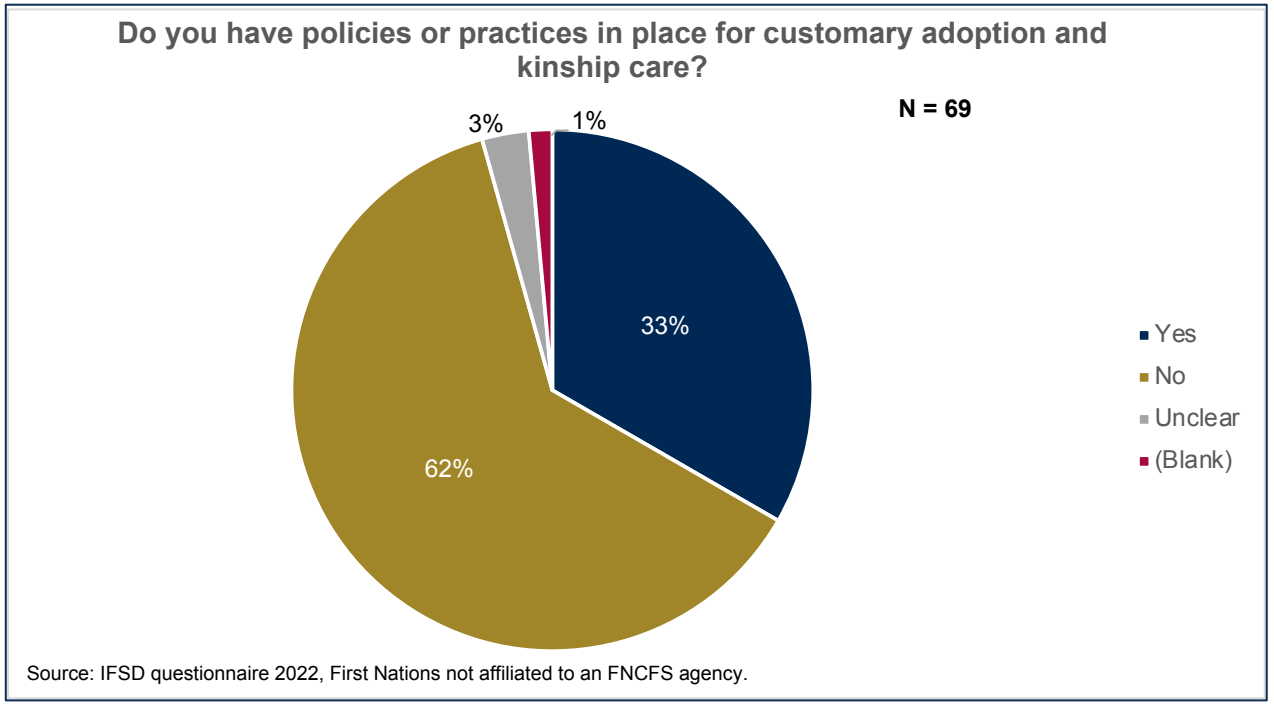
Post-care supports and services

- Most respondents do not offer post-care supports and services.



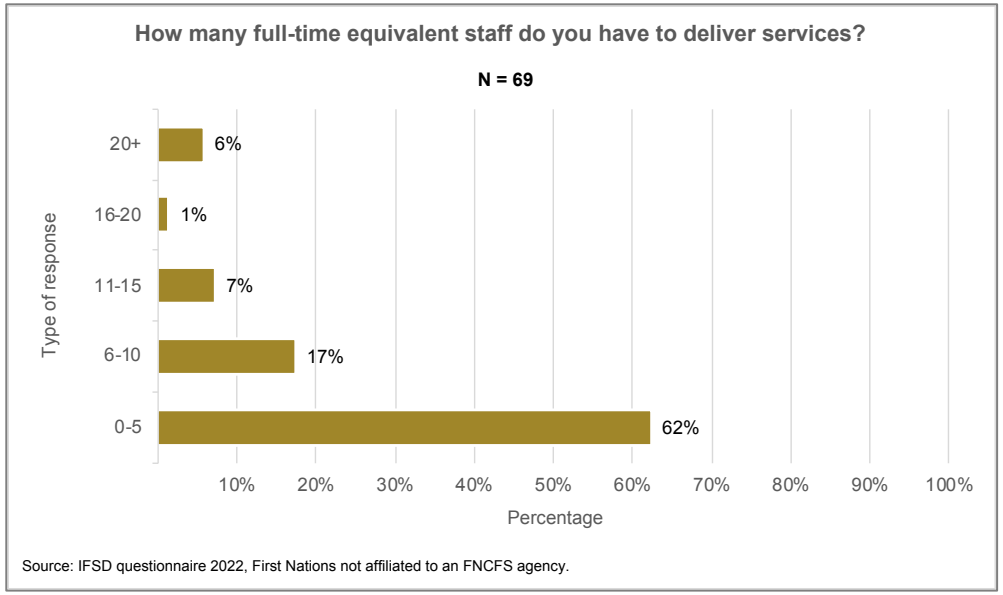
Customary adoption and kinship care

- Most respondents **do not have practices** for customary adoption and kinship care.

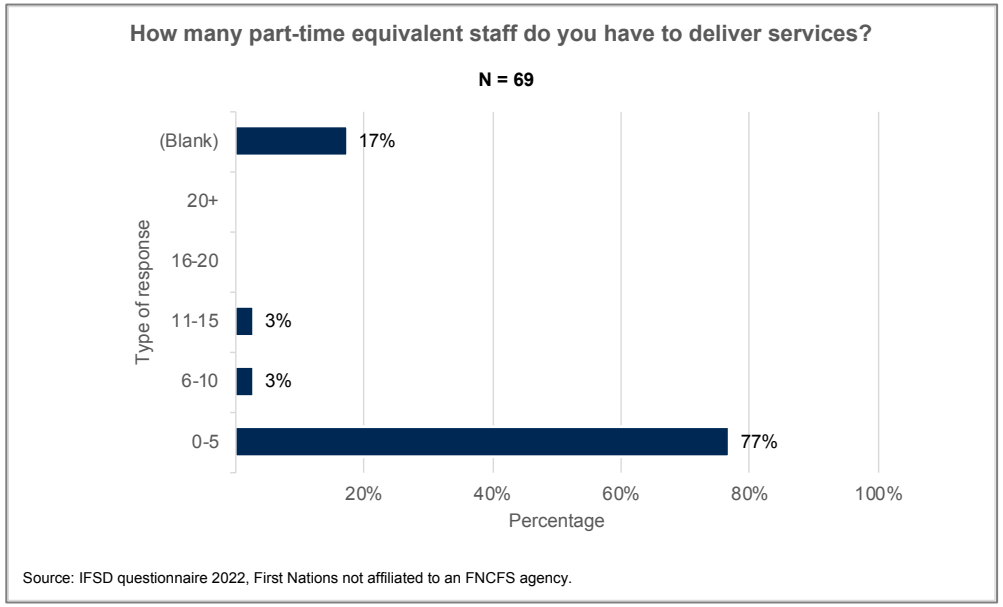


Staffing

- Most respondents report full-time and part-time staffing levels between 0-5 persons.



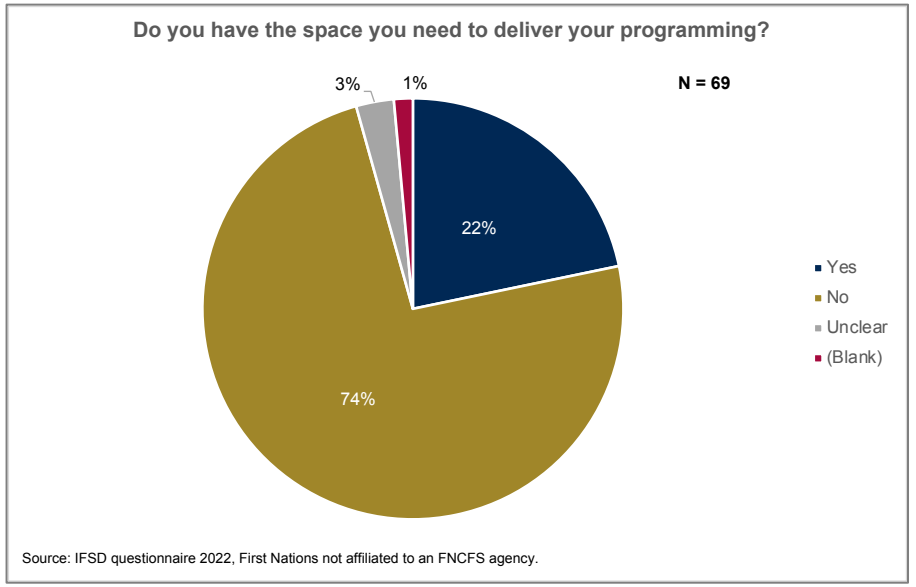
Source: IFSD questionnaire 2022, First Nations not affiliated to an FNCFS agency.



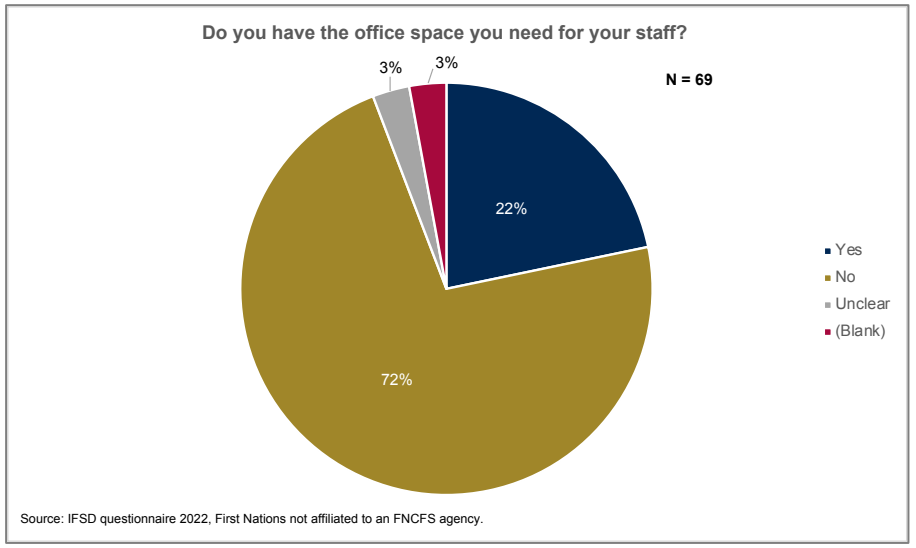
Source: IFSD questionnaire 2022, First Nations not affiliated to an FNCFS agency.

Capital

- Nearly 3/4 of First Nations do not have the necessary space for program delivery.

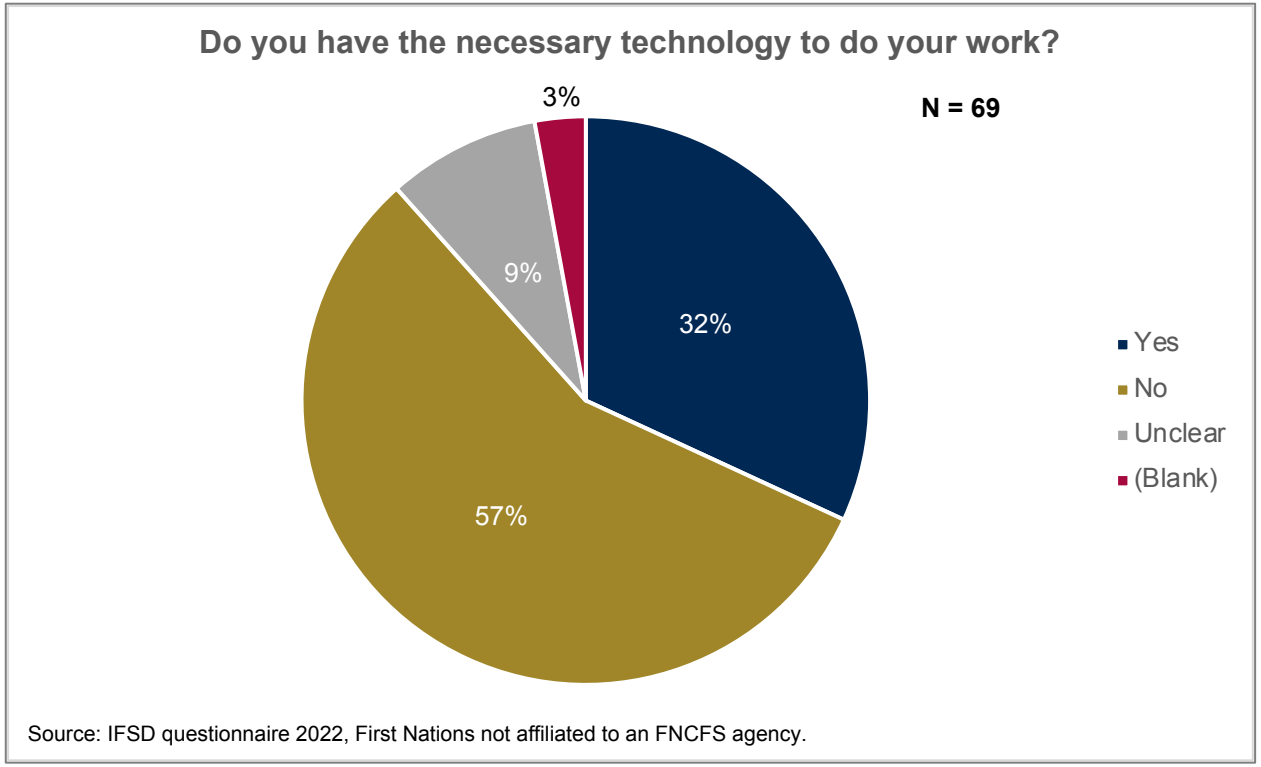


- Similar to programming space, staff office space is reported as needed by nearly 3/4 of First Nations.



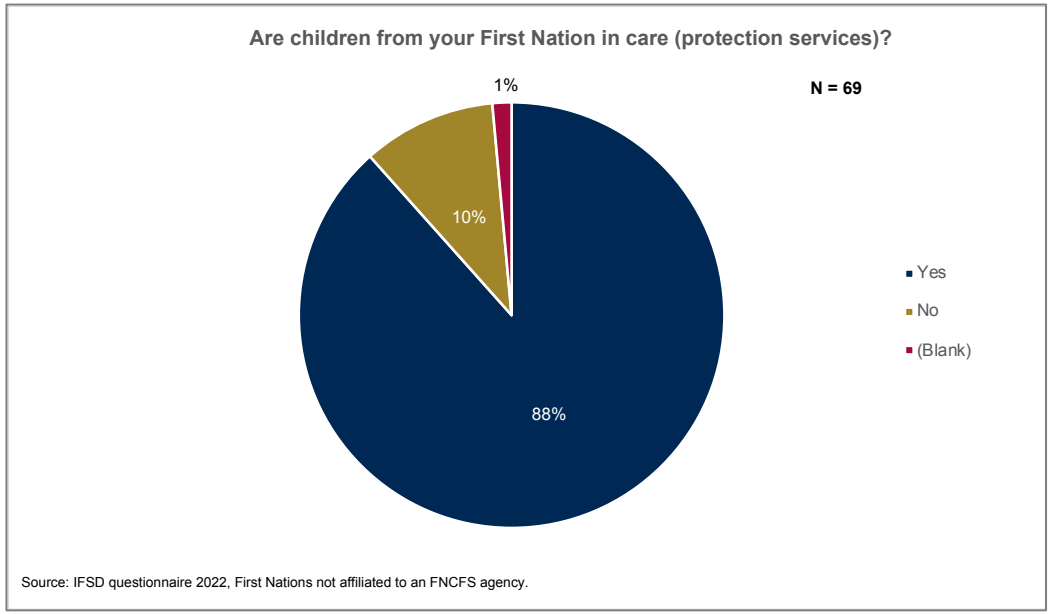
Technology

- Over half of respondents indicate they do not have the technology required to do their work.

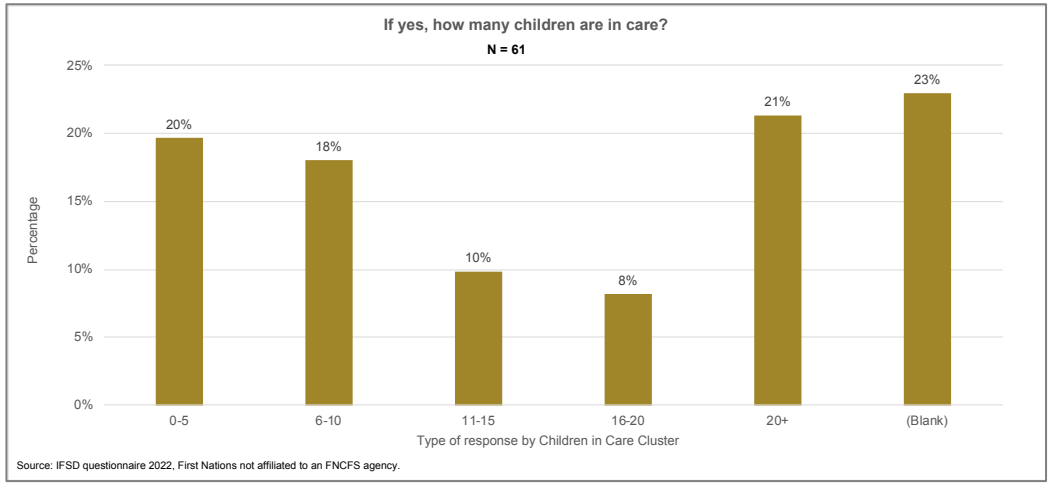


Children in care

- Nearly 90% of respondents report children in care.



- Of those reporting children in care, over 1/3 have between 0-10 children in care, and nearly 1/4 do not report the number of children in care.



Considerations and next steps

- There is a need and desire to increase supports and services to First Nations children
- First Nations have various starting points that should be considered in assessing resource needs
- A range of models should be anticipated for increasing supports and services to First Nations children

Workshop Summary – First Nations not-affiliated with a FNCFS agency

Date: May 9, 2022
Location: Vancouver, British Columbia
Participants: 15 participants representing 10 First Nations

On May 9, 2022, IFSD hosted a workshop with First Nations not affiliated to a First Nations child and Family Services (FNCFS) agency in Vancouver, British Columbia.

During the one-day session, IFSD heard concerns that regional forums were not being adequately consulted on reform, especially, given the short timelines then planned to implement the changes. Participants voiced concerns about the speed of change, and the time needed to develop capacity within their communities to manage changes. In addition, questions, and concerns about the alignment of funding to reform were raised.

There were three principal themes that emerged from the discussion that followed the Chatham House Rule:

- different starting points and contexts among communities;
- service delivery and funding; and,
- approaches to defining and acting to foster well-being.

Different starting points and contexts among communities

The points of departure among First Nations vary, and there are important differences in scale, capacity, and operational sophistication among them. Participants highlighted aspects of a community that should be considered when planning for delivery of child and family services:

- location of the services (e.g., in-community or off-reserve; rural/urban),
- size of the community;
- remoteness; and,
- stakeholders involved.

Remote communities, in particular, face unique challenges. Accessing outside supports, services or funding for service delivery can be difficult, especially if the community is also small. Minimal infrastructure and a lack of housing can present added barriers to development in the community.

While additional resources are welcome, increased funding will not immediately address capacity issues. Participants highlighted an issue with distributing funding based on population size. Smaller nations still require funds to deliver services, but their funding is limited by population and is not connected to need. There is a fixed cost to delivering programs and services and not all First Nations have that foundation.

Service delivery and funding issues

Participants highlighted a disconnect between existing funding levels and needs within the community. This problem is compounded by communication issues between community-based social workers and MCFD staff. Participants highlighted that MCFD can overstep, and take over the work of social workers in First Nations communities. MCFD staff do not use culturally appropriate language and do not consider the diversity of traumas that may have been experienced by the families they are interacting with. Participants discussed their desire to transition to culturally-based programs that employ community members who understand local culture, trauma, traditions, and needs.

Participants identified several measures that could enhance child and family services:

- increased training for employees;
- building internal (First Nation) capacity;
- increased flexibility for spending decisions;
- associating with a delegated agency; and,
- partnering with the Ministry (for larger communities)

Participants also highlighted issues with children living off-reserve and their lack of connection to the community. There is a dichotomy between what can be done for children on-reserve versus off-reserve.

Participants discussed the importance of prevention services which can limit the need for intervention later. Isolated communities reported that they “fall through the cracks” and do not receive the resources required to deliver prevention.

Participants suggested adopting a holistic, lifestyle approach could be helpful for prevention. This would involve the entire community, not just one child or family.

Participants discussed challenges with shifting the approach of all services and programs to align with the goal of prevention. Staff have to be creative when providing services as they must follow many rules. After funding is received, flexibility in spending is minimal. For instance, respite homes have been helpful in delivering prevention services and avoiding the unnecessary re-location of children.

Approaches to well-being

Participants highlighted various visions of well-being, including:

- managing their own child and family matters;
- looking inward rather than outward to re-build communities;
- greater collaboration within First Nation agencies and departments;
- housing is adequate and allows community members a place to thrive;
- to be united, proud, and confident in our culture and taking care of our land and resources; and,
- being healthy, self-reliant, and prospering.

Participants emphasized the importance of a holistic, community-based approach to well-being. Participants discussed the idea of “wrapping our ways around the child.” This could involve a circle of a care team working with multiple parties to create a cultural plan for the child. It could also involve collaborating with other organizations and First Nations.

Child and family services should be understood horizontally. Participants discussed addressing the root causes of issues in the community such as housing, water, and food insecurity. Approaches to addressing these issues will vary based on the community’s unique context.

Participants also emphasized decolonization and healing from intergenerational trauma.

Participants suggested several elements as critical to this process:

- reconnecting youth with culture through elders, language, and laws;
- building partnerships with chief and council;
- hiring community workers;
- increasing training for staff; and,
- building unity within the nation.

Workshop Summary – First Nations not-affiliated with a FNCFS agency

Date: May 10, 2022
Location: Vancouver, British Columbia
Participants: 18 participants representing 12 First Nations

On May 10, 2022, IFSD hosted a workshop with First Nations not affiliated to a First Nations child and Family Services (FNCFS) agency in Vancouver, British Columbia.

During the one-day session, that followed the Chatham House Rule, participants focused their discussion on four themes:

- Service types offered to children and families and the approach to service delivery;
- Issues or challenges in delivering these services;
- Defining well-being in different communities; and,
- Requirements/needs to meet the vision of well-being.

Participants shared their uncertainty about reform. They were clear that consideration should be given to existing models and how they have failed First Nations. For reform to have meaning, it must recognize and meet the diverse needs of First Nations.

Reform will take time, especially to recruit needed staff. Increased funding will be helpful, but is not an immediate solution. It is unclear how new funding and new laws will change the current system. Participants suggested the need for more study (including support from lawyers, communications experts, and policy analysts), and a working group to evaluate the process on an ongoing basis.

Developing capacity, and implementing reform, will take time. **Change is happening quickly, but this is just the beginning of a long journey.** Participants suggested that first Nations should meet to provide technical support and advice to each other.

Service delivery

Developing and delivering services tailored to the unique needs of a community is a critical and time-intensive exercise. A community that can design and deliver its own services looks after itself, without the involvement of outsiders. Participants highlighted that holistic, wrap-around services work well for their communities. This approach to service delivery considers the person and their relations to their family, community, and environment. Working from a prevention mindset is important to supporting communities in their healing journeys.

Issues affecting service delivery

Challenges in communities are horizontal and interconnected. Participants discussed how a problem in one area can have negative effects on another, because people and communities are not siloed. Their existence, just like their well-being, is holistic.

When it comes to the design and delivery of child and family services, participants highlighted several issues that affect service delivery:

- Housing – lack of adequate housing is common in communities
- Infrastructure – there is a need for more programming and operations space
- Addictions – greater space and funding is needed to treat addictions
- Colonization – the inter-generational impacts of colonization influence service delivery approaches
- Trauma – communities have unique traumas that cannot be treated uniformly
- Capacity – recruitment and retainment of staff is challenging

Well-being

There was general agreement that well-being should be understood holistically, and that its details would differ among First Nations. During the discussion, the following components of an understanding of well-being were identified:

- Well-being should be understood holistically
- Families should be treated together, instead of separating children and parents
- Indigenous languages and values should be prioritized
- Healing needs to occur for reform to be a reality, especially for those who attended residential schools
- Healing means going back to the land, culture, and learning things like ancestors did
- Services should be culturally appropriate
- Urban centres are culturally integrated with communities

What is needed

Participants suggested several approaches and needed steps to move toward their visions of well-being:

- Implementing a specific department for child well-being/child and family services
- Increasing collaboration between departments within First Nations
- Integrating levels of governance (i.e., including elders, chief and council, and community)
- Increasing transparency in decision-making
- Exercising right to develop policies unique to the community
- Increasing access to cultural activities
- Providing adequate housing
- Prevention is prioritized over intervention

Workshop Summary – First Nations not-affiliated with a FNCFS agency

Date: May 12, 2022
Location: Prince George, BC
Participants: 9 Participants representing 6 First Nations

On May 12, 2022, IFSD participated in a meeting of First Nations not-affiliated with a FNCFS agency. Participant discussion centred on four areas:

- what and how services are offered for children and families;
- issues affecting service delivery; and,
- moving forward with reform.

Service delivery

Embracing cultural practices has been a success. Implementing culturally appropriate programs like a women's group and a parenting program, has been helpful. Some participants provide ceremonies for each child at birth, which helps support the child's identity and provide a link to their family.

The MCFD approach is not culturally sensitive and has been harmful. Children are not receiving culturally appropriate care with MCFD staff. First Nations staff are forced to manage MCFD workers to ensure children are receiving appropriate care.

Issues affecting service delivery

Challenges in the community are horizontal and linked, and participants discussed how a problem in one area can have negative effects on another. Participants highlighted several issues that affect service delivery:

- Loss of culture – children are disconnected from their traditions and culture
- Intergenerational trauma – government practices (e.g., residential schools, sixties scoop) have been extremely harmful. Transparency of trauma has been helpful for community members to reflect and share experiences
- Lack of support for family systems – re-establishing the matriarchal system of support will take time. Teaching parents traditional skills has been helpful, especially through women's groups
- Addictions – support services are needed. Community members want help, but don't know how to access supports. MCFD is not supporting the process of breaking cycles
- Lack of services for children aging out of care – individuals cannot access services or housing on-reserve
- Lack of funding for cultural activities – some funding is accessible through grants, but more is needed to sustain these services over a longer time-period, especially given staffing issues
- Capacity – recruiting and retaining qualified staff is an ongoing issue

Reform

Cycles of trauma need to be broken to avoid perpetuating the colonial system. Bringing back customs and traditions, especially through teaching children the languages, about territories, and beliefs is important. Indigenous customs, beliefs, and laws should supersede any colonial system of policies, laws, and procedures. This is a challenge as residential schools destroyed many cultural traditions and customs. One participant stated, “now we are reversing assimilation, colonization, and intergenerational trauma from residential schools.”

New legislation has been helpful, but there are still problems. MCFD is now forced to follow protocols, although some of the ministry workers are still harmful. Cultural practices can help break this cycle, but collaboration among stakeholders is needed to make this happen. Departments should work together as people are navigating multiple systems with similar issues. Community members should be involved in developing the approach service delivery, so that it reflects the needs of the community.

High turnover at MCFD needs to be addressed. The turnover creates more work for First Nations staff to teach them appropriate protocols. It would be helpful to have a committee of elders and other community members to sit on an advisory board for service delivery. Gradually service delivery should be run completely through the First Nation. To get to this stage, communities need greater resources, capacity, and support.

Workshop Summary – First Nations not-affiliated with a FNCFS agency

Date: May 16, 2022
Location: Whitehorse, YT
Participants: 19 participants representing 11 First Nations

Child welfare challenges do not stem from a single issue, but multiple issues that transcend generations, e.g., poverty, unemployment, access to health and mental health services, parenting skills, food security, housing shortages, etc. Addressing the root causes of challenges is necessary for long-term change. A culturally informed whole of community approach – children, families, elders, youth – is required to support grieving and healing.

"The legacy of systemic issues is being transferred throughout generations."

Changing the approach to CFS will take time and resources. CFS crosses generations with root causes in poverty, housing, food security, trauma, violence, etc. Prevention supports and programming should address these core issues.

To date, CFS has been a government-led activity. This means that everything from front-line supports, services, and staff, to 'back office' functions in finance and governance will need to be built, transitioned, and improved over time. Attempting to design and plan in an uncertain environment is a challenge. The opportunity for change is encouraging and positive but requires clarity to maximize benefit for First Nations.

On May 16, 2022, IFSD participated in a meeting of First Nations not-affiliated with a First Nations child and family services (FNCFS) agency.

Four themes emerged from the discussion that followed the Chatham House Rule:

- service delivery in a changing environment;
- issues in delivering these services, notably, differences between Whitehorse and communities;
- expressing and developing well-being in communities.

Service delivery

CHRT money has helped build capacity through hiring support workers, service workers, and addiction counsellors. Prevention services are now being considered, as well as AIS for data collection, and a peace management system.

Service delivery needs to be culturally appropriate. To build capacity, it has been helpful to have new staff have community engagements with Elders to support training and self-care. Training is important, especially capturing the culture and language, and building a way to transfer knowledge from Elders to community members.

Building an approach to prevention is important, but it is difficult given staff capacity issues. There's pressure from the community, and from leadership, to deliver prevention services, but staff do not have the time or resources. Crisis response continues to take precedence over planning prevention services.

Funding mandated by the Canadian Human Rights Tribunal (CHRT) rulings at actuals has been a source of change. It has supported internal capacity building, the hiring of staff, and program delivery. The challenge, however, is what happens beyond year 5, i.e., after the prevention funding is set to end. Sustainability and consistency of funding is unclear and as one participating expressed, it's like trying to work "with imaginary numbers."

Issues affecting service delivery

There is a significant gap in the availability and accessibility of services in Whitehorse and other places outside of the city. This includes accessing health and mental health services, post-care supports, transition support for youth, etc. Transportation to even access Whitehorse can be limited, compounding these challenges.

In communities, issues are horizontal and interconnected. Participants discussed how a problem in one area can negatively impact another. There were several issues that were raised as issues affecting service delivery:

- Staff are overwhelmed, overworked, and burnt out
- There is a lack of infrastructure for community events, daycare, and cultural activities
- It is difficult to recruit and retain staff given low wages and housing issues. Participants want to hire more local community members
- Income-based and employment-based poverty are issues. Social assistance for families does not match inflation
- Data collection is an issue. Communities operate on different systems, some of which are inefficient
- Transportation can be a challenge, especially outside of Whitehorse
- Police involvement after-hours can be harmful
- Planning operations through Jordan's Principle can be contentious and may only alleviate short term issues.

Expressing and developing well-being

When it comes to expressing and executing a vision of well-being, participants expressed a mix of operational and capital requirements to support changes in their communities:

- a bigger centre that includes domestic violence support, playrooms for kids, crafts, and rooms for families
- programs that teach parenting skills

- moving out of crisis mode
- community events like meals at the longhouse to connect
- space for holistic health and wellness
- a casual space for multiple generations to interact

There are different points of departure, with variability in the capacity, program/service delivery, and infrastructure of the participating First Nations.

Infrastructure for program delivery is limited. There are needs for space and tools for programs/services, as well as for staff offices/work areas. Reliable Internet connectivity (with adequate speed) is a challenge for many First Nations.

Capacity for service delivery can be limited. There are shortages of qualitied staff and training community members takes time and resources. Attracting and retaining staff in communities can be difficult with housing shortages and low wages. Those working in child and family services often burn-out, being overwhelmed and overworked.

There was an openness expressed for data collection, but available resources and capacity among participants varied. Some were actively collecting and using their own data, while others were dependent on paper records.

Workshop Summary

First Nations not-affiliated with a First Nations child and family services (FNCFS) agency

Date: May 18, 2022
Location: Edmonton, Alberta
Participants: 19 participants representing 5 First Nations

On May 18, 2022, IFSD participated in a meeting of Alberta First Nations not-affiliated to a FNCFS agency.

During the discussion, participants discussed reform in child and family services. Reform was happening quickly, from the perspective of participants, with limited clarity on what shape changes would take. With the many moving parts, there were concerns about 'missing out' on new funding opportunities, as well as the sustainability of funding after the five-year commitment.

As participants shared their First Nations' contexts, they emphasized the need for a baseline understanding of different starting points. Data collected by First Nations for First Nations would be support control of their own information and narrative. Analysis of the information could support funding requests and track changes in First Nations over time.

Reactions to reform through jurisdiction were mixed. When it comes to the *Act respecting First Nations, Inuit and Métis children, youth and families*, some participants expressed that a government cannot give another nation the right to make their own law, e.g., "Why is Canada trying to give us permission to watch our own kids when we already have our own laws?" There were concerns about undermining First Nations sovereignty and autonomy with the law. Additional challenges come from the province's lack of recognition of sovereignty and action on reconciliation, even though it must follow the federal Act.

Four themes emerged in the discussion that followed the Chatham House Rule:

- what and how services are offered to children and families;
- issues/challenges in delivering these services;
- what well-being means to various communities and what is needed to achieve it.

Service delivery

The province can do a better job of collaborating with First Nations and acting in a way consistent with the principles of substantive equality and the best interests of the child. For instance, some participants suggested that a band designate should be the first point of contact for any protection-related concern of a First Nations child.

Children who are placed in foster homes off-reserve are not receiving culturally appropriate care. These children are not exposed adequately to their language, culture, and heritage. This can add significant downstream costs. When children are not taken care of, they are more likely to experience homelessness, addiction, and a lack of education.

Participants emphasized that prevention is just as important as intervention.

Issues affecting service delivery

Challenges in communities are horizontally linked, and participants discussed how a problem in one area can have negative effects on another.

Participants highlighted several issues that affect service delivery:

- Data gaps - there is minimal data availability and interpretation
- Parental supports - parents do not know what their rights are
- Aging out of care – lack of transitional supports
- Housing – often overcrowded or inadequate
- Kinship placements are not permitted
- Addictions – treatment and supports are needed
- Frontline workers are not included at the table to share their experiences

The service delivery challenges highlighted intersect with the province, especially, as they relate to the handling of protection concerns. As noted earlier, matters of data are issues of care and control for First Nations that merit closer attention in the context of child and family services.

Well-being

Participants emphasized several aspects of well-being during the discussions:

- Supports for addictions, mental health issues, parenting
- Providing wraparound services
- Support for social programs, infrastructure, and housing
- Support for expectant mothers
- Support to deal with intergenerational trauma
- Improved communication services
- Improved broadband services
- Widely available cultural activities
- Wellness centre for children

The emphasis on a whole-of-community approach was crucial to providing prevention services and rebuilding resiliency in First Nations. The different needs and starting

points of First Nations must be recognized, because they will each have their own approach to caring for children and families.

Participants highlighted the need for collaboration between stakeholders, including the creation of a working group. The working group would support the creation of a data system for service delivery and serve as a way to gather ideas and people on child and family services.

Workshop Summary – First Nations not-affiliated with a FNCFS agency

Date: June 1, 2022
Location: Ottawa, ON
Participants: 13 participants representing 9 First Nations

On May June 1, 2022, IFSD hosted a meeting of First Nations not-affiliated to a First Nations child and family services (FNCFS) agency. Participants shared personal challenges and experiences with the child and family services system. The discussion that followed the Chatham House Rule focused on three themes:

- the need for a holistic approach to well-being;
- realities and challenges of service delivery;
- needs for improving service delivery.

Well-being

A holistic approach to well-being should be implemented, from the perspective of participants. The current funding approach is not conducive to holistic service delivery or analysis of outcomes. A holistic approach should include spiritual, cultural, mental, and physical aspects to well-being. It includes families that are healthy, strong, and culturally connected. Land-based healing and community care should be prioritized.

A holistic approach should promote unity among the regions and focus on what various communities have in common. Needs and starting points are diverse, but communities can still work together.

There needs to be action that follows discussions and roundtables.

Service delivery

Participants highlighted several issues that affect service delivery:

- Staff capacity – there is high turnover. Recruitment and retainment are issues;
- Increased training is needed, including cultural training;
- Funding is often too low and lacks flexibility;
- Decision-making through chief and council can be inefficient;
- Remoteness and isolation make it difficult to deliver services;
- Servicing families who live off-reserve is challenging, as funding is based on on-reserve population;
- Basic housing needs are not met;
- Food insecurity is common

There are a variety of interconnected issues impacting the design and delivery of child and family services. Often, existing services are not sufficient to meet needs. If First Nations leave their communities for support, they are often not culturally appropriate.

Canadian Human Rights Tribunal (CHRT) mandated funding has helped, but capacity needs to be built. Through CHRT funding, some programs and services have been expanded (e.g., a community house for emergencies, salary increases). However, there need to be people in

positions to leverage resources and delivery programs and services for children and families. Staff capacity needs to increase before being in a position to apply increased funding.

The current lack of staff capacity means that communities are falling behind on jurisdictional issues. It would be helpful to have access to resources to prepare for the development and application of new laws.

What is needed

Participants suggested several approaches and needed steps to move toward their visions of well-being:

- Increased collaboration and communication between the community and mainstream service providers
- Front-line workers need to be at the forefront of reform
- Qualitative outputs could better demonstrate what is happening – a mixed methods approach could be better when collecting and presenting data
- Increased collaboration between communities to learn from each other
- Increased cultural activities, including elders providing traditional teachings
- Increased support for addictions
- Building of a wellbeing centre with space for training and community involvement

Workshop Summary

First Nations not-affiliated to a First Nations Child and Family Services (FNCFS) agency

Date: June 2, 2022
Location: Ottawa, ON
Participants: 10 participants representing 6 First Nations

On June 2, 2022, IFSD hosted a meeting of First Nations not-affiliated to a FNCFS agency. The discussion centred on matters of practice and service delivery.

The discussion, that followed the Chatham House Rule, had three themes:

- realities of service delivery;
- issues impacting service delivery;
- considerations for a way forward.

Service delivery

There is often a tension between communities and provincial child welfare works. Participants noted that services from the provincial ministry are not culturally appropriate. Parents are often bullied by child welfare workers from outside the community. The ministry does not investigate issues when reported by the community, perpetuating the cycles and challenges of children in care.

With the service delivery challenges, some participants noted areas of success. A youth council was established in a First Nation to support the development of young people. It has a positive impact as youth take part in the council, have their voices heard and learn to be effective leaders.

Other participants expressed success with a rehabilitation program and a respite home for emergency services. In both instances, the First Nation stepped in to fill a gap in a service area. Supporting community members in their rehabilitation journey and in times of crisis were highlighted to demonstrate the positive impact of programing for First Nations by First Nations.

Issues impacting service delivery

First Nations are different. Their realities, opportunities, and challenges are reflective of their unique histories and contexts. When discussing challenges, participants highlighted their interconnectedness of issues in communities and the overall structure of service delivery (including funding):

- Capacity
    - Recruitment and retainment of staff are challenging due to low salaries
    - There is high turnover among staff

    - New staff are not well-equipped and require training
- Communication
    - Government and First Nations are misaligned on goals, priorities, and approaches
    - Services are described and defined differently
- Ageing out
    - There is a lack of transitional supports for education, housing, and health
    - Financial assistance varies
- Funding
    - Is often inflexible and inadequate
    - Block funding would be preferable
- Community faces numerous other issues
    - Mental health, addictions, human trafficking, child abuse

Considerations for a way forward

Participants suggested several approaches and needed steps to move toward their visions of well-being:

- Using least-disruptive measures (e.g., prevention) to support families
- Recognizing intergenerational trauma
- Breaking the cycle of poverty and addictions
    - Women and families should be empowered to make decisions
- Staff should work on cases they are related to
    - “We have a vested interest, not a conflict of interest.”
- Participants expressed concern about reform. New laws are not followed by the ministry, and investigations rarely occur

Participants emphasized several aspects of well-being in the discussions that extend beyond child and family services:

- Adequate housing
- Language instruction
- Teaching of cultural heritage
- Front-line workers are taking care of themselves
- People are connected to the land and water
- Wellness plans are developed and implemented for children
- Community healing from intergenerational trauma through elders and tradition

Reform is happening quickly, but communities need time to build capacity and approaches. Communities need to be engaged to ensure that their voices are being heard.

Workshop Summary

First Nations not-affiliated to a First Nations child and family services (FNCFS) agency

Date: June 13, 2022
Location: Virtual (Quebec)
Participants: 11 participants representing 8 First Nations

On June 13, 2022, IFSD participated in a meeting of First Nations not-affiliated to a First Nations child and family services (FNCFS) agency. Participant discussion centred on four areas:

- accessing services;
- building a culturally-informed vision of well-being;
- applying resources to solve problems

Accessing services

First Nations in Quebec use a variety of Indigenous languages, as well as French and English. Participants explained that many communities want access to services in Ontario because services in Quebec are less culturally sound, and often only available in French. Being able to access needed services in a language that you understand is important in an area as sensitive as child and family services.

Beyond language of service, there are challenges in communities that influence the design and delivery of child and family services. These challenges are often horizontal in nature, impacting communities across service areas. Mental health, addictions, chronic disease, and housing, were highlighted as core issues that not only influence child and family services but communities more generally.

Well-being

Participants emphasized that revitalization of culture and languages are critical to well-being.

Participants suggested several approaches and needed steps to move toward their visions of well-being:

- Increased training and capacity building in communities
- Offering of land-based cultural activities
- Increased investment in infrastructure (i.e., there is a need for more community spaces)
- Increased availability of treatment options for addictions and mental health
- Increased investment in housing

The discussion highlighted that children and families must be understood within the context of their communities. This means addressing root causes of challenges, e.g., housing, access to services, etc., in order to support the well-being of children and families.

Leading with community-based capacity, culture, and approaches to fostering resiliency, participants defined considerations for well-being.

Applying resources to solve problems

Participants indicated that funding increases are welcome but remain uncertain about how long it will last and how funding amounts will be defined. Often, funding is limited or specific. For example, a community cannot allocate its funding for a community event space (e.g., skate park, basketball court) because this counts as infrastructure. This type of spending is needed as it gives youth something to do. Fixed funding limits the ability of the community to address needs as they arise.

It is unclear how new funding and reform will work over the long-term. Capacity will take time to develop, even with increased funding. Better communication among First Nations and with the federal government can help increase the availability of information and build capacity.

APPENDIX D – SUMMARY OF THE NOVEMBER 2023 NATIONAL GATHERING

First Nations not affiliated to a First Nations child and family services (FNCFS) agency *Workshop Summary: Setting next steps together*

The Institute of Fiscal Studies and Democracy (IFSD) is pleased to provide you with an update for the months of November and December on its research to support reform of child and family services in First Nations (FNCFS).

Context

The Institute of Fiscal Studies and Democracy (IFSD) is continuing its work with the Assembly of First Nations (AFN), the Caring Society (Dr. Cindy Blackstock), and the National Advisory Committee (NAC) to support the long-term reform of the FNCFS program.

Of the First Nations population on-reserve 17% is not affiliated to an FNCFS agency, 3% of the population on-reserve has passed their own law and is exercising jurisdiction, and 80% are served by an FNCFS agency.[1]

In the last five years, there has been significant focus on FNCFS agencies and more recently, First Nations exercising or contemplating jurisdiction. There is, however, limited understanding of CFS-related needs and activities in First Nations not affiliated to an FNCFS agency.

To help to fill this gap, IFSD was mandated to deliver a needs assessment and cost analysis of a range of approaches to designing and delivering CFS among First Nations not affiliated to an FNCFS agency.

This work has been undertaken with the invaluable contributions of First Nations. IFSD extends its gratitude to First Nations which, in the last year and a half, through a questionnaire (48% national participation), 9 regional gatherings (with 70 First Nations represented by 125 participants), and several case study collaborators, have helped to define different starting points, identify successes, challenges, and needs.

> What we learned, working together through the questionnaire, case studies, and regional gatherings:
>
> There is significant operational, financial, and organizational variability in how First Nations not affiliated to an FNCFS agency deliver CFS and related programming. While most First Nations currently offer some child and family and/or related services, the current mix of services offered does not meet the needs of these communities. There exist multiple paths forward in terms of approaches to funding and approaches to service delivery.

[1] Note: There is a population of 103,929 First Nations on-reserve currently served by an FNCFS agency and not affiliated to an FNCFS agency that have declared their intent to exercise jurisdiction or that are engaged in the coordination agreement process.

Before drafting its final report, IFSD gathered with First Nations not affiliated to an FNCFS agency on November 2, 2023, in Ottawa.

The gathering was an opportunity to confirm the context and experiences of First Nations not affiliated to an FNCFS agency were captured appropriately; to define the range of options and tools for supporting the design and delivery of CFS; and to capture anticipated challenges moving forward.

The working session was attended by over 65 First Nations (50% of First Nations excluding Northwest Territories[2], those without land bases/populations on landbases, and ten First Nations in Quebec (under modern treaty, most of which are served by the Cree Board of Health and Social Services)), who gathered in person or joined virtually via Zoom. The significant participation rate was representative of different geographies, regions, approaches to service delivery and populations sizes.

Dr. Cindy Blackstock delivered the keynote address before participants engaged and deliberated in groups on various themes and questions.

Learnings from Dr. Blackstock's address:

Among many important messages, there were three principal takeaways:

1) Supporting children and families means addressing the key drivers of child maltreatment, e.g., poverty, poor housing, addictions, etc.
2) Prevention and protection services are linked and should be coordinated to meet the needs of families.
3) Prevention activities in child and family services can be primary, secondary, or tertiary in nature. Secondary and tertiary prevention services are technical and intensive to support children and families in crisis or at high-risk. These services are different than primary prevention services which have lower barriers for access and can be passive in nature and accessed voluntarily (akin to public health campaigns). Given the complexity and human impact associated to providing these services, First Nations should consult their lawyers and insurers on liability for the provision of different types of prevention services.

Participants shared back their main takeaways from their discussions in plenary. The session followed the Chatham House Rule. A summary of the discussion is included below.

[2] First Nations in the Northwest Territories are not covered by CHRT rulings on child and family services. First Nations in the territory have a different starting point than those in the provinces and Yukon.

IFSD is grateful to those who shared their time, knowledge, and dedication during the gathering. Your contributions, captured below, will inform cost analysis and recommendations for next steps.

Summary of proceedings
First Nations not affiliated to an FNCFS agency comprise a diverse group that represents a variety of different contexts, starting points, and approaches to delivering CFS. The following summary captures takeaways from the plenary sharing session, organized thematically by questions proposed to participants.

The work of CFS is sacred. The importance of working from the spirit guided by empathy and kindness was echoed throughout the discussion.

To facilitate discussion, IFSD proposed five questions to participants:

1) Defining community context. What is impacting CFS?
2) What is our starting point for CFS, (i.e., staff currently employed, open positions), programming (i.e., current activities and services), structures (i.e., department, agency, etc.), etc.?
3) What tools do you have to fulfil your mandate? What tools do you need? Consider, for instance, program development, planning, assessing community needs, data gathering approaches and analysis, etc.
4) What are some challenges/considerations as you move forward?
5) What type of funding-related matters, e.g., amount, terms and conditions, etc., best support your First Nation's vision of CFS?

At the close of the discussion, **seven recommendations** were confirmed with the group:

1) Access to shared resources in CFS for strategic planning, programming, and staff supports are needed.
2) There must be a respect for the time and space needed to reflect, engage with, and support children and families. This does not happen quickly or easily.
3) Total membership (irrespective of residency) should be modelled in all cost analysis.
4) Remoteness should be considered in all cost analysis.
5) Funding must be clear, sustainable, and on-going. Block and multi-year approaches to funding should be explored.
6) Consider the different starting points for First Nations not affiliated to an FNCFS agency that will impact their transition to future/desired states.
7) A **call for another in-person** gathering to spend more time exchanging and sharing ideas over two full days.

The summary below is organized by question theme.

> NOTE: One virtual participant raised their displeasure at the coordination of the November 2, 2023 gathering, and indicated that the questions asked to participants were irrelevant to their context. The participant indicated that their region was different and is not represented by the consensus of the majority in this summary.

Context impacting CFS

There is motivation and hope with a drive to do more for children and families. While approaches and starting points differ across First Nations, there are three broad themes and issues that emerged that impact the design and delivery of CFS.

Contextual factors are influencing starting points, needs, and shaping how CFS is designed and delivered. The most commonly mentioned issues impacting CFS included housing and related infrastructure, poverty/deprivation, addictions, and intergenerational trauma and healing. Compounding these issues are limited, inadequate, or unavailable services near communities.

Staffing challenges, i.e., attracting and retaining staff was universally defined as an operating challenge. Finding staff takes time (especially challenging in rural and remote places), keeping them means competing with salaries and work environments that are often more competitive with the province. There is a desire to invest in community members who will live and work and contribute to their community. Training them, however, can be a multi-year exercise, especially for technical positions. Different types of skills and positions are needed to support CFS. There is a difference between support roles for which staff can be developed with basic training, and other more technical positions, e.g., for prevention services that require more technical training.

Trust and governance were highlighted as considerations that actively or tacitly influence efforts. In some First Nations, there are negative perceptions of CFS and trust has to be built. Other First Nations struggle with tensions between political leadership and CFS practitioners who may see needs and responses differently. There is also the overlay of provincial jurisdiction and for some, the exercise (or contemplation) of jurisdiction. These matters influence CFS operations and staff.

Starting point for CFS

For many assembled, work in CFS is being undertaken in crisis management response mode. Staff are limited and often overworked. In some First Nations, trust is limited in CFS, in the province or related agencies and needs time to be developed. There are limited opportunities for planning because information about the First Nation's own children is limited and resources for access are constrained. An approach to data gathering, secure maintenance, and evidence generation are needed. Several participants emphasized the importance and need for genealogical supports and tools to connect children with their roots and history.

A whole of community approach that includes culture, language, and members throughout the life cycle (children, youth, elders, etc.), is desired by many to support planning and service delivery. *Money alone does not solve all problems. Without people and plans, you cannot execute no matter how much money you have.*

Tools available/needed

There were ideas and promising practices to share among those assembled. When asked to define needed tools, participants agreed that supports and resources for programming, job profiles, and crucially, strategic planning, should be made accessible through a central repository. Some regions, e.g., British Columbia, Quebec, have active support organizations while others are seeking them out.

It was noted that the Kids Help Phone offers training for volunteers with expert supports. In addition, the Mi'kmaq Maliseet Bachelor of Social Work program at St. Thomas University was highlighted as a community-developed opportunity for training for social workers. For those seeking models to develop their own training, they may wish to review it.

> Participants highlighted their First Nation as a source of inspiration, direction, and potential pool of talent. Building skills and capacity as many First Nations continue on their healing journeys will take time.

Concerns were raised by some about access to resources for capital (despite CHRT orders) and related processes, although some successes were noted too. Office and programming spaces remain in short supply in many First Nations.

Challenges/considerations moving forward

"It's like we're being setup to fail."

"We're moving too quickly."

Participants shared the pressure and concerns of the current environment. They are being told to move quickly before money disappears. Creating constructive or sustainable change cannot happen without capacity, staff, and clear medium- or long-term plans.

This is a major concern. Resources have been allocated to end to discrimination and ensure it does reoccur. How are First Nations not affiliated to an FNCFS agency expected to execute in short time frames without the benefits of planning, time, people, and an existing baseline?

There is a clear call for a whole of community approach. This means recognizing and working to address existing gaps in First Nations, e.g., housing, deprivation, and in CFS, e.g., training their own social workers, developing support homes, etc.

Planning and development need to be built by the First Nation for the First Nation. Not all First Nations are starting from the same place, with the same capacities, or are seeking to deliver CFS in the same way. Sovereignty is about building evidence from the community's stories and experiences and charting a way forward together.

Funding matters

Clear, consistent and reliable funding is necessary to meaningfully plan and support community, retain staff, and function normally as a service provider. The crisis mode management is in part attributable to "never knowing what next year will bring." Funding questions and concerns abound, e.g., what happens in year 6?

Funding inconsistency and unreliability contribute to staff turnover and an inability to plan. Resources for CFS are available now but do not cover root causes of need, e.g., deprivation.

A whole of community approach to CFS means considering the full membership of the First Nation, and ending a false differentiation between membership based on residency for service access.

IFSD extends its gratitude for the invaluable contributions made to this work by First Nations not affiliated to an FNCFS agency. Their willingness to share their time, knowledge, and experiences makes this work possible. Should you have any questions or comments, please do not hesitate to get in touch at info@ifsd.ca.

In its next steps, IFSD will:

1) Produce national cost estimates, (i.e., estimates of total cost), based on the different funding approaches discussed;
2) Prepare case studies of First Nation-level models of service delivery (with consent from First Nations collaborators); and
3) Share considerations for the different funding approaches and cost estimates for consideration in December 2023.

IFSD is writing to share its monthly update on our research to support FNCFS reform (updates will continue monthly). Feel free to share this update with colleagues or invite them to join our mailing list (info@ifsd.ca).

Disclaimer

This report has been produced independently by EngageFirst Management Consultants for the Institute of Fiscal Studies and Democracy (IFSD), Ottawa. This report contains projections for future operations. We relied on data from publicly available sources to reflect the realities of First Nations Child and Family Services (FNCFS) programs and operations. While care has been taken to confirm the reasonableness of the assumptions and information that lead to the findings and conclusions, we did not perform any independent audit or verification. This report or any part thereof may not be reproduced without the express permission of IFSD.

Introduction

EngageFirst
Management Consultants

Background

- Some First Nations (FN) in Canada are set to acquire full jurisdiction over their child and family services (CFS).
- EngageFirst Management Consultants was appointed by IFSD to conduct an independent estimation of the workload and staffing needs for providing Prevention and Post Majority Support Services (PMSS) in a representative group of FN communities.
- This report contains our findings based on an objective analysis of the available information and statistical modeling.
- The work leverages lessons from assessments undertaken for similar programs including a First Nation exercising jurisdiction.
- No direct data gathering was conducted for this analysis. Effort has been made to reflect reality, however the analysis and findings are for illustrative purposes.

Objectives and Scope

- The objective of this engagement is to conduct an assessment of the workload and estimate the staffing needed to deliver CFS within three representative FN communities with no existing services.

- The following CFS programs were in scope:
  - Prevention and Family Enhancement (Prevention)
  - Post Majority Support Services (PMSS)

- Resources needed in the following roles are in scope:
  - Case Worker
  - Supervisor
  - Administrative Support

Our Approach - Work Assessment Model©

- We applied a shortened version of our Work Assessment Methodology (WAM©) to assess the workload and to estimate the human resource requirements for three representative FN CFS operations.
- WAM© is a robust and reliable approach that applies statistical methods to estimate the total work and related human resource requirements (Full Time Equivalent positions) to achieve desirable outcomes for children and families.
- The model has been designed to reflect the realities of delivering CFS programs and services by and for FN communities with band affiliated children and families living on and off reserve.
- The models are for three population sizes representing small (~500), medium (~1200) and large (~5000) FN communities.
- The Prevention and PMSS programs are designed to provide wrap-around services, not including child protection, to band members who live on-reserve and off-reserve.
- The practice models for Prevention and PMSS programs were derived by studying similar programs in a provincial jurisdiction, consultation with an FNCFS organization, and by reviewing frameworks, guidelines and toolkits published by Indigenous Services Canada (ISC).
- The modeling assumptions and parameters are reflective of a specific CFS policy and practice model, human resource policies, and expectations of program success. The input parameters are representative, no direct data gathering was conducted with an FNCFS.

Our Approach…

- The assumptions and parameters driving the resource estimates were designed to allow the FNCFS sufficient resources to deliver the desired level of services, while facilitating access to services for their community members.
- The estimates of staffing requirement support best practice execution of casework, implying sufficient time for performing casework as required by policy, including client facing work, record keeping, completing administrative duties, training, and meeting all other job expectations.
- The WAM© model uses estimates of time for casework, based on survey data for similar activities in a provincial CFS program and verified by an FNCFS organization. Where comparable data was not available we applied reasonable assumptions for the data.
- The final estimates of workload and human resource needs are based on a consensus among different approaches and through Monte Carlo simulation.
- The estimates of staffing are for front-line service delivery roles in the program, and are calculated as a range of estimates (low-med-high) for full time equivalent (FTE) positions.
- The estimates do not include staffing needs for management positions, outsourced services, or for the crisis line to support Prevention and PMSS.
- The estimates do not include the staffing needs for activities such as program design, training, certification, and other such activities that would be regarded as capacity building towards establishing a new program.

FN Community Profile (illustrative)

	Small Community	Medium Community	Large Community
Current Population	500	1200	5500
Services to Band Members Off-Reserve	Yes	Yes	Yes
% Pop. Under 24 yrs. age	30%	55%	50%
Area (sq.km)	2	60	80

Assumptions

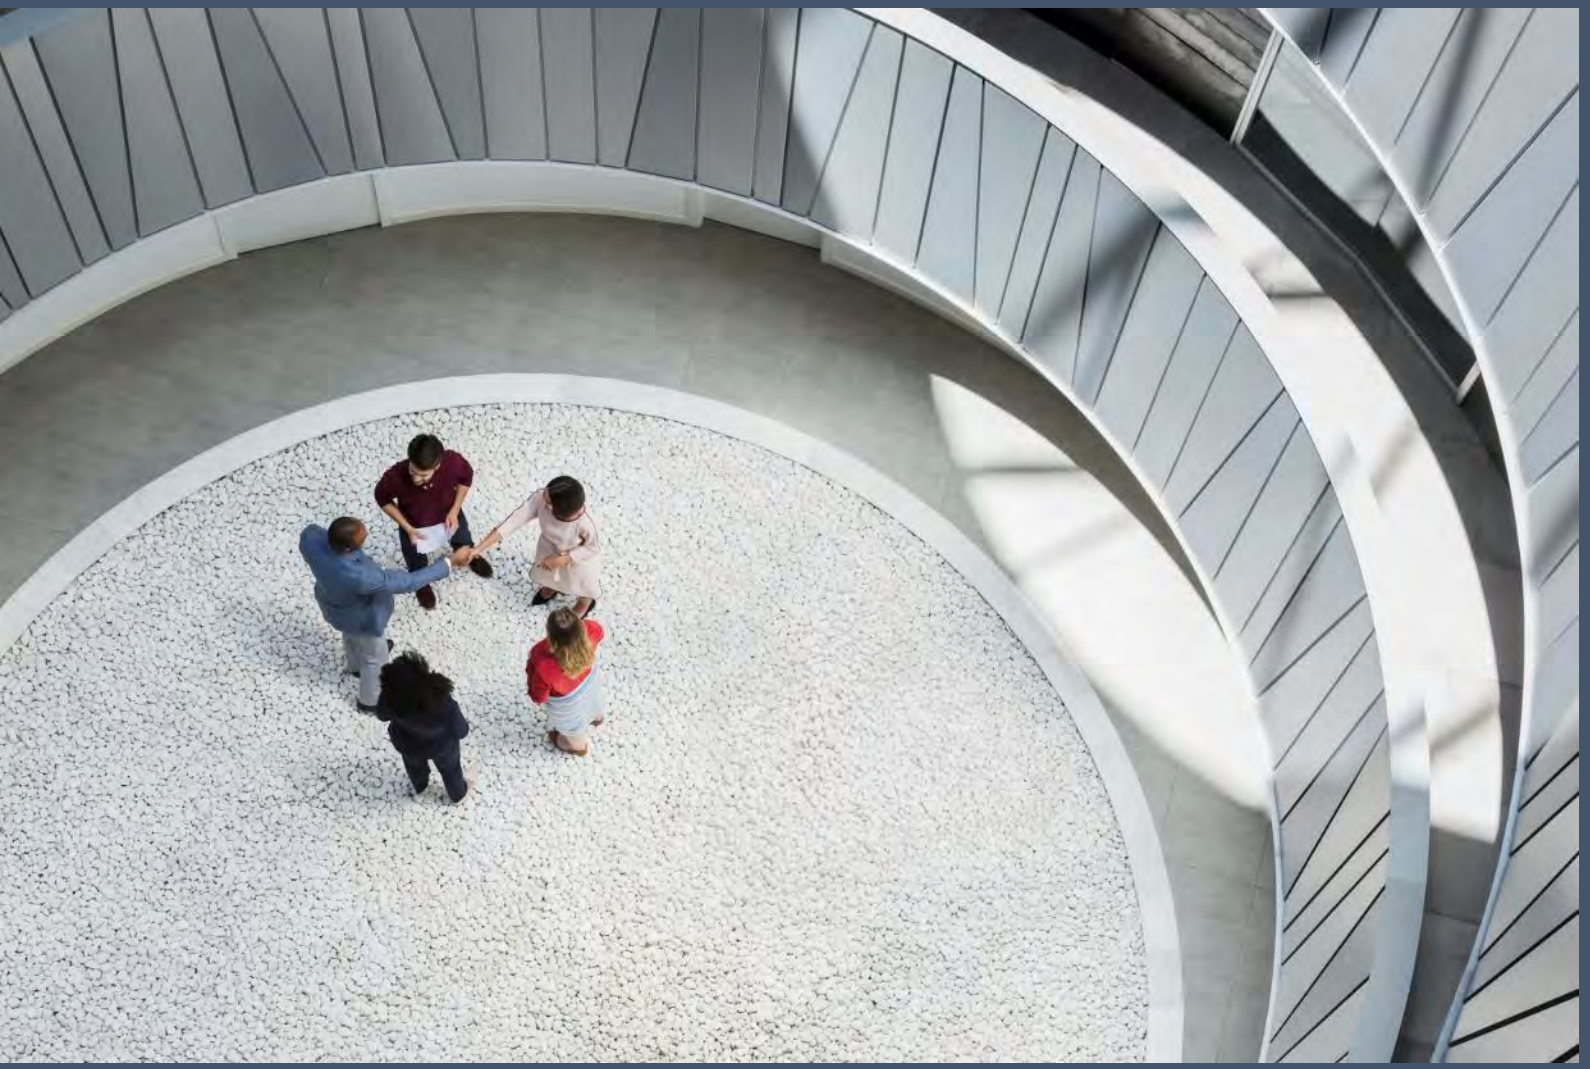
- FN policies will facilitate children and families to access the services they need, when and where they need it.
- The need for services reflects the impact of removing barriers to access, and increased awareness among band members about the services available within their community.
- The CFS program will use a Generalist model for frontline roles, meaning the caseworker will perform all duties related to casework from intake to the final closure of the file, as well as work required with the community as a whole.
- We applied a case mix (low-medium-high complexity) weighted towards high complexity due to the higher occurrence of drug abuse, addiction, mental health and inter-generational trauma among Indigenous populations.
- A family receiving secondary or tertiary prevention services, as defined later in this report, or a youth/young adult receiving post majority services is expected to stay on a caseworkers caseload (that is, the file remains open and is being actively managed by caseworker) for the majority of a full year.
- Supervisors and administrative support staff will not carry caseload.

Assumptions…

- The estimates are based on accepted practice in supervision ratio for child protection services similar to Alberta but adapted to reflect realities of prevention services, varying between 1:5 and 1:8. In practice the ratio depends on the nature of the program and specific expectations of the supervisor role.
- The estimates are based on generally accepted practice in administrative support ratio varying between 1:6 and 1:10 depending on the nature of the program and specific expectations of the role.
- Allowance has been made for time spent by every caseworker in non-casework activities such as general administration (email, meetings, supervision, data tracking), training, travel and other miscellaneous activities.
- Allowance has been made for statutory holidays, vacation entitlement, and contracted working hours.
- FNCFS will employ staff with varying degrees of competency and seniority, resulting in a range of employment related entitlements. The staffing estimates are based on the typical staff entitled to 15 days of statutory holidays, 16 days of earned vacation, and 10 days of sick leave.
- The normal working day comprises of net 7 working hours after allowance for lunch and two coffee breaks.
- The base case model (Scenario-1) compensates the staffing estimate for an annual vacancy rate of 5%. An alternate (Scenario-2) compensates for a higher vacancy rate as well as for lost efficiency due to any structural factors.

Assumptions…

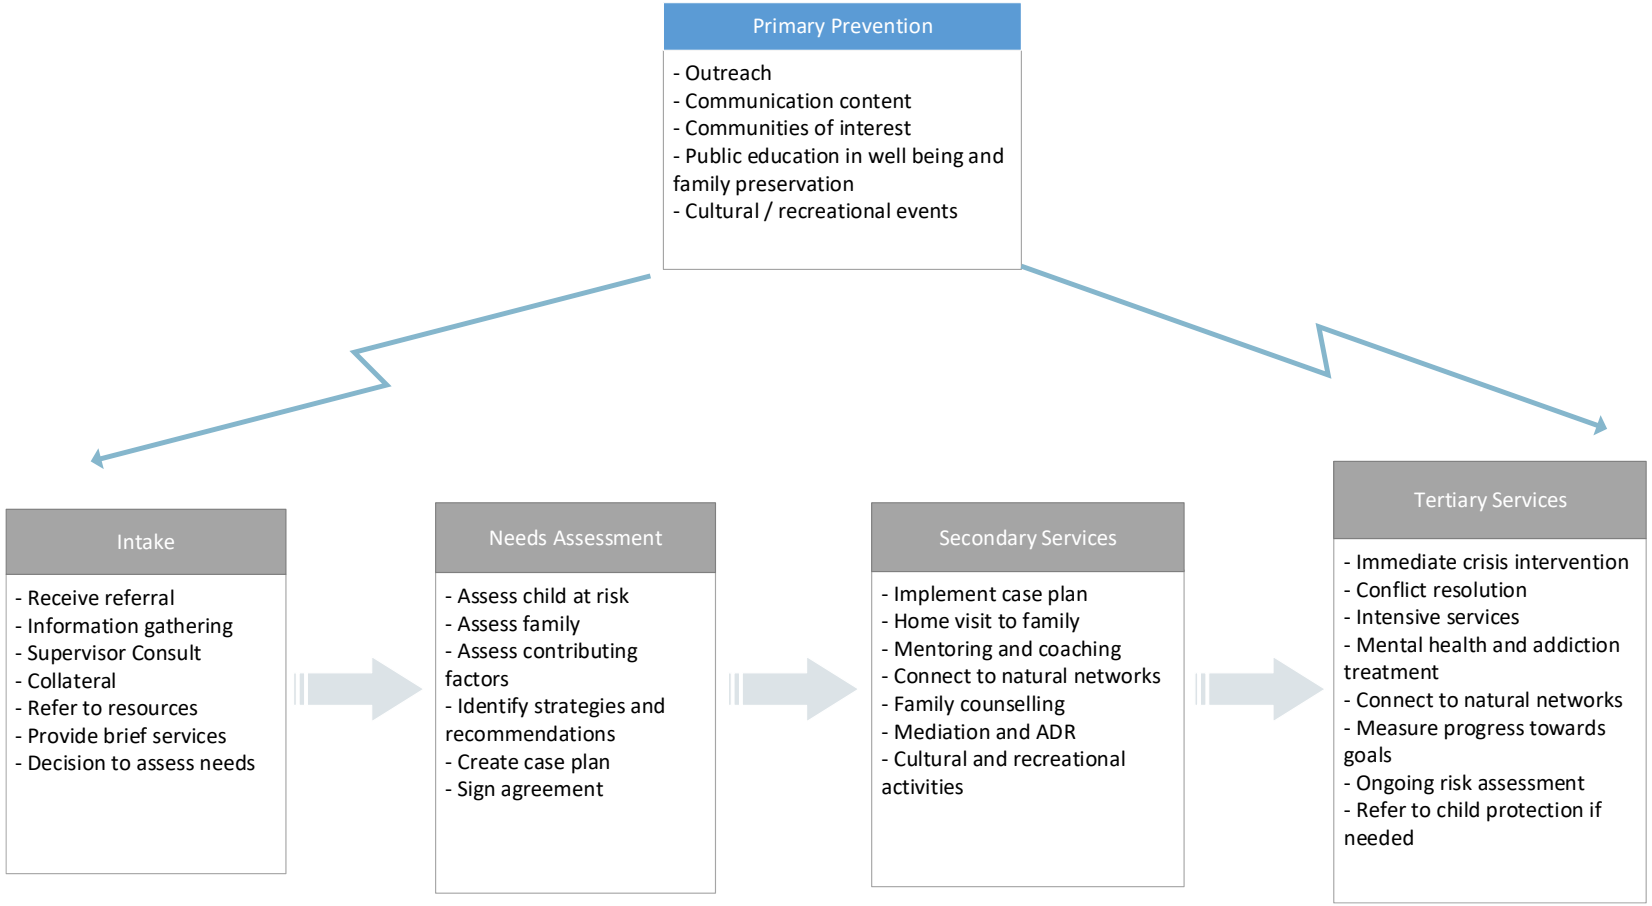
- Ongoing training and competency development of program delivery staff will be outsourced and are not included in the staffing estimate.
- Professional services for children, youth/young adults and families in need (e.g. addiction, family violence, psychological counselling, employment counselling) will be outsourced. CFS caseworkers have a service coordination role.



Findings and Analysis

EngageFirst
Management Consultants

Prevention and Family Enhancement - Practice Model



Prevention and Family Enhancement

Program Metrics	Small	Medium	Large
Total number of FN families	185	353	1486
% of families at Intake[1]	75%	60%	50%
% of families receiving Secondary Services[1]	55%	45%	38%
% of families receiving Tertiary Services[1]	20%	15%	12%
% of families achieving desired outcome[1]	37%	30%	25%

Note 1: As percentage of total FN families. Based on subjective assumption of potential service delivery targets.

Prevention and Family Enhancement – FTE Scenario-1

- Prevention and Family Enhancement includes services for strengthening family relations, parenting capacity, and preventing them from requiring any form of intervention.
- The estimate does not include staffing for a crisis line.
- The casework required under this program are:
  - Primary Prevention Services (community oriented)
  - Intake for Secondary and Tertiary services
  - Prevention Needs Assessment
  - Case Management for Secondary Services
  - Case Management for Tertiary services (intense)
- Supervision and Administrative Support are based on the average staffing estimate for the caseworker role.
- A caseload is a family receiving secondary or tertiary services. The benchmark is the recommended caseload (±10%) for a Generalist caseworker while also performing intake, assessment and primary prevention work as required.

Full Time Equivalent	Small FN Community	Medium FN Community	Large FN Community
Case Worker[1]	4.7–4.9–5.1	6.8–7.0 –7.4	23.6–24.6–25.7
Supervision	1.0	1.0	4.0
Admin. Support	1.0	1.0	4.0
Total (FTE)	**6.9**	**9.0**	**32.6**
Caseload per FTE	**21**	**22**	**23**

Note 1: The estimate shows a range from low to high forecast of Full Time Equivalent (FTE). The middle number is the most likely estimate of FTEs required for delivering the service.

Prevention and Family Enhancement – FTE Scenario-1 by Type of Prevention

- This table shows the allocation of staffing to Primary, Secondary and Tertiary prevention services for the most likely estimate.
- Primary Prevention Services is community oriented work, for example public education and awareness raising through workshops and outreach, hosting cultural and recreational events.
- Secondary services is prevention and support services at the family level, including direct contact, referrals to supports and professionals, community and cultural connections, natural supports, respite and dispute resolution.
- Tertiary services include secondary prevention and support services of higher intensity for families having more acute needs.

Full Time Equivalent	Small FN Community	Medium FN Community	Large FN Community
Primary	0.5	0.7	1.1
Secondary	3.0	4.3	16.0
Tertiary	1.4	2.0	7.5
Total	**4.9**	**7.0**	**24.6**
Supervision	1.0	1.0	4.0
Admin. Support	1.0	1.0	4.0
Total (FTE)	**6.9**	**9.0**	**32.6**

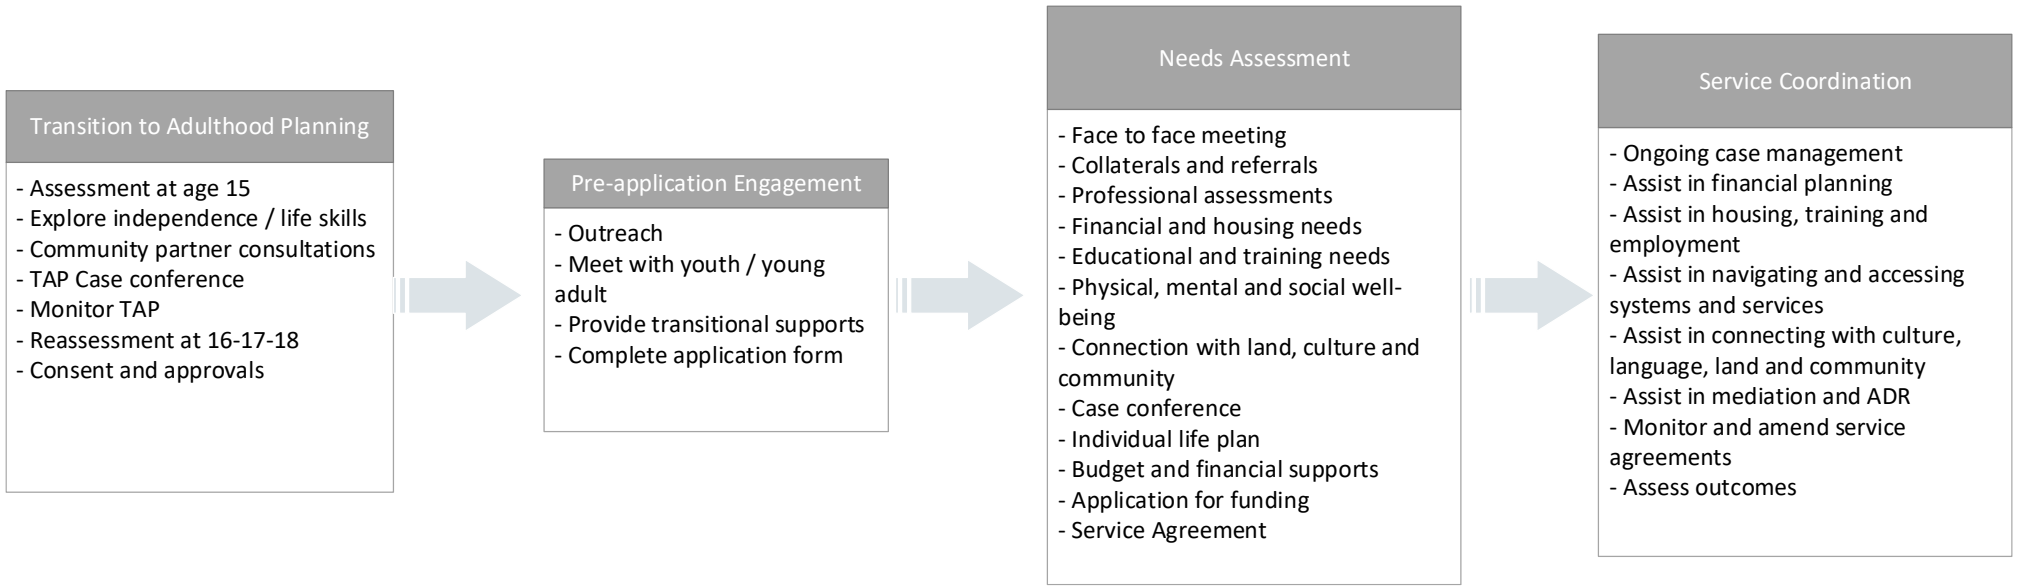
Prevention and Family Enhancement – FTE Scenario-2

- The estimate of FTE in this scenario is based on a presumed vacancy level of 10% and an adjustment for lost efficiency due to structural factors.
- All other assumptions and scope of services remain the same as in Scenario-1.
- The estimates show a small increase in the FTE requirement and a corresponding decrease in the caseload per FTE.
- A caseload is a family receiving secondary or tertiary services. The benchmark is the recommended caseload (±10%) for a Generalist caseworker while also performing intake, assessment and primary prevention work as required.

Full Time Equivalent	Small FN Community	Medium FN Community	Large FN Community
Case Worker[1]	5.0-5.2-5.4	7.3-7.6-7.9	25.3-26.3-27.4
Supervision	1.0	1.0	4.0
Admin. Support	1.0	1.0	4.0
Total (FTE)	**7.2**	**9.6**	**34.7**
Caseload per FTE	**20**	**22**	**22**

Note 1: The estimate shows a range from low to high forecast of Full Time Equivalent (FTE). The middle number is the most likely estimate of FTEs required for delivering the service.

Post Majority Supports – Practice Model



Post Majority Supports

Program Metrics	Small	Medium	Large
Total FN Population	500	1200	5500
Number of transitions to post majority age	6	14	61
Number of applications and eligibility review	25	60	260
Number of applications for funding	12	28	124
Number of youth/young adults receiving services	25	60	260

Note: Metrics are based on subjective assumption of potential service delivery targets.

Post Majority Supports – FTE Scenario-1

- Post Majority Support Services are available to youth who will be leaving care, or young adults who have already left care to support their successful transition into adulthood.
- The casework required under this program are:
  - Transition to Adulthood Planning
  - Pre-Application Engagement
  - Initial Application Review
  - Needs Assessment
  - Application for Funding
  - Service Delivery Coordination
  - Outreach Services
- Supervision and Administrative Support are based on the average staffing estimate for the caseworker role.
- A caseload is a youth/young adult receiving post majority services. The benchmark is the recommended caseload (±10%) for a Generalist caseworker while also performing intake, application processing, and outreach work as required.

Full Time Equivalent	Small FN Community	Medium FN Community	Large FN Community
Case Worker[1]	0.9–1.0–1.1	2.2–2.3 –2.4	9.5–9.9–10.3
Supervision	0.25	0.5	2.0
Admin. Support	0	0.5	2.0
Total (FTE)	**1.25**	**3.3**	**13.9**
Caseload per FTE	**25**	**26**	**26**

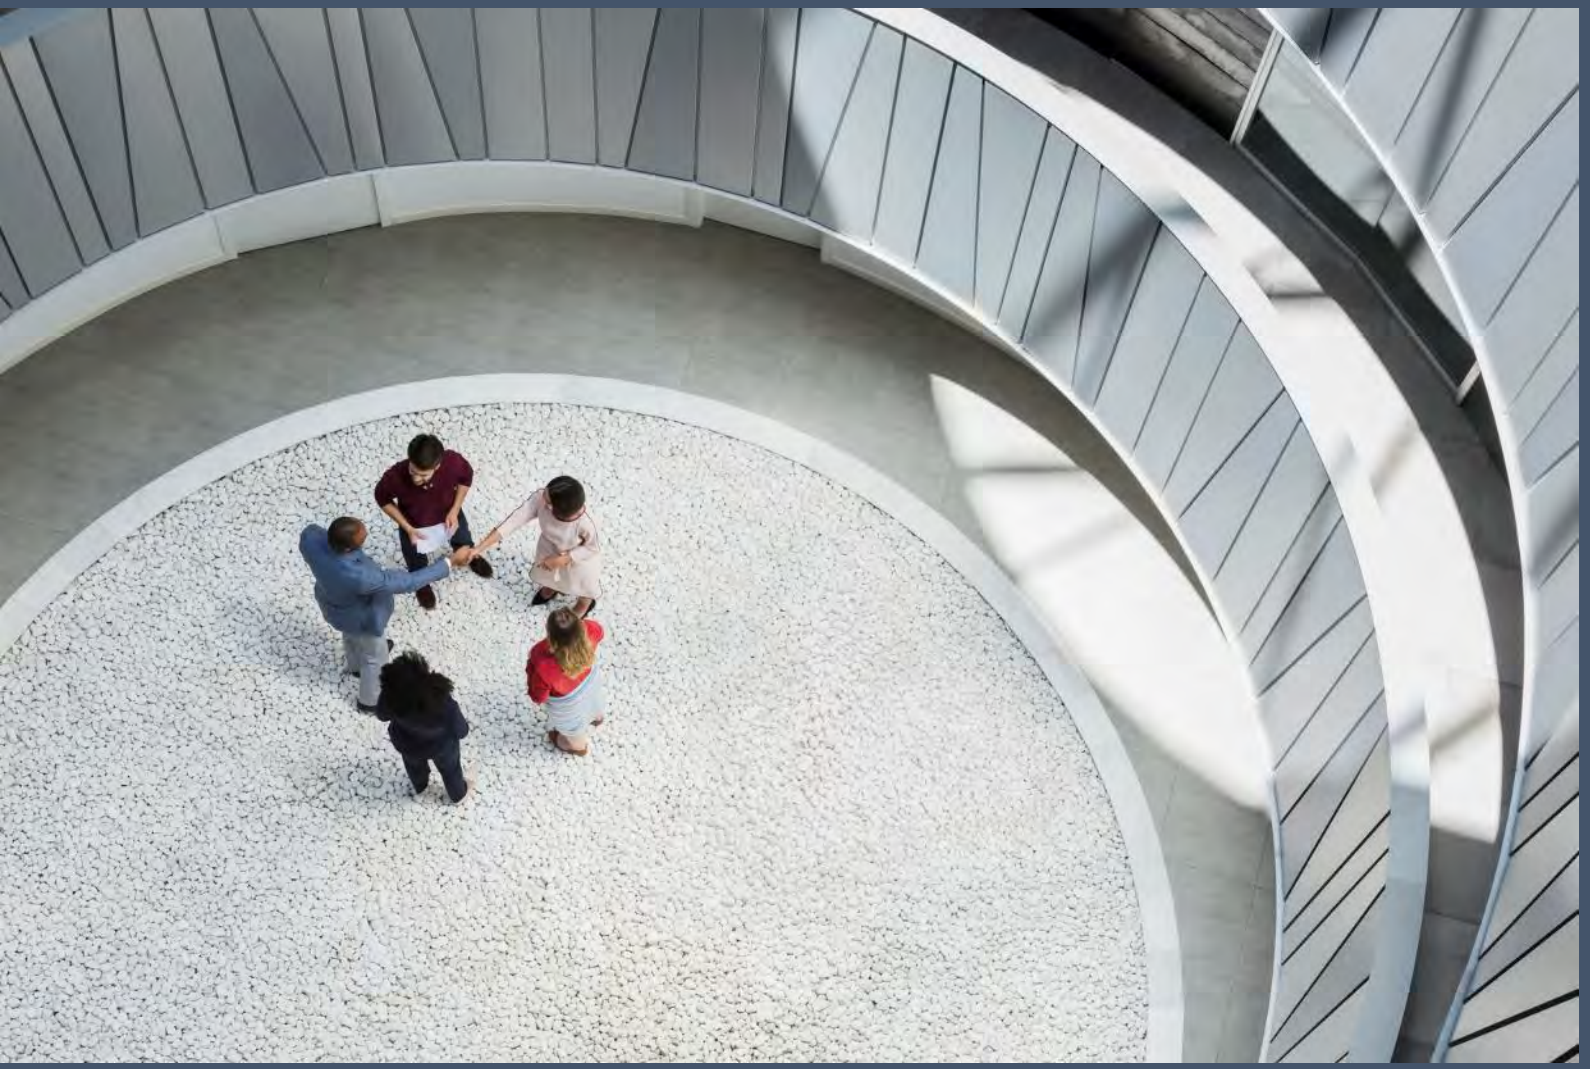
Note 1: The estimate shows a range from low to high forecast of Full Time Equivalent (FTE). The middle number is the most likely estimate of FTEs required for delivering the service.

Post Majority Supports – FTE Scenario-2

- The estimate of FTE in this scenario is based on a presumed vacancy level of 10% and an adjustment for lost efficiency due to structural factors.
- All other assumptions and scope of services remain the same as in Scenario-1.
- The estimates show a small increase in the FTE requirement and a corresponding decrease in the caseload per FTE.
- A caseload is a youth/young adult receiving post majority services. The benchmark is the recommended caseload (±10%) for a Generalist caseworker while also performing intake, application processing, and outreach work as required.

Full Time Equivalent	Small FN Community	Medium FN Community	Large FN Community
Case Worker[1]	0.93-1.0-1.1	2.4-2.5-2.6	10.1-10.5-10.9
Supervision	0.25	0.5	2.0
Admin. Support	0	0.5	2.0
Total (FTE)	**1.25**	**3.5**	**14.5**
Caseload per FTE	**25**	**24**	**25**

Note 1: The estimate shows a range from low to high forecast of Full Time Equivalent (FTE). The middle number is the most likely estimate of FTEs required for delivering the service.



Summary

EngageFirst
Management Consultants

Summary and Conclusion

- Managing the workload on frontline staff who deliver services to children and families is extremely important. Research indicates a correlation between workload and quality of outcomes.
- Having the right number of staff (caseworkers, supervisors and support) is important for the success of any organization delivering services to children and families.
- In developing the resource estimates we applied our WAM© methodology with assumptions and parameters reflective of a specific CFS policy and practice model, human resource policies and expectations of program success. These assumptions and design parameters may not apply across the country.
- No direct data gathering was conducted for this analysis. Effort has been made to reflect reality, however the analysis and findings are for illustrative purposes.
- FN communities across Canada differ from each other in their demographics, service capacity, program expectations and in their unique needs for services. FNs interested in estimating their resource needs should exercise judgement.
- The estimates indicate that depending on the population served, a CFS organization offering Prevention and PMSS based on the modeled policies and practices would require 7.9 FTE for small, 12.3 FTE for medium, and 46.5 FTEs for large communities in casework, supervision and administrative roles.
- Communities much smaller than 500 population may face challenges to operate as a standalone CFS organization. Strategies for sharing services with a neighboring large community, or clustering with other small communities to create a sustainable size should be explored.

CFS Program - FTE

- This table summarizes the estimate of FTEs required for each service by role for the base case (Scenario-1).
- Supervisor and Administrative support FTEs have been adjusted to reflect a joint Prevention and PMSS operation.

Full Time Equivalent	Small FN Community	Medium FN Community	Large FN Community
Prevention Caseworker	4.9	7.0	24.6
PMSS Case Worker	1.0	2.3	9.9
Supervision	1.0	1.5	6.0
Admin. Support	1.0	1.5	6.0
Total (FTE)	**7.9**	**12.3**	**46.5**

Engage First Management Consultants

- EngageFirst is a professional management consulting firm specializing in Child and Family Services (CFS), Health and Human Services.
- Our team consists of practitioners and experts with a combined experience of more than 60 years in CFS program delivery, policy and legislation; including direct experience with Indigenous communities.
- Our Work Assessment Model (WAM©) is the leading methodology for designing, assessing and benchmarking casework practices in CFS, Health and Human Services.
- We have unique qualifications and experience in program design, program review, performance management, and business transformation in the public sector.
- We are also a leading provider of expertise in data science and advanced analytics for applications in CFS, Health and Human Services.
- We put our clients first and are committed to your success in every engagement.

APPENDIX F – SUMMARY OF THE FEBRUARY 2024 NATIONAL GATHERING

First Nations not affiliated to a First Nations child and family services (FNCFS) agency: Setting next steps together

Second national gathering, February 12, 2024

During a meeting of First Nations not affiliated to a First Nations child and family services (FNCFS) agency held in Ottawa on November 2, 2023, delegates asked for a second meeting to hear findings and share reflections to inform the final report. IFSD convened the second gathering on February 12, 2024, in Vancouver, attended (in-person and virtually) by 47 individuals, representing 30 First Nations.

IFSD extends its gratitude for the invaluable contributions made to this work by First Nations not affiliated to an FNCFS agency. Their contributions through a national questionnaire, regional and national gatherings, and in-depth analyses, have been vital for this work. The generosity in sharing time and knowledge, and the honesty of their contributions, have helped to define the complexity of their different starting points.

IFSD's mandate is to deliver a needs assessment and cost analysis of a range of approaches to designing and delivering child and family services (CFS) among First Nations not affiliated to an FNCFS agency. This work is being undertaken pursuant to a Canadian Human Rights Tribunal (CHRT) order (2022 CHRT 8) and at the request of the Caring Society (Dr. Cindy Blackstock), the Assembly of First Nations (AFN), and the National Advisory Committee (NAC) to support the long-term reform of the FNCFS program.

Principal takeaways from the gathering (which followed the Chatham House Rule) are captured in the summary below.

Complex service environments

First Nations not affiliated to an FNCFS agency were never asked if they wanted to design and deliver all forms of prevention services (primary, secondary, tertiary). For the assembled participants, however, taking care of their children and families is a sacred duty. While their capacity to deliver prevention services varies considerably, everyone wants to ensure their children, youth and families can access the prevention services they need in a culturally appropriate manner. This is particularly important when provincial/territorial services can be inadequate and discriminatory.

As the service agreements between the federal and provincial/territorial governments on FNCFS are opaque and undisclosed (other than with Yukon), there is no way of assessing what services Canada is funding, nor the completeness of provincial/territorial service delivery.

First Nations are often left advocating to the province/territory to ensure their children receive the supports and services they require. Challenges with service delivery are constant, making advocacy a constant task. Drawing the line between

provincial/territorial service delivery and First Nation service delivery is challenging. It's a fine line, often blurred by a lack of coordination and integration in service delivery with the province.

Regional dynamics differ between First Nations not affiliated to an FNCFS agency and their provincial/territorial service providers. Some First Nations have memorandums of understanding (MOUs) with their province for service delivery, while others have tense relationships leaving First Nations unable to obtain basic information about their children and services.

First Nations not affiliated to an FNCFS agency have not had sustainable funding to build a consistent program offering in CFS. This has contributed to the variances in current levels of service delivery.

Clarity on the expectations for service delivery is required, as are the desired services in First Nations. There are questions that need to be answered:

1) What are the service needs of the First Nation? What does the First Nation want to deliver? What are they able to deliver now?
2) What prevention services (primary, secondary, and tertiary) are being offered in the First Nation? By whom? To what standard?
3) Is service integration between the provincial/territorial government and the First Nation ensured? How?

There must be specificity around service obligations between the First Nation and provincial/territorial government. Precisely what is required by whom and with what funding is essential to ensure needed services are being provided consistently and in alignment to *An Act respecting First Nations, Inuit and Métis children, youth and families*.

Support and capacity

There were several calls for continued engagement and gatherings to share knowledge and experiences with regional and national roundtables. These gatherings are opportunities for resource sharing, local engagement with First Nations, and peer support. Space and time are needed to plan, define needs, and develop approaches that align to community needs.

Needs in communities are significant and are impacted by structural drivers that contribute to the over-representation of First Nations children in protective services. Structural drivers such as addictions, housing, poverty, etc., will not be addressed by CFS alone. The drivers, however, shape service delivery. Often, needs are complex stemming from intergenerational trauma.

Specialized services are needed in First Nations but staffing these positions and retaining personnel is challenging. Compounding staffing needs are service providers

within a First Nation competing for the same staff. Coordinating and integrating service delivery within the First Nation can help to ensure a continuum of needs are met.

Steps to reform

The CHRT ordered Canada to end discrimination and ensure it does not reoccur. To uphold the rulings, CFS needs must be addressed for all impacted by the FNCFS Program. This includes First Nations not affiliated to an FNCFS agency and the provincial and Yukon governments. Given the complexity of service provision for First Nations not affiliated to an FNCFS agency with the integration and coordination (often lacking) with the provincial/territorial governments, who is best placed to ensure discrimination against children ends and does not reoccur through service delivery must be established.

Based on the knowledge and information shared by First Nations not affiliated to an FNCFS agency, IFSD proposed funding approaches (i.e., mechanisms to transfer funding) and produced funding estimates (Table 1, see Appendix A for a summary of the draft final report). There was support for a regionally/territorially focused funding approach where First Nations in their territories define an approach that best suits them. Others preferred continued bilateral agreements between the First Nation and the federal government. A national pool of funds was proposed to ensure First Nations not affiliated to an FNCFS agency could access additional funds for different activities, e.g., community engagement and consultation, during this period. Irrespective of the funding approach, participants indicated that **a steady state for service delivery has not yet been defined and that funding levels and approaches were subject to change**.

Table 1

Option	Description	Change from current state
1) Status quo	Fixed contribution approach.	None. Likely revision to terms and conditions.
1a) Status quo plus	Apply block contribution approach.	First Nations have greater flexibility in how funds are used for CFS in communities. Must work with a fixed amount of funding.
2) Regional support model	Trusted regional organizations would serve as the funding allocator and capacity support provider for First Nations not affiliated to an FNCFS agency.	Variation in regional allocation models. Localized capacity support for CFS.
3) First Nations needs assessments	Funding held in trust by regional organizations until First Nation is prepared to accept the funding for use (within approx. 1-5 years), following consultation with community on their own timeline.	Resources accessed based on readiness of First Nation.

The assembled participants emphasized that any decisions related to funding and structure are a starting point. These changes do not represent a reformed approach to CFS delivery in First Nations not affiliated to an FNCFS agency. **It will take time to**

clarify required activities and their resource requirements. It will also take time to build capacity to deliver desired services.

It is imperative to clarify required activities in prevention (which includes primary, secondary, and tertiary services). There is limited (if any) information available from the provinces, inconsistency in the starting points of First Nations, and no history of service delivery with sustained funding. First Nations not affiliated to an FNCFS agency are only beginning to develop their approaches to the delivery of prevention services.

Principal takeaways and recommendations

1) First Nations view CFS as a sacred duty. No one asked about their readiness for prevention service delivery (primary, secondary, tertiary), but they will do it.
2) First Nations not affiliated to an FNCFS agency have not had the opportunity to consistently plan or design their prevention service delivery approach. This means that activities are in development and will evolve. Funding is only a starting point. Funding needs are expected to change as service provision stabilizes.
3) Funding approach options defined during the gathering included:
    a. Maintaining separate bilateral agreements between First Nations and the federal government (no national approach)
    b. First Nations work together regionally/territorially to define the funding approach that best suits their needs
    c. Maintaining a national pool to access funding for supplemental activities (outside of service provision), e.g., community engagement
4) A call for more gatherings:
    a. Resources for local and regional gatherings to consider approaches
    b. National gatherings to share experiences, practices, and knowledge

IFSD is grateful to First Nations not affiliated to an FNCFS agency for the time, knowledge, and experiences that they have shared. Their contributions have made this work possible. IFSD anticipates its final report to be published in mid-March 2024.

Appendix A - First Nations not affiliated to an FNCFS agency final report findings (DRAFT - For discussion only)

First Nations not affiliated to an FNCFS agency
Final report findings

Second national gathering

DRAFT – FOR DISCUSSION ONLY

February 12, 2024

Today's goals

1) Confirm your context and experiences are captured appropriately.

2) Define the range of options and tools for supporting the design and delivery of child and family services.

3) Capture anticipated challenges moving forward.

Discussion questions for breakout sessions

- How can the amount, terms and conditions of federal funding best support your First Nation to deliver child and family services?

- Are there other service providers with which service delivery should be coordinated?

- What types of supports (e.g., capacity-building, capital, technical assistance) would assist my First Nation with designing, planning, and executing service delivery?

Draft final report summary

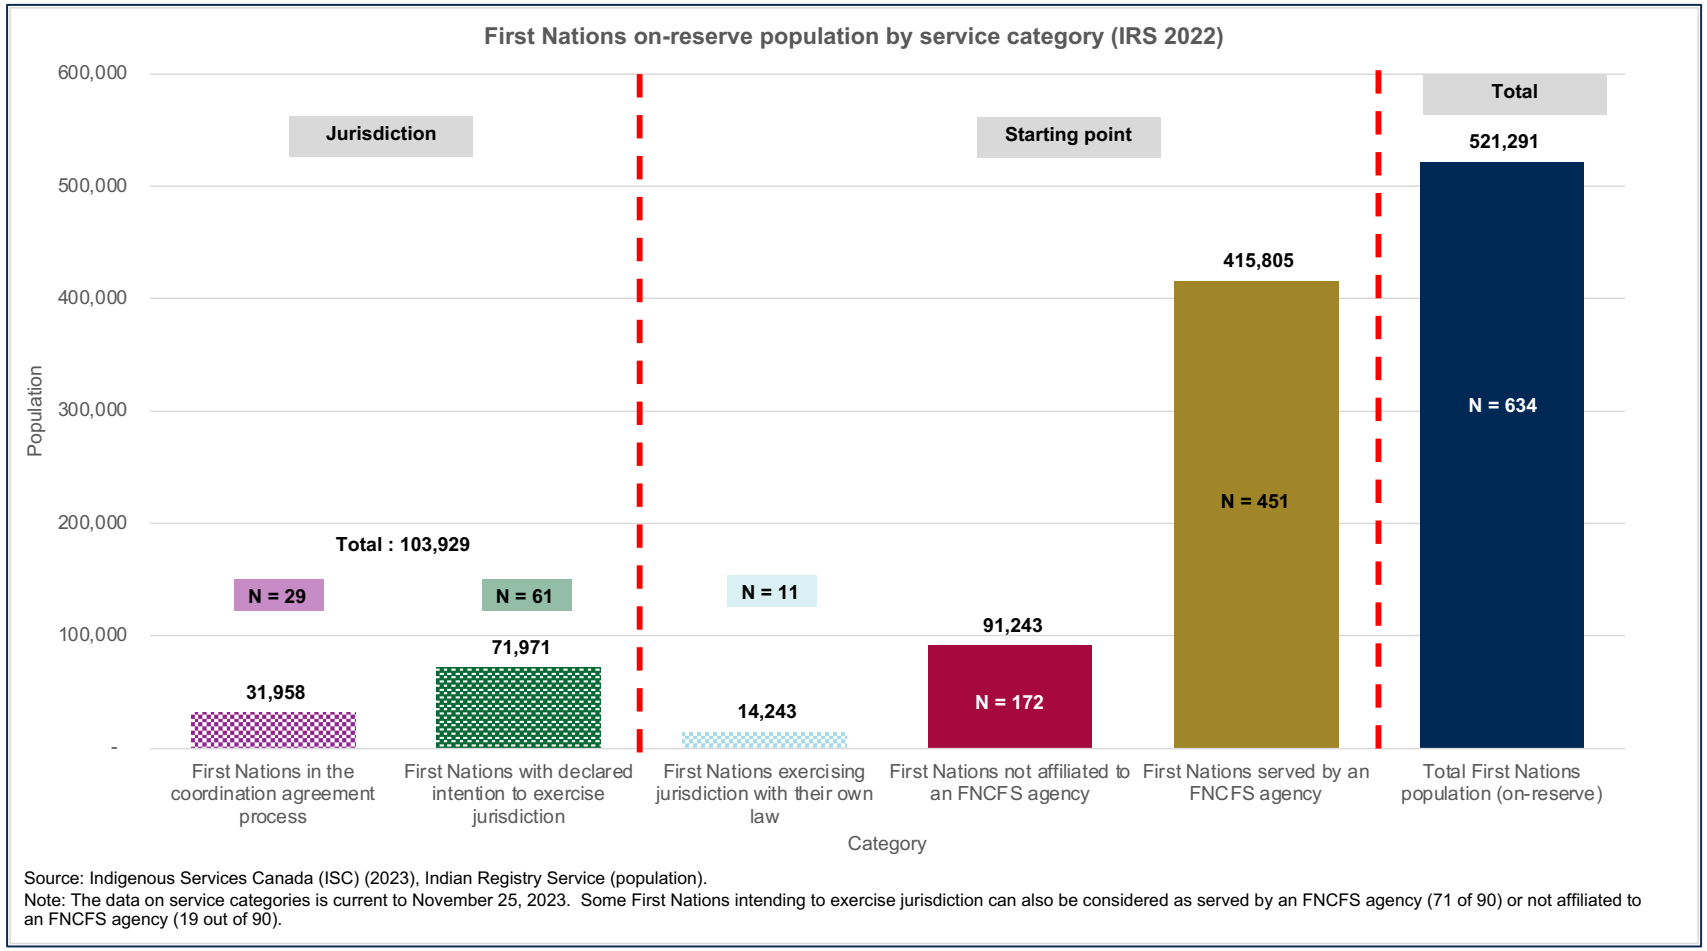
IFSD's mandate

1) Undertake a child and family services (CFS) needs assessment regarding First Nations not affiliated to an FNCFS agency.

2) Produce a cost analysis of approaches for designing and delivering CFS among First Nations not affiliated to an FNCFS agency.

Context: Population by service provider

- A significant majority of First Nations are served by an FNCFS agency.
- First Nations not affiliated to an FNCFS agency represent a significant group, but one left largely unconsidered for long-term reform.



Source: Indigenous Services Canada (ISC) (2023), Indian Registry Service (population).
Note: The data on service categories is current to November 25, 2023. Some First Nations intending to exercise jurisdiction can also be considered as served by an FNCFS agency (71 of 90) or not affiliated to an FNCFS agency (19 out of 90).

The FNCFS Program

- The description of the FNCFS Program through InfoBase (the Government of Canada's public facing reporting on its programs) includes *supporting safety and well-being for First Nations children ordinarily resident on-reserve*.

- Funds through the program are allocated to FNCFS agencies, provinces delivering services, First Nations Bands, and Tribal Councils. This means that the FNCFS Program is funding FNCFS agencies, First Nations, transfers to provinces, and jurisdiction.

- The contributions of FNCFS agencies to this work have helped to define a starting point, resource requirements, and implementation considerations in child and family services.

Child and family services in First Nations not affiliated to an FNCFS agency

- Ways First Nations not affiliated to an FNCFS agency receive CFS:
  - Protection and guardianship services are requirements in provincial/territorial law. These services are delivered by the province/territory and paid by Canada on-reserve and in the Yukon.
  - Secondary and tertiary prevention services should be delivered. It is unclear who is delivering these services, e.g., the province/territory and/or First Nations, other providers.

- Service providers should be operating consistent with *An Act Respecting First Nations, Inuit and Métis children, youth and families,* with consideration of the best interests of the child, a culturally-informed approach, and least disruptive measures.

- To end discrimination and ensure discrimination does not reoccur, the different parts of the system, i.e., protection, prevention, service providers, must work together.

Complex operating environments

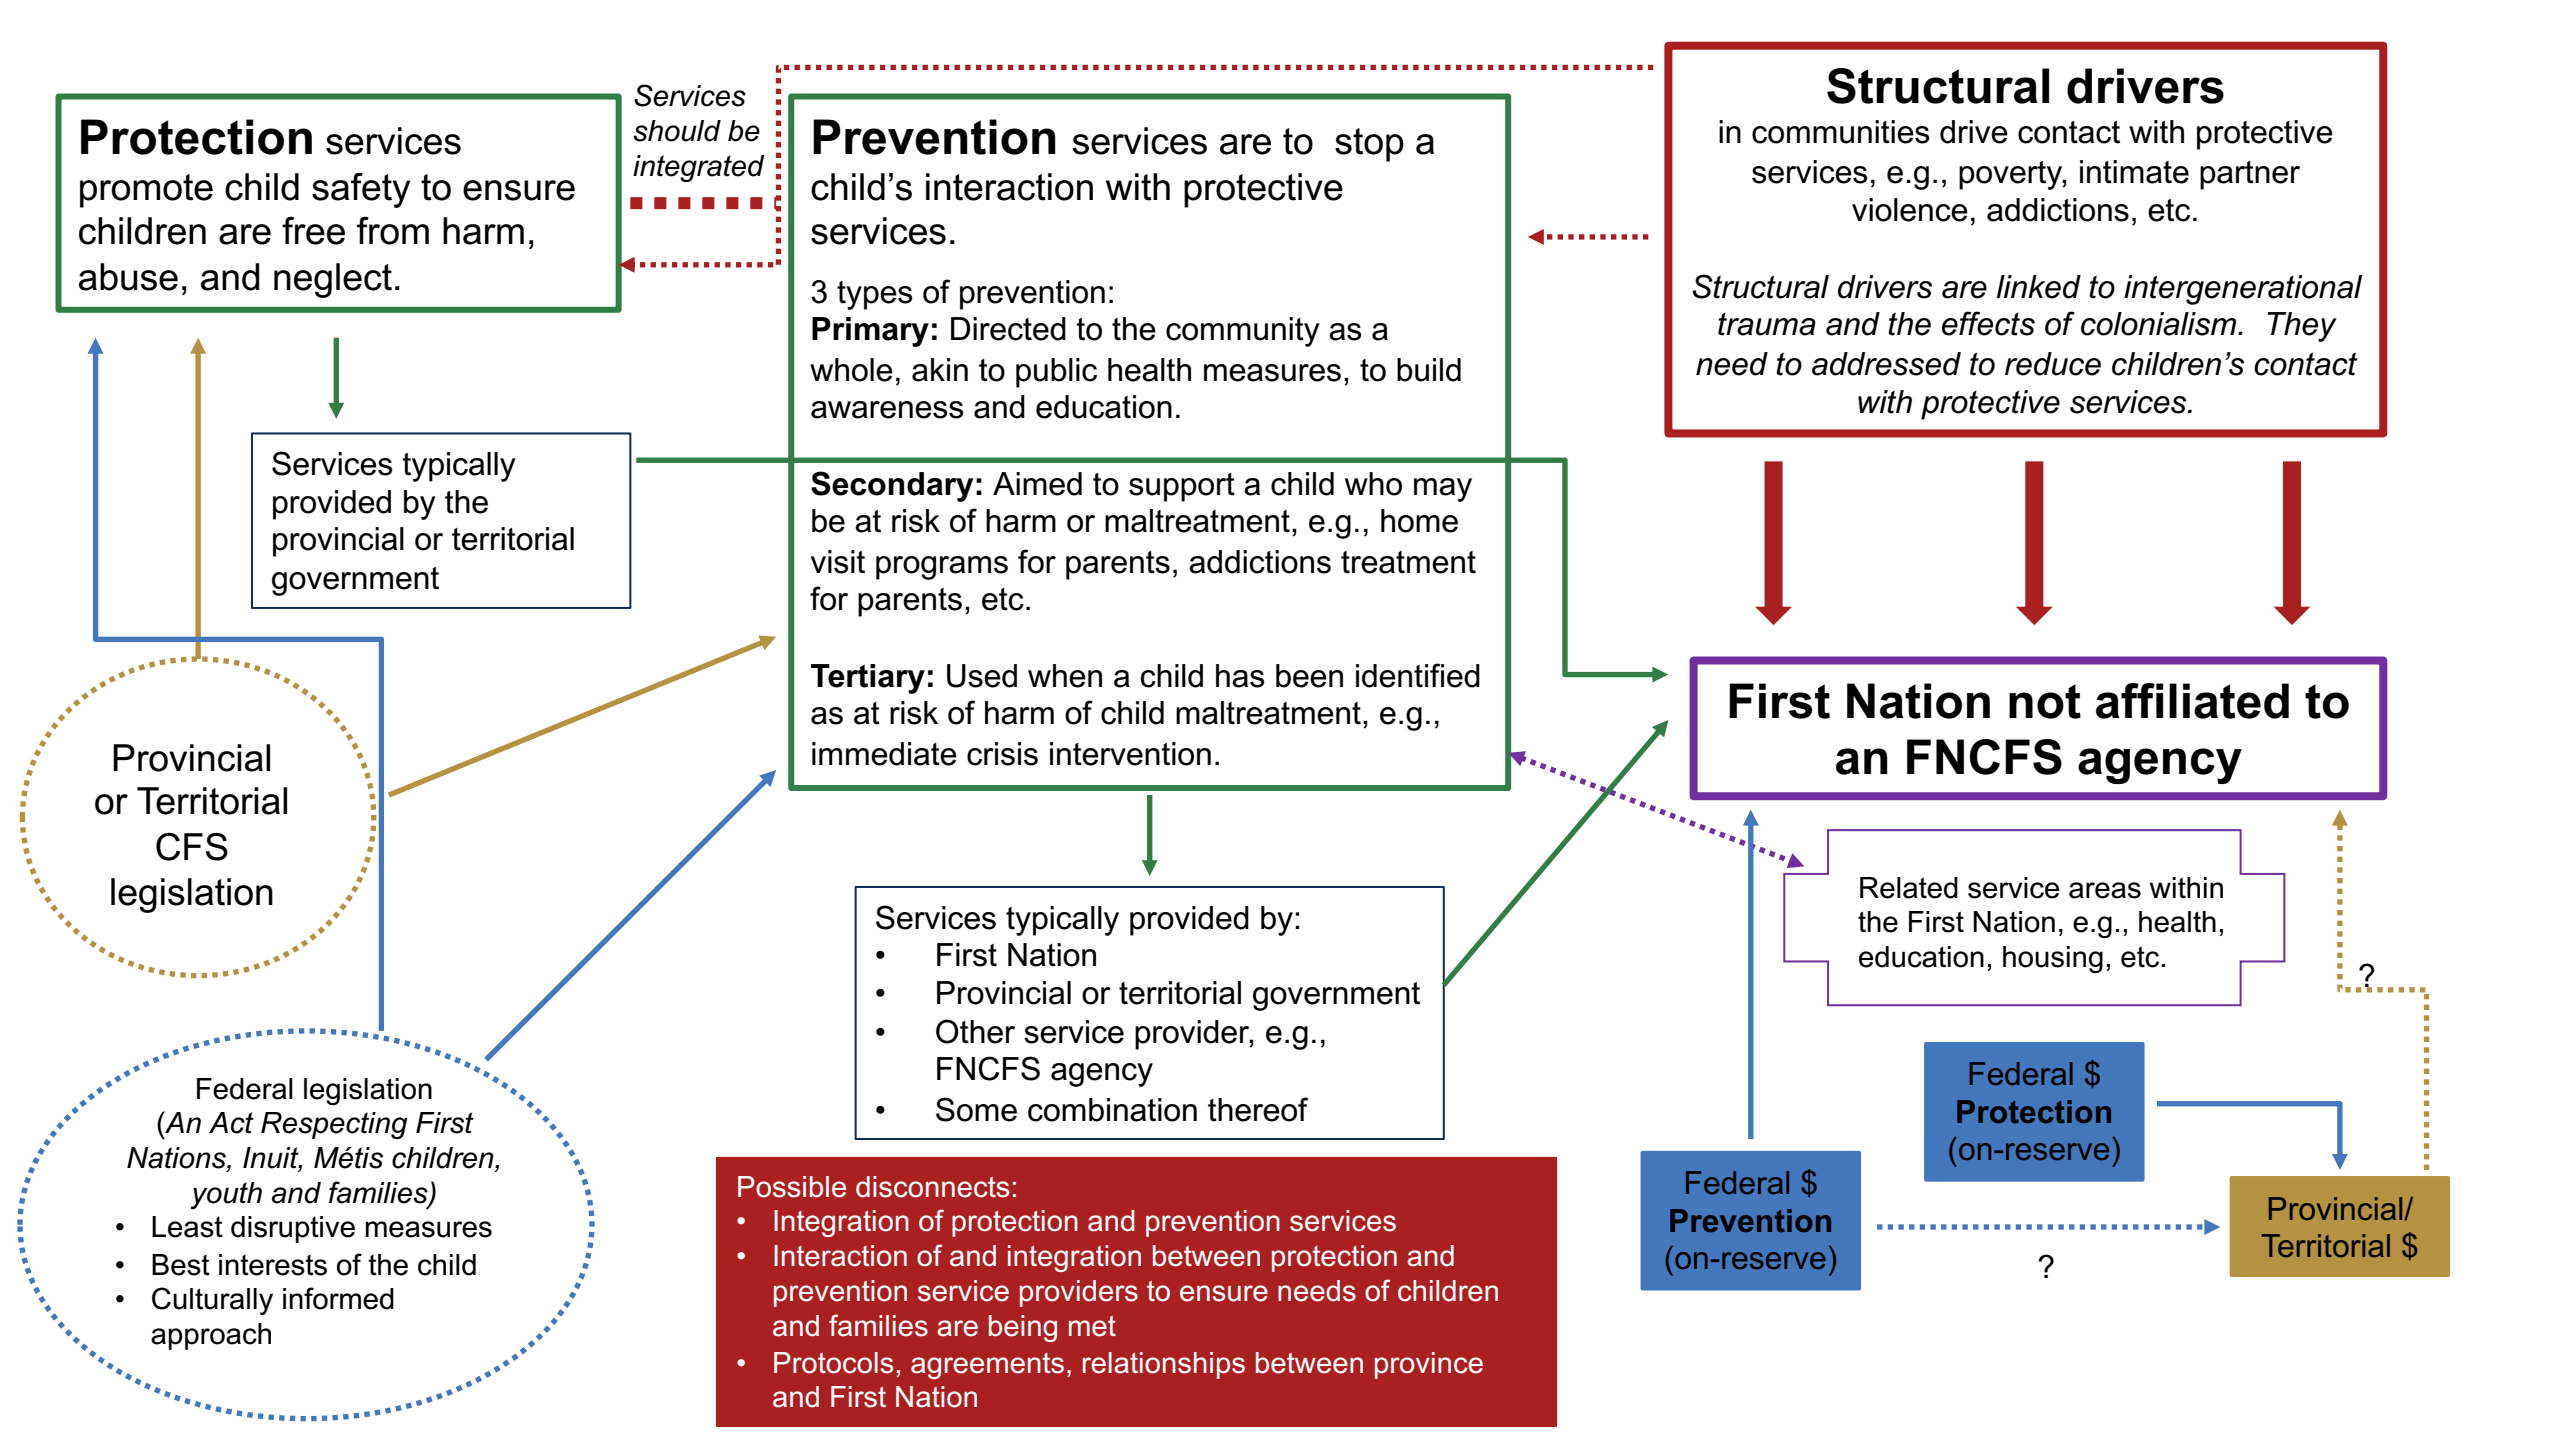
- Structural drivers that promote contact with protective services exist across communities. Addressing or mitigating the effects of those structural drivers can be done through a combination of protection and prevention services that should be integrated.

- Protection services: typically provided by the province/territory, with funding from the federal government for services on-reserve.

- Prevention services: may be offered by the province/territory, the First Nation, a nearby delegated agency, or other service providers.

- Ensuring the coordination of protection and prevention services is essential for keeping children out of care. Such coordination requires protocols, agreements, and working relationships between the First Nation, provincial, and federal governments, as well as with service providers (including those within the First Nation).

Where a First Nation served by an agency may work with their service provider, it is the provider that typically ensures coordination of protection and prevention services. For First Nations not affiliated to an FNCFS agency, the service landscape is more complex.



Protection services promote child safety to ensure children are free from harm, abuse, and neglect.
Services should be integrated
Prevention services are to stop a child's interaction with protective services.
3 types of prevention:
Primary: Directed to the community as a whole, akin to public health measures, to build awareness and education.
Secondary: Aimed to support a child who may be at risk of harm or maltreatment, e.g., home visit programs for parents, addictions treatment for parents, etc.
Tertiary: Used when a child has been identified as at risk of harm of child maltreatment, e.g., immediate crisis intervention.
Structural drivers
in communities drive contact with protective services, e.g., poverty, intimate partner violence, addictions, etc.
Structural drivers are linked to intergenerational trauma and the effects of colonialism. They need to addressed to reduce children's contact with protective services.
Services typically provided by the provincial or territorial government
Provincial or Territorial CFS legislation
Federal legislation (*An Act Respecting First Nations, Inuit, Métis children, youth and families*)
• Least disruptive measures
• Best interests of the child
• Culturally informed approach
Services typically provided by:
• First Nation
• Provincial or territorial government
• Other service provider, e.g., FNCFS agency
• Some combination thereof
First Nation not affiliated to an FNCFS agency
Related service areas within the First Nation, e.g., health, education, housing, etc.
Federal $ **Protection** (on-reserve)
Federal $ **Prevention** (on-reserve)
Provincial/ Territorial $
?
?
Possible disconnects:
• Integration of protection and prevention services
• Interaction of and integration between protection and prevention service providers to ensure needs of children and families are being met
• Protocols, agreements, relationships between province and First Nation

Different starting points

- 46% national participation in a questionnaire (2022); 9 regional workshops (75 participating First Nations); 2 national gatherings (November 2023 and February 2024); 5 in-depth analyses.
- Consider the different starting points for First Nations not affiliated to an FNCFS agency that will impact their transition to future/desired states.
- Time and space needed to reflect, engage with, and support children and families. This does not happen quickly or easily.
- Funding must be clear, sustainable, and on-going.

Funding

- At November 25, 2023, there were two funding amounts confirmed for First Nations not affiliated to an FNCFS agency (pursuant to the CHRT's rulings):

    1) $283/person on-reserve for the First Nations Representative Service;
    2) $2,500/person on-reserve for prevention services.

- The two funding amounts are for fiscal year 2024-25. Future funding amounts and structures are subject to the ongoing negotiations on FNCFS Program reform.

Funding foundations

- These funding options should not be considered final. They are works in progress that will need to be reviewed and reassessed as capacity is developed, mandates are defined, and services provided.

- As part of a First Nation, the design and delivery of CFS is not happening in a vacuum. There are existing services, people, and resources that should be leveraged to move forward in CFS.

- With each funding scenario, there are differences in the principles to generate the allocations and their total amounts.
  - **Estimates in this presentation are for on-reserve population only.** Total population models are included in the final report.

- For the different approaches to structure, there are trade-offs in flexibility in the use of funds, the source of funding allocation, and the prioritization of regional v. national approaches.

Cost estimation scenarios

Scenario	Description
1) Base scenario	- Per capita allocations of $2,500 and $283 - Projections grown by population + inflation
3a) Base scenario ($2,500+ $283) + some FNCFS agency funding approach top-ups	- Per capita allocations of $2,500 and $283 - Remoteness (baseline and top-ups) (applied to all First Nations) - Poverty 7% (of difference) - Results 5% (baseline) - IT 6% (baseline) - Projections grown by population + inflation
3b) Base scenario ($3,123 questionnaire) + some FNCFS agency funding approach top-ups	- Per capita allocations of $3,123 (average per capita expenditure from questionnaire data) - Band Representative Service, $283 per capita - Remoteness (baseline and top-ups) (applied to all First Nations) - Poverty 7% (of difference) - Results 5% (baseline) - IT 6% (baseline) - Projections grown by population + inflation
3c) Base scenario ($3,859 integrated provider) + some FNCFS agency funding approach top-ups	- Per capita allocations of $3,859 (average per capita expenditure of integrated service providers in Quebec from questionnaire data) - Band Representative Service, $283 per capita - Remoteness (baseline and top-ups) (applied to all First Nations) - Poverty 7% (of difference) - Results 5% (baseline) - IT 6% (baseline) - Projections grown by population + inflation

Scenarios compared

- Scenario 1 produces the lowest national estimate over five years for the population on-reserve ($1.63B).
- The three scenarios augment a baseline with one or more top-ups that are linked to different contexts and the costs of service delivery.
- Scenario 3a is the lowest and 3c provides the highest allocation relative to the selected options, as its per capita allocation is **the highest**.

Structure: Approaches to allocation

Option	Description	Change from current state
1) Status quo	Fixed contribution approach.	None. Likely revision to terms and conditions.
1a) Status quo plus	Apply block contribution approach.	First Nations have greater flexibility in how funds are used for CFS in communities. Must work with a fixed amount of funding.
2) Regional support model	Trusted regional organizations would serve as the funding allocator and capacity support provider for First Nations not affiliated to an FNCFS agency.	Variation in regional allocation models. Localized capacity support for CFS.
3) First Nations needs assessments	Funding held in trust by regional organizations until First Nation is prepared to accept the funding for use (within approx. 1-5 years), following consultation with community on their own timeline.	Resources accessed based on readiness of First Nation.

Next steps

- Second national gathering, February 12, 2024 (Vancouver).

- Update final report:
  - ISC expenditure data
  - Feedback from First Nations not affiliated to an FNCFS agency

IASC Inter-Agency Standing Committee

Guidelines

WITH US & FOR US: WORKING WITH AND FOR YOUNG PEOPLE IN HUMANITARIAN AND PROTRACTED CRISES

Developed by UNICEF & NRC under the auspices of the Compact for Young People in Humanitarian Action, in consultation with IASC Results Group 2 on Accountability & Inclusion

November 2020

Endorsed by IASC Operational Policy and Advocacy Group (OPAG)

These IASC guidelines were created in response to *Action 1: Services* in the Compact for Young People in Humanitarian Action (CYPHA). Launched at the World Humanitarian Summit in May 2016, the CYPHA made a long-term commitment to young people through five key actions that relate to services, participation, capacity, resources and data. UNICEF and the Norwegian Refugee Council (NRC) led the development of the guidelines, co-chairing a task force that includes: ActionAid; CARE; Inter-Agency Working Group on Reproductive Health in Crises (IAWG); International Federation of Red Cross and Red Crescent Societies (IFRC); Mercy Corps; United Nations Office of the Secretary General's Envoy on Youth (OSGEY); Plan International; RET International; United Nations Population Fund (UNFPA); United Nations High Commissioner for Refugees (UNHCR); and the Major Group for Children and Youth (MGCY).

The aim of these guidelines is to serve as the 'go-to' guide for working with and for young people in humanitarian settings and protracted crises.

Foreword 11

A **Introduction** **12**
Background 14
How did the voices of young people inform these guidelines? 17
Defining terms: Adolescents, youth and young people 20
Making the case: Key advocacy messages on working with and for young people in humanitarian action 22
- Demographics 22
- The potential dividend 23
- Increased vulnerabilities and needs of young people affected by emergencies 23
- Young people's fundamental rights 25
- Often overlooked, seldom acknowledged 25
- Differentiated needs 26
- Adolescent girls and young women 26

B **Key principles** **32**

C **Meaningful participation** **40**
Modes of participation 44
Strategic areas for meaningful participation 45
- Strategic area 1: Influencing law and policy 46
- Strategic area 2: Building skills and capacities 48
- Strategic area 3: Addressing social norms 53
- Strategic area 4: Supporting mechanisms and opportunities for participation 57

D **Young people across the humanitarian programme cycle** **68**
Five elements of the humanitarian programme cycle 73
- Element 1. Young people in needs assessment and analysis 73
- Element 2. Young people in strategic planning 78
- Element 3. Young people and resource mobilization 79
- Element 4. Young people and implementation and monitoring 82
- Element 5. Young people in operational peer review and evaluation 84

Three key enablers of the humanitarian programme cycle: Coordination, information management and preparedness 86
- Key enabler 1. Young people and coordination 87
- Key enabler 2. Young people in information management 90
- Key enabler 3. Young people and preparedness 91

Implementation of adolescent- and youth-responsive programming 98
Key programming approaches for putting young people at the centre no matter the sector 102
Camp Coordination and Camp Management (CCCM) 105
Disaster Risk Reduction and Climate Change Adaptation (DRR and CCA) 109
Education 113
Livelihoods 119
Food security 128
Health 132
Nutrition 141
Water, Sanitation and Hygiene (WASH) 145
Sustaining peace 150
Protection 157
Child protection (Area of responsibility within protection) 160
Gender-based violence (Area of responsibility within protection) 164
Housing, land and property (Area of responsibility within protection) 168
Mine action (Area of responsibility within protection) 171
Shelter 173
Emergency telecommunications 177

Annexes 191
Annex 1: Risk assessment tool to support safe participation 192
A risk assessment tool and additional guidance to enhance safeguarding 192
Annex 2: Checklist: Meaningful participation of young people in programmes 196
Annex 3: Checklist: Planning an assessment with young people 197
Annex 4: Checklist: Information management process 199
Annex 5: Recommendations for supporting young women's leadership 200
Annex 6: Life skills 201
Annex 7: COVID-19: Working with and for young people: Guidance summary 202
Part 1: Young people, seriously affected by coronavirus disease (COVID-19), are part of the global response 202
Part 2: Key actions 203

Acronyms and abbreviations

AAP	Accountability to Affected Populations
CaLP	Cash Learning Partnership
CCA	climate change adaptation
CCCM	camp coordination and camp management
CRC	Convention on the Rights of the Child
CRM	complaints and response mechanism
CSO	civil society organizations
CVA	cash and voucher assistance
CYPHA	The Compact for Young People in Humanitarian Action
DRR	disaster risk reduction
ERW	explosive remnants of war
FAO	Food and Agriculture Organization of the United Nations
GBV	gender-based violence
HLP	housing, land and property
HPC	humanitarian programme cycle
IASC	Inter-Agency Standing Committee
IAWG	Inter-Agency Working Group on Reproductive Health in Crises
ICRC	International Committee of the Red Cross
ICT	information and communication technologies
IDP	internally displaced person
IED	improvised explosive device
IFRC	International Federation of Red Cross and Red Crescent Societies
ILO	International Labour Organization (of the United Nations)
INEE	Inter-agency Network for Education in Emergencies
IOM	International Organization for Migration
IPCC	Intergovernmental Panel on Climate Change
LGBTQIA+	lesbian, gay, bisexual, transgender, queer/questioning, intersex, asexuality, +
M&E	monitoring and evaluation
MENA	Middle East and North Africa
MHM	menstrual hygiene management
MHPSS	mental health and psychosocial support
NEET	not in education, employment or training
NGO	non-governmental organization
NRC	Norwegian Refugee Council
OCHA	United Nations Office for the Coordination of Humanitarian Affairs
OHCHR	United Nations Office of the High Commissioner for Human Rights
OMC	operational management cycle
OSGEY	United Nations Office of the Secretary General's Envoy on Youth
PSEA	Protection from Sexual Exploitation and Abuse
RCM	refugee coordination model
SALW	small arms/light weapons
SEA	sexual exploitation and abuse
SRH	sexual and reproductive health
SRHR	sexual and reproductive health and rights
UNFPA	United Nations Population Fund
UNHCR	United Nations High Commissioner for Refugees
UNICEF	United Nations Children's Fund
MGCY	Major Group for Children and Youth
WASH	water, sanitation and hygiene
YPS	youth, peace and security

Glossary/definitions of selected terms used in this report

Age groups: Children (ages 0–17), youth (ages 15–24), adolescents (ages 10–19), young people (ages 10–24), young adolescents (ages 10–14), older adolescents (ages 15–19), older youth (ages 20–24), young adults (ages 18–24) (see also **FIGURE 2** ▶ and **BOX 4** ▶).

Clusters/working group: Please refer to explanation in **BOX 2** ▶.

Durable solutions: International protection is a temporary substitute for the normal safeguards of national protection in one's country of origin. The three durable solutions are: voluntary repatriation, local integration and resettlement. Often a combination of solutions will be necessary for a refugee population, as each refugee's sex, race, age, time of flight, community of origin and reasons for flight have implications for the suitability of each of the three durable solutions for that person[1].

Duty bearers are entities "that have obligations to respect, protect and fulfil the rights of people" in the context of a rights-based approach to development; the principal duty bearer is the state (government), but non-state moral duty bearers can include parents, teachers, employers, police and non-governmental organizations and institutions at all levels[2].

Internally displaced persons: Internal displacement describes the situation of people who have been forced to leave their homes but have not left their country[3].

Refugees are all persons who are outside their country of origin for reasons of a well-founded fear of persecution on one of the grounds listed in the 1951 Convention, or because a conflict, generalized violence, or other circumstances, have seriously disturbed public order, and who, as a result, require international protection[4]. In this report, we will use the term 'refugee' to include asylum-seekers who have not yet been finally granted or refused refugee status.

Returnees: Former refugees who have returned to their country of origin spontaneously or in an organized fashion but have not yet been fully reintegrated[5].

Separated child: A child who is separated from both parents or from his/her previous legal or customary primary caregiver, but not necessarily from other relatives. Separated children may therefore include children accompanied by other adult family members[6].

Stateless: Not considered as a national by any state under the operation of its law[7].

Unaccompanied child (unaccompanied minor): A child who has been separated from both parents and other relatives and is not being cared for by an adult who, by law or custom, is responsible for doing so[8].

Acknowledgements

These IASC guidelines have been prepared by **UNICEF** and the **Norwegian Refugee Council (NRC)**, as the two agency co-chairs of Task Team 1 under the **Compact for Young People in Humanitarian Action**.

The guidelines were developed by international consultant Josh Chaffin, who worked in close collaboration with Priya Marwah and Jumana Haj-Ahmad (UNICEF), Sophia Kousiakis and Paul Fean (Norwegian Refugee Council). The guidelines build on an initial document, desk review and write-ups by Katie Tong, Amie Wells and Tanya Zayed. Special thanks are given to the approximately 500 young people across more than 20 countries who helped shape these guidelines: Afghanistan, Brazil, Chad, Ecuador, Egypt, El Salvador, Ethiopia, the Gambia, Indonesia, Iraq, Jordan, Kenya, Malaysia, Mexico, Nepal, Nigeria, Peru, Syria (online consultation), Turkey, United States and Venezuela, among others.

In addition, this document was extensively reviewed by members of the Inter-Agency Standing Committee, UNHCR, cluster/working group partners, members of the Compact for Young People in Humanitarian Action, and many field practitioners working with and for young people in humanitarian and protracted crises.

Much appreciation is also extended to the Compact Task Team 1 agencies who provided extensive contributions to improve the guidelines and ensure young people's active shaping of the content: **ActionAid** (Kirsten Hjørnholm), **CARE** (Anushka Kalyanpur), **IAWG** (Katherine Meyer), **IFRC** (Marcel Stefanik), **Mercy Corps** (Matt Streng), **NRC** (Emma Bonar, Sophia Kousiakis and Mai Nasrallah), **OSGEY** (Mette Lybye Poulsen), **Plan International** (Lotte Claessens and Anita Queirazza), **RET International** (Marina Lopez-Anselme and Dima Haydar), **World Organisation of the Scout Movement** (Brunel Etienne), **UNFPA** (Danielle Engel, Purba Tyagi), **UNHCR** (German Robles Osuna, Janis Ridsel and Nick Sore), **UNICEF** (Jumana Haj-Ahmad, Priya Marwah and Erika Yague,), **MGCY** (Mridul Upadhyay).

These guidelines were edited by Jane Patten of Green Ink, United Kingdom, and designed by LS graphic design.

This project was made possible through funding from UNICEF and UNFPA.

500 young people consulted

across

more than

20 countries

Foreword

Historically we've had a tendency to approach adolescents as a problem to be solved, and youth as a period of risk. If we want humanitarian action to be more effective and inclusive, we need to think of youth instead as a period of promise, for a population full of potential.

Young people make up 41 per cent of the global population. In many humanitarian settings, adolescents, youth and children constitute more than 50 per cent of the population in need*. In a world where one quarter of the global youth population live amid violence or armed conflict and young people are increasingly affected by natural disasters – made more intense and frequent because of climate change – we have no choice but to act. During a conflict or disaster, a young person's education, health and development may be interrupted. Social networks maybe ruptured and young people may be exposed to new risks. They may find themselves taking on adult roles too early. The support young people receive in humanitarian crises will have a lasting impact not only on their own recovery process, but also on the future of humanity. There is an urgent need to safeguard the rights of young people and engage them in humanitarian response efforts.

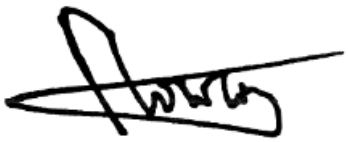
As humanitarian actors make decisions about how to respond, they must start with young people themselves. Young people are excellent judges of their own needs, and they must be engaged to inform decisions that will affect their lives. Malala Yousafzai has said "I raise up my voice – not so I can shout but so that those without a voice can be heard... we cannot succeed when half of us are held back." We must all be advocates for bringing the voices of young people to the front lines of humanitarian action.

We must involve young people in humanitarian responses and peacebuilding efforts, from design through to implementation and monitoring. These inter-agency guidelines are part of the effort to address that.

The development of these IASC guidelines involved a cross-section of hundreds of young people and humanitarian practitioners from Afghanistan, Bangladesh, Ecuador, Iraq, Jordan, Kenya, Nigeria, the Bolivarian Republic of Venezuela, and beyond, and several major recent global consultations with thousands of crisis-affected young people.

There is no universal prescription for young people's needs in humanitarian settings. They are a diverse group, and context is everything. This guidance will help practitioners and young people design and implement approaches that address their needs and that engage them as change agents in their context.

Signed,



Mark Lowcock

Under-Secretary-General for Humanitarian Affairs and Emergency Relief Coordinator, United Nations

Introduction

A

Background

The World Humanitarian Summit, held on 23–24 May 2016 in Istanbul, emphasized the urgent need to safeguard the rights of young people (defined as those aged 10–24 years) and engage them in humanitarian response efforts. The Compact for Young People in Humanitarian Action (CYPHA) was launched at the summit, under the leadership of the International Federation of Red Cross and Red Crescent Societies (IFRC) and the United Nations Population Fund (UNFPA), as a deliberate step by the humanitarian community to work with and for young people.[1] The CYPHA builds on processes led by and for young people – including the Global Refugee Youth Consultations in 2015–2016,[2] the 2015 Doha Youth Declaration on Reshaping the Humanitarian Agenda,[3] and the 2015 United Nations Security Council Resolution 2250 on youth, peace and security[4] – all of which emphasize the need for and importance of meaningful engagement of young people at subnational, national, regional and global levels.

Starting in October 2017, UNICEF and the Norwegian Refugee Council (NRC) led a two-year consultative process (completed in December 2019) to develop these Inter-Agency Standing Committee (IASC) guidelines in response to Action 1 of the CYPHA (see BOX 1 ▶).

Box 1: Five key actions of the Compact for Young People in Humanitarian Action

Action 1: SERVICES: Promote and increase age-and gender-responsive and inclusive programmes that contribute to the protection, health and development of young women, young men, girls and boys within humanitarian settings

Action 2: PARTICIPATION: Support systematic inclusion of engagement and partnership with youth, in all phases of humanitarian action through sharing of information and involvement in decision-making processes at all levels, including budget allocations

Action 3: CAPACITY: Recognize and strengthen young people's capacities and capabilities to be effective humanitarian actors in prevention, preparedness, response and recovery, and empower and support local youth-led initiatives and organizations in humanitarian response, such as those targeting affected youth, including young refugees and internally displaced persons living in informal urban settlements and slums

Action 4: RESOURCES: Increase resources intended to address the needs and priorities of adolescents and youth affected by humanitarian crises, including disasters, conflict and displacement, and identify ways to more accurately track and report on the resources allocated to young people in humanitarian contexts

Action 5: DATA: Ensure the generation and use of age-and sex-disaggregated data pertaining to adolescents and youth in humanitarian settings

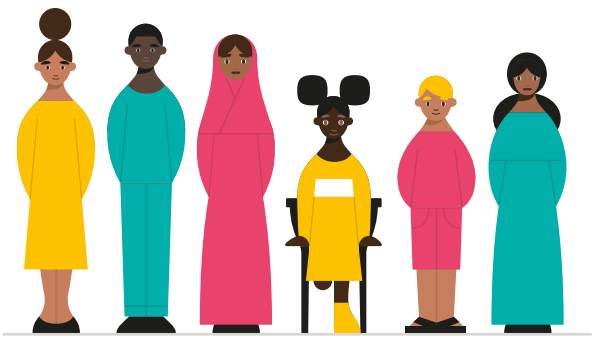
For definitions of key terms, see **GLOSSARY ▶**. For an explanation of humanitarian clusters/working groups, see **BOX 2 ▶**. For information on age groups and definitions, see **FIGURE 2 ▶** and **BOX 4 ▶**.

WHY young people?

Adolescents and youth are a vital positive force in emergency preparedness and response. They have wide-ranging capacities and unique needs, but they often get lost between programming for children and programming for adults. These IASC guidelines are not just about 'mainstreaming' the needs of young people, but about recognizing the contributions they make towards improving humanitarian response and programming. These guidelines address a gap in humanitarian tools, which tend to overlook young people – a specific but broad demographic with interlinked needs across multiple clusters/working groups (see **BOX 2 ▶**).[6]

WHO is the target audience of this guidance?

These guidelines are for all humanitarian aid staff at the country level, including staff of civil society organizations (CSOs; including disabled persons organizations), local and national non-governmental organizations (NGOs), government agencies, international NGOs, Red Cross and Red Crescent Societies, and United Nations agencies. These actors should consult and work closely with young people and with youth-led organizations and networks to apply the guidelines. Other stakeholders, such as private sector firms and aid donors, will also find this guidance useful as they support the work of these implementers.



WHAT is this document?

These IASC guidelines provide a framework for working with and for young people throughout the humanitarian programme cycle (HPC), complete with tips, examples and case studies. In addition, humanitarian actors can use this guidance as a reference to design programmes that respond to their context.

WHEN should this guidance be used?

It can and should be applied in all phases of humanitarian action (to inform disaster risk reduction, preparedness, response, transition and recovery), in the context of both rapid-onset and slow-onset emergencies, for natural hazards, conflicts, protracted crises, and during refugee and internal displacement situations, as well as in peacebuilding contexts.

HOW should organizations use this guidance?

A core set of principles is presented, which should be applied to humanitarian programmes for young people across differing humanitarian contexts, keeping in mind that the approach should always first be adapted to the local context, to ensure practical and cultural appropriateness.

These guidelines can be applied to lay the groundwork when developing good humanitarian programmes for adolescents and youth that will do no harm. For instance, there is information on the importance of training staff on functional referral pathways before they engage with young people.

SECTION E ▶ ***Implementation of adolescent and youth responsive programming*** was developed to inform organizations' ongoing humanitarian programming involving adolescents and youth, within particular clusters/working groups. Relevant resources and tools are mentioned with links for easy access, and case studies are also presented, which may further inform good programme approaches in a specific sector or during a particular phase of the HPC.

Box 2: Clusters and working groups in humanitarian response

Clusters are groups of humanitarian organizations, both United Nations and others, in each of the main areas of humanitarian action (listed below). They are designated by the **Inter-Agency Standing Committee (IASC)** and have clear responsibilities for coordination.

The IASC is the primary mechanism for inter-agency coordination of humanitarian assistance, involving the key United Nations and other humanitarian partners. The IASC operates under the leadership of the **Emergency Relief Coordinator** at the United Nations Office for the **Coordination of Humanitarian Affairs (OCHA)**.

In the context of refugee responses, the term 'cluster' is not used. Instead, the refugee coordination model (RCM; see **BOX 14 ▶** in Section D) follows a coordination structure known as refugee protection working groups.

The thematic areas of the humanitarian clusters/working groups are (in alphabetical order):

- Camp Coordination and Camp Management (CCCM)
- Cash
- Early Recovery (not included in these guidelines)
- Education
- Emergency Telecommunications
- Food Security
- Health
- Information Management
- Logistics (not included in these guidelines)
- Nutrition
- Protection (including the following Areas of Responsibility, which are all covered in these guidelines: Child Protection; Gender-Based Violence [GBV], Housing, Land, Property [HLP], Mine Action)
- Shelter
- Water, Sanitation and Hygiene (WASH)

Note: The Early Recovery and Logistics clusters/working groups are not featured in these guidelines, as noted, but there is instead an additional focus on Livelihoods, Sustaining Peace, Disaster Risk Reduction (DRR) and Climate Change Adaptation (CCA).

How did the voices of young people inform these guidelines?

The voices of young people affected by conflicts and natural hazards are a cornerstone of these guidelines.

A series of gender-balanced field consultations (in person and online) were held during 2018 and 2019 with a combined total of more than 500 crisis-affected youth (including from youth networks), and workshops (in person) were subsequently held with around 200 practitioners working in humanitarian and adolescent/youth programmes, including United Nations agencies and NGOs. The youth participants were from more than 20 countries across the globe: Afghanistan, Brazil, Chad, Ecuador, Egypt, El Salvador, Ethiopia, the Gambia, Indonesia, Iraq, Jordan, Kenya, Malaysia, Mexico, Nepal, Nigeria, Peru, the Syrian Arab Republic (online consultation), Turkey, United States, and Venezuela, among others. The participants were given a draft of these guidelines as a basis for discussion and feedback, and a youth-friendly consultation toolkit was used for the youth consultations.

Many targeted requests for individual feedback were also sent via email to focal points across clusters/working groups and specialists in adolescent and youth programming. In total, the responses of approximately 500 youth and 300 practitioners were recorded, consolidated and incorporated into this guidance. The **Major Group for Children and Youth** were major contributors to ensuring young people's recommendations were consolidated into these final guidelines.

Mercy Corps and the **Capstone student team** from Columbia University, New York,[8] were the first to validate the IASC draft guidelines in the field. Workshops and interviews were conducted in Nepal with young people and humanitarian workers, reflecting on the engagement of young people during the 2015 earthquake response.[9] Key findings and recommendations were incorporated into these guidelines.

FIGURE 1.
Geographical scope of the 2018–2019 youth consultations conducted for these IASC guidelines

In addition, during three earlier major global consultations, thousands of crisis-affected adolescents and youth also expressed their priorities for improving humanitarian action. These three global consultations were:

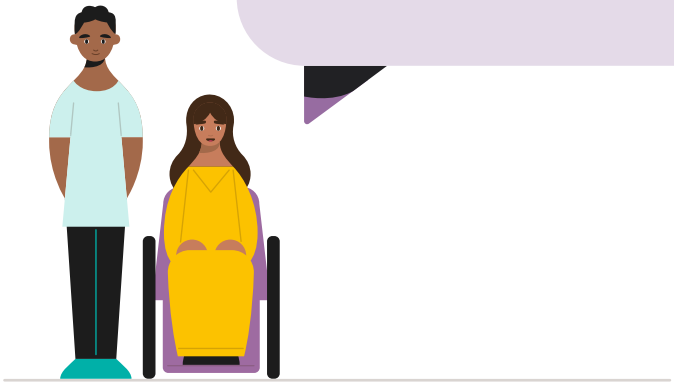
- **The 2015 *World Humanitarian Summit Global Youth Consultation*:** Approximately 300 young people from 89 countries participated, including crisis-affected youth, youth experts, and representatives of youth-led organizations. The event in Doha, Qatar, was co-chaired by the World Humanitarian Summit Secretariat, Reach Out to Asia (ROTA) and the United Nations Major Group Children and Youth (MGCY).[10]

- **The 2016 *Global Refugee Youth Consultations*:** 1,267 young people participated in more than 50 national and subnational consultations held in 22 countries, bringing together refugee and host country youth. This initiative was undertaken by the United Nations High Commissioner for Refugees (UNHCR) and the Women's Refugee Commission (WRC).[11]

- **The 2018 *Independent Progress Study on Youth, Peace and Security*:** The Missing Peace: This study was mandated by United Nations Security Council Resolution 2250, in 2015. The development of the study was supported by the UNFPA and the United Nations Peacebuilding Support Office (PBSO). More than 4,000 young people from across the globe participated in regional, subregional and national consultations, focus group discussions, and online consultations.[12]

For links to the reports on these consultations, as well as other key resources, refer to the list of **RESOURCES ▶** at the end of Section A. **BOX 3 ▶** summarizes the priorities for action as expressed collectively by the young people involved in all three of these consultation efforts.

"Young people felt they have had similar conversations like this before, but no action was taken. They asked if this will actually make a difference to them having more opportunities to get experience and to work. They emphasized that what they needed was action - opportunities to get involved, opportunities to work and volunteer. And that this should be the focus of the guidelines."



NRC consultations with young women & men, Jalalabad, Eastern Afghanistan

Box 3: Calls to action from young people

From all of the global consultations described, **from 2015 to 2019**, clear calls to action emerged for the following:

- → Empower and invest in young people through meaningful engagement.
- → Acknowledge, utilize and develop their capacities and skills.
- → Ensure youth-focused protection.
- → Support physical and emotional well-being.
- → Facilitate networking and information sharing.
- → Promote and support young people as connectors and peace builders.
- → Generate data and evidence on young people to promote duty. bearers' accountability to young people.
- → Apply an age-sensitive, youth-centred approach in all phases of emergency response.
- → Systematically consult with young people's organizations on conflict dynamics, causes of violence, and priorities for peace.
- → Involve young people in the design, implementation, monitoring and evaluation of programmes.
- → Harness social media platforms to disseminate information and give young people a voice.

Defining terms: Adolescents, youth and young people

The definition of a child, as formalized by the United Nations Convention on the Rights of the Child (CRC), is every human being under the age of 18.[13] The definitions of adolescents and youth vary across countries, cultures and organizations.

The United Nations defines 'youth' as being aged 15–24 years, while UNICEF and partner agencies WHO and UNFPA concur with that definition of youth but also define 'adolescents' as being aged 10–19 years and young people as 10–24.[14]

These two age brackets overlap with each other, and definitions of youth have changed over time,[15] which complicates the collection and reporting of standardized or comparable quantitative data – this can be seen in the 'Demographics' subsection below, where the statistics on young people globally (children, adolescents, youth) are reported on differently depending on the region or data source.

In many cultures, **adulthood** and **childhood** are defined not by age, but by achieving a certain status in society – often linked to milestones like **marriage**, **having children**, or becoming a **property owner**. Because of these social definitions, while an unmarried 35-year-old may still be considered a 'young person', a child soldier, child labourer, teenage wife/mother, or orphan can take on an adult role at an age as young as 10.[16]

Especially in humanitarian settings, where displacement or conflict have prolonged the period of transition to adulthood (e.g., by delaying education, employment or marriage), **young people**'s lives are put on hold. Youth, therefore, is sometimes defined as 'waithood', a prolonged period of suspension between childhood and adulthood, when young people are no longer children, but are not yet regarded as adults.

These IASC guidelines use the term 'young people' to include adolescents and youth (ages 10–24 years, inclusive). All of these terms are mapped to ages in FIGURE 2 ▶, including the distinction between younger adolescents (age 10–14) and older adolescents (age 15–19) (see also BOX 4 ▶).

"Thinking this way about youth is good because it increases the positive energy and bravery within them."

UNFPA consultations with Syrian refugee adolescents & youth in Ankara, Turkey

Box 4: Suggested age groups for data disaggregation for young people in humanitarian action

Age groups/brackets

Use the following recommended age groups/brackets as far as possible when analysing and reporting results for comparability and streamlining:

Children (0–17), adolescents (10–19; younger adolescents, 10–14; older adolescents, 15–19), youth (15–24), young people (10–24). See **FIGURE 2** ▶.

Data collection to support optimal age disaggregation

Data collected using 1-year age increments allows for slicing and analysing the data in all different ways, which is ideal.

Where this is not possible the suggested minimum disaggregation at the time of data collection is: 10–11, 12–14, 15–17, 18–19, 20–24.

This level of disaggregation supports broad analysis of children, adolescents, young adults (18–24 years) and young people, using the age groups/definitions above and in **FIGURE 2** ▶. But it also supports more detailed analysis, which is necessary to reflect developmental stages and to recognize different needs within the broader age categories.

Further considerations

- → It is particularly important to differentiate between the different stages of adolescence for programming purposes related to sexual and reproductive health, and education (including alignment with pre-school, primary and secondary school ages).
- → The internationally recognized distinction between children (0–17 years) and adults (18+) is crucial to take into consideration, given the differences in treatment under the law between children and adults.
- → Refer to the Task Force 5 brief for further details on sectoral considerations.

Making the case: Key advocacy messages on working with and for young people in humanitarian action

In every humanitarian emergency, even without anyone asking them, young people step up and apply their many powerful assets to the response: skills, motivation, energy, creativity, a strong sense of justice and equality, an aptitude for technology, and a capacity for peer mobilization. In recognition of the emergency responses that young people initiate themselves, duty-bearers are increasingly tapping into their enormous potential for improving humanitarian action as well as 'building back better' in the recovery and reconstruction phase.

Demographics

In 2017, 1.8 billion people – a quarter of the world's population – were young people (ages 10–24), and this group comprises more than half the total population in the 48 least developed countries.[19] Children and young people (ages 0–24) in the Middle East and North Africa account for nearly half of the region's population and have the potential to become agents of change.[20] Africa's youth population accounts for 20 per cent of the entire world's youth population (aged 15–24), and this proportion is expected to rise to 35 per cent in 2050.[21] South Asia is home to more adolescents (aged 10–19) – nearly 350 million – than any other region, followed by East Asia and the Pacific with over 300 million.[22]

The potential dividend

Investing in adolescents and youth contributes to breaking cycles of poverty, violence and discrimination that pass from one generation to the next. Coordinated investments in young people's health, well-being and education provide high economic and social returns. Expanding education and skills and providing livelihood opportunities to young people and their families can break the intergenerational cycle of poverty. Benefits for young people are enjoyed in the present, into adulthood and also by the next generation – their children.[23] In particular, it is worth noting that early adolescence, specifically ages 9–14, represents a 'second window of opportunity' for nurturing rapid learning and brain development (the first window being during infancy and up to 3 years old).[24] If governments provide supportive macro-economic policies, and targeted investments in health, education and skills, and promote gender equality, this enormous population of young people can contribute towards a 'demographic dividend'.

Increased vulnerabilities and needs of young people affected by emergencies

During a conflict or disaster, a young person's educational, social and emotional development may be interrupted. Emergencies can cause health problems and lead to new impairments, rupture families and social networks, expose young people to new risks, and restrict access to vital goods and services. They may find themselves taking on adult roles too early. They are often targeted by parties to conflict. They suffer trauma and loss and may face major long-term challenges in recovery. Women and girls are affected disproportionately, facing multiple sexual and reproductive health challenges as well as multiple forms of gender-based violence (GBV).[25] Young persons with disabilities, and girls and young women in particular, are more likely to be abandoned by their families, isolated in their homes, at risk of GBV, and missing out on access to information and services that would strengthen their protection and resilience.[26] **BOX 5** ▶ provides selected summary statistics on young people in emergencies.

Highest number per region globally

Whether forcibly displaced or emigrating in search of a better life, millions of young people have become migrants in recent years, either within their own countries through inter-urban or rural-to-urban migration, or across borders. Regardless of the reasons they move, or the label applied to them (migrant, refugee, asylum-seeker, undocumented, internally displaced person [IDP], etc.), many report severe deprivations while on the move,[27] and often face detention, violence, abuse and insecurity.[28]

This is especially true of those who travel without their families.

Even in peacetime, young people are often perceived as a threat or stereotyped in society. In displacement situations, racism, xenophobia and discrimination can be barriers to accessing services. In a conflict setting, they may also face persecution, threats to their life, or stigmatization due to association (or previous association) with armed forces or armed groups.

Box 5: Young people in emergencies: Numbers at a glance

These data highlight how young people's needs, vulnerabilities and risks are exacerbated in humanitarian and protracted crises.

- Today some **408 million** youth aged 15–29, or **23 per cent** of the global youth population, are affected by violence or armed conflict.[29]
- There were **9.7 million** young people aged 15–24 living in internal displacement because of conflicts, violence or disasters at the end of 2019. Of those, **3.1 million** were under the age of 18.[30]
- Approximately **175 million** children every year will be affected by natural hazards attributed to climate change.[31]
- **70.8 million** people around the world have been forced from their homes, among them nearly **25.4 million** refugees, over half of whom are under the age of 18.[32]
- Internal migration peaks among those in their 20s, who often migrate to learn new skills or make the most of those already acquired.[33]
- **225 million** youth in the developing world (20 per cent) are not in education, employment or training (NEET).[34]
- Nearly **3 in 10** youth (aged 15–24) in countries affected by conflict or disaster are illiterate.[35]
- Enrolment in secondary level education has risen among refugees from **23 to 24 per cent** in 2020. There has been an increase in the number of refugees accessing higher education – a rise to 3 per cent after several years stuck at 1 per cent. However, this is still far below the global enrolment rate of 37 per cent.[36]

In a globalized world shaped by concerns about terrorism, transnational crime and extremist violence, stereotypes often frame young people as a problem to be solved and a threat to be contained. These assumptions have fuelled 'policy panic', particularly as it relates to the 'youth bulge', youth migration and violent extremism. This policy environment skews youth, peace and security responses towards hard security approaches and away from prevention and care, ignoring the fact that most young people are not involved in violence.[37]

How young people are supported to transition through humanitarian crises – across gender, ethnicity, nationality, disability, education, etc. – will have a lasting impact not only on the disaster recovery process, but also on the future of humanity. Even in emergency contexts, investments are needed to build institutional capacity for working with young people, to strengthen their human capital, improve their employment prospects, and promote youth-inclusive governance and human rights.

Young people's fundamental rights

General Comment No. 20 (2016) by the Committee on the Rights of the Child states that "the potential of adolescents is widely compromised because States parties do not recognize or invest in the measures needed for them to enjoy their rights".[38] Beyond the CRC, there is no similar international convention focusing on the needs, concerns and aspirations of young people. They are automatically considered 'adults' when they reach 18 years old. Other normative frameworks that guide work with young people include the **Convention on the Elimination of All Forms of Discrimination against Women (CEDAW)**, the **Convention on the Rights of Persons with Disabilities (CRPD)**, the **Sendai Framework for Disaster Risk Reduction 2015–2030 (the Sendai Framework)**,[39] and the **2019 United Nations Human Rights Council Resolution on the Right to Education**.[40]

The **Global Compact on Refugees** also refers to youth and highlights the importance of their meaningful participation.[41] International humanitarian law and refugee law enshrine the right to access to life-saving services for sexual and reproductive health (including access to safe abortion services and post-abortion care) and the right to access to prevention and response services for GBV.

Often overlooked, seldom acknowledged

A sense of exclusion is widespread among young women and young men across the globe.[42] This may be especially true of those in humanitarian disaster settings, where their vulnerabilities are heightened, their concerns are rarely heard, and their needs rarely prioritized. Humanitarian actors have often, perhaps unwittingly, contributed to the exclusion of young people by failing to involve them in decision-making and processes that affect their lives.

During crises and periods of displacement, education and training play a key role in creating an environment where all young people can develop a sense of purpose, identity and belonging, gain livelihood skills and life skills, and become positive agents of change. Yet, all too often, even where education is available in humanitarian settings, most programmes prioritize younger, primary-aged children. Thus, as youth enter the world of work, often their only livelihood options are in the informal economy, where income is erratic and they are vulnerable to exploitation.

Differentiated needs

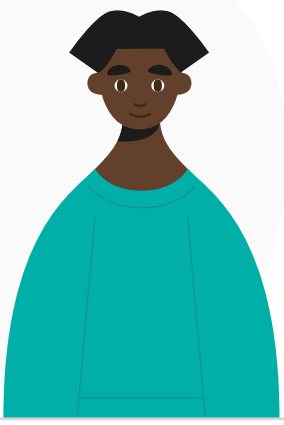
Young people and their needs vary across language, traditional and religious groups, disability, sex and other characteristics related to diversity and context. The risks of child marriage, sexual exploitation and abuse (SEA) and unwanted pregnancy are higher for girls and young women, while the risks of association with armed groups, being radicalized or being targeted for harassment by police may be higher for boys and young men. Refugee adolescents and youth may have problems with legal recognition, lack of documentation, lack of freedom of movement, language barriers, discrimination, racism and xenophobia. Most refugees and IDPs live in urban areas (58 per cent of refugees, as of 2017), and not in camps.[43] Urban displaced young people can be less visible, often unreached with services, and isolated in ways that those in camp settings are not. They may be hiding due to their ethnic identity, nationality or undocumented status. They may be stuck at home due to the threats of petty crime and violence, armed gangs and police harassment. In many cities, tens of thousands of refugee and IDP girls and young women are employed as domestic workers, where they say their rights are routinely trampled.[44]

Adolescent girls and young women

Even outside the context of a humanitarian crisis, the 'starting point' for girls and young women is far behind that of their male peers. Gender inequality is pervasive in all societies, where girls and women are usually the most disadvantaged, excluded from opportunities, and left dependent on boys and men, leading to inequitable economic, political, social and health outcomes. This inequality is exacerbated in times of crisis. Already bearing a greater share of the burden of domestic labour than boys and men, in a crisis setting, a girl is more likely to be called upon to care for younger siblings while a parent leaves for work. Already less likely to be enrolled in school, in a crisis setting, the family may keep their daughters at home for their own protection or force them to get married earlier. While all forms of GBV are much more likely to affect girls and women than boys and men, in a humanitarian crisis, the incidence climbs sharply and often remains elevated for years afterward.

Progress has been made in reducing gender inequalities in areas of humanitarian practice such as education and nutrition, but many gendered barriers to services and participation in programmes remain. Duty-bearers must be deliberate in their efforts to overcome these, in all sectors.

"It's not only participation that's expected from us, but we also need to have our own programmes run by young people."



UNHCR consultation with young people in Jijiga, Ethiopia (Awbarre, Sheder and Kebribayah refugee camps)

Box 6: Vulnerable categories of crisis-affected young people

These guidelines make many references to the need for initiatives at all stages of a humanitarian crisis to reach all categories of adolescents and youth (see **BOX 4** ▶ for explanations of age groups and definitions). This is especially crucial for those living in vulnerable situations, who are not inherently weak or incapable, but due to inequitable and discriminatory sociocultural norms and local institutions, are often harder to reach.

Vulnerable categories of crisis-affected young people include, but are not limited to (in no particular order):

- → **Orphans**
- → **Very young adolescent girls (age 10–14)**
- → **Child brides**
- → **Unaccompanied and separated adolescents**
- → **Adolescent mothers**
- → **Adolescent heads of households**
- → **Married adolescents**
- → **Widowed adolescents**
- → **Adolescents in urban settings**
- → **Survivors of gender-based violence (GBV)**
- → **Girls and women who bear children of rape in conflict**
- → **Young people born of rape in conflict**
- → **Young survivors of sexual violence, trafficking, and other forms of GBV**
- → **Young people engaged in transactional sex**
- → **Young people living with HIV and other chronic illnesses**
- → **Young people with disabilities**
- → **Young people caring for persons with disabilities**
- → **Young people formerly associated with fighting forces**
- → **Young people impacted by gang violence**
- → **Young people in contact with the law, including those in detention**
- → **Young people experiencing homelessness or in temporary housing**
- → **Young people engaged in (the worst forms of) child labour or forced labour**
- → **Young people from minority linguistic, religious and ethnic groups, including indigenous young people**
- → **LGBTQIA+ young people**
- → **Undocumented young people**
- → **Refugee and internally displaced young people**
- → **Stateless young people**
- → **Returnee young people**

These categories often overlap, meaning that some individuals find themselves facing multiple vulnerabilities at once. For example, humanitarian actors should be prepared to engage and support a 15-year-old widowed girl from a minority ethnic group who fled civil war with her newborn baby and younger sister.

Key principles

B

1

Young people as positive assets and rights-holders

Acknowledging young people as 'assets' and 'rights-holders' rather than 'problems' or 'threats' allows emergency responders to harness young people's innovation, creativity and energy. In pursuit of the localization agenda,[45] and to build upon what already exists, young people must be engaged in relief, recovery and efforts to sustain the peace. YouthPower's 'Positive Youth Development Framework' provides more information on this approach.[46]

2

Meaningful participation

Working with and for young people is not just about serving an underserved population. Young people participate in planning, implementation, monitoring and evaluation not only to make the programme more sustainable and relevant, but because participation is a basic right in itself, including for children, as mentioned in the **Convention on the Rights of the Child**.[47] Participation must never be tokenistic or manipulative, and ethical and safety standards must be followed. Meaningful participation is discussed in much greater detail in **SECTION C ▶**.

↓

Female students in NRC's youth centre cheer for a photograph after a life skills class. NRC in partnership with the Norwegian Ministry of Foreign Affairs is providing basic numeracy and literacy courses to 80 female learners in Gordhim, Aweil East State in South Sudan. These courses are complemented by vocational training courses in baking, carpentry, masonry, and agriculture.

© NRC/David Belluz/South Sudan

3

Giving away power

Adolescents and youth are partners, not simply beneficiaries. Duty-bearers take the role of facilitators, acting as catalysts, helping young people to realize their rights and achieve their goals. This requires a shift in thinking and ceding a significant amount of control to young people themselves. This principle is often forgotten by humanitarian practitioners but is crucial to creating effective partnerships with young people.

4

Commitment

Meaningful engagement with young people must be built into all phases of the humanitarian programme cycle (HPC). At a minimum, organizations should commit to collecting sex- and age-disaggregated data based on the age bracket recommendations in these guidelines (see **BOX 4/FIGURE 2 ▶**), and to ensuring representation in the humanitarian cluster/working group system and refugee coordination, by requiring that each cluster/working group include a focal point on adolescent and youth issues,[48] preferably a young person themself, with adequate support.

5

Equity, non-discrimination and inclusion

Within the broad age range of adolescents and youth (i.e., young people, aged 10–24) lies a rich variety of needs and interests by age, sex, gender identity, sexual orientation, disability, socioeconomic status and many other characteristics and demographic variables. Effective programmes break down barriers to participation based on these diversity factors. Inclusive programmes account for young people's age, work and family commitments, disabilities and competing priorities.

6

Accountability

The views and contributions of young people affected by crises should be incorporated into all phases of the HPC through commitments related to leadership/governance, transparency, feedback and complaints, participation, design, monitoring and evaluation. For further information, see **BOX 11 ▶** ***Accountability to affected young people***, in Section C.

→
Women and Girls Centre, GBV response.

© UNFPA/ Yenny Gammin/ Myanmar

7

Do no harm

Young people need a physically, socially and emotionally safe and supportive environment. Duty-bearers should be sensitive to divisions and inequities among and between young people and their communities, to avoid making them worse. Participation should not put young people, especially girls, at risk of backlash from the family or community, or from other young people. Many may have suffered trauma; facilitators must be equipped to refer them to specialized services, and must pay particular attention to the potential for harm among those living in vulnerable situations.

8

Safeguarding

Safeguarding is defined as all actions taken by organizations to protect their personnel from harm and from harming others.[49] Young people – particularly vulnerable groups including adolescent girls, young people with disabilities or ethnic minorities – are often exploited and abused by those with the responsibility to protect them. Humanitarian agencies should have a safeguarding policy in place, such as the one at **RET International** (see list of **RESOURCES ▸** below). All staff, volunteers (including young people) and partners (local or international, public or private entities) must sign a code of conduct demonstrating their understanding and adherence to critical guidelines that safeguard beneficiaries and must be trained in **Protection from Sexual Exploitation and Abuse (PSEA)**. Additionally, humanitarian actors must have systems in place to hold perpetrators to account for abuse, including focal points, reporting and investigative mechanisms (with trained staff), and referral pathways. Young people should be informed where and how to report safely in case of a safeguarding concern. For further information, also refer to 'Feedback mechanisms', in **BOX 11 ▸** ***Accountability to affected young people***, in Section C.

Box 7: UNICEF Core Commitments for Children in Humanitarian Action

UNICEF has a long history of working in emergencies and humanitarian contexts, both natural and man-made. The '**Core Commitments for Children in Humanitarian Action**' – the CCCs – constitute UNICEF's central policy in upholding the rights of children affected by humanitarian crises, including adolescents. The CCCs are aligned to international standards and guided by humanitarian principles. This framework serves as a guiding principle for UNICEF and partners in fulfilling their commitments to children's rights across all sectors – Health; Nutrition; Water, Sanitation and Hygiene (WASH); Child Protection; and Education – as part of any humanitarian action.

The CCCs were initially developed in 1998. The 2020 version brings UNICEF's humanitarian policy in line with evolving humanitarian contexts, including humanitarian reform and the cluster approach (see BOX 2 ▶ in Section A), informed by field-based evidence and practice. It highlights the protection and engagement of children, young people and women, and ensures the rigorous application of international standards covering their rights. The revised CCCs recognize the crucial role of young people in humanitarian action, particularly in partnering with adolescent/youth-led organizations, networks and groups to build their capacities and to deliver humanitarian services and programmes. With these important revisions, it remains to promote predictable, effective and timely collective humanitarian action, and to clearly outline the areas
in which UNICEF can best contribute to results.

Meaningful participation

Meaningful participation of young people, in accordance with ethical considerations, enables them to acquire knowledge and skills, build competencies, dream bigger, and gain confidence. It enhances and promotes young people's capacities for civic engagement, collective organization, tolerance and respect for others.

In the context of humanitarian and protracted crises, agencies should place specific focus on the engagement of young people in preparedness, response and recovery.

Their participation helps to ensure more age-appropriate approaches, whether they are helping to plan a sector-specific response, ensuring inclusion of marginalized groups, influencing national disaster risk reduction (DRR) and climate change adaptation (CCA) strategies, educating peers on protection risks and referral mechanisms, or organizing recreational activities. This kind of participation does not happen on its own; for young people to become engaged members of their communities, they need to be acknowledged and treated as part of the humanitarian architecture, and the barriers to their participation must be removed.

Box 8: Global Consensus on Meaningful Adolescent and Youth Engagement: Partnership for Maternal, Newborn and Child Health (PMNCH)

Meaningful engagement of young people is central to the common vision of achieving the outcomes and targets of the **Sustainable Development Goals** (SDGs),[51] **Family Planning 2020** (FP2020)[52] and the **Global Strategy for Women's, Children's and Adolescents' Health**.[53]

The **Global Consensus** seeks to bring together local and global health and development communities around a common understanding of young people's engagement and participation in the development and implementation of policies, programmes and processes that affect them. It commits partners to see adolescent and youth engagement as an inclusive, intentional, mutually respectful partnership between adolescents, youth and adults whereby power is shared, respective contributions are valued, and young people's ideas, perspectives, skills and strengths are integrated into the design and delivery of programmes, strategies, policies, funding mechanisms and organizations that affect their lives and their communities, countries and world.

The Global Consensus was initiated by PMNCH, the International Youth Alliance for Family Planning, and FP2020. The Global Consensus statement is available in English and French.

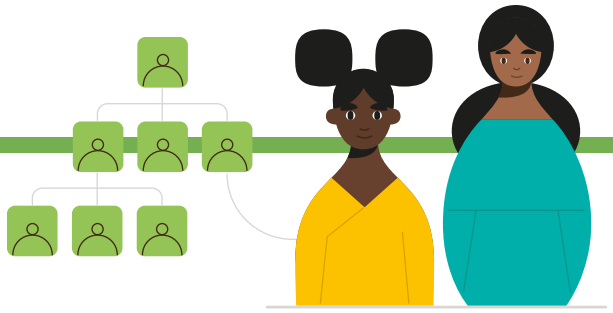
PMNCH, International Youth Alliance for Family Planning, and Family Planning 2020, **Global Consensus Statement: Meaningful adolescent & youth engagement**, PMNCH, 2018, www.who.int/pmnch/mye-statement.pdf



Box 9: Overcoming barriers to female participation

Crisis-affected young women and especially adolescent girls confront many gendered barriers to meaningful participation in humanitarian action: limited mobility, restricted access to public space, domestic responsibilities that compete for their time, hunger, and the threat of violence or harassment, among others. To overcome these barriers, programme staff need to work safely with girls and young women to find ways to engage with their more vulnerable peers in the community, who may otherwise be 'invisible' to humanitarian actors.

The approach might include some combination of the following:

- → Seek parents', caregivers' and community buy-in for girls' meaningful participation through home visits, open days, etc., including by providing reassurance on security concerns about their participation.
- → Ask the community about girls who are particularly at risk of violence or abuse (e.g., married girls, young mothers, girls with disabilities) and invite them to participate and share their views.
- → Conduct door-to-door outreach at different stages of the humanitarian programme cycle (HPC).
- → Engage girls themselves in developing key messages.
- → Build the capacity of staff, girls and young women to undertake gender analysis, to shed light on the barriers to participation in activities.
- → Where applicable, adapt mobile/online platforms to engage and support girls and young women who may be unable to access services, committees, safe spaces, etc.
- → Strategize with young people to find ways of shifting community attitudes towards young women volunteering and engaging in relief efforts.
- → Ensure that language on protection is understood by girls and young women and framed around their well-being.
- → Support local women-led organizations, including organizations of women with disabilities, to participate in community mobilization, outreach and advocacy.
- → Address the mental health and psychosocial support (MHPSS) and livelihood needs of young men, which if unaddressed can result in further restrictions on family members, increased gender-based violence (GBV), and negative impacts on future well-being of males themselves.

Many concrete steps to maximize the inclusion of girls and young women are also included in the 'proposed actions' under each sector in **SECTION E ▶** ***Implementation of adolescent and youth-responsive programming***, as well as in **ANNEX 5 ▶** ***Recommendations for supporting young women's leadership***.

Involving girls, women and other at-risk groups in all aspects of programming is essential to fulfilling the principles and approaches in this guidance. However, such involvement – especially as leaders or managers – can be risky in some settings. Therefore, the recommendations may need to be adapted to the context. Due caution must be exercised where inclusion of girls or young women poses a potential security risk or increases their need for protection. A risk assessment tool to support safe participation is included (see **ANNEX 1 ▶**).

Inter-Agency Standing Committee (IASC) Reference Group on Gender and Humanitarian Act, **Guideline: The gender handbook for humanitarian action**, 2018, https://interagencystandingcommittee.org/system/files/2018-iasc_gender_handbook_for_humanitarian_action_eng_0.pdf

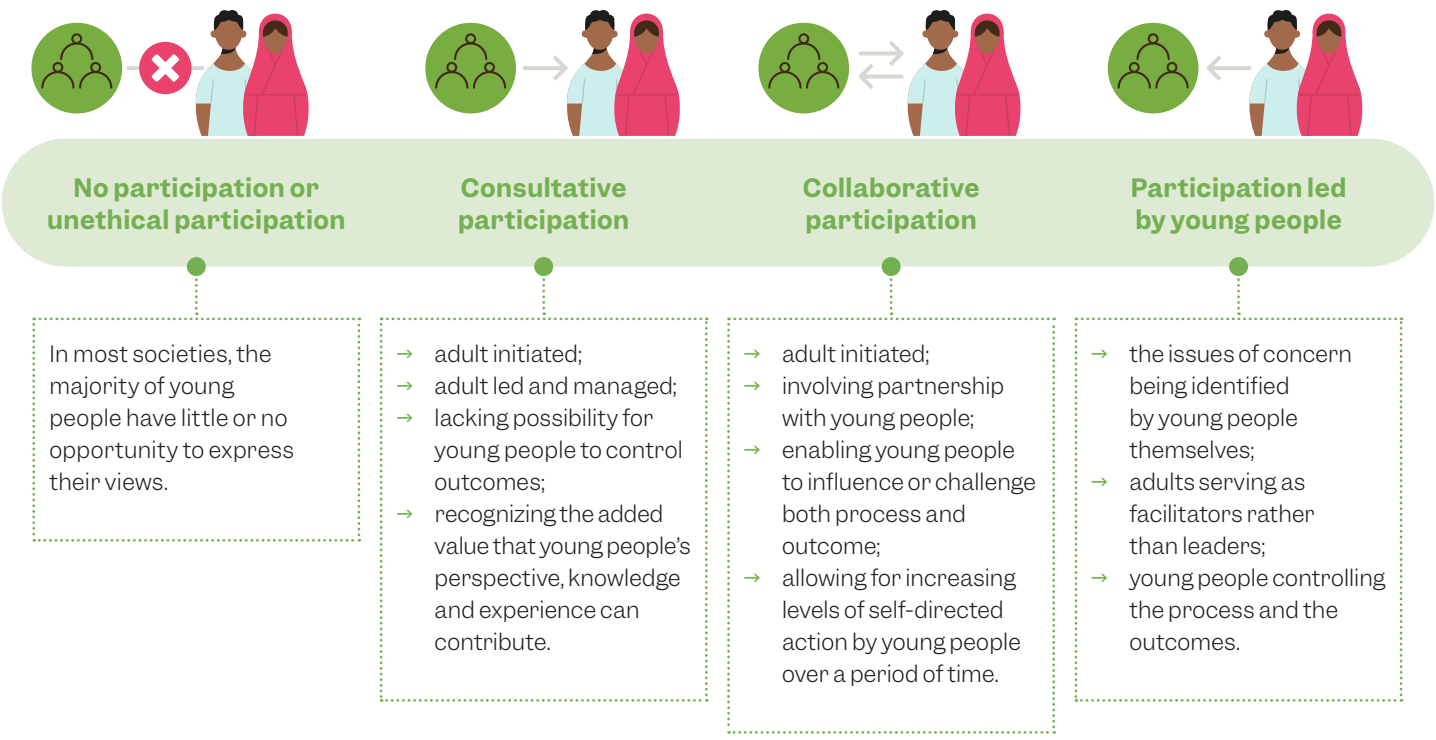
UNICEF, **Engaged and Heard! Guidelines on Adolescent Participation and Civic Engagement**, 2020, https://www.unicef.org/documents/engaged-and-heard-guidelines-adolescent-participation-and-civic-engagement

Modes of participation

There are three main modes of participation: consultative, collaborative and young people-led participation (see **FIGURE 3** ▶).[54] One is not necessarily preferred over the others. All three are legitimate and appropriate, but they may not always be possible to apply during a humanitarian response without having first invested in youth-led preparedness. Participation can range from consultation, where young people's voices are influencing decisions, to collaboration, where they are involved in co-designing programmes with adults, to young people fully leading their own initiatives. A thorough understanding of the local context, risks and existing referral mechanisms is required to inform decision-making about what mode of participation is appropriate, especially in the case of engaging younger adolescents (aged 10–14).

FIGURE 3.
Main modes of participation for young people

Source: Adapted from UNICEF (2018).[55]



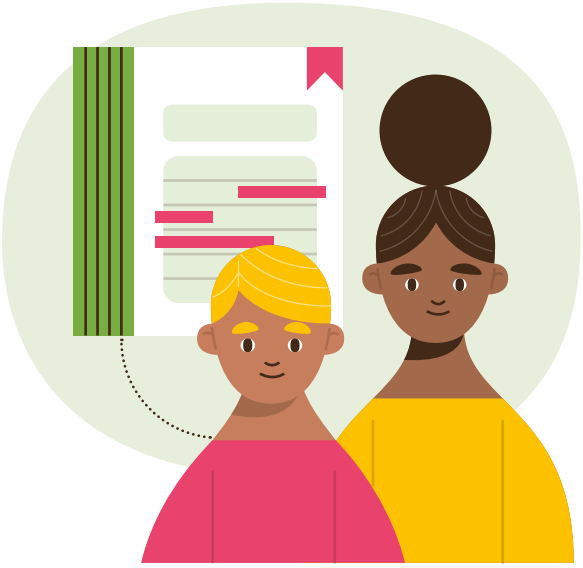
Strategic areas for meaningful participation

In order for young people to engage in a meaningful way, they need to be able to voice their views, and to have access to safe spaces and responsive audiences. This requires investment in addressing harmful social norms, implementing laws and policies that create an enabling environment, building skills and capacities of both young people and adults, and creating sustainable mechanisms and opportunities for participation. Four strategic areas for meaningful participation are discussed here in turn: (1) Influencing law and policy; (2) Building skills and capacities; (3) Addressing social norms; (4) Supporting mechanisms and opportunities for participation.

↓
Nelson (24 years old) engaged in discussions in the NRC Youth centre. Nelson came to Kakuma in 2004 from South Sudan, separated from his family. "Most of us have been idling in the community, just taking drugs and alcohol," said Nelson. "But now we can join carpentry, electricity and computer classes at the youth training centre. But more education opportunities are needed because of the high number of youth in the camp."

© NRC/Christian Jepsen/Kenya

Strategic area 1: Influencing law and policy



Laws and policies rarely recognize the specific needs and rights of young people, budget allocations remain inadequate to provide the services they require, and the socioeconomic and political context may exclude them. Development and humanitarian actors need to advocate with governments for law and policy reform and budget allocations that are responsive to the needs of young people and rooted in their participation. Findings from global consultations (see SECTION A ▶), as well as information from the **Compact for Young People in Humanitarian Action and Youth2030: The United Nations Youth Strategy**[56] can be used to inform legislation and policy at all levels.

Adolescent- and youth-led advocacy

Young people are powerful advocates for their own rights and needs, particularly when provided with relevant channels through which to contribute. Humanitarian actors should work to ensure that young people and decision makers are 'at the table' together. Young people can also be supported into positions of leadership, through various dedicated and self-organized youth engagement platforms, such as youth advisory mechanisms, youth co-decision boards, youth parliaments and formal youth constituencies.

Participation in advocacy increases young people's visibility, which can also bring them into conflict with entrenched interests, including local authorities. Young people, and particularly girls and young women, should be supported to discuss and understand any potential negative repercussions that may arise as a result of their participation in advocacy and in influencing legislation and policies. Families and local leaders should be engaged to understand and support the goals of any programme for young people. Working with youth coalitions, rather than with individuals, may help young people feel more protected. A risk assessment tool to support safe participation is provided in ANNEX 1 ▶.

Other channels for young people to engage in advocacy and leadership can be found in SECTION E ▶, in the tip sheets on '***Camp Coordination and Camp Management (CCCM)***' and '***Sustaining Peace***'.

CASE STUDY 1

Adolescent-led advocacy in the Central African Republic: War Child UK

In the Central African Republic, in the context of conflict between rebel groups, foreign mercenaries and government forces, War Child UK enables young people through its VoiceMore programme to design and run their own local advocacy projects to address issues that children and young people are facing. Training helped them to understand their role as spokespersons, build their skills in persuasive speaking and learn how to run an advocacy project.

The young participants identified sexual abuse and coercion from teaching staff as the problem they first wanted to address. The group designed their own research project and collected data from adolescents (aged 12–18) in 10 schools in the capital city, Bangui.

They presented their results to the Ministry of Education and the Education cluster (country level), demanding enforcement of staff codes of conduct and reporting mechanisms in schools. The Ministry responded by sending circulars to all schools emphasizing their responsibilities to prevent abuse. The group also presented their concerns to the Global Education Cluster and have presented their report at two United Nations events, in 2017 and 2019. The group developed a poster campaign and radio programmes to help build awareness of the issue. Participatory risk assessments helped mitigate any dangers participation might bring.

Central to the VoiceMore model is the constant reaffirmation of the participants as the drivers of the initiative. Regular reflection helps them evaluate their own personal development and plan the next steps for advocacy.

Strategic area 2: Building skills and capacities

The ability to express one's opinion, critically analyse information and make decisions is not innate – it must be learned through practice. In humanitarian situations, where young people's needs are often overlooked, humanitarian actors need to make investments to help young people to realize their rights and gain the skills to design, implement and monitor the response through an adolescent and youth 'lens'.

A key input to the **World Humanitarian Summit** was the **Doha Youth Declaration on Reshaping the Humanitarian Agenda**, where specific recommendations on building young people's capacity for participation were made (and are reflected across the sector-specific 'key actions' tip sheets in SECTION E ▶), such as the following:[57]

- → Nurture and strengthen the capacity of youth through training programmes and an enabling and sustainable economic environment.
- → Enhance disaster risk reduction (DRR) education and training that is gender and age sensitive.
- → Enable young people to communicate about prevention, preparedness, response and recovery within their communities.
- → Mainstream gender equality and empowerment of young women in all training and planning, to ensure inclusive policies.
- → Train refugees and affected populations as facilitators and project managers.
- → Equip youth with the skills to be effective peacebuilders and agents of reconciliation.

"You must remember that we haven't been allowed to talk as children, so we have very little experience talking in public or voicing our opinion. We're not used to it."

NRC consultations with young people, Jalalabad, Eastern Afghanistan

Human resources considerations when working with and for young people

In addition to building the skills and capacities of young people, participating agencies and coordination structures must build their own capacities to help young people realize their rights and achieve their goals.

- Before the start of any programme for young people, colleagues or partner agency staff who are experts in child protection should be brought in to train staff in 'do no harm' principles and guidelines in order that they can engage sensitively with crisis-affected young people who may have experienced trauma.
- When hiring for relevant programmes or projects, employ working-age young people and, crucially, adults who demonstrate youth-friendliness and a passion for the needs of young people, in addition to technical experts. Discuss any barriers to hiring youthful or youth-friendly staff, and how can these be overcome.
- In addition to staff, establish roles for young people within project activities as volunteers, interns, mentors to younger children, etc.
- Through a collaborative process, identify individuals in each humanitarian cluster/working group (see **BOX 2** ▶) to be appointed as dedicated adolescent and youth focal points who will work together as a youth task force.
- Prepare staff to facilitate young people's engagement, as it is likely that most staff will not have a background in working with adolescents and youth. Managers should also address older staff members' fears and expectations around bringing in younger staff and volunteers.
- Ask younger staff how they want to be supported to show leadership and implement ideas.
- All partners should include background checks when recruiting staff who will be working with young people.
- Induction training by all partners hiring staff should include the topic of Protection from Sexual Exploitation and Abuse (PSEA) and the signing of a code of conduct following the training.

Adolescent girls and boys participate in field testing of the IRC's SAFE programme in North-East Nigeria, 2018.

© IRC/Barka Asindaya/North-East Nigeria

Box 10: SAFE – Supporting Adolescents and their Families in Emergencies

SAFE is a protection and psychosocial support programme model to strengthen the capacity of front-line actors so that adolescent girls and boys (ages 10–19) are safer, more supported, and equipped with positive coping strategies in acute emergencies. To achieve its goal, the **SAFE programme model** is designed around two pillars:

1. Working directly with adolescent girls and boys to provide them with essential health and safety information, encourage participation and develop social and emotional skills, strengthen relationships, and connect them with available support services; and

2. Contributing to a safe and supportive environment for adolescent girls and boys through working with female and male caregivers to develop their knowledge of how to protect and support adolescents, and collaborating with the community, other sectors and service providers to increase awareness of the needs and interests of adolescents.

The **SAFE Resource Package** is publicly available and includes practical, field-friendly implementation guidance, detailed facilitator training manuals, and three tailored curricula – for adolescent girls, for adolescent boys and for caregivers. The SAFE resource package and the UNICEF Adolescent Kit for Expression and Innovation[58] (see also **CASE STUDY 20 ▶**) can be complementary to one another and used by countries to strengthen programmes with adolescents.

CASE STUDY 2

Preparing young people for humanitarian action in the Middle East and North Africa (MENA) region: Education Above All Foundation/Reach Out to Asia (ROTA)

Under MENA Youth Capacity-Building in Humanitarian Action (MYCHA), an initiative of the Education Above All Foundation and ROTA, over 30 local NGOs from 15 countries have supported youth with technical advice, in-kind support and grants for youth-led projects. Agencies nominate participants already active in emergency preparedness and response in their local contexts, and assist them through the application process. Young people receive training in humanitarian practice and plan their own action initiatives to be carried out at the local level with the support of the nominating NGO. This approach has shown NGOs the value of engaging young people in their work, and that young people can develop their own innovative solutions to local challenges. MYCHA contributes directly to **key action 3 of the Compact for Young People in Humanitarian Action**, which relates to capacity (see **BOX 1** ▶).

CASE STUDY 3

Inclusive approaches to address the needs of young people with disabilities in Panama: RET International

In Panama, the needs of vulnerable young people with disabilities were often overlooked in disaster risk reduction (DRR) and management policies, responses and projects. Driven by the fact that inclusion should actively seek the participation of persons with disabilities and acknowledge their specific capabilities and not only their special needs, RET International developed different measures to mainstream inclusive approaches in DRR within the education sector in Panama. As part of these efforts and in cooperation with the Panamanian Institute for Special Adaptation, a Spanish sign language vocabulary on DRR was developed to facilitate the participation of adolescents and youth with hearing impairments in capacity-building activities. These activities were done at schools and other community-based locations to prevent and mitigate risks of natural hazards. For visually impaired young people, material was developed in Braille. This has increased the safety of concerned young people and the establishment of inclusive safe learning spaces and communities in Panama. Over 4,000 children, adolescents and youth with special needs have already been reached through this approach. RET International was granted the Zero Project Award 2020 for 'Innovative Practice' for including children, adolescents and youth with disabilities in DRR and management practices.

Strategic area 3: Addressing social norms

Even when positive policies and legislation are in place, young people often come up against social norms that hinder their ability to participate. Entrenched social and workplace hierarchies; traditional gender roles; expectations of discipline and respect for elders; assumptions of a lack of capacity, especially among younger adolescents and youth – all of these serve to exclude young people from having a say in decisions and becoming engaged. Efforts to address social norms around issues such as child marriage, access to education (especially for girls), and communal violence are vital to foster enabling environments, but they may also risk backlash and retribution, especially in conflict-affected settings. Humanitarian actors should engage with older adults (caregivers, community leaders) in order for young people to safely participate in humanitarian response.

CASE STUDY 4

Addressing negative adult perceptions in Kenya: RET International

In the Dadaab refugee camps in Kenya, youth face historical barriers that exclude them from the camp communities and particularly from the decision-making processes. This is often due to the negative perceptions that many adult community members have towards them. RET International sought to address this issue by empowering young people and youth-led associations through training, coaching and so-called 'youth–adult partnership' initiatives.

In these partnerships, youths and adults explore concepts like respect and tolerance, conflict resolution and peacebuilding, to enable them to identify, prioritize and lead concrete social change initiatives together. Adults who participate, such as camp leaders, have become significantly more positive towards young people, seeing them as capable and socially engaged members of the community; this facilitates their inclusion in community decision-making processes at camp level.

CASE STUDY 5

Scouting programme for Somalian refugees in Kenya: World Organization of the Scout Movement

Somalia has the fourth highest Gender Inequality Index (0.776). The Somalian refugees living in Kenya brought with them the clan-based tradition of strict male hierarchy and authority. The limited roles and status of Somalian women and girls, based on religious and cultural norms, are further exacerbated by the conditions of the refugee camps. The participation of women in decision-making is extremely limited, perpetuating inequalities. The World Organization of the Scout Movement initiated a Scouting programme reaching out to over 1,000 young Somalian refugees.

The programme actively recruits young girls and empowers them to engage in the same activities as the boys. The community of Somalian refugees came to accept the idea of strong female youth leaders after seeing this in action in the Scouts' decision-making structures, where girls may give directions to groups of boys and lead activities such as sanitation, tree planting and peacebuilding. Girls are also more aware of their rights and how to protect themselves, easily engaging with others in awareness activities around sexual and reproductive health.

CASE STUDY 6

A participatory post-disaster communication campaign in Nepal: UNICEF

Following the 2015 twin earthquakes in Nepal, UNICEF supported direct outreach to communities through a variety of social and behaviour change communication strategies. To reach affected populations in remote areas, UNICEF partnered with a youth-led organization that already had strong district-based networks. Hundreds of young volunteers went door to door in villages and camps to exchange information, distribute leaflets and demonstrate the use of essential supplies. Involving young people from local communities in outreach activities not only ensured appropriateness and acceptance of messages, but also created a sense of ownership. Capacity-building for adolescents, youth civil society organizations (CSOs) and community radio staff was central to building resilience and strengthening emergency preparedness during the recovery phase.

UNICEF has also developed 'Minimum quality standards and indicators in community engagement' to provide globally established guidance on the importance of community engagement, including adolescent and youth engagement. These standards include 16 core minimum standards (**FIGURE 4 ▶**), as well as suggested indicators for use by governments and implementing agencies (NGOs and CSOs), and tools (checklists and matrices) to support the localized development of additional indicators. More information is available in the documents referenced for this case study.

5. Adaptability and Localization
6. Building on Local Capacity

PART B
Standards Supporting Implementation

7. Informed Design
8. Planning and Preparation
9. Managing Activities
10. Monitoring, Evaluation, and Learning

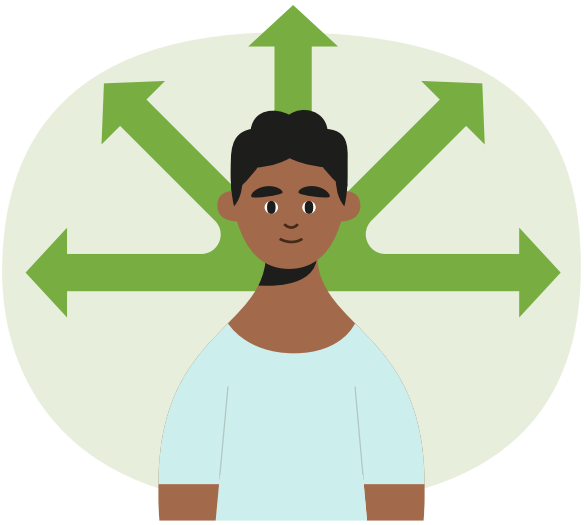
PART C
Standards Supporting Coordination and Integration

11. Government Leadership
12. Partner Coordination
13. Integration

PART D
Standards Supporting Resource Mobilization

14. Human Resources and Organizational Structures
15. Data Management
16. Resource Mobilization and Budgeting

Strategic area 4: Supporting mechanisms and opportunities for participation

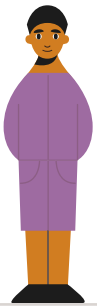


The most effective way for young people to acquire skills and values of active citizenship and civic engagement is through participation itself. Humanitarian actors should work with young people to identify opportunities for engagement in decision-making and community life, including development and implementation of projects, as well as feedback/evaluation.

Specific opportunities could include:

- Accountability and feedback mechanisms (see **BOX 11 ▶** and **CASE STUDY 7 ▶** ***Children's feedback through complaints and response mechanisms in Dadaab Refugee Camp in Kenya***)
- Participatory action research (PAR) (see **CASE STUDY 8 ▶** ***PAR with young people in Jordan, Lebanon and the Syrian Arab Republic***)
- Media production (see **CASE STUDY 9 ▶** ***Peacebuilding, education and advocacy in Uganda***)
- Youth-friendly spaces and services (see **BOX 12 ▶** and **CASE STUDY 10 ▶** ***Adolescents improving sexual and reproductive health (SRH) services in the Democratic Republic of the Congo***)
- Advocacy or awareness-raising campaigns (see '***Adolescent and youth-led advocacy***', in Strategic area 1, above).

"It's important to see us as leaders in our communities and not only as beneficiaries of humanitarian aid."



MGCY & Youth to Lead y Desarrollo de Nuevas Generaciones consultations with young people, El Salvador

Box 11: Accountability to affected young people

A crucial opportunity for meaningful participation is found in accountability mechanisms. Originally, the Inter-Agency Standing Committee (IASC) endorsed five commitments on **Accountability to Affected Populations (AAP)** in December 2011,[62] and these were revised in 2017 to reflect essential development, resulting in four commitments, combined for AAP and **Protection from Sexual Exploitation and Abuse (PSEA)**: (1) Leadership; (2) Participation and partnership; (3) Information, feedback and action; and (4) Results.[63]

The views and contributions of young people affected by crises should be incorporated into all phases of the humanitarian programme cycle (HPC) and can be embedded in the humanitarian response monitoring framework in a variety of ways.[64] In the preparatory stage, clusters/working groups can ensure: that youth groups and young women and young men participate in discussions on indicators and targets; harmonization of monitoring methods; mechanisms for affected people to provide ongoing feedback safely; reporting frequencies and formats; and the use and dissemination of findings.

Clusters/working groups and inter-agency working groups (see **BOX 12 ▶**) should select outcome indicators that capture the perspectives of affected young people and their diversity, as well as their satisfaction with humanitarian assistance, including the appropriateness and quality of goods, services and participation. When gathering monitoring data, agencies should, to the extent possible, involve young people in any field data collection exercises.

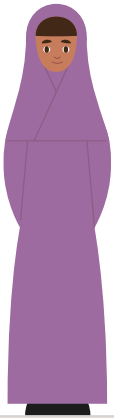
Agencies should devise a coordinated plan for disseminating information from the monitoring exercises in adolescent and youth-friendly language to affected people, including through young people's participation in dissemination.[65]

Feedback mechanisms

Young people's anonymous feedback is also a key component of safeguarding, crucial for the prevention of sexual exploitation and abuse (SEA). Feedback can be collected by various means: installing locked complaint boxes; distributing post-session feedback forms; including a feedback field on the electronic tablets used for sign-in; offering a website to visit or a toll-free number to call or text, etc.

Not all feedback mechanisms work for all age groups, and more than one may be needed at the same time. A diverse range of young people should be consulted periodically to ensure the feedback mechanisms are fit for purpose. The process of engagement will help to increase their confidence in using the channels and their understanding of the feedback and complaint process.[66]

Feedback mechanisms are not only for reporting abuse, but also for accountability, to build trust, to promote empowerment of affected communities, and to inform programmes. They can also provide agencies with early warning signs of various risks.



"There needs to be more focus on feedback to young people after assessments. Young people that shared they felt let down and don't trust aid workers, because they come and speak to them about their views, but then young people don't hear from them again and they don't get the support the asked for."

NRC consultations with young women, Jalalabad, Eastern Afghanistan

CASE STUDY 7

Children's feedback through complaints and response mechanisms in Dadaab Refugee Camp in Kenya: Save the Children

In humanitarian practice in recent years there has been increased emphasis on the importance of accountability to beneficiaries and applying Humanitarian Accountability Partnership standards to establish complaints and response mechanisms (CRMs). Children's access to CRMs has been piloted by Save the Children in Dadaab Refugee Camp in Kenya. To design the CRM, Save the Children organized focus group discussions where children described their preferred CRM as one that: provides face-to-face reporting; is situated in child-friendly locations; is child-targeted in terms of set-up and information/messaging; and promotes participation and inclusivity – so is flexible and includes younger and non-school going children.

Setting up the CRM was piloted in one camp and then rolled out to two other camps and host communities. The information or feedback desks were set up in all Child Friendly Spaces (CFS) in the camp and in the host community at the new arrival registration point and in the Save the Children camp offices. In addition to the information desks, other measures to proactively solicit and give feedback to adult and child beneficiaries were also introduced, including the establishment of 'Beneficiary Reference Groups' among adults, and using group discussions with girls and boys in CFSs, through children's club meetings, feedback boards and drawing competitions. The use of child-to-child approaches proved to be effective in awareness creation on the CRM – as a result of children telling their friends and families, more children and adults visited the information and feedback desks. Allowing for anonymous complaints was also encouraged. Children may often complain on behalf of a friend, or on behalf of a child of the same age or gender.

Box 12: Coordination of young people and working groups for gender-based violence (GBV)

Consider how adolescents and youth can support cluster/working group coordination mechanisms (e.g., cluster/working group meetings) when these groups are developing: (1) service mapping; (2) referral pathways; and (3) standard operating procedures (SOPs). These are all critical coordination documents that guide the quality of and facilitate access to response services for child and adolescent survivors of GBV (such as sexual abuse and sexual violence). Consider how you can work with young people and their families to inform strategies to increase accessibility and availability of these services.

When working groups are developing and updating these three types of coordination documents, this process should include input and feedback from young people (and, if they are under 18, their caregivers). They should also be included in the process of making others aware about the referral pathway. There may be ways you can work with actors who are already engaged (i.e., local or international, private or public entities) or mechanisms that already exist. For example:

- → Child protection or camp management actors often have links to existing community-based groups.
- → Child protection actors often work with education actors who are actively working in schools, with links to student networks or youth groups.
- → Child protection and education actors often have young people-friendly spaces.
- → There may be existing youth organizations and networks, including youth-led groups.

Child Survivor Initiative (2019), provided for these guidelines.

"Some key issues that young people wanted to see included in the guidelines were around personal and mental well-being: a sense of belonging, purpose, hope, a future. Young people were concerned with being socially and psychologically safe, the environment, stability, education and employment."

UNFPA consultations with Syrian refugee adolescents & youth in Ankara, Turkey

Working with existing networks and structures

In the interests of future sustainability, the initial approach – prior to programme assessment or planning – should start by engaging with any existing networks to elicit participation from their young members, such as **Y-PEER** (see **BOX 13 ▶**), **National Scout Organizations** (including Girl Guides and Girl Scouts, where they are separate from boys), and the **National Red Cross** and **Red Crescent Societies**.

Box 13: Y-PEER

Y-PEER
Youth Peer Education Network

Y-PEER is a network of young people and organizations that takes an inclusive and interactive peer-education approach and has been in operation since 2000. It works on topics such as sexual and reproductive health and rights (SRHR), gender equality, gender-based violence, meaningful youth participation, civic engagement and global peacebuilding. This network operates in 46 countries throughout Eastern Europe, Central Asia, the Middle East, North Africa and the Asia-Pacific region and supports young people to have meaningful participation in decision-making processes related to healthy lifestyles and civic engagement, with a view to securing equal access to information and services. The network aims to ensure that:

1. Adolescents and youth have access to SRHR-related knowledge and skills
2. Adolescents and youth living in humanitarian settings are aware of and implementing the 2015 United Nations Security Council Resolution 2250 on youth, peace and security
3. Y-PEER members are recognized as meaningful partners in decision-making processes at various levels
4. The Y-PEER network is a leading actor in promoting the core principles of the Sustainable Development Goals (SDGs) at regional and national levels.

Safeguarding

Engagement must be carefully managed, especially for younger adolescents aged 10–14, who may be early in the process of developing the relevant skills for meaningful participation and civic engagement. It should also be noted that in conflict and post-conflict settings, youth groups may be threatened, excluded, or targeted for manipulation by political parties. Therefore, due caution must be exercised where working with youth groups may pose a potential security or protection risk. A risk assessment tool to support safe participation is included in **ANNEX 1 ▶**.

Diversity and inclusion

While working with established youth structures is essential, where they exist, this approach on its own is unlikely to reach a wide range of young people, and its reach may be limited. Youth leaders are sometimes educated elites who have little in common with the marginalized majority, and most young people do not belong to established youth groups.

Agencies should also engage young people in remote areas and marginalized communities, and those with disabilities, etc., who are less likely to be affiliated with youth groups.

In addition, meaningful participation of a diverse cross-section of young people is impossible unless information is transmitted in relevant languages and formats, through accessible channels and at an appropriate level of understanding for all, including those with disabilities, younger adolescents, uneducated youth, etc. Wherever feasible, alternative formats such as Braille, sign language or easy-to-read formats can help ensure that young people with disabilities are able to participate in decision-making and access services. Agencies may consider partnering with disabled persons' organizations when designing programmes, and where possible, include budget lines for adolescent- and youth-friendly and accessible communications in grant proposals.

CASE STUDY 8

Participatory action research (PAR) with young people in Jordan, Lebanon and the Syrian Arab Republic: UNICEF

Through PAR, refugees, internally displaced persons and young people in the host communities are researching the problems affecting them and their communities. This UNICEF programme also builds the capacity of United Nations and NGO partners to support, guide and mentor young researchers. Young people and coordinators learn how to conduct interviews and focus group discussions, then they draft and implement a research plan and collect data in the field from groups of 10–20 or their peers. They transfer the data to UNICEF via tablets, and UNICEF supports the young researchers in data cleaning and analysis. They use problem tree analysis to reflect on solutions to the problems identified. The young researchers also receive basic communication and advocacy training, enabling them to begin to implement advocacy plans related to the identified problems and the proposed solutions. Follow-up workshops offer them the opportunity to directly interact with key stakeholders, share their findings and present recommendations. Programming can then be designed based on reliable and accurate data collected by young people themselves.

CASE STUDY 9

Peacebuilding, education and advocacy in Uganda: UNICEF

This programme was launched by UNICEF in 14 countries (including Uganda) in 2012. It aims to address conflict drivers related to education and contribute to peace and social cohesion. In Uganda, in partnership with the Straight Talk Foundation, the programme takes a Communication for Development (C4D) approach to implement dialogue activities using media and based in schools and communities. Programmes serving young people have involved the creation of audio and video clips, photographs, print media, websites and social media posts. These may be for the purposes of advocacy, as part of accountability efforts (monitoring and evaluation) for affected populations, or as a means of sharing messages with the public relating to health, education or peacebuilding initiatives. Media production is an excellent platform for meaningful participation and practical skill-building for young people, including use of the latest technology.

CASE STUDY 10

Adolescents improving sexual and reproductive health (SRH) services in the Democratic Republic of the Congo: CARE's Vijana Juu project

Reproductive health outcomes in the Democratic Republic of the Congo are among the poorest in the world, especially in crisis-affected parts of the country. Social and family structures and support systems are disrupted, exposing young people to risks and barriers to accessing SRH services and information. Adolescent girls face cultural norms and stigma that limit their ability to seek health services, and they may be denied care because of their age. CARE designed Vijana Juu (Swahili for 'Up with Youth') in collaboration with adolescents and youth. This project utilized CARE's Community Score Card© (CSC), a citizen-driven accountability approach for assessment, planning, monitoring and evaluation of service delivery. CARE invited young people to contribute their thoughts on how local clinics could better serve their SRH needs, and then invited health-care providers to consider the feedback. Both groups developed a joint strategy for improvement, and adolescents were engaged to monitor youth-friendliness. Young people noted improvements in services, better attitudes among service providers, and a reduction in clinic waiting times. This process also helped to identify adolescents living in vulnerable situations whose SRH needs were not being served.

Young people across the humanitarian programme cycle

D

This section provides guidance structured around the humanitarian programme cycle (HPC) or, for refugee emergencies, the operational management cycle (OMC). Both the HPC and the OMC refer to a series of actions to help prepare for, manage and deliver humanitarian response. They provide entry-points for working with and for young people at every stage and across all clusters/working groups (see **BOX 2** ▶ in Section A). This guidance refers mostly to the HPC, but the two cycles are similar.

For information on the distinctions between internal displacement vs. refugee response coordination arrangements, see **BOX 14** ▶.

As shown in **FIGURE 5** ▶, the HPC consists of five interrelated elements and three key enablers: coordination and information management (in the centre), and preparedness (around the outer ring). In this section, we first discuss the five elements (see the next page) and then the three key enablers.

"Have you made sure there's a system where youth are informed of any changes that may take place in your programme strategy or in your implementation plans?"

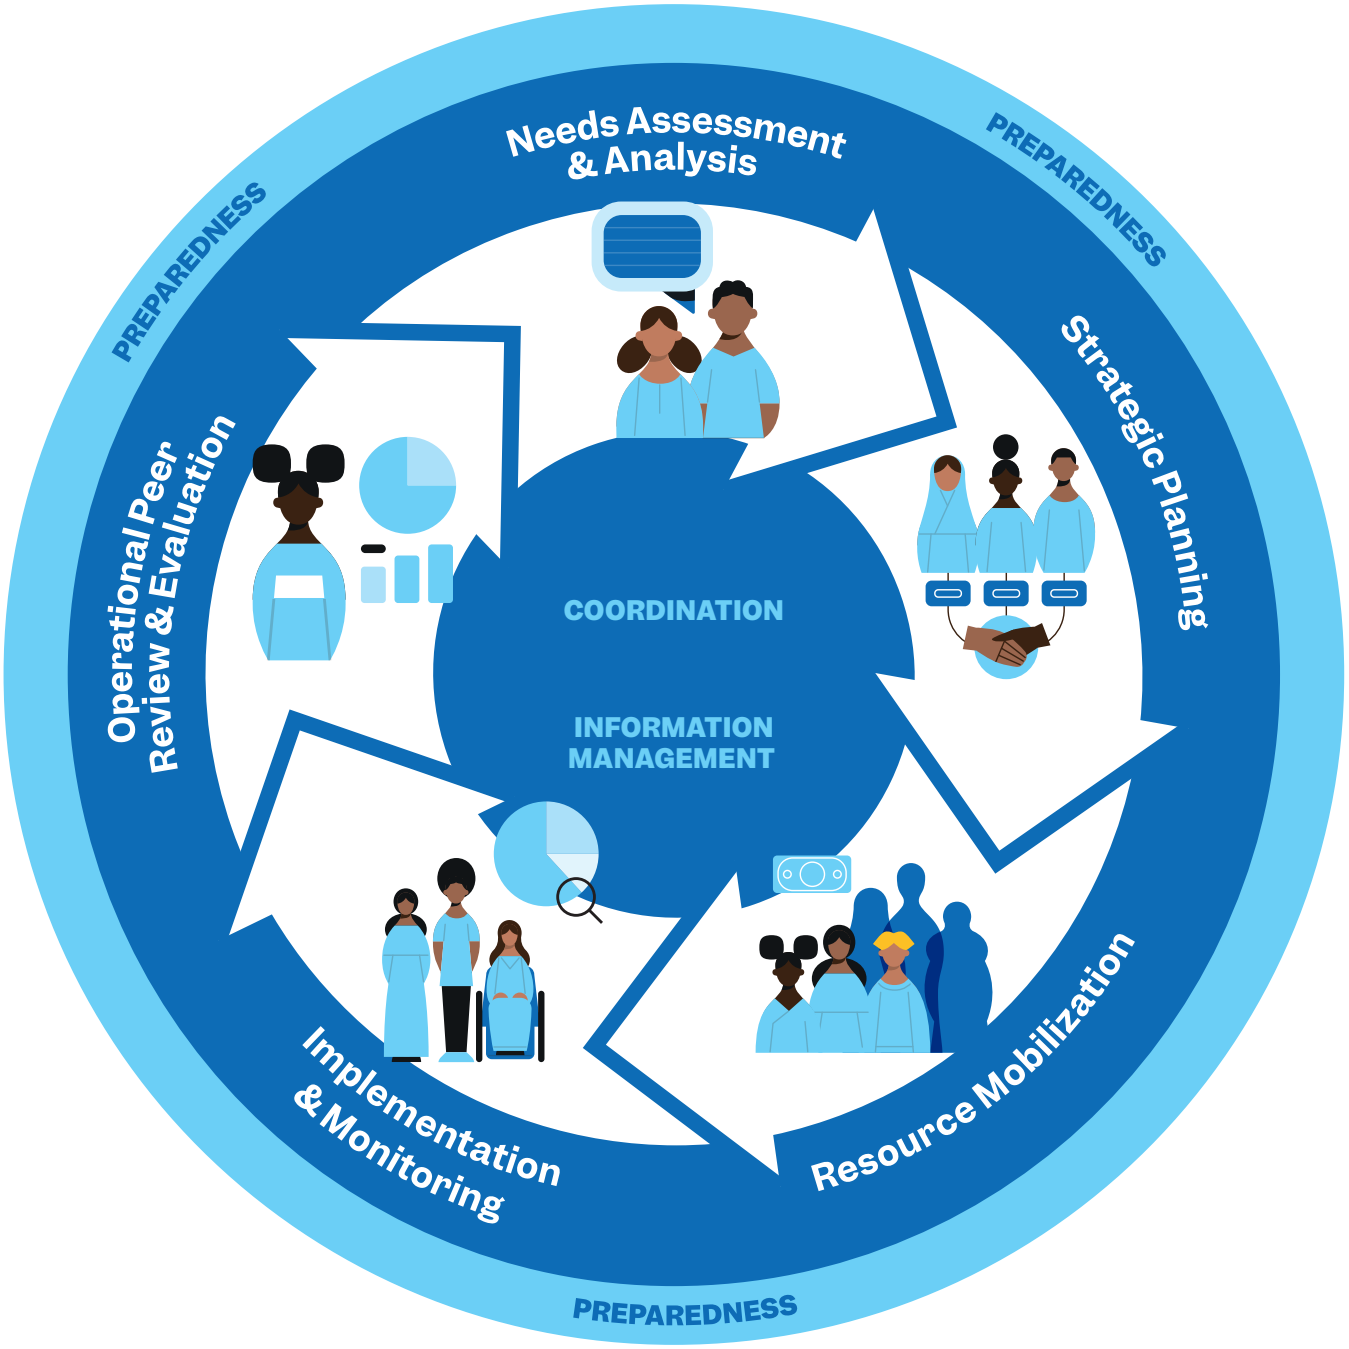
FIGURE 5.
The humanitarian programme cycle (HPC)

Source: OCHA (2020).[71]



Box 14: Internal displacement vs. refugee response coordination arrangements

In situations of internal displacement, Inter-Agency Standing Committee (IASC) clusters (see BOX 2 ▶ in Section A) are activated when existing coordination mechanisms are overwhelmed or constrained in their ability to respond in line with humanitarian principles. A formally activated cluster has specific characteristics and accountabilities. It is accountable to the **Humanitarian Coordinator through the cluster lead agency (CLA)** as well as to national authorities and to people affected by the crisis. IASC clusters are a temporary coordination solution and efforts are made as soon as appropriate and possible to hand over coordination to the relevant authorities.

In refugee settings, **UNHCR** is responsible as the provider of last resort within the refugee coordination model (RCM),[72] which follows the sector and refugee protection working group approach (not clusters; see BOX 2 ▶). UNHCR ensures that the coordination mechanisms prescribed by the RCM inform internal UNHCR processes and follow the key steps of the operational management cycle (OMC).

For situations with both internally displaced persons (IDPs) and refugees (i.e., mix of two different target groups), UNHCR and the **Office for the Coordination of Humanitarian Affairs (OCHA)** have a mixed coordination agreement.

COORDINATION MECHANISMS	REFUGEE SYSTEM	CLUSTER SYSTEM	DEVELOPMENT SYSTEM
ACCOUNTABILITY LINES	Reports to the High Commissioner for Refugees, who reports to the General Assembly	Reports to the Emergency Relief Coordinator, who reports to the General Assembly	Reports through the Chair of the UN Sustainable Development Group*, (Deputy Secretary General) to the Secretary General

Five elements of the humanitarian programme cycle

ELEMENT 1.

Young people in needs assessment and analysis

The rights and interests of all young people, including those in vulnerable situations (see BOX 6 ▶ in Section A), must be taken into account in needs assessments. In the acute phase of an emergency, duty-bearers should advocate for and support the inclusion of young people's needs and interests in any coordinated assessments undertaken, such as the **Multi-sector Initial Rapid Assessment (MIRA)**,[76] the government-led **Post Disaster Needs Assessment (PDNA)**,[77] the **Needs Assessment for Refugee Emergencies (NARE)**[78] or any other sector-specific needs assessments. In slow-onset or protracted emergencies, humanitarian agencies undertake **Multi-Stakeholder Needs Assessments (MSNAs)**.[79]

All sector-specific or multisectoral assessments should aspire to meaningfully engage young people as respondents as well as partners in design, data collection and analysis. Addressing the needs of youth in assessments requires collecting data on sex, age and disability so that data analysis can be disaggregated by those key variables. Humanitarian actors and enumerators must be trained in child safeguarding and confidentiality and informed consent and assent procedures (see BOX 15 ▶). Ideally, multiple sectors can jointly support affected communities to include young people when they develop and conduct an analysis of community needs. Tailored risk analysis should be conducted with and for adolescent girls and young women, so that programme design responds to the risks they face, as identified through the analysis. Active identification of GBV survivors is never recommended, and consultations should not be designed in a way that specifically targets or isolates them.

Specific questions for evaluation of young people's capacities and needs, and of available services, are included within the various sectors in SECTION E ▶. In many cases, existing information from multisectoral or sector-specific assessments, as well as existing (pre-crisis) national statistics (for example demographic and employment data), can be used to provide all the information needed for programme design with and for youth. However, if you decide to undertake a specific assessment, be sure to first go through ANNEX 3 ▶.

Box 15: Informed consent and assent

Following correct procedures for informed consent is fundamental to conducting ethical research, including collecting data from individuals. Working with adolescents or youth who are not capable of giving consent (e.g., due to being a minor, or having a disability) requires the *consent* of the parent or legal guardian, as well as the assent of the subject. In accordance with human rights laws, children – including adolescents under the age of 18 – have the right to express their views freely in all matters affecting them, and their views must be given due weight in accordance with the child's age and level of maturity when considering what is in their best interest.

Informed consent: The process of obtaining permission from a person prior to that person's participation in a research study/activity/intervention. Informed consent involves:

- Disclosure: provision of information to the subject about the research/activity/intervention, including potential risks and benefits
- Understanding: comprehension by the subject of the disclosed information and the request for consent, which may require additional facilitation if the individual has limited or no prior education, literacy, or capacity to understand, due to age or physical or mental illness
- Voluntariness: understanding by all parties of the fact that the subject's involvement in the research/activity/intervention is voluntary and should be free from coercion
- Capacity: the person providing informed consent must possess the decision-making ability and legal right/authority to give permission for the subject's participation (whether that is themself, or someone for whom they are the parent/legal guardian) in the research/activity/intervention.

Assent: The willingness to participate in research or an activity/intervention expressed by persons who are, by legal definition according to local law, too young to give informed consent, but who are old enough to understand the proposed research/activity/intervention in general, the potential risks and benefits, and the activities expected of them as subjects.

Agencies should ensure that field staff engaged in data collection are soliciting informed consent from caregivers of adolescents under the age of 18, as well as assent from the children themselves. For youth aged 18 and over, informed consent should be solicited as for older adults.

CASE STUDY 11

Youth-led assessment in Uganda and Jordan: Youth transitions in protracted crises

More than 80 per cent of refugee crises last for 10 years or more, and two out of five crises now last 20 years or more,[80] meaning that some people will spend their entire young lives in displacement. Using a participatory, youth-led approach, the Youth Transitions in Protracted Crises research project engaged young refugees affected by protracted crises in Uganda and Jordan as both researchers and respondents and mapped their transitions to adulthood. These young people undertook data collection among their peers, and contributed to analysis and knowledge exchange with government, donors and agencies through workshops. A multimedia 'story map' approach was showcased in individual storylines of 14 young refugees. The project identified barriers to and facilitators of young people's ability to build stable and successful adult lives in the context of prolonged displacement and/or refugee situations, across five domains: education, work, discrimination, marriage, and identity and belonging.

CASE STUDY 12

Making assessments more engaging for young people in Greece: Mercy Corps and the Norwegian Refugee Council (NRC)

Since 2015, over 1 million people have made the dangerous journey across the Mediterranean fleeing war, poverty and natural hazards in the Middle East, South Asia, and East and West Africa in the hope of finding a dignified life in Europe. Tens of thousands are still stranded in Greece, over 30 per cent of them youth aged 15–25, enduring harsh and unsafe living conditions (not only in camps). The Skills and Knowledge for Youth Leaders (SKYLS) methodology developed by Mercy Corps uses imagery to facilitate discussions that reveal underlying causes of issues affecting young peoples' lives and identifies the skills and actors (people/organizations) that can address them. Mercy Corps and NRC chose this methodology due to the prevailing sense of 'assessment fatigue' among displaced populations in Greece. The activity was adapted to ensure appropriateness for older youth in particular (aged 20–25). The participatory/interactive card 'game' facilitates interactions among youth to generate information, rather than using a more traditional researcher-led discussion model. The SKYLS methodology enables youth to reflect on their strengths and capacities, rather than solely on vulnerabilities, challenges and needs.

Source

Mercy Corps and NRC (2016).[82]

CASE STUDY 13

Youth-led assessment to design youth-inclusive programming: The Norwegian Refugee Council (NRC)

In Rakhine, Mon and Kayin States in Myanmar, where there have been decades of armed conflict, and ethnic cleansing perpetrated by the Myanmar Government in 2017 has forced millions of Rohingya to flee their villages, youths live in a state of instability and insecurity with no end in sight. In this context, young people are redefining their roles in society and in the community, and seeking new opportunities for the future. In these three states, a youth-led assessment was initiated as a means of identifying youth needs and relevant barriers and opportunities from a youth perspective, and to create youth-inclusive programming. This assessment was done in partnership with young people; termed a 'youth inclusive process', this means that youth were engaged in relevant aspects of the assessment with the aim of ensuring that their voices and perspectives were reflected. This assessment ensured youth participation and input into the design of tools and training, while the field work was led entirely by young people, with ongoing staff support. The goal was not only to capture youth voices and experiences, but also to build youth skills and knowledge. Youth facilitators learned new technical skills such as data collection, leadership and communication, while increasing their understanding of the labour market and future development opportunities.

ELEMENT 2.

Young people in strategic planning

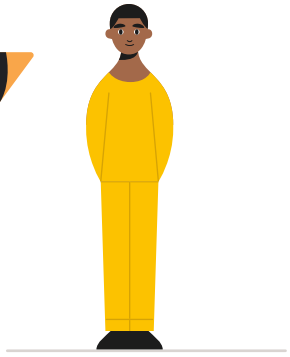
Within agencies, strategic planning is the phase where programmes are designed. Strategic planning should identify and respond to the needs of different age groups of people. A diverse cross-section of young people, including different age groups, should be involved in strategic planning, ideally starting with the theory of change, which outlines the objectives and intermediate outcomes of a strategy or programme.[83]

Based on joint assessment findings, strategic planning involves humanitarian actors developing a joint strategic plan, mobilizing resources and monitoring the situation. Humanitarian actors should seek entry-points for reaching out to young people, identifying those who are left behind, and supporting their meaningful engagement (see **STRATEGIC AREA 4** ▶ in Section C: ***Meaningful participation***).

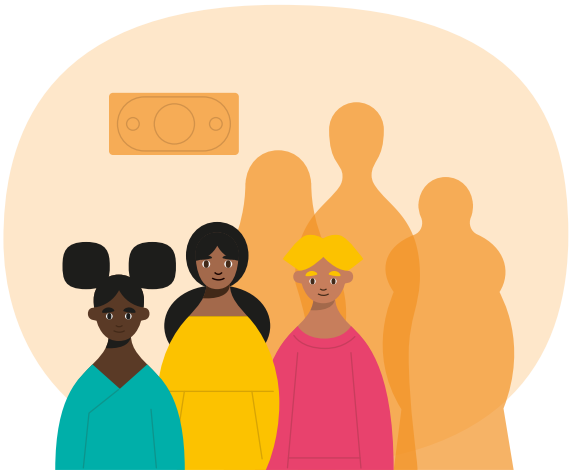
At the early phase of an emergency, when implementation plans and budgets are being developed, young people's participation should be included as an indicator.[84]

Young people's rights and needs – as defined by young people themselves – and disaggregated data for this demographic group should be reflected in the humanitarian country strategy and the response plans of clusters/working groups (see **BOX 2** ▶ for a description of clusters/working groups), which specify what each will do to contribute to overall strategic objectives. There should be age-specific results and indicators on young people for each sector. Agencies should include at least one objective in the cluster/working group strategy or response plan on accountability, and indicators should include young people's satisfaction with the humanitarian response.

"When asking for young peoples' input it is important to consider that it should be from the very beginning."



NRC consultations, young man, Jalalabad, Eastern Afghanistan



ELEMENT 3.

Young people and resource mobilization

Donors and partners require accurate assessment of needs, informed strategies, and collective responses among humanitarian actors. By addressing the needs of young people in humanitarian response plans, inter-agency appeals and other strategic documents can thereby mobilize resources for humanitarian programming for this group. Engaging with donors before and during a humanitarian response and advocating for inclusion of the needs of young people within their priorities and budget allocations is critical.

Humanitarian actors should help identify funding opportunities for programming with and for young people through partnerships and calls for proposals. In particular, flexible funding is required for the specific needs of youth organizations, initiatives and movements. Resource mobilization efforts should ensure the inclusion of adolescent- and youth-specific programme interventions within sector-specific response plans and projects, such as **United Nations Peacebuilding Fund (PBF)** funding opportunities for Gender and Youth,[85] the **Central Emergency Response Fund (CERF)**[86] and other funding mechanisms.

Agencies should work with their communications and media teams to highlight the needs of young people and share good practices and stories on engaging adolescents and youth and addressing their needs in emergencies. This can support advocacy and resource mobilization.

Within their own project proposals, agencies should consider including budget lines for:

- Additional young people as staff (working age) and community volunteers (e.g., to provide training, support, mentoring for their peers)
- Needs assessments that address young people's priorities
- Training for staff on inclusion and meaningful participation of young people
- Accessibility and disability-related accommodations (3–5 per cent of total programme budget)[87]
- Communications, consultation with young people and feedback mechanisms
- Sub-grants directly to young people and/or youth-led organizations, for their own projects.

CASE STUDY 14

Participatory grant making to grassroots youth groups in crisis settings: FRIDA

Participatory grant making enables youth groups who apply for grants to decide together who will receive funding. Pioneered by the women's fund FRIDA, this model is designed to catalyse emerging leadership, respond to on-the-ground realities of affected communities, ensure transparency, and shift the traditional power dynamics between donor and grantee partners. Applicants are not required to be registered entities, as registration with the government can be prohibitively costly for grassroots groups, and may subject them to safety risks, especially in conflict settings. After applicants submit their proposals, a clear set of priorities guides the eligibility screening process. Once proposals have been deemed eligible, they move into the voting stage led by applicants themselves, with applicants unable to vote for their own proposals. Applicants anonymously vote on other applications in their region, in their language, and collectively decide where funding goes. The votes and results are tallied and checked by staff. The final selection of grantees is announced, and grants are paid to groups. Grantees report that they value the ease and uniqueness of the model. FRIDA has made grants to feminist activist youth in several humanitarian settings, including the Democratic Republic of the Congo, Haiti and Libya.

Box 16: Developing key messages for advocacy and proposal development

When creating proposals or approaching donors, the messages in '***Making the case***' in SECTION A ▶ may be useful. The following resources may also be useful when developing key messages:

- **Doha Youth Declaration on Transforming Humanitarian Aid**: This document represents the opinions of global youth representatives on improving humanitarian action (https://reliefweb.int/report/world/outcome-world-humanitarian-summit-global-youth-consultation-doha-youth-declaration).
- **New Way of Working**: This can be described as working over multiple years, based on the comparative advantage of a diverse range of actors, including those outside the United Nations system — and including young people — towards collective outcomes (https://agendaforhumanity.org/initiatives/5358).
- **The 2030 Agenda for Sustainable Development**: The Agenda is a plan of action for people, planet and prosperity, and reflects the needs of young people, including a commitment to strive to provide youth a nurturing environment for the realization of their rights and capabilities, helping countries to reap the 'demographic dividend' (https://sustainabledevelopment.un.org/post2015/transformingourworld) [available in Arabic, Chinese, English, French, Russian, Spanish].
- **The Compact for Young People in Humanitarian Action**: The Compact for Young People is a collective commitment of 50+ humanitarian actors working to ensure that the priorities of young people are addressed and informed, consulted, and meaningfully engaged throughout all stages of humanitarian action (www.youthcompact.org/about).
- **The Missing Peace**: Progress study on youth, peace and security: this study, requested by the Secretary General of the United Nations in response to Resolution 2250, presents findings on the positive contributions of youth to peace processes and conflict resolution, and recommendations for effective responses to support the agency, leadership and ownership by young people and their networks and organizations, and facilitate their equal and full participation in decision-making at local, national, regional and international levels (www.youth4peace.info/system/files/2018-10/youth-web-english.pdf).
- **United Nations Security Council Resolution 2250**: A ground-breaking resolution on youth, peace and security, which urges member states to give youth a greater voice in decision-making at local, national, regional and international levels and to consider setting up mechanisms that would enable young people to participate meaningfully in peace processes (http://unscr.com/en/resolutions/doc/2250; www.youth4peace.info/UNSCR2250/Introduction).
- **Youth2030**: The United Nations Youth Strategy: the Strategy aims to facilitate expanded global, regional and country-level action to address the needs, build the agency and advance the rights of young people worldwide, and to ensure their engagement and participation in the 2030 Agenda for Sustainable Development and other relevant global frameworks (www.un.org/youthenvoy/youth-un) [available in Arabic, Chinese, English, French, Russian, Spanish].

ELEMENT 4.

Young people and implementation and monitoring

During implementation of the humanitarian response, agencies may deliver programmes targeting young people, and they may also engage them as implementers of activities. Monitoring tracks the inputs and outputs resulting from interventions for affected populations, charts the outcomes of cluster/working group activities, and measures progress towards the strategic objectives of the humanitarian response plan.[89] Agencies working with and for young people should advocate so that the coordinated response considers the diversity of young people in the affected population, disaggregated by age and other diversity factors, and includes their perspectives in the response plan. Clusters/working groups should jointly monitor young people's satisfaction with the response, to identify and resolve issues affecting coordination.

Agencies should take a participatory approach to monitoring, and opportunities for young people's reflection on programme progress should be built in. All young people – but especially those who are female and those in vulnerable categories (see BOX 6 ▶ in Section A) – must be engaged as stakeholders in monitoring. Participatory monitoring activities have many benefits, including:

- → More relevant, effective and sustainable programmes and policies
- → Improved conditions for young people, informed by their viewpoints and lived experiences
- → Improved intergenerational communication and empathy
- → A feeling of empowerment at personal and community levels.

Indicators should include outcomes specific to adolescents and youth, including some developed by young people themselves.

CASE STUDY 15

Engagement monitoring system in Jordan, Lebanon, Palestine and the Syrian Arab Republic: UNICEF

In partnership with NGOs and young people, UNICEF has developed a simple system to track and monitor adolescent- and youth-led civic, social and economic engagement through online tools that young people can use themselves. A user ID is created for each adolescent participating in the programme, enabling UNICEF to track long-term progress. UNICEF and partners are accountable for programme performance results and will be able to make informed decisions to improve the ongoing programmes and enhance future programmes. Young people input data on programme coverage, programme quality, experiential learning and behaviour change, to reflect whether implementation has been going to plan. UNICEF measures adolescent engagement and behaviour change before and after projects through direct and indirect measures from community members, combined with an assessment of the relevance and importance of the programme to young people.

ELEMENT 5.

Young people in operational peer review and evaluation

Operational peer reviews and inter-agency humanitarian evaluations should assess the collective results of interventions on the needs and rights of young people, as well as their meaningful participation.[91] Specifically, the peer review or evaluation consults a diverse cross-section of local young women, young men and youth organizations on their views on programme quality, accountability and performance. Particular attention should be paid to the views and needs of vulnerable groups of crisis-affected young people (see BOX 6 ▶ in Section A). Agencies should aim to involve young people to the greatest extent possible, including by calling upon external evaluators with experience using participatory methodologies and working with youth. The peer review and evaluation budgets should include funds for dissemination of findings and recommendations in inclusive and participatory formats and through channels friendly to adolescents and youth.

CASE STUDY 16

Youth-led programme evaluation in Côte d'Ivoire: UNICEF and Search for Common Ground

In the repeated socio-political crises affecting Côte d'Ivoire in recent years, schools have been the site of political violence and manipulation of young people. A peacebuilding project led by UNICEF and Search for Common Ground established Peace Clubs in schools, to engage young people in constructive dialogue. In a participatory evaluation of the programme, the participants used video production and the Most Significant Change (MSC) method[92] to generate evidence. The evaluation itself was also designed to contribute to peacebuilding, through dialogue between groups, sharing common goals and developing life skills. The evaluation process was as follows: first the participants developed stories of change to reflect how the Peace Clubs had contributed towards sustaining peace. Next, they led a process to choose the most impactful stories and create a storyboard to prepare for filming each selected story, followed by the filming and editing. Finally, the team of participants analysed the content, identified barriers to and facilitators of positive change, aggregated the information and created a final video report presenting the results. The two films selected as the most significant by the community were screened for key decision makers in government, NGOs and the United Nations, whose own feedback was later also included in the evaluation.

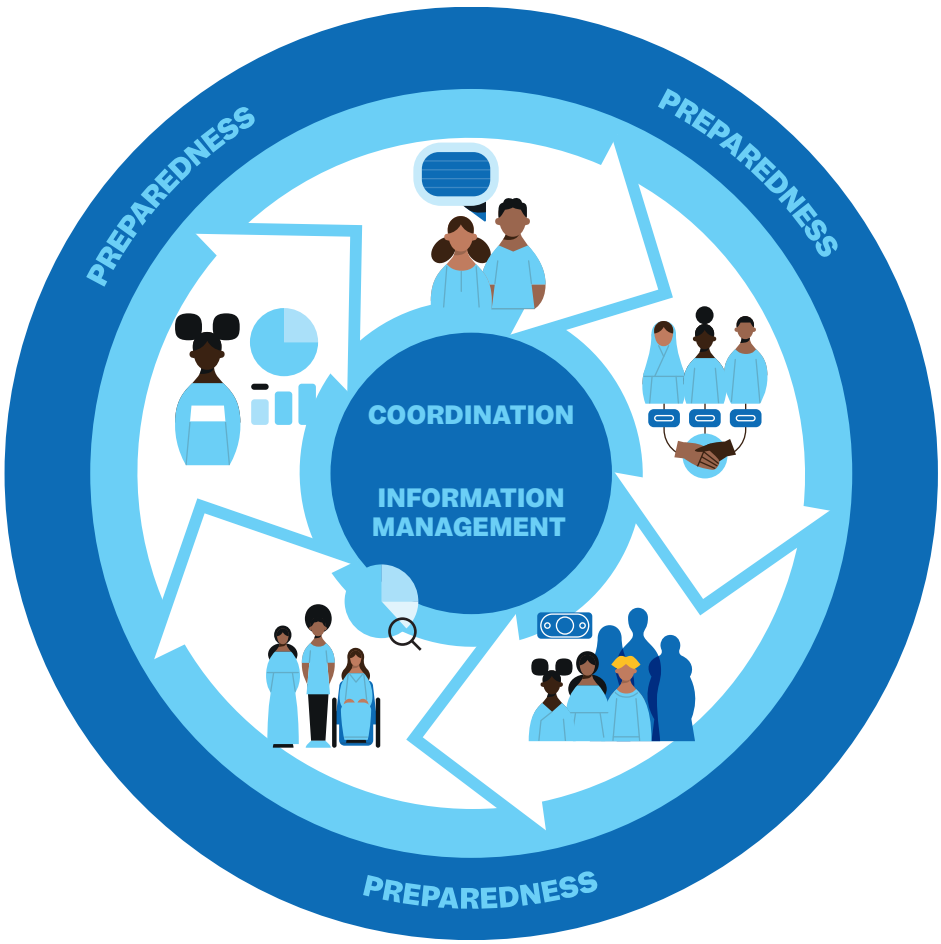
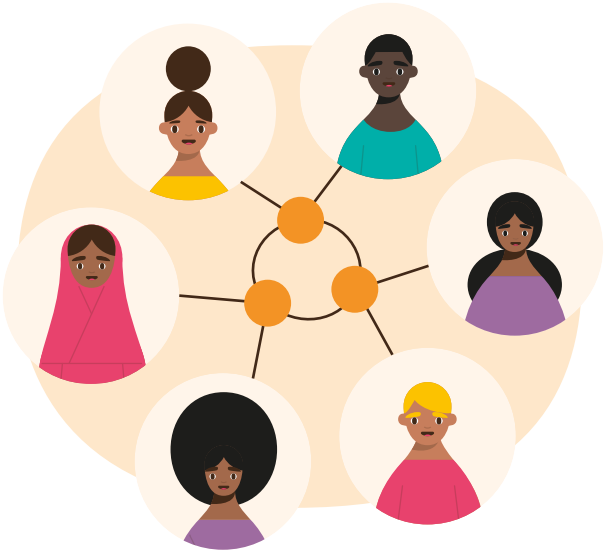
Search for Common Ground (2015).[93]

Three key enablers of the humanitarian programme cycle: Coordination, information management and preparedness

Successful implementation of the five inter-related elements of the humanitarian programme cycle (HPC) (discussed above) is dependent on effective operation of the three key enablers: coordination with national and local authorities and humanitarian actors; information management; and emergency preparedness (see **FIGURE 6** ▶).

FIGURE 6.
The three key enablers in the HPC





KEY ENABLER 1.

Young people and coordination

Coordination ensures that no duplication of response efforts is taking place, and that any gaps are addressed. Historically, coordination structures have tended to exclude rather than include local stakeholders, including young people. In the cluster system (as well as in refugee settings, which follow the sector/working group approach), humanitarian actors do not consistently apply an 'age lens' to their work. In some contexts, the Child Protection sub-cluster/working group might be activated and take the lead in coordination of services for adolescents and youth. In others, it might be the Education cluster/working group or a Reproductive Health working group. This ad hoc approach within coordination structures means that young people are often overlooked in humanitarian response, or their needs and priorities are only addressed piecemeal. See STRATEGIC AREA 4 ▶ in Section C for ideas on how to include young people in coordination mechanisms.

Each cluster/working group should designate a focal point on youth issues, and a dedicated adolescents and youth working group should be formed (similar to gender coordination mechanisms), including young people as representatives. In addition to coordinating efforts, this group can be a powerful platform for young people's consultation, participation in action and decision-making, and advocacy related to issues affecting them.

Examples include:

- Flexible funding designed for the specific needs of youth organizations, initiatives and movements[94]
- Mechanisms for the host country to hear the challenges that young refugees, asylum seekers and host community young people face[95]
- Multisectoral approaches looking holistically at young people's needs
- A life-course approach, based on evolving capabilities and needs, which maximizes investments from early childhood through into young adulthood
- Intergenerational approaches working with young people, parents/caregivers and community members[96]
- Refugees' right to work
- Inclusion of young people in local or national disaster response mechanism(s)
- 'Firewalls' between health/social services and law enforcement/military to guarantee safe access to health and social services without fear of being reported, targeted or deported due to citizenship status or other vulnerable group affiliation.

An adolescents and youth working group can also support capacity development initiatives for service providers and sensitize government authorities and camp managers on issues relevant to young people.

CASE STUDY 17

Youth Task Force in Zaatari Refugee Camp, Jordan: The Norwegian Refugee Council (NRC) and UNFPA

Thousands of Syrian young people currently live in refugee camps in Jordan. The majority have not completed high school or university, and most have no access to paid employment, and are only allowed by the government to leave the camps for a limited number of hours a day. They complain of powerlessness, hopelessness, high stress and interpersonal tension. Adolescent girls and young women are often confined to their dwellings by their families. Duty-bearers acknowledge that young people have not received the same attention as other age groups. The Youth Task Force in Zaatari Refugee Camp aims to ensure that young people's needs are prominent within the planning processes of the Education and Protection sectors, and that they are on the agenda of key stakeholders and donors. This inter-agency body, co-led by NRC and UNFPA, is seen by external partners as a model of successful collaboration – less about showcasing individual members' initiatives and more about pursuing shared agenda items. The Youth Task Force is credited with helping to ensure the integration of needs identified by young people themselves into the Jordan Refugee Response Plan.[97]

CASE STUDY 18

Youth Working Group (YWG), Cox's Bazar, Bangladesh: UNFPA and Save the Children International

In Bangladesh, children and adolescents comprise 55 per cent of the Rohingya refugee population. YWG is a coordination structure built by the Education and Child Protection sectors to gather data on, advocate for, and support programmes for young people in the Rohingya and host communities. Co-chairs UNFPA and Save the Children International developed a skill development framework for displaced Rohingya adolescents and youth aged 10–18 years, in Cox's Bazar. The purpose of this framework is to empower young people through foundational, transferable and job-specific skills. The YWG also led development of advocacy messages for the Government of Bangladesh to allow Rohingya adolescents and youth to take part in an income-generating programme. YWG mapped existing initiatives for young people, and this was then shared among the YWG members to use as a reference. The YWG is collating existing life skills materials to complement the effort, and training partners in adolescent girl-centred programme design.

Source

Youth Working Group, Cox's Bazar, Bangladesh (2020), provided for these guidelines.

KEY ENABLER 2.

Young people in information management

Information management (IM) – the process of collecting, processing, analysing and disseminating data and information – is carried out through each phase of the HPC to inform effective responses to the needs of young people. IM processes should generate and analyse data that capture the realities of life for young people (see ANNEX 4 ▶ ***Checklist: Information management process***). This could include:

- Create a demographic profile of how many young people (aged 10–24) make up the affected population, disaggregated by: sex; age categories (see BOX 4 ▶); in-school/out-of-school; in or out of training/employment; married/unmarried/divorced/engaged; young people with or without disabilities; and any other relevant local diversity factors.
- Work with youth programmes to find entry-points for the participation of young people in IM activities. This is a vehicle for meaningful participation (see SECTION C ▶), and it also helps ensure that information collected is relevant to them.
- Work with technical staff to ensure that the results of assessment and analysis of young people's needs are anchored in cluster/working group and response plans.
- Ensure that relevant field staff are soliciting informed consent from caregivers of adolescents under the age of 18, as well as assent from the children themselves. For youth aged 18 and over, informed consent should be solicited as for older adults (see BOX 15 ▶ ***Informed consent and assent***).

The secondary data used to create a demographic profile might be more accurate than primary data and can also be a rich source of information for gender-specific vulnerabilities. However, where displaced or crisis-affected populations are not registered individually, it must be kept in mind that most secondary data are national, may not be up to date (especially after population displacement), and may not be adequately disaggregated to create an accurate picture of the demographics of young people.

KEY ENABLER 3.

Young people and preparedness

Preparedness refers to the ability of governments, professional response organizations, communities and individuals to anticipate and respond effectively to the impact of likely, imminent or current hazards, events or conditions. It requires mechanisms to be in place that will allow national authorities and relief organizations to receive advance warning and deploy staff and resources quickly once a crisis strikes.[99] Young people can play a vital role in disaster preparedness.

Duty-bearers should look for entry-points to reach out to young people, identify those who are left behind and support their meaningful engagement in preparedness planning at both the inter-agency level and within their own agencies (see STRATEGIC AREA 4 ▶ in Section C). Agencies may engage young people in preparedness by doing the following:

- Empower young people to identify and communicate risks within their households, communities and wider environments.
- Ensure that disaster-related information and educational curricula are adolescent friendly and gender sensitive, and that young people are provided with opportunities for skills development on disaster risk reduction (DRR), climate change adaptation and resilience.
- Facilitate young people's equal and meaningful participation in the budgeting, implementing, monitoring and evaluation of the Sendai Framework, and in DRR policy and decision-making at all levels.
- Develop partnerships with youth-led organizations in crisis-prone areas and provide training in key skills for crisis response, such as first aid, monitoring and evaluation, communications, and human rights, including refugee rights.

CASE STUDY 19

Youth-led preparedness programming in Kenya: International Federation of Red Cross and Red Crescent Societies (IFRC)

In the Kwale communities in drought-stricken areas of Kenya, young volunteers with the Red Cross have raised awareness among young people about the problems associated with climate change, among other factors, and they have provided necessary training and mobilized young people in building community resilience in the face of recurring drought and severe hunger and malnutrition. With the volunteers' help, communities improved their early warning and preparedness systems, updated the community disaster response plan and strengthened food security through promotion of climate-smart farming practices. Young volunteers also contributed to environmental conservation efforts and increased local access to clean water. As a result, Kwale communities were able to withstand the drought crisis better than many others in the region.

CASE STUDY 20

Adolescent-led disaster risk reduction in Indonesia: UNICEF

Indonesia is one of the nine countries with the highest risk of climate hazards,[101] and is known to be one of the world's countries that is most prone to natural disasters – with a high risk of multiple hazards, including flooding, earthquakes, landslides, tsunami, volcanic eruptions and cyclones.[102] Around 97 per cent of the country's total population live in disaster-prone areas, which includes more than 117 million adolescents (aged 10–19),[103,104] giving them a major stake in reducing risks from climate change, natural hazards and environmental degradation.

Using the UNICEF Adolescent Kit for Expression and Innovation (see below), which follows a human-centred design approach, adolescents have engaged in a process to map the disaster risks in their communities, develop prototype solutions, and present their ideas to local community members and leaders. For example, in Kupang District of East Nusa Tenggara Province, one group identified drought as the most significant threat, and developed the idea of installing a deeper well to reach water that does not run out in the dry season. The adolescents presented their idea to the community, and local leaders agreed to include it in the village development plan for the following year.

Implementation of adolescent- and youth-responsive programming

E

This section first provides an overview of key programming approaches for putting young people at the centre. Next it proceeds to present a series of 'tip sheets' specific to each cluster/working group (or Area of Responsibility within these; see **BOX 2** ▶ in Section A) providing tips for age-appropriate, adolescent- and youth-responsive programming. For each cluster/working group in turn, some background information is followed by the tip sheet/table presenting 'key actions', organized around (1) needs assessment and analysis, (2) strategic planning, (3) resource mobilization, (4) implementation and monitoring, and (5) peer review and evaluation (see **FIGURE 5** ▶ in Section D). This is followed by lists of relevant resources (with links) and case studies.

Information provided here is only a starting point. No two settings are alike, of course, and none of the below guidance is prescriptive; these ideas are intended to be adapted to the local context and the particular phase of the emergency. Sharing of resources and expertise with young people and between partners is critical for achieving better results.

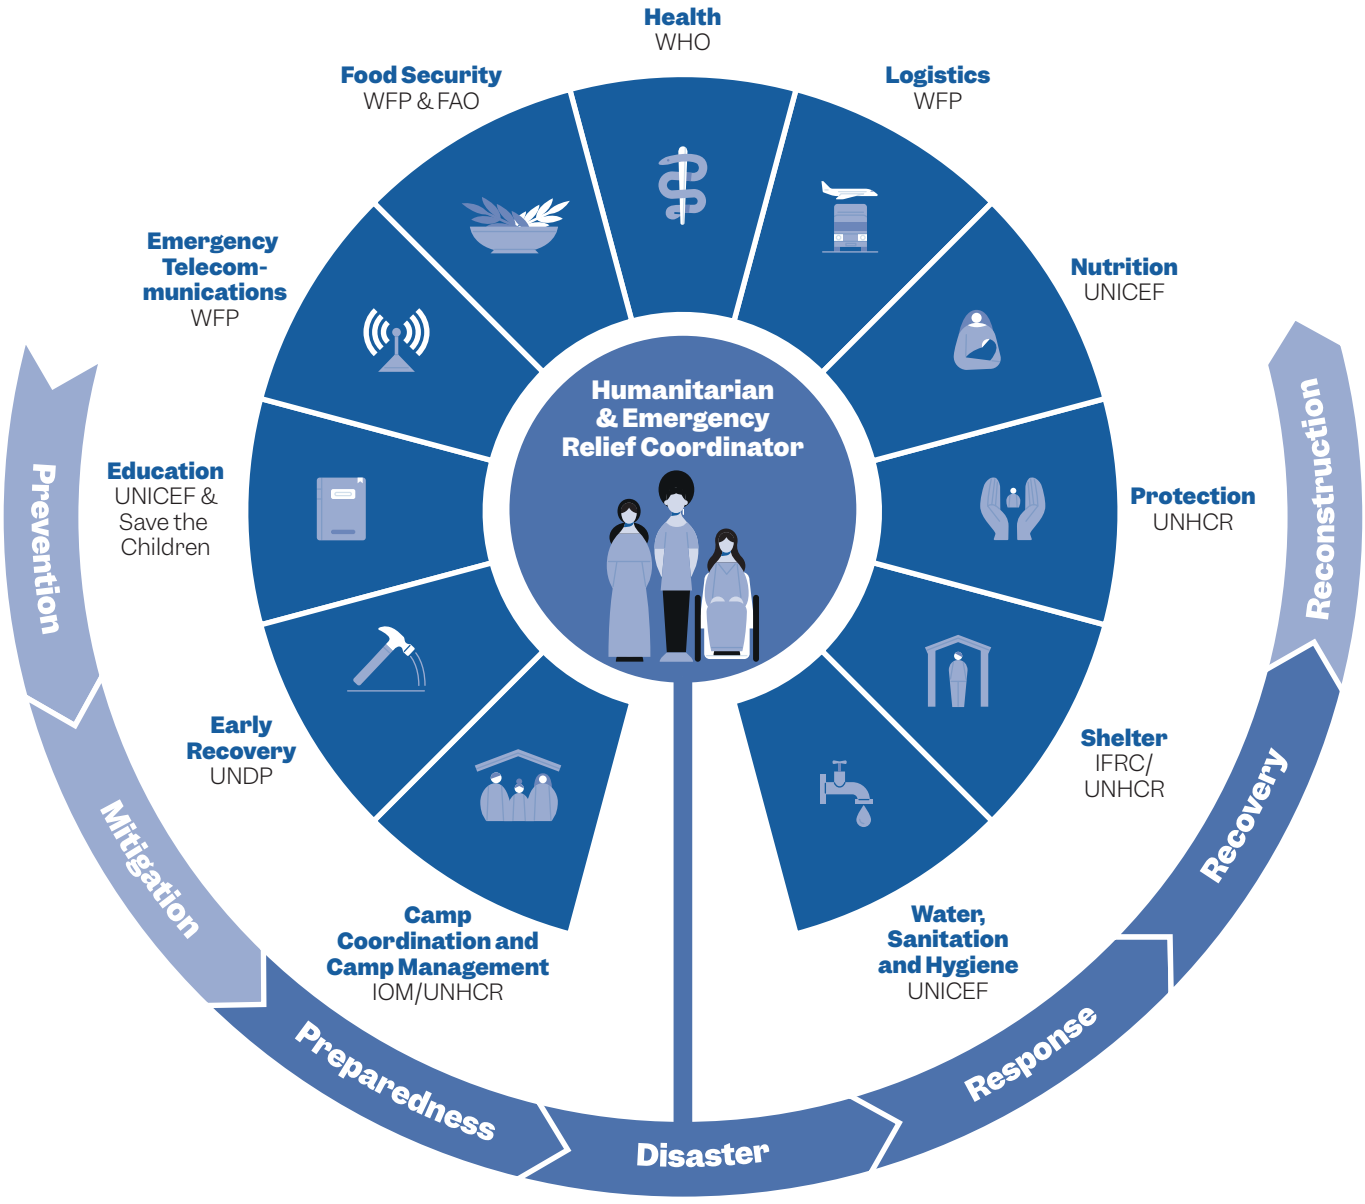
FIGURE 7.
The Cluster Approach

Source: UNOCHA (2015).[107]



Key programming approaches for putting young people at the centre no matter the sector

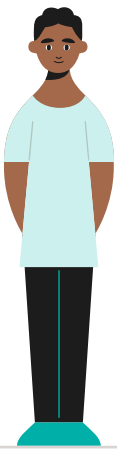
Effective youth programming puts young people at the centre to address their diverse needs and capacities. The following approaches to working with and for young people are cross-cutting and relevant to any sector or phase of the HPC. Particular considerations for working with and for refugee youth have been highlighted (see **BOX 17** ▶).

Life-course approach

Evidence shows that identifying critical risks and gaps across different age groups within 'adolescents' and 'youth' (see **BOX 4** ▶), and prioritizing key interventions for each, allows for a better use of resources and produces greater impact. The needs and interests of a 10-year-old will be very different from those of a 19-year-old, for example.[108] This life-course approach builds a continuum of support for young people and maximizes the investments made on their behalf.

Gender-targeted and gender-transformative approach

Putting adolescent girls and young women at the centre entails making programmes *gender-targeted*, by finding the 'invisible' girls and creating the conditions to allow their access to and participation in programmes, such as through outreach to vulnerable groups, ensuring family and community buy-in, and supporting local women- and youth-led organizations for community mobilization and advocacy. *Gender-transformative* interventions engage girls, women, boys and men in unpacking harmful gender norms and addressing barriers for girls, including through peer-to-peer education on protection and negative mechanisms for coping with harmful gender norms (e.g., child marriage, transactional sex, trafficking, etc.). Examples of approaches to empowering young women in humanitarian and protracted crises are presented in **ANNEX 5** ▶.



> Young people asked for these Guidelines to include a section on peacebuilding. Young people can be peacebuilders, especially since they have been personally affected by wars. Young refugees can be moderators in their community, whether in their host country or in their country of origin.

UNHCR consultation with young people, N'Djamena, Chad

Building human, social and financial capital

Young people's needs should be viewed and addressed in a holistic manner, so interventions for their empowerment and protection in crisis settings should develop their human, social and financial capital. Rather than stand-alone programmes, young people benefit from integration of life skills and health education, numeracy and literacy, peer interaction, support for basic needs, mentorship, entrepreneurship training, and access to capital to facilitate their transition into a job or self-employment. This approach to build human, social and financial capital has been shown to increase rates of savings and employment, improve health and psychosocial outcomes, and reduce exposure to unwanted sex.[109]

Integration across clusters/working groups

Putting young people at the centre requires that agencies build linkages within and across clusters/working groups. It is important for young people to have many connections to others, and such networks must be fostered through opportunities in the Education and Livelihoods sectors in order to create pathways from school to decent work. Similarly, the Education and Child Protection sectors acting together create a virtuous cycle for crisis-affected adolescents. Actors working on sexual and reproductive health (SRH) need strong linkages to the Protection sector, and vice versa. Gender-based violence (GBV) principles and considerations (which are encompassed under the Protection sector) are essential to young people's outcomes in all the other sectors, especially Nutrition and Shelter.

Working across the nexus of humanitarian, development and peace[110]

Strengthening linkages across the humanitarian–development–peace nexus helps attain long-term development gains and build resilient and peaceful societies. In large-scale emergencies, the nexus approach allows governments and humanitarian actors to respond on a large scale, while also anticipating additional follow-on shocks by building the skills of young people. Investing in resilient systems with risk-informed programming, preparedness and response during times of stability mitigates the impact and cost of emergencies when they arise, and thus humanitarian and development programme efforts should be complementary. Programmes should seek durable solutions (see definition in GLOSSARY ▶) from the beginning of a crisis, while maintaining the primacy of the humanitarian imperative to save lives, working where possible within national policy frameworks. Localization is at the heart of the humanitarian–development–peace nexus, as many local actors, including youth organizations, already engage in both humanitarian and development work (see the next point).

Partnership with youth organizations

Young people are often actively engaged within their communities, from simple acts of community service and participating in formal institutions, to organizing and mobilizing their peers at local, national, regional and global levels.[111] Established youth-led organizations play critical roles in humanitarian crises. They know their own context and can capitalize on extensive community networks.[112] However, they are often critically underfunded and struggle to stay afloat, overshadowed by international organizations and unreached by governments and donors. They may lack technical skills in preparedness, crisis response and recovery. Partnering with youth organizations – as part of efforts for localization of humanitarian aid – enables humanitarian actors to respond to the needs of young people by reducing barriers to meaningful participation, applying an inclusive approach, and building their capacities to be advocates for and agents of change. Humanitarian actors should prioritize efforts to work with youth organizations, while also taking steps to ensure that their partnerships do not derail the missions of the respective local youth groups.

Box 17: Working with and for refugee youth

Refugee youth are subject to additional challenges in humanitarian situations. Loss of their livelihoods, homes and physical protection, as well as significant challenges accessing education, health and social protection services in countries of asylum, compound the suffering they initially experienced when they were forced to flee their homes. Where emergencies involve refugees and asylum seekers, additional points must be considered during the planning and implementation of humanitarian activities.

Some considerations:

- National monitoring, data collection, action plans and referral systems may not cover refugee youth populations, meaning that their needs are not assessed or addressed in long-term national policies and strategies. Refugee youth may not be able to access services, including protection, education, social welfare, cash transfers etc., whether due to a lack of appropriate documentation or resources, or due to deliberate exclusion in law and policy. In the worst cases, refugees may be subject to arrest and detention.

- Refugee contexts can be politically complex situations, sometimes with limited or unclear roles and responsibilities for national actors with regard to the protection of refugee children. This may be particularly the case in states that are not party to the 1951 Convention Relating to the Status of Refugees.[113]

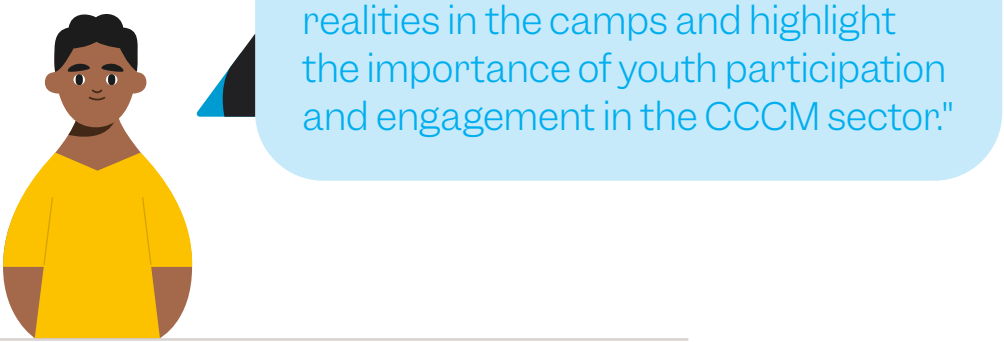
- Refugee youth may be at greater risk of violence, exploitation and abuse due to their status as refugees. Xenophobic violence may also affect their ability to participate in education and livelihood activities, and even to move around and socialize freely.

- Host community youth in some cases may feel marginalized in areas where there is a large refugee response that does not consider and include them.

- Durable solutions and complementary pathways must be identified as these are key components of the response when it comes to refugee youth. These include voluntary repatriation, local integration and resettlement, as well as options for work or student visas in third countries.

Camp Coordination and Camp Management (CCCM)

With the right support, young people – both female and male – can play a central role in the positive development of a camp community and stabilization of camps and camp-like settings.[114] For example, they should have leadership roles in outreach programmes, awareness-raising, care and maintenance interventions, and opportunities for roles as mobilizers in peer networks. Some categories of young people may not wish to participate, or members of the family or community may not see their participation as necessary or positive. CCCM staff play a critical role in ensuring that these groups and individuals are appropriately represented and supported. This requires an understanding of the unique participation barriers and capacities of different groups. For example, social norms may dictate that young girls or young people with disabilities are not supposed to have leadership roles in society. Placing them in those positions without a comprehensive strategy and consultation on needs may cause harm, including violence and social exclusion.



NRC, UNICEF and UNFPA consultations with Syrian refugee and Jordananian young people in Jordan

Tip sheet

Key actions for CCCM programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Identify the needs of young people in camps and camp-like settings, disaggregated by sex, age and disability, with the support of relevant service providers. → Gather feedback from young people, especially adolescent girls and at-risk groups, with regard to possible CCCM sites and layout of camps and camp-like settings. → Ensure that consultations with the community include adolescent girls and young women. → Identify the safety concerns of young people, especially girls, and the accessibility concerns of young people with disabilities.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify needs and barriers to access. → Conduct a participatory youth assessment to understand the needs, capacities and priorities of young people in camps and camp-like settings; include assessment of the feasibility of involving youth in activities related to communication with communities, community representation and community coordination forums.
Strategic planning 2	→ Provide opportunities for young people to be included in planning committees. → Ensure that the CCCM response plan addresses the needs and priorities of young people identified during the needs assessment, and from any other relevant data on young people.	→ Create camp planning and meeting spaces that young women and men consider to be inclusive, friendly and welcoming. → Involve a diverse cross-section of young people in the design of the CCCM response plan to identify and mitigate safety risks.

HPC phases	What to do	Tips for young people's participation
Resource mobilization 3	→ Compile and circulate information and key messages on the CCCM needs of adolescents and youth, such as from assessment reports, to influence funding priorities. → Report on gaps in funding for addressing young people's CCCM needs to donors and other humanitarian stakeholders.	→ Engage young people in developing key advocacy messages for CCCM funding.
Implementation and monitoring 4	→ Implement CCCM programming that targets the needs of young people and recognizes their assets and potential to contribute. → Conduct internally displaced person (IDP)/refugee registration and profiling in a manner that is survivor-centred and accountable to affected populations, including respecting the confidentiality and safety of girls, young women and other at-risk groups. → Ensure that young people living in vulnerable situations are registered for extra assistance, as needed (see **BOX 6 ▶** ***Vulnerable categories of crisis-affected young people***, in Section A). → Create and disseminate camp planning documents in the local language(s) and use language that is friendly to young people. → Train CCCM staff and volunteers in protection (including both child protection and GBV), including how to safely receive a disclosure (report) of GBV from a client and provide a referral to specialized services using existing referral pathways or protocols. → Develop and maintain feedback mechanisms for young people to express their views on the effectiveness and quality of CCCM programmes.	→ Identify meaningful roles that young people can play in CCCM and in provision of services in the camp, such as outreach, awareness raising and maintenance. → Provide space in the camp for young people to engage in peer-to-peer support and participate in self-help groups. → Consult young people during routine review and adaptation of camp security measures. → Mitigate barriers to participation faced by young women and men (e.g., childcare, income-generating activities, limited mobility) which could restrict engagement in consultations or other activities.
Operational peer review and evaluation 5	→ Review projects within the CCCM response plan to assess to what extent both female and male young people in different age brackets were effectively reached through humanitarian programming. → Document and share good practices on addressing the needs of young people in CCCM.	→ Facilitate the participation of young people in project reviews.

CASE STUDY 21

Youth Vigilance committees in returnee sites in Chad: International Organization for Migration (IOM)

In 2017, tens of thousands of Chadian nationals returned to Chad, fleeing violence in the Central African Republic, the Niger and Nigeria. Boko Haram operatives infiltrated the returnee populations in their camps (official and unofficial) and host communities, and lured young people into their group. In response, young returnees organized Youth Vigilance committees in each site to call attention to the risk of Boko Haram.

Awareness-raising activities used loudspeakers, storytellers and plays in local languages. Members helped to map the needs of returnees in support of IOM reintegration activities, and to engage in an initiative to assist community members living in vulnerable situations. The Youth Vigilance initiative supported young returnees with socioeconomic activities and prevented them from being forced into the army or armed groups such as Boko Haram.

Disaster Risk Reduction and Climate Change Adaptation (DRR and CCA)

In 2017 alone, 96 million people were affected by natural hazards that resulted in disaster,[115] with many such hazards increasing in intensity and frequency due to the changing climate. Not only is climate change worsening the risk of floods, droughts, heatwaves and other hazards, but vulnerability and exposure are increasing through environmental degradation and unregulated urbanization. Disasters are causing unprecedented economic damage that threatens sustainable development, and the poorest tend to live in harm's way.

DRR and CCA actors are increasingly collaborating with young people to reduce vulnerabilities and enhance resilience before a humanitarian crisis occurs. As promoted in the Sendai Framework on DRR and the Paris Agreement,[116] resilience means strengthening the capacities of everyone – including young people – to prevent, prepare for, adapt to, cope with and recover from hazards.

These issues are growing in importance to young people, and possibilities exist at all levels to support them in efforts appropriate for their age, such as developing age-appropriate school teaching curricula about climate change. Young people are working with school officials to develop comprehensive school safety plans;[117] teaching their families about home safety;[118] mobilizing youth volunteers in early warning systems;[119] leading climate-related school walkouts and legal actions;[120] and advocating for youth-centred DRR and CCA strategies.[121]

Tip sheet

Key actions for disaster risk reduction (DRR) and climate change adaptation (CCA) programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect data on the differing experiences of young people with regard to DRR and CCA, and analyse these data disaggregated by sex, age and disability. → Consult with a diverse cross-section of young people to understand their specific vulnerabilities to multi-hazard risks and their potential roles in response and adaptation.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify needs and barriers to DRR and CCA.
Strategic planning 2	→ Ensure that the DRR and CCA response plan addresses the needs of adolescents and youth identified during the needs assessment, and from any other relevant data on young people. → Ensure that the project activities and outcomes in the DRR and CCA response plan directly address the needs of young people, including activities to reduce risk and enhance resilience using the unique capacities, knowledge and skills of young people, especially those from marginalized populations.[122] → Develop community recovery and resilience plans (including preparedness) after hazardous events, incorporating DRR and CCA in ways that build on the skills and recommendations of young people.	→ Enable young people living in vulnerable situations to influence development of local and national DRR and CCA strategies, including services, early warning systems and emergency response plans, in accordance with the Sendai Framework (Target E) and the Paris Agreement.
Resource mobilization 3	→ Develop information and key messages on adolescents and youth, such as from assessment reports, to influence DRR and CCA funding priorities. → Report on gaps in funding for adolescents and youth in DRR and CCA to donors and other humanitarian stakeholders. → Advocate for sufficient funding for adolescent- and youth-informed and -focused programmes before a humanitarian crisis occurs, to reduce vulnerabilities and enhance resilience of young people and their communities.	→ Engage young people in developing key advocacy messages for DRR and CCA funding.

HPC phases	What to do	Tips for young people's participation
Implementation and monitoring 4	→ Train young people of all ages, genders and abilities to identify, manage and respond to disaster risk, and provide opportunities for them to assess risk at school, home and in their communities, including climate-related risks. → Integrate adolescent- and youth-friendly, gender-sensitive and inclusive DRR and CCA training into national formal and informal education, including on the rights that young people have before, during and after a hazardous event. → Involve young people in DRR and CCA education and campaigns, providing them with information about DRR and CCA relevant to young people in their communities. → Develop and maintain a feedback mechanism for young people to provide their perspectives on the effectiveness and quality of DRR and CCA education and advocacy campaigns. → Address barriers or biases in DRR and CCA programming that may compromise the safety of adolescent girls and young women and other at-risk groups.	→ Support young people to gain the knowledge, skills, resources and support, including mentorship, to innovate towards reducing risk, such as by building on their skills in social media, interpersonal negotiation, technology and entrepreneurship. → Consult young people during routine review of DRR and CCA programmes and activities.
Operational peer review and evaluation 5	→ Review projects within the DRR and CCA response plan to assess to what extent adolescents and youth were effectively reached through humanitarian programming. → Document and share good practices on addressing the needs of young people in DRR and CCA.	→ Facilitate the participation of young people in project reviews.

CASE STUDY 22

Youth Green Clubs tackle cyclone threats in Viet Nam: CARE International

From 2009–2014 in Da Loc, Viet Nam, young people in democratically elected Green Clubs led DRR, CCA and ecosystem management activities in cyclone-affected villages facing poverty and land saltwater intrusion threats to agriculture. Alongside local organizations, Green Clubs participated in DRR planning and helped plant and maintain mangrove forests to reduce the impacts of cyclones. The youth supported and coached farmers by providing technical guidance on implementing climate-resilient livelihoods, such as the use of biofertilizer. They also developed campaigns using theatre, drawing, filmmaking, fashion design and poetry to educate and mobilize residents. The campaigns focused on awareness-raising and behaviour change relating to mangrove protection and climate change adaptation. In five years, the Green Clubs reached more than 10,000 community members through their activities.

Education

In crisis contexts, formal and non-formal education are critical to create environments where all young people can develop a sense of agency and purpose. Education also ensures physical, psychosocial and cognitive protection. It builds resilience and coping skills and helps young people access other critical services. Quality education ensures young people gain the relevant skills and competencies they need for whole-person development, navigating the labour market and becoming actors for peace and stability. In particular, it is important to ensure that the two critical windows of opportunity for rapid learning and brain development are not missed, the first being ages 0–3 years and the second at 9–14 years.[124] In this context, education during this 'second window' provides a critical opportunity to build on earlier investments in education, or to provide a second chance to those who missed out on educational and social opportunities as children, due to conflict or displacement.

Educational interventions for young people can benefit the community as well as young people themselves, by building their skills and engaging them in employment and voluntary activities. However, too often even where education is available in emergencies, most programmes target younger, primary-school aged children, with little investment in the developmental and protection rights and needs of adolescents or youth in their early 20s. In displacement contexts, especially, some young people will be illiterate, while others will be university students, and all levels must be catered for in terms of providing appropriate educational activities/opportunities. Access barriers for young women, persons with disabilities and those living in vulnerable situations must be overcome.

Young people are calling for innovative options that include relevant education, human rights, livelihood and life skills training (see **ANNEX 6 ▶ *Life skills***), which respond to their needs and open up possibilities for the future. During displacement, training and engagement of young people as teachers and facilitators can be crucial to launch and maintain educational projects for younger children, while also developing skills among the older group.

For the Education sector, all areas of focus across the HPC should be considered together with the domains[125] of the Inter-agency Network for Education in Emergencies (INEE) *Minimum Standards for Education* (known as the INEE Minimum Standards Handbook).[126]

> Registration and documentation were strong themes throughout the consultations, especially with regards to health insurance and work permits. Many young people spoke of the consequences of not being able to access diplomas obtained in their country of origin and the inability to have their degrees accredited in the host country.

UNFPA consultations with Syrian refugee adolescents & youth in Ankara, Turkey

Tip sheet

Key actions for Education programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect data on needs, priorities and capabilities, and analyse these data disaggregated by sex, age and disability, to understand differing educational needs of young people before and after the crisis. → Analyse data to understand: → how many young people of different age groups in the area are in school, in training or NEET (not in education, employment or training), and what proportion of those in each category are female and male; → the education profile of young people, including percentages who: have never been to school, have attended primary school, have completed secondary school, are in higher education; → the barriers to young people accessing education. How are barriers different for girls and boys, for internally displaced persons (IDPs)/refugees and other vulnerable groups? Examples: distance to school; lack of civil documentation; cost of school fees; sex of teachers and administrators; teacher quality; safe and accessible water, sanitation and hygiene (WASH) facilities, lack of access to sanitary pads or other support during menstruation; existence of crèches/child care; accessibility for people with disabilities; family acceptance and support for school attendance; lack of clothing; food insecurity; → the cut-off age after which an adolescent is legally unable to register for formal schooling.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify needs and barriers to education.

HPC phases	What to do	Tips for young people's participation
Strategic planning 2	→ Ensure that the Education response plan addresses the needs of young people identified during the needs assessment, and from any other relevant data on young people. → Ensure that the project activities and outcomes in the Education sector response plan directly address the specific needs of young people. → Specify in the response plan which options exist for those who are NEET: formal and non-formal education, alternative education opportunities, technical and vocational education and training (TVET), distance learning, life skills and employability skills. → Build links in the response plan between learning and future employment and livelihood activities. → Advocate for the integration of refugee and displaced young people in the education system, budget and plans of their host area or country. → Continuously advocate and collaborate with education authorities and other education actors for recognized and accredited education for refugees and IDPs.	→ Consult with adolescents and youth during the design and development of the strategic planning document (e.g., the Education response plan). → Include a diverse cross-section of young people in Education planning committees.
Resource mobilization 3	→ Gather information and disseminate key messages from needs assessments among adolescents and youth to influence education funding priorities. → Report on gaps in funding for education programmes for adolescents and youth to donors and other humanitarian agencies.	→ Partner with young people in developing key advocacy messages for Education funding.
Implementation and monitoring 4	**Access:** → Offer flexible learning opportunities to young people, as they may have limited time available to attend education due to family or livelihood commitments. → Provide a range of education opportunities so that young people can re-enter the formal school system and/or participate in non-formal learning. → Give young people opportunities for employment as teachers, teachers' aides, mentors and trainers, etc., within education and training programmes. → Address barriers or biases in Education programming that may compromise the safety of adolescent girls and young women and other at-risk groups.	→ Engage young people in the provision and review of education services.

HPC phases	What to do	Tips for young people's participation
Implementation and monitoring 4	→ Consult Protection colleagues to understand why specific groups of young people are NEET and develop intervention plans to engage them. → Plan early to work with specialized agencies, use the Washington Group questions[127] to screen young people to identify learning impairments and disability-related barriers early, and develop individualized learning plans that mitigate them. **Quality:** → Ensure the curriculum includes the development of skills for personal empowerment, including active citizenship, life skills, human rights, and comprehensive sexuality education (CSE). → Formal and non-formal education should integrate social and emotional learning (cognitive, social and emotional competencies) to mitigate the effects of exposure to conflict or crisis. → Make educational and vocational information and guidance available and accessible to all learners.[128] Audit curriculum materials to ensure content does not reinforce harmful or discriminatory norms. → Continuously train teachers to work with people living with different kinds of disabilities and adapt curricula to make them accessible. Prioritize training and recruitment of female educators and teaching assistants. → Make provision for language classes for refugees and displaced young people who do not speak the language of instruction. → Develop and maintain a feedback mechanism for young people to provide their perspectives on the effectiveness and quality of education programmes.	→ Support young people to gain the knowledge, skills, resources and support, including mentorship, to innovate towards reducing risk, such as by building on their skills in social media, interpersonal negotiation, technology and entrepreneurship. → Consult young people during routine review of DRR and CCA programmes and activities.
Operational peer review and evaluation 5	→ Review projects within the Education response plan to assess the extent to which the needs of adolescents and youth were effectively addressed through humanitarian programming. → Document and share good practices on addressing the needs of young people in Education programming.	→ Facilitate the participation of young people in project reviews in the Education sector.

CASE STUDY 23

Education for durable solutions for refugees: Education for Humanity at Arizona State University

Of the nearly 80 million people displaced around the globe, fewer than 3 per cent have access to higher education.[129] Education for Humanity, an initiative of Arizona State University in partnership with humanitarian agencies, offers tertiary-level online courses with in-person facilitation to refugees and host community members in the Middle East and East Africa. Academic offerings reflect the ambitions of refugee learners, including digital English language courses, digital skills preparation modules, as well as university degree pathways in partnership with local universities. Short-term certificates are also being developed that will be relevant in regional labour markets. Launched in 2017 and currently serving over 2,700 learners, the programme prioritizes gender parity and works with local facilitators to guide students. Despite challenges with limited connectivity, competing family responsibilities, and varying accreditation policies, the initiative has helped learners gain 21st century skills, earn university credentials as well as secure employment, and is a promising example of connected learning in humanitarian contexts.

CASE STUDY 24

FabLab – an innovation space for refugees in Greece: Terre des Hommes

The closure of the Balkans migration route in 2016 led to more than 60,000 refugees being stranded in Greece. Young people had few opportunities to put their energy and enthusiasm to use, and many had lost access to school. As part of the Digital Fabrication Laboratories network around the world, FabLab Ioannina[130] was designed to be a room full of advanced digital design and manufacturing technologies for the creation of projects, where participants would be limited only by their own imagination and creativity. This innovative and captivating non-formal education space provided refugee and host community young people with practical digital skills to improve their resilience and future employability. Equal numbers of female and male young people could learn coding, create apps and integrated circuits, and use a 3D printer. In addition to addressing training needs, FabLab gave young people a safe physical space with dedicated activities, similar to a child-friendly space (CFS) for younger children. The inclusion of host community young people ensured the acceptance of the project by a local population affected by economic crisis.

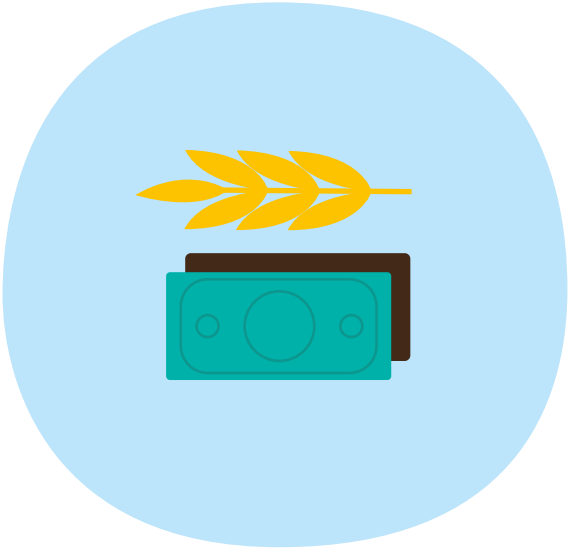
FabLab (2019).[131]



Livelihoods

Livelihoods initiatives should be part of every humanitarian programme engaging young people.[132] Young people with adequate human, social and financial capital can contribute to creating sustainable economies and peaceful, prosperous societies. Acquiring the tools for earning a livelihood, such as life skills, training, job search assistance and other support, not only helps young people to find employment but also enhances their self-esteem, confidence and sense of control over their lives, while also lowering the likelihood that they will engage in risky behaviours such as substance abuse, violence and premature sex.[133] The International Labour Organization (ILO) is supportive of older adolescents (15 years and above) working, as long as the work is safe and supportive to their development.

Crisis-affected young people often have a harder time integrating into the labour market for social and psychosocial reasons,[134] because of missed education, the poor quality of the education system, lack of documents to show their qualifications, or because they are barred from working or from leaving their community. Often their only livelihood options are in the informal economy, where income is erratic, the lack of a contract leaves them vulnerable to exploitation; working conditions are poor, and social protection is weak or non-existent. For young people attempting to earn a living on the street, the risks of crime and violence can be high.

Young people (especially, but not only, young women) also face disproportionate barriers to accessing land, pasture and other natural resources for their livelihoods, compounding the problems of joblessness and food insecurity. Access to these resources is often controlled by elder-led systems of governance that exclude young people from meaningful decision-making and systematically deny them their rights when disputes occur. In many countries, young men cannot get married without providing an adequate dowry of livestock, cash and/or agricultural goods; therefore being excluded from accessing land, pasture and other resources also means being denied the ability to marry. Lacking viable livelihood options, vulnerable young people are often forced into dangerous and illicit forms of resource extraction such as poaching, cattle rustling, charcoal burning and artisanal mining – which increases their risk of criminalization, as well as recruitment into armed groups. Youth may need help with negotiating rental agreements for farmland, negotiating for durable access to land, pasture and natural resources, and support to be included in decision-making bodies and dispute-resolution mechanisms (see the TIP SHEET ON HLP ▶).

Young people are also often excluded from financial services, either by policy or prejudice. As they mature and become heads of households, young people need access to and a working knowledge of savings and loans to start a business, and to grow and protect their assets.

Agencies support a wide array of economic strengthening interventions for young people: cash or voucher assistance (CVA; see BOX 18 ▶); income-generating activities; infrastructure and public works projects; livestock and farming support; financial inclusion (microcredit, savings); access to markets (value chain development, market systems approaches); job creation and entrepreneurship; and technical and vocational education and training (TVET); among others. Financial inclusion efforts fall into two categories: providing access to credit, and support for savings mechanisms. Group savings programmes such as village savings and loan associations (VSLA) are a hybrid of both, providing a variety of services normally provided by formal financial institutions.

Box 18: Cash or voucher assistance (CVA)

CVA is increasingly the preferred economic strengthening tool in humanitarian settings because of its greater flexibility, higher client satisfaction, scalability, and lower cost.[135] Some agencies have set ambitious targets for increasing the amount of their assistance delivered in the form of cash. CVA can be delivered unconditionally, or with conditions such as taking children to a health clinic or attending school/training. There are currently no reliable data indicating how many young people are direct beneficiaries of CVA in the wake of a humanitarian crisis.

Some agencies are reluctant to give cash to young people, especially those under 18. But, however concerning it may be, many adolescents are working in humanitarian settings, supporting their families and handling cash. Even when Livelihoods programmes do not directly engage with them, adolescents are affected by these household economic interventions because they usually work in household microenterprises.[136] Restricting them from directly accessing cash assistance may be putting them, and those in their care, at further risk of negative coping. The Alliance for Child Protection in Humanitarian Action now recommends including adolescents as direct beneficiaries of cash assistance.[137]

However, CVA carries the risk of community jealousy, stigma, bullying and theft. Agencies should assess and mitigate the risk from cash assistance to young people, using the tools below.

Keep in mind: The blending of services and cash is likely to be more effective than either component of an intervention on its own. There is great scope for complementarity between cash and sector-specific programming in ways that can create impact.[138]

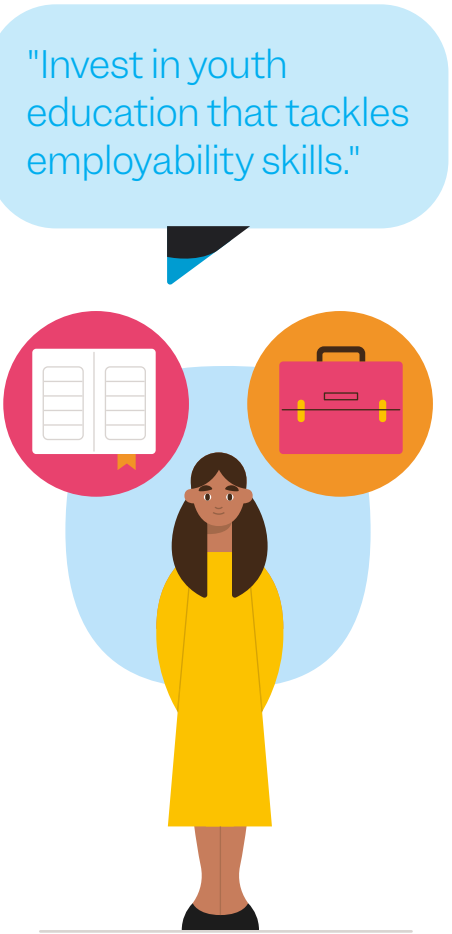
TVET remains popular among young people and implementing agencies, despite the high cost, a disappointing record of connecting young people to employment, and an overemphasis on 'blue-collar' trades. TVET is still widely implemented today, mostly for its non-economic benefits: increased self-confidence; social interaction; community recognition, etc. While there is limited evidence that employment programmes by themselves can curb engagement in political violence, they are still a preferred approach of actors working to promote stability in fragile and conflict-affected countries.[139]

The best training approaches for displaced young people are those that can lead to durable solutions upon return, resettlement or local integration.

Regardless of the type of Livelihoods programme, agencies should be concerned about who accesses services, how they are designed and publicized, and how they benefit young people. Young people should be engaged in a participatory process to understand local labour and goods markets, as well as the markets where they may eventually (re)settle. They should not be vocationally streamed according to discriminatory sociocultural norms – for example, by sex or gender identity.

Box 19: From school to work

Education and livelihood issues are intertwined, and the best humanitarian programmes for young people work to find linkages between the two. For example, a market assessment or labour market analysis is needed to inform a Livelihoods programme, but also helps to ensure that training is demand-driven and that courses offered by Education actors are relevant. Tackling the livelihood needs of crisis-affected young people requires agencies to create pathways from the world of education and work. Understanding labour market information helps stakeholders (policy makers, private sector employers, students and their parents, education and training providers, and others) to make more informed choices related to their career, or public and private workforce investments.[140] One factor that has been associated with greater success is the early involvement of the private sector (private companies) in connecting educated and trained youth with job opportunities.



NRC, UNICEF and UNFPA consultations with Syrian refugee and Jordananian young people in Jordan

Tip sheet

Key actions for Livelihoods programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis **1**	→ Collect data on the differing needs of young people with regard to Livelihoods, and analyse these data disaggregated by sex, age and disability. → Analyse data to understand: → how young people are currently and were previously engaged in earning a livelihood; → livelihood assets of young people, the skills they possess and those that they would like to gain; → the main barriers (social, cultural, health-related, educational, financial, etc.) that young people face when trying to support themselves and their families. → Compile youth-related findings from joint market assessments, such as the Emergency Market Mapping and Assessment (EMMA), Market Information and Food Insecurity Response Analysis (MIFIRA), Rapid Assessment for Markets (RAM), political economy analysis (PEA), gender assessments, or any youth labour market assessments conducted by the government or individual agencies.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify needs and barriers with regard to livelihoods. → Seek feedback from young people on facilitators and barriers to accessing safe and decent work opportunities.

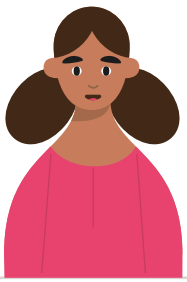
HPC phases	What to do	Tips for young people's participation
Strategic planning 2	→ When analysing demands in the labour market, ensure that the Livelihoods response plan addresses the needs of young people identified during the needs assessment, and from any other data on young people and the labour market. → Ensure that the project activities and outcomes in the Livelihoods response plan directly address the specific needs of young people. → Specify in the Livelihoods response plan opportunities to access training and skills development in related sectors, notably Shelter, WASH, Health, Food Security and Nutrition, in order to build the human, social and financial capital of young people – including those living in vulnerable situations – through age-appropriate linkages between education, training and livelihoods. → Ensure the Livelihoods response plan considers: → whether refugees or internally displaced persons (IDPs) can work or start businesses without being exposed to legal or protection concerns; → which paperwork, qualifications and skills are needed by young people to access available jobs; → which skills training is relevant to the context and linked to labour market survey findings and research into durable solutions. → Assess potential risks to young people's, especially adolescent girls', safety and well-being that may arise due to participation in Livelihoods programming including cash-based interventions.	→ Facilitate the participation of adolescents and youth in strategic planning to enable them to identify opportunities and mitigate risks in the Livelihoods sector. → Involve a diverse cross-section of young people in the design of Livelihoods programmes.
Resource mobilization 3	→ Gather information and disseminate key messages on young people's needs and priorities to influence the Livelihoods sector funding priorities. → Report to donors and other humanitarian stakeholders on gaps in funding for Livelihoods programmes for young people.	→ Engage young people in developing advocacy messages for Livelihoods sector funding. → Seek young people's views and feedback, especially on how their needs are being addressed, and how they're being engaged in the Livelihoods sector, when developing proposals and reports for donors and partners.

HPC phases	What to do	Tips for young people's participation

Implementation and monitoring
4
	→ Implement Livelihoods programming that targets the needs of young people and draws on their capabilities, such as by:
	  → connecting Livelihoods programmes with technical and vocational training and formal or non-formal education, as well as psychosocial support;
	  → linking vocational training to real job opportunities and on-the-job training, cultivating a cadre of businesses, local authorities and NGOs who could offer apprenticeships to graduates of youth education programmes;
	  → referring young people wishing to pursue their own businesses to business management and entrepreneurship training, financial services and mentorship programmes;
	  → designing programmes that offer a diverse menu of skills training options, such as: United Nations languages, skilled trades, information and communication technologies (ICTs), health care and accounting;
	  → provide training and opportunities for young people to engage in specific skills for emergency response – e.g., humanitarian principles, Sphere Standards, monitoring and evaluation, DRR, Health – to enhance their employability among humanitarian agencies.
	→ Combine economic strengthening interventions with non-economic interventions that include: protection messaging; health, including sexual and reproductive health (SRH); life skills; environmental education; psychosocial support; and peace initiatives.
	→ Partner with skilled CVA providers to find an appropriate cash or voucher modality for young people, starting with those living in vulnerable situations, and ensure that young people are aware of these opportunities.
	→ Involve young people in Livelihoods education and campaigns, and provide them with information about Livelihoods relevant to young people in their communities.
	→ Develop and maintain a feedback mechanism for young people to provide their perspectives on the effectiveness and quality of Livelihoods programmes.
		→ Engage youths as trainers and mentors for younger adolescents in programmes to provide guidance in the transition into employment.
		→ Engage young people in the efforts to minimize the environmental impact of programmes, including through sustainable sourcing of raw materials.
		→ Consult young people in the ongoing monitoring and adaptation of Livelihoods programmes, including training programmes and job placements.

HPC phases	What to do	Tips for young people's participation
Implementation and monitoring 4	→ Address barriers or biases in Livelihoods programming that may compromise the safety of adolescent girls and young women, and other at-risk groups. → Ensure that the process for identifying Livelihoods programme participants is discussed and understood in the local community and made transparent, so that Livelihoods interventions do not further exacerbate any pre-existing tensions in society.[141] → Manage young people's expectations around employment outcomes following technical and vocational training and offer follow-up support to help them find work or succeed in self-employment. → Support development of 'green' livelihoods, such as in recycling, methane capture and use, renewable energy, etc. → As appropriate, work in coalition with other agencies and young people to advocate for refugees' right to work, and/or freedom of movement.	→ Engage youths as trainers and mentors for younger adolescents in programmes to provide guidance in the transition into employment. → Engage young people in the efforts to minimize the environmental impact of programmes, including through sustainable sourcing of raw materials. → Consult young people in the ongoing monitoring and adaptation of Livelihoods programmes, including training programmes and job placements.
Operational peer review and evaluation 5	→ Review projects within the Livelihoods response plan to assess to what extent the needs of adolescents and youth were effectively addressed through humanitarian programming. → Document and share good practices on addressing the Livelihoods needs of young people.	→ Facilitate the participation of young people in project reviews.

"Support innovative ideas in livelihoods such e-marketing and do not stick with traditional livelihoods programming such as tailoring. This will require an understanding of what is new and which sectors have potential."



NRC, UNICEF and UNFPA consultations with Syrian refugee and Jordananian young people in Jordan

CASE STUDY 25

Livelihoods and protection in Borno and Gombe States, North-East Nigeria: Mercy Corps

An escalation of violence in 2014 resulted in mass displacement throughout North-East Nigeria due to military operations, non-state group activities, return of Nigerians from neighbouring countries, and communal clashes. To improve the safety, livelihoods and personal agency of displaced adolescent girls and boys, Mercy Corps introduced a mix of life skills, reproductive health services and psychosocial support, financial literacy, access to savings and loans, livelihood skills and vocational training. These activities were delivered through the creation of community safe spaces and, in some cases, layered onto pre-existing meetings that girls were holding in their communities. Because girls were extremely limited in their movement outside of the home, participating girls played a critical role in helping identify their hard-to-reach peers to invite them to participate. Committees of parents, local leaders, school officials, teachers and youths became advocates for the programme and educated parents about the programme's goals. Mercy Corps adapted the programme to meet the specific needs of younger adolescents with the use of pictures, role-playing and storytelling. Older adolescents facilitated lessons with younger children, creating a cascading leadership model.

Mercy Corps (2019), provided for these guidelines.

CASE STUDY 26

Employability for conflict-affected youth in eastern Ukraine: Save the Children International and the Slavic Heart Charitable Foundation

The emergence of armed conflict in Eastern Ukraine in 2014 brought new economic hardships to millions of people. Youth unemployment surged, increasing poverty and the risk of negative coping. Save the Children and the Slavic Heart Charitable Foundation launched the 12-month EU4Youth initiative to increase internally displaced persons' (IDPs') and disadvantaged young people's employability, access to economic opportunities and civic participation.

Government and NGO staff took a trainers' course on teaching life skills for employment, while learners were exposed to vocational training and internships to learn the workings of public agencies and private firms. In a separate training track for entrepreneurship, trainees developed business ideas with expert support, and the most promising ideas were funded under the project. Eighty-seven per cent of participating youth surveyed said the activities had increased their employability.

Source

Save the Children (2019), provided for these guidelines.

CASE STUDY 27

Cash for age-appropriate work: Save the Children Uganda

In a project to provide life-saving sexual and reproductive health (SRH) services and livelihood support, refugee and host community adolescents and youth gained access to emergency cash transfers in exchange for work that the community deemed to be age appropriate. The cash transfers were reinforced with teaching of life skills and entrepreneurship skills to support the young people's economic activities within and around refugee settlements. The project increases equitable access to gender-responsive adolescent- and youth-friendly livelihood opportunities and enhances the capacity of health service providers for friendly SRH services. A second phase of the project builds entrepreneurship skills. Monitoring data showed an increase in participating young people initiating microenterprises.

Source

Save the Children (2019), provided for these guidelines.

Food security

This section considers the needs of, and roles for, young people across the four pillars of food security: physical availability of food; economic and physical access to food; food utilization; and stability of the other three dimensions over time.[142] Adolescents and youth have specific, gendered food security needs and potential for meaningful engagement in food security initiatives. They also play a central role in agriculture, because the global food system is the largest employer of youth.[143] A critical issue related to malnutrition is the feeding and care practices of food-insecure young mothers, who may have limited education and experience as well as the burden of additional responsibility in a crisis. In many contexts, unpaid care and domestic work which underpins food security is largely done by women and girls. Female young people, especially, have protection needs around the distribution of food, cash and agricultural inputs by humanitarian actors, but all sub-groups of young people need input on the design of effective food assistance programmes. Although food distribution is still the dominant food assistance modality, cash and voucher assistance (CVA) is increasingly used to address a range of needs (see **BOX 18 ▶**).

As agricultural markets are transforming with higher demand, increased prices, more integrated supply chains, and greater rural–urban connectivity, new opportunities are emerging for young people in agribusiness. However, young people, and especially young women, often lack the necessary access to: land; finance and markets; education and training; livestock, fishing and agricultural technologies; or modern farming techniques. Furthermore, agricultural policies are rarely youth friendly. Rural young people often, therefore, do not see agriculture as a viable career path that will enable them to maintain household food security.[144]

Skilled young women and men have shown that when they are given opportunities across inclusive value chains – from input supply to production, processing, storage and marketing – not only can they find solutions to feeding themselves and their families, but they can also contribute to helping their countries achieve food security and better nutritional status.[145]

Tip sheet

Key actions for Food Security programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect information, data and assessments on food security needs of young people, disaggregated by sex, age and disability. → Analyse data to understand: → how food insecurity is affecting protection (child labour, child marriage),[146] nutrition care practices of young mothers (including those living with HIV), and education of young people; → any barriers in accessing distributions for households headed by adolescents and youth; → policy barriers that impede young people's participation in agriculture and food systems; → how these barriers can be overcome.[147]	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify needs, how young people are involved in distributions, and barriers to food security, including for in-school and out-of-school young people.
Strategic planning 2	→ Ensure that the Food Security response plan addresses the needs of young people identified during the needs assessment, and from any other relevant data on young people. → Map/gather information on who is doing what, where, with regard to young people in food assistance (e.g., cash or voucher initiatives for young people, female-headed households, pregnant and breastfeeding mothers, people with disabilities). → Ensure that the chosen transfer modality is substantial enough to meet food and nutrition requirements to keep young people from negative coping. Consider specific needs related to age, sex and vulnerability, e.g., adolescent mothers.[148] → Ensure young people in school in need of food support have access to school feeding and/or cash or voucher assistance. Reach out-of-school young people through the use of youth-friendly spaces, as needed. → Advocate and plan for food distributions to be age- and gender-responsive (e.g., provision for adolescent mothers).	→ Involve a diverse cross-section of young people in the design of food assistance and agricultural support programming, including the selection of commodities for distribution.

HPC phases	What to do	Tips for young people's participation
Resource mobilization 3	→ Include information and key linkages to engage young people in Food Security programming, and budget for those interventions (i.e., assessments, building capacity in supply chain). → Report regularly to donors and humanitarian stakeholders on resource gaps, especially those affecting the most vulnerable (e.g., female-headed households, pregnant and breastfeeding mothers, young people with disabilities).	→ Seek young people's views and feedback, especially on how their needs are being addressed and how they are being engaged in Food Security programming, when developing proposals and reports for donors and partners.
Implementation and monitoring 4	→ Ensure all young people are aware of distribution sites and timings (consider the needs of remote populations, female- and adolescent-headed households, literacy barriers, etc.). → Ensure that young people receive the necessary tools, inputs and training to carry out locally viable and sustainable agricultural activities.[149] → Provide referral to mental health and psychosocial support (MHPSS) for young mothers as part of Food Security and Nutrition programming. → Develop and maintain feedback mechanisms for young people as part of Food Security projects, including outreach to vulnerable groups. → Train a diverse cross-section of young women and young men to manage distributions. → Ensure that vulnerable groups, such as female heads of households, young people with disabilities, pregnant and breastfeeding women, are able to raise their concerns during reviews and evaluations, while guaranteeing confidentiality and without exposing them to further harm or trauma. Some mechanisms – such as confidential hotlines run outside the community – are more effective than others. → Monitor the coverage for school feeding programmes and how out-of-school young people are reached.	→ Engage young people to disseminate information, mobilize communities, and help with distribution activities. → Ensure that meeting spaces are safe and accessible for all. Where the voices of adolescent girls and young women cannot be heard, look for other ways to get their opinions and feedback.
Operational peer review and evaluation 5	→ Review projects within the Food Security response plan and programming. → Assess which young people were effectively reached and those who were not and why. → Share good practices around usage of gender-responsive Food Security interventions, and address gaps.	→ Facilitate the participation of young people in project reviews.

CASE STUDY 28

Junior Farmer Field and Life Schools (JFFLS) – youth employment in agriculture: Food and Agriculture Organization of the United Nations (FAO)

Of the world's estimated 188 million unemployed people in 2019, 68 million (36 per cent) were between 15 to 24 years old.[150] Unfortunately, the vast majority of jobs available to youth are low paid, insecure, and with few benefits or prospects for advancement. Especially in rural regions of developing countries, the situation can be one of extreme hardship. To address specific needs of rural youth, FAO developed the JFFLS in 2004. The methodology provides livelihood options for long-term food security while reducing vulnerability to destitution and offering strategies for coping with risk. The JFFLS programme promotes gender equality by enabling young people to take on the same roles regardless of sex, and by developing their capacities to critically assess relationships, risks and resources in their communities. The curriculum combines agricultural skills, life skills and entrepreneurship in an experiential and participatory learning approach suited to rural communities and low literacy. The JFFLS approach has been adapted to address the orphan crisis associated with the HIV epidemic, emergency situations, climate change and rural youth unemployment, and to prevent child labour. To date, more than 25,000 young people have participated in JFFLS in over 20 countries.

FAO (2020).[151]

CASE STUDY 29

Training young farmers in Kenya to improve food security: RET International

Over the years, political instability and severe drought in the region have led certain populations to seek safe haven in Kenya. The country's major challenge remains the approximately 550,000 mostly Somali refugees residing in cramped, harsh and dangerous camps and settlements. The world's largest refugee complex, Dadaab, hosts approximately 400,000 refugees. RET International trained youth in Dadaab to improve food security for themselves and for Kenyan host communities. This response was tailored to the dry and non-fertile lands of the camps. In a partnership with the Kenyan Ministry of Agriculture, Livestock and Fisheries, adolescents and youth willing to become new farmers were trained on reusing household waste, such as wastewater and compostable products, to produce vegetables for consumption. They then successfully planted tomatoes, vegetables and watermelons to supplement their World Food Programme (WFP) food rations, increase food security for their families, and generate income from the sale of surplus vegetables.

Health

This section addresses health issues faced by young people, inclusive of general health needs, mental health and psychosocial support (MHPSS), well-being and sexual and reproductive health (SRH). Depending on the context, the most likely causes of death for young people during humanitarian emergencies include diarrhoeal diseases, acute respiratory infections, measles, malaria, severe malnutrition,[152] and complications in pregnancy and childbirth.[153]

In addition to possible illness or injury, the impacts of a crisis can include trauma, anger, fear, depression, sadness and loss of hope for the future. Some young people will have witnessed atrocities, lost family members, or been in detention. Young people involved in a humanitarian response may themselves be at risk of re-traumatization or secondary trauma. Due to various threats, young people and especially girls and young women may be stuck at home and isolated from peers, which may lead to depression and anxiety.[154] Young people's mental health problems can create degenerative effects that turn into social problems later in life.[155] Effects can be intergenerational when mental health issues impact the way a young parent cares for their children.

During emergencies young people also face greater risks to their SRH, including early pregnancy, gender-based violence (GBV), sexual assault and rape, among others.

Some groups of adolescents are particularly at risk, including: very young adolescents (10–14 years); pregnant girls; those separated from their families; heads of households; GBV survivors; those engaging in transactional sex; those associated with armed forces and armed groups; orphans; those living with HIV; those with disabilities; LGBTQIA+ adolescents; and those belonging to indigenous or migrant groups. Humanitarian situations also exacerbate HIV-related risks, and more than half of those newly infected with HIV today are between 15–24 years old.[156]

Health services are often under increased pressure in a crisis setting, and are not usually perceived by young people as welcoming, which reduces demand from young people. Bias and negative attitudes among health-care providers often keep young people from accessing services. Duty-bearers are increasingly partnering with young people to map the health system, inform the design of programmes, and improve the adolescent- and youth-friendliness of services.[157] The Compact for Young People in Humanitarian Action's operational guidance summary page, '***COVID-19: Working with and for young people***', is included as **ANNEX 7 ▶**. It includes analysis of direct and indirect health impacts on young people, as well as concrete recommendations and resources relating to the COVID-19 response.

Tip sheet

Key actions for Health programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect data on the differing experiences of young people with regard to health and analyse these data disaggregated by sex, age and disability. → Analyse data to understand: → if young people can access sexual and reproductive health (SRH) services, and mental health and psychosocial support (MHPSS); → if young people can access services for clinical management of rape and information relating to sexual violence in a safe and confidential manner; → if young people feel that existing health services, including SRH and MHPSS, are friendly to them; → if there was comprehensive sexuality education (CSE) being delivered before the crisis; → if testing services are available for pregnancy and HIV, and if counsellors are available to advise on HIV status and link individuals who test positive to ongoing care and services.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify needs and barriers to health, including MHPSS and SRH.
Strategic planning 2	→ Ensure that the Health response plan addresses the needs of young people identified during the needs assessment, and from any other relevant data on young people. → Identify partners and linkages with other sectors such as Nutrition (e.g., nutrition needs of adolescent mothers, therapeutic feeding), Protection (e.g., referring GBV survivors to appropriate services), etc. → Advocate for a working group on SRH and MHPSS, with representatives from youth organizations and networks to enable coordination of interventions among partners.	→ Engage young people in developing key advocacy messages pertaining to their health needs, including SRH and MHPSS.

HPC phases	What to do	Tips for young people's participation
Strategic planning 2	→ Advocate and plan for health interventions to be gender-responsive and inclusive. → Identify entry-points for (re)starting culturally appropriate CSE, such as in schools, youth clubs and camp structures. → Consider issues of self-harm and other indications of mental distress – such as bullying, domestic violence, and alcohol, tobacco and drug use – in the design of programmes.	
Resource mobilization 3	→ Include information and key messages on specific needs and priorities of young people, to influence Health funding priorities. → Report on gaps for adolescents and youth in Health programmes in reporting to donors and other humanitarian stakeholders.	→ Engage young people in developing key advocacy messages pertaining to their health needs, including SRH and MHPSS.
Implementation and monitoring 4	**Access:** → Prepare medical response programmes which allow for the rapid assessment and treatment of adolescents and youth. → Build capacity of health-care staff, including reception and security staff, as well as the staff of partner organizations and relevant ministries, on how to provide adolescent- and youth-responsive services, including non-judgemental and respectful counselling. → At the onset of an emergency, respond to SRH needs through adherence to the 'Minimum Initial Service Package' (MISP), part of the *Inter-Agency Field Manual on Reproductive Health in Humanitarian Settings*.[158] → Ensure that all young people have access to sexual and reproductive health and rights (SRHR) information and services. Consider deploying midwives, establishing mobile and static SRH points with referral services, and establishing health or maternity spaces, which can be situated with child-friendly spaces and youth-friendly spaces. → Make provisions for psychosocial support and ensure it is accessible to young people.	→ Engage young people in developing key advocacy messages pertaining to their health needs, including SRH and MHPSS. → Build capacity of young people to participate in coordination mechanisms (cluster/working group meetings). → Train young people on basic health education, SRH, menstrual hygiene management and MHPSS, and work with them to disseminate information, mobilize communities, and help with distribution activities. → Work with Livelihoods and Education actors to find pathways to employment for young people in health, SRH and MHPSS.

HPC phases	What to do	Tips for young people's participation
Implementation and monitoring 4	→ Ensure that young people who are survivors of sexual violence receive clinical care and referral to other supportive services, as needed. → Ensure there are trained networks of practitioners, such as midwives, counsellors and community health workers, to deliver health (including SRH and MHPSS) information and services to young people. → Make provisions for dignity kits including information on menstrual hygiene management (MHM) (see **TIP SHEET FOR WASH PROGRAMMING ▶** as well). → Provide access to condoms and family planning services, HIV testing and counselling services, and GBV services, including post-rape care, and post-exposure HIV prophylaxis. → Disseminate adolescent- and youth-friendly health information through existing structures, and within wider adolescent and youth programming. → Ensure access to a safe space for young people to discuss their issues, socialize and have access to mentors. **Quality:** → Integrate MHPSS interventions within Health and Protection programmes, including referral mechanisms, rather than as stand-alone programmes. → Avoid targeting GBV survivors or young people associated with armed groups and armed forces in ways that further their discrimination and exclusion in communities. → Identify and build capacity of health and case workers who can safely and ethically identify young people with psychological disorders for referral to care. → Ensure that practitioners have skills to work with young people in a safe, friendly and ethical manner. → MHPSS activities should not always be conducted in mixed-gender groups, but the same information should be provided to females and males. For instance, males must be informed on the female reproductive cycle. → Materials should be accessible and culturally adapted to context so that young people can bring them home without risk of threat or shame.	

HPC phases	What to do	Tips for young people's participation
Implementation and monitoring 4	→ Ensure services are accessible (sites, opening times, costs, availability of commodities/supplies), acceptable (consent is given), appropriate (relevant to their unique needs), comprehensive (providing a full range of services, including a range of contraceptive methods), and equitable (available to all regardless of age, sex, gender, disability or origin) for young people and their families. Mobile service delivery may be warranted.	
Operational peer review and evaluation 5	→ Review projects within the Health response plan to assess to what extent the needs of young people were effectively addressed through humanitarian programming. → Document and share good practices on addressing the needs of young people in health.	→ Facilitate the participation of young people in project reviews.

CASE STUDY 30

Psychosocial support in contexts with no formal services: Mercy Corps

In crisis and conflict settings, young people are often exposed to chronic psychological stress with little or no access to specialized services. Informed by neuroscience exploring the impact of long-term stress on the brain, Mercy Corps' Hearts & Heads Framework helps adolescents re-establish social and emotional connections with themselves, their families and their communities. The methodology trains local volunteers on building empathy, social connectivity and critical thinking skills that improve adolescents' situational awareness, risk assessment, emotional management and skills for overcoming adversity. A randomized control trial showed improved safety and security and lower stress hormone levels among those participating in the intervention.

CASE STUDY 31

Young people champion adolescent sexual and reproductive health (ASRH) in emergencies: UNFPA Philippines

At the onset of Severe Tropical Storm Washi in the Philippines in 2011, peer educators from the Y-PEER network and the International Planned Parenthood Foundation (IPPF) mobilized to conduct rapid assessments, distribution of dignity kits, and health education sessions including menstrual hygiene. The youth volunteers quickly mobilized through text and online messaging, and several rounds of real-time training of new volunteers took place, resulting in a large pool of human resources on the ground throughout the response cycle. Learnings from their discussions with fellow young people on ASRH needs, risks and vulnerabilities helped to strengthen ASRH programme design. In the transition to long-term preparedness programming, UNFPA, Save the Children and the Department of Health prioritized training on ASRH to create a pool of master trainers and staff for future emergency responses.

CASE STUDY 32

Girl-to-girl sexual and reproductive health and rights education in Jordan: Mercy Corps

Mercy Corps' Regional Center for the Advancement of Adolescent Girls engaged girls from the Syrian Arab Republic through Ideo.org's 'Amplify Reproductive Health Challenge'. The project allowed girls to develop creative peer-to-peer education and girl-led facilitation techniques to educate girls about menstrual hygiene. Girls engaged family and community stakeholders in the design of an illustrated book called *Jazeeret el Zohoor* (Island of Flowers), which uses storytelling to help pre-teens understand their bodies.

CASE STUDY 33

A youth-led response to the Ebola crisis in Sierra Leone: Social Mobilization Action Consortium

The civil wars in the Mano River basin from 1991 to 2002 decimated infrastructure, fractured the political system and left vulnerable thousands of young people formerly associated with the fighting forces. Today in Sierra Leone, more than 60 per cent of the population still live on less than US$1.25 a day, and unemployment and illiteracy remain high, particularly among youth.[160] The largest ever Ebola outbreak started in March 2014, and many in Sierra Leone came into contact with victims during their sickness and after death, resulting in rapid spread of the virus. In response, NGOs like Restless Development activated youth volunteer networks to stop Ebola transmission, fight stigma and support survivors. The Social Mobilization Action Consortium (SMAC, which also included GOAL, BBC Media Action, FOCUS 1000 and the United States Centers for Disease Control and Prevention [CDC]) managed to cover the majority of rural communities across the country for more than a year, conducting 49,000 visits by 1,800 youth across 10,000 communities. SMAC youth were trained in Ebola safety, M&E and social mobilization techniques. In each village, an action plan was developed, and champions were identified. Mobilizers became a reliable constant for communities, assisting with referrals, alerting burial teams and providing advice. This youth-led approach was a significant factor in stopping the disease, through an increase in safe burials and timely referral of cases of the disease. The model formed the basis for the government's community engagement for the last 12 months of the outbreak.

Nutrition

Malnutrition has devastating effects on population health.[162] Adolescence is marked by a period of rapid growth, physical and sexual maturation, and brain development. It provides another key 'window of opportunity' for improving nutrition after the first one, which is the first 1,000 days (the period between conception and the child's second birthday). This represents a final opportunity to influence adult height and mitigate stunting.

Malnutrition during adolescence generally presents in the form of: undernutrition (wasting, stunting or chronic undernutrition and thinness or underweight); micronutrient deficiency or excess; and overweight or obesity. The latter increases the risk for heart disease, stroke, diabetes and some cancers. Two thirds of premature deaths and one third of diseases originate in adolescence.[163]

Higher levels of both acute and chronic malnutrition, especially among adolescent girls, are directly related to gender-inequitable access to nutritious foods.[164] Discriminatory sociocultural norms can also mean that boys and male youth lack adequate knowledge and skills around providing themselves and others with nutritious diets. Young people's exposure to violence in the home and community may increase where food is in short supply. Girls in particular may be at risk of child marriage and engaging in transactional sex due to lack of food.

Well-nourished adolescents who are protected from disease, infection and early pregnancy are less likely to develop malnutrition, and are more likely to avoid non-communicable diseases, have optimal maternal and birth outcomes, and enjoy increased work capacity and productivity.[165] In humanitarian crises, malnutrition in the form of wasting, underweight or micronutrient deficiencies are key concerns. Therefore, assessing conditions and ensuring adequate nutrition for young population groups according to age, gender, weight, physical activity levels and other key factors, is of high priority in humanitarian and fragile settings.

Social and behaviour change strategies can include engaging young people of working age as staff or volunteers in peer-to-peer promotion of improved nutrition, or to educate younger children. Young people can participate in savings groups and income-generating activities to have income for safe and nutritious food (see **LIVELIHOODS ▶**, above). They can be nutrition champions and promote healthy diets and active lifestyles at the community level. For young people, community-based platforms such as youth clubs/organizations, sports clubs and religious institutions can provide formal and informal opportunities to engage, participate and learn, while also delivering services such as mobile clinics or community-based sexual and reproductive health (SRH) education. Targeted health and nutrition counselling should ensure coverage of households with pregnant and lactating adolescent girls and young parents in particular.

Tip sheet

Key actions for Nutrition programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect data on the nutritional needs of adolescents and youth, especially menstruating girls, pregnant girls and young women and breastfeeding mothers, and analyse these data disaggregated by sex, age and disability. → Conduct nutrition surveys in the community to understand where and how young people engage with services and how they access information about nutrition.	→ Consult young people to understand their diets, dietary preferences and any barriers to consuming a nutritious diet. → Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people in order to understand and establish their needs with regard to nutrition and diet.
Strategic planning 2	→ Ensure that the Nutrition response plan addresses the needs identified during the needs assessment, and from any other data source. → Plan programming for young people in coordination with agencies providing health services, especially sexual and reproductive health (SRH), maternal, newborn and child health services.	→ Facilitate the participation of adolescents and youth in strategic planning to enable them to identify opportunities and mitigate barriers to good nutrition. → Involve a diverse cross-section of young people in the design of Nutrition programmes.
Resource mobilization 3	→ Include information and key linkages to engage young people in Nutrition programming, and budget for those interventions (e.g., assessments, supplies, capacity-building). → Report regularly to donors and humanitarian stakeholders on resource gaps, especially for those most vulnerable (e.g., female-headed households, pregnant and breastfeeding mothers, young people with disabilities).	→ Engage young people in developing meaningful advocacy messages for improving access to nutritious food. → Seek young people's views and feedback, especially on how their needs are being addressed and how they are being engaged in Nutrition programming, when developing proposals and reports for donors and partners.

HPC phases	What to do	Tips for young people's participation
Implementation and monitoring 4	→ Ensure that all young people are aware of distribution sites and timings (consider the needs of remote populations, female and adolescent-headed households, literacy barriers, etc.). → Develop and maintain feedback mechanisms for young people to express their views on the effectiveness and quality of Nutrition programmes. → Raise awareness among pregnant adolescents and adolescent parents on the nutritional and health benefits of breastfeeding for both the baby and mother. → Make provisions for breastfeeding support starting with early pregnancy and continuing through the postpartum period. → Provide nutritionally appropriate alternatives for young parents unable to breastfeed, and conduct training for those parents on the importance of clean water in the preparation of breastmilk alternatives. Note: Appropriate facilities should be made available in order to ensure that the water used to prepare breastmilk alternatives is clean. → Provide referral to mental health and psychosocial support (MHPSS) for young mothers as part of Food Security and Nutrition programming. → Provide support for young people with children who conduct outreach in their communities for nutrition interventions (e.g., ensure they have access to safe spaces). → Monitor access to nutrition assistance for young people and develop targeted interventions accordingly.	→ Engage with young people in the coordination mechanisms, design and implementation of Nutrition programmes. → Train young people to raise awareness among their peers and engage with decision makers on essential nutrition interventions (e.g., the special needs of pregnant and breastfeeding young women).
Operational peer review and evaluation 5	→ Review projects within the Nutrition response plan to assess to what extent the needs of adolescents and youth were effectively addressed through the Nutrition programmes and interventions. → Document and disseminate good practices on effectively addressing the needs of young people in Nutrition.	→ Ensure that vulnerable groups, such as pregnant and lactating women and young mothers, are able to safely and effectively raise their concerns during reviews and evaluations.

CASE STUDY 34

Engaging adolescents in the design of nutrition programmes in Uganda: World Food Programme (WFP)

In Uganda, 25 per cent of the population are adolescents, of which half are girls. The lack of specific data on adolescent nutrition as well as information on how to reach and engage with them has limited the prioritization of adolescent nutrition interventions. In 2019, WFP and the Ugandan Government released findings from a study to inform adolescent programming. The study found that seven interrelated themes influenced adolescents' access to adequate and healthy food: climate change and agricultural practices; household economy and income generation; alcohol; social norms; sexual and reproductive health; access to education; and service provision. It also found that engaging adolescents effectively is essential for assessing how nutrition-specific and nutrition-sensitive interventions can be effectively delivered and how they can be linked to other components of services for adolescents. Throughout the study, adolescents highlighted their priorities and needs related to engagement:

- → **"Come to us, fit around our lifestyles"** – Adolescents stressed the importance of accessibility and that they preferred to be 'reached' in places they already frequented and at convenient times.
- → **"Use our groups, don't group us"** – Adolescents expressed their own preference for groupings, for example: according to age and life stage, separate engagement of married girls and young mothers from unmarried girls (including the nga'kobain social groups in Moroto), older boys (including junior elders) from younger boys, and in-school adolescents from those who are out of school.
- → **"Make it entertaining"** – Adolescents highlighted the need for activities to be primarily entertaining, followed by being informative and understandable; for example, they could use methods like music, dance and sports, including tailored communication platforms, media and formats.
- → **"Show us real experiences"** – Adolescents confirmed that they found 'real life' stories to be the most engaging and effective way of sharing and learning from experiences.
- → **"Speak our language"** – Adolescents raised the importance of conversing in their local and colloquial languages. They stressed the need to be spoken to with respect for them to feel comfortable in engaging with services and programme interventions.
- → **"Ask us, include us"** – Adolescents wanted to be involved in a participatory manner, such as through interpersonal activities, to ask questions and ensure that their voices and opinions were heard and recognized.
- → **"Be fair"** – Adolescents raised the need for transparency and variety in modes of engagement. Trust and privacy were emphasized, as adolescents were wary of information or situations they perceived to be discriminatory or associated with corruption. Ensuring impartiality and equity in both engagement and the provision of services was seen as a priority (particularly in terms of interactions between refugee and host communities).
- → **"We need energy"** – Adolescents reported that having energy was their priority to ensure they could complete their daily workload.
- → **"Build us for the future"** – Adolescents emphasized the importance of engaging with them holistically, providing health and nutritional information alongside sexual and reproductive health services, education and vocational training.

Adapted from WFP (2019).[166]

Water, Sanitation and Hygiene (WASH)

Young people are central to humanitarian WASH efforts as both learners and doers. The most efficient way to change adult behaviour is through educating young people, and today's young people will be the decision makers about the future use of water resources. In emergency contexts, WASH facilities (and the routes used to access them) can become areas of heightened threat for GBV. A major impediment to girls' school attendance is a lack of adequate water and sanitation facilities.

Empowering young people as WASH promoters assures that a project has a greater effect and more lasting impacts on communities. Many of the proven strategies in WASH are in areas that young people are naturally attracted to, such as: creating appealing campaigns; volunteerism; developing technical and communication skills; green technologies; peer-to-peer mobilization; cooperative learning and teamwork.[167]

"Can you engage with social innovation for youth to bring innovative ideas in WASH problems, as youth bring innovative approaches."

NRC, UNICEF and UNFPA consultations with Syrian refugee and Jordananian young people in Jordan

Tip sheet

Key actions for WASH programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect data on the differing WASH needs of young people, and analyse these data disaggregated by sex, age and disability.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people in order to establish their needs and any barriers with regard to WASH and menstrual hygiene management (MHM).
Strategic planning 2	→ Ensure that the WASH response plan addresses the needs of young people identified in the needs assessment, and from other relevant data on young people. → Ensure that intersectoral linkages are present in WASH response plans for young women, with attention to the Protection, Education and Health sectors. → Ensure the WASH response plan builds upon existing entry-points for WASH and young people, for example through schools and Community-Led Total Sanitation (see **LIST OF RESOURCES ▶**), and school-based WASH initiatives. → Establish linkages with other sectors (Health, including sexual and reproductive health [SRH], and Protection, including gender-based violence [GBV]) on their planned interventions for adolescents and youth that may have complementarity to the WASH programmes (e.g., peer education and dissemination of MHM supplies, safety patrols, distribution of hygiene supplies).	→ Consult with adolescents and youth during the design and development of strategic planning documents such as the WASH response plan and MHM interventions.

HPC phases	What to do	Tips for young people's participation
Resource mobilization 3	→ Utilize information and key messages on young people's priorities and needs to influence WASH funding priorities, and regularly report on gaps in WASH to donors and other humanitarian stakeholders and partners. → Report on gaps for adolescents and youth in WASH programmes when reporting to donors and other humanitarian stakeholders.	→ Engage young people in developing key advocacy messages pertaining to their WASH needs.
Implementation and monitoring 4	→ Ensure that WASH facilities are continuously safe, hygienic and accessible to all young people, including those with disabilities. → Ensure that WASH programmes provide opportunities for young people to have leadership roles in school and community WASH initiatives, including those who are not in school, and those living in vulnerable situations. → Work with adolescent girls and young women to integrate MHM throughout all WASH programming. → Develop and maintain feedback mechanisms for young people to express their views on the effectiveness and quality of WASH programmes. → Coordinate the implementation of WASH activities with Health (e.g., SRH) and Protection (e.g., GBV) interventions to complement distribution of supplies, dissemination of information, development of key messages, and training of adolescents and youth.	→ Engage with young people in the coordination mechanisms, design and implementation of WASH programmes, and dissemination of hygiene messaging. → Engage and consult with adolescent girls and young women on whether WASH facilities are adequately gender-segregated, perceived as secure and equipped for MHM (e.g., water for cleaning, waste disposal), and materials (e.g., correct type and size of pads).
Operational peer review and evaluation 5	→ Review projects within the WASH response plans to assess if the needs of young people were effectively addressed through programming. → Document and disseminate good practices on addressing the needs of young people – particularly adolescent girls and young women – in WASH and MHM programming. → Evaluate the quality of MHM interventions to determine if there are adequate facilities (e.g., water for cleaning, waste disposal) and materials (e.g., correct type and size of pads) available.	→ Facilitate the participation of young people in WASH project reviews. → Ensure that vulnerable groups, such as pregnant or lactating women and young mothers, are able to safely and effectively raise their concerns during WASH programme reviews and evaluations.

CASE STUDY 35

Young people in Venezuela as agents of positive change in WASH: RET International

In its efforts to address the food, health and sanitation needs of vulnerable Venezuelans, RET International seeks to provide access to safe water and to improve community hygiene conditions. Recognizing the positive role young people can play in their communities, RET International provides training on the importance of hygiene, self-care and access to safe water. Young people then design and implement their own hygiene campaigns. Through this approach, RET International seeks to tap their potential to adopt new ideas and transfer knowledge to their peers and communities. Trainings are gender-sensitive and gender-specific. Participants learn about the concepts of gender and diversity, including stereotypes and roles, and the relevance of those concepts to WASH promotion. RET International also provides hygiene kits and carries out basic infrastructure repairs to guarantee access to drinking-water. Trained young people become agents of positive social change, and local capacity is increased to sustainably address sanitation needs.

RET International (2020), provided for these guidelines.

CASE STUDY 36

Hygiene kits for imprisoned, quarantined women and girls in El Salvador: UNFPA and UN Women

UNFPA and UN Women have distributed over 1,300 dignity kits containing essential hygiene supplies, such as soap and menstrual pads, to women living in prisons in El Salvador. Detainees typically rely on family members delivering hygiene supplies during visits, but visits have been halted for the foreseeable future due to the COVID-19 pandemic. These distributions, coordinated by the United Nations country team, came alongside an awareness-raising campaign on how to prevent infection and transmission of the virus that causes COVID-19. Women living in prisons in El Salvador are at especially high risk for contracting COVID-19 due to the close living conditions and other environmental factors – there are approximately 4,000 women imprisoned in the country according to the national Directorate of Prisons.

Additionally, all persons entering El Salvador are now required to spend 30 days in a quarantine facility. While quarantined women and adolescent girls are provided with pads once a month, some may find the supplies to be insufficient, and lack of privacy and unreliable running water are barriers to adequate menstrual health management (MHM) in these facilities. UNFPA has provided around 400 dignity kits to the Salvadoran Institute for the Advancement of Women for distribution in quarantine centres.

Source

UNFPA (2020), provided for these guidelines.

CASE STUDY 37

Schoolchildren promote handwashing in their schools and communities in Nigeria: UNICEF

UNICEF's effort to promote handwashing with soap in schools, as part of a larger water, sanitation and hygiene (WASH) programme funded by the European Union, highlights how important it is to involve students, children and adolescents themselves as active participants and change-agents for the health of their communities, especially during the COVID-19 pandemic. John Mark Okeghene, a member of the environmental health club in his primary school in Owodokpokpo-Igbide, Isoko South, Delta State, leads sessions on handwashing during school with his classmates, and after school with his community. He teaches them the importance of handwashing with soap and the necessary steps. "I always tell my classmates to wash their hands, especially palm-to-palm, with soap, under running water," he says. As schools begin to shut down in Nigeria to curb the spread of COVID-19, students carry the message about the importance of handwashing to their homes and neighbours. The responsibilities given to the environmental health club members also creates in them a sense of ownership that makes good hygiene behaviours more likely to stay with them throughout their lives.

Sustaining peace

United Nations **Security Council Resolution 2250**, adopted in 2015, acknowledged the contribution of young people to peace and security and called for their meaningful participation across different spheres that impact their lives – political, social and economic. This includes addressing their needs across all levels of decision-making processes: socioeconomic development, education and employment. Resolution 2250 marked a shift from the traditional perception of young men as perpetrators, and young women as victims in violent conflict. The findings of the independent progress study on youth, peace and security (2018),[169] mandated by Security Council Resolution 2250, demonstrated how young people are actively engaged within their communities, from acts of community service and civic engagement, to advocating for the needs of their communities or participating in formal institutions.[170] Young women and men also play active roles in organizing and mobilizing their peers at local, national, regional and global levels to build peace and address different forms of conflict and violence. At the same time, young people's peacebuilding engagement frequently crosses the boundaries of humanitarian–development responses.

Sustaining peace aims to prevent violent conflict by addressing the root causes and drivers of conflict, as well as patterns of violations of human rights and international humanitarian law, while supporting existing capacities for peace at individual, community and system levels. This involves responding to forms of exclusion, systemic discrimination and marginalization on the basis of joint analysis of conflict dynamics and joined-up strategic planning.[171] Peacebuilding activities can take place prior to the outbreak of violence, during conflict, or once hostilities have ended and reconstruction has begun.[172] Multi-country research shows that young people involved in peacebuilding processes are more active citizens for peace. Their participation increases peaceful coexistence, supports those living in vulnerable situations, and reduces discrimination and violence, and thus contributes to more resilient communities and societies.[173]

Young people are more likely to proactively engage in peacebuilding and develop resilience in conflict-affected settings if certain conditions are in place: spaces for political participation; access to social services like education, protection and health; connections between youth and their communities; and opportunities to build confidence and self-esteem.

Tip sheet

Key actions for programming for Sustaining Peace, at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Gather information on which youth organizations, networks and associations are already engaged in peacebuilding and social cohesion-related initiatives. → Analyse data to understand: → how young people are impacted by the conflict and violence; → how the conflict is evolving at different phases of the crisis; → the patterns of young women's and young men's involvement in violence, and in peace initiatives; → how young people's voices are incorporated in the peacebuilding process; → the specific challenges faced by adolescent girls and young women, and by young people with disabilities; → if young people's humanitarian initiatives are having an impact on peace and social cohesion; → the risks of engaging young people in peacebuilding efforts; → the divisions among young people of different social, religious, ethnic and political backgrounds, and by gender.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify needs and challenges related to peacebuilding. → Engage young people from diverse backgrounds (e.g., refugees, internally displaced persons, and host community members) to meaningfully participate in humanitarian assessments.
Strategic planning 2	→ Identify entry-points during the development of the humanitarian response plan to build a component on youth peacebuilding, promoting social cohesion, especially in contexts related to peace and conflict. → Integrate within response plans' mechanisms for young people to voice their grievances related to peace and security. → Identify, fund and partner with youth organizations, initiatives and movements working to sustain the peace.	→ Facilitate participation of young people in strategic planning to enable them to identify and mitigate risks in peacebuilding-related initiatives. → In refugee situations, ensure that the lead international organization has, at the country level, an advisory group of refugee and host community young women and young men to advise on local peace and security needs.[174]

HPC phases	What to do	Tips for young people's participation
Resource mobilization 3	→ Gather information and disseminate key messages on specific needs and priorities of young people, to influence peacebuilding funding priorities. → Report on gaps in funding for young people and peacebuilding to donors and other humanitarian stakeholders.	→ Engage young people in developing key advocacy messages for peace-building-related funding.
Implementation and monitoring 4	→ Establish connections with Education partners, both formal and non-formal, to explore if and how peacebuilding and social cohesion components are incorporated into school curricula or in the school environment, and work with Education stakeholders and young people to fill the gaps. → Ensure young people living in vulnerable situations are involved in peacebuilding initiatives, making a special effort to reach those severely affected by conflict, going beyond 'elite', urban, educated youth. → Ensure access to safe spaces for adolescent girls and young women to participate and voice their interests and needs.[175] → Create opportunities for young people to share their peace and security challenges through intergenerational dialogue and consultative forums, and to take part in decision-making processes to ensure that their needs are addressed. → Ensure that refugee host countries establish mechanisms to listen to the peace and security challenges young refugees face, and how these affect their relations with the state and host communities.	→ Institutionalize the needs of young people as an integral part of the humanitarian cluster system and refugee coordination mechanisms (sector/working group approach), by requiring that each cluster/sector/working group includes an expert on adolescent and youth issues. → Create safe spaces and promote the voices of young people. → Engage young leaders and members of youth organizations, networks and associations in training and sensitization on youth, peace and security.
Operational peer review and evaluation 5	→ Review peacebuilding and social cohesion-related projects within response plans to assess to what extent the needs of adolescents and youth were effectively addressed. → Document and share good practices on addressing the needs and roles of young people in peacebuilding.	→ Facilitate the participation of young people in project reviews. → Use innovative approaches to evaluate the impact of young people's engagement in peacebuilding, especially building on qualitative evidence and participatory approaches, and enabling young people to contribute to M&E design, data collection and analysis.[176]

CASE STUDY 38

Addressing the drivers of conflict in the Middle East and North Africa (MENA) region: Youth RESOLVE

Global statistics reveal that MENA is the most dangerous region for adolescents and youth worldwide. Refugee young people have reduced access to essential services and are more likely to experience discrimination. Although host countries have opened their education systems to Syrians, enrolment rates are below 25 per cent in all host countries except Egypt. Unemployment levels are particularly high for Syrian refugees; for example, 60.8 per cent in Jordan. Across Jordan, Lebanon and Iraq, the Youth RESOLVE consortium engages host communities, refugee and internally displaced person (IDP) youth in peacebuilding initiatives, youth-led advocacy, and Education and Livelihoods programming. The advocacy component has brought together host and refugee youth in Jordan and Lebanon to identify issues both are facing, to advocate for change together. Youth from varied backgrounds discuss tensions, reconcile differences, build a sense of belonging, and work towards common goals. Young people contribute to sustaining peace through active citizenship, advocating for those in their community who face hostility or discrimination. The consortium is led by World Vision and consists of Islamic Relief, Caritas, Generations for Peace, and Questscope.

No Lost Generation (2018).[177]

CASE STUDY 39

Youth, Peace and Security (YPS) in Palestine: United Nations Theme Group on Young People[178]

Youth aged 15–29 compromise 30 per cent of the Palestinian population.[179] The protracted occupation, instability and internal social fragmentation as well as a patriarchal culture have left young people facing widespread poverty, gender inequality, restricted movement, political and civic exclusion, and high unemployment,[180] as well as high rates of anxiety, depression and post-traumatic stress disorder (PTSD). Negative coping mechanisms include migration, child marriage, social withdrawal, drug use, violence and radicalization. United Nations Security Council Resolution 2250 (2015) recognized "the important and positive contribution of youth in efforts for the maintenance and promotion of peace and security", and identified five pillars for action: participation, protection, prevention, partnerships, and disengagement and reintegration.[181]

To operationalize Resolution 2250, the United Nations Country Team, international non-governmental organizations (NGOs), and youth groups work together on various initiatives. These have included national consultations on YPS with thousands of young people, and a Youth Summit in Gaza on conflict resolution and peacebuilding. UNFPA and the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) have worked with the leadership of refugee camps on young people's positive contributions to peace. UNFPA has worked with a local NGO to train young people on needs assessment, planning and delivering youth-led humanitarian action. The United Nations Country Team has now mainstreamed youth issues in the Humanitarian Needs Overview, which guides the humanitarian work within clusters.

CASE STUDY 40

Young people sustain peace in Sri Lanka: Youth4Youth

Ethnically divisive state policies gave rise to decades of conflict in Sri Lanka, which ended in 2009 when the Sri Lankan military defeated the Liberation Tigers for Tamil Eelam (LTTE, also known as the Tamil Tigers). While the policies have been reviewed over the years, the issues have not been adequately addressed. A parallel youth insurgency was quelled by military force rather than a political solution, and the resulting volatility has led to negative perceptions of youth in the country. Over a quarter of the population falls between the ages of 15 and 29, but they have not been central to the national peacebuilding and development agenda. UNFPA, UN Volunteers and UN Women are facilitating platforms to engage young people in the peacebuilding process so that their voices are reflected in key policy and decision-making processes. The initiative supports dialogues, connecting hundreds of young people with government representatives. One outcome has been to form a panel of young leaders to drive youth-led solutions at national and subnational levels.

CASE STUDY 41

Youth as agents for peace in Chad: RET International

RET International has developed a youth-led methodology, successfully applied in Latin America, Africa and the Silk Route regions, to reduce the potential for conflict, through engaging young people to become agents for peace in refugee camps and host communities. In the south of Chad, RET International youth are trained on human rights, responsible citizenship, positive leadership, intergenerational partnerships, conflict mitigation and resolution, and project management.

Refugee and local youth set up a youth peace journal, which collects information and news from their communities to advance tolerance, social cohesion and development. In Chad and other countries, young people have worked with RET International to develop small, results-oriented 'quick impact projects' to promote peace and coexistence in their communities, such as cleaning the village football ground and market area, or building a stage for theatre and other cultural events.

CASE STUDY 42

Developing life skills for peace and social cohesion in Colombia: Escuelas en Paz, UNICEF

In Colombia, Escuelas en Paz is working in conflict-affected rural areas to support schools in promoting peacebuilding, local reconciliation and resilience among adolescents (11–17 years old). Like other UNICEF education initiatives for peace, Escuelas en Paz trains teachers in the 'pedagogies for peace' approach, so that they can teach students key life skills, including non-violent conflict resolution, empathy, critical thinking and how to communicate and take action with confidence. It has also been supporting adolescent- and youth-led initiatives that are led by trained teachers and students in targeted schools, which include community-level initiatives using arts, music and sports. Over 16,000 children and adolescents had been engaged by 2018, and UNICEF is now working with the Ministry of Education on integrating peacebuilding into the country's education strategy.

UNICEF (2017).[183]

Protection

Young people in humanitarian settings are subject to a host of protection risks, often different from those faced by younger children or adults aged 25 and over. Urban refugee and displaced young people often reside in the least safe neighbourhoods, where crime is high and police may routinely harass, beat and detain them. In conflict zones there may be mines and explosive remnants of war. Young people may become associated with armed forces or armed groups. Often their only livelihood options are in the informal economy, where risks of crime and violence can be high. For crisis-affected adolescent girls especially, the threat of GBV looms large in everyday life. Young people, particularly girls, are often sexually exploited or abused by those with the responsibility to protect them, including humanitarian staff, school staff, law enforcement and military personnel.

Young people are increasingly playing key roles in ensuring their own protection in humanitarian response. Community-based and women-led approaches to protection are engaging women and girls in identifying protection needs (e.g., patrol groups established in camps, in coordination with camp committees), mapping available services, establishing referral pathways, providing basic psychosocial support, and addressing social norms that can lead to safety risks and increased need for protection.

There may be risks involved in young people's participation in protection activities, especially where it increases the visibility of organized youth groups, or where they start looking into power dynamics and root causes of conflict. This has the potential to bring them into conflict with local authorities. A risk assessment tool to support safe participation is included as **ANNEX 1 ▶**.

The following tip sheet is applicable to Protection programming overall, but the Protection cluster/working group also encompasses Child Protection, Gender-Based Violence (GBV), Housing, Land, Property (HLP), and Mine Action (see **BOX 2 ▶**), and separate tip sheets are presented for each of those Areas of Responsibility below.

Tip sheet

Key actions for Protection programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect data on needs, priorities and capabilities to understand differing protection needs of young people before and after the crisis, and analyse these data disaggregated by sex, age and disability. → Map mental health and psychosocial support (MHPSS) and Protection services prior to consultations in case any referrals need to be made. → Collect data on: → age of consent within the country → legal age of marriage → legal minimum age of employment → age of criminal responsibility. → Analyse data to understand if young people have specific needs with regard to civil documentation or school-related papers: birth certificates, national identity documents, school records, etc.	→ Hold consultations – grouped by sex and age of participants – with a diverse cross-section of young people to identify needs and challenges related to Protection. → Ensure that consultations do no harm and are managed by actors with expertise in engaging and supporting adolescents and youth. → Ensure young people are consulted to provide their perspectives on the definition of protection and identifying protection risks and solutions. → Use the participation risk assessment (**ANNEX 1** ▶) and analyse the potential risks for young people to participate in Protection programming.
Strategic planning 2	→ Ensure that the Protection response plan addresses the needs of adolescents and youth identified during the needs assessment, and from other relevant data on young people. → Identify established Protection coordination mechanisms, if they exist, as part of the response planning. → Consider if or how young people and their organizations could be part of any existing Protection coordination bodies.	→ Without doing harm, engage adolescents and youth in a process to understand the dynamics and root causes of the conflicts in their context (see also **SUSTAINING PEACE** ▶).

HPC phases	What to do	Tips for young people's participation
Resource mobilization 3	→ Develop information and key messages on adolescents and youth, such as from assessment reports, to influence Protection funding priorities. → Report on gaps in funding for adolescents and youth in Protection to donors and other humanitarian stakeholders.	→ Work with young people to develop advocacy messages for Protection funding. → Seek young people's views and feedback, especially on how their needs are being addressed in Protection programming, when developing proposals and reports for donors and partners.
Implementation and monitoring 4	→ Implement Protection programming that targets the needs of young people and draws on their capabilities. → Analyse if Protection services take into account the needs of young people, with particular attention to vulnerable groups (see **BOX 6** ▶ ***Vulnerable categories of crisis-affected young people***).	→ If Protection capacity exists within the team, build the capacity of older youths to register, manage and refer relevant cases, in volunteer or paid roles, as context allows. → Engage with older adults (caregivers, community leaders) in order for young people to safely engage in humanitarian response. → Ensure young people – especially adolescent girls and young women – are integrated into community-based Protection committees or other activities.
Operational peer review and evaluation 5	→ Review projects in the Protection response plan to assess to what extent adolescents and youth were effectively reached through humanitarian programming. → Document and share good practices on addressing the needs of young people in Protection.	→ Engage young people in policy review and advocacy processes, without causing them any harm, and maintaining their confidentiality should they choose.

Child protection

(Area of responsibility within protection)

Young people's interests are relevant to the Child Protection Area of Responsibility in two main ways: first, the subgroup that are adolescents under age 18 in need of Protection services are children themselves; and second, older adolescents and youth can be trained and supported as volunteers or paid staff in Child Protection activities. In addition to the Child Protection issues (GBV, child marriage, recruitment and use by armed forces and armed groups, detention by authorities, and child labour), younger adolescents in crisis settings are vulnerable to many dangers, including injuries, physical violence, neglect, and separation from their caregivers.

The best-interests principle must guide all actions and interventions that humanitarian actors take on behalf of internally displaced, refugee, returnee or stateless children (see **BOX 20 ▶**).

Box 20: What is the principle of the best interests of the child?

Article 3, paragraph 1, of the Convention on the Rights of the Child (CRC) stipulates that:

"In all actions concerning children, whether undertaken by public or private social welfare institutions, courts of law, administrative authorities or legislative bodies, the best interests of the child shall be a primary consideration."

The concept of the best interests of the child provides guidance for ensuring the well-being of a child, which is determined based on individual circumstances, including the child's age, gender, level of maturity, and personal experiences, as well as the presence or absence of parents, the quality of the child–parent relationships, the physical and psychosocial situation of the child, and their level of risk/need for protection.

The best interests principle applies to all children without discrimination, regardless of a child's guardianship or legal status, and it also applies to actions affecting children as a group and to all actions undertaken by institutions that affect individual children. The principle obliges states to establish concrete procedures and/or mechanisms that can be used to assess and determine the best interests of a child under their jurisdiction.

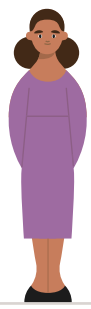
UNHCR (2018).[184]

Tip sheet

Key actions for Child Protection programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect data on needs, priorities and capabilities and analyse these data disaggregated by sex, age and disability, to understand differing Child Protection needs of young people before and after the crisis. → Collect data on: → Child Protection services available for adolescents; → child-friendly spaces (CFS) that cater to young people (also establish if they can be accessed by disabled adolescents). → Analyse data to understand: → the specific Child Protection concerns experienced by adolescent girls and boys; → the state of the juvenile justice system, and what efforts are under way to improve it; → care arrangements for separated and unaccompanied children, and how these young people are supported once they turn 18.	→ Hold consultations – grouped by sex and age of participants – with a diverse cross-section of adolescents to identify needs and challenges related to Child Protection. → Ensure that mental health and psychosocial support (MHPSS) and protection services have been mapped prior to consultations in case any referrals need to be made. → Ensure consultations with children and adolescents do no harm and are managed by actors with expertise in engaging and supporting adolescents. → Ensure a safe and accessible space for consultations.

"Empower youth to work with their governments in the development of immediate and durable responses for protection."



MGCY & Youth to Lead y Desarrollo de Nuevas Generaciones consultations with young people in El Salvador

HPC phases	What to do	Tips for young people's participation
Strategic planning 2	→ Ensure that the Child Protection response plan addresses the needs of young people identified during the needs assessment, and from any other data related to young people and the labour market. → Develop a coordination mechanism on Child Protection under the overall Protection cluster/ working group. Assess how to consult and engage adolescents within that mechanism. → Discuss with teams how programmes will reach: hard-to-reach adolescents in the community; children living and working on the streets; young people in detention; and adolescent heads-of-households. → Plan for CFS to cater to adolescents in an age-appropriate manner (e.g., opening hours, activities, facilitators) – consider a separate adolescent or youth space where they can build social networks, acquire skills, and access sexual and reproductive health (SHR) information and care. → Coordinate with Health (including SRH) and GBV partners on their planned interventions for adolescents, especially related to adolescent- and youth-friendly spaces and health points. → Plan to ensure adolescent girls, and particularly married adolescent girls, are reached with Child Protection services.	→ Include adolescents and youth when strategizing methods to reach all demographics of young people, including hard-to-reach adolescents. → Plan for young people to inform the design of Child Protection programmes. → Engage young people to deliver Child Protection services (e.g., sensitizations, family tracing and reunification, referral to services).
Resource mobilization 3	→ Develop information and key messages on adolescents and youth, such as from assessment reports, to influence Child Protection funding priorities. → Report on gaps in funding for adolescents and youth in Child Protection to donors and other humanitarian stakeholders.	→ Work with adolescents to develop advocacy messages for Child Protection funding.

HPC phases	What to do	Tips for young people's participation
Implementation and monitoring 4	→ Consider following the International Rescue Committee's (IRC's) guiding principles for working with adolescent GBV survivors in Caring for Child Survivors of Sexual Abuse.[185] → Consider outreach and mobile programme delivery approaches to ensure adolescents are reached, specifically those living in vulnerable situations. → Monitor throughout implementation that Child Protection actors are running interventions in a gender- and age-appropriate manner, to cater to adolescents' needs and not just younger children. → Ensure trained specialists are available to address adolescent needs within Child Protection interventions. Ensure they are aware of existing referral pathways. → Continuously develop the skills and knowledge of caregivers to support the participation of adolescents. → Ensure referral pathways are in place for unaccompanied children 'ageing out' of care to ensure continuity of support for those who need it. → When dealing with unaccompanied and separated children in alternative care, give adolescents the opportunity to monitor the quality and safety of their own care arrangements and, if desirable, support supervised independent living arrangements. → In family tracing, involve adolescents as active participants, rather than passive recipients. → When delivering case management interventions, consider the growing role for adolescents in decision-making.	→ Engage young people to strengthen community-based child protection mechanisms. → Work with young people to find the appropriate combination of art, music, sports, languages and vocational skills, and referrals to other services, including case management for Protection issues. → Build the capacity of older youths to register, manage and refer relevant cases, or to act as facilitators and mentors to younger children in volunteer or staff roles, as context and safety allows.
Operational peer review and evaluation 5	→ Review projects in the Child Protection response plan to assess to what extent adolescents and youth were effectively reached through humanitarian programming. → Document and share good practices on addressing the needs of young people in Child Protection.	→ Facilitate the participation of young people in project reviews – ensure that vulnerable groups are able to voice their concerns during reviews and evaluations.

Gender-based violence
(Area of responsibility within protection)

Young people's risk of various forms of violence increases in humanitarian settings. Adolescent girls and young women are at increasing risk of violence, due in particular to the worsening of existing inequalities between young men and young women.[186] Girls and young women with disabilities are more likely to face physical and sexual violence, abuse and exploitation and are less likely to be able to access services, due to a variety of physical, societal and communication barriers.[187] Homophobia and transphobia not only contribute to GBV but also significantly undermine LGBTQIA+ GBV survivors' ability to access support, most acutely in settings where sexual orientation and gender identity are policed by the state.[188]

Humanitarian actors should assume that GBV is happening even in the absence of accurate data, which may be impossible to collect during a crisis.

Adolescent girls and young women are at risk of sexual assault and rape, especially if food, water or fuel sources are located far from settlements or in unsafe areas. Sexual exploitation, including the exchange of sex for essential goods and services, trafficking and sexual slavery, may increase during emergency situations. Soldiers or armed groups can perpetrate opportunistic or systematic sexual violence, including as a weapon of war, including against boys and young men. Violence in the home can escalate during emergencies as young men lose their jobs and status – particularly in communities with traditional gender roles and where family violence is normalized. Girls are also more vulnerable to child marriage during emergency situations.[189]

Addressing GBV requires a joint effort among allies, partners and activists, including boys and young men, but male involvement should not end up diverting funding and capacity from women's organizations, or perpetuating gender inequality.

Tip sheet

Key actions for GBV programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Review data related to GBV within the context, but assume that GBV is happening even in the absence of accurate data. → As determined within the GBV coordination mechanisms, collect data on the differing GBV risks and needs of young people, and analyse these data disaggregated by sex, age and disability.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify their GBV needs and priorities and to inform responses.

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Gather information on: → specific GBV services available for adolescents, especially girls and young women; → GBV services that are and are not accessible to young people with disabilities; → the internally displaced person (IDP)/refugee registration and profiling systems/staff and how they address the rights and needs of girls and young women, GBV survivors and other at-risk groups. → Analyse data to understand: → whether specific GBV services are sufficiently available and accessible to adolescents (especially girls and young women) and to young people with disabilities; → how sexual violence has affected adolescent boys and young men; → whether or not the IDP/refugee registration and profiling systems or staff respect the rights and needs of girls and young women, GBV survivors and other at-risk groups. → Respect confidentiality and safety of young people when sharing GBV-related concerns.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify their GBV needs and priorities and to inform responses.
Strategic planning 2	→ Identify if there is a coordination mechanism on GBV in place within Protection, and establish whether adolescent girls and young women are participating. → Allocate a GBV focal point for adolescents and youth. → Programme for the needs and priorities of young people within the GBV Area of Responsibility, and develop age- and gender-appropriate interventions for younger adolescents, older youth, boys and young men, disabled young people, those living in remote areas, and other vulnerable groups. → Plan to address physical safety needs in and around sites as this relates to risks of GBV. Consider the Sphere standards; lighting; need for women-, youth- and child-friendly spaces; when, where, how and by whom security patrols are conducted; safety of water, distribution sites for food and other goods; accessibility for persons with disabilities, etc. → Plan for GBV prevention and response programmes to take into account service provision for all young people, prioritizing at-risk groups.	→ Ensure young people – particularly adolescent girls and young women – are included in the design, implementation and monitoring of GBV programming. → Engage young women in community-based interventions to identify Protection needs, map available services, take part in patrols, provide basic psychosocial support and strengthen referral pathways.

HPC phases	What to do	Tips for young people's participation
Resource mobilization 3	→ Develop information and key messages on adolescents and youth, such as from assessment reports, to influence GBV funding priorities. → Report on gaps in funding for adolescents and youth in GBV to donors and other humanitarian stakeholders.	→ Work with young people to develop advocacy messages on GBV for funding.
Implementation and monitoring 4	→ Continuously ensure awareness is raised with colleagues and young people that identification of GBV survivors is never recommended and that consultations should not be designed in a way that specifically targets or isolates them. → Ensure safe access to GBV services, including functioning referral pathways for young people, especially adolescent girls and young women, and young people with disabilities. → Apply a 'gender lens' to all programming for young people, encouraging them to think about the positive effects of balancing power in relationships between men and women, boys and girls. → Train staff and stakeholders working with young people in basic awareness on issues related to gender, GBV, women's rights, social exclusion and sexuality, and ensure they know how to handle GBV case reporting.	→ Ensure that male engagement programmes are not unduly prioritized over GBV prevention and response programmes for females. → Build the capacity of older youths to register, manage and refer relevant cases, in community volunteer roles.
Operational peer review and evaluation 5	→ Review projects in the GBV response plan to assess to what extent young people were effectively reached through humanitarian programming. → Document and share good practices on addressing the needs of young people in GBV.	→ Engage young people in GBV policy review without causing them harm and maintaining their confidentiality.

CASE STUDY 43

Youth-led prevention of GBV in the Democratic Republic of the Congo: SAFEKA

In the town of Kalemie, in Tanganyika District, the local youth group, Sauve la Femme et la Jeune Fille de Katanga (SAFEKA), identified GBV in school settings as one of their main protection challenges. With a grant from UNHCR's Youth Initiative Fund, they established school-based 'Peace and Non-Violence Clubs' with 500 internally displaced and host community young people. The clubs supported adolescents and youth to learn about GBV and build a network to support prevention and response activities. The project used peer-education techniques to teach leadership, peacebuilding, action research methods and ways of supporting survivors. Using participatory theatre, local radio, and exchange visits with other schools, the clubs reached an estimated 30,000 people with their messaging. School heads, local government, teachers and parents reported positive changes in young people, including improved conflict management skills. Club leaders reported greater knowledge of GBV and its impacts, and a greater sense of responsibility to prevent GBV and adopt non-violent behaviour.

"I could not believe that going to school with my two children could be a reality. My dream is to learn sewing and when I finish I will get money and be able to take care of my twins. When I was pregnant, I was rejected by my family as the father was already married. Now, I am convinced that my future life will positively change one day." Alima Bora's story in her own words, 20 years old.

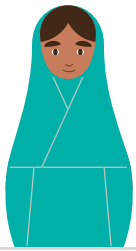
© NRC/Odette Asha/South Kivu, Democratic Republic of Congo

Housing, land and property
(Area of responsibility within protection)

The rights to adequate housing, as well as rights to land, property and natural resources, are a priority issue for crisis-affected young people. Eviction from housing is a major cause of youth homelessness, especially among displaced populations and in urban areas. When people are forced to leave their homes and seek new shelter, ongoing threats of eviction and insecure tenure can lead to further displacement and homelessness. This is compounded by many other factors; for example, legal restrictions on refugees' ability to work or the inability of IDPs to access livelihoods can undermine their tenure security, because they cannot pay rent. Lack of funds for rent also leads some young people into situations of exploitation and abuse. To address these issues, humanitarian actors need to understand the tenure arrangements where young people are living, and how they can be strengthened to avoid exploitation and eviction (see the **TIP SHEET ON SHELTER ▶**).

Young people (especially, but not only, young women) also face disproportionate barriers to accessing land, pasture and other natural resources that are important for their livelihoods, compounding the problems of joblessness and food insecurity. Access to these resources is often controlled by elder-led systems of governance that often exclude young people from meaningful decision-making and deny them their rights during disputes when they occur. In many countries, young men cannot get married without providing an adequate dowry of livestock, cash and/or agricultural goods; therefore being excluded from accessing land, pasture and other resources also means being denied the ability to marry. Lacking viable options, vulnerable young people are often forced into dangerous and elicit forms of resource extraction such as poaching, cattle rustling, charcoal burning, and artisanal mining – which increases their risk of criminalization, as well as recruitment into armed groups. This requires a range of sectoral interventions to support young people; for example, through Livelihoods interventions (see the **TIP SHEET ON LIVELIHOODS ▶**), assistance with negotiating rental agreements, negotiating for access to land, pasture and natural resources, and support to be included in decision-making bodies and dispute-resolution mechanisms, and support for civil documentation.

"These guidelines need to include the importance of housing for young people."



UNFPA consultations with Syrian refugee adolescents & youth in Ankara, Turkey

Tip sheet

Key actions for Housing, Land and Property (HLP) programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect data on the differing HLP and natural resource needs of young people, and analyse these data disaggregated by sex, age and disability. → Assess the factors causing young people's tenure insecurity, and its effects on those living in vulnerable situations (female-headed households, refugees, etc.), as well as how the legal system addresses their HLP rights.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify their needs and challenges related to HLP.
Strategic planning 2	→ Ensure that the HLP response plan addresses the needs of adolescents and youth identified during the needs assessment, and from any other relevant data on young people. → Ensure that the project activities and outcomes in the HLP response plan are directly linked to the specific needs of young people. → Engage young people in any ongoing process of alternative dispute resolution. → Facilitate coordination between young people and any committees, legal and technical advisors, and advocates that can assist in dispute resolution. → In contexts of return from displacement, guide young people on how to retake ownership of their property or receive restitution.	→ Facilitate the participation of adolescents and youth in strategic planning to enable them to identify opportunities and mitigate risks related to HLP.

HPC phases	What to do	Tips for young people's participation
Resource mobilization 3	→ Gather information and disseminate key messages on adolescents and youth from assessment reports to influence HLP funding priorities. → Report on gaps in funding for young people and HLP to donors and other humanitarian stakeholders.	→ Engage young people in developing key advocacy messages for HLP funding. → Seek young people's views and feedback, especially on how their needs are being addressed in the HLP Area of Responsibility, when developing proposals, reports and messages for donors and partners.
Implementation and monitoring 4	→ Provide information on HLP rights to young people, with special attention to adolescent-headed households, married adolescents, and those living with an intimate partner. → Connect young people with any government schemes to grant land or offer affordable housing, ensuring protection and support for younger adolescents. → Involve young people in HLP education and campaigns, and provide them with information relevant to young people in their communities. → Develop and maintain a feedback mechanism for young people to provide their perspectives on the effectiveness and quality of HLP programmes. → Address barriers or biases in HLP programming that may compromise the safety of adolescent girls and young women, and other at-risk groups.	→ Involve a diverse cross-section of young people in decisions made regarding HLP. → Work with young people to disseminate information on HLP rights within families and communities.
Operational peer review and evaluation 5	→ Review projects within the HLP response plan to assess to what extent adolescents and youth were effectively reached through humanitarian programming. → Document and share good practices on addressing the needs of young people in HLP.	→ Facilitate the participation of young people in project reviews – ensure that vulnerable groups are able to voice their concerns during reviews and evaluations.

Mine action

(Area of responsibility within protection)

Mines, explosive remnants of war (ERW), small arms/light weapons (SALW) and improvised explosive devices (IEDs) pose a significant threat to the lives and well-being of young people in humanitarian and protracted crises. Adolescents and youth have distinct roles and responsibilities within a community, roles that differ by sex. Their exposure to and knowledge of possible safety threats differs from that of older adults and younger children. Meaningful roles for young people can be found within efforts around de-mining, mine risk education, victim assistance and advocacy.

Tip sheet

Key actions for Mine Action programming at each stage of the humanitarian programme cycle (HPC)

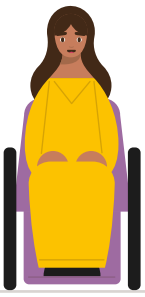
HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect data on the differing experiences of young people with regard to mines/explosive remnants of war (ERW)/small arms/light weapons (SALW)/ and improvised explosive devices (IEDs) before and after a humanitarian crisis; analyse these data disaggregated by sex, age and disability. → Undertake a participatory assessment with young people affected by the presence of mines/ERW/ SALW/IEDs. → Report on how young people are affected by the presence of mines/ERW/SALW/IEDs.	→ Hold consultations – grouped by age and sex of participants – in order to understand the needs, priorities and capabilities of young people related to mine safety.
Strategic planning 2	→ Ensure that the Mine Action response plan addresses risky behaviour and promotes positive action that young people adopt towards mines/ ERW/SALW/IEDs. → Assess which sectors could form partnerships in order to work with young people on mine risk education, victim assistance and advocacy.	

HPC phases	What to do	Tips for young people's participation
Resource mobilization 3	→ Include information and key messages on young people's priorities and needs as established in prior needs assessment to influence Mine Action funding priorities. → Report on gaps in funding for young people and Mine Action to donors and other humanitarian stakeholders.	→ Engage young people in developing key advocacy messages for Mine Action funding.
Implementation and monitoring 4	→ Implement Mine Action programmes which address the needs of hard-to-reach young people, particularly those impacted by armed violence and the presence of mines/ERW/SALW/IEDs: young people in armed groups, out-of-school adolescents, displaced young people. → Involve young people in mine awareness education and campaigns, and provide them with information about mine risk relevant to young people in their communities. → Develop and maintain a feedback mechanism for young people affected by the presence of mines/ERW/SALW/IEDs to provide their perspective on the effectiveness and quality of mine awareness education and campaigns. → Address barriers or biases in programming that may compromise the safety of adolescent girls and young women, and other at-risk groups.	→ Promote safe participation and leadership of adolescent girls and young women, and other at-risk groups in Mine Action. → Be mindful of barriers that may prevent people of differing genders from having equal access in participation in Mine Action programmes as beneficiaries, volunteers, employees and decision makers.
Operational peer review and evaluation 5	→ Review projects within Mine Action and Education response plans to assess to what extent the needs of adolescents and youth were effectively addressed through mine education and action. Assess which young people were reached, and those who were not and why. → Document and share good practices on addressing the needs of young people in Mine Action and Education.	→ Facilitate meaningful participation of young people in project review. Ensure that vulnerable young people's voices are heard and understood.

Shelter

Empowering young people in Shelter-related assessments and responses is one of the key strategies for disaster preparedness. It helps to build goodwill among community members towards young people and may ensure that a project has deeper and more lasting impacts. Young people should understand the risks to their dwellings and communities, and they need opportunities to help improve overall living conditions and their security of tenure prior to, during and after emergencies. Failure to include young women, especially adolescent girls, in Shelter can do real harm. Overcrowding can exacerbate community tensions, domestic violence, sexual assault and child marriage.

Shelters that are poorly designed or sited on the perimeter of camps may increase the risk of sexual harassment and assault. Inadequate distribution of fuel, building materials, etc., may force young women to trade sex for these items. Insecure tenure – due to the absence of or unclear rental agreements – is especially a problem for young people, who may not be used to advocating for their rights nor have knowledge of what those rights are. Because of social norms for young people to defer to older parties, they may need support to exercise and claim their rights in the event of a dispute with a landowner (see **TIP SHEET ON HLP ▶**). Without shelter assistance and assistance to secure land tenure, young people can be subject to exploitation or reside in dangerous spaces.[191]



"Can you provide youth with opportunities to acquire the skills, and the basic tools, needed in order to be able to maintain their own shelter?"

NRC, UNICEF and UNFPA consultations with Syrian refugee and Jordananian young people in Jordan

Tip sheet

Key actions for Shelter programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Conduct an assessment on the differing Shelter needs of young people, and analyse the data disaggregated by sex, age and disability. → Recognize the assets of older youth (aged 18 and above) in the needs assessment by analysing how they were previously involved in Shelter responses.	→ Hold consultations – grouped by age and sex of participants – with a diverse cross-section of young people to identify needs and challenges related to Shelter.
Strategic planning 2	→ Ensure that the Shelter response plan addresses the needs and priorities of young people identified during the needs assessment, and from other relevant data on young people. → Directly link the project activities and outcomes in the Shelter response plan to ways to address the specific needs of young people.	→ Facilitate youth participation in strategic planning to enable them to identify and mitigate risks in the Shelter response plan.
Resource mobilization 3	→ Gather information and key messages on the needs of adolescents and youth in reports to influence Shelter funding priorities. → Report on gaps in funding for adolescent and youth Shelter programming to donors and other humanitarian agencies.	→ Work with young people to develop key advocacy messages for Shelter funding. → Seek young people's views and feedback, especially on how their needs are being addressed and how they are being engaged in Shelter programming, when developing proposals and reports for donors and partners.

HPC phases	What to do	Tips for young people's participation
Implementation and monitoring 4	→ Implement Shelter programmes that address the needs of young people, and that harness the skills and interests of older youths (aged 18 and above). → Inform young people of available Shelter opportunities and resources and involve them in Shelter education and campaigns. → Ensure that Shelter responses support adolescent girls' and young women's safety and privacy: provide private space to change clothes and manage menstruation; prevent overcrowding; ensure girls do not sleep in the same space as fathers, brothers or people outside the family; provide lighting and locks in toilets, and safe access and proximity to toilet sites. → Ensure appropriate toilet facilities for transgender young people. → Develop and maintain a feedback mechanism for young people to provide their perspectives on the effectiveness and quality of Shelter programmes. → Provide Livelihoods opportunities and skills training for young people within Shelter programming, such as construction, distribution, etc., as well as in related sectors, such as Livelihoods, Education and Protection.	→ Consult a diverse cross-section of young people on implementation of Shelter programmes, such as the location and construction of new shelters, and environmentally sustainable local shelter materials. → Involve young people in continual monitoring of whether and how access to shelter is causing tension in the community, and support dialogue among diverse groups to find solutions. → Mitigate barriers to participation faced by young people (e.g., childcare, income-generating activities, limited mobility) that could restrict engagement in consultations.
Operational peer review and evaluation 5	→ Review projects within the Shelter response plan to assess to what extent the needs of adolescents and youth were effectively addressed through humanitarian programming. → Document and share good practices on addressing the needs of young people in Shelter.	→ Facilitate the participation of young people in project reviews.

CASE STUDY 44

Youth participatory shelter programming: PASSA Youth

Participatory Approach for Safe Shelter Awareness (PASSA) is a participatory method of disaster risk reduction (DRR) for shelter and settlements safety developed by the International Federation of Red Cross and Red Crescent Societies (IFRC) and Habitat for Humanity. PASSA Youth develops young people's capacity to reduce shelter-related risk by raising awareness and building skills in joint analysis, learning and decision-making at the community level. Trained volunteers guide a group of 15–30 youth leaders through participatory activities that raise awareness of safety issues related to shelter. Together they strategize to improve shelter safety, use social networks and multimedia resources for mapping, diagnosing and finding shelter solutions, and monitor progress.

Emergency telecommunications

With young people's aptitude for information and communication technologies (ICTs) relative to other age groups, ICTs may be one of the best ways to engage young people in many areas of humanitarian response (Education, CCCM, etc.), including as staff (those of working age) and volunteers. They can also be supported to participate meaningfully in Emergency Telecommunications response itself, led by the Emergency Telecommunications cluster as first responders.

Globally, the proportion of youth (ages 15–24) using the Internet (71 per cent) is much higher than that of the total population (48 per cent).[193] Young people are early adopters of new technologies for economic and social reasons, and the main users of the Internet, text messaging, social media and online messaging. Still, young people face significant barriers in their access to ICTs, including poor connectivity, prohibitive costs of data and devices, digital illiteracy, and lack of infrastructure, particularly in low-income countries and emergency settings. The proportion of men using the Internet is higher than women in two thirds of countries worldwide.[194]

Connectivity can be lifesaving and has the potential to transform the way in which duty-bearers respond to the needs of displaced people, as well as the delivery of humanitarian services. It can promote self-reliance by broadening the opportunities for affected populations to improve their lives, including through access to legal and health information, search engines and news. Digital technologies can expose young people to greater opportunities for learning and education during humanitarian crises, especially in remote regions. However, humanitarian workers have a responsibility to do no harm with ICTs, maintaining data privacy in all communications with and about affected populations.

Humanitarian agencies should find out if any private or public assessments have been done previously on young people's mobile phone and Internet usage. They should also assess the ICT infrastructure available to young people.

Tip sheet

Key actions for Emergency Telecommunications programming at each stage of the humanitarian programme cycle (HPC)

HPC phases	What to do	Tips for young people's participation
Needs assessment and analysis 1	→ Collect information, data and assessments on the telecommunications needs of young people, and analyse them disaggregated by sex, age and disability. → Analyse data to understand: → barriers faced by young people in accessing telecommunications; → the proportion of young people with access to a handset. → Use focus group discussions to determine which communications platforms young people mostly use, and on which devices. Additionally, determine the ease of access to technology by different groups of young people, and establish which service providers are most popular and why. → Collect information on the IT infrastructure and what data coverage is available. → Collect data on the type of mobile phones used by young people.	→ Work with young people to map safe and unsafe areas through GPS (Global Positioning System) technology, and share this information with other clusters to inform programming. → Hold consultations – grouped by sex and age of participants – with young people to identify needs and challenges related to telecommunications.
Strategic planning 2	→ Ensure that the Emergency Telecommunications response plan addresses the needs of young people identified during the needs assessments, and from any other relevant data on young people. → Mitigate the risks of the ways in which new modes of communications may harm young people. Use the experiences and recommendations of young people to inform strategic planning after a humanitarian crisis. → Develop tech-enabled skills and vocational trainings in partnership with Livelihoods and Education actors.	→ Enable young people living in vulnerable conditions to influence Emergency Telecommunications response plans and participate in inter-agency working group meetings on digital communication technologies, and engage with other stakeholders including the private sector and with Protection and Education actors.

HPC phases	What to do	Tips for young people's participation
Resource mobilization 3	→ Advocate for young people's priorities and needs, as identified in prior needs assessments, to influence funding priorities for Emergency Telecommunications. → Ensure that donors and humanitarian stakeholders receive reports on gaps in funding for youth-focused Emergency Telecommunications programming.	→ Partner with young people on developing key advocacy messages for funding for Emergency Telecommunications.
Implementation and monitoring 4	→ Implement Emergency Telecommunications programming that addresses the needs of young people and allows male and female young people equal access to data and voice connectivity. → Train young people without access to technology in basic digital literacy. → Promote young people's access to electricity and connectivity by deploying and expanding community Internet access. Additionally, promote equal access for women and girls to the Internet. → Implement youth-appropriate programme feedback channels, such as online platforms, SMS or phone hotlines.	→ Enable young people to take leadership roles in telecommunications interventions, e.g., as peer-to-peer educators in digital skills development programmes.
Operational peer review and evaluation 5	→ Assess to what extent the needs of adolescents and youth were effectively addressed with Emergency Telecommunications response plans. → Document and disseminate good practice on addressing young people's access to Emergency Telecommunications and technology.	→ Engage young people in project reviews of Emergency Telecommunications.

Annexes

Risk assessment tool to support safe participation

An ethical approach to participation ensures that young people do not face harm as a result of their participation. It requires awareness and consideration of the local and national sociocultural, religious and political context.

Any agency interacting with young people should undertake risk assessments, and regularly monitor, assess and mitigate risks associated with their participation.

A risk assessment tool and additional guidance to enhance safeguarding

Child safeguarding refers to proactive measures taken to limit direct and indirect collateral risks of harm to children, arising from the work of UNICEF, its personnel or associates. The risks may include those associated with physical violence (including corporal punishment); sexual violence, exploitation or abuse; emotional and verbal abuse; economic exploitation; failure to provide for physical or psychological safety; neglect of physical, emotional or psychological needs; harmful cultural practices; and privacy violations.

Meaningful adolescent participation requires systematic attention to child safeguarding, ensuring proper implementation of **UNICEF Policy on Conduct Promoting the Protection and Safeguarding of Children**, and adherence to **safeguarding procedures**, and for UNICEF staff and associates UNICEF Personnel Standards.[195] If adolescents are involved in research, evaluations or data collection, the UNICEF procedure for ethical standards in research, evaluation, data collection and analysis should also be applied.

Risk assessment and risk mitigation strategies should be undertaken in collaboration with adolescents and other concerned stakeholders, to ensure that adolescents do not face harm as a result of their participation. Risk assessment requires awareness and consideration of risks and opportunities for adolescents in the specific local and national sociocultural, religious and political context. It also requires consideration to gender and conflict-sensitive issues (***Stages of adolescent development and opportunities for participation***, found in UNICEF Engaged and Heard! Guidelines for Adolescent Participation and Civic Engagement) with attention to how power affects relationships and responses.

Risks may be present whether adolescent participation is digital or face-to-face. It is important and opportune to recognize that adolescents are frequently early adopters of new technologies and they can access rich information, and communicate and connect in innovative ways through digital technologies.[196] However, access to the Internet is accompanied by risks including: information overload; overuse of the Internet, which may restrict time spent in alternative constructive activities; online bullying and spread of discriminatory messages; exposure to child sexual abuse and exploitation; unsafe sharing of information negatively affecting individual privacy; and risks of punishment for expressing views online. See UNICEF Standards for child safeguarding in online and digital environments.

- → Undertake risk assessments, and regularly monitor, assess and mitigate risks in collaboration with adolescents.
- → Assess risks associated with participation, but also analyse the risks of not consulting and not listening to adolescents (e.g., increased risks of adults abusing adolescents *if* there are no channels for adolescents to share their concerns and complaints).

→ Within their own adolescent-led initiatives, adolescents should also be actively involved in risk assessments and strategies to reduce risks and to inform decisions about when and how participation may not be safe or appropriate; and should be supported to adjust their plans if proposed activities are not in line with their best interests.

A minimum process and set of questions for risk assessment and risk mitigation:

→ Consider the socio-political, geographic, sociocultural and religious contexts, as well as current reactions and responses by adolescents and families, especially in humanitarian settings.

→ Consider each scenario:

1. No participation or consultation with adolescents
2. Consultation with adolescents (through informal interviews, focus group discussions or use of participatory tools)
3. Collaborative participation whereby adolescents collaborate with adults and are able to influence planning, decision-making and/or implementation
4. Adolescent-led participation – activities that are initiated and/or led by adolescents

→ Complete the table below regarding potential benefits and risks/threats of supporting different modes of adolescent participation, and actions that have been or could be taken to reduce risks to make a decision.

TABLE 1.
Risk assessment tool for safe adolescent participation

MODE OF ADOLESCENT PARTICIPATION	KEY IDENTIFIED BENEFITS associated with no participation or different modes of participation	KEY IDENTIFIED RISKS/ THREATS associated with no participation or different modes of participation	LIKELIHOOD OF RISK (high, medium, low)	SEVERITY OF RISK (high, medium, low)	RISK MITIGATION what actions have been taken to reduce risks?	FURTHER ACTION NEEDED to ensure best interests and 'do no harm'
1. Adolescents are not involved						
2. Consultation	e.g., State-level consultation on child rights	e.g., 1) Adolescents will be transported from various locations with poor road safety record and conditions, which increases the likelihood of road accidents and potential injuries	Medium	High	1a) Vehicles pass all safety requirements and proper licensing 1b) Drivers required to strictly adhere to traffic laws and taking any additional passenger 1c) Drivers read and sign code of conduct	1a) Ensure trip is registered in office trip register along with the list of passengers 1b) Drivers must ensure adolescents always have a seat belt to secure them 1c) Give full trip itinerary to parents/ caregivers
		2) ...			**2a) ...**	**2a) ...**
		3) ...			**3a) ...**	**3a) ...**
3. Collaborative participation						
4. Adolescent-led participation						

Ensuring risk mitigation and response to potential and identified harm during participation processes:

- Ensure **organizational recruitment procedures** and practices encompass comprehensive background checks when recruiting staff and volunteers.
- Ensure all staff have **signed the code of conduct**.
- Provide staff and volunteers with training on **child safeguarding**.
- When **designing, implementing and monitoring** the programme/project, listen to adolescents' views and ensure the principles of 'do no harm' and 'best interests of the child'.
- Ensure **child safeguarding focal points** are allocated for programmes supporting adolescent participation and civic engagement, appointing individuals with skills and experience in sensitive responses to disclosures of abuse.
- Ensure that the **roles and responsibilities** of chaperones, facilitators and a child safeguarding focal point are clearly defined. For examples of clearly defined roles and responsibilities for chaperones and facilitators, see UNICEF (2010).[197]
- Ensure that **safe, confidential and ethical referral pathways for services are clear** for medical assistance, psychosocial support, alternative care, legal support, education support, etc., especially in circumstances where urgent medical assistance and/or alternative care is required. Immediate emergency (and security) care needs of a child/young person must be prioritized and addressed before any other steps.

For participation opportunities, ensure that adolescents have access to sufficient information and spaces to give their ***informed assent or consent*** (see **APPENDIX 6 ▸ *Glossary***; Santelli et al., 2017[198]); and that for adolescents under the age of 18 years informed consent is also gained from parents and guardians. For examples of informed consent forms and media consent forms, see UNICEF (2010).[199]

Ensure that adolescents are informed and aware of the child protection code of conduct, and that they know **how and to whom they can report any concerns**. Serious incidents, particularly those involving UNICEF personnel, should be reported to integrity1@unicef.org.

- If the adolescent participation opportunities include **events or field travel, apply regulations** to ensure preparations for safe participation, prior to, during and after the event. These regulations include attention to:
  - **Event and trip planning**: ensuring transparent and fair processes to select participants; information sharing with adolescents/parents/guardians; securing written records for informed consent/assent; risk assessments and risk mitigation planning; preparatory workshops with adolescents.
  - **Roles of chaperones, focal points and facilitators**: clarity about roles and responsibilities; and efforts to ensure the right people are selected for their role.
  - **Safe transportation logistics**: make sure adolescents have a safe way of travelling to and getting from locations where activities will take place. If using private cars or buses then get written consent of parents/guardians. Make any necessary arrangements for travel and medical insurance, travel documents and visas (where required).

- **Appropriate and safe accommodation arrangements**: following risk assessments and compliance with health and safety legislation; and sufficient rooms for the number of participants.
- Considerations for safe and **ethical media interactions,** including informed consent forms for media interaction (if relevant); and preparations and briefings with journalists.
- **Emergency protocols and procedures in place to respond** to medical emergencies, accidents or injuries, and preventative efforts including a record of pre-existing medical conditions/ allergies/dietary requirements. Staff to carry a first aid kit.
- Communication with parents or guardians, including provision of emergency contact details.
- Codes of conduct developed by children/ young people to ensure rules of what is and is not appropriate behaviour; and emergency contact card provided.
- Debrief with adolescents, parents and chaperones.
- Approach consultations on sensitive issues (e.g., sexual harassment) in a considerate and culturally appropriate way, ensuring that staff or volunteers have sufficient training and expertise to work with adolescents and to respond sensitively to their views and concerns.
- Carefully consider the ethical implications regarding reimbursements, incentives and rewards concerning adolescent volunteering or participation – see UNICEF (2019).[200]
- Safeguard adolescents' privacy through secure data storage. Ensure that data are password-protected.
- Teach digital literacy to keep **adolescents informed, engaged and safe online**.

Checklist: Meaningful participation of young people in programmes

To understand whether the participation of young people is meaningful in your context, these questions can help take stock and provide guidance in areas where youth participation is important and may need to improve. Depending on the type of programme or intervention you are working on, not all of the questions will be relevant. The answers to these questions should be gathered from reports from partners, monitoring data, needs assessment, coordination groups, etc., and therefore do not require any additional data collection.

- → Are young people involved in humanitarian response decision-making? If so, through what mechanisms and at what stage of the decision-making process?
- → Are young people involved as participants (volunteers, facilitators and/or staff) in activities? In the coordination structure?
- → Are you/the response engaging with existing adolescent and youth structures (youth organizations, ministry of youth, ministry of education, schools, Internet cafes, churches/mosques, etc.?). Have you spoken to national staff about the existence of adolescent and youth organizations and networks?
- → What about young people who are not affiliated with any such structures?
- → What about young people belonging to particularly vulnerable groups? (See **BOX 6 ▶** ***Vulnerable categories of crisis-affected young people***, in Section A of the main guidelines.)

Are young people and youth-led organizations equipped with skills to engage with humanitarian processes (including humanitarian principles)? See **CASE STUDY 2 ▶** in Section C: ***Meaningful participation***.

Use the questions to help you think about the different mechanisms that are already in place, or that are lacking, for young people to engage. This is a starting point for thinking about how to ensure meaningful participation of young people, tailored to your programme/response.

3

Checklist: Planning an assessment with young people

During the strategic planning phase, the second phase of the humanitarian programme cycle (HPC), ask yourself and your team the following questions. If you have not considered some of the points, think through what you need to do to plan an assessment with young people.

- ☑ Is it necessary and safe to conduct a youth-specific assessment at this time? Are there key questions that cannot be answered from existing information and processes?
- ☑ Is it safe and appropriate for the adolescent and youth groups to be partners in the design, conduct and analysis of the assessment? If it is considered appropriate, include adolescent/youth representatives and their adults supports (e.g., an NGO partner) in practical training on assessment methods/information gathering.
- ☑ Is a robust safeguarding system in place, as described in the section on ***'Safeguarding'*** (see **SECTION B ▶**)?
- ☑ Have secondary data (NGO reports, government statistics, adolescent- or youth-focused assessments, etc.) been reviewed to answer the specific questions of the assessment, including about the demographic profile of the area?
- ☑ How will the assessment reach the harder-to-reach and those living in vulnerable situations? (See **BOX 6 ▶** ***Vulnerable categories of crisis-affected young people***, in Section A of the main guidelines.)
- ☑ Are disabled persons' organizations involved in the design and undertaking of the assessment?
- ☑ How will young people be involved in the assessment and programme planning? Can they safely take the lead?
- ☑ Can female community leaders be engaged to mobilize adolescent girls and young women?
- ☑ Can female assessors be hired for consultations with at-risk adolescent girls and young women?
- ☑ Is a gender-based violence (GBV) specialist available to inform the assessment? If not, see *How To Support Survivors of Gender-Based Violence When a GBV Actor is Not Available in Your Area: Pocket guide*.[202]
- ☑ Have participants given their informed consent to participate? (See '***Information management***' in **SECTION D ▶**.)
- ☑ How will the information be analysed and disseminated to humanitarian actors and to young people?
- ☑ How will young people surveyed or interviewed know that their feedback is being used or acted upon?

Suggested questions when conducting an assessment

- ☑ How many young people (aged 10–24) make up the affected population, disaggregated by: sex; the minimum age disaggregation suggested by Task Force 5 of the Compact for Young People in Humanitarian Action (CYPHA):[203] 10–11; 12–14; 15–17; 18–19; 20–24 (if disaggregation by 1-year increments is not possible; see also **BOX 4 ▶**); in-school/out-of-school; in training/employment; married/unmarried/divorced/engaged; young people with disabilities; and any other relevant local diversity factors?
- ☑ What are young people already doing in terms of preparedness, response, etc., both formally as members of youth groups or NGOs, and informally in their communities? How did they respond to the latest emergency? What opportunities exist to engage/include these young people in the work/activities that the humanitarian clusters/working groups are doing, so that they are recognized as part of the response?
- ☑ What are the locally applicable definitions of child, adolescent and youth in this context (e.g., in laws and policies)? How does this compare with the CYPHA's suggestions for age disaggregation (see **BOX 4 ▶**)?
- ☑ Are different groups, including refugees, allowed to access: secondary school; primary school; technical and vocational education and training (TVET); higher education; life skills training;[204] and/or distance learning?
- ☑ What documentation issues might affect access to employment, education, travel, banking, etc.? (Birth certificate, national identity document, criminal record, work permit, diploma, etc.)
- ☑ What programmes and actors (government, NGOs, private firms, community-based organisations, cultural institutions) are already engaging young people in the affected areas? You can ask this question during coordination meetings.
- ☑ What are other programmes/actors doing to engage young people? Try to gain a sense of existing programmes, what works and what doesn't, and assess whether your programme can build onto existing structures or initiatives and/or use successful approaches but in a different area.
- ☑ Which categories of young people are most vulnerable? Who are the 'invisible' young people in the community?
- ☑ What are young people's priority concerns?
- ☑ To what extent are young people satisfied with the humanitarian response?
- ☑ Do young people know of any feedback mechanism in the community, and what is their opinion of it?
- ☑ What are young people's preferred communication channels?
- ☑ What kinds of information would young people like to receive from humanitarian actors?

4

Checklist: Information management process

At assessment, analysis and planning stages:

- ☑ Have young people (including those who are vulnerable or hard to reach) been consulted about and participated in:
  - ☑ determining the purpose of the programme, with reference to the theory of change?
  - ☑ decisions on age groups and categories of vulnerable people to target within the wider population of young people?
  - ☑ development of indicators?
  - ☑ development of the methodology for collecting, analysing, storing and disseminating information?

During implementation:

- ☑ Are young people included as staff or volunteers on the data collection team, coordination team, communications team?
- ☑ Does the programme use diverse ways of gathering information from young people (face to face, in the classroom, through technology, etc.)?
- ☑ Is the feedback mechanism adolescent- and youth-friendly? (See the subsection in **SECTION B ▶** on *'Safeguarding'*)
- ☑ Is the data collected analysed and used by humanitarian actors to adjust and improve programming? Are information products produced and disseminated? Is there a coordination forum where data on youth is systematically reviewed, triangulated and analysed?

During evaluation, post-programme:

- ☑ Is the feedback process adolescent/youth-friendly? Feedback mechanisms should take into account languages spoken and understood, literacy levels, and accessible channels for young people. They should get progress reports in formats accessible to them, and they should be made aware of the ways that their feedback is being used and acted upon.
- ☑ Are young people trained and supported to disseminate results?
- ☑ Has the programme followed the five Accountability to Affected Populations (AAP) commitments? (See **BOX 11 ▶** ***Accountability to affected young people***, in Section C).

5

Recommendations for supporting young women's leadership

- Work with established platforms (where they exist), such as women's groups and forums, to ensure access, voice, leadership and safe spaces for young women in these networks. Work with young women to define what their needs in these spaces are, and work with adults to ensure their buy-in and support.
- Run tailored risk analyses for young women during programme set-up so that the risks young women face are assessed and clearly understood from the outset, and programme design responds to these risks responsibly.
- During the design of activities with young people in humanitarian and protracted crises, be careful not to further entrench gender stereotypes and norms through programming (e.g., by assigning boys/men to do search and rescue and girls/women to run emergency childcare).
- Consult with young women on their basic needs, and engage them in the process of designing solutions. Ensure they have access to health and psychosocial support services.
- Build the capacity of staff, especially at the field level, to undertake gender analysis, in order to understand the barriers to women's participation in activities.
- Conduct outreach to parents and the wider community and engage them in women's leadership programmes (e.g., home visits, open days) to establish buy-in and reassurance on security.
- Support young women to take leadership roles in educating their peers and the wider community about negative coping mechanisms, including the risks of child marriage, trafficking and sexual assault during humanitarian and protracted crises (e.g., school assemblies, forming girls'/women's groups, using print and social media).
- Support young women to engage in protection activities, such as joining young women's task teams or committees, to monitor and support themselves and their peers' multi-layered protection needs. Ensure language on protection is defined by young women and framed around their well-being. Information on young women's protection should be shared in accessible ways, taking illiteracy rates into consideration.
- Ensure staff are trained on both child and adult safeguarding procedures, as young women often fall into both categories, and this will better enable more flexible and effective referral pathways to link them with relevant support services.
- Consider community sensitization and reintegration programmes for young women who have been isolated from the community due to discrimination against, for example, those with children out of wedlock, or those living with disabilities.
- Provide technical training for members of women's networks and organizations on areas such as fundraising and financial management, to support their longer-term sustainability. Support their efforts by advocating for this approach to donors and decision makers.
- Consider engaging role models in communications efforts to shift attitudes to be more supportive of young women volunteering and engaging in relief efforts and taking leadership roles.
- Ensure young women are still able to access services and information relevant to sexual and reproductive health and rights (SRHR) during humanitarian and protracted crises. Safe and confidential youth-friendly SRHR services that are adaptive to the specific needs of young women are also recommended, as young women often face stigma, or are unable to talk to those in positions of power about their needs. Share this information through a range of safe social channels, peer groups and mentorship support programmes to ensure those most marginalized can also be reached.

6

Life skills

Life skills development must be part of education programmes for young people. Life skills are mentioned under many sector areas within these IASC guidelines. Known also as '21st century skills', 'soft skills', 'employability skills' and 'transferable skills', life skills are defined by both the Inter-agency Network for Education in Emergencies (INEE) and the World Health Organization (WHO) as:

"...abilities for adaptive and positive behaviour that enable individuals to deal effectively with the demands and challenges of everyday life. In particular, life skills are a group of psychosocial competencies and interpersonal skills that help people make informed decisions, solve problems, think critically and creatively, communicate effectively, build healthy relationships, empathize with others, and cope with and manage their lives in a healthy and productive manner. Life skills may be directed toward personal actions or actions toward others, as well as toward actions to change the surrounding environment to make it conducive to health."[206]

Life skills are especially important in specific risk situations (displacement, living on the street, post-conflict, etc.) and where young people need to promote and protect their own rights.

Life skills that have been identified under multiple frameworks are considered 'core' skills. UNICEF's Life Skills and Citizenship Education (LSCE) framework developed for the Middle East and North Africa (MENA) Region contains 12 core skills framed around four clusters: Learning, Employability, Personal Development and Active Citizenship (see **FIGURE 8** ▶). Programmes do not have to cover all 12 core skills but should address the four clusters. These skills help young people manage emotions effectively and build healthy relationships. They complement and enable academic, technical and vocational skills development.

COVID-19: Working with and for young people: **Guidance summary**

Part 1: Young people, seriously affected by coronavirus disease (COVID-19), are part of the global response

A common understanding of the health and non-health impacts of the pandemic, along with the role young people are playing in driving solutions, is essential to the pandemic response.

Every young person is affected differently

This global crisis is exacerbating existing vulnerabilities and inequalities experienced by young people, all further amplified in humanitarian contexts where fragility, conflict and emergencies have undermined institutional capacity and limited access to services. Young migrants, young people who are internally displaced and refugees, young people living in poor, high-density urban areas, young people without a home, young people living with disabilities, girls and young women, lesbian, gay, bisexual, transgender, queer/questioning and intersex (LGBTQI) young people and those living with HIV will be particularly affected; young people separated from, unaccompanied by, or left behind by migrant working parents face higher risks of exploitation, violence and mental health issues, and already poor access to health services and protection.

Impacts on young people

Health impacts. As the pandemic spreads to low-income and lower-middle-income countries with proportionally high numbers of young people and significantly weaker health systems, direct and indirect health impacts on young people are likely to increase (e.g., diminished access to adolescent and youth sexual and reproductive health services). Young people may also see serious negative impacts on their mental and psychosocial well-being.

Safety and protection issues. During lockdown, and in a context of overall economic and social distress, adolescents and young people are at high risk of domestic violence and gender-based violence (GBV), as well as online harassment and cybercrime. Early marriage, teenage pregnancies and child labour are also likely to increase in the recovery phase.

Educational impacts. 1.5 billion young people, over 90 per cent of the world's students, in 188 countries are being kept away from school and universities because of social distancing measures. This large-scale interruption of learning, including non-formal and informal learning, may have severe consequences, especially for young people living with disabilities and for those with little to no access to technology, Internet, or telecommunication services.

Economic impacts. A global recession is a likely consequence of the COVID-19 pandemic, and young people's livelihoods will be disproportionately affected. Dependence on daily wages is forcing some to remain economically active, both exposing themselves to COVID-19 and risking spreading the virus to others. Young people who work in the informal sector fall through the cracks of stimulus packages and other public economic policies.

Impact on civic space and participation. Restrictions on movement will hamper the ability of young leaders and organizations to protest, mobilize, access funding and support their communities.

Young people mobilize to respond to COVID-19

Many young people have mobilized immediately to respond to the crisis as health workers, advocates, volunteers, scientists, social entrepreneurs and innovators.

Part 2: Key actions

These five key action areas, derived from the pillars of the Compact for Young People in Humanitarian Action (www.youthcompact.org) – services, participation, capacity, resources and data – are intended to guide practitioners in the development of an adolescent- and youth-focused and inclusive COVID-19 response. The following recommendations will be accompanied by concrete examples and resources.

Action 1: SERVICES

- Health. Ensure that COVID-19 response plans are sensitive to adolescent- and youth-specific healthcare needs, including sexual and reproductive health, mental health and psychosocial support.
- Water, sanitation and hygiene (WASH). Ensure that young people have access to a water supply for drinking and personal hygiene, sanitation services, handwashing facilities with soap, and menstrual health management (MHM) supplies to maintain their general health and well-being and prevent the spread of infection.
- Education. Support continued learning for young people, including for those over 18. Formal and non-formal education programming should reach migrants, refugees and displaced young people.
- Protection. Ensure the protection of young people in all COVID-19 prevention and mitigation measures, coordinate closely with adolescent sexual and reproductive health (ASRH) actors and ensure that practitioners are trained in youth-friendly communication techniques and basic response to GBV along with issues related to adolescent girls, such as child marriage.
- Livelihoods, cash and markets. Ensure that young people whose incomes may be affected by the COVID-19 crisis are supported. Ensure that young people and their families have financial access to goods and services.

Action 2: PARTICIPATION

- Maintain connections with young people and youth organizations in your networks.
- Encourage inclusive information-sharing that is accessible online and offline, and consider barriers to access that young people living with disabilities may face.
- Engage young people, including the most marginalized, in assessing the impact of COVID-19 on their communities.
- Actively engage young people in responses to COVID-19 as health workers, advocates, volunteers, scientists, social entrepreneurs and innovators.
- Engage young people in monitoring and evaluating COVID-19 responses.
- Tackle the spread of inaccurate information, debunk myths and confront stigma.

- → Support access to youth-friendly content and work with young people to develop content.
- → Apply the 'do no harm' approach and ensure safe and ethical participation of young people at all times.

Action 3: CAPACITY

- → Build the capacity of, and support, youth-led organizations to engage in COVID-19 response coordination with other humanitarian actors, access funding, and design and deliver programmes.
- → Build the capacity of governments, United Nations agencies and civil society organizations (CSOs) leading response and coordination efforts for the meaningful engagement of youth.

Action 4: RESOURCES

- → Fund youth-led organizations' COVID-19 mitigation initiatives, including adolescent-led organizations and young women's collectives, and ensure that funding streams are reliable, transparent, sustained and flexible.
- → Advocate for the inclusion of young people in coordination mechanisms where funding decisions are made.
- → Co-design programmes and proposals with adolescent and youth groups and, where possible, include a budget for their projects in agency budgets.

Action 5: DATA

- → Generate and share data disaggregated by age, sex and disability.
- → Support adolescent- and youth-led and community-driven monitoring and accountability of COVID-19 responses.

208 Compact for Young People in Humanitarian Action, 'COVID-19: Working with and for young people: Guidance summary', May 2020, www.youthcompact.org/the-compact-response, accessed 22 June 2020.

Call for UN Member States, UN System entities, civil society, private sector, media, local authorities and youth-led organizations to align strategies, approaches and programmatic responses with the principles outlined in the Agenda for Humanity in view of reaching all young people and empowering young women, young men, girls and boys to be agents of positive transformation.

We, the participants of the World Humanitarian Summit High-Level Special Session on **Transforming Humanitarian Action with and for Young People**, have gathered in Istanbul, Turkey, to ensure that the priorities, needs and rights of young women and young men, girls and boys affected by disaster, conflict, forced displacement and other humanitarian crises, are addressed, and that they are informed, consulted, and meaningfully engaged throughout all stages of humanitarian action.

We recognize the humanitarian responsibility to enable and protect the rights, address the specific needs and build on the strengths of all young people. Ensuring young people have the skills, capacity and resources to prevent, prepare for, respond to and recover from humanitarian situations, will help reduce the costs of and need for international humanitarian support, improve humanitarian effectiveness and strengthen resilience of communities.

Drawing on the relevant international and regional instruments, the Doha Youth Declaration on Reshaping the Humanitarian Agenda, the Global Refugee Youth Consultations, the UN Security Council resolution 2250 on youth, peace and security, and the outcomes of other processes led by, involving and/or targeting young people, we call for a long-term commitment from stakeholders to the following actions:

Action 1: Promote and increase age- and gender-responsive and inclusive programmes that contribute to the protection, health and development of young women, young men, girls and boys within humanitarian settings;

Action 2: Support systematic inclusion of engagement and partnership with youth, in all phases of humanitarian action through sharing of information and involvement in decision-making processes at all levels, including budget allocations

Action 3: Recognize and strengthen young people's capacities and capabilities to be effective humanitarian actors in prevention, preparedness, response and recovery, and empower and support local youth-led initiatives and organizations in humanitarian response, such as those targeting affected youth, including young refugees and internally displaced persons living in informal urban settlements and slums;

Action 4: Increase resources intended to address the needs and priorities of adolescents and youth affected by humanitarian crises, including disasters, conflict and displacement, and identify ways to more accurately track and report on the resources allocated to young people in humanitarian contexts;

Action 5: Ensure the generation and use of age- and sex- disaggregated data pertaining to adolescents and youth in humanitarian settings

We the undersigned agree to collectively review at regular intervals and be accountable for the progress of the implementation of this compact. By agreeing to this compact, we are accountable for and commit to transforming humanitarian action for and with young people, guided by the Agenda for Humanity, to prevent and end conflict, safeguard human rights and rule of law, leave no one behind, and invest in young people for now and for the future.

Maastricht Principles on The Human Rights of Future Generations

ADOPTED ON 3 February 2023[1]

Introduction

The rights of future generations have long been neglected in the analysis and application of human rights. Yet, human rights law does not limit itself to present generations. The foundations for international law to address the rights of future generations are established in international instruments in an array of subject areas spanning nearly a century; constitutions and legislative acts adopted by the majority of the World's States; in the laws, traditions, and cosmologies of Indigenous Peoples from every continent; and in the doctrine of major faith traditions representing the majority of the world's people.

The Maastricht Principles on the Human Rights of Future Generations seek to clarify the present state of international law as it applies to the human rights of future generations. The Principles consolidate the developing legal framework and affirm binding obligations of States and other actors as prescribed under international and human rights law. They also provide a progressive interpretation and development of existing human rights standards in the context of the human rights of future generations. They further recognize that States may incur additional obligations as human rights law continues to evolve.

These Principles provide examples of how realizing rights of future generations requires attention to the distinct rights of particular groups and peoples, but does not do so comprehensively. It is important to read these principles together with other human rights standards setting out the implications of human rights for particular groups, including groups subject to historic and current systemic discrimination in its many forms.

The Principles represent the result of a process of close to six years of research, dialogue and collective brainstorming, with the engagement of a range of academic experts, national and regional current or former human rights mandate holders, civil society organizations, members of Indigenous Peoples, and social movements. They build on historic traditions and knowledge spanning millennia.

The Principles were adopted in Maastricht on 3 February 2023. Signatories include experts located in all regions of the world and include current and former members of international human rights treaty bodies, regional human rights bodies, and former and current Special Rapporteurs of the United Nations Human Rights Council. This initiative builds on expert legal opinions adopted in Maastricht, the Limburg Principles

on the Implementation of the International Covenant on Economic, Social and Cultural Rights (1986); the Maastricht Guidelines on Violations of Economic, Social and Cultural Rights (1997); and the Maastricht Principles on Extraterritorial Obligations of States in the area of Economic, Social and Cultural Rights (2011) and its accompanying commentary.

The full explanation of each Principle, and the sources supporting them will be set out in the Commentary to these Principles.

Preamble

I. The Universal Declaration of Human Rights, the International Covenant on Economic, Social, Cultural Rights, and the International Covenant on Civil and Political Rights all proclaim that recognition of the inherent dignity and the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world.

II. Neither the Universal Declaration of Human Rights, nor any other human rights instrument contains a temporal limitation or limits rights to the present time. Human rights extend to all members of the human family, including both present and future generations.

III. Human generations exist within an unbroken continuum that is continually renewed and redefined as untold new members join the living human community. Any treatment of human generations and their respective rights must recognize and reflect this continuum.

IV. The human rights of future generations form an essential dimension of humankind's duty to uphold the inherent dignity, equality, and inalienable rights of all.

V. Decisions being taken by those currently living can affect the lives and rights of those born years, decades, or many centuries in the future. In recent decades, the need to recognize the intergenerational dimensions of present conduct have taken on increasing urgency. Humanity, the Earth on which we live, the natural systems of which we are but one part, and our political, social, cultural and economic systems, are in the midst of profound, rapid, and perilous change at humanity's own hands.

VI. Recognizing and ensuring the rights of future generations demands an evolution of decision-making processes to consider and ensure both justice and sustainability across an array of timescales including the present, near term and distant future.

VII. Children and youth are closest in time to generations still to come and thus occupy a unique position, and have an important role to play, within this transition to long-term, multigenerational thinking. Accordingly, their perspectives and participation in decision-making with respect to long-term and intergenerational risks must be accorded special weight.

VIII. Intergenerational justice has both individual and collective dimensions.

IX. Women and girls continue to bear the burden of many of societies' greatest challenges. Pervasive social norms and gender stereotypes continue to hold society back from attaining substantive gender equality. Women and girls face systemic discrimination in their enjoyment of all human rights, including a lack of meaningful participation in decision-making processes despite their influence and vital role in securing community and household resources. Gender inequality, if unaddressed, undermines the rights of both present and future generations.

X. Systematic racial, ethnic, religious and other forms of discrimination, exploitation and the inequitable distribution of wealth, resources and opportunities, between and within countries, undermine the rights of present generations and compound the threats to future generations. Accordingly, efforts to address and remedy intragenerational injustice are essential to achieving justice between generations. This requires the fulfilment by States of their extraterritorial obligations, including in the context of the regulation of transnational corporations.

XI. The worldviews and ways of life of many Indigenous Peoples reflect the continuum of the relationship between present and future generations and the intrinsic linkage between humankind and the land and ecosystems of which humanity is a part. These systems, and the continuum and interlinkages they safeguard, are endangered through the taking and degradation of Indigenous Peoples' lands, territories, and resources. Accordingly, the full recognition of the sovereignty and effective implementation of the rights and sovereignty of Indigenous Peoples is a shared obligation to both present and future generations of humanity.

XII. Peasants and traditional communities, including fishers, pastoralists, forest-dependent people, nomadic people and rural women play a key role in conserving biodiversity and ensuring adequate and sustainable food systems for both present and future generations. Safeguarding their rights and resources is critical for safeguarding and realizing the human rights of future generations.

XIII. Humanity is a part of the world, not apart from it. The rights of future generations must be interpreted and applied in light of humanity's dependence on and responsibility to Earth's natural systems, now and throughout our species' future.

XIV. The human rights of future generations must be understood, interpreted, and integrated within the evolving legal context recognizing humanity's relationships with the natural world, and the best available science. This context includes the right to a clean, healthy and sustainable environment, the growing recognition of the rights of Nature, and the knowledge systems of Indigenous Peoples, local and traditional communities.

XV. The cessation of unsustainable patterns of production, consumption and lifestyles is required to guarantee the full enjoyment of human rights, including economic, social, cultural and environmental rights, by all members of present and future

generations. Human development must be decoupled from the destruction of Nature and the overconsumption of natural resources to achieve the realization of the human rights of present and future generations and the integrity of nature and natural systems.

I. GENERAL PROVISIONS

1. Definition: Future Generations

For the purposes of these Principles, future generations are those generations that do not yet exist but will exist and who will inherit the Earth. Future generations include persons, groups and Peoples.

2. Legal Basis for the Human Rights of Future Generations

2.1. Future generations are legally entitled to human rights on the basis of amongst others:

a) International law in its various forms which recognizes human rights for all people, without limiting these rights to present generations;

b) International law in its various forms that explicitly or implicitly recognize obligations and responsibilities towards future generations, and seek to ensure intergenerational equity; and

c) General principles of law, as reflected in laws, norms, customs and values of States and peoples from all global regions and belief systems that recognize obligations and responsibilities towards future generations, or that are and will continue to be relevant to the protection of the human rights of all, without limiting them to present generations.

2.2. The above bases do not preclude other sources of law recognizing the rights of future generations that are consistent with these Principles.

3. Limitations and Derogations

States may only subject human rights, including the rights of present and future generations, to limitations and derogations expressly permitted under international law pertaining to those specific rights, and subject to the procedures and safeguards prescribed in the relevant international law.

4. Interpretation

a) Nothing in these Principles should be understood to affect any national or international standards that are more conducive to the realization of the rights of future generations.

b) Nothing in these Principles may be interpreted to imply that any State, group, or person has a right to engage in any activity or to perform any act aimed at

undermining any human rights recognized in these Principles, whether those of present or future generations.

c) Nothing in these Principles recognizes any rights of human embryos or fetuses to be born, nor does it recognize an obligation on any individual to give birth to another. These Principles may not be construed as accepting any interferences with the bodily autonomy of women, girls, and others who can become pregnant, including their actions and decisions around pregnancy or abortion and other sexual and reproductive health and rights.

d) These Principles must be interpreted and applied in a manner that is consistent with humanity's dependence on Nature and all living beings, and with the need to uphold the realization of the rights of Nature and all living beings.

5. Universality and Indivisibility of Human Rights

a) All human beings - in the past, present and future – are equal in dignity and entitled to the full and equal enjoyment of human rights.

b) All human rights are universal, indivisible, interdependent and interrelated. Future generations are entitled to all individual and collective human rights, including but not limited to, civil and political rights, economic, social and cultural rights, the right to a clean, healthy and sustainable environment; the right to development; the right to self-determination; and the right to peace.

6. Equality and Non-discrimination

a) Future generations have the right to equal enjoyment of all human rights. States must guarantee the rights of future generations as set out in these principles without discrimination of any kind. States and other duty bearers must refrain from any conduct which can reasonably be expected to result in, or perpetuate, any form of discrimination against future generations.

b) States must eliminate all forms of direct and indirect discrimination, including intersectional discrimination, on grounds of race, color, ethnic origin, sex, gender, sexual orientation, gender identity, marital and family status, work, descent, disability, health status, place of residence, age, national or social origin, religion, culture or language, political or other opinion, property, birth, economic and social situation, or any other status recognized, or to be recognized under international human rights law.

c) States must protect present and future generations against all forms of discrimination by public and private actors and prevent the emergence of new forms of discrimination.

d) States must take special measures to eliminate and prevent all forms of discrimination against groups and peoples that have experienced historical and/or systemic forms of discrimination such as slavery, colonialism, racism, discriminatory gender norms and practices and patriarchy. Such measures must include eliminating and preventing the intergenerational transmission of

inequality, poverty and oppression. States must also redress the continuing impacts of past injustices in order to ensure that present and future generations are not subject to similar abuses. Special measures must be continued until the full and equal enjoyment of human rights by all is achieved in law and in practice.

e) Future generations must be free from intergenerational discrimination. This discrimination includes but is not limited to:

i. The waste, destruction, or unsustainable use of resources essential to human life;

ii. Shifting the burden of responding to present crises to future generations; and

iii. According less value to future lives and rights than the lives and rights of present generations, including discounting the impacts and burdens of present conduct on the lives and rights of future generations.

7. Intragenerational and Intergenerational Human Rights Obligations

a) States must address and remedy intragenerational human rights violations – that is violations affecting members of present generations - in order to both realize the human rights of present generations and to avoid transmitting these violations to future generations.

b) States must respect and ensure the full enjoyment of children's human rights in the present as well as ensuring that their human rights in the future are not jeopardized, and refrain from conduct that would undermine their human rights as adult persons.

c) To meet their obligations to future generations, States must necessarily impose reasonable restrictions on activities that undermine the rights of future generations, including the unsustainable use of natural resources and the destruction of Nature. Such restrictions must not impair or nullify the enjoyment of human rights of present generations; must rectify the vastly disproportionate levels of control over and use of resources by some members of the present generation; and not impose disproportionate burdens on disadvantaged groups.

8. Intergenerational Duties and Trusteeship

a) Humanity is of the Earth, wholly dependent upon it, and interdependent with it. Every generation lives on the Earth and has an interlinked relationship with Nature and its biodiverse ecosystems. During their time on Earth, each generation must act as trustees of the Earth for future generations. This trusteeship must be carried out in harmony with all living beings and Nature.

b) Each generation has the duty to protect and sustain the Earth's natural and cultural heritage for future generations.

c) The principle of trusteeship and intergenerational duties includes the decisions each generation makes about the near-Earth environment and the Moon.

9. Prevention and Precaution

a) Where there are reasonable grounds for concern that the impacts of State or non-State conduct, whether singly or in aggregate, may result in violations of the human rights of future generations, States have an obligation to prevent the harm, and must take all reasonable steps to avoid or minimize such harm.

b) Doing so demands a strong approach to precaution, particularly when conduct threatens irreparable harm to the Earth's ability to sustain human life or to the common biological and cultural heritage of humankind.

c) The burden of proof in all circumstances must lie with those who would undertake or persist in the conduct involved, not with those who might be harmed as a result. This burden grows proportionately greater as the scale, scope, and irremediability of threats to rights of future generations increases.

10. International Solidarity

a) All human beings, whether within present or future generations, are entitled to a social and international order in which rights and freedoms can be realized for all. Such an international order is only possible, now or in the future, if people, groups and States adopt the principle of international solidarity.

b) States have an individual and collective duty to recognize, respect and practice international solidarity in their relations with each other to ensure the rights of present and future generations, including the right to live in a clean, healthy and sustainable environment, and the rights of nature.

11. Learning from and Upholding the Rights of Indigenous Peoples

a) In implementing and upholding the rights of future generations, States and non-state actors should draw inspiration and guidance from Indigenous Peoples' knowledges, cultures and traditional practices which contribute to sustainable and equitable development and the proper management of the environment.

b) Indigenous Peoples have the right to maintain and strengthen their distinctive spiritual relationship with their traditionally owned or otherwise occupied and used lands, territories, and other resources, and to uphold their responsibilities to future generations in this regard. States must respect and take active measures to protect the sovereignty of Indigenous Peoples over the lands, territories and resources they have traditionally owned, occupied or otherwise used or acquired.

c) States must respect and protect the rights of Indigenous Peoples to maintain their institutions, traditional lifestyles, languages, cultures, knowledge systems,

and spiritual ontologies for the benefit of present and future generations of Indigenous Peoples and for future generations of humankind.

12. Peasants, Local and Traditional Communities

a) Peasants, local, and traditional communities, including small-scale fishers and fish workers, pastoralists, and forest-dependent communities, have a special relationship with the land, water, and natural processes on which they depend for their livelihoods. They play a vital role in conserving and restoring biodiversity, protecting cultural heritage, undertaking sustainable practices of agricultural production, and ensuring food security for present and future generations. States should draw inspiration and guidance from their knowledge, traditions, and practices.

b) States must safeguard the full and equal enjoyment of all human rights to peasants and traditional communities, including, individually and collectively, their right to land, traditional knowledge, and seed systems; to participate equitably in sharing the benefits arising from the utilization of plant genetic resources; and to participate in the making of decisions on matters relating to their rights. In doing so, States must ensure that this knowledge and these vital resources remain available to future generations.

II. STATE OBLIGATIONS

13. Obligations to Respect, Protect, and Fulfil the Human Rights of Future Generations

a) States have obligations to respect, protect, and fulfil the human rights of future generations.

b) These obligations extend to all conduct of States, whether through actions and omissions, and whether undertaken individually or collectively, including decisions made in their capacity as members of international or regional organizations. Such conduct includes, but is not limited to, the adoption or implementation of policies, practices, programs and legislation.

c) Failure to comply with these obligations constitutes a violation of the rights of future generations.

d) States must ensure an effective remedy for failure to respect, protect and fulfil these rights as set out in section IV (Accountability and Remedies).

14. Scope of Jurisdiction

Each State has obligations to respect, protect and fulfil the human rights of future generations in any of the following circumstances:

a) Situations over which it exercises authority or effective control, whether or not such control is exercised in accordance with international law;

b) Situations over which its conduct brings about foreseeable effects in the enjoyment of human rights for present or future generations;

c) Situations in which the State, acting separately or jointly, whether through its executive, legislative or judicial branches, is in a position to exercise decisive influence, or to take measures to realize the human rights of future generations in accordance with international law.

15. Limits to the Entitlement to Exercise Jurisdiction

The State's obligation to respect, protect and fulfil the human rights of future generations does not authorize a State to act in violation of the United Nations Charter and general international law.

16. Obligation to Respect the Human Rights of Future Generations

States must refrain from conduct they foresee, or ought reasonably to foresee, will create or contribute to, a substantial risk of violations of the human rights of future generations.

17. Violations of the Obligation to Respect

Violations of obligations to respect the human rights of future generations include, but are not limited to:

a) Depriving future generations of sustainable and equitable enjoyment of natural resources, Nature or ecosystems necessary for the enjoyment of their rights to life, health, and an adequate standard of living for themselves and their families, including the rights to food, water, housing and sanitation;

b) Unsustainably using and depleting natural resources;

c) Polluting or degrading ecosystems;

d) Contributing to a decline in biodiversity or to anthropogenic climate change;

e) Creating human rights risks resulting from the development and/or deployment of technologies for reducing greenhouse gas emissions or removal of carbon from the atmosphere;

f) Engaging in conduct that results in discriminatory access to natural resources and benefits enjoyed by future generations as compared to present generations;

g) Impairing the ability of future generations to prevent and respond to climate change and other forms of environmental harm;

h) Censoring, withholding, intentionally misrepresenting, or criminalizing the provision of information related to the climate crisis;

i) Entering or remaining in bilateral or multilateral agreements that undermine the enjoyment of human rights by future generations;

j) Interfering with the voluntary perpetuation of a community or peoples' cultural legacy to future generations;

k) Taking measures that are foreseeably likely to result in displacement of future generations from their land, territories and/or housing, or that deprive them of enjoyment of Nature, ecosystems or natural resources;

l) Developing or using surveillance or data gathering technologies or other means of social control that would infringe the human rights of future generations;

m) Developing or using artificial intelligence systems that threaten the full enjoyment of human rights of future generations;

n) Developing or using weapons of mass destruction, including, but not limited to, inhumane conventional weapons, nuclear and biological weapons;

o) Producing or facilitating the production of any waste material or hazardous substances of a kind, or at a scale, that cannot be soundly managed, and safely and completely disposed of by the generation that produced it;

p) Developing or using reproductive technologies that threaten or violate future generations' human rights, including but not limited to, the rights to privacy, health, safety, bodily integrity, and equality;

q) Unjustifiably reducing expenditure on programs and institutions required to realize human rights, thus putting future generations at risk of diminished enjoyment of their rights.

18. Obligation to Protect the Human Rights of Future Generations

a) States must take all necessary measures to protect the human rights of future generations against substantial risks posed by the conduct of public and private actors, including business enterprises.

b) States have a continuing obligation to reasonably foresee and prevent the creation of circumstances likely to result in the violations of the human rights of future generations.

c) Necessary measures include, but are not limited to:

i. Adopting and implementing appropriate legislative and administrative measures as well as establishing procedures, institutions and mechanisms so as to identify and effectively prevent national and international threats to the human rights of future generations;

ii. Establishing special mechanisms, processes or institutions to monitor and report on the extent to which public bodies are setting and meeting their human rights obligations towards future generations;

iii. Ensuring effective and accessible judicial and other remedies for violations of the human rights of future generations in accordance with Part V.

19. Violations of the Obligation to Protect

Violations of obligations to protect the human rights of future generations by States include, but are not limited to:

a) The failure to adequately monitor and regulate the conduct of public or non-State actors where it is reasonably foreseeable that such conduct will impair future generations' human rights, or failing to hold them accountable for such conduct;

b) The failure by States to phase out fossil fuels within the shortest possible time, with States with the greatest responsibility and capacity to move most expeditiously;

c) The failure to avert, minimize and address loss and damage associated with the adverse effects of climate change; including the failure of States with greater responsibility and capability to adequately contribute both financially and through all appropriate policies and measures;

d) The failure to take steps to protect future generations from biological risks and threats;

e) The failure to prevent the degradation or destruction of irreplaceable topsoils and freshwater vital to sustaining the lives and livelihoods of future generations;

f) The failure to effectively regulate, and where appropriate prohibit, scientific research and activities that pose a reasonably foreseeable and substantial risk to the human rights of future generations, including genetic engineering and geo-engineering;

g) The failure to adopt effective measures to protect State and international decision-making processes from undue corporate influence or corporate capture which nullifies or impairs the human rights of future generations;

h) The failure to prevent the monopolization of access to knowledge and abusive corporate control of data required for the realization of the human rights of future generations;

i) The failure to adopt legislation, programs, and policies to protect the right to work and rights in work in the context of technological innovations that pose a substantial and reasonably foreseeable risk to the full enjoyment of these rights by future generations;

j) The failure to protect Indigenous Peoples, peasants and traditional communities' rights and prevent the appropriation of their systems of knowledge by State and non-State actors;

k) The failure to investigate and provide appropriate remedies for human rights abuses by non-State actors, including prosecution where appropriate, and reparation.

20. Obligation to Fulfil Human Rights of Future Generations

a) States must take all necessary measures to fulfil the human rights of future generations, including by providing and mobilizing adequate financial resources and technical assistance.

b) States must create an enabling environment to prevent and remove the causes of asymmetries and inequalities between and within States, and the structural obstacles and factors that generate or perpetrate poverty and inequality for future generations.

c) Necessary measures include, but are not limited to:

i. Recognizing the human rights of future generations in appropriate normative instruments, such as national constitutions and legislation;

ii. Adopting framework legislation that allocates duties and responsibilities in relation to the fulfilment of the rights of future generations to different levels and branches of the State and dedicated agencies and commissions, and sets appropriate time-bound targets;

iii. Establishing a domestic mechanism that conducts a prior review or audit of the potential effects of legislation, bills and policies and other governmental decisions on the human rights of future generations;

iv. Imposing duties on State and non-State actors to carry out environmental and human rights impact assessments of decisions, explicitly including impacts on the rights of future generations;

v. Ensuring that the burdens of mitigating and remedying climate change and other forms of environmental destruction are not shifted to future generations;

vi. Ensuring that disadvantaged groups, developing States, in particular least developed States, small island developing States, and States in conflict and post-conflict situations do not bear disproportionate costs and burdens of mitigating and remedying environmental destruction;

vii. Designing and implementing educational and awareness programs on the human rights of future generations;

viii. Taking positive measures to facilitate knowledge and understanding of the human rights of future generations;

ix. Phasing out unsustainable consumption and production patterns and waste generation that jeopardizes the Earth's ability to sustain future generations. Wealthier States must proceed more expeditiously under the principle of common but differentiated responsibilities and respective capabilities;

x. Developing and implementing human rights-based governance and regulation of information and communication technologies that ensure, non-

discriminatory access to the internet, and public control of data infrastructure;

xi. Providing financial and other forms of support to representatives of future generations to participate in public deliberation, mobilize, and advocate for their human rights;

xii. Creating an enabling environment that fosters and promotes the capacity of individuals, community-based organizations, social movements, non-governmental organizations, and Indigenous Peoples to defend all the human rights of future generations, including the right to self-determination;

xiii. Removing barriers for women and girls to participate fully and equally in education and the economy, including in areas in which they are under-represented, such as science, technology, engineering and mathematics.

21. Violations of the Obligation to Fulfil

Violations of obligations to fulfil the human rights of future generations by States include, but are not limited to:

a) The failure to take positive measures to facilitate knowledge and understanding of the human rights of future generations;

b) The failure to adopt and implement legislation, policies and programs to eradicate the intergenerational transmission of poverty and disadvantage;

c) The failure to establish appropriate monitoring mechanisms to evaluate progress in the fulfilment of rights, including the rights of future generations;

d) The failure to ensure that the rights of future generations are fully integrated in national human rights strategies and plans of action;

e) The failure to ensure, at the very least, the satisfaction of essential levels of social, economic and cultural rights for present generations, and to take measures that enable future generations to ensure these levels for themselves;

f) The failure to take individual and collective measures to reduce inequality both within and between States;

g) The failure to mobilize and allocate adequate resources, including from international assistance and cooperation, to facilitate the full and equal enjoyment of human rights by future generations;

h) The failure to invest adequate resources to ensure a just and fair transition from the production and use of fossil fuels and other ecologically harmful activities;

i) The failure to take appropriate measures to prevent potential public health emergencies in the future;

j) The adoption of retrogressive measures that result in the unjustified reduction or diminishment in the enjoyment of human rights by future generations;

k) The failure to prioritize the realization of the rights of marginalized and disadvantaged groups in realizing the rights of future generations.

22. Participation and Representation

a) Future generations must be represented meaningfully and effectively in decision-making that may impact on their enjoyment of human rights.

b) States must create the enabling conditions for representation of future generations to participate in decision-making. This includes recognizing bodies established by Indigenous Peoples, peasants and traditional communities that have developed their own mechanisms to represent future generations.

c) States must recognize and respect that present children, adolescents and youth occupy a proximate position to future generations, and must protect their rights to be heard and other participatory rights, including when advocating for human rights on behalf of themselves and future generations.

d) States must create accessible and inclusive bodies and institutions at all levels to ensure that the representatives of future generations can effectively participate in decision-making that affects their human rights. Examples of such bodies and institutions include: Ombudspersons, guardians, trustees or commissioners; designated seats in parliaments, National Tribunals to protect Nature and/or National Human Rights Institutions. Special attention must be paid to ensure that these institutions and mechanisms are diverse and include meaningful and effective participation by groups that are disadvantaged or who have experienced systemic discrimination. The independence of such institutions must be guaranteed.

e) States must take adequate and effective measures to guarantee the rights of individuals or groups of individuals working to protect or promote the rights of future generations, including women, children and youth, Indigenous Peoples and environmental and human rights defenders. Such protection must ensure freedom from attacks, threats, intimidation, retaliation, stigmatization or criminalization.

23. Access to Information

a) States must make every effort to ensure easy, prompt, effective and practical access to comprehensible information about issues that may affect the human rights of future generations, including by proactively making this information available. They must also put in place procedures that provide representatives of future generations with the right to seek and receive such access to information, and ensure transparency about decisions reached.

b) Fees, where charged, should not constitute an unreasonable impediment to access to information, and an appeals system should be in place to challenge failures to provide information.

c) States must provide and disseminate information on matters that are important for the effective protection of the human rights of future generations, such as environmental and climate related information, information on inter-generational toxic, chemical and radiological hazards, technological developments and scientific research. They must respect, protect, and fulfil the freedom to seek, receive, publish and disseminate such information.

d) States must ensure disclosure of information necessary to fully and properly identify State and non-State actors that may be responsible for human rights impacts on future generations.

e) Information should be provided in languages used by affected peoples, groups and communities, in alternative formats, and through suitable channels of communication that are accessible to disadvantaged groups. Information must also be disseminated in an accessible manner for persons with disabilities, including through braille and other assistive technologies.

f) States must refrain from the dissemination of false and misleading information on issues that are important for the protection of the human rights of future generations including, but not limited, to climate change, the implications of technological developments, and scientific research. They must counter and, where appropriate, prevent dissemination of such misinformation by other actors. They should regulate and address conflicts of interest that undermine the right to information.

24. Extraterritorial Obligations

a) States have obligations towards future generations who will exist within their territory and outside their borders. These arise on the basis of:

i. obligations relating to the acts and omissions of a State, within or beyond its territory, that have effects on the enjoyment of human rights outside of that State's territory; and

ii. obligations of a global character that are set out in the Charter of the United Nations and human rights instruments to take action, separately, and jointly through international cooperation, to realize human rights universally.

b) States must take all appropriate legal, political, economic and diplomatic measures to refrain from conduct that would create a reasonably foreseeable risk of impairing the enjoyment of human rights by future generations, including outside their territory. They must conduct regular assessments of the extraterritorial impacts of their laws, policies and practices.

c) States must prevent corporations and other non-state actors under their jurisdiction from engaging in conduct domestically or outside their borders that

would create a reasonably foreseeable risk of impairing the enjoyment of human rights by future generations, including outside their territory. States should provide effective judicial or other State-based mechanisms to hold corporations and other non-state actors legally accountable for such violations.

d) States must, individually and jointly, take deliberate, specific, and targeted measures in decisions and international agreements to create an international enabling environment conducive to protecting the rights of present and future generations. Such measures must include economic, social and environmental and climate-related measures. These measures must be taken in accordance with equity, and the common but differentiated responsibilities and respective capabilities of States.

e) States must ensure that international trade and investment agreements are applied and interpreted in a manner consistent with the human rights of future generations, and where necessary to realize these rights, terminate, amend or withdraw from existing agreements. Consistency between trade and investment agreements and human rights obligations require that the former be designed, implemented, applied and interpreted in a manner that does not undermine or restrict the State's capacity to fulfil their human rights obligations. They have the duty to notify, consult and negotiate with other States in situations where there is a substantial and foreseeable risk of violating the human rights of future generations.

f) States have an obligation to provide international assistance commensurate with their capacities, resources and influence, and to cooperate with each other, to ensure respect for, and the protection and fulfilment of, the human rights of future generations, as established in the Charter of the United Nations and in international human rights treaties.

g) States in a position to do so should individually and collectively take steps to prevent and resolve unsustainable State debt (including, as appropriate, through unconditional debt relief) owed by other States that will infringe the human rights of future generations.

h) States in a position to do so should provide international assistance, including financial, technological, and other forms of assistance, to contribute to the realization of human rights of present and future generations.

i) International assistance should not undermine national development strategies or polices and domestic accountability mechanisms and procedures and must observe international human rights standards, including the right to self-determination, the right to participate in decision-making, and the protection of the human rights of future generations.

j) States providing aid and those receiving it should be accountable to present and future generations for their actions and the results of their interventions. This requires that mechanisms are created for representatives of future

generations to participate in decision-making about international assistance, and to seek remedy and redress on behalf of future generations.

III. OBLIGATIONS, DUTIES AND RESPONSIBILITIES OF OTHER ACTORS

25. Duties and Responsibilities of Non-State Actors Including Business Enterprises

a) Non-State actors, including business enterprises, must at the very minimum, respect the human rights of future generations, and thus refrain from causing or contributing to adverse impacts on their human rights through their activities, products or services, and prevent harm, mitigate risk and remedy such impacts when they occur.

b) Businesses and other non-state actors whose actions may negatively affect the enjoyment of human rights by future generations must adopt a clear policy commitment to respect future generations' human rights. They must comply with their duty of care including along their value chains. They must undertake human rights due diligence processes to identify and assess any actual or potential impacts on human rights posed by their activities, products and services in all their business relationships. They must also disclose, prevent harm, mitigate risks and remedy the adverse effects of their actions on the human rights of future generations.

c) Non-state actors that breach these duties and responsibilities should be held accountable under international law.

26. Obligations of Intergovernmental Organizations

a) States and international institutions of which they are members must create an enabling global environment with the aim of achieving the full realization of human rights of future generations.

b) International financial institutions and other inter-governmental and supranational institutions are subjects of international law and have a duty to not impair the ability of their members to comply with their legal obligations. They must accordingly respect the human rights of future generations, and engage in conduct consistent with the realization of these rights. They must comply with all obligations imposed by the general rules of international law and ensure access to remedies for any violations of their obligations towards future generations.

c) International financial institutions and other inter-governmental and supranational institutions must ensure that their policies, practices, and economic reform measures will contribute to the realization of, and not undermine, the human rights obligations of States towards future generations. They must refrain from designing, adopting, financing, and implementing policies or measures that, directly or indirectly, impair the enjoyment of human rights by future generations.

d) Inter-governmental and supranational institutions, at the global and regional level, should support efforts by States to uphold the rights of future generations including through multilateral cooperation. Such support should include technical cooperation, financial assistance, institutional capacity development, knowledge sharing, exchange of experiences and transfer of technology.

e) International financial institutions and other inter-governmental and supranational institutions must adopt effective measures to protect decision-making processes and spaces from undue corporate influence or corporate capture which nullify or impair the human rights of future generations.

27. Responsibilities and Duties of Individuals and Communities

a) Every person has responsibilities and duties to themselves, their community and society, and to humanity as a whole, including duties to respect and promote the human rights of future generations.

b) Civil society organizations and non-governmental bodies have responsibilities to respect and promote the human rights of future generations.

c) National human rights institutions must have the competence to oversee decisions that may have an impact on future generations. They should incorporate the human rights of future generations in their plans and programs, and should put in place mechanisms to monitor and report on the activities, decisions or policies (and the implementation thereof) by States' authorities which affect the human rights of future generations.

d) The recognition of individual and community responsibilities in no way diminishes the obligations of States to respect, protect, and fulfil or the duties of non-state actors to respect the human rights of future generations.

IV. ACCOUNTABILITY AND REMEDIES

28. Incorporation and Implementation in Domestic Law

States must ensure that the human rights of future generations are effectively incorporated into their domestic law, or otherwise recognized in their domestic legal system.

29. Victims

For the purposes of the present section, victims of violations refer to future generations, including persons, groups, and Peoples, who face a substantial and reasonably foreseeable risk of suffering human rights violations, whether individually or collectively, through acts or omissions of present States and non-State actors. The designation of persons, groups and Peoples subject to such violations as victims in this context refers to their entitlement to hold accountable those responsible for violations of their rights, while affirming their dignity, autonomy and self-determination.

30. Effective Remedies

Everyone has the right to an effective remedy for conduct violating their human rights. To that end, States must:

a) Provide adequate judicial, quasi-judicial and administrative mechanisms for the supervision and enforcement of the human rights of future generations;

b) Investigate, adjudicate, and redress violations of future generations' human rights caused or contributed to by States or private actors;

c) Ensure that victims (and their representatives) have standing before courts and human rights bodies, and take all necessary measures to ensure that representatives are able to enforce the human rights of future generations through the judicial system;

d) Ensure access to justice, including by removing barriers to access and providing appropriate and adequate assistance to victims' representatives;

e) Disseminate, through public and private mechanisms, information about all available remedies for violations of the human rights of future generations;

f) Where the harm resulting from an alleged violation is expected to occur on the territory of a State other than the State where the harmful conduct took place, any State concerned must provide the victims with access to justice, whereas the obligation to provide reparations falls on the States responsible for the harmful conduct.

31. State Responsibility

A State is responsible for the breach of obligations to respect, protect and fulfil the rights of future generations from the moment that it fails to act in conformity with these obligations.

32. Prevention, Cessation, Non-repetition and Redress

States' obligations to respect, protect, and fulfil the rights of future generations include, among others, the obligations to:

a) Take appropriate legislative, administrative and other measures to prevent violations, including the regulation of activities by non-state actors under their jurisdiction;

b) Take effective measures aimed at the cessation and non-repetition of activities that risk harming the rights of future generations; including preliminary measures to prevent harm while remedial procedures are underway;

c) Provide effective guarantees of non-repetition of violations;

d) Provide adequate, effective, prompt and appropriate redress to victims, including reparation, as described below.

33. Full and Effective Reparation

Victims are entitled to full and effective reparation, as laid out in principles 34-36 below, which include the following forms: restitution, compensation, and satisfaction. Reparation for violations of the human rights of future generations should be proportionate to the gravity of the violations and the harm caused by the violation. States, in consultation and cooperation with representatives of victims, must establish national and international programs for reparation for violations of the human rights of future generations.

34. Restitution

Restitution should be aimed at restoring the ability of victims to enjoy their human rights to the greatest possible extent. It should be informed by the best available scientific evidence, as well as Indigenous Peoples' and traditional knowledge, by precaution, and the participation of victims' representatives. Restitution includes, as appropriate: restoration of degraded ecosystems and means of subsistence and development, return of land, territories, resources, and other property, and means to identify, restore, revitalize and transmit cultural heritage.

35. Compensation

Appropriate compensation must be provided for any damage that cannot be prevented or repaired, including when restitution is not possible. Compensation may be made in kind, or in the form of monetary compensation committed to victims.

36. Satisfaction

Satisfaction must include, where applicable, any or all of the following:

a) Verification of the facts and full and public disclosure of the truth regarding the causes and conditions pertaining to the violations, including the role and responsibility of non-state actors;

b) Mechanisms to provide victims and their representatives with information on the causes and conditions pertaining to the violations and to learn the truth in regard to these violations;

c) An official declaration or a judicial decision restoring the dignity, status and rights of the victims;

d) Public apology, including acknowledgement of the facts and acceptance of responsibility;

e) Judicial and administrative sanctions against persons liable for the violations;

f) Inclusion of an accurate account of the violations that occurred in national and international human rights law training and in educational material at all levels.

Part II: Measuring to Thrive performance framework

Introduction

As a new and improved performance framework, Measuring to Thrive[52] will offer perspective on the well-being of First Nations children, families, and communities (see Figure 32), in keeping with the legislatively defined principles of **substantive equality**, the **best interests of the child**, and a **culturally-informed approach**. The intent of Measuring to Thrive is to provide FNCFS agencies with a portrait of the people they serve and the context in which they operate to support enhanced decision-making and eventually, to better inform funding approaches (see Appendix J for the full framework).[53]

What you measure, you manage. This framework is a tool to promote better understanding of community in order to ensure an agency has the resources required to meet the needs of the people it serves. Measuring to Thrive is a vision to promote better results for children; it is not about measuring an agency's individual performance.

[52] Agency leadership and experts convened for a roundtable on February 21, 2020 in Ottawa at the Institute of Fiscal Studies and Democracy (IFSD), to refine a measurement framework based on the work of First Nations child and family services (FNCFS) agency leadership in 2018.

[53] The Children's Health and Well-being Measure (CHWM) is a 62 multiple choice question survey, with three open ended questions to help to assess the spiritual, emotional, physical and mental health of Indigenous children. Administered via tablet in five First Nations communities in Ontario, the survey results have helped to develop community portraits of children's wellness and the delivery of services and resources of children in need. Focused exclusively on children's health and wellness the CHWM was not designed to assess child, family and community holistic well-being.

KW'UMUT LELUM
BRITISH COLUMBIA

The dashboard agency: It's about outcomes, not about band-aids.

A focus on outcomes must be accompanied by clear lines of accountability, requisite human capital, IT and data resources.

Context
Kw'umut Lelum serves nine First Nations in British Columbia. With populations below 2,000 per community, close collaboration and engagement is facilitated. Working closely with band councils, Kw'umut Lelum works to address service gaps and not duplicate services in its communities.

The agency's appreciation for relevant data focused at the level of the child and their community, supports the development of needs-based programs built from the bottom-up. In the last two years, Kw'umut Lelum has undergone organizational shifts to build and integrate a new outcomes-focused data system. From budgets to programs, Kw'umut Lelum is building real-time portraits of its communities, their needs and what works for them.

Operating
Kw'umut Lelum had a substantive shift in its operations in 2018, with prevention funding that changed internal structures and practices. From the hiring of prevention workers for each First Nation served, to the development of a data team, the agency finally had the resources to orient its practice toward holistic well-being.

The way Kw'umut Lelum frames its challenges is rooted in a life-cycle perspective. When considering access to services, it is not only about counting which services are there an which are not, but also about barriers to access and the appropriateness of those services for communities. This nuance is an important one. Connecting context to inputs, outputs and outcomes, from the ground-up, facilitates a different way of delivering a mandate.

To build this perspective, Kw'umut Lelum began collecting quantitative and qualitative data in an integrated database. This approach helps the agency track the progress of an individual child and also understand how they, their family and community are faring together. Linking contextual information about

communities to the experiences of the individual paints a clearer portrait of the ways in which services, environment and resource allocation interact.

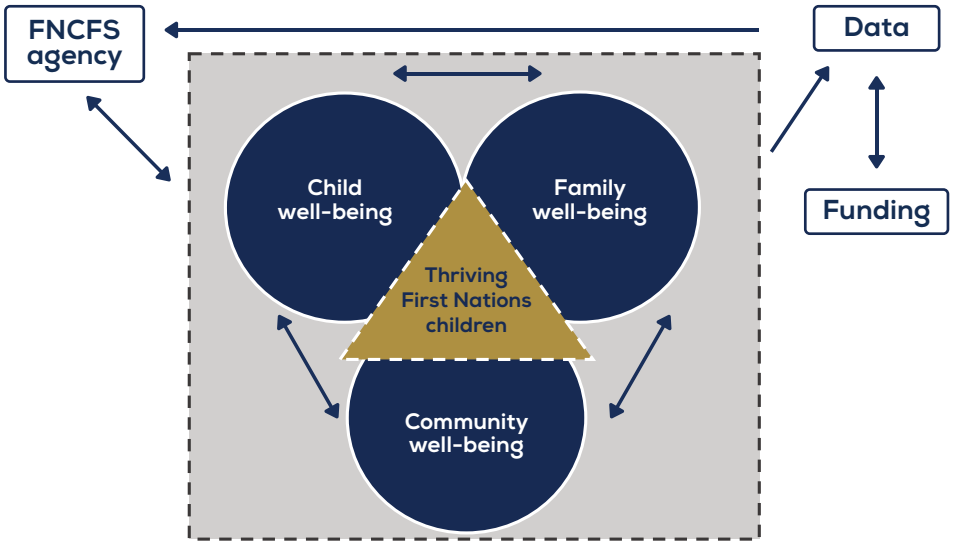
The evidence generated from the data is very useful for budget and resource planning. With an enriched perspective, budgets can be aligned to need, and verified through consultations and regular assessments with chiefs and communities. Budget allocations, especially on well-being and prevention matters are determined with input from the senior management team, the board of directors, and community consultations.

Kw'umut Lelum has three points of accountability in its organization: to their board of directors, to band management, and to the communities and their front-line staff. The system of accountability promotes cross-collaboration, connections to and knowledge of communities.

Lessons and Considerations

Change such as the type Kw'umut Lelum has introduced in the last two years does not come easily. Organizational change needs confidence building leadership and a cohesive senior team. Change may not suit everyone equally and some staff may choose to leave. Agencies should be prepared with a well communicated plan to deliver the change and be open to adjusting in-course to meet unexpected circumstances.

FIGURE 32: Measuring to Thrive framework's holistic conception of well-being.



WHAT WE HEARD

1. Context matters: The experiences and needs of individual agencies and their communities differ, e.g. urban, rural, remote, etc. ***The measurement framework must abstract to a common collective vision of well-being.***

2. Culture is key: Culture, language and land are crucial elements of belonging. Opportunities for children and families to connect with their community are important. ***The measurement framework must be read through the lens of individual cultural practices, traditions and languages.***

3. Safety is an element of well-being: Safety is not an independent goal of FNCFS, it is an important element of overall child well-being. ***Safety must be a measure within child well-being.***

4. Measuring what matters: FNCFS agencies recognize the value of collecting and using their own meaningful data for improved decision-making and funding approaches. ***Measuring what matters will take time and will require a period of testing and adjustment to refine the approach.***

5. Capacity requirements: Agencies require internal capacity and support to leverage data collection and analysis that reflects them. ***A third-party independent and trusted custodian of the data should be established to support this need, along with resources internal to agencies.***

The vision in Measuring to Thrive is expressed through three interrelated elements: the well-being of communities, families and children. Measuring to Thrive is meant to be read in the spirit of holistic well-being. As such, it is meant to be informed by the unique cultural practices, traditions and Indigenous languages integral to thriving First Nations and their communities (see Figure 33).

FIGURE 33: Measuring to Thrive framework overview.

FAMILIES
(6 indicators)

Performance area	Sample measures of indicators
Wellness and social engagement	▪ Families reporting livable income to meet needs ▪ Families demonstrating social engagement through participation in cultural traditions, teachings and ceremonies ▪ Incidents of family violence

CHILDREN
(42 indicators)

Performance area	Sample measures of indicators
Safety	▪ Incidences of child sexual abuse ▪ Number of moves in care ▪ Rates of family reunification
Cognitive development	▪ Children achieving basic numeracy and literacy targets
Social relationships	▪ Youth reporting ties to elders ▪ Youth reporting ties to siblings, extended family, friends
Emotional, cultural and spiritual well-being	▪ Children/youth reporting eating traditional foods ▪ Children/youth reporting pride in Indigenous identity
Physical health and well-being	▪ Children/youth reporting regular physical activity ▪ Percentage of teenage births

COMMUNITY
(27 indicators)

Performance area	Sample measures of indicators
Basic needs	▪ Households with drinking water flowing from tap for consumption, bathing and other uses ▪ Households with internet connectivity ▪ Community employment rate
Community services and engagement	▪ Community spaces for gatherings ▪ Community controls and runs health services
Wellness	▪ Rates of violent crime ▪ Rates of chronic health conditions
Education	▪ Community offers and controls elementary education ▪ High school graduation rates

The vision in Measuring to Thrive is meant to be universal. No matter where you reside, there can be agreement on the highest order elements that indicate thriving communities, families and children. While Measuring to Thrive is a common expression of well-being, individual agencies will deliver their mandates in the best interests of the communities they serve. This means that remote, rural, urban, large and small agencies may have differing needs and approaches to their practice, but may find unity in the pursuit of well-being for thriving children, families and communities.

Ideally, the Measuring to Thrive framework receives strong and broad-based support and is used in part or in full as a common tool for data development and tracking among federally funded FNCFS agencies. As proposed and agreed during the roundtable, it would be imperative for FNCFS agencies and for their communities to have any data collected through this framework transferred to a neutral, reliable and trusted third-party who would be a custodian of the data. This data would belong to FNCFS agencies and their communities. An institution such as the First Nations Information Governance Centre (FNIGC) could be leveraged or an agency similar in style to the University of Chicago's Chapin Hall, could be established in Canada to securely house, analyze and support FNCFS agencies in the collection and application of their data. Over time, as increased amounts of data are collected and analyzed, the data's predictive value would improve making it a helpful planning tool.

In the current state of FNCFS, there is a lack of alignment between social policy and financial resources. Social policy research and FNCFS agencies have repeatedly emphasized the importance of prevention-focused approaches to care that empower children, families and communities, rather than focusing on protection. Approaches taken by FNCFS agencies in pursuit of the well-being of their communities are numerous. There are, however, established gaps in their regular funding in areas such as prevention, capital and information technology. Poverty is a critical gap to address and was used euphemistically to capture the challenging contexts in which many FNCFS agencies operate. Such challenges include limited housing and housing in need of major repairs, access to potable water from the tap, access to broadband, etc.

FNCFS agencies do not operate in a vacuum but are influenced by the realities of the communities they serve. Ensuring that financial resources are aligned to the realities of their circumstances is necessary to support the well-being of communities. Achieving alignment between policy and resources requires people, processes and data to deliver operations and promote accountability.

As active organizations in a network of services in their communities, FNCFS agency activities are ideally focused on investing in people and collaborating to support the development of capable human beings. Inter-relationality is paramount, as individuals are wholly well with a sense of community.

In the Measuring to Thrive framework, **community** is a network of belonging and support; **family** is a collection of people who may have blood relations that support each other almost every day; **child** is a young person on a journey to adulthood.

CARRIER SEKANI FAMILY SERVICES BRITISH COLUMBIA

Empower your staff to deliver the best programming, informed by your own data, evidence and cultural approach, to build a trusted organization focused on well-being. Scale matters. Large and sophisticated agencies have the resources for such activities as research and communications that drive results and community connectedness. No matter an organization's size, its growth has to be paired with change management and resources in IT infrastructure, human resources, and capital assets.

Context

Carrier Sekani Family Services (CSFS), is a large prevention-focused organization serving eleven First Nations from three offices in and around Prince George, Vanderhoof, and Burns Lake, as well as Health Centres on-reserve in north central British Columbia. The agency's life cycle model (from cradle to grave), informed by its own research, extends across health and social programs and services. From intensive family preservation to telehealth initiatives, CSFS has empowered its staff to innovate, try, fail, and succeed, in support of the people and communities they serve.

Operations and Programs

Working cohesively as an organization, CSFS seeks to design its services to strengthen capacity in communities, and to support the development of happy and healthy children and families. There is no 'wrong door' in at CSFS. Staff are well connected and freely collaborate within the organization. An individual or family in need of support will find a wrap-around approach to services.

Strong leadership, research and policy are pillars of CSFS's integrated approach. Senior executives are credited with creating an environment that empowers staff, making them feel accountable for the organization and its outcomes. Managers run business lines in the organization, with latitude to solve problems and innovate to meet community needs. The organization has developed a Terms of Reference, unique to each First Nation, outlining its process for integrated care meetings.

CSFS's over 200 staff are regularly convened for meetings (typically, virtually), in which updates are shared and ideas discussed. Complex care clients/patients are reviewed at monthly integrated care meetings. The regular contact and awareness reinforce the integral role staff play in the operation. Staff retention is high.

CSFS's research program is a defining element of the agency. Current research in health, psychology, social services, etc. is paired with internal data and evidence to build policies and programs that support outcomes. Staff value the relationship they describe as 'symbiotic' with the research team, as they engage in 'true collaboration,' in their work. The research team maintains connection to community through a Research Advisory Board made up of knowledge holders from each member nation.

There are direct linkages between research and programming at CSFS. Programs such as, the Intensive Family Preservation Program are informed by research on traditional child rearing and traditional laws. The youth program, Walk Tall, was shaped by research and findings from the Youth Suicide Project. Following ten years of research, the Family Law Program was established to support families. Mediators associated to this program are trained through a specialized course, delivered in partnership with the University of Northern British Columbia for which university course credits are earned.

An in-house curriculum, "Our Way," was developed define a culturally informed approach to services, specific to the eleven First Nations CSFS serves. The approach has become very popular in the organization and even outside of it, with paid training.

The emphasis on data, evidence and evaluation is built-in to new initiatives and programs. Services are accredited with the highest recommendation possible in audits. For example, Youth Services, a relatively new department is building in community consultations and evaluations with participating members into their practice from the outset. This work encourages in-course corrections by adjusting practices to meet needs.

This theme of informed, accountable and empowered staff extends across the agency. There is a focus on care with social workers carrying an average of eight cases. This changes the dynamic of care, with social workers able to focus on people instead of paperwork. The agency's vision is core to staff retention; the organization doesn't just respond to crises; they work with families to build better futures. Staff feel valued, contribute ideas, engage in research, build programs and policies from the ground-up.

Outward Facing Connections

Serving eleven communities and a large staff, CSFS has built a Communications Team that runs social media accounts, a YouTube page and contests. The team helps to share stories and practices for well-being in the communities. They share information, promote events, and encourage awareness of CSFS.

The community engagement goes beyond a one-way transfer of information to focus on development. CSFS contracts the Nicola Valley Institute of Technology to run customized training programs. With training funded by CSFS, community members can pursue human resource training and social work training and work for the agency. CSFS's presence in communities is constant, and not exclusively associated to protection problems. By investing in communities, CSFS benefits from their engagement and trust.

Conscious that service offerings differ in community and in cities, CSFS is working to foster a similar continuum of services. Programming tends to be more extensive in communities, while many members are moving into urban centres. The continuity of service is important to CSFS, and they are extending their capacities to meet their community members wherever they reside. Infrastructure, such as CSFS's electronic medical record, provides real time access to the same information throughout the territory, helping staff to support patients wherever they are accessing services.

In the last two years, CSFS has expanded its programming offerings with funding from CHRT rulings. The growth while exciting, highlighted the importance of pairing change with requisite IT infrastructure, human resources, and capital assets. Responding to the concerns of managers who had lengthy hiring waits and a need for space, was critical to sustaining morale in changing circumstances.

Lessons and Considerations

Major growth can be exciting and challenging. When circumstances change, it is imperative that staff are supported and are actively engaged in change management. Technical, human and infrastructure resources should be commensurate to mandate and grow/change with priorities.

Research, data and evidence can be powerful tools to inform and enhance policies and programming. While not all agencies will have a research directorate, emulating program-level evaluation practices, data tracking and in-course adjustments can yield benefits by capturing and applying learnings in future decisions.

A cohesive and high-functioning organization is built on trust and the contributions of its members. CSFS has nurtured an environment that creates a supportive space for staff to innovate, with accountability for outcomes.

Applying the framework

On a quarterly basis, data on the indicators in the Measuring to Thrive framework would be collected. Data will come from various sources, including case files from the agency, as well as external publicly accessible data, e.g. Regional Health Survey, Statistics Canada, etc. Any data to complete the framework will not identify individuals. Measuring to Thrive is designed to collect information in aggregate to protect the privacy of individuals.

As the agency completes the framework, the data would be accessed by the third-party custodian (i.e. First Nations-led secretariat) responsible for scrubbing and analyzing the data. On a quarterly basis, researchers from the third-party will meet with agency leadership to discuss the analysis and potential applications on the ground.

Transitioning to a data collection and monitoring system that supports FNCFS agencies is not expected to be seamless. There will be a period of transition where testing and further refinement will be essential. It is expected that in order to get to the best possible version of Measuring to Thrive, revisions through use will be necessary. Testing the framework is the only way to ensure it reliably reflects the realities of FNCFS agencies and their communities.

FNCFS agencies have an opportunity to leverage the information (data); heart (stories); and resource needs (funding) of their communities to support them. There are four parts to the Measuring to Thrive framework:

1. Support improved decision-making by collecting relevant data aligned to a common vision;

2. Ensure data is good quality and connected to the realities and stories on the ground;

3. Ensure agencies have the capacity and support required to collect and analyze the data;

4. Inform resource allocation moving forward to promote a results-focused approach and allocative efficiency.

Taken together, the parts of the Measuring to Thrive framework can encourage a culture of accomplishment within FNCFS agencies wherein measurement is a tool to promote holistic well-being, supported through requisite resources.

Supporting software

FNCFS agencies will have their own case management systems to track their activities. Often, the data collected in these systems aligns to provincial requirements for child and family services and may not connect to overall holistic well-being of the child, family and community. IFSD has collaborated with software developers to build a complementary tool for FNCFS agencies to collect data and track their progress in alignment to the Measuring to Thrive framework (see the Measuring to Thrive software application details below).

There are other software providers, such as RedMane Technology,[54] that can offer agencies cloud-based solutions to data collection and integration with case management tools. A Chicago-based company, RedMane has offices in Vancouver and works with several FNCFS agencies across Canada. Its self-described expertise are in social service-oriented tools, including the mCase platform,[55] with capacity for systems integration, and off-the-shelf software implementation.

[54] See RedMane Technology's website, https://www.redmane.com/.

[55] See RedMane Technology's mCase platform, https://www.redmane.com/mcase/.

FNCFS agencies will have options and resources on how best to pursue their data collection and analysis in connection to the Measuring to Thrive framework.

Consistent, national data collection is possible. The United States and Australia—both federations with state-level governments involved in the provision of social policy—have national data collection practices on children in contact with the protection system, their experiences in care, and their transition out of care. Australia's data is principally an aggregation of child-level data, with additional sources. The United States has different databases, associated to the child's contact with the protection system. The Adoption and Foster Care Statistics (AFCARS) database collects information on care placement and adoptions. States are required to provide the information twice a year. Data for the National Child Abuse and Neglect Data System (NCANDS) database is voluntary for states, whereas information for the National Youth Transition database is collected through a mandated state-administered survey (see Table 5). The practice of regular, national data collection on child protection is possible, even in federal states. A national authority is often integral in defining the requirement or in orchestrating the aggregation.

TABLE 5: National data collection in child welfare in the United States and Australia.

Jurisdiction	Primary data sources	Data collected	Data custodian
United States	*Adoption and Foster Care Statistics (AFCARS)*: Collects information from Title IV-E agencies[56]	Case-level information on children in foster care[57]	United States Children's Bureau
	National Child Abuse and Neglect Data System (NCANDS): Data are submitted voluntarily by the states	Child welfare outcomes and characteristics of child maltreatment[58]	
	National Youth in Transition survey: States administer the survey to cohorts of youth at ages 17, 19 and 21[59]	Outcomes of youth currently in or recently aged out of foster care	
Australia	*Child Protection National Minimum Data Set/National Child Protection Data Collection*: Extracted from state and territory child protection administrative data sets[60]	Information on[61]: ▪ belonging and identity ▪ care planning ▪ connection to family, culture and community ▪ education ▪ health ▪ participation in decisions ▪ safety, stability and security of children and young people in care ▪ social and recreational needs ▪ training and support for careers ▪ transition from care	Australian Institute of Health and Welfare
	National survey of children in out-of-home care: Data are collected by the state/territory departments[62]

"MEASURING TO THRIVE" SOFTWARE APPLICATION

To deliver on results-focused outcomes for thriving children a web-based online system is being developed to capture outcome data from each CFS agency and to report the collected results. The current working name for this performance framework is "Measuring to Thrive". **It is important to note that all elements of the system are customizable, including branding. The IFSD logo was merely included as a placeholder in this mock-up.**

Technical Architecture

The solution is entirely "cloud-based" and designed and built to run on the Microsoft Azure cloud platform. All critical elements such as the application, web and database servers are located in Canadian data centres.

Database Technology

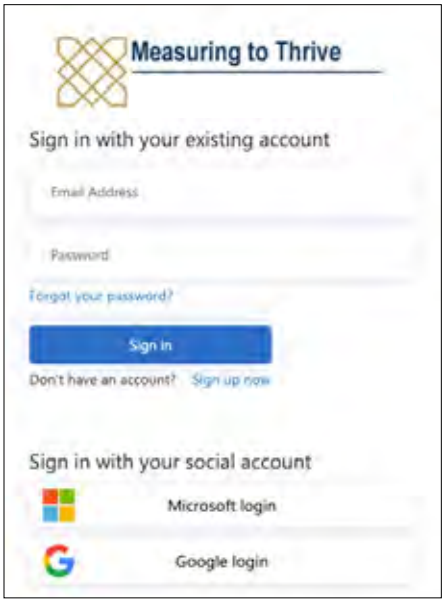
The system is built using the Microsoft Cosmos DB service (MS-SQL). The database can be easily configured to scale up and down to maximize cost efficiencies while still allowing for performance growth as demands require.

Application Server Technology

The application uses modern open-source technologies (Node.js) and is configured to only permit authenticated encrypted connections (HTTPS exclusively).

Application Analytics and Monitoring

The system leverages Azure's sophisticated Monitoring and Alerting features to provide administrators with relevant and timely information regarding the system's health and performance. All data gathered is automatically anonymized in a manner that preserves user privacy.



Identity & Access Management

The system permits an authorized user to login leveraging a Microsoft or Google ID or another email account of their choosing. The underlying technology uses Azure Active Directory B2C (AAD B2C)—a cloud-based identity and access management solution that can scale to hundreds of millions of identities.

Data Residency

All core application code as well as all sensitive application data and reported outcomes are stored exclusively on Canadian servers.

Data Model Overview

Agencies

There are 100+ First Nation Child and Family Services agencies in Canada. One record will exist for each agency and will contain descriptive information such as Agency Name, Address, etc. Each agency can have multiple user identities associated with it for secure login and data entry purposes. Agency records are setup and maintained by the system operator—not individual agencies.

Users

Each agency may have more than one individual who is permitted to login and view, enter or edit appropriate outcome data for an agency's communities. Each user will have a unique identity linked to an authoritative third-party provider such as a Microsoft or Google ID or a user selected email address linked to an Azure Active Directory B2C Local Account.

Bands

For the purposes of this performance reporting system each First Nation corresponds to a federally recognized Band—each of which has a unique Band Number. Each Band can be associated with one or more Reserves (Communities). Band records are setup and maintained by the system operator not individual agencies.

Reserves

For the purposes of this performance reporting system each community corresponds to a federally recognized Reserve—each of which has a unique Reserve Number. Each Reserve is associated with a Band. Each agency is responsible for one or more reserves (communities). Data entry (input) will occur at the reserve level of granularity. Reserve records are setup and maintained by the system operator not individual agencies.

Key Performance Indicators and Hierarchy

Indicators are grouped into a hierarchy illustrated below.

Component	Description
Strategic outcome	Broad but distinct societal areas of focus to achieve the strategic outcome.
Performance areas	The lenses through which progress on strategic outcomes can be understood.

As an example: The overarching goal is "*Enabling First Nations Children to Thrive*".

The overarching goal is made up of three Strategic Outcomes: Child and Youth Well-being, Family Well-being, and Community Well-being.

As a further example, the Child and Youth Well-being Strategic Outcome consists of five Performance Areas: Safety; Cognitive development; Social relationships; Emotional, cultural and spiritual well-being; Physical health and well-being

The Safety Performance Area breaks down to distinct Indicators:

- Number of serious injuries or deaths; Recurrence of child protection concerns after ongoing protection services; Child abuse (excluding sexual abuse); Child sexual abuse; Rate of family reunification; Timeliness of customary care; Percentage of children with kin and/or Indigenous families within their community; Quality of caregiver and youth relationship; Regular opportunities for relational connections to community; Out of home placement rate; Number of moves in care

KPI Definitions & Effective Dates

The system defines the Indicator name, data types, formula, description, etc. Since the Indicators in use will likely need to evolve over time, indicators include effective dates to dictate when they go live in the system and when they are retired from use. The data entry interfaces as well as reporting leverage effective dates to filter for relevant Indicators.

Periods

It has been decided that Government of Canada (GoC) financial years and fiscal quarters will be the basis of the application's calendar. GoC fiscal quarters are defined as: Q1 = April–June; Q2 = July–September; Q3 = October–December; Q4 = January–March.

Outcomes (Indicator Data)

Outcomes are the measurements of KPIs that are entered into the system. This is the most granular level of data in the application.

- Indicators for Child and Youth Well-being and Family Well-being will be reported by each agency for each reserve they serve on a quarterly basis.
- Indicators for Community Well-being will be entered by the system operator for each reserve on an annual basis using authoritative data from sources such as Statistics Canada, ISC, or other sources.

Record Level Security

All data entry and reporting in the system is filtered and secured such that only relevant data is visible/accessible to users based on their roles. In particular, it should be noted an agency user is only able to see the Bands and Reserves they serve and not the Bands and Reserves of other agencies.

Roles

The system envisions different roles for Agency and System Operator personnel with each having access to different privileges, capabilities and visibility over data. It is possible for a single user identity to have more than one role assigned. Specifically, while Agency staff will typically only have the "User" role assigned, System Operator personnel may have either "Administrator", or "Data Manager", or both "Administrator" and "Data Manager" assigned.

Administrator Role

The role of Administrator is assigned to System Operator personnel. This role will manage the general application settings and branding, updating the KPI definitions and associated hierarchy and maintaining text elements such as the help files, Terms of Use, etc.

Data Manager Role

The role of Data Manager is assigned to System Operator personnel. This role has three primary functions:

1. Create or edit Agency records and manage Agency License Keys for user onboarding;
2. Create or edit Band and Reserve records;
3. Enter or Edit Community Well-being data as required. Also, occasionally enter or edit Child and Youth Well-being & Family Well-being Outcomes data as required to support Agency personnel.

User Role

The role of User is assigned to an Agency User associated with a specific Agency. Each user will have a unique login that permits them to:

1. View/Enter/Edit data for Child and Youth Well-being as well as Family Well-being outcomes for each of their agency's reserves.
2. View/Select and export historical outcomes data for their reserves (including Child and Youth Well-being, Family Well-being as well as Community Well-being) for presentation or further analysis using tools such as Microsoft Excel.

User Interface/Experience (UI/UX)

The system is developed to support modern desktop browsers. The nature of the performance reporting system is "information dense". As such, the application is designed/optimized to be accessed primarily via desktop-grade web browsers. While the application can work with mobile devices, such as tablets, the experience may be suboptimal.

English or French User Experience

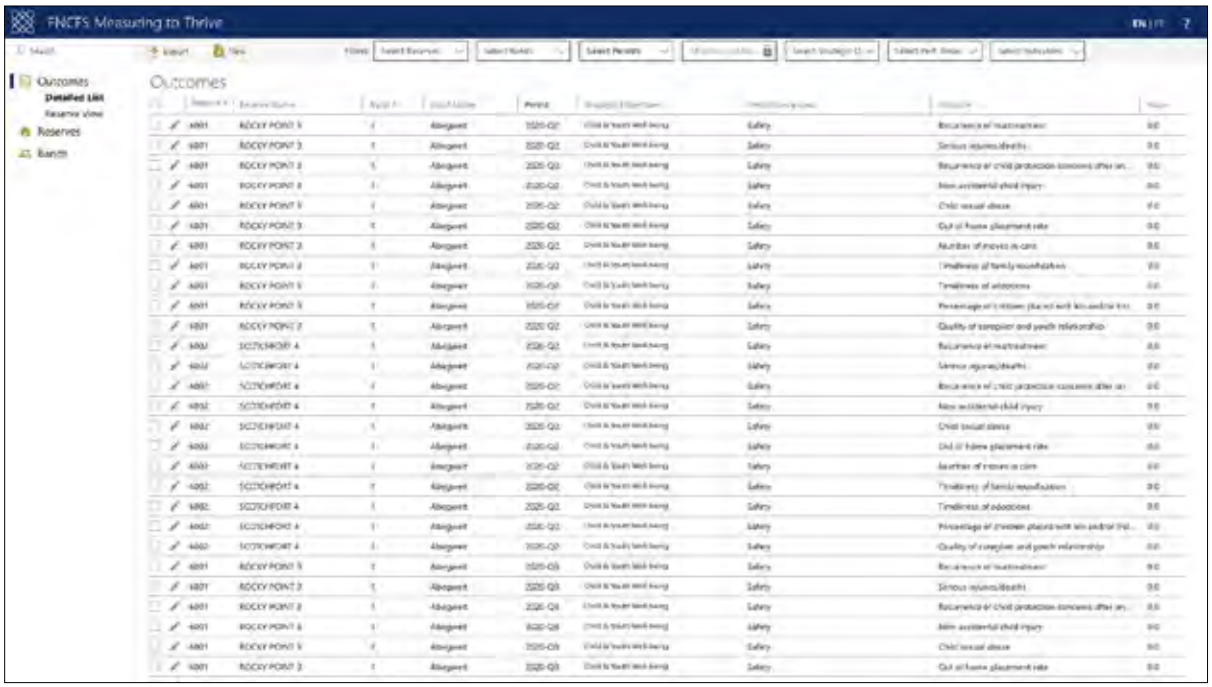
The application permits any user to operate the system in English or French and dynamically switch between the languages via a toggle.

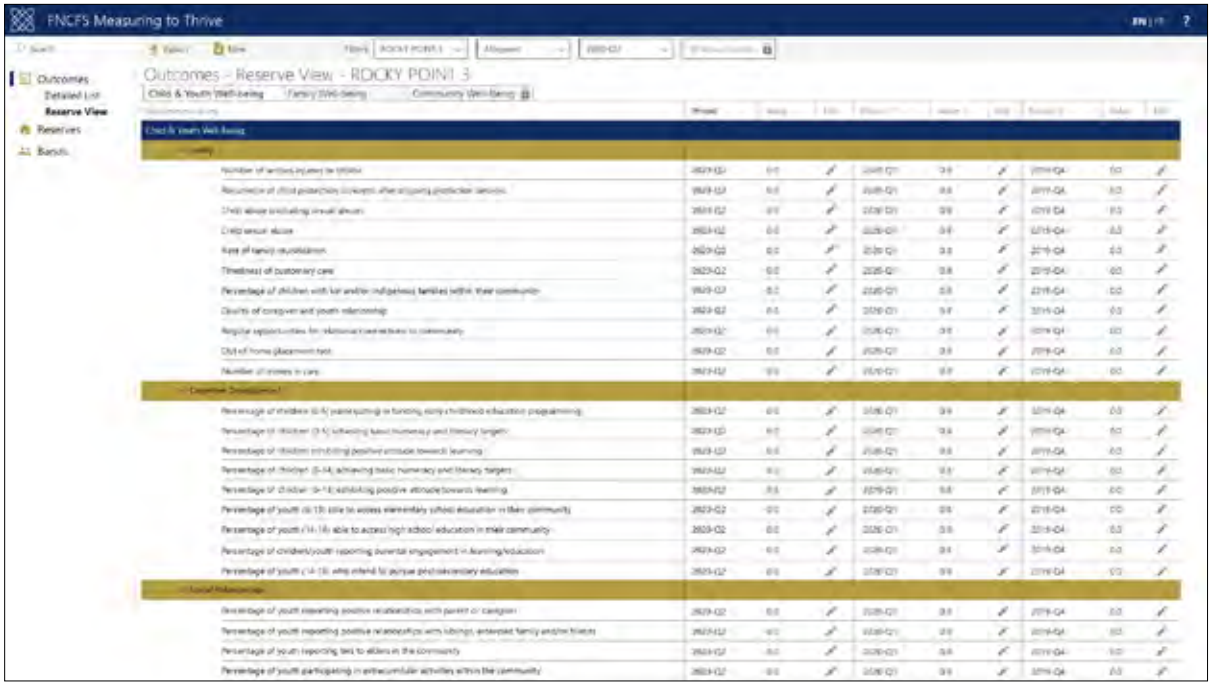
Dynamic filters

The application is very "data dense" and thus the UI employs a series of filters to allow selection of a subset of Agencies, Bands, Reserves, Indicators and Outcomes, in addition to "Time-based" filters for desired periods, to efficiently isolate desired historical records as required.

Screenshots

The screenshots shown below illustrate the initial mockup of a user's experience of Outcomes both as a Detailed List view and a Reserve View. Please note the data shown is only a placeholder—not actual outcomes.





Building well-being into performance

While the concept of well-being has received increasing attention from scholars and practitioners, both from states and international organizations, the issue of citizen well-being originally gained momentum during the 1970s. The child well-being indicator movement grew out of the broader recognition of social indicators of well-being. As a result, in 1979, UNICEF launched the State of the World's Children reports and the World Bank published a World Atlas on the Child. That year, Child Trends was established by the Foundation for Child Development to monitor child well-being. The OECD also started producing reports on family demography and education during this time.

The importance of measuring and tracking child well-being in particular is clearly articulated in the relevant literature as being imperative to ensuring thriving futures, both for individual children and for society as a whole. As reported by the World Health Organization (WHO), "The early child period is considered to be the most important developmental phase throughout the lifespan (…) What happens to the child in the early years is critical for the child's developmental trajectory and life course."[63]

Originally, the intent of child well-being indicators was to monitor children's survival[64] and to protect children from the most severe and pressing risks to safety. Hence, these national social indicator systems focused on sounding alarms to focus attention upon pressing problems that needed to be rectified and included very few positive indicators.

Over time, the concept of child well-being expanded to address a broader range of competencies.[65] In recent decades, a theoretical shift has occurred in understanding the development of children's needs and behaviours and how to support optimal development.[66]

Benson, "Developmental assets and asset-building communities: Implications for research, policy, and practice," Vol. 1, *Springer Science & Business Media*, (2003); Richard M. Lerner and Laurence Steinberg, "The scientific study of adolescent development," *Handbook of adolescent psychology* 2 (2004): 1–12; Peter L. Benson and Peter C. Scales, "The definition and preliminary measurement of thriving in adolescence," The Journal of Positive Psychology 4, no. 1 (2009): 85–104; Peter C. Scales, Peter L. Benson and Eugene C. Roehlkepartain, "Adolescent thriving: The role of sparks, relationships, and empowerment," Journal of youth and adolescence 40, no. 3 (2011): 263–277.

This new conceptual approach is explicitly strengths-based, focusing on cultivating children's assets, positive relationships, beliefs, morals, behaviours, and capacities to give children the resources they need to grow successfully across the life course.

There has also been a shift from an adult perspective on child well-being towards a child-focused perspective, with broad acceptance for children's subjective perspectives on their own well-being and for children as reporters as a preferred method of assessing their well-being. In the future, children will likely be increasingly active participants in measuring and monitoring their well-being.[67] Positive indicators have been used to describe the competencies, skills, behaviours, and qualities, as well as the relationships and social connections, which foster healthy development across the domains of a child's life.

THE HUMAN DEVELOPMENT ECOSYSTEM

Inherent in the relationship between individual and collective well-being is the concept of a human development ecosystem. Urie Bronfenbrenner, founder of the US federal program Head Start and one of the world's leading scholars on the impact of public policy on child development, has called this interdependence of individuals and societies the "Ecosystem of Human Development".[68] As a reflection of this multidimensional approach to child welfare, many theoretical approaches to family and community well-being have since adopted Bronfenbrenner's Ecological Systems Theory as a underlying basis for intervention.

According to this theory, child development is comprised of four layers of systems which interact in complex ways and can both affect and be affected by an individual child. Later, Bronfenbrenner added a fifth dimension comprising an element of time. In this conception, the microsystems in a developing child's life (family, school, peers) are proximal contexts which directly influence an individual child and their development. In other words, these are "activities, roles, and interpersonal relations experienced by the developing person in a given setting with particular physical and material characteristics"[69] at the innermost level. These microsystems, however, are nested and affected by broader contexts (exo- and macrosystems).

Moen & G. H. Elder, Jr., (Eds.), "Examining lives in context: Perspectives on the ecology of human development," (Washington, DC: American Psychological Association): 619–647.

[69] Bronfenbrenner, (1979): 22.

Bronfenbrenner's approach emphasizes the influence of complex relationships within various levels in the environment on a child's development. In the practice of child and family services, these insights reflect the importance of a holistic approach to well-being that includes consideration of a child's context. As a result of these insights, Bronfenbrenner has been described as a pioneer in the study of child and youth care.[70]

As documented in an OECD report[71] on child welfare, there are two prominent strands in the literature on child well-being. The "developmentalist perspective," emphasizes the detrimental effects of costly outcomes, using indicators such as sickness and poverty. The "child rights perspective," by contrast, tends to focus on positive or strength-based measures of child well-being.

CHILD WELL-BEING TODAY: THE SHIFT TOWARDS PREVENTION AND EARLY INTERVENTION

According to the United States' Children's Bureau, in the last fifty years there has been an increased focus on prevention services in child welfare. The change in approach recognizes the contextual factors that impact a child's well-being and the important roles that communities, intervention services, and others play in child safety and wellness.[72] In the 1990s, the United States began funding family support services more intensively to help reduce abuse and neglect. From counselling to in-home assistance programs, the funding recognized the value of prevention-focused interventions for children, families and communities.[73] The downstream social and financial costs of contact with the protection system outweigh the costs of early intervention (see The cost of doing nothing).

INDIGENOUS PERSPECTIVES ON WELL-BEING

Insofar as First Nations child well-being is discussed within the context of health, social determinants of health are often mentioned. Social determinants of health refer to the living and working conditions which exert an influence over health outcomes. Oftentimes, these relate to an individual's place in society, such as income, education or employment. Other examples of social determinants of health for First Nations adults living in First Nations communities in Canada include community wellness, education, labour force characteristics, personal health practices, health services, culture, and the physical environment.

Similarly, the framework proposed by Finlay, Hardy, Morris, and Nagy (2009) suggest that, in Canada, Aboriginal status, early life, education, employment and working conditions, food security, health care services, housing, income and its distribution, social safety net, social exclusion, as well as unemployment and employment security are identified as social determinants of health.[74] Other determinants of health among First Nations peoples include colonization, globalization, migration, cultural continuity, access, territory, poverty, self-determination, disempowerment, and a lack of control over one's destiny.[75]

According to the Cultural Framework developed by the First Nations Information Governance Centre (FNIGC), health and well-being in a First Nations context can be defined comprehensively as the total health of the total person in the total environment. FNIGC references work by traditional teacher, Jim Dumont (2005), who defines total health as: "all aspects and components of health and well-being seen as integrally interconnected with one another within an inclusive, inter-related and interactive web of life and living." The total person encompasses "all dimensions of personhood—understood to be body, mind, heart and spirit." Total environment refers to "a healthy connection and relationship with the living environment—this being constituted of the land and the natural, cultural, structural/material, political, historical, behavioural, community, family and everyday living environment."[76]

According to McCubbin et al. (2013),[77] Indigenous well-being denotes a relational perspective which emphasizes 'the collective' over 'the individual' as a distinct entity. Hence it is closely tied to culture and spirituality, as well as to social and emotional, physical, subjective and economic well-being.[78]

In Canada, FNIGC has conducted the Regional Health Survey (RHS) of Aboriginal populations since 1997. The RHS collects information of on-reserve and northern First Nations communities based on Western and traditional understandings of health and well-being.[79] The Government of Canada also employs the Community Well-Being Index, which measures socio-economic well-being for individual communities across Canada. It includes 4 components: education, labour force activity, income and housing.[80]

For an overview of well-being initiatives in Australia, Canada, New Zealand, and the United States, see Appendix K. A review of the approaches suggests commonality among Indigenous peoples in holistic perceptions of health and well-being. There are, however, differences in the framing and approaches that individual countries adopt when engaging on Indigenous health.

Performance budgeting and performance measurement

Performance measurement frameworks underpin a well-functioning performance-based budgeting system. A well-articulated performance measurement framework aligns desired outcomes to resources, to evaluate the impact of a program in achieving these results over time.

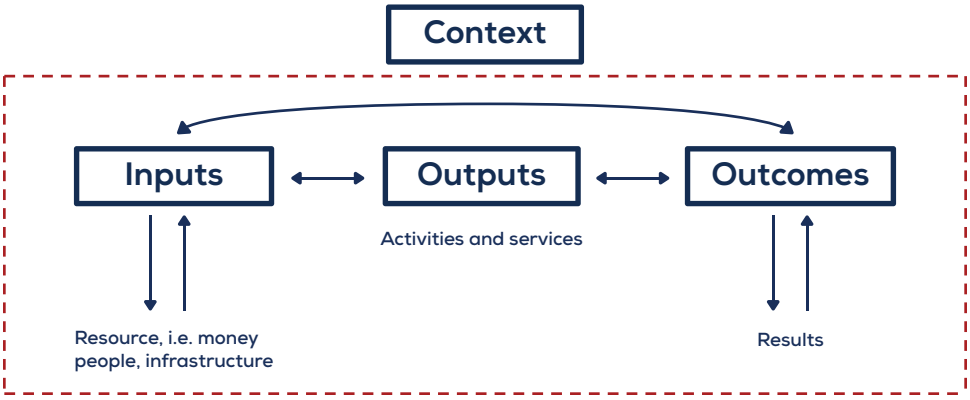
Effective management requires an explicit connection among resources (inputs), activities (outputs) and results (outcomes). IFSD's role is to find the optimal and sustainable combination of inputs and outputs to deliver desired outcomes. This is a complex undertaking that requires data, contributions from FNCFS agencies and other experts, as well as cost-benefit analysis.

An effective performance measure framework will maintain a clear connection between structures, incentives, and results-tracking. Although the implementation of a performance measurement framework for a large-scale program can be administratively challenging, it is undoubtedly a crucial component of sound financial management and clear accountability. Changes in inputs will translate into changes in activities with impacts on results, all of which are informed by context (see Figure 34).

A performance framework is a means through which to establish accountability and conduct regular evaluations and reviews of performance to ensure that resources and funding are optimally allocated and aligned towards the realization of the desired strategic outcome. If there is a well-functioning governance and management system supporting the FNCFS performance measurement framework then an evidence-based answer to the fundamental question of the progress in the welfare of First Nations children may be ascertained.

FNCFS, like any service, does not occur in a vacuum. First Nations children often have disadvantaged points of departure (housing, poverty, health, etc.). Recognizing these contextual realties and resourcing (in human, financial, and infrastructure terms) to mitigate them, is necessary to support FNCFS agencies in their work. Simply throwing money at the system will not necessarily generate better results for children, families and communities.

FIGURE 34: Standard performance framework overview.



Based on the literature on child welfare at the individual, familial, and community levels, many experts and practitioners now recognize the multiple dimensions of child well-being rooted in social ecosystems, as well as the importance of utilizing results-based frameworks to promote these attributes. Building from this research detailed earlier in this section, the performance measurement framework is intended to provide a measurable outcome-based framework that will underpin a results-focused FNCFS funding approach across Canada.

The long-term and medium-term outcomes and results are captured at the top of the performance measurement framework by the 'thriving First Nations children' outcome with child well-being, family well-being and community well-being sub-strategic outcomes.

The performance elements and programs supporting each sub-strategic outcome are the basis for linking activities, budgetary inputs and short-term performance indicators with the long-term and medium-term outcomes at the strategic and sub-strategic outcome level.

Thus, the performance measurement framework is the means by which we are able to link short-term resource allocations with long-term performance outcomes and better understand the current state along with the progress being made towards the attainment of the long-term outcomes being sought.

The challenge is optimizing inputs and activities for sustainable, positive results. More inputs do not automatically translate into better outcomes. Some of the key definitions inherent to the performance measurement framework are illustrated in the figure below.

PERFORMANCE MEASUREMENT IN CHILD WELFARE

The long-term strategic outcome being sought is thriving First Nations children. This strategic outcome is broken down into three sub-strategic outcomes that

represent broader but distinct societal areas of focus that will help to achieve the strategic outcome. The three areas of focus are child well-being, family well-being and community well-being (see Figure 35) Sub-strategic objectives associated with the four areas of focus are detailed in Table 6.

FIGURE 35: Strategy map overview of the Measuring to Thrive framework.

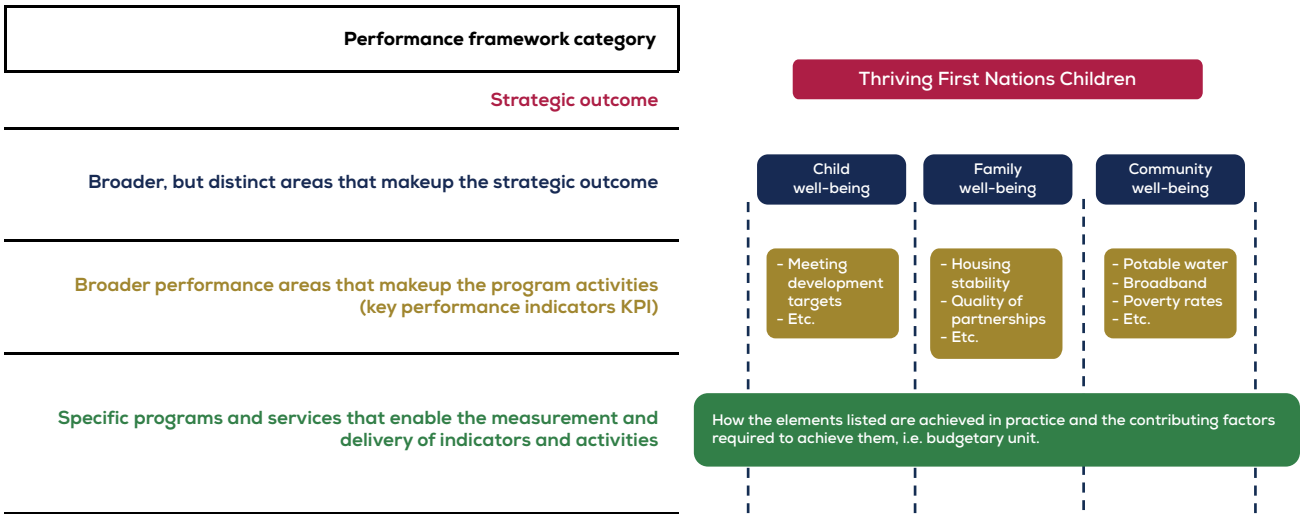


TABLE 6: Strategic outcome definitions of the Measuring to Thrive framework.

Strategic outcome	Definition
Child well-being	**Purpose:** Children reach their full developmental potential and have a sense of hope, belonging, purpose and meaning. **Definition:** Child well-being is a multi-dimensional concept that is influenced by a child's interaction with the environment. It includes cognitive, social, psychological/emotional, cultural/ spiritual and physical development and wellness. These interdependent components provide the foundation for a child to reach their full developmental potential and for children to feel positive about life and have a sense of hope, belonging, purpose and meaning.
	Purpose: Child safety, a crucial component of child well-being. Children are protected from harm and achieve permanency in their living situation. **Definition:** Protecting children from harm and abuse will always be at the core of an agency's mandate. While it is preferable to preserve the family unit, this is not always an option for some children. An agency must not only be equipped to respond to these cases, but also ensure that children achieve permanency in their living situation as swiftly as possible to avoid further disruption. Child safety refers to preventing and responding to cases of child maltreatment (including physical abuse, sexual abuse, physical neglect, emotional maltreatment and exposure to domestic violence). For children placed in out-of-home care, this also includes permanency and stability in their new living arrangement.

Family well-being	**Purpose**: Families enjoy a safe, stable environment in which to foster healthy familial relationships. **Definition:** Family well-being is a relational concept, referring to the interactions between family members but also affected by the larger environments in which parents and children exist. Within the family unit, well-being comprises family self-sufficiency, meaning the labour force participation of caregivers and the ability of the family to meet basic needs, and family health and social factors, meaning the mental and physical well-being of caregivers and family protective factors.
Community well-being	**Purpose:** Reliable public infrastructure, access to basic needs, and resources and services to foster safe, stable, thriving communities. **Definition:** Community well-being is the combination of social, economic, environmental, cultural, and political conditions identified by individuals and their communities as essential for the fulfilment of their full potential. This dimension of well-being is determined by a community's access to basic needs (potable water, access to suitable housing, broadband connectivity, the presence of community infrastructure, and overall community poverty level). In addition to these aspects, community well-being is also affected by health and social services provision among band councils and community agencies, as well as by broader indications of public safety and community health, such as rates of suicide, rates of illicit drug use, rates of heavy drinking, BMI rates, rates of chronic conditions, and rates of violent crime.

DATA COLLECTION

The successful implementation of a performance measurement strategy requires routine collection of data both at baseline and over time. Data can be administrative (e.g. it is already collected through program files), primary performance data (e.g. specialized for the individual program), or secondary data (e.g. data that applies to the program but has been collected but for other purposes). It is also important to identify:

- The frequency of data collection (how often will it be collected?);
- The responsibility for data collection (who is responsible?);
- Baseline information (what is the current state?);
- Targets (what is the goal?), and;
- Timelines (when does the data need to be collected?).

Building a system for results means building-in data for better decision-making and the ability to adjust practices for mid-course corrections. Data is a tool for agencies and communities to improve planning and resource allocation. In order for data to be an effective tool for informed decision-making, the following requirements are necessary:

- Data collected must be relevant to mandate and desired outcomes;
- Analysis must include context/point of departure;
- Agencies will be assessed against themselves;

- Data richness and applications for predictability will improve with time;
- Data handling must follow OCAP principles, and;
- Only aggregate data is shared publicly.

As will be expanded in the discussion of the application of the framework, the issue of concern in this report is not the lack of data collected on First Nations in Canada (indeed it is the case that many First Nations groups are extensively surveyed) but rather that the quality of data, mainly in terms of granularity, does not allow for sufficient performance measurement at the level of the child welfare agency. As the majority of this data information cannot be analyzed at the level of individual First Nations communities, it does not enable strategic planning and results-tracking over time.

Performance framework justification

Achieving the strategic outcome of *Enabling First Nations Children to Thrive* is built on three sub-strategic outcomes: child well-being, family well-being and community well-being (see Figure 36). These sub-strategic outcomes are divided into performance areas, and each performance area consists of proposed measures and indicators to evaluate progress in performance areas. Performance areas, measures and indicators have all been developed with aforementioned theoretical and Indigenous perspectives of well-being in mind. The following section provides a justification for these components of a performance framework that is focused on thriving First Nations children (see Table 7).

TABLE 7: Strategy map components.

Component	Description
Strategic outcome	The overarching goal, to which all activities contribute. It is measurable and represents an end-state or maintenance of an end-state.
Sub-strategic outcomes	Broader but distinct societal areas of focus to achieve the strategic outcome.
Performance areas	The lenses through which progress on sub-strategic outcomes can be understood.
Measures	Means of assessing progress in performance areas.
Indicators	The variables measured. They can be qualitative or quantitative, and should be valid, reliable, affordable, available and relevant.
Activities	The actions or processes undertaken to achieve outcomes. It includes the “how” of achieving outcomes, such as targeted programs or direct front-line services.
Inputs	The resources required (both financial and non-financial) to support activities.

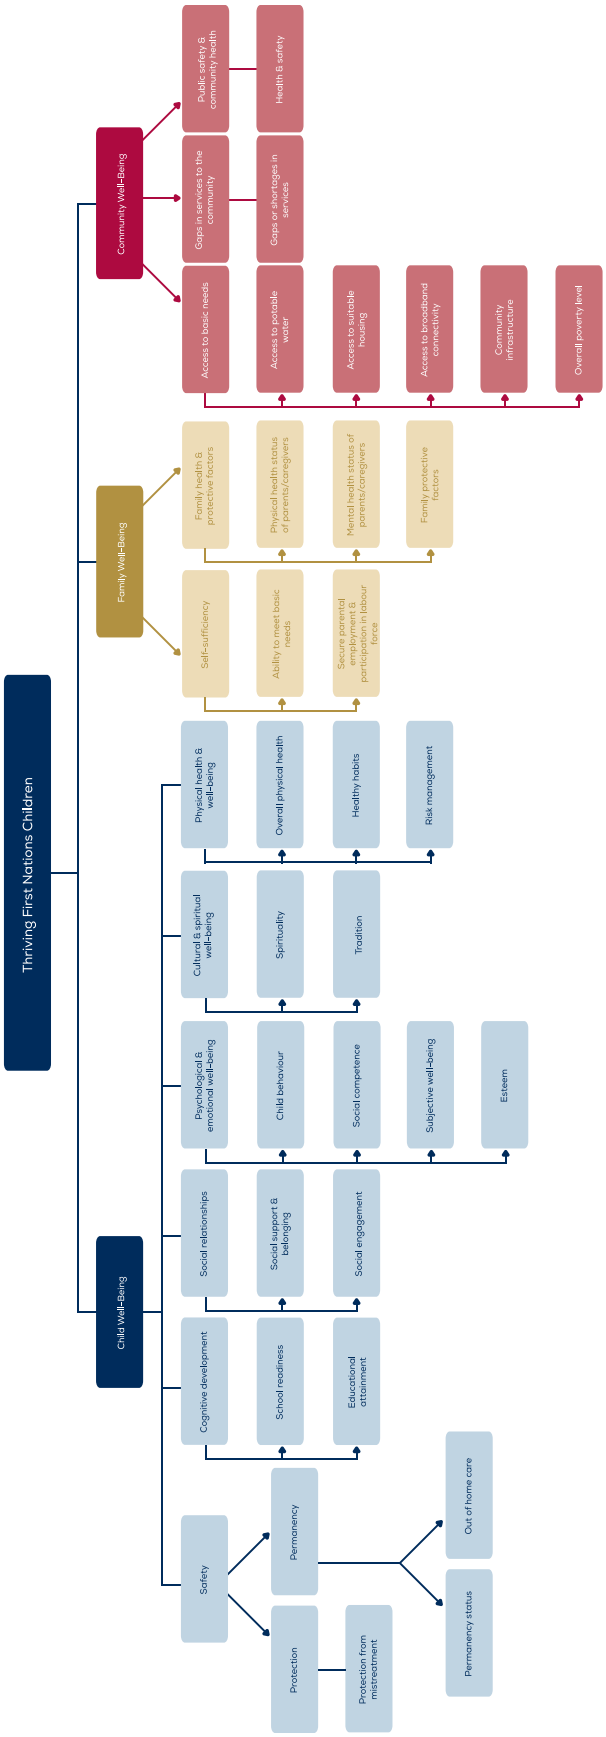

FIGURE 36: Mapping the Measuring to Thrive framework.

SUB-STRATEGIC OUTCOME: CHILD WELL-BEING

Child well-being is a multifaceted concept, for which there is no consensus on measurement. Depending on contextual factors such as family, community, and socio-political considerations, child well-being requires consideration of multiple dimensions influenced by a child's environment.[81]

To improve well-being, it must be understood through a holistic lens. Pollard and Lee[82] cite Columbo's (1986) definition of child well-being as a useful one: "A multidimensional construct incorporating mental/psychological, physical, and social dimensions." The definition is useful as it encapsulates several spheres of influence on a child's and adolescent's well-being at individual and environmental levels. In line with the multi-dimensional approach to defining child well-being, Asher Ben-Arieh, notes that child well-being encompasses quality of life in a broad sense. It refers to a child's economic conditions, peer relations, political rights, and opportunities for development. Most studies focus on certain aspects of children's well-being, often emphasizing social and cultural variations. Thus, any attempts to grasp well-being in its entirety must use indicators on a variety of aspects of well-being.[83]

Consistent in the literature on measuring child well-being is the need to conceptualize and develop indicators that focus on strengths as opposed to deficits, as this is how "we discover the core elements of well-being that enable children to flourish and thrive."[84] In a literature review on child well-being and how it is studied, Amerijckx and Humblet[85] understand the multidimensional nature of child well-being across 5 axes:

- Positive vs. negative (e.g. strengths-based approaches as opposed to deficit-based approaches to conceptualizing child well-being)
- Objective vs. subjective (e.g. others' perceptions of child well-being, as opposed to the child's perception of their own well-being)
- State vs. process (e.g. child's well-being in present day, versus well-being over a longer period of time/lifetime/life trajectory; also referred to as the "developmentalist" vs. the "child rights" perspectives)

[84] Pollard and Lee, "Child Well-being: A Systematic Review of the Literature."

[85] Amerijckx and Humblet, "Child Well-Being: What Does It Mean?."

- Material vs. spiritual (e.g. well-being in terms of financial, health, educational and family resources or lack thereof, as opposed to non-material aspects of well-being)
- Individual vs. community (e.g. the extent to which a collective group matters for an individual's well-being)

The dimensions of child well-being are interdependent; growth in one area is highly dependent on well-being in other areas, and all of it is connected to the well-being of their family and community. If we were to direct our attention to the individual, however, what does a thriving child look like? What contributes to child well-being in the here and now, and what is important to ensuring children grow into thriving adults? Based on a review of academic and grey literature, five dimensions have been identified as essential for child well-being:

1. Safety
2. Cognitive development
3. Social relationships
4. Emotional, cultural and spiritual well-being
5. Physical health and well-being

The following review defines each dimension of child well-being, key measures and indicators to evaluate progress in each dimension, and evidence to support why these matter for child well-being.

SAFETY

Ensuring that children are safe, especially those who face immediate threat to their health and safety, will always be at the core of a child welfare agency's mandate. Child abuse and neglect (also referred to as child maltreatment in the literature) is generally defined by the Canadian Child Welfare Research Portal as "acts of commission or omission by a parent or other caregiver that result in harm, potential for harms, or threat of harm to a child," and includes "physical abuse, sexual abuse, physical neglect, emotional maltreatment and exposure to domestic violence."[86]

[86] Canadian Child Welfare Research Portal, "Child Abuse & Neglect," accessed July 27, 2020, https://cwrp.ca/child-abuse-neglect.

Abuse in the early years of life can have detrimental effects on future health and well-being and can disrupt early brain development.[87] As the WHO notes, "maltreated children are at increased risk for behavioural, physical and mental health problems, such as: perpetrating or being a victim of violence, depression, smoking, obesity, high-risk sexual behaviours, unintended pregnancy, and alcohol and drug misuse" in adulthood.[88] These consequences may extend into further health problems, such as chronic disease and sexually transmitted infections.[89] Poor outcomes resulting from child maltreatment also present major costs to society.

Upholding the rights of children and promoting their well-being across the life course is essential to ensuring that they thrive. Child safety, which includes preventing and responding to cases of child maltreatment, as well as achieving permanency, safety and stability for children who have been placed in out-of-home care, is a fundamental component of child well-being. In this performance framework, the concept of child safety has been divided into two key dimensions:

1. Protection
2. Permanency

The following review examines key measures and indicators that should be used to evaluate progress in each dimension, and evidence to support why these matter in order for children to thrive.

PROTECTION

Measure: Protection from all forms of maltreatment

Central to the work of a child welfare agency is to protect children from harm and abuse. The Canadian Child Welfare Research Portal identifies five primary forms of maltreatment: physical abuse, sexual abuse, physical neglect, emotional maltreatment and exposure to domestic violence.[90] The indicators for this measure include:

- Recurrence of maltreatment
- Recurrence of child protection concerns in a family after ongoing protections services were provided
- Serious injuries/deaths
- Non-accidental child injury
- Child sexual abuse

[87] World Health Organization, "Child maltreatment," June 8 2020, https://www.who.int/news-room/fact-sheets/detail/child-maltreatment.

[88] World Health Organization, "Child maltreatment."

[89] World Health Organization, "Child maltreatment."

[90] Canadian Child Welfare Research Portal, "Child Abuse & Neglect."

Why these indicators matter

Children who have been maltreated are at increased risk of recurrence of maltreatment.[91] Research has found that compared to children who had not been previously maltreated, children who had been were nearly six times more likely to experience it again.[92]

While any case of maltreatment is serious, there is consensus in the literature that chronic maltreatment is associated with more negative outcomes.[93] In a prospective study examining outcomes of chronic child maltreatment, researchers found that the number of maltreatment reports predicted negative childhood outcomes in a linear fashion. In other words, the more often a child was maltreated, the greater the number of negative outcomes later in life. Chronic maltreatment may be especially alarming for outcomes related to suicidal behaviour. The same study found that "suicide attempts before age 18 showed the largest proportionate increase with repeated maltreatment."[94] The recurrence of child protection concerns in a family after ongoing protections services were provided is not only important to protect the well-being of children and prevent chronic abuse; it is also an indicator of how effective child welfare services are at preventing maltreatment.[95]

As Jaffee and Maikovich-Fong[96] summarize, compared to both non-maltreated children and children experiencing transitory maltreatment, those who have experienced chronic maltreatment exhibit more behavioural issues. Compared to non-maltreated children, chronically maltreated children have more difficulties with peers, aggressive, delinquent and withdrawn behaviour, internalizing symptoms, and decreased prosocial behaviour. Compared to children experiencing transitory maltreatment, they show more externalizing problems, lower

levels of ego resilience, higher rates of juvenile offending, increased levels of anxious and depressed behaviours, increased levels of aggressive behaviours, depression, and symptoms of post-traumatic stress, as well as decreased levels of interpersonal and coping skills.

Leading researchers in the field of child development have found that exposure to strong, frequent and/or prolonged adversity, such as chronic abuse, parental substance abuse, or exposure to violence, can elicit a toxic stress response. This type of stress can have a profound effect on the architecture of the developing brain, which "can have potentially permanent effects on a range of important functions such as regulating stress physiology, learning new skills, and developing the capacity to make healthy adaptations to future adversity."[97]

Though rare, serious injuries and deaths are an important indicator to prevent these tragedies from occurring in the future and to evaluate whether the child welfare system is appropriately responding to cases of maltreatment. Research in this area of child welfare has shown that previous reports of child maltreatment is a risk factor for child deaths,[98] further substantiating indicators of recurrence as an important measure of child safety.

In summary, protecting the safety and rights of children is at the core of a child welfare agency's work. Indicators highlight the importance and effectiveness of an agency's ability to prevent subsequent cases of maltreatment from occurring, which have a major impact on a child's ability to thrive in the present and in the future.

Measure: Emergency mental health

Another important measure to consider when it comes to protecting children is providing effective services when they may be a harm to themselves. Emergency mental health refers to when children are in crises and are at risk of harming themselves in any way, or contemplate, attempt, or commit suicide. The indicators for this measure include:

- Suicidal ideation
- Suicide attempts
- Suicide rate
- Self-harm related behaviour

[97] Jack P Shonkoff et al., "The lifelong effects of early childhood adversity and toxic stress," *Pediatrics* 129, no. 1 (January 2012): e232–e246.

[98] Melissa Jonson-Reid, Toni Chance, and Brett Drake, "Risk of Death Among Children Reported for Nonfatal Maltreatment," *Child Maltreatment* 12, no. 1 (February 1, 2007): 86–95.

Why these indicators matter

The rate of suicide among First Nations people is three times higher than the rate among non-Indigenous people.[99] The suicide rate among First Nations living on-reserve have been found to be twice as high as those living off-reserve, and the highest rates are among youth aged 15 to 24 compared to other age groups.[100]

Risk factors for youth suicide include socio-economic disadvantage, parental psychopathology such as depression and substance use disorders, family history of suicidal behaviour, parental discord and separation, a history of physical and/or sexual abuse during childhood, and dysfunctional parent-child relationships.[101] Furthermore, suicidal behaviour within families, personality traits such as low self-esteem, external locus of control and hopelessness, and mental health disorders such as affective disorder, substance abuse and antisocial behaviours are considered risk factors for youth suicide.[102] From an Indigenous perspective, a review of the literature found that depression, having a friend attempt or commit suicide, substance or alcohol abuse, having a psychiatric disorder and experiencing childhood abuse were the strongest predictors of attempting suicide.[103]

The impacts of multigenerational trauma stemming from negative experiences in the residential school system have been associated with a history of suicidal thoughts and attempts.[104] Furthermore, given the contextual challenges facing First Nations communities, including poverty and intergenerational trauma, First Nations children coming into contact with the child welfare system are likely exposed to one or even several of these risk factors. Implementing effective services that promote mental health among Indigenous children more generally and in crises is integral to their safety and ability to thrive.

PERMANENCY

Measure: Permanency status

In situations where children require out-of-home care, the primary goal is for them to eventually be reunified with their families, although this is not always possible. In any case, achieving a permanent or stable living situation is important for healthy child development and well-being. The indicators to assess performance for this measure include:

- Out-of-home placement rate
- Number of moves in care
- Timeliness of successful family reunification or adoption

Why these indicators matter

A stable and permanent living situation is essential for healthy development and establishing more secure and strong relationships with caregivers, which in turn impact a child's ability to thrive. As Trocmé and colleagues note, "a stable placement experience can assist children in out-of-home care to develop and maintain family, peer, and community relationships while separated from their families."[105] Stability promotes fewer school changes and thus stronger relationships with peers, as well as more consistent access to community services and activities.[106]

Multiple moves in care are associated with various negative outcomes among children. Instability may elicit a toxic stress response, which can result in developmental delays and behaviour problems. In turn, this can propagate a negative cycle of displacement and worsening attachment disorders.[107] Children who experience ongoing separation from both their biological and foster families may develop an inability to form trusting relationships with adults, which can lead to "persistent rage, chronic depression, asocial and antisocial behaviour, low self-concept, and chronic dependency."[108] It is not surprising that unstable placements in foster care, characterized by placement frequency and episodic foster care, have been associated with increased rates of mental health service utilization.[109]

[105] Nico Trocmé et al., "National Child Welfare Outcomes Indicator Matrix (NOM)," *Centres of Excellence for Children's Well-Being: Child Welfare*, (June 2009): 1–8.

[109] David M. Rubin et al., "Placement Stability and Mental Health Costs for Children in Foster Care," *Pediatrics* 113, no. 5 (May 2004): 1336–1341.

As Trocmé and colleagues[110] describe, the out-of-home placement rate is not necessarily a negative indicator, as some children may need to be removed from their living situation to ensure their safety. However, at an aggregate level, the out-of-home placement rate can indicate the effectiveness of preventative child welfare services and the well-being of children in the community as a whole.

In summary, as a last resort, children may need to be removed from their homes to address cases of chronic child maltreatment. Measuring the child welfare system's ability to achieve permanency in their living situation is important for the well-being of the child and future outcomes.

Measure: Out-of-home care

In addition to achieving stability in a child's living situation, it is also important to consider the characteristics of the living situation and their impact on child well-being. The indicators for this measure include:

- Children placed with kin and/or Indigenous families in their community
- Quality of caregiver and youth relationship

Why these indicators matter

In the event that children must be removed from their homes and families, placing them with "kin" is the preferred option in many jurisdictions. According to the Canadian Child Welfare Research Portal, kinship care refers to "children placed out-of-home in the care of extended family, individuals emotionally connected to the child, or in a family of similar religious or ethno-cultural background."[111] Compared to foster children, children in kinship care have displayed better outcomes with respect to behavioural development and mental health functioning.[112]

Kinship care has become increasingly popular as it promotes continuity and connection to a child's culture and community. This may buffer the traumatic experience of being separated from one's parents by offering a sense of familiarity and belonging with extended family.[113] This has been regarded as especially important in the Indigenous context given

[113] Pamela Gough, "Kinship care," *Centre of Excellence for Child Welfare*, Faculty of Social Work, University of Toronto (Toronto, ON, 2006): 1–4.

the policies and practices that have used child removal as a tool for assimilation in the past. In a First Nations community in Manitoba, one study found that kinship care provided a link between culture and traditions, promoted a child's connection with their caregiver and community (which enhanced the connection to their culture and ability to speak their Indigenous language), and participants reported improved school performance and fewer behavioural issues.[114] Studies have also suggested an association between kinship care and placement stability, i.e. fewer moves in care.[115]

To understand the well-being of children who have been removed from their homes, it is also important to understand the quality of their relationships with their caregivers. Establishing secure, trusting and positive relationships with their caregiver is essential for healthy development, impacting outcomes across the life course.

COGNITIVE DEVELOPMENT

Cognitive development refers to "the construction of thought processes, including remembering, problem solving, and decision-making, from childhood through adolescence to adulthood."[116] Healthy cognitive development is important for a child's trajectory, and is often measured in relation to educational outcomes.

Measure: School readiness

Among children approaching school age, one important measure of development is school readiness. According to Engle and Black, school readiness is defined as "a broad set of skills that affect children's ability to learn in school: physical health, motor skills, self-care, emotional and behavioural regulation, social skills, communication skills, pre-academic skills, attention, and curiosity and motivation to learn."[117] Based on this definition, healthy growth in all dimensions of well-being are important for school readiness. The indicators of language and cognition to measure academic school readiness are chosen in accordance with

[117] Patrice L. Engle and Maureen M. Black, "The Effect of Poverty on Child Development and Educational Outcomes," *Annals of the New York Academy of Sciences* 1136, no. 1 (2008): 243–256.

Brownell et al.,[118] that "the types of skills assessed in this domain are the strongest predictors of subsequent school performance and educational attainment". It is important to note, however, that there are several non-cognitive indicators of school readiness; these are conceptualized in other dimensions of child well-being in the performance framework.

Helpful indicators include:

- Basic literacy score;
- Basic numeracy score;
- Interest in literacy and numeracy score;
- Advanced literacy score;
- The number of 3 and 4-year-olds participating in funded early years education

Why these indicators matter

Gaps in school readiness at school entry are indicative of suboptimal development and characterized by the child's socioeconomic environment. For example, children of mothers with low educational attainment made up 32% of children entering school lacking printing and writing skills, as opposed to 8% of children with mothers who had a bachelor's degree or higher.[119] Similar gaps are also seen in proficiency in literacy and math, and disadvantaged children are also more likely to exhibit behavioural problems.[120] What is more, these gaps tend to widen as opposed to shrink as the child proceeds through formal schooling and are predictive of future school performance and educational attainment.[121] Heckman's work suggests that, "most of the gaps at age 18 that help to explain gaps in adult outcomes are present at age five."[122]

Participation in early childhood education is a well-evidenced intervention to enhance school readiness, especially among children from disadvantaged backgrounds. Ensuring that children are better prepared when entering school aims to improve educational achievement—a key factor in social mobility and escaping poverty.[123] As Shonkoff states, "high quality early childhood programs designed to

produce positive effects on educational achievement and later work-force participation offer an important, unrecognized infrastructure for addressing the stress-related roots of social class disparities in health."[124]

Measure: Educational attainment

Another important measure of cognitive development from childhood into adolescence is educational attainment. Indicators chosen for this measure include:

- Literacy and numeracy test scores (middle childhood)
- Positive attitudes towards learning/school
- Youth who intend on going to post-secondary school (e.g. trades, university, college)

Why these indicators matter

Educational attainment is important for child well-being, particularly in the context of a child's socio-economic trajectory. Literacy and numeracy scores tell us how well the child is performing in school and are a gauge of cognitive functioning.[125] Academic success also has a reciprocal effect on a child's attitude towards learning (often referred to as academic self-concept).[126] Learning begets learning, and academic achievement and motivation to learn are key factors to a high level of educational attainment.

This is important, as educational attainment often translates into levels of skill and ability in society, which are linked to a host of outcomes in adulthood.[127] More obvious impacts of low education are reduced rates of employment and earnings. Failure to complete high school is linked to higher rates of welfare dependency and criminality.[128] Educational attainment is also a determinant of participation in the Canadian labour market, especially for Indigenous people.[129] For example, in 2009, 82% of adults aged 25 to 64 with post-secondary qualifications were employed,

compared to 55% of those with less than a high school education.[130] Indeed, employment rates are higher for Indigenous people with post-secondary credentials.[131]

PSYCHOLOGICAL AND EMOTIONAL WELL-BEING

Psychological and emotional well-being in childhood includes the ability to self-regulate emotions; healthy self-esteem, which is affected by the presence of optimism, hope, resilience and looking to the future; as well as their own perceptions of their mental health and well-being. According to the WHO, "mental health is a state of well-being in which an individual realizes his or her own abilities, can cope with the normal stresses of life, can work productively and is able to make a contribution to his or her community."[132] Promoting psychological health and well-being in childhood is an important pathway to good mental health in adulthood.

Measure: Child behaviour

Child behaviour is a good measure of how children are faring psychologically and emotionally, particularly with respect to self-regulation. Indicators chosen for this measure include:

- Anxious and fearful behaviour
- Aggressive behaviour
- Hyperactivity and inattentive behaviour

Why these indicators matter

As Trocmé describes, "abused and neglected children are at high risk of developing emotional and behavioural problems at home, school, and in the community," and experience decreased placement stability.[133] This lack of stability may only reinforce behavioural and emotional problems. Therefore, child behaviour is an important measure to monitor in the context of children who are in contact with the child welfare system so that they can be referred to appropriate early intervention services.

Behavioural issues among children are associated with socioeconomic disadvantage and have been linked to worse outcomes in adulthood. For example, research has found an association between attention deficit

problems and poor labour outcomes in adulthood, such as lower rates of employment, lower earnings and worse jobs.[134] Conduct disorders in childhood, which include antisocial behaviours such as disobedience, tantrums, fighting, destructiveness, lying and stealing, increase the likelihood of violence, criminality, poor relationships, and poor mental health.[135]

This incurs significant societal costs as well.[136] Scott and colleagues[137] found costs for individuals with conduct disorder in childhood to be 10 times higher than for those with no problems, the bulk of which were associated with criminality, extra educational support, out of home care and state benefits. Another study examining physical health in adulthood among children who displayed childhood aggression found a direct and positive link to the use of medical services, "as well as medical visits due to lifestyle-related illnesses and injuries, with indirect paths through educational attainment."[138]

Measure: Social competence

There are varying definitions of social competence, but it can generally be described as "involving the personal knowledge and skills which persons develop in order to deal effectively with life's many choices, challenges and opportunities."[139] More specifically, it involves the quality of interactions and relationships. Indicators chosen for this measure include:

- Communication skills
- Prosocial and helping behaviour
- Social intelligence

Why these indicators matter

While skills related to achievement outcomes in school are undoubtedly important for future success, James Heckman, a Nobel Laureate in Economics, argues that equal attention must be paid to the development of noncognitive skills that are relevant for participation in the workforce and in society, which include those such as socioemotional regulation, personality factors, motivation, perseverance, and the capacity to collaborate with others.[140]

This was demonstrated in Heckman's research on the General Education Development (GED) testing program in the United States, which is a series of cognitive tests that high school dropouts can take to determine if they meet the minimum academic standard of high-school graduates. They found that although they have similar test scores to regular high school graduates, GED recipients have earnings that compare to high school dropouts.[141] Heckman and his colleagues conclude that "the GED surplus of cognitive skills is not outweighed by the GED deficit in noncognitive skills."[142]

The importance of noncognitive skills for success in adulthood is bolstered by Heckman and others' work in the field of early childhood intervention among disadvantaged children. Take, for instance, the Perry Preschool Project, which aimed to improve intellectual and social development among African American children at risk for school failure. Upon initial follow-up, the program was considered a failure as it did not appear to boost IQ compared to non-participating children. However, they did have higher achievement test scores, and upon follow-up at age 40, participating children had higher rates of high school graduation, higher earnings, higher percentages of home ownership, lower rates of welfare assistance, fewer out-of-wedlock births and fewer arrests compared to non-participating children.[143] Heckman attributes many of these differences to the development of noncognitive skills in these programs, contributing to social success.

[143] James J. Heckman, "Skill Formation and the Economics of Investing in Disadvantaged Children," *Science* 312, no. 5782 (2006): 1900–1902.

As Denham[144] concludes, in the context of academic outcomes, there is a strong body of evidence linking social-emotional competence to improved attitudes towards school and higher educational achievement. By contrast, those who have not developed in this area have weaker relations with peers and teachers. This decreases interest in school and persists into later years of learning, which can lead to dropping out.

Measure: Subjective well-being

Subjective well-being among children has emerged as an important measure, which has largely stemmed from the United Nations Convention on the Rights of the Child, in which children are assured rights as individuals, and that their views are important and must be taken into consideration.[145] Indicators chosen for this measure include:

- Self-reported happiness/life satisfaction
- Self-reported mental health

Why these indicators matter

Indicators like self-reported happiness and mental health distinguish the concept of "well-becoming" into adulthood from "well-being" among children in the present. In light of the recognition that children's rights are human rights, it is important to study and understand well-being from the child's experience and perspective. Huebner and colleagues[146] describe life satisfaction as "a person's subjective, global evaluation of the positivity of her/his life as a whole or with specific life domains," that can "encompass judgements ranging from very negative to neutral to very positive."

These indicators may complement understanding of other indicators important to child well-being. While there is a large body of evidence highlighting associations between life satisfaction and well-being outcomes among adults, the extent to which this is relevant for children is still being studied. Emerging research has found life satisfaction to be a mediating factor on how stressful life events influence parenting behaviour and problem behaviour among adolescents.[147]

Measure: Esteem

Esteem is an important part of psychological and emotional well-being. Many components of esteem are captured in the First Nations Mental Wellness Continuum Framework, where metal wellness is defined as:

> *...a balance of the mental, physical, spiritual, and emotional. This balance is enriched as individuals have: PURPOSE in their daily lives whether it is through education, employment, care-giving activities, or cultural ways of being and doing; HOPE for their future and those of their families that is grounded in a sense of identity, unique Indigenous values, and having a belief in spirit; a sense of BELONGING and connectedness within their families, to community, and to culture; and finally a sense of MEANING and an understanding of how their lives and those of their families and communities are part of creation and a rich history.*[148]

As Dumont and Provost note, "research has shown that individuals with high self-esteem or a high feeling of control will adopt active coping strategies focused on problems, whereas individuals with low self-esteem will adopt passive-avoidant coping styles focused on emotions."[149] Low self-esteem has been associated with mental health issues such as anxiety and depression.[150] Indicators chosen for this measure include:

- Sense of purpose
- Optimism and hope
- Resilience
- Confidence
- Agency

Why these indicators matter

Fostering resilience among disadvantaged children is a complementary approach to mitigating risk factors to promote well-being. In practical terms, it will never be possible to remove all risks; therefore, cultivating psychological resilience and coping strategies offers a strengths-based method to navigating stress and adversity, in turn promoting better outcomes.[151]

[151] John Harvey and Paul H. Delfabbro, "Psychological resilience in disadvantaged youth: A critical overview," *Australian Psychologist* 39, no. 1 (2011).

Scholars have recognized the importance of these indicators given the effects of intergenerational trauma on mental health among Indigenous peoples. For example, self-esteem and optimism are important protective factors for depressive symptomology among Aboriginal youth;[152] a desire to contribute to one's community and believing in one's self have also been found to improve mental health among Indigenous youth.[153]

SOCIAL RELATIONSHIPS

Social relationships in both early childhood and adolescence are widely regarded as one of the most important factors for healthy development and well-being in childhood through to adolescence. In the earliest years of life, it is argued that the quality of relationships and parenting carries the heaviest weight among the factors that drive healthy development.[154] Establishing warm, secure and responsive relationships with caregivers are key to establishing a child's confidence to play, socialize and explore their environment, which is what propels development.[155]

Measure: Social support and belonging

As defined by Cohen, "social support refers to a social network's provision of psychological and material resources intended to benefit an individual's ability to cope with stress."[156] This is especially important for the well-being of vulnerable children that face many different adversities in life. Indicators chosen for this measure include:

- Youth who report positive relations with their parents
- Youth who report 5 or more close friends
- Youth who report positive relations with siblings and extended family
- Youth who report positive relations with non-family adults
- Youth who report strong ties with elders in the community

Why these indicators matter

As children progress into adolescence, strong social relationships continue to be an important protective factor as individuals navigate major developmental changes. Strong social relationships, or lack thereof, have been tied to several aspects of well-being. For example, in

a population-based study on young Canadian adolescents, Gadermann[157] and colleagues found that social relationships such as belongingness with peers and adults at school and connection with adults at home were the strongest predictors of life satisfaction. Research has also found positive associations between social relationships and physical and psychological well-being by promoting healthier lifestyles, better self-esteem, and a greater sense of purpose and internal locus of control.[158]

Social support can also act as a protective factor when it comes to the impact of stress on health, as supportive, responsive relationships have been found to be a major factor in preventing the effects of toxic stress on the developing brain.[159] Dumont and Provost[160] summarize research on how this may apply to preadolescents and adolescents, noting a link between low social support satisfaction and mental health issues such as anxiety, depression, sleep disturbances, and interpersonal sensitivity. When faced with adversity and instability, social support and positive relationships with parents can act as a buffer against poor outcomes,[161] and attachment to parents are associated with psychological well-being particularly in adolescence.[162] Socially isolated people have been found to have higher mortality rates, are more likely to commit suicide, have higher rates of tuberculosis, accidents and psychiatric disorders.[163]

Social support has also been found to moderate the relationship between socioeconomic status and academic performance. Malecki and Demaray[164] found that socioeconomic status and support from parents,

teachers, classmates, close friends and the school was significantly associated with grade point average.

Measure: Social engagement

Related to social engagement, Cohen defines social integration as "participation in a broad range of social relationships,"[165] which includes both behavioural and cognitive components. Indicators chosen for this measure include:

- Youth who report some involvement, participation or contribution within the community
- Youth who participate in extracurricular activities

Why these indicators matter

Participation in social activities is important for developing social competence and skills and is linked with fewer behavioural problems and higher self-esteem.[166]

In the Indigenous context, a review by MacDonald found that community and culture were cited as the most common protective factors for mental health among Indigenous youth, which included things like healthy relationships with family and community members.[167]

CULTURAL AND SPIRITUAL WELL-BEING

It has been recognized by Indigenous scholars, practitioners, and the Pan American Health Organization that solutions to persisting health and socioeconomic inequities among Indigenous peoples must go beyond the social determinants of health to include Indigenous knowledges and ways of being. This includes language, culture, spirituality, connection to the land, and self-determination.[168] Indigenous children are born into a history of colonialism and attempts of forced assimilation, which is considered to be at the root of widespread health and socioeconomic disparities. The impacts of these policies and practices has resulted in intergenerational trauma and a loss of culture and language among

[165] Sheldon Cohen, "Social Relationships and Health," *The American Psychologist* 59, no. 8 (2004): 676–684.

[166] Michelle Dumont and Marc A. Provost, "Resilience in Adolescents: Protective Role of Social Support, Coping Strategies, Self-Esteem, and Social Activities on Experience of Stress and Depression," *Journal of youth and adolescence* 28, no. 3, (1999): 343–363.

Indigenous communities.[169] As King and colleagues note, "the definition of indigeneity is…inherently social….[and] being isolated from aspects of this identity is widely understood to have a negative effect on Indigenous health."[170] As such, culture has become an important determinant of Indigenous well-being, and experts emphasize that it must be at the core of all efforts to improve well-being among children.

Measure: Spirituality

Spirituality is a broad term and has not been generally defined from an Indigenous perspective. Fleming and Ledogar[171] discuss Indigenous spirituality through the lens of two conceptual frameworks. The first is enculturation, which involves "the degree of integration *within* a culture"; the second, is cultural spiritual orientations, "which distinguishes between cultural and spiritual *orientations* and tribal spiritual *beliefs*". Indicators chosen for this measure include:

- Sense of belonging to cultural group
- Pride in Indigenous identity
- Sense of connection to the land
- Participation in spiritual practice/knowledge/ceremony

Why these indicators matter

While considered an important dimension of child well-being more generally, expert academics, practitioners and agencies have stressed the importance of cultural and spiritual well-being among First Nations children. One of the effects of colonial policies and practices of assimilation that First Nations children are born into is "the systemic devaluing of Indigenous identity," as well as the loss of a connection to the land—a core element of Indigenous culture and spirituality.[172] The importance of restoring the connection to one's Indigenous culture and identity is emphasized in relation to mental health outcomes and resilience.[173] In a study examining suicide rates among First Nations

[169] Margo Lianne Greenwood and Sarah Naomi de Leeuw, "Social determinants of health and the future well-being of Aboriginal children in Canada," *Paediatrics & Child Health* 17, no. 7 (August 2012): 381–384.

youth in British Columbia, researchers[174] found that among communities where cultural continuity was preserved through avenues such as securing land claims, were self-governing, had band-administered education, police, fire and health services as well as cultural facilities within the community had lower suicide rates than communities where these factors were less present. This is an interesting strengths-based example where in-group variability was examined (and not just compared to the non-Indigenous population). Other studies have yielded similar results, with Indigenous spirituality acting as a protective factor against alcohol abuse and suicide.[175]

Measure: Tradition

Passing tradition on to Indigenous children is another component recognized as important for cultural identity and well-being. Indicators chosen for this measure include:

- Speaks traditional language
- Eats traditional foods

Why these indicators matter

Language is considered to be at the core of identity and how culture is passed down from generation to generation. Available statistics indicate that young children are learning to speak their heritage language as a second language.[176] Although they have persisted through colonization, preservation of Aboriginal languages is of particular importance as they are not spoken anywhere else in the world.[177] Though there is limited research on the association between knowledge of traditional Indigenous language and health outcomes, one study found that First Nations who had high levels of language knowledge had significantly lower rates of suicide than those with lower levels and for non-Indigenous youth. In fact, "youth suicide rates effectively dropped to zero in those few communities in which at least half of the band members reported a conversational knowledge of their own "Native" language."[178] Researchers identified language as the strongest cultural continuity factor contributing to this difference.

[178] Darcy Hallett, Michael J. Chandler, and Christopher E. Lalonde, "Aboriginal language knowledge and youth suicide," *Cognitive Development* 22, no. 3 (2007): 392.

Traditional foods are also tied to Indigenous culture and connection to the land and are relied upon for well-being. One of the many effects of colonization is poor nutrition habits that have been passed down through generations. As Wilton Littlechild,[179] a Cree Nation Chief, describes, this stems from the residential school system where food was inadequate or used as a means of punishment. Furthermore, loss of land and access to traditional foods has meant that healthy food choices, especially among rural and isolated First Nations, are expensive and often unavailable.[180] This has, in part, led to disproportionately high rates of chronic diseases related to lifestyle factors such as type 2 diabetes and obesity.[181] As MacIvor and Napoleon[182] note, traditional food gathering not only promotes a healthier diet, but also more exercise and a connection to one's Indigenous identity.

PHYSICAL HEALTH AND WELL-BEING

Physical health and well-being constitute another important pillar supporting development in other dimensions and overall child well-being. Physical health does not equate to merely the absence of illness and disease; it goes beyond this definition to include the presence of healthy habits and behaviours that promote well-being now and in the future. This includes good maternal health and parenting knowledge for a healthy start in the earliest years of life, eating a healthy diet, being physically active, having a good sleeping routine, and reducing participation in risky behaviour as a child progresses into their adolescent and teenage years.

Measure: Overall physical health

Ensuring a healthy start in life lays the foundation for health and well-being across the life course. This measure aims to capture factors that promote healthy growth and development in the early years, which can have implications for health across the life course. The indicators chosen for this measure include:

- Low birth weight
- Breastfed for at least 6 months
- Children living with a disability or chronic illness

[179] Wilton Littlechild, "Indigenous peoples must look to the past to nourish our children," *The Globe and Mail* April 19, 2018, https://www.theglobeandmail.com/opinion/article-indigenous-peoples-must-look-to-the-past-to-nourish-our-children/.

[182] McIvor and Napoleon, "Language and culture as protective factors for at-risk communities."

Why these indicators matter

In addition to adequate nourishment and uptake of antenatal care services, maternal health status and health behaviours influence development in utero. Low birthweight is also an important indicator of maternal health status and poverty.[183] Risk factors for low birthweight include smoking, alcohol or drug use during pregnancy, infection during pregnancy, insufficient weight gain during pregnancy, and young or older maternal age.[184] Low birthweight has been associated with a number of poor outcomes, including cognitive and language development impairments, decreased academic achievement, and increased risk of chronic illnesses later in life.[185] It is important to monitor maternal health status and behaviours that influence healthy physical development of children to identify opportunities for early intervention.

Also critical to health in infancy is exclusive breastfeeding, which is not only important for nourishment, but also for protection against infection, cognitive development and developing a secure attachment to the child's primary caregiver.[186] Adequate maternal and child nutrition before and after birth is influential in promoting physical growth and brain development, which has consequences for language-cognitive and social-emotional development, and ultimately, for future health and socioeconomic outcomes.

In addition to maternal health status and behaviours, another important indicator of overall physical health and well-being of children is the presence of a disability or chronic illness. As Kim and colleagues summarize, "children with chronic health conditions often experience pain, fatigue, and emotional distress and other problems that may affect their well-being."[187] An epidemiologic survey of 3,294 children in Ontario found that children with both chronic illness and associated disability

[187] Jiseon Kim et al., "Symptoms and quality of life indicators among children with chronic medical conditions," *Disability and health journal* 7, no. 1 (2014): 96–104.

were at three times greater risk of experiencing psychiatric disorders.[188] Learning and behavioural disabilities have been associated with a higher risk of school difficulties, criminality, higher medical needs, difficulty establishing emotional relationships, and employment challenges as adults.[189] Therefore, providing accessible, effective and timely support for children experiencing disability or chronic illness is important to promote well-being.

Measure: Healthy habits

Establishing healthy habits is important for growth and development. Moreover, reinforcing a healthy lifestyle in childhood and adolescence increases the likelihood that these behaviours will continue into adulthood. The importance of measuring healthy habits in the context of child well-being has been primarily explored among adolescents, as this is a time when children are gaining more independence and autonomy in their lifestyle choices.[190] The indicators chosen for this measure include:

- Eating habits
- Level of physical activity
- Sleep habits

Why these indicators matter

Healthy habits, which include things such as levels of exercise, a healthy diet and sleep hygiene, lay an important foundation for development among children, as well as for future outcomes in adulthood. Establishing patterns of regular physical activity and a healthy diet are important for preventing obesity and chronic illnesses such as type 2 diabetes and promoting healthy body image.

Measure: Risk management

Preventing and managing risky behaviours among children and adolescents is very important as this may influence many different domains of well-being. The indicators chosen for this measure include:

- Teenage birth rate
- Percentage who report using illicit drugs in the last month
- Percentage who report binge drinking in the last month
- Smoking in the last month

Conceptualizing and Measuring Indicators of Positive Development,* ed. Kristin Anderson Moore and Laura H. Lippman (Boston, MA: Springer US, 2005).

Why these indicators matter

Early prevention of risky behaviour such as alcohol, tobacco and illicit drug use or unprotected sex is important, as these problem behaviours can manifest in youth and extend into adulthood. For example, a study of 727 Indigenous adolescents in the United States found that those who began drinking at an earlier age (i.e. 11–13 years old) were at a much greater risk of developing problem drinking than those who started later.[191] Adolescence is a time when risky behaviours tend to occur at the same time and are associated with "increased risk of poor educational attainment, future morbidity and premature mortality."[192] This is true of the Indigenous context as well, where high rates of binge drinking among adolescents "has been identified as a leading case of adolescent morbidity and mortality consequent to violence, falls, suicide, drowning, motor vehicle accidents, and risky sexual behaviour."[193]

SUB-STRATEGIC OUTCOME: FAMILY WELL-BEING

As stated above, there is a vast literature documenting the integral relationship between child well-being and family well-being. As summarized by Newland (2015), many studies have demonstrated child well-being as being predicated on family well-being and parenting quality.[194] Throughout the relevant literature, family well-being denotes that a family has the capacity to care for children and fulfill their basic developmental, health, educational, social, cultural, spiritual, and housing needs. Similarly, Newland (2015) defines family well-being as a relational concept, referring to the interactions between family members but also affected by the larger environments in which parents and children exist. Within this research, family well-being comprises two sub-components: Family Self-Sufficiency (parental employment and a family's ability to meet basic needs) and Family Health and Protective Factors (parental mental and physical well-being and family protective factors).

SELF-SUFFICIENCY

Families' overall level of self-sufficiency is typically measured in terms of economic resources. This aspect of family life is frequently cited as a crucial determinant of child thriving. The indicators selected as the measures of this indicator include:

- Secure parental employment and labour force participation, and;
- Ability to meet basic needs, including transportation, housing and utilities, food, clothing, childcare and other necessary expenses.

Self-sufficiency is among the most cited factors in the literature on family well-being. Many studies have found that low parental income and economic hardships cause increased economic pressure in families, which adversely impacts parental mental health, conflict between parents/caregivers, parent-child interactions and parenting practices, as well as cognitive, academic, and socioemotional outcomes in children. Indeed, when parents are lacking the skills and resources necessary to be self-sufficient, they are more likely to struggle to provide adequate support and educational assistance for their children.[195] Families in chronic and persistent poverty are especially prone to challenges with self-sufficiency and may require additional support to reach this objective.[196] In the context of First Nations, risks to self-sufficiency are often more pronounced than in the rest of Canada. For many First Nations households, life choices can be severely compromised by high food costs, poor availability of healthy food, low income, and/or high housing and heating costs.

FAMILY HEALTH AND PROTECTIVE FACTORS

In addition to the immediate financial needs captured in the self-sufficiency component, there is the equally important consideration of health status of parents and/or caregivers, as well as the degree of protective factors within the family unit. As a result, we have classified the measures in this sub-strategic outcome as follows.

- Physical health status of parents or caregivers;
- Mental health status of parents or caregivers, and;
- Family protective factors.

Parental physical and mental health

Parental mental and physical health are necessary conditions for maintaining a stable and positive family environment. Parents who are suffering from poor mental health will likely have a negative impact on the entire family system, including co-parents, children, as well as other networks outside of the family such as work and social support systems.[197] Mental health disorders, combined with the daily challenges of parenting, can cause parents to feel overwhelmed by the demands of everyday life. Moreover, parents suffering from subclinical mental health issues (e.g. distress, mild depression, anxiety, stress, fatigue, somatic symptoms) rarely seek treatment for their conditions.[198] Under these conditions, parents have been found more likely to resort to inappropriate coping devices, such as avoidance or drug/alcohol use, as a way of managing the challenges in their lives.[199]

These persistent conditions of heightened levels of stress, combined with low levels of social support, are particularly problematic for families.[200] Conversely, when parents use appropriate emotion regulation, stress management, and support-seeking strategies, they tend to exhibit more positive physical and mental health, decision making, job performance and stability, parenting skills, and social relationships.[201] Markers of positive parental mental health, including life satisfaction, positive mood, and efficacy, are related to better individual and family

functioning.[202] It is essential that parents who have mental health issues be treated properly if they are to be self-sufficient and resilient.[203]

Parental physical health is an equally important component of family well-being which impacts parent–child interactions and child well-being.[204] Parental health behaviours and management strategies are related to parental mental health and family functioning (e.g. family interactions, outcomes, roles, self-sufficiency, and parent involvement), all of which impact children's life outcomes.[205] Finally, parents also serve as "the primary gatekeepers of their children's health", therefore making choices about their child's healthcare, nutrition, physical activity, mental healthcare, and physical and emotional environments.[206]

Family protective factors

The last component of family well-being in this research is family protective factors, which consist of family resilience, social connections, knowledge of parent and child development, concrete support in times of need, and developmental parenting and attachment. Many child welfare and family support systems have emphasized the importance of protective factors in preventing negative outcomes for children. These factors can mitigate risk and promote healthy development of children and families such as strengths that help buffer and support families at risk. These risk factors include stressful conditions such as maternal psychiatric disorders, family violence, persistent poverty, and substance use. Increasing the strength of protective factors is an effective prevention and intervention strategy to offset risk exposure and promote enduring gains.[207]

Strengthening Families™, developed by the Center for the Study of Social Policy (CSSP), identifies five protective factors: (1) parental resilience; (2) social connections; (3) Knowledge of parent and child development; (4) Concrete support in times of need; and (5) social and emotional competence of children. Many child welfare systems have used the CSSP framework to develop strength-based intervention initiatives.[208] Strengthening Families is a research-informed approach to improve family well-being, enhance child development, and reduce the likelihood of child abuse and neglect.[209] This framework is widely used as an intervention in many child welfare agencies to reduce child maltreatment and foster positive relationships between parents and children.

According to the CSSP:

> Protective factors act as a counterweight to risk factors. They buffer the impact of what the researchers call "toxic stress". Risk factors, it turns out, are not very predictive of future events. And we cannot get to good outcomes for children only by focusing on reducing risk. The protective factors in the Strengthening Families framework both protect against risk and promote positive outcomes.[210]

Strengthening Families is also consistent with the shift in the child welfare sector from a protection to a prevention-based system in its emphasis on a changed relationship with parents. As summarized by the CSSP:

> Programs and service providers in these systems sometimes see parents as irrelevant to their work, or worse, as obstacles to achieving the outcomes we all want for children. But we know that children grow up in families, not programs—and we cannot achieve good outcomes for children without engaging their parents as partners.[211]

Finally, Strengthening Families is aligned with developmental science and emphasizes the importance of nurturing and responsive relationships in the critical period of early childhood. The CSSP clearly references the

effects of traumatic experiences in children, which can "carry into the rest of a young person's life."[212]

Parental resilience refers to the ability of parents to manage stress (either parental or general life stressors) and for the parents and the family to function well when faced with challenges, adversity, and trauma. According to the CSSP, it has been frequently demonstrated that how parents respond to stressors is more significant to determining the outcomes for themselves and for their children than the stressor itself.[213]

Second, social connections refer to parents' constructive and supportive relationships with family members, friends, neighbours, co-workers, community members, and service providers, which provide emotional, informational, and spiritual support. These connections have been associated with positive parental mood, positive perceptions and responsiveness of parents towards children, as well as parental satisfaction, sense of competence, and reduced anger, anxiety and depression.

Third, knowledge of parenting and child development, simply an adequate understanding of child development and parenting strategies that support physical, cognitive, language, social and emotional development, contribute to emotionally available parents and caregivers who recognize and respond to the needs of children, and who interact with them in an affectionate, sensitive, and nurturing manner. This type of care allows children to develop a bond of secure attachment towards their parents or caregivers and, in turn, to develop a sense of trust, safety, self-confidence, and security.[214]

Fourth, concrete support in times of need refers to strategies and resources which parents can utilize during exceptionally trying times, such as job losses, home foreclosure, acute poverty (e.g. inability to pay for basic necessities), substance abuse, or other family trauma. As summarized by the CSSP, when parents are able and willing to navigate through and access health care and social service resources offered in their community, they are taking a critical step towards improving their circumstances and "learning to better manage stress and function well."[215]

Finally, developmental parenting, a term coined by Roggman et al.,[216] encompasses a set of parenting practices meant to be developmentally appropriate and adjusted as children's needs and skills change. Roggman and others have found that developmental parenting includes four key components: affection, responsiveness, encouragement, and teaching.[217] More recently, Newland expanded that list to include engagement, appropriate discipline, and supportive co-parenting.[218] In general, developmental parenting is described as responsive and sensitive to children's needs in order to foster positive attachment relationships with parents and caregivers in infancy and early childhood, which are a crucial conditions to facilitate of child well-being.[219] Indeed, both the quality of parenting and the quality of parent–child relationships are extremely important for children's well-being.[220] High-quality parenting is characterized as being developmentally appropriate, consistently with a child's needs, and adjusted as those needs change in order to foster well-being.[221]

SUB-STRATEGIC OUTCOME: COMMUNITY WELL-BEING

Community well-being is the broadest domain of well-being utilized in this research project, encompassing many contextual factors which can enable or constrain a child's thriving. Poverty has known impacts on development, a matter highlighted in Phase 1.[222]

As Liebenberg and Hutt-Macleod attest, "Reducing the number of children in care will depend in large part on providing families and communities the resources required to heal so that they are better

able to care for children."[223] However, the importance of community well-being denotes a focus beyond simply reducing the number of children in care. Rather, a community focus shifts the objective towards promoting substantive equality and wellness for children, families, and communities to have a chance for healthy development. As Bronfenbrenner explained, "Children don't grow up in programs. They grow up in families and in communities."[224]

The community capacity-building framework proposed by Liebenberg and Hutt-Macleod (2017) demonstrates how development at the community level is critical to well-being in general, including that of children.

The definition of community well-being employed in this research is derived from the University of Minnesota's Earl E. Bakken Center for Spirituality & Healing, as "the combination of social, economic, environmental, cultural, and political conditions identified by individuals and their communities as essential for them to flourish and fulfill their potential."[225] While the factors inherent in community well-being in an Indigenous context are numerous, for the purposes of this research, these have been limited to three sub-components. The components of community well-being are as follows:

- A community's access to basic needs;
- The gaps in service provision to communities, and;
- Public safety and community health.

ACCESS TO BASIC NEEDS

Access to basic needs in a community will comprise five key indicators: access to potable water, access to suitable housing, access to broadband connectivity, proximity and presence of community infrastructure, and overall poverty level. These components have been included in numerous studies and surveys documenting Indigenous well-being in Canada.

Access to potable water

Firstly, access to potable water is widely recognized as a fundamental condition for human health, and the lack of access to safe drinking water and adequate sanitation is one of the greatest threats facing vulnerable populations in the world. Indigenous teachings in particular demonstrate

that water has various meanings and uses for people including a "...home for living beings, a life-enriching cleansing agent, an element of interconnection, and a symbol of both strength and softness."[226] As documented by Sanderson, the meaning attached to water among First Nations is that of being: "life; ...sacred; ...power; ...our first medicine; and, water connects all things."[227]

In Canada, providing safe drinking water to First Nations on reserves is a significant issue. As Bharadwaj and Bradford note, many reserve communities in Canada live with long-term drinking water advisories and high-risk water systems, and experience health and water quality below that of non-reserve populations.[228] The Government of Canada's federal department of Indigenous Services Canada provides data on long-term drinking water advisories in First Nations communities, which refer to water advisories which have been in effect for more than 12 months.[229] As of July 27, 2020, there were 30 short-term drinking water advisories and 61 long-term drinking water advisories on public systems on reserves.

The Parliamentary Budget Officer in Canada has estimated that the government would have to invest a minimum of $3.2 billion in capital investment to bring First Nations water systems up to the standards of comparable non-Indigenous communities in order to eliminate boil-water advisories.[230] When this estimate was released in 2017, it was found that the government was spending only 70 per cent of what is needed to end boil water advisories on First Nations Reserves within five years.

Access to suitable housing

Access to suitable housing is an equally important basic need. According to Statistics Canada, 'housing suitability' refers to whether a private household is living in suitable accommodations according to the National

Occupancy Standard (NOS); that is, whether the dwelling has enough bedrooms for the size and composition of the household.[231] Statistics Canada has recently devoted greater attention to measuring housing needs in Canada through the new Canadian Housing Survey in 2018. Access to suitable housing can also be determined through the core housing need metric developed by the Canada Mortgage Housing Corporation (CMHC).

According to the CMHC,[232] core housing need is a situation in which:

1. Major repairs are required and residents do not have the means to move to a good unit in their community;

2. There are not enough bedrooms for the residents, and they do not have the means to move, and;

3. The current home costs more than the residents can afford, and they do not have the means to make a move or find an available affordable home in their community.

As defined by the CMHC,[233] a household is defined as:

- Its housing is unacceptable (does not meet one or more of the adequacy, suitability or affordability standards), and;
- Acceptable alternative housing in the community would cost 30% or more of its before-tax income.

Affordable, stable housing in a safe, supportive neighbourhood is essential for a healthy family life.[234] There is a substantial body of research linking adequate housing to indicators of human health.[235] Recent guidelines released by the WHO, for instance, highlights that improved housing conditions lead to better standards of health and overall well-being.[236]

In this report, the WHO demonstrates that a healthy home is one that provides a safe, comfortable and hygienic environment, as well as a psychological sense of home through a feeling of belonging, security, and privacy.

In Canada Indigenous People are far less likely than non-Indigenous Peoples to live in such a home, particularly those living on reserves.[237] According to recent data, approximately 20% of Indigenous People lived in a dwelling in need of major repairs in 2016, and 18.3% of Indigenous People lived in housing that was crowded.[238]

Families experiencing homelessness often report a loss of parental control, and are more likely to experience domestic or community violence and an increase in fear and anxiety.[239] Poor housing has also been linked to the spread and chronic occurrence of viruses and bacteria[240], and the increased prevalence of unintentional injuries.[241] Moreover, housing instability is associated with decreased family engagement in children's early school-related activities and poor early school attendance, and children who experience homelessness during their infancy, toddler, or preschool years tend to have poorer early academic outcomes overall.[242] Housing improvements linked with improved health include renovations, relocation, and energy efficiency projects.

Access to broadband

Broadband connectivity has been associated with numerous community benefits and has been recognized as a pressing issue for Aboriginal communities.[243] According to Benkler, internet connectivity is necessary infrastructure to contribute to "high and sustainable economic growth

and to core aspects of human development."[244] As acknowledged by the Government of Canada, broadband is "a critical tool for Aboriginal people as broadband infrastructure can improve health and safety, increase social well-being and provide economic development opportunities and growth for Aboriginal communities".[245] Today, only about 24% of households in Indigenous communities have access to broadband connections of 50/10 Mbps.[246] As a result of these recognized benefits, since early 2011, Indigenous Services Canada (formerly, Indian and Northern Affairs Canada (INAC)) was developing an Aboriginal connectivity strategy, while other federal departments including Industry Canada are creating a comprehensive National Digital Strategy. In some cases, broadband infrastructure has been framed as a component of indigenous self-determination.[247] There is general consensus that broadband infrastructure is an integral component of a thriving community, from a tool for cultural preservation and language learning to service delivery in health care and education.[248]

Presence of community infrastructure

The inclusion of the presence and proximity of community infrastructure is consistent with the definition of community well-being developed by the Earl E. Bakken Center for Spirituality & Healing as being based on three factors: Connectedness (e.g. social support, civic engagement), livability (e.g. housing, transport), and equity (e.g. basic needs are met, equality of opportunity).[249]

The Earl E. Bakken Center for Spirituality & Healing makes reference to numerous studies showing the positive effects of community spaces and services for community well-being, including transportation systems, health and social service centres, public safety and emergency services, parks, recreation, and arts centers, and government and legal institutions. Research shows that community infrastructure is essential to fostering services, facilities, and networks which increase quality of life and reducing poverty.[250] Investments in many Indigenous communities in hard and soft infrastructure are necessary to promote quality of life for community members. This can also help to attract people to the community and can act as a disincentive to out-migration.[251]

Community infrastructure is also significant to the degree that it promotes safety and security among neighbourhoods which, in turn, promote safety within families.[252] Safe neighbourhoods contain resources which support family activities and community health and connections, including parks, sidewalks or walking paths, libraries, and community centers.[253] Neighbourhood safety can create opportunities for children to learn social customs, develop feelings of confidence in their communities, and build interpersonal relationships with peers.[254]

Poverty

Overall poverty is included as a component of community well-being. According to Gustavsson and MacEachron, "there is little disagreement about the association of poverty with child welfare involvement."[255] The negative effects of poverty are often complex and self-reinforcing:

> children can be hungry, be living in substandard housing or be homeless, be unsupervised while a parent works or is meeting

> other responsibilities, be truant from failing schools, lack medical care, or have a caretaker with untreated mental illness or substance abuse.[256]

Parental or familial experiences of poverty have been associated with numerous detrimental effects to child well-being, including emotional and behavioral problems as well as further disruptions in schools and to friendships. Poverty is also associated with poor early childhood development and is a risk factor for family breakdown, both of which have been linked to poor educational performance in children. Moreover, economically distressed areas often experience higher reports of child maltreatment, correlated with inadequate housing and single parenthood.[257] Finally, community poverty has also been linked to health disparities and language development in children.[258]

Community connections and cultural safety

Consideration of community connections and cultural safety to assess social cohesiveness and cultural attachment are important elements of community well-being. Cultural safety refers to social environments and practices which recognize, respect, and honour diverse cultural identities.[259] A measurement of cultural safety is important given that the harmful effects of racism and colonialism experienced by people from non-dominant cultures can affect stress levels, health status, and even life expectancy.[260] As Czyzewski notes, colonialism can be understood as a social determinant of health among Aboriginal populations.[261] Cultural safety also refers to an approach to service delivery that respectfully engages families to select the most individually appropriate path to well-being.[262] The prevalence and use of traditional languages within a First Nation will be used as a proxy to determine cultural connections within a community.

Applications

Successful implementation of a performance framework depends on relevant, timely and high-quality data. The following section examines the current state of data on First Nations in Canada, where gaps in data exist, and what is needed to support a performance framework that focuses on a future state of thriving First Nations children.

DATA ON FIRST NATIONS IN CANADA: CURRENT STATE

While there is a vast amount of information collected on First Nations, it is largely uncoordinated and carried out in a piecemeal fashion across various federal departments, agencies, regions and organizations by both Indigenous and non-Indigenous groups (see Table 8).[263] Oftentimes, data is not collected frequently enough to be used for planning and operations, nor is it sufficient to answer relevant questions due to gaps in coverage for First Nations living on-reserve (for example, Statistics Canada's Aboriginal Peoples Survey only collects data from First Nations living off reserve, Métis and Inuit). Some surveys fail to separate First Nations identity from the general population, with inconsistency in how Indigenous identity is defined (e.g. self-identified, Status Indian, etc.). Certain efforts have also been critiqued for using culturally inappropriate indicators[264] and focusing on secondary issues (e.g. disease prevalence) as opposed to root causes of ill-health and well-being.[265] Furthermore, First Nations communities are often unable to use this data for planning purposes as it is aggregated to provincial and national levels.

There have been some efforts to address these challenges. For example, the First Nations Information and Governance Centre (FNIGC) was established in 2010, and works mainly to develop and administer national First Nations surveys in collaboration with Regional Partners.[266] One of their larger initiatives is the First Nations Regional Health Survey (RHS), which gathers information on health and well-being from over 250 First Nations communities. The RHS has filled important data gaps for First Nations peoples living on reserve and in northern communities, and as a First Nations-led initiative, includes culturally appropriate indicators on a holistic set of outcomes. FNIGC also houses the First Nations Data Centre, which

provides data access to researchers, policymakers and other stakeholders on a pay-per-use basis. Census data can offer broad coverage of certain indicators at the level of the individual First Nation but may not always be considered representative.

TABLE 8: Available data and application considerations for the Measuring to Thrive framework.

Data source	Types of data collected	Limitations for FNCFS purposes
Statistics Canada	*Census* ▪ Demographic and family characteristics ▪ Education, labour and income outcomes ▪ Household and dwelling information ▪ Language, mobility and migration	▪ Aggregated to give national level overview ▪ Conducted every 5 years ▪ Indigenous indicator self-identified ▪ Indicators are not always culturally relevant
First Nations Information and Governance Centre (FNIGC)	*Regional Health Survey (RHS)* ▪ Health, well-being and social determinants on children, youth and adults *Early Childhood, Education and Employment Survey (REEES)* ▪ Early childhood education and development ▪ Youth employment and education ▪ Adult employment and education ▪ Labour-market conditions *Community Survey* ▪ Environment ▪ Shelter, infrastructure and housing ▪ Food security and employment ▪ Early childhood development and education ▪ Health and social services ▪ First Nations identity ▪ Justice and safety ▪ First Nations governance	▪ Administered to only a sample of First Nations communities and/or sample of the population ▪ RHS and REEES data aggregated to give national level overview (and cannot always be disaggregated to community level) ▪ Some communities cannot access data due to confidentiality concerns ▪ No clear timeline for further data collection and reporting
Indigenous Services Canada (ISC)	▪ Broadband connectivity profiles ▪ Boil water advisories ▪ Population and profile data on individual First Nations	▪ Can be difficult to access ▪ Data can be outdated (e.g. most recent publicly available data from ISC on connectivity in First Nations communities is from 2013) ▪ No aggregation of data

ANALYZING THE GAPS: WHAT IS MISSING?

Among the most significant challenges to the success of this project are the gaps in high-quality data pertaining to First Nation communities. To align what data currently exists to what is required for supporting a FNCFS performance framework, two dimensions of data source quality were considered: accessibility of data and granularity of data (see Figure 37).

Data accessibility, as the name suggests, refers to the ability to access or retrieve the data stored in a database. Publicly accessible (e.g. housing, access to potable water), data tends to be aggregated, which limits its applicability for decision-support in specific domains. Conversely, granular data refers to the degree of detail and specificity of data, in this case whether data can be divided into Frist Nations and family units. As data is more subdivided, it is more granular. Granular data can be aggregated or disaggregated to allow for different scopes of analysis. If data is not granular, it becomes very difficult to analyze clearly. Granular data may be available at the level of the individual agency or First Nation, but is not always readily available, comparable or consistently captured (i.e. loss of time series).

In the current state, there is limited consistent information and data available on the overall performance of the FNCFS system. What is known, is that the system is underfunded, the system incentivizes the placement of First Nations children in protection, and there is no commonly used results-focused framework. One of the immediate priorities with respect to transition to an alternative funding approach, is the adoption of a commonly supported and used performance framework rooted in the goal of thriving First Nations children, families and communities.

The draft diagram below plots the indicators from the performance framework based on their current-state accessibility and granularity. Several indicators are accessible but insufficiently granular (bottom right quadrant). This suggests that while there is aggregate data at the level of a First Nation, a province or region, the data may not have the necessary detail to measure the indicator defined in the performance framework. For instance, there may be data at the level of the First Nation on alcohol and drug misuse, but that data may not be available for the individual child. Even though individual data will not be shared, it is a useful internal metric for agency decision-support and planning for the child and family. The mismatch between accessibility and granularity is not insurmountable. It will require agency action with requisite resources.

The upper right quadrant is both accessible and sufficiently granular. Most of this data relates to child safety, as it is expected that agencies already collect this information at the level of the individual child for their case files. It is anticipated that while this data will not be made public at the level of the individual, the aggregated data can be a reliable source of information to assess overall outcomes for children and families in a community. Some community level data is also included, as it can be accessed from public sources at the level of the First Nation. Such data includes housing suitability and access to potable water to fulfill certain indicators. The two community well-being indicators

related to infrastructure and health and social services in the bottom left corner are deemed both insufficiently granular and insufficiently accessible because the data does not tend to exist. It would be up to individual communities or agencies to collect or produce this data.

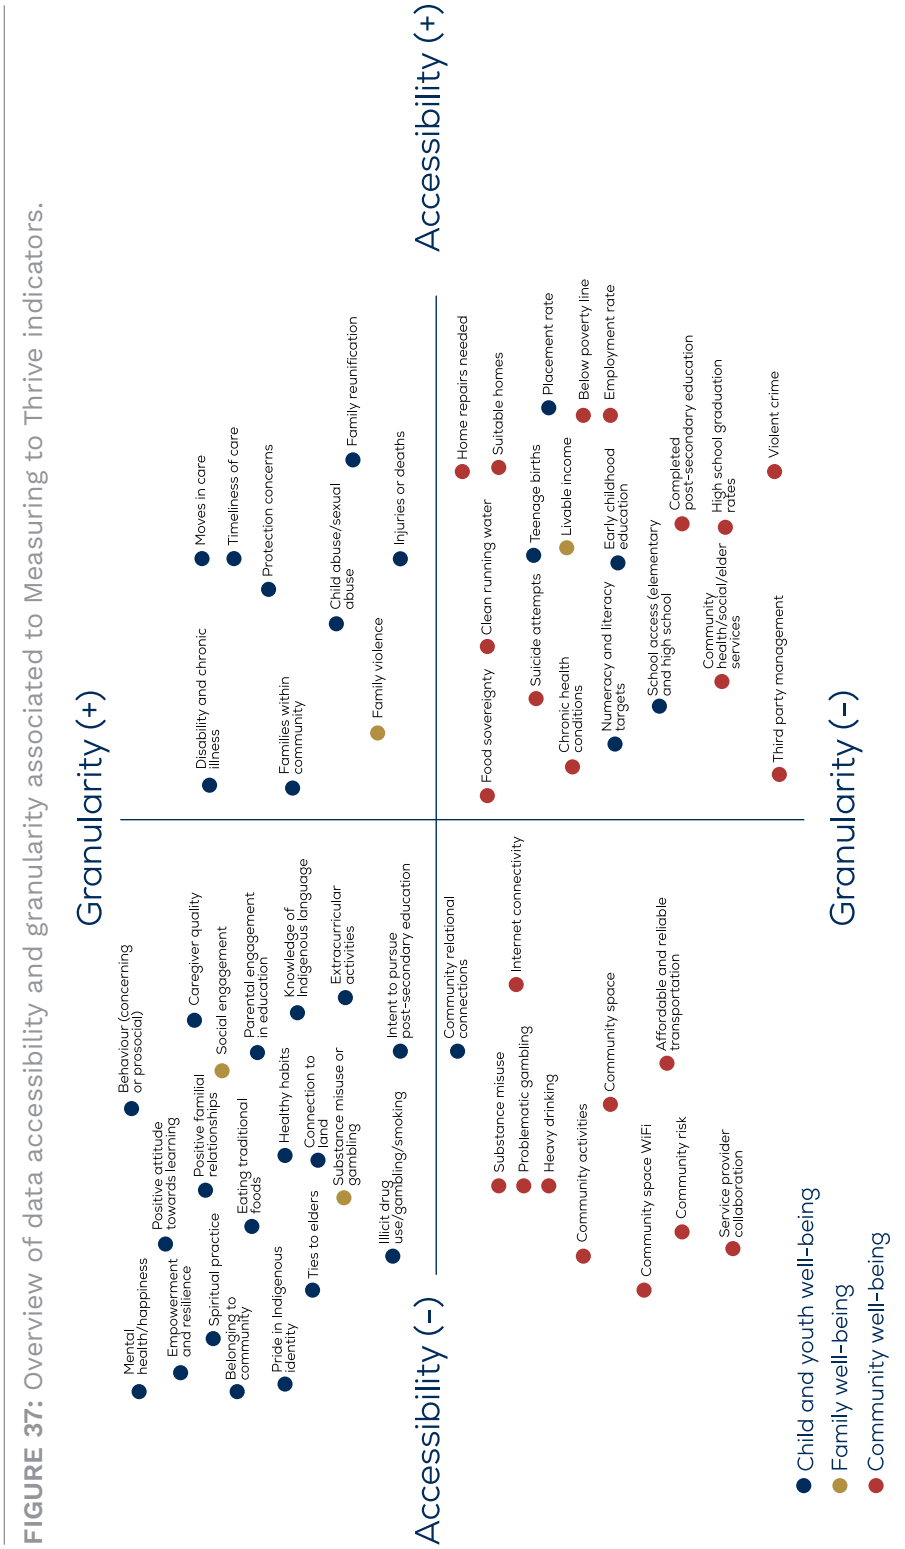

FIGURE 37: Overview of data accessibility and granularity associated to Measuring to Thrive indicators.

FEASIBILITY AND CRITICALITY OF DATA COLLECTION

Given the large gaps that exist, analysis was undertaken to determine the feasibility of obtaining data, and the criticality of it to understand progress to achieving sub-strategic and strategic objectives. This was evaluated using the following criteria:

TABLE 9: Defining feasibility of access and criticality of data for the Measuring to Thrive framework.

	Feasibility	Criticality
1	Easy to access: Data source is already publicly available or very core to agency mandate AND is available at the sufficient level of granularity to fulfil the indicator.	Data is imperative to assessing whether or not the sub-strategic and strategic outcomes are being achieved.
2	Somewhat easy to access: Data is likely not publicly available but close enough to agency mandate that they could reasonably collect it.	Data is somewhat essential to assessing whether or not the sub-strategic and strategic outcomes are being achieved.
3	Difficult to access: Data is not collected by agency and outside of agency mandate, would require external cooperation.	Data is not essential to assessing whether or not the sub-strategic and strategic outcomes are being achieved.

In this configuration, a *Feasible* coding (green) applies to data that is already being captured or an agency could easily collect the data. A *Somewhat Feasible* coding (yellow) describes data that may not exist publicly, nor is it likely being captured by agencies, but of which a request falls within an agency's mandate and the data could be feasibly collected by an agency. Finally, a *Difficult* coding (red) indicates some challenge in accessing the data as it falls outside of a typical agency's mandate and may require collaboration with a third party to capture the information (see Table 9).

Determining the criticality of collecting data on a particular indicator was based on findings from the literature on what is needed to ensure child well-being. Consideration was also given to whether the indicator measured the child's immediate health and safety or well-being more generally, whereby ones related to safety took precedence.

CHILD WELL-BEING

Child well-being is a multi-dimensional concept, and data is required from several different areas in order to holistically understand how a child is faring. In terms of feasibility, the majority of indicators were categorized as somewhat easy to access, meaning that social workers could likely collect this information through assessments with the child

and family. This is with the exception of indicators related to school performance, such as numeracy and literacy scores. In cases like these, there may be opportunities for collaboration with external entities on a community-by-community basis. For example, agencies may collaborate with school boards to collect information on educational achievement outcomes and behavioural issues in the classroom. Likewise, if early intervention programs such as Aboriginal Head Start On-Reserve are delivered within an agency's community, there may be potential to share data on maternal health and early childhood development outcomes.

The child well-being sub-strategic program is the most comprehensive of the four sub-strategic programs and consists of cognitive development, social relationships, psychological & emotional well-being, cultural & spiritual well-being and physical health and well-being performance elements. Cognitive development is supported by school readiness and educational attainment programs. Social relationships is supported by social support & belonging and social engagement programs. Psychological and emotional well-being is supported by child behaviour, social competence, subjective well-being and esteem programs. Cultural and spiritual well-being is supported by spirituality and tradition programs. Physical health and well-being are supported by overall physical health, healthy habits and risk management programs.

FAMILY WELL-BEING

The family well-being sub-strategic outcome consists of self-sufficiency and family health & protective factors performance elements. Self-sufficiency is made up of ability to meet basic needs programs and secure parental employment and participation in labour force programs. Family health and protective factors are made up of physical health of parents/caregivers programs, mental health of parents/caregivers programs and family protective factors programs.

In terms of feasibility, most of these indicators are somewhat easy to access, meaning that social workers could reasonably collect this information through assessments with the child and family. Some indicators referring to family health and protective factors, such as illicit drug use, and symptoms of anxiety and depression and thoughts of suicide and self-harm among caregivers, are presumably feasible to be collected by the agency (and to some extent are already being collected) as these are central to the mandate of agencies and critical to achieving sub-strategic and strategic outcomes.

COMMUNITY WELL-BEING

The community well-being sub-strategic outcome consists of access to basic needs, gaps in services to the community and public safety & community health performance elements. Access to basic needs

has a heavy focus on community infrastructure and looks at access to potable water, suitable housing, broadband connectivity and community infrastructure. It also looks at programs that address the overall poverty level. Gaps in services to the community is made up of programs that seek to address gaps or shortages in services. Public safety and community health consist of health & safety and educational attainment programs.

In terms of feasibility, most of these indicators qualify as relatively easy to access, with the exception of community infrastructure and public safety and community health indicators, as these will require collaboration with external organizations are not within the core mandate of child welfare agencies.

CONNECTION TO THE MEASURING TO THRIVE FRAMEWORK

It is clear that there are several gaps and challenges to utilizing First Nations data more broadly and at the level required by FNCFS agencies. The need to create a more coordinated and standardized approach to managing First Nations data to support an FNCFS performance framework raises the question of which entities and institutional relationships can be developed to collect and store this data. To that end, the example of Chapin Hall at the University of Chicago provides a useful parallel.

Chapin Hall, an independent organization affiliated with and located on the campus of the University of Chicago, engages in extensive partnerships with communities to share information and data on performance indicators of child welfare agencies. Chapin Hall serves as a steward of administrative data from a number of public agencies regularly. These data are used with the express permission of the source agency; for purposes approved by the source agency; and to benefit the source agency and the individuals and families the source agency serves.

One example of a key partnership is with the state of Tennessee, which introduced performance-based contracting (PBC) in child welfare to promote timely permanency for children in 2006. In this model, providers are financially incented to promote the permanent placement of children and are benchmarked against their own performance. The state pays for a result and bills providers that do not meet their agreed targets. Underpinning Tennessee's PBC model is data collected by providers and aggregated by Chapin Hall, which provides expertise on data analysis and performance, as well as in evaluating results and adjusting the program as needed.

Through its frequent use of high-quality reliable data and working partnerships across sectors, systems, and programs, Chapin Hall advances evidenced-based policy and funding solutions to address the complex needs of children, families, and communities. A First Nations-led secretariat is proposed to support First Nations and agencies to transition to a future state with a results approach focused on child, family, and community well-being.

Availability of data needed to benchmark and evaluate if outcomes among First Nations children are improving is scarce, and much of it will need to be collected by FNCFS agencies and providers. It is recognized that collection, analysis and management of the data will require an institutional capacity that is not currently present among all FNCFS agencies. Adequate funding for establishing this infrastructure, stakeholder buy-in and ownership over all aspects of performance measurement and strategic planning will be essential. Allowing communities to define their own success, establishing a positive, no-fault culture around measurement and tying it to an opportunity to improve (as opposed to viewing it as an assessment of performance) must also be integrated.

Connection to the Government of Canada's Expenditure Management Architecture

The Treasury Board of Canada Secretariat has set many standards and requirements for evaluation in the federal government, including the *Policy on Results* (2016)[267] and the *Directive on Results* (2016),[268] the latter of which contains Mandatory Procedures for Evaluations and Standards for Evaluation. The *Policy* replaced three Treasury Board policies, including the *Policy on Evaluation*. TBS continues to demonstrate functional leadership in implementing, using and developing evaluation practices across the federal government. This *Policy on Results* in particular is intended to allow the federal government to move towards performance-informed budgeting in the future.[269]

[267] Treasury Board of Canada Secretariat, "Policy on Results," July 1, 2016, https://www.tbs-sct.gc.ca/pol/doc-eng.aspx?id=31300.

[268] Treasury Board of Canada Secretariat, "Directive on Results," (July 1, 2016), https://www.tbs-sct.gc.ca/pol/doc-eng.aspx?id=31306.

[269] Derek Armstrong, "Performance (-informed) Budgeting in the Government of Canada," *Treasury Board of Canada Secretariat*, October 2018, https://fmi.ca/wp-content/uploads/2019/04/en-presentation-derek-armstrong-to-fmi-oct-25-pd.pdf.

Prior to this, the Secretariat had established a guiding document on performance measurement strategies in the federal government.[270] As explained in this guide, performance measurement is a results-based management tool used to plan, monitor, and assess the performance of policies and programs in relation to their progress against explicit benchmarks and goals. In general, the purposes of performance measurement are two-fold: first, to support ongoing program monitoring, and second, to support and facilitate effective evaluation. More specifically, performance measurement allows governments and evaluators to:

1. Monitor and assess program effectiveness;

2. Evaluate the economy and efficiency of programs to determine the value of results in relation to expenditures;

3. Enhance accountability and transparency in the delivery and spending on programs, and;

4. Facilitate strategic program planning to improve its effectiveness and achieve intended results.[271]

ELEMENTS OF THE *HORIZONTAL INITIATIVES GUIDE*

The complexity and breadth of the system-wide approach to FNCFS is evident when considering the contextual influences on well-being. Adhering with the guidance set out in the *Guide to Departments on the Management and Reporting of Horizontal Initiatives* would be beneficial with respect to achieving a successful outcome.

The *Horizontal Initiatives Guide* promotes the management and reporting on horizontal initiatives by:

- Clarifying the definition of a horizontal initiative
- Outlining appropriate governance (First Nations-led)
- Describing the roles and responsibilities of lead and partner departments and agencies
- Setting out the process for their management and reporting
- Prescribing reporting requirements for Parliament and to TBS

[270] Treasury Board of Canada Secretariat, "Supporting effective evaluations: A guide to developing performance measurement strategies," September 29, 2010, https://www.canada.ca/en/treasury-board-secretariat/services/audit-evaluation/centre-excellence-evaluation/guide-developing-performance-measurement-strategies.html.

[271] Treasury Board of Canada Secretariat, "Supporting effective evaluations: A guide to developing performance measurement strategies," September 29, 2010, https://www.canada.ca/en/treasury-board-secretariat/services/audit-evaluation/centre-excellence-evaluation/guide-developing-performance-measurement-strategies.html.

1. *Does FNCFS meet the criteria for a horizontal initiative?*

The performance measurement framework Measuring to Thrive meets the definition of a horizontal initiative. The performance measurement framework is holistic as it seeks to address the root causes in the system that have prevented First Nations children from thriving. This performance measurement framework covers protection, mental health, physical health, education and infrastructure to name a few of the areas of focus. The funding associated to meet the goas of this framework will implicate ISC and other departments.

2. *Appropriate governance for the FNCFS performance measurement framework*

Having established that the Measuring to Thrive framework meets the definition of a horizontal initiative it is important to outline appropriate governance. The following steps should be taken as part of the roadmap towards the implementation of the framework:

a. The appointment of a senior-level First Nation oversight committee
    i. Responsible for data collection, monitoring of indicators and spending, resolution of disputes, timing of meetings and agenda, liaison and ongoing reporting and engagement with key stakeholders and central agencies, communication strategies etc.
b. Establish appropriate subordinate bodies for the sub-strategic outcomes
c. Ensure governance deals with simple issues and roadblocks
d. Ensure that the oversight committee reports high-risk, high-impact issues to the First Nations-led secretariat and/or other appropriate body

The establishment of appropriate and effective governance is critical towards success of this horizontal initiative.

3. *Establish the roles and responsibilities of lead and partner departments and agencies*

Building off the need for appropriate governance it is important that the roles and responsibilities of the lead and all partner agencies/entities are clearly identified to ensure that there is system-wide coordination and synergies with all the moving parts of the performance measurement framework. Alignment and a system-wide view of the effectiveness and efficiency (i.e. value-for-money) of the totality of operations will demonstrate fiscal probity and stewardship with respect to Measuring to Thrive.

4. *Setting out the Process for the Management and Reporting of the Horizontal Initiative*

In order to be successful, the process for managing and reporting of this horizontal initiative requires a shared understanding of:

- The outcomes anticipated
- The indicators of success
- The activities required
- The capacities needed for execution

This shared understanding underscores the importance of ensuring there is accountability for data collection, analysis and reporting. The FNCFS performance measurement framework is horizontal and measures progress in strength-based approaches and overcoming contextual barriers. Given the current data gap in understanding system-wide performance, the initial priority must be to establish a baseline of performance and financial data in the current state. This will help to clearly identify the scope of the challenge as well as being able to identify a medium-term to long-term performance roadmap that will help to measure and report on the success of the funding formula and the performance measurement framework moving forward. First Nations are best positioned to gather, analyze and report on data relevant to well-being.

5. *Prescribing Reporting Requirements for Parliament and to TBS*

Given the importance of the FNCFS funding approach and performance measurement framework it is critical that the oversight committee establish clear evaluation and reporting requirements to Parliament to be able to provide an evidence-based and transparent evaluation of what has been successfully achieved and what gaps remain. Regular reporting and evaluations on performance and the resources allocated to realize this performance will provide a high-quality evidence-based assessment on the progress towards the Vision of *Enabling First Nations Children to Thrive*.

DETAILED CHECKLIST BASED ON THE HORIZONTAL INITIATIVES GUIDANCE DOCUMENT

For a detailed checklist that applies the guidance in the *Guide to Departments on the Management and Reporting of Horizontal Initiatives* to the FNCFS performance measurement framework, see Appendix L. The purpose is to provide a quality assurance best practice checklist for the implementation of the renewed FNCFS system.

This is Exhibit "41" referred to in the Affidavit of Cindy Blackstock affirmed by Cindy Blackstock of the City of Kamloops, in the Province of British Columbia, before me at the City of Ottawa, in the Province of Ontario, on December 22, 2025 in accordance with O. Reg. 431/20, Administering Oath or Declaration Remotely.

DRAFT

Guiding Principles

- **Best Interests of the Child**
- **Needs based.**
- **UNDRIP – free, prior, and informed consent**
- **Non-Discrimination (Substantive equality)**
- **Reflect distinct community circumstances.**
- **Culturally appropriate**

General: Transition decision making and safeguards

Topic	Options	NAC Recommendation/Next Steps	AFN Regional Recommendations
Decision on Transition	• **Everyone moves to a reformed approach.** • **First Nations (in consultation with agencies) decide if/when to move.** • **Other?**	**No endorsement of a global transition to reform.** **Recommendation of the NAC that the First Nations in consultation with the Agencies decides if/when they will move to the reformed approach.** **Caring Society requests some plain language in the materials from IFSD on transitioning.**	**QC-** First Nations in Quebec have been working on strengthening governance and have a health and social service process since 2013 – QC recommends that LTR takes into account QC processes. The funding mechanism must have protections built in to ensure that shortfalls in funding will be covered by ISC so that First Nations do not have to take money from other programs to make up for shortfalls.

Topic	Options	NAC Recommendation/Next Steps	AFN Regional Recommendations
			BC- Agencies in BC are not ready to move to a block funding approach where baseline funding is based on previous years' expenditures. Prevention funding is still new in BC and agencies are still assessing needs and building capacity to deliver prevention programs and services. Their early efforts were derailed by the COVID pandemic and ongoing efforts are hampered by extreme recruitment challenges. Many of the agencies have assessed need in their communities and have developed plans to address those needs but have not been able to staff the positions required by those plans. Prevention funding, although new in BC, has already been unstable. Initially it was at actuals, then shifted to $2.5k per capita at which point several Nations claimed the full amount and left agencies scrambling to reset their prevention programming and build it into their operational budgets. In this context, agencies in BC have not yet established a reliable baseline for operational funding, as required by the block funding approach. For example, one agency (which has been particularly successful in recruiting new staff) saw an 800% increase in staffing cost following the pandemic, and they are still hiring. Agencies in BC have been using the

DRAFT

Topic	Options	NAC Recommendation/Next Steps	AFN Regional Recommendations
			business plan approach, which is working well. There is a strong desire to maintain that approach for a few more years. Further, more time is needed to develop First Nations led mechanisms to transition to the CHRT orders. SK – Same as BC – "Prevention funding, although new in BC, has already been unstable. Initially it was at actuals, then shifted to $2.5k per capita at which point several Nations claimed the full amount and left agencies scrambling to reset their prevention programming and build it into their operational budgets." the Agencies are still providing preventative services and ISC has agreed to cover at actuals "least disreputable measures". Many First Nations have taken the 100%, as their right, But there has many families falling through the cracks created by the delivery of the services. Given the 3 Preventative service levels overlapping reality - this will continue – the agencies services should no fail the children and families. Same goes for the First Nations. Many agencies, and First Nations are not ready for the block approach. Some do not want said approach. That said, IFSD reports are not completed – SK Recognizes these reports are negotiating tools. SK agencies and First Nations

DRAFT

Topic	Options	NAC Recommendation/Next Steps	AFN Regional Recommendations
			CAN NOT COMMIT TO APPROACHES WHEN WE DO NOT HAVE THE INFORMATION AVAILABLE FOR SAID USE.

DRAFT

Safeguards for Transition	• **Once in the block approach it is binding.** • **Mechanism to revert to current approach (with modifications to ensure non-discrimination)** • **Mandatory funding reviews/adjustments at year 3 and 5** • **Gradual transition with those ready to go now**	**Consider First Nations and Agencies being provided with budgets with both scenarios to inform decision making.** **Recommendation emerging for transition tools, especially plain language tools are needed for transition.** **There needs to be a safety valve to exit reform if not working/as directed by leadership.** - **IFSD adds that safety valves are referenced in the context of the agreement.** - **For discussion: would the agency fall back on actuals?** - **The safety valve requires reform to ensure that the fall back isn't discriminatory.** - **IFSD provides context that Canada would seek to limit their fiscal exposure through a certain fiscal framework.** **Mandatory funding agreements reviews recommendations** - **IFSD: year 3 is the typical start date for evaluation, but before thinking of that the information needed to do the evaluation is needed. Data is required – providers need data, evaluators need data.**	**SK – IFSD Reports are not available to make an informed calculated decisions on approach to be taken by the Agencies and/or the First Nations.** **The transition tools must be realistic for both the agencies and the First Nations. Transition plans must use the plain language – therefore agencies and First Nations must be directly involved in the reform from the start – the Party lawyers do not know how Child Welfare Services work on the ground level and lack the understanding and the language required.** **NAC must be directly involved with the reform language.** **SK agrees with the a 'safety valve' to exit reform if not working for the First Nations and Agencies.** **SK – funding agreements must be 'community needs based' and not formula based. The funding can not be capped and must increase based on Consumer Price Index, and can not be controlled by ISC and the outdated method, which is always lower than inflation base.** **SK – supports First Nation owed OCAP data review and collection on all services on a First Nation and Regional level.** **SK - Canada will always have a fiduciary responsibility under Treaty and in law; they can not limit this in a fiscal framework.**

DRAFT

Topic	Options	NAC Recommendation/Next Steps	AFN Regional Recommendations
		Implementing the results of evaluation? - **Build implementation of the evaluation into the legislation.** - **What types of legislation/frameworks exist to draw from on this language.** - **What First Nations-led or developed processes for review and evaluation exist. E.g. a yearly or ongoing evaluation, less bureaucratic, led by the First Nation/Agency. Ongoing data capture and review to support evaluation and recommendations. Transparency is needed for accountability, including by the provinces.** - **In sum: general agreement for data frameworks to be guided by OCAP principles.** **Timing: is there support for those who are ready to transition now and is there support for creating provisions for those who need more time?** - **No opposition in principle but greater consideration needs to be given to how block works for FNCFS now, and how block under reform will work.**	
	•		

DRAFT

Self-determination in child and family services	• **C-92 Nations do not get less.** • **Nations pursuing self-determination under any mechanism do not get less.** • **Revise above to include structure and enforcement.** • **Ensure that regardless of delivery jurisdiction there is no adverse consequence.** • **Other?**	**Recommendation: it's not enough to just say C-92 do not get less.** **NAC endorsement of second point** **NAC endorsement that the funding level, structure, and enforcement will not be any less than the reformed model?** - **For discussion: inclusion of an optional mechanism for support for C-92 First Nations to have an independent review of their agreement to ensure the above?** - **Could it be the RIC? What is the role of the IFSD? Collection of best practices and recommendations perhaps within a regional approach to a Secretariat type model that could also support data collection.** - **Better information on trajectories/journeys of children through CFS involvement. We need to know how the reform of the system and related decision points impact the child's journey and how it affects parents/caregivers approach to**	**NB-** 1. The funding mechanism is predicated on colonial definitions of who is First Nations and who is not. First Nations must decide who is eligible for themselves. 2. All funding should be needs-based, multi-year agreement's, and not be capped. First Nations should have more control over funding and that funding should be more flexible. First Nations should not have to over-justify their requests as they have been required to, their expertise and knowledge of their communities needs should be respected. **NB:** Recommends that prevention services should be offered to anyone the First Nations defines as community and not according to the Federal Government. **NS**: recommends that prevention services be delivered by First Nations/First Nations organizations to prevent stigma surrounding being involved with CFS. **AB**: Recommends sovereignty, treaty, and control are at the heart of these issues. With direct First Nation control over CFS management, nations can choose their own path forward in healing families, children, and communities. Restorative Justice funding, programming, and services are central to taking steps toward putting First Nation's

DRAFT

		navigating and negotiate these changes. **For discussion a national secretariat could be helpful in connecting children apprehended off reserve with their community**	sovereignty into action. CFS and Jordan's Principle must be reformed to serve the needs of Indigenous peoples. **SK – 58 of 74 First Nations in SK area are involved in C92 process. There are tri-lateral and bi-lateral agreements, 1 to multi First Nations working together.** **SK see C92 as an Act and is not a giver of First Nations' Treaty Rights and Inherent Rights to care for our Children. It is an Act that recognizes our Rights.** **SK First Nations are being advised to work cooperatively with their current services providers (if non-First Nation – should must get input/assistance from First Nation CFS) , have a services transition plan in place, work based on both on and off reserve population and residents as well; including non-registered with a right to register.** **SK - funding should be needs-based, and not formula, and no cap. First Nations total over funding and ongoing funding shall be flexible with no claw backs.**

National and Regional Supports

DRAFT

Topics	Options	NAC Recommendation/Next Step	AFN Regional Recommendation

National Secretariate function	• **Establish new entity to do all support functions.**
	• **Establish new entity to support regional tables and address national issues.**
	• **Use existing orgs to deliver national supports and ensure funding for regional tables.**
	• **Do not establish a secretariat**
		Regional tables to determine sufficiency of funding and needed top ups
		- **Recommendation is that the Secretariat be apolitical.**
		- **No endorsement of a National Secretariat <u>only</u>**
		- **Endorsement of regional and National Secretariat approach**
		- **Support for the FNIGC's involvement**
		  ○ **Recommendation to provide documentation on how First Nations have been working with existing Secretarial supports.**
		  ○ **FSIN has passed a resolution to not support a National Secretariat.**
		- **A legal support C-92 First Nations?**
		- **For further discussion, Caring Society's role in the Secretariat.**
		- **If a regional approach is taken costing of the supports to the regions is required.**
		  ○ **Decide on mandate; what will it do, what won't it do?**
			QC: Recommendations for the Secretariat is that the mandate should not overlap with the mandate of regional bodies doing similar work already, but instead complements regional entities in capacity building, operations, and programming. Secretariat should support data collection and analysis and respect First Nations ethics on research and data (OCAP or similar).
			
			Yukon: Recommendation for the mandate of the Secretariat should be to provide operational support and guidance for best practices on data and evidence-based decision making. The Secretariat should also provide support in annual evaluations, operations, and programming.
			
			BC: Recommends that the mandate, and associated funding, of Secretariat should go towards supporting the capacity and infrastructure needs of First Nations in BC, specifically.
			
			SK – Only supports First Nations and their regional advocates to in connecting children apprehended off reserve with their communities. SK First Nations Treaty and Inherent rights have no boundaries and are with their people wherever they go. Not even

DRAFT

Topics	Options	NAC Recommendation/Next Step	AFN Regional Recommendation
		○ Draft a sub-recommendations document for the mandate. ▪ Funding streams outside of Gov funds? Requires charitable tax status. ▪ Advocacy ▪ Clearing house of Parenting toolkits/practice tools. ○ Research + tools + advocacy. ○ Liability. ○ Support for implementing data systems and making data more accessible, training and resources. ○ Best practices. - Create database of children in care using compensation data? - Map out Canada Research Chair (CRC) who are working on First Nations research. - Inter-University collaboration to support First Nations in meeting	a First Nation led National Secretariat will hold this First Nation right to our children. SK – supports only regional secretariats development. SK has the SK First Nation Child and Family Institute whose mandate could be broadened with more funding to include more detailed research and data collection. As well FSIN does advocacy as required by the First Nations. The SFNCF Institute does not provide this. Caring Society is alrighty completing a lot of the work suggested – clearing hours advocacy, toolkits and it is suggested that the funding flow in a way as to not take away their current "self- generated" work, if possible. If not, then a smaller secretariat that does not duplicate the work of the Caring Society.

DRAFT

		their research priorities (national agenda for research).	

Accountability Mechanism(s) for Canada	• **Pursue recommendations per Metallic report.**
	• **Include First Nations/Agency mechanism in FSA.**
	• **Children's Commissioner (National/Regional or combination thereof)?**
		Possible to invite Niaomi Metallic to present to NAC?
		
		- **Think through who Canada is accountable to and who might want to hold P/T and Federal Government accountable.**
		  ○ **Children and families**
		  ○ **Agencies**
		  ○ **First Nations**
		- **Can we develop toolkits for accountability?**
		- **Cindy recommends adopting the Principles outlined in the A7G Accountability in our Lifetime report.**
		- **Independent from Government, needs "teeth".**
		- **Enforceability at an International level? E.g. UN.**
		  ○ **Canada has not ratified charters that would hold the government accountable.**
		  ○ **Could encourage leadership to press Canada to sign.**
			Yukon: Accountability in the Yukon includes holding Canada and the Yukon government accountable. The recommendation is that the accountability mechanism must operate at the Territorial level, for the Yukon at least.
			
			BC: No specific recommendation was shared, however BC noted concern that when the Final Agreements are signed, the CHRT will no longer have oversight over Canada's actions with regards to FNCFS and Jordan's Principle. Canada has of unfulfilled obligations regarding the FNCFS program and Jordan's Principle and there is no accountability mechanism clearly defined in the reform model.
			
			SK – The agreements must be written to allow Canada to held accountable. Canada should be held accountable through the Canada court system and the CHRT if the 'Alternative Dispute Resolution' fails. There must be teeth for all parties to be held accountable to the agreement.
			The agreement should not be signed if Canada can not be held accountable.

DRAFT

Topics	Options	NAC Recommendation/Next Step	AFN Regional Recommendation
Data Collection/Research	• **Indicators per IFSD Phase 3 and link to accountability mechanism?** • **Integrate into existing studies.** • **Create National data base on key indicators (per TRC Call to Action 1)** • **House in National Secretariate?** • **Longitudinal data to track outcomes over time?** • **Assessment of CFS interventions?** • **Other?**	• **OCAP and Tri-council ethics of data are endorsed.** • **Non-identifying aggregate data available on a national level endorsed.** • **A baseline on data collection is required – needs to be available at all levels (e.g. community upwards)** • **Community-specific wellbeing indicators.** • **Decouple data consistency with the census and bring more in line with other First Nations data projects (indices, language, identifiers).** • **How to harmonize data sets across jurisdictions.**	**BC:** Recommends that no one governing body should have sole right to a community's data. First Nations data sovereignty requires unfettered access to their own data to know what is or isn't working in their community. **QC:** Recommendation is that data collection and reporting/research must comply with First Nations research and data ethics such as OCAP. **NS:** Recommends that information about what systems upgrades and technology requirements be to support data collection and analysis be developed. Ownership of data must be with First Nations from hereon, including transfer of existing data. **NFLD:** Recommends that purpose-built case management systems are required for reformed FNCFS. **MB**: Recommends that First Nations-led research that identifies First Nations well-being be used to create a funding structure. **YK**: recommends that data collection be evidence based and recognition that it will take time and investments to build capacity and infrastructure for it.

DRAFT

Topics	Options	NAC Recommendation/Next Step	AFN Regional Recommendation
			SK: SK supports BC and only a First Nation have a right to the First Nation's data. "First Nations data sovereignty requires unfettered access to their own data to know what is or isn't working in their community." **SK does not support a National Secretariat. Therefore, if one is created a First Nation has the right to agree or disagree to their data being collected or used for any purpose.**

DRAFT

Topics	Options	NAC Recommendation/Next Step	AFN Regional Recommendation
Liability	• **Canada is insurer of last resort (particularly against abuse claims)** • **National liability pool** • **Top ups for growing insurance premiums** • **Educational campaign for First Nations CFS and Jordan's Principle** • **Other?**	• **List for NAC the questions that have been asked about liability: what is the nature of the question, what is the summary of the response, what are the further questions raised by these responses** ○ **Summarize the 4 different legal positions.** ○ **Speak to Elders to better understand the roles of the Elders and knowledge holders in community work – will they be covered under liability/employment? What options exist?** **Look into whether FNIHB provides funding for Elders to do community work and has opened up the question of liability indemnity further. What role would FNIHB have in providing liability in the case that they do provide funding (Richard forwarded).**	**NS:** Concerns about unanswered questions regarding liability were raised in reference to non-status members of First Nations communities. No specific recommendation emerges, except for to address these concerns. **SK – National Insurer created by First Nations for the purpose of insuring First Nation CFS Agencies and First Nations providing said services.** **Canada should be providing the funding for liability. IF Canada does not adequately funded Agencies, First Nation preventative services to cover for the best insurance they are failing in their fiduciary responsibility – questions should be ask of a lawyer – especially if a First Nations are asking for this as part of the funding.**

DRAFT

Topics	Options	NAC Recommendation/Next Step	AFN Regional Recommendation
Self-determination	• **Keep current wording.** • **Expand to include a strong statement that Canada must take positive measures to ensure its funding/policies are substantively equal.** • **Expand to include other forms of drawing down jurisdiction (i.e.: S. 35, Treaty etc.)** • **Address coordination of laws across jurisdictions?** • **Other**	- **Draft/expand language to reinforce that First Nations should be not discriminated against for choosing their own path on CFS: whether it be through treaty, self-government, C-92, or remaining with the program.** ○ **Revised text should also include that First Nations not receive anything less than the program in terms of structure and enforceability. These principles of structure, funding, and accountability should be included.** - **Regional, national and international mechanism to coordinate First Nations laws [C-92 repository – next step: be managed by a First Nation organization, something that has been heard from First Nations leadership]** - **What is the exit lever of C-92?**	**NB:** Recommendation is that full self-determination means jurisdiction over all First Nations health and social services, e.g. not just FNCFS and Jordan's Principle, but income assistance, education and housing etc. is the long-term vision. The path to wellness must be holistic and address First Nations specific determinants of health, such […] First Nations self-determination over laws and policy. Nb further recommends that Chiefs and First Nations leadership should take on direction and mandate setting for Jordans Principle. **SK: "Treaty and Inherent Rights"** **The First Nations should not get less than the provinces for providing services and the same level. For every child taken into care – how many workers are employed. We don't need to use the same number of workers – these funds should go to providing the best services to keep the family together. MSS in SK – all preventative services are by contract and we know these service providers are also extremely underfunded.**

General Funding Considerations

DRAFT

Topics	Options	NAC Recommendations/Next Steps	AFN Regional Recommendations
19.8 B amount	• **Accept fixed amount** • **Advocate for increased funding above 19.8** • **Advocate for Spirit Bear Plan to address shortfalls in other child/youth family programs** • **Combination?** • **Other?**	- **Recommendation from CS is to not accept a fixed pot – is this needs based? Is the fixed pot better for Canada or for children?** ○ **Premature to agree to a number when it's not clear when it's been arrived upon and lacks accounting evidence. Data has not been shared with IFSD to know the true investment required.** - **Questioning whether this funding will truly meet the needs of First Nations drawing down jurisdiction?** ○ **Jordan's Principle picking up the funding slack of FNCFS.** ○ **What other categories are being funding through Jordan's Principle that may not be appearing in FNCFS spending data, but should be?** ○ **Should First Nations accept the amount**	**N/A** **SK – Advocate for Spirit Bear Plan. AFN Chiefs-in-Assembly supports it therefore it should be used across all negotiating. More funds will be needed entering year 6 and beyond. No fixed pot. The funding is coming from Natural Resources, which First Nations never gave up their Treaty and Inherent Right. Canada has a fiduciary responsibility that is recognized by Canadian courts.**

DRAFT

Topics	Options	NAC Recommendations/Next Steps	AFN Regional Recommendations
		without knowing the true scope? - **Year 6? Start 5-year review process at year 3 – data is key to supporting true need's based funding.** - **Observation is that $19.8B not enough – in NAN territory there is wide discrepancy in use of the actuals process and the Capital 41 applications. It may be difficult to know the true need when there aren't enough staff or morale to do the work available for reimbursement through actuals.** - **Loss of productivity due to burn out has not been costed.**	
Population	• **Population served by the First Nation/Agency recognized by their nation per 2020 CHRT 36** • **IRS** • **IRS plus adjustor for children eligible for status** • **Combination?** • **Other?**	- **CS recommendation is to adhere to CHRT order language to provide a per capita amount re CHRT orders and a Stats Cans continuous Indigenous growth projections.** ○ **Recommendation agreed on: Apply 2020 CHRT 36 orders includes non-status, off-reserve children for Jordan's**	**QC:** Quebec's regional report recommends IRS and Stats Can continuous Indigenous population growth projections. **NB**: recommends against the use of the IRS and of the Berger method of determining population. **NS**: is concerned that prevention funds based on population limits the First Nations ability to respond to non-Status First Nations living in their communities.

DRAFT

Topics	Options	NAC Recommendations/Next Steps	AFN Regional Recommendations
		Principle services to FNCFS. ○ **[Funds available under this order to do a service population count.]** - **Loss of status can mean that the IRS population will decline. IRS will not show true figure – need a way to calculate a way to ensure that population isn't tied to IRS.** - **Recommendation: Non-status children must be included in the population count because they are considered part of the community vis a vie the family living on reserve (e.g. some family members are eligible for status, and some aren't). First Nations will serve the children in the community regardless of status.** - **Some discussion of the agency/community doing their own coding for population – could this be better leveraged?** - **Service population extends beyond those who live in community at the moment, e.g. those who have moved away for**	**YK**: Recommends that all funding should be adjusted upward for population growth and inflation. Population-based funding alone does not reflect the requirements of building or sustaining, programs and services in small, remote communities, and baseline funding should consider both need and fixed costs, not population numbers alone. **AB**: recommends that population data and modeling should be left in the hands of the First Nations themselves, as ISC's Indian Registry has longstanding issues with inaccurate calculations of First Nations Population. **SK: the population rests with First Nation. The First Nation membership, their individuals who have a right to be registered and the residents living on and obtaining services by the First Nation.**

DRAFT

Topics	Options	NAC Recommendations/Next Steps	AFN Regional Recommendations
		various reasons but still remain part of the community. This is needed to promote connections. - IRS based population creates conditions for discrimination.	
Maintenance	• Maintain at actuals • Roll into the block • Block with actuals as a backstop • Or tentative IFSD recommendation of 3% of baseline • Combination? • Other?;	- Agreement to recommend the need for some mechanism to bill maintenance at actuals to account for variation in child needs and service demand. ○ How does reimbursement work when the province is the flow through for maintenance funding? ○ An emergency valve for maintenance key for the program and C-92* ○ Small service populations can mean that one large family might take a large portion of maintenance funding than what would be expected. ○ Actuals safety valve especially important during the roll out of compensation. - Maintenance at actuals do not pay staff beyond basic salary on	N/A SK – Agencies at actuals. First Nation prevention services should be actuals and community needs based. IFSD reports are not completed.

DRAFT

Topics	Options	NAC Recommendations/Next Steps	AFN Regional Recommendations
		contract, e.g. benefits. How do you keep staff if you can't offer competitive hiring packages?	
Protection	• **Maintain at actuals including secondary and tertiary protection as eligible cost** • **Roll into block** • **Block with actuals as backstop** • **Combination?** • **Other?**	- **Secondary and tertiary prevention figures into protection vis a vie least disruptive measures/legislation at the agency. Currently agencies can bill LDM at actuals if costs go above.** - **Are protection budgets stabilizing?** ○ **Depends on who is defining "protection" – social worker's definitions based on clinical assessment and should be prioritized.** - **Recommendation for an additional safety valve mechanism.**	**QC**: Recommends rolling protection into the Block approach: the reformed funding mechanism must have protections built in to ensure that shortfalls in funding will be covered by ISC so that First Nations do not have to take money from other programs to make up for shortfalls in the calculated baseline. **SK: The IFSD report is not completed. All protection should be at actuals, community and needs based.**
Year 11 and beyond	• **Agree to 10 year plan and renegotiate in year 11?** • **Insist on secured funding adjusted to need to prevent recurrence of discrimination beyond year 11**	- **Whatever is decided here, it needs to protect against discrimination beyond year 10:** ○ **How do we balance this with a realistic negotiation?** ○ **Recommendation from CS to draft a statutory funding agreement via**	**SK- IFSD engaged fully following year 6 and beyond.**

DRAFT

Topics	Options	NAC Recommendations/Next Steps	AFN Regional Recommendations
	• **Other?** • **Legislation?**	**legislation [informed by conversation with federal government member].** - **Support from members present for the idea of statutory funding to ensure that discrimination ends and doesn't recur.** -	
Reform of the Department	• **Request Tribunal hold jurisdiction until CFS is done** • **Request Tribunal hold jurisdiction until CFS and Jordan's Principle are done** • **Request Tribunal hold jurisdiction on this issue until the evaluation of the department is done and EAC recommendations approved by leadership are implemented** • **Other?**	• **Consider joint meeting with Expert Advisory Committee First Nations caucus to discuss**	Note that Reform of ISC recommendations relate to ISC's relationship with First Nations. **NB:** Recommends that First Nations should always be at the table in a Nation-to-Nation capacity and not an afterthought in policy development. Additional relational recommendations are that: - An assessment rubric be developed with First Nations that is clear and transparent to address inconsistencies in funding proposal evaluations at the Department. - Appeals on denied applications should not require litigation as legal representation is expensive and time consuming. - Reducing redundancies in bureaucracy at the regional and headquarters levels and in the processes. - NB recommends that courtesy notes be sent to First Nations when key contacts at ISC change over.

DRAFT

Topics	Options	NAC Recommendations/Next Steps	AFN Regional Recommendations
			- ISC should be recognizing First Nations approaches to wellness and reimbursing costs associated to these wellness activities on a substantively equal basis. **YK**: Recommends that the Yukon has an active voice in the reform to ensure their voice is heard. **BC**: Recommends that if the Final Agreements are signed and the CHRT no longer has oversight into the process, transition may be taken into consideration given Canada has had unfulfilled obligations. **NS**: Reform should be a by First Nations for First Nations process, it is not just about improving systems but also healing from Canada's colonial systems. **SK: Reform must be led by FNCFS Experts and First Nations leadership, not lawyers and unknowing experts. NAC should be working with the Expert Advisory Committee – given the information they provided to the NAC caucus when we did meet. ISC can not reform a FNCFServices since they are the ones who failed the Services, not the Agencies. The Agencies held them accountable and this is where we find ourselves today.**

DRAFT

IFSD Recommendations

Topic	Options	IFSD Recommendation	NAC recommendation	AFN Regional recommendations
Baseline Budget	**Total FNCFS Agency expenses (including non-ISC funding)** **ISC only portion of funding** **ISC only portion of funding reported expenditures net remoteness (based on CAF)** **Baseline sufficient to discharge the basic protection costs** - **The top ups link to the reality of providing service on the ground, e.g. poverty, remoteness**	**ISC only portion of reported expenditures**	**Recommendation to implement an actuals process to cover expenses for out of home care above and beyond the funding provided for in the Block.** - Multiple considerations to meet increasing needs: greater complexity of cases, needs of caregivers, burnout of workers, innovation in care approaches, ISC HQ slow to reimburse expenses billed at actuals. - There are gaps in information with regards to the service level agreements at the province and funding flows – BC states that the	**QC**: Recommendation is that baseline funding should be based on need, enhanced with changing priorities, and should not be capped. **Yukon**: A funding model that envisions base fundings and top-ups directed to Yukon First Nations and organizations, not towards the enhancement of Yukon's Government budget, is recommended. The funding model must be entrenched within baseline budgets and multi-year commitments. Yukon First Nations children and families are best served when maximum funding is directed to Yukon First Nations and Yukon First Nations organizations, not the Yukon Government. **BC**: Recommends that more time be provided to ensure that Nations can establish prevention programs and services; develop a baseline level of funding needed to address the overrepresentation of First Nations children in care and ensure baseline funding

DRAFT

	, IT and results. - **Block means that money can be moved around within the program to meet needs as they arise.** **Not included:** - **First Nations not affiliated to an agency** - **Capital** - **Post-majority support services** - **Prevention funding**		preference would be to have funding from the Feds bypass the province and have it go directly to the agency (from a partially-delegated agency perspective). - Block funding – need for a more precise definition. - MB notes that the province did not fund the transition to the single envelope approach to funding and it created problems for service providers because there was no "safety valve". - Investment needed for costs associated with transition and training:	is informed by fully developed and responsive prevention services. **NB:** Recommends that 1. Funding should be based on need and enhanced to keep up with changing priorities. 2. There should be no caps on funding. **AB:** Alberta would like to see budgets available for off-reserve children matched with monies available for on-reserve children. Without the inclusion of off-reserve members in the budgets and programs, an increasing number of their members will be left out of the reformed funding models. CFS funding models must be holistic, meeting the needs of First Nations children on every level (housing, water access, heating, sanitation and safety, food security, personal safety at home, school and in community, sustainable and reliable infrastructure on reserve and internet access and technological resources on reserve). Alberta would like to see Non-Delegated First Nations people reflected in the funding formulae.

DRAFT

				Alberta further recommends that prevention be included in CFS funding with an integrated approach eliminating siloed services. SK: The Baseline budget can not be formula base, since it underfunds smaller agencies and First Nations. Budgets must be community and needs based funding and uncapped.
Information Technology	**Allocation for hardware/software based on industry standards** **1) 5% of baseline** **2) 5.5% of baseline** **3) 6% of baseline** **Q: where do connectivity issues such as lack of broadband land? With IT top up or with Capital?** - **Typically hardware and**	**No preference**	**NAC recommendation: Definition to clarify what falls under IT costs vs capital funding.** - **Agreement for 6% of the baseline otherwise.**	**QC:** Recommends that in addition to the 6% top-up, additional funding should be allocated to First Nations to develop, implement, and maintain their information management systems and IT equipment. **NS:** Recommends that greater clarity be prioritized for determining what kind of systems upgrades and technology requirements will be needed to support new data collection systems. **NFLD:** Recommends that First Nations prioritize the need for their own FNCFS data collection through built case management systems. **Yukon:** Recommends addressing the high cost of IT and connectivity in the North through additional funding to support Yukon First

DRAFT

	software in a non-profit organization. - **If a service provider needs to do a major outlay for IT, it should be with Capital funding (either CHRT 41 or Capital in the reformed funding system)**			Nations. Yukon was unable to determine if the proposed top-ups were sufficient. **AB**: recommends funding be increased for access to cellular service and WI-FI/internet to ensure equity in First Nations communities. **SK: SK agrees with Quebec and** Recommends more than the 6% top up since 26 of the 74 First Nations require a higher amount due to poor systems. "…Additional funding should be allocated to First Nations to develop, implement, and maintain their information management systems and IT equipment."
Results	**Allocation for data analysis:** **1) 1% of baseline** **2) 3% of baseline** **3) 5% baseline** **Recognition that funding is required in order to gather**	**5% of baseline**	**Recommendations:** - **Caring Society: would like to see a mechanism to fund those who are starting out to build capacity and resources to reach the point in which 5% of the baseline is sufficient. Actuals or**	**QC:** First Nations offering prevention services only will not be able to access this funding, therefore QC recommends that First Nations offering prevention only receive baseline and top-ups. **BC:** Recommends that results consider First Nations values and holistic approach to wellness. BC recommends more support for First Nations living off reserve.

DRAFT

	information – for example, funding for a quality assurance technician's salary, a data system, consultation and contracting, training.		**other safety valve process.** - **Otherwise, consensus is for 5% (BC intervened to note that 5% could be a starting point).**	**SK: First Nation should be able to access this funding and prevention should be increased based on Consumer Prevention Index (and should not go down, if it changes), plus baseline and increased CPI top-ups.**
Poverty	**Mitigates some elements of poverty in CFS** **1) 3% of difference** **2) 5% of difference** **3) 7% of difference** **Note: IFSD recommends using the Market Basket Measure to measure poverty and using the 2016 census since 2022 income on reserve**	**5% or 7%**	**NAC Recommendation:** - **Eliminate 3% as a possibility and reconsider 5 and 7% at the NAC main table with additional information from IFSD with language as to what this funding can and cannot do in terms of "solving poverty".** - **Considerations for this recommendation depend on how the money will be used by service provider –**	**QC:** No specific recommendation is made however, QC finds that IFSD's method to calculate poverty lacks positive impact to address poverty in QC specifically as poverty and the lack of services are the main drivers of the overrepresentation in QC. **Yukon:** Recommends that poverty funds should be allocated through Yukon First Nations and FN organizations, and/or directly to families. **BC**: notes that there is insufficient ISC funding to address poverty and housing crisis. **AB**: Poverty needs to be addressed holistically with special consideration for housing and food insecurity. This approach

DRAFT

	is a historic outlier due to pandemic income supports. **Top up meant to mitigate the effects of poverty as a driver of CFS involvement.**		**either as an income supplement (BC considering this approach) to bring families up to the poverty line or as a cash reserve to pay for needs as they arise.** - **Using poverty funding in an income supplement manner may require a higher percentage.**	will require increased communication with and between funding bodies to provide First Nations with adequate resources to meet communities' needs. Poverty reduction must be included in CFS funding. **SK: over 90 % of those living in poverty in SK are First Nations. Over 80+% of the children in care are First Nation. Child poverty, in-care and housing must be addressed together and poverty reduction as part of the preventive services for both on and off reserve First Nation people.**
Emergency Fund	**Unanticipated circumstances:** **1) .5% of baseline** **2) 1% of baseline** **3) 2% of baseline** **Emergency funds are meant to meet needs arising form unanticipated situation to prevent children**	**2% of baseline**	**No NAC recommendation as of yet for the percentage but concern was noted for whether it would be sufficient in meeting needs over and above what is held in reserve for emergency funding given the ongoing nature of emergency on-reserve.** - **A safety valve is recommended.** **Regional approach (an emergency funding pool):**	**QC:** recommends that funding for emergency situations be reviewed in three years and increased if needed. **NS:** Nova Scotia recommends that emergency funds be managed by the First Nation to deal with urgent situations on reserve. **NFLD:** Recommends that access to emergency funds should be flexible. First Nations and organizations should be able to declare when an emergency is happening to trigger the release of funds. **Yukon:** Recommends that the emergency funding methodology reflect the costs and

DRAFT

	from coming into care. **Funds are expected to be held by service provider for use as needed.**		- **That regional approach relieves Canada of its fiduciary responsibility vis a vie Treaties.** - **An application based approach not recommended given the challenges of applications during a crisis period.** - **Clear but simple terms and conditions: easy access to funds.** - **Regional management of funds could be possible, but mechanics require a quite a bit of working out.** - **Administrative cost of a regional approach could eat away at the funds.** - **Cautions against application to the fund during a crisis.**	realities of responding to crises in the Yukon (travel, accommodations, multiple partners, etc.). Additionally, it should reflect the lack of services and service providers available within the territory and its communities. Also recommends funding to develop supports and build capacity to respond to emergencies is required. **BC:** recommends that emergency funding policy takes into account the fact that BC remote communities have insufficient or non-existent support for emergency situations such as homelessness, pandemics or environmental disasters. **SK: must by increased according to CPI and not be clawed back; as well take into account remote communities and 15% more is not enough. FSIN is part of NARC.**

DRAFT

			- **Who defines the emergency? What consultation can be done on that definition – front line perspective.** - **Social emergencies – First Nations can define emergency for themselves.** - **Not only emergency funding available – clear definitions and a one tool or bucket perspective required.**	

DRAFT

Remoteness	**1) Weighted remoteness based on Stats Can Remotenes s Index** **2) Cost Adjusted Factor (CAF)** **3) 15% CAF for First Nations above Remotenes s Index of .4 and weighted on pop** **4) 15% CAF applied to all FN agencies**	**For discussion**	**Recommend inviting NAN and Helaina Gaspard to present various options** **NAN: evidence based approach to account for increased costs due to remoteness. NAN report: Remoteness Quotient. Uses the Canadian Remoteness Index to adjust the cost based on remoteness – goal is that the value of a dollar is the same in a remote community as it is in a non-remote community. Option 3, 15% CAF, is insufficient for remote communities (e.g. Fort Albany would require 39%). .4 indexing would eliminate communities from a remoteness adjustment based on having road access, but have other geographical or service access factors that affect the community.** - **15% not enough: FSIN is trying to secure funding from ISC to do research on**	**QC:** recommends that remote First Nations in QC should sit on the National Assembly of Remote Communities (NARC) and/or other tables dealing with remoteness. They further recommend that Canada complies with the CHRT orders and provide funding to remote First Nations immediately. **NB:** recommends that ruralness be taken into consideration in funding for wellness and investments in establishing wellness infrastructure in rural areas as well as filling staff shortages**.** **BC:** States that needs of remote communities vary across BC, therefore involve an increased cost of living with fewer access to services. Transportation issues to and from services for remote communities. **AB**: Increased funding for on-reserve support would allow First Nations people to not have to leave their reserves to gain the support, services, and care they require. Increased funding for on-reserve treatment and care would additionally allow children in care to receive support services in their home communities. **SK: FSIN is part of NARC and 26 of the 74 First Nations are affected, both from the**

DRAFT

			the true cost of remoteness for the 74 First Nations identified as remote. - **A new approach required: needs based and evidence based.** **Fixed pot problem: what solutions exist to deal with the fact that a remoteness factor above 15% will increase the cost above the $22B.** - **Canada/ISC has to pay for the child's needs regardless, it's the inherent right of First Nations children to have services paid for.** - **IFSD message: the structure is the key to this. Funding is dependant on the structure – lean on the structure.** - **Unlikely that First Nations leadership will not sign off on**	**south and the north. 15% is too low. The remoteness factor must be community and needs based. No one formula will work.**

DRAFT

			an agreement that is not evidence based.	
Inflation	**1) Consumer Price Index** **2) Canada's current 2%** **3) Canada's 2% adjusted upwards to CPI**	**Consumer Price Index**	**Only recommendation for 2% as the floor with CPI as the adjustor for real time costs.** **Inflation not included on the final amount for prevention: only added to the per capita amount.** **Small First Nations are not receiving their entire 75k.** **Order of operations issue – inflation is only being applied to the per capita**	**QC**: recommends that the Consumer Price Index (CPI) should be used to calculate inflation. Further Quebec recommends that inflation and population be adequately accounted for in baseline growth. **BC**: Recommends that First Nations state funding must keep up with population and inflation**.** **AB:** Recommends that the cost of living and inflation be factored into budgets and funding.

DRAFT

			amount and not the entire envelope. **MB: no First Nation service provider with a previous prevention funding agreement and is being held at that level is receiving any inflation.**	**SK: Consumer Price Index be used and no funds clawed back.**

Appendix

Decision on Transition:

Caring Society provides an overview of the chart by highlighting the guiding principles of the chart which are the best interests of the child, needs based, UNDRIP- free, prior and informed consent, non-discrimination (substantive equality), reflect distinct community circumstances and culturally appropriate.

The group had discussions about the decision on transition, which included three options presented, they are: 1. Everyone moves to a reformed approach. 2. First Nations (in consultation with agencies) decide if/when to move. 3. Other? On transition, IFSD noted that transition should consider the different realities of different points of departure among First Nations through a staggered approach. Further, IFSD suggests a needs assessment to ensure organization components are in place and can support transition which includes having people to deliver the services they need. Elder Ed adds the importance of having one definition of Jordan's Principle to ensure people are on the same page when delivering these services.

The Caring Society notes that with phase 3 recommendations and the findings of phase 3, plain language should be used to provide better understanding. The group recommends that First Nations in consultation with agencies decide if and when they move to a reformed approach.

NAN notes that there should be considerations of tools and resources that will be available to transition regardless of when First Nations transition at once or if at a phased approach, recipients will need tools and resources.

DRAFT

IFSD notes that transition is a 2-5 year period. The reform of a program is more than just changing an amount of money, it is changing the way we evaluate the program and the structure of the program. Transition requires consideration of timing, forewarning, resources, availability of supports (national and regional supports), etc. When entering a fiscal arrangement fixed for a set amount of time, you are locked into the agreement for a period and during this time you will have time to re-evaluate during the locked period.

The Caring Society states that the decision should be with the First Nation and agency, as when people feel as though they are forced into something it does not go well. However, when given options and control, they may be more inclined to move forward. The QC representative stated that there needs to be opt-out options provided. He continues to state that an Alternative Dispute Mechanism needs to be integrated in the transition process so that agreement holders can engage the alternative dispute mechanism if needed. before considering how to opt out, we need to understand/develop the dispute mechanism. FSA requires concrete engagement with First Nations from ISC – unilateral decisions-making from ISC have had detrimental effects on policy implementation.

The MB member mentions the on and off reserve component. Stating that children off reserve are not included, further notes that people are not leaving their communities because they want to but because they must. There are children in care outside of the First Nations and this piece needs consideration.

Safeguards to Transition:

Discussion surrounding the block funding approach and the need for safeguards. There should be a mechanism that allows First Nations to move back if it is not working. Canada may say you reformed into the block funding approach, and you need to stay that way; there should be a mechanism to revert back and decide to go back to the current approach with modifications, the issue is getting ISC to implement any recommendations from the funding reviews. Caring Society asks the group if we should recommend people transition in advance of the transitioning tools being available? A member states that some First Nation agencies will have tools to move forward, therefore they should be able to decide to transition at they rate they decide, other First Nations will need help transitioning. First Nations and CFS agencies need to work together in collaboration, as First Nation leadership should be making decisions and not the agencies. There needs to be relationship building between First Nations and agencies. Caring Society notes the need for examples of good relationship building between agencies and those delivering Jordan's Principle so there is more collaboration. MB states that some agencies will be ready, some may need extra help. Comes back to direction of the First Nation. In

DRAFT

MB, misperception is that agencies are accountable to the Government, but working to change that perception so that First Nations have a greater role in decision making.

Elder Ed notes that there needs to be consideration of isolation, remoteness, communication services, language translation to Indigenous language, transportation, etc. when thinking about working together. Further, we need to include spiritual elements in communities to strengthen reform.

Members in favour of IFSD continuing to develop tools for transitioning. Caring Society states that if making the decision of going into the approach, it must involve self determination and a way to back out if needed. IFSD notes that a safety valve would include an ADR process rather than to exit the agreement. The safety valve is the amount of money sufficient to discharge the mandate. When talking about safety valves we are exploring, we are talking about emergency funds at actuals.

The group discussed off-reserve children and Caring Society suggests building off CHRT 36, which states that children off reserve are eligible for Jordan's Principle. Through IFSD's work on Jordan's Principle, it will give a sense of what the work entails and remains.

IFSD states that the need for information is important, therefore a funding review should take place in year 3 and adjustments implemented at the end of the agreement. The service provider or First Nation to gather information is critical. There needs to be a way to assess structure and if the funding amount is working for the First Nation. On implementing results of evaluation, this tends to be based on good behaviour or judicial process. Legislation on First Nation Child and Family Services and CFS and evaluation can be included in the agreement.

Caring society notes that C92 is supposed to go through a review in 5 years and questions what types of legislative reform we should suggest to leadership that we see some problems on. Perhaps proposing legislative framework occurs and is durable in the community.

COO member notes that the government is flawed and calls on the need to develop our own review systems to make them easier to understand. Caring Society notes the need for ongoing internal learning and accountability framework and instruments to hold other parties accountable. Manitoba comments on the need to have each government involved. On provincial involvement, ISC is meeting with provinces regularly and that needs to be transparent regardless of where they live.

Self-Determination in Child and Family Services

DRAFT

Considerations: AIP restricts protections to C92 funding level of $ not structure, enforcement

Caring Society notes that we have support for data collection captured by OCAP principles, there needs to be reviews, general agreement for the need for a mechanism for the implementation of the reviews. First Nations who go under C-92 can do so if they do not get less regardless of any jurisdiction (ex. treaty, inherent right, c-92) that there is no discrimination. Further, the Caring Society questions if folks want 2-5 years, or if they are ready now, should folks who are ready now, go now? Regardless of when folks go, we do not want to see discrimination, C92 Nations should not get less. Regardless of what jurisdiction model a First Nation chooses, there should not be discrimination under any model. The group agrees that its not enough to just say C-92 Nations do not get less.

A NAC member highlights the need for us to understand how children are navigating these services through their behaviour. It is important to capture how children are surviving and managing to thrive with these social and political decisions. Caring Society notes that policy decisions have consequences, and it is important to ensure they work out for the children and adjust to the children. The Caring Society suggests asking people on the Expert Advisory Circle (EAC) who specialize in mental health issues, specifically, questions on how they can guide us and the thinking they've done.

National Secretariate Function
Further information to consider:
See IFSD recommendations.
Questions to consider:
1) Should organization be political?
2) Is current funding estimate of 3M sufficient?
3) Mandate?
4) Reporting and accountability

The Subgroup discussed whether the organization should be political or separate from the politics. The NAC members decided that the recommendation should be to keep the National Secretariate Function separate from the politics. The participants had not voted in favour of the secretariate being political.

The Subgroup discussed in $3 Million in the phase two budget, the group discussed the establishment of a new entity to support regional tables, a national table and regional table. The group decided that they would not recommend having a national table

DRAFT

without a regional table. The group discussed that they believe in the regional national table and national secretariate approach. Quebec recommended looking at existing national entities, which makes more sense than reinventing the entities. BC questions how we can support nations that are going down the jurisdictional path without listing connections to lawyers and existing relationships, it may be beneficial to invent legal support to provide support to folks going towards jurisdiction. The Caring Society suggested bringing Niaomi Metallics report on Jordans Principle to the NAC to refresh. When thinking about the national secretariate, this would involve networking, legal support, etc. The Caring Society notes that FSIN passed a resolution not to pass a secretariate as they did not want to be a political entity. BC mentioned the Caring Society's role in the secretariate and the idea that they would morph into the secretariate. When speaking about advocacy, the Caring Society would be able to help with groundwork. The BC secretariate is providing research and analysis for amendments to provincial legislation. The smaller agencies and First Nations who are seeking jurisdictions require human resources and administrative support. The Caring Society Is open but conflicted to providing secretariate support, however, will do it if folks want, there will need to be NAC and leadership consultation. The $3 million in phase 3 will not be enough especially for data collection, if we take a regional approach it will have to cover the costs for the supports to the regions.

The mandate of the secretariate functions is a discussion of the NAC, as they should decide what they should and should not do. The Caring Society will send a document from FNIGC. The Caring Society suggested the creation of a separate document on the mandate of the secretariate to discuss at the upcoming meeting to decide what they should and shouldn't do. The AFN notes that they asked IFSD to look at research on budgeting. The Caring Society notes that the Canada research chair document on $1million for the design of prevention program, further they would like to see the secretariate to have their own funding and resources. BC questions whether we have enough drafting to say what we want for the secretariates mandate. The NAC talked about having archivists to figured out where children who have been placed in care are located, this should be done nationally.

The Caring Society mentioned the creation of a database to collect information on children in care receiving compensation. On a national level, we do not want to lose the advocacy element and will have to figure out what should be done nationally and regionally. BC suggested developing toolkits that are flexible to ensure they can be changed to service different First Nations. For the nations we are supporting, it would be beneficial for the secretariate to collect toolkits to help First Nations. The AFN notes that having a national and regional approach has been communicated from First Nations that have provided comments. We need to ensure there are entities available in every region, we need to consider what we can do if there isn't something in place in regions. BC suggested creating an options paper of how provinces developed their secretariate funding.

BC noted the importance of providing advice on liability, now that we have actuaries involved. Regarding group insurance, we should contemplate that there may be a legal arm of the secretariate as an attorney of facts to provide this may be needed. BC further

DRAFT

notes that it may be beneficial to build out a national insurance place. CS notes that we need to come up with options for liability and suggest options to leadership.

Accountability Mechanism

Considerations: See attached Executive Summary, Article and PPT on Metallic report. ADR in FSA not complete. See A7G report (Accountability in our Lifetime)

The discussion began with the suggestion to have Niaomi Metallic back to the NAC to present on her report again to look at different accountability mechanisms for Canada. To think about who can hold Canada accountable, including children, families, agencies and First Nations. QC notes the need to look at the scope of provincial mandates for things people wont touch for example some folks wont touch UNDRIP, C-92, etc.

The AFN noted the uneven implementation of advocacy across Canada, its difficult to gap the bridge for advocacy. MB notes that there has been meeting with GC and the advocate, we will get an up-to-date status of where this is at. QC notes that provincial commissions who do the investigation aspects. There mandates may be limited and fenced, if folks complain about a child being apprehended and C-92 is not being followed. Provicial investigation bodies will not go near C-92, UNDRIP, etc. CS notes the importance of mapping out the existing things, what is available, the functions and limitations. BC notes that RCY in BC used to be a children's commission, recently due to legislation, BC spoke with the committee to expand the powers of the RCY, so they could assist in advocacy together and apart. BC recalls the people that were working to develop a national advocate office for the National child welfare advocate. Unfortunately, this child welfare advocate office was not consulting with First Nations leadership for their input into the program further it was not responsive to First Nations peoples.

CS notes that it may be beneficial to review the A7G report on accountability: Responsibility, Safety, Respect, Reciprocity, Relational, Integrity. Here is the link: https://fncaringsociety.com/sites/default/files/accountability_in_our_lifetime.pdf. The CS suggested having the youth come along with Niaomi to present on their paper. Further, we should ask IFSD what work has been done on existing accountability mechanism, and gaps and limitations. CS notes that there was a report between Canada and the US to get rid of the conventions, suggested that only one accountability mechanism, some of the bodies at the UN were in favour, we need to find an update regarding where this is at.

Data Collection/Research

DRAFT

Considerations: CIS not guaranteed for future years

Within the Chart, BC notes that no one should have sole right to a communities database, non-identifying aggregate data should be shared. BC notes the regional reports involved limited regional participation.

QC notes that data collection and research is to respect OCAP. BC thinks the secretariate should take the lead on this. Caring Society askes the group if we are all in favour of OCAP and tri-council data and standards and not to rely solely on OCAP. National data should be non-identifying aggregate data. CAS data looks at children coming into the child welfare system. We need non-Indigenous children in our data to compare what is happening to Indigenous vs. non-Indigenous kids, additionally we need data on kids who are not in care. It is important to know where our children are to make decisions relating to funding.

BC notes that the next steps are to get principles and goals when talking about data collection. Measuring to thrive indicator to well being, we need to think about how we are going to get the work we are doing in the regions to the secretariates. Further BC suggests a comparison of what data collection exists in the provinces. Caring Society notes that baseline data is important on a community level, community service provider level, a regional and national level. Consensus data does not accurately collect data, we need to be collecting data to reflect the true baseline of what is happening in communities.

The AFN notes that work is being done on C-92 with Firelight group, they've done a report on data landscapes and have completed groundwork. We need to think about what might help First Nations build human resources to do the work? Further how we can make it more accessible. Further the group discusses the importance of demystifying data and teaching people how to read data. Caring Society notes that it may be beneficial to map out Canada research chairs to see what they are doing for Indigenous youth and families. BC notes that a professor at the University of Calgary got a grant and talked about hosting a national meeting with universities to come together with a First Nation child and Family services research agenda.

Caring Society noted that there has been a data base set up so that students can choose from topics rather than choosing random topics. The Caring Society has a charitable tax exception and if using existing entities, they recommend that they have charitable tax exception.

Liability

DRAFT

Considerations: See liability opinions dated 2018 and January 2023

On the topic of liability, BC questions regarding prevention who is liable if prevention funding is given to the Nation or the agency? Further, what is the liability that agencies have? Caring Society notes the importance of speaking to elders and knowledge holders on the topic of liability as they work in First Nations child and family services. Caring Society suggests we turn to the elder's council for guidance on this topic. Elder Ed states that elders would get more focus and knowledge in this area and could bridge the gaps in knowledge, he encourages the group to seek guidance from the elder's council.

QC states that the AFN came out with a document under the health sector that talked about elders getting compensation for performing traditional healing approaches and ceremonies to clientele. The document helped communities navigate through putting these processes in place and provided communities with budgets for these services in place. The services were to be short term and covered under the order. By setting up these services, QC questions if FNIHB has put First Nations into awkward positions with potential liability. QC will send out the document to NAC members.

CS notes on the liability exposure component, it all needs full airing and there needs to be transparency. The AFN will look at the work done on liability. Caring Society suggests for IFSD to see on the ground research and the summary of the responses on liability. There needs to be insurance and folks need to be made aware of liability. We need to talk with the NAC about liability.

Self-Determination

AIP restricts protections to C92 funding level of $ not structure, enforcement.

19.8B amount

Consideration: IFSD estimates that agency funding alone over 5 yrs will be 17,725,021,879 to 20, 204,904,083 assuming a 15% CAF for remoteness. This leaves max 2.075B for any remoteness top ups, FN without agencies, C92 transfers, provinces/territories

Population

Considerations: Current IRS does not include children eligible to be registered. Also see 2020 CHRT 36 posted on fnwitness.ca

DRAFT

Maintenance
Protection
Year 6 and Beyond

Considerations: Current AIP only covers 5 years. No commitment past year 6

Reform of the Department

Considerations: Work is getting underway but no substantial reforms beyond training and some performance metrics for senior ISC staff.

Baseline Budget

Considerations: Federal obligation to fund

Information Technology
Considerations: Different needs and IT capacity among agencies

Results
Considerations: Critical for evaluating outcomes and measuring need

Poverty
Considerations: Difference between Market Basket Measure and after-tax median income

Emergency Fund
Remoteness

Inflation
Considerations: See CPI-FDDIPI Comparison info sheet

DRAFT

Doing Better for Indigenous Children and Families: A Report on Jordan's Principle Accountability Mechanisms

Naiomi Metallic, Hadley Friedland & Shelby Thomas

March 31, 2022

Table of Contents

Table of Contents 1

Executive Summary 4

Introduction 16

Primer on Accountability Mechanisms 20

Part 1: Why is there a need for accountability when it comes to Indigenous children and families? 27

a) The history of First Nations child welfare services 27

b) First Nations Caring Society et al. v Canada 30

c) Canada's conduct since the Main Decision 31

d) Role of First Nations Caring Society since the Main Decision 37

e) Role of the provinces 38

f) Conclusion 39

Part 2: What specific issues should be addressed by an accountability mechanism? 41

Need #1: Oversight of the current Jordan's Principle process at ISC 41

Need #2: Overseeing of ISC's long-term reform of CFS, including funding of agencies, as well as CIRNAC's funding and negotiation of self-government under C92 42

Need #3: Oversight of Canada's efforts addressing systemic inequality in services related to Indigenous children and families 42

Need #4: Oversight of federal-provincial efforts at cooperation in relation to funding and servicing of Indigenous children and families 43

Need #5: Ongoing education to ISC, CIRNA, provincial DCS staff, provincial agencies, Social workers, Crown lawyers, legal aid lawyers, judges. 44

Need #6: Investigating and mediating individual complaints about provincial governments' funding failure to provide services to Indigenous children and families 45

Need #7: Investigating and mediating individual complaints about child welfare agencies' implementation of CFS laws and policies, including C92 45

Need #8: Powers for enforceable orders against Canada for non-compliance with Jordan's Principle, substantive equality and other relevant laws and international requirements (C-92, DISA, UNDRIP, CRC, etc) 46

Need #9: Powers for enforceable orders against provinces for non-compliance with Jordan's Principle, substantive equality against provinces and relevant laws and international requirements (C-92, UNDRIP, CRC, etc) 47

Need #10: Formal advocacy for First Nations children, families and communities for government services and in child welfare matters 47

Part 3: What does effective accountability look like? 49

a) External accountability mechanisms 49

b) Legislated mechanisms, not simply created by the executive 50

c) Mechanism with specific mandates relating to Indigenous children and families 51

d) Mechanisms with powers over all Indigenous children 53

e) Mechanisms that bypass jurisdictional wrangling 55

f) Recommendations for Specific Accountability Mechanisms 57

(1) A National Indigenous Child and Family Advocate 59

(2) A National Indigenous Child and Family Tribunal 68

(3) National Legal Services for Indigenous Children and Families 71

Recommendations 75

Primary Recommendation: 75

Additional Recommendations: 79

Conclusion 81

Disclaimer

While this report was informed by interviews and feedback from stakeholders, including the First Nations Child and Caring Society and Indigenous Services Canada, the conclusions and recommendations expressed are those of the authors.

About the authors

Naiomi Walqwan Metallic is from the Listuguj Mìgmaq First Nation, located within the Gespègewàgi district of Mìgmàgi. Naiomi W. Metallic is an Assistant Professor at the Schulich School of Law at Dalhousie University, where she holds the Chancellor's Chair in Aboriginal Law and Policy. She holds a BA (Dalhousie), an LLB (Dalhousie), an LLL (Ottawa), an LLM (Osgoode), and PhD (Alberta – in progress). She was also a law clerk to the Hon. Michel Bastarache of the Supreme Court of Canada in 2006-2007. Naiomi also practices law with Burchells LLP. She has been named to the Best Lawyer in Canada® list in Aboriginal law since 2015 and was chosen for Canadian Lawyers' Magazine 2018 Top 25 Most Influential Lawyers in the area of Human Rights, Advocacy and Criminal law. As a legal scholar, she is most interested in writing about how the law can be harnessed to promote the well-being and self-determination of Indigenous peoples in Canada.

Dr. Hadley Friedland is an Associate Professor at the University of Alberta Faculty of Law. She holds a Child and Youth Care diploma (with distinction) from MacEwan University, an LLB from the University of Victoria, and an LLM and PhD from the University of Alberta. Her research and teaching focuses on Indigenous law, Aboriginal law, family law and child welfare law, criminal justice, therapeutic jurisprudence and community-led research. She has published numerous

articles and collaborated to produce accessible Indigenous legal resources for Indigenous communities, legal professionals and the general public. Dr. Friedland co-established and was the first Research Director of the Indigenous Law Research Unit at the University of Victoria and is co-founder of the Wahkohtowin Indigenous Law and Governance Lodge, an interdisciplinary initiative developed to uphold Indigenous law and governance through supporting community-led research. She is author of the book, *The Wetiko (Windigo) Legal Principles: Cree and Anishinabek Responses to Violence and Victimization,* University of Toronto Press, 2018.

Shelby Thomas is Métis and her family comes from the Grand Marais region, which is located at the southeast corner of Lake Winnipeg. She is also a third generation Dutch and Polish settler. She pursued a Bachelor of Arts with a major in Psychology at the Université de Saint-Boniface and a Juris Doctor at the Université de Moncton. Shelby has extensive experience working as a researcher for various organizations including Manitoba Justice, Public Interest Law Centre, Manitoba Centre for Health Policy, and Manitoba Keewatinowi Okimakanak Inc's MMIWG Liaison Unit. She is currently the research manager at the National Centre for Truth and Reconciliation. Shelby will forever be grateful for her opportunity to contribute to the work of the National Inquiry into Missing and Murdered Indigenous Women and Girls as an associate commission counsel, where she often felt like the child of the staff. Children and youth hold a special place in Shelby's heart; she passionately advocates for their inclusion and meeting their needs.

Appreciation

We would like to thank all those who generously gave their time to give interviews for this report as well as those who gave feedback on drafts of the report. Thanks to Linda Reif for generously sharing her expertise with respect to accountability mechanisms. Thanks to the research assistants whose work helped inform the final product: Evan Cribb, Danielle-Vautour Wilmot and Toni Hynes.

Executive Summary

Introduction

In the Assembly of Seven Generations' report, *Accountability in Our Lifetime: A Call to Honour the Rights of Indigenous Children and Youth*, Indigenous youth stated clearly:

> Indigenous youth and children need action and it is urgent. [...] [The human rights violations experienced by Indigenous children and youth] is beyond the point of advocacy, rights promotion and the power to report. There must be accountability for those in positions of power that demonstrate prejudice and racism towards Indigenous peoples as well as accountability for the decades of broken promises on behalf of Canadian governments. The bleak reality is that government inaction and its ongoing violations of the rights of Indigenous youth and children has resulted in harms.

Accountability and advocacy mechanisms can address and prevent violations of rights to substantive equality and resulting harms. They have an important role in ensuring, strengthening and promoting good governance in democratic countries world-wide. To date, existing accountability mechanisms in Canada have not generally served the accountability needs of Indigenous children and families. Numerous reports and inquiries have identified this unmet need, including the Auditor General of Canada, the TRC Final Report and the MMIWG National Inquiry Final Report. The Canadian Human Rights Tribunal ("CHRT")'s 2016 *Caring Society* case was a watershed decision in holding Canada accountable for systemic underfunding of child welfare and other essential services. However, this was a hard-won victory and much work remains to rectify systemic inequities and discrimination.

In the summer of 2020, the Caring Society, acting jointly with the Department of Indigenous Services Canada (ISC), approached the authors to undertake research on the design of an independent accountability mechanism to oversee the government's adherence with the numerous orders that have been made by the CHRT based on Jordan's Principle and substantive equality in *Caring Society et al. v Canada*. The intended outcome of our research was this report, setting out at least three potential, well-research options "for an effective national Jordan's Principle Ombuds-like function."

There is a wide breadth of general or specialized accountability mechanisms encompassed within the broad concept of "Ombuds." Their common elements are independence and the ability to investigate and address concerns relating to government action outside of the formal court system. Ombuds-like institutions may be referred to as Ombuds, Advocates or Commissioners, and may or may not be connected to a quasi-judicial process like a tribunal. More detailed information can be found in the section, "Primer on Accountability Mechanisms" of this report. Looking at the variety of models available, our objective, and the focus of this report, most simply, is to propose accountability institutions and measures to meaningfully address the discrimination identified by the CHRT in *Caring Society* and effectively prevent similar practices in the future.

In **Part 1** of this report, we attempt to summarize the long history that forms the context of the need for independent accountability measures to meaningfully address the discrimination identified by the CHRT in *Caring Society* and prevent similar practices in the future. Drawing from this context, in **Part 2**, we set out what we identify as 10 key accountability needs of Indigenous children and families that must be addressed in order to provide effective accountability. Finally, in **Part 3**, we discuss features of effective accountability mechanisms and propose three interconnected mechanisms that we believe address the accountability needs. Any of these three mechanisms, individually, would serve to provide greater protection of the rights of Indigenous children and families from the discrimination found in the *Caring Society* case by improving government accountability. However, as outlined in this report, none are sufficient, on their own, to address all of the identified accountability needs. Therefore, we reach the conclusion that combining all three mechanisms would be the most effective way of preventing discrimination from continuing or re-emerging in the future.

These 3 Parts are summarized in this Executive Summary and discussed in greater detail in the body of this report.

Part 1: Context: The Need for an Independent Accountability Mechanism

Professor Linda Reif, an expert on international human rights and ombuds institutions, reminded us that the driving question in designing any accountability mechanism should be, "*What are the real accountability problems we want to address*?" Therefore we begin by reviewing the historic and continuing accountability problems that form the present context.

Over-representation: Governments in Canada have contributed to taking away thousands of Indigenous children from their families and communities. This started with the federal residential school system, through the so-called "sixties-scoop" and continues in the extreme over-representation of First Nation children in provincial child welfare systems today. In the last 70 years, the inadequate provision of services to meet the needs of Indigenous children living with their families has significantly contributed to this gross over-representation.

Interjurisdictional Neglect: Inequitable service provision is rooted in the "jurisdictional wrangling" between provincial and federal governments, to avoid funding these services. In its 2019 Final Report, the National Inquiry into Missing and Murdered Indigenous Women and Girls named this problem "interjurisdictional neglect." This interjurisdictional neglect widens the gap between Indigenous children and families and other children and families in Canada.

Findings of Inequitable Funding and Inadequate Reforms: The TRC Final Report documented Canada's refusal to adequately fund health services as a cause of high illness and death rates of Indigenous children in residential schools. There has been documented underfunding of essential services on reserve for decades, culminating in the CHRT *First Nation Caring Society* decision in 2016. First Nations began voicing concerns in the 1970s and 1980s. Canada developed the FNCFS program to address concerns, but in 2000 and 2005, the Assembly of First Nations [AFN] and Canada commissioned expert reports which confirmed the

systemic underfunding continued in the FNCFS program. Canada did little to implement the reports' recommendations. The Caring Society and the AFN finally filed a human rights complaint with the Canadian Human Rights Commission in 2007. Years of procedural arguments and delays followed.

The Caring Society Case: In 2016, the Tribunal ordered in favour of the complainants. It found that discrimination on race and/or national ethnic origin was made out. In extensive reasons, the Tribunal highlighted the real power and control Canada held over child welfare services on reserve. Funding formulas did not ensure culturally appropriate programming, were not comparable to provincial funding to meet provincial standards, and, in fact, led to perverse incentives to remove First Nations from their homes as a 'first resort' rather than a last one. The Tribunal also found that Canada had wrongly adopted a very narrow interpretation of Jordan's Principle, continuing to leave many First Nation children behind. Canada committed to not appeal this case and to make reforms to address its findings.

Non-compliance Orders and Inadequate Reforms: Since the main Caring Society decision, the Tribunal has found several instances of non-compliance by Canada, particularly its failure to implement a broad interpretation of Jordan's Principle and an effective process to respond to Jordan's Principle requests and appeals. The non-compliance decisions highlight numerous systemic and accountability issues, including following old approaches (comparability instead of substantive equality) and a too narrow definition of services and children covered by Jordan's principle, as well as using funding authorities to justify inaction, failure to collect appropriate data to properly assess Jordan's Principle requests and needs, and lack of an arms-length appeal process.

While some real reforms have been made, they remain inadequate. The Department of Indigenous Services [ISC] has attempted to respond to the CHRT rulings through internal measures, such as educating ISC staff, modifying some processes, funding community services coordinators to help applicants, and changing its Jordan's Principle's appeal process. However, meaningful internal change is challenging. There is high staff turnover, and the modified appeal process was stalled due to vacancies.

Individualization of Claims and 'Projectification': The Jordan's Principle application process remains individualized and onerous for applicants. In particular, requiring all applicants to provide documentary evidence and demonstrate how a request aligns with substantive equality is burdensome, and leads, unsurprisingly, to high numbers of requests being assessed as submitted without sufficient information (51% of all Jordan's Principle requests in 2019-2020), rather than granted or denied on their merits. This issue is part of a larger concern of "projectification", described in Sinha et al, 2021 - that ISC's view of Jordan's Principle appears to be akin to a program. The current process is individualistic case by case, demand-driven and contingent on the capacity of applicants to successfully navigate it. Systemic assessment and development of proactive policies and practices to ensure equitable services is still missing.

Canada has increased funding for FNCFS services through annual budget allocations, but has also resisted reforming its funding approach to the FNCFS Program to one that is needs-based, and informed by principles of self-government. Details of long-term reform in relation to funding have yet to be released by Canada.

Statutory Reforms with Inadequate Education, Resources or Oversight for Compliance: Canada passed *An Act respecting First Nations, Inuit and Métis children, youth and families*, SC 2019, c 24 ("C92"), which sets out national minimum standards and recognizes an inherent Indigenous right to self government, including child and family services. C92 legislates Jordan's Principle in s. 9(3)(e):

> in order to promote substantive equality between Indigenous children and other children, a jurisdictional dispute must not result in a gap in the child and family services that are provided in relation to Indigenous children.

However, Canada has provided little to no education or resources to support understanding and implementation of C92. C92 does not specify how s. 9(3)(e) will be ensured, or whether Canada or the provinces bear responsibility for funding services to achieve the national minimum standards or Indigenous self government. There are mixed messages regarding so-called "coordination agreements" between First Nations, provinces and Canada for the self government aspect. It is unclear how, without more, C92 responds to the tribunal rulings, and there are fears it may perpetuate, or even escalate, the jurisdictional wrangling in this area.

ISC standards within *Department of Indigenous Services Act*, SC 2019, c 29, s 336 ("*DISA*"), which came into effect in July 2019, provides further grounding to respond to the tribunal rulings. The preamble includes commitments to ensure service standards are transparent and meet the needs of Indigenous groups, recognize socio-economic gaps, promote Indigenous ways of being and doing, and that ISC collaborate and cooperate with Indigenous peoples. *DISA* identifies the group ISC serves as "Indigenous peoples", which includes "Indian, Inuit and Metis peoples." In s. 6(2) it states the minister "shall" ensure a range of services, including child and family services, education and health, and in s. 7(2) it requires collaboration in the development, provision, assessment and improvement of the services listed at s. 6(2). Further, the *DISA* commits Canada to implementing the *United Nations Declaration on the Rights of Indigenous*, as does Canada's 2021 law, the *United Nations Declaration on the Rights of Indigenous Peoples Act*, SC 2021, c 14 ("*UNDRIPA*"), which affirms the Declaration as a universal human rights instrument with application to Canadian law.

C92, *DISA*, the Declaration and *UNDRIPA* provide solid statutory support for transparent, equitable needs-based and cooperative service provision. However, it is not clear to what extent *DISA* or *UNDRIPA* are being followed by the Department at this time. There is potential and a need for education and oversight of ISC regarding compliance and implementation.

Ongoing Gaps of Education, Advocacy and Accountability:
Lack of awareness and education by both governmental and non-governmental professionals continues to present significant challenges to the effective implementation of Jordan's Principle and equitable culturally appropriate services for Indigenous children and families. Generally, both the MMIWG Final Report (2019) and the TRC Final Report (2016) called for national advocates in this area. Provincial governments continue to deny responsibility for services to First Nation children and families. According to Jordan's Principle Operational Committee respondents to a survey in early 2021, specific challenges to implementing Jordan's Principle continue to include informational limits to written documentation, interpretation of reviewers or failure to follow parameters causing claims being denied in error, lack of reasons for denials, barriers to appeals due to burdensome document requirements, requiring individuals or First Nations to demonstrate how substantive equality applies, timelines and delays, lack of information and communication, lack of aging out of care supports, high turnover of ISC staff, worker burnout, lack of expertise in substantive equality, and failure of provincial governments to come to the table. Respondents identified the need for more internal training and community educational outreach as well as quicker and easier access to services.

Currently, there is some support to address some of these challenges through government funded Jordan's Principle Navigators and Regional Focal Points. However, the Caring Society, a small fundraising reliant charity with no government funding, continues to play a crucial advocacy role in supporting families in seeking to access Jordan's Principle and substantive equality, including drawing on its network of lawyers who assist on a *pro bono* basis to address denials, from liaising with ISC to filing judicial reviews. The Caring Society also informally provides oversight of ISC's implementation of the CHRT decisions, by bringing issues of non-compliance to the CHRT's attention, as well as continuing to publicly raise awareness of systemic discrimination against First Nations children and families. ISC staff are uncertain as to what they can share with the Caring Society advocates due to privacy and confidentiality. The Society's staff recognize that they cannot help all who need assistance and emphasize the need for formalized and funded advocacy services for First Nations children and families.

Part 2: Accountability Needs:
The preceding discussion demonstrates 10 major accountability needs relating to Jordan's Principle, and equitable services for Indigenous children, families and communities:

1. **Oversight of the current Jordan's Principle process at ISC:** While ISC staff may be well intentioned and committed to implementation, deep systemic inequality and the legacy of discrimination requires oversight from a body with relevant expertise.

2. **Oversight of ISC's long-term reform of CFS, including funding of agencies, as well as CIRNAC's funding and negotiation of self-government under C92:** Long term reform was a key order of the Main Decision and oversight is required to address the current lack of transparency, education and resources for understanding and implementation and funding of self government in relation to child and family services.

3. **Oversight of Canada's efforts addressing systemic inequality in services related to Indigenous children and families:** Eliminating systemic inequality in delivery of essential services is the ultimate goal of Jordan's Principle, the Main Decision, and a core recommendation in numerous reports and inquiries, including the TRC and MMIWG National Inquiry Final Reports.

4. **Oversight of federal-provincial efforts at cooperation in relation to funding and servicing of Indigenous children and families:** Ending interjurisdictional neglect requires oversight of federal-provincial cooperation and compliance with Jordan's Principle and C92 responsibilities to Indigenous children, families and communities.

5. **Ongoing education to ISC, CIRNA, provincial DCS staff, provincial agencies, Social workers, Crown lawyers, legal aid lawyers, judges:** Effective implementation of the CHRT Orders, Jordan's Principle and C92 requires more and ongoing education for all government and legal actors responsible for compliance and application.

6. **Investigating and mediating individual complaints about provincial governments funding failure to provide services to Indigenous children and families:** This is necessary as many provincial child advocates, ombuds and legal services providers aren't aware of or pursuing Indigenous children and families' rights.

7. **Investigating and mediating individual complaints about child welfare agencies' implementation of CFS laws and policies, including C92:** Several inquiries, including the MMIWG National Inquiry, called for an Indigenous-specific child advocate, as there is inconsistency with provincial child advocates ensuring compliance with provincial statutory protections, and now the C92 minimum standards.

8. **Powers for enforceable orders against Canada for non-compliance with Jordan's Principle, substantive equality and other relevant laws and international requirements (C-92, DISA, UNDRIP, CRC, etc):** Supervisory jurisdiction has been key to the CHRT's ability to affect change in the *Caring Society* and something similar to take its place is necessary for when the Tribunal is no longer seized of the case, given the extraordinary long history and seriousness of substantive equality and statutory human rights violations, and Canada's intransigence to change even after the Main Decision.

9. **Powers for enforceable orders against provinces for non-compliance with Jordan's Principle, substantive equality against provinces and relevant laws and international requirements (C-92, UNDRIP, CRC, etc):** The history of provincial neglect of Indigenous children and families' needs justifies having a body that can also grant binding orders against the provinces for their failure to respect their obligations.

10. **Legal advocacy for First Nations children, families and communities for government services and in child welfare matters:** It is evident there continues to be a strong, largely unmet need for formal, funded advocacy to support Indigenous children

and families vis-a-vis both federal and provincial governments in relation to the provision of equitable services and child and family services matters.

Part 3: Features of Effective Accountability Mechanisms and Recommendations:

Based on research into provincial, national and international ombud-like and other accountability mechanisms to address substantive equality and statutory human rights concerns, including the importance of accountability mechanisms being context driven, so impacted by the history and needs discussed above, we have identified the following five features of effective accountability:

A. **External accountability mechanisms:** Currently, there are no external non-judicial accountability mechanisms that apply to the work of ISC and CIRNAC.
B. **Legislated mechanisms, not simply created by the executive:** For effective independence from the government of the day, legislatures, and not executives, ought to create accountability bodies, appoint their leadership, oversee the bodies' functions, and be the government entity receiving reports from the body.
C. **Mechanism with specific mandates relating to Indigenous children and families:** The unparallelled gravity and longevity of the ongoing substantive equality and statutory human rights violations of Indigenous children and families in Canada requires the creation of mechanisms with specific mandates in relation to Indigenous children and families.
D. **Mechanisms with powers over all Indigenous children:** As per SCC jurisprudence, DISA and C92, federal jurisdiction applies to First Nations, both status and non-status, Metis and Inuit peoples. Powers over all Indigenous children is necessary for any mechanism to reduce, not reproduce, exclusion or jurisdictional neglect. Such an inclusive approach is not the same thing as a pan-Indigenous approach. It is equally important that the mechanisms recognize the diverse legal traditions among Indigenous peoples.
E. **Mechanisms that bypass jurisdictional wrangling:** Currently, neither human rights bodies nor the courts in Canada can hear a complaint of denial of services involving both the federal and provincial government at the same time. Ironically, and tragically, as lawyer David Taylor puts it, there appears to be a Jordan's Principle problem in vindicating Jordan' Principle claims. For an accountability mechanism to be effective, it must challenge the conventional jurisdictional boundaries that could lead to delays and denials of services under it, and have led to the decades of interjurisdictional neglect of Indigenous children and families. Canada has the power to do this under s. 91(24).

Recommendations:

Based on the accountability needs identified in Part 2, and the features of effective human rights accountability mechanisms identified in this Part, we recommend **3 interconnected mechanisms to safeguard the needs of Indigenous children and families.** While originally we expected to propose 3 independent options, we have come to the conclusion that, while any of the three mechanisms, on their own, would be an improvement over the status quo, all 3 are necessary to achieve meaningful accountability. The stakes are too high, the pattern of

discrimination too long and entrenched, and Canada's practice, policy and even legal reforms still too inadequate, for anything less to actually be effective at this point.

The 3 accountability mechanisms are:

1. **A National Indigenous Child and Family Advocate:** This would be a primarily based on the model a child advocate ombuds model, but also with specific jurisdiction to oversee governments' delivery of services to Indigenous children and families in accordance with Jordan's Principle, their right to substantive equality in statutory human rights instruments and other relevant laws and international requirements (C-92, DISA, UNDRIP, CRC, etc). The Advocate would also oversee governments' implementation of child welfare legislation and policy in relation to Indigenous children and families. In this regard, in addition to addressing systemic issues, the Advocate would assist Indigenous children and families resolve individual complaints through informal and confidential means.
2. **A National Indigenous Child and Family Tribunal:** This would have the power to hear complaints from individuals, groups, communities or the Child Advocate. Complaints would include those of a systemic nature against the federal or provincial governments and their delegates in relation to Jordan's Principle, substantive equality and the implementation of CFS laws and policies, including C92. The Tribunal should have robust remedial powers to effectively uphold the right to substantive equality and other statutory human rights of Indigenous children and families.
3. **National Legal Services for Indigenous Children and Families:** This would be designed to provide Indigenous children and families with state-funded access to knowledgeable lawyers who can support them in their attempts to access substantive equality in essential services from federal and provincial governments, and in their interactions with child welfare systems. The power imbalance between individual children and families and the state makes advocacy essential for upholding the right to substantive equality and other statutory human rights.

We conclude that all 3 of these mechanisms are necessary to effectively address the government conduct that has contributed to the harm Indigenous youth name, including the overrepresentation of Indigenous children in state care and the senseless suffering and separation of Indigenous children and families with medical and disability needs, for decades.

All 3 of these mechanisms <u>must,</u> at minimum, have the following features for effectivity:
